This item is filmed at the reduction ratio checked below/
Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\nabla$ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la
générosité de:

## Bibliotheque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernidre page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernidere page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la derniére image de chaque microfiche, selon le cas: le symbole $\rightarrow$ signifie "A SUIVRE", le symbole $\nabla$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé é partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## GEOGRAPIIIC:LL, STATISTIICAL, AND MISTORICAL.

## POONAII

poonall, a disuriet of British India, preaid. Hombay, primipally hetween the lath and
 loug. ; having N. Chmednuggur, W. Hie cionem, os. the suttarah dom, mad li, thowe of the Siznm.
 the eometry is muntanans and irregular, but intersyred with many fertile mall well-watered valle The climate is gosel and invigorating, and more suitable to leuropeans than ment parts of Indin. A gound deal if the surface comsists of the hark and red cotton soils common in the S. of India: rice gromms comprise ubout 1-loth part of the
 The land is nsesesect on the village system. Pomah is the only eity; but there are several ohtheremsiderable tuwns, at whech comrse woullen, cottom, aml silk fialries, and metallic ornaments are made: The colelrated ave-temples ul Carlee, and several places of llindao pilgrimage, are in this disarict.
loosanl, a city of british India, presid. Bombay, formerly the cap. of the Mahratta dom., Dat now the capi, of the above distr: on the Morilla,
 on the railway from bumbay to Belary. Pop. estimated at abuyt 110,000. It stands in an extensive and bare plain, alout 2! 1100 lt. above the sea, at the foot of a small insulated hill, crowned with a pagrola. It is withont walls, and cans neither lay chaim to antiquity nor heanty; is very irregularly built and paved, with menn bazaars, deep ruinms streets, and no harge or striking elifices. The principal palace is surrombled by high and thick walls, with four romil towers, and is enterel through a gointed archway. These are several other palaces, but they are small and insimuitieant. A little west of the eity is the British coutonment, on an elevated site, wih wide strects, a spacious chureh, a good statiom-library for the soldiers, and another library for the ritheers, and regimental selooks, supported by zulseriptinit. This city has a llindoo college, emblished in $1 \times 21$, for 100 stulents, with elasses for Ilindou divinity, medicine, metaphysies, mathematies, nud astronomy, law, logic, rhetoric, and grammar. Pownah is the resilence of the British eollector and judge for the distr., and has a distr. jail, several British schools, and a Rom. Catholic churel. East of the city is an excavated temple, aplyarently dedicated to Siva. Poouah is first

## POR'TO-PELLO

## PORTO-RICO

on ils F. side. Where widest it is nearly 2 m . urross; area 2,970 acres. D'op, $\mathrm{N}, 468$ in 186 t . The Nland consists of a vast mass of freestone, rising in its lighest point to about 450 lit, above the leved of the sea. lts gharries, which have long berom famons, have limished the stone used in the building of St. I'mul's cathedral and many other edilices. It has a village, several hamlets, a prison for convicts, with clomrches, schools, and two old castles. It is well watered, tum the soil, thomeh in most parts thin and light, is fertile, vielding fine herbige, with wheat and other grain, but not insumbient quantities for the suply of the inhalos. The enstom ol gavelkind prevails in the island. Near its S. extremilv, denominated 'Porthand litl,' in lat. $60^{\circ} \quad 31^{\prime} 22^{\prime \prime}$ N., long. $2026^{\prime} 4!^{\prime \prime} W^{\prime \prime}$, are a lighthonses with fixed lights, elevated I! ft, ahove hirh water. The 'Race of Bortland' lies to the S. of the lill. It is a ripling of the water. oceasioned by the ruggedness of the ground, which impedes and brealis the comrse of the tide. it spuings it is rallur dangerous, at least for small loaded vessels. In the angle between the N. coast of the island and the opmosite shore of the manland, is Iortland or Weymonth Roads, where there is excellent anchorage, with W, or N. winds, for the largest shijs, Ihit gales lirom the SSL., SE., and E., throw jn a very leary sea; and to protect the roads from their influence, a gigantic breakwator is now being constructed, for a notice of which see Wramoutit. The sea is perpetually encroaching on this island; and in 1665, 173.1 , and 1792 , portions of the cliffs and of the land, having heen undermined, fell into the sea, anul sunk to a lower level. The Isle of Portland has been made a depôt for convicts, who are cmployed of the breakwater.
L'OR'TO-BELLO, a famons sea-port and town of t'olombin, on the Caribbean Sen, of the N. side of the jethmus miting the two great continents of $N$. and S. America, at the point where it is less thim 40 m . across; lat. $9^{\circ} 24^{\prime} 29^{\prime \prime}$ N., long, $79^{\circ}$ f13' $3 \overline{5}^{\prime \prime}$ W. The town, now qreatly fallen off, is l,uilt along the siore, at the foot of a monntain range which surromuls and whelters the harbour. lhit this barrier, at the same time that it protects the port, prevents the cirenlation of the air, and, combined with the heavy periodical rains, the influence of the surrounding forests, and the excessive heat, renders this locality a favourite seat of yellow tever, and one of the most mbealthy places in the world. Owing, however, to the excellence of its port, which is one of the finest that am be imagined, and its contiguty to Panama, on the opposite side of the isthmas, it was, for a lengthened period, an important commercial entrepot. Down to 1740 , the galleons from Old spain, with merchandise for the Spanish Main, I Perı, and the W. coast of America, used to rendezvons at forto-liello, about the same time that the Pern Heet arrived at I'anama, the gold and silyer, and other produce brought by the latter, being conveyed aeross the isthmis by means of oxen and convorsely. As soon as the galleows hat moloaded, ant the merchandise from I'anama lat arrived, a fair was held, which was attended by a great conconrse of strangers, ant when a deal of business was transacted. lint in 1740 the galleons ceased to resort to l'orto-l Bello, the commerce with l'ern and IV. America having been since carried on direet by vessels that stiled romel Cape Ilorn. In ennsequence, the importance of Porto-Jello rapidly leclined; and the alvantages of its port not being suilidient to eomentervil the mhealdimess of its climate, it is now comparatively deserted. Jhat shond the project for efleeding a commumication across the isthmus. by canal or railway, talie effect,
it is probahle that l'orto-Bello may recover some portion of its former importance. "The climate is said to have been improwed by an opening made in the momonins that eneirele the town, and by the conting down of a protion of the aljaccit forests.
Notwithstanding Porto-Jlello was formerly very strourly fortitied, it was taken, with little loss, by Ahniril Varmen in 1739. The impormace at this explait. and the thbilitics of the admiral, were, at the time, much overrated; and it was supposed that if he were furnished with an adequate force he wond have little difficulty in redacing all the Sumish settlements in this quarter. But the events that took place cluring the next two years, and especially the failure of the attuck on Ciarthagena, molecolved the pmblic.
lorto-Bello was discovered, in lis02, by Cohnmbus, its mame being derived fron the excellence of its harhour.
loh'TUBELLEO, a parl. bor, and sea-port of Seotland, ro, Did I, othlan, in a plain on the S. bank of the Frith of Forth, 2 m . E. Vidinlorgh, on the Edinburgh and Serwick railway, P'op. 1,366 in 1861: but in sumber its pop.o owing to the inthe of visitors from Eilinburgl, is much larger. The bor. has a chapel of ease attached to the establishment, a Free chureh, and chapels belonging to the Episeopalians, Indepudents, and lellict, 'The main stret lios along the line of the public road rumingr E . and W , ; a number of cross strects diverge fronn it, leading down to the sea beach, or stretebing in the opposite dircetion. Some of these consist of lines of detached villas. Soparate villas, also, abound throughont the town, sume of them fronting the sea. No tixed plan has been ohserved in laving out the town, which has a stragerling :1ppearance, and some of the older parts are very mean.

Adjacent to Portobello is the village of Joppa, now almost a part of it. There is no harbour at cither place. 'There are mannfactories of brieks, tiles, earthenware, glass, and erystal. Fire-chay abomals on the E . point of J.ppa, where tire-lricks are manulactured to a considerable extent. It is estimated that the average number of visitors for sea-bathing in the town, from May to Uci., amounts to 500 or 600 . And, owing to the salubrity of its sitnation, many families resort to it as an eligible permanent residence.
lortobello derives its name from the first honse having been built by an individual who hati beell with Nimiral Vernon, in 1739, at 'Portobello.' The lieform Aet umited it with leith and Musselburgh in sending 1 mem, to the H , of C . legistered electors in the united bor, 2,501 in 1861 . Municipal comomeillors, 9.
LORTO FERRASO, a sea-port and the principal town of the island of Elba, which sce.

PON'T)-HICO (Span. Puerto Rico), one of the W. Indian lslamds belonging to Spain, being the smallest and most E . of the Greater Antilles; chictly between lat. $17^{\circ}$ :5 $5^{\prime}$ and $18^{\circ} 30^{\prime}$ N., and long, $65^{\circ} 40^{\prime}$ and $60^{\circ} 20^{\prime} \mathrm{W}$. ; having N. the Atlantic, und s. the Caribben Sea, separated on the E. Irom the Virgin Islands by the Virgin lassage, and from llayts on the W. by Mona l'assage, so m . across. jits shape is that of a parallelogrmm, the length E. to W. being abont 100 m ., and the breadth nbout 38 m . Area, $3,700 \mathrm{sq}, \mathrm{m}$. Under the old colonial system of Spain, in 1788, the pop. did not exceed 80,650 ; whereas it amomede in 1860 , accorling to the official returns, to $583,30 \mathrm{~s}$, of whom : $\mathbf{3 0} 0,430$ were 'pure whites,' and $2 \mathrm{~s} 2,878$ coloured people. A mountain chain rums le, nud W. thromgh the centre of the island ; the highest summit of which, at the NE: extremity, is abont 'he climate is pening made town, and by the ailjuecnt

nol the principal ce.
(co), one of the pain, being the eater Antilles; $1 x^{\circ} 30^{\prime}$ N., ami -ing N. the Atparated on the Virgin l'ussage, ma I'assage, so parallelogram, 100 m ., and the sq. m. Uuder 1788 , the pol? t amounted, in rns, to $58: 3,30 \mathrm{~s}$, is' and $28.2,878$ in runs li. amil d; the highest emity, is about

3000 ft . in height. Numerous rivers have their sources in this chain, flowing on either side to the sea, some of which are navigable for 2 or 3 leagues from their monti, for schooners and coasting vessels. The coast line is indented with numerous bays and creeks, some of which form excellent harbours for ships of large burden. The surfice, which is linely diversitied, is well waterel, and the soil is genernily rich nud fertile. The climate is supposed to be less minealthy, and better adapted to Linropeans, than in most of the Antilles; it differs widely, however, in different parts; the N . const beimg esperially subject to heavy rains, and the S. to dromerhts. Violent hurrieanes often do immense damage. Porto-Rico is siugularly destitute of with animals. There are no indigenous guadrupeds; and scareely any of the feathered tribe are to be fond in the forests. The birds are few buth in number and species; and travellers in ty go whole leagnes without seeing a bird or even hearing their ehirp. On the rivers there area few water-fowl, and in the lorests the green parrot. Almost every other island in the W. Indies is infested by snakes, and other noxious reptiles. llare are none. libut rats of an enormons size, and in great mumbers, infest the comntry, and sometimes commit drealful ravages onf the sug:ircanes; and although continually persecuted, their numbers do not decrease.

The resourees of Iorto-lico are wholly agricultural: 10 manfactures exist, nor have any mines of ardil or silver, or other mineral products, been hitherto explured.

Agriculture is in a very backward state, and the ishand sullers greatly from want of roals. Mr. Cowper, British consul at I'orto-Kico, in his 'Report on the Trade of Porto-Hico for the Year, 1xi; ' (Commercial Reports received at the Foreign Othice, Oct. 186is), says, that 'if gookl roads were made throughout the comitry, the cultivation of the land would greatly increase, for at present $n$ larere amomit of rich and fertite land in the interior is left uncultivated throurh the want of roads. The south coast of the island is generally oceupied with sugar plantations, but most other parts of the i land exhibit a promisenous cultivation, plantations of sugar being intermined with those of eallee, and with tield-rice, maize, plantains, tobateco, and pasiare. Artiticial irrigation is nowhere practised ; but notwithstinding the drought which prevails in the S., plenty of water for the cane is found at about 2 ft . below the surfice. The average produce of sugar per acre, for the whote ol' Porto-Rico, is estimated at 30 ewt., being more than double the quantity raised on the best lands in the most favoured of the British Antilles. The collee is of a peenliarly good quality, much care being taken in pheking and preparing it. The trees, which mostly belonf to small proprietors, grow to a great height, and sometimes yield from 20 to 40 lbs each. Every poor family has 20 or 00 trees; and even in the woods trees are to be found in a wild state, laden with coffee. The labourers at the harvest come into the market, some with 50 liss., others with a ewt., and so on, being the surplus of their little crops, after leaving enongh for the use of their families for the season. This they sell to the merchants, to purchase artieles of elothing. The plant on the large estates is pruned and colt low, and yiedds, at an average, 1 H, per tree. 'The tobaceo of I'orto-Lico, which is but little inferior to that of Cuba, is wholly the produce of free labour. I'oor families, white and black, plant $\frac{1}{2}$ or $\frac{1}{4}$ acre, and cure and dispose of the prodnce to the shopkeepers in the villages, who are generally agents for the more extensive merehants of the enpital. These shopkeepers fur-
nish elothes and money in alvance, at an enormons interest, to the cultivaton, from whom they receive their crop at a certain price, genernlly less than half its valne. The soil in many places is particularly suitable for the growth of cotton, the culture of which has been very greatly extended within the last half dozen rears. Iudigo grows spontaneonsly, but is nut cultivated; and few European vegetables are raised, thongh the grenter number might be produced withont dithienlty.

The pasture lands in the $\mathbf{N}$. and F. are superior to any in the $W$. Indies for breeding and fattening eattle. Cattle-breeding is, perhaps, more profitable here than any other branch of agrieniture, but, owing to the sublivision of property, few individuals possess so many as 1,010 head of cattle. In the bredling districts, where there are no arable lands, the cattle are permitted to roam at larser, as on the American coutinent, but on a smaller scale; elsewhere they are penned up in encloserl meadows. They are mostly reared in the valleys distant from the const, whence the carriate of sugar and coffee would be too expensive fur the enltivator. The larger proprietors, who have from 100 to 150 head, if they have not suffecient pasture land of their own, divide their stock amony the porer landowners, priving them cows, and calves alrealy weaned, to be taken care of; and dividins the produce of the animals, when sold, with them, in a certain proportion. The cattle are turned into the fattening pastures at a year ohd, and in 3 or 4 months are fit for sale. A considerable tratlic has long been carried on in cattle from this ishand with the French, Finglish, and I anish W. I. Islands ; for, in eonsequence of their being tamer, they are easier managed on board ship, and are not so liable to die or fall off at sea as the wilder eattle of the American eontinent. The home sujplies of cherese and butter are insulticient for the consumption. The island is not adnpted for woot growing, the flecee of the sheep degrenerating into a species of hir; but the muton is excellent. The numbers of sheep, goats, hogs, mules, an. 1 asses are, however, very limited; but there are, probably, above 30,000 borses of a tolerably grood breed. 'The foresis in the interior suphy timber of the best quality for ship and house buidding; and to prevent th ir decrense, the goveriment hiss ordered that three trees shoukd be phanted for every me ent down.
I'revionsly to $181^{\circ}$, Porto-Rico, being exehided from ull direct intercourse with other comutries excepting Old Spain, was cither sta:ionary or but slowly progressive, the entire value of the exports in that year having amounted to only $b, 5,2-1$ dotlars. But at that epoch a royal decree appeared, which exempted the trade between spain and the Spanish eolouies and Porto-lico from all duties for 15 years; and she was then, also, permitted to carry on a free trade, ander reasonable duties, with other comntries. In conseguence principally of these liberal measures, but partly ahso. of a eonsiderable immigration of rich Spmish colomsts from S. America, l'orto-Rico las latterly made a most extraordinary progress. Great improvements have been effected in the police and internal atministration, and roads have been construeted in some parts of the island. 'But at present,' sirys Mr. Cowper, writing in 1865, 'there are no railways, canals, drmins, telegraphes, or waterworks, all of which are greatly needed to ensure the health, happiness, and prosperity of the peuple. None of these can be done without foreigners and their capital : of this the Spanish gov. is well aware.'

The tollowing table, taken from the otlicial report of Mr. Cowfer, British consul at l'orto-Rico, shows the value of the imports and exports of the

PORTO-RICO
diffrent ports of the island of lorto-lico in the vear Initil:-

Among the lading artides imported are colton mantinctures, woollen do., drapery goorls, and silk manntacturcs.

The necessaries, and many of the comforts, of life are enjoyed be the great majority of the inhahs. of porto-liaco. 'The Xivaros, a name aphled to all the whites below the better claseses, swing themselves to and fro in their hammorks all day long, smoking their cigars, and serapiner at entitar. A few collee plants and plantain trees. a cow and a horse, an acre of lamb, in corn or swret putatoes, constitute the promerty of what would be demominated a eomfortable Xivaro: who, monated on his meagre and hard-worked horse, with his lomer sword prot ruding from his basket. Iressed in a broadhrimmed straw hat, colton jacket, clean shirt, and check pantaloons, sallies forth from his cabin to mass, to a enck-fight. or to a dance thinking himself the most indepembent and haploy beins in existence. 'Jhe homses of all elasses, in the comatry, are msually built of worl. The windows have no chlass; they are shat with shiling boards: so that when it rains, or when the wind blows with violenee, the fimily remains in darkness. The roofs al' the better class of houses are eosered with woulen shingles. There are scaredy any inns for travellers either in the fowns or emintre.
The govermment, laws, andinstitatims are nearly similar to these extablished $\mathrm{ly}_{\mathrm{y}}$ span in the rest of her Tramsatlantic eolonies. Porto-lico is governed hy a captain-gromeral, whose authority is supreme in military allairs, and who is presiblent of the roval audiencia fur eivil matters. The latter court is compused of the captain-general, a regent, three judges. a tiscal, two reporters, and a marshal; and is sulperior to all other eonstituted anthorities, ineluding the eeclesiastical tribunal. The eaptaingeneral has a juntu, or conneil of the principal military ollicers. In the seven towns and villages, which are the caps, of departments, justice is administered by the mayors: in the smaller towns and vilhares ly inferior masistrates, called lientemants, who defermine delits under 100 dollars, act ans justices of the peace, enllect the dinty of subsidy, receiving th per eont. on the collections. They are appointed by the captain-general, whalso appoints the elerey to their dilferent livings, on the recommendation of the bishon. D'ublie instruction is very hackward; but sehools, thongh few, are increasing. The inland is diviled into seven military depes, each under the command of a Spanish colonel. The resular military fore eomprises about 10,000, ami the militia ilwat 16,01411 men.
 and about a dozen gim-boats. The tithes and al-
eavala duties were abolished in 181\%, and the subsidy, or direct contribution on landed jroperty, established instean. The tutal revenue of the colony was set lown, in the Spanish bulget of 186 b-fi3, at $2,1000,(100)$ reales. The chief towns of the ishand are San Juan de Porto-kico, the cap., Mayagnea, Ponce, Asuadilla, and Figrardo.
lorto-Rien, when diseovered by Columbus, in 1493 , is supposed, thongh probsibly on no very goont gromids, to have had (im,000 inhabs., who were, in no very long time, almost exterminated. In the latier part of the 17 th century it was taken by the linglish; but, from the prevalence of dysentery, they were soon after obliged to abamdon it; since which time it has been mostly in the quiet possession of Spain. A revolutionary movement, which broke ont in 1520 , was put an end to in 1823 .

PORT' (H-JICO (SAN JUAN DES), the principal city and sea-port of the above ishand, of which it is the cap., on rising grombl, at the extremily of a proninsula, joined to the land by a narrow isthmos;
 in latio. The town, which lies along the E. side of the larbour, is strongly fortilied. The strects eross cach other at right angles: being on a deelivity it is well drained, and may be considered as one of the best and healthiest towns in the W. ludies. In the carlier part of the present century, most of the houses were of worl; but at present, execpt in the suburbs, not a worlen homse is to be well, and they are principally two stories high. There are some grod public buildings, including the bishop's palace, and sominary ; the royal military lospital, with 304 beds; piblic gat, house of eorrection, a hamdsome theatre, town-honse, with a masmiticent public hall, and several convents. The govermment house, thotall old and sombre-looking, has some time martments. The cathedral is a large, uminished, heavy falbric; there are several other churches, with a custom-honse and arsenal. The harbour has as striking resemblance to that of the llavanmal, to which it is but little inferior. Its entrance, about 3301 fathoms in wilth, has the Norro Castle, at the NW. comer of the city, on its E. side, and is defended on the $\mathrm{V}^{2}$., or olpmite side, by lorts crected on two small islands. Within it expands into a capacions basin. the depth of water varying from of to 6 and 7 fathoms. On its W. side, oplosite to the city, there are exfensive sambbanks; but the entrance to the harbour, and the harbour itself; is unobstructed by any bar or shallow. porto-lico is the residence of the governor, and the seat of the superior coorts for the island. It has a society for the promotion of the fine arts, with mumerous publie sehools and hospitals. It engrosses a large portion of the commeree of the ishand, and has, in consequence, attained to considerable distinetion among the emporiums of the W. Indies.

D'OR'TSMOU'TH, including its sumurb of Portsea, a parl, bor. and sea-port town of lingland, the principal naval arsemal of Great lbritain, and the chicf station of the fleet, co. Hants, on the W. side of Portsea Island, at the entrance to Portsmonth Harbonr, opposite Gosport, and on the N. vide of the Chamel, separating the Isle of Wight From the mainhand. $16 \mathrm{~mm} . \mathrm{S}$ : somthampon, and 65 m . SW. Lomdon, on the Lomion and South Western railwiy. Jopp of Lor, 91,799 in $1 \times 61$.

Portsea lxhaid, which has lortsmonth at its SW. extremity, is about 4 m . in length ( N. and S. ), and from 2 to 3 m , in breadtl, between l'ortsmouth Larboar on the one side, and Langstone llarbour on the other: it is comected with the mainhand, at its $N$. extremity, by a stone bridge, and is genorally fertile and well cultivated, producing excellent crops of corn, and large quantities of par-
, and the sub1 property, esaf the colomy t of $1 \times 6=-63$, $s$ of the island p., Mayague\%,

icularly fine garden verclables. Its coasts are well defended, at nameroms points, by strong military works, ineluding, together with the furtitications of l'ortsmouth itself, Fiort Cumberlani, somehsea Castle, and a long line of intronehed works at llisea. The extermal appearanee of l'ortsmonth and l'ortsea is greatly embellished by the tine trees whieh ornament their ramparts; aind few towns exlibit so impusing an appratichas Portsea at its principal entrance from lombon, The entramees to lortsmonth, the oder int mere southerly part of the parl. bore, are much less striking; lint its interior is far superior to that of its neighbour. l'ortsmonth may be generally described as consist ting ol three or fiom parallel streets, "rosed at right angles by two or three other lines of thoromgheres. ITigh Street, the prineipal, with its imgntar contimation, Broad, or Point street, runs contirely thromg the erntre of the town; it is wide and handsome, having on cither side many large and excellent houses, several public builiings, and some very superior hotels. It has also been much improved by the removal, in $1 \times 36$, of the ohd town han, an ansightly briek buibling. which previonsly stood abon its midhlo, blocking up the greater part of the coach-romed. Nany gomb private honses are to be met with in the other streets, and on the Gimal larale, a spacions opm aren, used for garrisum insueetions, and for the daily muster of the several gatarls; but in general the private buildings are of an inferior character, and the back streats, particularly those at the Point and toward the N . part of the town, are of the lowest daracter. The Point is a small peninsula stretching $W^{\circ}$. to form the month of the harbour, and mostly beyond the walls of the town, It is, with the opposite part of lortsea, the principal seat of maval tratic, most of the ship agents and brokers hasing their ollices here, amd, in time of war especially, it presents a seene of the greatest activity.
lortsets, which has entirely grown up since the beriming of last century, on a tract formerly called fortsmontli Common, N. of Portsmonth, now greatly surpasses the hatter in extent inh pop. It is divided into two nearly equal parts by its main thoromghlare, Gueen Street, which runs for abont $\frac{1}{2} \mathrm{~m}$. in a threct line from lion date, and is lineel on each side with shops, many of which cmulate those of the Strand or Filect Sitreet. Some few of the other streets, as St. James's Strect, King Street, and the Common Diard, are tolemaly broall and well built; but, except these, nome if the others approach even to mediontity. The homses in l'ortsea are rarely more than two stories in height, and their fronts are but selhom stuccoed. It has but one handsome open space and few pulbic buidings. lhoth towns are well paved, well supplid with water, and well lighted with gas.

The suburbs beyoud the walls comprise at least half the parl. bor., their more tensely peonded prortion extending over a space filly as large, if not larger, than that ocempied by the two towns. Ol these suburbs, Southsea abone has any pretensions to beauty. It eonsists of a succession of well built terraces fiteing the sea, and the li, ramparts of Portsmonth, being inhabited prineipally by naval, military, and govermment civil oflicers, and visitors resorting thither during the summer seasm. Behind these termees are a number of tolerable streets, and some new squares. Dim (irove and Somerstown are sections of this suburb; the former, a little further eastward, eonsists of a series of elefant thetached villas, surrounded by tine plantations and gardens, commanding prospects of spithead and the lsle of Wight, and inhabited by opmlent individuals. Landiort and leathouse, imme-
liatily to the lamd $N$. of Portsea, have nothing in point of apporance to recommend them; thooir inhals. are, in a great measure, retail trulesmen and workmen employed by government. Newtown (.Wile kind), Kingston, and luwkland, J. of the foregoing, are cheerfal and agromble suburbs, princigally extending along the Lombon liond, and inhalited by the same elasess as those residing in Sonthea. Immediately withont the walls of lortsmonth, stretching along the shore, is Southsea Common, a tine large open share, nsed for reviews and military inspections, ind a fivomrite place for pulbic recreation.
'The importance of Port smontlo, like that of llymonth, depends wholly on the exombene of hire harbour, and on her convonient situation as a phace lir the ontit and rembzons of the thents in the Chamel, or of those ernising ofl the cobata of Frame and simin. It is this that has made lore be selceted as the primeipal station of the nave, and has emsequently meaned hor to the highent dextination as a maval depot. The hatmone which is megualled in (ireat linitain, and surpiassed but by few in the worlal hat: a narrow antrmere, mot exceding :20 yards in willh. betwern lortsmonth and liosport: hat within its widh increases, ambl it cxpmoks into a moble basin capahbe of comtaminer the lareer part of the naw of (areat Britain. There is a bat ontaide the entance to the harbour : hat as it has abont $1: 3$ ft. wator wer it, even at the lovest opring ebhs, it can hardly be saitl tu be any obstrution to the havigation ; and within the harbone there is water suthesient to that the lateset men-of-war at any time of the tiale. The anchoring aromal is excellont: and, heing free from smaken rocks, or other ohstrations, ships lie as securely in it as il they wore indock.
'the doskyarl, which eomprises abomt 120 ateres, lies ahone the E. sile of the harbour. It comprives all the cotablishments necessiry for the eonstruction and repair of sinips of war, and lior their outlit with the greatest olexpatt h, indoling momeroms building and graving docks, partly oproming into the harbur, and partly into it later bisin, which commmanales with the latter. Ahome the guay, fronting the harbour, extenus a mohle line of wardonses, haviar in its cellate a hambome owtarumal observators. lat the rope-homse, nemply 1,200 ft. in lengeld, calles are twind to the $1 \times x-$ font of : Bu inches in ciremoference; and the andor limge problaces anchors of the largest size. 'Ihe irom imbloper mills, the copler Comudry, where the copprer is rolled into sherets for shasalimas hy
 Hurths, sitw-pits, seasoming sheds amel mast-pmals, are all on the most extonsive sate. I'robahly, however, the most interesting marhinery in thit invented, or, at all events, vashly impowed, by sir Esmbert brmel, for anting blocks. It is excedingly ingenions, and has been prodnctive of a vast saviug of labour. luring the late witr unwards of 4,160 working-men were emploved in lourtsmoth dock yard, of whom 1.500 were shipwriphts and eanlkers; lout in time of peace the mombers are greatly retheed.

In the dockyard are the navy pay ollice, the resilences of the port-admiral, the admiral-simerintendent, and the heals of the priminal departmer ts of the estab. 'The port-almiral's residince, tormerly that of the commissjoner (whose cluties are now performed by the superintoment), is an elegant editice of white briek, simromaled by garrens. Near it is the Roval Nasal Collone, a spacious dark brick elilice, erested in $1 \% \because!4$, its contre surmomed by a cmpola and oheervatory wall firmishel with instruments. Llere vouths intemifel for the uavy were former'v instructed in mavigit-
tion; lut, in 1839, the eollege was remolelled, and is now appropriated to the instruction of jumbor naval and marine officers in the higher branches of arionce eomineeted with their profession, and everecially the principles and practice of naval frmmery. The officers belonging to this establishment are boarded mid lodged in the collere, bit are borne on the books as part of the complement of a ship of the line in the harbour. Immediately fiming the resillence of the port-admiral is a hamdsome white brick buiding, intended originally for a schond or college of naval architecture, for the education of $n$ 'superior class of shipwrights ;' a plan which, though on no very satisfactory fromme, has since been ahandoned. On the green, in front of the last mentioned building, is a hronzed leaden statue of W'illiam 1II. Niljacent to the eollege is a ehapel-of-ease for persoms attaphed to the dockyard. The latter was, during Inst contury, the seene of several conilagrations. Gne of these, in 1776, was clearly the work of an incendiary, who was convicted and exesuted for the oflones. The dockyard is, lowever, daily oben to the insicetion of visitors who aplly for ailmission at the gite.

I'o the $s$. of the dockyard, and nearer the mouth of the harbour, is the 'frum-wharf', wr arsenal for ordnance stores. This is am extensive and vory complete establishment. As a depoit for cammen it is inferior to the arsenal at Woolwich, lont, in most other respects, it is very superior to the latter. It comprises many extensive and hamdsome storehouses, tilled with nll kinds of ammunition; a neat armonry roofed with eoppere, and containing small arms for $20,000 \mathrm{men}$; a laboratory, and varions other othees, spacions quass along the harbour, and a terrace of excellent revidences for its oflicers, fronted by a fincly planted inclosure. This estahlishment is separated into the two divisions of the ohd and new gm-wharf by the mill-pond; a dammed-up ereek between $1^{F}$ urtsmouth and Portsea, which supplies the moats of both, and also turns a considerable flonr mill formerly attaeled to the victintling office, but now in private hands. 'Ile viethalling department, which formerly occupied some large piles of hillins within the town of l'ortsmonth, was, in 1 ses, removed to Weovil (see Gosponer) ; and its formor storehonses have partly been purehased by merchants of the town, and partly riven place tia a handsome row of modern dwelfings, the new almshouses, and the buildiner of the Plilosophical Soricty. The enstom-honse is an insignificant muiklinir, hat in a convenient situation. The fimetions of governor are exercised by a lieut.grow rnor, who ocenpies a noble mansion in lligh Street, formerly the residence of the port-admiral.
lortsmonth appears to have been originally fortitied ly bilward 1V. Its works were greatly angmented aud improved during the reigns immediately suceceding, and in those of Elizabeth, Charles II, and James II. Under William III, ther were eompletel, nearly as at present, the town being almost wholly enclosed within a bastionel enceinte, the ramparts faced with masonry, and encircled with broad moats, with a glaeis beyoud. Jut, owing to the rise of lortsea, the N. side of these works soon became useless; and, in 1750, the rovermment began also to surround Portsea with works on a still more extensive seale. At present a contimous line of ramparts extends round botli towns, and the belt of fortification is completed by the worlis surrounding (iosport, on the oploosite side of the harbour. The ramparts, being planted with elms and poplars, form the favourite promenades of the inhab; and facing the sea is the I'latform, a fine stone battery, mounting 25 pieces
of emmnon, and commanding an extensive and beautilul view. I'ortsmonth is entered by four, and lortsea ly two, earriage grateways, some having eonsiderable architectural beauty. Besides the town batteries, Spithead and the approaches to the harbonr are defended by Southsea Castle, mill Forts Cumberland, Blockhouse, and Monktom. Southsea Castle, foumded by lleury Vill., nbout 1 m . Sli. Portmonth, is built almost whollyof stone; as are Forts Nonkton mud Illockhonse on the mainland. Fort Cumberland, on the F.. extremity of l'ortsea Island, a structure of the list century, eovers it large space, and has carthen rumparts faced with brick, and barrack-room for 3,000 men. 'The town, its suburbs, nud anxiliary fortresses are garrisoned by the Portsmouth divisions of royal marines and marime artillery, and a certain inmber of infantry of the line. Within the town are several capacions and excellent barracks, and there are others in the gunwharl, at 'Tipmer and Ililsea. I'ortsmouth has a military hospital, and a marine intirmary situated hotween the eustom-house and the fin-wharl: Ihit llaslar llospital for the reception of siek anil wombed seamen, the principal establishment of its kind in the kingdom, is on the opposite side of the harbonr at Gosport (which see). The chicf (ngineering department for the S. and W, of Enirland, and the residences of the commandimts of the marines and engincers, nre among the other prineipal government buildings.

The par. chureh of l'ortsmonth, fonnded about 1920, but prineipally rebuilt in 1693 , is a spacions stone edifice with in square tower, 120 ft. in heirfit, surmonnted by a cupola ind vane, which forms an important landmark. Among other monnments, it Jas one to Villiers, duke of Buckingham, assassimated leere in 1628 . The vicarage is in the patronage of Winehester College. Anljoining the grand parade is the garrison chapel and burying-grommd. In P'ortsea are two chapels of ease, St. John's and St. George's. St. I'aul's, Southsea, and All Saints', Newtown, are elerint Gothic edifices of similar arehitceture, the lormer built in 182.2 , at an expense of 15,4291 , and the latter, in 38.9 , at a cost of 10,4641 . Portsea par. chureh is an antiquated editice at Kingston, alnut $1 \frac{1}{2} \mathrm{~m}$. from the town, and surroumled by a vory extensive emetery. The living is a victirage, in the patronage of St. Mary's College, Winehester. There are numerous places of worship for Independents, Baptists, Wesleyans, Bryanites, Scotch I'reslyteriams, Unitarians, Rom. Caths., (General Baptists, and Jews. The town-hall and gaol together oceupy a large ellitice; the latter, which is elean, convenient, and well conducted, is under the jurisdiction of the borough magistrates. A market-house and exchange, the generat dispensary, savings' bank, workhonses, female penitentiary, benefieial society's hall, literary and philosophical institution, with a handsome edifice, and a good museum and library; Hampshire library with 5,000 volumes, the King's Rooms at Sonthsea, with an excellent bathing estabtishment, Green Row and York Liooms, used for balls, and a theatre, are the other principal builitings of public interest. There are Jancastrian and mational schools. an endowed free grammar school for 50 boys ; and St. l'aul's school, a joint-stock subseription acalemy lor superior classical and mathematical instruction; besides several good private academies, a mechanies' institute, forensic and philharmonic societies, and various charities. On the London road, about $1 \frac{1}{2} \mathrm{~m}$. from the town, is n new and spacions publie cemetery.

In addition to its other comveniences, Portsmonth harbour enjoys an important advantage

## PORTSMOUTII

PORTUGAL (KINGDOME OF)
of opening into the celebrated road of Spitheal, between the Jampshire coast and the lisle of Wight. It derives its name from a sand-bank calleat the Spit, extembing abont 3 mm in a Sla, direction, from the narrow neck or tongue of land on which (iospurt is built. A ship of war was formerly kept moored, as a guard or receiving ship, at the head of this bank; but since the peace this practice has been diseontimued, and the roalstead is merely marked by buoys placed at regular intervals. It is here that shipis iited ont in the docks and harbour remiezvons before gringer to sen, and it is also a secure and conrenient asylum for the Chamel tleet and other Vessels, during the occurrence of storms. lrom its safoty and capraciousness this roadstead is called by sailurs, 'the hirg's bed-chamber.

Inasmuch as lortsmouth depends for support min its being a freat naval port and ursenal, its pwoperity is necessarily greatest luring war. At presint, however, it we eompare it with previous priouls of peace, it may be said to be flourishing. It necessarily has a considerable trado in the importation of the varions articles required in its mumerons establishnents, and for the supply ol the inhabs., and the victualling of the thect.
 sailing vessels muler 50 , and 99 nbove 50 tons besides: steamers, of an argregate burthen of B5x tons. The gross customs' revenue amounted to 23.2, tixl. in 1863.

I'ortsinoutl is connected with Armndel and London lyy a navigable canal, and commmicates with Gospurt ly a thatinge bridge for passengers and carriures, the poperty of a comprany incorporated in lsis. Stumers ply to Livde, Cowes, Lymington, Ilarre, l'lymouth, Dublin, and other jors.
['ortsmonth received its first charter from Itichated l., which was contirmed by various subsequent momarehs. Under the Municipal Reform Aet it is tlivided into seven wards; its municipal ollicers beiner a mayor, $1: 3$ aldermen, and 42 commcillors. It hats a commission of the peace under a recorder, and the boundaries of the manicipal and parl, bor. are co-extensive. I'etty sessions are hedd three times a week, and a county court is established here, before which 9,181 plaints were entered in 1848. Portsmonth has sent 2 mems. to the 11. of C. since the $23 / \mathrm{l}$ Edward I.; the right of election down to the Reform Act being vested in the mayor and corporation, the number of which seldom exceeded 60. The electoral limits were enlarged by the Bonndary Act, so as to inelade all the parish of P'ortsea with the old lorough; and, in 186 in' $^{2}$, there were 4,583 registered electors. Portsmonth is one of the polling places at elections for the S . division of Mimp)shure. Markets on Theslays, Thursdays, and Saturdays. The charter of Lielard I, established a lair in the town, called the 'I'ree Mart,' which lasts for 10 days from July 10 , and is succeeded by a 3 days' fair on l'oitsilown Mill, attended by a great concourse of people.

The earliest mention of Portsmouth occurs in the Sixon chronicle, which states that it existed in $\delta 01$. It probably owes its origin to the sea lawing retired from Porchester, probably the ane. Poutns Aldurni at the upper end of the harbour, on which account the inhabs. removed thither, and built a town at the mouth of the port. It was taken and burnt by the French in 1377, but was soon recovered, and in the reign of llenry Vllt, had become the principal naval arsenal of Ebriand.

Poltrsmourif, a town and port of entry in the U. States, being the larifest town, thongh not the cap., of New Hampshire, on a peninsula in
the Piscataqua, 3 m . from the Allantic, 10 m . LiSE. Concord, aml 50 m . NNE. Bestom. P'op. [2,10) in 1800. The town is well baitt, and having sudfered severely at diflerent times from fire, is now mostly constructed of brick. It las many hamesome honses, and there are several good public buiddings, incholing a tine episcopat church, varions other churches, a conrt-honse, grad, almshomse, acaleny, and athenemm. Its harbonr is one of the best 111 America; it is eompletely land-loeked, and is necessible to vessels of the largest size, having 40 ft , water in the chamel at low tide. It is detended by several forts, and on Great Islami at the W. entrance is a lighthouse, with a tixed light 90 ft . nbove the sea Two bridges cross the l'iscataqua at I'ortsmouth, one of which is one-third of a mile in lengrth On Nary Istamd, opposite the town, is a mavy yard, belonging to the Linited States, with three wet-docks, and other establishments tit for the construction of larige ships of war. l'ortsmonth las a considerable trude, it being the only seaprort of New IIampshire.

POl'T'LGAL (KING1)OM OF), anc. Lusitunit, the most W, state of continental Europe, occupy ine the greater part of the W. portion of the Spanish neminsula, between the 37 th and $42 m$ degs, N. Lat. and the eth and 10th W. long., having E. and N. Spain, and S. and W. the Atlantic. Length, N to S , about 350 m , averare brenith, rather more than 100 m . The kiugdon is divided into seven provinees, the area of which and puphation, aceording to the censms of $[838$, and of 1858 , is given in the subjoined table:-

| Provinces | Ar:a, Sq. Miles | $\begin{gathered} \text { Populaton } \\ \ln 18 \bar{j} 5 \end{gathered}$ | Hopulation in 185s |

| Total . | 36,510 | 3,549,420 | 3,584,677 |

Geographically considered, l'ortugal can be regarded in no other light than as a dependency on, or portion of spain; and, in fact, all the monntain chains and great rivers by which she is traversed originate in the castern and more extensive portion of the peninsula. Ihe prineipal monntain chain, the Sierra de Estrella, runs SW. and NE. from the Spimish frontier, near Almeida, to Cape Roca, near Lisbon, the most westerly land in Europe, lat. $38^{\circ} 45^{\prime} 30^{\prime \prime}$ N., long. $9^{\circ} 30^{\prime} \dot{2} 4^{\prime \prime}$ W. The culminating point of this ehain, near Covilha is $7,0 \geq 4$ feet above the sea. Another chain, the Sierra Monchique, runs across the prov, of Algarve, the most southerly in the kingdom, terminating in Cape St. Vincent. There are a great number of inferior chains, and the provinces to the $N$. of the Doure are especially encumbered with mountains.
The great rivers, the Tagus, Douro, Minho, and Gandiana, have their sourees in Spain, thongh they are joined by some considerable aftluents in their passage through l'ortugal. There are but few lakes, and those ot no importance; but mineral and hot springs are not uncommon. Water, in many districts, particularly in the S., is both scarce and bad; and, in consequence, extensive tracts in the great plain of Nlemtejo and other provinces are nearly minhabitable. The climate is, it generad, milater and more agreeable than in Spain, owing to the height of the movntains and the great extent of coust. In the rugiged traces

PORTUGAL (KINGDOM OF)
 parts keres. the the valleys, and in the s. part of
ine kingilom, the ense is pemerally very diflerent: hat all aloug the eosat the herit is tempered hy the sea breezes. Shaw soltom lies on the low gromil; hut the rains of winter are often heasy aud long comtimend; and at this season the vicinity of Lislow and other parts of the comintry are very subjeet to murthquakes. Violent hurricines are also of frefuerit ocerurrence.
'The gemeral aspect of ' 1 ortugal is similar to that of spain, ancl evell more lasuriant.
-- 'It is a goowly sight to see
What beaver hath done for this dollolous landt What fruits of fragramee hillsil on every tree! What goodly mrospretsob're the hills expand Clitite Harohl, canto t. st. xv.
Thie regctathe prolures are very varions, as well fromi diflimence of latitule as from the great saricty of elevation. Whent, barley, oats, tlas, hemp, and other girmaders of a mortliern latitude, are raised in the high gromuls, vines and maize in those of warmer trmperature, and rice in the low gromuls. The chief fruits atre olives, ormuges, and fenums; but the hat two grow only in the warm and sheltered vallere of the Stand central parts of the kingolom. "the would are extenive: in the S. they comsist primepatly of oak; in the eentral proviners of chestmut, and in the 5 . of seat pine, hermes, and rork trees. dsarve problures the Americtu aloe, date, and other intertrepical prochuts; and loutugal is sumpeed to have a greater number of indigenoms phats that any other part of Burne. (Balli, Essili statisturie, i. 1\%\%.) Silk is iromeneel of very suand quality; and, in Frmeral, any dericeney, whether in vegetathe or animal pronilucts, is to the imputed not to the swil or "limate, but to the indolence and anskilfulness of twe people.

The ayriculture of l'ortusal, though recealy it has lerim to improve, is still, spanking generally, in the mont hackward and degrauleld state inaginathe. A varicty of ciremonstures have conspired to hring almat this result; among which, the leat of the clinate and the want of water, eqpecially in the somd hern provines, have, no doult, a very comsiderable inlluence. Probably. however, the mildness of the climate has heen still more iuginioms than its aridity, for hios has at
 wants of the people. And if wo these powerfal physiend causers we ald the pernicions practice of exempting the elergy and nolility from those difect taxes which were made to fall with their full weight on the coltivaturs; the vast amomen of property in mortmain, and prevented from coming into the hands of those who wonld burn it to the best accomit; the want of a proper methoul of letting, and the comseqnent insecurity of the enerupiors ; the wate of a mamufacturing pulp, and of great towns, that is, of markets fior agricultural proslure; the extreme tadness of the rombs, and the ditticulties in the way of internal commanication; the number of sanins' diy's, fists, and other superstitions ohservances; and the ignorance of the people ; we shall certainly have little canse to womber at the low state of ngriculture in most parts of the comutry.
In the greater purtion of the kinglom the farmers are puite matidnainted with the rotation of colpos, and, one wonld be ahmost dispuseed to conelate, of the diflerences of soil, inasmaely ats they continue $t 0$ raise the same crops indiseriminately from all sorts of hand. 'Their implements are of the chunsiest and rudest description; the harrow mal the hue were, till lately, nearly mo known, aud thrashing was usually jertormed by
trampliner the grain under the fied of horses and cattle. Thomgh, in so iry a comery, the combmand of water and the irrigntion of the lamds lee indisponsable, this, in many extensive districts, is inite uegheted. In conseppernere, the country is in parts but litte neropied, and the traveduer sometimes proceds a distance of 15 or 00 m . withomt dixeovering as mary homses, Tos show the devicienery of the mems of commaniemtion, it may be sulleient to state that, on travelling fíwn Dirantes to the spanish fromiter, alomes the $x$. vile of the 'Tarus, a distance of atwot 1 III! m., there are six rivers to crons without a single bridge, though they are fiordable only in itry weather.
It mist mot, however, be supposed that these

The Pors longer than the binglish.
Constitution.-ake the peninsular kingedoms of Castile and Aragon, loortugal had anciently leer curtes or assemblies of the states, One of thene assemblies, held at Lamegu in 1141, conferred the title of king on Alfonso Itenriguea, who had two years previonsly deleated the Mowrs in the great battle of Ourigue. The cortes at the same time enacted a law lor regulating the suceession to the throne, in which. amony other things, it is haid down that femates shan not be eligille to the crewn, though in the direct order of succession, if they have married a fureigner, and that their marrving a forcigner when on the throne shatl be considered equivalent to an act of abrication. The pawers of the cortes corresponded, in other respects, with thuse of similar assembides in other countries; but their privileres and thase of the sovereign were very ill detiisel; and the latter contrived, in the course of time, to engross all the powers of the state; the govermment of lortugal became, in all respects, as desputicat as that of Spain; and the last convocation of the Cortes took place in 1697. (See L'Art de Veritier les Dates, part 11. tem, vii. $1-10,8 \mathrm{co} . \mathrm{ed}$. )
Frem this period down to the administration of the Marguis de Pombal (1750-17a6). (very abuse continued to multijhy, and Portugal was distinguished only by the imbecility of her govermanent, the power and prolligacy of the nobility and elergy, and the poverty and indolence of her people. The Marguis de lombal suppressed the order of the Jesnits and contiseatel their estates; he also suppressed some of the more oppressive privileges of the nobility and elergy, and etlected varions important reforms in several departments of the administratiom. In other respects, however, his policy evinced the narrowest and most illiberal views; and, on his dismissal from power, most part of the old abuses in the goverment revived, and the country continued in its former state of apathy and abiscenent.
The events connected with the great war in the peninsula, the emigration of the court to lras.' the Jong continuance of the Eaglish armies in the country, the organisation of the d'ortuguese army on an improvel footing, and the intluence of thi changes in Spuia, laid the foundations of a new order of things. The nation was dissatistied with the continued residence of the court in Brazil, which, in fact, made P'ortugal a dependeney of the latter, and the wish for some fundamental changes in the frame of the government beeame general. At length, in August, 18:20, a revolution broke out, and a free constitution was soon after established.
The present fundimental law of the kiluglom is the 'Carta de Ley;' granted by King I'edro IV., April 29,1826 , and altered by an additional act,
dated July $5,18 . j 2$. The erown is hereditary in the female as well as male line, but with preference of the mate in case of equal birthright. The constitution recoguises three powers in the state, the hegishative, exceutive, and 'moderating' anthority, the two last of which reside in the sovereign and his responsible ministers. There are two legislative chambers, the 'Canara doy Dares,' or llouse of 1 'eers, and the 'Camara dos lijutadow,' or llatse of Commons, which are conjunctively called the General Cortes. 'The peers, unfimiteit in number, but actually comprising 115, ure named for life by the sovereign, by whom also the president and vice-president of the first chamber are nominated. The peerage was formerly herediary in certain families; but on May 27, 186.t, the cortes passed a law abolishing hereditary suceession. The members of the second chamber are chosen in direct election by all citizens possessing a clear amanal income of 133 milreis, or 222 . The deputies must have an income of at least :300 milreis, or $89 \%$ per annum; but lawyers, protessors, physicians, or the graduates of any of the lenrned professions, need no property qualitication. Continental l'ortugal is divided inte 37 electoral distriets, returning $15 . t$ deputies, to which Madera and the Azores add $2 \overline{0}$. Each deputy has a remuneration of about 10s. a day during the sessinn. The amual session lasts three months, and fiesis elections must take place at the end of every four years. In case of dissolution, a new parlimment must be called together within thirty days. The general cortes meet and sepurate at specified periods, without the intervention of the sovereign, and the latter has no veto on a law passed twhe by both honses. All laws relating to tinance and general taxation must originate in the chamber of deputies.
Justice is alministered in the first instance by the Juizes de Fora; and appeals are made to the corregidors of the provs., and from these to the Cusa de sumplicacão nt Lisbon, and the Relugioo do porto at $\mathrm{O}_{1}$ orto. All these tribunals are, however, subordinate to the royal court in Lishon. Cireat abuses are said to exist in almost every department, both in the judicial and administrative branches, the inadequacy of the salarics lealling to the aceeptance of bribes.
The religion of Portugal is the Roman Catloolie, unalloyel with any tant of I'rotestantism, but contributing but little if aaything, to the morahityof the people. The luguisition no longer interferes with frechlom of conscience, having been abolished in 1821. The Portugnese church is under the jurisdiction of a patriarch, with extensive Imwers; three archbishops, and fourtcen bishops. Notwithstnading the hostility of the Marguis de I'omoal to the monks, who used to say of then that they were la vermine lu phes dungereuse qui paisse ronger un étut, their numhers previously to the late revolutions were estimated at abont 8,000 , and the revenne of the comventual establishments was supposed to exceed $1,200,00 \%$. a year. However, an end has been put to this state of things: the monks at present have to support themselves as they best may, on a small stipend that has been allowed them, and most of their property has been contiscated.
'The lauguage of Portugal is merely a dialect of the Spanish, diflering but little more from the latter than Seotch from langlish. Education is, nt onee, little diffiused and of bad quality. There is a miversity at Coimbra; besides which, serenteen high seminaries and numerous schools exist, aflording instruction to about 33,000 pupils. With the exception of Camoens, few I'ortuguese authors are known beyond the limits of their country. with preferliright. The lortugnese are bint little indebted to the neeonnts given of them by travellers. bint their character, as drawn by Dil Chatelet (Voyare en I'ortugal, i. B9- 7 ), thengh not very ilattoring, is held to be mearly correct. " 11 est, je pernse, proll ale perple phas latil que celai de lormgal. Il esi petit, basame, mal conformé. L'intericur répond, an feméral, assez in cette reponsmite envelople, surtont it lisbome, di les hommes paroissent réunir tons les viees de l'âme et du conis. 11 y in, nu reste, entre la capitale et le nord de ce rovanime, me diffrronce marquie sous ces deux rapports. Dins les provinues septentrionales, les hommes somt mosins moirs at moins laids, plus franes, plus lians dams la sucisté, bien jlus braves, et plas lalurieux; mais eneure plas asservis, sil est possiblis, nux pröjures. Cette différence existe égatement pur les lemmes; clles sont beanconp plas bhimehes fue celles dus such. Les Portugais, eminitéres en femeral, sont vindicatifs, bas, vains, raillears, presumptueux à l'excès, jaloux, et ignorims. Apre's avoir retracé les chéthits yne j'ai cern apercevoir en eux, je serois injuste si je me taisois sur leurs bemmes qualités. lls sont attacheis ì leur patric, amis gencrems, fideles, sobres, charitables. Ils suruient bons chrétiens, si le fanatisme ne les areuflopit pas. Ils sont si accontumés nus pratigues de la religion, quils sout plus superstitiens que hivots. Las hitalgos, on les grabils de lortugra, sont très-bornés dans leur éducation; orfucilleux et insolens; vivant dans la pilus grame ignorance, ils ne, sortent presque jamais de leur pays pour aller voir les antres peuples.'

The Spaniards and l'ortugnese regard each other with a deep-rooted mational antipathy.
'Well doth the Spanish hind the difference know 'Twist him and Lusian slave, the lowest of the low.'
'Strip a Spaniard of all his virtues, and you make a good l'ortuguese of him,' says the Spanish proverb. 'I have heard it more truly said,' says Dr. Southey (Letters, ii. 6.I), 'add hypocrisy to a Shamart's vices, and you have the I'ortugnese character.' The two nations differ, perhaps purpusely, in many of their habits. 'Almost every ham in Spain smokes: the Portugnese never smoke, but most of them take smuff. None of the Spmiards will use a wheelbarrow; none of the l'ortuguese will carry a hurden : the one says, "It is fit only for beasts to draw carriages;" the other, that
"It is tt only for heasts to carry burilens." In one raspet, however, their tastes are identical, bull-tights being quite as pomar nmong the l'ortugnese as nomong the inpaniarils. The statements of another traveller, Scmple, as to the lortugnese elinracter, coincide with those of In Chatelet. - The l'ortugese are generally alark-complexionol and thin, with black hair, irascible and revengeful in their tempers, and eager in their gestures ont trivial wecasions. They are also said to be imbolent, deceitlinl, and cowarily; lint they are timprate in diet, and that may he classed at the head of their virtnes, if, imped, they have many more. They have no public spirit, and, consequently, no national character, An Englishman, or a liremelnman, may be distinguished in furcipn countries by an air and manners peculiar to his nation: but any mengre, swarthy man muy pass fur a lortuguese.' All classes serm to dospise Cleantiness; and lislon and the I'ortughese towns rrenerally are, certainly, entitled to the mot vary onviable distinethon of being abont the tithliest in Earope. The morals of both sexes are saill to be lax in the extreme, and assassimation is a common offence. But the fair presumption is, that, under the benelicial inthence of motern progres.s, the aboses that have thepressed and degraded the nation will be extirpated; and that the l'ortaghese will once more recover their ancient place among European mations.

History.-This combtry, anciently called Lusitania, was taken possersion of by the liomans about anno 200 n.c., previonsly to which, some Plumitcian and Carthaginian colonies are supposed th have been planted on its shores. It remained a Roman province till the lifth century, when it was invaled by the Sueri aml Visiroths. The Moms laming in the $s$ of spain in the carly part of the eighth century, and meeting with little resistance from its thinly spreal population, easily overran the greater liart of lortural ; lont tha nature of the country fivouring the operations of the inthabitants, they were not long in reoworing possessond of its more northern and mombtainots portion. The name of Lasitania seems to have heen exchanged abesut this perion for that of I'ortacale, subsequently changed into l'ortugal, from the circumstance of Oporto, the principal strunshold of the Cbristians, beiner then called Calle, or Porto Calle. (D'Awille, Etats Formés en Europe, P. 192.)

In the 11 th eentury lortugal became an carldons, under the kingrom of Leon and Catile; and during the 12 th it was crected into an intepentent kingilom. Its power now rapilly increased; and by the acquisition of Algarve, in 12.19, it arrived at its present limits. In the latter half of the 14 lh century the voyares and discoveries commenceil which have shed immortal lustre on the lortugnese name. During the lith century, Mateira, the Canaries, and Azores were discovered and colonised; and, in 1498, Vaseo de Giman doubled the Cape of Good Lope, ant opened a new route to India. In the following century the lortuguese explored the coasts of Newfountland and America; took possession of l3razil; numle important aequisitions in India nad the l'ersian Gulf, and discoverel the Noluceas; by which successful enterprises they mompolised the commerce of the East, and a great share of that of the West. Int the prosperity of lourtugal was short-lived. After the disastrous detcat ind death of King Sehastian, in Africa, in lizk, Philip II. of spain seizel on the kingrlom, which remainel a Spanish prov. from 1580 to $16.10 ;$ anll when she regitined her indepenilence, the grenter part of her commere, and her foreign possessions,
were in the bands of the Dutel. But, motwithstanding the cmamerimation of Irazil, Port!yal still preserves the Azores, Maturia, C'ape ile V'erol. and Ginimea lshands; the settlembents of Augena and Mozamhigue, in Mrica, mad those of Cion,
 tugal was invaded by the lirenelt, when the royal family remeved to lirazi). doblt. dying in
 which he hell till hisia; ; when, alter a lempthenem? contest, boma Maria II, finmader of the still raiguing home of liragalazi-Coldarg, was estal)lisherd in its prosessing.

 burg, map. reg., at the cumbluence of the liathe with the llaved, in an inland formed be the two rivers, a canal and lakes, is m. aW, berlin, on the railway from berlin to Magideburg. Pupb.
 Doutam has heren mpropriately termed the Virsaillen of l'russia, It is a faviourite roval residener; streets strapha, brode, and well paved; and the lomese, thongh frequently small, and mot very commondions wilhin, have, fior the most part, splentind fromts. It is encompassend he walls and madisales; has mmermen grates and brideres, stme of which are highly ormamental; and is dividend intu three purts, the whand mew thens: and lirederidkatiatt. The most remakable editices are, the joblate, a magnitieent structure on the liaver. havinis ntarhed to it a theatre, a memuserie, and - parimes stables; the chureh of the rairnsint. in whind are depowited the remains of lirellerick the Gireat ; the chureh of St. Nicholas, mat the great military urpham hospital. Ia the what market-phace is am whelisk of red sibesiam marble. of feet high, oll a pudextal of white hatian marble; on the hate are inseribed the names of the great elector and his sucessors. The barracks are very extensive. There is a lycem, a military schom, with varims publice sehonis of inferior mote, and sumdry literary estalhishments. There are ahsh. exclusive of the nilitary orphail hespital, mentimed alove, in intimary and workhones. lobsdam was formerly more of a barrack that of a town; but for it gonel many years past it has been distinghished in virrions hrameles of manufacture, such as that of silk, hardware articles, and arms. Down situated on a mavigable river, commmiating bey canals and railways with many large towns, andi, with the Elbe and the Oder, it has a goold deat of commerce.
lonstam is a very old town, having existed in the sth ecmenry: it did not, however, become a place of nhe importance till the clector lirederick Willian selected it for a residence, and began the palace. It was materialle improved hy kiug Frederick William 1., but, like Berlin, it owes it principal emhellislonents to the tate and liberality of Frederick the Cireat. In its chvirons is Sans Sourf, the favourite residance
of that illustrimes prinere, and the place where he expired, on the 17 th of Amphat, lixit. The new patace and the marble patare are abor in itw vichite.
PoLtiflebebsie, a town amb riveport of the L. Stater, ro, New York, wh the llaisom, in
 riser-lmank here is 200 ft . in height, but the town has dive convenient landing-places. It owrongins
 have hexill laid out, several of whish me well paved. Nhany of the stores in the main strent are equal to thene of the Bromatwe in Nive York, anil momerous private homses cxlaihit lueth wealdo mind taste. There are momeromathurehes, a comethumse, a gand, a co. work hanse, an ncmatemy, mad a Lamonstrim selowh. Ponghkeppie has a minsiderable trate, and commanicates regularly. leve steam beats, with Xew Xirk, Newhury, amdinher towns. It was fimnted live some Duich fímilios, in lata, and incorpurated in lsen.
PRAGLEE, a dity of Wohemia, of which it is the calp, near the centre of the kingedm, on the Moldnu, by which it is intersected, 7il m. sist: Dresten, and hise m. NE. Vimma, in the railway
 The city stmuds in a basin, surrmandel om all sithes by row is nul eminenese, minom the slong of which the buildings rise tier alfor tier, ns they repele: from the water's alge; and few dities of Austria, or, indeed. of any cometry, have so pranil mul imponing an external apparamere. It is dividerl into finer quarters, of whicl two, the Alsatadt and Xenstudt, are one the right, and the others, the Kleinseite and IIradsehin, on the left hank of the: Mohbin. The Alstant, or most ancirnt pert of the eity, st metehes almar the margin of the river, and for a considerable distance np the ascentinn promad: it comprives the mivarsity mal hearilolinhopis palave. the municipality, the principal churches ama pmblic colitiese, the theatre, and all the superior shons. It in the distrint of commeres and pelueral aetivity, amb is crowded with a dense and active popp. lis strets are semerally narruw,
 and elowny; and the private lonillings, matally of staceod brick, are black with age and diri, and so lofty as to exeluto the hight from the avenues lietween them: but, om the other hamb, there is an air of amtipuity, and a singularity of' arclitecture alomit many of the colitioes, public and private, that renders them att once venerable and inturesting. Ther oful phaces are ofteln surrumbled hew howy arealdes, beside which ars the churelies or pmbice buithuges, exhibiting it fantantic mixture of Giothic and hallian demo rations; while at every turn the eye is met by sume memorinl of histhrian events. beymb the Altstadt, surmumbing it on three sides, inul sup: rated from it only by a large wide strect ternend the Graben, from its having loen formerly the city ditch, is the Neustall (new city), finmuled by the emperor Charles IV., the strects of which are much more open and spacions, and are generally rectangulir. Here are the vast coments, hospitals, and other publie millibugs, which owerd their maguiticence to the desuits, but the hamens are pors; and the imbalatants, chiclly medhaties, artisams, and traders of the lower cliss. At une extremity of the Nenstadt, up the river, is the fortress and arsemal of the Wiseehrat, wrectel on a blutl rock, and comected with the line of works which extends in a curve belinut the whl and new eity, embracing them buth, and dexcending to the river at each extremity. Un the on'masite bank of the Mohditu, the surtiare of the ground is for a small space comparatively even,
behind which arises $n$ range of high, bohl, eragey hills. (On the even Nince, and partly $\quad$ II the anecont, is built the Kloluseite (small wile): this is the quarter of the arintonracy; in it are the pultures of the anefent lohemian molles, with uttucherl gardens and shrubheries, which often extrud high up the irregular ascent hehind.

I'lie lofty rifige abuve the llradsehin firma a marnillecent termination of the prospect, as viewed from the bridpe below or from the opgosite side of the river. IVere, on the summeit of a lomg bold emincence, in the vast palare of the old Ibobemint monarcha, and close lichind it rive the choir and tower of the cathedral. Further on, along the liall, are groajs of stately edilices, amal beyond these arain may be seen, on a loftier point, the Sing l'remonetriternains monastery of Sitahow, with its lolity towers and dark thick groves overhaneritig the river. 'The quartore of l'ragise on the laft, like those on the right bank of the Molina, are inclosed by fortitications, lut these are of litte streupth, and were raised by Charles 1 V . merely to ghe employment to the worklup popilation. na the chance of invasion was then but inconsiderable.

The liridge which connects Altatadt with the Klcinseite, the only one hitherto constructed within the limits of the city, is one of the lomgest in Disatria. It is a ponderoms structure of stone, 1780 ft. in leugth and 35 in breadth, with a lonty tower at each extrenity, and colossal stone statues, single and in rrobins, among which is precominent that of St. Joln Nepomuck, the tutelar suint of the city. Not far from the brigge, and attucheal to the Altstadt, is the Judenstadt, a district alloted to the dews, whose number is about 8,000, living, as usmal, in crowded tilthy abodes, forming a labyrinth of narrow winding strects.
'I'lie IIradschin, or palace on the lill, is a vast pile, more remarkable, however, for extent than bemuty. It is said to be larger than the pulare nt Viemia, and to comprine 4.10 apartments: inchading the hall of Ladislans, improma nudiencerom, and hall of asscimbly for the states. On at harrow terme immediately helow the palaee, two whelisks mark the pot where the iniperial commissiomers and their seeretary, sent thither with the most intalerant edictes ngainst the lashemian I'rotestants, were indignanly thrown ont of the windows of the green chaniber, hy the deputies of the kingom, in Jlil8. Not withstanding the great licight of the wimbows wheme they were ajected, the eommissioners escapurl minurt, by lalling, as is said, on a dunghill. 'This event miay be regarded as the commencement of the :30 years' contest, curled by the peace of Westphatia in $164 x$, which, while it serured the Jiberties of the rest of iermany, untiortmately consummated the slavery of liohiomia, which lind long been foremost in frcedom nud toleration. The cathedral, hegim in 13 s th and tinished in 1. As 6 , is within the precincts of the IIradschin. It is a tine specimen ol Gothic architecture, and is surmonited by a lantern-crown similar to that on the tower of Sit. (iiles, Edinburgh. The choir, built by Charles IV., nol the untinisheil chapels that surromed it, are mud admired. In the eathedral are the tombs of many liohemian sovereigus and other distinguished individuals; a tine altar piece amb other pinintings; mosaies, nind the costly shrine of St. dohn Nepomenck. Others of the mumerons churches, as that of the Theinkirrhe, in which is the tomb of the famons astronomer, Tycho Irales, who died here on the 18th October, 16011 , are interesting for their momiments. I'rusne had formerly a grent momber of
convelits, but Joseph 11. scolarised most of these
establinhmenta. Among the chapists is one which is an exact repreventation of that of laretto.
The cown-hall, neselnd, military hospital, military orphan anylum, lying-la hompital, jriméjpal workhonse, and theatre are mmongat the dinest at the publice edilices. Of the private palaces, that built by the fumons Wallenstein, duke of Friedland, is the most remarkable. 'Thomgh mithifhed, it is of immense extent, 100 houses having been pulled down to make room for its alto. It atill belongs to a collateral branch of Wallenstein's familyt the npartments and furniture, which are sald to remain in their original state, nre shown to strangers, and the park attached to the palace is thrown open to the public; but the resideners of the nolility in the Klefnseite are montly deserted. They are generally large nery buildings, some, however, with a goond dend of architectural decoration; and the dirty rablishy appearance of their loriek walls, lualf covered with worn-ont stuceo, conveys the iden of prisous or joorhouses rather than of musions of distinghlished nobles. Their proprintors have transferred themelves and their wenlth to the Anstrian cap.: leaving to the Bohemians these sad memorials of times, when the court of I'rague might lave looked with seom on the inferior splendour of Vieman. let in some of these desolate aboles, covered with dust and rubblsh, there are immonse collections of books. 'I'se Labkowit\% library ls said to comprise more than 70,000 vols. the Kinsky 40,000 , the Klebelsberg 18,000 , the kilam Martinitz 21,000 , and others equal or superior numbers. In some of these palaces a few rooms are titted up and occupied during winter liy a minor lirunch of the fumily, and in many of them are ofllees for the stewards and managers of the bohemian estates; but when, on particular oceaslons, as, for instance, at the coromation of a sovereign, it is requisite for the proprictors to visit Irague, they usimlly occupy npartments in same hotel, their cwn palace loring puite untit for their recpition. There are, however, a few exceptions to this gencral emigration. Here and there may be fomal the mansion of some great noble, who still upholds the local dignity of his ancestors; and below these highest mugnates are a comsiderable body of resident nolles, inforior in wealth, though perhaps not in blood, who take a purt in the provincial administration, and who farm nmontr themselves, in the winter season, an arrecable and clegant socicty. In the palace of Comit Nostitz is a fallery rich in calisuet pictures of the butch and Flemish masters; and in that of Comint Steruberg is the mational musemm, comprising extensive collections of paintings, hooks, fossils, and matural ohjects. 'The library, in the strabow monastery, one of the finest apartments ol'its kinul in Germany, comprises a collection of about $\dot{3}, 000$ volumes.

The miversity of lrague, fommed by Charles IV. in 1348 , occupies a large editice termed the Carolinum, and is remarkable as the dirst great public school established in Germany. The students were formerly divided into 4 nations, amd are said, though there can hardly be a dombt that the statement is exaggerated, to have amometed, early in the loth century, to 40,000 . In conacquence, however, of a measure proposed, in 140!, by Ilnss, who was then rector, to abridge the privileges of the foreign students, more than half the pupils attending the miversity withdrew to Leipsic, Hedelberg, Cracow, and other seminaries. The Crarolinum is now exchusively devoted to instruction in medicine, law, and the sciences; while education in theology is conducted in the Clencentinum, an immense building, foundel by

I'liENKI, ow, a town of I'russia, the chicf place
 at the point where the river liekre rampen from the lake of thint mume, ite m, WSW. Stettin, on the railway from Stettin to Wismar. Pop, $11.14,0$ in Ixil. 'Itre tuwn is thrivimg and well-hailt: has varions chorehom, selomin, and luspitals, a valmble pulilic librars, and mandfuentes of linern, wallens, and tobacer, with brewreries and tanneries. In IXUf, a emollict fonk plate in the smburhes of this town, which embed in the surremer to the
 mattle of Joma.
 sony, ath. P'usowium), a rogal five town, formerly the cajo ol 1 langary, immediately within its $W^{*}$. frontice, calu, "o, of its own hame, oll the N. lank of the Dannle, 31 ml . Fi. hy S. Vienna, on the railway from Vionua to l'estí, l'ulo, di, xibis in 1857. The town stretebes along the banks of the bannie, and oflers a great number of handsone binildings. It has, however, more of the rharacteristies of a ticrman than 11 limgurian city, and has few public: bitdings worth notice. The most conspictuons of the latter is the eastle, a huge square brick structure, built upon a height above the town. It is now a ruin, having been burnt in 1811, by an ltalian regiment in the Froneh service; it is, however, memorable as the seene of the appeal made in 17.11 by Maria 'lheresa to the Ilumarian states, Which was so gencronsly respmaled to by the latter. l'he hall of the diet, or lomulhuts, is a plain unpretending edifice, both extermally and intermally. The cathedral, a Gothic ediflee, supposed to date from the 11th cenfury, and in which the kings of IInngary are erowned ; the combty-hall, German theatre, barracks, and archbishop's palace, are tho other prineipal public buiddings. There areseveral hamdsome noble residences, but they are seldom oceupied, for I'resburg is not a favourite place of abole with the Jomgarian nobility. Presburg was formerly surromided with walls, but it has lomer ontgrown these, nud they are now mostly demolished. It is a bishophs see, and the rusidence of the archbistoop of Grin, primate of Hungary. It has a Kom. C'ath, neademy and a Calvinist lyceum, both possessing good libruries; a Cath. high gymnasium. Cath. seminary, college for poor students. and various other public schools; is haspitals, inchuding one supported by the Jews, who are very mimerous here, and have a quarter to themselves; and many charitable institutions, $\Lambda$ tine library,
belonging to Count Appony, is open to the public. The mamufactures, which are varions, include silk and woollen goods, saltpetre, rosoglio, and tobaces; and the town has a large transit trade in corn, linen, and IIungarian wines. Immediately outside the town is the kinigsberg (kime's mountain), a suall circular momed to which the king of Jhngary formerly went to perform an important ceremonys: inmediately niter his cormation. A very beantifill and fertile country extends along the other hank of the Danule, opposite l'reshurg; and on that side are the favourite resorts of the inhabs.; the promenade in the Au; publie gardens; and arema, or theatre in the open air for national perlirmances.
l'resturg is very ancient. Joseph II, transferred its previous title of eapital of linngary to Buda. The treaty which gave Venice to the French and the Tyrol to Bavaria was concluded here in 180\%.
Plesicco'l, a market town, par., and township of Bugland, humd. W. Derly, en, Lancaster, 8 m . L., by N. Liverpoel, and 23 m . W. by S. Manchester. Pop. of par. 63,540 , and of township, 5,136 in 1841. Area of par., 3.,940 neres; do. of township, $\because$ IO acres. It is situated on high ground, over a large and rick coal-tield, and eonsists of one long princiןal street, well paved nad lighted with gis, sin the old turmike road between liverpool and Manchester. The principal public buildings are a town-hall, sessions-lwnse, prison, and mechanies' institute. The pror. churel, an ancient structure, has a modern tower and steeple 156 ft . in heipht, forming a conspienons olject to the surrounding country. The living is a vicarage, of the amual value or X931., in the gift of King's College, Cambridge, to which the manor belongs. In the out-townships are numerous distriet churehes, the patronage of $t$ of which is with the vicar. There are places of worship in the town for Wesleyan and lrimitive Metholists, Independents, and Unitarians, besides which there are within the par. 3 LRon. Cath. elapels, and a great number of meet-ing-houses for different denominations of dissenters. A grammar school, with an endowment producing lliel: a year, has about 30 fomedation hoys (sons of iuhabs.) with other pay seholars, those lourn and celucated in the par. having : preference to 7 fellowships and several grood exhishitions at Brasenmose College, Oxford. Several ah ishouses, erected in 170x, furvish lowlging for 19 old women; and there are numerons money charities. The other benevolent institutions are a ladies' chanity, bible society, and savings' bank.
P'riseot has long heen celcbrated for its mannfacture of watcli-tools and movements, in both of which branches it greatly excels; files, also, of first-rate quality, and engravers' tools, are made hore. 'The manifacture of coarse earthenware has for many years been carried on, the chay of the neighborthood heing well adapted for such a purpose. Conl-mines are wrouglat in every direction round the town; it is estimated that upwards of 2,000 men are employed in the collieries within the par.; and liverpool receives from Jrescot its chicef suplly of coal. Many of the out-townships are very jopulous, St. Helen's and Eecleston having attained to some importance as manufacturing towns. Irescot has petty sessions, and a baronial court for the re covery of small debts. Markets on Saturday, and fairs on alternate Tuesdays.
PILSTTEIGN, a parl, bor, and market town of S. Wales, hund. New Radnor, co, Raduor, near the S., hank of the Lug, in a fertile and well-cultivated valley, adjoining the contines of Ierefordshire, 12 m . E. by N. Leominster. The par. of I'resteign, which exteuds partly into Wigmore hund., co.

ITereford, had 2,383 inhnlss in 1861, of which the parl. hor. had 1,743 . l'resteign is a well-built town, and, notwithstanding its limited size, is the cap, of the co., the assizes and quarter sessions being held in it. The chureh, which is very ancient, has some curions monuments and tine old tapestry. The living, a reetory of the annual value of alout 8001., is in the gift of the Earl of Oxford. The Wesleyan and Primituve Methodists, nud Baptists, have phees of worship. The co. hall is a haudsome strueture, and there is also a co. gaol and a free-school. The latter, fomuded and liberally enlowed in the reign of Elizabeth by a clothier of the town, furnishes a plain English clucation to between 50 and 60 bays; and there are other minor schouls and Sunday sehools attached to the church and the Werleyan connection. At the N. end of the town is a fine circular monnd, hail out in public walks, presented to the inhabs. hy the Earl of Oxford. P'resteign mites with New Ridhor and other small bors, in sending 1 mem , to the II. of C. Registered electors in the whole bor., 401 in $186 \overline{0}$. It is govenned by a bailiff and constabics.
'The liev. Richard Lucas, author of the 'Enquiry after IInppiness,' was a native of I'resteign, having been born here in 16:15. The work now referred to, which has passed throurh a great number of elitions, and is still held in considerable estimation, was written after the author hal becume hlind.
IRESTON, a parl. and mun. bor., market town, and par. of England. in its own div. of huml. Amounderness, co. Lameaster, on the N. bank of the libhle, 19 m . S. laneaster, 28 m . NNE. Liverpool, and 211 m . NWN. Lomdon by London and North Western railway. Popl of parl. hor. 82,980 in 18(i). Area of parl. bor: (which comprises l'reston and Fishwick townships), 2,560 acres. The town, which consists of a broad principal street, ruming NL: from the river, erossed by several others in difterent direetions, is well built, well paved, with haudsome dwelling-houses and thriving factorics, having a pertect drainage, and good roads leading from it. The streets are well lighted with gns, and there is an alumdant supply of water. The market-place, at the junction of Fishergate and Friargnte, comtains about $3,000 \mathrm{sq}$. yds. The public buildings comprise an elegant court-house, erected in 1826 , a town-hall, built in 186i3, from designs of Mr. (3. G. Scott; an exchange or market-house, as-sembly-rooms, thentre, borongh prison, House of lievovery, and a large comty penitentiary. The churel, origimally erected in the 16 th century, was rebuilt in 1760: the living is a vicarage, of the ammal value of $665 \%$., in the gift of the trustees of' IInlme's charity. There are also 11 district churches, chicfly of modern erection, and several others have been built in the ont townslips. The places of worship for dissenters comprise four for Rom. Caths. (a numerous and increasing body), and others for Wesleyan Methodists, Independents, Unitarians, Lhmingdonians, Primitive Methodists, Baptists, Saulemaniuns, and the Society of Friends. National schools are attaebed to the several churches; and all or most of the dissenting places of worship have large Sunday schools, furnishing religious instruetion to between 7,000 and 8,000 clibidren. A grammar school, founded prior to 1688, has an endowment of 501 a y year: there is, also, a partially endowed blue-cont school, and several day and infant seloools, supported by subseription. The other charities comprise nine almshonses, and several money bequests; a dispensary, honse of recovery, built in 1829; provident society, work-

The work now through a great helil in consider$r$ the anthor had
n. bor., market its own div. of aster, on the N. Lancaster, 28 m. WN. London by ailway. Pop. of rea of parl. bor. Fishwick townwhich eonsists of og Nl. from the ni diflerent direcwith handsome ctories. having a leading from it. gas; and there is 'he market-place, Friargate, conpublic buillings crected in 1826 , designs of Mr. arket-honse, asprison, Itouse of nitentiary. The e l6th century, is a vicarage, of gift of the trusare also 11 diserection, and a the out towndissenters com merons and inesleyan MethoIuntingdonians, Sandemanitus, onal schools are and all or most (ii) liave large ous instruction Iren. A gramhas an endowa partially enveral day and scription. The Imshouses, and asary, house of society, work-
house, and savings' hank. Among the literary istablishments, the first phace is the to the l'reston Institution for Ditlusing Eseful Knowledge, which has a library of abont 3,000 vols., and ant excellent musemm. The I'alatine and Dr. Shepherd's libraries are open to all classes, and the town has a puhlic liw library. An agricultural soriety was foumaded in the year 1811. Avenlam Walk, on the summit of the hill which rises from the loinks of the Ribble, is a fivourite promemade, and is kent in order at the cost of the corporation.

Preston, from its central position, its vicinity to an important coal ristrict, and its extensive means of communication with the interior by canals and railways, mited to the skill and enterprise of its citizeus, has of hate years rapidly incrensed in wealth and !oplo, and is now one of the ereat seats of the eotton manufacture. The mamufacture dates from the year lata, and at present romploys about $2 x .1000$ hands, including the trites conmected with it. The manufacture of linen eloth, formerly the priucipal branch of industry in l'reston, is still pretty extensively carried on, and cmploys aboit 9,000 hamds. It has also numerous iron fomdries, and establishments for making machinery and other articles. l.eather is tammed in considerable qumbities; and there is a small fishery on the libhle, which abounds with salmon, smelts, and eels. The liblule is navigable at spring tides, as far as Preston-marsli, for vessels of 250 tons. The mavigation, which formorly was much impeded by sand-banks, has beris improved by a company incorporated in 1s:37-3s. The lancaster canal, formed in 1796, passes the town: and it is comected with other parts of the co.. and of England generally, by the North Luion railway, whieh crosses the libble on it viaduct of tive arches, is ft . above the river, the Lancaster and l'reston railway, a portion of the erreat north-west line, the I'reston and loongridge railway: the lholton ind Preston railway, and the I'reston and Wyre railway, which hast eomects it with the new sea-port if Fleetwood, at the mouth of Wyre harbour, now rapidly rising in importance. Large markets on Saturdiy, with others on Wednesday and Friday for tish, batter, and vegetables. (ireat fairs in Jannary. March. August, and November, the first of which called the 'Great Saturday,' is celehrated for its show of horses.
l'reston is a bor. by preseription, and received its first charter from II Pury II. Ily a subsequent charter, granted ly Ileury IlI., the niticers of the bor. were mothorised to hohd a guid merehant for the renewing of the freedom of the burgesses, and other purposes. This privilege is made the oceasion of great festivity. For a long time after their tirst institution, the guilds were beld at irregular periods; but they have now for more than a century been celebrated every twenticth year, commeneing on the Monday next alter the decollation of St. John, which generally happens in the last week of August. I'rocessions of the corporation, and the dillerent trades in characteristic dresses, as well as of ladies, and females emploved in the factories, take place on two of the days; and the amusements, which are varied and interestiug, continue for a fortnight. Isut for civic purposes the guid hooks are open for an entire month. Under the Municipal Reforn Aet, l'reston is divided into six wards, its municipal ollicers being it mayer and twelve aldermen, with thirtysix comeillors. Quarter and petty sessions are held muder a recorder. Quarter sessions for the hunds. of Amounterness, Blackburn, and Leyland, are also held liere, and there is a county court.

Preston hias sent two mems. to the II, of C. since the reign of lidward VI., the right of voting. lomis to the Leform Act, being in the inhabs. at large. The bomblary Aat enlarged the electoral limits, so as to include the township of Fishaviek with the old bor. Heg. electors, 2,(6i) in 18(i,
l'reston is supposed to have risen on the deeay of the aneiont Rerigemium, or Ribchester, a citynow rednces to the condition of a mere village. about 11 m . higher up the river; and it derived its mame of Prist's-turn from the munber of religions honses entablished here, and ol which there: are still some remains. It was partly destroved by Robort IRruce, in 132.2 . In the parliamentary wars of Charles l., its inhals. declared for thi king, and it was bexiered and taken by Sir Thomas Fairfas. In 1ing, the dacolite insurgents took prossossion of the town, and rected barricades for its defence; but, after a lorave resistanee, they were compelled to surrender to the rovalist force under General Willes. In 17his, Pieston was visited by the Pretender, on his retreat; lont he was eompelled to withilraw on the approach of the Dake of C'monerland.

PRESTONPANS a bor of haromy and sca-port. town of Scotland, co. I Faddington, in the shore of the Frith of Forth, $7 \frac{1}{2}$ m. E:. Ediulnurgh. J'op. 1,57 in 1861. The town is strughling and illbuilt. consisting principally of a single street parallel to the Frith of Forth. It derives its name from its having, for a lengthened perion, had a mumber of silt-works or poms fior the production of salt by the evaporation of the seat water, and for the retining of rock salt. The hatter branch of the lusiness is now the only one that is carried on. It has also works for the manufacture of coarse pottery: There are extensive ogster beds in the vicinity of the town, whence the Edinhorgh markets derive a large proportion of their supply. Morrison's Ilaven, the port of l'restompans, about $\frac{1}{2} \mathrm{~m}$. W. from the town, is a small ereck, with not more than 10 ft . water at springs.

Near this villige, on the 21st of Sept. 1745, the roval army, under sir loln (iope, consisting of about 2,160 regular troops, was totally defeated and dispersed, with great lose, by the Highlanders, who were hat little suberior in point of mumbers, under the l'retender. The kiug's tromps being panic-struck threw away their itms, and fled at the first lire, and were cat down almost without resistance.
IREVESA, a town of Turkey in Europe, prov. Abania, at the entrance of the Ambracian liulf,
 town is ill-built, badly pared and dirty; but it is in a good situation for commeree, aid was formerly the entrepit of the trade of Jjpirus. On the isthmus, comecting the penitsula umon which it stands with the mainland, are the remains of Nicopolis, consisting of the meient walls, a theatre, some baths, and varions other vestiges of antifuity.

PRINCE EDWWARD'S ISIAND (formerly ST. Jons's), an island of N. America, belonging t" Great Britain ; in the Gulf of St. Lawrence, principally between the 46th and 47th degs. of' N. lat., and the 62nd and 6 ith $^{2}$ of 15 . long., from 20 to 2 : m. E. New Brunswick. Length, of a curved line passing through its centre E. to W., about 1.10 m. ; greatest breadth, $i 4 \mathrm{~m}$. Area estimated at $1,380,7110$ acres, or about 2,150 sq. m. I'p. 80,85$)^{5}$ in 1861, principally Highland scotch. Irish, und Acadian French, with Englislımen, Dutchmen, Americans, and Swedes. A chain of hills of moderate height partly intersects it; but the surliue in general is level, or at most only modulatiug.

## PKINCE EDWARD'S ISLAND

It is well watercd, and its shores are deeply indented with mumerous bays. The climate is milder than in any of the surrounding lhritish colonies. and appears to be farourable to longevity. The atmosphere is nearly free from the fogs prevalent in Cape Breton and the adjacent conntries. Below the thin vergetable mould the soil is generally clay or ham, resting on a base of sandstone: there are some swampinad pine barreas; but these bear only a small proporion to the whole surface. The ishind ingeneral is well woded, the principal trees leing ipruce, fir, beech, birch, and maple. Gak, anh, ind lareb are searce, and the quality of the first is very infermor. All kinds of grain and veerctables raised in limend eome to perfection. What is, at present, the principal olject of altention; but it is an uncerian crop. lotatoes have been extensively cultivated, and have had the same mischicrons eonsedpences here as in Ireland and elsewhere. Flax of excellent quality is raised, ind mannfactured into linen for domestic use. Ilemy, will grow, hut not to the same perfection as in the aljacent colonies. It is sain, that had the natural advantages of this island been turned to proper accomit. it misht at this time have been the frimary of the British colonies, instead of larely supportiur a porer and limited population. of ${ }^{\circ}$ nearly $1,-100,000$ acres emintined in the island, only 10,100 are said to be motit for the phough; Int only 216,000 are now under cultivation. The origin of this state of things is ascribed, in Lord burham's report, to the injudicions grants made to alsentee proprictors, muler conditions that have been totally disregarded. "The absent proprieturs neither improve the land, nor will let others improve it. They retain it: and keep jt in a state of wilderness.' (heport, pp. 70-80.) What land is umder the plouph is cultivated in a very sloventy mamer; thongh the establishment of an agricuitural society of late years lats done something to improve hustoandry.

Pastures are groml, and suitalile for cattle and sheep: owing to the want of proper attention, hogs are said not to thrive so well as the former. Live stock used to sulfer greatly from the ravares of bears, loup-cerviers, and other will animals; hat these are much less mumeroms now than formerly. The ishand lass no mines. Its fisheries might he of considurable importance; but, owing to the want of eapital and of a taste for the busihess, they are all but wholly nerlected, and left to the undisturbed possession of the Americans. A goorl many ships are built in the eolony: 66
 sels, of 0,006 toms, in 18til; and 73 vessels, of $12,3 \mathrm{~S}_{\mathrm{j}}$ tons, in $186 \%$. The total value of the imports, in 1sis2, was $211,2.10 /$, and of the exports, jou,inol. The principal trade is with the other provs of 13. N. Americil. Total colonial revenue, 25. $601 /$ in $1 \times(\mathrm{i} 2$.

The constitution is nearly similar to that of Nova scotia, and in all civil matters independent of any jurisdiction in America. The government and legislature is vested in a lient.-governor, a conucil of hine members, and a house of assembly of thirty representatives, elected hy the people. The grovernor is chancellor of the court of chancery ; the ehief justice and attorney general are appointed by the sovereign; and the high sheritf is appointed anmally by the local government. In the supreme conrt of judicalure all criminal and civil matters of consecpuence are tried by jury. ('ases of petty debt and breaches of the peace are derided hy special magistrates and justices of the peace. There are soperior sehools in Charlote lown, and numerous distriet sehools. Charlotte 'lown, the cap. and seat of govermment, on Ilills-
borongh river, near the S. cuast, has one of the best harbours in the Gulf of St. Lawrence. The town, on gently rising gromud, is regularly lmilt, and clean, with abont 6,000 inhobs. The courthouse, episcopal and Scoteh churches, several ehapels, the barracks, and the fort are its only conspienous public buildiugs.

This island was taken from the Frenel in $175 \mathrm{~S}_{0}$. It was amexed, with Cape Breton, to the government of Nova Seotia in 1763 , but since 17 (i8 has formed a separate colony.

PHINCLEF WALLS'S ISLAND (native Pulo P'inamg, 'the Areca island'), an ishaul and Britosh settlenent in the Vastern Seas, abont 2 m . from the W. coast of the Malny Peninsula; lat. $5015^{\prime}$ N., long. $100^{\circ} 25^{\prime}$ E. Lengtli, N. to S., nearly 16 m . Preadth varying from 8 to 12 m . Area about $160 \mathrm{~s}\left(\mathrm{~g} . \mathrm{m}\right.$. $1^{2}$ op. 42,160 in 1861, primeipally Malays, Chiuese, and Chuliahs, the Liuropeans being under 800 . The $N$. part of the island is monntainons, and a range of hills runs through its centre, leclining in height as it approaches the SW. extremity: But two-thirds of the whole surface are level, or of gentle inclination, and, like the lills, covered with woods. The thermometer, in the phains, ranges hetween $76^{\circ}$ and $91^{\circ}$ Fahr., and on the higher hills at from $6.1^{\circ}$ to $76^{\circ}$. V.xeept in a few places, J'inang is considered very healthy. Refreshing showers fall at short intervals throughout the year. The climate of the high lands is said to resemble that of Funeha! in Mlateira. I'he geological formations are primitive: nearly all the hills are of granite. and the sulsoil, where not alluvial, is principally the detritus of that rock. Tin ore is fonnd at the bese of the momntains. The island produces a good deal of timher, well adapted for ship-building and masts, and fine fruits; and the soil is favourable to the growth of spiees. As a commercial mart, however, this settlement is much inferior to Siltgapore.

The attention of the agriculturists is almost exclusively direeted to the improvement and extension of the spice plantations, and dry waste land for that purpose may be obtained from the government on leases of 41 years, at a small quitrent. A good many cocoa-nuts are grown; and gambir, indigo, cotton, areca, and tobacco in small quantities. Colfee, sugar-cane, betel nut and leal; rice, cotton, and ginger are also raised. The trade of l'inang is chiefly that of transit, between Great Britain and British India on the one hand. and the Malay Pebinsula and Tenasserim, provs. Siam, Anam, Borneo, Java, Sumatra, and China, on the other. A considerable trade in cotton eloths is kept up by the Chulials with the Coromandel coast.
Gerorge Town, the eap., at the N.E. extremity of Pinang, has a pop. of about 13,000. It is built on level eround, and comsists of a long and broad street, intersected by others of inferior dimensions. It has a fort, a handsome chmreh, an Armenim chapel, two liom. Catholie chapels, a court-house, gaol, publie school. poor-honse, the governor's offices, and the civil and military hospitals. A few sloops are kept by Europeans, but the major portion ly Clinese. I'here are cantonments for the native troops near the town. linang was purchased by the liast India Company in 1786.

PROV'ENCle, one of the former prove of France, in the Sle. part of the kingdom, now subdivided into the deps. Basses-Alpes, Buuches-du-lihone, Var, and a portion of Vauchuse.
lROVIDENCLE, a city and port of entry of the U. States, Lhode Island, of which it is the cap., being, also, the second city of New England in point of jop., wealth, and commerce. It stands at
has one of the lawrence. The a regularly built alls. The courtthurelies, several ort are its only

## t of entry of the

 la it is the cap., few Fingland in ce. It stands atThe heal of the tide-water in Narragansett lay, ahont 30 m. from the Atlantic, 40 m . S.SW. Bontun, with which it is comnected by railway. lop. 60,itio in 1860. The town stands on elevated gremul an both sides I'rovidence liver, an arm of the hay, here crossed by two bridges, one 90 ft . in width. It is n well-built, handsome, thriving town. Its chief public boildings are the state home, brown umiversity, and the ariade. The last was tinished in 1828 ; it is 222 ft . in deptli: has 2 granite fronts 72 ft . in width, ormamented with Durie colonnades, and cost, in all, abont 130,006 dolls. Providence has numerous churehes, schuols, and charitable institutions. Brown University, founded at Warren in 176.I, and removed thither in 1770 , comprises 2 colleges, and is goverumed by a hoard of trustees and fellows, all of whom must be Baptists, It has a library of 28,000 vols, and a very complete philosophical aparatus, and is attended by above lion students. The Friends have a boardiag-school here, which has about 200 pupils. There are several literary societies, which possess libraries, and many extensive private seminaries.
l'rovidence is distinguished as a manufacturing thwn: its cotton factories employ from 14,000 to 1s, (140) :pindles; and it has extensive bleachingErounts and dye-honses; iron fomutries, and ma-chine-factories for the production of cotton machanery with mannfictures of combs, jewellery, whiss wares, leather, boots and shoes, somp, cumblles, and furniture. l'awtueket, about $4 \mathrm{~m} . \mathrm{NE}$. , is also the seat of extensive cotton mannfuetures, the products of which find an outlet at I'rovidence. Tessels of the largest burden come close to the wharfs, and the mavigation of the bay is not often immeded by ice.

I'rorideuce communicates with Boston, and with Stonington in Connecticut, by railways; with Wurcester (Massachusetts) by the Blackstone canal; and steamboats of a large class keep up a daily communication with New York, It was origina' y settled in lliate, by Mr. Ruger Williams, (1) Whon is aseribed the honour of having established the tirst political commmity in which perfent religions toleration was admitted. It was incorporated as a city in 18:31.

Providisce, one of the Bahama lslands, which see.

IRLSSLA, one of the great European kingloms, between the dith and 5th deg. N. lat., and the tith and 23 rid deg. E. long. 'The principal part of the l'russian tominions lies continuonsly along the $s$ shore of the lbattic, between Russia and Mecklenburg, comprising the N, part of what was formerly l'ohmal, and most part of the N. of Germany. 'Ihe intand frontier of this part of the monarchy on the E. and $S$. is suticiently conneeten; but on the W. side it is very ragged, some small indepement states being almost entircly surrounded by the Jrussian dominions. But, exelusive of this principal portion, there is an extensive Prussian territory on botlo sides the Rhine divided into the provinces of Westphalia and lihine. This portion is separated from the rest of the monarely, or from what may be called the Eastem States, by Hesse-Cassel and part of Hanover and Brunswick. Some detached territories in Saxony, and the priacipalities of Hohenzollern in the kinglom of Wurtemberg, also belong to I'russia.

Bastern Prussia has on the N. the Baltic; on the E. Rinssin, Russian Poland, and Cracow; and on the S. and W. the Austrian states of Galicia, Moravia, and lBohenia, with Saxony and other German states. W. l'russia, or the provinces on the lihine, lave on the N. and E. Hanover and other

German states; on the S. Framee; and on the W. lelgium and the Netherlands. From the extreme eastern frontier of Prussia to Aix-li-Chapelle, in an ENE: and W'SW, dircetion, the distance is about 75 m ; and from the promontory on the Baltic, above Sitralsumd, to the extreme southern frontier of Silesia, in a NL. and SW. direction, the distance is 40.1 m . Owing, however, to the irregularity of the frontior, and the intervention of other countries, these measurements give wo information ths to the extent of the monarchy.

Grouth of l'russia,-The rise of the l'rissian power has been rapid and extraordinary. The kings of Prussia are descended from petty tierman princes, who, in the 1 -fth eentury, were burremes of Nurembers. In 1415, Sixismund, emperor of Germany, solle the marquisate (atterwands clectorate) of lirandenhors to Frederick, one of these burgraves, for f00,0iof ducats, who, by this purchase, laid the foundation of the fature gramener of his fimily. In libl, Albert, margrave of Bralldenhurg, wis elected grand master of the Teutomid knights, who then possessed Ducal l'russiat and by a treaty conchuded in 1525 , this territory was secularised and erected into a duchy in favour of Albert and his successors. ln 1697, I'russia was acknowledged by Poland to be a tree and independent state; and, alter other agramdisements, it was advanced to the dignity of a kingrdom in 1700 . Pomerania was not long afier ahded to I'russia. l3nt notwithstanding these acquisitions, when Frederick the (ireat iscended the throne, in 17.10, his disjointed dominions did not contain $2,0010,000$ inhabs., who had mate but little progress in the arts, or in the accumalation of wealth. Bint this extraordinary man, with no extrinsie assintumed, and by mere clint of superior talent, wrested, in the early part of his reign, the valuable and extensive province of Silesia from the house uf Austria. He afterwards defended himself, durimy the seven vears' war, against the combined eflorts of Austria, Rnssia, and France, and forced these pawers to conchude a treaty, by which silesia was solemmly guaranted to l'rissia. la the latter part of his reign, in conjunction with linssia and Anstria, Frederick phamed, and partly carried into ediond, the partition of I'oland, aepuiring as his share the western parts of l'russia, and secured, in adilition to the increase of territory, an :mrestrictell commmication between the great divisions of his kingdom.

By these different aequisitions, l'russia, at the death of lirederick, in 1.86 , hald been increased in vize nearly a half; while, owing to the superior fertility of the conjoined provinces, and the improvement effected in every part of his dominions, after the peace of $1-633$, the jop. had inerensen to about $6,000,000$. I'russia acpitired, by the sutherquent partition of Poland in 179:, and its timal dismemberment in lano, a great extension of torritory, incluting the important city e." Inantaic, and upwards of $2,000,000$ inhabs. In addition to this she acquired the bishopric of laderborn and the principalities of Ihayrenth and Anspach, with several lesser districts in Cermany; so that, in 1805 , the kinglom contained nearly $5,00 \mathrm{~m}$ gent. sq . miles of territory, and a pep. of $9,6.40,1 \% 4($. ler disastrous contest with France in 1801 lowered l'russia for a while; but the spirit of the people was not sublued; and after Nipoleon's empatign in liussia, the pop, rose en masse, and the \%enl and bravery of the l'rusians were mainly instrmmental in effecting the final overthrow of Napoleon. It the general peace of 1815 , Prussia becume more powerful than ever. She recovered all her former possessions, except a prortion of her Polish donimions assigned to the kinglom of l'oland; but
this was more than compensated by valualle acguivitions in Saxony, lomerania, and the Lhenish provinces.

Divisions anel E.rtent of the Country--Pipmha-tion.-The I'russian moniarchy is divided, for antministrative purposes, into eight proviuces, which again are subdivided into twent $y$-six districts, Not included in these divisions are the principalities of Honenzollern, ceded to the king in 1819 , and the district uml bay of Juhte, or 'Jiduderebiet,' which the goverument purehated, in lxin, from Ohdenburs ther the sum of 500,000 thalens, or $\overline{-1,5001, \text { as }}$ a harixmr for the Prussian theet in the North Sea. 'The following was the population of l'russia, according to the census of December 3, 1861 :-

alities of J Oohne sq. 113, and tho outal area of the lish sif, m, at the
ns-The surface flat. With the Iartz Monntains, Ittulurger Wald, Westphatia amd $t$ and the dower Giant's Monmlesia, there is 1 no
l'russi:a is, in is in most parls and small lakes ons of the rivers the monarche; fromier towards low and sandy. ature of the soil, f litule else tham have supposed read the greater mild seem to be inosition. At it country was co-
vered in most parts with immense foresta, of which there ure still very extensive remains. These, when they belong to the crown, are under the con rol of the administration of forests.

Soril,-The quality of the soil is very various. In Brandenburg and l'omerania it is generally porr; in many parts, indeed, it consists of traets of hoose barren sand, liversitied with extensive heatlis and moors; but, in other parts, particnalarly along the rivers and lakes, there is a good deal of meadow, marsh, and other comparatively rich land. In Ducal l'rnssia and l'russian I'oland, inchding the prov, of l'osen, the soil consists gencrally of black earth and sand, and is in many parts very anperior. But Silesia, and the siaxom and Rhenish provs. are naturally, perhaps, the most productive. The plain of Mardeburg, on the left bank of the Wilhe, is perhaps the most fertite and best cultivated disirict of the monarchy.
Rivers and Lakes. - l'russia is extremely well watered. The lihenish provs, are traversed by the Hhine, while their E. frontier is partly tormed by the Weser. 'The Elbe Iraverses the Saxon provs.; the Oder, which is almost entirely a l'russian river, runs through the whole extent of the monarehy, from the S. frontior of Silesia to the Isle of Usedoin, where it fills into the Jaltie, Jolish Prussia (or l'osen) is watered by the Wartha; West l'russia by the Vistula; and Ducal Prussia by the l'regel and Niemen. And, besides the above, there are many other large rivers, as the Ems, Moselle, Spree, Havel, Netz, de.

Owing to the thatness of the eomatry throngh which they tlow, none of the great rivers are interrupted by cataracts, and they are all navigable -the Rhine, Elbe, and Vistula, throughout their whole course in the l'russian dominions; the Oder is navigable, for barges, as far as Ratibor in s. Silesia; and the l'regel and Niemen to a considerable distance inland. The establishment of steamjackets on these rivers, and the freeing of the navigation of the Rhine and the libe from the oppressive tolls and rugulations by which it was firmerly olstrncted, have already been, and will no doubt eontinue to be, of vast service to the comutry: Cimals have also been construeted conneeting the Elbe, the Oder, and the Vistula; so that foods shipped at Jamburg may be conveyed by water to Dantzic and eonversely. (Sue the aecounts of these rivers, under their diflerent names,

Lakes are excuedingly numerous, particularly in Ducal I'russia and Pomerania. There are also ahong the coast severat large bays, or rather lagonns, commmicating with the sea by harrow mouths, and possessing more of the chatacter of freshwater lakes than of arms of the sea, They are denominated Naffis, the prineipal being the Curische Jiatf' and the Frische llaffi, on the coast of Dneal l'russia, and the llaf' at the mouth of the Oiler.

Scuports.-The principal sea ports are Memel, Königsberr, I'illan, Dintzic, Stettin, and Stralsuml. With the exeeption of Stettin, or rather of its ontport, Swinemumde, the water at these ports is rather shallow, seldom execeding from 10 ft , to 12 ft . But at Swinemunde there are from 19 ft . to $\because 1 \mathrm{ft}$.

Climute.-The climate of Prussia is not less various than the soil. Along the Baltic it is moist, and in Ducal I'russia, especially, the winter is long and severe. It is also severe in the S. parts of Silesia. contiguous to the Carpathian momntions. In N. Silesia, Brandenburg, and the Saxon and Rhenish provinces, it is comparatively mili.
Minerals.-The Prussian monarchy is rieher in mincrals than might have been anticipated from
its flatness. Iron is the most generally diffused. It is very extensively wrought in silesia, primipally on account of the erown, mit also by private molividuals, The irom-works in the Jhine provs., near Dortmond, Solingen, Iserlohn, Ne., and those near Schmideberg, 'Tarnowit\%, Sproltam, de., in Silesia are very extensive. Conls are very abondant in the Rhenish provs., Saxony, and jarts of Silesia, and large quantities are ammally prodnced. Salt, whieh is a govermment monopoly, is produced principatly in the saxan prove, which also yield considerable quantities of eopper and some silver. Silesia furnishes ammally large quantities of xine, lead, and tin; but the hastmentioned metal is partly, nlso, supplied by Handenburg. Amber has long been known as a produet of i'russia. It is prineipally formed along tho low narrow tongie of land between the Curische IIaff amb the sea.

In dixtinguishing the mineral prodncts into 1. metals ; II, combinstible minerals;III. stomes; IV, ehay, sand, earth; V. salt, alum, de.-there are in l'russia,
I. Metals.

Silver, in Saxony (Marrfeld); Westphalin (Sicgen) ; Silesia.
Copper, Saxony (Marfeld); Westphalia (Siegen); Silesia.
Lead, Silesia, Rhine, Westphalia, Saxony
Iron and sleel, in every province, but prineipally in the mountalins of Silesia, Westphalin, and Rhine.
Cohall, Westphalia (Sicgen), and Saxony.
Arsme, Sllesin.
Calamine and zine, Silesin, Rhine, and Westphalia.

## II. Combustible Minerals.

## Sulphur, Silesia.

Amber, Prusslin.
Pit-cual, Silesia, Westphalia, Rhine, Saxony.
hrown-coal, Saxony and khine.
Turf, in every province, principally in Brandenburg.

## III. Stones.

## Amethyst, agate, in Silesia.

tlabuster, Saxony.
Jlarble, Westphatis, Saxony, Rhine, Silesin.
Volcuic tophus, Rline irovince, and very important.
Serpentine stone, Silesia.
Of sumdstone, mill-stones, in Silesia, Saxony, Westphalia, Rline.
Grinding or whet-stonen, in Westphalia, Silesia, Sixmo. Limestone, in Silesia, Westphalia, Mhlue, Suxony, Lrimflenburg.
Gypsum, in the same provinces as limestone.
Stute, Westphalia and the Ithine.
IV. Clay, Sand, Earths,

Porcelain earth in Saxony, zear IIaile.
Piproclay and fuller's earth, Sileria.
Simal, suitable for the fabrication of glass, in all provinces.
Brick-clay and marl, in all provinces.
V. Salt.

Kithen selt, in Saxony. Westphalia. Pomerania, Rhino. dlum, Sitesia, Saxony, Westphalia, Rhine, Eratudenbmerg. Saltpetre, in some provinces.

In the year 1861 there were prowluced in the monarehy $235,189,996$ eentuers of coall ; $1!9.9191,119$ centners of iron ore ; $1,808,0$ ate centhers of capler ore ; and 6,573,637 centuers of \%ine ure. The total value of ore produced in the l'russian mines, in 1861, amounted to $31,234,6228$ thalers.

Vegetable and Animal Produrtions.-These alo not differ materially in l'russia and (ireat Britain. hye and wheat, with buek-wheat, oats, barley, potatoes (now very extensively cullivated), anil flas and hemp, are the prineipal prodnets of l'russian agriculture. Abont 700,000 cimers of very fair wine are made in the Rhenish frovs. It is mostly consumed in the country, the exports being so very trilling as not to exceed from 0,000
to 6,000 eliners a year. The average price of Drosxiall wine may be ostimated at from 15 to 20 rlx-dollars per eimer: The animals of Prossia are the same us those of this eomntry, exeept that wohes and wihd boars, which wore long since exterminated in Great Iritain, continue to exist in considerable numbers in the l'russian territuries.

Agriculture-blown to a comparatively recont prerion, the state of lamed properiy in 'l'ussia, and the condition of the oceupiers of the soil, was similar to its state and their condition in most pirts of continental limeope The eonntry was montly divided into comsiderable estaters: and, down to $181 /{ }^{-}$, none but nobles or privileged persons cond acguire landed property. Such prarts of an extate as were not in the immediate jussession of the lord wore hed by occupiers, in a sort of presial slavery, on condition of their paying a certain rent, consisting sometimes of services to be performed on the lord's land, sometimes of the delivery of a certain proportion (generally a half') of the produce, and more frequently, perhaps, of both the one and the other. In some phaces the temants had aeguired a sort of hereditary right to their possessions on their making the accustomed payments ; but in other parts the title to the lands they ocenpied was only for life, or for a certain mumber of years; thongh, by a most absurd regulation, the proprietor could not then resme the lands into his own hands, but was obliged to re-let them to an ocenpier of the same grade as the one who had left them. In 1807, however, the regulation which prevented peasants, tradesmen, and others of the lower classes from acquiring land was abolished; and, in 1811 , appeared the fanoons codict which enacted that all the peasants who held perpetual leases on condition of paying certain quantities of proluce, or of performing certain services on acconnt of the proprietors, shonld, upon giving up one-third part of the land held by them, become the menditional proprietors of the other two-thirds. With repeet to the other classes of peasants, or those who oceupied lamds upon lifeleases, or leases for a term of years, it was macted that they should, upon giving mphef their farms, become the uneonelitional proprietors of the other helf: This edict eflected the greatest and most sweeping change that was ever peaceably made in the distribution of property an any great comentr: It was regarded at the time as a dingerous interfirence with the rights of individuals. lint the aboses which it wem to eradicate wereso injurions to the publie welfare, allu were, nt the same time, wo decply seated, that they comld not have been estiputed by any less poverful means. It has given a wonderful stimulus to improvenent. The peasantry, reheved from the burilens and services to which they were previously subjected, am placest, in respect of political privileges, on a level with their lords. have begm to display a spirit of enterprise and iudustry that was previonsly moknown. Formeriy, nlso, there were in Irussia, as there have be ${ }^{\prime \prime}$ in linglamd and most other comtrics, a pront extent of land belonging to towns and villages. and ocenpied in common by the inhabs. While under this tenure these lands rarely produce a third or fourth part of what they wonld produce were they divided into separate properties, and assigned to individuals, each reaping all the advantuges resnlting from superior industry and excrtion. The Prussian government being aware of this, succeeled in effecting the division of a vast number of common properties, and thas totally changed the appearance of a large extent of comitry, and created many thousand new proprictors, The want of capital and
the fore of ohd habits rendered the influence of there chameres at the ontret lesw ariking than many antieipated: but these retarding circumstances have daty diminished ith power; and, Iespite the too great extension of the potato, it may be sadely adirmed that the rountry hats male a greater progreses sine IXIE thatit did during the preceding two linndred years.

Rye used to be in l'russia an article of miversal eomsumption. orempring the same place there that wheat oreupies in Eingland, and potatoes in trelanil. But of hate years it has heen, to a great extent, sumerseded by the potato, the culture of which has increa-ed with a rapidity to which there is 110 parallel. It now, in fact, forms the frimeipal depondence of a large proportion of the pop. The hisual agricultural conse is to fallow every third year, taking, either first a erop of rye and then wheat, or conversely. The greater part of the wheat shipped at Dantzic is fronght from the Polish provinces nuder linssia and Sustrin. Flax and hemp are cultivated for domestic use. and also for sale, in all parts of the momarely, but expecially in Silesia. The best flax is mised from forcign seed, the seed produced at home being used to make oil-eake. Tobacco, lops, madder, and other phants used in dyeing, are also raised. Chicory is largely enltivated. Heet-ront plantations are very extensive, and have recently natile great progress, especially in Saxony and Silesia.
lixcept on the rrown estates, there are few firms. Most considerable landed proprictors are accustomed to manage their estates by stewards; and, as already seen, the smaller ocenpiers are mostly all proprietors. It is impossible to form any accurate estimate of the prodnetivencss of the suil, ditlering as it does so very widely in quality anu culture. In the most fruitful and best enltivated slistricts, as near Mardeburg, the produce of what is reckoned at from $1+$ to 16 schutfiel the morgen ( 1 scheffel $=1 \cdot 6$ bushel; 1 morten $=1 \cdot i{ }^{2}$ aere) ; whereas, in l3randenburg and P'omerania, the produce of wheat is not reckoned at more than from dis to 10 scheflel the morgen. The prodnee of ree varies in the best districts from lo 8 seh. per morgen. lint in the samaly and sterile portions of Pomerania, Irambenburge, and W. I'rassia, the produce is often not. more than 2 or 3 seh. per moreren. 'Ihe rent of cultivated land is as virions as the crops, being dependent partly on soil amd partly on sithation. In the immediate neighbourlood of Berlin, the hest limds vield a rent of lis rix-dollars jer morgent; in the commery aromed Magdeburg the rent is in general about 10 r. d. per do. ; in Branrenburg, if it be mot in the neighbourhood of Berlin, the rent is soldom more thin $2 \frac{1}{2}$ r. d. per morgen ; and in the sandy and sterile tracts, the rent is sometimes not nure than 1 or 2 silver rrosehen per morgen.
Jorses, cattle, and sheep are raised everywhere throughout l'russia. 'l'he growth of the latter has been of late years an object of muela attention, particularly in Bramdenburg. Saxony, and Silesit. In eonsequence of the improvements effected by the introdnction of merinu sheep into (iermany, the wool of Saxony, Silesia, and some other provinces, has becone superior even to that of spain. The fall in the price of corn, subsequent to $1 \times 1)^{2}$, gave a great stimulas to this branch of industry: Wool now constitutes, in fact, the principal articie of export from Germany, and has been productive of much wealth to many saxon and Silesian proprictors, as well as to many in other provinces. Prossia contains, in round numbers, $1,600,000$ horses, 8,000 asses ami mules, $5,500,000$ oxen, $15,400,000$ sheep, 670,000 goats, and $2,600,000$

 than a manufacturing conntry, I'russia lias greatly distinguished horself, particularly of late yars, in varions bramehes of manufacture. The lihenish provinces, Saxony and Silesia, are the distriets nost prominent in this department. Linens and coarse woollens for domestic consumption are manle in every village, and, indeed, in most cuttages thronghont the kingom. The linens that are exported ure ehiefly prodnced in silesia, Westphalia, and the Eirmelatid, or portion of bucal l'russia containing the circles of litamse hurg, Meibsurg, liossell, and Allerstein. The totil value of the linell stulfs anmally mannlitefured is estimated at from 60 to 60 millions rix-tollars, of which a fourth part is exportel. Ilirchbere, and the aljacent towns and villiges, are the primeibal seats of Silesian manufartures. Large funatities of silk and cotton foods, and lucn, are prodnced in Eliberfeld, and other towns in the Khenish provinces. Very superior brond cloth is largely manufactured at Eupen, Malomedy, Lerlin, and Aix-la-Chapelle. Prussia oceupies a respectable ramk in the proxhection of the useful metals. The total quantity of bar and pis iron prodaced in 1861 , anomited to $17,722,322$ centhers. 'The articles of hartware made at Iserlohn, Haren, Solingen, Olpe, and Essen, enjoy a ligh repntation; but are inferior to the cast-iron articles, whether of fancy, ormanent, or utility, prodneed ut Berlin. I'hese, as regards beanty and delicacy of exeention, are mequalled by any mate cither in Engrand or any other conntry. lorcelain, jewellery, watches, and coaches are largely produced at berlin und other towns. Vast mimisers of books ammally jesne from the presses of leerlin innd llalle. lieer and spirits are very extensively probliced, and consumed in all parts of the monarchy.
The prineipal mannfacturing district of I'ussia is in the Chenish provinees on the Wipper, having Elberfed and Soliugen for its principal towns. It is well supplied with coal and water power; and the inhals, are alike industrions and inventive. The pop, of Elberfeld, inc. Barmen, has increased during the present century from $11,-20$ to near 80,000, and the progress of many of the ather towns and villages in the vicinity has been hartly less remarkable.

Some of the manuficturing establishments in the linine district are on a large seale, emphoving from 400 to 500 workpeople. The tirst stiathentine used in l'russia was set up in 1780. In 1862 there were about 2,000 steam-engines in the monarchy.

Commerce.-The exports from Prussia consist principally of com, wool, timber, Westphalian hams, zinc, dax, bristles, salted provisions, and other articles of raw produce; with linen and wonlen cloths, silk wares, iron and hardware, jewellery, watches, and wooden clocks, Prossian bluc, spuits, and beer. The imports consist chietly of sugar, collee, and other colonial products, raw cottom, and cotton twist and stutls, indigo and other dye stufts, spices, French and other wines, coals fir the use of the ports on the lialtic, and salt. 'The statistics of l'russit with resard to commerce are not given separately, bit are inclucled in the Zollvercin calculation, (see Genmany.) The value of the imports into the Zollvercin, in 1858, amomed to $377,36(1,01010$ thaters; the exports for 1858 amounted to $37 i, 000,000$ thalers ; making a total of $\mathbf{7 5 2}, \mathbf{3 6 0 , 0 0 0}$ thaters; the proportion per inhabitant was 22 thulers 12 silver groschen. The value of the im-
port of the fiscal proluce was $\mathbf{1 5 . 6 1 0 , 0 0 0}$ thators. The amonnt of duty paili on imports was, in lxi"א, $2 x, 10: 2,000$ thalers; the amomit of duty without the liseal prohuce was $14.2 .5,0.000$ thaters. The per-eentage daty on imports to the total import was, in $1858,7 \cdot 50$; withont the tiscal prombee, drbo. 'lhe import of wheat was 1,0 at hertolitres; the export of wheat was 1,233 ; of other grain the import was 5,1616 , the export 7,619 . Of wine the import was 140,000 , the export 124,000 ; of brimly the import was 23,1000 , the export 110,000 . Thie export of horses, asses, mud males was $7,10,3$; thos import, 28,457. The import of oxen was $8!, 973 ;$ the export, 0,316 . Of sheep the import was 121,991 ; the expmot, 162,770 . Of swine the import was 322,035; the exprort, $2 \cdot+$,OWs.
Of colonial goots (the centher $=100$ kilogrammes) the import into the Zollversin of collee was $575,00 t$ centners ; the export, 32,000 centures: ut sugar the import was $3 \cdot 9,5 \mathrm{H}$ centmers, the export was 81, oll : of tea the import was 16,080 eenthers: of tobaceo the import was 252,35 ! ; the expurt was $3: 33,113$ centhers : of iron, the import of eastints iron was $2,000,300$; the export, 71.061 centners: of bar-iron the import was $30 \mathrm{x}, 060$; the expori, 02,038 centners : of mamufactured iron the inapurt was $122,(6711$; export, $218,8: 30$.

Of weaving materials there were imported into the Zollvereiti:-

|  | linport | Exprort |

The total reecipts from railroads in Prussia amomented, in $18 t^{\circ} 2$, to $: 38,686,8: 11$ thaters, there being 7.11 m . of railway.
shipping.-Considering the extent of sea-const possessed ly l'russia, and the facilities she enjoys for ship-building, the shipping is not very eomsinderable. 'The mercantile anvy of l'russia consisted, in 1863 , of 1,783 vessels, of 415,371 tons burihern. Of this number, 89 were steamels, of 19, itho toms. The increase in tomatge amomuted to $25 \cdot 1$ per cent. during the last tell years. Of vessels which arrived and left l'rusiam forts in 1859 there were 18,313 , of $2,8815,124$ tons ; showin's an inerease. in ten years, of $38 \cdot \mathrm{a}$ per cent. in the comurerial activity of the kingdom.

The number of ressels of all nations which arrived at l'russian ports in $186^{\circ} 2$ was $11,9 \%$, incluming $1,3+1$ steamers; the total burthen was 1, $00.4,908$ lasts. Of this mumber, 3,251 , or wore than half the total tonnage, bore the British thatr: Vessels from Denmark numbered 2,759 ; thuse of Nomay, (61!): of Sweden, 400 ; of Russia, e:37; of Spailu, 47 ; of liranee, 100 ; and of North America, 2. As compared with the former vear, the returns show an increase in the year 1802 of 588 vessels.
Money, Weights and Mcasures.-Accomnts are kept in rix-dollars, or thaters, of 30 silver groschen. Each rix-dollar should contain 25768 gr . line silver, and is worth 2s. $11 \frac{1}{2}$ d., but is generally taken at $3 s$. The centner, or ouintal of $110 \mathrm{llis}$. , is equal to $113 \cdot 381 \mathrm{lbs}$ avoirdupois. The last, by which ships' tommage and freights are estimated
eontains d,000 Prussian Ihs. One Prussian mile is cupurakent to 1 tix Eugrish miles. The morgen is equal to 1.52 imp, neres.
(iocernment.-I'revionsly to 1823, the government of l'russia was mabsalute momarely. The nocession was herelitary in the direct male line; and the prerugative of the prince, which was nearly despotie in theory, was only limited by the privileges of the different ranks and onders of the people, and still nore by their intelligence and the power resulting from their military organisation. During the war which terminated in the liberation of the conntry from the domination of the F'rench, the king promisel to grant, on the expulsion of the invaders, liberal institutions to his subjects. But the performance of these promises was delnyed, on one pretence and another, till $18: 3$, mul was then very unperfectly fultilled ly the institntion of provincial states, whose powers were exceedingly circumseribed, and who, also, deliberated in private. An institution of this sort, far from satisflying the reasonable demands and wishes of the people, served only to give them more force. It was expected that on his aceession to the throne, the next king, Frederick William IV., wonla have made some important constitutional concessions; and this expectation not being realised, petitions for an extension of poular privileges were prescuted fron some pewerful bodies; so that a change to more liberal institutions could not be postponed much longer. Consequently, in Fubruary, 1817 , an ordinance appeared, by which his L'russim Majesty constithited the separate provincial states into a genern diet or parliament, vested witl very considerable powers. It is probable, but for the events that occurred in lirance in the course of 1618 , that the form of govermment established by the ordinance of 18.17 would have been grainally consolidated and moditied, so as to suit the wants and habits of the people. But the intluence of the vecurrences in l'aris stopped the conrse of this reform, and grave a stimulns to more democratic principles and projects which the government wanted the power to control. In conscquence, a new constilution was drawn up, and having been promalRated at lierjin on the Ist of February, 18000 , was sworn to by the king on the fith of the same month. This constitution, altered considerably, in a conservative sense, by royal decrees of April 30, 185 s ; May 21 and Jume 5,1852 ; May 7 und May $2 . f$, 1850 ; Jume 10 and October 12, 185.1; May 30, $1 \times 5 \overline{5}$; and May 15, 1857 , vests the legislative power in the king and two representative assemblics. The first of these, which may be called a semate or upper house, is composed of, first, the prines of the royal family who are of arg, inchating the seions of the former sovereinu damilies of Ilohenzollern-Ifechingen and Hohenzollern-Sigmaringen; secondly, the ehiefs of the mediatised princely homses, recognised by the Comgress of Vienna, to the mumber of sixtecen in l'russia; thirdly, the heads of the territorial nobility formed by the king, and mmbering some filty niembers; fourthly, a number of life peers, chosen by the king among the class of rich landowners, great mannfacturers, and 'national celebrities ;'tifthly, eight titled noblemen eleeted in the cight provinees of I'russia by the resident lindowners of all degrees; sixthly, the representatives of the universities, the heats of 'chapters,' and the burgomasters of towns with above difty hlousand inhabitants; and, seventhly, an mlimited number of members nominated by the king for life, or for a more or less limited period.

I'he other, or lower chamber, corresponding to the British II, of C., consists of 350 mems., who
are 'chosen liy electors in electoral districts.' 'The electors in these districts are themselves chosen by universal sulfrage, that is, hy the votes of all male I'russians paying taxes and $2 \cdot 1$ years of age. But to modify the elliet of the principle, the primitive clectors are divided into three clanses, determined by the amonnt of the taxes they bay; and these $\delta$ chasses of primitive electors, though their mumbers be widely diflerent, choose ench is third part of the electors who directly elect the representatives. In comsequence of this contrivance, the inthenee of the higher class of votern, or of those who pay the greatest amomint of taxes, is not overbome lig the mere numerical ascendaney of the other classes, and the chances are, that the representative body will be rendered more conservative than it otherwise would have been. The chambers are to he ammally eomvoked in the munth of November, the duration of the tirst being limited to six, and that of the secomd to three years. But this law, like the constitution itself, lus frequently been set at naught in late years. Since 1862 , pophlar represcatation in l'russia has been entirely powerless to counteruct the will of the exeentive government, which has male laws and even deered budget estimates withont the conenrence of the chambers.

A president, with powers similar to those of a French prifet, and a salary of 6,000 rix-dollars ( 900 l .), is placed at the head of eath of the nime provs, into which the kingdom is divided. Bach prov. has also a military commandant, a superior court of justice, a prove director of taxes, a prov: consistory, all appointed by the king. The last is divided into three seetions-one haviug the superintendence of schools, another of ceclesiastical aflairs, and amother of the public health. 'The provs, are subdivided intu regencies or connties, and these again into hreise, or circles (arrondissements), and the latter into gemeinden, or pars. (commmes). Liach regency has a president and an administrative board or commeil, and the farther subdivisions have also their locat authorities. The municipal orgamisation of the towns is more complieated than that of the commmos. The principal finctionaries are all elective, but the clections must be contirmed by the king or the authoritics.

The system of law principally in force in the E. states of' the l'russian monarchy is embotied in the well-digested code entitled Landrecht füir die P'reussischen Stuaten, which reccived the roval sanction in 1791, and became law in 179.; but it is oceasionally morlitied by enstom, and l'olish, Swedish, and German laws are still in force in eertain parts of the momareliy. 'The lihenish provinces follow, with some exceptions, the rubes laid down in the Code Napoleon. The primary proceedings in judicial matters take place before local conrts established in the circles and towns; thence they may be carried before the provincial courts (Oberlandesgerichte); and in the last resort before the supreme tribunals at berlin. The judges are independent, and justice is purely and cheaply achninistered. Juries are employed in the lihenish provinces, but not in the other parts of the monarehy. Tribunals of arbitration have also been established in the provinces of Bramdeuburg, Pomerania, I'russia, Silesia, and Saxony, similar to those established in Denmark, and with the same bencticial results. In no other country, perhaps, is patronage of so little consequence, and merit so sure to lead to distinction and advancement. Candidates for publie employment go through a course of edncation appropriate to the functions they are desirous to fill; and, before being appointed, have to submit to
districts.' 'Tho maselves chosed lie votes of all 4 years of are. inciple, the priree classes, deaxes they pay; electors, though , choose each in irectly elect the of this contriclass of voters, mount of taxer, rical ascendancy ces are, that the lered more conhave beell. Redigion- - 'the royal limily belongs to the reformed or Protestait religion; but all denomimations of C'liristims enjoy the same privileges, atime are equally aligible to plates of trust or emohment. Lis lsti, the pepe emsinted in romil mambers, of $10,500,100$ P'rotestinnts, $6,000,000$ latholics, and $2: 30,000$ Jews. The l'rotestants predominate very decidedly in liramenbures, $l^{\prime}$ matmia, saseny, and breal I'russia; while the Cablolias predominate in the lihine province anil Westphatia, in the regrency of Opheln, in silesia, and in losen. Whenstiksa was aeguired ly Prasiit, the mass of the pope were Cathoties; lint at present the l'rotestants predominate in the regencies of Breshan and liegnitz, particularly the lisat.

The Irotastant chureh is govemed by contsistoriss, or boards appuinteal by governmont, one for each province. 'There are also symuts in mose cireles and provinces, but no feneral symod hat vee been hede. 'The constitution of the Catholic chareh ditiors in ditferent provinces. In the lihemish provinces it is tised by the concordat, entered into between the Frencli govermment and lope Pins VII. Lhit in every part ot the monareliy, the crown hats wisely reserved to itself a control wor the elaetion of bishops and priests. The incomes of the clergy are very small. 'The hirher Citholic elergy are paid by the state, the arelibishop of Hireshan receiving 1, Tond. a year, and the other hishops abont 1,1 ifi/h. 'The incomes of the batuchial clerge, of loth sects, montly arive from peraliar endowinents. (ieneratly govermment does foot ghamatee the stipend either of I'rotestant or Catholice cherrymen ; but in many pars. the elergy cujoy a public provision from the statc. This is peculiarly the case in the lihenish provinces, in virtue of the comeordat alrealy andmed to. Proselytiom, or the attempting to induce a persom to change his relipion, whether by force or by persuaniom, is prohibited by law ; and all eontroversial sermons, or peculiar displays of religions zeal, would certainly at tract the notice, and fincur the displeasure, of the authorities. Except in the thane province and Westphatia, the pepmation of which are bigoted Catholies, there is in 10 comntry less of religious acrimony and contention thath in I'russia.

Educution-Prussia can boast of possessith a more perfectly orgimised and complete system of mational celucation than has ever existed in any comutry, livederick the lireat has the merit of hating introlaced the system into Silesia, alter he had wrested it from Ansiria. From Silesia the system has been eradually extended to the other provinces, and is now in full vigum in every part of the monarehy. Attemanace at school is ruforced by haw. Every ehilh, whether male or female, rich or poor, nust attemb a pablie school from: the age of tive years complete, till such thae ats the elergyman of the par. athims that the child hass aceurired all the elacation preseribed by law for an individual in its station: gencrally areaking, the school time extends from 6 to $1 / 1$ years complete. Should a child not attend, its parents or guardiams must satisly the public antthorities that it is receiving an appropriate education at home, or in a private seminary. The seliow fers ate exceedingly moderate, and the children of such poor persons as are unable to pay them, are instructed gratuitously at the public expense. It is otlicially reported that every cidid born in the kinglom, and remaining within its limits, receives an edncation. On the whole, I'russim education is of a superior quality, though it
insolves too much of sameness nud of military regines. The late ling of I'rosain devoted himait with much perseverame and diarretion in mas turing this syestem. Nothing hats been omitaed that conhl rember it pertiert. In the selpools fior the instruction of the mastors, the examinations to which they are sulpected, fund the snmervision exercised over every part, the utmost maxiely is evinced to rember it as perfeet an possible. Su particular religious creed is allowed to be tamitit in any schoul; hut ou particular days, set apart for the purpmet the chilitren are instructed by the chergyum of the diflicrent seets to which they belong. Their religions instruction is not, therefore, neglected; while the intermixture of the dillerent sects from their carliest years, on a perlect liouting of equality, removes all aporitios and religions almimosities. . 11 l matters relative to the pablie: sehoods are manased in each prowine e by a public loard "pmointel for that parpose, and the expense is affrayed ly govermment.
lixclusive of the gymmasimos and superios schools, l'russia has if universities, those of herlin, Breslan, lhom, latle, konigsberg, and (ireifowald; and the two semi-universities of Munster and lbamsbers. These are placed directly muler the control of the minister of public instruetion. and much pains lare been taken to render them eflicient and useling. 'The mumber of professors and sulurdinate tenchers in the miversities is very gront, and we should incline to think that they have been uedlessly multiphed. The univerity of Berlin is best attented, and next to it those of Breslan and lomn.

Mititary Lorce.-The situation of lrussia, surrounded by powerfal states, and with a disjointed territory, requires lor her security a large military force. But as the reveme of the commtry is comparatively limited, it became indispensalile to endeavour to orgmise the army, so that it might embrace the maximmo of furce with the minimum of expense. 'The Prussian govermment secoms to have very satislactorily solvel this important and dialicult problem, The obligation of military service is universal; every man (!usubstitutes beimir accepted) is obliged to serve in the army of the line and the lauducher (provindial army), bet ween the ages of 20 and 35 . Livery l'russian suljeet is enrolted as a sohlier as soon as he has eompleted his Etth vear. Ile has to be in the army durimer 7 years, 3 years of which mast be patsed in the recular army. and the rest among the troups ot the reserve. $A i$ the end of this term the soldier enters the lamlwehr, or militia, for ! years, with liability to be called upon fir ammal practice, and to be incorporated in the regular army in time of warr. Leaving the landweln, the sollier is tinally enrollad in the landsturm. The haudsturm, or levy a masse, consists of all the men not in the army or the lambehr up to the age of 50 , and of volum men between 17 and 20. This foree is only called ont in case of invasion, There are varions exemptions firom this law of military service, in liswour of the nohility, clergy, and some other classes of the ponlation. A certain amoment of edacation and fortune eonstitutes also a partial exemption, intasmuch as young men of 20 , who pay for their own equipment, and can pass a light examination, have to serve only one year in the regnar army. This loes not exempt them, however, from the leral service in the reserve, the landwehr, and ilie landsturm.
'Ite stalf of the regular army consists of one general tield-marshal, one general feldzengmeister, 31 generals, 36 lient.-gencrals, 69 majur-generals, 75 colonels of infintry, 18 eolonels of cenvalry, 1.) colonels of artillery, 6 colonels of engineer corphe,
nuld one colomel of trains. The organisation of the army is ne follows:-

The formation of a navy for the kinglom dates from the year 18:8. Aecording to a return made ly the government in Aurust, 1863, the flect of war at that period consisted of the following vessels:-

Falling Vessels Guns
3 Frigntes of 48,38 , nnd 28 guns . . . 114
\& Infigs, one of 15 , and two of 16 guns
1 I'ransport, with
38
6
Tutal 7 Sailing Men-of-wnr, with . . . . . $1: 18$
Guns
6 Screw Corvettes of 26 and 28 gins . 162
9 Duddle-wheel Steamers, with . .
22 Gun-boats, of two and three gimis.
'lotnl 30) Men-of-war Stenmers, with . . . . 240 Atogether, 3 ressels, with 308 ghtns.

Revene and Expenditure.-The revenue and expealiture of the kingdom, from the establishment of the parliamentary system till 1861, have been as follows:-

| Scars | Revenue | Expenditure | Deficlt |
| :---: | :---: | :---: | :---: |
|  | Thalers | Thaters | Thaters |
| 18.19 | 85,903,481 | 91,601,281 | 5,608,060 |

| 1860 | 130,312,755 | 136,342,316 | 6,424,561 |
| 1861 | 134,541,701 | 139,327,337 | 6,230,368 |

Altogether, the revenue of Prussin increased 63 per cent., and the expenditure 65 per cent., from the year 1849 till 1863, with a total deficit of $42,971,640$ thalers, or $6,188,806 \ell$, during a peried
of 13 years, In the flnancial estimates lail hefire the chambers every sessim, the bincone null expuoditure were marly always calculated to he equal; but the 'extrnordinary expentiture,' nulmitted ufterwards, oceasioned a more or less considerable deticit.
The publice teld of the kiugiom, necording to the olllicin! report haid befire the house of deputies lin the session of $186^{\circ} 2$, was as follows, on Janmery 1, 1862 :-

| 1. National Delt bearing Interest:- | Thaters |

The national debt of l'russia dates from the reign of Frederiek William 11. King Frederick I1., eulled 'the Great,' left at his denth a treasure of $72,000,000$ thalers, which not only was spent during the 11 years' reign of his suceessir but a debt incurred of $50,000,000$. King Frederice William 111. at tirst snceeded in reducing this debt to less than $30,000,000$; bnt the subsequent wars with Napoleon I. again inereased the mational liabilities. The debt amountel to $53.494,914$ thalers, or $7,6,2,130 l .$, in the vear 1805 , and had risent to 217,975,517 thulers, or $31,139,359$., in $1 \times 13$. The French govermment had to pay $145,000,000$ of franes to Prussia for war expenses, necording to the stipulations of the treaty of laris, and by these means, and subsequent large reductions in the expenditure, the national liabilities were rednced to $82,722,200$ thalers, or $11,817,4071$., which sum was formed inte a consolilated debt by the law of May 2, 18.12. The firther pregress of the debt is seen in the above table.

Food, Dress, Dirersions, and Mabits of the Bulk of the People,-The food, dress, iliversions, and habits of the people are very different in different provs. In general, rye is the ordinary breail-corn. Alont half a century since the consumption wis estimated at from 5 to 6 schellel per liead, lut now it is not more than 3 seheffel, the defect being made up by the increased consumption of potatoes. In many listricts, indeed, potatoes are now almost the only vegetable food. Besides rye-bread and potatoes, the people use barley, buek-wheat, and milk. In the Rhenish provs, wheat is more extensively used than in the other provs. The wheat cultivated in l'russia Proper and Posen is rather for sale than for inland consumption. Beans and pease are extensively used in most parts of the monarchy. Coffee, mixed with chicory, is exten-

$\xrightarrow{\text { It }}$ for it versi alch lintle ilg s wirl

## PRLSSAA (PROPER)

sively used, and on Sumbes it is taken by all plasses. The consumption of sugar has rajidly inereased, and amomits, at an averafe, to alonit fllw. per individul, motwithatanding the substithtion of honey for sugar in very extensive districts. 'The cunsumptinn of butchers' meat is comshderable, primeipally in towns, It is estimated over the whole monarehe at from if 6 to :17 line a voar to each individuat. Hut in the towns it mas lie from 10 to bil lise, and in the comitry perhap nut more than from 20 to 10 llim . In herlin the comsinuption of hutchers' meat exceeds 101) lis. pur intivjithal: ant this, in all cases, is exclusive of poultry, tish, ami game. Game, indeed, is only used hy the richer fimilies; lut tixt is an ordinary fown of the perasuitry in many districts. I'oultry expecially gerse, are largely lised ly the eommon wople in P'omerania. There is also no want of hater for the pensantry, bit the eonsimpition of whese is greater. The consmintion of spirits is innmense; it is less, however, in the lisenish pross. where whe in extensively used, than in other parts of the monarelis. Ilecr atso is ath onthary besorame, mad the consmaption is very hreat. The comsumption of tobaceo is estimated at 3 las. per individual.
'The zeneral dress of the men eonsists, in winter, of a woollongreat coat, and in smmor a linen coat. Wimmen how begin to he extrusive consimmers of cottons stotf's; it is still, however, enstomary for the sombg fomale peasants to premare stomes of linen in anticipation of their marriage. Wowlen shees are worn, lint are not so freguent as in Frame or Irehand, and in bat weather abmost every bobly is woll shom with leather boots mad shoes; bat in fine weather a few of the common people gro harefoot. Silks are ouly used by the wealthier chasses.

It is usual for the peasants to go to ehorels rearnbarly on the simblay foremon; ann it is enstomary the them to spend the evming of the day in diversinns of same sort or other, frequenty in the aldonse, and in Silesia in dancing parties. Most little towns have shooting places, and the moetings of the landwehr for exercise are looked forwarll to with numeh satisfactiom.
pliUSSA (llal'Eli), an extensive and important prov, of the P'rassian dominions, tivided into the provinces of Last or Dncal l'russia, anil W. I'rissit, havint N. the Ihaltic, li, and S. Rinsia, lohand, and the prov. of l'osen, and W. Bramdenhmor and P'omeranis. Area, $21,880 \mathrm{sq} . \mathrm{m}$. P'ops. 2, xis, is2 in $1 \times 6 t$. The prove is divided into 4 regencies and of eircles. Prineipal towns, Konigshere, Dantzic, Elloing, Tilsit, and Marienwerder. It consists principally of an imonense plain, iraversed by the Vistula, I'regel, lassarge, and other rivers, mid interipersed with mmmerous lakes and immense forests. Soil various, but generally fertile, particularly the delta of the Vistula arid the comatry watered by the Niemen. I'rincipal products, wheat and other sorts of corn, timber, hemp, and ilas, provisions, wool, and ashes, liye is more cultivated than any other sort of grain; Wheat is also largely entivated, but mere for exportation than for internal consumption, rye being the ordinary bread corn. Oats, barley, and peas are also raised, and laterly potatoes lave been extensively eultivated. Farming implements defective and ill constructed; the harrows are made of wood, without any iron, even for tecth. With the exception of the crown estates, which are let on lease, but little land is rented. In the cireles of Dantzic, Elbing, and Marienwerder, good land fetches, when let, from about $4 \mathrm{~s}, \mathrm{Gi} l$. to 5 s , an aere, the tenant bearing all taxes. But in other districts the rent of the cultivated land does not exceed from $1 s, 3 d$. to $2 s, 6 d$. an acre. The wages of farm

1'U゙にllad (Iai)
29
labour vary in summer from $\mid$ I. to Rol., al. I in winter from 3d, to bel., withont fimel; but with a cottage free, or at a low ront, a garden, and jablure for a cow. In harvest the wages are a gool doal higher. The peasantry live in womben or clay cottares, with but fow linsuries, prinejpally nin potatoes, rye bread, nul milk, rarely tusting animat fored, int driaking great quantínes of spirits and beer. Dinem, from thas of their own growils, and wool spun in their cottures, furnish their clothing. Domestic servants Get butchers' ment. generally pork, once or twice a week. Woonl and turf ure almost everywhere ahmolant, and are the principal articles of fuel. Amber is fonmel alomir the sea-shore, but otherwise minerals nre quit animportant. There are many dintillaries mat breweries, but, with the exerption of Josen, this is the least mannfacturing pros, in I'russia.

WKOF, a govermment of buropean linssia, chictly hetweren the inth and ixth dex.s. . . lat. and the 2xth and ibed li. long., having N. l'etershurg 'and Novgorml, of ench of which goses it formerly made a part : li. 'Tver and Smolanak; $S$. Witepsk, and W. livonia, Area estinated at.
 face is nearly flat, with a slope to the N., the direction taken liy most of the rivers. None of these are of considerable size; but the gow, is, motwithstading, well watered. At the XW. יxtremity is the lake of losof, commented by a strat with that of Pejpis. Marshes mre manorons. The atmosplece is usmatly hamp, thomgh, wh the whote, the climate is far from unhealthy. suil thin, and not very fertile, but more corn is grawn than is reguired for home constamptioll. A goon deal of hemp, and fas is raised. The lirests are extensive, und abound with gume. Ciattle ure not of great importance, and bees are less reared tham in most provinces. Mamulactures have increased during the present century, but they are still of no great consequence. l'skof is livided into 8 districts: chiof towns, Pskof, the cap., Toropet\%. and Velikic-Lonki. Its pop, eonsists matinly of linssians, with some Lithmaians and Finns. Public enlucation is little extended.
'skof, or P'leskow, a town of Einropean linssin, cap, of the alowe gov, on the Velikain, llin, m. SW. I'etersharg. I'op. 15,006 in $18 \mathrm{~s} \%$. The town is mostly built of wood, but has two good edilices belonging to the archbishop and the consistory; a number of churches, two convents, and a high sehool. Its only manufactures are ot' leatlocr, but it has a considerable trade in the export of the products of the country. $A$ large annual fair is held here in Feb., at which larige fuantities of woollen, silk, and cotton fabrics, leather, books, and jewellery, are sold.

I'ULEBLA (LA), a city of Mexjeo, cap, of the prov. of its own name, on the declivity of a hill, 76 m . ESE. Mexico, and $120^{\circ} \mathrm{m}$. W. by S. Vera Cruz. Pop. estim, at 72,000 in 1863 . The eity is compactly and uniformly built. The streets, which, thongh not very wale, are straight, and intersect each other at right angles, are paved with large diamond-shaped stones, with broad and well kept footpaths on either side. The houses, of stone, are generally two stories high, with that roofs, laving mostly a court in their centre, surrounded with open galleries, and a fountain of tine water, conveyed thither ly earthen pipes. Many have iron laleonies toward the street, and their fronts are inlaid with highly glazed tiles, or else gaudily and fantastically painted. The apartments are spacions; they ure mostly paved with porcelain, carpets not being in use; and their walls are adorned with paintings in fresco. The lamily of the proprictor usually resules in the upper

mufactures, a commereial eollege, normal sehool, a society of ugriculture, science, mod arts, \&ratuitous courses of geometry and mechanies. applied to the arts, and a small musemm of antuguities and paintings. It is celcbrated for its manufacture of white anil black lace.
le l'uy is very ancient, bat its orthin is uncertain. It sufferef considerably in the wars of the League; and, till lately, its trade and prosperity were mueli depressed.

I'UY-DE-1)OME, a central dép. of Franee, formerly a port of Auvergne, between lat. $45^{\circ} 17^{\prime}$ and $43^{\circ} 15^{\circ}$ N., and long. $2020^{\prime}$ and $4^{\circ} \mathrm{IE}$. having N. Allier, E. Loire, S. Ilaute-icoire and Cantal, and W. Corrèze and Crense. Area, 795,05l heetares. P'op. $\mathbf{j / 6 , 4 0 9} \mathrm{in} 186 \mathrm{~F}$. This dép. is almost wholly covered with mountains of volcamic formatiom, the ligghest of which, the lic-de-Sancy, is $0,223 \mathrm{ft}$. in height: the Puy-de-1)ome, whence the dép. takes its name, has an elevation of 4,8 fe feet. Principal rivers, Allier, Dore, Sioule, and Dordogne, most of which have a N. direction; the Allior intersects the dep. abont its centre, and its valley, the Limagne of Auvergue, is exceedingly fertile. In general, however, the soil is sandy, stony, and otherwise indilferent ; and agriculture, owing to the poverty and ignorance of the natives, is in in more backward state than in most other parts of France. Great numbers of the inhabs. ammally emigrate in search of field labour into the uljacent provs. Hye, oats, and wheat are the principal grains cultivated. The ammal prodnce ,f wine is estimated at from 400,000 to 500,900 lect.; it is mostly of inferior quality, cannot be conveyed from place to place without the risk of being spoiled, and, qenernlly speaking, is good for little, anless it be mixed with other wines. The ammal produce ol wool is estimated at 900,000 kilogr. Chesnuts, timber, honey, waluut-oil, and cheese are among the principal sonrees of its wealth. Puy-de-Dume yields lead, antimony, coal, and granite. Its manufactures, which are mostly conlined to the arrond. of Thiers and Anbert, consist in the former principally of cutlery and hardware, paper, leather, and wax-lights; and in the latter of woollen, linen, and cotton gooms: lace, and paper. The iep. is divided into 5 arromds., chief towns Clermont-Ferrand, Ambert, lssuire, Riom, mat Thiers.

PYRENEES, a lofty chain of mountains in SW. Europe, separating Spain from France, and which, taken in its largest extent, may be resarded as stretching from Cape Creans, in Spain, on the Mediterranean, near the frontier of France, W. to the coast of Galicia, a distance of about 650 m . It is more usual, however, to confine the term to that portion of the chain which separates Sjain from France :-

- Pyrene celsa nimbosi verticis arce Divisos Celtis late prospectat Iberos, Atque ateraa tenct magnis divortia terris.'

When thus restricted, the elain terminates on the W. near Fuenterrabia, between lat. $1=\circ 10^{\prime}$ and $43^{\circ} 20^{\prime}$ N., and lons. $3^{\circ} 20^{\prime}$ E. and $2^{\circ}$ W., its length being about 270 m ., its average brealth about 38 m ., and the area about $1,100 \mathrm{sif} . \mathrm{m}$. I'his great range may be considered is consisting of 2 parts, both haviug the same direction, though not in one continued line, the point of division being formed by the Val d'Aram, near the head waters of the Garonne, of these the W. part is more southerly than that to the E. . The steep escarpment is on the side of Spain; the slope towards France being mach more gradaal, owing to the elevation of the level districts about the Adour and Garonne. It may be remarked, also, that the

## PYRENEES

French valleys ascend the crest of the chain by easy steps, more or less lofty, while the opposite side presents a comtinued succession of rugged chasms, abrupt precipiees, and huge masses of naked rock. The chain at each extremity declines towarls the sea; but the fall on the E .. is much more sudden than on the W.; the elevation only 50 m . Irom the Mediterrancan beins $8,500 \mathrm{ft}$., whereas, on the opposite side, this altitule is not fond mearer than 70 m . from the coast. The following table gives the pasition and elevation of the principal summits of the Pyrences:-

The summits marked with an asterisk, which comprise the three highest points of the chain, are on its S. face. Glaciers are found, as in the $A$ Ins, on some of the higher mountains; lint these masses of permanent ice are much less extensive, the point of perpetual congelation being at a height of $10,000 \mathrm{ft}$., or about $2,000 \mathrm{ft}$. higher than in the: Alps, a difference owing chiefly to the vicinity of the sea on either side.
The valleys of the Pyrenees are numerous, and of singular conformation ; for, whereas the clepressions of the Alpine system ron from 40 to 710 m . nearly in the direction of the ehain, all the great va'ses of the l'yrences are transversal, taking their origin at a col in the crest, and ruming $N$. and $S$. almost at rifht angles with the main ridge. The largest valleys are found in the central l'yrenees, the prisejpal being those of the Garonne and Lavedan, each of which is from 40 to 50 mn . in length. These transverse valleys are commonly the beds of rivers, or rather torrents; which, in the wider and less elevated parts, take a slow inal serpentire course, but in the detiles become rapid and impeturas torrents, often interrupted by cascades, and sometimes by a series of falls. Lakes are frequently enclosed in the basins formed in the higher ridpes of the valleys, and several ot those in the central Pyrences, which are sheltered from the sum, are perpetually covered with ice. Some valleys, alao, instead of rumning in a decp and narrow detile, or a series of little basins, more or less extensive, rising by degrees to the height of the central ridge, present at their origin a single basin, surrounded on three sides by a lofty wall of rock, and opening by a narrow gulley into the vale below; and these natural amphitheatres, or cirques, as they are termed (the principal of which is that of Gavarnin, in the valley of lareges), comstitute the grandest and most distinctive features of the l'yrences. Abont 50 passes are formed through the valleys now noticed; but by far the greater number are practicable only for the peasantry, or used by snugglers, who are found in all parts of the P'yrenees. There are, besides the railway, only a good carriage roads over the ehain:1. the Col de Pertus, the extreme E. pass between

The two highest passes ure the Port dior

The geok gy of the I'renees is still very intberfectly known. The extent of primitive roek is smaller than in the $\mathrm{Alps}^{\text {; }}$ hat its arrangement is very peculiar: not in isolated masses, bursting here and there throngh the transition and seeondary formations, but in a band or zone romning in the direetion of the chain, but only oceasionally falling in with the rest or centrol chain; the granite in the W. section is on the S., and in that to the E . on the N . side of the main ridue. The primitive formation is extremely simple, comsisting of three rucks only, granite, micacems sclist, and primitive limestone, which, together, form a pretty eomthons bind, stretching threefourths across the isthmus. 'The transition rocks, comprising the great lalk of the mantain system, are arranged in vertical hands thanking the primilive formation, and consist of argillaceous schist, sehistuse and common gramwacke, with blue limestone: these strata occur mostly on the N. side, the beds S. ol the primitive formation being chiefly secomdary rocks, as red sandstone, Alpine and dura limestone. The oolite and chalk formations are fomblin the lower parts of the chain on cither side. 'The existence of volemic action is proved by the trap and other similar formations, Interspersed in different parts of the chain; by the peculiar manner in which many of the stratia are upheaved; by the frequency of earthquakes on both sides of the range; aud ty the abundance of thomal springs, especiall, in the valleys on the Froneh side of the l'yrences. The most celebrated springs are those of Bagnices te bigorre and barrige. Bagnires de laehon and St. Sumeur ; all of which are visited, during the summer months, by persons labouring ander rheumatism atal chronic disurders, as well as by others in search of pleasure and pieturesque scenery.

Iron, copper, aine, and lead are found in the Prenees, but, with the exception of iron, these ores are not wrourht, though it is a well known fact that great mineral riches were extricted from these monntains by the Carthaginians and Romans. Indeed, there are the remains of 300 or 400 deserted mines in diflerent parts of the I'yrenees, some of which are said to be very rich. "The veins of marble are numerous and valuable, one of them, a white marble, being equal, in purity and closeness of texture to that of Carrara.
The thora of the l'yrenees comprise the rhododendra, the alpine rose, and a large variety of plants common to high elevations; the principal furest trees being the box, fir, pine, and, in lower situations, the deedduous oak. The fama comprise the izzurd, a species of chamois, the wolf, and the bear; with a variety of birds, many of which are migratory.

The l'yrences give rise to numerous rivers. Those on the N. side comprise the Alour ant its tributaries, the Pau, Oleron, Snison, Nive, \&e.; the Garonne, with the Gers, Ariewe, and others of its atlluents, ull sending their waters into the Bay of Biscay; and the Aude, the 'ret, and the 'Teeh, Vol. iv.
falling into the Mediterrancan. The rivers descenting from the S. slope are mostly tributaries of the Eliro, the prineipal being the Xragon, (iallego, Cinca, and Segre, all of which have numerous branches; the other rivers of this slopee are the Ter and the Lobregat, the latter tlowing into the sea close to Barceloma.

Secues of savage sublimity are more frequently met with in Switzerland than in the lyrenees; the N. lat. of the former, as well as the greater size of its rivers and lakes, adding to its features of wihd grameur. The l'yrences, however, exreed the $A l_{\text {is }}$ in elevation, owing to the much lower level of the valleys, as compared with those of switzerland, some of which are mearly 4,000 tt. high, while those of SW. France suarely exced $\geq, 000) \mathrm{ft}$. The presence of oaks, also, in the forests, clothing the sides of the mominans, gives a beanty to the l'yrences which is wholly absent on the fireovered steeps of the $\mathrm{Sl}_{\mathrm{p}} \mathrm{s}$. Iht, however worthy of the traveller's notice, these valleys will pro bably never become the frequent resort of the tumist, because access to them is, notwithstanding the varions lines constructed to and through these momntan mases, still very dillieult, and the atcommodation for travellersworse than indifferent while Switzerland, accessible in all directions by sool roals, and a complete network of railways is visited not only on its own necomnt, but becanse it is the high road to Italy.

The mountaincers of the Pyrences are shepherds, and small proprietors both of land and cattle; but owing to the deticieney of nutritions vegetation, their condition as graziers is far inferior to that of their brothers of the Alps. They are patient and industrions, though seldom raised above want: besides which, they are in everything, but especially in food and clothing, more simple and primitive than the $\mathrm{Alpine}_{\text {mom- }}$ montaincers, than whom, however, they are monestionably handsomer and more vigorons. 'Their fond usmally consists of rye or larley, breat and paste, made from Indian eorn, with, oceasiomally, salted lidt's flesh aut pork. Crime of every description is rare in the l'vences, theft very infrequent, and murder altogether manown. On these momitains is fonnd the extraordinary race of people ealled Cayots, thistinguished by their sallow and unhealthy eomotenances, stupid expression, want of vigour, relaved aplearance, impertect articulation, disposition to goitres, and inferior share of mental capacity. They live in the most retired valleys, seeluded from and studionsly avoiding intareonrse with the rest of the inhals., by whom they are looked upon as a degraded race; and though they are not persecuted, enslaved, and thebarred the privileges of ruligion as formerly, they are still a separate fimily, still outeasts; ; people having evidently no kintred with those who live aromm them. but the remnant of a ditferent and more ancient family. 'The origin of this eurious race is hidden in obscurity.

The P'yrenees, which seem to have been known to the Greeks under the name of חlvpriv, are connected with many important historical events. Hamibal crossed them on his way to Italy, at the begiming of the second I'mie war, most probably by the pass of Pertus, near the E. and of the chain. Julius Casar also traversed them with his army, when marehing into Spain against Pompey. Charlemagne carried his victorions arms over these momntains, nut athed Spain to the empire of the Franks. Edward the Black Prince led his army over one of the western passes, when fighting in defence of l'eter the Cruel against Henry of Trastamare ; and these mountains have obtained a more recent celebrity

## PYRENEES-ORIENTALES

France, reg. SW., formerly inclucled in Gascony, between lat. $12^{\circ} 42^{\prime}$ and $43^{\circ} 35^{\prime}$ N., and long. $20^{\prime}$ W. and $85 \mathrm{~L} .$, having N. Gers, E. Ilante-Garome. W. lasses-1'yrences, and S. Spain, the ridge of the l'yrenees forming the line of demarcation between the two kingdoms. Area, 452,945 hectares. 1'ol. 240,179 in 1861. Within the limits of this dep. are aome of the most remarkable places of resort and oljects of curiosity in the l'yrences, as the baths of Mariges, Bagnires. and Canterets, the valley of Gavarine, and the Breche ale Roluml. l3y far the greater part of the surface is covered with ramifications of the P'yrenees, among which the Gave de l'an, Gers, and Adour take their rise. Small lakes are very momerous in the mountains. There is a larger proportion of good soil in this than in the neighbouring dép. of the Brasses - Pyrinees, thongh the produce of corn (ehiefly maize and wheat), be still insufficient for the inhabs. l'roperty is much sublivided; most of the peasants are proprictors of the soil they eultivate; and the greater number of the other proprietors are engaged in the eultivation of their own lands. A traveller, Mr. Inglis, describes a family in the mountains, whose condition might be taken as a fair sample of that of the poorer mountaincers of the l'yrences. 'The property of the peasant,' he says, 'consisted of two cows and three gonts, A small meadow in the neighbourhood of the hat was fertilised, and allotted to rye, and abont a rood of land was laid ont in potatoes and cabbages. The peasant and his family consumed the whole produce of the animals. Meat of no kind ever entered the cabin; but the lake, $1 \frac{1}{2}$ league distant, occasionally supplied a fer fish. A kind of cheese, like some of the joorei Scoteh cheeses, was made from the goats' milk; and the sale of this to the lower orders at Canterets was the only sonrce of the money necessary for the purchase of clothes and whatever else was not produced by cows and goats.' (Switzerland, the I'yrences. \&e., p. 280, 281.) The dep. produces abont 270,000 hectolitres a year of inferior wine, abont a half of which is exported or converted into brandy. A good many cattle are reared, and the horses bred in the phain of 'Tarbes are extensively purchused for the service of the light cavalry. Mules are bred for export intor Spain. The prodnce of wool is reckoned ut abont 370,000 kilogra a year ; and a good deal of butter is mate of the milk of the sheep. The protuce of honey and wax is also considerable. Minerals and mamufaetures, though of little importance, are not quite valueless, there being gonl marble quarries, and sone fabries of woollen, linen, mad cotton stuffs, with tamneries and distilleries. The (lép) is divided into three arronds, ; chief tows, thrues (the caj.), Argeles, and Bagneres de 1igorre.

P'YRENEES-ORHENIDLES, a maritime and frontier dép, of France, reg. S., consisting principally of the old prove of lioussillon, with a portion of Languedoc, Fi., having N. Aute, W. Ariege, S. Spain, the ridge of the byrences forming the line of demareation between the two kingdoms, and F. the Mediterranem. Shape nearly triangular. Aren, 412,211 hectares. Pop. 181,763 in 1861 . The l'yrences in this akp are less lotty than in the greater part of the rest of their course; still, however, the Camigon, their highest peak, attains to an elevation of $9,140 \mathrm{ft}$. The thep, though in great part monntainous, comprises a large extent of plain country. The principal rivers are the T'et, 'Tech, and Agly; but none of these are navigable, The arable lands are of two elasses-wed and dry. The irrigable, or wet, are always muder culture: in the rotation to which they are sub-
aluded in Gascony, $\bar{b}^{\prime} \mathrm{N}$. , and long. 20 ' E. Haute-Garome, juain, the ridge of of demareation beea, 452,94 a liectares ${ }^{n}$ the limits of this markable places of in the l'yrenees, as res. and Cauterets, e Brexhe te Rolumd. surface is coverel enees, among which 1 Alour take their acrons in the mounportion of good soil ouring dep. of the e produce of corn still insulticient for h suldivided; most ors of the soil they amber of the other cultivation of their - Inglis, describes a ose condition migh $f$ that of the poorer 'The property of ed of two cows and w in the neighlourcid, and allotted to was laid out in poasant and his fiumily ce of the amimuls. the calin; but the onally supplied a few some of the poores on the goats' milk; ower orders at Cunthe money necessary d whatever else wats oats.' (Switzerland, 81.) The produce siderable. Ninerals of little importance, being gool marble woullen, linen, mul ud distilleries, The ronds, chief tows, and Baguères de

ES, a maritime and , eonsisting princiillon, with a portion Aude, W. Ariege, S. ees forming the line two kingrloms, and e mearly triangular. 61,7 63 in 1861. The s lofty than in the reourse; still, howest peak, attains to tie déro, though in rises a large extent -ipal rivers are the c of these are maviof two classes-wet t, are always mider hich they are sub-
jected. they usually yiehl three crops in two years, bun of which is wheat, mud the others trefoil, or beans, maize, potatoes, hemp, or has, when they are kept in grass for an equal period. The dry, or non-irrigable, lands are alternately under wheat or rye, or in fallow. Hut though agriculture be better conducted than $m$ most of the aljacent heps., the corn continnes to be separated from the gritin by treading out with lurses, as in Aude. The total produce of corn, chietly whent, maize, and ree, is estimnted at 42,1 tio bectolitres a year, a quantity obvionsly much below the demand of the fop. The dep. also furnishes in ordinary rears about $500,0 \mathrm{~m}$ ) lectol, of wine, and 12,000 of oil. 'The eins ordituires are highly coloured and leavy, and are but little drunk in a pure state in other parts of France, but are extensively emphoyed to give colour and body to the weaker winces of other déps. The red wines of lagrmols and the white wines of hivesaltes are, howerer, of a very superior description. The white liuseat wine of livesaltes is suid to be decidedly the best vit de liquear produced in France. The horses of $\mid$ till 1640 , when at was tinally annexed to Finace.
the dep. have been very much improved ly tue imperial stanl at lerpigam and otherwise : sherep and goats are, however, the most valuable domestic animals; the former vick ammally alout sh, of0 kilogre of wool for exportation, after supplying the heme cousmuption. The mulbery has been introduced, but this dip. ranks last amonir those in which silk is grown. About 300,000 kilogrammes a yeur of cork are collectenl. Propertyis very much subolivided. Irom, copper, hismuth, and lead are raised, but in mogreat quantitios. Many of the inhabs, of the coast are ceanpiod in the tumy and anchory fishories; and there are mannfactures of coarse woultem stutis and hosiory, with iron furges, tameries, bapar mills, and distilleries. The dip is divided into three arronds. : chid towns, l'erpignan, the capital, Coret, and l'rides.
lionssillon belongred successively to the kings of Majoren ant of Nragon, till Lous XI. tonk it from the latter. It was restored by Charles Vill.,

## Q.

$Q^{0}$UEREC, a city and sea-port of Canada, of which and of the British possessions in N . America, it is the cun., on the NW. Innk of the At. Lanwrence, at the point where it is joined by the st. Clariese, ahnont 340 m . from the mouth of the former. P'op, tiz, 138 in 1861. The city ocect pies the extrenity of a ridge, terminating in the angle formed ly the junction of the two) rivers, in the puint called Cape Diamond, rising to the height of nearly 3.10 ft , aluve the st. Lawrence. The cape is surnounted by the citadel; and the town extends from it, principally in a NE. direction, dawn to the water's ellge. it is diviled, from the difliterence of elevation, into the Upper and Lower tewns. The old town, which lies wholly without the walls. partly at the foot of Cape Diamment, and rumud to the St. Charles, had nurrow mod dirty, and, in parts, steep strects, till the year 1 stij, when the prinecipal jart of it was deitroyed in two trenendens conntlagrations in May and June. Though built of stane, the houses which were burnt dowa were mostly roofed with shingles; and to this the extent of the destruction oceasioned by the fires in cquestion is princippally to be aseribed. In reluilding the town, care has been taken to have the streets properly laid out, widened, nal otherwise improvel. The ascent from the lower to the ulper town is ly a winding sirect and by flights of steps. The strects in the litter, thongh nurrow, are generally clean, and tullerably well pavel, or macadamiscil. The pulbfic lmilitings and most of the loonses in it are roofecl with tin plates.
Quelece is very strongly fortififel, and may be called the Giilraitar of Anerien. The citadel, over Calpe Diamond, inchules an area of about 40 accres, and is fommiduble alike from its position and its works, constructed on a gigantic scais, unll on the most approved principles. The line of the firtiifcations, which stretelhes neurly across the penimsula on the $\mathbb{W}$., and runs along a ridge between the upper mud luwer towne, is intersected by five gates, amd lass m imer cirenit of aloont $2 \frac{1}{2} \mathrm{~m}$. leyond the rampurts, wa the W., are the extensive suthurbs of St. Rech, St. Juhn, and St. Lenis.
The pulhie buildings are sulustantial rather than elegant. The Chatem St. Lunis, the resillence of the governur-general, a large plain builling, on a
height overhanging the river, was hurnt down early in 18:35. The lioman Catholic cathedral uf Notre 1)ame, the I'rotestant enthedral, with simulry other Catholic and Protestant churehes; the ohl episcopal palace, now the seat of the Canadian legishature; the quadraugular elifice, formerly the college of the Jesuits, but now a barrack, in the upper town; with the Quebee bauk, the exchange reading-room, and the goverument warehouses, in the lower town, comprise the principal public buildings. There are three numeries, one of which, the Hotel de Dieu, is a very valuable hospital. The nums are lieze, in fact, a most useful class of persons, aeting as murses to the sick admitted within these establishments, and as in" netresses of young girls.
Among the establishments for educational purposes, the first place is due to the lirench collene. It has a principal, and professors of theology, rietoric, and mathematies, with five regents for the Latin and Greek classes. Ilere is also a roval grammar sehool, a elassical academy, a national school, and many French and linglish private schools. A royal institution for the advamecment of learning within the prov., and a literary and historical society, respectively enjoy the patronage of the royermment and of the principal inhabs. A mechanies' institute was established in 18:10; and it has numerous benevolent associations. The city public library, though not very extensive. is well selected, and contains a great variety of standarl works. The garrison, also, has a good library.

Though not a manufacturing town, Quebee has various distilleries, breweries, with tobace, soap, and candle works; and mombers of the ships have been lamehed from its yards. It has two or three banks, and a savings' bank. The markets are well stocked with most sorts of produce, but good fish is rather scaree and dear.

The climate, though on the whole goom and henthy, is in extremes. In summer the heat is equal to that of Naples, while the colle of wimer is not inferior to that of Mosenw. This inergatity oceasions a corresponding dilference in the modres of life during the diflerent seasons of the year. In winter travelling is carried on by means of sledges and carrioles, in the same wiy as in

## QUEBEC

linssia. The first viev: of Quchee in sailing up the St. Lawrence is striking in the extreate; and there is a magniticent prospect from the citadel on tape Dianomd. The majority of the prop. being of French extraction, the French language, which is still spoken in some of the best circles with grent propriety. anl the R. Catholic religion, preduminate. Society is here more prolished and retined than in any other town of British America; and the higher provincial gentry of French deseent ure distinguished by the conrteonsness and urbanity of therr mamer. Bat all classes are much given to show, and generally indulge in expenses beyond their means. Hence Quebec is very expensive; and owing to the jealousies that exist, and the violence of provincial polities, soceicty is split into different partics, Great attention is, also, paid to etiquette; and those admittel to the governor-general's parties rarely associate with those who do not enjoy that honour.
Vessels of the very largest burden arrive at Quebec. 1ts harbour or busin, between the city mal the island of New Orleans, is of great extent, having in general about 28 fathoms water, the tide rising from 16 to $18 \mathrm{ft}_{\text {, at neaps, }}$ and from 25 to 30 ft . at springs. Shijus lie alongside the wharfs abong the st. Lawrence. There are extensive flats between the lower town and the St. Charles, where wet doeks might be easily construeted. The trade of the city is very extensive. It engrosses, with Montreal, almost the entire trate of the prov. with the mother country and the $W$. Indics. It has a regnlar intercourse, by means of steamers, with Montreal, and other ports higher up the St. Lawrence, and with Halifax and other ports on the Atlantic. The corn and flour exported from Ranebee is not the prowth of the prov., but of the U. States. The principal articles of import consist of corn, cottons, Woollens, silk, and other manufactured goouls; glass wares, spirits and wines, iron and lardware, sugar and tea.
During the year 1862, the following number of vessels with eargo entered the port.

Quebec was taken from the Frenel in 1759. A British army, mader General Wolfe, having effected a landing near the city, attacked and

QUEEN'S COUNTY

## defeated the French army under Montcalm, on

 the heights of Nbraham, to the W. of the town. Wolfe fell in the moment of victory; and Montcalm, who was also mortally woundel in the action, expired soon after. The liench, panicstruck by the loss of the battle and the death of their conmander-in-chief, surrendered the city before even a single battery had been opemal ugainst it. A monament was crected, undor the patronage of Lord Dalhonsie, in the rartens of the châtean, inseribed to the "Immortal memory of Wolte and Montcalm.'QUEDHLINBULEG. a town of l'russia, reg. Masdeburg, circ. Ascherslehen, on the Bode, a tributary of the Sanle, 7 m . Sisli. llablerstalt, and 33 m . sW. Magdeburg. Pon. 15,773 in 1861, exclus. of a garrison of 938 men. The town is well built, mul is strrounded by turreted walls, pierced by a gates. On an eminence immedintely above the town is an old castle, now falling into decay, but which has a good library, and is in part converted into a selool. It was formerly the residence of the abbesses of Quedlinburg, who were princesses of the empire, and had a seat on the Lhenish bench of bishops. Many of these abbesses are buried in the Stiftskirche, or chureh of the ancient abbey; in which are also the tombs of Henry the Fowler, his empress, and the beantiful Conintess Königsmark, mother of Narshal Saxe. Quedlinburg lens several hospitals, public schools, anul varions charities; with mannfactures of woollen stuffis, distilleries, and sugar-relineries. The rearing of cattle and hogs employs many of the inhabs.

Klopstock, anthor of the ' Messiah,' was a native of Quedlinburg, luaving leen born here on the 2nd of July, 1724: since his deatl a momment has been ereeted to his memory in the briihl garden, near the town, Quedlinburg was formerly a free imperial city, and has been frequently the residence of the German emperors and the seat of ecelesiastical comeils.
QUEENBOKOUGiH, a bor., sea-port, and par. of lingland, co. Kent, Lake Seray, on the L.. coast of the Isle of Sheppey, at the junction of the channel of the Swale with the estuary of the Medway, 2 m . S. Sheerness, and 37 m . li. by s. London, on the london, Chatham and Dover railway. Pop, of par. 973 in 1861. The town, which is poor and mean, consists principally of a main street, having the guildhall, with a grol underneath, near its centre. The elhureh, an ancient structure, has a tower at its W . end; aml there is, also, $n$ chapel for Independents. A charity school for the education of the sons of the freemen are supported by the corporation and the parliamentary representatives for the tor., and there are some minor schools, and a Sumday school. The inlabs. are almost wholly engaged in the lireeding and supplying of oysters for the Loudon market.
Inconsiderible as it has long been, (Vucenborough enjoyed the privilege of sending 2 mems. to the II. of C . from the sera of Elizabeth down to the passing of the Relorm Aet, when it was disfranchised. It was reckoned too mimportant to he included in the provisions of the Mlunicipal Keform Act. A tine old custle in the vieinity of the town was demolished by order of parliament in 1650.
QUEEN'S COUNTY, an in. co. of Ircland, pros. Leinster, having N. King's eo., E. Kildare and Carlow, and a detaehed portion of King's co., S. Kilkemy, and WV. Tijplerary. Area, $421,8 \dot{0} 4$ acres, of which 60,972 consist of mimproved bog and waste lands. Surfare generally tat; and soil, except where bog oceurs, fur the most part very fertile. Estates mostly large; but many of them are let on
perpetual leases, the heal lessees on these estates forning the midille elass of gentry. These, howcurr, have mustly relet their farms, generally in smaller divisions, to inferior tenants; and these ngain have subdivided them to others; so that many of the occupancies are extremely small, and held hy persons too poor to be able to make any improvement. lint where firms have been let oin terminable leases, they are larger, and on these virious improvoments have been introduced, both as respects the rotation of crops, the iaplements of hashamdry, and the stock, loirying is carried on to some extent, and a gond deal of cheese is made for the Inblin market. Coal and limestone are fomme in this eo., but the former is not wrought. 1'rincipal rivers, barrow and Nore. It is diviled into 8 haronies and 50 parishes. and semds 3 mems. to the II. of C., boinge 2 for the co. and 1 tur the bor, of Iortarlington. Liegistered electors for the co, 3,438 in $18 i \sin$. At the census
 families. and !n, dian inhahitants: while, in Is.fl, the co. hat $\frac{0}{2}$, , tis inhab. hotses, $27,7+2$ families, and 1 53, 930 inhabitants.

OLEBNSFERAC (SOUTII), a parl, bor. and sca-port of Seatland, cor. Linlithorow: on the $s$. shore of the frith of forth, nearly opposite to $N$. Quensferry, 8 m. W. by N. Ethinhurgh. lop, 1,230 in lxibl. It is a poor decayed place, which Was originally fomed for, and is still principally depmatent wh, the ferry, whid has long been established at this point, aross the Forth. It consists chiefly of one street; ruming paralled to the Frith. The only publie: buildings are the parish churel, a dissenting chapel, and the townlall: it has a somp mamblatory and a brewery. Newhall. immediately to the F. of the town, is now the princibal ferry station aeross the forth, though. under eertain cireumstances, the ferrymen prefier the pier of the bor.

North Queconsterry, on the opposite side of the Frith, which is lere less than 2 m. across, is still mure inconsiderable. 'The principal ferry business across the loorth is now, in liet, carried oin between Newhaven and Burntisland, and Newhaven and Kirkeally. I)r. Wilkie, aththor of the 'Epigoniad,' Was a mative of S. Queensferry, having bern bon there in 17.2l. Quensfirry unites with Dunfermline, Inverkeithins. Culross, and stirling, in sending 1 mem. to the 11 . of C. Registered electors in this bor. 33 in 1865. Hopetoun Inonse, the splendid mansion of the earl of Ílopetoun, is situated a little W. from S . Queensferry: It ocenpies a commanting position, and las a voble view.
qUENTIN (ST), (an. Augusta Verumumhorum), a manufacturing town of France, dép. Aisue, cap. arrond., on the Somme and on the canal of St. Quentin, 24 m . NW. Lam, on the railway from Paris to Namur. Pop. 30,790 in 18ul. The town was formerly a place of strength; but, since the time of douis XiV., its ramparts linve given phace to suburbs and public walks, and a line public promenale extends on the E. side of the town, along the banks of the canal. St. Quentin is tolerally well bilt; its principal streets being wide, its new quarters handsome, and most of its houses modern. In the eentre of the town is a large square, in which is the town-hal, a curionsly ornamented Gothic editice. 'Ihe principal ehurch, or cathedral, is a majestic pile, 416 ft . in leurth intermally, and its nive 212 ft , in height. The hospitals, the public library, with 14,000 vols., the court-house, belfry, theatre, and concert-hall, eomprise the other buildings worth motice. It has tribmands of origimal jurisdiction and eommerce, a chamber of mamufactures, a conneil des prud'hommes, a communal college, drawing and cam-
mercial selools, courses of practical geometry and mechmics, and a society of arts and scienees.

St, (Quentin was formerly the eentre of an extensive manufacture of linen fabrics and vam. This branch of industry has now almost disappprared, but its place has been suphlied by the cotton manuficture. There are, within an area of 12 lengies romud St. Quentin, embracing its arrond., with parts of the deps. Somme, In Word. and lias de Calais, nearly 75,010 hands mompored in weaving, bleaching, und spinning cotton, luesides masy more in subortinate departments. The principal articles are striped and spotted muslins and yarn, and the town and its neiphbourhood have about $\mathbf{7} 00$ bobbinet frames. The cottom spimers, whose momber is about 1,000 , reside principally in the town; the wavers live in the villares and surrombling cotutry, where most of them are petty proprictors, ocempied in arricultural labour for 3 or 4 months of the yuar. The cuiton mills of St. Nuentin are he mo menns so extensuse as those of the dép. Iant-likin : tew emplay more then 200 hames. Children are comploved bare at an earlier age than in the cottoa fuetoriesol' Alsine ; but the workpeople of all ares choy mush better health and more comburts in St. Gucutin tham cither at Mulhausen or Lille.

Table linens. leather, soidn, and sulphurie acin are also prodared here ; ind the rommerer of the town with the aljacent parts of liance. loderimm, and (icrmany is much liceilitated be the ratway, as well as the eamal of st. Gumbin. The latter coments the inland navigation ol France with that of the Netherlands, by forming a communicalion between the Oise, the Somme, and the Schehlt. It is remarkable elactly lior the tumels cut through the high ground, about a m . N. St. Guentin. The first of these is 160 ft . below the sarfine, 24 ft. in width, the same in height, and $\frac{1}{2} \mathrm{~m}$. in length. The second tumnel is on a still larger scale, being 3 m . in length, and 200 ft . below the surface. Daylight is admitted, at certain distances, by openings carried to the surline; and the tunuel being cont through a chalk rock, the sides are mot bilt. It was tinished in 1810 .

St. (Juentin, as previously stated. Was formerly stromgly fortitied, and was regarded as one of the lulwarks of lrance on the N. In 15:5\%, in the earlier part of the struggles between Philip 11. and France, the army of the former, moler the Inke of Sivoy, having threatencl to attack the town, defended by the fimous Admiral Coligny and a wak garrisom, the Constable Montmorency advanced with a considerable army to its relief, and suceceded in throwing some reinforecments into it. On his retreat, however, he was owertaken by the Spamiards, when a general action ensued, which ended in the total defeat of the Jreneh, who lost all their artillery and baggage, with ahont 7,000 men killed mad prisoners, macluding many persons of distinetion. The town soon alterwards tell into the hands of the Spaniards. The hattle having been fooght on the 10 in of Augrast, St. Lawrence's lay, the vast palace of the liscurial, built by lhilip, II, was dedicated to the saint in commemoration of the victory.
lierre la limée, better known by his Latin aame of Ramus, one of the cmrliest and ablest opponents of the scholastic system of philosophy, and the Maryuis Comborcet, were natives of the vicinity of St. Quentin.
QUERE'MAKO, a city of Mexico, cap. of the prov, of its own uane, in a rich and fertile valley, 110 m, N F. Mexico, and 60 m . ESLE, Gumaxmato; lat. $20^{\circ} 36^{\prime} 39^{\prime \prime}$ N., long. $100^{\circ} 10^{\prime} 10^{\prime \prime} W^{\circ}$. Pop. estim, at 50,000 . Queretaro is a well-buitt city, wihh three large squares, many handsome public
edifices, and the usual excess of eonvents and churches. The Franciscan monastery is spaciens, amb surrombled with extensive gurdens: and the convent of Sinta Clara is an innmense buibling, inlabited by ento lemales, including many young ludies sent thither for their education. The streets have side pavements, laid with tlags of porphyry: the city is woll supplied with water, hrought to it by un aqualuct abont 10 m . in length, earried across the valley upon 60 arches.

It is divided into 5 parishes; 4 in the borly of the town, and $L$ in the suburbs, separated from the rest liy a little stream. 'We were much struck,' says a travellor, Mr. Wand (Mexico, ii. 18:3), 'witif the busy look of (puretaro, which has quite the air of a manafincturing town. More than luil' the liouses contain shops, and the pop. is engraged cither in small trades or in the wool manulamtories, whieh are still very numerons. These are divided into two elasses, obruges and trapiches. The first eomprises the establishments that cmploy from 10 to 30 looms; the last those in which oinly one or two are in activity. In both course cloths, of different patterns and sizes, are manufactured; part of which are retaiked upon the spot in the great Plaza, where a market is held every evening by torchlight, and part sent to the eapital or other great towns of the confederation. The demanil for these manufactures has decreased very mach since the prorts were opened to Eirropen imports; inded, the woollen trade is now principally krpt up by a \&overmment contract for supplying the army with elothing. The price paid for scarlet, green, ind vellow cloths of the very coarsest texture, varies from 24 reals ( 12 s.) to 15 reals ( 7 s . 6 id. .) per vara; and there is no doubt that they might be obtained of a better quality at a much lower price from abroad. The wool is brought primeipally from the northern states, San Luis de lotosi and Zacatecas; its price fluctuates from 16 to 2.1 reals the arroba of 25 lbs., including carriage; lut the wool most esteemed is the produce of the state itself. It aequires its value, not lrom any superiority in the bred of the Queretaro sheep, but from the circumstance of the flocks being so much smabler than those of the north that they can be better attended to, fell in richer pastures, and kept more clear Irom thorns, which deteriorate the ileece. This wool sells for $3 \frac{1}{2}$ dollars (or 30 reals) the arroba.' The manufactures of the city are conducted on the same ncfarious system that prevails clsewhere in Mexico, of inveigling the ladians into debt by the volmtary alvance of money, and then shutting them up in the factories.
()ULMIELS, a town and river-port of France, dej. Finisterre, of which it is the cap., at the jumetion of the Eir with the Odet, about 11 m . above where the latter falls into the Bay of Bemandet; 115 mm . W. by S . Rennes, on the railway from l3rest to Nantes. Pop. 11,488 in 1861 . The town stands on the deelivity of a hill, and is divided into the old and new town. The former, surromeded by walls flanked with towers, is illbuilt; but in the new town there are some good strects and looses. The cathedral, a handsome Gothic editice of the lath century, and other elurehes; the military hospital; the college, a large structure formerly belongmg to the Jesuits; the theatre, and some public baths, are the principal public buildings. The river is navigable as far as the town for vessels of $\$ 00$ tous burden, those of greater size anchoring opposite its embonchure, in the bay of Benambel. It has mannthetures of earthenware and building doeks; its inhabs., also, engage in the pilcharil fishery, and carry on a pretty brisk trade in provisions.

Quimper is a bishop's see, and derived its present mane from its tirst bishop, in the otlu century; previously to which it was called Coriospitain. It was sacked hy Charles of Hois in the year 134\%. Among the distinguished men, of whom Quimper has to boast, may be mentioned lardouin, the commentator of l'liny, celebrated alike for his learning and his paradoxes; and freron, the most voluminous of the French crities of the last century.
(2UI'TU, a celebrated city of S. America, cap. of the reppub, of Equator (Ecuculor), in a ravine on the li, side of Pichincha (a voleanic mountain, which, at no very distant period, was in a state of activity), above $9,500 \mathrm{ft}$, above the sen; 160 m . NNE. ( intyaquil, and 460 nI . SW. Bugota. Lat, $\left(1^{\circ} 13^{\prime} 27^{\prime \prime}\right.$ S., long. $78^{\circ} 10^{\prime} 1 i^{\prime \prime \prime}$ W. J'op., varionsly estimated at from 40,000 to 70,000 . Quito is, oit the whole, one of the best built cities of South America. It has four broad, straight, and wellgaved strects, and three large and some smaller squares, in which are the principal public builiings, and the best private residences. The strects which rum N. and S. are pretty level, hot those which cross them ascend the skirts of the I'ichincha on the one hand, and descend on the other towards a small river, over which is a stone bridge; and from this unevenness of the gromid some of them are so steep as to bo impracticable for carriages, besides being, for the most part, harrow, crooked, unpaved, and almost impassable after lieavy rains. So momerons, also, are the crevices in the monitain, that, in the suburbs particularly, several of the houses have been raised on arches. The houses, which are lange and convenient, are mostly built of unburnt bricks, cemented with a species of mortar, used by the anc. 1'erovians, which soon becomes extremely hard. On aeconut of earthquakes, they are seldom more than one story in height, exclusive of the gromul-floor, or rez-de-chaussie. They are flat-roofed, aul have usially a baleony towarils the strect. Generally speaking, they are indifferently fur ished, and deticient in cleamliness. The city las an abmolant supply of water, obtained from several streams, which flow through it in combits. The principal square has, in its centre, a line brass fountan; and on its sides are the cathedral, the bishop's palace, the town-hall, and the palace of the president. The last is a gloomy-looking buidding, with a terrace in front, ascended by two tlights of steps. In it are the halls of the audiencia, treasury, and archives, the president's apartments, with the otices of the public seeretaries, and the gaol. The cathedral, a plain building, with a steeple at one corner, is much less landsome than several of the other chmrehes. Quito has numerous convents. The ex-Jesuits' college has a beautiful front, with Corinthian colunms, finely seulptured by native artists. The interior of this editice is very rich, and has a library, said to comprise $20, t 100$ vols, including severnl rare work. A part of the edilice has been converted into halls for the university, and another part into barracks l'reviously to the revolution, the churehes and convents were richly furnished with silver ormments, plate, and paintings; but a part of this wealth has been since turned to more useful purposes.
(Gnito renks rather high, at least among Spanish American cities, as a place of ellucation. It had two universities before the time of Charles III., but they were then united into one. Besides this university, which still exists, there are several colleges umber the guidance of the different religions orders. The city was made a bishop's see in 15-15, and is the residence of the president, and
and derived its prep , in the $\overline{\mathrm{t}}$ th century ; called Coriospituin. lois in the year 134 i . n , of whom thimper ioned Hardouin, the brated alike for his s ; and Freron, the rench critics of the
of S. America, eap. Ecuculor), in a ravinc a volcanie mountain, ciol, was in a state of ove the sea; 160 m . I. SW. Ilogota. Lat. "W. Pop., variously 70,000. 1 1uito is, on built cities of South 1, straight, and wellfe and some sinaller rincipal pmblic buikidences, The streets retty level, but those skirts of the l'ichinlescend on the other lich is a stone bridge : ' the gronnd some of mpractieable for eare most part, narrow, lost impassable after also, are the crevices suburls particularly, been raised on arches. and convenient, are cks, cemented with a - the ane. J'eruvians, ely hard. Onacconut eldom more than one if the gromed-thoor, or flat-roofed, and have he street. (Generally cently fur ished, and city has an abmondant rom several streams, rhuits. The princijal l tine brass fumatam: ithedral, the bishopis he palace of the presi-my-looking builing, Ided by two flights of of the audiencia, treacsident's apartments, e secretaries, and the ain building, with a h less handsome than es. Quito has mmeesuits' college lias a thian columns, finely
'The interior of this Iibrary, said to comseveral rare worlis, a converted into halls er part into barracks: $n$, the churches and hed with silver orna; but a part of this to more useful pur-

the seat of all the superior courts and offices of the republic.

Coarse cottons, and woollen cloths, baizes, flannek, ponchos, and stockings are made in tuito, which is also highly celebrated for its confectimery ; but its eliief exports consist of corn and other asricultural products. These, with some of its mamfinctures, are sent by way of Ginavaquil to Central America, in exchange for inlige, irom, und steel; and to lern in return for bramly, wine, and oil, and for gold, silver, and other motals, licuador not heing vory rich in mineral wenth. The foreign imports comprise all hinds of binopean manafactured goods, with iron, stcel, and seme other raw materials. The markets of (guito are abmulantly provided with becf, maton, pork, and puitiry, both cheap athd good; veretnbles and fruits of all kinds.
The inhbibitants of Guito do not difler mate-
 bull lights, masquerinles, dancing, music, and religions processions being their principal amose-
ments. This is, no doubt, to be ascribed to tho milduess of the climate, and tho ease with which the ordinary necessaries of life may be prodnced. The city enjoys, as it were, a perpethal spring. Vegetation alever ceases at any promiod of the year; but from Dec. to Mareh violent storms of rain and lightning almost daily oecor in the aftornoon. EArthonkes are, also, frequent; and we of those visitations that oceurred in $17!17$ is satid to have destroyed in the prove above It, inith porvons, and to have hat a promanent indurnce over the climate. A plata, about 1 lengues NE. from the city, was male choice of by the Jrench ama Sbanish astromomers, in lizifi, for momoring a degree of the meridian: and an inseription on a marble tablet on the wall of the ex-h asints' chmied in tuito commemorates the evont, and the latmons of the commission ; but the most enduring memorial of that great umberaking is to be fommed in the 'Historical Voyure' of T'llon. Guito was fonmed by Solastiain Bemaleasar in lisib, and was incorporated as a city by Charles $V$. in lishl.

## R.

RAN! (IInng, Gyiir or Nugy Gyjir, an. Juwriunu, Arobo, or Arubouia), a roval free town of Humgry, eap. the eo. lanab, at the conduene of the river of the same name with the banube, 22 m. Will. Comorn, and 39 m. Sle. Preshurig, oll the railway from Viema to Comorn, lop, 17, xibl in 15,)t. The eity stands in a low and marshy plain, and is rather unhealthy. Like Vienna, the city is separated from the suburbs ly its old fortitications, and an open glacis, plantel with trees, and forming pulbice walks. Some of the streets are regularly lmilt; aml, besides three or tour churdhes and a eathedral, the eity has the bishop's palase, the public buildings belonging to the co. and the corporation, and some handsome residences belonging to the Esterhazy and Ziely families. It has, also, a roysl academy of law and philosophy; and liom. Catholic, Greek, and Lutheran digh selools. lin the centre of the eity is an immense Capmehin convent, its roof surmonnted with two very high and conspicnons spires. There are varions other conventual establishments, 2 workhonses, 2 barracks, a theatre, and arsenal. liaab is the seat of a larser trade in corn than any other city in llungary, and is a great depôt for the trade of Pesth with Germany and Italy. It has several large annual fairs, its commeree depending, for the most part, on its fivourable position on two navigable rivers.
It was a strong post under the Romans, and has been generally kept in a defensive state by the Hungarian kiugs; but it was twice taken lyy the Turks, and, in 1809, an Austriaa force was routed by the Freneh under its walls.
RACCONLGI, or RACONIGI, a town of North Italy, prov, Cimeo, near the Maira, and 21 m S. 'Turin. Pop. 10,45 in 1862 . 'The town is walled, and tolerably well bailt: it has several goorl churehes, hut its chief ormament is a noble castle and park, belonging to the I'rince of Carignano. Among the works of art in the eastle are some pictures (if they may be so called), beantifully executed in silk. Silk weaving aud spinning are the principal branches of industry in and round this town.

RADNOL, an inland co. of lingland, S. Wales, laving N, the cos, of Monturomery and Salop, E. Hereford, S. Brecknock, from which it is separated by the Wye, and W. Cardigan. It is of a tri-
angular shape, and eomprises 272,610 acres. With the exception of some low and comparatively fertile tracts alomer the lurders of llereford amid Silop, and in the valley of the Wre, the larger prortion ly fill of this co, is wild, momatainous, and dreary. It is stated, in Ditvis's Survey of s. Wiales, pulbishe 1 in 1815, that about two-thirals the surfice consisted of waste land, mostly moor, hat partly also bug. Several disisions abd some extensive enclosures have, however, been effected in the interim, so that the extent of waste or common land, thomgh still very grat, hats bern materially diminished. At present, the wastes are mostly depastured by sheep, and this co. rears, ill proportion to its size, more sheep that any other in the principality. They are mostly of a small hardy breed. Nimberons encroachments have, trom time to time, been made on the wastes or commons ly persons who had property adjoining. and by cottagers, who erected hats on tha borders, aid gralually extended their sarilens, till they sometimes inchuded acres of lamd. A food many of the manors on which these enCroacliments were male formerly belonged to the erown, and having been lately sold, the purchasers have attempted to mast those who had made these encroachments. Though, mo doubt, the act was illegal, still, under the cirenmstances, it was beneticial rather than otherwise: and having been permitted in the tirst bistanco. their rights should have been protected. The fimbs in the low gromuls vary fiom 20) to 200 ackes: they are mostly held at will, or from year to year; and as there are no conditions to enfore a proper system of management, agriculture is in the most backward state, there being no proper rotation of crops, and the land being freguenty fond and out of order. Many of the low firms have a p ortion of moor or conmon pasture attached to them. The eattle in the low gromuls are primipilly of the llereford breed: there are sonne extensive meadows, and irrigation is well understooch. 'There are some rather large eistates, lout there are, also, many of an inferior size. The minerals and manufactures of the co. are of no importance. liatnor is divided into 6 humireds and in parishes, and sends 2 mens, to the II, of C., being 1 for the co., and I for New liadnor and its contributory bors. Reg: electors for the co. $1,597 \mathrm{in} 1865, \quad \Lambda \mathrm{t}$
the census of 1861 , Radnorshire hal 38,866 inhabitants, while, in 18:31, the number was 25 , 8 , 5 ti. The pross ammal value of real property assessed to ineome-tax was $33,35,1 /$ in 1857, anl $351,8,41$, in 18tis. The bor, of New Ladnor, referrel to ntove, is of great oxtent, embraciag an area of nearly 80 m . in circ. It had a population of 2,262 hin 1861, while the township hat but d63 at the same census.
IAACIUSA, a town of Italy, island of Sicily, pros. Syracuse, co. Molica, near the W. bank of the river of its own name, about 14 m , above the cmbonchure of the latter on the S . coast of Sicily, and 80 mm . W'SW. Syracuse. Pop. 2-1.4.19 in I 8 tis. The inhabs., who are ative and imlostrions, have considerable cloth and silk manufactures, and a ruther extensive trate in the corn, oil, wine, and cheese of the surromiling territory. It is near the site of the ane. IIybla Meran.
lisatisa (slav. Dubrournik. Turk. Paprournik, an. Rensinm), a sea-port town of the Anstrim dominions, prov. Dalmatia, cap. circ. of its own name, on a peninsula in the Arratic, 37 m. WNiV. Cataro. Dope $8, x 23$ in $185 \overline{5}$. The town is walled, and has two goonl harbomes, one to the NW, and the other to the SE., which, as well as the towa, are protected by severalmoderuforts. Its streets are narrow, excepit one, the Corss, which interseets it from N. to S.; its houses are well built, in the ladinn strle, but many of them are now mocenpied. It has a catheilral, a Greek chureh, a l'iarist gymuasium, high sehool, military hospital (once the Jesuits' collere), lazarefto, and theatre. It is the see of $n$ liom, ('ath, vicar-bishoy, and the seat of the superior jurlicial courts for the cire.; it has manufactures of silk, leather, and rosoglio. Thongh Ragusa has erently declined from her former importance, it still has a considerable coasting trate.

Ragusa was fonnded in the 7 th century by some furitives from Epidaurus in Illyria, when that city was destroyed by the Slavi. It continued to be a republic under the successive protection of the Cireeks, Venctians, and Torks, till 180t, when it was taken by Nanolem l., who arected it into a dukedom, which he conferred on Marshal Marmont. On the fall of the former, hiarnat was given to Austria.

RAJAllDLENDRY: a district of the Madras presidency in British India, (See Cumcans, Nomrilimin.)
lindshmundiy, a town of IJindostan, cap. of the above rtistr., on the Colavery, about 50 m . from its mouth, and 65 m . NE. Masulipatam. It stretches along the river for some distance, and has an old fort, several mosques, and a tine bazaar. It is the seat of the district conrt.
LidjlimAllAL, (The Royal Residence), a town of British lmdia, presid. llengal, prov. Bhaugutpore, on the (ianges, 66 m . NW . Moorshedabad. Liseler Achar and Sultan Shujah, the brother of Aurungzebe, it was the cap. of bengal, and, lhough much decayed, it is still estimated to have 30,000 inhabs. It consists principally of one long street of stone or mud houses, gencrally with two stories; abont a dozen market-phaces, seattered over a wide extent of gromme; a few tombs and mosques, and the ruins of a spaoions palace. The inhabs, have some tratlic with the hill people of the tistrict, but their main source of protit is derived from their supplying necessaries to travellers on the Ganges.

LiAMESHAYE, a distr. of British lndia, presid and prov. Bengal, principally between the 24th and seth degs, of N. lat., and the $88 t h$ and 90 th of 1:. long., having N. Dinajepoor and Riangpoor; L. Myemunsing and Dicea Jelalpore; W. I'ar-

## RAMPOOR

neal; and S. the Ganges, separating it from Jessore, Nuddea, and Moorshedabal. Area, 3,950 sti: m. I'op. estimated at $1,0001,000$; about two thirils llimdons, and the rest Molammedans, The whole surface is so low that from the beginuing of July to the end of Nov. it is nearly subnerped by the immadations. Towarls the F. it is thickly wooded. Few solid edilices and no fortresses exist in this distr.; but it comprises many gopulous comasereinl villages, and the towns of Nattore, Bauleah, and Ilırrial.
IAJJOOTLAN, the largest prov. of IImiontan, towards its NW. guarter, between $24^{\circ}$ and $31^{\circ} \mathrm{N}$. lat., and $70^{\circ}$ and $\frac{1}{6} \mathrm{E}$. long. ; having W. and N Moultan mad Lahore, Ji. Delhi and Agra, S. Malwahe and Gujrat, and SW. Sinde. Its length, N. and S. is estimated by llamilton at 350 14., mand its average brealth at 200 m ., fiving it an area of about $70,000 \mathrm{sq} . \mathrm{m}$. It comprises a large extent of sandy desert, but in the s . and J . are many lertile tracts. This prove, which is wholly suljeet to the Rritish comsists of a number of principnlities, the chief of which are Julpoor, Jesselmere, Jeypore, Odeypoor, and licanere.
RADMCillL'li, a distr. of Jritish Judia, by far the largest muler the lemgal presid., ocenping all the s. part of the prov. Bahar, betwen the oend and 25th decrs. of N. lat., and the 8.3rol and 87th of E:, lomg.; having N. Shahabad, Buhar, and Bhamgutpore; bi. Beerbhoom, and the Jumple Mehats; anil S. and W. the territory ceded hy the rajah of Berar. Area estimated at $22,430 \mathrm{sq} . \mathrm{m}$. Dop. estimated at $2,230,000$. A large propertion of this distr. is rocky an' nuprolnctive, or eoverel with wood. Irm, coal, lead, and antimony exist in the hilly region of the s., but from wast of eapital and anternrise among the inhabitants, few, if any, mines are wrought. Many of the zemindars have very extensive possessions, and ure, in a great measure, independent of Ibritish anthority. 'There are many old brick forts in Lamghur, afforinge protection to horiles of landitti, and other refractory persons; but few other darable buildings. This clistr. has always been notorions for erime; and hitherto, notwithstanding its great extent, has been of little value to the lifitish government.

RAMILLIES, an incomsiderable village of lelgiam, prov. S. Brabant, 18 m . Silk. Lomatin. 'This vilhuge is famons in history from its being the suene of the great victury gained on the e3ral of May, 1706 , by the allied furees, muler the buke of Marlborough, over the French, under Marshad Villeroi. The F'reuch army amonuted to about 80,000 men, beug superior in numbers to that of the allies. The latter, however, owing, as is alleged, to the bad dispositions and ineapacity of Villeroi, gained an easy as well as a complete victory. 'Ihe French lost about 8,000 men, killed and wounded, and nearly 7,000 prisoners, including 600 officers, with all their artillery and baggage The luss of the allies tid not amount to 3,1000 men. The Duke of Marlborough, whose gallantry was as conspicuous as his great tulents as a general, had a horse slow under him in the action; and the head of Colonel Brientich, who was assisting his grace to remount, was carried off by a camon-ball.

RAMIPOOR, a large town of British India, prov. Dellii; on the Cosilla, a tributary of the Ganges, 112 m, l. by N. Delhi. It has two briek palaces, a lofty mosque in the principal street, the magniticent mausoleum of a former elises, and some grod house; ; but the greater part of the town consists of' sui-burnt brick honses, with thatehed or tiled rooti. Its teritory is exceelingly productive, and well cultivated.

Another town, called Rampoor, situated on the
separating it from clabal. Area, 3,9 (1) (0)M,0t) ; abont twoWohammedans, The rom the legeiming of nearly sulmerged loy the F. it is thickly ad no fortresses exist rises many populous e towns of Nattore,

Sutleje, about 160 m. E. lw N. Umritsir, is a fasonerte place of Himbo pifgrimage, nud an entrepot for the commerce of Ilindustan with the romntries beyond the Ilimalaya, on which account it has a large yearly fair.

LAMMEBE, a town of British India, prov. Aracan, cap. if the prov., and on the ishand of the same mame, about 110 m. S. by la. Aracam. l' jp. estimated at 8,000 . It stands at the head of a creek, in which there is pretty good nuchorage, and hass a bazain, supplied, though mengrely, with British goods. Jts inhabitants, who are a tine athletic ricer, carry on a brisk trade with Chittagong, Sandoway, I lissein, nod Calcutta,
li.MMsil, a town and par, of Eagland, co. Ihuntiugdon, humb. Jlurstingstome, $7 \frac{1}{2} \mathrm{~m}, \underset{\text {, }}{ }$ Ianden. by Great Northern railway, mal 10 m .
 par. $1, \dot{6}+10$ in 1861. The par. extemds into the co. C'mbridge, and has an area of no less than 17,bibu acres. '1he town eonsists principally of one long street, running li. and W., with mather Jrameling off to the $X$. IIonses mustly brick, The churdh, a the ohl edilice, has a nave, chancel, and andes, with an embittled tower at the W. end. The town tommerly belonged to the Crommell fiuntle, several ot whom are buried in the churels, bat there are no monuments to their memory. It - hats a free-selanol. founded and endowed in llitis, which edacates abont 70 boys a and a charitysehom, which educates about 30 girls, was fommed towards the begimang of last centary by Jolm Iryden, esti, a relation of the great poet. The town sullered sovely from tire in 1731 .

Limmsin is within the great level of the fens: and in its vicinity are several shathow lakes, or meres, that called the Whittlesca, now 4 m . NW. from the town, being the largest in the kingdom. A magniticent hencdictine abbey, fombed here in 969, acquired, in the sequel, great wealth and celebrity. At the diswhlion, its revennes amomed to 1,08 al. a vear. A ruined gateway is all that now remains of this once famons falbric.

Siamsay, a town of the lsle of Man, which see,
RADAsGATLE, a sea-port, watering-place, and par. of Engrand, co. Fent, on the li. eoast of the 1sle of 'I'hanet, $15 \mathrm{~m} . \mathrm{E} . \mathrm{by}$ N. Cianterbary, 65 m . Liki. London, by road, and 79 m . loy dondon, Chatham, and Jover railway. I'op. 11,065 in 1861. The town, which, till the logmanus of last century, was little more than a small tishing villace, has risen to its present importance, partly in consequence of the constraction of its artiticial harhour, one ol the largest of the kind in England, but principally from its having become a finomrite summer resort of visitors from the metropolis. Its older portions, irregularly built, with narrow st reets and mean-looking houses, oceupied ehietly by the tralespeople, lie in a that opening townds the sea ly a narrow gulley, (here called gate, whence the nime of the town,) between two very steep cliffs; the latter, which are ascended by stone steps, are now eovered with good-lowking, thongh, in general, not very substantial houses, haid out in terraces, erescents, anl squares. The town is well-lighted with gas. 'Till 1838 the supply of water was insullieient, and constituted no small item of expense to the inluabs. of the houses on the elifts, but an ample supply was then introluced from the neishbouring vilhge of St. Laurence. A market-homse stames at the intersection of the priacipal streets of the old town. The chureh, a large and handsome buikline, in the perpendicular style, with an octag.anal tower, provides accommoilation for nbont 2,000 arsons: the living (created by act of parl. in 182 $)$ i. a viearage of the anmal vaite of 4001 ; patron, the awhbishop of Canterbury, A chapel-
of-ease is supported chietly ly voluntary sulseciptions and few rellts: hesides which there are phaces of worship tor Weedegan Mehosists. Independents, Dingtists, abil Einitarlans, and a dews. syongogne. The town has four Sunday seloobls, attended by nbout soo chididen, and there are mational, hancastriam, and inlant sehools, limmishing instraction to nearly 500 yomg persons of both sexes.

The most striking feature of the town is its barbarr, one of the most marniticent works of its elass in the kingolom, formed by donble piers. built under the sumerintendence, sncessivels, of Simonton and lieninic. It was commencen, at the public expense, in 1750, with the intention ol forming an asolim for vessols in the Downs, which might otherwise be driven on the Goodwin samds. The E. pier extends, in a curvilinear direction, upwards of 300 yards into the sea, its total length, inclmoling its angles, amometins to: 2,000 fere ; that of the W. pier heime athout l,ond feet. 'The width of the entrance is 210 fent, and the harbeur atrat Is neres. The general breadin of the piors is 36 feet, inchuding a strong parapet. on the outer sides next the sea. 'Jhery ure constructed chielly of l'ortland and Purbeek stome. After the piors wore nearly tinished, the deposition of samb and mond within the harbour being so great as to threaten min to the entire project, smeatun recommended the const ruction of a hasin within the harbour. to be tilled at high water null let out asain at obli, tide. so that any deposit might be carried oflhy the artilicial curredt. This was aceordinery dome, and has been fomd to answer the purpuse ; and, in 1787, an advanced pier was underaken to facilitato the entrance of shipping in tempestuons weather. About the same period, a dry doek was excavated, and storchonses erected. There is a highthotive on the hend of the W. pier, whence a clear red light is displayed at night, when there are 10 ft . Water in the month of the harbour ; this notice being given, durime the day, by a red diar from Siun llill. A ret dock has been constructed near the basin for the repair of vessels. Still, however, it must be admitted that, though no cost has been spared to render this harbour as useful as pussible to the shipping in the adjatent dangerous part of the Chamel, it is, owing to the want of water, very delective; and, as it can be entered only at certan times of the tide, it is far from realising the expectations that were formed of its being a good refuge harbour. It is under the superintemlence of an incorporated company of trastece, who apooint the ehiet and depoty harbour-maters and other oflicers. It was made a royal port in hovour of a visit from George 15 . in 1821 ; mad an obelisk near the pier-gates has been ereeted to commemorate that most mimportant event.

Ramsgate had formerly an extensive commerce with the Baltic, but this has long declined. It has still some trade with France and llollamel, ehietly in the importation of egres, fruit, and provisions. The gross eustoms revenue of the port (wheh inelades Margite and Irondstairs), amomoted to 2,9+4l. in J863. Its coasting-trade is pretty extensive, chielly with London, Neweastle, and Sumderland. $A$ considerable fishery of turbots amd soles is carried on ofl' the coast by boats from the W. ports of litgland: but only a small share of it is taken by the inhatis. of hamsgnte. Indeed the town displibys littleactivity beyond what is caused by the inthax of visitors cluring the summer seasem, and for whose aceommodation passenger steamers ply daily to and from the metropolis. The smoothness of the sands li. of the harbour, and the clearness of the water, make the lenel particularly well adapted for bathing, and it eonstitutes a very

## RANGOON

favourite resort for visitors, hundreds of whom may here be soen in the lieight of the season strolling abont, lonuring on chairs, and emjoying: the seabreeze. I'lie pier furnishes mother deliphtina promenade, and on the W. clith is a the broad walk, extending westward towards leerwell Bay. I'he bath estabilishments are rephete with aceonmonation for invalids; and libraries, uews-romoss hamars, and comeerts, furnish amble mems of xempation ami ammement.

Lialligrate is a momber of the Cinque I'ort of Sumbich, and is governed hy a depmoty, mpointed ly the maver of that lor.; but juclietial athitrs are regulated by a local maristracy under a lecal net. bassid in iste. Markets on Weduesilay and Saturiay, but daily during summer, and exceedintrly well supplied.
liAN(ion $)$, a town, river-port, and the chief entrenot for the forelgu trade of l3ritish IBurmah, on the E. and principal braneh of the Irawnedi (called the kingroon river), abont 26 m , from the sea, if) m. SSiV. l"wel, and 90 ml . W. by N. Martabman lat. $16^{\circ} 42^{\prime}$ N., loug. $96^{\circ} \quad 20^{\prime}$ li. Pop. estimat. at $2 ;, 000$. The town and suburbs extemid longthwise along the bank of the river for abont 1 m . by 3 in ilepth; but the honses are very unrqually scattered over the aren. The lort, or rather wooden stockale, which constitutes the fown properly so ealled, is an irregular oblong, entared by 8 gates and several sallyports. According to Mr. Malcohm, who visited Liangoon in 18:if) ('Travels in SE. Asia, i. Ti), 'the city is spread ubon part of a vast meadow, but little ubove ligrit tides, und at this seasom (May) resembling a nerlected swamp. The fortitications are of no avail ngainst modern modes of attack. 'l'ley consist of merely a row of woolen timbers sut in the gromal, rising to the height of about 18 ft ., with a narrow platform ruming round inside for musketeers, and a few eamon lying at the gateways in ansoless condition. A dozen loreigners hise brick tenements, very slabby: there are also four or five small brick places of worship for foreigners, and a miserable custom-house. Besides these, it is a city of bamboo huts, in appearunce as paltry as possible. 'The eaves of the louses generally descend to within 6 or 8 ft . of the grouml, very few being of more than one story, or having any other covering than thateh. Hence it is very subject to fires, from one of which it is said to have suffered most severely in the year 1851. Cellars are unknown, and all the houses are raised 2 or $3 \mathrm{ft}_{\text {. above the gronnd, for coolness }}$ and ventilation. As the floors are of split hamboo, all dirt falls through; and what is not pieked川, by crows, dlogs, fowls, de., is occasionally swept out and burned. The streets are marrow and paved with half-bumt liricks, which, as wheel carriages are not allowed in the city, are in tolerable repair. There is neither wharf nor quay; in four or tive places are wooden stairs, at which small boats may land passengers ; but even these do not extend to within 20 ft . of low-water mark. Vessels lie in the strem, and discharge into boats.'

The river opposite liangoon is about 600 yards aeross, and the town is accessible to ships of 1,200 tons' burden. 'The navigation, though somewhat intricate, is safe and practicable with the aid of ordinary native pilots. At neaps the tide rises and falls about is ft.. and at springs, from $2 \mathrm{a}^{5}$ to 30 ft . Rangroon presents many facilities for shipmuilding. The banks of the river are so tlat and soft, as to render locks almost unnecessary, and there is nearly a complete water commonication with the teak forests of Peyu, by far the most abundant in India. Ship-building luss, in fact, been carried on at Rangoon since 1786; and in

## RASTADT

the 38 years whieh preceded the Sritish capture of the town, 111 wibare-righed vessels of 'inrnpean construction had been built, the total burien of which tmonnted to ipwards of $: 10,000$ tons. Several were of from $\mathrm{x}(\mathrm{H})$ to 1,000 toms.
'The markets of liangoon are well and cheaply supplied with many sorts of provisions, as rice, poiltry, null tish. Iher foreign commerce of the sown is still comsiderable, though greatly erippled by esormons part charges and nisolute prohibitions arainst exporting ries or the precions metals. Fipecio is indeed exporterl, hat ouly chambestincly: 'The trale of the empire seaward is jrineipally with the ports of Chitharong, Dacea, Colentta, Malras, Masulipatama, abd l'eumig, and occasionally with the I'crsian and Arabiang gulfs. No direct trule has yet been carried on between harmah and any linuropan comotry. The articles exporten to toreigit conitries from liangoon are teak woorl, catechan, stick lae, bees' wax, elephints' teetlo, raw cotton, orpiment, grod and silver. gems, and ponies, which are mach esteemed at Madras, liy far the most important of these commodities is teak timber ; the quantity of this wood anmally exported is said to be equal to $7, \bar{a} 00$ finl-sized trees. The primeipal imports are cotton piece gookls from India and Britan, British woollens, iron, steel, quicksilver, copper, cordage, lorax, sulphur, gunpowider, saltpetre, ife-arms, conrse porcelain, English glass ware, ofilim, tobaceo, cocon and areen nuts, sughr, and spirits.
About 2 m . NNW. Kangoon is the celebrated Shoe-bagon temple, which, thomph rather smaller that that of Shoe-Madoo, at l'eg口 (which see), is much more lighly ornamented. The two principal rands leading to it are lined on either side with inmerons pagrolas, some of considerable nize. The great temple, similar to that of l'egu, stamis on a planted terrace, raised upon a roeky eminenee, and reached by an aseent of 100 stone steps. The area of this terrace is abont 2 acres; the temple at its hase is 310 ft . in dianeter, and 338 ft . in height. surmonited by a tee, or umbrella of open iron work, 45 ft . in height, ani riehly gilt. The golden temple of the idol may challenge eompetition, in point of beauty, with iny other of its class in lmelia. The buidding is composed entirely of teak-wood, and indefatigable pains are displayed in the profusion of rich carved work which adorns it. The whele is one mass of the richest gilding, with the exception of the three roofs, which have a silvery appearance. A plank of a deep red colour separates the gold and silver, which has a happy effect in relieving them. All romind the prineipal jagoda are smaller temples, richly gilt, and fiuruished with intifes of' Gaudama, the sight of which, accompanied by the constant tinkling of the inmumerable bells huing on the top of each pagoda, combines, with the stillness and deserted appearance of the place, to produce an impression on the mind not speedily to be effaced. The temple having long enjoyed a ligher reputation than any other in the Burmese dom., is resorted to by numerous devotees, and near it live 150 families, called 'slaves of the pugoda.' to whose care it is entrusted.

RASTADT, a fortitied town of W. Germany, grand duchy of Baden, cire. Middle Rhine, of which it is the eap., on the Murg, a tributary of the lhine, 13 m . SW. Carlsruhe, on the railway from Carlsrulie to lhasel. Pop. 7,428 in 1861. The town is strongly fortitied, the fortress being a Bundesfestumg, or under the nominal control of the German diet. Rastadt has wile streets, several R. Cath. and Lutheran ehurehes, a gymnasium, lyceum, varjous other sehools, and a palace, the residence of the last margraves of lBaden, in which is a curious collection of 'Turkish trophies. Rastadt is the

## RATIKRALE

RAVENNA
seat of the superior judicial court for the cire. It has manfactures of tohaceo, chicory, carriages, and machinery and listrmments of varions kinils; hut is prineipilly noted for two comgresses held in it: the first, in 171., when a treaty was concluded Intwen Marmal Villaremal l'rince lingene: and the secoml, bill $175 \times-99$, which turninated abruptly in the asasimation of two of the Fremel envoys.
lid'illKliAlde, an inland town of lreland, prov, Minnter, eo, Jimerick, on the Deel, 17 m . WSW. Limerick. Pop, 2,761 in Jstil. The town principally comsists of one street, nearly 1 m . in lomgth, which has many food honses and shopor. A par. charch, a li. Cutholic chapel, with an Imdenetulent mal a Methodist merting-honse, a lever-hospital, dispensary, court-homse, and bridewill. Severat tiorman families are settled in the town. General sessions are held four tintes a vear; petty sessions on 'Thursdays. It is an constabulary station, and has a comsiderable retail trake. Markets on Thursiays; fairs on 7th lich.. 4th April, 1st and 19th June, 5th Aug., 18th sipgt. and 1xth Nov.
H.LTIS1BON (Germ, Regenshurg, an. Castrum Regiumen, afterwards Augusto Tiberii), a city of S. (iormany, copl. of the Uper lonhtinate, in lavaria, on the Danube, aeross whieh it communimen with its suburb, Stadt-am-llof, by a bridere, 1,000 (ierman ft. in lengeth, $6 \mathrm{~J} \mathrm{~m} . \mathrm{biNE}$. Nunich, on the railway from Nuremberg to
 of the oldest towns in tiemmeny, and lus a proportiomally antique appearame. Its streets are unrow aid irregular: and its houses, though lofty, are altogether ohd-fashioned and inconvenient. Nmy have tall batthemented towers, with loopholes for musketry, and among the large resideneres are several ornamented with heraldie bearings. The cathedral is a tine (iothic eatitice, beyun in the 18th century, lint the greater part appears to have been constructed in the 15tla: its interior was formerly erowided with a monber of extraneons ormaments; but these have been removed. In it are a few fine works of art, inchading a las-reliff on the tomb of the primate Dalberr, ilesirmed by C'mova. 'Two elder cathedrals adjoin this elifice; one, now used as a baptistery, is supposed to date from the 10th or 11 th century, and the other is of a still earlier date.

Near the eathedral is a massive square tower, probably a remmant of an ancient lionan fortress. The chireh of St. Emmerm las some very curious monnments of high antiquity, lnt it is now half iu ruins; and St. Emmeran's Abbey, a large though not a fine building, las been converted into the palace of the prince of Tours and 'laxis. The establishment to which the latter belonged was fomeded long before the time of Charlemagne, by whom it was enlarged; and at the time of its dissolution, it is said to have been 1,200 years old. The Seoteh Jenclictine eonvent, a monastic institution in latishon, the small reveme of which hits preventel its secularisation, supports two monks aul five young Scotch ecelesiastienl stulents. It has a very carions church, supposed to date from the loth or llth century. The townhanl, a glomy and irregular structure, is interesting as being the seat of the derman diets from Itibi3 to $18 t) 6$. The apartments formerly oceupied by the diet present little that is remarkable; but bencath the edifice are some dungeons, in which are preserved the rack, and other machinery of torture, formerly in use,

The old bislop's palace, in whieh the emperor Maximilian II. died, is now a brewery. The ramparts of latisbon are no louger of use as a means of defence, but serve as public walks.

Within the city is a momment to the great astronomer Kepler, who expired here in lia30. Ratishon lins a royal acalemy, Rom, ('atholis lyceum, Latheran gymunsium, theolngical siminary, olservatery, jublie library with 21,0nt) volimes, school of desigu, musemm of mathematical and philownhical instrmmenta, and botanie society. Since it has ceased to be the seat of the German biet, it has lecell mostly shorn of its inportance: bat a gond many vessels for the maviHation of the lhanbe are built here; and it has several breweries, distilleries, tanmries, and iron works. It formerly enjoyed the exclasive right of the navigation of the Damube, upwarls to Lim and downwarels to Vienam. 'This privilage is extinct, but it still has a large slume of the tratlic on the river.
At Domanstabet, on the Dambe, ahont $\mathbf{i k m}$. distant, is the Valhalla, at tine Doric marble temphe, built by king lanis I. of lanvaria, fir the reeeption of statues and busts of the distinguished men of (iermany. This editice, commenced in 1830, was completed in the conrse of 1811 .
liatisbon was the eapital of the dukes of lhavaria, till their duehy was overturned by Charlemagne. It was afterwards a free imperial city, governed by $a$ connt of the empire. 111809 , some severe fighting took place before it between a jurt of tho grand French army, under Napoleon, and tho Austriaus, to the disalvantage of the latter, who were forced to retire towards Bohemia.

LiAVENNA, a eity of Central Italy, cap. of prov. of same name, on the Montone, nmid extensive hut fertile marshes, 43 m . ESLi. Whogna, 84 m . NW. Ancona, and $4 \frac{1}{2} \mathrm{~m}$. from the Ailriatic, on a branch line of the railway from lolorna to Aneona. Popr. 19, 118 in 1862 . The eity is famons for its arehitectural remains. Ilaving been the eaph of Italy durimg the last years of the W. empire, and suecessively tho residence of IIonorins, Valentinian, Odoneer, Theodoric, and tho succeeding (Gothic monarehs, it presents many interesting specimens of the arehitecture of that period, few of which are elsewhere to be fonnd. The empress Placidia, from 122 to 150 , and Theodoric, from 492 to 526 , embellished it with tho best editices the times were capable of producint ; and many of these exist in singularly good preservation. The ehureh of san Vittore is suid to date as far back as the carly part of the 4th century; but what remains of it is a mere harn, withont character. The earliest perfeet charch is that of Santa Agata Maggiore, completed in the oth century, having granite columas and rich marbles, apparently taken from some more aneient edifice. San Giovanni del Sagra was built by l'lacidia, ano 435; San Francesco apparently about the same chate; St. Apollinaris Nuovo, a foundation of Theodoric, and having mosalies of that period; St. Apollinaris, at Chiassi, buit by Justinian, on the ruins of an ancient temple of Apollo; and Sipirito Sante, also of the lith century, In all these charches the general plan and style are nearly the same. They eonsist of three naves divided by columns, supporting arches; the middle nave terminating in a semicircular recess, covered with mosaics. The roof is of timber, and not concealed. No very distinct marks of specitic difference are observable in the workmanship, between the structures of the ath and bth centuries, except in the omamental parts: the capitals and moutdings of the latter period are much more fancilin. The eathedral of Havenna was originally fomided towards the end of the dth century; but the present building is modem, and lass some frescoes by Guido, basreliels, and rich altars. Near it is the baptistery,

## REMDING

as metagomal lmildine, firolnhbly of the same date as the ancient mothedral, amd almont eovered with mosales, att ributed to ant urchbishop who Jived abuit dino. The bugitism of Christ is represented on the dome in mosale, The ehureh of San Vitale, mouther actugomal structure, dates from the flist half of the tith century, Ilere, also, is a little chureh built by placidia, whose tombit contains, with thone ol Ilomorian, Constantins, and Valentinian III. Withont the city is the mansolemm uf 'I'hemoric, comstructed by his langhter Amalnulita.
liat ly far the most lintereating of all the strictures to be neen at Revematis the tomb of Dante, the immortal nuthor of the Livinu Commelin, who expired here, in exile, on the llth of September, 1321.

## - Happler Ravemina on thy honry shome. Fortresw on fatling empirel tomonrd werps The immortal exile.' Chithe IIurohl, iv. b9.

He was buried in the ehureh of the Francisean momatery, in a handsome tomb erected ly his prutector 'tuitor da lodenta, restored by Iternarilo limbar in l|x:3, arain restured by Cardinat Comi
 clawe in 1780 , at the expense of C'ardinal Linigi fanzara. 'The flamentines repentedly demmaded the ashes of the minhty dead, but these demanis were muiformly met hy 1 im danial.

The lorfa Alura, it trimphal arch at the $\mathrm{IV}^{*}$. entrance of the dity, mal a fiew remains, said to be pertions of 'Theotorices palare, and having some similarity to those of the palace of lionletiam, at Spalatro, romprise the principal remaining antiquitios. The city has ramparis, whiela, however, tre of little sorvice as means of thelonce. Sume of its stumres are neat, imblormmented with statues of perges and the streets are montly wide and reGnlar, but dirty ; and the huses are old-liashimed, and floomy. It has a few silk mamulactures, ant a large amual fair; lout, like l'ulua, it is very thall, and fitter for stuly than for artive hasimese. A momastery has lieen appopriated to
 vols. ; and a musemm, with a few olperes of matural history, antiguities, costs, and piamings. Few of the charches are rich in paintinge, bat there are some goal private galleries, lyrom paises laveman for jts elimate, aml says, he found much elneation amd hiberality of thinkings amonin the hipher classes. It is an archbishopric, mul the residence of a papal legate.
liavema was origimally fomded by a colony of Thessalians, most probably on the sea-shore, but, in the days of Strabo, it was owing to the aceummlation of mud, surromided loy marshes. (Lib. v. 1. 14\%.) Ilence Silius Italicus,
' Lenta paludosa proscindunt stagnn Ravenne.'
Lib. vill. v. 602.
Being diffienlt of approach, and well fortifient, its ulvantages as a strimghold and a naval station were perceived by Augnstis, who constructed n new harbons, tabont three miles from the old town, which he connected with the P'o and the old eity by a canal, and with the continent by a canseway. liavema henceforward heeame the principalstation of the Alriatic tleet, and the new and old cities were nearly joined by intermediate buiktings. But the same cause, the accumulation of mud and other matters, bronglit down by the Po and other rivers, that had destroyed the port of the ancient eity, in no very long time destroyed that constructed by Augistus. It is now, in fact, about $4 \frac{1}{2} \mathrm{~m}$. from the sea, and so early as the 5th or lith century of the Christiun era ' the port of Augnstus was comverted into pleasint orchards, and a lonely grove
of pines covered the gronmil where the Roman
 lhat this very ciremmstance, though it leverned the maval homertance, increased the strengeth of the new eity, which, from the begimaing of the oth to the mindle of the Kth century, wis considared as the weat of govermment and the eapital of Italy. At lempth the (ireck exarchate being overdirown, the city und its territory was givern by lepoln to the Iloly Noe la 7 7月. Sulsequently linseman ancessively belonged to its own lomis, the lblognese, and the Vemetims, till Ibll, when it lell to tho jope. In lible, the lireneh, inher the Dike de Nemonrs, galued a sigmil vietory over the Simmiards, at a short distance from liavemu, an event commemorated by an belisk erected on the lielil of buttle.

Landing is of grent antiquity, though its origin is unknown. In Iebial Ilemry lif. held a parliament here, and another was adjourned thither in 19i3. In the great a cil war it was sumecssively ocenpied by the forees of parlimment and of the king. Aredsbishop land was the som of a clothier in this town, where he tirst saw the liglat in 1573. In lise prosperity he did not forget the place of his birth, to whiot lie was a liberill henefactor.

 laml, co. ('urnwall, huml. J'ruwith, ou an acelivity on the ligh rond betwern Trumo and Sis. Ives, 8 ni. Wiviv. the former, and 11 m , li. the Intter, anil

 Area of par. 8,70 acere. 'The town consists principally of the lomg strect, buitt on the side of the hill. It las been greatly extended and improved of late vears, having linly dembled its pop, sime 1sill, and is pratty well linilt, paved, and lighted with gras. Ninomig the more recent buildings are a handsome square granite tower, with an illumibated elock in its "pper part ; and the savings, lank, a neat editice with a colommale in fiont. The par. churel, at the foot of the Ciarin Ire llill,
 living is a rectors, in the patronare al lomd de lumstanville. A ehajel of ease, in the pointed stule, has been crectel contignoms to the town, partly by a grant from the pirliamentary commissioners, and partly ly subsiriptions the living is a curacy, in the patronage of the rector. There are also meeting-houses for laptists, Methodists, and Quakers: a grammar sehool, erected by voluntary contribution in 1803, with varions other private and Sundny schools, a subscription reading rom, and a small theatre.
Redruth owes its importance wholly to the extensive copper aud tin mines in its vicinity. The ('onsolidated and United Mines, between it and Gwemap, are the most extensive of any in Cornwall. One of the shafts in these mines is more than 300 lathoms deep, the temperature at the
 tiealagy ut torrmall, j, bith.) The ore is romveral lis railwas to leworon, on a creak belonge: inif to Finmouth harhour, and to lortroath inul Hayle, "ut the N. shle af the peninsila.  are more mumeros ami extensise than in ang ather budy of water of equal axtent. 'They extrond most commonly in lonir strpis parallel to and ahout $\frac{1}{} \mathrm{~m}$. from shour, with which they are in milly eases mited: the derel water runs close up to their edre, but the bank themselves are selflom more than if fo below the surface. Amones the ralds mecmuected with the shore sureral are nt some distance from it, a chmonel intervenime of sumbient depth to admit of navigation by small vesechs, and having gand anchorage in stormy wenther, These reefs are more ummerons on the E. than on the W. coast ; but the Dhalak arrhipelago is, perhaps, more extensively interseeted with them than any uther part of the sea. 'lhere are also many isolated recfs; but they present few obstacles, owing to the transparency of the water, which renders them easily diseoveralile. No surf is ever observed on them, how boisterons soever the weather, a cirenmstance attributed to the porons nature of the coral on the outor cile of the reff. After all, howevor, these reefs other no considerable obstacle to ships, and the shelter Which they afforel in some cases facilitates navigation without decreasing its speed.

The existence of the istamels and rerfs just described has led to a division of the Red sea into at central and two lateral chamels. The central channel, between the onter extremities of the
reefs extending from elther shore, is very deep throughont, and in some parts no bottom lats been found even at a depth of 250 fathoms. 'lhe brealth of this channel in the parallel of Djidela is 110 m .; but firther S . it climinishes to little more thain 40 m ., and contimues gradually dereasing down to the Strait of Bab-el-Mandeb. The inner channel, on the Arabian side, is formed partly by broken reefs umd sumken rocks, partly by islands and long-continued reefs, a large part also being open to the sea: its average width is from 2 to 3 m ., and the depth is very considerable, though the anchorage is so insecure as to afford little protection from the sea. 'The inner chammel on the opposite coast, is similarly bound to that now mentioned; but it is much narrower, and somudings ean be olotained only in a few places: the harbours, of which there are seven or eight, furnish tolerally grood anchorare, but it is very misafe to anchor on the rocky shelves projecting from the rects. Both these lateral chamels are connected with the open sea by cross chammels, some of which, especially N. of lat. $17^{\circ}$, are of great width and depth.
'Ihe winds of the lied Sea are not uniform in its different parts and channels. With respect to the central channel it may be observed, that the NE. monsoon here becomes a SE. wind of considerable force, decreasing, however, as it passes northward, and disappearing about lat. 180 , where it is replaced ly the N. breezes that prevail during the warm season, 'The S . winds commence in October, and subside at the end of May, when they are succeeded by NW. winds, which usually bring with them thick, hazy weather, especially on the Aralian sicle. In the lateral channels, $\mathrm{N}^{2}$ winds, inelining to lind and sea breczes, are more or less prevalent, hand-squalls being very common both in April and May

The currents of the Red Sea appear to be entirely goverued by the winds; for it is observed that with S. breczes they set northward, and with N. winds to the south. It is probable, also, that they increase according to the strength ot either, as little or no current is pereeptible during the previlence of light, variable breezes, just before the monsoon. N. of Djidla, however, both the winds and eurrents are very variable throughout the yoar ; but here even the latter depend on the formor, and a strong S , wind wibl canse a current of 20 or 30 , amol even 40 m . a day. Tides have heen observed in a fow parts of the coast; but the rise and fall are not sntlicient to allow of the conclusion that this sea is subject to limar influence. The idea that the waters of the lied sea were formerly at a higher level than the Meditermmean, and that the surthee has been depressed hy the constancy of currents thowing towards the ladian Ocam, has been abamboned. The fact seems, that from May to October, during the prevalence of N. winds, the water is 2 ft . lower that the averare level; whereas from December to February, whell the currents rum in an opposite direction, the water collects at the N. part, whiel accordingly becomes unusially elevated.
'The country about the lied Sea is more or less mountanons, though the ligh lands seldom abut directly on its coasts: indeed, this sea may be described as the lower part of a valley bommed eastward by the table-land of Arabia, and westward by a range of monntans rising from 1,000 to $\mathrm{t}, 000 \mathrm{ft}$. above the sea. Between the high gromils and the shore, however, a level district intervenes, of some extent and considerable fertility; but it is ahmost menltivated, the imhubs. living in illeness, and eontenting themselves with the wretched pittance that maty be obtained by
pasturage, and the plimder of the IIadj season Nothing, indeed. can be conceived more wretched and desrading than the condition of the people dwelling in the villages bordering the Red Sea.

The principal harbours on the li. side of this sea are Mocha, Huleida, Loheia, ani 1)jidela, the tirst and last being by far the must important. Suez, Cosscir, Suakim, and Massouth are the chief places on the African side; and a pretty active communieation is kept up between the inhabs, of the opposite shores, more pirticularly as the sea is erossed by all the African pilgrims on their way to Mecea and Medina. The vessels employed in trausporting the pilgrims and their merchandise may amonat to abont 400, each averoging 130 tons; and the pilgrims from Africa alone are said to average 20,000 annually. (Geog. Jourı., vi. x 9. ) Grain, also, and slaves are large articles of trade between the two shores: the grain is shipped nt Cosseir, wholly on account of Mehemet Ali, pacha of Egypt; the slaves are brought almost exclusively from Suakim and Massomah. Mocha being the only port whence groods are exported, the Red Sea has not, till within the last fow years, been much frequented by foreign vessels, except those belonging to pilgrims from P'ersia and India, with the merchandise of both countries; wheat, tobaceo, dates, and Persian carpets being bronght by the former, and rice, sugar, muslins and other fabries, imligo, spices, and handsome young females by the latter. Coffee, frankineense, and goms are sent in exelange from Mocha; but the returns from the other ports are in cash and pearls. Within the last few years the uavigation and commerce of this sea has greatly increased. The gales in the N. part of the Red Sea offer some impediments to steamers; but there are no obstacles which experience and perseverance may not overcome. Dejôts for coal are established in diflerent parts, and the steam packets run with nlmost undeviating regularity.

The Fed sea is first mentioned in saered history in combection with the miracolous passage of the 1sraelites across the Ginlf of Suez. (Exodus xiv. 21.) In the time of Solomon, two ports, Elath and Eriongeler, wereestablished on the Ginlt of Aknba; and the I'hunicians seem to have carriod on a large trude on this sea, though, probably, they had no direct communication with lndia, The ently Greek writers, including Herodotas, seem to have had very vague notions respecting the lied Sea; for the 'Epvđpad $\theta \dot{\alpha} \lambda a \sigma \sigma a$ apparently comprises, in their estimation, the whole extenit of coast from the Indas to the const of Ahica. During the thourishing period of the l'ersian empire, the I'ersian Gulf was the medium through which Europe and Western Asia received the Wealth of the Eist ; but imder the successors of Alexamder, especially the l'tolemies, who everted themselves to promote the trade of this seat, it becane an importint channel of intercourse between Jurope and India and the bias. This intercourse contimed with lit the intermission, though bot to the sime extent ut all times, till the discovery of the passare round the Cipe of (iood Ilope, by which conmerce was diverted into a wholly ditlereut chamel. 'The time, howevor, seems now to have arrived when the lied sua is urain to recover a portion, if not the whole of its ancient importance as a great commercial highway.
(iruat diserepaney of prinion has prevailed respecting the origrin of the nume. Aceording to Pliny (llist. ## REGGIO

REIGATE
seems to be that it is derived from the great nimudance of coral foumd in it.

1:IGGilO (an. Rheqium Julii), the most $S$. city and sea-port of Italy, cap, of pros, of its own name, on the E. side of the Strait of Messima, 8 miles Sle. Messinn, and 78 miles SW. Contnaaro. Pop. 15,1692 in 18132 . As a city, it is inferior to its opposite neighbour Messina; hat it has a fine sitnation in the midst of orauge groves, is well supplied with excellent water, and its climate is said to he the best in Suntherultaly. The former town was destroyed by the earthquake of 1 है83, since which liergio lias hat slowly recovered its prosperity. it. I: been laid out on a regular plan, which, when : 0 wpleted, will remder it a hamdsome city. A wite rond, called the Marinu, extents along the sea shore, parallel with which the principal street runs through the centre of the town. The heuses are in general good; and as it stands on a gentle declivity, it is well trained. It has a collegiate and many other churches, several convents, a roval college, hospital, fomblling asvlum, and a handsome theatre. It is surrommed with walls, outside which are several suburbs. Its ancient fort no longer exists. Regrio is the sent ef an archlishon, and of a ci* il and eriminal tribumal, It has manufactures of gloves, stockings, and silk, and produces some articles from the tilaments of the Pinut murina; which, with oil and fruit, are tos chicf exports.

The ancient lieginm was one of the most celebrated and thourishing cities of Natnu Gracia. It was fommed nearly $\mathbf{7 0 0}$ years n. C., by a party of Chaleidimns, Zanchans, and other (ireck colonists; and was for 200 yars the cap. of one of the principal republice of S. Italy. The government was subject to the same mutations as that of the other Greek eities, being sometimes muler a demoeracy, but more frepuently unter an oliparehy, or a single tyrant. It was besieged by the elder Dionysins, tyrme of Syracose, who having succeeded in eatting ofl all communieation between the sea on the one hand und the country on the other, relluced the inhabs. to such distress for want of fond, that a bushel of wheat is suid to have been sold for 5 minas, or, aceording to the usual methoul of computing, about $15 /$. 12s. tid. At last, alter Bnstaining the most drealful privntions, they were obliged to surrender, when most of those who survived were sent as slaves to Syracuse. lt, however, ngain recovered some portion of its former importance, and succeeded in repelling an attack of LIannibal. Augustus established a colony in the city. It jroduced several distinguished followers of Pythagoras, some historians of celelority, and some distinguished seulptors. It sullered in aniguity, as well as in nore motern times, from earthquakes.
lisagan (an. Reginm Lepieh), a city of N. Italy, prov. l'ama, beween the Tessome and Crostola, tribitaries of the $J^{\prime}(0,16 \mathrm{~m}$. WNW. Notena, and
 The city is defended by ramparts and a citadel. and is well-built and rather handsome. Its streets are regular, and bordered with areales, It has some handsome churches, numerons convents, a town-hall, theatre, lyceum, public library, and a library and museum of antiquities, collected by Spallinzani, No antiquities remain, except in statue in the principal square, traditionally said to ropresent Bremnos, the Gallic leader. Legrio has manfactures of silk and linen fubries, horn, wooden, and ivory articles; with some trade in cattle and argicultural produce, and a harge fair, which hasts during the entire month of May.

It is supposed to have been fommed by M .

Fmilins Lepidus, who constructed the famens Amilian way. It was here that the elder Brutis was slain by order of P'ompey. Napoleon ereeted lieggio into a dukedom for Marshal Oudinot. Among other distinguished individuals to whom this town has given birth, may be mentioned Ariosto, one of the greatest of Itnlian poets, born here on the 8 th of Sept. 1474 ; and the naturalist Spallanzani: its vicinity lias also to honst of being the hirthplace of the great painter, Antonio Allegri, surmamed Corregio.

REICHENBERG, a town of Bohemia, and, next to l'rague, the largest and most flourishing in that kingrlom, eire. Bumzlan, in a well wooded $\because t$ of the lausnitz monntains, $27 \frac{1}{2}$. NNW. (iitsehin, and 66 m . NE. P'ragne. J'op. $18,8.5 \cdot 1$ in 1857. The town has 3 par, churches, 2 custles, a fine sehool-house, a new thentre, and the largent brewery in Bohemia. It has mannfactures of woollen cloth and yarn, cottons and linens, with numerons dyeing-houses.

REIGA'TE, a parl, bor., market town, and par. of lingland, eo. Surrey, hund. its own nume, in the valley of 1Lolmstale, at the foot of a range of chalk hills, traversing the co. from E. to W., $16 \mathrm{~m} . \mathrm{La}$ Ghildford, and $18 \frac{1}{2} \mathrm{~m}$. SSWV. London, on the South Eastern railway. Pop, 9,975 in 1861. Aren of parl, bor., which is co-extensive with the par., 5,000 acres. The town, which consists of a brineipal thoroughfare ruming E . and W ., crossed at one end by another at rught angles to it, is small, but remarkably neat, with a greater momber than usual of gentlemen's honses atached to it. The old church, in the fields a little E. the town, is a large structure, in the perpendicular style, with an embattled stone tower, the rest of the building being of grey limestome: in the interior are many handsome mommments, and in an attached building is a public library. A new chareh, called St. Mark's, was bintt in 186i. The Weslevan Methodists, Baptists, and the Society of Friends have plaees of worship, with attached Sumday sehools. 'There is, also, a large mational school for children of hoth sexes, aud a small grammar school, The market-honse and townhall is a small briek building ol no pretensions to beauty; and near it is a clock-lwuse, occasionally used as a prisom.

A castle once stood on an cminence N . from the town; but the only parts now remaining are the moat, and a curious excavated chamber, once used either as a prisom or store-honse. The priory, the property of Larl Somers, an elegant modern mansion at the s. end of the town, built on the site of an Angustine monastery, has a park of $\overline{\text { I }} 0$ neres. Reigate formeriy carricd on a considerable trade in oatmeal, no fewer than 20 mills being employed, previously to the American war, in its manulacture; but this business has since su much declined, that only one mill remains, Fuller's carth and white sand are frund in considerahle quantities in the neighbourhood, which produces an mbundance of medicinal and other phants.

Reigate is a bor. lyy prescription, its poverning officer being the bailiff of the lord of the manor. It sent 2 moms, to the 11 . of C . from the 23 lidw. 1 . down to the Relorm Act, the right of election being in the burgage holders, of whom, in 1831 , there were only 8 , wholly under the intluence of Earl Soners, the lord of the manor. The lieform Act deprived the bor, of one of its mems., and extended the electoral limits so as to comprise the entire par. lieg. clectors, $8: 15$ in 18130 . It is a polling place at elections for E. Surrey. l'etty sessions for the lund. and the spring quarter sessions for Surrey are hedd here hy the co, maristrates. Markets for corn on 'luesday; and a

## REMI

eattle market the first 'Tuesday in each month Fairs, Whit-Monday, Sept. 14, and Dec. 9.

REAM, or REAE (Sl'), a town of France, dep. Bonches-du-lhône, (ap. cant., in a valley 15 m . Ne: Arles. I'op, $6,34 x$ in 1861. 'Iloe town was formerly surronnded with a donble line of ramparts; but these have hean levelled, and their phace is occupied by a fine circular promennde. Strects, narrow and irregular; bit there are many good houses. The town-hall, new par. ehoreli, and a lanatic asylum are the principal public buildings.

St. Remi is chicely remarkahle for its Roman antiquitics, about 1 im . from the town, and sup)posed to belong to the an. Clanmm. They eonsist of 2 edifices; one and arels somewhat similar to the central portion of that it. Orange, hat much mutilated; the other a beantiful Corinthian monument, square at its base, but circular above, appearing from an inseription to have been ereeted hy rextus L. Marcus to his parents, whose stathes are in the circular portion of the structure. The Abhe Expilly, one of the most laborions and useful topograblioual writers of last century, was a native of St. Liemi, where he first was the light in 1719. His principal work is entitlel I ietionmaire Geographigue, tlistorique, et Politique des Gimbes et de la liance.

ISENALS, or RONSE, a town of Belgium, prov. E. Flanders, arrond. Oudenarde, cap. canton, 20 m . ssiV. Ghent. Pop. 13,120 in 1860 . lisurix is in a fine situation, and is embelished with several public fountains: its old castle is now in ruins, but it has some good public buildings. It las mamufictures of cotton, woollen, and linen stnits, hats, beer, and chocolate; with a considerable trade in linens, a monthly and 2 weekly markets, and 2 large anmand fairs.

LEXFREW, a small maritime co. of Scotland, having N. and W. the river and Frith of Clyde, S. Ayrshire, and E. Lanarkshire. Area, 14j, 280 acres, if which about a half may be arible. There is a large extent of lilly, moorish gromm, in the W. parts of the co., and along the contines of Ayrshire; but from loort Ghasgow eastwards, alomer the Clyde, it is emparatively flat. Soil varions, being in parts thin and samdy, while in others it consists of a deep, loamy, fertile elay; and the country being in general well enclosed with ledges, alid ormanented with gentlemen's seats and plantations, has a rich appearance. 'liblage hasbumby is in a rather hackward state, and neither the rotation of crops nor the management of the lamd is so well mulerstood as might, have been expected. Much, however, has been done in the wily of improvement during the last (1) years; enclosures lave become gencral; new ronds have been constructed; the land has bedn dratined and limed, and the rotation of erops improved. Farm-houses and othices have alvo been greatly improved. On the whole, however, the co., from the homidity of the elimate and the nature of the soil, is better adapted for grazing and dairying (the latter of these is extensively followed) than for tilhure. There are several large estates, but property is, notwithistanding, a good deal subdivided. Firms of a medium size. 'lhere are valuable coal mines near Paisley and the castern parts of the co., und limestone and freestone are very generally dilliused. Paisley is the principal seat of the scoteh shawl mannfacture ; and, next to Glasgow, of the Scotel cotion manulacture: manufacturing industry is also extensively prosecuted at lohlockshaws, Neilston, and other places. (ircenoek and lort (ilasgow, which are both in this comoty, are considerable sea-ports. I'rincipal rivers, W'hite-Cart, Black-

Cart, and Giryfe. 'lhe co, is divided into sixtern parishes, and sends three mems. to the ll. of V :, being one for the eb., and one cach for l'aisley and (ireenock. Lenfrew and Port Glasgow are associnted with other bors. in the return of a mem. liegistered electors for the eo. 2,$2 ; 6$ in $18\left(6{ }^{3}\right.$. At the census of 1861 the co. had 11,934 inlabited lanses, and 175,501 inhabitants; while, in 18.11, the co. had 24,664 inhabited houses, and $155,00^{-2}$ inhabitants. The ohl valued rent was $\overline{5}$, $6 \cdot 1 \mathrm{l}$, and the new valuation $316,751 /$. for 1864-bis.

Lignficie, a parl. hor, of Scotland, co. Renfrew, of which it is the cap., within abont $\frac{1}{2} \mathrm{~m}$. of the $S$. bank of the Clyde, 5 m . W. Glasgov. Pop. 3,412 in 1861. The town consists merely of : single street, from which several lanes issuc. The only public buildings are the parish chureh, townhati, and gaco. There are no native manufartures in the town, but abont 260 looms are employed on accomint of clasgow manuficturers. It has also a distillery; and a considerahle dairy estahlishment. The bor. was commected with the Clyde by a eamal in $17 \times 6$, but it has been allowed to go into disrepair. A quay was constructed on the Clyde opposite to the town in 1835 ; and a railway, $3 \frac{1}{4} \mathrm{~m}$. in length, comects the bor. with l'aisley. On the whole, however, it has hut littie trade or enterprise. The royal family of Stewart, so ealled from their office, had their original residence near this town. It joins with Port Glasgow, Dhabarton. lintherglen, and Kilmarnoek, in sending one mem. to the H. of C. liegistered electors in this bor., 148 in 1865 ; councillors, 12 ; corp. revenue, 2,5097. in 1803-64.
NENNDS (an. Coudute, aftewards Ferlones), a city of France, dep. Ille-ct-Vilnine, of which it is the eap., in a plain, at the confluence of the lle and Yilaine, 61 m . N. by W. Nantes, on the riilway from l'aris to Brest. Doph. 4\%,485 in 1 siti. The Vilaine divides liennes into an upper and lower town. 'The former, which is the largest, is; recularly huilt and handsome; the lower town is quite the contrary. The houses in both are, lowever, of a dull grey stone, which gives the city a sombre appearince. liemes has several squares. as that of the Palais de Jnstice, in which was formerly a bronze equestrian statue of Louis XIV; and the Ilace aux Armes, planted with line trees, and forming a favourite promenade. But it has neither public fomintins nor covered maketplaces; anl, for a eity of its size, there are few public buildings worth notice. Thougl not fortitied, it hats sevcral gates, on one of which is all almost ellaced Latin inscription in honour ol' the emperor (Goridin. Opposite this gate is the atthedral, a heavy-looking editice, with a front flanked by two square towers, and ormamented with dive rows of columns of alferent orders. Several of the other clameches are in much better taste. The town-hall is one of the best pablie edifices. It has been rebuilt, together with a large part of the city, since a destructive tire in 1720 , and comprises a large saloon, used for public fêtes, the halls of varions juticial courts, a pullic library of above 30,000 vols., schools of design amd architecture, and the apartments occupied by the mayor. The lootel appropriated to the use of the imperial court and tribunal of commeree is a buidding in the Thsean order, having some good paintings and arabestines.

Rennes has several hospitals, a house of eorrection, in which varions mannfactures are eonlucted, an arsenal, artillery forges, and varions military schools. It is the seat of a bishop, whose diocese comprises the dep. Ille-et-Vilaine: it is also the sat of the impurial conrt for the dive deps. of Brittany, the cap, of the 13 th military

## REPTON

REVEL
ivided intos sixtern ms, to the HI . of C , e each for l'aisley Port flasgow are le return of a mem. 2,276 in 18tib. At ul 11,934 inhalitent ints; while, in I8:11, homes, and $15 \overline{5}, 00_{2}^{2}$ ent was $5,76 \cdot 1$. , and 1864-65. rothand, co. Renfrew, in abont $\frac{1}{2} \mathrm{~m}$. of the W. Glasgow. I'(p). onsists merely of : ral lanes issue. The parish churell, town10 mative manufac260 lowms are emmanufacturers. It comsillerable dairy comected with thi it has been allowed - was constructed on own in 1835; and: meets the bor. with ever, it has but littie al family of Stewart, I their original resians with Port Glas, and Kilmarnock, in i. of C. Registered 365 ; councillors, 12; -6;
terwards Rerlones), a ilaine, of which it is minfluenee of the llite Nantes, on the railPop. 40,185 in 18 sitit. into an upper and ich is the largest, is ; the lower town is ses in both are, howbich gives the city a hats sevcral squares, stice, in which was tatue of Lomis XIV.; planted with lime promenade. But it nor covered maketsize, there are fow
'Though not liertione of which is an ion in honour of the this gate is the cal itice, with a from rs, and ornamented of diflerent orderss are in much better of the best publie ugether with a hare netive fire in 1720 used for publie letes, courts, a public li chools of design and uts oceupied by the ed to the use of the commeree is a buildug some good paint-
als, a house of emmufictures are comforges, and variots to of a hishop, whose He-et-Yilaine: it is court for the tive or the 13th military
division, and has a chamber of manufactures, a faculty of law, a seemilary sehonl of medicine, two seniuaries, a tolerable museum of painting, and some other scientific establishments. In the immediate vicinity are several good promenades; the principal, the Thabor, formerly a garien of the lienctictines, on a height above the city, has a statue of Dnguesclin. Though favourably situated for trade, Remes has few manufactures: the priaripal are those of sail-cloth, for the navy, fishing-ncts, and twine. It has, lowever, a consilerable trathic in linens, butter, evder. and provisions, which is much facilitated by the eanal of Ille and lance, and that between Naites aud Brest. It has 12 annual fairs.
Remes was the eap, of Brittany from the 9th century to the lievolution. It has produced munemons distingrisised men, among whom may be sperified the fammas Constable Duguesclin, born in the eastle of Sutte-broom, in the immediate vicinity, in 1314; La Bletterie, the author of the lives of Julian and Jovian : amd Cingucuc, the author of the ' llistory of Italim Literature,'
REDTON, or REPLNGON, a par, and village of Eugland, co. Derly, humd. Repton, on a small afluent of the Trent, $i f \mathrm{~m}$. SWV. Derby. Area of par. with Bradhy chapelry, 6,440 acres. Pop. 2,175 in 1861. The town consists principally of a street of seattered honses, abomt one mile in length, its inhahitants being chictly agricultural. The par. church is a spacions strueture, with an elogant spire, and several bandsume momuments. A tree schoul, well cudowed in 156i6, is held in the remains of a priory of Black Canons, established in 1172.
RLOCCENA (am. Loretum), a town of Spain, in New Castile, prov. tuenga, on the Magro (a tributary of the Juear), 43 m . WXIV. Yilencia. Pop. 7,709 in 18:7. The town is surrounded with walls, aud commanded by an old castle, built on an eminence; the streets are tolerably straight, lined with well-huilt lomses, and, as in most Spanish towns, there is a spacious plaza, in the centre of which is an omamental fomitain. Three par. elurches and a college are the only publie buildings. The chief employment of the imhahs. is in weaving ribbands and silk goods; and licquena now furmishes a large supply of these articles to Madrid, Seville, and Cadiz. A fair is held ammaally in september. The neighbowhood, a portion of which is irrigated, is well cultivated, and lurnishes corn, wine, fruit, saffron, and large quantities of silk.
Duriug the war of the Suceession, in 170f, the eastle was taken ly the Eumbish, but retaken the following year by the French under the Duke of Orlans.
RETFORD (EAST and WEST), a parl, and mun. bor. of Eiglaud, en. Nottingham, wapentake Bassetlaw, on the Idle, a tributary of the Trent, 26 m . NNE. Nottiugham, and 129 mm . NNW. London by road, and 138 m . ly Great Northern railway. l'op. of parl. Lor. of Last letforl, ta, 3330 ; anil of par. of West Netford, 6337 , in 1861. The parl. hor. comprises, together with the par. of Ranst lietford, parts of those of West liettord, Clarelwrough, anel trdsall. The town consists of several thownghfares, which meet in a common centre, and are mited by eross strects. To the NE: are the hamlets of Moorgate and Spittal Hill, and to the S. South Letliord and Thrmphton. to which last houses extend from East Retford, so as to form one continned line of luildings. West Jetford is dividel from Eant Retford hy the lolle: the lomes of East and West Lettiond bave an reepectable appearance, and the strects are lighted with gas. Last lietford church is a spia-

Vol. IV.
cions edidice of different dates, with a lofty square tower. The chureh of West Retford is small, but hats a handsome spire. The living of East leetforl is a viearage, that of West Retford is a rectory. In the sulurly of Moorgate is a new chapel of ease, in the Gothic style: there are in the town places of worship for lhaptists, Independents, and Wesleyans. The town-hall is a beilding, surmomed by a cunola, and having beneath a grod market pace. There are two almshouses, one for old men, the other for women; a free grammar sebool, fommder by Edward V'I., of which the municipal anthorities are trustees: a mational school, established in 1813, various minor charities, a newsroom, and a theatre. There is no mambietory of any kind in the town. Malting was formerly extensively earried on, and hat-making and the mamulacture of worsted were introluced, but these branches have nearly ceased. The lille is not navigrable at lietforl, but it commmicates with the Irent by the Chestertield C'anal, which passes S. of the town, and is carriecl over the Idle by an aquedhet. East Retlord is governed ly taldermen and 12 conncillors. It is sail to have been a bormgh by prescription; it received many chaters from lieury III. and subsequent sovereigns, down to Dimes I. Last leeford returned 2 mems, to the 11. of C . in the !th Edward II., and continned to enjoy this privilege down to 1806 . Ihat it having been proved that gross lribery had been practised at the election that then took place, it was proposed ly one party to incorporate the: aljoining humdred of Bassetlaw with the bor. and by another to trinsfer the franchise to Manchester, Dirmingham, or some other of the great towns that were then unrepresented. After lengthened disenssion, the tirst-mentioned plan was agreed to, so that the parl. bor, of Bast Retford is unow identical with the hundred of
 Markets at last lietford on Naturdays; faire Marel 23 and October 2, for horess, cattle, and cheese
RL:TIIEL, a towin of France, dép. Ardennes, cap. arrmid., on a steep declivity bevide the Aisne, here crossed by a wooden lridge, 24 m . SW. Mezieres. I'op. 3,712 in 1861. The town is pretty well laid out, and is improving, but the honses are mostly of wool, and there is no remarkable public buidding. liethel was formerly the eap. of a co, of Champarne, and was fortitied. It has a court of original jurisdiction, a commmal college, society of ugriculture, theatre, several hospitals, and two prisons. It is chicfly noted for fts woollen manufactures, which are estimated to employ from 1,400 to 1,800 hands, mostly spinners. As in most small manufiacturing towns, the worlprople are generally employed at their home: The prices of labour are somewhat lower than in lihcims, but provisions are cheaper, and, on the whole, the woollens spimers of Lethel are in a better comlition than these in that city. Its. trade has been comsiderably angmented by the opening of the camal of Ardentes: besides woollen mambinetures, the town has many iron forges, breweries, and tameries.
HEVEL (Esth. Talline, Luss, Kolyran), a seaport town of linssia in Enrope, cap. of the alove gov.; on a small hay on the S. side of the Gulf of limland, 200 m . Wisw. letershurg. Pop, 21, 20 in 1805 . The city proper, included within the ramparts, is small, and thongh it has many good lorick honses, its streets are harrow and irrugular. There are several Latheran, a lienn, Cath., aml
 rions charitable and educational establi, hunent? the latter inclucing a symuasium, eniscupal semi-
nary, and a sehool for nobles. The castle, a moniern edibiee, is appropriated to the provincial anthorities; the momicipal oflicers, who are elected by the city, reside in the town-hall. The admiralty is the prineipal public luilding. The suburbs, consisting mastly of wouden honses, cover a large extent of ground along the shore. Revel is much resorted to as a watering-place, and has some good warm buthe, a theatre, several clulis or cusimos, and three or four public libraries, one of which, the property of the city, is said to comprise 10,000 wols. This town is one of the stations for the lissian fleet, and has a harbour defendel by several batteries. 'lhis port, which was innterially improved in 1820, is deeper than that of Cronstadt, though mare dillicult of entrance. The roadstead. formed by some islands, is well sheltered: the long duration of the frost is the principal drawback on lievel as a maval statiom, thongh that is a disadvantage which it shares in common with the other Russian ports in the Baltic. Though not eomeeted with the interior by any mavigable river, Level has a considerable trate. Its principal exports are corn, spirits, hemp, tlax, timber, and other Baltic produce; the imports consist of colomial produce, herrings from IIolland mud Norway, salt, cheese, wine, tobacco, fruits, lye stufle, cotton yarn, stuffs, and other mamifactured gools. $A$ portion of the customs' revenne is enjoyed by the town.

Revel was founded by the Danes in 1218, and afterwards sold by them to the Kinights of the Tentonic Order. In 1561 it came into the possession of the Swedes, lut was taken from them by the Russians in 1710. Near it is the Katharinenthat Palace, built by Peter the (ireat, the gardens of which are a fiavourite public promenade.
liseds, a town of Spain, in Catalonia, 9 m . W. Tarragona, and 54 m . W. by S. Barcelona, on the railway from Bareelona to Tarragona. Pol. 28,171 in 18i5. The town stands on a plain gently sloping towards the const, and comprises severil strects lined with gooll houses, with mumerous churehes, hospitals, barracks, an orphan asylum, theatre, and handsome public fomminins. The inhabitants are extensively employed in the mamufacture of silk and cotton fabics, hats, ami soap; besides which there are large dye-honses, bleaching-gromols, tameries, spirit distilleries, and glass-houses. Hens may he regarted as one of the most important manufacturing towns of Catalonia, and the numerous handsome houses in its neighbonrbond indicate the industry and prosperity of its inhabs. The town is comiected by a canal with the port of Salon, whence its prolnicts are exported in exchange for rice, flomr, cod fish, and anchovies. Its weekly warket is one of the largest in Spain, and is frequently attended by upwards of 10,000 persons.

The town was fommed in the middle of the 12th century, but its present importance is wholly consequent to the establishment of silk and cotton manufactories at the close of the last century.
REUSS, a territory of Central Germany, forming two independent principalities, Licuss-Greiz und Renss-Schleiz, between lat. $5 t^{\circ} 20^{\prime}$ and $51^{\circ}$ N., and long. $11^{\circ} 45^{\prime}$ and $12015^{\prime} \mathrm{E}$, having S . Bavaria, E. saxony, and N. and W. the territories of I'russia, Cobourg, Gotha, and Weimar, the last dividing it into two unequal portions, Area of Ih. (irciz, $148 \mathrm{sq} . \mathrm{m}$; of R. Solleiz, 297 $\mathrm{sq} . \mathrm{m}$. Poln. of ll . (ireiz, 42,130, and of H . Schlei\%, 83,360 in 1861. The surface is generally hilly: in the N . it is waterel ly the Elster, in the S. ly the suate. Tillage is less an occumatho of the inhabs. than the rearing of cattle ancesheep.

The most fertile tract adjoins the town of Gera, Woorls comparatively extensive, and one of the chicf sources of national wealth, Woollen, lineu, and cotton falries are produced; mining is little followed, and the only metallic works are a firs iron-forges. The inhabitants are almost all lat theraus. The principality of J. Greiz is ruled by the elder hranch of Reuss, and consists of the lordships of Greiz and burgh. Greiz is the chind town, and seat of the superior judicial court. whence appeal lies to the tribunal of Jena. The public revenue amounts to about 200,0100 thaters a year. The younger branch of Lenss has a territory composed of the lordships of Schleiz, La-benstein-Eibersiloff, and (iera ; chicf town and seat of gov., Schleiz. Appeal from the court of this principality lies also to Jena. l'ublic revenu, about 285,664 thalers, or 42,8201 . in $1866^{2} 2$. Each branch has a scparate vote in the full diet of the German Confell, and together with Indenzollern, I ippe, Liechtenstein, and Waddeck, the 16 th place, and a vote in the committe.
RLUC'LLNGEN, a town of Wirtemberg, cire. Schwarzwald (Black Forest), of which it is the cap., on the Eschatz, a tributary of the Neekar: $1!\mathrm{m}$. S. Stuttgari on the railway from Stuttgard to Rottenburg. P'op. $13,400 \mathrm{in} 1881$. Reutlingen presents a contrast to many other old imperial cities, haviug mostly regular streets, and will. built though antipuated houses. It is fortiticil. and has several suburbs. One of its clanrehes has a tower 320 ft . in height: the town-hall, lyecum, a well-endowed hospital, and orphan asylim are the other most conspicuous edifices. It has mamufactures of Jeather, lace, net for women's caps, of the ammal value of 100,0 nen florins, elocks and watehes; with dyeing and bleaching factorio. and prining estalishaments.
Rentlingen was the tirst town in Swabia whid embraced the Reformation.
LIILEMS, or REIMS (ane. Durocortarum, pot. Remi), a celchrated city of l'ramee, dép. Marnc, of which, though not the eapr. it is he far the larges town, cap. arroul., in a plain near the Vesle, a tributary of the Aisne; 27 m . NNW. Chalons, and 95 m . F. by N. l'aris, on the railway from Chalons to St, Quentin. Pop. 5 as, 8 os in 1 sifil. The eity is surrounded by ramparts facel wifh stone, which, being planted with trees, fom agrecable public walks, and there are other promenales in the immediate neighbourhood. It i about a league in circuit, and is entered by sis gates, me of which, the Porte Neave, a trimmphal arch, with handsome doors of "pen iron-work, was raisel in homonr of Lonis XVI. at his coronation. Two principal thoroughfares, which meet in the Place Royale, divide the city into four unepulal portions. It is tolerably well laid out. its streets being wide, straight, aid qenerally elean : it ha: several good sypures, but its honises are small. having mostly only two floors, and are comstructed with monotonons milformity. Waterworks, heyond the walls, distribute the waters of the Vesle throngh the town. The cathedrail. one of the largest and most magnificent in Eurplo is that in which the coronation of the Bourinu kings of France has taken place, with few excetions, from the ara of Philip, Augustus. It was clicely construeted between 1212 and 1242 . is 476 ft . in length, 99 ft , in breadith, and 1.4 ft . in height. It has a nohle front, thanked with two square towers, $26 \frac{21}{2} \mathrm{ft}$. in height. Of the thre grand entrances on this side, the central is 900 fit. and those on cither side 2.4 ft . in width; athat the former is a beantiful cirenlar window. Tha whole front is omanented with nearly $50^{0}$ statwes, and a great number of columns and bas-

Waterdistribute the waters town. The cathedral. magnificent in Jurope hation of the Bourlmen Hace, with few exer (i) Augustus. It wil n 1212 and 124\%. in breadth, and 1.41 t. ront, thanked with two height. Of the three , the central is 903 th. - f f. in width; aluse ircular window. Tha with nearly 650 :tit of colmms and bas-
reliefs, and similar decoratous abound in every part of the exterior. In one of the towers is a hell wejrhing $23,000 \mathrm{lbs}$. This cathedral has some fine stained glass, tapestry, marble pavements, a very tine orgno ; the 'Washing the Feet, a cheff dowre of Poussin; varions curiosities, including the font said to have been used in the baptism of Clovis, and the tomb of Jovinus, a citizen of liheims, who arrived at the dignity of lioman consul amo 36if. The last, an admirable specimen of ancient art, was trinsferred from the ehurch of St. Nianise, destroyed during the plirenzy of the Revohtion.

Rheims, which was a place of great consideration under the lomans, had varions other antiquities, hut they were niostly destroyed or carried ofl during the lievolution. The most remarkable ancient momment now existing is the Porte de Murs, one of the eity gates; a triple archway, - ornamented with cight forinthian columas and numerous bas-reliefs, though these are now greatly defaced. This arch appears to lave been crected in honour of Cisar and Augustus, when Agrippa was governor of Gaul. Without the walls are the traces of an amphitheatre. The chureh of sit. Remi, constructed in 10.41, is considered the oldest in the city. It oceupies almost as much ground as the cathedral; and, though much less lofty and ormamented, is in a similar style of arehitecture. It contains the remains of the ancient and curions mansoleum of St. Remi. 'The town-hall, an edifice of the time of Louis XlII., with whose statue its front is oruamentel, the new prison, maison rouge, which has some listorical interest, theatre, and several hospitals, are among the ot ther ehief oljects of notice. In the centre of the Place is a bronze statue of Lonis XY., surrounded with allegorical figures, crectel in 1818 , to rellace a simitar statue destroyed in 1793. Lheims is the seat of an archbishor, whose sutiragans are the bislops of Amiens, Beauvais, Chalons, and Soissons, and of courts of assize, oriminal jurisdiction, and commerce, a council des pruthommes, a chamber of manufictures and arts, and a college. It has a public library of 94,000 printed volumes. and 1,000 MSS., a botanic garden, and schools of mutual instruction.
Wheims is the centre of the manufacture of woollen stutfs, which extents over nearly the Whole dep. of Marne, and the aljacent defs. of Aisne and Ardennes. These manfactures are estimated to vecupy 50,000 hands, of whom 12,000 settled in Rheims. About 3,000 of the latter are weavers, 1-10th part of whom work at jaequartlooms, 1,500 employed in spiming yarn, $4,000 \mathrm{in}$ fulling, washing, and otherwise preparing the fabries made. For the last 25 years the woollen manuficture of licims has made a considerable progress in most of its branches. Workmen usually work for about 12 hours a day; those living in the city heing mostly employed in the workshops of the manffacturers. In general the workpeople are well clothed and well fed, but they are satid to be improvident. liheims also prodinees soap, candles, bisenits, anl gingerbread, and has breweries, tanmeries, and leather factories. It is n principal depuit for the wines of Champagne, large quantities of which are stored ip in cellars, similar to those of Eiernay, which see. Besides its trade in woollen manufactures and wines, it has a considerable trado in cotion stutls, Hour, and other agricultural proilucts.

Uuder the liunans Durocortarum was the cap. of Belgica 1 I.. and was distinguished as a seat of letters and philosophy. It became a bishopric before the irruption of the Franks, and received many privileges from the Merovingian kings. In
[859, Rheims successfully resisted the arms of Edward 11I. In 1547, a miviversity was founded in it, which lasted till the revolution, when it was suppressed. In 1814it was taken by the Russians, who were soon after expelled by Napoleon with great loss. Among the great men of whom Rheims has to boast, the most distinguislied by far is Colbert, minister of tinance rhoring the mosit splendid period of the reign of Louis XIV., born here on the 29th of August, ltit9. It has also given birth to the Abbe de la Pluche, and the historian Vely.
RIFIN (IBAS, or LOWER-RIINNE), a frontier dep. of lirance, in the E. part of the kingtom, which, with Jlant-linin, formerly constituted the prov. of Alsace, chietly between the 4 ath and loth ders. of N. lat., and the 7 th and Xth E. loms.: having N. Rhenish Bavaria and the drip. ot Moselle. W. Meurthe and Vosges, S. Maut-Lihin, and E. the lhine, separating it from the gramiduchy of Baden. Area, $455,3 \cdot 15$ hectares: pop. $570,5 \overline{4} 4$ in 186il. The $W$. part of the dép. is covered by the Vosges momentains and their ramifications. 'The average elevation is from 2.000 to $\underline{2.500} \mathrm{ft}$; but the 1 lochfield rises to $1,4130 \mathrm{ft}$, and the Selmeeberg to $2,850 \mathrm{ft}$. The surface declines towards the li., Principal rivers, the Ill, with its mumerons tributaries, the Moler, Zorn, and Sarre. I'he arable lands are estimated at 180,920 hectares. meadows $50,(12+4$ ditto, vineyards 13,123 ditto. orchards $5,9 \% 4$ ditto, and wooils $117,75 \cdot$ ditto. 'The marshes in the E., and the stony tracts of the W., are unsuitable for agriculture; and thourh the middle of the dép. be fertile and well cultivated, the produce of corn is not sullicient for liome consumption. More potatoes are grown than in any of the neighbouring déps. A good deal of tobaceo is raised aud bought by the government. The anmal produce of wine may be estimated at about 460,000 hestolitres: it is of a medium ģuality, but, speaking generally, is inferior to that of the Mant lihin. About a half of the prortse is consumed in the dép., the rest being sent, parily to other dóps. and partly to Baten. Hops, wool, hemp, onions, and other vegetables, are articles of extensive cultivation. The plongh is usually drawn by horses. Horned eattle are numerous, hat sheej, are searce. Poultry are extensively reared near Strasbure, particularly geese, the livers of which serve to make the pâtus de foie gras, for which that city is so celebrated. Iron mines are wrought; lead, antimony, cobalt, coal, and bitumen are met with ; and salt is made from springs in the N. and W. The dép. has manufactures of cotton yarm, muslins, woollen and linen cloths, leather, satrllery, carriages, and glass wares. There are many iron forges, and firc-arms are manufactured it Mutzig and Klinzenthal. Strasburg is the seat of an extensive gencral commerce and transit trade. Bas-lihin is divided into four arromels.; chicf towns. Strisburg the eap, Saverne, schlestalt, and Wissembourg. The majority of the population are lrotestants.

RIIIN (11AU'S, or UPPER RIIINE), a frontier dejp, of Framee, in the E. part ot the kingrdom, formerly comprised in the prov, of Alsace; between lat. $47027^{\prime}$ and $48^{\circ} 18^{\prime}$ N., and lomg. $6^{\circ} 45^{\prime}$ and $7^{\circ} 85^{\prime} \mathrm{E} ., \mathrm{having}$ N. Jhs-Rhin, W. Vosges aud Haute Snône, S. Doubs, and the Swiss cantons of Neufhatel, Iherne, und Basle, and Li, the Rhine, separating it from the territories of Baden. Area, 410,761 hectares; pope 515,802 in 1861 . In the W. are the chains of the Vosges and Jura; one summit of the former, the bullou d' $l^{\prime} A$ sures, rises to 4, ti02 ft , above the sea. The rest of the surface is mostly plain. Except the Ihline, the 111 is the only navigable river; but the canal between the

## RIIINE

lhine and Rhone intersects the dép. in its whole lenyth. As in Bas-Rhin, the most fertite portion of the surface is in the centre of the clep., where agrienture is in a pretly advanced state. The arable lands are estimated to comprise 105,501 luetares; mealows, i2, 666 do. ; vinevarls, 11,141 do.; orchards, 5,819 do.; naul wouls, 113,215 dr. Prinepal crons, wheat and barles. The produce of wine is estimated at alowe 400,000 hectul, a year. Some of the white wines, especially those of Guehwiller, Litquevir, and Thann are lhighly esteemed. The rins grentils are extensively purchased by the merchants of Cologne aud Prankfirt, whomix them with the wines of the Rhine. to which they impart strength and vivacity. They kecp for more than twenty years, improve as they Grow wher, and sustain no injury from travelling. The delp: also proluces excellent beer. There are varims iron and other mines, and grool buidding stone and other minerals are met with in various parts. LIand-looms are scattered ower nearly the whole of the depse of the Itaut and Bas-Lhint the articles produced are chictly moshins and fine calicoes. The cotton manutictures employ 100,000 individuals, or nearly a fourth part of the entire pop.; but a large proportion of these persons prosecute the cotton trade as a subsidiary empluyment only, carrying it on in their cottages when they are not neersesarily engaged in the culture of their little patches of gromal. Mulhatsen, Tham, (iuchwiller, Soultz, and sainte Marie aux Mines, are the chicf seats of the cotton manufacture. The homes of the weaving classes in these towns are, for the most part, dirty and comfortless, and evince avery symptom of bad management and poverty. Jeven those who have children in the entton mills do not keep ulp any appearance of comfort. The Alsatian weavers have, gencrally speaking, a sufficiener of food, thomgh in all other respects they are laidly off. This dép. has alsor ranfaetures of hardware, clocks, and watches, with various iron mod sted forges. It is divided into 3 arronds.; chicf towns, Colmar, the eap., Altkirch, and Belfort. Unlike Bas-Lihin, the majority of the pop. in this dép, are Rom. Catholice, but l'rotestants are numerous.
Alsace, which formed a part of the kingloms of Austrasia and Lorraine, afterwards helonged to the German empire till 12his, when it hecame indepenilent. It subsequently belonged to Austria but was finally amexed to France by Lonis XIV. in 16:97.
MIINE, a large river of W. Europe, rising on the N. side of the App, flowing through Switzerland and Germany, and filling into the North Sea or German Ocean, betwect lat. $46^{\circ} 30^{\prime}$ and 520 N., and long. $30 \cdot 10^{\prime}$ and $9050^{\prime} \mathrm{E}$. Length, mearared along the stream, 950 m : area of basin, including tributarics, xas ent sq. m., or about 1-43d part of burppe, It originates, in two principal streams, which have their sources on the N. sile of the l'enine Alps: the principal of these, ealled ly the Germans Vorler-1:hine, is formed by the junction of two small streams flowing from the N . side of Mownt sit. (iothard, at an eleration of $6.5 \$ 1 \mathrm{ft}$. alsowe the sea; lat. $46^{\circ} 32^{\prime}$ N., long. no $^{\circ} 53^{\prime}$ E.; only a few miles from the source of the lihone. Hence the main stream, which som becomes enlarged ly the aflucuce of momerous brooks and mountain torrents, takes at first a NE. direction through the magnifieent and stupendens ravine of the lilue inwald, enclosed on both sides by nlunost perpendicular rocks, rising $: 3,00 \mathrm{ft}$, alowe the iver, and clothed to their very smmat with stately firs, At the lower end of this valley, and only a few miles alove Chur, near limehenan. the river is joised ly its E. branch, the Ilinter-Rhine, which
rises on the side of the Moschelhorn or Vogelsharg, near the pass of St. Bernari. At Chur the riyer detlects N., maintaning that gencrul direction through a fertile and romantic valley, nbounding' with vineyarls, as far as the Lake of Constanct, into which it pumrs its waters, their level at this point being $1,2.25$ lt. above the sea, or 5,324 it. below the source. The river, leaving this beantifil lake at its W. end, near the town of Constane', enters a smaller expanse of water, called the Unteror Zetter See, in which is the island of Reichenan, and thence, narrowing its chamel, runs W. to Schafthamsen; 3 m . helow which the stream, pent between lofty rocks, and divided by craggy isket, fatls over a ledge of rocks 76 ft . in height, formin, one of the most celebrated Earopean catarats. (See Somarmausis.) The chanicl, from this bsint to hasle, is extremely torthons, windiny through lofty rocks, which confine the waters within a narrow compass, and consequently increase the rapidity of the current. At Zuzach, alont 1 m . above the contluence of the Anr, oceurs, a seeond fill, flown which, however, the natives venture their luaded barks, exeept during the spring floosls. The river maintains its W. dirertion throngh a roeky valley, interrupted with frequent erags rising above the stream, as far ats Basle, where it is crossed by a bridge to0 ft. in length. Ilere commences the navigation of the river, its level at this point being 827 ft , above the Geman Ocean.
hasle secms to be the proper point of division between the Upper and Lower Whine; fur the navigation abeve this town is so interrupted by falls, and roeks as to be scarcely of any importance, whereas from lence to the month boats pass at almost all seasons of the year. Assuming at Basle a pretty constant N. conrse, the Rhine becomes the boundary bet ween France and the griud duchy of Baden, and afterwards between Baden and R'henish Bavaria, the cities and towns in this part of its course being Mannlecim, on the E. Bank, at the confluence of the Neckar, and Strusbure, Sucier, Oppenleim, and Mayence, on the W . bank. At the last of these towns, at the jumetion of the Mayn, the stream takes a suden thrn W . to bingen, on the $W$. bank, from which point the course of the river is pretty miformly NW. to the delta at its mouth. Coblentz, at the confluence of the Moselle, Bom, Cologne, and Clèves are the chief towns on the W. bank; those on and near the E. side comprising Wiesbaden, Dusseldur: Wesel, and other places of inferior size. The detta of the lihine is the largest in Europe, not even excepting that of the Wolga : it extents, with its ramitications, 110 m . along the coast, from the F . slowe of the Zuyder-Zee to the S. Irauch of the Mas; and the ifistance from the apex, alwot 10 m . below Emmerich, beines 7 ? m. the total area of the country comprised witfiin its limits is $\{, 150 \mathrm{sq} . \mathrm{m}$, When the river divides, the left or s arm taiks the name of Waal; and the other, retaining that of the lihine, is comnected, a little fartlier N., Ily an artificial camal with the Yssel. Still lower down the Jhine takes the name of the leek, in order to distinguish it from the old lhhine, now sandeld up, which passed by Utrecht and Leyden to the sea at Catwy. The Rline has at present thre mouths. Ahout two-thinds of its waters flow b. the sea by the Waal, the remainder being carriod partly to the Zuyder-Zee by the Yssel, and partly to thie ocean ly the lecel and Mans, on which is the great lhienish port if liotrerdam. The branches, however, are so interlaced with natural and artificial chamels, ant there are so many hgoons and marshes in this district, that a map lieemmes imdisponable to aly detailed deseription.

still lower down the Leek, in orker lhine, now sanderl amd Leyden to the ars at present thre " its waters low to iamler being earriol he Yisel, and partly Mitas, wh which :s Rotterdam. Then rlaced with matural cre are so many linrict. that a map lieletailed deseription.
'The entrame to the Mans, leading to Rotterdam lies in lat. $51^{\circ} \mathbf{0} t^{\prime}$ N., and is commonly ealled the Hricl-gat or cinmmel: it has a bar across, on which there are if ft, water at neap-tides. Spring-tides rise here lrom 11 to $1: 2 \mathrm{ft}$., and neaps 6 or 7 ft .

The breadth amd depth of the Rhime in dillerent pars of its comrse have leen aceurately detemined fiy repeated olservations. At Chur, in the Grisons, it is 260 ft. in width, or abont as broal as the Thames at liehomond; at Kehatlitausen the width is 300 lt., amel at Basle, 350 ft . 'The breadth of the strea between hasle and Strasburs is much increaser of the ummeroms islands that interrupt the eurrent; but from the last-mentioned phace to Sueier the wilth varies from 1,000 to 1,200 ft The size of the lhine thene downwards to Colslentz crambally increnses 10 near $2,000 \mathrm{ft}$. in width; but mear that point it enters a mommanous detile, and becomes much narrower, widening again at Cologne, where it is 1.400 ft across: and lower down to its month, in the princijal mavigable branches, it has a breadth exceeding 2,000 f't, The depth of the chamel from Dasle to Strasburg avernes about $1-2 \mathrm{ft}$. ; and below the latter town the river is mavigable by large steamers and vessols of eonsiderable tonuare, July is the season when the river is finlest, and it then rises about 12 ft. above its averate height. May and (hetober are the seasens of bow water. The descent of the river, and comsequently the rapidity of the current, are extremely variable in dillerent parts; but the meam inclination liom Strasburg is estimated at abont $1: 3$ ft. per mile; and the current may averare somewhat more than 3 m . an hour, thongh bedow Cologne it is greatly decreased, the lhine there becoming eomparatively a slurgish river.

The alluents of the Lime are very munerons, but the chicf trilis. belong to the portion below Basle. The only mavigable ablluent above that point is the Aar, a stream which drains the greater part of swituerdand, and brings down nearly an equal volure of water with the Uper Lhine itself. It rises in the great mass of st. Gothard, passes throngh a narrow valley, in which is the cataract of Aarfall, liol ft. in height, afterwards enters the hake of Brienz, and thence, after passung thromorh the lake of 'lhum ( $1,875 \mathrm{ft}$, above the sea) runs patst lerne, and enlareed by different tribs., bringing down the waters of lakes Lacerne, Willlendstadt, amd Zurich, joins the main river at
 and powerfil current. Its ehief alluents are the Finss and the Limmath; the former rising on the NW. side of Mount St. (iothard, receives the waters of lakes Laticerne and Zug, while the latter rises in the oberland Alps, ind runs through the lake of Zurich, looth joining the Aar on its E. bank, abont a mile from each other; both are navigable except during the spring thoods, but owing to the rapidity of the current boats ascend empty.
below Basle the Rhine is joined by many large tribs., the most important of which enter from the Li. or rikht bank. 'The tirst of these is the Neckar, which fills into the main river at Mamheim, about 21.1 m . belon Basle. It rises in the Black Forest, in about lat. d $\mathrm{s}^{\circ} \mathrm{N}$. and $8^{\circ} 30^{\prime}$ li., amd hats a vory tortuons comse, tirst NE:, subsequently NNW., mud hastly $W^{\circ}$., of more than $1 \times 10 \mathrm{~m}$. It is mavirable for large barges up tor 11 eilbrom, and for small cratt as fiar as Stuttgari. The Mayn, which enters the Ihine at Maycnec, or Manz, about 20 m. below Framkfort, which is on its N. bank, is a most important tributary. Large river harges, bessels of j0t) toms burden, ascend as high as Kitangen, which is $16^{5} \mathrm{~m}$. from the month: its entire conrse is estimated at 320 m . (See Mari.) The balm joins the linine about 48 m , below

Mayence: it is abont $1 \cdot 10 \mathrm{~m}$. long, but is not ma-
 The liohr and the lipleare two other considerahle tribs, on the lis. side; both navigable for about 100 m . The promipal atluent om the W. bank is the Moselle, which rises on the $W$. side of the Vospes, at an elevation of $2,350 \mathrm{ft}$., and alter flowing past Naney, Metz, and Treves (near which it is joined by the Sarre), enters the main river at Cobhentz, aiter a course of 280 m . The conthence of the Mearthe, 160 m . below the source, marks the extent of the navigation, 'The Mense, or Maas, rises in the tlep. of the Upier Marne, on one of the W. ollisets of the Vowere, ind ruming with a torthons conrse, somewhat like the leater S., past st Mihid, Tendun, Nedan, Merictes, Namur, Liege, and Maestricht, joins the Waal, or prineipal st reata of the delta, near forkim, below which, as nlrealy olserved, the man stream assumes the name of Mans down to its morth.
The geology of the valley of the linine hat been rather extemsively incestigated ly bumé, Von Ihech, Brongniart, and other maturalists. The bed of the Upler litine, from its swarce to the Chur, is formed of primitive rocks, chiefly gneiss and jorphyritic gramite; but at this juint, gramwacke, blue limestone, and odd red sambatone become the prevailing rocks, as far as the Lake of Constance, where they are succeded by tertiary formations, probably of more recent date than the gypseous strata of the J'aris batia. Secondary and tertiary rocks line the river from Basie to this Neckar; but from this point to Bingen, below the contluence of the Mayn, granite, gneiss, and micaschist, form the substance of the high erags that line the river on both sides. Lower down, the elifts are compused of secondary limestone, with superimposed strata of new red s:mistone; and in some parts volcmic rocks are fombd curiously interspersed with the inferior chalk strata. 'Ihe coald formations are fomm in the upper jarts of the luhr and Lippe, this part of lihenish ['russia furnishing the chief suplly of that mineral for the purposes of steam navigation. Below Dasseldorf the tertiary rocks are replaced by diluvial ame alluvial formations, which form the subsoil of the delta. (ieologists, however, are of opinion that the momerons islands in this intricate delta have been formed not so much by deposits bronght down by the river, as by the inroals which the sea is continually making on this const.

The seenery of the Rlinue has luen justly anmired by travellers. Widness and rude qrandenr chatacterise it in the detiles above the lake of Constimee, and the combtry from the Unter-Sed Yestward, as far as Rheinfelden, 6 m . above Basle, is almost equally rom?utic. But at this point the ehameter of the scencry changes, and the river, fommerly an inconsiderable feature in the hantscape, becomes a broad and majestic stream, flowing as far as Mamheim throurh a rich open sallev, from 30 to 50 m , in brealth. The bimks there begin to be more bola and rocky, but the scenery most generally admired is between Mayence and Coblentz. The linine here pursues a meambring course, pent between lolty and eragery mountains, and resembles rather a succession of lakes thin a river. Ilere, indeed,
'The river nobly foams and flows,
The chmon of this enchantel gromen
And all its thousand thens diselose
Some fresher beaty varying round."
chilite Inarona.
The mountains, however, are only mountains in miniature. The groves on the hilit-rides are few and far between; but there is no grove without a
clurelk spire risiug in the midst, and overtoppling the trees. Frequently a daring mul fantastic elift, rrowned hy an ancient castle, frowns over the river, or rises majestically from the brow of the steep.

The Rhine, with its varions afluents, comprises a navigation of about $1,500 \mathrm{~m}$., and, in a commereial point of view, is perlaps the most important river in Europe, owing to the momerons states to which it allords a water conveyanec. The fullowing table exlibits the extent of the states, or portions of the states, included within the valley of this grent river:-

| Switzerland | Sq. M. <br> $12,10 \%$ | Other Cerman | Sq. M. |
| :---: | :---: | :---: | :---: |
| France . | 15,100) | States . | 9,0.12 |
| Alsitria | 8ii) | Belgitum | 4,100 |
| Badell | 4,614 | Netherlands | 6,620 |
| Bavaria | - 10,000 |  |  |
| Wurtemberg | - $5,3 \pm 0$ | Total | 83,298 |
| Prussla | - 31,152 |  |  |

The nuvigation of the Rhine has always been of considerable importance, but since the employment of steamers, and the abolition of the tolis mul other political olstacles to its free use, its importance as a channel of navigation and traflic has been immensurably increased. Vessels of large burden aseend the river to Cologne, and Strasburg is reached by those of 80 or 90 toms. There is quite a tleet of steamers on the Rhine between Strasburg and Rotterdan, and a vast inerease las taken place in the number of passenfers in reeent years, clespite the lines of railway which rmalong the banks of the river.

Besides the gools convered up and down the lhine in steamers and sailing ressels, immense quantities of timber are sent down in the form of ralts. The smaller rafts, from the Upper Rhine and the smaller afllments of the river, used formerly to rendeayous at Namedy, near Andermach, where they were consolidated into rafts of a larger size, that were sent down the river to Dordrecht, where they were generally broken up, and the timber sold and forwarded to its tinal destination. Of late years, however, the plan of ch.structing very large ralts has begm to liall into disuse. A traveller (Autumn on the Ihine), thus deseribes the rafts. 'A little below Andernach the little viltare of Namedy appenrs on the left bank, under a wooded momitain. The lihine here forms a bay, where the pilots are acenstomed to mite together the small rafts of timber floated down the tributary rivers into the Rhine, and to eonstrnet enormous tloats, which are navigated to Dordrecht, and sold. These machines have the appearance of a floating village, composed of twelve or tifteen little wooden huts, on a platform of oak and deal timber. They are frequently 800 or 900 ft . in Iength, and 60 or 70 in breadth. The rowers and workmen sometimes amount to 700 or 800 , superintended by pilots, and a proprictor, whose habitation is superior in size and elegance to the rest. The raft is composed of several layers of trees, placed one on the other, and bomid together: a large raft draws not less than 6 or 7 ft . of water. Several smaller ones are attached to it by way of protection, besides a string of boats loaded with anchors and cables, and used for the purpose of sounding the river and going on shore. The domestic economy of an bast Indiaman or an English man-of-war is hardly more complete. Poultry, pigs, and other animals are to be fomm on board; and s.nveral butehers are attached to the suite. A well-supplied boiler is at work night and day in the kitehen : the dimner homr is annomeed ly a lasket stuek on a pole, at which sigual the pilot gives the word of command, and the work-

Then run from all quarlers to reedive their messes, The consmmption of provisioms in the voyage to llolland is almost ineredible; sometimes amomuting to 40,000 or $50,000 \mathrm{lbs}$ of bread ; 18,000 or 20,000 uí fresh, besides a quantity ol salted, meat; and butter, vegetables, \&e. in propurtion. The expenses are so great, that a capital of three or four humdred florins is considered necessary to undertake a raft. Their mavigation is a niatter of considerable skill, owing to the abrupt windings, the rocks, and shallows of the river; and some years ago the secret was thought to be monopolised by a boatman of Ridesheim und his sons,"

The Rhenus, or lihine (Gr. 'Pinvos). became first known to the liomans by the eompuest of Julins Cinsar, who erossed it twice to pmish the Germans. It is thus described by him:- Rhemus oritur ex Lepontiis qui Alpes incolunt, et longo sputio per fine's Nentuatium, Melcetiorum, Sequenorum, Mediomatricorum,'Tribueorum, Trevirorm citutus firtur; et ubi oceano appropinquat, in phares difluit partes, multis ingentibuspue insulis effectis, quarnu pars magna a feris barbarisque nutionibus incolitur (ex quibus sunt qui piscibus utyue ovis arium videre existimanter), multisque capitibus in orconum influit.' (Bell. (ial., iv. 10.) Ancient writers, thongh agreed with respect to its general course, filfer respecting the number of months by which it falls into the ocean: Tacitus (Ann. ii. 6.) speaks of two only, one of which, probably the modern Wand, he terms Vuhalis, and the other Rhenus. Pliny and I'tolemy, however, say that there were three mouths, the most northerly of which, called Flevum, was supposed to have been formed by a ehamel dug by Drusus, to comueet the IRline with the Ivali, which is, most probably, identical with the Yssel, as I'omponius Mela (iii. 2) assures us that it fell into the lake F'leco, or modern Zuyder-Zee. No duitb, however, the channels of the river in the delta must lave shifted, both prior and subsequently to tho accounts given by the elassical writers; besiles which, the inronds made by the sea on the enast of Holland rencler it impossible to ascertain what may have been the exact number of its months at any very remote period.

RHLNE ('liOVINCE OF), a prov. containing the S . portion of the I'russo-Ihenish states, having N. Molland, E. the prov of Westphalii, Nassan, and other German States, S. France, and W. the latter, Belgium, aud Holland. It lies between $49.3^{\circ}$ and 520 N . lat., and $6^{\circ}$ aud $92^{\circ}{ }^{\circ}{ }^{\circ}$, long. Area, 10,289 sq. m. Pop. $3.216,9 . \mathrm{I}_{8} \mathrm{in}$ 1861. l'rincipal towns Aix-la-Chapelle, Cologne, Coblentz, Dusseldorf', Elberfeldt, T'reves, anil Bom. It is divided into $\tilde{5}$ regencies, and these again into 59 eircles, I'tineipal rivers, Rline, which traverses alnost the who', extent of the prov., Moselle, Saar, and Linhr. Surface varions. Its l. part to the N. of the Moselle consists principally of voleanic momentans, and a chain of the same sort (Eyfel Gebirge) rums across the prov: between Malmedy and Coblentz. The debris of voleanic rocks being particularly suitable for the growth of the vine, it is very extensively eulitVated; the product of the vines of the lihine and the Moselle being estimated at abont 700,000 cimers a year, Jixclusive of wine, the principal raw products consist of potatoes, corn, Hax and liemp, timber, and tobatio. Manufactures in the Lower lihine are both extensive and flourishing. In the townof Aix-la-Chapelle, Eupen, Malmedy, and Montjoie, along the Netherlands frontier, and in Elberfeldt, Barmen, and others to the E. of the liline, improved machinery is to be met with; and the manufacture of tine woollen eloths, casimeres, fine and course cottons, and silks, is prosecuted with great success, The iron worlis and
receive their messes, is in the voyage to sometimes mnomitof bread ; 18,000 or itity of salted, meat; in proportion. 'The a capital of three or red necessary to unation is a matter of he abrupt wintings, the river ; and some It to be monopolised and his sons.

HIODE ISLAND, the smallest state of the N. Ameriean Vnion in New Finglond, comprising a turricory wo both sides Narragamset lhay, having N. and li. Massuchimetts, W, Connecticat, and S. the Atlautic. Area, 1,300 sq. m. lop. $1 \overrightarrow{1,620}$ in 18it). This state derives its name from an ishand in Narragansett Bhy, 15 m . in length by 3 in, in width; besides which, it inchales several small ishants in the Athantis, Surline gencrally broken and hilly; soil molerately promenctive. Small rivers momerons; the prineipal are the l'awtucket and Pawtuxet; they all have their embonchure in Narragansett Bay, a line sheet of water, extembing more than 30 m . inhand, and having sevecal gool harbours. Iye, bartey, oats, and in some places wheat, are protheed in guantities suthicient for home consmmption ; cider is made for expurtation; artilicial grasses are raised in large quantitics; cattle of a good breed; but the inhabs. femerally have applied themselves more to commeree, the fisheries, and manulictures, than to arricalture. Iron, enpler, marble, and froetone are among the minerals; and there are extensive beds of anthracite coal; but this, though gond, has been hitherto little wrought. Irincipal manufictures, cotton and woollen goods, leather, hardwate, and machinery; there are, also, catieo printing and beaching works, and munerous iron fomblrics. l'movimaxes (which see) is the chicf commercial town; and with Newprot, the cap. and seat of govermatent, lhistol, Warwick, and Coventry, are the other principal towns. lihode Ishand is the only state in the Union without a written constitntion: it continues to be governed by the provisions of the old royal charter. The governor and lieutenant-rovernor are chosen annatly; and, with $: 33$ other members, compose the senate. The bonse of representatives consists of 72 members, eiceted ammally. The general assembly, composed of these two chambers, meets once a year. 'The julicial power is vested in a supreme court, and a court of common pheas for wach of the tive cos, in the state. The julges continue in otlice till removed by a vote ol the gencrai assombly. 'The state appropriates 501,060 dolls, a year for the support of common schools; a larger sim is raised by the towns for the same purpuse, and the instruction fund receives considerable aid from private contributions. The most momernus religions sects are baphists and Compregationalists. The militia of the state conbists of alt able-bodied males between 18 and 45 years of are, with bat few exceptions.
'This state was tirst settled, in 1636 , by a per son of the mune of Williams, banished from Massaclansetts on aceount of his religions opinions. Williams obtained a charter for Rliode Ishand and Provilence llantations in 1614; but, in Ititi3, the present raling charter was granted by Charles 11. Rhoule Istand sulfered greatly during the revohttiomary war. It sends two representatives to contrues.
hllodes, a famoms island of the Mediterranean, belonging to Turkey, off the SW. enast of Asia Minor (an. Lyfia and Caria), 10 m . S. C'ape Volpe; the eity of liholes, at the NL. extremity of the istand, being in lat. $36^{\circ}-5^{\circ} 5^{\circ} 3^{\prime \prime}$ N., lomer
 and SW., and is, where broadest, abont 18 m , aeross. l'on, estimated at 30,000 , of whom rather more than it thital are Greeks. A chain ot' mome tains rons lengthwise from one end of the istand to the ofther ; their highest smmmit (Mount Artemira (am. Atabyras, on which was a temple of Jupiter), comminding a noble view of the island
aud of the aljaceut shores of Asia Mtimor. In mu tiquity this monntain chain was rovered with dense forests of pine. whence the Rhomians drew supples of timber for their thete, and in moderit times it has supplied considerable quantities for the dock yards of Constantinople. Sjeaking generally, the soil in the lower parts is dry and samby but it has some fine valleys, and is well watered by the mumerous stremms that descend from the mominains. In antiquity it was fimons for its fertility :
A reybon pregnant with the fertlle seed
Of plants, and herbs, and fruits, and foomfal grain : Eneh veriant hill manmberd thoeks does feed;

Chmmberd meln possiss each towery pian.
Pindur, by West: Olymple Odes, N.
lint, owing to the insecurity and extortion o which the inliab. have been long the vietims, its agriculture is in the most depressed state, ma y of its tinest dielids being allowed to lie waste, anm the inland not producing corn sufticient even for its scanty population, Its wheat is still, however, of the linest quality; thongh, perhaps, sadly ilerenerated from that mentioned by Virgil as being tit for the fensts ol' the gorls:-

Non ero te, Dise meusis aceeptr secuntis.
'Iransierim, Rhodia, et tumitis, Bumaste, racems,'
Georg, lilu. if, fine lot.
The island also prodnces oil, ormures, eitrons, and other fruits; and, lut for the grinding despotism by which it is weighed down, it might proluce, in profision, most necessaries and luxurios. Marble is quarried in several parts of the island. The climate of Rhodes (churum Rhodon, Ilor.) is probably the linest in the Mediterranean. 'It is, says Dr. Clarke ('Travels, iii. 2i8), 'a truly slelightfulspot, and its gardens are dilled with delicions fruit. llere, as in Cos, every gale is seentel with the most powerfil fragrance, wafted from groves of orange and citron trees. Numberless aromatic herls exhale, at the same time, such profuse odour, that the whole atmosphere seems to bo impremated with a spicy perfume. The present inhabitants of the ishand contim the ancient history of its climate, mantaining that hartly a day passes thronghout the var in which the siln is not visible.' The heat, which otherwise womld be oppressive, is tempered by the wind, which blows with little variation from the N. and NW. The only beasts of burden ised in the islama are mules and donkeys, there being no camels and but few horses, and those only belonring to the richer limrks. I'artridfes are very abomdant. Varions precies of exeellent. fish, with coral and sponges, are tound in the aljacent sea.

The citr of lilootes is situated, as already stated, at the NE. extremity of the island. It is built imphitheatrewise, on gromal rising gently from the water's edge, and is strongly fortitied, havime a monted castle of great size and strength, and being surrounded by walls, flanked with towers. These works were eonstructed by its former masters, the kilghts of St. John. The town consists generally of narrow winding lanes and mean houses, When in possession of the knights it had many substantial stone honses, some of which, as well as the pabie buiddings, were ormamented with the arms ol the knights in alto reliero; but the greater mumber of these houses are now in $n$ state of ruin and such as have been rebuilt in their stead are mere woolen fabrics. Contrary to what might have been expected, the best streets in the eity are in the quarter inhabited by the Jews. The Greeks oceupy a distinct quarter, behind and SL:. from the city properly so called. On the land side the city is suriounded by a buryiug-gromnd, and
beront it are the suburbs, consisting of atached min tindely situated honses, surromded by gardens, many ot which, however, are said to be mocenpied, The ancient palace of the granl master is now the residence of the pacha; the batge and line elomeh of st. Johin is the primeipal mospue, and the gramd hospital has heen comverted into a public framary, It lias two harbomes; the smatlest, a the Insin, willa a urrow entrame, is protecter on all sides from the wind; but the 'lurks having allowed filth and samd to acemmalate lat the entrance, it enn now be used only by the smaller class of vessels: the other harbour is mueh larger, and has deep water, but is sate only durime westerly wimls, those from the ND. throwing in a heavy sea: on this acconnt large vessels jurefer anchoring in the romals in 21 fathoms water, from its beinir more eonveni at for retting ont to sea, in the event of the wind setting in strong from the Nl:, A lighthonse is crected on a mole between the two harbours. Several ships for the Turkish mavy have been built at liholes, bat the trade of the town is quite inconsiderable. There are sume, thomgh but tew, remains of antiguity in the city, the barharism of its Saracenie nul Turkish eomquerors, fund the recurrence of destructive earthunkes, having destroyed most memorials of its former iplendonr.
Ihistorical Notire.- Rhodes was early distinguished ly its wealth, its naval power, the wiselom of its laws and institutions, and its sugeriority in art and seience. 'I'lepolemos, a prince of Rhodes, distimgnished himself' at the siege of 'Troy; and the island conld then boast of the then finmous rities of Limilus, Jalysus, amd Camirns, 'The city of Khodes is much less ancient, having been fommed during the l'elopomesian war. Fut its indrautageons situation, and the excellence of its harbour, soon gave it a decided superiority over the other towns of the island, many of whose inhab, withlrew to it; and it was, in finct, one of the best built and most magnificent eities of the aneient world. It had been construeted with the greatest regularity, its streets being wide and straght, and the houses in each being of the same height, and built on the same model. I'liny calls it civitas libera et pulcherrima (Llist. Nat., lib. v. cap. 31); and Strabo, who had seen Rome, Alexandria, and other great cities of the aneient world, gives the preference to Rhodes. 'The beanty, says lie, 'of its harboure, streets, and walls, mid the magniticence of its nomuments, rember it so much superior to all other cities, as to alanit of no comparison.' (Lib, xiv.) lts temples, especially those dedicated to Bacehns, Jiam, Isis, \&e., were celebrated ahike for the marniticence of the buiding, and the stanes and paintings with which they were enriched. In the nolle ode already relerred to, written about 500 vears 1, c., Pindar alludes as follows to the exeellence of the Rhodians in statuary: -
'Thence in all arts the rons of Rhodes excel ; Tho' best their forming lamis the chisel gotde;
This in each street the breathing maribes tell, The stranger's wonder, mind the city's pide.,
The most famons of the works of art in Rhodes were two pietures, of the most transcendant merit, by lrotogenes, the contemporary and rival of Apelles (Strabo, lib, xiv; I Pliny, IItist. Nat., iib. xixiv. caj. 10), and the Gulossis, the work of Chares of Lindins, deservedly reekoned one of the womders of the world. 'This magniticent brazen statue, erected in honour of Apollo, the tutelary deity of Rhodes, is suid to have been 70 culjits (about 105 ft .) in height, and of the most admirable proportions. It was set up abont anmo 278 n.c., and was thrown down by an earthquake of years thereafter ; and it is a curious fact, that it
lay where it fell for nearly 890 years, or till $\mathrm{s}, \mathrm{n}$, biti, when the istand, hatime been taken by the Sarncens, they broke the statne to pieces, and whl the brass. Biaise de Vigenere, a writer of the I dith century; stated, for the lirst time, that the Colossus stood with a foot on each side the entrance to the port, and that the largest vessels, inder full suil, pussed between its legs. This story, which carries absurdity on its fince, and for which there is nut a shadow of mathority in my ancient writer, having bend alopted by kullin, has thence foum its way into most modern works. (Illiny, lib, xxxiv. cap, 7 ; Rollin, Ilist. Ancienme, iv, $13 \overline{7}$, Ito, ed,; Sivary's Letters an Grecere, bing, trans, fis; lhorgritphie Vniverselle, art. (Chares.) lixclusive of this matchlews wark, libodes hal 10. colossal statues, each of which might, necording to l'my (loce, cit.), have sufficed to illastrate the town.

The wealth of the Rholians was terived partly from the fert ile soil and alvantageons situation of their island, but more from their extensive eonmerse and commereial navigation, and the wishom of their laws, especially those having reference to maritime athiry. Such, indeed, was the estimation in which the latter were lield, that the rule of the Rhoolian law de jartu was expressly embodied in the Digest (lib, xix. tit, 2), and has been thence adopited into all modern conlen. linded, the fiair presumption seems to he, that most of the regulations as to masitime aflairs ineluded in the civil law were derived from the same source.

Rlaodes was also famons for its science and lite. ature. Wischines, on his retirement from Athens, opened a school ol'rhetoric in this city; and towaris the termination of the Roman republic, and under the early emporors, lihotes wats held, as a school of eloquenee, literature, and philosophy, to be little, if at all, inferiur even to Athens; and these, combined with the renial temperature of the elimate, and the luxarious refinement of the capital city, made it be resortel to by some of the most illustrions individuals of whom liome has to boast, ineluding, amomg others, Pompey and Cicero, Julius Cuesar, too, had set out to study at khodes, and wasonly prevented by being eaptured on his voyage by pirates, (Suctonims, lib, i, eap, 4.) Tiberims resided for about 7 years in the island. It seems also to have been a filyourite retreat of those liomans who wishel to withlraw from the factions and turmoil of lionc. (Cicero, Epist. ad limm, lib, ii, epist, es.)
'Ihe goveriment of lihodes, wheh, like that of most other (ircek citien, was originally momarehical, was subsequently changed into a demoeracy, and thence into an aristoeracy, under which it enjoved a degree of trampsility and prosperity to whids most Grecian cities were strangers. It was taken by Mausolus, king of Caria, but recovered its independence hader his widow, the famons Artemisia, From this perionl Rhodes continued to enjoy prifonnd peace, till it was attacked by lemetrius, the son of Antigonus, one of Alexander's successors. 'the siege of the eity of Wholes by Jemetrins is one of the most celebrated in meient histors: but all the science and efforts of Demetrins were defeated by the bravery and resolution of the Rhodinus, and he was eompelled to raise the sidee, anno 308 n.e., after it had continned about a year. The expense of the Colossus was mostly defrayed from the sums received by the Rhodians for the machines and other engines used by Demetrius in the siege, and which he gave up to them. It may be worth while to notice the fact, mentioned big Hunc, that this siere allords the only example to be fonnd in antiquity of the establishment of a cartel for the exchange of prisoners. (See biseay on the L'opulousiness of Ancient Nations.)

300 years, or till an. f been taken be the ne to pircees, and suld e, a writer of the lith me, that the Colossus e the ent rance to the ssels, uniler full suil, \& story, which carries which there is mot a ncient writer, having thence fomm its way liny, lib, xxxiv. cap, v. 137 , Ato, ed.; Si e. trams., tis; 1hurra-

The libutians were sulserpurntly ranked amoner The stealiest of the allies of lime; they repulsed Aithridates, who mate an attack on their cits, and wontinged to enjoy their liberty till the reign of Vespasian, when blembes was male a homen prowinee. The inland was overrum by the Saracells; but haviner bech recovered by the bastern emperors, it was presentel, in liax, hy the bim. peror Bimamel, to the Kuights of St, dohn of Jurnsalem, who held it till 15:2, when, after a despurate resistance, it was taken by the Thrks in whose possession it has remained tis the present day:
 of Franee, dep. Neyron, of which it is the cal., on a hill beside the Jeyrom, lia3 m. E. bys.
 mose ohber wery ohd towns, is ill huilt: strectes aterp, marrow, diry, and hark from the projection of the upher sturiew. The urighbourhool js, however, arperable; and the town, which has rather an inmonsing aspect from withnut, is chsely surrounled with gardens mad panted promediates. Alment the omly elitice worth notiee is the cathedral, a tiothie building, constructed between the 18 th ambl lith centuries. Its tine tower, which, it is said, may ies seen at a distance of nearly 00 m . is wifis lit hirh, square fur two-thirds its height, then octaryal, ornamented with delicate tracery, surmomotel with a small enpola mud a colossal atatue of the Virgin: it has minarets at cael cornur, on the smmins of which are tigures of the four evangelists. This church is rich in arabesques, and has a tine urgan. The bishop's palace, prefecture, ruyal college, formerly betonging to the Jesuits, stininary, public libraty, with 16,000 vols., town-hall, haspibial, and comsent of Cordeliers, a buildinif of the 1 Ith century, are the other chief public edifices.

Rhele\% is a bishop's see, and has courts of primary juristiction and commerce, a chamber of manulactures, sehools of drawing and for deal and dumb nersions; manutinctures of eonrse woollens for chothing troops, hats, wax candle,t, and playing cards; anil sume trate in checsie, wool, ant coarse linens. It has four ammal fairs. In its vicinity many mules are bred. lhoter was amexed to the ifmen. of the crown ly 1 enry IV.
H1toNE: (an. Rhentuins), a celebrated river of SW: Durupe, risins in the Permine Aps, traversing purtions of Switzerland and France, and falline into the Mediterranean, between lat. $43^{\circ} 15{ }^{\prime}$ and $18^{\circ} 15^{\prime} \mathrm{N}$. , and long. $4^{\circ}$ and $8^{\circ} 20^{\circ}$ E., Length, 590 m ; ; estimated area of basin, $3 \overline{7}, 300 \mathrm{aq} . \mathrm{m}$. The highest source of this river is on the W. side of the great mass of st. Gotharl, between the Furca, Gallenstock, amd Grimsel, at an elevation of 5, , 80 lt . aboye the sea; but it seareely assumes the form of' a river till its junetion with three or four other streams at the foot of the glacier of its own name, a beantiful fan-shaped cluster of ice, the lower culse of which is $5,40 \mathrm{ft}$, alove the sea. Its comerse through the Valais is WisW. as far as Martigny, abmit 82 m . 'rom its souree, the height of the river at this point being $1,5,3$ ft. aloove the sea; but here the stream assumes a NNW. direction for about $2 t \mathrm{~m}$., entering the Lake of Geneva at a level of $1,2: 36$ ft. above the sea, bringince with it a deposit of mud which has partially filled all the upper part of the lake. (Lyell's Genlogy, i. 333, 334.) The lihone, on leaving this lake at the town of Geneva, where it is crossed by two bridges, is soon afterwarls joinel by the Arve, and then enters a rock detile between the Slps and Jura elain, taking a SW. direction for abont 22 ml ., as firr as the gorye called the l'erte áu Rhône, where its waters are
hididen by limestone rocks nearly meeting worr the sirwin. Its course thence is marly dues. fier to mo, as far as st. C'ruis, at which point the river is still tifis ft, above the seat, Here, however, it takes a sulden turn to the WSW., which direction it maintains with few exceptions to its function with the sane at lyons, the averace fall from the lake of Geneva to this city (a distance of abont 120 m . aloust the streain) hinis estimated at somewhat more than i ift. per mile: 'The P'erte atu hône: is thas deseribed by Mr. Dakewell (Travels, iii. 26:) :--'llue river, buthre arriving at lit I'foto, runs in a nurrow bed, cut in solt clay strata reposing on a hand calcaremas stratun!; but on reaching this stratum, the wateres have examated a deep thmael in it, into which they ball with emsillerahle loree; the roeks onl each side approading so close, that, before the space was widened ly the Sardinian fovermment, to prevent smugerling, a man might lave strole acrows and reen the Rhome pass at a great depth letween his feet. This tumel is divided hall-way down lay projecting lempes all rock into an mpur and hwer clamed. In winter and early in spring the river rums below these ledges, and is nearly concealed: in ome part, abso, masses of rock have: fallen down, and entirely covered the lower boid of the river for about 60 yods. This part may he traversed when the river is low; but in summer, during the melfing of the Appine smows, it is muche cularged and tlows over the intervening rock.' 'The hlome leaves the hilly comentry a fow miles E. of Lyons, where its deep, tramspirent blue, and very rapid waters are juined from the N . by the slugrish and mully stream of the Saone: indem, so marked is the dillidence hetween these rivers, that for many miles helow Lyons, they How site by side, the E. purtion being clear and blue, the other of a muddy yellow colonr. The course of the Rhone chase to the cityis from NNE. to SSW. : it has a medium breadth if about tian ft., and is so liable to inmulations that embankments have been formed to protect the town and its suburbs. From Lyons the mited stream hohls a course nearly due $\dot{\mathbf{S}}$, to the Mediterranean, receiving atmerons streams both from the W . and E., but chiefly the latter: the Isere, a comsiderable river, rising on Momut Cenis, joins it betwen Tournom and Yalence; and near Arignom (where the lihone is 117 ft , abuve the sen), it is joined by the Duranee, a swift and turbid stremu, which collects the waters from the western lace of the maritime $\mathrm{Alps}^{2}$.
The Rhone enters the Mediterranean by fomr moutlis: the first separation oecurs at Arles, where two branehes are formed; one called the great linme, roming SE ., the other known at the little Phone, pursuing asiv, comrse, and boht turether enelusing the allnvial island of Canargut. which has an area of about $1,900 \mathrm{sq} . \mathrm{m}$. Sach of these again bifureates a short distance above the month : but the l. channels are those only which almit of safe navigation. The Rhone, which hats a very rapid course (Rhoultans ferory), brings down a whitish sediment, diseolouring the Mediterrancan to a distance of 6 or 7 m .; and there is every reason to suppese that there has been a constant, though slow, advance of the base of the delta during the last 18 centuries: indeed, Mese (an. Mesua Collis), stated by Pomp. Mela to be almost an island, is now far inland; and Notre Dame des Ports, a harbour in the 9th century, is now a league from the sea. The conthence of the Rhone with the currents of the Meliterranem forms bars across the mouths of the river, and hy these means considerable spaces become dividet off from the sea, and subsequently from the river
ulto, when it shifts its chmumg of eflux. Nome
of these lagoons heing suljeet of the oreasional of these lagoons being sulject so the oreasional during sturms, are altermately fresh mall salt. Others, after being fllled from the sea, become more salt by evaporation, and are, fin fact, unturul silterns. The sea, opposite the montly of the
 within a distmee of $\mathbf{i}$ or 7 m . the twottom being characterised by very curious altermations of marine and freshavater shells. (Lyell's Geolugy, i. : $141-315.5$.

Amung the trils, of the Rhone, by far the mont impurtant is the sume (an. Arar), which rises ont the Vosges, in that mass of high hat which gives urigin also to the Meuribe, Moselle, , mid Mouse: the sourere is at Vionuenil, 1,300 ft, above the sea. lis comes is tortums, though generally ssid, as far as Clatoms; ix mo above which it reerives on its E. Dank the witere of the bonhes. This river rives at an elevation of $2,8: 10 \mathrm{ft}$, nbove the sea, in one of the lomgitudinul vallevs of the Jura mome-
 suldenly ded eded sonthward by Mount 'Terrible, whence its comrse is SW, past besancom, to its eombuence with the main river. The genoral direction of the Suone from Clanlons is S . Ty W., pust Macom, Trevoms, dee; and the average fall from the furmer place to its junction with the lihone at Lyoms searecly exceeds 1 ft. per rinile; and the clamed being extremely torthens, it las " very slow current, (' In!luit imeredibile lenitate, itu it orulis, in utram pertem pluat, judivari nom possit.' Catear, lit, $\mathfrak{i}$. culp. 12.) Its waters are charged with marl, same, and the delnis of Jura limestone. The Isere and Durance have alrendy been mentioned. Thay are extremely rapiit, charged with deposit from the secondary strata llanking the main riblge of the $A 1 / \mathrm{ss}$. The only considerable W. trih. is the Ardeche, rising in thie Cevemes, not far from the louire.

Owing to the rapidity of its eurrent the Roone was furmerly of comparatively little use in maigation, the principai trade being earried on by vessels down the stream, mostly from Lyons to llemeaire, the bonts that aseended the river being usumlly draghed up by horses. Ibits since the introduction of steamers, a vast impulse hats been given to the navigution; the Rhone, Sane, and their greater atluents, have become impurtant chamels of intercourse; and their basins are now improving more rapilly than any other part of France. An English traveller. Mr. Maclaren, who sailed down the Sane and Bihone, from Chabons to Murseilles, describes the trip as follows (Notes on liranee, 1 . $; 32$ ): - ' i left Chatons at 6 a.m. and reached Lyons by the steam-boat at two, distance alont 85 in . Thie fire was only $4 \frac{1}{2}$ francs. Frum lyons to Avignon the fire is 30 fr , the distance about 170 m .; time about 13 or 14 hours per steamboat. The stemm-boats are Euglish built, and worked by English engincers. They are about 100 ft . long, 2 io $^{2}$ wide, and are neat and commodions, though by no means splendid. They are very flat in the bottom, drawing only about 24 inclies of water. The Rhone is full of samdbanks, which, owing to the rapidity of the current, are continually shifting, mod vessels drawing a greater depth than 2 ft . camot navigate the river with salety. The laglish engineer tohd me that his steam-boat went about 9 m . an hour in still water; the current adds aboit 5 m . going down, and deduets as much going in; so that she moves at the rate of 14 m . the one way, and 4 the other. The thone passes through one of the most beautiful, picturesque, and delightful regions in the world. It is one continued vineyard, skirted and sheltered
by mometains from 500 to 0,000 ft. in height, pre senting every varlety of form and ayluct, - haw
 bare and sterile-now clothed with vines or mulberries, or cut into tetraces, and earefully eutio vatel to their summits. Sount l'ilatre, milt ollares of the high cevemes, on the W., and the Alis inf the E., cupped with snow, appear through opening in the lateral chains at intervals, The valley is oten contructed to a space of one m. matin it sprems ont in the form of a rich pinin, to a bremath of 10 or 12 m . Twenty times the river apmars elosed in ly the hills, aind yon are puzated to conjacture where it espropes, thll a bend in its comtren clemens, the mysters: 'To the matural beantine of the emnitry are mided those which it derives from the imbustry and taste of its inhalhinmes. There is an almont mimoken line of large tomas, villages, hamlens, cottuges, mad neat villas, along each whe of the river, mal not merely on its lmaks, thet reachlog back to the momintains. The glitterint white walls of these buildinges, surromaded by rich, well caltivateal lands, five vivacity to the sedme, and till the mind with inmges of pence, nlmulanere, security, and coutentment. From Chaloms Io Marsoilles the marks of propress meet the cye eserywhere. The whole distriet, 270 m . in length, is alvacing wills gime striles, At every atel, in descembling the river, we meet with honses of manufactories building, guays forming on the river, bridges erecting, roads or towing pathe, "t enbankments making. 'Two facts will slow that this is mo exagreratiom. It is only cight years sinee steam-hoats were introduced; andilere are now six plying between Chalons mind lyons, and ten between lyons and the sen, thomgli the rame they use is brought from Einghan, and coste nanut Folls. a tom. It is but ten yarsa since suspuminn bridges were heard of is the district; yet in the short interyening space the industrims inhales. of these districts have erected 14 suspersion lididew wer the Sime, and 12 wor the khone. I dhath if there be as many at this moment in all Enghal. Amd let it not be supposed that the bridges are pultry or rute and imperfiet works. 'Ilay ar: light and elegant; the arches are often of gram span, und the pathway is either level or slighly and uniformly enrsed. Sometimes they have two arches, but in reneral threc. The elanins are sometimes single, but mare commonly triple of (pindrnple; the suspensiom rods always singto. The columns on the piers are sumetimes slenier abelisks of stone, sometimes thin tall slibs al' ca-l irom. 'Taking them altugether, they are the lightest and most handsome structures 1 eversaw, and slow great bolduess ass well an skill amel thiste, in the engineer. Bhat the fate on whieh I wish to fix attention is the enterprise and the weald which these works bespeak. The eti lridyes mut have cost at least 200,0001 ., and this sum has beet raised by the public spirit of the distriet, and expended on one species of improvement, while mant others were in progress.'
The basin of the lithone is comected ly cants with the other prineipht rivers of lirance. The emal of the lithene and hline connects the Domb: with the III, min nthuent of the lihine; the Cumal du Centre mintes the Saone to the Loire, and the cmual of Burgundy comects the Same with the Yome, a navigable branch of the seine; so that in this way the four principal rivers of l'rance ane minted. The navigation of the month of the lihone is considerably improved by the eanal of Arles, which ruas elise to the Great Rame, and by the canal ol leancaire, which leases the river near the town of that name, and not only rums into the Mediterranean, but is joned by branch

Rinoste, a thes of lirames, and, next to that of the sidine, the smallest in the kingionn, thongh, from its contuining the city of Lex日s, it he ambing

 having $\mathrm{N}_{\text {, Same-et-loite, W. and S. Loire, and }}$ E. din and lvire, from which it is prineipally eparated by the rivers Whone and sitone. labigtli,

 Surface mostly momstainoms, being eovered with ramilhations if' the Ceventes. 'The depe is welt watereth, but there are mondighle rivers, exeept the blome mad sume It is esimated that it has 143,1:0 hectures arable lamd, 3 ib,39! ditto meadows, :a, oid vineyards, and 31,4 dif woods. The produce of corn is far betow the intermal demand The prosluce of wine, the chicf sume of ardient taral wealhio, is maj'lnised to exceed 150,100 hectolitres a your, 'lhe wines prosmeed in that portion of this deps ealled the Weanjolais belong to the class of Macon wines. Of the other growthes, probably the best is the Cote-liotie, a rel wino raisel nenr Ampuis. It requires to be kept in the cask for five or six years before bottling. The white wines of C'ondriens are also very goot. The foreste prowluce time chestants ; bit the quantity of timber they yied is insulticient for the demand of the importint manmiacturing dist riets romed Lyons and it. litiemes fortunately coal is abmodant. Neither homen catte nor shepe are very mumerous: but a grat many goats are kept, and in some plases they have been crossed with the breed of Thitret. From the milk of the gonts on Mont d'Or a cheese is made which fetches a ligh price. The silkwom is reared in some places, but tho culture of the mulberry appears to he diminishinge Rhone is rich in minerals. Desides conl, iron copperas, arpentiferons leal, barytes, manganese, and tine marbles are obtamed; and in this dep, are the two most protuctive eopper mines in France, those of Chessy and ist. Jel.
The primeipal manulacture is that of silk stulls, which is carried on upon a most extensive seate It has beon finlly noticed under the art, Lvoss, to which the reader is reforred. Ihe dep. has alsu manulactures of muslins at 'Tarare, linen and cottun thrend at Thizy and other towns, and of hardware, jewellery, glass, paper, paper hangings, and chemieal products. Taking into account the small extent of the depr, it exhibits a much greater proportion than ordinary of the larger elass of properties. Thone is divided into two arronds., chief towns Lyous and Villefranche.

Hhons, Butches du. (See Bouches du Rhontis)

MLAZAN, a gov of European Russia, betwreen lat. $53^{\circ}$ and $\overline{5} 5^{\circ} 40^{\prime}$ N., and long. $38^{\circ} 20^{\prime}$ and $\cdot 11^{\circ}$ $15^{\prime} \mathrm{li}$. ; having N, Vladimir, E. and S. Tambof, and W. Thas and Moscow. Aren, $16,200 \mathrm{sq} . \mathrm{m}$. Pop. $1,4 \geq \overline{7}, 299$ in 18.8 . Surlace gencrally that The Oka, ruminer from W. to E., divides it into two unequal portions of very diflerent aspect. The country S. of that river is the more elevated; the air wholesome, and the soil fertile: in the N , on the contrary, the country is generally low, marshy, and coverell with woods, or destitute of culture More com is grown than is required for home consmintion, the average produce being between $5,000,000$ and $6,000,000$ chetwerts a year. The forests, which are very extensive, cover above a third part of the surface ; those belonging to
the erown comprive abont $l: 2 x, 001$ ) deciatines, or
 tablen are, in some distritets, raised in large guantities. The propridars of the pasture lames het them to graziers belongimg to the likrane, wha bring thithor large horls. 'The breed of horses is Lowd: the Russian gov. has a dijeit d'éfrlons ne Shopince. Jhers are supposed to produce abont
 mines and stome farries. Namafietores hava made some progreos. 'J'hose of plase and harilware werupy the first rank; and there are others of woullen, cottom, and linell liblorios, eorilages, potash, that map, with dyaing extablishmentas, anmeries, and listilleries, $A$ pertion oi tho manitlimetured goods is sent to Moseow, abl hy way of the Ukn, down the Wolpa; bint the princijal exports are the raw products of the goo., ennsistims of corn, eatile, honey, lard, iroh, timber, and wooden articles, The jen, is prineipally linssian, Int partly of the 'Tartar stock. Itiazan is subavided into liz districts; chief towns Liazam, the cap, Zaralosk, mul ǩneimof.

Histan, a town of buropenn linssia, cup. of
 the $0 k a, 110 \mathrm{~m}$. SK. Moncow. l'op, 2l, 1t: in 18:5. 'The town consists of two tistinet purtions; an irrefular fortress, with an earthen rmmpart, inehosing mumerous churehes, the minedind palace, formerly the residence ol the princes of liazan, and the eonsistory; and the town proper, in whidh are also mumerous eharches, with a line edilice for the govermment oflices, several comvents, a semmmary and public library, and hospital. Tho town has grentiy increased in size and importance within the last tifty years: but most of the hotises are still of wood, and planks ocenpy the phace of pavement in the structs. liazan is the sent of a military fovernor, with anthority ower the govs, of diazan and 'ambof, and of tho chief jublicial comrts of its gov. It has a fyinnasimm, to which a society of arts was attached In 18:0); a schowl of drawing and architecture, fommed in 1824 ; wehools for the chilhren of ollleinl persons, and several al the principal manafactures an the gos. 'The old town of liazan, destroyed by the 'Tartars in lisis, is distant about 33 m . sib

IIIBLAUVILLE (Germ. Rappolzweiler), a town of Jrance, dep. IIaut-Rhin, cap, eant, at the foot of the Vosges, 7 m . N. Colmar. Pop. 7,181 it 186l. Above it are the remains of the old castle of Ribenupierre; and in the immediate neighbourhous are some other ruined fortresses, and the principal remains of the ancient wall called the Ileidenmaner (' wall of the l'agans'), ereeted at a remote period along the tup of the most lic range of the Vosges. It has manufictures of calicoes and cotton handkerchiefs.
SICllNOND, a parl, and mum. bor., market town, and par, of England, the cap, of a district called lichmondshire, having a separate jurisliction, W. div. wap. Gilling, N. riding co. Fork, on the declivity of a hill rising from the Swale, which half encireles the town, and is crossed here by a stone bridge; 11 m . SW. Darlington, and $41^{\circ} \mathrm{m}$. NNW. York, on the North Lastern railway. Jop, of parl. bor. 5,134 in 1861, Area of parl. bor. which comprises the pars. of Richmond and Aske, 5,690 acres. ' The town, which is most pieturexquely situated, commands, from many points, very fine views of the Swale, its bold rocky banks, and the well-wooded country around; and its appearance is made more imposing by the ruins of its castle and keep, bnilt on a rock above the river, The streets are irregularly laid out; but a very fine broal avenne leads from the Dirlington ani Northallerton roads into an extensive market
place, surromuded ly the principal shops and town hall. In the centre of the mariet sequare is a colmm, or cross, muler which was formurly a reservoir for water, broment by pipes from the ineishtbouring lamet of Aislebeek; hat the supply being deficient, a much larger quantity has been liromght from Coalsgite, and a new and larger reservoir las becon eonstructed for its reception. 'Ihe lonases are mostly built of a reddish sadndone; and the town, being well paved, lighted with thas, and kept remarkably elean, has a very neat apuanance. The ehinch, luilt on a slope tacing the river, is principally in the perpendicular style, with a the pinnteled tower ; but some fortions are clearly of an ohder date. The Weslevans and Baptists have places of worship, and there is a large lioman Catholic chapel with an attached school. The town has a mational school, attemded by atont 200 boys and girls, an inlant sclaool, and sumblay schools. $A$ free grammar sehood, fommed in 9 bilizabeth, is well culowed with property mader the manarement of the corporation, who appoint its head-master. All matives, and the sons of residents within the bor., are admitted gratis. Another free selool, for eammercial purposes, is mader the emmol of the corporation; in whase hands, also, are several charity estates, inchading endownents for almshonses. A seientifie suciety and mechanies' institute have attached fibraries, and there is a savinis bank. There are no mannfactures of importance at lielmond. Its market is a very consithrable one for eorn, and for the aecommodation of the dealers, a new markethouse, 90 ft . lomg, was built in 1 s.i.t. The town is inhabited by many wealdhy families, who, with the neirhbomine gentry, eanse a pretty extensive retail trade. The traninge of rate-horses is also at emsilerable husiness; and races are held anmally in Oetober, abont a mile from the town, on a high moor, which has a commorlious gramel stand. Abont $1 \frac{1}{m}$. NNW. is Aske Jall, a fine seat belonginer to the Earl of Zetland; and near Catterick is Birough Hall, the residence of Sir W. Lanson.

Riehmond, which received its tirst royal eharter in 3 blward III., and was incorporated in the 1! Jiliz., is groverned, under the Mun. lietom Act, ly a mayor, 3 alidermen, and 12 commallors: fuarter and petty sessions for the bor: are hedn mader a recorder, and peety sessions for the waj. of West Gilling take place on altermate wedis. A civil court for the recovery of debts muler $100 \%$., another for the district of Hichmonds!aire, and a conrt leet for the manor, are loche vecasionally; and there is a monthly ecclesiastical court, mader the archateacon of Riflamond. The bor. has returned two mems. to the ${ }^{11}$. of C. sine the 27 Bliz. the right of election down to the licform Act being in the hodders of hargage temmes. The Bomblary Act enlarged the limits of the bor, by the addition of the par. of Easeby, and in 1 sibis it land sum reg. electors. It is also one of the $p^{\text {polling }}$ paces at elections for the N. riding of the co. Market on saturday; thre ammal chattered and other lairs.

The listory of Richmond is closely associated with that of its castle, fommed by Alan, the lirst carl of Nichmond, who having recoived from Willian the Conquaror the forfeited estates of the carl of Mercia, built the castle and part of the town of Lichnond, to protect his fimily and property. Under the Norman momarchs, the title and property were possessed by ditlerent fimilies, natied to the blood rovial; and in the contest between the homses of York and Lancaster they also several times changed possessors, till at lengeth they were rested in the crown by the areessime of Hens, earl of Lichmond, to the throne, under
the title of lleury V'll. Since this epoch, the cantle has been allowed to fall into partial deany. It still, however, bears marks of its former graindeur ans importance. The keep tower, of whint the walls are nearly entire, is a Nomman structure, about 100 ft . in height, the walls being 11 fi , thick; the lower story is supported by a vast colunn in the middle, from which sprintr cireatar arches, closing the top. The thoors of the two "puer rooms lave fallen in; but a modern wooken stairease leads to an older thirht in the walls, hy which the visitor may reach its summit, which commants an extensive and beatiful view of the suromadiag comery. The ruas of several other parts of the eastle still remain, and laterly they have bern partially repaimed. In the sE. corncr of the area is a ruinoms tower, in which is a dongenn, $1: 3$ or $1 / 1 \mathrm{ft}$. deep. The gromal eovered l y the eastle comprises nearly six acres: it belongs io the duke of litelmomed and Lemox, on whose anecestors it was conlerreal, with the title of duke, ly Charles II. llere are also the ruins of a menabstery of tirey Friars, the steeple ol' which is a remarkably tine specimen al the perpendicular st ple: and at lanseby ate extensive and highly interasting remains of an ablere, built in the twelfth eerntury, for l'remonstratensian monks: the buidinss are chiculy in the early binglish style: the windows, both of the charel and refectory, have sonm very clegrant tracery.

Richmonn (the Tivoli of London), a town and par. of lougland, nppor div. humd. Kingston, ca, surrey, at the bottom and on the slope and summit of an emincone rising from the S. bank of the Thannes ; 10 ml W. by.N. Lombon, on the lomdon
 in 1861: area of par. $1,2: 10$ acres. The primeipal street extends the whole length of the town, rins ning along the ridge on its W. side to the sumnit of the hili, and being, in the lower parts, paralled tu the river. The other strects are of very infleriut importance. 'The houses in the lower part of' the town are old-fashioned, mol by no means larige; bat on the hill and outskirts are many hamdsome mansions, ocenpied by families of distinetion. 'l'lie houses on the terrace, and the Star and diatior lootel, at the smmait of the lill, command wey extensive and noble prospects of the 'I hames and its rich valley, Wintsor Ciastle being distmety seen in the distance.

Richmond is more a place of pleasure than of busimess, though it has a consideralle retail trade for the supply of the resident families and visitors. It is a prinepal resort of visitors from London during the summer months, conseyed thither parly by railway and partly by steaniers and row boats. On the whohe, lowever the intlux of visiturs to lidhmont, at least of the midille and lower classes, has materially diminished of late yents.

Lichmond Park, the principal entrance to which is at the W . end of the terrace contigums to the Star and fartur Itotel, formed by Charles l., comprises an area of $2,25 i$ atres, being about $\times \mathrm{m}$. in cire: It comsists mustly of poor soil; but has a great variety of surface, is well stocked with leer, and pertioctly open to the public. The great lodge, which stambe on risiar ermand, commanding at the prospect, was luilt by Sir lis. Walpole, ranger flumen the reigns of George I. and 1 I., at an expense of ll,obu\%. Ilere, also, is a new or stone loulde, built lir a hunting seat by George I.,
 whum it was ocenpien thll his death. What is called the Ohl Park extembs along the 'Thames from Kew to lichmond, and ind hules the roval gardens and pleasire-gromuls altanded to Kew Palace (seoklow) This park is, lowe yor, jataccessible to the public, exeppt on certain davs; and is considered as belonginer rather to kew than to lidehmoml. The Giren, at the bottom of the fown, forms a parallelomram almost as large as limohn's lim Fields: it is used in smmmer for phaving matelies att crieket: on one side of the green is a hamkome pulbie walk,
lichmond (formerly called sheen) was for centurics the site of a royal palace; but at what perion it was erected is ancertain, though it bocanse a tixed resilence of rovalty as caty as the 14th eentury. Ilemry V. rebuilt it in a magnificent sityle. Henry Vll. held a toumament liere, in $11!\dot{j}$, soon after which, the buthing having becu destroyed by tire, n how palace was crected by that monarch, who fave the manor its present name, being that of his own title, previously to his accession to the crown: he died hare in liona. But its principal distinction consists in the fact, that when the emperor tharles V. visited Enghand in 1523 , he was lodged in this palace. Green Elizaleth was imprisoned in it by her sister Mare, and it afterwards became one of her favourite palaces, aml here she died, on the elth March, 100\%. Huring the commonweathl, the palace was soll ber the parlamentary eommasioners for 10,ax:3. : and the whole appears to have been then dismantered and demolisherl, nothines now remaining exeppt a few of the unt-ulibes, its sute being ocenpied by several nodem mansins held an leate from the rown. On the $X$. side of the palace onte stow a monastery, founded by Ilomy F., for ('arthusian monks, the revenues of which, at the dissulation, were estimated at !atill. I
 Henry lif., was smppresed with the other in 15in. The enatom of lbough Euglish, by which, in the crent of the father's dying intesate hands desend to the pomment som, or, in chetant of heirs male, to the yombest daughter, prevails in the manor ol liehmond.

 in INto. 'Phe sitmation of Kichmond is sery
 varions shapes, descembing to the shtward. The chiel street is hambome and spacions: and tha"e
is a fine square encring abont 10 acres, plantel with trees, and laid out in gravel walks. In this equare is the capitol, an cleganst bunding on the model of the Mitison carre at Nismes, crected shortly after the war of indepemdence. It has it statue of Wiashington, by Itoulons. A puhbic library has been established in the senate hall, whicli has also a portrait of Jellerson. Near it is the eity hall, a neat Dorie structure. The elarches are mimerons, anil one occupies the site of the theatre destroyed ly fire, with great loss of life, in 1811 . The Virginian armoury, the penitentiars and a new theatre, include the other chicf ohjects of notice. The eity is abmantly supplied with water from three reservoirs. Riclmond is fivour ably situated for commerce. It stames at the head of the tide-water, in James liver, and is conneeted ly James River Camal with Lhehaman, 175 m. listant, and by ralways with Apuia Creek ami l'otershorg. It is consequently the natural depott for the wheat, hemp, and other prowhece of a large extent of eomitry. Inmeliately above the city aro some falls, beyond which the river is navisable by boats for upwards of 200 m . The falls supply valuabe water power, which is usem to work flour, eotom, paper, and rolling mills. Kichmond liss also a camon fommery, andi tobaceo factories. 'The suburb of Manchester is rommected with lichmond by two bridges; and with some conl mines, $1: 3 \mathrm{~m}$. ristant, by a railway. The town gained distinction charing the late civil war in the Laited States, when it hecame the seat of the central govermment of the so-callen Comfederate States. It was taken by the United States troops early in 1865 , and its eapture provert the signal for the end of the tremendons strugede for power between the Northern and Southern states of the great American republic.
HICKMANSWOR'Ill, a market-town and par. of Eingland, eo. Merts, limul. Cashio, on the Gate, 18 m. NE. London, Area of par. ! 17.10 acres. Iop. 1,573 in 1866 . The parish chureh has been rehnilt with the exception of the conhattled tower, which belonged to the old elinreh. The town has an endowed natiomal school, and other minor and Sunday schools, and two ahmshonses. It is moverned ly two constables and two head-horoughs. In its vicinity are several streans, on which eonsidernble flour and paper milts have been erectel. Its trade is facilitated by the (irand dunction canal, which passes close by the town.

Moor Park, a seat of the Marquis of Westminster, in the vieinity, was once the residence of Cardinal Wolsey; but it has since been rebuilt in the modern style. The Grove, belonging to Lard Clarembon, and other seats, are also in the immediate neighbourhood.

Jilcid, an important city and river port of European Lissia, cap, of Livonin, on the Dwina or Duma, about 9 m . from its embouchure in the finlf of Kiga, 290 m . SW. St. Peterburg, with which it is connected by raikay, Pop. 22,136 in 18ito. Liga is strongly fortitiod. It consists of the town, broperly so called, and the suburta, the fommer being entirely inelosed ly the fortitications. Strects in the town narrow, erooked, and houses generally hriek: in the submrlos, which are much more extensive, the strects are broad and regular, and the honses mostly of wook. One of the suburbs lies on the left bank of the river, the communication with it being maintained by a floating oritge about $2,400 \mathrm{ft}$. in length. Among the pubhe huidings are the cathedral, conseernted in 1211. and relmilt in 1.217 ; the clameh of st.

 mambline a tine riew of the eity and moljacent
country; the eastle, the seat of the chancellery, and of the general and civil governors; latl of the provincial states; town-honse; exchange and arsenul. A magnificent column, surmounted ly a colossal bronze Vietory, was erected in 1817, by the mercantile body, in homour of the Emperor Alexander and the Russian army. Among the literary establishments are a gymuasium, a lyecom, a school of mavigation, and various elementary schools, a public library, an observatory, and a society of Lettonian literature. Manufactures of no great importance, theugh, of late, materially improved. The manufactures of eotton, cloth, and rugs are the most important. There are also sugar-houses, tobacco manufactories, and breweries.
Owiug to her situation on a large navigable river, lifiga is the entrepôt of an extensive country; and is, in respect of foreign commeree, the next town in the Russian dominions to Jetersburg. Corn used to be the principal article of export ; and though its value is now surpassed by that of flax and hemp, it is still very considerable. The principal artieles of export during the year 1863 with their value in British sterling, were as follows:-

Flax
Flax Tows
Hemp
Hemp Tows
Hemp Sced Ryc Barley
,
$\mathfrak{E}$

The imports consist principally of sngar and other colonial products, dye-stulfs, wines, cotton, cotton-stuff, and cutton-yarn. There is a bar at the mouth of the river which has usunlly from 12 to 13 ft , water; and it is customary for vessels drawing more than this to load and unload the whole or a part of their cargoes at Bolderaa, a small port outside the bar. The entrance to the river at Duamunde, is guarded by a fort, where is also the custom-honse. Riga has increased very rapidly, Luder Catherine II., its pop. did
not exceel 20,000 ; in 1824 it amonnted to 30,9018 ; and in 1835 to 57,338 . It has ocea. sionally suffered considerally from inumdations.
R1MINI (an. Ariminum) a eity of Italy, pror: Forli, between the rivers Marecelia (ani, Arim: mus), and Ausa (an. Aprusa), within about 2 m , of the embonchure of the former in the Alriatic, $28 \frac{1}{\mathrm{~m}}$. LSES. Forli, and about the same distance SE. Ravenna, on the railway from Bolorna t Ancona. ${ }^{1}$ (op, 16,8 go in 1862. The city is wallet, and entered ly scyeral gates. $A$ long street triverses it, terminating on the N, at the Porta di San Giulinu, whence emerges the Emilian war: leading to I'acenza; and on the S. at the l'ortu Romana, where ends the Flaminian way, comlueting thither from Rome. The town is well bnitt, having some good strects and handsome marble palaces; but, like most other ltalian cities, it has a dull, melancholy, and descrtel appearance. The eathedral, said to have been built on the ruins of a temple of Castor and lollux, was restored and altered by Alberti in the 15th century, and has a very elegant exterior, to which, however. the interior offers a lamentable contrast. In it are some tombs if the Nalatesta family, once lords of Rimini. The chureh of san Gintiano has a fiue altar-picte by Paul Veronese, and several good paintings by Guido. and other masters; in that of St . Augustin is a ceiling handsomely painted in fresco. It has a handsome town-house, theatre, a bowling green, and a geod fish market; and in the Gambalunga palace is an extensive library, liberully thrown open to the pablic. The castle built here by Sigismund I I is falling into decaty. The prineipal square is embellished with a fountain anl a statue of Pope Paul $Y$.; and in another of the open spaces is a small platform, or pedestal of a column, which, according to an apoeryphal tradition, was the suggestum on which Cesar haraugned his troops after passing the Rubicon! At the $S$. entrauce of the eity is a triumphal arch, raised in honour of Augustus, and in most respects worthy of admiration; it was surmountel in the middle ages by a Gothic battlement. Both rivers are crossed by solid bridges; that over the Marecchia appears, from the inseriptions, to have heen commenced by Augustus, and tinished br Tiberius. It is of marble, $\underline{2} 20 \mathrm{ft}$. in length, anit has five arches. Crities differ as to its merit as a work of art; but being still in excellent proservation, there can be no difference of opiuion as to the solidity of its construction. Withont the walls are the traces of an amphitheatre, and other remains of antiquity. The port of Rimini, on the Adriatic, at the month of the Marecchia is so mach obstructed by sand, as to admit small vessels only. Kimini has manufactures of silk, glass, and earthenware; and the surromeding country being very fruitful, it has a considerable trade in corn, and furnishes quantities of fish to the neighbouring towns.

In antiquity Ariminum was of far more importance than at present. It was the first considerable town on the E. coast of the peninsula, after erossiug the Rubicon (the boundary between Cisalpine (ianl and haly, properly so called), and was regarded as one of the bulwarks of the latter. A Lioman colony wae planted in it amwo U.c. dx,i, and at a subsequent period it received another colony. It was occupied by Cesar inmediately alter he had crossed the Rubicon, and was hemoured with the especial patronage of Augustus. It was given by P'epin, with the rest of Romagna, to the Holy See, to whieh, with few intermissions, it belongel till Isti0, when it came to form part of the new kinglom of Italy.

1824 it amounted to $[7,338$. It has ofeably from innndations. , a city of Italy, prow. Marcechia (an, Arimi. (sa), within abont 2 n. former in the Alliatic, bont the same distance way from Bologna $t_{0}$ 62. The eity is walled, tes. A long street trithe N, at the Porta di rges the Emilian way, on the $S$, at the Porita Flaminian way, comne. RIO DF: JANEILO, or simply Rio, a city and are wholly for the necommodation of strangers, Rearot of Itrazil, of wheh it is the cap., and the largest and most important commercial eity of S. America, ou the W. side of one of the tinest bays in the world, 80 m . W. Cape Frio; lat. (lightheuse, in Fort Sta. Cruz) $2 \geqslant 054^{\prime} \mathrm{S}$, long. $13^{\circ} 7^{\prime}$ $15^{\prime \prime}$ W. Pop 193.301) in 1863, of whon about half are whites, and the rest mostly negro slaves. The city, which is in the shape of a parallelogram, is situated on level gromind, at the foot of hills, and has a tine appearance from the bay. The older portion, or that aljoining the sea, is divided on the W. from what may be ealled the new town by a large open spaed, the Campo da Honra. The style of architecture is in general mean, resembling that of the older parts of Lisbon; and thourh creat improvements have been effected since the emigration of the court of I'ortugal to lio in 1807, a great deal remains to be done loflore it be entitled to rank even with a second-rate liuropean town. The streets, whiel are mosily straight, and interseet each other at right angide, are pretty generally furnished with trottoirs. and paved with blocks of granite. Kint, though many of them have heen willened of late years, and oitherwise improved, they are still, for the most part, marrow and dirty, with a waterconrse in the contre. the ustal receptacle of the filth from the houses. The honses, which are mostly of granite, or of franite and wood, are seldom more than two stories in height, rough, or whitewathed, with red tile roofs. They are narrow, hat deep in proportion to the height, the lowerstory is eommonly oceupied by the shop or workhouse, and, in the henses of people of distinction, by the stable and eoach-honse; the second story (and thirl, if there be one) comprising the family apartmonts. The mildness of the elimate, which is here a perpetual spring, readerint artiticial heat mmecessary, there are no fire-places except in the kitchens, and, consequently, very few chimueys, which, to a stranger from limrope, rives the city a bald amd, as it were, a truncated appearance. The windows in the secoul story grimerally open upon iron verandas, the juhowies having been removed by order of government. In the outskirts of the town the streets: are impaved, aud the houses of only one floor, low, mean, and dirty, with doors and windows of lattice-work, opening ontwards to the annoyance of the passengers. Inside the honses it is usual for all the apartments on the same floor to communicate above the partitions, which do not extemi to the ceiling. This, thongh it destross privacy, is adyantageons, by allowing that free cireulation of air.
There are numerous churches in the city, but none of them can be ealled fine buildings, or are worth the notice of travellers from Enrupe. The cathedral, or chureh of Nussa seuhora da Gloria, on a lofty hill, on the S. side of the eity, is a courspichons ohjeet from a distance, and especially from the bay. There are several conventual establishments; a misericorrlia, with an attached hospital; a fomdling hospital : an institution where female urphans, born of white married pareuts, are educated an! portioned ofl in marriage, with other charitable institutions.

Water is convered into the city from a neighbouring lofty hill (2,308 ft.), called the Coreovado, by a magnificent aqueduet, eonstructed in 1740 . The water is thence comveyed to public fommtains in diflerent parts of the city, and a good many persons cam a livelihood by carrying water from these fumtains to private families. The town is vorvindiflerently lighted. There are bat few ims and hotels, and those mostly very inferior: they
being rarely visited by the townspeople. The roval palace forms two sides of a largo, or ohlong space, opening to the hay near the principal landing-place. It consists partly of the ohd palace of the viceroys. and partly of a convent furmerly belonging to the Carmelites, and is wholly destitute of architectural beanty. Among the other poblic lmildings may be speeified a new and handsome theatre, the exchange, the old college of the Jesuits, and the episeopal palace and royal villa of Christovao, in the environs.

The prineipal banking estallislment at lio is the liank of Brazil, institnted by the government. on the model of the Bank of France. The capital of the bank is $33,060,000$ milreis, in 165,0000 shates of 200 milreis each, or $4,133,33 \mathrm{ail} .6 \mathrm{~s} .8$. 4. , with the right of emission of notes to treble the amount of its eapital. The bank is bound to redeem the goverument treasury notes in circulation in the empire, at one time to the amount of $56,0100,0001$

Neither cducation nor literature are in a very flourishing state. There are, however, sumdry lyceums and graminar schools, and a great many private licensed academies. Anong the principal educational institutions may be specitied a school of surgery, military and commercial academics, an acadeiny of arts, and a national museum. In the vieinity is a very good botanie garden, comprising abont four acres, inchoding, amoner other exatics, numerons specimens of the tei plant. Near the imperial palace is the public library, containing from 50,090 to 70,000 vols. The police and health of the city have been materially improved within the last dozen years. The market-place consists of a colleetion of booths, fur the sale of vegetables, which are at once abundant, excellent, and cheap. The farina of the Jatropha Manihot is bere the grand substitute for bread stuths, and is extensively used, formintr, with bananas, the principal food of the negroes.

Commeree.-The trade of hio is very extensive, and has increased rapidly during the last fiv, years. It is now by far the greatest mart for the export of collec. The following table shows the quantity and values of the exports of the port of Rio de Janciro during 1862-63:-

At an exchange of $20 d$. per reis, equal to $£ 5,899,537$ Jis. $7 d$.
The principal article of import consists of cotton erools, the value of which amounts to full ounethird of the total value of the imports. Next to cottons are woollen, linen, and silk manufactures, wines, jewellery, and iromnongery: tlonr, meat, fish. bitter, and other articles of provision: spirits, salt, carthenware, paper, and a bost of other artieles.

Harbour.-The harbour of Rio is one of the finest in the world. Jts eatrance is marked by a remarkable lill, in the form of a sugar loaf, 900 ft . in height, elose to its W. side; while on the opposite side of the bay, at the distance of abont $1 \frac{1}{2} \mathrm{~m}$., is the fort of Santa Cruz, on which is a lighthouse. There is, also, a light-house, having the lantern elevated abont 300 ft . above the sea level, on Cliar Raza (Flat Island), about 10 m . S. from the month of the harbour. Ships may enter either by night or day, there being no obsitruction or danger of any kind. The water in the bay is sufficient to flont the largest ships of war; and it is extensive enough to accommodate the mavies of all the countries in the world.

RIOM (an. Ricomagus), a town of France, clép. P(yv-rle-Dôme, cap. arroncl., on a hill, 8 m . N. by F. Clermont. Pop 10,863 in 1861 . The town is well built ; but the bouses are mostly in an antiquated style, and being wholly constructed of Folvic lava, with which it is also pavel, it has a singularly sombre appearance. It has several bandsome public fountains, and its churches, hospitals, the varions public offices, and the sub-prefeeture, are gool buildings. One of its promenades is urmamented with a statue of Desaix. Riom is the seat of a royal court for the dejps. Piyy-delôme, Allier, Canial, and Itant-Loire; and of tribmals of primary furisdiction and commerce. It prownees cotton and linen cloths, candles, leat'er, and brandy ; and has a large trale in agririltural produce. It was formerly the cap. of Awergne, and the residence of its dukes, some remains of whose eastle still exist ; and it contianes to rank as the sccond town within the ancient limits of that province. Among the distinguished individuals belonging to hiom mas le specitied Gregory of Tours, and the learned Jesibits J. and A. Sirmond.
lilPON, a city, parl. and mun. bor, and market town of England. N, riding co. York, lower div. wap. Claro. on the Ure, close to its conflume with the Skill, 29 m . NW. York, and 2.22 m . NW'N. London by Great Northem railway. I'op.
of parl. hor. (which comprises the township of lipon with part of the district of Bondgate), $t, 1: 2$ in 1861 . The appearance of linon is that of a very respectable and wealthy country town. The strects are irregularly laid out, but clean, and wed lighted with gns, many of them meeting in the market place, a spacious square surrounded with good shops, having in its centre an obelisk 90 ft . in height, surmomnted by the eity arms, and on its S. side a particularly bandsome town-hall, comprising courts, oflices, and a handsome rom for balls and public mectings. Rijon minster, erected in J8:3b into a eathedral, and built in the J-Ithand 15th centuries, is one of the best proportioned churches in lingland. It is a eruciform structure, with a tower rising from the intersection of the mave and transepls, hesides two others (cadh 110 ft . in beight) at the W. end. Its leugill, fivm E. to $W^{\prime}$., is $2 t i 6 \mathrm{ft}$; breadth of choir and aisles, $67 \mathrm{ft} . ; \mathrm{and}$ length of transepts, 132 ft . 'Thi, vencrable edifice,' says Mr. Pritton, 'contains varions parts worthy of attention, particularly its W. front, a very tine specimen of hold early Enslish, and, except the battlements and pimacles. without alteration. A part of the charelh is Nurman, and a great portion of the tramsepts but little later. 'The choir is partly decorated; and S. of it is a Norman erypt, above which are some Norman buildings used as vestries. It the l., end of the choir, which is sadly distigured by heary modern galleries, is a decorated E. window of tive lights with very elegant tracery. 'lise nave is very light, exhibiting some extromely tine composition; and there is a considerable quantity of rool sereen-work, both in wood and stone.' 'The clapter eomprises a dean, sublean, and six canons, Who divide among them a net revenue of $63: 3 /$, Hipon was erected into a hishopric in 1838, the diocese comprising most of the populons parts of the W. riding, with the liberty of lichmondshire in the N. riding. The anmal revenue of the see is 4,5001 ., chictly derived from the surplus fund formed out of the deductions from the revenues of the larger sees. Trinity church, built and cildowed in 1826 at a cost of above 13,0001 ., is a Gothic cruciform structure, with lancet windows. and has aceommodation for npwards of $1,000 \mathrm{per}$ sons. The Wesleyan Metholists have two places of worship, and there is one each for Independents and Primitive Methodists. The town has several Sunday sehools, besides which there are natiomal schools both for boys and girls, and an endowed blue-eoat school. A prammar school, founded in 1555, has an endowment producing abont 3701. a yenr: it is free, for Latilt, (ircek, and English grammar, to de sons of all residents, berids Whom the master may receive boarders and payscholars. The town has several almshouses aind money-charities, and a dispensory furnishes rdidf to the sick poor. A mechanies' institute, subseription library, and news-room are comprised in 'the public roms,' a large and rather handenne buiding, erected by subseription, having attadsed gardens and pleasure-grounds. A theatre was Duilt in 170, , but it has been converted into a depot and riding-school for the York yeomany cavalry.
lipon was formerly celebrated for its manufacture of spmes, and the expression 'as true ster) is lipon rowels, was unce prowerbial for men of integrity and intrepidity. It had also a eomsiderable manubeture of woollen-eloth; but both thee braneles of industry have lomig ceased to cxis. Linen-weaving, maling, and taming are pursucd to some oxtent; and, as seen above, sadile-irece and saddlery are made in pretty large guantific. It is a large staple for wook, bought up bare by the

ROCHEFORT
clothiers of Leeds and llalifax; and it has an exeellent corn-market. In 1767, the Ure naviration was brought up to the town, which is thas rembered accessible by barges of 30 toms.
lipun is a bor. berespription, but repeived a charter from James 1 . Uuder the Mon. Reform Act it is governed by a mayor, 3 aldermen, and 12 emondilors. The hor, has a commission of the peace umider a recorider; a eomuty comrt, before which Hx plaints were entered in 1845; and a separate manor-court held by the tlean and chapter, havine juristliction over the district, ealled 'canon fee. Ripen has sent 2 mems, to the il. of C. since the reign of bivard VI., the right of election heins, previonsly to the Reform Aet, in the holders of hargage tennres, all of which had, for many yenrs, becen in the possession of a single individual. The limits of the par. bor.. as tiverl by the Bomolary det. comprise the entire township ol Ripon with a part of the townslip of dis-munderherem-homigate. Reg. electors, 3.3:3 in 1865. Large markets on Thursdas, abounding with all kinds of agricultural produce, and sin yearly likirs.
Ripon derives its name from its position in ripu of the river Cre, hot whether of Roman or Saxm foumbation is wholly unknown. A momastery founded here A.s. bitil, attilined considerable celebrity ; it was, however, destroyed liy the Seotel in the reign of Elward 11., and was not afterwards restural.
RIVE-DE-GIDA, a rapidly increasing town of France, dep. Loire, cap. cant. on the Gier, a tributary of the Rhone, at the head of the camal of Givors, and on the railway from St. Etienne to Lyons; 12 m . NE. the former, and 30 m . SW. the latter. ['on, 14,202 in 1861. The town was formerly furlitied, but its works have been destroved, and it is now principally remarkable for its commercial activity, sharing largely in the growing prosperity of the comitry along the Rhone, and the districts round lyoms and St. 户tienne. It has extensive manufactures of ghass wares; and its coal-mines furnish a large proportion of the conl required in the lardware factories of St. latieme It has also hardware mannfactures of its own. The offices of the Givors Cimal Company, and the moble reservoir belonging to that cimal, are the most remarkable public works at Rive-deGier.

ROANNE (supposed to be the Rodumma of Ptolemy), a town of France, dép. Loire, cap. arrond., on the Loire. here crussed by a new brigue, 34 m . N. Montbrison, on the railway from Lyons to Munlins. Pop. $17,268 \mathrm{in} 186 \mathrm{~b}$. Lioanne is a pretty, well-hilt, open, stragering town, with - good quay, a large hospital, a hamdsome theatre and a commonal eollege, having a good library and cabinct of natural histors. It is the seat of a tribunal of origimal jurisdiction, and a chamber of manuthetures; and is a depot lor the manulactures of Lexoms and the NE. of France, passintr to the rentral and NW. déps. It also manufactures mustins, calicoes, and woollen fabrics: and has some trade in corn, wine, thour, timber, and charcoal. Various reminns of antiquities have been disconered in and near the town.
ROCDHDALE, a pir. bor., market town, aml par. of Enstand, mildile div., homel. Sallord, en. Lancaster, on the lioch, trib, of the Irwell; 11 m
 200 m . NW. Lenton ly Lancashire and lorkshire railway. Pop. of par. lor. (whide comprises all withon the limits of a circle deseribed with a radins of $\frac{3}{4} \mathrm{~m}$. from the town-lailt), $38,18 \mathrm{t}$ in $1 \times 1 \mathrm{il}$. The town consists of several streets, greatly improsed fato yars: the principal thoronghtare, in which
are the marke-momse and town-bati, being wile and lined with brick houses. 'The streets grenerally' are well paved, lighted with gas, and well supplibil with water from four resurvoirs in the township of Wartleworth. Ifre are two assombly-rooms, a small theatre, a commorlions gaol, and workhonses. The parish church, a structure of Norman and arls English arehitecture, with a square pinnaded tower, stands on an eminence, to which there is an nscent from the lower part of the town by a tlight of 126 steps: the living is a vicarage, of the ammal value of $1, a 301$., in the gilt of the Archbishop of Canterbury, The town has six ther churches, ant numeroms places of worship for dillerent demminations of dissenters, amomg whom Methodists. Independents, and baptists aro the prevailing bodies. Einch ehureh and chapel has a sumblay sehool, atemed by great monhers of children. 'The town has a large mational school, another well-endowed establishment, ralled the Moss srlool, lor the grataitous edacation of 10 boys and 20 girls : is free arammar sehool, fomded
 dowed girls' schan, and mumerons moneyod chat rities. A dispensary and ladies' charity furnish reliel' to the sick poor; besiles which there are Bible, tract, and other religions associations, a literary society, an horticultural socioty, and a savings' bank.

Rochdale is a principal seat of the woollen and cotton manufactures, especially the former: the woollen articles produced here consist principally of baizes, flamels, and kerseys; and those of cotton, of strons calicoes, fustians, and similar artieles. About 10,000 hands are cmplosed in the cotton factories and print works, and $; ; 000$ in the baize, Alamel, and other woollen factories. 'There are ako mumerons handi-loom weavers, thomeh bower-looms have been extensively introhtuced within the last few years. Int-making is pursuct on a considerable seate, nud mumerons hands are employed in the town and neighbourhood in making machinery. Coal and stone abomel in the meirhbourbool, and the par, comprises 10 colliories. Iron ore has been found in considerable quantities in Bhtterworth township, and thags are quarried at Spotlamt. Revelate has means of commonica tion with Manchester and Liverpool westward, and with Halifas, Leeds, and other towns, eastward, both by canal and railway. 'The Rochdate Canal which passes near the town, miting westwarl with the Duke of l3rilgewater's Camal, and eastward with the Calder and Ribhle Navigation, 33 m . in length, cost upwards of t $000,00 \mathrm{ll}$., and is supplied, at its summit-level, by large reservoirs, one of which eovers 130 aneres. It was opened in 1804, and the daily tratlic may anomit to 1,1011 toms. 'The Manchester and Leeds ratway mases thromgh the distriet; and in Calderbrook township is a tumel 2,860 yards loug, chietly cut through the solid rock, 80 ft . below the surlace.

Notwithstambing its pops. and manufacturimer importance, lionhate had no representative in the legislature till the passing of the liefinm Art, which conferred on it the privilege of semding 1 mem. to the II, of'C: the electoral limits being defined, as above stated, in the local act of 6 (ieo. $1 V^{\circ}$. c. 1101. Lieg. electors, 1,416 in $1860^{2}$. It is also a pollinf-phace for the S. div. of' Lameashive. 'The town is muder the jurisdirtiom of the co. maristrates, and has a comity-court. Markets on Momday ind Saturday : fairs, May 14, Whit Tuestay, and Nov. , for hurses and cattle.
dioc'llifoli'l', a maritime fown, and the thirit maval port of Franes, the. Charente-hafórieure, on the Charente, about 12 m . (ly water) from its

## ROCHESTER

La Rochelle, with which it is connected by railway. l'op. 70,285 in 1861. The city is situated at the extremity of an extensive plain, and is shaped like a low, the are formed by the ramparts, and the chord by the river. The town, which is wholly of inodern date, having heen fommed innder Lonis XIV., is well laid ont and built, thongh the Honses want elevation. Some of the principal strects are planted with double rows of poplars; and in the centre of the town is the l'aee d'Arnes, a large and regular square, planted, and ornamented with a fommenin, which, with other fommtains, provide the inhabs, with an abundant supply ol' river water. 'The port is eapacions, and deep ennugh to reccive vessels of the hargest size, having 24) ${ }^{\circ} \mathrm{t}$. water at low ehb, and more than 40 ft , at ligh tide. The mercantile harbour, separated from the port militaire, admits vessels of from 800 to go0 tons. The baval yurd is entered by the lorte te Soldil, a humsome giteway constructed in 18:28, on either side of which are lodges for the gramel, the agents for the surveillance of the port and ofticers of the customs. It comprises buildiuge-ducks for ships of from 60 to 120 guns; sawing, brass and copper mills impelled by steam; a sail-loft, model workshop, a bagne, or prisom, capable of necommoditing 1,000 conviets; a rope-lomse, in which eables upards of 400 yards in lengeth are mate, and a maval and military arsenal, bisenit mambactory, and stores for materinals of every kinu necessary in the fitting-ont of ships of war. The cables and ship-bisenit made at this port are admitted to be the best in liance. The maval lospital without the town comprises 9 separate builiings, furnishing accommodation for 1,200 patients. The residence of the naval commandant is a tine buiding, surromuled loy gardens, whielh are open to the public. Ruehtiort is the seat of a maritime prefecture, and tribmals of origimal jurisiliction and commerce, and has sehools of naval gumery, hyilrograply (2d elass), medicine, arawing, and music; a society of arts and literature, lible soeicty, and public library. It has a few vinegar fictorics and sugar relineries; but ship-bilding is by far the most important braneh of industry, imd the ship-builders of the mercantile port eonstruet handsome vessels for the consting trade and cond fisheries. The little trade otherwise enjoyed by livehetort is prineipally in corn, wines, stilt, and hrandy. The town was formerly very unhealthy, but it has been sreatly improved by the dranage ol the adjacent comintry.
LOCILELLE (LA), a town and sea-port of Framee, dép. Charente-Infétienre, of which it is the cap., "in the Athantic, $76 . \mathrm{m} . \mathrm{S}$. by E. Nantes, and 93 m . NNW. Bordeane, with which and l'aris it is comneeted by railway. Pop. 18,901 in 1861. lavehelle has an admirable commercial position. The town forms, as it were, the bottom of a small gulf, which serves as an avant port. It is defented liy 2 hanhsome towers, which, whether la Rochelle be approached by land or water, nre seen at a distance. Oplosite the town, at the extremity of the roadstead, are the Isles of hé and Oleront. The harbour is safe and commodions; it is protected by a strong jetty, and is capable of receiving vessels of 400 or 000 tons burden. There has been created a dock, or arriere port, where vessels are eareencd. 'The strects are wite and straight, and have foot-pavements, mositly under arcates, on which the honses are built. Few of the private buildings are lofty or of mueh size; but the town lats, notwithstanding, a striking appearance. The fortilications, constructed by Vablan, consist of ramparts, with $1!$ bastions and 8 lunettes, the whole enelosed with ditehes and a eovered way. The town is entered by $\overline{7}$ gates, one of which, the

Porte d'Lorloge, is a handsome structure, apparently of the l6th century. There are several food squares, and without the walls are the promemales eathed the Mall and the Chmup de Mars. 'The cathedral, town-hatl, courts of justice, hos:-pital,orphan-isylum, exchange, and arood bathing establishment, are the principal public buidines, thourh several more are worth notice. La lochelle is the cap. of the 12 th military division of France, which comprises the dejps. Charente-Inferieure, Deux Sivres, and Vendee; the seat of a bishop, of conrts of primary juristiction and commerce, of a royal academy of arts and seiences, and the residence al several foreign consuls. It las a seminary and commumal college, sehools of mavigration and design, a public library of 20,000 vols., botanic garlen, several prisons, a mint, and a royal arsenal and fomulry. Its trade is extensive, not only in wines and brandies, but in woul, iron, salt, clieese, butter, oil, sardines, anul colminil produce.
La liochelle appears to owe its origin to a castle construeted here to cheek the incursions of the Normans, It was for some time in the possession of the linglish, from whom it was taken lye the French in 122 2 . During the religious wars, and especially atter the massalere of St. lartholomew, it was a stronglond of the l'rotestants. It was invested ly the Catholie forees in lase and withstood a long siere, terminated by a treaty. The mumerons infractions of that treaty in the reign of Louis Xlll., and unter the ministry of liehelien, led to a second siege, which commenced in Augnst, $16 \boldsymbol{e}^{7}$, and which was as violent, and longer and more deeisive that the former. The king, the Wuke of Orleans, Marshal Bassompiore, and all the most renowned generals of the time, wore present at the siege. The circumvalation extended for 3 leagues romad the town ; but the sea being open, buglish vessels !oured in provisions and ammanition. After 6 bontlis of heroicursist. ance, the fimous engineer, Metezean, was lirseted to bar the entrance of the harhour by an immense lyke, extending 1,500 metres into the sea, and of which the remitins are still visible at low water. The result was som fatally apparent. Fitmine quiekly decimated the ranks of the besiegred, and, after a sigge of 14 inumths and 18 days, la linchelle was compelled to capitulate. Richelien made a trimpinal entry into the eity; the fortifications were demolishel, and the I'rotestants deprivel of their last plate of refuge.

ROCHESTER, a city, parl. and mun. bor., and market town of England, co. Kent, lathe Aylesford, at the W. end of and adjoining Chatham, on the S . bank of the Medway, erossed here ly it hanilsome stone bridge of 11 arches; 25 m . W. hy N. Canterbury, 28 m. b. by S . London by rond, and 30 m . hy North Kent railway. P'op. of parl. bor. (which includes with the old bor, thditional portions of the par, of stroud), 16,862 in 18 itil. The bridge over the Medway comnects the town with Strumb, on the opposite bank of the river; so that the three towns of Chatham, Rochester, and Strond form, as it were, a continuons street, upwards of 2 m . in length, along the road from Lombon to Dover. The hoonses in Rochester gemorally have a somewhat antiquated appearance, ind among them are several built ehietly of timber, with projecting gables and stories. The town is partially pavel, and lighted with gas. Fortitications were erected for its protection in 1802; bat Fort l'itt is now ased as a military hospital, and Fort Clarence has become a lumatic asyi'mi for soldiers. The town-hall, a spacions briek caitice, fromed ly lorie eolumms, is open umberneath, ainil above is a large hall with several porarats of publie

characters: at the back is a small bor. grol. On the site of the former gnildhall is the clock-house, a neat buidding erecterl in 1706, at the expense of the celebrated admiral Sir Clondesky Shovel. A theatre is occasionilly opened; there are also assembly rooms and baths, and a record room at the end of the bridge. At the SWV. angle of the town, rising aloruptly from the river, is the cantle, anciently a strong fortress, but which has, for a lengthened period, been in a state of decay. The walls, which are of Kentish ragstone, cuclose a quadrangular area of nearly 300 sq , ft., and, with their towers, are now in ruins. The walls of the keep, however, at the SSL angle of the court, are in good preservation: it rises abont 104 ft . Irom the ground, and has turrets at the angles rising 12 ft . above the rest of the building. The style of the whole building is Norman, and it presents a fine specimen of the moles adopitel at the date of its erection to enable a very small number within the castle suecessfinly to resist a much frater momber of besiogers; for which jurpose, in. leded, the aceress, the varions successive gates, amb other defenees, are admirably calendated. The masonry in the interior is very grool, especially that of the well, which is in one of the walls, and was areessible from several thoors of the castle.

A little E. of the castle is the cathedral, originally fommed by Ethelbert, aloout A.D. tion; but the present buiding was principally erected in the 12th century, from the phans of Bishop (immonjuh, one of the tirst church architects of his day. It is a cruciform structure, with a central tower, of modern erection, rising from the intersection of the nove and transepts, with another, now moroofed, called timmlulph's Tower, on the N. site, elose to the di. tramsent. Aecording to brittom, the dimensions of the chmreh are as follows: total insite length, 306 ft ., of which 1 s 6 ft . belong to the choir; lireadth of mave and alsles, ofi ft.; leneth of the great and small transepts, 220 ft . and 60 ft . respectively; extent of W . front, Kl ft . The exterior aplearmee of the cathedral is mot very imposing, and the exterior walls of the nave are cither much tleayed or covered by modern repairs. The other parts of the chureh are surrombled by luidelings, so that little more thum one portion ean be seen at a time. The W. Tront is a tine sporimen of Norman emrichment, hat has a very large inserted perpendiendar W. window. The mave las Norman jiers and arehes, except those next the cross, which, with most of the lid, jortions of the ehureh, are carly Einglish. There are other Norman pertions on the other side, whicle appear to be the romains of the eloisters and other momastic adjumets. The crypt is very spacious, extending under the whole choir: its character is early Fonglish; lut a portion mader the N. aisle may he considered almost Norman. There are a few monmments, lont they are more remarkable for singularity than heanty. The whole eathedral, exeept the nave and s.aisle of the chancel, is adorned with early English groining, and, as at Canterbury, the floor of the choir is considerably raised above that of the nave. The ecelesiastical corporation comprises a dean and $i$ prebeudaries. The see of Rochester is worth 4,0001 . a year. The town las 2 par, churclies, one of which, St. Margaret's, is of very mixel architecture, and the other, St. Nicholas, in the perpendienlar style: the living of the former is in the gift of the dean and ehiapter, and of the latter in that of the bishop. The Wesleyan Methoslists, Independents, Enitarians, mud the Society uf Friends have flaces of worship, and the Sumlay schools within the bor. are attended ly above sion children. A rramuar sehool, fonmed in $15 \cdot 2$, having ti exhibitions at

Oxford and Cambridge, is supported by the dean and chapter, besides which there is min endowed mathematical selom, establislect in 170l. '1wo national sehools give instruction to ahont ion) ehildren, and there are two or three ahnshouses, witlı smaller money charities.
I'he bor. of lachester, linst incorporated in the reign of IVenry II, is divided, under the Mmicipal lieform Aet, into 3 wards, and is gonverued by a mayor, 5 aldermen, and 18 conmeillors. It has a commission of the peace under $n$ recorder, and petty sessions are hell twice a week; it has, mlso, a county court. Rochester has returned 2 mems. to the 11, of C. since ed bidward I., the right of election down to the lioform Aet. being in the freenen not receiving alms. The electoral limits were culargod, as above mentioned, by the lionndary Aet. Ker. (electors, 1,5!!) in 186ar. Corn markets on Tuceday, and for provisions gencrully on liriday.

The only event of any importance conneoterl with the inomern listory of lionliester is the descent made loy the Intch in 16637 . Sio Chatiam.
Rocaesters, a city of the L. States, New York, on the (ienesce river, 7 m . S. from its rinbonchure in Lake Ontario, at the point where the: Erie canal is earried over it by a splendid alua-duct, 260 m . NW. New York. $\mathbb{l}^{\prime}(0)$. $5,-20$ in 1860. Rochester is one of the most romarkahile: even of the American towns for the ruidity of its growth. Its jelp, which, in 1820 , annouinterl to only 1,502 , hat inereased, in $18: 30$, to 9,2164 ; in 18.10, to 20,191; and, in 1800 , to 36,1183 . 'This inerease has been owing, in part, to the advantagenms situation of the town for an emprium, from its casy commnumation with the lakes by means of the Genesec, which is navigable to within ${ }^{2} \mathrm{~m}$. of the town, and with the comntry traversed ly the lirie and lienesee canals, and iy varions raitways, which either terminate in or pass by the town; but principally, perhaps, to its immense command of water-power, the various falls of the Genesce river within its limits amomoting in all to $2 l i 8 \mathrm{ft}$. in perpendicnlar height: it has, in con sequence, many large flour-mills, and is, in tiact, become the prineipal seat of the thour-trade of the Union. It has also a varioty of other large catablishments, the moving pwower in which is sultplicel, wholly or in part, by water-such as filling mills, woollen and cotton factoriss, and iron fomblries. In addition, it has extensive tanneries; and boat-building, both for the camals and fur the trade of the lakes, is earried on with great. spirit.
lochester is well-built, having wide strects, large 'stores' and wardouses, and many ueat, and some suprior dwelling-houses, with shrmblacrics attached. Being the cap, of a comnty, it has a comrthouse, gool, and other combty buildings; momerous schools, academies, and churehes; a collegiate institution and musenm ; varions public hanks, and one of the largest savings' banks in the state. It was incorporated as a city in 1883.

HOCROY, a town of France, dép. Ardennes, cap. arrond., in an extensive plain, near the lielgim frontier, $15 \mathrm{~m} . \mathrm{N}$. ly W. Mezieres. l'opt. 3,282 in 1861 . The town is surroumted ly it rampart strengthened with bastions and demilunes; is the seat of a tribumal of original jurisolietion, and has a military hospital, a socicty of agriculture, and some harivare mannfactures.
laocoy having been besioged by a spanish army in lbat3, the lrince of Comb, then dake d'Enghien, and only 21 years of age, advamerel t" its reliet, with an army inferior in mombers and in the phatity of the troops. Lut the extraordinary
talent and brilliant courage of the prisice more than made me for his inexprience and the inflriurity of his force. The Prench qained a combpllete vietory (190h May, 16ilis). The Spaish infimtry, which had hitherto heen inviusible, was colt io pieces; mad the French arms acpuired a superiority which they preserved for more than tiol years, or till the battle of thembeim The hminnity of Comed, hencefforth called ' le Grand,' was as cmapicuous on this oteasion as his talents and his eourage.

RomaNs, a town of Frunce, dép. Drôme, in a fine plain, on the lsire, by whieh it is separated from the lharg-te-fringe, on the opposite side of the river, the commmiention hetween the two being maintained by a the bridge, 12 m . NE. Valenee, nud sis m. WSW. Grenoble. pop, in-
 which is surrounded by an old wall thanked with towers, is a handsome well-built town, and has some tine promenales. The parish charch is the only remaining purtion of the lamons momastery fiminded here liy St, liermard, in s:17, to which the towin owes its origin. Limans has a theatre. apensiomat, or selood for the gratnitons edinention of yound ladies, and a tribunal of commerce, with nianulictures of silk num woollen stulls, hosiery, and gloves, it has also an netive trude in the proulace of the thep, inchuting silk, wow, winc, oil, and trutles, which is much facilitated by the junction of the lière with the Rhene.

The lamons harou Lally, who, having distingnished himself at the hattle of Fontenoy, was subsequently sent as commander-in-ehidf of the French forces to India. was a mative of homams, where he first sinw the light, on the lith of dunnary, 1702. Being of a violent, irritable temper, and inyolved in the greatest dillienlties, Lally got embroiled with every body. After the fall if Pondicherry, in 17tif, he returned to France, where, 1 sued ty the hatreds he had exeited in Indin. he was, after a lengthened imprisomment. tried by the parlianent of P'ris, and condemmed to be decinitatel. This sentence was carried into effect on the !th May, 1 tini.
RODIE, the most celebrated of European cities, (' Lux urbis terrarum, et arx omuium gentium:' (icero, Catil, iv. cap, 6), fimons alike in ancient and modern history; tirst, as the metropolis of the most pewerfinl nation of antiquity, and, ulterwards, as the ecelesiastical capital of Christenfom, nad the residence of the peple, on bath sides the Tiber, but principally on its E., hank, about 16 m . from its mouth, 15 m . NW. Naples, and 145 m . Sisl:. Florenee, on the railway from Florence to Nuples. P'op. 201,161 in 1863 . Molern Rume, which interests alike by its classical assoeiations, its antiquities, its clurehes, and its works of atrt, is surrounded by walls (mostly ocenpying the site of those constructed hy the Emperar Aurelian), in the form of an irregular polygme, about 14 m . in cire., the longest diameter being from the Porta del l'opolo, NW., to the l'ortas. Selastiane, SE., abont : m . in lengeth. The eity has 16 gates, three or four of which, howe ir, have been walled up: of these, the principa are the Porta del Pיpolos, on the road to Floresec and Ancona: the Porta lia, on the road to Tivoli; the Porta Maggiore, leading to D'alestrina; and the Porta S. Giovami, lending Sbic to Albano ame Naples. lhat not more than a third part of the enchised area is eovered with buildings, the rest consisting of ruins, gardens and fields, with some clurches, emvents, and other scattered habitations. The older part of the ancient city, where the prineipal ruins are foumb, is about of m . s. from the molern city; but it is needless to addi,
that the former. under the emperors, was much more extennive than the modern town, inammult ans, bexides the suace within the walls, it had very extenive suburls. The ground ocenpied hy the city is montly low, lecing only from 35 to 45 ft . abive the level of the sen. Exellusive, however, of the low gromads, severul low hills, or eminemes, are comprised within the limits of the eity; and in eonsequence of ancient lione bring popularly sudd to stand upon nevell hills, it was sometimes colled ar.e spoticollis. The following measurements exhibit the height of the hills now referred to:-

The I'alatine Ilill, the melens of the city, comprises a phee of abont lo acres, and appears oriminally to lave had precipitons edges ; lint exeepiting this, and the C'upitoline llill, comprising about 16 arres, the rest have an easy ascent, ame are, in thet, mere eminences. No dhubt, however, oriny to the aceumulation of rublish in the valleys, aund the lowering of the hills by rains, and the diguing of fommations, the elevations of the latter must have been mach more striking in antiquity than at present. The seven hills, properly so callen, on the E. bank of the Tiber, were inchoded in the city so early as the reign of Lorvins 'lollins; but at a later period the Mons limeins (lincian lli"; to the NE:., and the Mons Vaticames, and part of the Mons Janiculus, on the W. side of the 'Tilior, were enclosed within the eity walls. The hills consist elnetly of volcanic tula intermingled with thin beds of travertine, making good buildinis stome, as well as of silicions samd, and a few hayers of [umice and seorie; while the low fromme which has been raised several feet above its ancient level, apparently by the deposits left by frequent floods, is covered with calcareous sumds, marls, clays, or silt.
liome is divided into fourteen districts, or Rioni, eleven of which are in the ponion now inhabited; but the more popular, and tor general purposes more intelligible, distribution of the city is into a central portion on the low gremed li. of the Tiber, the ancient Campus Martins, a division to the li. of the latter, on the lineian, Quinanl. and Viminal tlills, and a third division on the W. side of the river. 'Ilhe tirst of' these quarters is the chide seat of bustle and tracle: it is intersected hy the Corso, and has some other growl streets. Whi the NW. side of the C'apitol is the meanest and dirtiest part of the city, chictly inhabited by dews, and many degrees worse than Jummonth Street or Hommestiteh in Londen. The apper part of the city, on the Jincian mud Quimal Jlills, is lens densely covered with honses, and chietly comprises palaces and villas, churches, comvents, mal gardens; it is intersected nemr the pope's palace on the Quirimal Ilill by two tine avenues, crussing each other at right ingles, and having form fomtains at the point of intersection, Jetween the Quirinal and Espuiline Hills are several streets inhabited by the lower orders, and extending to the Via Vaccina, a rather broad thoyonghtire leadiug to the Roman formm. Heyond N., E., and S., are pardens and fields, stmded here and there with villas, churehes, and ruins, ineluding the baths of Diocletian and Titus, abll the Colosseum. 'Ehat fortion of home which lies on the right or W. bank of the river, consists of two parts: the Viti-
can, nortli of St. Ang of tho ef the Trastn which luns 1 m.). Via Corsini.

On the and dirtict lews, aut Street or mart if the 1ls, is leoss ietly cm mcents, allil pe's palitue *, crusinur finur finultween the streets inling to the re leading nd S., are here with e bathis of m. 'Thunt. Hit or W: the Vati-
can, northwarl, in which are comprised the Castle of 'st. Augelo and St. I'eter's, the ghory mot merely of the ecermal eity, but of Clisistemben; and the Trastavere or nuelent hanicnilan, sonthward, which haw the street, calleel from its length (nearly 1 m. ), Via Lomgara, a botanie garden, mud the Villia Corsini.
The moslern city of lome is dull, dirty, and, with a few striking exerptions, memuly built. Most of the strects are marrow, crookel, and baily lighted. From this general emsure, however, mast he excepted the Carso, already alluted to, extending in a struight line more than a mile, from the l'orta del lomolo to the foot of the Capitoline lill, and which, in the greater part of its extent, is fol ft. wide, with trottoirs at the sides, which, however, are so, burrow, and so often colarmathed om, as to be, in fact, of little service: it is lined with many handsome pulacer, some of which may vie in grandeur with the noblest in Italy. Two other streets, the Strada di lipetta and the Strada del Balinum, diverging from the apen space before his holiness's pmace, are lons, straight, and tolerably wide. These three streers are crossed by a line commeting the bridge of st. Augelo with the l'mein llill, and forming one of the most hustling thoroughliares in Rome. With these exceptions, however, the strects are mean looking, and the honses lave a shablys, dilmpidatel appearanee, wholly unworthy so celelirated a city. The private honses are nuxally. from three to five stories in height, built of tuff or briek, and .instered ower. With these are intermixed many huge old buildings (palduzi), contrasting most strikingly with the surrounding slight, mean tenements, hy their bulk, height, and air of antique grandon:. In emsequence, however, of the decay of the fimilies to which they belong, many of them are now turned into ecelesiastical colleges or hutets, or let to foreigin ambassadors or moblement and in thase which have esenped this fite, the lower story is sometimes let for shops, and sometimes retiined for stables, coach-louses, and servants' romms. The second story is senerally a picture grallery, consisting of a suite of roums all opening into each other, and richly adorned with marlle ant painted exilings. The owner of the building oecupies the third story, or, if there be n fourth, the third and fourth, throwing open his gulleries to artists and all who choose to give two or three mosh to his servants. Gencrally speaking, these Duhlumge exlibit great simplicity of design, usually presenting to the strect one simple comtinue ${ }^{\text {i }}$ line of surface, rarely decorated either with columus or pilasters. Ornaments romed the windows are never omitted, but are generally too latre, and in bad taste. The stories are generally. divided by horizontal mouldings along the front, and great spuce is left between the ranges of windows. The whole is crowned by a large and rich carnice.
lione has not a single square: and of the piazzas or pavel areas, the liazza dy Popolo, the l'inzza Navona, and that in front of St. Peter's, are the only three that deserve motice. They ar adorned with obelisks, statnes, and fountains: but the tirst and last being at the extremities of the town, are lost as places for walking in or meeting friends. The fine promenade on the Pincimn Ilill, E. of the l'iazza del l'opols, is planted with trees and commands an extensive riew; but it is of small extent, and is shout at sunset. Without the walls, hovever, on the NE. side of the eity, is the Yilla Borghese, the grounds of which, nearly 3 mm . in cire, planted after the fashion of an Einglish park, and ornamented with statues and fountains, are open to the public, and constitute the fivourite
resort of all classes, whether on foot or in carringes, Limme, like lamdon and Niples, is destithete of promemaless sheltered from the weather, and woll lighted at night, a convenience which Paris has in perfection; and another defect is the ahsence of elegant shops, cuffes, mid restamimis, that form so striking a feature in the French capital. In the mumber nud pramdenr of its pulslie fontains, however, and in the quality of its watrer, liome surpasese every pity. Almust every public piaza has its fomman, and almost every fomiciul has some peculiarity in its size, form, or sitatiom, :o mtract attention. The finest of these, and perhaps the most marniticent in the world, is the funutain of 'Trevi, which lus a white marble basiu in a vast inelosure paved with barge shals of the same material. It represents a palace of Neptume placed on a romerh, lirokem roek, and ablumed with Corinthian pilhars; in the centre of the building, under a rich arch, stands Neptune in his car drawn by sea-horses: and water runs down in torrents from the rock, making, as it were, a sen at its base. In the summer the waters overthow their usual limite, fill the whole marble basin, and rive to a level with the stuare, which "fter sumset is a favemrite lounge of the in'rabs. The fomman in the l'iaza Ninoma has an obolisk in its centre, surremuded by Tritoms and Nainds, sented on rucks, and sponting forth water in marnifteent jets dran. The Fontima felice, on the Viminal Ifill, diseharges itself mader an Imic arcade thromgly a rock, which a ligure of Moses is striking with his rock. Other tigures surromend the prophet, and below are four lioms hanging over the basin, as if eager to slake their thist. These and the other fommans of the city are supplied from three only out of the momerons aqueluets which attest the luxuriance of the ancient city; and yet such is the quantity they comsey, and so pure are the somrces whence it is derived, that no bity cmin boast of such a profision of clear mal salubrious water, pureal forth spontaneonsly in jets ll'men, withont the aid of expensive machinery, as at Versailles, St. Clond, and Chatsworth.
The great glory of modern Lome consists in the magnifieence of lier churches, and, above all, in the matehless strueture of St. l'eter's.
-_ thon, of temples old. or attars new,

Since Zion's desotation, when that IIo
Forsook his former city, what could be,
of earthly structures in his honour vil'd,
Of a sublimer uspect? Majesty,
Power, (Glory, Strength, and Renuty, all are ais)'d In this eternal ark of worship undefi'd.'
This magniticent fabric ocenpies the site of an older structure raised by Constantine the Great. l'ope , bulins II. haid the first stome of the new building on the 18th of April, 1506, having selected the famous Bramante for his arelitect. But the latter dying in 1514, other architects were employed to carry on the work, till, in 154t, it was fortmately committed to the illustrions Michael Angelo, who nearly completed the tlome and a large portion of the building. After Michael Angelo's death. in 1563, the work was prosecuted under other sarehitects, till its completion in 1614 The colomade by Bernini was addel in 1653-167. 'St. Peter's,' says a well-known Euglish traveller, Mr. Macharen, ${ }^{\text {bunlike many other celdbrated edi- }}$ fices, surpasses expectation. The fromt is tow low, am has some other defects; but the vestibule is admirable, and the interior is solemn, grami, rich, harmonions, beyond anything that I had conecived. It is minucsionably the noblest builiting ever reared ly luman hands, the only work of
art, as Malame de Stail ohserves, which produces / magnilicent temple ever raised by mortal hand an hmpression of grambenr akin to that which we to the worship of the Supreme lieing. receive from the works of unture. So vast are its dimensions, that colossal statues and monnmental grouns of tifures are stowed away in its ainles nud resesses withont imparinis the unity and simplicity of the plam, ns they do in the St. Paul's of lomon, 'The interior of the dome (which is 140 It. in dinmeter), as well as a considernble portion of the other surface, is covered with pictures, all of" which, however, are, with ons exception, of nosnic. The ere forms most erromeons estimates respereting the height of the diflerent parts of St. P'eter's, and most visitors are on this accome disppointed hy first impressions. The splendis: lirnze Baldurchimo, or enmos, immediately mader the alome and over the highe itior, close also to the sumposed tomb of sit. Peter, is ulonit 120 ft . hirf, thongh in npparance ouly 30 . 'Itse chair of St, l'eter, too, lehind the high nitar, appears from a distance as if raised mily a lew steps trom the \&round, whereas it is phaced on melevation 70 lt. alowe the floor. The pien seen in the hand of the prophet in one of the lower compartments of the fome, might he supposed to he 12 or 18 jnehes in lougth, whereas its real lengeth is 6 ft . The vhitor lans no ndequate conception of the magnitude of the dome until be arrives at the roof (the passures of" which are so contrived that one may ascend on horsehack), when he flods it rising belore hinn like a monntain. The view from the external grllery round the lantern is excedingly fine and exlensive, embracing the Cmmpagna from the sen to the Apemines; besides which, on looking at the roof of the ehurel, its ten cupolas give it somewhat the npparance of a town, so astomishing is its size. The depth of the thoor, as seen from the interior of the lanterm, appears lessened from 100 fi. to 100 ft . ; but it may be diseovered that the ere is dexived, as the promenaders below appear ouly as tiny infunts. When we stand in the inttorior gallery of the cupola corresponding with the whispering gallery of St. I'all's in London, fund look at the mosaics on the concave, we are surprised to find them composed of spuare lits of roloured stome, half an incll hroal, dlumsily put tugether, often with intervals between them; yet, seron from below, they might pass for oil mintings. We tind a pietured face of an angel close tu us nearly a yaril broad; but, when we look across the gallery, a similar face, amd really of equal proportions, seems to be of the natural size. The lisplits in this splendid editice are linely tempered, well distributed, and kept in admirable order. 'The profusion, also, of rare and heantiful marble, introdnced in every part, together with the gilded roof, the statues, monmments, mosaic ceilings and pictures, forms a display of brilliant and unexampled magniticence, which requires weeks and almost years to contemplate,'

The form of the eliureh, as designed by Bramante, was that of a Latin eross; but this was ehanged by Miehael Angelo to a Greck cross, which has the advantage of exhibiting the whole strueture at one coup-d'eil. Unfortunately, however, the plans of the latter were afterwards departed from by Carlo Maderno. In the canstic, and, jerhaps, imjnst language of Forsyth (Italy, 1. 179), 'a wretchel plasterer came down from Como to break the sacred unity of the master-idea, and him we must execrate for the Latin cross, the aisles, the mean-looking attics, and the low, ugly front.' The latter, however, is 396 ft . in length, and 159 ft . in height; and with whatever defects it and other parts of the strneture may he charged, still there can he no question that St. Peter's is, beyond all comparison, the most

Of the many mugust ceremonies performed it this mugnilicent temple, the most imposing is that of the Tenebre, on the night of Good Friday, when the homired lanips that burn over the tomb) of st. L'eter are extimguished, and a stupembons cross of light appears susponded from the thome between the altar and the nuve, shombling over the whole edilice a soft limere, delightful to the eye, and forming, with the objects mimate ind innumate ofl which it sheds its light, a seene singularly striking, by a lmppy mixture of tranquillity and mimation, of darkness mal lupht, of simplicity and majesty; a scenc, ibulced, fur more sublime and more deply impressive than the illumimation of the extermin dome on the sight of St. l'eter's day (June 29).

The dimensions of St. D'eter's have been varionsly given by dilferent nuthorities; and jerhaps exaetness is not attainable; but the following measurements are generally mopteil, and may, perhups, be depented on, lar purposes of emmparison, the following table also gives the dimensions of St. I'anl's landon, of Milan eathedral, nul St. Sophia's at Constuntinople.

| Dimenstons | St. Peter*s | St. Paul's | Milan Cuth. | st. Mophin |

Comparing the Roman chureh with the liritish cathedral, which, though longe intertallo, may well claim to be the secomd in the work, the floor of St. l'eter's covers nearly 5 English neres (nearly the si\%e of the Colisemin), while that of St. I'inl's oceupes only 2 acres; and the actmal bulk or entire contents of the former, as compared to the latter, are as I to J. St. Peter's is supposed to have cost with its momments, qilding, and embellishments, from 12 to 16 millions sterling, whereas the cost of St. P'aul's did not exceed 750,0001.

It is to be regretted that the situation of thes eathelral of CIIristendom has been remarkably ill chosen. 'No building,' says Mr. Woods (Letters of an Arehitect, $i$. Btix) 'of great consequence, was ever so budly plased. There is no distant point of view in which this church gives the impression of great murnificence, or from which it has the appearance of being such an immense building as it really is. This is owing to its situation in a hollow between the Janienline and Vatican IItls, which are comnected by a neck behind it; so that, on three sides, it is surromeded by slopes rising almost immedintely from it to about the height of the nave; and even in front, notwithstanding the large space before it, the building seems enemmbered with houses, which ocenpy a slip extending towards the river. From the bridge of St. Angelo little is seen but the dome itself; and even when a glimpse is at length caught of its front and of the circular colomnade by which it is approached, it appears much nearer than it is; and the magnificent avenue, the chef-d'ouve of bernini, seems a finer olject than the edifice to which it leads.' This colommade, which consists of two opposite semi-cllipses, forming eatelt a broad covered passige leading to the front of the
enthedral, tine 19 ft . surmoninted cesitral spat wo foulta hlock of irria by a cross. was bromg and formur heen remo Sixtus V.
Among t Latran, at the malers the Colisent in former chapter of and the ${ }^{10}$ chureh wis the begitut consistinit impressive, There are a bronze do the Formm, statues of interior is do of the nave Apostles. 'I the Corsini witlı a cent marbles, gil of the riche a palace, wl turies the n in lotas, int freat distan brated for marble step pailace of I'il liomais ('uth to ascend on number of $t$ preservation with planks oiltside the y and in many Lateram, was been relinilt. is a very till of its ornam design, and the whole, is three aisles, Tonic pillars beautifill eff and miay ha Lacina, that this church, deserves mot The church erected abot presents to 20) Dorie col sides, alom terminating Lhat it is priv the tomb of statue of $\mathbf{~ I I}$ churehes are almost chall them comm: their decora they contai wortly of at Santa Agne al Corse,

Supitia's rallu, may world, the glish neres ile that of the autual compared - s.ipposed diling, and is sterling, ot oll of this markably ls (Letters hence, was tant point mpression $t$ has the nilding as tion in $n$ can Hills, ; so that, es rising re height standing cems ellwlij, exbridge of elf; ; and ht of its hich it is anl it is; amere of dilice to consists eileh a at of the
cathodral, comprises 250 Doric columns of travertine 10 ft . in height, arranged in fonr rows, mul summonted by 1 !ey statues of saints. lat the contral spuce, hetween the colomnades, thanked by two fonmtahs, is an obelisk, comsisting of a single block of granite about 80 l't. in heisht, surmomited by a cross, the total altitule being 136 ft . it was bromght from ligyit to Kome by Cabigula, and formerly stood in the circus of Nero, having heen removed to its present situation by l'ope sixtur V.

Among the churches of liome, that of St. John Lateron, at the SSli. extrenity of liome, far from the modern buiddings, and upwards of $\frac{2 \mathrm{~m}}{\mathrm{~m}}$, from the Colisenm, is entitjed to the second place, and in former times was smperior to St. Peter's. 'The fhapter of the Lateran evel now takes precedence, and the popes are always erowned here. 'This church wis built on the site of an wder structure in the begiming of the lith century, Its front, romsisting of a magniticent colomate, is certamly impressive, notwithstunding its numerons finults. There are 5 entrances; that in the contre having a bronze low taken from the Trmple of l'eace in the Formm, and on the top of the facade are 15 stathes of our Saviour, and varioms saints. The interior is divided into 5 aisles, and in the pillars of the nave are colossal stathes of the Twelve Apostles. This church comprises also a chapel of the Corsini finmily, in the form of a Greck cross with a central dome, gorgeonsly decornted with marbles, gilding, and pietures, and said to be one of the richest in liome. Adjoining this chureh is a palace, which, after having been for many centuries the residence of the popes, was eonverted, in ligat, into a hospital for the poor; and at no preat distance is the Scala Santa, a buibling celebrated for containing a stairease of $2 x$ white marble steps, alleged to have belonged to the palare of l'iate at Jerusalem, and which orthodox Romaa Catholies esteem a meritorions act of piety to ascend on their knees; indeed, so great is the number of the devotecs, that, with a view to the preservation of the steps. they have been covered with planks of wood. The ehureh of St. J'anl's, cutside the walls, one of the handsomest in Rome, and in many respects superior to that of St. Joln lateran, was burnt down in 1882, and has recently been rebuilt. The basilica of st. Maria Magriore is a very tine and large edifice; but the profinsion of its ormanents takes from the unity of the man design, and the marrow brick tower, rising above the whole, is in very bad taste. The interior has three nisles, the central one being lined by 36 lonic pillars of white marble, which have a very beautifinl effect: they are undoubtedly ancient, and may have belonged to the temple of Juno hacina, that formerly stood here. $\Lambda$ ehapel in this ehureh, belonging to the Borghese family, deserves notice for the richness of its decoretions. The church of st. lietro in vineolo, origimally erected about amo 420 , but since wholly rebnilt, presents to the eye a noble hall, supported by 20 boric columns of Parian marble, open on all sides, adorned with some beantifinl tombs, and terminating in a semicirele behind the marble. Sut it is principally remarkable for its contaning the tomb of Julins II., illustrated by the noble statue of Moses by Michael Angelo. The other churches are so numerous, that it wonld be mi almost challess task to describe them: many of them command admiration from the splendour of their decorations and the articles of virtio which they contain; but perlaps the linest and most worthy of attention from the stranger are those of Santa Agnese, in the l'iazza Navona, San Carlo al Corso, San Ignazio, the Simti Apostoli, the $\mid$ ceiling are represented the Creation, the loluge.

Chiesa di (iesm, and the Clicsa Niova; all fis which are abumbantly rich in marbles and rihling, thomph not always dispowed in the best tante.
The Vatican, the most ancient and by liar the most colebrated of the papal palaren, is it mans of bublings erected at varions times by diberont propes, said to cover a space abont $i, 200 \mathrm{ft}$, in length by $1,000 \mathrm{ft}$. in breadth, and to momprima above 4,000 apurtments. 'Ihe ellect. however, is anything but pleasing : from no point of vicw does it present any extent of front or magnificonce of desisn ; while tos proximity to St. Peter's interfores most mforthately with the view of that buidding. The interiur consists of a sute of gatlaries of small breadth, which, if phaed in a contimons line, would extem two miles in length. It contains a conntless mintitude of inseriptions. stathes, busts, relievos, urns, sarcophapi, anm vases, to say nothing of its literary and momismatic treasures, its books, MSS., and drawings, the mmber of which the visitor ean unly guese at hy commting the presses that eonceal them from his sight. Taken altogether, it is by far the riehest musemm in Jinrope, ind the precions olygets it contans are magniticently lodged; for when the chureh wis rich, she putronised the arts liberally both by bnying mad building, and even now the pasthimons benevolence of popes and cardinals oceasionally expends itself in erecting a now gallery, or embellishing an ohd one. 'lhe eollection of sculptures is bevond all eomparisom the hargest and most valuable in Euroqe, eomprisiug, among other great works, the unequalled gromp of Lawoon and his sons, which even Michael Angelo despuired of being able to restore, the celebrated $\Lambda_{\text {jollo }}$ lideredere (foumd at Antim, near the close of the Leth eentury), the well known group of the Nile ant liss offispring, the Jelvedere torso of Hercules mul Ilebe, a noble statne of $A$ donis, and another of Maredlus, with an excellent bust of lins VhI. by Canova. The library of the Vatiem is alleged to comprise abont 80.000 printed broks and $3.5,0001$ MSS. ; but, in joint of fact, its literary riches are maknown, the eatalagues having never heen completed. There is reason, lowever, to think that its collection of eeclesinstical MSS. immensurahly surpasses my other in Europe; but it is vary dalicient in warks of modern literature, and its value can be fully appreciated only by the churchman and the antiquary. The picture gallery, which is by no means extensive, is, as compared with the collections now noticed, quite of merlern creation. The frescoes of Raphael and Miehael Auriclo, indeed, have long atorned the walls of the Vittican ; and the works of the former occupy three open galleries, called the Louyie ali Ratfarlio, which go round three sides of a square court; but the oil paintings have been collected wholly by lias VI. and subsequent pontiffs. It comprises several of the grand productions of the ltalian sehools, including. among others, the 'Transtiguration,' he Raphacl, usmally considered his shef-d'rure, and generally held to be the noblest work of art in the wordd; the 'Madoma di Foligno,' by the same master; the 'Commimion of St. Girolamo,' by Domenichine ; the 'Martyrdom of St. Selmstian, perhaps Titian's very best work, and the 'Midonima of Monte Laca,' by Ginlio Romano. 'Ihe Vatien has two chapels, the most celelorated of whin'h, known as the sivine chapul, was built by order of lope Sixtus $1 V_{.}$; its walls and ceilinut were covered during the pontifientes of Julins [J. and Jaul 111. with frescoes from the masterly hand of Michael Angelo. Ilehind the altar is the migniticent painting of the Last Judrment, the theme

'the greatest breadth ol' the stream within the walls is only atuot dan fi., amd the smallest $\mathbf{E}$ till ft ., the avorare beinig somewhat heses than one-third the brealth of the Thames at Lombon Bridge, and considerably leses than that of the clydent Ghangow, It is derper, however, tham the 'lyde, and has certainly a larger volume of' water.

## Fortlettons rapidis et mutti thavis arena <br> In mare prortumpt., <br> Virg. ENa, vill. 31.

It well merits the epithet of therns, as it is not only discolonrent, but londed with arllon mud leyomd almost may other river; and this is not the consepgence of aceidental Iloonls, for its waters are searedy ever dear, and hener, no monbt, its amient mime Albula, Its banks are low and tame, comsisting, for the most part, of erimbling soil, withont quayss anil at many phees without even protheting walls, and they are not ormamented by a single promemale or time street. There are only two places where there is a sort of quaty, or lanling-place, one called Riputtr, on the lif. bank, ubove the bridire of sit. Angelo, where loats lime the inland proses land wine and provisions, and the other at the s. ent of the city, on the opposite bank, ealleal the l'orto di Lijpit tirmule, where sea-borne vessels lami their eargroes, and whore there is a line of warehonses, and a $a$ astom-huse. Three briberes eross the river within liome; that most morthwarl is the lomte St, Angelo (ame. Poms Ailius), luilt by llitrian, and restored in its present form by Chement IX.: it is a stracture wh great heanty, having a balustrace, on the top of which are several hideunslooking ligures of angels. 'Ihe nest, proceuling sonthwaral, is the l'onto Sisto (anc. P'ons Jomienlensis), Inilt by cither Trijith or Antminns l'ins, and rebuilt hy sixtus 1 V ., in the 15 th century: About half a mite lower down is the island of San Bartolomoe, the andient Insile Tiberine, of oblong shape, nbout $1,000 \mathrm{ft}$. in lenertle, and 300 l't. in brealth, mited with the li. bank by the fonte Sill Bartolomeo (anc. Pous C'estins), innl with the W. bank and the district of Trastavere by the lonte di guattro Caji, so called from a larid of Jams Qualrifroms that formerly stom there; it is the l'ons Fabricius of antiguity, and was
we: the remains of blored miliont britges, flas
 irom the ciremostance of the trimuphal promes-
 is now entirely destrosed, but the piere of it may
 little belows the hridgo of St. Angelos. Abent hali fif the loms lahtinnas, the suost ancient bridge of Rome, is still stamding. a liew rarik loblow the ishand of sam lartolomeo, and a emonimation has been male of woul for the acemmonhtion
 lius, the most smotherly of the whl liomain bridiges, has long disappeared. The 'Tiber is now, as it was in V'rgils time, silyent to vary hight and
 us hight as the liaka ill sparna, and vers Ireguchty laying maler water all the streets in the bosy fuarior nesur the river. On the lourto di liputa nre two billars whim mark the lowitht of the slilherent thods for some remturies past, and it mplemes from it that they have all haps-
 ruary, 'lhe fremelley of thest inmalations fate rise to varions jirugects lor preventing them, and Aurelian cmaseal the banks to be ralsed and its chamalel clearea, The vast acemmalation an suil by whels the surface of monern liome is raised so many feet above the nueiont city, makes it less liable to anther from thonds mon than liormarly.

The dasstcal moxumbers of lome are very mumerons, their interest deponting on their bematy, armmbar, and singularity, their intrinsie merits, or on the events and presonages historiadly assoriated with them, 'Those who expect reatilieation from the lirst somree will, in many instames, be dis:apminteal. as the preater momber present little to please the eye or gratity the faste, 'Ihe uyneturfs, for example, those astonishimg edliots of human indastry, which streteh neross the Camphoma in varions tirections, exhibit their real greatmess mily to the moderstambing, Tos the rye, these works (ol' which there serm tor have been foneteen, comber from nine ilitherent sourtess), present merely a series of maken brick arehes, searecly larger than a hollse-thoor in span, or higher than a park-wall, athl withont any sort of ormament. Near the mounaina, and in erossing valleys, they may be lofty; bat in the vieinity of the eity they are low ami tamo: three only now remain in a state tit fir use, viz, the Aepua vergine, Aequa lelici (anc. the chmulion Alyceluct), anal the Agua Sibatila, whieh sumples the Janienlun. 'The kamam rourls, also, sulilly built of Jarge stones, may be called nerat works for their expense and utility, but they have no exterand attractions, The smone remark applios to the Clonese, of whieh a latse itea is emvereal by calling them seners. 'lhey were rather drains bimbe to carry off the shagmint water of the pestilential marshes, which mengied mole of the low grombl near the 'Viber, and the spaces between the Aventine, l'alatine, and Capitoline Ilills. They were ennstructed at a very carly porinal (aceoriling to some, in the time of the kingsi), for the obvions reason, that the marshes separated the lirst inhabited purts of the eity from eath ofher, and their desiceation became indispensable. The height and width of the Chotea mentima are equal, each measuring $18 \frac{1}{2} \mathrm{ft}$.: a view of it may be obtained at its moth, where it Hows intio the Tiber a litule below the l'unte liotto, mother portion being visible near the arch of danns Quadriltems.

The buths, as they now exist, are an asemblage of naked, hall-(lilapidated brick wall., which sur-
frise by their huge size and the extent of ground they eover. The former existence of cight therma, crected by different emperors, is known; and the carcinses of three remain in considerable masses, those of 'litus, Caracalia, mud Diocletian, the rums of the lirst two of which are in vineyards, a great part of the last having been triusformed by Wichael Angelo into the chureh and monastery of Simta Maria degli Angeli. Dach consists of a lahyrinth of apartments, the nses of some of which antiquaries have scarcely been able to conjecture. Caracalla's bathes covered an area of 2x Emplish acres, a space nearly three times the siae of Lincoln's Im Fields, in Lomion. 'lout we must keep in mind,' says Mr. Maclaren (Notes, p. 1.12 ). 'the multifarions mature of these establishments, whish included not mily haths, with their caldaria, frigidaria, and sudatoria, bat portiooes and garilens, libraries, lecture and converation romos for the philosopliers, academies and halls fir declimation, gymasia for the 'fancy' theatres for the quy, temples for the devout, and, most probably, wine shops or places of refresliment for all; in fact, they were less baths than 'places of miversal recreation,' The lioman citizen left his house carly, and only returned at night to his hed, spending the day eligety in the formm, the coorts of justice, or at the baths. The hatter establishments seem to have combined the uses ol bur coffee-honses, reading-rooms, libraries, lechure-rooms, and theatres, as well as baths. We may call them, indeed, national club-rooms, suphied with every species of accommodation then in vogue, and open to the whole free citizens of Rome. It is this circumstance which gives them their interest. We canmot tread these ghastly chambers, where no sound now falls on the ear sare the edo of our what steps, without thimking of the animated throng that once peopled them, the crowd of homan citizens of all grates and classes, from the emperor to the menticant who received his monthly dole of wheat from the public gramaries, the foreigners from every clime, princes, tax-gatherers, hostages, pethioners, litigams, soldicrs, parasites, who came to the seat of rmpire lor business or pleasure. All these mast hase resorted to the baths, some for ahlution, excrcise, or amusement, some to read in the hbraries, some to listen to the philosophers, some to talk of the news and hear bulletins read from the armies, annombing battles on the lime or Euphrates, or iasurrections in spain or (iaul.'

Among the wumerous temples that once adorned the ancient eapital of the world, the Pantheon and the temples of Vesta, Peace, Fortuna virilis, and Ihechus, present extensive and vezy interesting remaina; lint incomparably finer than all the rest is the lantheon (in the ancient Campors Martins), which, though stripped of its external oruaments, and distigured by two molern belfries, created by bornini, is entire within. This exquisite temple was built, as l'liny states (llist. Nat., lib, xxavi. eap. 15), and as the inseription on the portico testidies, by Agripha, the friend and gencral of Augustas, who dediented it to Jupiter the Avenger, Jowi uftori. It is a perfect circle, 180 llt in diameter.

> Relie of nobler days and noblest arts!
> Despoiled, yet pertect, with thy circle surends
> A holiness appeating to all hearts-
> 'Io ort a 'roctel.'

Its heanty comsists in its admirahle proportions; and its portico, 110 lt. in leggetly by 4 ft . in depth. suppurted by 16 ( 0 orinthian colamus af waite marble, hats a mox majestic aplearamee. The dome is ol great extent, and has a central apeatere, from which the building receives its
cutire light. The Pantheon has been stripped of averything that combld be taken away, in orider to furnish materials for the embellislument of st. leter's. It is now male the receptacle of monnments to those who have deserved well of their comintry, and contributed to sustain the reputation of ltaly.

The great wonder of ancient lome, however, is the Flavian amplitheatre, now the Colisemm, or more properly Colosseum, unquestionably the most aldenst r uin in the world, and by fir the largest anphitheatre of which there is any knowledge.
'Omnls Cossareo celat labor nmphitlientro, Unum pree cunctis fama loguatur ophes.'

Martina, de Spect.
It consists of a vast ellipse, the length of the longest dimmeter monarured from the outside of the onter wall being about 620 , and that of the shortest 513 ft ., so that it covers about $5 \frac{1}{4}$ limel. ateres of gromal. 'lhe longest diametor of the arena has been varionsly given at from 287 to 300 ft ., and the shortest at from 180 to 190 ft .; the space between the arena and the outer wall (from 160 to 167 ft .) being oceupied by the walls, corridors, abs: reats that rose tier above tier from the wall roand the arena, nearly to the top of the outer wall. The latter, which is about 179 ft . in height, consists of three rows of vaultel arches rising one above another, exclusive of which it hatd, when perfect, upper works of woot. This colossal abphitheatre is said to have had seats for 87,000 spectators, mol standing room for 20,01010 more. 'There is really, therefore, but litale of exaggeration in the statement of Aldison, that the amphitheatre.

And held, uncrowled, nations iu its womb.'
The arena was sufficiently extensive for the exlibition, on the grandest possible scale, of the blondy sports that delighted the aucient liomans; and here hundreds, and even thomsunds, of gladiators and of wild beasts have frequently conteraded at once.

## 'Butcher'd to make $n$ Romnin holjlay.'

This magnificent ruin has been much damaged by earthinakes, hightning, and the destroving influence of time; lut it has suffered incomparably more from the injuries inflicted upon it hy the successive masters of liome. In the 12th century it was ocenpied as a fortress; and in the course of the next century it became, what it lonis continued to be, a common yuarry, whence materials were taken to build a large portion of the modern city. In consequence of these lengthened devastations, not a single step is now remaining of ald the seats 1 stone which rose in regular succession from the arena; but the wall wheh surromided it, to prevent the escape of the wild beasts, is uarly entire. The interior presents a most comblete secue of destruction. B3 means of broken stairciases, the traveller may elimb up a considerable height, and be ahmost lost in the labyrinth of ruins. It is from such a view of these romains that the best idea of their vastness is formed; and if viewed by momilight, when the shattered fragments of stone, and the slirubs which grow upon them, are seen at a distance in alternations of light and shade, the mind receives mingled :abressions of gratitication and melancholy which, erhaps, no other praspect in the world could produce. At longlt, however, an end was put to the poliation of this most solendid rolie of imperial limme. - Benediet XIV, consecrated the siot which presecution and fible hat stalued with the blood of so

many Christian martyrs' (Gibbon, xii. 455.) strengethened portions of the existing ruin. "The pih,' says an Euglish traveller, 'speaks powerfilly to the imagination, throngh the bloody rites once celehrated in it. It was the seme of those samage figlats of ermiators, those combats of will beasts which were muknown among other andient mations, and have dixed a brand of infamy on the boman mame. The interior has been carefully cleared out, and the bommeries of the arena which was so often soaked with blood are distinetly seem. When we stand among the broken arches of this vast edilice, now the abode of hats andowh, silent as the grave, and with not a single buibling near it, our thoughts are irresistibly carried back to the thomsands of all ranks and both sexes who omee tilled its ample benches, to the roars and yells of the widd anmals lacerating each other, the shrieks of the slanghtered human beines, and the shouts of he blool-thirsty multitule now aplanting the blow which took away a fellow enature's life, anel now ealling ont for fresh victims. These cruel exhibitions were characteristit: of liome, both republican and imperial. The lireoks, wherever they establishel their power, earriel with them the elevated sentiments and gracefin mirth of the stage ; and you may trace the chominion of the Romans over the ancient world, by the amphinheatres built for the gratification oi their feromity,

The Romans, always fond of shows and games, were especially attached to those of the Circus.

## 'Duas tantum res anxius optat, <br> lanem et Circenses.' <br> Juvenal, Sat, 10, v. 81.

I'lere are said to have been at one time no fewer than 15 eirenses in the eity and its rimirnes. The primedial of which were the Citens Maximas, Cireas Agonalis. and the cirenses of Nero and Caracalla. tif the Cirens Maximus (which Ammiames Marcellimus describes as heing at ones' the temple, the dwelling-honse, the puhlic meetimg, and all the hanes of the ancient liomans') there are now no remains; but Pliny informs us that it was eapable of accommorlating 260,000 spectators; and Jurenal, using, perlaps, a poct's licence, goes the length of siyying,

## 'Totan hodic Romam Circus capit.'

The form of the Cirens Agronalis (supposed to have been built by the Jimperor Severus) may be trued in the Piaza Navona: and even the romd end is not lost: it is about 750 ft. in length; asel the races held here during the Caraival foreibly remind us of the uses to which it was formerly devoted, The Cirrus of Caracalla, outside the gate of San Sebastiam, has its walls still entire, though the seats have fallen in, leaving a kind ot terrace along the wade length on the walls. It apmears to have been 1,$6 ; 8$ It. in length, 485 jt . in width, and to have heen eapable of aceommon lating 20,000 seectators. Of the other Jioman ruins (excepting those of the Formm and Capitol), the two colnmes of Trajan and Antomine, and the three trimmpal arches of 'litus, Constantine, and severus, primeipally desorve attention, from their beanty mad the tiste displayed in their execution. The column of Traiga, erected to commenorite that emperor's successes in Dacia, is 115 it. 10 in . in heght, mot ineluding the statue of St. Peter, which Sixtus V. had the bad taste to substitute for that of its illustrioms fommer. A spiral staircase leads to the bahnstrade at the top; and the exterion is alorned wath senfotures in bassorelievo, sprally arranged round the column, representing
the victories and melievements of the emperor. Napoleon's pillar at Paris is a good imitation of that of Trajian. 'The pillar of Antonine (or, nowro correctly, of M. Aurelius, for he erectel it), ill the Piazza Cohonna, is $122 \frac{1}{2} \mathrm{ft}$. high, mul is now surmounted by a colossal statue of Ni. I'inl; the hasreliefs, similarly arringed to those on the other eolumn, are not nearly so well executed, and the whole is much injured and defaced. The arelt of litus, built to commemorate his victories over the Jews, consisting of a single arel, was alomed with cifht marble columus of the Composite order, and had its interior eovered with sculptures, representing the emperor's triumph after the capture of Jerusalem ; but it is in a state of great dilapidation, many of its rich decorations havine been earried off to embellish the Farnese and other palaces: latterly, however, some attempts have been made towards its restoration. Till the time of Sixtns JV., the bas-reliefs were not visibh, so moch had the soil accumalated and buried the arch; but that pontiff onderel it to be excavated; aud there is now a elear pasiage under it at the level of the ancient parement, and, perhaps, om the pavement itself. 'The areh of Constantine, at the loot of the Palatine IIIII, near the Colossemm, is the most nohle, becanse the best preserved structure of the kind in liome; but it is indebted for its chief beanty to the spoliation of the arch of 'Trajan, which stood in the furum of that emperor, and which the senate, with equal barbarism and servility, stripped of its bas-reliefs and other rich materials, employing them to ornament the new structure. It consists of a large arch between two of smaller size, having on cach side 4 flutel Corinthian erlamms of giallo antico supporting the figures of $\&$ bacian captive warriors. It is cuvereal with the bas-rrliofs taken from the areh of Trajian, :and with others of later date and of very inferion execution. The soil, which hal aceumulated round this areh, was exeavated in 180.I, when part of the ${ }^{\text {rian }}$ Trimmphales was brought to light. The grass-grown platform at the top was onee, probatbly, oeenpied by the victor in his trimmphal car: but this has disappearet. We have alrealy stated, that the paltry gateway in front of buekingham lalace is a wretched miniature imitation of this arch. (Lumisten's Ancient Lome, $8: 2{ }^{2}$.)
The Capitoline IIill, 'that rock of trimmph, that high phace where liome embraced her lieroes,' naturally kindles a feeling of enthusiasm: but of the topography of the ancient Capitol we really know next to nothing. 'Four temples, 15 ehtipels, 3 altars, the great rock, a fortress, a library, an athenemm, an area coverel with statues, the ellm roment-otice, all these are to be arranged on a space 400 yards in length and 200 in hrealth; and of these, the last only ean with prowision be assigued to the donble row of vaults crowied with salt, where the inseription of Catulus Wats discovered. The eitatel may be believed to have extembel along the whole side of the hill.' (ILoh)homse's Illustritions of Chilile Ilarohl.) But, however little be known of the precise pasition of these ancient buillinss, here was situated the romus ile camne straminibusque, which passed for the humse of homulus, and was preserved witla religions care till the time of the emperors: lace the lioman people celebrated their most sacred rites, and kept their trensures, archives, trophice, recurds, Sibylline books, and other valucal relies; aml here 300 conquerors, in the space of 1,000 years, reposited their spoils and emsummated thair ghories, by the framb spectacle of a trimmpla. (Marlaren, p."161.) The Romin form, however, is, perhups, the most melancholy objert within the walls of 'the eternal city.' Its former grandeur is utterly amihilated;

## liOME

the grombl has been applicd to other pmrposes, and even the exalet jwsition of its varions parts is much disjuted, though it is probable that exeavatimes. julicionsly comducted, would set the puesthen at rest. The Furmen, as desiribet hy bomsen, the l'rusiam emoy, who took great pains on its investigation, ajplears to have been of no great size (about two ateres), and to have owed mach of its magnificence to the temples, basilicer, curia, aud on her buidings that surromaded it. Sndeed it was in consegnence of its inadecplate size, that Julius Casar built a mew onc, Lusustus, Trajan, anal othor emperors, followed his example, and Lime hat ultimately a multitule of firmus. That though the ancient formm lomamm and present ( innu"u Vacino is so desolate that we might anyly to it Virgil's description of its appearance before the arrival of the Trojen setters (Eneid, viii, 36i) :-

Romanoque toro et lantis mugire Carinis,'
the classical selholar turus with more pleasure to the pages of liyron :-
'The Formm, where the inmortal aemmts glow, Amb still the elogucht air breathes, , ,mrns with' Clieco! The field af freelem, taction. tame, amb thom, Where a fromed peetices pariuns were exhated From the firat hour of empite in the but To that when further worths to compuer failed.
The formens of Angustus, Trajme and Nerva were laid the near the foot of the ("apitoline Blith, close to, thongh separated by buithings from the Formon L'omannum ; and somthward rises the l'alatine llill, on which was built that more village or collection of huts of which the masters of the workh, in the dayss of their gramene, loved tor speak as "the craclle of their empire-the acorn, whence sprung the mighty val that over:hathoved the world.' Ciecro had a honse here, and the brick ruins are still extant of the golden palace ol Nero; but at prevent this spot, which once loulget the whole thman people, is oceupied by a sugle vilha, surrombled by vinevards and gardens. All the more conspicuons monmonts above described belong to the imperial times, for scarcely a slired remains which can be referred with certanty to the ages of the liepublic. The principal exceptions are the Tultimprison, comprising two dungems, perfeetly dark, and built with hage blocks of stone, answering, in all respects, to the striking deseription given of it ly sallust (hell, Catalin. cal. iai): there are also two mucicnt tombs (me of which betonged to the Cornelian family, and contained the bones of the Scipios) ; and the Chaca Maxima illready mentioned ; but thesestructures lave little beanty, and derive their interest almost exelusively frum dassical associations.
$P^{\prime}$ 'opuletion of Ancient cond ALodern Rome.-It is extremely diflicult to arrive at any just comechains with reepect citluer to the pepulation of home, or of any other of the great eities of antiquity. ficmerally it has bex exceedingly examerated. The great actions of the dommen, the vast extent of theirempine amb the magniticence and pplenlour of the ir caphal, the original seat of their pewer, secm naturally chought to lead to the equchaion that its hop, minst have been immense. The strong national spirit of the liman writers fed even the must cantions among them twagnity the power and importane of the retrmal city, which were exaggerated beyond all bounds by oratons and preto. anxions to gain the favaur of the publie by that thing their prejudices, and exalt ing thit power and grenthess. The satments, tow, of the clatssical writers as to the fup) of Rome and other great towns, are not ouly in themselves very
vague, hal, heing extremely liable to mislakes in copying, have, nu doubt, in many instances, been magnilicel ly esplysts and others, alwass prone to exaggerate what is really great, mad of which they have podistinet knowledge. And, in addition to this, all enguiries into the pup, of liome, Athens, and other ancicut cities, are rentered peculiarly ditilienlt from the cirreumstance of the returns of the censinses, and the statements in the classieal authorities fommed on them, usinally or always referring to such free citizens only as were capabile of bearing arms, without inchuding children or slaves, though the later formed in most instimes a large, if mot the largest, portion of the polp. Varions statements have been put forth with rexpeet to the 1 pol. of Rome. The exaggerations of Vossius, Lhusins, Châtembriant, and others, who give to imperial lime 14, 5 , and 3 millions of inhals, are too absurd to deserve notice. Jhume, whe in his masterly 'Jessay on the J'opmbenstens of Ancient Nations,' has lisenssed the question of the pop, of lome with his namal learning and grow sense, arriyes at the conclusion that Rome, when in the zenith of her greathess, might have been about as pupulous as Londem in 1760; in other words, that she might then have had from oun, the to suot, w10 inhab, (iilbom estimated the pup, at
 that the mure moderate estimate of Jhune : , the more arenate, though the probatility is that even the latter is beyoulthe mark. It appears irnm the very learned and claborate researches of MI. Durean de la Malle (Bconomic l'ubligue des Lomains, liv. ii. cap. 10), that the area of lame, inchuded within the walls of Aurelian, which have been traced and laid down with the ulmost precisim, ammunts 10 very near $1,3!6 \frac{1}{2}$ hectares, that is to about 3 -joths the area of $l^{\prime}$ 'aris; and the fuir presumption in, from the numerous formons and wher open spaces in Rome, the mumber of the public buildings, and the great magritude of many of the private residences, that its pop., as comparcal with that of Paris, would be in a still less proportion. To the pop. within the walls has, however, to be added that of the subnets, the amount of which is the sabject of elanorite enquiry by the same learned critic. On the whole, he concludes, apparcatly on gool grounds, that the pop of imperial Home, including its suburls, in its most flomishing periocl, may be fairly estimated, allowing for tronps
 It is probable that this estimate is sery near the mak. And how small soever it may appear when contrasted with the statements that have been luge current as to its vast magnitude, a pop of dont,000 is really immense for a city like lhme, without either manufictures or trade, and the inhals, of "hich cliefly depended tor subsisteme on the gratuicons distribution of the corn supplied by the confuered provinces.
During the troulles that derastated Italy, and especially lime, from the 5 th to the b:ith eentury, the pup. of the city rapidy declined, and dish not exceed that of a third or imurth rate town of the present day: But from the 1/llo century it began again to incrase; and in the 'moldend daye' "if Leu $X$., it is suppensed to have amomaterl to about sab,uok. Towards the midale of the 17 th contury it was estimated at ! $!0,001$. In lima the

The liomams have, hwever, their redeming qualitiow: they are very sobler, social in their hathite, find of their childred, and chliging to strangers. 'Fhere is mo
 ease. They may dress as they perase, live as they please, and induge in all their parsomal tate tes and recentricitics. withont boing amoyed, or cren stared at. In private bolging-logises stramery often meet with much genmine and granitha kindnes. Many ol their vices may be asabrad to the opration of a lad pelitical sysicm on minds naturally arcute and active: fir fillochomd, lypuerisy. amble cralt are the natural fruits on' a guvemmernt which arnshes likerty of thenght.

The maners of the upper elaswes are modient ive of extreme indolenes. They rise late, and are never to be seen antil four in the altermom, when they take a drive up and down the Corst, which, harrow ats it is, may be termed the llyde P'ark of Rome: after which they resort to soivies bin private houses, fier the thentres are ofern omly during the cambal. To walk in Rome is quine unfaithonable, athl a carriage of some kind or other is indispensalife even to thase of the nollesse or gentry whes limited income denies them a comFortable meal. bancing, cemersation, and cardo are the chict evening anmsements; dimer partios are almost mbinown : and suppres ane only given ongreat meations. In the month at May, all the mhals. that "all attion it go to the monitry for? momblas, and again in Oetoler for the sams jeriont, the air of the c'mapugna being then parition liy the rains of A ril and soptember. On these niensous they hire a honse or bonking in one of the petty towns 10 m . or li m . from liome: aul the principal ammament during their rilleqgitutur emsists in tishing and bird mathing; the chase. in any of its furms, lacing litile folsowerg.

The publie ambements comsist of theatrical repersentations, ennerts, and religions ceremonien, with oerasionai frobse at the carnizal and other lestive seasums. Thare are there theatres, then if
 bring a great part wh the yoar; but the perform-

 the people at lage, music forms but a small pam ol their enjevome, thoug a few wantering harpers (rurcinfithri) may sometimes be fomid
trying to inspire them with the love of sweet sommes. An amphithentre (correa) lor bull-fights, tumbling, and horse riding has been formed out of an ancient masoleme of Augustus, and when open is a fivourite resort. 'The earnival wonld require some space for its description in detail: it maty le sullicient here to olserve that in its liecuse and intrigue, its unbridled mirth, and its levelling of rimk; nay, evell in the season of its celebration, it bears an obvions resemblance to the Roman saturnalia; but it appronches, perhaps, more closely to the feast of Cyhele, when, aecording to livy (xxis. e. 1.1), the richest draperies were hang from the wiodows, masquerading look place in the streets, and every one, disgnising himself as he pleased, walked about the eity in jest and hulfonery. If the historian had informed nis in addition that one of the princinal ammsements was a promivenons pelting of sugrar-pluns or chalk stones, he wonld have firmished a precise picture of the modern carnival. Religions festivals are very frequent, bint oceur oftener between Alvent and st. Peter's Dity than at other seasons. The puple celdurates mass and confers lis public lonerliction in St. l'eter's on Christmas Day, laster Day, Whit-Simday, and other festivals, on which oecasions the solemmities are mousaally grand, and attract immense crowds to the chureli.

The exhibition of the illuminated cross has been alrendy mentioned. The ilhmination of the exterior of the church is also very imposing ; the appearance of this immense building, with its dome, lantern, and cross all lighted with large paper lanterns, has a most striking and magniticent aflect, which, however, is mueh heightened whon, at a fiven sigmat, thomsamis of globes and stars of vivid rire, suddenly ifnited, as if selfkindled, blaze in a monent into one dazaling flowd of light, all over that vast strueture. Im-- mediately after the above display, on the night of St. Peter's lay, follows the Girandola, mexhitition of lireworks, from St. Angelo, which is generally admitted to be sumerior to any other of the kind in the world. These festivals cost the papal treasary abont 15,000 erowns a year.
The wretched state of literature and education in modem liome has been moticed already muler Papal States. The city las, indeed, a miversity, a college, and numerous public selogols; but they either afloral no instruction in the higher branches of literature and philosoplly, or such maly as is of the worst possilhie description. All foreign publications that might tend to expand and enlighten the public mind are risidly excluded; all native works must be sulmitted to the revision of the lienusers; and the only literary pursuits that meet with iny eneouragement are those having referFnce to antiquity and the fine arts, and even they feel the parabysis that aflects the other and nobler brameles of stuly.

Rinne las mumerons charitable institutions, the total ammal revenue of which amonnts to between suntoth and 9 mo,0to dohars, half of which comes from the papal treasury, the rest heing supplied ly endowments or voluntary contributions. lbut, however large is the number of these establishments at liome, a erreat proportion of them are of donlitful, ill-directed, and even jumicions charity. Not to speak of the fommolling loopitals, or those which offer a premium to itheness and thoughtlessucss, there are thitsen societies for giving doweries to girls on marriage, and pecuniary gilts on taking the veil ; and of 1,100 women married here in a yoar, loun) avail themselves of thene societies. There is also murls private almegiving, especially by the profe, who thas spends abeut

35,000 crowns a year. The consequare of this indisoriminate charity is sen in the mendicity, squalor, wretehedness, itleness, and want that is seen at every step in the stredts of Rome. Thare are in the city twenty-ane establishments for the diseased, insine, and comvalescent, of which eight are public and eleven private hospitals, accommowating, on the whole, about 1,1100 patients; the averase mortality is about 7 per ent. There are also eight fotanding hospitals, in which are nearly 4,000 elididren of both sexes. In fact, liome is one of the great recipients for abmuloned chilimen, bromght thither from remote provinces, amel cvell from Naples. The mortality in these hospitals is absolutely frightfal, 川pwards of 72 per cent.
Ihe eity is governed by an ecolesiantical governor and i conncil (sacri consultu) appminted ly the pope; and thongh there be a smator, or civil governor, he enjoys only the name withont its anthority; and the title has, for many vars, been enferred exelusively oni a mative of another Italian state, as it has not leom thought safe to entrust it to a lioman. The police of the city consists of abont 1,0 earabineers, somuwhat simitlar to the gelas d'ames; bat the ind ficienacy of this looly, which is said to be evon more imberile than the old town-guard of Edinburgh, is proved ly the frequent robleries and assatssimations eommitted with almost total imponity.
lione, thomgh the chice mamifueturing eity of the lapal States, has no manufiacture deserviug mach notice. The princijal are silk mal worlon goods, especially velvets, brocades lior the clarsy: and the more expensive kinds of silk goods. Hits of very good quality are made liere to the value of about 200, to0 crowns a year. 'The manufia'ture of mosaics and jewellery of an extremely varied character oeenpies a qreat number of hands, and many also are employed in making eastsor imitations of antique motels. Lathor, amd prepared slims, gloves parelment, strings for masical instruments, glue, glass lootles, are amoner the other articles manufactured in the city; but they are of no great importance, and, with the exception of works comnected with the fine arts, all the mamfactures are comducted in the most chamsy mamer. The hospital of St. Nichatel has the privilege of furnishing cloth for the apostolic palaces and she pontilical troons. None but national woul is employed in the manulacture: the spinming is done by hand, ehiefly by women in the prisoms: the warping is effected also by manal labour; and it is mate a boast that no machinery is employed where the work can be done withont it. 'The establishment has 25 looms, employs 8 80 p prsons, and probluces about 77,500 yards a year of the most costly; il not the best, cloth jroduced in Europe. Manafactures of some kind or other are carried on atso, eliefly by hand-labour, in twelve eonservatories, containing alwat 600 inmates.
A sreat discrepancy of opsiniom has prevailen with sespect to the climate of Rome. The fart, however, secms to be, that wherever the honsis are few, and the ground is mainly covered with gardens, fields, or ruins, malaria is felt during the summer montlas, though not in the same deyree as in the open country outside the walls. 'Thim is the comblition of the greater part of ancient Kome, of all the districts E . ant S . the (gurinal and Capitol, so that five of the seven hilis aro ditiar wholly or partially mhealthy. The upier part of the l'inecian Ilill, the road towards the lorta Ition and the space between the hattan of Dineletian and the l'orta sam Lorenzo, are also considered mohealthy: and there are districts of the same chat racter harlly iobabited, having a comvent lare and there, fle rest being laid out in gatdens and
vinesarils. Langare is parts, on tl amal it may which exter to the bank: malaria. I' as in most epidemic fes dirty and de: no connecti rather to the hailsits of th the city is is but freguent it seldom lir day. vinevards. West of the Tiber, the distriet of Lungara is mhealthy. 'The more densely peopled parts, on the contrary, are sulliciently lealthy; and it may he salit with truth, that mokern Rome. which extents fom the 'bitinal and the ('apitol to the banks of the 'Tiber, is frenerally free trom malaria. 'There are whealthy seasons in lame, as in most other cities, and in particular years epintemic fevers preval to a fearful extent in the dirty und densely peopled distriets; but these have no conacetion with malura, beine attributable rather to the absence of sewerage, and the filthy hathits of the lower orders. The temperature of the dity is generally mill and genial. Frosts are not frepuent, and though snow falls oceasionally, it selfom lits on the ground more than a singte day. 'The trumontana, however, a pieceingly cold N. wind, sometimes hows for days together. lanins are liequent and leavy in November and December; lat fogs are rare. In simmer the heat is olten oppressive, especially duting the prevalence of the siroco. In summer, the hour after sumset is considered the most umwholesome period of the das, and then people generally avoid exposure to the air.

Mistory,-The history of Rome, which ineludes, for many centuries, that of all the comotries washed by the Moditerranean, and, at a later prionl, that of the Western Christian chareh, is far too extensive to allow of any considerable demals here. Its fommation is hideden in the obsemrity of an age respecting which few recorts remained in the time of its historims; and the busestigations of Beaufort and Vichular have thrown much doubt on its early tratitional history. Chronologists, however, are protty woll agreed in assigning its. fonndation to lemalus, its cra, atecordins to Varro, beins 753 years in. C . Accorting to the aceomit of livy, the founder was succeeded by 6 other monarchs; and the constitution during the kingly perion was an eladice monarehy, with a king; semate, and popular assombly, the king being, at the sane time, chief magistrate, hish priest, and commander of the muy; thongh, in point of fiet, asisis election depemded on the voiee of the comitia, the 'people' were the real source of power. The senate originatly consisted of 169 members, to whom, in eourse of time, others were adhed. The eomitia comprised the burghors only, and the deerees of the senate ruquired their appoval before they became law. The Romans during this perion being successlitl in war, alded considerably to their previously contined territory. The public and private vices of 'larguinius Superbus led (ano हl0 b. c.) to the abolition of kingly government, and the establishment of the republic, under 2 consuls, ammally chosen, originally from the patricians only, but afterwarls from cither patricians or phebeians. 'The temporary ascemency of the patrician party elfected the instifution (n, c. 5 toti) of the dictatorship, by which, on extraordinary emergencies, the whole power of the state was commited to a single individual, who might aut with despotical authority. In the sequel, alter many delays, mul much opposition, ollicers called tribunes were appointed by the people, who had a rete on the proceelings of the senate, The constitution was thas founded on the principle of a distribmion of power between the aristocracy and the commonalty; and in this state it remained withont my considerable elange to the end of the Punic wars, the $\begin{aligned} \\ \text { mpire of }\end{aligned}$ lame being in the meanwhite extemted over Italy, Sicily, Corsion and Surhina, the N. coast of Atrica, and part of Span, Amil these suedesses the distimetion of patricians and phocians seched to have disal-
peared ; but the unequal distribution of the pubice lamds, or of those compured hy the arms of the repubitic, led to new, protracted, mat hoody statsgles between the paricians, who had apmenntand to themselves the lion's share of these hamis, amd the plebeians, who sought to brias about thair more equitable tivision. 'This oceationed the introduction by the later of an Amamian lab; not, however, meaning by this, as is eommonly understood, a law to interfere with or to effect inin equal distribution of private property, bat metely a law to limit the extent of the public lamde helif by individuals, and to subject them to at real and not a nominal rent. (Soe Niebohr, ii. passim.)

The listory of the intestine troubles of liome daring the long protracted contests rapereting this law, and the extension of the framehise to atl ltalian subjeets and allios of home (the hatter of Which leal to the sociat Wiar), wonld head us, into letails quite masnited to the nature of this work. It is sullirient here to state that the princifole ol representation not heing adopted in the linman constitution, it could not long survive, altor the extension of the framehise to the Italitus in general. The teliberations of the eity assemblies were henceforth liable to be controllem by an intlux of citizens from a thistance, and full seops was given for the exarcise of all sorts of cormpion and intimidation. The soldiers, too, atter they hal carried their vetorions arms beyond the Iomadaries of Italy, sradually eeased to pay their acenstomed delerence to the orders trom Rome, and began to regurd themselves rather as the servants of the generals by whom they were commanded, and to whom they looked for advantement, than of the republic. In conserpurne, , he whoke power of the state came to be engrossed hy the great military leaders: aml Mariats ant sylli, Pompey and Cenar, Man. Xntony ant Dughstus, were suceessively masters of the lioman worla. The battle of Actium (anmo b.c. 30) threw the whole power of the state into the hanls of Anfustus; and the publice, wary with intestine wass and revolutions, were ghal to enjoy tranguillits under his supremacy. The imperetor, who hat previously been morely the commander-in-edide; now begim to coneentrate all the rowers of the state in his own prason. He became, in elled, perpetnal dictator, amd held the sovervigh power free from all constitutiomal respomsihility. The senate, inded, continued to exist muler the emperors and the prevtors or jugheses retained their names; but the decrees of the fommer were recommonded, or rather thetated, hy the emperors, and the edicter of the hatter were superiseded by summary decrees called constitutiones principuin. In this state the govermment of liome remaimel about d00 vears. The succession depemed partly on the will ol the reigning emperor, who som? times appointed hiss successur, either by atopntion, or by giving him the title of Ciasar. In the event of no suceessor being mamed by the previons emperor, the risht of clection devalved on the scuate; but it was frequently usurpe:l by the army and hy the I'retorian rouards; and sometimes rival emperors were chosen by the semate and the army, or by different armies, the pretensions of the eamdidates being decided in the fied. Under such cirmmstances, and considering the degraded state of the lionan people, enervated by indolence, and corrupted ly largesses, immanity from taxes, mal indulgence in public shows, it may woll excite surprise that the empire did hut swoner fall to piecess.

Some speculative infuirers have elassed ble ciremmatance of the imperial dignty leing cherive among the camses that contributed to its dechine;
whereas it really apmeare to have been almost the only primedphe that cmabled it to survive so long. In a gowermment like that of liome, where every thing hat to be trameided directly by the emperor, a hereditary monarchy, which siphoses the "ncourronee of minorities, was ont af the question. And how unworthy soever the menas hy which some of the emberors arrived at the imporial disuity, not a few of them owed it to their subering abilit:. Nerva, 'Jrajan, the two Antonines, Severus, Aurelian, aud ofter able princes, mave new vigour to the totering fibloic, and probonged its existrone.

At the close of the eth century, the Roman dominions, which still extended from Britain on the $W$. Wo the Emphates on the b., were divided betwern llomorins and Aremlius. At thas time, ton, the harbarians, xemsible of the growing weakness of the Romans, beran to harass the empire with incessant hostilities, and ene conntry after another was lost, till at lenegh laby itself was invaded by the lloms, and shortly atterwards by
 dethromed the impotent Limmalns Augustulus, assumbl the title of rex, and tixed his residence in Ravemma. Thus foll the greatest empire of the word, exactly $1,2.2!$ voirs after jts supposed fondation liy hommhis. Odnacer gave way to 'Theodoric, king of the Ostrogoths, and during his reign lome and all laly enjoyed a perion of peace and prosperity. But the calm was only temporary ; Bolisarins, the weneral of Justinian, ama Totilit the (ostrognth, suceessively took home, which was stripped of some of its most splendid momuments. at the same time that its inhabs. were reduced to a state of wreteheluess which they had mot before experienced. Alter having become a province, or exarchate. of the Eistern empire. Comme basmed, in $\overline{7}$ t, under the dominion of the Frmase, who retaned it till the deposition of Charles le Cirus, in 857 ; after which the possession of home and Italy beame, duriner more than three centuries, the singect of contention hetween the emperors of fiermany, the numerons states into which Italy had been parcelloet, and the hishops of liome, who with the title of pope assumed a right to tempural jower. Niehohas Ill. at length ohtained from liodolph of Ilapsharg. in $12-x$, the grant of :an independent territory called the siates of the Chureh; and thas begim the soverignty of the $\}, 0 \mathrm{jes}$, which, with some intorruptions, has continued to the present day. (Further details respecting this part of lioman history will be foumd moder the head, Papal. Stares.)
ROMEFORD, a market town and pir, of Essex, in the liberty of Ilavering-atte-lbower, on the Tigh road iroin lomblon to Norwich, 13 m . ENE: Gomdon, and 14 m . Sill. Chelnasford, on the Great Eastorn railway. I'ol. of town t.:86 and of par. $6,60 \mid$ in lsiti. Area of par, $3,3+6$ arres. The town consists brincipally of a lomp wide stroet atong the high romb, having gear its centre the anarket-homse and town-hail, in which are hedr the petty sessiuns fur the liferty. The elmareh is an ancient structure consisting of a nave, chancel. and N. aisle, with a tower at the W', end. The living is a curacy sumordinate to that of llomchurd, in the patronage of New College, Oxford, value inl., besides which the curate receives an ammal? stipend of tom. The Wesleyan Methoflists and laptists have phaces of worship, with attamed Sumbiry schools; besides which there is at natiomal school, bartly endowed an. 'martly surp furted ty subseription. 'The town hats also several almishoses and benefietinus for the pors. At a little distance from lombord are eavalry haracks, erecter in 1750 , but now disused. The inhabs.
are chicfly retail deaters, or persons employed in market gardening and agriculture. The town derives its principal alvantage from its sithation on the Londan road, amd more recently fom hemg whe of the stations on the Great Easturn ralway. It is also one of the prolling plates for the S . div. of lissex, Markets, especially for calves, wall attemed, on Momays, 'Tucsdays, and Wednesdays; fair, fume ef, for cattle aind horses.

RoviNl:Y (NLW), a cinque-port. derayed lur. market town and par, of linghand, (co. Kient, lathe Shepway, partly in lib, Romme Marsh, and partly in humi. St. Martin's l'omentury, 1! m. Sil: Dover, and is m . S'E. lamdon. Srea of bor. ame par. 0,320 acres. P(1) 1,462 in 1sil1. The town, which arose out of the ruins of thd lommey, was furmerly in a eomparatively forrishine eonitition, being a considerabse satoport; lat the haven has for many years been completcly filled up. It consists at present of a bromd primeipal street crossed by one ol' inferior size, in which is the fown-hall. llonsen chicfly of forick, the markitlomse and town-hall béng modern ercetions. The church is a sparious structure, cmasisting of a mase, aisles and chancel, barly Nomman, and partly in the pointed style, with a large and emrons tower at the $W$. end: the living is in vicarage in the patronage of All Souls' Collure, Oxtord, of the nett value of 161/. a year. The Weslevan Methodists have a small chapel, abl thore are 2 Sumday sehools, besides a free school and almshousers. The indabitanto, with a few exceptions, arre ampoyed in grazing eattle un Rommey Mard, a rich tract of land, extending abont $7 \mathrm{~m} . N$. and $\mathbb{W}$. from the town, ind comb prising abont 47,100 acres, with a pelp. of $\overline{3}, 70 \mathrm{x}$ in 18til. This traet is defended from the emeroachments of the sea by an immense embankinent called Dymelorel Wall, along which is a momal road for carriages: this sea-wall is kept in repair by a rate levied on the proprictors of the marnh. The sheep depastured here furnish long combing wow.

New Rommey is a bor. by prescription, and returned 2 mems. to the If. if C. from the reign of Edward III. down to the Reform Aet, by whid it was disfranehised. It was not eonsidered of sufficient importance to be incladed in the provisions of the Dusicipal lioform Aet; but it still retaius ecrtain privilenes reserved in that act for the Cimgue lorts. Old lammer, 2 m . W, the town, has now ouly a few homses surromding the ehureh, with a fop. ol lol in 1861.

ROMOMANTIN. a town of France, dip. Loire-et-Cher. (alle arromad., on the Siculre (a tributary of the Loire), where it receives the Marantin, wh
 formerly the cap, of sologne, and was embellished by Frameis 1 . It hats an old castle, a spacions prisom, a theare. enurts of origimal jurisdiction and commeree, and some manufactures of woollen stuths and yarn. Lomoramtin was taken by bilward the Batek Prince in b:iti. Cambon ajpear to have been used in the siege : lat this, thmen ohe if the arliost, is mot, in has hern alleged, by ans means the first accasion on which they were su employed. But it is hetter known in history bey giving its name to the edict of $\frac{1}{}$ (in) , drawn ij) ! the chancelhor l'thopitat, which gave to bishops, rad tomk away from the parliaments, the power to try enses of heres.s. It is sald that the damedher consented to this ediet only to avoid a still greater evil. the extablishment of the laguisition.

 divided into Romsey-lixtra and lufra, 9,310 aeres, The town, which consists al iefly of at lung ann! wide street, erossed by another at right nuges.a, covers a considerable extent of gromm. It hais an audit-honse, with a market-place beneath, and an oll town-hall, in which petty sessions are beld; bot by far the most remarkable public builinig is the parr. churel. This interesting editice is almost the only remaining portion of an aboer said to have been foumbed here by lidward the Elider. The present structure appears, however, to late from the begiming of the leth century, and it is one of the most complete Anglo-Norman hoontmonts in the kinglom. 'It is a cruss elureh, with a low massive tower; the genoral exterior apmenrance is Norman, of very good character, and much of it maitered. 'The W. end is early Furlish. very plain outside, and its details accommodated to the Norman part; but the inside of this W. portion is a very tine speeimen of the early Einglish, rich rather by eomposition than minate ormament. The central portion and the transepts, with the sides of the eloancel, are Norman, showing varions singularitios and mixtures of pointel and rombl arehes.' (lickman, diotli. Areh., p. 17it.) This church has a tine high altar, much good tracery, and stained glass; and a curions peenliarity is, that a large fruit-bearing apple-tree grows from its roof. 'lle I'reshyterians have a meeting-luonse in lomsey, and it has an alonsdomse, a charity school for 30 buys, and a free schoom. Ilve corporation are trustees for several charities which, with the affairs of the bor, gene-rally- appear to have been well managed. 'The corperation consists of a mayor, 6 aldermen, and 12 capital burgesses.

Sir William Petty, one of the most extraordinary men of his time, wals a notive of Romsey, where his father carried on the husiness of a chothier. He received his carly edncation in the grammar school of his mative town. Aftor his death. on the 16 th December, $165 \times 7$, his remains were deposited in the par. chureh under a platio stone inseribed with his name.

RONDA, a city of Spain, in Andalusia, prov. Granala, on the Cinadiaro, 40 ml . W. by N. Mahasa, and 48 m , NNE. Gibraltar. Pop. 19,$3 ; 3+$ in 1857. The situation of the eity is peculiar, being built in lofty rocks beetling over the river, across which, at an clevation of 200 ft . above the surface, are thrown two liridges, one of which consists of a siugle areh, 110 ft . in span, and surmomited ly mother bridge of three arches, at a much greater elevation. A thiril bridge crosses the stream somewhat above the town. The river is wholly unnavigable, and several cascades are formed close to the city. One portion, ealled the Old City, overhangs the s., elitf. and is encircien by an old emlattled wall, built by the saracens, anm flameal hy extensive ontworks, while the more whely spread hildings on the opposite bank bear the name of El Wercudillo, or New Town. Within the fortifications stabds the royal palace of AbonMelie, the Moe- now a vast heap of ruins. The only entrance in the city is through a suceession of gates, leading to a long and narrow, but tolerably strilight street, ruming N. and N. for about ${ }_{3}^{3} \mathrm{~m}$. to the upper or new bridge. This street is lined with handsome slops, and from it lead ofl both right and left numerous alleys, communirating with fitle courts and erowked passages, all of which, however, are lined with remarkably good henses. In fact siys Capt. Seot ${ }^{+}$(Limula and Gramala, i. 103), this labyrinth is the Mayfar of Vol. IV.

Ronda, the aristoeratic location of all the IFidnhume ol' the provinee, who, prond af the little pistall of land won by the swords of their fordiathers fiom the aceursed Mosloms, would as som think of donying the indallibitity of the jupe ats of taking up their abole among the morenntile inhabitants of the mushroom suburl, which, however, is bevomal all comparison, the most agreeable phace of residence.' The prinejpal streets of the Now Town are wide and tolerably straight: it contains some tine open phazes; and althonfrla the houses are thas more exposed to the sum, they enjoy a freer cirenlation of air. The absence of an entosing wall tends also, in point of cuoluess, to give the Mercalidlo an advantage over the eity. It is nuarly as dibient of aproach, however, and as incapable of expansion as the walled city itself, for alinls bomal it on threc silles, leaving the acoess free ouly on its S. side. The city has few public builuings except its chmrehes, which are mumerons, and gandily titted up; but they have neither paintings nor statuary of any merit. The New Town romprises a small, but commotions theatre, the stables of the Rect Maestranze (or corporation of nobility for breeding horses), and the P'lazt de los Toros, it circular eosered building of stone, one of the handsoment in Spain, and eapable of accommonating 10,000 spectators.

The inhabitants of Ronda are prineipally empoyed in agrienltural and horticultural pursuits, though there are several manfactories of coarse woollen cloths amd hats, two or three tameries, and mumerous water-mills. It is a place also of eonsiderable commerce; its secluled, imul, at the same time, central situation, making it a convenient depôt for smaggled goods, in which, indeed, the present trade of spain mostly consists. A very large tair is ammally heled here in May for cattle, horses, sheep, and general goods: it colleets an astonishing concourse of people from all parts of the comintry, and otlers an excellent opportunity for observing the costumes and shates of charactir peculiar to the inlabs. of the ditlerent provinees. The wrighbourhood is extremely pieturesque, and prodnces an abmalance of wine, oil, and com, as Well as the fruits and vegretables peenliar to a more N. climate. Cattle graze in large herils on the plains, and the hills abomod with many varictios of game, inchuding deer and wild boars. About 3 m . Sli. of Ronda is the singular momitain, called Cresta de Gallo, consisting of two parallel ridges joined at the bottom, one rell, the other white; both of then possess mineral riches, which, waler a better system ol national ceonomy, might probably be turned to sood acconnt.
lionda has brea supposel, thongh perbaps with little foumation, to owe its origin to the limans. Nothing certain, however, is known respecting it prior to the domination of the Moors, wha male it one of their prineipal strongholds. In litis1 it became the court residence of Shom-Mclic, son ut the emperor of Fez, who erected the eastle ame fortifieations. It was tinally taken from the Moors by Ferdinand of Castile in $14 \times \tilde{5}$.

RONCOMMON, an inland co of Ireame prow Commaght, having N. Leitrim and Sligo, le, anil SE. Longforl, Westmeath, aad King's County, from which it is separated by the shamon, stir and W. dalway, from which it is separated by the Suck, and Mayo. Area, 5x1,107 arres, of which 181,063 are bug and monntan, and $2 \cdot 4,787$ waltor. There are some monntainons tracts in the N. part: of the co., and elsewhere; but, seaking ceneralls, its surface is marly hat, exhibiting. for the most part, eithe green liededs or bogs. sulstratumprincipally lime "mese. l'astures onast luxuriant, Stone fences, so common in Scothad, are in Inelame nearly
peculiar to this co. Estates very large: many of them, however, are let on perpetual leases, the holders of some of which form an intermediate class betweris the great proprictors and the oecupiers. A large proportion of land in pasture; bot latterly tillage has been rapidly extending. Several improvements have been intronduced both in the plan of husbandry, and in the lastruments employed in carrying it on. Tillage farms generally simull. Onts and potatoes prineipal crops, but wheat is now rather extensively cultivated. A good deal of work is done by the boy, a species of spale. Cattle, long-lorned; slicep, long-woolled; both breeda goon ; few dairies. some new eottages, on a few estates, are neat and comfortable, but the great majority contime to be as had as possible. The same may be said of the farm buildiugs. There are veins of coal and ironstone in the N . parts of the eo., to the W. of lough Allen. These had been occasinally wrought to some extent for a eonsiderable period, hut in general to the henvy loss of those by whom the works were carried on. It was, however, contended that this happened from the want of eapital, or want of skill out the part of those employed, and the most exaguerated mid delusive aneomits were, at the same time, published of the value of the mines. At length, during the year $1 \mathbf{N}_{2} 5$, three companies wero formed for working the coal and iron mines at Arigna and other phaces in this eo. One of these, after examining the gronnd, prodently declined proeeding any farther ; the energies of another were paralysed by the fraud, jobbing, and mismanagenment of some of its directors and agents; and the third (the lrish Mining Company), an enterprising and well-eonduetel association, ultimately abandoned the undertaking, their collieries having proved, if not absolntely worthless, not worth the cost of working them. The linen manfacture was at one time pretty extensively diffused over the eo, but it has latterly very mueh fallen off. Being washed throughout its whole extent ly the Shannon, few lrish cos. have grater facilities than Roseommon for the casy and convenient disposal of their prolucts. It is divided into 6 bronies and 56 paishes, and sends 2 members to the Ilouse of Commons, both for the eo. liegistered electors. 3,650) in 18ti5. Irincipal towns, Roscommon and Elphin. At the census of $180 i 1$, the comuty had $2 x, 215$ inhab. houses, 29,766 fmmilies, and 107.272 inlabitants; while in 18.11 the county lian 44,087 inhabited houses, 46,387 families, and 253,591 inhabitants.

Rosconnon, an inland town of Ircland, prov. Commangh, cap, of the above co., 6 m . W. from Lough Ree, and 78 m . W. by N. Dublin, on the Midland Great Western railway. Pop, 2,699 in 1861. The town has a par. church, a Rom. Catholie chapel, a public school, a market house, a cavalry barrack, an extensive modern co. pourt house and gaol, and an intimmary. haces are anmually held in the vicinity. Uimer a charter of James I., in 1612, the corporation, which consisted of a sovercign, 12 burgesses, and a commonalty, returned 2 mems. to the lrish 11, of C. till the Union, when it was disfranchised. It prineipally oceupies the N. slope of a gently rising hill; but it is straggling, ill-built, and poor, its hovels stretching along the prineipal lines of road by which it is approached. Latterly, however, it has been somewhat improved. In summer, it suffers from a deticicuey of water. A manor court holds pleas for debts to the amount of 111 . The co, assizes are held here; as are general sessions twice a year, and petty sessions every Monday. It is a constahulary station, and has manufactures of cearse woolions, linens, and brown puttery, for the suplly of the
immediate neighbourhood. The trade in corn is inereasing. Markets on Saturdays; fairs on WhitMonday and ith leecmber.
'The ruins of an ohd Dominican abley, fommed in 125-, have a tine momment of its fominter, one of the C'Comor family. llere, also, are the remains of a tine old castle, built by the Luglish soon after their entry into this part of the co. The town, and a considerable contignous estate, which has hithorto been much neglected, are the projerty of the liarl of lissex.
liosC'REA, a town of Ireland, prov, Munstor, near the NW. extremity of the co. 'lipperary; tinely situated between the sliebh-lhoom and Devils-bit ranges of hills, on a brameh of the lesser Hrosma, 40 m. NE. Limerick. 1'op, 3,543 in $1 \times 111$. The town is of great antiquity, having heen mate the seat of a bishopric in the 6th eentury, united to Killaloe in the 12th. Some remains of the old cathedral may still be seen in the W. front of the par, church; it has also a tine stone cross, a pillar tower, an odd eastle built by the Ormome family, and the ruins of a Francisean monastery. The town is irregularly built. Amongr the public buildings are the par. chureh, a Rom. Cathotic ehapel, meeting-honses for Qwakers and Methodists, a school on the foumdation of Erasinoss Smith, a fever hospital, eholera hospital, and dispensary; market-honse, bridewell, and barrack. A manor court, which holis pleas, to the extent of 101 . Irish, sits monthly; petty sessions are held on Mondays. It is a constabulary station. It manufactures coarse woollens, has several flour mills, two tanyaris, two hreweries and a distillery, and carries on a very extensise trate in grain; its retail trade is also considerable, the surromding comentry having a more than usual number of resident gentry: Markets on Mondnys and Thmrsilays; fiirs on 25th Mareh, 7th May, 21st June, 8th August, 9th October, and 29th November.
liOsE'T'S, or ROSSE'TYA (Arab. Rashid), a town and sea-port of Lower Eyypt, on the W. brmeh of the Nile (the ane. Bolbitine mouth), near its embouchure, 36 m . ENE. Alexamtria. Down to a late period, it was one of the most important commercial towns in the conntry, and had a pop. estimated to amount to about 25,000 ; but since the opening of the Mahmoulich eanal from Alexamdria to the Nile, Rosetta has sunk into comparative insignilieance; its pop. has dwindled down to about 4,000), and the principal traffic consists in the removal to Alexandria of the brieks, and other materials, of its buiddings. It was principally constructed of red briek, plastered over and whitiwashed. As elsewhere in the East, the streetsare narrow, and the upper stories project, so as frequently to meet. Upon the whole, however, liosetta is neater than many oriental towns, and its situation in the midst of date, banana, and orange groves, is distinguished for beauty. The inhals, are principally occupied in the rice, cotton, saileloth, and leather thetories established by the Pacha, at a wretchedly low rate of wages. There are now no resident merchants in Rosetta, and its shipping, which was formerly considerable, is reduced to a few boats. The port, thongh tolerably secure within, is diflieult of entrance, there being a shifting bar at the month of the river, which can only be passed with safety during favourable winds, and at certain times of tide

Rosetta is famed for the supposed salubrity of its air, which attracts visitors thither during the summer and autumn months. It was fouded by one of the ealiphs abont 870, near the site of the anc. Bolhitinum, but has no antiquities of its own. Here was diseovered the famons trilingme tablet, called the 'liosetia stone' to which we are

HoSS and CROMAISTY, two cos, of Sootland, in the Hightands, forming together an matime distriat of great extent, stretchimp quite across the ishand, and inchading lewis, in the Hebrides, These ens., though in some resprets distinct, are mited under one sheritt, and Cromarty being a smath co, consisting of several detached portions, most of which are wholly surrounded by parts of Rows, they may be most conreniently noticed mader one head. They are bounded N. by the co. of Sutherland, E. by the Frithe of Dornoch and Moray, S. by Inverness, and W. by the Atlantic. Aren, $1,90 \cdot 4,000$ acres, of which $1,53 \%, 800$ are mainland, and 375,200 islands; the freshwater lakes cover a space of 44,800 acres on the mainland, nud of $1: 2,800$ in the islants. The E. parts of the frov., eonsisting of the districts called the Black INle, or the l'eninsula, hetween the Beanly and Moray Friths, the Frith of C'romarty; and Easter Ross, or the I'enmsula, between the liriths of ('romarty and 1)ornock, are eomparatively that and fortile. Bastor lhoss has a consilerable extent of chayev loam, and of light sandy soit. The soil of the Bhack lsle is very various; mosh of it is poor, but the celtivated prortion consists principally of elayey bam, grool black mould, and sandy loam, In Strathpeffer, and the comntry romid Dingwall, the soil is clayey; hat with theso exceptions the rest of the co. is with, dreary, ruged, and mountainous, interspersed with lakes, and narrow glens, that abloril pasture for sheep and black cattle, Estates, for the most part, very large; but there are several that are not of much value. Farms of all sizes; hat the number of small oceunancies, though still very considerable, is much diminished. Native breed of cattle hardy, compact, and weld suited to the country; but in the W. parts of the eo., the Skye and Argyleshire breeds, or one closely allied to them, are most prevalent. Cattle were formerly much more abundant than at present. Sineep-farming has, for many years past, engrossed simost the whole attention of the principal farmers and improvers; so that, besides a decrease in the mumber, it is also said that the breed of catele has deteriorated. 'This, however, has been denied by others: and, at all events, the banefnl practice of overstocking is no longer carried to any thing like the extent to which it was formerly practised in this, as well as in other Highland cos. At no very distant period, oxen were extensively employed in field-labour; but they are no longer used for this purpose. All sorts of improvements, both in breedong and eropping, have been tried by the principal proprictors, and by many inteligent and enterprising sheep farmers that have immigrated thither from the S. Most part of Easter Ross, great part of the Black Isle, with the country round I)ingwall, and along the NW. shore of the lumer Frith of Cromarty, now ranks with the finest districts of Scothand. It is traversed in every direction by excellent roads, is well fenced, and has a more tham usual number of seats and plantations. Agriculture has been womderfully improved; and the crops of wheat and turnips are at present nowise inferior to those in the more S. cos. But exclusive of these districts, a great extent of mountainous comery is still ocenpied by the old Hightand tenantry. These are a brave and hardy race; b: joor, and withont either enterprise or industry. They oceupy the straths or valleys between the monintains, and along the banks of the rivers, which in some places are so thickly tenanted, that there is a family for every seoteli acre of arabla. land. On this they raive oats, bear, or biges (a phecies of barley), and potatoes; frepuently chlti-
yating the ground with a erooked spacle (easchrom) insteal af a plough. The mode of ploughing, which was formerly generni over the whole comatry, and which is still practised hy the smather thants. is barbarons in the extreme. 'The smaller temants uniformly possess a eousiderable extent of prazinir gromind, which is commonly contignous to, but sometimes at a considerable distance from, their arable possession. 'Their huts are for the most part wretehed; few of them have either chimners or wimbows they prefor, indend, living in the midst of smoke and lith; and in winter, the eattle are gencrably housed under the same roof witle the family. Bixept for a few months, when sowing or reaping their crops, preparing ant saving their fuel, the grenter part of their time is spent in the pursuit of game, in tishing, or in idleness.

The co, of Ross, at the rensus of IN6I, had a poj, of 81,406 , living in $15,72 x$ inhab. houses. Cromarty, in $1 \times 61$, hatit a pop. of 81,406, in $16,7 \pm 8$ honses. Hegistered electors, at the fenerat elecfiom of 1865, for lioss, xsis; and for Cromarty, 48. The old valued rent was $6,60 \mathrm{~s}$. for Ross, and 1,07.1/ for Cromarty ; and the new valuation, for | 8 til-6í, was 193,0681 . for lioss, and 8,1781 . for tromarty.
liosti, a town and par. of England, co. I Ierefuril, huml. Graytree, on the Wye, 15 m . W. by S . (iloneester. Area of par. 3,5 io aeres. lop. of par, $4,3 \cdot 1 \mathrm{i}$ in 1861 . The town is fincly situated on an eminence above the river, but its strects are stecep, rongh, and narrow. The chureh, in a conspichous situation, has a lofty spire, and is partly in the perpendienlar style, bit it has been injured by alterations and repnirs. 'The living, a rectory and viearage, vested in the patronage of the bishop of Ilereforl, is one of the best in the co., being worth $1,28 \mathrm{H}$, a year, nett income. There is a market-honse, two charity sehools, and an almsbunse. In Camden's time lioss was celebrated for its entlery and its cyder; the former, however, has entirely disappeared, but it contimes to be distinguished by the excellence of the cyder made in its vicinity. It is governed by a scrjeant and four constables. Market on Thursday.

The 'Man of lioss,' immortalised by Pope (Moral Essays, iii. lin. 250), was a Mir. John Kyrle, a native of the town, where he died in 1794 , at the age of 84 . The splendid enloginm of the poet did not really go beyond Kyrle's merits. He expented his time and income in promoting objects of public utility and benevolence, by which the town continues to be benefited. Ilis portrait is still preserved in his honse, now an inn, near the entrance of the road from Gloncester.

ROSLIN, an inconsiderable village of Scotland, co. Mid-Lothian, near the N. Esk, 7 m . S. by E. lidinburgh. It is remarkable only for the ruins of its castle and clapel, and for the fine scenery along the river. The ruins of the castle, the extent and magnitude of which sufficiently evince its former strength and importance, stand on a peninsulated rock, aceessible only by a lofty bridge. The ara of its fommlation is uncertain, It was for a lengthencd period the residence of the St. Clairs, earls of Orkney and Caithness, some of whom lived here in almost regal splendonr. It was taken and barnt by the English, nuder the liarl of Hertfori, in 154t. The chajel of Roslin, at some little distance from the castle, is the most exquisite suecimen of the slorid Gothic in Scotland, and is in good preservation, having escaped, with comparatively little iujury, the iconoelastic ravages of the lieformers. it was fonnded in 1445 , The inside is 69 ft . in length, 34 in breadth, and 40 in licight, supurted by two rows of elastered pillars, about 8 ft . in height,

## ROTHERIAM

with an aisle on each mide. The arches are SaxoGothic, mud are extemed across the side aisles; but the centre of the chareh is one continued urelt, divided into compurthants, ant dhely soulptured. The eapitals of the pillars are enriedied with follage, and n variety of tigures, most elaborately and minutely cut.

The larls of Orkney and Roslin were interred in a vault below the thoor of the chapel; and it is a curious fact, that down almont to the arra of the revolution they were buried. not in eollins, hat in eomplete suits of armonr. 'I'his circumstance has heenn slhuded to by feott, in lis tine ballad of ' Rosabelle, in the 'Lay of the Last Minstrel.'

The fren in which the lisk rons from Roslin to laswade is mostly barrow; las in parts hight, precipitons, rocky, and well-wooled banks, and is celebrated for its romantic scenery. A little below Roslin, on the opposite side of the river, is Hawthornden, the sent of Drummond, the contempormry and friend of Ben Jonson, mand one of the best poets of lis agre. The house stands on the brink of a precipice, overlanging the river, aut, with the estate, is now in the possession of the descendants of the poet. Below the homse are extensive caves, or apartments cut in the sandstone rock.

HOSSBACH, a village of Prussian Saxony, 16 m. S. Halle, celehrited in modem history for its being the scene of the great victory gained on the oth of November, 1757, by Firederiek the Great, with little loss to his own forces, over the French and Imperialists.

ROSTOCK, a commercial city and sen-port of N. Germasy, being the largest town, though not the cap. of the grand dinchy of MecklenburgSchwerin, on the Warnow, ! m, above its month in the Baltic, and $40 \mathrm{~m} . \mathrm{NE}$. Schwerin, with which it is connected by railway. l'up. 26,396 in 1862. The town is surrounted with old walls and divided into three parts, the old, middle, and new town. It has several suburbs, which, with the city, are built in an old-fashioned style. It Jas a ducal palare, numerous churches, a convent, two hospitals, a town-hall, and theatre. The church of St. Mary's is interesting from its having a monument in homour of Grotius, the ilhnstrious auther of the treatise 'De Jure Belli et l'acis,' one of the greatest men of motern times, who expired here on the 28 th of August, 1645 , far from his family and friends, an exile from his country. In one of the squares, thence called Blacher's I'latz, is a statue of the celebrated Prussian general, Blucher, who was a native of the town. The university of Rostock, one of the oldest in Germany, was founded in 1419. It has 4 professors of theolory, 5 of jurisprudenc:, 5 of medicine, and 10 of plilosophy; besides 3 extraordinary professors, and 10 private teachers, having attached to it a library of 45.000 printed volumes, theological and other anxiliary schools, an anatomical theatre, laburatory, botanic garlen, and various scientitic collections. It is, however, but poorly attended, having on an average less than 100 pupils. Rostock has a socicty of matural history, and other learned associations, and a commercial institute. It is one of the most active manufacturing towns in N. Germany, having numerous woollen factories, breweries and distilleries, vinegar and soap-vorks. Rostock has a pretty extensive trade. The exports consist chictly of good red whent, baricy, pease, rapeseed, and a few vats; with wool, rags of a very superior quality, oil cake, rape oil, bones, tlax, horses, cattle, and provisions. The average export of all kinds of grain may be taken at from aboht 115,000 to 130,000 qrs. a year, and the total value of all sorts of
exports may be estimatel at alont $2 \times 0,0001$. The Imports consist of eolomini problucts, spives, whes, nud mamifatured foods. There belong to the port nearly 200 vessels of from 150 to 2.50 tolles, which truile with most fiuropecha mations, the U. States, mind lirazil. The mitport of liostock is Warnemuade, at the month of the Warnow. There is a good pier, the depth of water at which is from 12 ft . to 14 ft . The depth of water in the river from Warnemminde up to liostock is msatly from 8 ft . 10 ( $\mathrm{ft} . \mathrm{s}$ so that vessely drowing there than this nust be lightened to get up the latter. The eommercial weights here wre the same as at Hamburg.

Liostock having been formerly one of the Jamso Towns, had, lior a lengethened period, and till Intely, some exchsive privileges. Its vessuls bore the thag, not of the grand dachy, bint of the city of hostnck; and it had its own separnte jurisdiction, independent of the rest of Mecklenhurg; appeals from its tribunals being carried to the central court at Lubeck. But it has now only a court of secondary juristliction, with appeal to the tribmal at I'arelim; and itsother privileges have been rither eurtailed or abohsherd.

ROSTOFF, a town of Luropen linssia, on the Itom, about 22 miles above where it fulls into the Sen of Azofl. Pop. 9,598 in 1858 . Tlis and the contiguons town of Nakhithevan are the primoipal entrepots of the trade of the vast coluntries traversed by the Don. The inhals, of the latter are the more commercial, but Rostoff would seem to enjoy the specinl favour of the goverilment, the clepots of provisions for the army, the fortresses of the Chbuasns, and of the eastern conast of the llack Sea, beinf established in it. The fort St. Dimitri, near the town, is a depot fior the munitions of war required by the above-mentioned places. During the proper season there is a great deal of bustle and activity both hore and at Nakhitehovan.

ROTILEN BULAG, a town of Havaria, circ. Midde Franconia, eap. distr., near the 'Tamber, 40 m. W. Nuremburg. Pop. 5,949 in 1861 . The town is beantifully situated, but irregularly laid oui, and has fow editices worth notice. It was anciently a free city of the empire, and is surrounded by old walls flanked with numerons towers. It has manufactures of woollen stulls, and an aetive trade in corn and eattle.

ROTIEERIIAM, a manufacturiug town, par., and townshp of England, W. riding co. York, liberty of Hallamshire, wap. Straffurth and 'Tickhill, on the Don, crossed here by a handsome stome bridge, and elose to its junction with the Rother, 6 m . ENE. Sheflich, and 142 m . NNE. London. Aren of par. (comprising eight townships), 12,510; do. of township, 2,140 acres. Prp, of town, 7,598 in 1861. The town, partly in a valley, and partly on the sides of two steep hills, has several steep, narrow, and irregular streets, lined with indif-ferently-built stone houses. liecently, however, great improvements have been made, the streets having been widened, new honses built, and grts generally introduced. The court-house, ganl, market-house, and public library, are handsome motern buildings. The chureh (elisetly built ly Archtishop Rotherham, in the 15th century, and by him rendercd collegiate) is a large crucitorm structure of perpendicular arehitecture, with a central tower and spire fully enriched with pinnels, canopies, and crockets: 'On the whole,' siys Mr. IBritton, 'this is one of the finest par, churehe's in the N, of lingland, and deserves the most attentive exnmination, bohl as to its composition :in! most of its letails.' (Arch., p. 27.t.) 'The living, a viearure in the gift of Lord Iloward of

The town has a liom. Caph, chapel, mod pheere of worvipe for V'esley an and I'rimitive Methorlists, matists, and Unitarians: bosides which, there is at Marshorough, on the other side of the river, an ludepement chapal, with an attached academy fir the edueation of yomes men intended for the ministry belonging to that elass of dissentirs. There are seven Sumay seluols, a Lancasterim selhow for 100 chilifren of both sexes, two endowed charity schools, and a grammar school, fumded in list, slenderly endowed, but eonferring certain advantages on its pupils at the Emglish universities. $A$ dispensary was entablished in anth; and there are almshonses for poor inmarried females. An ecclesiantical college, fomided here at the close of the loth eentury, was sup)pressed by lidward VI.; a part of tho building is how used as an inm.
Rotherham, from its position in the middle of a district abomding with irom and conl, has long becn distinguished for its manolactures of castiron: and for some time during the American and Frouch wars it almost exclosively supplied the navy with common. 'The irnin-work for Smmerlami, Soththwark, and other hridges, was also east here. The manufacture is still earried on with grent vigour, new establishments have sprung up, and at present fenders, engine-work, and every variety of hardware, are manufactured on an extemsive scale. Glass, starch, maphthn, and soap, are also produced, and there are extensive porter breweries. The town enjoys freat liacilities for the transport of its mannfactured prolnce. The Iton was made navigable to Tinsley, above the town, in 1720, and is aceessible to Rotherham for vessels of 5 t) tons. $A$ railway to Shetheld was opened in 1838 , and the North Midland railway passes close ro the town. The distance by railway o london is 171 m . Large markets for corn and cattle on Monday; fairs, Whit-Nonday and Dee. 11. The town has no regularly coustituted municipal anthority; but a body chosen by the inhabs., called ' the feothees of the common laind of Rotherham,' employ the proceeds of eertain rents for the improvement of the town. The midsummer quarter sessions for the W. riding, and weekly petty sessions, are held here by the co, magistrates, and it has a county-court. It is, also, the chief place of a poor-law mion.

ROTlllesAy, a royal bor, and sea-port of Scotland, co. Bute, of which it is the cap., at the head of a beautiful bay on the E. side of the island, 30 m . W. by S. Glasgow. Pop. 7,122 in 1861. Port Banatyne, a favourite sea-bathing residence, is $2 \frac{1}{\mathrm{~m}}$. NW. liothesay. Being protected on the land side by surromnding hills, mud towards the sea by the opposite const of Argyle, only 3 m . distant, Rothesay has a very milil elimate, and is mueh resortel to by sea-bathers, as well as by mailits. Exelusive of its castle, the principal mublic buildings are the town-hall and comety louilding, in the eastellated form, with an elegant twwer; two places of worship connected with the established, and two with the free church; and chapels belonging to the Associate Synod, Independents, and lepiseopalians. The parish ehureh is situated $\frac{1}{2} \mathrm{ml}$., and Mount Stuart, the seat of the Marquis of Bute, $3 \frac{1}{2} \mathrm{~m}$, S . from the town. The means of elucation are mole Here, also, is a subscription library, with two reading-rooms, varous friendy societies and charitable associations, three branch banks, and a savings' bank. The cotton manuficture has been introduced;
and the cotton mills empluy above 400 hands. Hat the thations may be said to be the most impritat, as well as the oldest, hrmeh of himsiness carried on. 'The salmon fishery ahtains to a limited extent, as also that of hadibuks, whitmgs, and soles. But the herring tishory is more extenslve than all these together. The lislury, how ever, is not carrisel on in the Bay of lathenay; or if so, only in a small demree; it centres chietly in the kyles (ntraits) of lines, and the aljacent sultwater lakes; but it is primeinally armed on with
 exclusive of stemmers, belonif to the port. There are two small tuilding-yards.

The castle of Rothesay, a noble rum, is of great antipuity. It was at one time a favourite ruyal residenee, and liobrert III. expired in it in 190\%. Jahn, liarl of Bate, the favomrite of fearge Ill. and Mathew Stewart, the mathematician, father of I Mgald Stewart, were both matives of this bor. l'revinasly to 1832, it joined with other bors. in sending one mem, to the II. of C. ; but it is now merged in the co. representation,

LOTVILRDAN, a velehrated emmercial city of the Netherlmily, being, in puint of fop. anil importanee, the second in the kingolom, provis. llollamd, cap. arromi., on the N. bank of thas Mas, where it as joined by the liotte, whence its mane, 17 m . (direet distance) from its month, aml :Bi m. SSW. Amsteriam, with which it is collnected by railway. lop. 110, $22 x$ in $1 \times 133$. The shape of the city is triangular, the base of the trimgle extending along the river. It is surrommed by a mont, and, like every other loutel town, is intersected by mumerons canals, inly ne public thoroughfare, the Iligh Street, behgr without a cunal in its centre. 'The street, which rims in a direct line E. and W. through the city, is somewhat raised above the rest, being built pon the dam by which the Mats is prevented from immatang the conutry behind the town. Being the principal seat of retail commerce, it is lined with shops throughont. Liotterdam has a striking appearance from the river.
The flue quay, called the Boomptjes, from the rows of trees with which it is planted, extends along the river for nearly a mile : behind the trees is a line of well-built hoises, four or tive stories in height, mostly of tark-eoloured lorick, and having an aspect of much grandenr. The quay being crowded with shipping, this part of the city is the great seat of business, and presents a seene of incessant activity, 'In penctrating through the town from the lloomptjes,' says a reeent traveller, - we come to strect alter street, ench having a canal in the middle, lined with trees on both sides, and exhibiting a mixture of lofty gable fronts of houses, trees, and masts of shipling. The canals. or havens, streteh lengthwise and crosswise, like the meshes of a net, through the eity; and at, every short interval is perceived a drawbridiee of white painted wood, constructed with ponderons balanciug beams overhead, and raised by means of chains for the passage of vessels. The ground bencath the trees is paved with small y ellow bricks, and is chiefly occupied as quays for the lamding of goods. The space from the trees to near the houses is paved in the usual coarse manner for carts and carriages, and here the foot passencers are generally obliged to walk, for small ontshot buililings, tlights of steps to doorwnys, and such hike interruptions prevent any regular thoroughfare on the narrow brick trottoirs close by the houses. The havens are in a few places protected by chains from the strects, so that there is a constant liability to accidents, particularly at night. when the darkness is but poorly relieved by oil lamps dangling,

## ROUBAIX

Parisian fashion, from the ropes stretchel betwixt the trees and the honses. Latterly a portion of Rotterdam has been lighted with gas; but, according to a parsimonious plan, the lanps are not lighted when the moon is expected to shine.'

The hoises of Rotterdam are generally on a large scale, and lofty; in many of the streets they are really elegant. "The writer just quoted speaks ns follows of a large class of residences. 'Vach house may be considered the castle of a merchant, who both resides with his family, and carries on the whole of his commercial transactions within the same set of premises. The front part of the buibling exhibits an elegant loor of lofty proportimas, 15 or 20 ft . high for instance, at the licad of a tlight of steps. On getting a glimpse into the interior yon sce a lobby puved with pure white marble, and a stair of the same material leading to the story above, which consists of a suite of lofty rooms, and is the main place of residence of the family. Some of the rooms are finished in a style of great elegranee, with rich figurel cornices and roofs, silk druperies to the windows, sinooth oak floors, and the walls most likely painted as an entire pieture or landscape, in oil, by an artist of eminence. Near to the door of the house is a coach-house door, which, on being thrown open from the strect, discloses a wide pavel thoroughfare leading to an imer conrt, tho buildings round which are devoted to the whole warehousing department of the merchant. The bulk of the edifices of this great trading city are of the kind I describe.' The ordinary houses are badly heated, and are in other respects not very comfortable; but the poorest house in the city is as clean as scrubbing and washing can make it, both inside and out; in this respect, indeel, the Dutsh liave no equals. Among the minor peculiarities which strike an Englishınan, are the small ınirrors affixed ontside to almost all the first-floor windows, which are placed so as to slow the inmates whatever may be going on in the street below. The want of good potable water is a great inconvenience.

Rotterdam has few public buildings of interest. The town-hall, a large modern structure in the Grecian style, has a noble council room, with rooms for the city library and plilosoplical apparatus; but, though superior to the generality of such edifices, it is much inferior to that of Amsterdam. The exchange, on the contrary, is a finer buiking than that of the capital; it is rectangular, with a court in the centre, surrounded with arcades, supported by 30 pillars, each of a single block. The Schieland palace, occupied in 1811 iy Napoleon and Maria Louisa, is perhaps the finest of the public edifices. The cinstom-house and the former East India house on the Boomptjes present nothing remarkable. There are from 20 to 25 churches, including one for the English Episcopaliuns, and one for the Scotch Presbyterians. The prineipal is the chureh of St. Lawrence, formerly the R. Catholic eathedral. It is a large Gothic brick building, with a lofty square tower, and dates as far back as 1412 ; but nearly ull its ancient ornaments were swept away at the Reformation. In it are the monuments of the celelorated Duteh admirals, De Witt, Kortnaer, and Brakel, each of which has an appropriate inseription. It has also a splendid organ, said to be superior in size to the great organ of Haarlem, generally considered the largest in Europe. This is 150 ft . in lieight, mounted upon a colonnade about 50 ft , in elevation, and has 5,500 pipes, the largest heing 32 ft . in lieight, and 16 in . in dinmeter. In the market-place is a bronze statue of Erasmus, the most illustrious of the natives of Rotterdam. The house where this great scholar,
' the glory of the priesthool and the shame,' first saw the light, on the 28 th Oct. $146 \overline{7}$, still exists; but (quantum mutatos!) it has been degraded into a gin-shop. liotterilam has a naval dockyard: hont it is on a small scale, nol contains little worts notice. In the neighbourhood of the city are many places of entertainment, as tea gardens, and in the town are several elubs.

Rotterdam is the seat of the marine lepartment for the Maas, of the superior jumicial courts for the prov., and of a tribunal of commerce; the culp, of the 9th militia distriet of the kingrlom; and the residence of a military commandant, a direetor of police, and numerous foreign consuls. It has a society of arts and experimental philosophy, founded in 1767 , branches of the Societies of l'ublic (iood and the Fine Arts, a college, a Latin school; many superior intermediate and poor schools, in the whole of whieh, aceorling to Chambers, about 8,000 ehiklren are instructed; and varions private acalemies. The centrul prison of Holland for juvenile offenders is at Rotterdam; it has also varions workhouses and claritable institutions, and a savings' bank, paying interest at 4 jer eent. There are manulactories of tobaceo, refined sugar, needles and pins, glass wares, corks, dyeing and ehemical products, mad spirits; large markets are also held weekly for corn, flax, hemp, and other agricultural produce; and the anmual fair of Rotterdam is the largest in Holland. Rotterdam is more advantageously situated in a commercial point of view than Amsterdam, or any other Dutch town. She is easily acecssible from sea by the largest class of merchantmen: and from her position on the principal embouchure of the Lhine, as well as of the Maese, she is the grand emporium of the forcign trate of the countries which they traverse. The imports and exports are similar to those of Amsterdam (which see). Tlse white Zealand and Rhenish wheat shipped here is of a superior quality : and it is the best market for madder, geneva, eheese, and butter. The tomarge of the vessels entering the port annountel to 666,431 in 1860 ; to $697,0.8$ in 1861; and to 710,775 in 1862. Rotterdant has a regular intercourse by means of steam-packets with Londut and other great over-sea ports, and with Dusseldorff, Cologne, Maestricht, and other ports on the Rline and Maese.

Besides lirasmus, the great painter Adrian Van-der-Werf was a native of Rotterdam.

ROUBAIX, a mamufacturing town oi France, dép. du Nord, arrond. Lille, cap. canton, on the canal of Roubaix, 7 m . NE. Lille, on the railwny from Lille to Courtray. Pop. $49,2 \% 4$ in $1 \times 6 \mathrm{Ii}^{\circ}$. Roubaix, like most Flemish towns, is well built. It formerly laboured under a want of water; but of late an adequate supply has been obtained by means of artesinn wells. After Lille, Roubaix is one of the clief towns in the dép. for the manifacture of cotton goods; it has been estimated that, in the town, and immediately aljacent country, abont 30,000 hands are niteriately employed in the manufacture of cotton and woollen goods; the latter from ahout June to September, aud the former during the remninder of the year: 'the articles chiefiy manufactured are 'Ihibets, waist-coat-pieces, and thick cotton goods. There are about 12,000 looms in the district, of which half are Jacquard looms. The latter are principally in the factories, the manufacturers finding it necessary to preserve the privacy of their patterns. A weaver will, on the cotton goods, earn at an average 30 sous ( $15 d$ a day); on the second class work, from 30 to 40 sous ( 15 d. to 20 d. ) ; and on the Jacquaril loom, from 2 fr. to 5 fr. per day, the average being about 3 fr . The working pols, of

Rombaix is increasing by continual immigrations trom lelgium. Some of the labourcrss live in the town; but the greater number reside in the neighbouring villages and hamlets, coming daily to and from the factories, in whieh they work from 14 to 15 hours a day. They live mostly on meat, soup, potatoes, and beer; using butcher's meat 4 days a week. 'The work-people of Lombaix nnd Threoing are, whether as regards morals, cleanliness, clothing, lodging, food, or health, deeidedly superior to those of lille. Drunkeuness is here, and, indeed. every where else throughonat French lilanders, a prevahent vice; but, in other respects, the conduct of the work-people seems to le goonl; and they have established unmerous societies for their mutual support and assistance.
liOUEN (an. Rothomagns), one of the prineipal cities of France, and the great sent of its eotton manufacture, depl. Seine-Inferieure, of which it is the cajo, on the Scine, 44 m . (direct distunce) from its mouth, and tit m. NW. I'aris, on the railway from Paris to Ilavre. P'op. 102,649 in 1sibl. The city, which stauds in a fine and fruitful country, is ndmirably situated on a navigable river, by which it communicates with the call, on the one hand, and with the flourishing sen-port of liavere on the other; and it is surrounded by a verdaut and delightful country. Its numerous spires and towers, and the vessels that thiong its quays, give it a very imposing external appearance, to which its interior presents in most parts a striking contrast. Generally it is ill-built. Strects mostly narrow and crooked; houses prinripally of wood, or rather of lath and plaster, though in the W. aud newer quarters of the eity some are built of more solid materials, and have even cousiderable elegance. The city is oral, or rather lozenge-shaped, aud was for a lengthened prowion strongly fortified; but its ramparts are now demolished, and their place is oecupied by a series of boulevards, which separate the city proper from the faubourgs Cauchois, Bouvreuil, Beauvoisine, and Martinville.
The Seine, here crossed by severnl bridges, divides Rouen from its large suburb of St. Sever. The boulevarils, which are planted with trees, like those of Paris, and the fine broad quays and cours, which extend along the banks of the river, are the favonrite and almost the only public promenades; the squares or open snaces are shalhy hud irregular, and except the Place Impériale, near the centre of the eity, are all of insignificant size. Some, however, are ornamented with public fountains, with which liouen is well furnished: the Fontaine de Lisienx is a curions piece of antique sculpture, representing Mount P'urnassus, with ligures of Apollo and Pegasus. In the square of La l'ucelle, an indiflerent statue of Juan of Arc is erected on the spot where that heroine suffered martyrdom in 1431. The central parts of the city are the chief seat of general commerce; the upper classes principally reside in the faub. Cauchois, and the N. suburbs; while the lower quarters at the E. end of the town, and the faub. St. Sever, are almost wholly inhabited by the manufacturing classes.
By far the most celebrated and striking public edifice is the eathedral, one of the noblest religions structures in France. It was constructed principally between the 13 th and 16 th centuries inclusive: entire length 434 ft . ; breadth $103 \mathrm{ft}$. ; length of transepts, 174 ft ; height of nave $89 \frac{1}{2} \mathrm{ft}$. Its richly ormamented front has three tine portals, over the central of which is a square tower, and spire of iron work, reaching to a height of $46.4 \mathrm{I}_{3}$ It. ; flanked by two lofty but dissimilar towers, the 'lours Remain and Georges d'Amboise. The
bormer, which dates from a periol long anterior to the rest of the hnilding, is in a simple nud unadorned style; luit the latter, built int the end of the 15th century, is mueh mimired for the beanty uf its architecture. It is ormmented with mumerous sculptures; nad before the lievolution contained an enormons bell, which, with many others belonging to this enthedral, was then sent to the cannon foundry: The interior of the editice is lighted by 130 windows, many of which are ornamented with stained glass; and contains a vast number of tombs, inchuding that of Riehard $I$. (Cienr de Lion) of Enghand, many dukes of Normandy, and 17 arehbishons of Ronen; and the tine mausolenm of the two carlinnls d'Amboise. 'The latter is very perfect; but many of the other monuments were much matilated in the religions and revolutionary wars. 'The clurch of St. Ouen in the l'lace Royale belonged to the oldest conventual establishinent in Normandy, and oceupies a larger extent of ground thats the cuthedral. It is an admirable specimen of the printed Gothie: its fine octagonal tower rising from the centre of the buiding, is 255 ft . in lieight. The town hall adjoining this church was originally a portion of the conventual editice; and, besides various puhlic otlices, is nppropriated to the museum and public library, with about 80,000 volumes. Several of the other churches in Rouen well deserve notice, and some are of high antiquity. The great city clock is placed in a square (Gothic tower, erected in 1839, in the lligh Street. The Pollais de Justice, with a noble saloon, was built for the parl. of Normandy, at the end of the 15th eentury. The mercantile halls of Rouen, for the exhibition and sale of diflerent articles, are well adapted to their destination. They occupy thro sides of a square, the centre of which forms an open exchange, A special amartment is devoted tw every lifferent kind of gools; the cottom-cloth hall, whete the most important braneh of tratlic is conducted, is ety ft. in length, by 53 ft .4 in . in breadth. Every liday, from ti a.s. till noon, these halls displiny great commercial activity. There is another exchange adjacent to the quay. The exchequer othice, chambre des comptes, harracks, the bicêtre, a spacious reneral prison, antother prison for accused but untried persons, prefecture, archbishop's palace, mint, custom-honse, college, 2 theatres, hôtel-dieu, the gencral intirmary which, according to Hugo, has commonly 2,000 inmates, l'rotestant church, and the remains of an old fortress, are among the other principal public buildings. Rouen has some private houses worth notice, especially those in which Fontenelle and Pierre Corneille were born ; and others in which are some curious works of nrt, lt is the seat of a royal court for the deps. Seine-Inf. and Eure; of tribunals of primary jurisoliction and commerce; a chamber of commerce, and council des prudhommes, royal and university ncademies, an Imprial college, and a mint established in the 9 th century; the cap, of the 15 th military division of France; the seat of an archbishop, whose diocese comprises the dep. Seine-Inférieure, and whose suffragans are the bishops of Bayeux, Constances, Evreux, and Seez; the seat of a l'rotestant consistory; and the residence of many foreign consuls. It has a central society of agrienlture; societics of public emulation, commerce, agriculture, and medicine; a Bible society; schools of design and navigation; a botanic garilen; suvings' banks, and various charitable institutions.

Rouen is so eminent for its cotton manufactures that it has acquired the title of the lirench Manchester, and checked printed cotton eloths for

## ROUEN

## ROXBURGH

women's dresses are commonly known in France ly the name of romenceries. It was anciently codelerated for its linen falries, the mannfacture and dyeing of whide nppear to have been carried fin in it in the earliest times of the Jrench nomarchy. But so late as the middle of the last centiry, the workmen employed at Ronen were near: y all forcigners, chiefly Germus, Dutel, or Siwiss; who remained in France only during a part of the year, returning to spend the remaining months in their mative countries: and 50 years ago the coton yurn employed in the manufictures was wholly spun by hami. At present, however, both water and steam power are largely employed. The whole region romed houen shares more or less in its branclies of manufacture. It is estimated that the weasers of cotton and woollen grouls in the dep, amomet to 130,000, 4-5ths of whom are resident in Rouen and its immediate meightomrhoot. Aceording to odicial returns, there are 50,000 persons, men, women, and chilaren, or almut hulf the entire pop, of the sity and sulmorbs, engaged in the cotton manufacture.
The manulacturers of Rouen (says Mr. Symons) pride themselves greatly on the superiority of thirir prolacts. The geols produced by the Norman looms are in direct competition in thirid markets with those from the W. of Neothaud. 'ille wages of Norman wavers are, if nnything, lower than in Scotland, but provisions are at least 20 per ceint. cheaper. The net wages oltained by comery weavers working on their own aceomit, are about 1 fr. a day, or jes. n week, and this may lo taken as above, rather than below the average. Children and women are both oceupiel in weaving at proportionate earnings. The working classes of Romen are, apon the whole, in a mueh less depressed comulition than those of Lisle, and their health is also much better. Drmakenness is in both towns the prevailing vice among the lower classes; but it seems to lee less prevalent at Romen. The woollen manufactures of the city are mimportant; their clicf seat in this dep. heing at Elbeuf (which see). Broad silks, velvets, hardware, superior earthenware, chemical products, and confectionary, for which louen is famous, are the other principal proulacts. Vessels of 200 toms ascend to the city, which carries on n considerable trade with the countries both in the N . and S. of Eirope, the Levant, Amorica, and the other maritime deps. of lirance; the greater part, however, of its forcign commerce is carried on through the intervention of llavre.
lonen was of sullicient importance in the third century to be created a bishop's see; it atterwards hecame successively the cap. of the kingrlom of Nenstria, and of the duchy of Normandy. I'rince Arthur of Brittaly having leen put to denth in Liouen, in 1203, by John king of England, P'hilip Augustus besicged and took the city in the year following. It was retaken by lleury V. of England in 1417, and retainel by the linglish till 14.19, when it was finally amexed to the French crown. The Reformation made great progress here; and the city suffered much in consequence of religions feuds, lhit fewer individuals fell victims to the Massacre of St. Bartholomew and the phrenay of the Revolution in this than in most other large lirench eities, Ronen has given birth to some of the most illustrions individuals of whom France has to boast ; amongst whom may be speeilied l'ierre Corneille, one of the greatest modern Aramatists, born here on the 6th of June, $1601 ;$; lis brother, Thomas Corncille; Fontenelle, the academician, born here in 1657; Buehart, the fimous oriental scholar; Daniel the historian; and Brimog, author of the 'Iheàtre des Grecs.'

ROVEREDO (Girm. Rovereit), a town of the Tyrul, on the frontiers of Anstrian Italy, cap. circe of its own mame, on the leno, near its jumetion with the Adige, $13 \mathrm{~m} . \mathrm{S}$. by W. Trent, on the railway from Trent to Verma. 1'op. $x, 11 \mathrm{x}$ in 1857. Thio city is well built, many of its editices lesing of marble. The most remarkable buidthig is the castle, on a height commanding the town. It has superior civil, criminal, and commercial tribuats for the circ., a gymmasium, and high school, and an Linglish conventual establishment. In and romd the town are numerous silk mills, It has also tobuceo and leather finctories.
ROVItiNO, a sea-port town of Austrian Italy, circ. Istria, on the Alriatic, $39 \mathrm{~m} . \mathrm{S} \mathrm{SW}$. Trieste. 1 'op. 9,412 in 1857. The town has numerous fine churches and other public editices, high and female schools, and 2 hospitals. Its prineipal church is huilt after the nuolel of St. Mark's at Venice. It is the seat of civil, criminal, and conmereial tribumals; has two harbours, one of which is tolerably secure; and carrics on a considerable trade in wine, olives, timber, anchovies, and tumy. Its inhahs, are principally sealiaring people or engaged in the tisheries; they are, however, partly occupied in ship building and making cables. Near the town are some puarrics of superior marble.
ROVIGO (an. Rhorligium), a town of Austrian Italy, prov, Venice, cap. deleg., on the Adigetto, ${ }^{2}$ branch of the Alige in the swampy tract of the Polesin, 36 m . sW. Yenice, and 17 m . NE. Ferrara, on the railway from Venice to Ferrara. l'n. 9,543 in 18.57. The town is furtified int the old style, with walls thanked with towers, a ditch, aml a citadel; and is entered by 6 gates. It has mumeroms churches, a seminary, and a hospital; $\sum^{2}$ orphan asylums, a large nud tine theatre, an acedemy of sciences and arts, and various superior pmblic selhools. The library of the Coment Silvestri, comprising 36,000 vols., is open to the pullic. li is the seat of the superior courts for the deleg. and the residence of the delegate, and the hishol of Adrin. Though much decayed, it has a considerable trade in corn, a large fair from Oct. 21 to 28 , and three weekly markets. General Savary was created by Napoleon, duke of linvigo.
ROULLERS, or ROUSSELAER, a town of Belgrime, prov. W. Flanders, cap. cantom, on the Mamdelbecke, a tributury of the Lys, 26 m . W. lys Gilent. Pop. 11,500 in 18i00. The town has at high school, manufactures of linen fabrics, leather, soap, and oil, and some trade in butter of a superior quality.
ROXILULGII, an inland and frontier co. of Scotland, having N. the co. Derwick and a small portion of Mid-Lothian, E. and S. Northumberlaud and Cumberland, and W. Dumbries and Selkirk. Area, 460,938 neres, of which nearly a hailf is occasionally under tho plongh. It is partly intersected and partly bomed by the Tweed; and is traversed from its SW. border, where it las its source, NE. to Kelso, by the Teviot, whence it is sometimes called Teviotdale. It has every varicty of surface and soil. The low arable lauds in the valleys of the Tweel and Teviot consist principally of light turnip soil. The monntainous or pastoral district is principally in the SW. parts of the co., along tho Dumfries, Cumberland, and Northumberland border. The hills, however, like the Cheviots, to which they are contigums, ne mostly smooth, dry, and well coverel with gool sheep pasture. Property mostly in large estates; but there are several of the smaller class of prosprietors.

Farms generally large; and some firmers frequently hold three or more farms. Arable luisbandry is as well understood and prac-

tised in the lower parts of this co, as in the most inpruved parts of the empire. It is alsar celebrated for having beels the thentre where some of the priweipal improvements in modern farming were first introdiced, and where others were first suecessfully practised in Seothan. Mr. Diwson, the great improver of Scotch husbaulry, occupied the farm of Frogden, near Kelsir, in this co.; and in it, soon after 1760, he set to work the first jough drawn by two horses, driven by the plonghnam, that was ever seen in Seotland. And if Mr. Jawson was not the first to set the example of riaising turnips, he was the tirst practical farmer hy whon they were protitably enltivated on a late seale. (Survey of Roxburgh, pp, 60. 90.) Fanmers for dressing corn were also made and used in this co. before they were seen in any other part of Seotland. (llid. p. 5\%) Large quantities of wheat are now produced. Cattle, a mixed brech. sheep, principally Cheviots. Within the last 30 yars many important improvements have been pellected in this district. $\Lambda$ large extent of land that was entirely pastoral now bears lusuriant (rupis; bone manare has been introdnced; agriculfural management las been materially amended; a good deal of waste land has been phanted; farmhanses and buildings have, in numerous instances, beco rebnitt on approved plans; thrashing-machines have been erected on most considerable farms; and the habits and accommonations of the people have beon materially improved. There are some very productive orchards in the neighbourhood of Jedhurgh, Melrose, and Kelso. Marl is fomd in vast quantities in several parts of the co., and it is also well supphied with limestone and frestone. Firions branches of the worllen manafacture have brem introduced, and are prosecuted with eonsiderahle vigour at llawick and Wilton; and in a lesser degrae at Jedburgh, Melrose, and Kelso. The par. of Kirk Yethohm, in this eo., is celebrated as being the residence of the largest colony of gypsies in scotland. Roxburgh contains 31 pritishes; and returns 1 nem, to the 11 . of C. for the co. ; and the bor. of Jedburgh joins with other Hurghs in returning a mem. Registered electors fir the co., 1,1338 in 1865. l'rincipal towns, Jedburgh, Kelso, llawick, and Melrose. At the censuls of l8til, the co. had 7,757 inhab, houses, and 5,119 inhabs., while in 1841 , the co. had 8,661 inhab. houses, and 10,025 inhabs.
RUDGELEX, or RCGELEE, a market town and par. of England, co. Statlord, and E. div, of lumd. Cuttlestone, on the S . bank of the Trent, erossed here by a tine aqueduct of the Grand Trunk Canal, 8 m. lisil. Staftord, and 122 m . SW. Lomilon, by Lomion and Forth-Western railway. Area of par.. 7,120 aeres. l'op. 4,362 in 1561. The town is well built, comprising many good hotses. The par, ehurch, an aneient structure, with a haudsone tower at its W. end, has been enlarged und almost rebuilt. The living is a vicarage in the gilt of the dean and chapter of Lichfield. There are places of worship for different classes of dissenters, and several sunday schools, A free granmar selool was foumded hore by queen Elizabeth: an endowed school fiurnishes clothing and instruction to 35 boys; besides which there is a national and an infant school. Hopkins's Almshouses afford reliet to aged poor women, and there are several money charities. 'The principal manufacture of lindgeley is that of hats and felts; but other articles are mate here. A stream, which runs through the town to the Trent, turns severat colonr and eorn mills, and there are some iron forges. At lirereton, within the par., are extensive collieries, employing from 500 to 600 men. The town derives
considerable advantares from its position on the great line of camal eommomication between the $N$. and S. cos. Its grovermment is vested in a comstables chosen by the juhahes. Markets on 'luesday: fairs April 17, Jume 5, and Oct. 21 , fir horses and cattle.

LUUGIIF (am. Roeheberie, or Rokehy), a market town and bor, of limeland, co. Warwick, hamd. Knighthow, on the Avom, 28 m . Visle. Birmingrham, 75 m . NW. London by ruad, and $x: 4 \mathrm{~m}$, hy
 in 18th. The town, on an eminence S. of the river, consists of three streets, ono of which, learling to the chmrch. is broad, and lined with modern brick homses. (ireat improvements have been male within the last few years, and the advanttages derived by the town from being a principal station on the North-Western railway seem likely still further to promote its prosperity. In the older jart of the town, however, there are many houses of plaster and timber, denoting the former poverty of the place. The charch is an anciont buiding, pussessing little architectural interest, with a square embatiled tower, having a turret at its SEA. angle: the living is a rectory, of the ammal value of alot., in the fift of Earl Craven. There are several ilixtrict churches, of receut erection. The Wesleyan Methodists and Baptists have places of worship; and there are Sim day schonl , a charity school for thirty chidiren of cach sex, with almshonses and other charities.

The chicf importance of lagry is derived from its great publie selowl, to which the talent of sercral of its recent masters und the richness of its endowments have given a well-merited celebrity. It was origitally a simple grammar school, foumbed in $16 \overline{5} \overline{7}$, by hawrence Sherille, eitizen of London, a native of the meighhourlomet, for the benetit of the town and neikhbourtood of Rugby. Any jersom who has resided doring two years in, or within, ten miles of the town, may send his sons to be educated free of expense; but if the parent reside out of the town, his son must then lokge at one of the boarinighomses of the school, paying the same rate for his board as those not on the fommdation. The number of boys on the founhetion is mulimited; but the masters may not receive more than 2bt) boys not on the fumbation. The sehool property eonsists of land within the par., and of abont eight acres of land, called the Comblit. Close, in the neighbourhood of Lamb's Conduit Strect, Lamdon, the value of which has so greatly increased, in consefnence of the buildings erected unon it, that the ammal revenues of the sehool, which, at the middile of last century, were under 1201, a year, now exceed $5,000 l$. The manarement is vested in twelve trustees, and the school is mmer a head master amd eight elassical masters, with subordinate teachers of writing, French, and other branches. The study of elassical literature is carried quite as high as elsewhere, and the suceess of the boys at examinations for scholarships at (0xford and Cambridge, slonws that their kinowledge is of a substantial character; but at the sante time, history, both sacred and profane, modern as well as ancient, physical and political geosrapioy, arithmetic and mathematics (as far as conic sections), and French, constitute integral parts of the conrse of instruction. An annual examination is held at Cliristmas, and the names of the boys that distinguish themsolves are published in a class-pajer. The school has fourtecu exhibitions: established by the fomber. Three exhibitioners are elected every year by the tristees on the report of examiners sent from the miversitices of Oxford and Cambridge. These exhibitions are of
the value of 60l: a year, and may be held for suven years during residence in any college at cither university. There are likewise six scholarwhips, of the annmal value of $25 \%$ cach, supported by subseription; one scholur is elected every year, and his age mast not exceed 14t yeurs at the time of his examination. The scholarship is tenable for six years, if the boy hobding it remains so long at lagby. The ancient buildings of this great seminary consisted formerly of a master's house, and two or three school-rooms, all of very limited size and shably exterior, totally inadequate to the wants of the increasing establishment. In l809, however, the erection of a large and handsome pile of buildings was commenced on the site of the old school-house at the S. extremity of the town. The edifice is of white lurick, dressed with stone at the angles, windows, and cornices, the whole being of Tudor architecture. The principal front is 220 ft . in length, and the schools are entered by a turreted gntewny facing the strect and leading to the principal comrt, a fine area, 90 ft . in length, by 75 ft . in breadth, having eloisters on three of its sides. The buldings on the S. side comprise the dininghall of the head master's boarders, and three school-rooms; on the W. side is the great schoolroom, and on the N. side are schools for the Frencl und writing classes. The apartments of the head master are handsome and commodious, communicating also with the various dormitorics running round the quadrangle over the sehool-rooms. The sehool chapel is a detached bnilding, in the later pointed style, the interior being fitted up with stalls and handsomely carred seats; the ceiling is decorated with paintings, and near the nltar is the statue of Dr. James, a late head master, by Chantrey.

Rurly has 10 manufactures, and the inhabs, of the vicinity are principally agricultural. The trade of the town, however, has been greatly increased by the opening of the London and NorthWestern railway, and it is now an important entrepôt between the surrounding country and the metropolis. The Oxford canal passes also within a short distance of the town, comnecting it with the principal inland navigation of Eugland. On in eminence NE. of Rughy are some slight remains of a castle, supposed by Dugdale to have been erected in the reign of Stephen. Large markets on Saturday for corn and provisions; a freat horse fair November 22, and twelve other fairs.

RUGEN, an island in the Baltic, belonging to l'russia, opposite to Stralsund, and separated from I'omernia by a strait varying from $1 \frac{1}{2}$ to 2 m . in width. It is of an exceedingly irregular shape, being deeply indented by bays and arms of the sen. Area, 361 sq. m. Pop. 46,746 in 1861 . The island is very fertile, and sends annunlly large quantities of corn to Stralsund. Rugen differs much in appearance from the mainland part of Pomerania, its coasts cousisting mostiy of high, precipitous, chalky cliffs. It is well wooded, and being intercepted by ravines, as well as deen, nurrow bays, its scenery is highly picturesque. This circumstance, and its facilities for sealnthing, render it a favourite resort in summer. The inlabs. are primitive in their habits and manners, industrions, and frugal. They are principally of the reformed religion, and their language is a patois of low German intermixed with swedish. The fishing in the adjoining seas and bitys is very productive. Unfortunately the island has no good harbour, and its coasts are very dangerous. A lighthonse, having the lantern clevated $197^{\circ} \mathrm{ft}$. above the level of the sca, has been
erected on the most northerly promontory of the island, in lut. $53^{\circ} 41^{\prime} 12^{\prime \prime}$ N., loug. $13^{\circ} 57^{\prime} 27^{\prime \prime}$ E. lergen, the capital, situated in the centre of the islaud, las 2,700 inhabs. After being long in possession of Sweden, Rupen became part of the Prussian dominions in 1815.

RUNG1'OOL (Ranyapura), a distr. of lbritish India, presidency and province Bengal, between lat. $25^{\circ}$ and $27^{\circ}$ N., and long. $88^{\circ}$ and $91^{\circ}$ E.; luving E. Assam, S. Mymunsiug and Dinnjepoor, W. the latter and I'urneah, and N. Sikkim and Ikootan. Aren, 7,856 sq. m. I'op. estim. at $1,400,000$. It is wholly on the N . side of the Ganges, and is intersected by the l3rahmaputrn and Teesta. The climate is not so hot as in most other parts of leugal ; the soil is inferior to that of the Dinagepore district. Tobaceo is the staple product. Wheat is nlso a considerable crop; barley, oats, maize, cotton, and indigo, are little grown. A good deal of cotton thread is, notwithstanding, spun in the district, the material being imported by way of Moorshedabad. IIndoos and Mohammedans are supposed to be nearly equal in point of numbers. Chief towns Rungpoor, the cap.; Mungullaut, Chilmary, nud Goalparah. Inungpoor, in lat. $25^{\circ} 43^{\prime} \mathrm{N}$. , long. $89^{\circ}$ $22^{\prime}$ E., has beell estimated to have a pop. of from 15,000 to 20,000 . For copious information respecting this district, and that of Purneah, the reader is referred to the surveys by Dr. Buchanan Hamilton, in ' Nartin's British India.'

RUPPIN (NEW), a town of Prussia, prov. Braudenburg, gov. Yotsdam, eap. circ., on the lake of its own name, 37 m . NW. Berlin. I'op. 11,098 in 1861, excl. of garrison of 1,250 . The town is well built, and has a counci-house, high school, hospital, central prison, barracks, and a large covered military exercising ground, with mnnufactures of woollen goods, gloves, and leather. Its trade is greatly fucilitated by the Ruppin caual between the Havel and the Rhin, forming a link in the communication letween the Elbe and the Oder.

RUREMONDE, or ROFRMOND, a town of Belgium, prov. Limburg, cap. arrond., on the Meuse, where it is joined by the Roer, 37 m. NW. Macstricht. Pop. 8,425 in 1860. The town was dismantled by Joseph It.; but is still surrounded by ramparts, and is the residence of a military commandant. It is well built; is the seat of a court of primary jurisdiction, and a college: and has manufactures of woollen stuffs, and considerable trade.

RUSSIA, the most extensive, and one of the most powerful empires, either of nucient or modern times. It comprises the whole northern portion of the castern hemisphere, from the frontiers of Posen and the Gulf of Bothnia on the W., to the Paeitic Occan and Behring's Straits on the E., or from the 18th to the 190th deg. of E. long., being a distance, on the 60 th deg. of lat., of nearly 6,0100 m . Its extent from $\mathrm{N}_{\text {. }}$ to S ., though less vast, is still very great, stretching from the 38 th to the 70th, and in some parts to the 78th deg. of N. lat., exhibiting an average breadth of about $1,500 \mathrm{~m}$. Exclusive of this, Russia claims a very large tract in the NW. part of America; and is mistress of Nova Zembla, and some other large islands in the Arctic Ocean, of the Aleutian Islands off Kamtchatska, and of the Aland Isles, in the Baltic. The superficial extent of the empire has not been determined with anything like accuracy. It was estinated by Hassel at $372,935 \mathrm{geog}$. sq. m., vic., Liussia in Europe, including Finland, $72,869 \mathrm{sq} . \mathrm{m}$. ; Russia in Asia, 275,767 do. ; and Iiussia in America, 24,000 do. ; and Schnitzler in his 'Statisque Générale,' has adopted this esti- 5 T 11 shemkurak vithot

ifil, at the accesslom of the grent II In, in tsish, at the necession of Alexander In tisho, ut the accession of Alexander II.
'The linssian empire comprises one-seventh of the torriturial part of the globe, and about one twent $y$-sixth part of its entire surface.

F'ace of the Country, - Mountuins.-liussia is, in feneral, level, and comprises some of the most extensive plains in the world. 'Ihat part of the empire which is in the enstern hemispliere is naturally parcelled into the two grent divisions of Euroficmanal Asiatic Russia, by the Oural Mometains, which stretch in n NNL:, direction from the Caspinan Sen to the Aretic Ocean, forming, through the greater part of their course, the boundary between linrope and Asia. The highest prints in thas chain have an elevation of about $6,500 \mathrm{ft}$, nhwe the level of the Cuspian. In all the vast conntry, extending on the W. side of this central chain to the contines of l'oland and Moldavia, there is hardly a simgle hill. The Valdai hills, or clevated grouinds, between Novgorod and I'wer, where the Wolgra, the Don, and the Dniepr have their somrees, are nowhere more than abont 1,200 ft. above the level of the sea, the comntry exhituithige a waving surfice, and without any consideraile clevations. 'There is nothing, in fact, save the forests, to break or interrupt the course of the wind, in all the immense space interposed between the Oural and the Carpathian mountains. The only great chain of momatains in western Russia is that of Cancasns, between the Euxine and Caspinn Seas, and this is almost at the southern extremity of the empirc. Siberia, or Asiatic Kussia, consists primeipally of a vast plain, slightly inelining to the N. Towards the S. and E., however, it is in purts monutainous, being separated from Mongolia and Manchouria by ligh and little explored ridges, in which the great rivers that flow through it to the Arctic Ocean have their sources.
The most distinguishing feature in the appearance of Russia is her vast forests. Tepoborski, who estimates the surfice of European Russia at about $500,000,000$ of deciatines, supposes that $180,000,000$ are oect ied by forests. They are so very prevalent in the govermments of Novgorod and Twer, between l'etersburg and Moscow, that it has been said a squirrel might travel from the me eity to the other without ever touching the ground. The forest of Volkonski, at the source of the Wolga, is the most extensive of any in Europe. In the govermment of Perm, on both sides the Oural mountains, containing $18,000,000$ of deciatines, no fewer than $17,000,000$ are covered by
furents. The forests of Asiatic: Hinsaia are also of viat size. lis extensive districts, berwever, the surface is quite freo from wool. This is purticularly the case in the vast steppes or planins in the goveruments of Astrakhan and thask, which in many parts, indecd, are a mere sanly desert.
Rivers and Lakes. - The rivers of linssia are usually divided into live gromps or systems, corresponding to the sons in which they have their embonchure, viz, the Aretic Gecan, the lattic, the Black Sea, the Caspian, mad the l'acitic Ocean. Tho IIrst division is by far the largest. It comiprises, in linrope, the Dwinn, Mozen, and l'etchora; while in Asia it incholes, anong a lust of whers, the Obi, Jenisei, mud leeni, three of the lurgest rivens of Asia. All these rivers runf from S. to N., and the lant three have n comese of from 2,0100 to $2,500 \mathrm{~m}$. The rivers which fall into the Baltic, thongh of far greater ingortance in an eoonomical point ol view, are of very inferior magnitude, The principal are the Nova, which lass l'etersburg ut its month, the Duma, mind the Nienmen. The rivers whieli liall inte the Back Sea equal those falling into the lialic in conmercial ingortance, and far exceed them in lenget of eomes and volume of water. Amonge others are the Duiestr, Duicpr, Bug, Don, and Kibhan. The basin of the Caspian has, however, to boast of the largent innl most importunt of the rivers of finssia, the Wolgn This great river has its somrees in the government of Twer, about $180 \mathrm{~m} . \mathrm{S}$. by E. from Petersburg including simnosities, its course is abont 1,100 leagues, while that of the Damule is only about 150. It is of vast conseguence to the intermal navigation of the empire. The Casprian Sen also receives the Oural and the Eimba.

Owing to the flatness of the country throngh which they thow, und the vast leurth of their course, the rivers of linssia are bint little interrupted by cataracts, flow with a tranquil strenm, and nflord great facilities to intermal maviration. The severity of the elimate no doubt prevents, during a considerable portion of the year, all intercourse by water; and, as alrealy stated, renders the rivers falling into the Aretic Ocean of comparatively little value. Luckily, however, the frost, which interrupts naviration, alfords the greatest facilities to land travelling. The lakes, as well as the rivers, of liussia are upon a gigrantic scale The linke of Baiknl, in the govermment of Irkutsk, in Asiatic liassia, is one of the most extensive in the world. In European Russia, the lakes of Ladoga, Onega, P'eipus, Ilmen, and Bielo Ozero, are also of great extent, particularly the first. 'The duchy of Finland is alnost everywhere interspersed with lakes, and they are very nbumdant in other provinees, particularly in that of Olonetz.

Soil and Climate.-These, it is ohvious, must diffor exceedingly in so vast a eountry. Somo provinces mostly consist of sandy barren plains, or vast morasses. But the most valuable portion of the empire, or that included between the Bultic, the Gulf of Finland, and the Wolgn, on the N. und E.; the Black Sea on the $\mathrm{S}_{0}$; anal Austria and Prussia on the W., has, sjeaking generally, a soft black mould, of great depth, mostly on a sandy bottom easily wrought, and very feriile. In some places it inclines to sand and gravel; in many, from the want of drainage, it is peaty or bogry: in Livonia, and parts of Sithuania, it is clayey, but it nowhere inclines to chalk. 'Russia,' say's a well-informed native writer, M. l'leschéyéf, 'is divided into two great parts by the Oural momtains, which form an uninterrupted barrier through its whole breadth, and separate Siberia or Asiatic from European liussia. That purt of Russia which lies on this side ol' the Oural 'nountains; presents
an imиense plain deelining westwaril ly an eany dexcent. 'I his plain, from its vast extemt, has a gront varicty of climutes, wills, anil prodincta. Its "urtiern part, when semsibly deedines towards the White and Frozell Sins, is cowered with foreste, maratiy, and bat litele tit for cultivatime. The other, and more sontherly jurtion of this vast plain, inclucles the whole distriat along the Wolpa, as far an the atrypes or tleserta between the Caspian and the Sea of A avy, und constitutes the fluest part uf Linssia ; generally it has a fertlle soil, the arable mal mealow land jreperndernting over the wooms and marslies. That part of the conntry which extends townrds Forondje, I'nmlof, I'enza, mad Simhirak, as far an the denerts, is most retuarkulle for the superior quality of every kind of fruit and other produce. It hins everywhere an excellent soil, comsisthis of black earth, meromely impregrated with saltpetre. Ihat the traet whifel, commences between tho Sien of Azov aum the Caspinn, nul extends near the shores of the litter, and between the Wolga and Gural, as fir as the Limba, is little better than a tesert, being livel, alry, high, lurren, and full of salt lakes. 'The: comintry lying on the other side of the Oural monntains, known ly the namo of siberin, is generally a that tract of vast extent, leclining imperceptibly towards the Frozen Ocean, and rising thene by equally imperecpt ible degrees, towards its sont hern Inorder, where at last it is lost in the immense monntain ranges which separate the lassimn and Chinese empires. It is minecessary to notiec in letail the clillerent great divisions of this vast territory. In feneral, it may be stated that the more southerdy purtion of siburia, or that between the s. fromtier of the empire and the $\overline{0}$ th or both ileg. of lat., as far li, as the river Lean, has, for the most part, a fertile soil, and that, notwithstandiug the severity of the elimate, it prodnces most kinds of grait. But, owing to the increase of cold and the natire of the soil, the more northerly portion of the refrion now noticed, or that extending from the bith or lioth deg. of lat. to the lirozen Ocenn, and the whole conntry E. of the Lena, from the frontier of Munchooria northwarls, is wholly, or almost wholly, unfit cither for cultivation, or for the grazing of cattle. In the E. a portion of this vast Iract is mountainous, but it mostly consists of immense levels, full of swamps and bogs, covered with moss, whieh woukl be totnlly imparsable were it not that the iec, which never thaws deeper than a fuw inches, gives a firm under footing.'
Notwithstanding the heats that usunlly prevail during summer, especially in the sonthern provinces, cold, speaking generally, predominates very decidedly in lussia. With the exception, indeed, of the Crimen and the Transeancasian provinces, wo part of Russia can be sail to be generally hot; and even in them the frost in winter is often very severc. The climate of Russia is, in fact, proverhial for its severity ; and this inerenses not only as we advance towards the N., but also as we advance towards the E.; the cold being decidedly freater in Niberia than in the same latitules in European liussia, a difference which is also sufficiently perceptible in the provinces of the l . and W. sides of the latter. This, no doubt, is owing to various canses; but principally, perhaps, to the greater eultivation of the western provinces and their proximity to the baltic; and to the vast extent of frozen sea and land traversed by the winds from the NE:. Beyond the 65th degree of lar. the ground is eovered with snow and ice for about nine months in the vear; and during the other three montlis iee is always fomed at a little distance below the surfice. Corn erops camot be depended upon in Europenn Russia beyond the
(bend degree of lat.; and the great agrioultural uruvincew lie to the S , of the Esth leg. The fruis of temperate cllmaten are selilom met with lwyomil the isut deg. At I'eternlurg, in lat. bito bit, the menn maximnm of cold is alsout $2 j^{\circ}$, and the menu maxhum of hent $23^{\circ}$, Reaumur. The Neva is commonly frwaen over before the end of November, nul the ice never breaks up, before the end of March. At nu average of tell yenrs it is ealeulated that there are anmually at leternbury "17 bright days, 114 rain. 22 show, and $9: 3$ unsutt ledi. At Moseow, in lat. $6^{\circ} 0^{\circ} 153^{\prime}$, the cold is more severe than at Stockholm in lat. $6 y^{\circ} 20 \mathrm{~g}^{\prime}$. At Astrakhan, in lat. d $80 \% 1^{\prime}$, nearly the same as that of loyom, the Wolgn is sometimes frozen over so as to loun londed waggous. The sea of Azov is usinally frozen over irom November to the beginning of April. In Silverla, ns ulready stated, the coll is much mure severe than in the provinces to the $W$ : of the Oural monntains. The breaking nu of the fee on the Lena does not take place before the becriming of May.
Thut this severe eohl is not muhenlthy, nud is much less inconvenient than might be supposel. While the frost lasts the air is pure and bracing, and its severity is guarded ngainst by warm clothing, and by having the houses jroperly conatructed and heated. At l'etersharg and Moncow the winter is, in fact, the finest season. The inliabs, seem to revive at its npronch. Sledgeruals over the snow render travelling commodions and agrecable; and $a$ winter journey in a moslernte frost by monnlight is a high enjoyment. The Russiai peasants care only for warm covering for their legs and feet. At Petersburg, in a frost of $25^{\circ}$ lennmur, it is common to see women stumbiner for hours together washing their linen through holes clug in the ice over the Neva.
Spring can hardly be said to have any place in the Linssian enlendar. The transition from frost to fine weather is usmally very rapid. In a lrief period after the show and ice lave disappenred, the tiehds and trees are clothed in the livery of summer, and vegetation makes an extrnorilinary: progress. At l'etershurg the smmmer is as milil wid ngreenble as in the 5 . of France; but there and in all the $N$. provinces it is very variable. As we advance towards the $S$. it becomes steadier, and the heats increase. At Xstrnkhan the merenry in the thermometer somelimes rises to $1032^{\circ}$ Finh.; and in the Transenncasian provinces it rises still higher. The autumn, or the period of transition from summer to winter, is the most unpleasint season in Ihassia. The sky is genernlly clondy, and rains and storms are very prevalent. The Crimea, from its hight $S$. lat., and its being cmbosomed in the Euxine, has the most agreeable climnte in the empire.

Divisions and Population.-The divisions of the Russian empire have differed materially at different. periods. I'eter the Great made some important changes in the distribution that had existed previously to his epoel. 'The whole, however, was remodelled and placed on n new footing, by Catherine II, in 1775. She divided the entire empire into three great regions; those of the North, Middle, and South. Each of these regions wils subdivided into goveruments, of which there were nt first 42, and at the end of her reiga 50. Panl male some ill-advised changes on this distribution, which were set aside on the accession of Alexnuler I. The existing divisions were mostly fixed by the latter in 1822, nenrly on the oasis laid down by Catherine. The empire, exclusive of the kingdom of l'oland, is divided into goverimments, exclusive of ecrtain territories called provinces, or oblests, not formed into goveruments. The sulb-

Iron is produced in varlous parts of Russia, lut principally in the govermments of l'erm, trinburg. The production of iron has increased wory slowly, and the supply is altogether imalequate io the wants of the emine. It is all smelted by means of wood, and being principally prodnced at a great listance from the provinces where it is most in demand, it is extremely, ligh-pricel. Aud hence, as foreign iron is excluded by high duties, that article, a cheap, ann abundant supply of which is so indispensable to anything like suceess in their agriculture or manufactures, is placed becond the reach of those by whom it would otherwise be most extensively employed. Castiron articles are prepared at most mines where there are forges. There is an important eannoll manufactury at l'etrozavolisk, in the govemment of Olunetz, which was broughit to a high state of perfection by an linglishman of the name of Gascoigue. But the principal hardware manufactories are carried on at Tula, in the government of that name. (See Tula.) A great variety of articles of cutlery are proluced, and the lmperial manufactory of tire-arms is very extensive, employing about 7,000 male and $\mathbf{9}, 600$ female workers.
liussin is abundantly supplied with mines of salt and brine springs, but as most of them are at a great distance from the Baltic and western provs. there is a large impurtation of salt mostly from England. The salt mines and brine springs are principally situated in the governments of Taurida (the Crimea), Orenhourg, and Saratolf. At present the supply of antive salt is estimated at about 31 milhion poors, of which, by far the greater part is furnished by mines and springs
belonging to the crown. The imports may be reckoned at about 7 millions poods.
Ceal, though scaree in Kussia, has been found on the shores of the Sea of Azoff and in other loculities. Hitherto it has been wrought only to a smull extent, the entire produce of the mines not being supposed to exceed 3 million poods. But the importance of steam, and consequently of coal, in naval warfare, has become so great, that extraordinary efforts are being made to increase the prodnce of this valuable mineral.

Agriculture.-1 anded property in Russia is generally dividel into estates either of the crown or the nolility; those belonging to the former being little less extensive than those belonging to the latter. Some nobles have very large estates, though, owing to the compulsory tivision of landed property among the children of a family on the death of the father, this is not generally the case; and in some districts the too great subdivision of the land is an evil which has already made itself manifest. The value of a Hissian estate formerly depended more on the number of labourers or slaves belonging to it, and which may be either sold. or let out by the proprictor, than on its extent, or the quality of the soil : lout since the emancipation of the serfs this has ceased to be the case. $13 y$ an imperial decrec of March 3, 1861 , coming into final exceution on March 3, 1863, serlidom was abolished, under certain eonditions, within the whole of Russia. The owners of the serfs were compensated for their loss liy a payment regulated in the following manner. The previous labour of the serf was estimated at a yearly rental of 6 per cent., so that for every six roubles which the labourer earned annually, he had to pay 100 roubles to lis master as his capital value to obtain his freedom. Of this sum, the serfs had to give inmediately 20 per cent., while the remaining 80 per cent. were disbursed as an advance by the government to the owners, to be repaid. at intervals extending over forty-nine years, by the freed peasants. Accorling to an othicial report, the whole of these arrangements were completed at the end of July, 1865, so that from this date serflom ceased to exist in Russia.

The government, as a consequence of the emancipation of the serfs, teok measures in 1864-5 for the tiffusion of instruction among the agricultural population. An additional budget of 450,000 roubles was decreed for the year 1865 , by which the bulget oí public instruction was raised to about $1,300,000$ ronbles. This supplementary budget provides for the founding of village schools, of 11 new gymnasia (colleges); for the purchase of books and paper for the poorer peasants; for supplemenrary payment to schoolmasters and professors; for the purchase of scientific instruments; for the establishment of laboratories and museums; for the foundation of a pelytechnic schoel; and for other schools for teaching agriculture and horticulture.

Besides the $22,000,000$ of serfs belonging to private owners, there were, according to a census taken some vars ago, $22,225,075$ crown peasants -that is $10,583,63 \mathrm{x}$ men, and $11,641,437$ wemen. The emancipation of this class began previous to that of the private serfs, and was all but accomplished on September 1, 1863. By an imperial decree of July 8, 1803, land was granted to the peasants on the private and appendage estates of the crown, and to the peasants who belonged to the imperial palaees, which they are to pay for in forty-nine years in instalments, each equal in amount to the 'obrok,' or poll-tax formerly yielded by them. The peasants on these crown estates, atoont $2,400,000$ in munber, were thereby elevated to the rank of rent-paying peasaints, a situation in
which they will remain for 49 years, when they become freehold landowners.

An important, though not very numereus class of the population of hussia are the foreign settlers which the govenıment succeeded in attracting to the country at various perieds. The enormots extent of excellent but waste land, and the small and thinly-scattered population in all parts of the empire, naturally suggested the idea to the government of bringing these deserts into cultivation by inviting colenists from other countries Ivan Vasilievitch invited Germans to Moscew, of which the German 'Slobeda' still afforls evidence. Nichael Fedoroviteh, in 1617, brought several theusand inhabitants from Finland opd Carelia, and established them between Tyer a. Moscow Peter I. settled a great many Swedish priseners, and in 1705 , after the capture of Narva and Dorpat carried away about 6,000 of the inhabitants, 8 ud planted them in seattered parties in various parts of the empire. But Catherine II., immedintely after the commencement of her reign, conceived the idea of 'peopling with immigrant foreigners the desert and waste lauds of the southern provinces of the empire, and through them of disseminating industry and agricultural science among her subjects,' as it is expressed in the ukase of 1763 .

The first colonists received from the Russian government the necessary travelling expenses from their homes to their places of destination; they were allowed the importation, duty-frec, of their effects, to the value of 300 silver roubles; they hat houses built at the expense of the crown; and they had provisions and money for the first year, and a large sum as a loan, without interest for a certain number of years. These last privileges have not been granted to the same extent to all subsequent celonists.

A return made some years ago stated the number of celonies in the empire, inhabited by settlers who had not yet become quite natienalised, as fellows:-

Agriculture in Russia is at a very low ebb. Rut it differs materially in different provs. ; and some estates, even in the most backward provs., have been greatly improved. In Livonia, and the provs. bordering on the Baltic, and also in purts of the Ukraine, the husbandry is very superior, and the implements quite equal to the best that are to be met with in most parts of Germany. But, with the exception of a few estates, it is quite otherwise in the rest of the empire. The plough, owing to the high price of iron, is usually a wretched implement drawn by one horse, and calculated rather to scriteh than to turn up the soil. The harrow is mate of wood; and rollers and hoeing machines are entirely maknown. Were it not that the soil is genornly lipht, friable, and very easil $y$ wrought, it would be impossible to cultivate it by such

low ebb. Lut s.; and some a provs., have and the provs. 0 parts of the crior, and the that are to be y. But, with uite otherwise gh, owing to wretched imculated rathur 'The harrow ing muchines that the suil sil y wrought, e it by sucit
means. But these suffice to make it produce more than enough for the wants of the inliabs. There is not, indeed, another country in Eirope where corn crops may be raised at so little expense of labu,ur as in Kissia.

Exclusive of the sanily deserts of the sonth, vast tracts in the northern parts of the empire are, and always must be, unsusecptible of cultivation. Taking the whole surface of European Russia and l'uland at 500 millions of deciatines, M. Tegoborski (Furces Productives de la Russic, i. 53) supposes it to be divided as follows, viz.: -

The products vary, of conrse, with the difference of soil and climate. All sorts of corn are raised; but rye being the common food of the peasantry, it is produced in much greater quantities than any other sort of grain. Next to rye is oats; and the value of the crops of these two, taken together, is supposed to be more than double the value of the crops of wheat, barley, and every other kind of com. Orel, Kasan, Nijni Novgorod, Penza, Tambof, and Koursk are the most productive provs.; and it is in them that the greatest quantity of wheat is raised. According to the estimate of Tegoborski, the total produce of the crops of all sorts of grain in European Russia (including Poland) may be taken, in ordinary years, at about $260,000,000$ chetwerts ( $186,875,000$ qrs.). The return is supposed to be about four times the seed. But in the best districts, wherover the land is moderately well cultivated, the produce is mech greater ; and is, indeed, nowise inferior to that of the most favoured countries. Corn in Russia is: very frequently kiln-dried in the sheaf, before it is either stacked or thrashed. Tegoborski reckons the average price of the different varieties of corn at 3 roub. 50 cop . (silver) per chetwert; making the total annum value of the produce of grain 910 million roubles (silver), or $144,083,333 l$. sterling. 'Taking the empire at an average, the produce of the crops is not supposed to differ very widely in different years. But in the provs. there are, in this respect, the most extraordinary diserepancies; the crops being occasionally nost luxuriant in some, when in others they are all but totally deficient. And hence it not unfrequently happens, owing to the want of casy communications between them, that while one part of the empire is glutted with corn for which there is no demand, another is suffering all the evils of scareity. Contrary, perhaps, to what might be expected, the crops suffer more from droughts than from rains. Flax and hemp are very extensively cultivated; and, besides what is made use of at home, are very largely exported. Potatocs, though happily not very popular, succeed almost everywhere; and this, also, is the case with hops. Tobaceo is contined ta the S. provs., where it is an important article. The culture of beet-root has made considerable progress, especially in the government of Kieff.
it deserves to be mentioned, to the crelit of the government, that it has latterly been exerting itself in the most efficient manner for the improvement of agriculture. Irofessorships of agriculture have been established in the ditl'erent universities; and an institution to which a model farm is attachell has been established near Mohilew for edneating 120 pupils, so as to tit them to act as stewards or manngers of large estates.

IIorses are very abundant in Russia. Speaking generally, they are coarse and ill shapci, but hardy and active. In the southern provinces, however, whence the cavalry horses are brought, the breed is very superior; and great efforts have latterly been made to eflect an improvement in tho breeds in most parts of the enpirc. The khans or cheiks of the nomadic tribes oceasionally possess as many as 10,000 horses. There is 1 mo country of Europe where so many cattle are reared as in Russia, and none where they are taken so little care of. Exclusive of the nimerous herds, which constitute a principal part of the wealth of the pastoral and nomadic tribes, every peasant. has a few head, and even the beggar has a cow or a goat. The ordinary liussian ox is small, lean, and bony; but those of the Ukraine, Podolia, Volhynia, and some other provinces, are large and of a very fine breed. Many thonsand head are annually sent from the Ukraine to Petersburs and other Russian towns, and also to Silesia amd Germany. Tallow is at present, and has heen for many years, a most important article of export from liussia. The wool of the common linssian sheep is hard and coarse; but latterly comsiderable efforts have been made to improve the breed by importing tine-woolled sheep from Germany; and wool, notwithstamaling the inercase of factories at home, has become a considerable article of export. It is doubtful, however, whether the wool of Russia will be able to keep its ground in foreign markets in competition with the wool of Australia. Speaking generally, the climate is too muist for the production of fine wool, and too little attention is paid to the cleaning and assorting of ${ }^{-}$ the fleece. Epidemic diseases are, also, very prevalent, and the rinderpest, which was brought into England in 1865, and made such sad havoc among English cattle, was known many years previous in Russia, where it destroyed hundreds of thousands of animals. 1 logs are everywhere abundant, and, in the northern provinces espesially, furnish a principal part of the food of the people, while their bristles are an important article o' export. Goats are also abundant. The following is an estimate, based upon ofticial returns, of the number of horses, horned cattle, sheep, hogs, \&c., in liussia in Europe.

| Horses | 15,805,782 | Deer | 115,862 |

The rearing and management of bees is more attended to in Russia than in any other European country, and is, in fact. the principal occupation of several tribes. The wild bees, however, greatly exceel those that are domesticated. Their culture is principally attended to in the provinces of Kasan and Ourfa. Individuals anoong the llaseltkirs possess 100 hives in their gardens, and upwards of 1,000 in the forests. Honey is very extensively used in many parts instead of sugar. The export of wax is very considerable.

The forests of Liussia are of vast extent anil importance. They are, however, very unequally distributed over the comntry, many of the apparently boundless steppes in the S. govermments being, as already stated, wholly destitute of woo!. In some parts, too, especially in the vicinity of the great towns and navigable rivers, timber is become scarce from the reckless and improvident manner in which it has been cut down. But measures have been taken to obviate this abuse; and with ordinary care the forests may be sail to be incxhastible.

Manufactures.-The manufactures of the empire
are not generally in an alvanced state. Since the reign of Peter the Great, their improvement and extension have, it is truc, been favourite whjects with the goverument; and heavy duties and prohilitions have, in consequence, been imposect on such foreign articles as it was supposed might interfere with similar articles of native growth. But the slavery of the peasantry, only recently abolished, was long an obstacle to the formation of those habits of industry, perseverance, and invention necessary to insure success in manufactures; while the thinness of the population, the variety of natural products, and the fertility of the soil, all concur in pointing out agriculture, including under that term mines and fisheries, as the natural and most advantageous employment that can be carricd on upon a great scale, till civilisation be more generally diffinsed. Among the peasantry gencrally, there is little or no subdivision of labour. Each family commonly supplics itself, with all the clothing and furniture which it requires. Sometimes, however, a person superadds some particular employment to his ordinary avocations; and sometimes this principle is carried farther, and the inhabs, of entire villages devote themselves to some particular trade. The versatility of the Russian peasant is astonishing. Ilc is truly a Jack of all trades, and will turn his hand to whatever may be required. 'He will plough to-day,' says an observer (Venables' Russia, p. 141), 'weave to-morrow, help to build a house the third day, and the fourth, if his master need an extra coachman, he will monnt the box, and drive four horses abreast as if it were his daily occupation. None of these operations, except, perhaps, the last, will be as woll performed as in a conntry where the division of labour is more thoroughly understood. They will all, however, be suthiciently well done to "serve the turn," a favourite phrase in Russia. The people are very ingenious, but persevcrance is wanting; and though they carry many arts to a high degree of excellence, they gencrally stop short of perfection; and it will be very long before their products can come into competition, for finish, durability, or cheapness, with English goods.'
In certain departments, however, Russia is not merely equal, but even superior to other countrics. Her leather is excellent; and for some purposes, such as book-binding, is equal, if not superior, to any other material. The process followed in the preparation of this important article has been often describecl; and foreigners have frequently engaged in the business in Russia, with the view of making themselves nequainted with the details, that they might undertake it at home. But, whether it be owing to something in the bark or the water, or to some other undiscovered cause, none of the attempts to produce Russia leather in foreign countries have succeeded, and Russia continues to enjoy a monopoly of this valuable product, and to export it in large quantitics. The sail-cloth, corlage and canvass, tick, felt, mats, potashes, soap, candles, caviar, isinglass, spirits, and some other articles produced in hussia, are quite as good, or better, than those of any other country.

So late as 1788 , almost all the cloth required for the clothing of the army was imported from abroad; but it is now wholly manufactured at home. Clotb of a superior quality is also made at Moscow and its vicinity, at lamburg, near Petersburg, Sarepta, and other places; hut, generally speakirg, it is inferior to what might be imported, and much dearer. The manufacture of tlax and hemp is the best suited of my to the condition of the country, and is by far the most extensive and
prosperous. It is very widely diffused, there being fow villages in which it is not carricd on to some extent; but linen may be said to be principally manufactured in Vladimir, Kostroma, Moseow, and Kalouga; and sail-eloth and cordage in Archangel and Orel. The silk manufacture of Moscow is extensive, and it is carried on to a less extent in other towns. The glass manufacture has, also, made a rapid progress. Singlo plates have been made at the Petersburg, glass-works, which have sold for 600l. each. The glass-works of the brothers Maltzoff, in Tula and Twer, are deservedly celebrated. The manuficture of snuff and cigars, potash, and sonp, has rapidly increased. Paper, coarse and tine carthenware, and jewellery, are produced at Moscow, Petersburg, und other places.
The cotton manufacture has, also, been largely extended, though this extension is an undoulted result of the oppressive dutics laid on cotton goods and yarn when imported, and alfords no evidence of any real improvement. To suppose, indeed, that a country like lussia, without conl, without improved means of communication, with iron at an exorbitant price, and with slaves for workpeople, should attiin to anything like excellence and clicapness in the finer description of manufactures, would be to suppose what is plainly contradictory. Iaxthausen, Tegoborski, and other Well-informed writers by no means unfriendly to Russia, admit that the attempt to force the piremature growth of manufactures, which camot be successfully carned on excent upon a large scale, by means of skilled labourers and the most ingenious machinery, has been and continues to be most injurions to all her best interests. It draws away capital and intelligence from those pursuits in which she has every capacity to excel, to others in which it is impossible she should succeed. The real wealth of the empire consists in her raw products and coarse fabrics, which might be increased, under a free commercial system, to any imaginable extent.
M. Tegoborski gives the following statement with regard to the value of the manufactured products amually produced in Russia, and the number of people employed in their prodnction :-

| Specles of Manufaelure | Total Value or I'roduce | Value added by Industry after ilethuctlig Value of Raw Material | Number ol Men, Women, and Children employed |

partly, also, and no doubt, priacipally, employed
in other pursuits.
Industrial pursuits are quite free in Russin. There are no interial monopolies, save those of salt, spirits, and playing cards. There is nothing in the guilds, or corporations, to cheek competition; and all may excreise any art or profession, either in town or country, as may be most agrecable to themselves. Since 1836, lectures liave been instituted in all the Rassian miversities, for the instruction of manufacturers or handieraft-tradesmen in mechanics and chemistry. Noscow has hecome the grand seat of the manufacturing industry of the empire. From being principally inhabited by nobles and their dependents, the city is now prineipally inhabited by manufacturers and traders.

Commerre.-The commerce of Russia is already, notwithstanding the long paralysing influence of the prohilitive system, very extensive. But this system is now being modified; ant trade will, no doult, continne to increase with the growing wealth and population of the empire, and according as more liberal principles may prevail. The principal artieles of export are tallow, which is more largely exported from this than from any other country; grain, particularly wheat; hemp and flax; timber, potashes, bristles, linseed and hempseed, linseed and hempseed oils, wool, leather; fox, hare, and squirrel skins; canvas and coarse linen, corlage, caviare, wax, isinglass, furs, and tar. The prineipal imports are sugar, cotton, cotton stuffs and yarn; machinery and mill work; hardware and iron; collee ; indigo and other dyestufls; woollens, oils, spices, wine, tea, lead, und tin; coal and salt in large quantities; linens and sills.

The subjoined table gives the total value of the imports and exports (exelnsive of specie) of the liussian empire, in each of the years 1850 to 1862.

| Years | Imports |  | Exports |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Sll. Monbles | $\boldsymbol{\Sigma}$ | st1. Roubles | $\boldsymbol{\Sigma}$ |

The principal trading ports are Petenhurg and Higa, on the Baltic, but particularly the former ; Archangel, on the White Sea; Odessa, on the Black Sea; Tanganrog, on the Sca of Azof; and Astrakhan and Jaku, on the Caspian Sea. Moscow is the principal entrepot of the interior commerce of the empire. The trade with Ching is mostly carried on through Kiachta; and the fair of Nijni Noygorom is celebrated all over Europe. There are also very large fairs at Jrbil, Kharkoil; Joltawi, and other towns.

Communications. - Down to a late perind, the communiartion between letersburg to Moscow was maintained by a road which was justly said by Lord Londonderry ('Tour, i, 1.1t) to be a most. mitnificent publie work. It was nearly 500 m . in length, quite level, abont domble the width of the (ireat North Road in England, and was macudamized throughout, and kent along the whote line in perfect repair. But this rreat work must now be rendered comparatively useless, the two capitals having been connected by a railway. Other lines of railway connect the eapital with Wihat, Warsaw, liga, Orel, and the other chici towns of the empire; but, excepting these and a fuw other principal lines, there is a great want of good roads in liussia. This, however, is productive of less inconvenience than might be expected, from the circumstance of the frost rendering the worst roads fit for sledge travelling for a considerable period of the year ; and from the number of navigable rivers, aud the extension that has been given to their navigation by the constrnetion of numerous canals. By these means a water communication has been eflected between the great navigable river the Wolga, whieh has its embonchure in the Caspian Sea, and l'etersburg and Arehaugel: the Wolga has also been united with the Don, which falls into the Sea of $\Delta$ zotr. The Pripet, an aflluent of the Dniepr, whiel falls into the Black Sea, has been connected with the lugg, an afluent of the Vistula, while the lutter has been commeeted with the Niemen.

Few countries lave so extensive a eommand of internal navigation as liussia. Goods put on board in letersburs mily be convered to Astraklan, a distance of above $1,400 \mathrm{~m}$., or to any port on the Caspian, and vice vers $\hat{a}$, without once bring landed. The iroln and furs of Siberia and the teas of Clina are received ac. l'etersburg in the same way; but,

## RUSSIA

owing to the grent distanee of these enuntries, and |mostly foreigners, of whom the English are the the short period of the year during which the rivers and cauals are marigable, they sometimes take three yours in their transit. Inmense gmantities of goods are empered during winter mpon the iere, in sledges, to the difterent porty, mad to the nearest pristhens, or phares in the interior where barks are built for river or camal mavigution, They are put on hard in maticipation of the period of sailiug, that the harks may be ready to thke advamtare of the high water. ly hoatiug down with the corrent as som as the show and we berin to melt. The eargows carried up the river into the interior duriag summer are principally domeryed to their mimate destinations by the sledge romas during winter. The remserance by the latter is fomerally the most experditions; and it, as well as the internal conveyance by water, is performed at a very molerate expense.

Thie harks that come from the interior are mostly of a very rule construetim, Hat-hatomed, and soldonn drawing more than 20 or 30 inches water. When how arrive at their destination, they are sold or hroken inp for fire-wowl. Those hat have the purts for the interior are of a superior destription, amb are emparatively few in number the commolities imported heing. at an averare, of mach greater value, relatively to their butk and weight, tham those that are exported.
Aecomes in lisessia are keph in rombles and kojecks. The silver romble, worth about 3s. 2d. Wig., is divided iuto 100 koprecks, and is equivalent to 3. paper roubles. The only rohd coin is the demiimperial, value is rombles, or nearly lis. since 1sen, phatina coins, worth alout 16 . sterling, have loen struck ; hut they are not yet of any practical importance. 'The Russian IV, is rather lirger than the avoirdupois 1 h ; the hast $=13 \cdot \alpha$ quarters ; the chetrert, the measure for corn, $=5 \mathbf{5} \mathbf{7}$ E.mg. Lushels; the decintine, land measure, $=$ about 27 ateres; the rerst of 10.5 to a geog. degree $=1,167$ yards, 3 versts being alunt equivalent to 2 Eing. m.
Every Russian earrying on trade must be a burgher, and hare his name registered in the burghers' book. All whose names are in this book are cither townsmen who have property within the eity, or members of a guihl. There are three puilds. Thase who helong to the tirst must posricss 15,1000 silver rombles; they may engage in all sorts of commereial transactions, may establish lanks, tit out privateers in ease of war, and drive about the city in carriages drawn by two horses. 'Thase helonging to the seeond puild deelare themsolves possessed of 4,000 whbles; they are not contined to inhand trade, hut they can only import fircign foods worth 90,1000 rombles, A eapital of 2.tol roubles entitles its owner to almission into the third guild, which comprises shopkeepers and petty dealers. The rates paid by the members of these guilds amome tor 1 per cent upen their declared capital, the 'statement of which is left to the conseticnce of every individual.' l3urghers are not obliged to serve in the army, but may provide a sulstitute, or pay a tine. The guests, or forcign merchants, who eirol themselves in the city register on aceount of their commercial affairs, onjoy priviloges nearly similar to those enjoved by the members of the tirst guild.
Soue but mative Russimas are allowed to engage in the internal trade of the comutry; and hence a foreigner who imports gookls into linssia must sell them to linssians onty, and at the port where they arrive. A few foreigners, indeed, setted in Lisssia, and having eomections with the natives, trade with the iuterior: but it is contrary to law, and the goonds are liable to be seized.
The merchants engaged in foreign trade are
principal. The peemliar privileges firmerly cinjoyed hy the latter are now nearly obsolcte, nuld their rights, in common with ilose of ulher forcigners, are merely thowe of gnests. The Singlish thetury nt Ielerershurg is, at present, little clse than a society formed of some of the principala Pinglish merehanis, several of whom, however, da rot belong to it: its pewer extends to lithe else than the managenent of certain funds mader its control.
Owing to the searcity of empital in Russin, groods, the produce of the conutry, are frer, inemtly paid in ndvane: mid forvign groods are mast commonly sold upon eredit. From the month of November to the shipping seasom in Mas, the Linssians who trade in thas, hemp, tullow, hiristles, and iron, either come themselves to bedershores or Higa, or emphoy agrotes to sell their geals to forcigners, to be delivered, accorting to agreement, in May, Jume, July, or August. The payments are made areording to the circomstumes of the sellers and buyers: sometimes the huyer pays the whole monomit, in the winter monilis, fir the goods which are to be delivered in the summer or antumin; and sometimes he pays a part on comeluding the emitract, and the residue on delivery of the goods. The manufacturers and dealeris in linen usually come to Petersilmig in Marelh, and sell their goods for ready money.

Goicrnment--In liussia all power emanates from the cmar, whose authority is uneont roblem, except hy the respect he may vield to established customs, the privileges of certain classes, and the prejudices of the people. The will of the momarels has mo legal limita, so that he may he said to be absolute. The act of election of Itil3, which conferred the erown on the house of Romanof, reengnises the molimited power of the sovereifn. The Dimpress Cablerine and the Fimperor Alexamder lahmured to give order, simplieity, and regularity to the administration, and to reduece it to a sestem. so that it might be as independent as possible of the eaprices of the sovereigh. Alexander, indeed, proclaimed in 1811 that the law was in Russia superior to the sovereign, and pave to the senate the right of remonstrating ngatinst any ukase (as an imperial decree is called) they thought contrary therete. This, no doubt, secing the way in Which the semate is composed, is a very fedble wheck on the despotie power of the emperor. Hat it may well he doubted whether, in the actuad state of linssia, the present form of goveriment be not botter alanted to its wants than any that could be substinuted in its stead. It is sutlicimat: elear, as woll from general principles as from what has actually oceurred, that Russian grinecs camot salely follow a comrse of condart penerally disliked by the mation. On the other hand, however, the extent and unity of the sovereign jower is the best security for the propress of civilisation, and for the improvement and wellleing of the mass of the people. The later being, for the most part, without property, intelligenee, or inllnence, wonld be tyramised over to and incomparably greater extent ham at present, had the nobles any share in the government, or were they able to control its proceedings. What loland was linssin wonld he, did the nobility or superior elasses participate in the sorereign power. But the interests of the nutocrat and those of the mass of the people are generally identical. Under his protecting argis civilisation is extending, and a class of intelligent labonrers is mradually growing up, 'The emperor is helieved to be afraid of the nobles; but he har little

In fear from the people, the bulk of whom worshly lim like a domi-gos. It is this which chiesty led to that immense social revolution, the manei-
 more than anything, redincel the power of the nobles. There seems little doulit but that, under present circumstames, ant minghtened despotism is the most mituble govermment for a eountry lihe Russia. A representative romatilution wonlil mercly poit additional perwer into the hands of a comparatively small class, amil womle be as little ablipited to the wants of such a emumtry as ant alsolinte government woulal be to Enghand.
The carar is the central puint of the adminisration: his decisions are liaw, Every thiogr cmanates from lim in the lirst instanes, and every thing is referred to him in the last. The latomer he has to malergo is preat, alled requires incessant activity. The fublic lmsimess is tramsacted, under this emproror, by dilkerent homeds, romeifs, or colleges, which have rach separate, but sometimes nos easily distingoisher limetions. The Imperial Council of the Fimperor was entahlished, on its present foroting, in 1810. It consises of a president and an indelinite momber of members, of which the mimisters always make a part. It is divided into the live departments of heristation, war, civil and religions affars, thamere, and the affairs of l'oland; and lias the superinrandence of ill matters commected with the inturnal alministration of the empre. The secome college, or semate, was fommed by loter the fireat in 1711, and is reckoned the most important hady in thestate. It has virionsfinetions, partly of a deliberative and partly of an execotive that
 is the high enurt of justice for the empire, num eontrols all the interior tribmalas. Ihe mempers are nominated by the empror: at piresent their numher is about 100, ant each receives a salary of 7,000 robldes a year. The semate is divided into eight committees or sections, of which tive sit at Pretersburg and llaree at Moseow. Vach eommitlee is authorised to decide in the last resort mone eertain deseriptions of eases, brought eiflor immediately befure it, or by apleal from the inferior conrts. In a fow cases, however, jarties dissatistied with its decisions may petition the emperor. The selutors are mostly persons of high rank, or who till high stations; but a lawyer of eminence presides over each department, who represents the rmperor, inn withont whose sigmature its decesions wonld have no force. In the phemam, or general meeting of the sections, the minister of justice takes the chair, as high procurator for his majesty. besides its superintemlence over the court of law, the senate examines into the state of the public reveme and expenditure, and has power (0) enguire into publice abuses, to appoint to a creat variety of ollices, and to make remonstrances to the emperor. Monthly reports of its proceedings are published in the gazette. The third college comsists of the Moly Synord, and to it is committed the sumerintendence of the religions alliins of the empire. It is emposed of the princtpal dignitaries of the church. All its decisions run in the emperor's name, and have no forec till approved by him. The fourth eollege consists of the Committee of Ministers, of whom there are eleven, viz. the ministers of the imperial honsehold, of war, limanee, justice, interior, public instruction, imperial domains, post-ollice, ronds and poblie buildings, and the vice-chancellor and comptroller-genera, The ministers have frequently eolleagues who supply their phace when they are either sick or absent. "They communicate directly with the emperor, or with his ehancellerie
partiruliere, in whose hands all the executive anthority ls centred.
The local administration differs in different provhaces, govermment having always nllowed conguered or anmexel comintries to preserve their own laws and institutions, exerpot in so far as they ware hostile the the remeral constitution of the ampire, Finland has a simedind form of goveriment: aml the provs. wrested from Sweden hy Prore the Grent, Gomand, mat those liomerly
 nul privileres, which, however, have latterly been much monlitied. Phit despite these exieptions, the form of the provincial gevermment is sumbiently unifirm.
The empire is divided into gromeral governments, or viee-royalties, fovernments, num distrists. 'There are $1 / 1$ of the tirst, 51 of the seeoond, mul above 320) of the lant. There are ako extensive districts which, from the thimeses of the pro. or uherwise, are not organised intor regular govermments, which are cabled provinces, or oblests. The viedroys, or gemeral governers, are the represerntatives of the emperor, and an such command the forces, and have the supreme eontrol and direction of all alhims, whether civil or military All the finctionaries within their jurisiliction arm subordinate to, and make their reports to them, and they even sametion or suspum the juelements of the conrts. A civil governor, represinting the Leneral-grovernor, assisted by a comacil of regency, to which all memsures must he submited, is esta blished in each goveament or province. In case of dissent, the oplinion of the grovernor is provisionally mbipted till the pleasure of the comperor with respere to the matter be asecrtabinel. A vice-governor is appointed to fill the place of the divil-governor when the latter is alsent or unwell. There are also, in every govermment, a commeil of tinance moder the presinlemey of the vice-govermor Wha mamare the erown estates, and sumerimem the collection of the revenne; a college of gromerat provision, wheh has the direction aud inspertions of all charitable fommations, prisons, workhouses and selomis for the instruction of the poor; and a college of merlicine, which attends to all matters commeted with the public health, appoints district physicians, inm inspects pharmacopelas. The dis tricts have each their local finctionaries. The towns have a manicipal body, clected once every three years by the different chasses into which the free population is divided. Each town has also, acerriling to its importance, a commandant or bailitl, appointed by the erown, who has charge of the police, of the public buildings aud manazines, and who excentes sentences, and pursues criminals.

The Russian judicinl system is complicated, and not ansily umberstood, except by matives. 'l'here are civil and criminal courts in every sifcle; and a sumene court of justice, divided into cavil and criminal sections, is established in every government. Cases deeded in the inferior courts mas be carried by appeal to it . lis sontence is timal in all erimimal cases, and in all civil matters relating to sums moder 500 rombles. Those involving property to a greater amount may be carried before the semate.

It is a curions fact that, notwithstaming the despotical mature of the goverument, all the provincial tribumals consist partly of elective functionaries. Thus, the superior eourt for a circle consists of a judge and secretary, and of two assessors chosen ammally by the bohdes, and two by the peasants; and the suprior court of justice for a government, whieh is divided into a civil and a criminal chamber, consists of a president,
semetary, and four assessors for each chamber, two of the hisesesors being chosen by the mobility, and two by the burghers. It is, in fact, a principle in linssia, that a portion of the julges in every court should belong to the same class as the barty whose interests are muder disenswion, and be elected for that purpose by his compeors. l'revinusly to the reisu of the Eimpress Catherine II., the julges, particularly in the inlerior comrts, ware wretchelly pail. 'Ihat princess increased thoir sularies, hut they are still far too low: and sering that the judges are removable at pleasure, and owe their situation to fivour rather than unerit, there is wo wonder that the greatest ahmes continne to exist in the administration of justice. The procedings are dilatory in the extreme. The prohihition arginst taking fees from suitors is rarely emmplied with; and in most trimmals it is allimed, that if justice camont be altogether alecoited, it may at least be indetinitely postponed, loy dint of money. These ahmses have, however, heen, in part at least, obeiated by the publicadion, between $1 \times 26$ and $1 \times 33$, ly the legislative commission, of an extensive digest (Steod Zahonorr, ' body of law') of all the laws then in force relative to the rightes of citizens and the administration of public justice. This publication has preatly simplitied the law, and is important from its being, as it were, a elarter of rights which may be appealed to on all finture occasions, and which it will be very dillicult for any succeeding sovercign to abridge. But it wonld, notwithstanding, be idle to expeet any very material improvement in the orilimary aiministration of justice, until the judges be better trained, selected, and paid; and till the influence of public opinion, ant of a comparatively free press, neither oi which has at present any existence in Liussia, be brought to bear on the administration of justice, and of publie affairs generally. The latter, in fact, is the only security against abuse on which any reliance ean sately be placed. Whereever judges are exempted from the control of public opinion, and the mimalversion of the press, they are most commonly the obsequions instriments of quvernment, and seldom seruple to commit injustice when they believe it will be aeceptnble to their superiors.
There is in hussii, particularly in the great towns, a very etlicient system of police. The otlicars are empowered to ilischarge various functions besides those which come more peenliarly within their province, such as the decision of dilferences between masters and servants. Crime is not frequent in Russia, and property is as well protected in it ns in any other country. Houses beinge generally built of wood, fires in great towns vire apt to be very destructive, and the most eflectual precautions are taken to prevent their occurrence. All strangers arriving in liussia must pradnce their passports at the police office, and motify their arrival in the public papers.

Phishments.-Capital pmishments are rare in Russin, treason heing the only crime visited with sleath. In cases of murter, lire raising, and other eapital offences, the criminal, after receiving a celtain number of lashes from the knont (a heavy thong whip), under the intietion of which he sometimes expires, is condemned for life to foreed labour in the mines of siberia. The nostrils of criminals used also to be slit, and their face branded with a red-loot iron previonsly to their hanishment to Siberia; but this needless aggravation of punishment was put an end to by the Emperor Alexander I.
'Turture was formerly universal in linssia, and was intlicted at the discretion of the superior jus-
tices in all parts of the country, by whom, as was to be expectel, the power was often shamefolly abused. Russia is indebted to the Empress Cntherine lor the abolition of this atrocions practice. It is a siugnar finct, that the prejudice of the linssians, in regard to the necessity of torture, was su dee, ${ }^{2}$ rooted, that Catherine had to proceed with great cantion in bringing abont its abolition, which was eflected rather by indirect than by direct means.

Division of the People into Clitsses.-The people of liussia are generally divided into four clasees, viz. 1. nobles, 2 , clergy, is hurghers, merchants, and other firmers, and l. the peasants, or agricultural labourers.

1. Nobles.-I'revionsly to the reign of l'eter the Great, the linssian mobility consisted principally of the descendants of the ancient petty princes if the comutry, or of lords jossessed of vast extates. They were in the exclusive possession of all situritions of trust and emolument, to whieh they succecded according to their rank. leter, who early saw the disadvantage of this state of things, and the necessity of undermining the intluence of the nobles, most of whom were violently opposed to his projects for the regeneration of the comutry, had recourse to furtherance of his plans, to the sclaeme of creating a new oriler of nolility. In this view he divided all the civil and military functionaries in the service of the state into it classes, enacting, at the same time, that the s hithest classes shonld confer on the individuals in them the distinction of hereditary mobility; that some of the other classes shonld confer the distinction of personal nobility, or of nolility for life; and that those enrolled in the others should be deemed gentlemen, or bien uirs. Sume modilications were male in this nrrangement ly the Empress Cntherine II.; bit it is still manttained nearly as it was contrived by Peter the Great.
According to the oflicial accounts, the order of the nobility numbers about 700,000 individuals, of whom nearly 600,000 enjoy hereditary and the others persoinal dignities. In hassia, properly so called, the nobles are not numerous; but they abound in Podolia, Vollyyia, and other provinces acquired from Polansl, and especially in l'oland itself. Few, however, of the lolish nobles possess estates, and many of them are in a very destitute condition. The titles of prince, count, and baron have superseded those formerly in use. In the govermment of 'Tula, there are said to be more than 100 fimmilies having the dignity of prince. All the members of noble families are noble, and lave the same title as the head of the family. On the death of a molle persom, his estate is ilivided, aecording to a lixed scale, nmong his elididren of both sexes. Nobles are exempted from all personal charges, and from the obligation to serve in the army. Nobles are nlso exempted from corporeal punishment; have leare to tistil the spirits required for the consmoption of their establishments; may engage in mamfactures or trade: and have a ripht to all the mincrals on their estates. Precedence is determined, in liussia, by military rank; and an ensign wonld take the pas of a nobleman not enrolled in the army, or not vecupying some sitnation giving military rank.

The property of a noble who has been condemned is not contiseated hy the state, hut goesto his family. The nubles also elect various local magistrates and assessors, and deliberate at their meetings on varjous matters comnected with the lueal miministration. There is also in every govermment a committee of noblesto watch over the

Theso privileges, which are of consilerable importance, wore embodied and set forth in a uknse in 1762; and mother ukase of the Eimperor Alexander I, prolihits all government finnctionaries from interfreing with the election of the assessors, and other functionaries chosen by the nobles.

It is not easy to form a fieir estimate of the charater of the linssian nobles. (ienerally speaking, their education is more superticial than solid; but many are, weverilieless, highly aceomplished; they are all well aequninted with French, and mombers with the linglish and German lampares; thase who have travelled being distinguisheal by the superior polish and elerance of their mamers. They are miversally hosjitable; and most of them affect, and many relish the society of literary men and artists. That they are more sensail, more given to ostentations display, and less distinguished by a gentlemanly hearing towads their inferiors, than the higher classes in Eurland or Framee, is, no dombt, tric. However, eonsidering that the linssim nobility have no exciting political oceupation, that $\mathrm{i}_{1}$ most parts of the embpire there is no middle chass, and that the oecenpines of their estates are mat free men but slaves, the wonder is, not that their tustes and habits should be, in some respects, harbarons. hat that they shond have male sogreat at advance as they have done since the reign of l'eter the Great, and that they shonld be so intelligent and retined as they are foumd to be.

The Russian nobles, like those of England and other eomentries in feudal times, are in the labit of kerping great mumbers of servants. Thes receive only a tritling pittance as wages, but guite enough for their wants, as they are fod and clothed by their masters. Many linssian noblemen bave recently distingnished themselves by their attention to their estates, and by the ellorts they have made to introduce the improved processes and inplements in use in more advanced combtries. In some instances they have brought land stewards and hbourers from Lingland. Latterly, also, many of the principal nobles have become extensive manufacturers, and some of the greatest mamofacturing establishments of the empire are, at presont, in their hands. Some manufacmes conducted in this way have been eminently successful; thongh it is hardy necessary to add, that if they are of the higher class, or require pecnliar skili, conomy, or attention, they are not of a kind that can be snecesstally carried on by noblemen; and that the moment the protection allorded by oppressive enstom-honse duties, under whieh they have grown up, is withlrawn, they will straightway tall to the grommd.
Mr, Coxe and Dr. l'inkerton, among the best and most trustworthy of the Finglish travellers who have visited Rinssia, speak very favourably of the hassim nobility. The former says, that though they hase adopited the delicacies of lirench conkery, they meither allect to despise their mative disbes, nor squeamishly reject the solid juints which ehatacterise an English repast. The planest ats well as the choicest viands are collected from the most distant quarters. At the ables of opulent fersons in l'etersburg may be seen sterlit from the Wolks, veal from Arehingel, mutton from Astraklan, beef from the uliraine, and pheasants from llumrary and Bohemin. The common wines are charet, llurgandy, and chanmague; and binghish beer and porter may be had in perfection and abundaree. It is usual to take a whet before
dinuer; but the stories engraftom upon this priabtice, of the prevalence of inchriety among the hisher classes, are wholly withont fommation. In this respect their hadits have molergone a total change since the days of l'eter the Great, and they are now remarkalile for sobriety. The pensantry, however, often indulge to e xeess 111 their protations, (Coxe, ii. Líl.)
The lengthened stay of the Russian armies in the western and more civilised Juropean states, after the lefeat of Napoleon's invasion, male a large momber of the nobles, and of the more intrlligent chasses (which in liossia comsist ol ohe military othecers), familiarly acquainted with a more ailvanced state of suriety, and a better fom of civil polity. 'I'his ciremntance, also, fave an increased stimulas to the desire for travelling that previonsly prevailed amomg the nobility, many ot whom wiblidew to Frams.a limglamb, and lialy. It is not to be denied, hat the intuctuee of these concurring circumstances has sincer on varions oreasions, made itself sensibly felt in Russia; and that the govermment has sometimes haid reason to believe that a comsiderable portion of the mbility, and even some of the mast distiuguished remiments, wonld not be disjleased to siee some linits set to the powers of the exar. 'lo romiterine this fecling, various obstacles lave latterly been nit posed to the emigration of Russian moindes mal to their residence abrond: the most vigilant measares have also been adopted to hinder the employm in ot foreign tutors and gowernesses; and to prevent the introduction of loreign works not approwid by the censor. It remains to be seen whother these measures will he elfectual to maintain the present order of things; bit, at all events, it is sulliciently clear, from what has been alroaly seen, that, under existing circmonstances, such a revohution in Litssia as shond materially modify the power of the ezar, womld not be for the advalitage of the buik of the peopte.
2. Chergy.-'Ihis luody will be more fully notieed under the head lieligion. It comprises, in all, about $2-1,000$ individuals, of whom nhout $25.1,0100$ belong to the Established Churel. Inchudine the wives of the priests, it is supposed that about $5 \cdot 10,000$ persons may belong to this class. They are exempted from ill direct taxes, and from corporeal panishment, and may açuire all sorts of tixed property.
3. Merchants and Burghers.-This comprises the class intermediate between nobles and peasimts, and is thms alluded to by the Empress Catherine in her instructions for a new code of laws:- 'This class, composed of freemen, belongs neither to the elass of nobles nor to that of peasants. All thase who, being neither gentlomen nor peasints, follow the arts and sciences, navigation, commeree, ne exerense trades, are to be ranked in this class. In it shoud be phaced alt those who, borm of pleberian parents, shall have been brought up in schools or phaces of education, religrious on otherwise, fommbed by us or by our predecessors: also the children of olficers mind of the secretaries to the chaneery; de. Nerchants and traders belong to this alas:; and thes, as already stated, are distributed into guilds according to the amount of eapital they respectively possess, and enjoy varions privileges on their payint a certain per-centage on the ir cleclared capital. The burghers, or seend division of this chass, possess many privileges suporior to the peasants; lat they are distinguished from the morelants hy being subject to the eapitation tax and to enrolment in the army and nav. This Germans and other free eolonists established in liflerent parts of the empire, and the free cultivators and tenants fonnd in certain districts
belong to this intermediate chas. It comprises about three millions of individuals.
4. Densemts.-previons to the year 18033, hy far the largest portion of the people of Rassia ware shaves belonging vither to the crown or to indiviluals, above $21,000,000$ beiug the property of
 slaves belomering to the molility were very morimally distrihuted, some great jroprietors linving " very large momher, while the smaller and most mumerons class of proprictors have eomparatively fiw. As already stated, by int inperiad ilecree of March is, lebil, coming into finnl exeention on
 tain conditions, within the whole of linsia. 'The owners of the serfis ware compensated for their loss iv a pryment regrlated in the foblowing manner. the previons labour of the serf was estimated at a yarly rental of $\mathrm{i}_{\mathrm{p}}$ per cent., so that for every ${ }^{6}$ roubles which the babnurer carned anmally, he had to pay 100 ronhles to his master as his eipital value to ohtain his freedom. Of hais sum, the sorfs had to give inmediately 20 per cont., while the remaining so por econt. were disbursed as nu advance by the repaid, at intervals extending over 4! years, hy the freed peasants. Aceoriling to an oflicial report mule on Marela $: 3$, 1 diis, the necessary eontract arrangements - varying grouty in the diflerent grovernments, and left, in many instanees, to the serlis and owners themselves-ivere concluded, at
 serff. (If these, $46,2!\mathrm{k}$ enses hat already come into operation. In abont land of these eases, concrrming $2,43 x, 000$ sonls, the documents had not
 -ipation, respeeting $2,038,01010$ peasimis, stipulated for a yenrly pament to the lmalludider; 16,721 , concerning $1,7 \dot{S}^{2},(0) 00$ sonls, stipulated for work to be rendered instead; and in $4,3 \cdot 11$ eases a complete emancipation hat been arranged for, by which 5x: 3,000 peasants hecane cutirely frec. In 92.1 cases the fovermment cooprated in the emancipatory mrangements; in 163 cases at the desire of the landholders alone, which can only he eflected when they are coutented with the fomr-tidthe of the emancjpation price paid by the state, and renomee the other tifth, which should be paid by the peasants. The government had, on the whole, offected the reflemption of 104.197 peasants, which required a sum of $11,457,010$ ronbles, of which, however, searcely the half was paid in state paper, and the other portion was retained as a debt due to the landiohler by the state. 'Ine law on the subject enacted that the emaneipation must be effected by the state whenever a noble possesses no more than 20 serfs. According to an otlicial report of Sept. 10, 1865 , the whole of these arrangements were completed in July previons, so that, from this date, sertilom ceased to exist in linssin.

The Russian peasants at, if a sound constitution, stout and tirmly built, and generally of a middle stature. They live in woolen cottages, formed of whole trees piled upon each other, and built together in villages, the gables to the road. Sometimes they eonsist of two stories, but more frequently only of one. They are heated by stoves, and, thongh dirty, are not uncomfortable, nor ill suited to the climate. Wheir firniture consists generally of wooden articles, with a pan or two, lleds are little used, the fimily grenerally sleeping on the ground, on benches, or on the stove. The olress of the peasant consists of a long coarse drugget eont, fastenced by a belt round the waist, but in winter they wenr a sheep-skin with the woolly side inwards. Their trousers are of coarse linen; instead of stockings, woollen or flamel cloth is
wrapped ronnd the legs, and boots or shoes of matted limben burk are 'requently nubstituted for those of hather. 'Theneek, even in winter, is hare, and the head is covered by a praked round hat or eapr.
The Jussian peasant considers limself well fed if he lase rye-bromb, which is the staple article of liond thronghout the empire, and nour eabhuge soul, with a lump of fat, or log's-laril, lociled in it, ly way of relish. He uses hutehors' ment on holidays, and at other times rgis, salt-lish, hmenn, lard, nud mushrooms, which. nt the proper sensum, are extromely nbundant. Ilis fnvourite dish is a foolge-porlge of snlt or frewh meat, groats, and rye-flour, lighly seasoned with onions and garlie. saled cuemmbers are a constant dish at the poitwant's tahle all the pear romml. These and salted colbages form an ingortant article of mational commeree. 'lisey are brought in harge vats from the sonthern provinces, where the elinate favours their production, to Moscow; J'etersbarg, and other large towns, where they are constantly on sale in the publie markets. 'I'he preparation, in nutumn, of $n$ suthicient miply of these piekled veretables forms, in evory finitily, an impurtant part of domestic economy. 'This dependence of the Rinsian peasant on vegetuble diet is, no dombt, a eomseghence of the extraordinary munther of fasts and finst-lays, of which he is a carcfil observer, mill which are multiplied to such an absurd extreme, that it is sail there are only from tio or 70 days in the year on which it is permitted to nse lutichers' meat. Quas, a fermented liguor, mate by pouring boiling whter on rye or barley-meal, is the common beverage of the pasant. liut he is also very fomil of meal, aul still more so of com branly, and other spirithons liquors. The ennamption of the later is immense, execeding $100,000,0(0)$ gallons a year, and fimishing amumally a large revense to goverument. The use of tea is heeoming more and more extended. A substitute for it, ealled izbitzen, consisting of herls and honcy hoiled together, is also extensively used by the peasantry.

The peasants are exceedingly superstitions. A vessel of holy water hangs from the ceiling of every room, and a lamp lighted on particular oceasions. Fiery honse is provided with a sacred comer, supplied with one or more pietures of their tutelary saints, coarsely danbed on wood, frequently resembling rather a Cnlmock idot than a himan head; but sometimes they are of a better quality; and neatly framed: to these they pay the highest marks of veneration. All the members of the fimily, the moment they rise in the monning, andi before they retire to sleep in the evening, never omit their adoration to the saints: they cross themselves during several minutes, upon the sides and forchead, bow very low, and sometimes even prostrate themselves on the grount. Every person also, on entering the room, pays his obeisance to these oljects of worship previously to his addressing kimself to the family. The linssian peasantry have the vices ineident to their situation. With great capacity of endurance, and the most extraorlinary talent for imitation, they have little active vigour or steadiness of jurpose. In aceosting a person of consequence, or from whom they expect any favour or advantage, they prostrate themsolves, touch the ground with their hands, and kiss the fringe of his garments. When they acenmulate money, they most frequently hury it in the ground, a practice common to all countries where property is insecture.

Previously to the reign of Peter the Grent, it was customary for the Russians, of all ranks, to marry their children very early, even before the

I'his miden alternation of temperature is not fonnd to be injurions to health. Sat, notwithstanding the frequent use of the bath, the people are very deticient in cleanliness.

Army.-The military power of Eussia has been greatly uxamerated by, some, and as groatly dopreciatal by others. 'Ine sitrolitzes, the first regularly organised corps of inlantry in the Kinssian servies, serm to have had their origin abont the middle of the lith eontury; and eontimued, till aneir suppression by lerer the tireat, to eonstitute the principal strength of the army. 'Thery enjoyd varions privileges; were always abont the person of the enperor; and by their licentionsiess and insuborlination, as well as lravery, bore a elose resemblance to the l'ratorian hamals of anaiquity, amd the Janissaries of the Ottoman lorte. The abolition of this formidable corps, aud the reconstruction of the army on a plin similar to that followed in the more civilised comitrics of liurope, was maloubtedly one of the greatest services rendered by I'ter the Great. At his death, the regular army amomed to about 11t,000, exclusive of the imperial guard; and the suceess which attended his contest with the Siwedes showed that this army was a mateh for the best trowps that conhd then be opposed to it.

Cuder Catherine II., the army was greatly augmented and improved. 'This able and annbitious prineess augmented the pay of the trongs and officers, and gave them a more commodious and elegant miform than that formerly in use. She furmed the Cossacks into a light cavalry, which, alter being successlully opposed to the Spahis of the 'Turks, has since distinguished itself in the great contests of more modern times. During the latter part of the reign of Catherine the regolar army amonnted to about 250,000 men; and little was wanting to place it on a level with that of the surroumding powers, save the better organisation of the commissariat department, and the choiee of better educated and more skilful native otlicers. It is, however, to the Fimperors Alexander I. and Nicholas, but more especially the latter, that the Russian army is indebted for the more etlicent organisation, disciptine, and power by which it is now distinguished. The momentous struggles in which the former was engaged called forth all the military resources of the empire; many abuses were rectified, and improvements introd.sed; and the armies of Alexander were at lengtia enabled to contend successfully with those of the greatest captain of the are. Under the present emperor, the discipline and organisation of the army have been still further improved; and it is, at present, in a comparatively high state of efficiency.
The Russian army was newly organised, by a ukase of the Oth August, 1885. Duwn to that
perion, two large armies were mnintained; lint these were then comadidated, and the staff of one of' them reximers. 'The army is now divided into
 divisions, eath division into two brigales, rach brigale into two regiments, and rach regionent
 talions lake the liedd, aud two remain as a rescrve; su that rach regimunt is 1 , (wn strongr, and

'Jhere is thus a force of $47.1,000$ men and ! 16 is pieces of artillery. In aldition to this poworfind army, the resirves, somewhat. on the phan of the l'russian landwelir, comprise two levies, a Ist, of
 On the whole, therelore, it is promble that tho strength of the regular disposable liussian army, as given in the othicial returns, is from B60, 000 to 700,000 men. liat its renl as well as its apparent magnitule, its orfanisatim, amd distribution, are peruetually changing. In addition to the above, there is a large sorce of regular troops appopriated to lowal or peenliar serviess, inchating the garrisons of the slitherent fortresses with the armies emplored in the Caucasos, Fimland, and l'olamel. If to these we ald the veterams, nith the Cossacks and other irregnlar levies, the total anount will be swelled to considerably more than a million of men.
It may thence, perhaps, be supposed, that liussia is in a position to bring a loree of $\delta 00,000$ or tion,000 men into the tielil, exclarive of irregular troops. But, vast as are her means, this wonld he a very exiggarated estimate. Suposing the regular alisposable army on fiot, including the reserves, to amount to fi(0),000 men, two ont of every six battalions ( $1-3$ rid part of its amount) of which it is mate up are almost alwars absent. being employed in the training of new levies, and in public works. Hence, if this statement be nearly correct, only 120,000 of the $6 t 0,000$ disposable troops on foot would be alirectly available in a campaign. And even this would be far too high an estimate. A large deduction must he made in the event of their being called ont, from the numerical strength of the reserves. It is also well known that the forees actually emborifed rarely come up to those borne on the oflicial returns: and though this abuse be much less frequent now than formerly, still it is by no means uncommon, especially in the remoter rovernments. Owing, also, to the disaffection prevalent in poland, and her lengthened frontier, streteling in a continous line from the Gulf of Bothmia to the southern shores of the Black Sea, liussia must keep, especially when engaged in war witlo powers having the command of the sea, a very large

## RUSsiA

army to protect her own lerritory. Fiven if the troops really at the disposal ol' government corresponded with those in the oflicial returns, Rinsmia wonld lhod great ilitliculty in semding large armies into foreign conntrios, and maintaining them when there. Her thances are fiar from being in a thorishing state; her fleets, if they be not destroyed, will most probably be cooped up in harhours; and owing to the want of an elfective orgmination, and the aluses that prevail in lier cmmonssariat department, a great expenditure is insurred it the same time that the trousw are olten very ill provided with the nost indispensable necessarios. The medical department is, also, far from etlicient.

At home Rassin is all but invulnerable. The severity of the dimate renders it next to impossible for an invaling urmy to mantain any permaneut footing in the conintry; whilst the niture of the gromind, withont roads, and intersected by forests, rivers, and marshes, opposes the greatest obstacles to the advance of an invaling forec, and still more to its retrent. Even though the army of Napoleon I. had mot had to contend with the rigrours of a umusually early winter, the result of his expeditum would not have heen materially diderent. He conld not possibly have maintained himself during the winter in Moseow. Sooner or later he must liave retreated; aul a retreat through such a conutry, and in the presence of a powerfin enemy, realy to take every opportunty of attacking, could mot liail to he most disastrous.

The troops of the lmperial Ginarl are a very tine buly of men. (;enerally the linssian soldiers are, in respect of bodily vigour, inferior, perhaps, to those of linglans. 'They have nu enthosiasm; and, in respect of activity and intelligenco, are very fir below those of Eurgland, France, and Irussia. On the other hand, however, they jussess in the sreatest perfection the two tirst qualities of a soldier, the most mfliocling courage, and the most implicit wherlience. Subjected from birth to a master whose will is their law, the habit of prompt and absolute obedience becomes, as it were, a part of themselves. licgardless of clangers or dilliculties, they will attenpt whatever they are ordered; and will accomplish all that the most undannted resolution and perseverance can efleet. Thev also endure, without a murmur, the greatest lardiships and privations, and support themselves in situations where others would starve. The Cossacks, lhasehkirs, and other irregular cavalry, are very useful troops, and are well calculated ciller to improve a victory or to eover a retreat. Contrary to what might liave been expected, the artillery is the department in which the Russians have made the greatest advamees; but it is said to he in excess as eompared with the other deserjptions of force. The cavalry, also, is well monnted and eompratively excellent. Were the otlicers as intelligent and skilful as the solliers are brave and docile, the linssian army wonld be most formidable. But this is far from being the case. hatterly, however, great eflorts have been made to infprove the edueation of the officers, and exclusive of the cstablishments for that purpose mentioned below, a military academy was opened at l'etersburg, in 1832, where officers not above the degree of captain are instructed in military service; aud, in 1837 , a school for 400 cadets for the artillery aud engineers was opened at Woronesch. 'The pay of the otlicers, though still miserably low, has been increased; and the late emperor endeasoured to excite the martial spirit of the people, and to make the service popular, by iustiruting grand military spectacles. Some of these have been on a gigantic scale. At the grand
nilitary and religions festival in commemoration of the liattle of lhorolino, la $1 \times 39$, no fewer thin! 120, t000 troops were prescont. Marshal Marmonat spoke in higla tems of the enlleieney and diseipline of the linssian forces he reviewed in the $S$. provs. in 183 l .

Recruiting.-The army is recruited from the classes of peasants and urtisans, partly and principully by means of a eonseription, partly by the mupption of the sons of sobliers, and partly by volantary enlistment. Every julividual belonging to the chases now named is, with few exerptions, liable to compulsory norviee, provided he be of the proper are and statare. The levies are ordinarily in the proportion of 1 or 2 to every im males; lint during war the proportion is at lenst as 2 or 3 to $50(0$, and sometimes ats much as if or even 5 to 50t. This last, however, may be taken as the marimam levy, and is rurely exceeded. The number of recruits to he furnished hy the empire in general, and by each district in pariocular, is llaed necording to the results of the preceding census. The nobles nominate sueh of their depenidents as they please to complete their quotus, the unly conditions being that they shond have a gool constitution, and be of the requisite size, and not less than 18 nor more than 10 years of age; and. as idle, ill-disposed individulds are sure to be nominated in preference for reernits, those whore averse from the service euleavour to distinguinh themselves liy industry and gool conduct. The minimem standard height for indintry is not less than I metre $\mathbf{i g} 4$ millimetres; and for cavalry, 1 metre 660 millimetres. The recruits are tirst sent to the recruiting establishments, and thenec forwarded to the corps to which they are assigned. Nobles, magistrates, clergymen, und students are exempted from the service. Merelants and traders enrolled in the different guilds are also exempted; as are the only sons of peasants, aud peasants with more than 3 ehildren. The levies firnished ly the Cossacks are regulated by particular treaties; and many lanl' savage tribes are exensed, partly on accomint of their diminntive size, and partly becanse of their great aversion to a militury life. Generally, it is found that a levy of 2 on every 500 males prodnces a supply of abont 90,000 to 100,000 men. Substitutes are ulmitted in the event of the moble being informed and not objecting to their employment.

The period of service is fixed at 22 years for the goarl, and 25 years for the other troops. Latterly however, or since ISB3 and 1840, soldiers after 10 or 15 years' service, according as they belongeel to the Western or Eastern divisions of the empine, are entitled to an indefinite loave; and are sent home to their native place, their names being enrolled in the reserve of the battalion or muadrun of the regiment to which they belome, that they may, if necessary, be again called into active service. The argregate strensth of the reserves (those of 10 vears' service being called the lst reserve, and those of 15 years' service the 2nd) is estimated at about $215,000 \mathrm{men}$. The guard is recruited from the grenadiers; the latter from the inlantry of the line and light chasseurs.
Contrary to what might, perbaps, be supposed, the military is not a popular profession in liussia, and, speaking generally, the conseription is held in abhorrence. Formerly the levying of conseripts used to be accompanied with violence and blockshed. And though the condition of the soldier has latterly been much improved, and his periond of servitude shortened, the severe edicts that occasionally appear against deserters, and the punishments milieted on those by whom conseripts are harboural or concealed, evince the strong dislike

, be supposed, ion in linssia, ription is held gr of conseripts ce and bloolof the soldier mol his period adicts that ocal the punishconseripts are strongr dislike
entertained ly the peasantry to the service. It is belleved that nothing woulid do so much to lessen this dislike as the restriction of the period of compulacry service to some 10 or 12 vears, and abolishing the system of reserves. As the lubits of $n$ soldier would be fully formed in that period, the fini presumption is that but few comparatively would leave at the end of the term; at the same time that their being aware that they would then hee perfectly free, would render conscripts less indinposed to enter the army.

Jinssian soldiers are very generally married; govermment, contrary to the policy of most uther states, giving every tacility to those who wish to take wives. Among other inducenents, it supplies them with lodrings, and imdertakes to feed, clothe, num educate their chillren. But it allows the males no choice of a profesvion; the latter being all bronght up, from infaney with a view to their being mate soldiers or otherwise engaged in the publicesprice. After remaining for a while with their parents in their quarters, they are taken to denots or establishments at Woroneseh and other phaces, where they are instrueted in their doties. This class hins received the unme of cantonists, and is supposed to amount to not less than 270,000 indivilhanls, Many of the non-commiswionca otlicers of regiments belong to the class of cantonists, having been selected on the ground of their sulperior merit.

There are at Petershurg sehools for pages, enginecrs, othicers of artillery, and sub-otheers of the guard; the rank of ensign being given to pages Who have gone through a certrin course, and to gentlemen eadets who have ben two years in the sarvice. Jut the principal establishment for the education of ollicers is that of the Corps des Cudets at l'etersburg, fomded in 1731. It has abont 700 pupils, the sons of noble parents, that is, of those wha have attained to the rank of eaptain in the civil or military service. 'The pupils are divided into tive classes, and on leaving sehool become ensigns in regiments of the line. This school las materially contributed to diffuse information mong the inferior nobility, and to supply the army with ablo ofticers. There are also sehools for eadets at Moscow, Worouesch, Polotsk, 'Tula, Thmboff, and other towns. 'The pupils leave after a tixed time, and are ranked as ensigns.

Juring peace promotion depemls upon seniority, from the rank of ensign to that of colonel : during war it is determined inditherently, by gallantry; selection, and semiority. After two years service a sollier may beeome a steb-otlicer. The sub-otifeer who has served twelve years obtains of right the rank of sub-lientenant or ensign.

The Russian army is supported at very little expense. Exclusive of their pay, the higher class of officers receive considerable allowanees as mess-money; and they generally contrive to eke out their emoluments in various indireet ways. The pay of the subalterns is most inadequate; and it is hardly possible for any one to serve as a subaltern in the cavalry, especially in the cavalry of the quard, unless he has private resources. Oflicers are allowed, according to their rank, one or more servants (deutselihs), maintained by government, but equipped at the expense of their masters. They are taken from among the recruits, the least suitable for active service. The pay of a common Lussian soldier does not exceed $35 s$ a year, and various deductious are made even from this miscrable pittance. He gets a new miform each year ; and is allowed, in addition, 3 barrels of tlour, It lbs. of salt, and a certain quantity of rye or ontmeal. On fette days the soldiers of the guard receive a ecrtain allowance of butchers' meat, but
this is very rarely tasted by their fellows. At home the soldier used to be puid in puper; but when he crossed tho frontier he was pund in siver roubles; mid one of the latter being enfuivalent to 3\} of the former, his pay, when abroad, was, of course, angmenten in the same projartion. This may, perhaps, have been partly inteniled as a stlmulus to the soldier to umbertake oflensive operations; but, hesides having this effect, it whs ansolutely necessary to enable him to subsist. anong forcigners without robbing. The cavalry loorses mre very grond; mud, fioder heing vary cheap, they are well kept. Soldiers lemving the army on the expiration of their compulasory survice nre entitled to a small pension; amil thase who have been maned or womded are received and supported in some of the hospitnls established in that view in alifherent parts of the comentry. Soldiers who continue in the may after their term of compulsory service has expired, aequire several alyantures. They receive, exclusive of the retiring pension to which they ure entitled, domba pay; mud after tive years' volmary service they are entitled to a retiring pension equal to three times their origrinal full lity.

The imadequate pay of the officers and men is the gramil evil in relation to the linssinn army. It compels all classes to attempt underlunid methots of making money, and hence the joblint and corruption of the first and the thievish habits of the latter. These practies are now, however, less prevalent than formerly. Down to a lato period the colonels of linssian regimentes supplied their corps with most artheles of provision and clothing, and it is needless to add that in very many instances the otlicers were more anxious to increase their own emoluments than to provide for the wants and comforts of the troops. Hat this system has been suppressed; mad the provisioning and clothing of the troops is now placed under the superintendence of boards, constituted for the purpose. But despite every preemution there is still much temptation, and many opportmities to indulge in peculation.
Capital pumishments are at ah times rare in the Russinn army, aml are never intlicted execpt during war. During peace culprits are uniformly condemned to transportation to siberia, und to forced labour in the mines. Corporenl punishments may be ordered by the commanding officers of repiments, but they cannot be carried beyond twenty strokes of the knout, and are not inflicted except for very grave offences. Soldiers who contimue in the army after their full period of eompulsory serviec is exhansted camnot be corpo really punished except by command of a conncil of war.

Military Colonies,-Exclusive of her ordinary forces, Russia has a force of military colonists. These are a sort of agricultural soldiers establishel hy an ukase issued in 1818, agrecably to the snggestion of General Araktehicf. The object was to create a military force at the least possible expense, by engrafting military service upon the agricultural labours of the peasants. For this purpose certain districts belonging to the crown were selected in the environs of the lake Ilmen, in the rovernment of Novgorol, and in some of the southern governments, the territory of which wis distributed among the peasantry, at the rate of nbout 15 deciatines, or 45 acres of arable land to each head of a famly, villages on an improved and uniform plan being at the same time erected for their aecommodation. Tho stock and implements necessary for the cultivation of this land were furnished to the colonist by the crown, and he was charged with its eultivation, with contri-
buting to the common magnzine of the village and keeping up the roads, the surplus prombee after these outguings and the provision for his fanily were dedurted, being at his disposal. A moldicr was ansigued to each colonist, to be maintained by the latter; bint the moldier was. in return, obliged, when not abment or elngaged in duty, to assint the colonist in the labours of his farm. 'The colonists, as well as the moldiery, were deprived of their bearils, and wore uniliorm, every thing within the colony being mulject to military regulation? there was no restraint on the marriage of the soldiens; and their mule children, and those of the colonists, were all bred up to be soldiors. The girls were educuted in separnte schouls; and, thongh there was ao regulation to that eflect, were generally maried to the yoming men belonging to the colonies, Exclusive of the princlpal soldiers already alluded to, there was in every cottage a substitute or supplementary soldier, generally a son of the rolonist, who was bound to take the place of the prhedenl suldior in the event of his death or sickHess, sol that the regiments distributed amomge the colonies should never want their full complement of men.

The colonies contained in all from 50,000 to 60,006 troops, but they nre now generally admitted to linve been it finilure. It will always, indeed, be found to bo impossible nuecessfully to combine the business of arrienlture with the military service. The soldiers get attached to their farms and families, and becous unwiling to leave them and imputient of militury restraint. Hence considerable discontent prevailed, at different times, among the colonies in question. A dangerous mutiny, in which several officers lost their lives, was not suppressed except by the presence of the late emperor, who discovered on this oceasion his usual cournge and decision. The military colonies are now eonfined to cantomments in which peasants occupying a certain extent of land are charged with the maintenance of a tronper and his horse.

Nary.- Linssia is indebted for her naval power, as she is for her ascendency by land, her civilisation, and, indeed, everything else, to the creative genius of Peter the Great. Previously to his accession, Rinssia had no sen-port, other than Archmugel, and did not possess a single gun-boat. As soon, however, as Peter had nequired a footing on the laltic, he set about creating a navy; and the better to qualify himself for the task of its construction, he visited Holland and England, where he not only made himself acquainted with the principles of naval architecture, but with the practical business of a slip's carpenter, by workIng himself at this employment. The monarchs since Peter, and especially Catherine 1I, and the present emperor, have exerted themselves to increase and improve the fleet; and, it is now, perlaps, in as high a state of efticiency as it is likely to attain.

The Jussian navy consists of two great divisions, the fleet of the Baltic, and that of the Black Sea. Each of these two fleets is again suldivided into sections, of which three are in or near the IBltic, and three in or near the Black Sea, to which must be added the small squadrons of galleys, gun-boats, and similar vessels. The divisions, like the English, carry the white, blue, and red flag-an arrangement originating with the Dutch-but without the rank of the admirals leing in any way connected with the colour of the flag. Each division of the fleet formerly consisted of one three-decker, eight two-deckers, six fricates, one corvette, and four smaller vessels.
The sailors of the imperial navy are levied, like
the army, by recruitment ; as many of them, linwevar, ns jussible nre culisted vohnitarily, and the
 In this manuor. The perion af service lin the may Was formerly twenty-i wo years, bot was redhered,
 teell years.

An oflcelal report pullished by the minister of marine, July 20, ineia, gives the following statio ment of the existhing musal forces of liansia. It Is maid that this list includes only those vessels which are seaworthy and lit for active wervice.
The limalin fleet, aceorling to this rejort, comprines aix divisions, as follows: 1. The Jalite thet; 2. The llack sea there; 8. The unval luree elnthoned in the Anour; 4. The tlect in the White Sen; 5 . The tleet in the Caspian Sea; (i. The naval force on the lake of Aral. This lant farce is tho smillest of all, and consints of but two steamers of 10 und 12 honse-power; the thent in the White sen is more powerfol, and lachuless two war steamers carrying 8 gums each and titted with engrines of 910 nid 15 horse-ponver respectlvely, hesides three smaller stemmers. 'The next most important tleet is that in the C'nspinn, come prising ten stemmers of Kit) horse-power, nind 1 in steam transports, four of which latter are armend with 8 gins, and the other six with g guns each. The naval lorce in the Amour river is composed of six corvettes, monnting 11 guns ench; sevell sehooners, six of 6 guns ench, the other currying I guns; had cleven stenm tramsports, thirce of them serews, and enrrying collectively 37 gmas. The fleet of the Hack Sea is composed of fortytwo war steamers, six of which carry 11 guis ench; three, 9 guns each; and the remainder ${ }^{2}$ or 4 guns. The Baltic tleet ineholes nine ships of the line, of $135,131,111,84$, three of 83,78 , and 68 guns ; fourteen frigates, one of which monnts 70 guns, and four others carrying from 45 to (i) gurs; six eorvettes, armed with 11 to 17 gums each; two ginn-boats, of 3 guns eath; nine steamers of various kizes, carrying together tis guns; nineteen sinaller steamers and tive transports; making a total of sixty-four sail. The greater number of these vessels were built in England, and fitted with English engines, between the years 1851 and 1861 . But the list loes not include the iron-clad frigates built in 1813-one, the 'Sevastopol,' at Cronstadt, and the other in England.
Jussian ships, both in the Baltic and Black Sea, last but a very short time, and, consequently, are very expensive. The great naval stations are Cronstadt and Sveaborg, in the Gulf of Finland. and Sevastopol, in the Blaek Sea,
Education,-LEducation in Russia is at a very low ebb. There lave for more than a century been sehools in all the great towns; but these are but few in number, and the roral population is too much dispersed, and tied down to routine practices, to allow it to reap much benefit from comptry selools. But, notwithstanding the dinliculties in its way, education has been a grood deal improved and extended within the present century. It has always been, and continues to be, an olject of great solicitude with the foverisment. A plan for a national system of instruction was laid down in a ukase of the emperur Alexander I. issued in 1802, which, though it has undergone various modifications, contains the outline of the system that is still followed. The empire is divided in respeet of education into a certain number of districts, each of which has, or is intended to have, a university, with a certain mmber of lyceums (at which the young men intended to ill civil oflices are mostly in-

The sum placed zmmanlly at the disposal of the minister of public ifadruetion momonts to above if million poubles.
'The higher elucational entablinhments of the empire are:-

1. Vinversity of Petorshurg.-This mblversity, founded in $|x|!$, lins about 710 professors and subondinate functionaries, and (W0) stallents. The dight governments dependent upon it had 15 gymmaiums, till district schouls, and 96 parish schools, with elis private institutions,
S. University of Moscow. - This university, funded in $17 \frac{1}{5}$, has 126 professors or functionarices, and about 900 pupils. In its library are 10m, 0000 vols. It las nine governments within itw jurisuliction, and in these a lycemm, 12 gymmasiums, $\mathrm{N} \cdot \mathrm{I}$ district schools, and 220 parish schools. 'The surveilance of the system is committed to the care of an inspector and live sub-inspectors. A shool has also been lombiled in Moseow for the gratuitons education of the sons of tifty deenyed merehants.
2. The University of Kharkof, fonncled in 1803, has 79 professors, nind 43 prupils. The 5 governments with the territory of the 1 bon Cossacks mader its jurisdiction has 7 gymnasiums, 61 distruct wehools, and 117 parish schools.
J. The University of Kasm, fombled in 1804, has 87 professors, and 321 pupils. The 10 governments under its jurisdiction have enela a gymmasium, The Arabic, Persian, Therkish, and Mongolian langunges are taught in this university.
3. The University of Dorpat, foumled in 1632, one of the most celebrated in Russia, has about 75 grofesors, and 600 pupils. There is attached to the institution a botanienl garden and a museam. The three governments under its jurisdiction have four gymmasiums, anil 111 puhlie sehools.
4. The University of Kieff, called St. Wladimir, was founded in 183.1 , being intented to supply the place of that of Wilna, suppressed after the late Polish insurrection. It has 8 groufessors and suborlinate functionaries, and 522 pupils. It is well endowel. 'There are 5 governments under the juristiction of this university, in which are 1 lyceum, 11 gymnnsiums, 41 district schools, 107 parish schools, and 24 private establishments. Government provides for the education of 50 pupils at this university, of whom 26 are trained to be teachers, and 24 are instructed in the law, 80 as to ennble them to fill julicial and other civil offices in the old Polish provinces.
In addition to the above there are the educational districts of Olessn, Wilnn, nnd Warsuw, which have all institutions of greater or less importance. The lyceum at Odessa, and the institution of nobles at Warsaw, enjoy a well-merited reputation.

Besides the above there are various schools founded for particular objects, and not coming directly under the control of the minister of public instruction. Among others may be specified the military schools in Petersburg, Moscow, and other towns; schools of the surgico-medical academics of Petersburg and Moscow; schools founded
nul enduwed hy individuals, and thowe formded by and placed under the control of the chersy:

The latter, or the theological sehouls, intended principally for the instruction of the wons of the clergy, are aminget tha nost nucient anl importunt of any in liossia. They consist of four principal andmemies at Kieff, Sossoow, l'eternburg mill Kinsma, which give instruction in the fighar branches, and confer the dogrees of A.M. and
 Bin aut tha) distriet schools, at which ronsiderable numbers of the liferior cinsses are instructed; and of a still grealer number of parish schands The total mumber of scholars in these four deacriptions of selomols may vary from $75,10 \mathrm{Ho}$ to 8i, (10n). Though the soms of the elergy generally follow the prultession of their fathers, this is mot nlway the case. Ocensionally they entor the civil nervice, and somo of the mont celchrated statesinem, historians, and poets, of liussia, have sprung from this clase.

Vilenentary hastruction is in the most depressel atate. Aecording to a uknae of 1802, a grammar sehool shond be established in every listriet, mul an elementary selool slould be established in every parish, or at lenst in every two parishes, aceording to the population. But these regulations have, in very many instances, not heen complied with; and when it is considered that the advantarges of education are hat little appreciated by the peasmitry, and that it is frepuently inseomrapen by the mobility, it will not appear marprising that such shonld be the case, la despite, however, of every olsatnele, education has made and is making a considerable progress. 'The ollicinl report of the minister of public instruction states that, in the year 1860 there were in the whote of the empire 8,9:17 schools with 950,002 pupils. This gives $\quad 10$ pupil to every 77 inhabitants. Other enleulations five a mueh lower rate of public educathon, stating the propertion of school-attending chilifen to inhabitants as 1 to 140 .

Sinee the epoch of the Polish insurrection, nll Russian subjects have been furbidden from stinlying in nny forelen miversity. A strict survelilance is exercisel over all deseriptlons of schools; no private schools ean be opened without permission from the proper authorities, and all masters and mistresses of such seminaries must be native linssinns; and it is further orlered that no one slaall be a teacher in a private framily withont being aceredited by a university, and having a certifiente of enpacity and good conduct. The sciences principally taupht in the universities are the history, literature, geography, and statistics of Russia. Lectures on polities or politienl ceonomy are estecmed dangerous, and are forbilden. 'I he object of these regulntions is manifest. 1hit, whatever may be the case with the higher branches, the government has hal sagacity to perceive that the diffusion of elementary instruction, including the prineiples of the useful arts, would not tend to shanke the stability of the existing oriler of things, while it wonld do more than anything else to raise the pensantry from the state of ignorance in which they are, anil to develope the resources of the country. Great numbers of new sehools have been opened within the last half dozen years; and lectures on agricultu*e, and the application of science to art, have been esiablished in the different universities. A taste for instruction and realing is also beginning to be widely diffused among the town pop. Many new works, some of them of considerable merit, annually appear; and many foreign works are translated into Russian. Numerous literary and scientific journals issue from the presses of Petersburg, Moscow, Liga, Odessa,

## russia

and other towns. But all works and journals imported from abroal must be submitted, maler heary ponalties, to the inspection of the censors. This jealousy of whatever might tent to expand the uinuls of the people, and to make them acquainted with their rights and duties, is the grand obstaele to the civilisation of the higher classes.
Professors and teachers in miversities and other seminaries obtain rank and rise according to merit and seniority; and when mifit for the active dutics of their station, they receive a small pension. But their regular salarics, like those of almost all other fimetionaries, are totally inadequate to support their rank and station in socicty. $\Lambda$ professor has only about 80l. a year, and his assistant $32 l$.; a professor of languages has 241 ., and each of the stuleuts, supported ly the crown, 81 . a year. The institutions of Moscow and Tsarskui-Zelo are the most distinguished of those intended for the instruction of mobles. In the first there are about 800 lowirders, puid for hy their parents; the rest attending as day-scholars. The lirst class pay 321 . a year, and the second wil. The pedarugical institution of l'etershurer is one of the most mporttaut and valualle in the empire. It is exclusively appropriated to the education and training of schoomanters.
Young men belonging to great families nsed formerly to be, for the most part. elluented at home by fircign tutors, of whom not a fow were ignorant, ninprincipled, and servile. biat an ediet of the emperor Alexander I. contribut 1 to subvert this practice, by excluding all young men, not edncated at a public seminary, from the higher class of public employments.
Rues.-The Russian empire embraces at present an immense variety of lifferent races; but the great bulk of the nation, or the Russians properly so callecl, with the Poles, and also the lBulgarians and Servians, beleng to the great slavonic family. The Slavouians are most generally supposed to be the descendants of the Sarmate of antipuity; but, though probable, this is by no means certain. At all events, they are radically distinct from the Goths, on the one hand, and from the Tartars and other Eastern nations, on the ottis. There is no foundation whatever for the common opinion that they were denominated Slavonians ;"om their being originally slaves. On the contrary, when first known to history, the Slavonians were as free as the Goths. The practice of slavery was gradually introduced; and in liussia it was not completed till the begiming of last century.
The next principal race is that of the Ouralians or Fiuns, inhabiting the grand duchy of Finland, listhonia, Lapland, and several districts in the morth of the empirc. The Fimmish population is believed to amomet, in all, to above $3,000,000$ individuals. The Letto-1ithunian race, amomting to nearly $2,000,000$, is principally found in Lithunia and the $W$. provs. There are, also, above $2,000,000$ Thrtars; $2,000,000$ Georgians and Armemians. The Germans settled in various parts of the empire may be taken at about 450,000; anel there ure, besides, $1,060,000$ Jews, with Samoyedes, Mongolians, Kamchatskadales, imul Americans.

Language.-There are within the Kussian emjire about forty distinct lamguages in use, having ittached to them un imnenise number of different dialects. The individuals belonging to the siavomic race have two languages- the hussian and the Polish, both derived from the ancient shavonic. This mother-tongue, augmented aud modified by the intluence of Christianity, which intraduced it into a number of (ireek words, and by the dominion of the Tartars, by whom it was
loaded with Turkinh and Mongolian terms, was gradually formed into the lisssian. The primitive idiom contimed, however, to be employed in the liturgy and the seimess till the reign of P'eter the Grent, when the linssian gained that ascendency in religion and science it had already gained in conversation. The extraordinary advances that were then made in civilisation oceasimed the introduction of an immense number of new words. At length the language became tokerally wefl fixed. The alphabet, which eonsisted origitally if ds, has been reduced to 37 let ters, some of the in borrowed from the Greek and others from the Latin. Some elaracters are, however, situite milike those of any otlier language, and can harilly be pronomaced by any save slavonians. Thie grammatical forms are not well defined, and the comjugutions are exceediugly irregular. Otheswise the language is rich, somorons, flexible, matural, and elegant. The variety of its terminations is very remarkable. There is very little patois in liussia; the lauguage of the comutry dilleriug lut little from that of the towns. There are, however, three principal dialects characterised by Prichurd (History of Mankind, iii, 410) as follows:-

1. 'The pure or proper Russian, the cultivated language of the whole hussian nation, spoken in Moscow mod all the central parts of the leuropuall empire of Shassia. Vulgar and corrupted branches of this dialeet are these of Susdal and Olonet/, the last of which is intermixed with Finuish words.
2. 'The Mrelo-Russian, the language of the south-enstern parts of Luropeen Lussia, approaching to the old slavic in many forms of expression and in the enmmeration of some consomants. This dialeet is, perhaps, richer than any other in mintional sougs, many of which have a peculiar Leanty.

The Malo-Russian is essentially the same idiom as that of the liussniaks or lintlicnians, inhabitants of the castern part of Galicia and the north-enstern districts of llungary and l'oland, who are about $3,000,000$ of people. They belonir to the Greck Church, although beyond the limits of the linssian empire.
3. 'The White Russian is the dialect spoken in Lithuania and in part of White Lussia, especially in Volhynia. The historical ducuments of Lithmamia were written in this dialect, which was in use as a written language in the 16th and 17ilh centuries.'

It is a curions fact, that the first grammar of the Russian language appeared at Oxforl in 16: The best grammar is that of Dubrowski, publinhel at Viema in 18\%2. The Russian seademy has publishel a dictionary of the language in 0 vels. $4 t 0 ., 1806-18 \%:$.
Literature.-Russia has had severaldistinguished natural philosophers and mathematicians, but they have been chiefly foreigners (Germans principally) resident in the comutry. At present the native literature of Russia ucenpies a respectable place in that of Europe. The iutroduction of Cliristianity was marked lyy the growth of a taste for letters among the ancient slavomians; but the only romains of that early literature are some fragments of chivalrms poetry, and the ammals of the mank Nestor. The Tartar invasion arrested the progress of literature, and Russia fell back into the abyss of barbarism, whenee she did not begin to emerge till after the accession of the house of liomanoff. The attempts of the restorers of hiterature were at first contined to some feeble dramatio performances; and towarils the close of the 1ith, and the legriming of the $18 t h$ centuries, to miesrable imitations of lirench and other foreign works.

 iciturs, but they (mas principally') fent the native ectable place in of Christianity aste for lettcris it the only recome fragments s of the numk rested the pruback into the a nut begin to he house of lioprers of literacebble dramanie se of the 1 Thth, trries, to miseforeigu worls.In the course of the 18 th century, however, Lononosull created, by his precepts and his example, a uational literature. Sommarokofl carried the drama to a high degree of perfection, and since then a crowd of writers have distinguished themselves in all departments, from the epopeiu down to erbuge and table, and the national literature continues to flourish with undiminished virome. The IIistory of Linssia, by Karamzin, thongh it reathes omly to 1603 , is a work of great merit. Sumerons journals or periodical publications, in dillerent languases, levoted to polities, literature, ani science, nppear in different parts of the empire; but so long as these are subjected to a severe censorship, and as the goverument looks with juatonsy on anything approaching to the expressinn of a free opinion, the political and philosoplical works of littsian writers can be but little deserving of attention. The tirst liussian press was set up at Kiefl; in 1551. Previously to 1800 , there had not heen printed above 1,000 works in liussia; in 1807, the number of such works was about 4,000 ; in 1821, they amonnted to 13,24!, and at present to more than troble this mumber, about a fourth part being translations from the Frowh and otler forcign lancuages.
liussia has some splendid hibraries and museums. The imperial library at I'etersburer contains about 406,000 vols. and 17,000 manuseripts; and the Gmantzow Masemm contains a large collection of national antiquities and of every kind of enrusities.
Religion.-Most religions to be fomud in the anricnt continent lave their arlherents in Jinssia, The conrt, however, and the great booly of the matiou profess the Liusso-Greek Christian inith, demominated by its votaries the orthodox or true Catholic faith. The points in which it principally diflers from the Roman Catholic faith, are, its denying the spiritual supremacy of the pope, its prolibitiug the celibacy of the clergy, and its anthurising all individuals to read nod sturly the Seriptures in their vernacular tonguc. The prolibition of celibacy is earried to such an extent, that no priest can perform any spiritual function befire he is married, nor after he becomes a widower; and as he is not allowed to remarry, the death of his wife and the cessation of has functions as upriest (unless be be specially allowed by the hishop to continne them) are necessarily identical. The priests may, however, on the cleath of their wives, enter into a consent, and enjov the barren privilege of becoming eligible to be dignitaries of the elarel. Dictures of saints are admitted into the linsso-Creek elmoleses and bonses; but all statues and has-reliefs, are risidly exchuded. There are several fasts, of which that of baster, which comtinues for seren weeks is the lomsest and strictest. Divine service is performed in the natise tompue; and singing in churches is unaccompanied ly any sort of insirmental music. The total bill. professing the liusso-Greek faith may he esthated at abont $50,000,000$. No comintry in Jiurne possesses such a munber of fine elmurches fo lussia. The meanest village is generally furnished with a temple ormansented with gilt domes nud spires. These edifices are nearly all in the Grecisn style of architecture, substantially built of hrick, plastered and painted with much taste, larming a striking contrast to the hints or izbus of the peasantry by which they are surrominded.
'There are in linssia uearly 500 cathedrals and ahout 29,000 churches attacied to the estahlished f:ith, the latter employing abont $\mathbf{7 0 , 0 0 0}$ secular or twochal clergrmen. There are also about 5,t) colvents, of which 480 nre for men and 70 for women. Adjoining to each chareh or near it,
there is always a kolohwhia or belfry, commonly of great height, and provided with large bella, which are tolled several times dering every servief, and on holidays kept ringing the whole day. The Rinssians are passiomately fond of the sound of bells, and larger and tiner ones are nowhere to be foumd; every chureh has in its stecple four or tive of dilferent sizes; and in many this number is doubled and even trebled.

The Russian church was long subordinate to that of the Eastern empire, its metropotituln heing nominated by the patriarch of Comstantinople. Ihit after the eapture of the latter city liy the Turks in 1.153, the linsian clergy appointel their own metropolitan. 'lhis practice comtinued till the reign of P'eter the Great, who declared himself the head of the liusso-Greek elhurch, apposinting, it the same time, a synod for the management of its afliars. The clergy are either secular or regularthe former consisting of the parochial clergy, and the latter of the ligher dignitaries and noonks. The hierarchy is composed of bishops, archbishops, and metropolitans. There are in all thirt $y$-eighot dioceses.

In liussia, as in most other countries, the piely, or superstition of intividuals, had conferred great wealth ou the chureh, particularly on the monasteries. This having oceasioned many abuses and irregularities, aflorded a pretext, of which Jetor the Great availed himself, not only to suppress varions monasteries, but to deprive the chnreh of the greater part of its wealth. In the reign of Catherine $11 .$, the degradation of the clergy was completed by the appropriation of the whole insmoveable property of the charch to the use of the state, pensions being assigned, in its stead, to the diflerent functionaries to whom it had belonged. But, with the exception of a few livings in l'etersburg, Moscow, and other principal cities, the stipends of the clergy, even when increased by the offerings of the peuple, and by the perquisites on occasion of births, marriages, and finerals, are quite inadequate to provide for their comfortable subsistence. The total number of established elergy, of all ranks and orders, may be taken at about 25.1,000; and the sums allowed ns stipeods by goverument is so very small, that they are almost wholly dependent on their thocks. The revenne even of the seuior metropolitan, the highest dirnitary in the hierarchy, did not recently exceed
 abbot, the class next below a bishop, had not renerally more than from 401. to 507. a year. Mr. Coxe ('ravels in linssia, iii, 148,) says, that b besides the surplice fee, which in the poorest benetices amomints to 4/. a year, and in the most profitable to bat $201 .$, they have only a wooden house, sarcely superior to that of the meanest among their parishioners, and a small portion of land, which they generally cultivate with their own hands; while the highest dignity to whielt ther can ever attain, so long as they continue married, is that of a prototype of a cathedral, whose incone searcely excectis 20). a year.'
The duties of the linssian clergy of all orders are very labonious. There is in the family circles of the secular or parochial elergy a degree of culture and good matumers peculiar to themselves. This description of elergynen wear long beards, and form, in fact, like the priests of old, a lind of distinct class, or caste. None but the sons of clergymen are educated for the chureh; nor is there one instance in a thousand of any one belonging to any other class entering the ranks of the secular clerey: The resular, or dignified clergy, on the contrary, though often the sons of priests, not unfrequently receive recruits from
among the nobles and other classes; and all the higher stations in the chureh continue to be filled $u^{p}$ from their ranks. Orders and other marks of distinction are conferred on the Russian elergy; and at present a bishop is little thought of unless he be decornted with the star and ribbon of some order of knighthood.
The Russo-Greek church has, from an early period, had its sehisms and dissenters. The latter are said to be split into ahout 70 seets. They are classed under the common denominntion of raskolniks. The ritual, or service of the Russian church is contained in twenty volumes folio, in the Slavonic tongue.
With the exception of the restrnints laid on the Jews, who are exeluded from Russia l'roper, almost all religions may be freely professed anywhere in the empire, No member of the RussoGreck church is, however, permitted to renounce lis religion; and when a marriage takes place between one of its members and a person belonging to another faith, the children must all be brought up in the established faith. Catholies are very numerous in the Polish provs.; there are, also, large numbers of Lutherans, chiefly in the Baltic provinces, about $1,300,000$ Noliammedaus in Russia in Europe, with Jews, worshippers of the Grand Lama, Feticists, and other Pagans.

Finances.-Owing to the low state of civilisation in most parts of the Russian empire, and the want of mnnufactures and great towns, the public revenue is by no means so great as might be supposel from the vast extent of the empire, and the magnitude of the pop. The first detailed account of the revenue and expenditure of the Russian empire was issued by the minister of finance in May 1862. It stated the estimated income for the year 1862 at $295,861,839$ ronbles, or $42,265,977 \mathrm{~L}$, and the expenditure at $310,619,739$ roubles, or $44,374,2481$., leaving a deficit of $14,757,999$ roubles, or $2,108,2711$. The following were the chief items of this financial statement:-

Revenue for 1862.
Poll-tax, or ' Poduschnaja' Land-tax, or 'Obrok' Mines, Forests, and Domains Excise and Trade Licenses
Custom Dues
'Brandy-farming,' or ' Otkoupe' Various indirect Taxes Misceliancous Revenue

Not fully included in this necount, though properly belonging to the tloating debt, are above 750 millions of paper money, called bills of eredit, issned by govermment on the guarantee of all the banks and other credit establishments of the empire, united into a state bunk by imperial deeree of September 1, 1859. The capital of these establishments, which are under the direction and supervision of the minister of finmec, is statel to amount to $94,241,618$ roubles, or $13,748,802 l$. The note circulation of Russia has increased very rupidly of late years, while the specie has dininished at the same time.
Historical Sketch.-The ancients had very little acquaintance with the vast countries included in the empire of Russia. The monarely is usually regarded as having been founded by Rurik about anno 862 , his dominions and those of lis immediate suecessors, comprising Novgorod, Kieff, and the surrounding country. In $980-1015$, Vladimir introduced Christianity, and founded several citics and schools. 13ut, from this period down to 1237, when the comitry was overrun by the Tartars, Russia, with few exceptions, was the theatre of civil war. In 1828 the seat of government was transferre: to Moscow; and in 1481 the Tartars were finally expelled. In 1613 the louse of hio manoff, whence lis present majesty is descendel, was raised to the throne; and from this period the empire aequired strength and consisteney. Under Alexis Mikhailoviteh (1645-1676) White Russia and Little lussia were conquered from the Poles, and the Cossaeks of the Ukraine neknowledged the supremaey of the Czar, various internal improvements were effected, and the power of Kussia began to be felt and feared by all her neighbours. At length, in 1696, leter the Great ascended the throne, and the destinies of Russia and of the northern world were immediately clanged. This prince, who has probably a better elaim than any other that ever existed to the epithets of 'great' and of 'father of his country;' gave to the arms of lussia a decided preponderance in the north of Europe; he nlso gave her a fleet; conquered large provinees on the Baltic; laid the founclations of the noble city which bears his name; and introduced among his people the arts, the literature, the customs, and, to some extent also, the laws and institutions of the more civilised European nations. The difliculties lie had to encounter in his projects for remortelling and civilising lis dominions were of the most for-
midab overco

From this period Russia lins progressively advanced in power and civilisation. Under Catherine 11. ( $1762-1796$ ), a princess of extraordinary talent, Whsia aequired a great accession of power by her acquisitions in l'oland and on the Black sea, where she has now the same ascendency as in the Baltic. The history of Russia, during the present century, is well known. The attempt of Napoleon I. to dictate a peace to the emperor Alcsander I., in the ancient capital of the czars, led to the overthrow of his power, and gave a vast accession of influence and consideration a liussia. This influence las been maintained to the present time, notwithstanding the Crimean war, which for a moment lumbled the military pride of Russia.
RUSTCLIUK, or RUTZCHUK, a fortified city of Turkey-in-E!urope, prov. Bulgaria, cap. Sunjak, on the Dambe, 56 m . F. by N. Nicopolis, and 602 m . NW. Shumla. Pop. varionsly estimated, lut probably about 30,000 . The eity is built on a steep bauk, uj, which the streets ascend from the river. It is surrounded on three sides by walls, in the manner of Turkish fortifications; but towards the river it is partly open. At its NE. extremity is a ruined citadel, on an abrupt height alove the Dambe. The streets are narrow and gloomy; on cither sitle they present only dead walls; and as in all the rest of Bulgaria and in Ronmelia, each of the larger honses is a fortress in itself. The govemor's palace, some of the mosques, and some public baths are the only edifices worth notice. Many of the buildings are white-washed, and their tall chimneys are visible at a great distance. Woollen, silk, and cotton stuffs are made here; and there are many Turkish, Greek, and Armenian merchants in the town, who carry on considerable trade with Wallachia, in cloth, corn, and indigo. In 1812, the linssians took and burned the citadel and a part of the town ; and, in 1829, they entered the town after little opposition.
RUTIIEIRGLEN (pronounced Ruglen), a roval and parl. bor. of scotland, co. Lavark, on the left bank of the Clyde, $2 \frac{1}{2} \mathrm{~m}$. SE. of Glasgow. Pop. 8,062 in 1861. The town consists of one leading street, straight and well-paved, nearly $\frac{1}{2} \mathrm{~m}$. in length, 112 ft . broad, and of the parallel lane called the Back Row. From both sides of the main street, which lies in a direction nearly E. and W.: go ofl'a few cross lanes. There are no public buildings except the par. church, a quoad sacra place of worship comected with the establishment, a chapel belonging to the Relief, and the townliall. $\Lambda$ small cotton-mill employs about 80 hands; and there are two print-fields in the virinity, a Turkey red dye-work, and a chemical work. About 000 hand-loom muslin weavers are emplayed by Glasgow manufacturers.
lutherglen was created a royal bor. in 1126, at which time it was of more importance than (ilasgow, the latter being included within its municipal boundaries. Jint in 1226, Alexander II. grauted a charter to Walter, Bishop of Glasgow, relieving lis town from certainservitudes previously due to liutherglen. Previonsly to the passing of the licform Bill, in 1832, Rutherglen, unimportant as it has been, enjoyed the same parliamentary privileges as Glasgow; being united with it and two other towns in sending! mem. to the Il. of C . Glasgow has since that period had 2 representatives for itself; while Rutherglen joins with Kilmarnock and 3 other bors. in choosing a mem. Registered voters 197 in 1805. Municipal
councillors, 18 ; corporation revenue, 1,1161 . in 1863-6.4.
RUTHIN (Welsh Rhudd-ddyn, or Rhuthym, the 'Red fortress'), a parl. and min. bor., murkettown, and par. of N. Wales, co. Denbigh, hund. Ruthin, in the vale of Clwyd, 17 m . WS W. Chester, and 45 m . XW. Shrewslury. $\mathrm{P}^{\prime} \mathrm{p}$. of mun. and parl. bor., 3,372 in 1861. 'Ihe town, situated on rising gromed, ehiefly L. of the Clwyd, consists of a principal avenne, entered by several other inferior strects. At the summit is the market-place, in which is the town-hall, a substantial building, erected in 1663 , but recently repaired. The cos. hall, a fine modern stone structure, forms with the fatol an interesting feature in the town. The gaol, enlarged by the addition of a buidling for female prisoners, has suitable arrangements for the classification of the inmates. The chureh has an ancient structure of mixed architecture; the tower, $S$. and W. fronts, being comparatively modern, and much inferior to the rest of the buiding. It was made collegiate in 1310 by Johm de Grey, who formed an establishment for regular canons, and endowed it with valuable lands and mumerons privileges. A parit of the eloisters lias been converted into a residence for the warden of Christ's IIospital, fommed here by Dr. Gabriel Goodman, for the support of 12 deeayed housekeepers. The warden and pensioners are impropriators of the great tithes of Ruthin and Llan-IRhydd; and the warden is the vicar of both parishes, with an income of 2632. a year. The free grammar-school, endowed with a moiety of the tithes of Llan-Elidan, and under the superintentence of the warden, rauks as one of the best in $N$. Wales, and is attended by about 50 boys. $A$ national school is established liere for 40 children of each sex; and there are Sunday schools attached to the chanels of the Independents, Wesleyan and Calvinist Methodists. No particular trade or manufacture is carried on in the town, exclusive of what is necessary for the accommodation of the inhabs., who are principally employed in agriculture.

The corporation of Jinthin consists of a mayor, 3 aldermen, and 12 councillors. The bor, unites with Holt, Wrexham, and Denbigh, in sending 1 mem. to the H. of C. The parl. limits, according to the Boundary Act, include, with Ruthin, parts of the pars, of Ilan-Furog, Llan-Khydel, and Llan-Fair-Dyffryn-Clwyd. Reg. electors for the united bors., 889 in 1865. Ruthin is likewise one of the polling places at elections for the co., and the assize town ; besides which the quarter sessions are liedd alternately here and at Denbigh. Markets, well supplied with corn, on Monday, and a provision market on Saturday.
linthin, according to the Welsh historians, is of high antiquity; but we lave no anthentic information respecting it prior to the reign of Edw. I., who built here a magnificent castle, overlooking the Clwyd, on its W. bank, which he presented, in 1281, to lieginald de (irey. The ruins have been restored with admirable taste by the present proprietor, Lady Grey de Ruthlin, daughter of the 19th baron of that name, who has been a great benefactress to the town.

RU'TLAN1, an inland comnty of England, surrounded by Lincoln, Leicester, and Northampton. It is the smallest of the English cos., containing only 95,360 acres, of which about 90,000 are arable, meadow, and pasture. Surface, gently varied; air mure; and the soil almost every where loamy and rich. The W. part of the co., in which is the Vale of Catmose, celebrated by Drayton, is under grass, and the F. chiefly in tillage. It is particularly celebrated for its wheat, cheese, and sheep. Listates and farms of various sizes. The

## SACKETT'S ILARBOUR

river Welland runs along its SE. borter, from Rockingham to near Stamforl; and there is a canal from the river Soar to Oakhan, the principal town. It is divided into 5 humdreds and 25 parishes; and returns 2 members to the 11 , of $\mathrm{C}^{\prime}$., both for the co. Jegristered electors, $1,744 \mathrm{in} 1865$. At the census of $18 t \mathrm{l}$, the co . hat $4,6 \mathrm{~m}$ inhabited houses, and 21,861 inhabs., while in 1841, liutland had $4,29.4$ inhab. houses, and 21,302 inhabs.

RYI)L, a town, sea-port, and watering-place of Sughand, on the $N$. side of the Isle of Winht, par. of Newehurch, and hund. of E. Medina liberty, $5_{2} \mathrm{~m}$. ENE. Newport. Jop. 9,269 in 1861 . The town las a handsome appearance from l'ortsmouth, "pposite to whieh it lies, at a distanee of about 5 m.; its white houses, interspersed with garlens and plantations, being ranged in successive rows upon a tolerally steep acelivity, rising direetly from the sea, backed by bold hills, and surrounded with cultivated laud. It consists of a prineipal strect, running ipwards from the shore, and intersucted by others, some of which comprise handsome detached resmences, well adapted for the numeroms visitors who floek thither during summer. lt has several other churches, one of which is a handsome modern structure, pliees of worshij) for Wesleyan Metholists, Baptists, and Iudependents, with attached Simday-schools, and an endowed charity sehool: it has, also, a small theatre, assembly-rooms, libraries, and baths. The acemmodation for summer visitors lave been sreatly improved within the last few years, since Ryole has risen into favour; and a pier, constructed on wooren piles, runs $\frac{1}{4} \mathrm{~m}$. into the sea, making the town accessible seaward at all times of the tide. Steam-boits run nearly every hour in the dav, during summer, between liyde, P'ortsmonth, Cowes, and Southampton; and the opening of the South Western railway has occasioned a great influx of visitors to this and its rival waterime place, Wr. Cowes. The air is salnbrions, and in the environs are many agrecable walks commanding tine land and sea views; but, as a bathing phice, liyde is inferior to Southsen, on the opposite coast of Ilampshire, or to Cowes, on account of the shallowness of the water for a lengthened distance from shore. It has no manufactures, and its trade is principally contined to the supply of visitors and the inhabs.
RILD, a parl. and mun. ber., cinque port, market town, and par. of England, co. Susses, hund. Godstow, rape Hastings, on the Rother, abont 3 m . from its mouth, 38 m . E. by N. Brighton, and 53 m . SSE. London, on the South Eastem milway. Pop. of parl. bor. (which comprises with the pirr. of liyde, that of Winchilsen, and 6 others, with a portion of the par, of Brede) 8,202 in 1861. The town, which stands on the edge of an extensive tract of marsh land, rmming along the coast as far as Ilythe, consists of several regular and well formed streets, linel with old but respectable looking houses, many of which command tine views of the channel and surrounding country. In the centre of the town is the market-honse and townhall, with an old stmeture called the Ypres Tower, occasionally used as a gaol. A public library is vering.
S.ICKETTS ILARBOUR, a village or town and port of entry of the U. States of N. Ameriea, state New York, co. Jefferson, on a bay at the E. end of lake Ontario, at the mouth of Black river, $41 \mathrm{~m} . \mathrm{NE}$. Oswego, and 150 m. NW. Albany.

## S.

supported liy subscription, nuld there is a small theatre. The churdi is a large cruciform strusture, with a contral tower, partly of Norman und partly of early English architecture : the ai:les of the choir have fine lancet windows, and there is a large and tine perpendicular E , window. The living is a vicarage, in the gift of the learl of lhurlington. The Wesleyan Methodists, Independents, and laptists lave their respective places of worship, with attached Sumday-schools, and it has a small endowed grammar-school, an Einclish selnow, with several almshouses and other charities. There is no manufactory in the town, which depends upon heing the port and market throngh which the surrounding rich agricultural district is supplied. Some years since it is said to have been in a deelining condition; the reverse, however, is now the case, and it appears to be, indeed, in an eminently thriving state. This is mainly attributable to the improvements lately made in the harbour and in the naviration of the river, which have mate the town aceessible to vessels of 200 tons. By means of the Rother and its bramehes it supplies the surromding conntry to a distance of 8 m , with conls and other articles; and there is a canal which extends the mavigation as far as Robert's Bridge, a distance of 15 m , in a straight line. On the 1st of Jan. 186.1, there belonged to the port 51 sailing vessels under 50, and 51 vessels above 50 tons, besides 1 steamer ol' 21 tons. Gross customs revenue 4631 in 18tis. The exports are chiefly wool, oak timber, and bark. A considerable quantity of hops is raised in the neighbonrhood, for the drying of which large quantities of Wetsh coal are amnually imjorted.
liye is a bor. by preseription, and is governed under the Municipal licform Aet, by a mayor, 3 other aldemen, and 12 comeillors, styled 'the mayor, jurats, and commonalty of the ancient town of Rye.' Courts of session are held maler is recorder; and there is a court for the recovery of dehts mider 10 s . Fye returied 2 mems. to the 11 . of C. from the 42 Eidward III, down to the lioform Act, whieln deprived it of one of its members, and at the same time enlargel the electoral limits, so as to comprise with the old bor, the rest of the par. of liye, the town and par, of Winchelsea, with six other entire pars., and a small portion of the purs. of Brede. lieg. electors, 562 in $18 t i 5$. Marketson Weduesday and Saturday; fairs, Whit-Monday and Ang. 10.
Iive is very ancient, but its early history is little known. It appears to have beet an original Cinque Port, and is mentioned as a member of these ports in a charter grimed by llemy llf. In the reign of Edward 111. the town wats so censiderable, that it sent 9 armed vessels to the royal theet when the king undertook the iwasion of France. In the next reign, A.1, $137 \%$, it was phandered and burnt by the lirench, but it soon recovered its consequence. The rise of other ports on the same coast during the last century, and the filling up of its port, occasioned a considerable decrease of its importanee, which. however, as above seen, it las now a fair prosject of in some measure reco-

Pop. 10,525 in 1860 . The town extents more than a mile along the lay. The harbour is the best on the lake, and is used by the American government for ship-building, and as a naval depist.

the town, forming an inner and onter harbonr, the latter of which has water sulficient to flont the largest ships of war within 2 fathomes of the shore. Near the mouth of Black liver is another equally from port, and vessels of the largest class are buit at both. A consilerable traile is carried on from this port by the lake and the St. Lawrence; and by the Oswern, Erie, and W'elland cames. Numerons vessels for the navigation of the lake are buitt here.

SAlFl, AZAFFI, or ASFI (an. Sofiu), a city and sea-port of Morecco, prov. Abla, on the $\Lambda \mathbf{t}$ lantic, near Cape Cantin, and 9 \% m. NW', Moroceo. lop estimated at 12,000, ineluding about 3,000 Jews. The eity is built in a sterile ravine toctween two hills, being very hot in summer, and disarreeable in winter, as the waters from the neighbouring monntains, occasioned by the rains, discharge themselves throngh the main street into the ucemm, deluring the lower apartments of the honses. The place has thick and high walls, and a palace, formorly the occasional residence of the emprors soms; a little way N . of the town is a small furt. Its roadstead is safe in summer, but in winter, when the wimls blow from the S. or SW., vessels are obliged to run to sea, which they have been hown to dosevern times in the course of a month, while taking in their cargoes.
Satli was formerly an emporium of the Earopean trade with Moroceo, but its commerce has declined with the rise of Mogalore; on the fomblafion al which, in 1760 , the emperor ortered the removal thither of all the merchants of Salli. The Moorish and Bedonin inhals. are fanatieal and intolerant, and said to he inimical to Eurofeans, with whom, however, they have now little intercourse. In the environs are many Mohammedan sanctuaries. The sity is supposed to have been founded ly the Carthuginians. In modern times it belonged to the Portnguese, from 150 s till 1641.
SAFFRON-WALIDEN (an. Saffron-uceald-den, 'the woody hill abonnding with satiron '), a mmieipal bor., market town, and par, of England, co. lissex, and hund. Uttlesfort, 23 m . NNW. Chelmsforl, and 37 m . NNE. London. l'ops. $5,1 \mathrm{a} 4$ in 1861 . The town, in a valley close to a tongue of high land, surmonnted by the chureh, comprises several good streets and a spacions market place, with a neat town hall. Many of the houses are gool, and the place generally bears an appearance of neatness and comfort, The clureh, which stands so ligh as completely to overt川 the town, is an elegant structure in the perpendicular style, with ant embattled tower at its $W$. eml. The Independents, Baptists, Unitarians, and Friends, have places of worship. A free grammarsehool, endowed by Edward VI., has an exhibition at Cucen's College, Cambridge; but the education is now conducted on the national plan, and connected with it is a girls' sehool, the whole furnishing instruction to about 250 children of both sexes. There are likewise several Sunday-shools, some almshouses lately rebuilt, and various other money charities, Satfron-Waleden has several large multing establishments, and enjoys a good retail trade fur the supply of the numerous wealthy families in its vicinity; besides which it has well-attended markets for corn, eattle, and provisions. 'I'he neighbonrhood is extremely protuctive, and well cultivated; but the growth of saffron (whence the name of the town) has been abandoned. The bor. was ineorporated by Edward VI., in 1549, and is governed, under the Municipal Reform Act, by a mayor, 3 aldermen, and 12 comeillors. letty sessions for the himd. are held every alternate week, and there is a court for the recovery of debts muder
Vol. IV.

10I. Saffron-Walden is also one of the pollug places at elections for the N. div. of lissex, and the principal town of a poor-law mion, embracing Ul pars. Markets on Saturiay; fairs, for horaes and cattle, Saturdiy before Midlent Sunday, amd November I.

SAllARA, or the great central Desert of Africa. (See Arisica.)

SAID (an. Sidon), a town and sea-port of $A$ siatic Turkey, celebrated in remote antiquity as one of the greatest emporimms of the Mediterrimean, and as being the parent city of Tyre. Its mondern representative is seated on the $N$. side of a eape ex-
 20 m . SSW. Beyront, mat ma m . W. Dannasens; lat. $33^{\circ} 34^{\prime} 5^{\prime \prime}$ N., long. $34^{\circ} 22^{\prime} 40^{\prime \prime}$ li. P'op. estimated at from 4,000 to 5,000 , of whom more tham half are Cluristims of the Greek chmreh. Sidan may be compared with liegront as to its pop. and extent, and its streets are edtally irrugular and tilthy; but its sitmation is more plonsant and advantageons, its honses are bottor hailt, amd it hat khoms of considerable extent, and which would not disgrace any city of limone. Most of these have their own fomitains, indegement of those distributed through the town. The Aula supplic's Said with water, whed is brought from it by a chamnel kept in ill repair, for a distance of nore than a league. The strects in the uper town, which stand upom an activity, are narrow and gloomy, being arehed over in many phates, likn those of Jerisalem. The lower part of the town is mure checrful. The bazames are well supplial. especially with leather gemels. Most of the bumes have gardens attuched. On the lame size the town is meffended by a high wall, uow partly in ruins. ats well as by a fortress, oil a hill to the s., said to have been constructed hy lanis IX. of Framee. Threre are several mospues, both within and without the town.

It has been generally supposed that the ancient city was about 2 m . further inland, and, like many other maritime cities of antiquity, at some listance from the sea-shore, on which its port was situated. The non-existence of my antiquities worth notice at Said secms to favour this opinjon; while, at a place called Old Sidon, at about the distance above stated, some traces of ancient walls and other buildings are still diseoverable. There can. however, be no donbt that the harbour on the N. side of the present town was the port of the ancient as woll as the modern town. Here is a guay formed of very thick walls, in parts of which a tevsellated pavement of variegated maibles, with representatioms of animals and festoons, still exists in tolerable preservation. Many granite colımms are also wrought into the wnils, and ohers stand as posts to a bridge of several arehes, which rums from the main land, to a castle built in the sen, by Fahr-ed-Din, the celehrated emir of the I ruses, in the lith century. 'The latter, aming to render himself independent of the lorte, not only fortified said, but, in order to make its harbour inaecessible to Turkish galleys, ehoked it up by simking boats filled with the dibris of ancient buildings. This measure gave a severe how to the commeree of the town, the roalstead being so insecure that scarcely a disherman's skill ean lie in it in safety; Dut even at the end of the last century, the lirench merchants of Said had a considerable trate with Marseilles, to which they exported cotton, silk, and woollen goods, frnits, corn, onl, scammony, galls, soda, and wax. At present, the principal resonrces of the inlulitants are derived from dyeing, and from the manulacture of leather and silk goods.

Sition is first mentioned in Gen. x. 15, 19, and
extends more harbour is the the American s a naval elepot. r extremity of
appears to have risen into importance at a very early period, sinee it is spoken of in, Joshat as the 'great Zidon,' (ch, xi, 8; xix. 28.) In the divisjou of Palestine it was alloted to the descendants of Asher, but we learn from Judges, $\mathbf{i} .31$, that it never came into the actual possession of that tribe. Its inhalitants were anciently eminent in ship-builting, and were employed by Solomon in the constriction of the temple, there being, among the Jews, none who had'skill to hew timber like unto the Sidonians.' Pliny states that it was also famous for its glass manufactures. In its commercial inportance it appears, however, to lave been early eelipsed by Tyre, and afterwards generally followed the fortmes of that city. In the middle agres, during the Latin kingelom of Jerusalem, it was a lordship, and an episcopal see muler the Tyrian primacy. 'The ertsaders, who lost it in 1111, recovered it from the saracens in 1150; but were fimally oblised to surremer it to the latter in les9. In its neighlowhomel is the convent of Mar-bilias, the residence of the eccentric: Iady Hester Stanhope.

SAIGON, a city, river-port, and eap, of the prov, Gia-l)inh in French Cochin China, the former empire of Anam. Pop. loosely estimated at $1 \mathrm{k} 0,000$, amons whom are many Chinese. It consists of two distinct towns, aloont 3 m . distant from cach other, though the intermediate road be lined all the way with stragrling houses. I'ingeh, which has the citadel, and is the seat of the govemor, is on the W. bank of the great Sai-Gon river; whereas Sai-Gon proper, the main seat of commerce, is on a smaller river, which, however, is navigalle for good-sized boats. The two towns are nearly of like size. The streets, which are regular, and intersect each other at richt ancles, are, in some instances, of great widtli. Along these, or along canals, many of which traverse the city, the homses are disposed in straight lines. and close to each other. They are built chiefly of mul, enclosed in bamloo frames, and plastered; sometimes they are tiled, but more frequently thatched with palm-leaves or rice-straw. They have seldom more thin one story; bnt some of the better sort are surrounded with an open eourtyurd, with a gate towarls the strect. In sai-Gon proper some of the strects are paved with flacs; and quays of stone and brickwork extend nearly a mile along the river. The citatel, in l'ingel, constructed by a French engineer in 1790, has not been completed. It is a quadrilateral fortress, with earth ramparts, bastions, horn-works, a regular grlacis, esplanade, and dry ditch. No guns are mounted on it, though tuere are several French cannon in the arsenal; and at present it is not capable of a regular defence. The interior, which is neatly laid out, has barracks, otlicers' quarters, and the governor's residence. In the NE. part of the city, on the banks of a deep creek, are the naval yard and arsenal. The rice magazines, the naval arsenal, and the royal palace, a briek edifice, are the other principal public buildings.

Sai-Gon communieates with the Camboja river by a canal 23 m , in length, about 80 ft . in width, and 12 ft . in depth. Its foreign trade is principally with Chima and Siam. The principal articles exposed for sale in the shops are Chinese earthenware, silks, paper, and tea. $\Lambda$ few glass bottles and some broad-cloths may be met with, but scarcely any other Eurojean goods. The markets are well supplied with poultry, hogs, and oxen, and the flesh of other animals, less suited to a European taste, as clogs and alligators. Fruit is in great abundance, and the variety and excellence of the fish can hardly be surjassed. The
rieinity is well cultivated with rice and area palm.

SAINTES (an. Mediolammaft. Stentomes), a town of France, clép. Charente-Inférieure, cap. arronis., on the Charente, Jiere ecossenl by a stone bridine,
 The situation of the town is coond, and it is entered from the $S$. liy a finely planted promeaade; lin it is ill laid out, and is for the most part badly louitt. It las, however, some remarkable public buildings and antiquities. The cathedral was founded by Charlemisne, and the tower, with the principail entrance, is said to have lelomged to the original editice; but the rest of the structure dates principally from the 16 th century. The churd of s . binimpins has a time stenjple, eonstrueted minder Lonis XI. A celebrated abbey was fommed here in I0.3, into which Eleanor of Ginemne retired, after lier divoree from Louis-le-Jeume; its buildings are now converted into eavalry barracks, The sul-prefecture, formorly the bishop's palace: the hospital, oripinally the seminary; the l'ru-testant church, hall of justice, pulblic library, and theatre, comprise the other ehief public buililurs. It lass cabinets of matural history and antiquitions. a communal collese, and departmental mursery grommes, and manmfictures of hosidery, earthenware, dyving-houses, and tameries. Siantes is in the centre of a district, furnishing the best Comate: brandy, in which, and in corn and wool, it has a larse trale.

Emler the Romans, Mediolanum was one of the chief cities of Aquitaine. Some Romam hanlis exist on the banks of the river; and without the walis are the remains of an amphitheatre, almost as extensive, though mot nearly in such grool preservation, as that of Nismes: aljacent to the bridge is a trimplaal arch dedicated to Tiberius Drusus and Germanicus, and the ruins of an aqueduct and a circus are still traceable. Saintes was the cap. of the dép. Charente-Inferieure, from 1790 till 1810 .

SAINT HELENA. (See IIELjena, St., and so for all the other articles having the prefix of Siant.)

SMLAMANCA (an. Salmantica), a celebratel city of Spain, kingd. of Leon, and prov. of its own name, on the Tormes (a tril), of the Douro), crossed lere by a handsome stone bridge of 27 arches, 92 m . S. by W. Leon, and 119 m . WNW. Madrid. Pop. 15,203 in 1857. The city stands on three small hills, and is surrounded by walls: streets generally steep, narrow, and crooked, extremely dirty, and with a recayed melancholy aspect. There are mumerons publie places and fountains; but the only one worth notice is the Plaza mayor, a fine square, each side of which is 293 ft . in lengrth, surrounded by louses of three stories, bill of epual height and exuct symmetry, with iron balconies, surmounted by a stone balustrade : the lower part is open, forming a colomade ruming all romil the square, Bull-fights are held here in lume. Among the public edifices, by far tho largest is the cathedral, a Gothic building witin a superthity of carving on the exterior. "is 378 ft . in length, and 181 ft . in brealth, a. Seight of the nave being 130 ft . In the interior are some good paintings, and a fine organ with horizontal pipes. The chapter comprises a bislop, 10 dignitaries, and ob canoms. The city has also 25 par. churches; but few of them merit description. The elureh of st. Stephen, however, which was formerly attached to a Dominican convent, may almost vie in splenclour of decoration with the cathedral itself.
Salamanea has, for many ecnturies, been celebrated as the seat of a miversity, and the mumerous buildings belonging to the barions colleges constitute a principal feature in the city: inderd.

## SALAN KEMENT

SALERNO
11i
so proul are the Spaniards of the eollegiate editices of Salamanca, that they somewhat pmponsly termed it Roma lat chica (little Rome). The university was fommed in 1239. Int the 15th and Itith centuries, the university of Salamnuca was attender by from 10,000 to 15,000 students; bit its former glory is departed, and there are now less than $\$ 00$ pupils. Attached to the university is a large library, furnished with a few modern books aud piles of scholastic divinity.
Fumerly there were 4 puiblic and 25 private cotleges; but many of these have fallen to decaly, aull others were destroyed by the French diming their ocenpation of the eity. Few of the remaining culleges retain any traces of their furmer magnificence, their most valuable eflects having been carried oifl duriag the peniasular war, while the monastic libraries were burnt by wholesale in Ix:3ib, Buffere the sulpression of the momasteries, salamancal had ski clergymen; and betore the collers of the charches and convents were empticel to supply the wants of the state, ample prowision was made fir the support of ideness. Bury street swarmed with vagabonds, not merely thase who werepruper oljects of compassion, but those also who, if compelied to work, would have been found almumbunty able to maintain themselves. Mendicance still prevails; but the want of public support must eventually compel the mendicants to apply themselves to industrious callings.
The manntactures of Kalamanea are inconsiderable, comprising some fabries of lyond-brimmed hats (sombreros), several tameries, two or three estalidishments for weaving woollen eloths, and a few others for making starch, glue, and cirthenware, besides a pretty larre manufauture of shoes. A weekly market is held here, and an anmal fair in siptember. The suburbs aloomed with wellplanted walks; the huertu, or irrigated traet neir the river, is planted with fruit trees; corn and leguminus plants abound thronglowt the neighbwirhool, and the hills, clothed with oak trees, are depastured by oxen, slieep, and goats, ectebrated for the delicate flavour of their meat.
Sialananca, though mentioned ly the elassical writers muder the name of Salmantica, appears to have been of little importance under the homans, thungh a lioman road and some other monuments are still extant. Salamanea is celebrated in the history of the late Penimsular war for the victory gained in its vicinity on the 22nd July, 1812, by the Aaglo-l'orturnese army, under the duke of Wellingtom, over the Freneh, muler Marshal Marmont. Tho struggle was most severe; but the British were completely suceessful at all points.
SALANKCMENT, a small village of the Austrian dominions, prov. slavonia, on the Danube, nearly opposite to the embonclure of the Theiss, 23 m. l. by S. Neusatz. It deserves notice from its laving been the spot where the first decisive check was given to the progress of the Turks. A powerful army of the latter, commanded by the instly celebrated Vizier Kiuperli, was encomitered lare on the 19th of August, 1691, by the lmpenalists, under Prince Louis of Baden. After an oistinate and well contested action, without any decisive advantage to either party, Kinperli fell, when the Turks, panic struck by his loss, were totally defeated, leaving above 20,000 men on the tield of battle. The loss of the lmperialists did nut excecei 8,000 men.
SALEM, a town or city, and sea-port of the U. States of N. America, state Massachusetts, co. Rises, on a tongue of land projecting into the sea, and forming two inlets called N . and S. rivers; 18 m. SE. Newhary l'ort, and 18 m . NE. Bostem, with both of which it is comected by railways.

Pop. 25,870 in 1860. Thom h not regularly laid out, it is well built and healthy; and with respect to pop, commerce, nud wealth, is one of the tirst towns in New Eugland. It has an athenamm, with a good library, a valuable museum, belonging to the E. I. Marine Society, numerons banks, insuranee oflices, charitable institutions, and selowels, a chstom-house, and varions puldic louildings, most of which are substantial brick elitices. The gact is of stone, commodious, and spacions. In tho centre of the town is an enclosed commom, comprising about 10 icres, partially phated with trests. The harbour, formed by south liver, has gookl anchorase ; but vessels drawing more than iz or 14 ft . water have to be lightened at a distame from the wharfs. On Baker's 1sland, at the s, side of its prineipal entrume, are two lighthonses, one bering 15 ft , and the other $126 \frac{1}{2}$ fi, athese the level of the sea. The town and harbour are protectenl by two forts. The inhuls. ,f' salem have lollin been very largely engaged in the Luliat and Chima trade, and both their fineign mal consting trale is still emsiderable. They have aboe recently engaged in the whale tisher:
A bridge, upwards of $1,500 \mathrm{ft}$. in lengith, across N. river, comects Salem with lieverly, a town of about 6,000 inhlahitants, engared in similar pursuits. Next to l'lymonth, Ratem is the oldent town in Massachusetts, having been founded in 162ti.

Salim, a district of Bratinh India, prexid. Miadras, between the 11th and 13th dergs, of N. lat. and 7 th and 80 degs. E. long.; having NE: and $\mathrm{E}, \mathrm{N}$, , and S, , Areot; sle, and S Trichinepuly; SW. and W. Coimbatoor, from which it is separated by the Cavery; and NW. the Mysure territory. Area, bi, ifis sq. m. P'op. estimated at nearly $1,000,000$. Its whole surlace is abuve the E. ghatuts, and its climate is cond and brating, Which makes it be much frequented by Europem invalids. It comprises the Barramahi listricts, : rieh table-land forming its N. portion. Except the Cavery and Ioniar, it has tew rivers, and iw Lakes. About three-fourtlis of the land is inseseed under the ryotwar, and the remainder under the zemindar system. Rather more than hald the pop. is sup: ased to be aetively cmployed in agriculture. Maize, rice, and a litule cotton are grown, anil great guantities of teak, samdal, and black woonds grow on the hills; but the principal exports are eloth, ghee, tamarinds, turineric, jagyhery, sit seeds, and iron. Iron ore is very abundime, and good sted is made. Choth is, however, the stapte commodity, and is manafactured for expert to the W. Indies and America. The ehief imports are areca nuts, silk, and blaek pepper.
Salem, the ehief town, and residence of the British authorities, stands in about lat. $11^{\circ} 3 \sigma^{\prime}$ N., long. $78^{\circ} 13^{\prime} \mathrm{E}$. It has some trade in cottent elotis.
SALEMI, a considerable town of Italy, island of Sicily, prov. Trapani, cap. cant., on a hill, 24 II. E. Narsala. Pop, 13,860 in 1862 . The town is tinely situated, hat has a must abject appearance. Its inhabs, are indolent, and the town hats no trade. Salemi oecupies the site of the ancient Ifalycia. Sir R. C. 11 oare (Classical Tour in Sicily, ii, 8 y) supposes that it derives its present name from a saracen chief of the minth century.
SALERNO (an. Salermun), a celebrited eity and sea-port of S. Italy, cap., of prov, of its ewsin name, at the foot of a hill on the Ni:. shore of the Gulf of Salerno, 17 m . SSW. Avelhinos, aun 28 m . SL. by E. Naples, with buth of which eities it is commeted by ruilway. 1'op. 2. $1,2 \cdot 21$ in $181 ; 2$. The modern city of Salerno is ly no means well built; and the narrow and lirty streets, rini-

## SAIIABURY

ning on tifferent levels from the immeliate edre of the sen, some way up the monntain, give its interior a gloomy appearance, and afford but inconvenient residences; but its situation is most happy, und a marima, or promenate, which skirts its whole length along the shore, was added by the Freneh, and contributes to render its nspeet from the sea extremely imposing. There is no jort, though a broken mole, aflurding protection to the smallest vessels only, oflers the semblance of such an accommorlation. The prineipal square las a food public fonntain, and is surronmed with severat Gothic edilices, including the intendency, the new theatre, and the cathedrnl. The honsess are lofty, und the streets paved with lava. Ancient ( fothic walls, in tolerable repair, enclose the city; and on the hill above, amid the principal remains of the ancient Salernum, is a ruined citadel. The cathedral, a heary (iotlie strueture, is the most interesting of its mhlic editices. It was erected by the Normans on the site of an ancient lmilding, and is dedicated to St. Mathew, who is said to be buried within its walls. The atrium, or comrt before it, is spacious, and surrounded by a portieo of antigue columns of porpligry and granite (said to have been brought from Pistum, 23 m. SSE., by liobert Giniseard), npon which the Normans constructed a range of brick arches, bent more atter the Saracenic than the Gothie or Grecian mommer; these support a regular set of apartments, In the centre is a basin of granite, 15 ft . in diameter, constantly filled by a fommtain of excellent water. Many sepulchres are placed in the colonnade, and the church contains also mommments of remarkable persomages, as Roger and William, dlukes of Apilia, Margaret of Durazzo, and the restless pontiff Gregory VII., who died of chagrin at Salemo, in 1085. On enel side the entrance of the choir is a pulpit raised upon pillars. Their pannels are formed by rich mosaic of many colours, disposed in kusts and stars.' The choir is inlaid with square and oval plates of verde-antique, porphyry, and serpentinc: the great altar is decorated in the same barbarous bit splendid manner. There are numerous other churches, one of which is said, Init on donbtful anthority, to be the burial place ol' John of I'rocida, a native of Salerno, celebrated as the principal contriver of the conspiracy against the French in Sicily, which terminated on the 30th of March, 1282 , in the massacre known by the name of the 'Sicilian Vespers.' Salerno has two lospitals, a workhouse, three government pawnbanks, a seminary, a royal lyceum, and a university. To the last belongs a school of medicine, which was once among the most famons in Europe, but which has, for a lengthened period, lost its pre-eminence. But the lycemm in this town is said to be superior to most others in Southern ltaly.

Salemo is an archbishop's see, the residence of the provincial intendant, and the seat of a superior criminal court, and of a civil tribmal. Previously to the period when Naples attained to a decided lead anong the cities of S. Italy, Salerno carried on a consitlerable commerce by sea; that, lowever, has now wholly disappeared, though it continues to possess a pretty extensive inland trade, and has two large ammal fairs. Its climate is mild; but it is unhealthy from the proximity of marshes and rice-gronnds, the culture of which occopies many of the inliabs.

It is doubiful whether the ancient Salernum was contignous to or at some distance from the sea; but, on the whole, the probability seems to be that it did aljoin the sea, or that it was within such a short distance of it as to justify its being reckoned umong maritime towns. (Cellarii Geo-
graphia Antiqua, $i, ~$ sito.) After the fall of the Roman empire, Salerno became the eapo of a flourishing republic, the soverelgety of which was contested by the Greeks, Saraceus, lombards, and Normans; the later of whom ohtaiurel possession of the city in 1076. Naving heen mostly hurnod down by the emperor IIenry V1., it snlaseguently became a feudal possession of the Colonma, Orsini, and Sanseverini families, till it, was re-anmexed to the roval domains by the emperor Clarles $V$.

SALifOlid. (Sce Manchestern.)
SALINS, a town of France, dép. dura, cap, cant, in a narrow valley on the Furieuse, 26 m . NE: Lans-le-Sambier. 1'op. 7,361 in 18til. The tow: is walled, and commanded by two forts on anljacent heights. Its principal street is paved, and lined with sulstantial houses. There are several churches, a spacions college, a public library, gomel barracks, a theatre, hospital, and prison. These huildings are nearly all new, the town hawing been destroyed by fire in 18:5. Salins has several iron-forges, stone works, and brandy distilleries: but its name and principal importance are derivend from its brine springs, which were wrought in the time of the liomans. They oceupy a large space in the middle of the town, inclosed by turretent walls. The produce amomes to $1 \cdot 10,000 \mathrm{cwts}$ of salt a year; in addition to which a considerable quantity is made at Are, about 4 leagues distinn, to which an aqueduct conducts a portion of the water of the Salins springs.

SALISHURY, or NEW SARUM, a city, parl. bor, and market town of England, co. W'ilts, "if which it is the cap., hund. Uuderditch, on the Avon, here crossed by three stome bridges (one of which has ten arches), 21 m . W. Winchester, and 80 m . WSW. London, on the London and Soath Western railway. I'op. of parl. bor., which illchndes, with the city, the extra-parochial district of the Cathedral Close and parts of pars. Fisherton and Milforl, 12,278 in 1861. The city is built witil great regularity, having six principal strets romning from N. to S., crossed by the same number, intersecting them nearly at right angles. The houses generally are large aind respectable; some, also, laying claim to consitlerable arehitectural elegance. It is well paved, lighted with gas, and kept remarkably clean by means of brooks running down the middle of the streets. The market place, a large open square on its W. side, has, at its SL: angle, the council house, a brick structure. with a Doric portico, erectel at the close of the last century at the expense of the earl of ladnor. and since greatly enlarged. The interior is divided into court-rooms and othices for the business of the assizes, quarter-sessions, and corporation, and it has several good modern portrats. On the opporsite side of the market square is a curions ohl hexagonal-shaped building, having a conical row supported by pillars; it is called the Poultry or Butter-cross, and was probably built in the reign of Edward III. In another part of the same square is the public library and reading-rom, fomaded in 1819 , and supported by subseription. The most striking feature in Salisbury, however. is its cathedral, which stands in the large open space called the Liberty of the Close, on the s. side of the city. The situation is remarkably good; the precinct or close is kept in the best order, and comprises some very fine trees, which, as well as those in the palace grounds, serve to embellish the views of the catheiral. The W. front, the N . side, and the F . cutl of the latter are all open, and may be seen from peculiarly favourable distances; indeed, the NE. view is perhaps the hest general view of a cathedral to he had in England, and displays the various portions of thit

The 11 . of the latter are eculiarly fivourview is perhaps Iral to he had in portions of this
interesting edifice to the best advantare Salishary eatherdral has the manatige of 'being louilt in one style, the early Einglish, and on a mifirm and welf-arraged plam. The centre tower and spire (the eutire height of which is estimated at (1)! fi .) are of later late, but almirably nccomanodated to the style of the builaing. The phan is that of a complete cathedral, having spacions chinters, an octangular chapter-house, mod a tower for a library and maniment romm. There are two transepts, each of which has ant aisle castwarl; and the mave has a large N. poreh. The extreme lelgegth of the church (iuchuding the Ladye ehapel) is csimated at 17.1 ft .; hremilh of nave and aisles, ix ft . ; height of nave, $30 \mathrm{ft}$. ; and width, inchuling the great trausepts, 210 ft . Modern alterations have taken awny the altar-screen, and thrown the Ladye chapel open to the choir ; the organ-sereen, abs, as well as a large portion of the tabernaclework in the eloir, is of molern construction. The f: window is tilled with a beantilul panting on ghass of the Resurrection, from the designs of Sir dashua lieynolds ; another window exhibits a painting on ghass of the Elevation of the Serpent in the Wialerness. There are other painted windows; and in varions parts of the church are several ancient monuments, some of which are extremely curious. The W. front is a beautifully anriched specimen of the pointed architecture peculiar to this church: the angles are terminated ly tolerably massive square towers, surmounted by spires and pimaeles; and over the grand central entrance is a series of eanopied arehes, beneath the great W. window, which is formed in three divisions. The exterior of the ehurch is euriched with a number of recesses situated in tiers at dillerent heights all round the building, Many of the statues still remain, and it is supposed that mirimally there must lave been at least 200. The cloisters are remarkably magnificent, forming an exact square, each side of which is $18: 2 \mathrm{ft}$. in length. The cathedral library is built over the b: side of the cloisters, and adjoining them, in the same clirection, is the chapter-honse. 'On the whole,' says Mr. Nickman (Gothic Arehitecture, p. 25\%), the eathedral presents an object for arehitectural study hardly equalled by any in the kiurdom: the purity of its style, and the various modes of adapting that style to the purposes required, deserve the most minute attention.'

Within the close, formerly surromited by a wall, and still entered by several ancient gates, leserving admiration, are the residences of the lishop, dean, and canons. The deanery-honse is opposite the $W$. fromt of the cathedral; and at a little distance SE., surrounded by gardens, is the bishop's palace. a very irregular building, in different styles of architecture, having been enlarged and repaired at various periods, from the midule of the 15 th century down to a recent perioul. The gardens are on a large seale, comprising an area of several acres, well planted with tine, l.arge old trees. The episcopal see was removed from Old Sarum to Salisbury under the authority of a papal bull, in 1217, about which time the catheitral was founded, the expense of its ercetion, exclusive of the chapter-house, tower, and spire, being estimated at 40,000 marks, or $36,66 \overline{7} l$., an enormous sum in those days. The chapter comprises (besides the bishop) a dean, precentor, ehamedlor, and six canons residentiary; ilividing among them a net revenue of $2,800 \%$. annually, and having residences and separate revenues, with the patronage of 18 benefices. There are likewise 31 prebendaries, lesides choral vicars. The bishop has a large portion of the cathedral patronage, besides that of 36 bencliees; his diocese
extemls over the whole of Wiltshire and a portion of shropshare. Salishory has threo other churches, one ot' whicli, St. Eitmund's, is in the grift of the bishop, ami that of St. Thomas's in the patrunage of the dean and chapter. St. lislmund's is a perpemdienlar structure, with large windows and gool tracery, the chancel having been modernised. The tower tell down, and was rebnilt in the 17 th eentury. St. Thomas's is a larse perpendicular chareh of good composition, with its tower atanding on the s. side of the s. aisle: it has a nave and chancel, with aisles mil a cleristory. St. Martin's is a large chureh, in the early linglish style, with some more reecont parts. The chareh at lisherton is small and ol mixml arehitecture. The kom. Catholies have a hathsome chapel; and there are places of worship for Independents, Baptists, Wesleyan Methorlists, anll Duitarians, with attached simday sehools. A grammar sehool is attached to the catheiral for the instruction of the choristers, and there is another in the city, fonnded by (queen Elizabeth, in the patronage of the corporation. The bishop supports a food school; and there is also an orphan sehool, and the didherent parishes have their respective national and infint schools. There are several charities, among which may be mentwoned that of Bishop Le l'oor, near Ilamham Bridge; Trinity Ilospital, fommled in the reign of hichard II., for 12 aged matrons; and 1Bishop Warl's college for elergymen's witows, with several other almshonses and money charities. An intirmary, founded near Fisherton bridge in 17 itit, is liberally supported by subseription; a mendieity suciety has been established with consiclerable suceess, and there are various minor benevolent institutions, bible, and tract societies. A comaty gaol has been erected in Fishertom, ami there is a small, but neat theatre, little patronised, with assembly aud concert-rooms.
Salishury received its tirst charter from I Ienry Ill., which was afterwards renewed by several monarchs. Accorling to the Municipal Reform Act, it is tivided into 3 wards, and governed by a mayor, 6 aklermen, and 18 comeillors. (Luarter and petty sessions are held under a recorder; besides which the assize and quarter sessions for the co. are held here. A court for the recovery of debts to any amount is held monthly by the bishop's bailiff, and it has a county court. Salisbury has returned 2 mems, to the IL, of C. since the reign of Edward I., the right of election down to the Reform Aet being vested in the corpuration. The limits of the parl, bor, were enlarged by the Boundary Act, so as to inchude, with the old bor., the cathedral elose, and certain parts of Fisherton and Milfurd pars., as before mentioned. Reg. electors 685 in 1865. . Salisbury is also the chief election town for the S. division of Wiltshire. Markets on Tuesday and Saturday, with large cattle fairs on altermate Tuestays. Fuirs, Tuesday after Jan. 6; Tueslay after March 25; Whit Monday and Whit 'luesday for horses, and Oct. 29 for butter and elieese.
Salisbury owes its fomadation to the removal of the ecelesiastical establishment from the once im portant but now decayed borough of old Sarum, the Roman station of Sorbiolunum, about 2 m. . N from the modern eity. The quarrels between the troops of Ileury II, and lioger Le I'oor, the turloulent prelate of that day, induced the latter to establish his clergy in a more peaceliul and advantageous situation: a city soon arose romb the cathedral, and by the intluence of the monarchs and clergy, soon became an important place, while the other fell to decay, and was ultimately de serted by its inhabs. Ilenry III. granted the city

## SALON

## SALONICA

n charter, entitling it to the same privileges as Winchester, and emferring extensivo local jowers on the hishop of the see. l'arliaments wro oecasimally held here during the listh and I Ith eenturies. 'J'he eity beame celebrated, after the death of Charles I., lior the ahortive attempt of the rusalists mader Colonel Wyulhnun, to prochim Charles II. 'Two large nmansteries existed bere prior to the lieformation, bat there are no oxtant remains of these fommdations. Among ahher dintinguished individuals to whom Sinlisbury has given lirth, may lie speeilled James Harris, the athor of the ' 1 l ermes,' and of other loarned and ingenions philological and motaphysical treatises, born here in 1 TH. Thomas Chublb, a clever, but mot very learmed, deistical writer of the last century, was also a mutive of this dity. NW. from Nalishory stretehes the vast tract of downs nud heaths, called Salisbury I lain; and thont $t \mathrm{~m}$. N. of the eity is the stipembus momment of Stonehenge.

SALAN, a town of lirance, dép. Bouches du Ghome, cap, cant., in a fertile plain within ahmot : $\mathbf{m}$, of the canal te Crapomae, and 24 m . NNW. Marseilles. ['op, ti,i:3, in Lxtil. Salon is divided into an ohl mul a new town, separated from each other ly a planted boulevari, It has :ta air of opulence, of which many larger towns are destitute: its strects are regnlar, innd it has many grod loonses and publie bobldings, inchading a chureh huilt by the Thmplars, the pir, chureh, with several curions sendptures and towin-hall. On al rocky height, at the extremity of the town, is inn old eastle, comverted into a honse of correction. It has manulinctures of silk twist, hats, somp, and olive oil, mul a brisk general trade. The remains of a tenple in honour of 'Tiberius have been discovered here.
SALONICA (an. Thessuloniea), a celebrated city and sen-port of Europenn 'Turkey, eap. sandjak of its own name, at the NEA extremity of the gulf of same name, 185 m . N'NW. Athens, lat. $.10^{\circ} 80^{\prime} 47^{\prime \prime} \mathrm{N}$. lung. $2: 200^{\prime \prime} 13^{\prime \prime}$ E. Pop. extimated at 70,000 , of whon about three-fifths are Turks, amd the rest chielly Jews and liranks, with a few (arecks. Its appearance, when approached from the gulf is very imposing, as it is seen from a great distance, placed on the acelivity of a step hill, amid cypress trees amd shruhs, surrounded by lofty white-washed walls aseending in a riangular form from the sea, and surmomited by a fortrese with seven towers, The domes and minarets of mumeroms mosques rise from nmong the other buildings, and, being surromated with eypresses, sive me air of splendour (1) its exterior. The cire of the city walls prohably exceeds 5 m. , limt a great part of the space willin is voin. Its interior presents the same irrepularity, and many of the deformities common to Turkish towns; but, on the whole, as respects Wranliness and internal comfort, it may comt rast favourably with mose other blaces in Thirkey of large size and popl. The houses of the prineipal inhabs, Grecks ant Turks, have here, as in Yamina, small areas comnected with them, generally ocenpied by a few trees. The lazames at the lower emil of the low, are very extensive, forming several long, but marrow streets shaded either by trellises with vines, or by projecting wooden sheds, with branches of trees thrown across. The dealers are prinejpally Greeks and Jews; and the shops are well dilled with manufactured goods and colonial produce; but in jewellery, shawls, nud the richer articles of oriental tress, they appear inferior, Some of the mosques are worth notice from their size and antiquity, especially two which were formerly Grcel durrches. Another remarkable edi-
fiee, called the Rotmoh, ufter having successively served as a heathen temple and Christian chareh, has been conserted into a mosque: it has evidently been huilt on the model of the liantheom at Rome. The elymata is alorned with manaie work, apuearing like cight Irontixplecess of tine buidlings, and in the dome is a circiblar aperture, as in that of the Pantheod, $\boldsymbol{\Lambda}$ fourth mosque his been forined ont of a tine tomple of the 'Thermean Vemus. This was origimally n perfect parallehogran, 70 ft , in length, and 38 ft . in wilth, nupported on cither side by l2 colmons of the lonic oriler, of the most explisite proportions. The Greeks spoiled this beautiliul buililing by endeavouring to make it crnciform, but the sis cohnmes of the protuos remain. Among the other ancient st ructures are two trimmphal arches, one of which, now lorming a part of the eity walls, was creeted to Augistus after the hattle of philippi, anil the other of brick eneased with marble, in homour of Constantine; on the piocrs of the latter are sume tine grongs in has-relief. The Augustur gate. huwever (now called the Vardar gate, becamse it lemels to the river of that name), is a work of superior taste. lts original heirght appears to have been dil ft., but the lower part, to the depth of 27 ft ., is below the pres int surface; the span of the areh is 10 ft, and the masomry is of spuared White marble boeks, having inseritions and appropriate bas-reliefs. In the mid.tle of the city is 10 magniticent ruin, casted lareinteutas by the Spmish Jews resident hore, supposed to have been the propylarnu, or entrance to a circus, combsisting of tive Corinthian columins, suporting an entablature on which are several figures mach defaced, as large as life, nud still exhibiting the traces of a master's hand. The eastle, which lorms a large urea, separated by a rampart from the city, has lofty and well-built walls, and, at its highest 1 : 1 't, stands the foriress surmounted, bike that of 'omstantinople, by seven towers, called by the Turks Yedi-koule, and by the (irecks 'Enránvpyon. These towers, however, though wenpying the site of the old acropolis, are comparatipely modern, linving been buitt by the Venctians.

Salonica, during that period of the late war, when the anti-rommercial system of NapoleomI. was as its height, heeame aim important theot for Iritish goods, whenee they ware conveyed to Germany, linssia, and other parts of Europe. They were trimsported on pack-horses, by long and haborions jummies, into the centre of Eurone, through Busilia into Anstria, and through Bulgaria into different parts of Hangary ; the time ocenpied in travelling from salonica to Viema being about 85 days. At all times, however, it has had a considerable trade, which, of hate years, lus rather inerensed, particularly as regards the importation of British cotton manulactures. 'The exports prineipally consist of silk and tolacen woul, raw eutton, wheat, and other species of grain, linseed and hempseed.

The intercourse with jingland was a few years ago principally earried on through Malia by Maltese or Greek vessels; but the trale is now almust exchasively carried on in English bottoms. Sabnien has no port; but there is excellent anchorage in the roads opposite the town, which, from the conliguration of the gulf, are nearly landlocked. Accoments are kept in piastres of 40 paras, or 120 aspers, and the coins are similar to those of Constantinople. The weights and measures are the same as those of Smyrma, exeept that the kizhiz, or com measure of Salonica, $=3.78$ kizloz of Smyrna. The commercial classes consist chictly of Jews and Franks, the Greek pop. Laving greatly

The situation is said to be minealthy, ensucially in autumn, owing to the vicinity of the marshes at the heal of the gulf: intermittent fevers are then execodingly common, as well as chronic visecral complaints, the result of repeated attarlis "I' those diseases.

Thessalonien was at first an inconsiderable town muder the mame of Thermu, by which it was known to Ilerolotus, Thucydides, and Aschines. Nerses stayed hore some days with his army (llorod. vii. 128), num it was vecupied for a short time by the Atheninns during the I'eloponnesim war. Aecording to Strabo (lib, vii.), Casander changed its mame to that of his wife Thessalonica, the daughter of l'hilip, and sister of Alexander the Great, After the conspuest of Macedonia by the Romans it was male the capital of the secomed of the four districts into which that country was divided; it was the residence of Cicero during a part of the time he eontinued an exile. Valerinn raised it to the rank of a colony ; and it had anamphitheatre, a hippodrome, and numerous splentid public buildings. It is also interesting from its connertion with the carly history of Christinnity ; having been visited by St. Paol, who made many converts, to whom lie adiressed the Lpistles to the Thessalomians.

SALOL, or SHHEOPSIIIRE, an iuland co. of Englimul, having N. Deuligh, a detached portion of Flint, and Cheshire, E. Stafford, S. Worcester, IVereforl, and Radnor, and W. Nontgomery. Area, $826,45 \%$ acres, of which about 700,000 are sup)posed to be arable, meadow, and pasture. Aspect much diversified. No part of the surface is quite that; but the great phain of Salop, or Shrewsbury, is comparatively level. It extends, leugthwise, from Whitechurch, on the contimes of Cheshire, S . to Church stretton, a distance of about 30 m ; ; and from Oswestry, on the contines of Denbigh, to Colebrook Dale on the E., about 28 m . The Wrckin hill rises out of this extensive plain on its E. side. The S., or rather the SW' patts of the co, eontain several ranges of flattish squareshaped hills, divided by heautiful valleys. Soil varions, but generally fertile. In the le. it consists of a red simly loam, like that of Cheshire; in the S., a misture of elay and loam is most prevalent; and in the $W$. there is a good deal of eravelly light soil. The harvest is said to be a fortnight carlier on the E. than on the W. side of the co.; a ditference depending partly, no doubt, on the greater elevation of the pround on the W. side; but partly, also, on ditterences of soil. Salop is principally under tillage; but, in the S. and W. breeding and dairying are carried on to a comsiterable extent. A good deal of cheese, sold muler the name of Cheshire, but inferior to the seluine article, is made in this co. The wool of the hilly tracts used to be of a peculiarly tine quality, but it las deteriorated during the firesent century in consequence of the eflorts of the farmers to inerease the size of the sheep and the weight of the fleece. The total stoek of sheep in the co. is supposed to exceed 420,000 ; problucing ammally above 7,000 packs of wool. Ilops are
pronlued oll the lowiters of Herefoml. I'roperty varionsly divided; sume entaten being very larpe, while there are many of very inferior charree of size. On the burders of Wales, farms viry small, many not exceeding 20 acres; hut on the li, sile of the co., in the viduity of shillial, Wellimertor, and Newport, they vary from 100 to 600 acres or more, The distriet of C'lint Forest, in the SW. part of the eo, is divided into small fredohd pro-
 the majority being of the smaller class, 'I'heir ocempiers, who, in most cases, are also the owners, employ lew labourers, the primeipal part of the work on their farms being executed by themselves and their families. Leases less common now than firmerly, and farms senerally heli from year to year. Apriculture improving; but, owing to tho want of leases of a reasomable length, and with proper comlitions as to management, it comtinues to he very defective. The mimber of eorn crapls, taken in staccession, las been matcrially diminished since 1820 ; but two wheat crops still mot unirequently follow ench other. These remarks lo not, lowever, mply to the district ou the E., side of the eo, mentioned above, where the firms are large; for there the tenats are active and conterprising, and agriculture highly improved. Tormips extensively enltivated, and, for the most part, ill drills; few oats grown, Cattle ol mixed breed, and rather inferior. l'ork and baem much used by the people. Jarge Boeks of turkeys raised by some farmers. Dramage in some phaces muel wantel. Principal mineral products. iron, coal, lead, limestone, and freestonc. With the exception of S. Woles, Staffordshire, Lamarkshire, Derbyshire, and Northumherland, more iron is mate in this to. than in any other co. of the ampire. The furnaces are primeijally in Colebrook Dale, between Wellington und Willey. Ex:cellent china ware, and a very superior species of pottery, are made at Coalport on the Severn amb its vicinity: pipes and nails are made at lloseley; earpets at Bridgnorth; gloves at ladlow. Some branches of the tlannel mannfacture are carried on in Shrewshury and its neightoourbood; but ly far the largest jortion of the thamel sold in its markets is brought from Merionethand Denbigh. The Severn, which becomes navigable at loole, co. Montromery, traverses this co, in a SL: direetion, dividing it into not very unequal portions; and it is besides intersected loy very important canals. Roads formerly very baid, but now a groml deal improved, thongh still susecptible of much ametioration. Sulop is divided into 1 j humbreds, or districts answerable to that denomination, and 216 pars. It returns 11 mems. to the 1 L . of C.. viz. 4 for the co., and 2 eads for the bors, of Shrewsbury, lBridgnorth, and Wenlock, and I for Ludlow. Kegistered electors for the co., ! $9,15 \mathrm{~N}_{\mathrm{a}}$ in 18isj, being 5,315 for the northern aml 4,170 tor the sonthern clivision. At the census of libil, the eo. had 48,391 inhab. honses, and 240,959 inhabitants, while in 1811 Salop had 47,208 inhabited houses, and 239,048 inhabs.

SALSETTE, an ishand on the W. eoast of llindostan, prov. Arungabad, immediately N. ol Bombay island, with which it is connected ly a narrow eauseway. Length 18 m. , with an average brealth of abont 13 m . 1'op. estimated at $50,00 t$, about 1-5th of whom may be l'urtugnese Christinus. There are two towns on the island, Tamah ind Gorabmoler; the first being neat and homrishing, with a small fort, several churches, and a considerable l3ritish cantonment. The more remote interior parts of the island are inhabitel by wild tribes, having no intercourse with the llindoos of the coast; but who being ocenpied as burners of
chareoal, bring it down to particular mpots, whence it is earried nway by dealers in the article, who reposit in its phace n juyment, settled by enstom, of rlee, clothing, mul iron tools.

The mont remarkable objects of Salsette are the cave-temples of Kemory, amomg the mont noteworthy fhithic excavation lu India. They are of varions nizes and forms, belog seattered at diffirent elevations over both siders of a high knoll, belomging to a range of hills which divides the whond into two neorly equal parts. 'The largest, and most remarkable cure, bears a great resemWhance: to that of Carlee (which see), and was converted by the lortnguese intor a church. It is entered thromgh a tine and lolty jurtico in front, a little to the left hand of" which is a sletached setugomal pillar, surmunuted by three lions sented hack to buck. "On either side of the portien is a coloswal statue of Ibull, nearly 20 ft . in height. 'The scruen which separates the vestibule from the temple has in its ventre a large door, ubove which are three winhows in a semicirenlar areh; else-where it is covered with carved tigures. I'se anmrtment within is $91 \frac{1}{f}$. in length, und $3 x$ in lirealth, semicirealar, and surronaded on every side, bint that of the ent rance, with it colomande of octagomal pillars. Of these, $1 \geq$ on either side menrest the entrmuer have earved Dasen and eapitals; the rest are not finished in this momer. In the semicireular rud is ofome-shaped ruck, the daygos of lhathie temples, tratitionally said to have onee supported the tee, or saered umbrella. The romf, like that of the Carlee temple, is a semicirentar ureh, supported ly slemeder ribs of teak-wood. The varions other enves in this hill ares suare, or flatrowled, and attached to many are deep and wellcarved (isterns. I'here are other cave-temples in the island, at the villages of Momperier, and $\Lambda$ mbowlee; and at the former are rums of a very handsome l'ortuguese church and Jesuit monnstery.

SAL'I'A, a city of S. Amerien, cap, of the prov. of its own name, republic of La Plata, on the hiph rond from lhemos Ayres to l'otosi, $8: 20 \mathrm{~m}$. NW. the former city; lat. $2.1^{\circ} 30^{\prime} \mathrm{N}$, , long, ti.1 $\mathrm{I}^{\prime} 30^{\prime \prime}$ W. J'up, from $x, 000$ to $!?, 000$. The town is sitnated in the hottom of a valley, through which thow the rivers Arias and silleta (tributaties of the Sulalo); the latter of which has, of tate years, abandened its ancient bed, and seems to threaten, at no distant perionl, to lurst over the low marsly gromeds unon which the city stands. Its air is unhealthy; but its vicinity abounds with whent, rye, and cat tle, in which, and in salt, winc, hides, and mules, the city has manative trade. It was fommed by Don I Philip ale Larma in 1582.

SAlA'ASII, n tecayed bor, market-town, and pur. chapelry of lingiand, co. Cormwall, S. div. lound. of East, 17 m , SSE. Latunceston, and 4 m . NW. Jlymontl. l'op. 1,900 in 1800 . The town stands on a steeprock, near the Tamar, from which thee principal strect runs at right anghes, the houses rising one above another to the hill top, on which stinuid the chapel and town-hall. The latter is supported by pillars, the open space beneath being used for a market. Streets narrow and ill-built; the honses being for the most part, little better than cottares, though ehietly of stone from the roek on which the town stamis. The chapel is small; and the living is a curacy subordinate to the vicarage of St. Stephen. There are also two places of worship for Dissenters, with attached Sumbay-schools, and a small frec-school.

Saltash, which appears to have been formerly of more importance tham at present, is principally inhabited by tishermen, or persons connected with the doeks and shipping of Devonport; and in smmer is a favourite resorl for holiday people
from Plymouth and the surrounding neighlourhoos. It is likewise one of the chief entrmuems into Cornwall from bevonshire, and is approached by a ferry over the Tanar, the revennes of which lelong tos the corporation. Saltasly was made a free bor, in the reign of Henry WI., and returmed ${ }^{2}$ mems, to the H. of C. from the reigen of Eilward VI. down to the leform Act, by which it was dis. franchised. It was considered of too little lmporiance to heincluded in the provisions of tho Minnich mil Reform Aet. Murketnonsaturday: fuirs, Feb, $\because$ Jaly 2o, mud the 'luesilays lofiore ench quarter-das,
SAL'TCOA'TS, a set-jort town of Scotland, co, Ayr, purtly in the pur, of Ardrossan, and purtly in that of Stevenston, $2 \cdot 1 \mathrm{~m}$. $s W$. (ilasgow, nul nlenit I m.S. Arlrossan, on the ruilway frum Glangow to Ardrossim, I'op. 4,778 in 18 thi. The town has some good honses; luit, on the whole, is lindifferently and irrugularly built, und mean looking. It has "town-honse, with a handsone spite, clock, mol bell. Its mome is derived from the salt work: estublished la the town for the production of sali, by the evaporation of wea water: lat since the repal of the laty on sult, they have been nearly ubandoned. Magnesin, however, still contimnes to be proslucel to some extent. The principal dependence of the inhabs, is on the weaving and sewing of muslins, lor the Glasgow mannfactures. There may, in all, be nhont. E00 looms so cimployeat; principally on lappets, ganzes, shawle, and trimmings. Xbout 30,000 tons of conls are: amually shipped here for lhelfast and Duhlin. food deal of ship-binhling was lormerly carried on ; but latterly it has rleclined. T'wo emgragations belong to the United Associnte Sviod, and one to the Jelief; mad there is a Gaclic chand. It has a subseription library, a paruchal school, a free school, manuged by a committee of lation, and other schools, a savings' bank, and some Iriemdly societies. The lumbur is very defective; und in this respect it labours muler great disndvantages as compared with Ardrossan.
SALUZZO (Fr. Sulures), a city of North Italy, prov. C'meo, enp. prov., at the foot of the Alpin, on an ullluent of the l'o, 30 miles SSW. Turin, with which it is conneeted by railway. l'ols. lis, 814 in 1862. . The city consists of two portions, one on the smmmit and declivity, and the other nt the foot of a hill. The יpper town is walled, tolerably well built, aud has a eastle, which was, for three centuries, the resilence of the marquises of Suluzzo; one of whom, between 1.178 and 1480 , constructed the gallery through the Col de Viso. The lower town is the more populous and contimues on the increase. The eathedral, a hamdsome building, is in a suburb. Saluzzo has several convents, an intendeney, a court of primary jurisdiction, and a royal college. It is a bishop's sce. Its chicl mamfactures comprise silk, leather, hats, and hardware: and it has some trade in wine, corn, and cattle. Uuder the Freneh, Saluzzo was the eap, of the dep. Stura.

SALLBBURA, a city of Upper Austria, cap. of the circ., as it formerly was 'st ith archbishopric of' the same name, on the Salzach, a tribntary of the Im, 67 m. SW. Linz, and 70 m . ESSE. Munich, on the railway from Munich to Vienna. Pop. 17,300 in 1857. The Salzach, which here thows impetuously between two masses of roek, livides the city into two portions, connected by a stonc bridge, 370 ft . in length. It is walled, and entered by eight gates; and on a lofty point, commanating the town and adjacent country, is the Hohensalsberg, formerly the fendal citadel and resitlence of the prince-archbishops, but now used as a barrack. On the opposite side of the river is the Capurinerberg, a similar height, surmounted by the Capu:

chin convent. Fwing to the number of its churches, the profuston of marble ataties, ami hatpuofed houses, subhurg has the anyect of ant Itallan eity. Gencrally wneaking, thes city is dull anul glomyy, nad ita strects marrow, irregular, and grass-grown. The cathedrul, conatructed lit the lith century, on the phan of St. Peter's at Rome, is large and impuing, and has monerous mollumellts, seulgturem pantings, and other works of urt. It has at fie façale of white marble, oecupying the whole sine of n [mblie square, with three entrances, thasked by two rows of marble statues. several of the other churehes are highly gilt, and deeorated. Mommsteries are mumerous, but the number of their inmates has been moneh reduced. In the chureh of the llenedictine consent is the tomb of Michael Haydu, the musieal composer, who, as well as Muzart, was a native of Salzburg. The Alirabel palace is a liambome moleru editice. One of the greatent curiosities in the city is a gateway 120 li . in length, cut through the solld ruck.
salzburg has a military and three civil hospitals, neveral eharitable institutions, a govermment pawiobank, abd it prisol. It lud formerly a university; but this is now reduced to a lycenm of two facalties, medicine aml jurisprutence, with a hibrary of 20,0100 vols, and probably of 120 AlSS ., same of the 8thand 9th centuries, a botamie garden, and zoologienl maseum. In the Benedicine convent is mother extensive lihrury, with collectimes of evilus, It lias, also, a gymunsium, Ursiline female school, a spacions pablie cemetery, a public museum, and a theatre. Salaburg is still the residence of all archbishap, who has five sulfafrans; and is the sent of the superior courts for the circle. It lans manufactures of cotton varn, leather, starel, gunpowder, iron wire, and tiles, and some transit irale, though this has very much diminished. It is well and eheaply supplied with provisions. All travellers agree that it is hardly possible to exaggerate the romantic beauty of the senery if the neighbourhood.

Salzburg is sippused to oceupy the site of the am. Jucuria, destroyed by Atilli in 148. In 803, Charlenague and the ambassadors of Niepphorus, emperor of the bast, met in this town to settle the bomadaries of their respective empires. In the 13th century the eity becane the eap, of a territory, governed by its archbishops till 1802, when it wassembarized.
SAMALANG, a town and sea-port of Java, on its $\mathrm{Ne}^{\text {coast, the eap. of a prov., near the month of }}$ the river of its own name, $\mathbf{2} 6 \mathrm{~m}$. EALE. Batavia; lat, $6^{\circ} 50^{\prime}$ S., long. $110^{\circ} 27^{\prime}$ E. l'op. estiun, at so, 000, inchating many Chinese. It is tolerably well builh, and is fortitied with ramparts and a wet ditch, capable of resisting a native force. It hats many goud houkes, a large chureh, town-hall, anal hospital, a military school, theatre, and observatury, betore it is a deep morass, and it commanicntes with the sea only by two raised canseways and the river : it is, however, less unhealthy than the bower parts of Batavia. I'rovisions are chap; and near the town are many country honses. The town owes its importance to the industry of the natives in the aljoining districts, who raise large quantities of collee, pepper, and rice. Namy slipp-loads of the latter are ammally exported to Chima, and to different countries in the Arehipelago. Samarnang is the seat of one of the three civil and criminal courts, and courts martial in the islaud, and the residence of a governur with exteusive authority.

SAMARCAND, a city of indep. Tartary, in lhokhara, on the Sogrd, or Zer-Afehan, 120 m . E. Bukhara, lat. $30^{\circ} 30^{\prime}$ N., long. $68^{\circ} \overline{0} 0^{\prime} 15^{\prime \prime} \mathrm{E}$.
 m. in circ., enclosing gardens, parks, liclifs, bund extensive nubarbes: the faner wall marromaling the rity is of earth, and lus four gates, Samaremal has the appearance of having here magnitheently built; but it is now in a recayed comdition, muil garilens, thelds, anil phantations, wecupg the phaco of its mumeromestreets abil mosegues. There were formerly piwaris of eyo mosigues, many of which wore of white marble ; but most of these have become mere ruins, Of the 10 medresans, or Mohammedan colleres, only three are jertect, one of them lonning the ubservatory of the celehrateml l'hag lieg being extromely hamisome, ormanented with bromze and emmellenl bricks. Auother mollege, called sheredar, is likewhao of very bemutitinl architecture. The tomb of the hamons 'rimour liee, or Tamerlane, and has family, stili remains; and the ashes of the emperor rent beneath a bofy dome, the walls of which ure superthly aderned whth jaspur and Hgate.
samareand las neveral bazaars, amb three large khans, but its commercint injurtance is all but extinguished; Bokhata having been for many years the great entrepot of the froat caravin trulers, as well an the mulern capital of the conntry. The ancient city, howevar, is sitll regarded with high veneration by the people, ani till a king of lhokhara has annexel sumareand to his rule, he is mot viewed its a legitinate soveregn ; indeed, its jossession becomes the first ohject on the demise of one ruler and the aceession of another. l'mer, made of sills, is spid to have been carly mamifactured at samarcand; but ordimary paper is mow sapplied from linsia. The situation of the city has been deservedly praised by Asiatics, sinee it stands near low hills, in a conntry elsewhere plainand level. 'The climate is dry and healthy; food water is supplied from a great number of folntains, communienting by jipes with the viver, and the neighbourhood furnishes abundance of truit, and other supplies to the market.

Samarcand, which was taken in 12:0 by Jen-ghis-khan from the sultan Mahomet, beame under Timour the capital of one of the larpest empires in the world, and the centre of Asiatio learning and civilization, at the same time that it rose to high distinction on acconnt of its extensive eommerce with all parts of Asia. It was reunited to Ibokhara by Abdullah at the close of tho 16th century, since which it has gradimily fallen to its present rank as a mere provincial tow:a; and the traveller may now seareh in vain for its ancient palaces, the beanty of which is now calogised by the Arab historians.
SAMIBOR, a town of Austria, prov. Galicia, cap. circ, of same name, on the Dniestr, it m . SW. lemberg. l'op. $10,500^{-}$in 1857 . The town is tolerably well built, and has several li. Catholic and United ( reck churehes, an hospital, a criminal tribumal, mining court, salt intendency, and gymnasium. Its inlubs. are employed partly in the mannfacture and bleaching of linens, and partly in making salt. Lhubarb is cultivated in the neighbourhood.
SAMOS, a famons islant of the Egean Sea, now belonging to Turkey, of the W, coast of Asia Minor, from whieh it is separated by the narrow strait called the little Boghaz, only 2 m , across. It lus on the N, the Gulf of Scala Nova, is about 30 m . in length, E. and W., by about 8 or 9 in mean breadth; Moint Kerki, on its W. extremity (in. Catabutes, from its collecting clomds anil gencrating thumter), being in tat. $37^{\circ} 43^{\prime} 48^{\prime \prime} N^{\prime \prime}$, long, $26^{\circ} 3 x^{\prime} 21^{\prime \prime}$ E. I'op. extim, at 50,000 ( A ehatin of mountains runs from one extremity of the
inlend to the other: most of them are covered, as in :antiulaity, with furests of oak aud other timber, though in parts they are precifitous and hare. It han sevoral exturive valleys, espenially on its S. thore, which, being well-watered by streams from the hills, promber, even with the nost deficient culture, excellent crops of whent and other grain, with olives, tirs, oranges, and other fruits, wine, silk, aud cotton. In antiquity it was celebrated for its extraordinary fertility; it was then, nlso eultivatet with the intmost care, and the walls still exist which were built to form the sides of tho mountains into terraces, and to facilitate their culture. It still continmes to be the most productive istand of the Arehipelago. It anmualy exports considerable quantities of corn ; from $2 \overline{5}, 0$ otio to 30,000 cantars grapes, and about $\mathbf{1 5 , 0 0 0}$ barrels rilisills. The only thing which Strabo did not admire iu Samos was its wine (lib. xiv.) ; but when properly made, its muscadel is very superior. Oil and valonia are also considerable articles of ex[wirt. Wolves and other wild animals occasionally commit ravages among the oxen and sheep; poultry are exceilent, and partridges exceedingly abundant. Exclusive of marble, it produces iron, lemb, and even the precions metals.
Having voluntarily surreadered to the Turks, this island has been less liarshly treated by them thum most others in the Arehipeliggo. It, however, zealously espoused the cause of the other Grecks daring the revolutionary struggle ; and, the:igh it was assigned to the sultan by the treaty whieh rocosmised the independence of Grecce, the inhab. refused at first to submit to lis officers. l'revionsly to this event, the government of the island was substantially vested in three primates, chosen by the inhabs. But this would seem to have been no great boon. lhesides being oppressed by the urents of the Sultan and the l'rimates, the island lias, also, been Heeced by a swarm of Caloyers, 'apms, and other Greek priests. The present eap. of the island, called Khora, or Ni gali-khora, is on its $S$. side, about 2 m . from the sea, on the lower extremities of a mountain, on the ascent of which the citadel of the ancient eity was situatel. Thongli not without some good houses, it is a miserable town, having stony, steep, unpaved, and hardly passable streets. Vathi, on the N . side of he island, is larcer than Khora, and has an exellent harbour ; burt it, also, is a wretehed place, with strects from 6 to 8 ft . in width, execrably paved and steep.

Samos early attained to great distinction. She was one of the most powerful of the states belonging to the lonian confederacy ; and was able, oy means of her tleets, to maintain her indepentnine alter Crosus and Cyrus had reduced the states of Ionia, on the Continent. The city of Samos, on the S. shore of the inland, was extensive and populous, stangly fortified, and adorned with many nuble publie buildings. Among the other great works executed by the Samians, llerodotus specities a tumel, which they had earried through mountio?, to convey a supply of water to the city; an imniense mole, constructed for the security of the harbour (of which the remains still exist), about 120 ft . in height, and which advanced in a curved line ahout $\frac{1}{2} \mathrm{~m}$. into the sea; and the largest temple of which he (Hero(lotus) had any knowledge. (Ilerod, lib, iii. caj. 60.)

The temple to which the vencrable historian alludes was dedicated to Juno, and stood a little to the $W$. of sie city near the Imbrasus. The island, inteed, was espeeially sacred to Jumo, and was sipposed to have been the place of her birth, and where she esponsed Jupiter. Hence,
says Virgil, speaking of Carthage, where the god dess had also a temple-

Quam Juno fertur terris magls omnibus unam
l'osthabita colulisse samo. -
ExEinos I. Min. 19
The statue of the gorldess in this temple was very ancient, having been the work of Smilis, a contemporary of Diedalus. Among other statues in and near the temple, were those of Jupiter, Minerva, and Mereules, by Myron, one of the most celebrated seulptors of antiquity. Mark Antony carried off these statues to Rome; but Augustus made those of Minerva and llercules le returned to Samos, retaining only that of Jupiter. The Hnerean grmes, justituted in honour of Junn, called by the (ireeks*H $\mathrm{H} a$, were celebrated liere with extraordinary splendour. Like other great temples, that of Jumo was an asylum for all who implored the protection of the croddess; and Tacitus notices the arrival of deputies from Sumos, at Rome, praying that the vetustum Asyli jus might be contirmed. (Annal. iv. cal. 14.) the subscquent listory of this famous edifice is but little known. It lias, however, fallen a sacrilice to the ravages of time, or of barbarians, or buth. When visited by Tournefort, more than a century aro, portions of two columns were all that remained standing. Among other things simms was famous in antiquity for its pottery, which was everywhere in great request; and the art of manufacturing it is even said to lave been discoverel in this ishand.

The govermment of Samos experienced the mutations common to the governments of most Greck states. Originally it had kings, who were superseded by a mixed government, iuclining sometimes to democracy, and sometimes to oligarchis; while occasionally it was subject to tyrants. of the latter, the must celebrated is l'olyerates, who attained to the sovereignty in the 6th ceutury b.c. His object seems to have been to retain the government partly by foree, partly by corrupting and relueing the inhabs., and partly by engaging them in schemes of foreign conquest. (Mittori's Greece, i. 450.) At a period subsequent to the death of lolycrates, who was inveigled and crucitied by the satrap of a neighbouring province, the Samians were attaked by the Athenians, under Pericles; who, after an obstinate struggle of nine montls' duration, succeeded in reducing their city; and at a somewhat later period it received a colniny from Athens. During the contest between Mark Antony and Augustus, Samos was, for a while, the head quarters of the former and of Cleoputra, who kept court here with more than regal magniticence. After Augrustus had become the master of the Roman world, he passed a winter in this island, which he restored to its freedom, and at the same time conferred on it other marks of his favour. It alterwards became subject to the Greek emperors; and finally, in the 16 th century, to the Turks, under whose brutalising sway it has been reduced to the miserable state in which we now find it.

Of the many illustrious individuals that Samus has produced, l'ythagoras is by far the most tistiuguished. The ara of his birth is mot quite ascertained, but it appears to have oceurred about 580 years b.c. He early visited Egypt and other ancient seats of learning; but, on his return from his travels, being, as is said, dissatistied with Polyerates, he emigrated to Magna Grecia, and tomuded at Crotoma a school of philosophy, that speedily attained to the highest celebrity. Samos also gave birth to lihacens, said by llerodotus to have been the architect of the temple of Jum, to 'Theodorus the sculutor, and a host of others.

Anacreon was among the distinguished guests incited.

The narrow strait between Samos and the mainland is famons in ancient history for the great victory gained in it and the adjacent promontory of Mreale, over the flect and army of Xerxes, on the sime day that the forees he had left in Greece, muder Mardonits, were destroyed at Platica.

SANA, a city of Arabia, the cap, of Yemen, and the residence of the Imaim, in a valley from 6 to 9 m. in breadth, and 4,000 ft. above the level of the ocenn, near the hend of the Shabiver, and about 100 m. NNE. Mocha. Pop. estimated at 40,000 . The city is walled; as is also its suburb of llir-el-Azab, which was open in Niebular's time. The city and suburb, together, are said $t o$ be $5 \frac{1}{2} \mathrm{~m}$. in circ. The walls are mounted with cannon, but these are in a very bad condition. At both the E. and W. extremities of the city is a castle, haviug each a palace of the Imím. The streets of Sana are harrow, though broader than those of Mocha, and some other Arabian cities. $\Lambda$ handsome stone bridge is thrown across the principal street, down which a stream of water rims in wet weather. llonses principally built of brick, with open holes fur windows, clused when necessary by wooden shonters; but some, belonging to the higher elasses, have glass windows, beautifully stained. The palaces are built of hewn stone, plastered over with grey-coloured mortar. All the private residences in Sana appear to be furnished with fomtains. There are abont 20 mosques, very claborately adorned, many having their domes gilt, especinlly those in which are the tombs of the lmams. The public baths are both numerous and goosl: they are on the same plan as those of ligypt, and ' $a$ favourite resort of the merchants, who meet here to discuss the state of trade, and the news of the day over their cup of keshr, and their never-ftailing hookal.' A part of the city is appropriated to the Jews, who amount to about 3, 10 e. Each pays about a dollar a year for permission to reside; and a sheikh is appointed, who is responsible for the regular payment of this impost, and of the heavy taxes laid upon their vineyards and gardens. The Jews subsist chiefly by the sale of silver ornaments, grompowder, and spirituous liquors, and many ly working as common artisans, such as shoemakers. There are also may llindoos among the population, who, like the Jews, aro obliged to conceal as much as possibic the property they possess, for fear of exaction. The Mohammedra merchants are generally wealdsy, and live in good style, The principal frade in Sana is in colfec, the city being in the heart of the colfec commtry of Yemen. The article is brought into the market in Dec, and Jan.; and consulerable quantities of it are retained in the warehonses. It is, however, little used for home consumption, the favourite beverage being keshr, an infusion of the husk. The coffec-husk accordingly fetches here the bigher price of the two, from 4 to 12 dollars per 100 lbs. being paid for it. Very fine silk goods are exposed for sale in the bazatas. The imports are principally piece goods and Persian tobacco; with dates, and a great quantity of thread, or rather twist for weavinge, (ilass is in great request, and is principally suipplied from Egypt. The import duties at Sann are so slight as to be almost nominal.

The climate is too dry to be healthy; rain seldom falls, and famine appears to be a frequent result. Some inscriptions, supposed to be in the ancient IImyari character, linve been discovered here, but travellers have hitherto fomed few, or no other antiquities. The greater part of the fortitieations, and an aqueduct, now ruined, are said to
have been the work of the Turks, who bell the sovereiguty of the country till about two centuries ago.

SLNDWICH, a cinfue-port, mun. and parl. bor. of Eingland, en. Kent, lathe Sit. Aususime, hund. Distry, oni the Stonr, about 2 m . from its mouth, 55 m . E. by S . London bey road, and 98 m . by South Eastern railway. Poj, of manic. tor. 2,1)14, and of parl. bor. $13,750 \mathrm{in} 1861$. The parl. bor. comprises the pars. of Deal and Waluer, and the extra-parochial hamlet of St. Bartholomew, having an aggregrate area of $3, \times 10$ acres. Sandwich is divided into the three pars. of St. Mary, St. Peter, and St. Clements. It is washed on the NL: by the rivor Stour, and sirrounded on every other side by a dyke, the remains of its old fortitication. It is irregularly built, and has a more ancient appearance than, perhaps, any other town in the county. The streets are well paved and lighted, and the inhabs, are supplied with excellent water from the river, und from a spring which rises near the Eastry, and is brought to the town by is canal, 3 m . in length. St. Clement's church is a spacions building, with a massive tower of Norman architeeture risiug from four semi-cireular arelies in the centre of the building, and supported on stroner piers. In some parts it is curiously ornamented. The living is a vicarage, with a net income of 310l, a year. St, Mary's is also a vicarase, worth 117\% a year. Both the foregoing pars. are in the yift of the archdeacon of Canterbury. St. Peter's is a rectory, in the gift of the erown and the corporation of sandwich alternately, worth 1.14l. a year net. There are places of worship for Independents and Wesleyans; two hospitals, one founded in the 12 th century, and accommodating 16 residents, who must be freemen; the guildiall, built in 5579 , and a new house of correction, comprise most of the remaining public buildings. The free grammar school of Samdwiek was foumded in the reign of Elizabeth, and received considerable endowments in lands in 1563. Its governors are the mayor and corporation: it has four scholarships in Lincoln College, Oxford, of which two are in the appointment of the govetnors of the school, and two in that of the rector and fellows of the college; and four in Caius College, Cambridge, nominated in a similar manuer. It has, also, a national school and other charities. The town has no manufactures, and its trade is tritlins, eonsisting principally in the importation of coal for the use of the town and neighbouring country. The scheme of straightening the course of the Stour to the sea, so as to form a canal has been abandoned for want of calpital and enterprise.
Sandwich was tirst incorporated by Edward III. Its corporation cousists of 4 aldermen and 12 councillors, styled the mayor, jurats, and commonalty of the town and port. Their jurisdaction extends over Ramsgate, Sirr, and Walmer, and did formerly over Deal, which are all members of this cinque port. Sandwich has, however, no commission of the peace, except upon jectition or grant. It has sent 2 mems., isually styled barons, to the M, of C., since the 42 nd of Wiw. 111. Jreviously to the lieform Aet, the right of voting was in the freemen, resident and non-resident, the freedom being aequired by birth, gift, marriare, apprenticeship, ownership, and residence. Reg. electors in the new parl, bor., 1,073 in 1865.

Sandwich, formerly called Lundenwick, appears to have risen into consequence, on the deeline of Richborough, the an. Rhutupium, about the 6th century. It was long a place oí considerable trade, and continued, till a comparatively late period, to be a kind of ont-port to loudon, many poosls being conveyed by land to und from the capital.

## 124

SANDIVICH ISLANDS. (See lohynesia.) SAN FBANCISCO, a city and sea-port of the U. States, in California, on the S. promontory homdling the great bay of San Francisco, inside the bay, and a little to the S. of its entrance from the l'neitie, lat. $37^{\circ} 48^{\prime} 30^{\prime \prime} \mathrm{N}$. long. $122^{\circ} 27^{\prime} 23^{\prime \prime}$ W. 1'op. 56,802 in 1860 . The growth of this city has been quite extrnordinary. In the early part of 18.18 it consisted only of a few rude cabins: whereas it has now an exchange, a theatre, a custom-honse, many churehes, and other public buildings, with great numbers of private houses, many of which are of wood, but many, also, of culobe (sun-tried bricks), with a vast number of attached tents and booths. San lranciseo is indelitel for this transformation to the discovery of the gold deposits in the beds of the tributarics of the San Joaquin and Saeramento rivers, which fiall into her bay. Such, however, are the advantages of her situation, and the fertility of the adjacent country, that the exhanstion of the gold deposits, though it might elieck for a while, would not permanently affect the growth of the eity, or the extent of her trade. Sia Franciseo stands on a sandy level; and, during the wet season, when it is most crowded, the streets were, at first, mere puddles, into which carriages sumk to the axles; while, in the dry season, the amoyance from dust was all but intolerable. llut these inconveniences have been, to a great extent, obvinted by flooring the strects, or covering them with stont planks, a process which has been carried to a great extent, and has had the most complete success. The city has suffered much from tires. 'These, however, have been speedily repaired; and in a few weeks, no traces are seen of the most destrnctive conflagrations. According, however, as houses of brick or stone are substituted for those of wood and for tents, fires will become less frequent aud less destrnctive. The pop. of San Franciseo is the most motley that can be inagined, for, though Americans predominate, a large admixture is to be seen of adventurers from all parts of the world. Gambling is very prevalent; and is, perhaps, carried on to a greater extent here, during the rainy season, than in any other place either in the new or the old world. But this is the natural result of the circumstances under which the pop. has been brought together; and the passion will, no doubt, abate as the circumstances in which it originated change or lose their influence.
The bay of San Franciseo lias a narrow entrance, but within it exprands into one of the noblest basins that is anywhere to be met with, having a coast-line of about 275 m . The town has already become the seat of a very extensive trade, and will, most likely, be the grand emporium of the vast territory belonging to the U. States on the Pacific. The trade with China, Australia, the liastern Archipelago, and the lolynesian Islands, is even now considerable, and several ships have been fitted out for the whule tishery.
SANQUllAR, a royal and parl. bor. of Scotland, co. Dumfries, in the valley of the Nith, and near the left bank of that river on the road from Dumfries to Ayr, 26 m . NNW, the former. l'op. 1,754 in 1861 . The town consists principally of a main street along the line of the high roai. It has a town-hall, with a tower and clock, a handsome par. elurch, built in 1823, a Free chureh, 2 ehapels in eomnexion with the Associated Secession Churel, and a clapel for Anabaptists; with a parochial and other schools, a subscription library, and a savings' bark. The inhabs, are principally dependent on the wearing of cottons, and on the sewing and embroidery of muslins for the Glasgow manmiacturers. There is an extensive carpet

## SANTORINI

manufacture at Crawick Mill, about 1 m . from the town.
Simqular seems to have derived its origin from its tine old castle, now in ruins. This, which formerly belonged to the lorels of simquhar, having been purchased in 10330, by an ancestor of the last duke of Quecnsberry, became, on the demise of the latter, with other vast possessions in Dumfriesshire, the property of the thmily of bucelengh. It was created a royal bor. in 1506, and is united with Dumfries, Aman, Lochmaben, and Kirkeulbright in sending 1 mem. to the II. of C. Kerg. electors, 56 in 1865. Corporation revenue, 13 il. in 1863-64.

SANTA CRUZ. (Sce Tenembfe.)
SAN'LANDER (an. P'ortus Bleadiam), a eity and sea-port on the N. const of Spain, cap. prov. of its own name, on the W. side of the bay of the same name, ruuning into the Bay of liseay, 50 m . WNW. Bilbao, with which, and Madrid, it is combneeted by railway. Pop. 24,702 in 1857. The city is built on the slope of a hill, and has wide streets lined with tolerably respectable houses, the prineipal public editices being the cathedral, 2 par. churches, and 3 hospitals. It is a thriving town, with a considerable number of new houses, and the ehiel' sea-port of Old Castile, it having been the object of the government for some years to make it one of the principal marts for the supply of Madrid. It has a large trade with Cuba, to wheh it sends the wheat of Castile, mills loeing erected in the neighbourhood for converting it into tiour previous to embarkation. The exportation of wool is shared with Bilboa; but it has a superiority over that port from its greater proximity to the wool-bearing distriets. There are iron mines in the neighbouring mountains, but have been little wronght. The astillero, or building establishment of the marine, formerly much employed, is now almost in ruins; and the forests of the Montana. which once supplied Spain with nearly all the timber for the navy, are now seldom used, except for the supply of finel.
'The harbour of Santander is large, well sheltered, easily accessible, and sufficiently deep for all trading vessels. The vicinity prorluces an abundance of wheat and other grains, fruits of several varieties, and large guantities of eattle; the coast also swarming with salmon and other kinds of tish.

SANTAREM (an. Presidium Jutium), a riverport and town of l'ortugal, formerly the residence of the court, prov. Estremadura, cap. Comarca, on the Tagus, 45 m . NNE. Lisbon. 1'op. 8,590 in 1858. The town is built on a hill, and consists of 3 separate parts; the Marivalla on the summit, the libera on the Li. declivity, and the Alfange on the W. and S., deseending to the river's bank, and commanded by the fortress of Aleazaba. Only a few portions of its old walls remain. It is well lmilt, and has some good public editices; but these are mueli neglected, and soveral have almost fallen to ruin since the removal of the court to Lisbon, in the 15 th century. Hesides mumerous churches and convents, Santarem has several hospitals and asylums, and two Latin schools; and it is the seat of the l'atriarehal seminary, the lighest ecelesiastical establishment in the kingdon. Its environs are fertile and well cultivated, and it has an active trade with Lisbon.

SANTORINI, (an. Thera), an island of the Agean Sea, belonging to the S . Cyelades, 65 m . NNE. from the nearest point of Crete, Mount St. Ehias, the highest point of the island, being in lat. $36^{\circ} 20^{\prime} 45^{\prime \prime}$ N., long. $25^{\circ} 98^{\prime} 8^{\prime \prime}$ E. 1'op. 12,230 in 1801. This island is shaped like a creseent, or rather horse shoe, the concave side to
at 1 m , from the
1 its origion from This, which ampular, having estor of the last 1 the demise of ans in Dumfriesf Buceleugh. It ; and is mitent 11, and KirkeulH. of C. Reg. revenue, 137 l , in
(ffes.)
(endiam), a city ;pain, cap. prov. of the bay of the of Biscay, 50 m . Iadrid, it is comin 1857. The ll, and has wide table houses, the cathedral, 2 par. a thriving town, new houses, and , it having been r some years to ts for the supply with Cuba, to stile, mills being onverting it into The exportation it has a superiter proximity to e are iron mines but have beell building estabmuch employed, e forests of the oain with neariy ow seldom used,
arge, well shelnfficiently deep ity produces an rrains, fruits of tities of cattle; Imon and other
(utium), a riverly the residente ap. Comarea, on Pop. 8,590 in and conssists of 11 the summit, the Alfange on iver's bank, and leazabn. Ouly ain. It is well fifes; but these ve almost fallen nurt to Lisbont, erous churches 1 hospitals and Id it is the seat rhest ecelesiasIts cuvirons it has an active
island of the yclades, 65 m . ete, Monut St. lamd, being in $8^{\prime \prime} \mathrm{E}$, lop Haped like a meave side to
the W., forming a bay, shelterel by the islands Therasia, and Aspronisi.' Tho island has a dismal appearance from the sea, consisting wholly of black voleanic rocks, withont woml, rivers, or rivulets; but it has, notwithstanding, some very fertile districts, the decomposed voleanic roeks and ashes supplying a fruitful soil, which being earefully cultivated, produces corn, cotton, and large supplies of wine. The inhabs, lave nu water, other than that which they collect in cistenns; and the calcined rock, heing of a light consistency, the homses are rather excavated in it than built. Pyrgos in the centre of the ishand, near the seat of the ancient Thera, and Scaros, on the coast of the bay, are the only towns of any consequence. The inhub, are very industrious: aud have sustained little other inconvenience from the Turkish dominion except that of paying the tribute due to the Porte.
It was the general opinion of the ancients, that this island, and others in its vicinity, had been thrown up from the bottom of the sea; and I'liny says that this event occurred in the the yenr of the 135th Olympiad. (1list. Nat. lib. ii. cap. 87.) No donbt, however, this date is erroneons; as it appears from llerodotus that the island was inhabited 1,550 years $\mathbf{b . c}$., or 1313 years befure the equeh assigned by Pliny for its appearance. (llerod. lib. iv., caps. 147, i.48, and 15t.) Prolably, unless the date given by Pliny be vitiated, he may have referred to some ernption that hat oceasioned an enlargement of the island. The convulsions of which it was anciently the theatre, have not been suspended in more modern times; a new island having been thrown up near its coast in 1573, and nother in 1707, each being preceded by a violent volcanic eruption. In remote antiquity it was called Celliste, or the beantiful, an epithet that never could have been applied to it, bad its appearance then been at all like that which it now exhibits. The rui is of its ancient eity, Thera, on the hill now salled St. Elias, evince its extent and magnificence.
SAN'COS, a town and sen-port of Brazil, prov. St. Paul, in a low and unhealthy situation on the N . side of the island St. Vineent, 35 m . SSE. St. Praul, lat. $23^{\circ} 56^{\prime} 15^{\prime \prime}$ S., long. $46^{\circ} 00^{\prime} 15^{\prime \prime} \mathrm{W}$. l'op, estim. at 10,500 . Santos is a place of considerable trade, being the storchouse of the great eaptaincy of S. Paulo, and the resort of many vessels trading to the lio de la l'lata. It is tolerably well built. Several rivilets flowing from the momintains unite in one great river a little above the town. The port is formed by the continent and the island St. Amaro. There are two entrances, but that of the S . is alone navigable by large vessels; the other, which is formed by the river Bertioga, being tit ouly for small craft. The harbour admits slipis of large burden, which are sheltered from all winds except those from the SSW. round to the SL:. The part called the Narrows is defented by 2 forts.

Though the commerce of Santos will not bear to be compared with that of Rio or Bahia, it is very considerablo. Sugar is the great article of export, but the shipments of it have latterly been decreasing. The imports are similar to those of Rio de Janciro.
SAONE (liAUTE), a dép. of France, reg. E.; between lat. $47^{\circ} 15^{\prime}$ and $48^{\circ} \mathrm{N}$, and long. $5^{\circ} 3 \overline{5}^{\prime}$ and $7^{\circ} \mathrm{E}$. ; laving N. the dép. Vosges, E. Hantlihin, S. Doubs, and W. Cote-d'Or and HanteMarnc. Length NE. mul SW, about 70 m ., breadth varying from 25 to 40 m . Area, 533,092 hectares. Pop, 317,183 in 1861. In the N . and E . are the Vosges momutains, and their ramitications. The general slope is to the SW. in which tirection the

Saine traverses the dip. throughont its centre. The Oignon forms its Ste, bommiary. There is a considerable extent of rich suil. The arable hands are supposed to comprise eng, on: hectares, meadows 5 s, 923 do, sinevards 11,769 dho, ant wouds 154,230 do. K_ricutare has made some progress within the present century; but it is still very backward. The produce of corn and pulse exceeds the demand for home consumption. Whent, oats, and barley, are the principal crops. The vineyards form a principal source of wealth. The produce may be estimated at about 350,000 hectul. a year. The wines of Ray, Charicy, Naveme, Quiney, Gy, and Champlitte-le-Chatean, are the best, they have a tine colour, body, and may le: kept for a long time. Near the Vosges, large quantities of cherrics are grown for the mannfacture of kirschecusser. 'Timber is an important prodnct : and the ammal produce of wool is estimated at 130,000 kilugr. In minerals, this dép. is one of the richest in France. Its irom forges employ about 5,(000) hands; and bar iron, irom plates, and wire, steel, and varions iron growds are made to the ammal value of $11,0,00,000 \mathrm{f}$. Chass and carthenware, cotton goods, paper, and hats, are also prolnced: the exports are, however, mostly contined to agricultural products, and irm goods. Llante-Same is subdivided into thres arronds. : clicif towns, Vesont, the cap. Gray and lure.
SAONE-ET-LOIRL, a dép. of France, reg. E. principally between the 46ith and 47th degs. of N . lat., and long. $3040^{\prime}$ mud $5^{\circ} 30^{\prime}$ E., having N . Cote llor, E. Jura and Ain, S. Rhome and laire, and W. Allier and Nievre. Area 8idi, 472 hectares. Pop. $5 \times 2,137$ in 1861. The E. and W. parts of the dép. are level; the centre is mountainons, the momitains dividing the basins of the laire and the Saônc. These two rivers are, however, united in this dép. by the Canal du Centre. Nearly half the surface consists of a rich nud fertile soil. The arable lands are supposed to comprise 456,323 hectares, meadows $126 ;, 655$ do., vineyards 37,936 do., and woods 100,ti94 do. The produce of corn excceds what is recpuired for tho consumption of the dep. : potatoes form the staple food of the inhabs. of the momentains. Some of the vineyards in this dep., especinlly those in the arrond. of Chalons-sur-Same, produce winc that ranks in the first class of Burgundy. The wines produced in the other districts are known in commerce by the mane of vins de Maton. They are excellent as vins orlinaires, but cannot be compared with the first-rate growths. The produce of wine is estimated at about 500,000 hectol. The arrond. Charolles has some tine pastures: and is supposed to possess 250,000 head of cattle, and 405,000 sheep, being a much larger stock than in any of the neighbouring dens, A great number of hogs are reared. Out of 120,312 properties suljeet to the contril. foncière, $70,98 \overline{7}$ are assessed at less than 5 lir., 26,20 at from 5 to 10 fr., and 22,347 at from 10 to 20 fr. ; and 269 at 1,000 fr. and upwards. Coal, iron, manganese, and marblo are raised; the glass and iron works nul potteries are important. The commerce of the dep centres principally in Chatons-sur-Saone. 'This dép. is divided into five arrondts; ; chief towns, Macon, the cap., Antun, Charolles, Chalons, and Lothans.

SARAGOSSA, ZARAGOZA (an, Crsarea Argusta), a city of Spain, kingdom of Aragom, prov. of its own name, in a tine phain on the libro, erossed here by two bridges, 57 m . SL'. P'ampelana, 156 m. W. by N. Bareelona, mad 176 m . ENE. Madrid, on the railway from lareeloma to Madril. Pop. 63,309 in 1857. The limits of the town are
marked by a wall partly of turf and partly of stone, and there are 8 pincipal and 2 smaller gates. It is divided into 4 quarters and 2 suburbs, comprising upwarts of 200 long, narrow, ill-paved streets. 'There is only one wile street in the whole city, viz, the Cosso, which sweels round the outside circ. of the town on the land side, connecting the market-place and the Ebro. The houses, penerally speaking, are of brick, and 3 stories ligh; but few of them have any pretensions to architectural display. 'The town has an immense number of churches, two of which are cathedrals. That called EL Asen is vast, Hloomy, and marnificent; the other, called El P'ilar, is spacions, lofty, light, elegant, and cheerful. This clurch was nearly destroyed during the siege in 1808-9, and several of the other chureles and convents were then also destroyed. The cliapter of the unitel cathedrals comprises an archbishop, dean, 12 dignitaries, and 30 canons. Ampig the numerous other churches, 16 of which are parochial, that of Santa Engracia is worth notice on account of its valuable paintings and senptures, and the conventual cheureh of St. Domingo, in the plaza of the same name, is remarkable for a tine altur-picee and mausoleum of white marble. There are 5 hospicios, or public ulmshouses, one of which, the Casu ie Mistricordia, has accommodation for 700 sick and aged persons of both sexes, and another aftorls a reluge for upwards of 1,000 orphans and foundlings. The exchange, near the Puerta del Angel, is an antiquelooking, stuare building, ornamented with busts of the kings of Aragon, cuclosing a spacious hall supported ly 50 Joric columns, contiguous to which is the sessions-hall of the ayuutamicnto. There are two sets of barracks, and in the suburbs are several exteusive and well-planted walks. A little W. of the city is the fortress of Alja-feria, so called from its founder, the Moorish king BenAljufe, who made it his palace. A university was foumded here on the expulsion of the Moors, in 1118 , but was not incorporated till $14 \overline{4} 4$ : it was well attended at the elose of the last century, but is now comparatively deserted. Among the other establishments may be mentioned, a royal economic society, with professors of chemistry and agriculture, botany and rural economy, a royal academy of the tine arts, a public library, unil a monte de piedad. The manufaturing industry of Saragossa, once very considerable, has all but fallen to decav, the only manufactures at present heing those of coarse woollen cloths, parchment, shoes, and leather. The town enjoys also considerable advantages for commeree, owing to its position in the midst of a fertile country, on a main line of railway, and on the canal of Aragon, which runs from near Tudela to Sastago: its trade, however, is contined chictly to the transport of grain to Tortosa in exchange for articles of bome consumption.
The climate is temperate and healthy, though somewhat damp; the neighlibourhood produces good crops of wheat, barley, and maize, kidneybeans and other vegetables, wine, oil, fruits, and silk. The necighbouring hills depasture great numbers of sheep, chielly belonging to the Gumaderos or sheep-grazers of Saragossa, an ohd and highly privileged association.
Saragossa is very ancient, being said to have been foumded by the Phecuicians or Carthaginians. It was greatly enlarged by Julius Ceasar, who made it the head quarters of the veteran legion; and Augustus gave it the name of Cesarea Augusta, with the privileges of a free colony. Of its Rommu buildings, however, which, according to Strabo, nus: have been numerons and hamsome, there are searcely any vestiges. T'owarls the close
of the 5th century it was taken by the Goths, who were expelled in 712 by the Saracens; and at length, in 1017, it was made the cap, of a separate Mourish state. A enitury afterwards it was besieged and taken by Alphonso of Arugon, and it was subsequently united to the kingdom of Castile. But it is principally known in modern history from the obstinate resistance made by its inhabs., under l'alafox, in 1808-9 to the French, commanded successively by Marshals Mortier and Lannes. The siege lasted, with some slight intermissions, from July 15, 1808, to Feb. 21, 1809, when, after a loss of about 6,000 men killed in battle, und of ahove 30,000 men, women, anid children carried off by hunger, pestilence, and the fanatical excesses that raged in the unfortunate city, it surrendered to the French. General Nupicr's acconnt of this famous siege has strippel it of more thum hall the romanee with whel it was carly invested in this country. The 'hervie' l'alation 'for more than a month preceding the surrender never came forth of a vaulted lonidding which was impervious to shells, and in which, there is too much reason to believe, that he and others, of both sexes, lived in a state of sensuality, forming a disgusting contrast to the wretehedness that surrounded them.' (Napier, ii. 49, 3ld edit.) In obstimacy, fanaticism, and savage cruelty, the Saragossans seem to have borne a striking resenblance to the Jews besieged by Titus. The loss of the French in the siege did not exceed 4,000 men.
SARANSK, a town of European Russia, gov. and dist. Penza, on both sides the Saramga near the lusar, $70 \mathrm{~m} . \mathrm{N}$. by E. Penza. Pop. $11,86 \cdot \mathrm{t}$ in 185\%. Most ol' its houses are of wood: it has, however, two cathedrals, nearly a dozen other churches. a convent, various manufacturing establishments, and a large amual fair.
SARATOF, an extensive government of European Russia, between the 48th and 53 rd degs. N. lat., aud the $42 d$ and 50 th E. long., having N. the govs. of Penza and Simbirsk, E. that of Orenbourg, SE. and S. Astrakhan, and W. Tambof, Voroneje, and the country of the Don Cossacks. Length and greatest breadth about 350 m . each. Arrat estimatel at abont $73,600 \mathrm{sq}$. m. P'op. 1,636, 135 in 1858. The Wolga intersects it from N. to S., dividing it into two portions of nearly equal size, but diburing considerably in general character. The E. division is a wide steppe, destitute of wood, and coverel in many parts with salt lakes, from one of which $10,000,000$ poweds of salt are said to be annually obtained. The W. division is in part hilly, and though stony towards the S., has some tolerably fertile tracts in the N., where agriculture is the chief occupation of the inhabitants. Rive, wheat, oats, millct, and peas are raised, and in ordinary years the produce, after stpplying the demand lor home consumption, leaves a eonsiderable quantity for exportation. lotatoes, hax, and hemp are also produced, and the cultivation of tobacco, hops, and wood has been introduced by Gernan and other colonists. The climate, in some situations, is sulticiently mild for the culture ui the melon, grape, and mulberry. The jrineipal forest trees are oaks, poplars, Siherian acaeias, and firs. 'The woods are mestly in the NW., and those belonging to the crown are estimatel at about 418,500 deciatines; but the supply of timber is not adequate to the home demand. The rearing of live stock is conducted on a large scale, and the more wealthy proprictors are endeavouring to intprove the breed of sheep, by the introduction of Merino tlocks. The rearing of bees and of silkworms is on the increase. The lisincrics in the Wolga furnish large suphlies of tish, buth for home

Next to salt, mill-
stomes and a little iron are the chief mineral prombets.

The population is very mixed, including Tartars and litrhizes, and on the Wolga are numerons cohnics, founded prineipally by ( German and other immigrants from W. Europe, originally atiracted thither by grants of land, and privileges conferred hy the empress Catharine, in 17t3. The colonists are free, and in most respects subject only to their own jurisdietion. They conduct the most important manufactures of the govermment, which consist of linen, cotton, and woollen fabrics, hosiery, iron ware, leather, anil earthenware. There are mumerous flour-mills and distilleries. 'Ihis grovernment is favonrably situnted for commerce: it commmicates by the Wolga with the Nijni-Novgorod and the Caspian Sea, and by the Medveditza and lom, with the Sea of Azof. The Tartars have a large trate in sheepskins, and the Kahmeks in horses of a vory tleet, thourh weak breed. Saratof is divided into 10 districts; ehief towns, Sarator; Volsk, and Tzaritsyne. The population are mostly divided among the Greek, Protestant, and Dlohammetan religions.
S.anatof, a town of Russia in Europe, cap. of the above gov., on the Wolpa, 335 m . Sill. NijniNoverurod, and 360 m . NNW. Astrakhan. P'op. 61,610 in 1808 . Saratof consists of an upper and lower town, but, though fomuled so late as 166is, it is neither requharly laid out or well built. It has some good and even handsome stone residences; but most of its houses are of wool, and it has frepuently been in great part destroyed by tire. There are abont a dozen Greek-Russian churches, some convents, a Protestant and a R . Catholic church, a mosifue, and a gostinöi-duor, or bazanr, a large stone building for the warehousing, exhibition, and sale of merthandise. Since 1833 , a new and handsome nrchbishop's palace has been constructed; and there are several lospitals, a gymnasinm, and an ecelesiastical seminary, estahlished in 1828 , and having at present aboit 500 stulents. The inhabs. manufacture cotton fabrics, cotton and silk stuckings, clocks and watehes, leather, wax lights, tallow, nul vinegar. Saratof, wheh is intermediate between Astrakhan, on one hand, and Moscow NijniNowgorod on others, has an extensive trade, its exports being principally corn, salt fish, lides, cattle, and native manufactured goods; and its imports tea, coffee, sugar, iron, glass, and earthenware, woollen, silk, and cotton stuffs. It has three large amual fairs.
S.ARATUGA SPRINGS, a famous watering place of the U. States, in the state of New York, co. Saratoga, 31 m . NNW. Albany. Resitent pep. 4,815 in 1860 . This incorporated village consists of a fine broad street fringel with trees, and has many large and excellent hotels, a Presbyterian church, post office, and numerous boarding houses. The springs, which came into repute through the Indians in 1767, are spreal over a tract 12 m . across. Congress-spring, the most celebrated, was discovered in 1792. A gallon of its water holds in solution 385 grains of sea-salt; 35 do. hydriodate of soda; 8.98 .2 do. bi-carbonate sola; 95.788 do. bi-carbonate magnesia; 98 do. carbonate lime; 5 do. carbonate iron ; and 150 do. siles. Above 1,500 people have been known to arrive here in a week, coming from all parts of the states, even from New Orleans, a distance of between 2,000 and $3,000 \mathrm{~m}$., during the mhealthy season in the s . States. A very profitable traide is earried on by the proprictors of the several springs in the water, which is bottled and sent to distant parts. 'The spring water loses its pum-
geney, howerer, and its iron is entirely deposital, by its heing ton long kept in bottles.

The vicinity of Saratogn is interesting, from its being the scene of one of the lrading evente in the war of independence, the surrender of (iencral Burgoyne, and the British troops muker his eommand, to General Gates, 17 th Oet., 17 Z 2.

SARDINLA (Ital. Sardegua, Fr. Sarluigne, an. Ichusa, from its resemblance to the print of a foot, post Sardinia), an island of Italy, ind nest to Sicily, which it nearly equals in size, the lar rest in the Mediterranean. It lies prineipally between the 39th and 41 st degn. of N. lat., and the Wth and loth of F . long., Geing separated from Corsica on the N. ly the Strait of lonificio. It is of an oblong form; lengilh, N. and S., about 160 m. ; average breadth, about 60 m. ; area with its depentent islands, $9,2[0 \mathrm{sq}$. m. Pop $573,11 \mathrm{i}$ in 1862.

Sardinia differs from Corsica in being more diversitied, more fertile, and richer in minerals. A large propurtion of the surface is hilly or monntainons. The principal momatain ehains extemb from N. to S. at no great distance Irom the E. ecoast; but in various parts of the island there are ranges of considerable length stretching in an opposite direction. The general devation of the mountains is from 1,000 to $3,000 \mathrm{ft}$. ; the peak of Limbarra, bowever, is 3,686 ft., and that of (hemarqente, in the chain of that name (the Insami Montes of antiquity), $5,276 \mathrm{ft}$. in height, an altitude which enables the people of Aritzu to trade in snow for the consumption of the capital.

There are many extensive phans, the principal being those of Orieri and Sassari in the N., that watered by the Tirsi in the centre, and the Campidano, between Oristano and Coghliari, in the $\therefore$. The Tirsi, Finmendoso, Cuguinas, and Mannn, flowing through these plains, are considerafle rivers: the minor campi are watered by numerous small streams. Aromid the consts are many lagoons, and several considerable bays, as those of Carliari, Orittano, Sassari, and Orisel.

The monntain-elanins of Sardinia and Corsiea have a similar furmation, beifig composel of granite, schist, aud primitive limestone. Through the centre of Sardinia, from N. to S., extends a remarkable tertiary formation of a calcareons mature, and various volemic products are seattered over this formation, while the traces of extinct craters are visible in many parts of the island. Earthquakes, however, are rare; nor are storms frequent, thourh the climate is proverbially variable as to temperature. The mean temperiture of the year, at the level of the sea, may ho taken at $61 . \%$ Fah., and the medium height of tho barometer at 296 . Extensive distriets are very unhealthy, and in antiquity the island was celobrated alike for the excellence of its soil and the badness of its air. 'Sardinia fertilis, et soli quam cali melioris; atpue ut fecumdh, ita pene pestilens.' (Pomp. Mela, lib, ii. cap. 7.) The intemperir, as the malaria is here callel, appears to be somewhat. different from the malaria of Italy and Sucily; for thongh equally, or even more acrimonions in elfect, it cloes not always proluce the swelled bodies and sallow skins which are the symptoms of the latter. Buth diseases asually commence when the summer heat, assisted by light showers, disengages the impure gases from the low gromme, and emtinue mint the latter end of November, when heavy rains have precipitated the miasma, and puritied the air. llut they differ, imsmueh as malaria is generally supposed to be weak in its ellects unless imbibed during sleep; whereas intemperie, thourh worst at night, is pernicions an all times. The chicf source of insalubrity apmears
to consist in the exhalations from the numerous marshes and stagnant jools of the plains, and might, therefore, it may ie fairly concluded, be creatly abated by a proper system of chainage. Fire is said to be a puverfill antidote againist the evil; and the lords of Oristano were formerly acenstomed to light large fires round the town, which had the effect either of rarefying or destroying the mephitic vapours.

Not withstanding her extent, the richness of her soil, her position in the centre of the Mediterranean, aud her convenient harhours, Sardinia has been strangely neglected, not only by her own governments, but by the European powers generally, and has remained, down to our own times, in a semi-barbarons state. A long series of wars and revolutions, followed by the establisliment of the feulal system in its most vexatious and oppressive form; the fact of her having been for a lengthened period a dependency of Spain, and, if that were possible, worse governed even than the dominant country; the division of the island into immense estates, most of which were acquired by Spanish grandees; the want of leases, and the restrictions on industry, have paralysed the industry of the inhabs., and sumk them to the lowest point in the scale of civilisation. Since 1750, however, improvements of various kinds have been slowly, but gradually gaining gromel; and, within the last few years, several important and substantial reforms have been introduced, that will, it is to be hoped, conspire to raise this fine island from the abyss into which it has been cast by bad laws and bad government.

Besiles that portion of the island oceupied by lakes and marshes, there are large sandy or stony districts, called macchie, which comprise, in the aggregate, more than one-third part of the island a similar extent may be assigned to forests and pastures; the remaining portion of the surface being laid out in corn-fields, vineyards, olivegrounds, orehards, and gurdens. About one-fifth part of the cultivated land is supposed to be allotted to the growth of corn, which, even under the present system of agrieulture, is said to give a return of 7 or 8 for 1 ; and, in some favoured distriets, the average is said to amount from 16 to 50 for 1. Of the eapacity of the island for producing the most luxuriant erops of corn, there can, indeed, be no donbt. In antiquity, Sardinia was reckoned, along with Sicily, a granary of Rome. 'Siciliam et Sardiniam benignissimas urbis nostre nutrices.' (Val. Max., lib. vi. cap. 6.)
${ }^{6}$ Utraque frugiferis est insula nobilis arvis, Nec plus Hesperiam longinquis messibus uile, Nec Romana magis complerulit horrea terre.

Lucan, iii. lin. 65.
But the unfarourable political and mumicipal regulations under which the ialand has been placed, have gone far to neutralise the advantages it owes to mature.
The agriculturists of Sardinia principally consist of two great classes-those who cultivate small farms on the metayer prineiple, and those who work on the estates of others, getting, in most instances, a pateh of land for their support, and eultivating it at such times as they are not employed on the lord's lands. Both classes are excessively poor. The agreements under which the former class holds are seldom for more than a year; the landlord furnishing the seed as well as the land, and receiving half the produce. Those who occupy land for which they are obliged to pay a rent in corvées, or other fendal services, are, if possible, still worse off, having usually to borrow the seed cither from the landlord or from
the Monti Frumentarii established for that purpose, and having also to defray the tithe and a host of other buriens. Another disadvantage, under which all elasses labour, is the want of houses on their tarms: the peasants live together in villages, and have frequently to perform a journey of several miles in going to and coming from their farms. I'robably, also, this may, in some degree, account for the frequent ehange of ocenpancies by the Sardinian peasants; though, as Marmora has truly observed, their cireumstances be rarely improved by sueh changes. Lands belonging to a canton or commune are frequently cultivated on a kind of partnership system, being dividel into three portions: one of these, called vidazzone, comprises all the lands that are in cultivation, and which are distributed by lot amonct certain individuals, while the other two portions are oceupied in common as pasture. But, as a new distribution takes place every year, it is plain that no individunl can take any interest in the improvement of the soil; and this sort of tenure becomes, in fact, the most effectual that can be devised for the extinction of industry. Latterly, however, the government has been making efforts to promote the formation of inclosures and the division of the lands, which, though opposed by the prejudices of the people, have made some progress.

The culture of the vine is gradualiy inereasing in importance, and about 3,500 Catalan pipes are exported, chiefly from Alghero and Ogliastro. Olive oil, owing to the little care taken in its preparation, and its consequent bad quality, has hitherto been lunt little exported; but it is susceptible of an indefinite increase, and miglt be made an important article. Tobaceo is a royal monopoly. Flax, linseed, saffron, hemp, aud barilla are grown to some extent: silk is produced only in limited quantities, but its produce might: no doubt, be vastly increased; some cotton is produced, and also small quantities of madder, which last grows wild in the island. The momtains are clothed with forests of oak, beeel, chestnut, and other timber; but, from the want of roads, these are nearly useless. The agricultural implements and processes are excessively rude. The Sardinian plough, the counterpart of that described by Virgil, does little more than serateh the ground. It is without a coulter, and is very frequently wholly constructed of wood. Oxen only are used in plonghing and other field labour. Most of the garilen grounds are wrought by the hoe, the spade and mattoek being unknown, except to the liedmontese labourers on the new roads. The corn is left in the fields till it be thrashed, an operation effected by the primitive practice of treading with horses and oxen.
The greater number of the oxen, horses, and other live-stock, wander wild over the island, bearing the mark of their owners, and browaing in the woods in winter, there being no wolves. They are generally, as might be expected, very inferior; but considerable pains are taken in the breeding of some deseriptions of horses, and horseraces are a prevalent amusement. It is singular, notwithstanding the badness of the roads, that mules should be unknown. The Sardinian sheep is said to be remarkable only for its degeneraey: its wool is of a very low quality, and is worth little. Cheese, made of the milk of slieep and goats, is extensively exported; but this is a result, not of the goorlness of the milk, but of its extensive supply, arising from the great number of these animals, there being about 800,000 sheep, and 550,000 goats.

It is singular, the roarls, that Sardinian sheep its degeneracy: $y$, and is worth $k$ of sheep and but this is a milk, but of its e great number t 800,000 sheep,
liny, Ilist. Nat.
lib. xxxviii. eap. 9), whence some naturalists sippose the sheep to be derived, is a native of sardinia. It is a ruminating animal, frequenting only the highest and most sechuded woons; where, from its timidity and flectness, it is with diaficulty shot. 'The ferm of the cars, head, legs, and hoot', jidentify the mouttion with the sheep, though in size it is rather larger, and is, moreover, clothed with hair instead of wool. The horns are neither full nor deciduons, but hollow, and precisely similar to those of the ram, while the bleat is the same: it propagates also very readily with the sheep, the mixed produce being the 'umbre.' Though so shy in its wild state, the mufilon soon necommodates itself to domestic habits. Deer, wild boars, and a vuriety of game, niound in the forests: und the skibs of about 60,000 rabbits and hares, from 4,000 to 5,000 foxes, and 2,000 martins, are annually exported, besiles 5,000 cantars of carmucei, or llied skins, for making glue.

Thourh varions improvements lave been effeeted of late years, it is still true that the interior of this island exhilits, at this moment, a dergee of barbarism which can with ditliculty be believed to exist in liurope. The shopheris, and others who oceupy the mountainous parts of the ikam, are in the habit of weariug only coverings of tumed leather, or of shaggy goat or sheep skins. They are constantly armed to protect themselves from handitti; roaming with their floeks over the uninhabitel tracks, enjoving a bare subsistence, and acquainted with no laws but those of their own formation. They sometimes sow small patches of wheat and barley round their temporary dwellings; but they subsist chicfly on fruit, game, and the produce of their flocks, each fimily constituting as it were a patriarchol association. Though this part of the pop. be inoffensive, the number of handitti in the mountains furmerly rendered it unsafe for any one, whether a forciguer or a Sardinian, to venture far into the iaterior without an escort; and the farmers in the plains have veen aceustomed to rely for protection from the depredations of their highiand neighbous on a long established corps, called the barancelli. This is an armed association, ehosen anaually in the village districts; the members of which are bound to make restitution for all thefts, provided they receive immediate intimation of the robbery. Their remuneration arises from an annual sum subseribed by every landhohler. An attempt was made by the government, in 1819, to disband this force, but it was unsuccessful; and, on the whole, the barancelli are well adapted to the condition of the country.
The banditti that have long infested and still continue to infest parts of this island, owe their origin to a variety of causes, among which, no doubt, may be included the influence of the fental system, and the opportunities afforded by the state of the country, full of natural fastnesses, without roads, and without an efficient system of police, for their carrying on their depredations with impunity. Latterly, however, some stringent measures have been adopted for their suppression. The privileges of sanctuaries have been in most instances abolished. Loarls have been made into districts that were previously inaceessible; the right to wear arms has been restricted; and these measures, combined with the abolition of the feudal system, and the establishment of roval courts for the speedy and more equal distribution of justice, will, probably in no very lengthened period, go far to suppress the robberies and assassinations which have so long disgraced the island.
The houses of the peasantry are most wretelech,
consisting nisually of only one atory without windows; or, if there be windows, they are not ghazed, A whole fimily frequently dwells in a single room, in which kids, chickens, and dogs seek indiseriminate aceommolation with the naked ehildren; whilst an ass is usually employed turning a com mill (mola asinaria) in the corner. The centre of the room has a square hole in the elay Hoor, for the fire, but there is no outlet for the smoke excent accidental holes in the roof or chor. A few small low chairs, with an equally low talble, constitute the usuml movables. Earthenware not being common, the ordinary substitute is an oblong wooden dish. More llesh is msed than in Sieily, but less polenta. Omelettes of curds and rav vegetables are favourite articles of diet.

The towns and villages are mostly large and well situated, but with minaved, narrow sirects, mean houses, and a want of every comvenience. Immense dunghills, the eollection of ages, disfigure the prineipal entrances. In the N. hall of the island the villages are eomstructed of frcestone or granite, but most of the country houses in the S. are built with sun-dried bricks made of mul and straw. In the towns some good mansions arr met with, thongh they are ill fitted up, and their atria generally as dirty as those of the ancients in the days of divenal.

The fish on the coasts and in the larbours of Sardinia are mostly canght by foreigners. I'ilchards have become rare. The lagoons of Oristano and Cagliari abound with tine mullet, bream, and cels. From 200 to 300 boats used to arrive every year from Naples and (ienoa to the coral fisheries on the consts; but these have latterly been decreasing, owing to the vexatious customhouse regulations imposed on the coral boats.
Sarlinia has ores of silver, coploer, lead, and iron, which, if wrought, would, it is believed, be among the most valuable of her resources. Salt is a royal monopoly, and nffords a considerable revenue. Until recently, Sweden drew almost all her supplies of this article from Sardinia; and it continues to be exported in eonsiderable guantities. It is obtained by natural evaporation, principally near Caglinri.

Exeept the royal gunpowder, salt, and tobareo manulactories, a few for entton, wowlea, and silk goods, and some coarse pottery and glass works. Sardinia has no manufacturing establishments. Very little skill is shown by any of the artisans; and watches, clocks, and even coarse cutlery are all imported. The want of ronls has hitlierto proved a serious obstacle to manufactures, as well as to every other branch of indastry. 1 goml road, practicable for wheel carriages, has, however, been formed within recent years from Cagliari t Sassari, and cross roads are being carried lirom it to sonse of the most considerable places in the island. More important still is a great line of railway, running from Cagliari to Oristinno, and from thence along the west coast to Sassari, which has been in progress since 1861, but will, probally, not be finished till 1868 or 1869 . The execution of this railway must be of the prentest alvantage to trade and commerce. Till within the last twenty years, scarcely any roads were passable for travelters, exeept on horseback or on oxen, the lettiga of Sicily being maknown. A cart for luggage was indeed used; but this vohiele was a mere ladder monnted on solid wheels lixed to the axletree, and stuck romid the elge with triangular nails, being a ruder machine than any scelı in Spain, Greece, or Calabria.

The commerce of Sardinia has long been stationary, but of late has somewhat improved. 'The subjoined table gives the total value of the imports Yol. IV.

## SARDINIA

and exports of the island in each of the years 1860,1861 , and 1862 .

| Years | Imports | Exporta |
| :---: | :---: | :---: |
| 1880 | $\underset{67: 1,008}{\text { en }}$ | $\underset{67, t, 1333}{f}$ |
| 18451 | 1,017,075 | 716,1322 |
| 181\%2 | 780,076 | 631,67.4 |

Aecomnts are kept in lire, soldi, and denari: the lira of 20 soldi and 12 denari $=$ about 1 s . tid.; the real of 5 sohli $=4 \frac{1}{2} d$; the scudo of 10 reali $=3 \mathrm{~s}$. 9 d . The Sardiniam lb, of $12 \mathrm{oz}=14 \mathrm{oz} .5 \mathrm{dr}$, avoird.; the rublo $=26$ lhes: the moggio or starello (of (orn) $=$ uhout 1 bush. 1 peck. The palmo $=104$ ling. inches; the starcllo or moggio (of land) of Cagliari $=3$ roods 27 poles 19 yards ; of Sassari $=$ 1 rood 38 poles 24 yards.

Sardinia has a governor, who is the chief of the civil and judiciary administrations, and the commander of the forces both by land and sea. The island is subdivided into the provinces of Cagliari, Sissari, and Nuovo, and sululivided into districts and commmes. The seven cities or principal towns are under the administration of the magistrati, municipal bodies, each composed of six mems. Bach commune has a comucil of threc, five, or seven mems., presided over by a sinciaco. 'lhe Tdienza Reale, created in 1661, and reformed in 1823 , is the highest tribumal in the island. It is composed of thirteen judges and two presidents, and is divided into three chambers, two civil ans: one criminal; and has at its head the regent, the first functionary in the island after the viceroy. Besides its functions as a supreme judiciary court, it participates in the legislative power, the decree of the viceroy, published with the coneurrence of the Udienza Keale, having the force of laws. Sassari has a tribunal resembling the Udienza Reale of Cagliari, to which appeals may be made from its decisions. In the two cities last named are tribumals of commerce. In the frovinces justice is administered by prefects, whose decisions are final in civil canses to the anoment of 10 scudi, and who have primary jurisdiction in criminal cases. The curie, oi distriet tribunals, have a very limited jurisdiction.

Sardinia has a local parliament, callel the Stamenti, consisting of three chambers; the ecclesiastical, selected from the prelates; the military chamber, comprising all the nobles 20 years of age, with or without tiefs; and the royal chamber, composed of the deputies of the towns and commmes under the fapo giurato of the capital. The stamenti are convoked and holden during the king's pleasure, bat meet only on extraordinary occasions. Each section holds its sittings apart; and, after separately diseussing the matter under debate, they commmicate by deputies. The deliberations of the ecclesiastical borly, respecting donations, must be submitted to the king for his approval, before passing into a law. The supreme conncil of Sardinia has its seat in Turin : it is composed of a president and five comncillor-senators, and is similar to the ancient supreme council of Aragon. Beyond this tribunal there is no appeal, and it gives its opinion in all state affairs transmitted to it from the govermment of the island.

The laws of Sardinia are partly composed in the code entitled the Curta de Logu, promulgated in $13 \%$, and said to be drawn up, considering the period when it was issued, with great discretion and good sense. It has, however, been materially modified by the successive acts of the stamenti, the edicts of the difierent sovereigus of the house
of Suvoy, and the pregomi or deerees of the viceroys. In consequence of the momerons num, in many instances, contlicting enactments that have thus been issned, the law has become excerdingly obseore. This encourages litigation, and recourse is lay to the conrts to determino the most tritling questions; and unfortmately the means of legal relress are at once tedions, expensive, and uncertain. 'The country judges,' sajs a traveller, 'are extremely poor; and venality is so common, that sentences are just and equitable only when the govermment takes a criminal matter in hand. This is one of the leuling causes of the assassinations that have so stigmatised the island. It is an acknowledged difficult task to work a reform in detail; for if a magistrate prove himself more than usinally active in his otlice, he is sure to recoive the vengeance of adverse partisnas; and the eflecet of the whole system and practice is a melanchaly want of security both of persons and property.'

According to Captain Smyth (Sardinia, p. i•1), there is n striking resemblance between the Sards and Greeks. 'It is impossible,' he says, 'for any one who has travelled in Grecce, not to be struck with the similarity which, in many points, exists between the Sards and the Cireeks. Not only are their arms, music, dances, dresses, and manucrs in close resemblance, but many of their words and superstitions are exactly the same; so that the opportunities I have had of comparing the two mations, would lead me to infer the partial indentity of their origin. The Sards are of a midde. stature and well-shaped, with dark eyes and coarse black hair ; except in the mometains, whore fresh complexions and blue eves are met with. They have strong intellectual faculties, though uncultivated, and an enthusiastic attachment to their comitry. They are active, when excited, but extremely indolent in general. Thear good qualities are counterbalanced by cunning, dissimulation, and an insatiable thirst for revenge.'
Thongh vassals in Sardinia conld change their lord and residence at will, the degrading services and temures of fendalism were in full vigour in most parts of the island down to its abolition in 1839. The dependence of a pasant on his lord commenced when he was deemed capable of eaming his bread; and an anmmal tribute, either in money or kind, was exacted from all above the age of 18 ; and this, in addition to the usual imposts on lands and stock; the contributions demanded for prisons, robberies, arson, and exemptions from the roadlia, or one day's personal labour, as well as from other dominical services. These feudal burdens, with tithes, taxes payalle to the king, alms, as they are called, to mendieant monks, and other grinding extortions, mnounted, in many instances, to nearly 70 per cent. of the earnings of the peasant. And if, to this amount of taxation, be added the vicious custons that prevailed in the letting of land, unintelligible laws, and venal judges, need we wonder at the poverty and semi-barbarism of the peasants, and that revenge has become, in their estimation, a sacred dity.

The Sards are enthusiastically fond of poetry, but the other fine arts have met with 10 encouragement: and there is not a native planter, sculptor, or engraver, of any eminence in the islaul. The language of Sardinia is that dialect of the Italian which preserves the greatest portion of Latin.

There exists little authentic information respecting the history of this island previously to ite conguest by the Carthaginians, from whom it was taken by the liomans in the third Punic war. On the fall of the Western Empire, it was sucees-
erees of the vice umerous nul, in tments that liave sume excerdinuly tion, fund reconire tlie most tritling te means of legal nsive, and mmeers a traveller, 'are so common, that e only when the tterin hamd. 'l'his the assassimations island. It is ill work a reform in himself more than is sure to reccive ns; and the eflect e is a melanchuly and property, (Sarilinia, P. I.II), between the Sarils he says, 'for any , not to be struck lany points, exists ks, Not only are es, and mamucrs in - their words anl ame; so that the mparing the two r the prirtial inlen; are of a midelle clark eyes and motmtains, where es are met with, faculties, though tic attachment to re, when excirel, eral. information repreviously to itz om whom it Wis Punic war. On , it was sutcces-
sively possessed ly the Vantals, the Goths, the emperors of the Eiast, and the Moors; from whom it was taken, in 1022, by the frenoese mud Pisans. It continned to be a subjeet of contention between thene rival nntions till 1325 , when it was taken possession of liy the kings of Aingon, and it remaned attached to the Spanish monarehy till 1i1.t, when, hy the peace of Utrecht, it was ceded to Austria. lin 1720, the latory exchanged it for Sicily with Victor Amadens of Savoy. P'reviously to the French lievolution, the Sardimian government is said to have been dexirons to sell the island to the empress of Russia for $1,000,0001$. sterling; but the selreme was deflated ly the interference of France and Spain. (Young's Travels, ii. : 2 ib.). It was unsuccessfnly attacked by the French in 1793; and on the seizure by the latter of the continental portion of the Sardinian domiaions, Caghiari became the residence of the royal family. Recently, as already stated, measures which promise to be of the utmost importance to the island, have received the sanction of the goverument.
SARIDNLA, a former independent kinglom, and now a portion of the kinglom of ltaly, comprising the whole of N. Italy W. of the Tessino, including l'iedmont, Geooa, anal part of Nice, with the island of Sarlinia in the Mediterrancan, the whole of these dominions being situated between the a3th und 46th legss, of N. lat., and the 5th aul 10th of : : long. The territory is at present divided into the provinces of Alessandria, pop. 687,629, in 1862 ; Cunen, pop. 647,111; Genoa, pop. $8 \cdot 13,5 \times 0$; Novara, $573,392:$ Porto Maurizio, 121,020 ; and Thurin, pop. 924,209 in 1862.
The Alps separate this territory into two great divisions: l'iedmont in the centre, distingnished by the Romans as 'Gallia Transpadana,' forming the upper part of the valley of the 1'o; and the prov. of Genoa, the ancieat ' Liguria,' in the S. between the Maritime Alps and Apennines, and the sea. The most valuable portion is the plain of l'iedmont, extending frem the foot of the Alps to that of the Apemines on the $S$., and to the Tessino on the 1. The soil is everywhere a rieh, sandy loam, with little appearance of elay, and of great fertility. Owing to the heat of the climate in summer, water is here the great desideratum; and admutage has aceordingly been taken of the numerous streams that pour fown from the mountains, which are distributel with intinite skill all over the low grounds. Nowhere, indeed, is the art of irrigation carried to greater perfection than in that part of the great plain of the Po included in lieedmont. The irrigated lands, being under the intluence of a southern sum, produce the most luxuriant erops. Lands in liedmont are mostly indlosed, generally by ditehes, but, in many parts, with heelges also, which in some districts equal those in the best English cos. The crops, howerer, are generally divided by lines of fruit trees of different kinds, intermixed with mulberry trees. pophars, and oaks: and that the benefit of these trees may not be limited to the shade they produce, they support vines. Speaking generally, farms in Piedmont are small, and are usually held on the metayer system, the landlord receiving half the produce, and paying the taxes and repairiug the buildings.
Few combtries have so large a disposahle produce as liedmont. It has an immense number of cities and towns; and yet the Riviere of 'fienoa, Nice, and the country as far as Toulon, are supplied with corn and eattle from its superabundant produce. The produce of maize is considerable; and it constitntes the prineipal support of the country pepulation, who make use of it under a
variety of forms. The most usual course of husbamiry consists of what would be called in tingland a tour-shift, the first year lucius maize, the seemul whent, the third clover or tallow, and the tometh whent. It is customary to mix l'rintuct beans and hemp along with the maize. Wheat is sown on narrow ridges, and is earthed over hy the plongh, which in l'iedmont is an implement of a better kincl than in most parts of Italy. Wheat harvest takes place in the hegiming of July: it is thrashed ly means of celinders Itrawn by horses over the straw, which is turnell u, liv forks. According to Arthur Young (ii, 2(4)), thie common prodnce of the wheat crops in l'iedhumt dows not exceed six times the seed, which, comsidering the quality of the soil, he is justified in calling 'miseratide;' Imet the better crops viela between ten and deven seeds, or even more; and with a better rotation, annl more care, this might be made the average produce of the plain. Tis the corn erops must be added those of hemp, which is sometimes considerable, and silk, for which I liedmont is famons, with wine, vegetables, and fruit ; the prodnce of the farm-yard, and the profit of rearing and fattening stock.
The olive is the chief article of culture $S$. of the Apemines. The land in the Genoese territury is generally hilly and rocky, but has mostly a s. aspeec, suitable for the olive and the vine. The cultivated land is sulpiosed to comprise alout onefourth purt of the surfine. The laud here is divided into very small farms, those near the towns comprising only about six theres, and thon: in the interior aboit twice as much. Only a small proportion of the land is cultivated ley jroprietors: it is usually let on leases of three, tive, seven, or mine years, but never mare; the rent of cultivated land near Genoa is very high. In the greater part of the Genoese territory the rent is paid in cash or in produce, as wine, oil, grain, de., rated at a fixed price; but in the prows. of Novira and Alessandria the rent is paid, as is nsuml in che rest of the kingilon, on the mitager principle; the landlord furnishing the land and one-third the seed, and receiving two-thirls the produces. Wheat and maize are generally sown altermately: on the same land; mad good land is said to yielid usually from four to six for one, or double that quantity when it is tilled with the spade, as is enstomary in some parts. Wach farm of four on five acres supports a family, Lalwurers get from 31. to 51. a year, with hoard and lolging. Thoir usual diet consists of Indian corn, clesestmuts, potatoes, beans, and fruit, making little or no nise of butchers' meat. Women work in the tields, and tend the cows, in addition to spiming, weaving, and other domestic work, in which they are very indnstrions. Paupers, however, are more numerous in the towns than in the enumtry.
The mineral riches of the conntry are little explored; but irm of good quality, lead, copper, sulphur, manganese, and colalt, alomud in the monntains of liedmont. The mines of lesey, in the Tarentaise, formerly vielded tiom $30,00 i)^{\text {to }}$ 40,000 cwts. of lead, and iblout 4,000 mares of silver a year. Alabaster, fine marthe, serpentine, and slate, are plentiful. Salt is foumel both in mines and in springs. There are some forges, and other iron works ; but the priucipal manufactures consist of silk stuffs, velvets, and stockings, mostly consumed in ltaly. Coarse woollen and line in goods are made in several provs., and coarse stull's for the rural pol: Sail-cloths, cables, house furniture, paper, white lead, glass, earthenware, opttical and surgical instruments, jewellery, and works of art and virti, are among the articles made at Genoa, and other prineipal towns; and
there are mumerous brandy and tifueur distilleries and tanneries.
The great articles of export consist of raw and thrown silks, with silk stulls and redeets, which are lagrely proslaced at Genon; then come olive oil, woollens, pmpre, rice, vermieelli, and a varicty of inferior artictes. The leabing articles of iniport comsist of corn from the lBlack Nean, principally for the supply of Genon and the surromadiar distriet; raw cotton and cotton fabries, sugar and cuflee, indigo and other dye staflis; hardware, catlery und iron; salt tish and tobaceo.

SARED'TA, a town of Einropean Russia, near the frontiens of the govermment of Saratoff, on the Sirpn, near its conflnence with the Wolga. lop. 4,500 in 1858 . The town was fommed in 1760, by a colony of Iferalhoters in Moravia: it is well built, neat, clem, and fortitied, so as to be secure from the predatory inemrsions of the contiguons nomadic tribes. Its inhabs. are distiugnished by their industry: they manfacture linens, silk mil cotfon stulfis, with stuekings and caps, in great request all over the empire. They also raise and mamulacture tobaceo and distil spirits.

SARCUFMINES, a town of Framee, dry. Moselle, cap. arrond., on the Sarre, 4 lm . E. by N.
 the name of Giemond, was formerly one of the strongest in Lorraine; but no portion remains of ifs ancient fortifications except a dismantled citadel, now appropriated to the gendarmerie. The sub-prefecture, luill of justice, und college, wenpy the buildings of a Capuchin convent, founded in 1721. There are some spacious prisons. Sarguemines has manufactures of cotton thread, forks, spoons, aud carthenware of a superior quality ; and is the entrepot for the papier-miche smutl-boxes made in the surromnding villages, and of which it is said to export 100,000 dozens a year.

SARI, a very nucient city of Persia, prov. Mazanderan, of which it is the enp., about 18 m . from the S . shore of the Caspian, and 115 m . NE. 'Teherm, Previously to 1836 it is said to have lad from 30,000 to 40,000 inhabs., who carried on a brisk trade with Astrakhan and the interior of 1'ersia (Frazer's 'Trav. on the Caspian. p. 14) ; but ahout that time it was nearly depopulated by the planue. Sari is surromed by a diteh and a mud wall, flanked by pentagonal brick towers. The fateways have fallen down, and roads have been lroken through the wall in every direction, The appearance of the town differs essentially from that of any other in Persia $S$. of Elburc. The houses are bnilt of burnt brick, and neatly tiled; sume of the strects are well paved; and, although the marks of ruin are everywhere visible, Sari has something of the appearnnce of an English village or small market-town.

Sari is frequently mentioned by the poet lerdousi. Its vicinity is flat, woolly, and well watered.

SARK, or SELRCQ, one of the islands belonging to Great Britain, in the English Chamel, lat. $49^{\circ}$ $28^{\prime}$ N., long. $2^{\circ} 24^{\prime}$ W., intermediate between (inernsey and Jersey, 7 m . E. the former, and 9 m . NW. the latter; length, and greatest brealtil, about 2 m . each. Pop. 583 in 1861 . The island is divided into two portions, Great and Little Sark, mited by a nurrow neck of land. It differs little from the adjacent islands in its physical features. The soil is sandy and produces most kinds of grain aud vegetables. A good many fish and sea-fowl are taken romul its coasts. The inhubs, make cheeses, and knit stockings, gloves, anl Guernsey jackets, which they send to the ports in the W. of England, in exchange for colonial and manfac:tured grools.

SAliNO, a town of Sonth Italy, prov. Salerue. eap. elant., at the head of the river Sarmo (ain Surmus), 113 m. NIV. Salermo. l'up. 11,3il in istio. Sarmo ls a well bilt anil thourishing town, haviner a handsome enthedrab, several comvenes, an old cantle, belonging to the barborini fanily, a seminary, lospital, nome sulphurons baths, innd manufactures of paper and copper wares.

Surmo is celebrated in histury for the desperate battle fought in its vicinity, anno 5.:3, between the troopss of Justinian miler Narsise, and the (hothe under their king Tehas. The tintire offeat of the lntter, and the denth of their monarch, terminated the Gothie kinglom and power in Italy.

Sillillib, a dep. of lrance, reg. NW., between lat. $17^{\circ} 35^{\prime}$ and $44^{\circ} .10^{\prime}$ N., and ling. $v^{\circ} 25^{\prime} \mathrm{W}$. and
 Soirc-et-Cher, S. Intre-ct-Laire and Maine-cttoire, and W. Mayeme, It is of a comphet shape, t 00 m . in length, $\mathcal{N}$. and $\mathrm{S} .$, and about the same in brenitli, E. and W. Area, deo, fifis hectares. L'op. 4ti, 155 in $18 t i l$. Surlice fenerally level, exent in the NVY.. where there are a few hills. ' The principal rivers are the sarthe, with its tributarice the Vegre, llaisne, and Loir. The Sarthe rises neur Mortagne, in the dép. Orne, and runs with a very turtuens course, S. and siV., to the vieinity of Ingers: nenr which it receives the Loire, anid unites with the Mayeme to form the Maine, ufter an entire course of nearly 160 m . In the lith eont. it was navigable to Le Mans, but its mavigation is now ditheult for some distance below that city. lesides Le Mans, Alençon stands on the Sarthe. The soil of this deip. is varions; in some parts there are rich lands, but poor sandy tracts predominate, especially in the SE. The arable lands are supposed to comprise 393,456 hectares, meadows 58,120 ditto, vineyards 10,081 ditto, orehards 10,179 ditto, and wools d8,319 ditto. Whent, barley, and rye are the principal com crops; mad are sufficient, along with potatoes, for the comsumption of the pop. The produce of wine is not enough for the consumption ; but about $2 \cdot 0,000$ liectol. of cider and perry are anmually manutactured. Live stock abuntant and goorl. Hees are but little reared ; and the wax, in which Le Mans has a consilerable trade, comes mostly from the neighbouring déps. Lardware, paper, woollen filbrics, lenther, wax cindles, sail-cloth, glass and earthenware, soap, and other articles of necessity, rather than of lusury, are the goods principally manufactured in Sartlie. The iron lorges produce anmally about $1,000,000$ kilogre. of good iron. The citamines of Mane formerly enjoyed a great celebrity, but other fiburies have superseded them; so that st. Calais, and other towns where they were chicfly made, have fallen into decay. Sarthe is elivided into 4 arronds. ; chief towns, Le Mans, the cap., La Fliche, Mamers, and St. Calais.

SARUM (OLD), an ancient, and now totally ruined city and bor. of lingland, co. Wilts, on a hill, 2 m. N. Salishury, or New Sarum. It was the Sorbiodumm of the Romans; and, being surromided by walls and defended by a castle, became a place of considerable consequence maler the Saxons. Under Willium the Conqueror, the lishop of Shireburn and Sumning removed his see thither: and such was its importance that parliaments were held in it under subsequent Norman kings. laut it always laboured under varions ineonveniences, the principal of whieh was the total want of water; and in consequence of this, amil of disputes between the crown and the charch as to the possession of the eastle, the inhabs. began gradually to remove to the more convenient situation of New

Sarmm, or Sadishury ; mad the seat of the bishoprie hining tramsinted to the latter, in the reign of llemry Ill., Old sarmin fell into a state of total decas, and was almont wholly deserted in the early purt of the reign of llenry VIl. For a lengthened prion there have been lardly any vestiges of its ruins.
Ohi Sinnm sent 2 mems, to the II. of C. in the reign of Eilward III.; and, notwithstanding its oond decay, the proprictor of the bargage tenures in the bor., or of the land on which it once stoon, was permitted to exerelse this important privilene in its nume down to the passing of the lielurm det. when it was disfranchised, Not having a single honse or inhab., Old Sarmm atforded the most perfect example of a nomination bor. The pruperty several times changed humds; and thongh he estate was of little int rinsic valae, the privilege it possessed of mumfincturing two law-makers for the British empire, mate it sell for a very large sum. It may well excite astonishment that such in outrage on the principles of representation shund have been permitted to exist for so lengthened a period.
SAliUN, a district of Ilimlostan, presid. Bengral, rov. Wahar, and one of the richest and most prosperons in Ibritish ludia, between lat. $2 ; 0^{\circ} 30$ und $87^{\circ} 30^{\prime}$ N., and the 8.th and 8tith degs. of W. hong. ; having W. Gornckpoor, S. Ghazepoor shahabnd, and Patna, E. 'Tirhoot, and N. Nepanh. Length, N. to S., abont 110 m . ; breadth, varying from 25 to 80 m . Area, $5,7 \mathrm{t} 0 \mathrm{sq}$. m. l'op, estimated at $1,500,000$ in 1861 . It is well watered the Gampes forms its entire $S$. boundary, and the Gumbuck intersects it near its centre; it supplies in abmalance all the principal produets of the Bast, besides good timber for ship-building. There is little jungle or waste land; cattle, thongh not numerons, are of good quality. Manufnctures few; the prineipal is that of saltpetre, a great deal of which is prodnced in this distriet. The Mohammelans form but a small portion of the entire nop. Chiel towns, Chuprah, lettiah, and Maissy SASSAlld, a city of Italy, island of Sardinia, cap. of its N. division, in the NW. part of the island, on the 'Turritano, about 10 m . from its mouth at l'orto 'lorres, in the ginlf of Sassari, 58 m. N. by IV. Oristano, and 100 m . NNTV. Cagliari, lop. 23,172 in $186^{2}$. The city is surromind by a wall, strengthened by square towers, with five gates and a citadel, the latter being now used merely as a barrack. It has a good main strect; and is surrounded hy public walks, shaded by trecs. Sassari has mumerons churches, convents, and muneries, a Tridentine seminary, and a publie hospital. The cathedral, a massive structure, has a disproportionately large and very elaborate facade ; but its interior is clean and airy, and it has several good sculptures, ineluding a monument by Canova. The university is established in the former Jesuit's college. The palace of the governor is an extensive editice, and the public buiklings in gencral are well adapted for their intended purposes. It is the seat of an archhishop, of a tribunal of secondary jurisdiction, with appeal to the Audienza Reale of the island, and of a tribnal of commerce; and is the residence of the vice-intendant and vice-treasurer of Sardinia, and of a military governor. It has a considerable trade in tobacco, oil, and fruits.
l'orto T'orres (an. Turris), its port, 10 m . distant, can only aecomnotate small vessels; ships of large size being obliged to anchor in the roads nearly one mile outside, where however, the anchorage is good. Sassari rose on the decay of Thuris, during the insecurity of the middle ages. Agriculture appears to be better conducted in its
vicinity than in any other part of the islanct. Immediately withont its walls is the fommata of Rosello, an abmadat mouree of water, embedislaed with much architectural ormament.
SASSBACII, or Saltzhach, a village of the frand duchy of Baden, bailiwhek of Achern, at the foot of the monntains of the Black Forest, on an athuent of the Acher, 17 m . ENEL: Strashurg This village, which has abont 1,000 inhabs., has acepured a high degree of historical interent lram the timons Marshal Threune laving heen killed in its vicinity, by a random shot, on the efth al July, lifio. The circomstances attending tho denth of this preat sremernl have heen detailed hy Voltaire (Siecle de louis XIV., eip. 12) and other distinguished writers. Ilis remains, demasited by order of Lomls XIV, in the royal burvimp-place in the nbbey of St. Denis, esempert, at the arat of the Revolution, the fhantical violemet that scattered the dust of so many kimgs. At length, after various vicissitudes, they were deposited in the charch of the luvalids, by order of the still more illustrious captain now entombed within the same sacred precincts. 1 monnment, in homoner of Threme, erected in 1781 on the place where he fell, was repaired in 1801 hy Horean, and was reconstructed of granite in 1894. The fimeral orations in honour of threme, by Flechier and Mascarom, are held to be chatis-d'deutre.
sATALIEII, or ADALIA. See Abada.
SAT'TARAII, a considerable town and fortrens of Hindostan, prov, Bejupoor, about t 0 m . Stil:
 fort stands on a scarped hill; at the fort of which is the town, built partly of stone, and partly of mul or monornt bricks, but comprising no edilice of note. except a new palace. I'he fort, though unturally strong, was taken by Sevajee from the lhejapoor sovereign in 1673, by Aurungrebe in 16!0, and by the llritish in 1818. The lritish cantonments are about 2 in , to the E. Sattarah was, under Sevajee and his immediate successors, the cap. of the Malirat ta empire.

SAUGUli, or SAUGOR, a large town of Findostan, prov. Malwa, in the ceded districts on the
 taken by the British in 1818. Sampor is also the name of an island of the Sunderbmols, at the mouth of the Hooghly, abont $\$ 0 \mathrm{~m}$. SSW'. Calcutta. A ruilway to commect it with that city was projected a few years ago, and is now probably eompleted.

SAUMUR, a town of France, dép. Maine-etLoire, cap. arroud., on the Loire, 28 m . SL. Angers, on the rnilway from Angers to 'Touss l'op. $14,00^{-9}$ in 18181 . The loire here forms several islands, aud is crossed ly tive or six bridges, ome of which, a stone bridge of 12 arches, 284 yils, in length, long considered as one of the tinest in France, connects the town with its suburb of ha Croix Verte. Summur is built partly at the foot, and partly on the declivity, of a hill crowned by a citadel. Its lower portion is tolerably well hidid ont, and has a handsome quay and terrace facines the river; but the upper town is irregular, and the streets inconvenieutly steep. The castle. which appears to have been construeted at different periods between the 11th and 13 th cellturies, was the oecasional residence of the kings of Sieily and the dukes of the loonse of Valois: for some time previously to the Revolation it was a state prison; it now serves as an arsenal. There are several churches worth notice; one of which, curions from its antiquity, is supposed to have been constructed in the 5th or 6th century ; and another, Notre Dame des didilliers, is renarkable for its beanty, laving a fine dome

SAXONY (KINGDOM OF)
supportod on Corinthan edumbs, and an altar-
 smong the hest of that deseriptan of eatithes lin France; they ure funr storios in height, mal can necommondite 1,200 men. The town-hall, pillile library, publie hathes, and sheatre, are the wher primeinal huiblimgs, Not far from the town is a fimons ruling-selocol. It has momfactures of linen choths, humikerehiofs, necklnces, copper and iron wures, lenther and sultietre; with in brisk trade in provisions, and 1 large anmal fairs.

Sammir was taken in lodti by Fulk of Xnjou, and, alter many vieissitudes; was nomesed to the French erown in linio. A leotentant amendeny, fimbled here by the fimmon Duplessis Mormiy, the triemil of Ileing IV., kovernor ol the town fir a lengthened perioil, was dissolved by Lomis XIV. in Itixl.

SAYANNMII, a city and port of entry of the U. Siates, state fieorgia, on the river of its own name, nhont 12 m . from its mouth, nud
 Sinammah stands on a blati samly point, rising about 111 ft . alove the river, from which it has an imposing appenrance; its spacions and reguhar streets, and handsome pmblic buidings, heing interspersed with many trees. Drevionsly to 1\$20, when it sulfered from a terrible Ifre, it was mostly built of wood, and it was formerly also insulalrinus from the contipuity of rice swamps. This evil has, however, heen elfectually ohviated; and being now principally of neat stone houses, it is one of the hamdsomest townsin the S. States, It las numerons churches, an exchnnge, and many arademies. I'revions to the breaking out ol' the freat civil war, it was one of the prineipal ports in the U . States for the export of cothom. It also exports consadernble quantities of rice.

SAVE (Germ, Sal, an. Naws), a river of the Anstrian empire, and one of the principal tributaries of the Danulie. It rises towards the $N$. extremity of Carmiola, in about lat. $46^{\circ} 300^{\prime}$ N., long. $1.1^{\circ}$ E., and runs at tirst SE. through the frovemment of Laybach and Croatia, to about lit. $45^{\circ} 15^{\prime}$, lomg. $1 \div 0$. It thence has nors of an J. direction, formug the boundary line between the Austrian prov. of Slavonia on the N., and 'lurkish Croatia, Bosuma, and Servia on the S., till it enters the Jamme at Helgrade, after a course of about 590 m . Its ehief aflients are the Kılpa, Uma, Verbas, Bosma, and Irina. Though not very rapid, its inumbations are often very dentructive. Jeing navigable as far as the mouth of the Khlpa, for vessels of from 150 to 200 tons, it is a food deal used for commercial purposes. Few towns of ally consequence are, however, situated on its banks, the principal being Brod and Krainburg; Laybach, Agram, Petrinia, and I'osega are, however, at no great distance, and some of them are scated on its tributaries.

SAVELNE (an. Taberna), a town of France, dép. Mas-Rhin, cap. arrond., on the Zorn, a tributary of the Rhine, 19 m . NW. Strasburg. l'op 5,295 in 1861. Though finely situated, it is but indillerently built, and has no remarkable edifice, exeept an old palace, formerly belonging to the bishops of Strasbourg; hut now used for the police harracks and prison. The town has manufactures of woollen cloths, hosiery, and hardware, with some trade in timber flonted down from the Vosges hy the Zorn.

SAVONA, a town and sea-port of N. Italy, prov. Genoa, cap. dist. on the Mediterranean, 20 m. SW. Genoa. Pop, 18,959 in 180 . . The town has ramparts, which, however, are of no great strength, and many grod public and private buildings; but its strects are narrow, winding, and
bally paver. It hal fommerly two harhours, the hent of which was illoed by the fientese in ligis. from jealonsy: the other, formed by a mole projecting $\mathrm{F}_{\text {.. }}$ ilto the sea, is small, and is muther dillenit of "proadi, from the necmumation of sund and mod near its month. Snsomi is a Dishop's see, and the sent of julielal and commercial trihmals: it has manifnetures of silk gools, iron, and enthenware. and exports oranges and lemons, grown in its vieinity.

Savonn wam the birthplme of lopes Sixtus IV. and Julins 11., und is said to have leend tor somes time the residence of Columbins. I'ope I'ins V'II. was also detained in it ln $1810-11$, by order of Nupoleon.

SAXONY (KINLIDOM OF'), a semmilary state of Contral Europe and of Vastern dermany, principally between lat. $50^{\circ} 10^{\prime}$ and $\delta 1^{\circ} 30^{\prime}$ N., anm the lith and Ibth legs. of E. long. ; having W. the findep. Saxon prineipmlitios; N. J'russian Saxomy and lirandenburg, and S. Ihohemia. It is of a triangular slinpe. Length, li.. to W., about 140 m. ; greatent breadth nearly 90 m . The kiugalom is divilad into four kreise, or cirales, of the following aren and popmbation, aceording to the censits of $180^{\circ} 2$, and of December Inisl.

The increase of popmlation- 237,408 in nine years, or 214,378 per anmm-is inferior to that of inost. ot her European states.

The Eiragebirge (ore mountains) and the Riesengelirge (ginnt mountains) extend nlotgr almost the whole of the $S$. and SE. fromtior, bit they nowhere rise to $1,000 \mathrm{ft}$, of elevation. 'Their declivity is more grodual and undulating on the Saxon than on the Bohemian side; so that they cover the greater part of the commtry with their ramitications, rendering it either mountainots or hilly. There is, however, a very considerable extent of level ground, extenilise from the foot of the lilly tract, or from Coditz, Meissen, and Bautzen, northwards, all along the frontier of Prussian Saxony. The comntry to the SLE. of Dresden, where the Elbe forees its way through the mountain chain, has been called the 'Saxom Switzerland.' It is about 30 m. in length by 24 in breadth, diversified, and lighly picturesque; but its name is likely to convey a wrong impression of its seenery, its highest summit, the Schneeberg, being only $2,150 \mathrm{ft}$. in height. The spurs given off by the Erzgebirge to the N. enclose the valleys of the Elbe, the two Muldas, the \%ochoppan, Elster, and Pleisse, all of which flow to NW., and, except the first, which is navigable thronghout the whole extent of the kinglom, rise in Saxony.

Saxony has a mikler elimate than most parts of continental Lurope in the same lat.; the mean temp. of the year is about $47^{\circ} \mathrm{Fah}$; that of the winter quarter being $55^{\circ}$, and of the summer $59^{\circ}$, at an average of the entire country, which has a mean elevation of about $1,100 \mathrm{ft}$. nbove the sea. Landed properties are rather of limited size; but in all the rural districts the people appear to be contentel, and, on the whole, comfortable: panperism is rare. There is, perhaps, no conntry in the world where more is made of the land than in

Saxome. Vivery epot of eartlo which wems eapable of giviuga return is rultivated; and the mealown are mowed iwioe or thicice in the course of each sumber. There is no such a thing as a common or waste, while the forests are all guarded with a arictoess propurt lonate to their valne. The tielits are always well clenred of weedn, liye, whent, and harky are mearecly grown, except in the low comury; 'ln the monimain region they nre mot with oinly lin the valleys, onts mind petntores being there the chlef erons. leasp, vetehem, milled, tensel, thax, wil serds, tobaces, mud garden vegetables, are gemerally caltivated; nul artilicial graseen are nearly unlversal. lhat, motwithentinding the inmprowiment ol' agrienlare, and the imdinstry of the people, considerable puantities of corn laive to be mimpirted. A grent denl of trnit is grown; and between 7,000 mind 8,000 morgell of hatid is acenpied with vineyrarls. 'The forests, which oerupy ahmit one-fourth purt of the entire surfince, consist of Ir , pine, bereh, oak, elm, maple, and lureh. L"parals of one-third part of the words belomges to the crown, yiehling an mumal revenum of $2,000,000$ thaters: mid nemrly 10,000 imdividuals are enguged in woul-cutting.

Sincomy is celebrated for her breeds of whecp, Which are among the thest in Einrope. A late chetur of Saxiny introndeced the lireed of Merino Niecpinto his dom., and exerted hinself to jrommute the growth of this valuable race of animals with such suceess, that they ure now foumd to sucecel better in Central Jinrone than in Spain; and, notwithathuilug the rapinly increasing imprortations from Australia, a large portion of the immense quantity of wool inforted into Great Ilrituin contimes to be bronght from Suxomy and other Germanstates. 'Ihe hest wool is produced (in the sheep-walks of the Sinon Switzerlanal, The cattle of Suxomy, the mamber of which excectan bot),000, are also of a suncrior deseription; hat the butter is usually indillerent, while, to inerease its weight, it is frequently operlondel with alt. Jhit, such ns it is, the demand for it is minversal. 'Never,' says an linglish traveller, Mr. Strunf, 'did I withess so much butter daily' consumed, as l have seen since I entered this kingdom. Ilere, in short, brend and butter is the order of the day at all hours. It is the perpetual family staple, mal essential as a make-weight at every meal. You dind it with equal propriety at breakfast, at lonch, at dimser, and at supper. A larder in Saxony may well be called the buftery,' Horses are not so extensively reared as other live stock, and hoges are not numerons. The game laws nre very rigidly enforced, all sorts of lirds being incladed in their enactments; and rights of fishing appear to be preserved with the most scrupulous tenacity.
Mining is one of the principal occupations of the inhabs. Few parts of Europe equal the Eizzgebirge in the varicty and extent of their mineral riches. The basis of these mountains is granite, covered by gneiss, micn, and clay slate in succession, between which are other strata containing metallic ores. Upwards of 500 mines are wronglat, which are said to employ nuour 11,000 workmen; and between 50,000 and 60,000 persons derive their subsistence from mining industry and the mannfacture of metallic prodluets. The total anmul value of the metals obtained is estimated at 1,6i0,000 thalers; the silver producing nearly 930,000 , and the iron and iron-wares 400,000 . l.cad, bismuth, arsenie, antimony, colnalt, and manganese are the other prineipal metals. Freihurg is the centre of the silver mining tistrict. The neighbourhood of Meissen yielis the tine porcelain elay, of which the "Dresiden China' is made.

Nant if million wheffel of coal aro momally pren flued. Silt is scarre sinee the sult mines, furimerly ineladed in the suxon donn,g wore meparated from them in |c|h, ant this important necessary is mostly imported from l'ruswin. Sorpenthe marhle and the building atone, are abombint; as are vurious getns, including the topuz, fanper, and agate.

The most imporinat branch of manufacturing imhestry in siaxony is that of cotton, Its ex trisinn has becon ateribut on to the menrly conitemburaneons introdaction of the potato, called by the fierman writers the 'manan of the monatains, mad which has emabled the Saxoll weavers to abstuin a sullicieney of fond at exeredingly low whges. Most descrigtions of eotton fialiries ara now producei, mind may new factories liave leen estahlished int Chemnitz, Zwirknu, Auleran, Froiburg, and other towns. tireat efloris are making to inmurove the comatruction of machimery; and Juint-ntuck compuises for the purpose have locell established near Chemuitz and Dresden, Conl lins been fombin in the neighbourhond of lresten. Cotton-printing worlis nre on the incrase, nnd have heen mueh improsed within the last few years, Althongh the saxon prints, in genural, arm not equal to the hest ligelisht in beanty of puttern, or brightness mid liastuess of colomring, they make up for these delleincies by the chenier rates at which they ean he produced. The mily urtiche, however, iit which the suxoms eome intio eompetition with Britisl gomels ln the Amerienn nind other furelgin markets is cotton hosiers, barticularly the inferior descriptions. There is no branch of indastry which seems more appropriate to Saxony than this. It requirns only a small ontlay of capital for the stocking-maher; his wondell frame is bot expensive; the cont of his stock of cotton twist is small; and by ussociating arricultural with manuficturiug industry, he suplies himself from his own little linm with the principal necessaries. Most of the ntocking-weavers of Saxony are independent labourers, buving for themselves the raw materal and selling their manufnetured stockings to a mumber of small collectors, who furnish the Chemnitz or the Leipsic markets. The mannfacture of linen in Naxony is nlso of considerable importance. The spinaing of thax employs numerous hands; but, notwithstanding, abont $10,000 \mathrm{cwt}$, of yarn is annumlly imported from Silesia and Bohemia, and lattorly there lave been considerable importations from lingland. Mach attention has been paid of late to the manufncture of machinery, though it is still behind what is met with in the manafncturing districts of Great Britain. The Jaequard loom is gradially being introdnced, and there are schools of manufactures at Dresden, Chemnitz, and Planen. P'lain and figured silks, of very fair quality, are made at Aninberg: P'enig, and Frankenberg. The government is very desirous of promoting the culture of silk, aud some establinhments for the propagation of the worms exist at Dresten and leipsic; but in such a climate they ean hardly be expected to have much sueersis. Wooden wares are made in the comitry, mad Saxony supplies furniture of every description, musical instruments, de., to a great part ol Germany. Porcelain and modern antiques are articles made in large quantities, partienlarly at Meissen. The china produced here formerly enjoyed a very high reputation throughout liarope, but, owing to the extraordinary improvements male in the mannfacture in Great lbritain and other eountries, Meissen china has declined considerably from its ancient celelrity. Almost every article of use or luxury is made in Sinsony; the chief deficieney is
in paper, of which the Saxon manufactures to not produce nearly enough for the immense consumption of the presses of Leipsic and Dresden.

The extension of the cotton and woollen manufactures of Saxony, since 1833, is wholly, or almost wholly, ascribable to the circumstance of her having then joined the Zollverein, or German Commercial Leagre. This opened a widely extended market for lier prodncts among the German states, from the greater number of which they had previonsly been either wholly excluded, or adhitted only clandestinely, and under great difficulties. Sinxony, in fact, las derived the greatest advantage from the lengue, much more, in proportion to her extent and population, than I'russia. Little or no cloth of Saxon manufacture has hitherto fomme its way to the United States.

The extensive commercial relations of Saxony owe their origin to the enlightened poliey of Frederick Augustus, the elector, alterwards king of Saxony, who, at a time when protecting and prohibitory tariffis surrounded lis states, adopted a liberal commercinl system, and converted Sixony, and especially Leipsic, into one of the most important marts, not inerely for the simply of central and northern Europe, but part even of Asia, with all sorts of mannfacturel produce. The fairs at Leipsic were for a lengthened period the great sources whence hussia, as far as the borders of China, Poland, the provinces on the Danube, and many parts of the Turkish and Persian dominions, were supplied with manufactures; and though they have latterly declined, they still continue to be resorted to. Leipsic has been for a longthened period the centre of the book trate of diermany, being, London and l'aris only excepted, the greatest literary emporium in the world.

Government. - The present constitution of Saxony dates from September 4, $18: 1$; but has mulergone alterations and modifications by the laws of March 31, 1849; May 5, 1851 ; Novemher 27,1860 ; and October 19, 1861. According to the terms of the Constitution the crown is hereditary in the male line; but, at the extinction of the lattor, also in the demale line. The sovereign comes of age at the completed eighteenth year, and, lluring his minority, the narest heir to the throne takes the regeney. In the hands of the king is the sule executive power, which he exercises through responsible ministers. The legislature is jointly in the king and parliament, the latter consistiner of two chambers. Tle upper chamber comprises the princes of the blood royal ; the proprietors of eight baronial domains; twelve deputies elected ly the owners of other nobiliar extates; ten noble proprietors nominated by the king for life; the burgomasters of eight towns; and the superintendents and deputies of five colleginte institutions, of the university of Leiprig, and of the Roman Catholic chapter of St. Peter at Batzen. The lower chamber is made up of twenty deputies of lamded proprietors; twentyfive of towns and city cornorations; twenty-five of peasants and communes; and five representatives of commerce and manufacturng industry. The qualification for a seat in the upper house, as well as the right of election to the same, is the possession of a landed estate, worth at least 1,000 thalers a year; which qualification, however, is not required by the ex officio deputies of chapters and universities. To be a member of the lower house no fixed income is required; and electors are all men above twenty-five years of age who pay taxes, or contribute in any way to the public burdens. A salary is attached to the performance of the legislative functions; the members of the
upier house being allowed seven thalers, or about a guinea a day, during the sittings of parliament, and the deputies to the second ehamber three thalers, or $9 s$. Both houses have the right to mako propositions for new laws, the bills for which, however, must come from the ministry. No taxes can be made, levied, or altered without the sanction of both chambers.

All towns elect their own municinalities, and are governel by laws of their own; while the rurat districts are divided into departments, each of whieh has its own magistrates, whom the people not only choose, but may also, in case of malversation, ilegrade from oflice. The manicipal officers, also, though elected by the citizens for life, are liable, om conviction of incapaeity or unfair dealing, to be degraded. Their powers are very considerable in reference both to person and property, for they regulate the police, hear and determine civil chuses, and both tix the amount of lucal rates to be levied on the citizens, and determine low the produce shall be expended. In the clection of the magistrates, every ratepayer has a vote. They are all salaried officers.
'lhere are evivil and criminal courts in the cap, of each circle, and a high conrt of appeal in Dresden, in which latter all capital cases are tried. There are special military tribunals, a superion fiscal conrt, miversity court at Leipsic, miniug tribunal at Freiburg, and patrimonial tribnnals. The reigning fanily is Rom. Catholic, but there are not more than $29,000 \mathrm{Kom}$. Catholies in the kingdom, the great bulk of the prop. Leing Latherans. Literature and the fine arts have flomrished more in Saxony than in any other part of Fermany; and there is scarcely any country in Europe where primary instruction is so widely diffused, the number of the individuals attending schools and other seminaries is said to be as high as one in six of the popnlation. The university it lecipsie is the principal seminary.

Every male inhab. 20 years of age is, with certain exceptions, obliged to serve in the army fur six years in time of peace, and for three years subsequently in the reserve corps. The armed force is extensive ; it consists of 25,400 men, of whom 10,000 are privates under arms, besides the reserve corps of 3,000 more. '1his kingrdom holds the 4 th rank among the German states, having four votes in the full diet and one in committee. and furnishes a contingent of $20,000 \mathrm{men}$ to the army of the Confed. Its pulbic revenne amounted to $1,853,452 l$. in 1863 , and the expenditure to the same sum.
The greater part of the railways of Saxony are state property, and a very considernble revenue, virying from $1,500,000$ to $1,800,000$ thalers, is derived from this sonrce. The length of state railways, th the hegimning of 1862 , was 252 m ., built at an expense of $12,657,000$ thalers, or $6,398,5501$. The value of the public domains, chicfly forests, was estimated, at the same date, at $25,241,393$ thaters, or $3,786,2101$.
The public debt amounted, in 1861, to 61,725,499 thalers, or $9,258,8251$. The greater part. of it is of ancient date, created by the connection of the electors of Saxony with the throne of poland. The debt amounted, in 1764, to 29,028,425 thalers; it had fallen, in 1806, to $14,932,885$ thalers, but risen again, at the end of the Napoleonic wars, in 1815 , to $22,857,626$ thalers. It was settled at the congress of Vienna, when about one-half of the territory of Saxony was made over to Prussia, that the latter shonld also take a portion of the public debt. The amount left to Saxony was 16,660,771 thalers. This debt had increased, in 1830, to $18,762,050$ thalers, and theneeforth nug-
mented it tu the esta buitt at a

 art of it is of ction of the of Poland. 3,425 thaters ; thalers, but onic wars, in ettled at the e-half of the to I'russia, ortion of the Saxony was nereased, in ceforth aug-mented in still larger proportions, owing mainly to the establishment of a network of state railways, built at a cost of $42,657,000$ thalers.
The Saxons are among the best specimens of the old T'eutonic race. In person they bear a striking resemblance to the English agricultural pop, The Saxon royal family is said to be descemled from Witichind, sovereign of this territory in the time of Charlemagne.

Saxony was created an electorate in 1422, which title it retained till 1806 , when Napoleon erected it into a kingrdom. Duriug the war the king of Saxony was, from the battle of Jena downwards, a firm ally of Napoleon, who made extensive additions to his domi.t... a. and he did not abandon the fortunes of and the battle of Leipsic had compelted the French to evacuate Germany. This conduct led to the dismemberment of the kingilom by the treaty of Vienna in 1815; some of its most valuable provinces were then assigned to Prussia, and, but for the opposition of Anstria, it is probable that Saxony would then have ceased to exist as a separate state.
Saxdoy, a prov. of the Prussian states, consistiug of the territories dismembered from the lingrdom of Saxony in 1815, with the Saxon states formerly belonging to Prossia, has on the NE. and E. Brandentnirg, $S$. the kingdom of Sixony and the Thuringian states, and on the W. Hesse, Branswick, and Hanover. It is of a very irregular ontline, has several encluves, and indudes within its frontiers the independent prineipalities of Anhalt, Sondershausen, \&c. Area, $9,765 \mathrm{~s} \% \mathrm{~m}$. Pop. $1,975,932$ in 1861 . The prov: is divided into three regencies, and these again into 41 circles. Principal towns, Magdeburg, llalle, Erfurth, Merseburg, Naumburg, and Burg. The llartz monntains lie on the $W$, frontier of the prov.; but, with this exception, there are no hills of any considerable magnitude. l'rincipal rivers, the Elbe and its affinent, the Sanle, Mulda, Unstrut. Soil in parts sandy and unproductive, but in general loamy and fertile. The plain of Magteburg is reckoned the best land in Prnssia, and is very well cultivated. Principal prodncts, wheat and other sorts of corn, flax and hemp, excelleat wool, and tobacco. 'I'lic vine is cultivated in the neighbourhood of Merseburg and some other places. Productive mines of coal, iron, and rocksalt are wrought in difierent parts of the province. I'he stock of sheep exceeds $2,000,000$ hearl, and wool, which has been vastly improved by crossing with Merinos and other fine-woolled breeds, has become a staple product. Mammatures importmit and valuable, consisting of fine woollens, linens, earthenware and poreelain, and hardware.

SCARBOROUGFI, a sen-port, parl, and min. bor., market town, and par. of England, N. riding, co. York, and E. div. of the wap. of I'ickering lythe, on a roeky slope, rising from an extensive hay, 35 m . NE. York, and 227 m . N. London by Great Northern railway. Pop. of bor., 18,377 in 1801. Area of parl. bor. (which includes, with the old bor, and par., the extra-parochial distr. of the castle), 2,160 aeres. Scarborough has a very striking appearance from the sea, from which it rises amphitheatrewise to a considerable height. It is well built; the strects in the upper part of the town are spacions and we'! paved, and the honses generally have $a$ handsome appearance. It is also extending SW. towards Falsgrave, and southward along the slore. The prineipal public buildings are the town-hall, trinity-house, newsroom, assembly-rooms, a nent and well-eondueted theatre, a sea-bathing intirmary, many bathing establishments, and two public libraries. But the
handsomest and most classical building belongines to the town is the musenm, a rotunda $37 \frac{1}{1} \mathrm{ft}$. in diameter, by 50 ft . in leight, in the Roman Doric style. It is constructed of the Kelloway limestone, and, though of recent erection, has a valirable collection of specimens illustrative of the geology and natural history of the N. riding. A tine iron bridge of fund arches, supported on massive stone piers, 70 ft . in height, has been thrown across a ravine to comnect the higher town with the spa, $\frac{1}{2} \mathrm{~m}$. to the S . This handsome structure, which cost 9,0001 ., raised by snbseription, was completed in 1828 . The par. church, which was riven by Richard I. to the abbey of Citeans, in Tonrgundy, stands on an eminence not far from the ruins of the castle: it was formerly much larger than at present; hat the part now nsed is commodionsly titted up for divine worship. Christehureh, built in 18.28 , in the early linglish style, has accommodation for 1,300 persons. There are three other churches, and places of worship for lion. Catholies, Wesleyan, l'rimitive and Association Methodists, Independents, Baptists, and the Society of Friends, to most of which, as well ans to all the churehes, are attached well-attended Sunday sehools. A grammar school, founded in the 9th century, is but slemierly endowed; but there are several good subscription schools, inchading two of the National and one on the Lancastrian plan. The Amicable Society also elothes and educates between 70 and 80 boys and girls. A seaman's hospital is muler the government of the Trinity llouse, and there are almanonses, and several other benevolent, as well as religious institutions.

The harbonr, which is easy of aecess, is protected by two liandsome piers, of modern ereetion; but it labours under a detieieney of water, having only from 4 ft . to 5 ft . at low ebb springs, and from 8 ft to 9 ft . at low elsb neaps; but from first quarter flood to last quarter ebb vessels drawing S ft . water may enter the harbour with sutety. $X$ small foreign and pretty considerable coasting trale is carried on. On the 1st of Jannary, 186i, there belonged to the port 109 sailing vessels under 50, and 117 above 50 tons, besides ono steamer of 44 tons. 'The gross amount of enstoms' duties was 3,433l. in 1863. A great deal of fish is brought in here, and the fishery has greatly increased since the railway has affiorded a ready aecess to the populous districts and great mamifacturing towns in the W. liding. Of late years several persons have embarked in the herringe tishery, which is becoming an important and protitable source of employment to the fishermen. From 40 to 50 yawls belong at present to Scarborough and Filey, in addition to the numerons small boats used for fishing in-shore; and it is not unisial for 150 or 200 boats to enter the harbour during the season, at the same tide, with herrings. As an encomragement to the fisheries, the corporation remit the tithe of fish to which they are entitled; and a society has been formed to raise an honorary fund, to meet the casnal losses of nets, lines, and tackle of such provident tishermen as become subscribing members; and thas insuring to them, at a slight charge; an advantageons protection.

Searborongh, in recent years, has gained for itself the name of the 'Irighton of Yorkshire.' 'Ihere is annually a great concourse of visitors for the purposes of sea-bathing and anmsement: they are principally of the middle classes, and from the mannfacturing districts of Lancashire, Durham, and the W. riding of Yorkshre. Scarborough is, however, frequented not only for sea-bathing, but on account of its two mineral springs. Sulyoined
is the result of the analysis of a gallon of water from each spring.

It is probable that the spas may, from the growing reputation of the town, and their being so conveniently commeoted with it by the britge above alluded to, again acquire some pertion of that celebrity which the formerly enjoyed. The crection of a commonious saloon, in the castellated style, with embattled towers, the urehitectural beauty of the wells, the massive sea-wall, forming at once a secure protection to the spas and a delightful promemade, especially at high water, combinel with the newly laid out arnamental walks and gromads, have materially increased the natural attrnctions of Scarborough as a watering-place.

Scarborongh, which received its first charter from Ilenry 11. in 125: is elivided, mater the Municipal leform Aet, into two wards, the government being vested in $n$ mayor, five aldermen, and eighteen conncillors. Corp, revenue, $3,674 \%$ in 1xiz2. Quarter sessions are held mimler a recorder, and petty sessions are held weekly both for the loor. and North Ritling. The bor. has sent two mems. to the II. of C. since 23 Elward I., the right of election down to the Reform Act being in the common council of the bor., a boty comprising forty-four individuals. The Boundary $\Lambda$ et incladed with the old bor, the extra-pareehial precinct of the enstle. Registered electors, 1,317 in 1865. It is one of the polling-places at elcetions for the N. riding, and the chief town of a poorlaw mion comprising thirty-three pars. Markets on 'Thursday and Saturday: cattle fairs, Holy Thursilay and Nov. 23.
N. of Scarborough, on a bold, eraggy eminence, commanding a very extensive sea-riew, stand the ruins of a castle built in the reign of Stephen, to which Piers de Gaveston, the minien of lidward 1I., fled fur refige from the vengeance of the exasperated barons. The castle, after sustaining two sieges from the parliamentary troops, was dismantled at the close of the civil wurs; and thongh a portion of it was repaired in 1745 , and barracks have been subsequently built in its immediate vicinity, it is principally in ruins. The remains of the keep consist of a square tower nearly 100 ft . in height : the entire surlince included within the outer walls comprises nearly 19 acres. A strong gateway still remains, with portions of the circular towers occurring at intervals in the line of the fortilications. It was, previously to the invention of artillery, one of the principal strongholds in the kingelon.

SCHAFFIIAUSEN, the most $N$. canton of Switzerland; and, ntter /ing and Geneva, the smallest in the Confederntion. It is between lat $47^{\circ} \cdot 10^{\prime}$ and $47^{\circ} 50^{\prime}$ N., and long. $80^{\circ} 25^{\prime}$ and $8 \circ 55^{\prime}$

Bu, beine sebaran thy the lhine from the eantons of Zurich and 'Tlurgan, while, on all other sides, it is surrommed by the territory of the firmid Duchy of lialen. Area, $116 \mathrm{sq} . \mathrm{m}$. l'op, 3i, 6.16 in 1stio. Surface mulalating, its loftiest lith, the liadenberg, in the N. , rising only to about 1,200 Pt. above the lane. The soil is generally calcareous, but fertile; and the climate is anong the mildest in Switzerland. It is an agricultural rather than a manufacturing cantom; and its agriculture has greatly improved within the last half century. Formerly the supply of eorn was unite insutlicient for home consumption; whercas, in good seasons, considerable quantities are now exported. Artiticial pastures have also materially increased, as well us the number of cattle. Fruits are abmulant, particularly cherries, from which a good deal of Kirschucusser is made; anel the proCluce of timber is amply sudlicient for the wants of the inhabs. There are nearly 5,000 arpents of vineynrds, which furnish the principal article of export, wine being sent to St. Gall and Appenzell, the Black Forest, and other neighbouring districts; but of Inte years the competition of the wines of liaden, and the duties imposed on the Schathhansen wines in Germany, have erippled the trate.

One of the principal lmanches of inclustry in Schallhausen is the conveyance of goods through the cantom, which is greatly facilitated by the navigation of the lhine. Salt from Wiartemberg, timber, and other gools are conveyed through Schatf hansen to Switzerland. 'The manufacturing establishments comprise a few cotton and harilware factories. Aceounts are kept in florins, of 60 kreutzers $=20 d$. Eng. The foot is the sime as that in Zurich; the 1 lb . a little larger.

The canton is divided into twenty-four districts. The male inhabitants, of full age, and not bankrupts, paupers, or suftering a penal sentence, choose the legislative body. The latter, or grand council, consists of seventy-four members, twenty-four of whom form also the petty council, which is intrusted with most part of the executive power. The grand council meets in Jume every year, and is presided over by a burgomaster, who is changed ammally. The pop, is wholly l'rotestant. Eiducation is well attended to.
Selaffhansen was not included in ancient Ifelvetia, and its inhabitants resemble their Swalian neighbours rather than the Swiss. It was admitted into the Confederation in 1501 .

SChaffiausen (originally Schiffhausen, or Ship-houses), a town of Switzerland, and the cap. of the nbove canton, on the Rhine, 25 m . W. ly N. Constance, and 49 m . ENE. Bask, on the railway from Basle to Consiance. Pop. 8,717 in $18 t i 0$. The town is walled, and defended by the Munoth, an old citadel supposed to be of Noman origin, bat which is now fumished with extensive bombproof casemates. Strects ill paved, and the buildungs are renarkable for their quaint and autique architecture; many are ornamented in front with stnceo, carved, and fresco work. The minster, fotmed in 1052 , is a massive edifice in the romul arched style, with numerous monuments in its cloisters. An ordinary bridge across the lihine replaces that unique specimen of urt consisting of one arch 364 ft . in length, clestroyed by the French under Marshal Ondinot in 1709. Schalfhatsen has a gymmasium, a college with nine professors, a high female selool, and an excellent library. The latter comprises the books that belonged to the celebrated listorinu Maller, by far the most illustrious of the natives of Schallhausen, where he tirst saw the light on the Brd of Jannary, I7a\%. The town is a principal depot for the goods pass-

Selatf'hausen is supposed to have originated about the eighth or ninth century: it was subjected by Austria in 1330, but has been independent since 1415.
The celebrated falls of Sehaff hausen are situated almut a lengue SSW. from the town, where the Fhine breaks through a ramification of the lalack Furest momatains. The height of these falls, which, in some respects, are the granlest in linrope, varies, aecording to the season, from 50 to io it., being greatest in Jume and July, when the river is swollen by the melting of the snow on the mountains. The stream, which, immetiately above the fall, is about 300 ft . in width, precipitates itself over a ledge of limestone, four rocks projectiug from which divide it in its deseent into tive portions. The greatest body of water falls between the first of these roeks and the castle of Lantin, on the SE. bank of the river; from which the best view of the falls is ohtained. 'It is not;' says Mr. Spencer (Germany and the Germans, $i \mathbf{i}$. (ii), 'the height of the fall, but the immense body of water broken into spray in the most picturesque manner over the rocks, that constitutes the great heanty of the cataract. In other respects it cannot bear the slightest comparison with cither those of 'Terni or the Staubbach.'

In 1790, Lord Montagu, a young British nobleman of great promise, was drowned in a rash attemit to deseend these falls; and, by a curious comedence, his death oceurred nearly at the same time that his moble seat, Cowdrey House, near Midhurst, was lurnt. down.

SCIIAUMBURG-LIPPE (PRINCIPALITY $0 \mathrm{~F})$, one of the minor states of NW. Germany, principally between lat. $522^{\circ} 10^{\prime}$ and $52030^{\prime}$ N., and about long. $9^{\circ} \mathrm{E}$., surrounded by the territories of Hesse-schammburg, llamover, and Prussian Westphalia, exclusive of some detached lordships enclosed in the territory of Lipue-Detmold. Area, 212 sq. m. Pop. 30,7i4 in 1861, mostly Lutherans. It is hilly towards its S. extremity, but flat in the N., where the lake called the Steinhuder Meer nccupies about 11,000 morgen. The productive portion of the surface comprises about $\pi 4,000$ morgen, besides nearly 34,000 mergen of forest land, chiefly in the W. The soil is in general superior to that of lippe-Detmold, and agriculture and cattle-breeding are more advanced. The inhabs. of both prineipalities employ their intervals from rural labour in spinning flax and wenving linens. Coal is raised in the $S$. to the value of about 30,000 dollars a year; and forms, with corn, wool, timber, and linen goods, a principal article of export. The constitution, which dates from 1816, is a limited monarchy, the powers of the prince being similar to those of the sovereign of Great Britain; the landstünde, or parliament, consisting of all the noble landed proprictors, with four deputies for towns, and six representatives of the peasantry. Appeal lies from the decisions of the eourts of this principality to the stperior court of Wollenbuttel. I'ublic instruetion, as in Lippe-Detmold, is well attended to. P'nblic revenue, 34,050$)$, in 1863. Schamburg-Lippe lias one vote in the full diet of the Germ. Confed., and, with Lippe-Wetmold, lohenzollern, Reass, Waddeck, and Liechtenstein, the sixteenth place, with one vote in the committec. Its contingent to the army of the Confed. amounts to 350 men.
SCIHLLDT (lir. Eseat), a river of France and lelgium, which rises in the dép. Aisue, near St. Guentin, and runs mostly in a NNE, direction,
through the dip. du Norl, and the pross of llainanlt and L:. Flanders, to Antwerp, after which it turns NNW., and, dividing into the E . and $\mathrm{W}^{\text {N }}$. Scheldt, which enclose the islands of Beveland and Walcheren, enters the North Sea in nbout the same hat. as the Thames. Its entire leugth is estimated at about 200 m ., its breadth at l lendermond is about 650 ft ., at Antwerp, $1,700 \mathrm{ft}$.; and the widtla of its month varies from 2d to $3 \frac{1}{2}$ leagues. It is navigable from Valenciennes. Its principal tributaries are the Scarpe, Lys, and Durme, on its W., and the lender and lingel on its E. side. St. Quentin, Cambray, Valenciennes, Tournay, Ondenarde, Gihent, and Antwerp are on its banks. Its current is slow, and in the lower part of its course, where it runs through a completely flat country, its banks are fenced ly dykes to prevent inumation. It is conmeeted by the canal of St. Quentin and other cmals with the Somme, seine, and Loire, and with the princijal rivers and cities of Belgium, in its neighbourhood. During the commercial ascendency of Antwers the Scheldt enjoyed a larger share of tratlic than any other Linropean river; but its importance in this respect, though still considerable, has since greatly declined. 'There was nothing,' says harrow, (Tour in Holland) 'on this noble river, in our progress upwards, that conveyed any impression of an active or extensive commerce. In sailing up or down the 'I'hames, or on approaching London within 4 or 5 m ., the multitude of shipping affords indieations not to be mistaken of the commercial wealth aud prosperity of Lomdon. But the scheldt, when we ascended it, was a vacant river; we neither met nor overtook a single sail; and, with the exception of 2 or 3 American ships, and some 10 or 12 small vessels, mostly brigs, there was little appearance of trade along the common quay of Antwerp.' This, however, was before the revolution of 1830 had made Antwerp once more the commercial emporium of belgium ; and in the interval the scheldt has regained some portion of its former consileration.

SCHLSLESTADT, a fortified town of France, dép. las-Rhin, cap. arrond., on the Ill, a tributary of the Rhine, 26 m . SSW. Strasburg, on the raifway from Strasburg to lasle. lop. 9, 414 in 1811. The town was fortilied by Vauban, and is naturally strong from its being in a great measure surrounded by marshes. It has il hospital, prison. communal college. theatre, manufactures of cottou and linen fabrics, iron wire, soap, and earthenware, for which last it was famous as long ago as the 13th century, with breweries and distilleries. It is supposed to have been the ancient Elsebus, destreyed by Attila, where Charlemagne and his successors had afterwards a palace. The swedes took it in $16 \mathrm{i}_{3} 2$, but restored it to the lirench two years afterwards.

SCIIBMNIT/ (Hun. Selmeez-Banya), a famous mining town of llungary, co. Ilonth, in a mountainous distr. on the schemnitz, a tributary of the
 The town is entered by an old and stroug sateway, which conducts to al long, narrow, steep street, wretehedly paved, and so hemmed in by sloping hills that there is scarcely room for a row of housers on either side. At the end of this street is a momntain amphitheatre, the prosecnimm of which is occupied by the churches and other large buildings, while the hill sides are covered with the white cottages of the miners embosomed among trees. The town has malry good-looking houses, with shops and inns; but its fine old ruined castle is the only editice of much interest.

The mines of Schemuite, which extend under the town, and have been wrought for several cen-
turies, furnish considerable quantities of silver, whence grold is again extracted. The ores vary greatly in prodnctiveness; but, speaking generally, the mines have not been very profitable. 'I here are 6 principal veins or courses, each from 10 to 20 fathoms in thickness, running nearly E. and W. almost parallel to, and at the distance of from 60 to 300 or 400 fathoms from each other, and conmected by various small branches. In these extensive courses there are 12 royal mines, besides a number belonging to private indivituals, who are obliged to dispose of all the ore they obtain to the royal smelting works at a tixed rate. The whole of these mines communicute with the emperor Francis's adit or level, at the depth of nearly 200 fathoms. At a still greater lepth is the adit of Joseph 11 ., a magniticent work, 12 mining ft . in leight by 10 ft . in brealth, extending from Schemnitz to the valley of the Gran, a tistance of ncarly 10 Eng. m . This adit carrics off the water from mines which cannot now be wrought, and is so constructed that it may be used either as a canal or a railway. Dr. Clarke, who descended in'o the mines of Schemnitz (Travels, viii. 393), says, 'All the imperial mines are connected with each other, oflering, in their whole extent, a subterranean passage which reaches to the astonishing length of 3,000 fathoms, nearly $3 \frac{1}{2} \mathrm{~m}$.! The sight of the interior of the laquerstohln (one of the mines) convinced us that there are no mines in the world like those of llungary. How wretched, in comparison, appear the mines of Cornwall and Wales, where it is sometimes necessary to creep upon the hituls and knees, wet through, over all sorts of rubbish, to get from one shaft to another. The inside of a Hungarian mine may be compared to the interior arrangement of one of our best frigates, where space has been so husbanded, and cleanliness so strictly maintained, that nothing is seen ont of its place, and there is room chough for every operation.?

Dr. Clarke shonld, however, have added that the mines of Cornwall and Wales are wrought by private individuals for the sake of profit only, whereas the imperial mines which he visited are wrought at the expense of government, to which prolit is a sceondary consideration. The ore, besides silver and gold, contains lead, and sonetimes iron, copper, zinc, or arsenic. In contseguence of the want of wood and water, but little ore is smelted on the spot, being principally sent to Neusohl or Kremnitz. About 20,000 miners are employed in the Sishemnitz district.

A school of mining, in imitation of that at Freiburg, was established at Schemnitz in 1760, which has 5 professors and about 200 students, who are all cducated free of cost, several of them being also furnished with an annual donation of from 201, to 30l., to assist in their maintenamee.
SCHENECTADY, a town or city of the $U$. States, New York, cap. co. of its own name, on the Mohawk, a tributary of the Indson, and on the Erie camal, 16 m . NW. Albany, with which it is connected by a railway. Pop. 10,391 in 1860 . The compact portion of the city consists of about 20 streets, with a court-honse, co-othees, prison, about 9 or 10 churches, several hanks, iron and brass foumdries, carpet and tobacco factories, a piper-mill, and various superior public schools, the chnef of which is Union College. This establishment. founded in 1785̃, and incorporated in 1791, is now one of the principal institutions for public instruction in the state. It has twelve professors and other instructors, and a library of 13,000 volumes.

The position of the town on the Eric canal makes schenectady an important entrepot, and it luas a tlomishing and increasing tride. It is said
to occupy the site of mancient Mohnwk village and was meorporated in 1798 .

SCIHEDAM, a town and port of S. Hollan!, cap. cant., on the Schic, a tributary of the Maia, 3 m . W. liotterdam, and 1 m . N. from the Matas. 1'op. 15,406 in 1861. Schicdam is well buitt in the usual style of Dutch towns, and has numerous churches, an exchange, a Latin school, u chamber of commerce and manufactures, and a branch of the Society of Public Good. 'It is conspicuons,' says a traveller, 'both by the smoke which issues from the chimneys of its distillerics and the vast number of windmills by which it is environel. The whole horizon, in fact, in the direction of schiedam, seems animated with life and botstle. Schiedam is the chief scat of the manufacture of Dutch gin, or Hollands. The quantity of that spirit produced here annually is very great, there being in the town as many as 100 distillerics, while many thousands of pigs are supported by the refuse of the malt employed in the manufacture. The cin of schicdant is strong, but mild in thavoar, and is usually sold in Holland for 9 a a bottle, or ts. 6 d. a gallon; the price of the gallon on its iniportation into England being increased by freight and duties to about $28 s$. or 30 s.' Schicilam has rope-walks, building-docks, and a small though convenient port on the schie. It sends I deputy to the states of the prov.

SCHWABACH, a town of Bavaria, circ. Mid-dle-Franconia, 9 m . ssw. Nuremberg, on the rail way from Nuremberg to Angsburg. Pop, 6,611 in 1861 . The town is walled, and pretty well built, having several Protestant churches, a synagogue, a mint, and a hospital. It is the seat of various manufactures, the principal being that if pins; but there are others of hosiery, hats, goht and silver lace, tobncco, paper, printing types. and Jews' harps. It owes its distinction as a mannfacturing town to the intlus of emigrants from France, after the revocation of the edict of Nantes.

SCHWARTZBURG-laUDOLSTADT, a principality of Central Germany, between lat. $50^{\circ} 30^{\prime}$ and $51^{\circ}$ N., and about $11^{\circ} \mathrm{W}$. long., iuclosed by the territorities of saxe-Weimar, Cobirg, Mciningen, and Hildburghansen. Area, $340 \mathrm{sq} . \mathrm{m}$. Pop. 71,913 in 1861, mostly Lutherans. It comprises a portion of the N. dectivity of the Thuringian forest mountains, and is watered by the Sillwartza, lhn, and Saale. It does not yield sulficient conn for home consumption; timber and salt are its principal products. Iron, and a few other metali, are found; and woollen clothes, earthenware, glass, and other kinds of goods are mannfactured. since 1821 the government has been a limited monarchy ; the representative body consisting of 5 deputies of the nobility; 5 of the citizens, and 5 of the ruril pop. The deputies are elected every 6 years. The parliament has the control of the public finds, and no new law can be adopted without its consent. The princijal judicial conrts. are at Rudolstadt and Frankenhausen; from which appeal lies to the superior tribunal of Zerbst, in Anhalt-Dessan. Public revenue 205,2001 . in 1863. The public debt amounted to 154,0001 . in 1863. This principality furnishes 809 men to the army of the German Confederation. Chief towns, lindolstadt, the cap., on the Saale, and Frankenhausen.
SCUIVARTZBURG-SONDERSHAUSEN, a principatity of Central Germany, between lat, $51^{\circ}$ $12^{\prime}$ and $51^{\circ} 26^{\prime}$ N., and about long. $11^{\circ} \mathrm{E} .$, int clusal by territories belonging to Prussia on ever: side except the W., where it joins a detached district of Sase-Gotha. Area, $319 \mathrm{sq} . \mathrm{m}$. l'ow, $64, \times 95$ in 1861, mostly Lutherums. Surface uildlubting, and traversed by several afluents of the

Instrut, flowing in a W. direction. The lower part of the country yields more corn than is required for home consumption; the ligher portion has extensive forests, and timber and potash are umongst its principal products. Iron is found; and forges and hardware factories are the principal manufacturing establishments, though some woollen and linen goods are woven. The government is an unlimited monarely. Appenl may be made from the judicial courts to the superior eourt of Zerbst in Anhalt-Dessan. l'ublic revenue, $97,100 l$. in 1863. l'ublie deht, 500,0001 . Contingent to the army of the Confed., $\overline{5} 1 \mathrm{men}$. Chief iowns, Sombershausen, the caple, on the Wipper and Arnstadt. This princip., like the preceding, has one vote in the full diet of the Germ, Confed., and shares the bith place and one vote in the committee with Oldenburg, and the Anhalt principalities.

SCIIWEIDNITZ, a fortilied town of l'russian Silesia, cap, circ. linely sitmated at the Riesengebige monntains, on the Weistrity, in a fertile and beautiful country, 30 m . Sli. Breslau, on the railway from Breslan to Reichenbach. ['on. lij,381 in istil, exel. of garrison of 2,744 men. The town is well built and stromply fortitied, the fortilications, which had been dismuntled by order of Nafoleon in 1807, having been reconstructed on an improved plan, and rendered more formidable than ever, Its eastle, formerly the residence of the Piast dukes, is now a workhonse. It has a marrnificent liom. Cath, chureh, a tine town-honse, a fymuatium, a honse of eorrection, and the usuad govermment offices of the cap. of a circ.; with mamfinctures of woollens, cottons, and linens. Near it is the castle of Futstenstein, a fine antique feutal edifice, the property of the king of Prussia.
sColWERIN. See Meckienhimg Sohwems.
SCIUVYTZ, or SClIWliIT\% (CANTON OF). one of the 4 forest cantons of switzerlind, which gave its name to the Confeleration, in the central part of which it lies, between lat. $46^{\circ}$ jo $0^{\prime}$ and $47^{\circ}$ 20' N., and long. $80^{\circ} 30^{\prime}$ and $9^{\circ}$ E., having N. and NE. the canton of Zurich and St. Eand, E. Glarms, S. Uri and Unterwadden, and W. Zurg and Lucerne. Area, $338 \cdot 3$ sq. m. P'op. 45,193 in 1860. Nearly the whole surface is momitainous ; the Rosstock rises abont $8,200 \mathrm{ft}$., and the Righii about $6,150 \mathrm{ft}$. above the sea. The Rossberg, the fatl of a portion of which in 1806 had most destructive elfects, is partly in this canton and partly in that of Zug. The Sihl and the Muotta are the principal rivers: the former falls into the Lake of Zurich, which forms most part of the N. houndary "f the canton, and the latter into the Lake of Lucerne, which limits the canton on the SW. The Linth canal, between the lakes of Wallenstadt and Zurieh, runs along its NE. extremity. Tlue soil and climate are more favourable to cattlelreeding than to agriculture, which is much neglectel. IIowever, the inhabs, are distinguished by their superior treatment of live stock: the cattle of Schwytz are acconnted among the best in Switzerland; and upwards of 20,000 head are anmually sent from the S. side of the Alps to depasture oin the mountains duriug summer. Near Kussnacht, on the Lake of Lucerne, the vine is grown, and apples, which produce cider, are tole. rably abundant. The forests are extensive, and the supply of turf is all but inexluanstible ; cotton thread, and this in very small quantity, is almost the ouly article of manufacture. The principal exports are cattle, cliecse (sent mostly across Mt. St. Gothard), and timber. The transit trade is of little importance; and, on aceonnt of the badiess of the roads, is mosily contined to the lakes and navigable parts of the river.

The government is a pure democracy, the sovereign power residing in the peopte at large. The male pop. above 16 years of age form the general assembly at the canton, which ineets every two years, on the first Homlay in May, at schivytz, to appoint, by slow of hands, the handamman, and other supreme othicers, the deputies to the diet. A conmeil of high functionaries and 270 ordinary mems, assembles usually twice a year, to prepare instructions for the deputies, and hear their reports; and another conncil of 90 mem . is entrusted with the general excentive power. The canton is divided into 6 districts, each of which has its own conncil and tribnual of primary jurisdiction, the decisions of whiel are tinal in eases not above the amount of 200 thorins. The chief tribunal sits in Schwytz, and is composed of 30 mens., two-thirds of whom belong to the distriets of the cap., and the rest to the other districts of the canton. The inhabs, are exclusively R. Cathoties, subordinate to the bishop of Chur. P'ublic education is more backward in this than in most other cantons; and it has no public library. At 16 , every male inhab, is enrolled in the militia, and Schwytz firnishes a contingent of 80.2 men to the army of the Comfederation, in whieh it lokds the furtli place immediately alter the three directorial cantons. Schwrt\%, the cap, of the canton, at the foot of Momit Mythen, 26 m . SSL. Zurich, had a pop. of $5,7 \times 2$ in 18 io 0 .

SClACCA (an. Therma Selentina), a town and seaport of ltaly, island of Sieily, prov. Girgenti, on the $s$. coast, nearly 20 m . Sli. the ruins of selinuntum, and 30 m . NW. (iirgenti. 1 olo 14,161-t in 1862. 'The town, situated on the deelivity of an eminence rising from the bay, is surronnded by an irrernlar wall, in tolerable repair, with bastions towards the sea, and the castle of Lama at its E. angle. At a distance it has a respectable appearance; but, notwithstanding its large churches, convents, and magazines, it appears to be poverty-stricken.

Some of the firmons hot springs, whence the city has its ancient name, are a little without the walls towards the E . But the steam-baths, the construction of which was ascribed, in antiquity, to Daedalus, and now called the Stufe of St. Calogora, are on the summit of an isolated mountain, about $3 \mathrm{~m} . \mathcal{N}$ E. of the town, anit correspond exactly with the description of Diodorns Siculus. They continue, as of old, to be frequented by patients, and consist of several sudoritic grottoes, or caverns, the outer one of which has seats excavated in the rock.

Sciacea is one of the principal ports on the $S$. coast of the island, for the exportation of corn, and the ruck upon which the town stands is, int numerons plaees, hollowed ont into caricatori, or corn cellars. In summer ships anchor at about 1 m . off town, in from 7 to 12 fathoms, on a bottom of sand and clay, but being exposed to every wind from the $S \dot{E}$. rome to the $W$., it is not resorted to in winter, exeept by boats and tlat-bottoned craft.

Agathocles, tyrant of Syracuse, fimous alike for his great taleuts, perfidy, and cruelty, was a native of sciacea, where lie was born auno 359 II.C. He was of low origin, his father being a potter banished from lieggio, his native eity. Fazelti, the historian of Sicily, was also a native of this town.

SCILLY ISLANDS, a group of islands belonging to England, lying about 30 m . W. by S. from the Land's Enhl, supposed by sonte to be the Cassiterides, or tin islands, of the ancionts. 'fhey are shpposed to be, in all, about 150 islands and rocks, but there are only about half a dozen of any
importance. St. Mary's, the largest, is said to contain about 1,640 acres: the entire area of the group, as given in the population returns, is only 6,570 acres. In $186 i j$, they had a pop. of 2,481 . From their situation they necessarily liave a mill equable temperature, and though fogs are common, the islands are very healthy. They produce good barley, rye, and oats, the latter being principally of the variety called pillur, or avena nuda. Potatoes are extensively cultivated. IIorses and cattle small: sheep numerotes, and of good quality; sea-fowl are found in great numbers, and partridges are, also, abundant. There are shrubs, but few or no trees. The inhabitants make great quantities of kelp; they are also expert fishers, had act as pilots to such ships as require their services. As already stated, the ishnuds are generally supposed to be the Cassiterides, or tin islands of the ancients. 13ut it is most probable that the W. extremity of Cornwall was included under this term ; and, at all events, there is now no trace of tin, nor, indeed, of mines of any sort, in any of the islands. Heugh-town, the capital of the islands, and their only town, is situated on the W. side of St. Mary's. It has a pier and a custom-house, and is a place of some consequence, being defended by a fort, called the Star Castle, with a small garrison.

Persons aceused of felonies are sent to Cornwall to be tried at the co. assizes; but all minor ollences and civil suits are tried by a court consisting of twelve of the principal inhabitants, delegated by the proprictor of the islands under the dachy of Cornwall, of which they form a part. 'Ihis court sits once a month at Heugh-town, St. Mary's, for the trial of cases. Vacancies in it are usually filled up by clection, but it may be dissolved and a fresh appointment made by the proprietor.
The position of the Scilly Islands renders them of very couside able importance in navigation. Lying at the point of junction, as it were, of the English and St. Gcorge's Channels, ships passing from the one to the other, should the wind be unfavourable, often take shelter under these islands : it is sometimes, also, convenient for vessels to take shelter among them, rather than beat about at sea in bad weather, and a strong gale from the E. usually brings in numerous vessels. There are lour prineipal sounds or roads ameng the islande, exclusive of smaller inlets. Of the roads, St . Mary's, between the islands of St. Mary and St. Agnes, is the best; but it is generally the safest plan in entering it, or any of the other roads, to make use of pilots. The latter are always in readiness to offer their services.
A lighthouse of the first class was crected on St. Agnes Island, the most southerly of the groun, in 1680, the lanten of which is elevated 138 ft . above high water mark. It is, according to the ordnance survey, in lat. $49^{\circ} 53^{\prime} 38^{\prime \prime} \mathrm{N}$., long. $6^{\circ}$ $19^{\prime} 23^{\prime \prime}$ W.

But, notwithstanding the warning given by this light, these islands have been the seene of numerous shipwrecks. The most distressing of these catastrophes took place on the night of the 22 d of Oct. 1707, when the fleet from the Mediterranean, under the gallant Sir Cloudesley Shovel, got foul of the islands: the ship bearing the flag of the admiral and two other line-ofbattle ships struck upon the roeks near the lighthouse, and were totally lost, with every sonl on board. Some of the other ships were in extreme danger. It is not exactly known how the accident arose. The niglit was dark, but there was very little wind, otherwise the whole fleet must have been destroyed. It is probable that the light
liad been mistaken for anether. The body of the admiral was cast ashore, futd buried in St. Mary's, but it was soon after removed to Westminster Abbey, where a monmment, creditable to the liberality, thongh not to the art of the nation, was erected to lis memory.

SClO (an. Chios), a celcbrated and beantiful island of the Fgean Sea, belonging to the Turks, about 5 m . W. from Cape Blanco, in Asia Minor; Chio, its chief town, on its E. side, 53 m . W; Smyma, being in lat. $38^{\circ} 22^{\prime} 30^{\prime \prime}$ N., long. $26^{\circ}!{ }^{\prime}$ E. It is about 32 m . in length N , and S . and where broadest, about 18 m . across. Thous, " r the most part mountainous and rugged, it has a considerable extent of level and gently sloping ground. Its climate is mild and delightful, and it has numerous fine springs and rivulets. Dr. Clarke says it is the 'paradise of modern Greece; more productive than any other island, and yield. ing to none in grandeur.' (1II. 236, 8vo. edl.) In antiquity and in modern times, down to the late dreadful catastrophe, it was cultivated with the greatest care and assiduity. Owing to the limited extent of the arable land, and the greater suitableness of the soil for other crops, the prineipal part of the com required for the use of the inhab. has always been brought from the ports on the Black Sea and other marts. The staple articles of produce are silk, mastic, figs, lemons, aml oranges, wine, oil, cotton, and almonds. Its mineral wealth has been but little explored, but it contains abundance of marble, jasper, and a kind of green earth, resembling verdigris.

The wines of Chios, especially those produced in the district of Arvisia, were amongst the rost estecmed of any in the ancient world. They have been celebrated by Virgil (Ecl. v. lin. 72) ; and Horace asks
'Quo Chium pretio cadum
Mereemur?'
According to Pliny, Chian winc was served up ly Julins Casar at his most splendid entertainments; and it is thought worthy of notice, that Hortensius left a very large stock of this famous beverage to his heir. (Hist. Nat., lib. xiv. cap. 14, 15.) The wine of the island still preserves some portion of its ancient celebrity, but the produce is scanty, and it is said to be injured by transportation. Mastic is the most esteemed of the modern products of the island, being in great request among the Turkish ladies. All the mastic trees are supposed to be the property of the grand seignior, or rather of the sultana mother, of whom this island is the peculiar demesne. Bat formerly the trees were left, with the island itself, to the inhabitants, with but little interference on the part of the Turks, on condition of their aunually furnishing a certain quantity of mastic to the cadi for the use of the imperial seraghio, and paying a moderate capitation tax. And it is to the comparative exemption it has thus enjoyed from Turkish despotism, that the sprightly vivacity of its inhabitants, and their greater industry; enterprise, and prosperity, are to be aseribel. Besides its chief city, the island had, previously to its late calamity, several considerable towns and numerous villages. The population, which was very dense, las been variously estimated at from 80,000 to 150,000 , of whom from 30,000 to 35,000 belonged to the capital.

The latter, on the E. coast of the island, constructed by the Genoese, along the seashore at the foot of the motutains (an. Pellenai Montes) on the slope of which stood the ancient city, is well built, extending, with its gardens and villas, for about 4 m . along the sea. Its houses are commodious, and its shops and warehouses well fur-

 mirealy stated, in the grenter part of its comrse the line of demarvation low ween the Itightand and lowhlanke, mid separatille the watters which thew into the Forth, Tay, mul smuth Visk, from these which juin the suma, Sipey, muld bee. It, munt cleverted sutumits are near the hemed of the Norrllern Dee, bien Macthu, 11 m. XW, Bramemar, lat. is $7^{\circ}$ t' N., loug. $3^{\circ}: z^{\prime}$ W., tham ft alowe the level of the rea, is at once the enluminating puint of the Gramplimis, aum the lieghest, of the british momutains, lusing 20 fit. hiffler than lien Sevis, which was hunf comsiderect at the highest if ilhe scotel mumutains, and 81! ft. higher than sume dom in Wiles. The other primeipal stummits in the

 shire, :3,1:35 ft, in height, on the F ., side off luel Lomumid, the best kinw on of all the sentriah monntains, alwo leleng to this chain. The trampians are distingruidecel by their steribity aud desolate aspece, their sides in many places aslilititing vast perpemideulir lelgew of roek. The primeipal passed thromith the chain are those of Alerfloyle, Leni, thenshiie, and Killiecrankio.
ben Nevis, alluldel to almere, lies to the NW. of this clanin, in alloutt $55^{\circ} 49^{\circ} 30^{\prime \prime}$ N. lat., leng. $5^{\circ}$ W., being separated from the Grampians ley the mour of liamuelh. It rises to anl elevation of 4,370 ft. almuee the sea. Its summit, which commands a magnifio nut view extending from the Japs of Jura to Chelumlin in skye, Cairugurn. mid lien Macilhu, is, during the greater paitt if the year, coverel with show. From len Nevis N . to Leweh lirown several mountains rise to uearly 4,(1ut) ft. in height ; and the emintry is so thinly inlabitel that frequently, for many miles, not ia lounse is visible. Bat from Lukll Broman to Cape Wrath the surface diminishes considerably in clevation, and, though bleak in the extreme, is, for some distance from the W. evest inland, not mure than about 1 , with fi. abure the seil.

In the Lawlands, the Sidlaw and Ocliill hills, which rum parallel to the Girampians, mowhere rise to $2,5 \mathrm{smi} \mathrm{ft}$. Indeed, Brinallaw, on the S . border of Dumblifesshire, the hifichest mommain in the S. of Scotland, is only $2,711 \mathrm{ft}$, above the sea.

The more elevated tracts in the Lowhmads, int rlotling the manitains of Ronshurgh, Dumfriw Poeblew, sidkirk, imil lamark whires, are frempenty
 grond pasturape fir nhecp.
Thumgh the sullewn mill level tractes ins sootant lee fow and of limited extent, as rothpared with those ul Eughat, some of them are extrimely firtile, and they are nosesty well enhivated. The carse of Stirling and Falkirk, on the banks of the Fiorth; that of Strathentu mal diowrie, on the Thy : and the merse of Ilderwickshire, all how allavial tracts, are not inferior, in point of armdhetiveness, to any land of the cmpire. Trvins. dale, or the low hande abong the Treviot; "'yom dald, or the low lamis mong the 'Tyne, in is. Lathian: the Itaw ni lific, ur the low grmand ahneg the Biten in Pifeshire; and strathmure, or the low gromals between the firmunim monntuins and the Gehill hills, eomsist, for the most bith, of rich homy suil, and are cetremely well harmed.
 aquality of the surface makes the hawer parta if alue conintry apperar to lue much lese fruithind than they really are; the hollows betweell the suall rminemes behe oftan extremely fiertile, mul the
 ceptible of tillage, frumently furuish exerollent pasture. This is particularly the came in the silf: commens; large tracts of hand in Gallonsay mal Dumfriosshire, that lat from 20)s, to :mis. aim acre and upwards, wouh aplacar to mor mot well arcuainted with the comery and its cmpabilitiox worth little or mothing. $i$ proud deal of hevel hut ponerally hiph-lying land, evpecially in the ligh lands, ami iu some parts also of the lawhande, comsists of mones: having for the most part a doy subsuil, covered with pent earth or moss imprergnated with water, nut milike the loggs of Irelanh. Many of these muns are of very comsilerablin exteitr ; the largest probably, as wedl as the mant desulate and worthless, is thi moor of hannelh, to the s. of Hen Xevis, comprised in the shires of Arvile, l'eril. and liverness.
Riters, -scothand has mumerons rivers, several of whieh are of (umsiderable size. Thes ditlir from those of Bughand in being more precipitous, rapid, interripted by cataracts, nond sulyijet th sulden overthwings. lixegept the Clydr, the othors mastly disombogue on the Fi, eorist. The Tweed, which rises on the comtines of Dumfrimeshire and Lamarkshire, falls into the N. Sua at herwick, after a course ot ainant $1(16) \mathrm{m}$., omly a small portion of which is mavigable, Procerding northwards, the next river of any considerable maruitule is the Forth, which rises on the E., site of Bron Lamonl, and has, in Leneral, an casterly, but very tortuens course to Kincardine, where it unites with its great astary, or rather arm of the sea, the Frith of Forth, the Bodotrin of 'Tacitus. It receives on its N , side the Thith and Allan, and From the si, the Derom; Aherforle, Stirlinge atal Alion are om its hanks. The Forth is rapial fir some comsilerable distane from its somere; lut during the greater part of its comese it rums thrmugh a that comary with many wintings : vessels of 3 an toms aseend the Forth as far as Alloa, and thase of Io toms asceme to stirling. It is comaceted wint the Clyide by the great canal from Cirangemonth to Donglass. The Tay is the largest of sicots rivers, anll is suppowed to carry more water to the sea than the Thancs, or any other river in Great Britain, (Bee Thy.) The N. aul K. Esks, her. bon. spey, and ländhorn, all diveliarge themselver on the E. const; and in the N. division of the Itirhlands are the Nairn, Ness, anl Beanly. The lerring fishery in Seotlaml and the Isle of Man during the year Intia was less than in anv of the three years immediately precoding，hat considerably exceeded the lishery of lsis）．The quantity cured was $4 . i$ ，sit；barrels；liranded，
 ing，as compared with the year latiz（the most

 barrels exported．The following table shows that althongh the duantity cured was less，the quinn－ tities branded and exported were greater in litias than in 1860 and 1861：

|  | Rarrels eured | Barrels branded | Barrels |
| :---: | :---: | :---: | :---: |
| Year 1860 | －（is），19：3 | －31， 313 | 377，976 |
| 1sist | －66tis，ris | 2 （ia，i） 17 | 390，：3： |
| 180\％ | －654，516 | 276，580 | 407，761 |

The fee for branding，imposed by the act 21 and 22 Vict．e．69，yielded $2,4.11 /$ in $155!1,3,465 /$ ．in 18tio， $4,12 \cdot 2$ ，in $181 ; 1,5, \pi 01 /$ in $18 t i=$ ， $4,618 /$ in I8103；in all， $21,3441 /$ ．The commissioners regad these figures as showing that the imposition of a lee has in no way diminished the desire and ap－ plications for the loram，and that the brame remane， as it always has been，the standard of quality for the continental trade．＇It was anticiphted，＇they remark，＇that the experiment of tishing for har－ rings npon the ocean eonsts in wintur（which had been tried for the first time ofl＇the Caithoss comet in 1802）wonlil be repeated and extemied；and this was proved to the the case．The news that herrings were alont the eoast in winter，and that it was possible to fish for them successfully，soom reached other places，where the adventure was entered＂pon with more or less enterprise，and gradually trials were made for herrings at that senson of the year all along the S ．shores of the Noray Frith，and along the E．const as tar S．as Montrose．In some quarters this tishery was so extensively prosecuted as to lead to the fish being selected and branded for the continental market； a circumstance never before known，and so peat－ liar in its chanacter as to give rise to the question， whether a separate brand ought not to be insti－ tuted for winter－canght lerrings，in order to dis－ timghish them from those emmith in summer？．．．． In comection with this sulject，as indicative of grenter tishing enterprise，it is satisfactory to be able to state that the tishermen＇s boats and nets are improving in the most marked mamer mon ahmost all parts of the const ；better material amd better workmanshipare apphed to them；the beats are of larger size and better form ；and more care

L ：
is taken of them in every way, whether as regards bnidding, maintenance, or repair. The fishermen are decidedly becoming more thrifty, and better comdeted. Their dwelling-houses and villages, as well as their boats and tishing materials, exhibit the progress which they have made; and althongh both honses and villages are still susceptible of much and most necessary improvement, yet they unmistakably indicate that this indastrious and adventurons race of men, so genernlly regarded as primitive in their habits and their calling, are, in eommon with the other working classes, being bronght under the inthence of an abvancing civilisation, and are sharing in the better state of things which it proslnees.'

The number of eod, ling, and hake taken or purchased at the cod and liner tishery in seotland and the Isle of Man, in the vear $1 \times i 33$, was $3,791,2(1)$, showing. as compared with the year $1 \times 6,3$, an increase of $\mathbf{7} 39,407$. There were cured dried, $129,7,2 \pi$ cwts : enred in pickle, 7,337 harrels; exported cured dried, 53,73 ; evts. ; showing, as compared with the year 1802, an increase of 29,068 ewts. in the quantity cured dried, a deerase of 39s barrels in the quantity eured in pickle, and an increase of 20 , $\quad$ bl ewts. in the prantity exported cured dried.
'The following table shows the mumber of boats, decked and moleeked, employed in the shorecoring herring and cod and liner tisheries, in the several dismicts of Seotland and the Isle of Man , in the year 1863; the number of tishemen and luys by whom they were mamed; and the estimated value of the boats, nets, and lines.

Fontand formerly enguged largely in the whate fishery, hat in recent years this diphortment of industry hats declineal, not from any dimintion of skill or 'interprise, lant from the increasing rishs :mal umprotitable nature of the busmess. Furtunately, the loss of the whale dishery has berem more than compernated by the extension of the herring lishery, and ly the success that has atteuded it.

Races of Inhabitants--It is generally allowed that the tirst immigrants into sicotland, like thuse into bingland, whence, perhaps, they originally came, belonged to the great Celtic family: and Mr. Chalmers and others have embenvoired th prove that the pupnlation continued to be purely C'eltie till it was alloyed, tirst by lomans, and suli, sequently by (iothic invaders. (C'nledonia, vol, i.
 tenable. 'Tacitus (expressly aflims that the Caledomians, or imhabitants of scotland, were of liormanie or Gothie origin. 'Rutila Caleshomiau habitentimm comar, magni artas, Germanioram orition'm "adsrevant.' (Vit. Agrieola, eap., xi.) Agrivola, however, from whom Thatus derived his information, kuew little or next to nothing of the conntry N. of the Grampians: and, as there is every reasom to think that liorwickshire, the lathiais, Fiff. and other parts of the low rountry on the E. coast of Seotland, were, like the same traets in borland, early occupied by lielgite or other fathic eulonis: from the opposite continemal eonst, it seeme 'most
 hians a (iermanie origin, had these only in view. The fair presumption is, that, in the northern, as in the more suthern part of the island, the oh Celtic inhabitants mantaned their asembleney in all the monntainous, and comparitively inaldcessible, districts; and this retanable presimution is comoborated ly varions circumstances.
In the third century, the terms l'iets and l'ietlamb began to be substituted for Caledonians amd Codedonia. It is pretty generally believed that these terms aply to the same jeople amd the same conntry. it seoms, indeed, to be perfectly clear, that the liets were deseended from the Scythians or tiothe; and, if we the right in wur statements, as to the origin of the Conledonians, it follows that, if the licts wore not idential with them, they bolonged, at all events, to a congenerons rilce.

(the Dalrials of the vencrable lBede), hegran to be distinguinhed as a leading tribe in Treland; and seems, indeed, to have given its name to the isham, which, for some centuries, was called Scotia. (linkerton's Geography, i. 137, ed. 1811.) It would seem that, previonsly to the 11 th century, a colony of the Scoti from Ireland had established themselves in the West Lighlands; and this colny, in no very long time, gave its name first to the llighlands, whence it was shbequently extrmded, on its being united under one govermment, to all that part of the island N. ef the Tweed and the Solway Frith, The Scoti ceased to be heard of in Ireland not long after they had obtained a forting in the Highlands, and the ancient names of that ishand were revived.
Every thing conmeted with the history of the Scoti is involved in impenetrable obseurity. But it is agreed, that whatever may have been their remote origin, they hat, when they settled in the Western llighlands, the language and habits of the Irish Celts, or liael, a comgenerons race with the llighlamd Celts, and speaking, in fact, the sume language. But the seoti-colonists had a written haruage, which the ohd occugiers of the comery had not; and they were also decidedly sufurior to the latter in knowlelige and civilisation. (l'inkerton, On the Larly History of sootland, ii 160.) These ciremmstances sutiojontly acoumt for the aseendency they adpuired, and for their being able to give their mome to the Ilighlands, without having recourse to the hypothesis, for which there is not a tittle of evidence, of their having conguered the country.

Nter the Romans withdrew from Britain, some Gothic or saxoms tribes, following the example set ly those who had previonsly settled in the more sontherly parts of the istimd, established themselves, diring the sixth century of our iera, between the 'Tweed and the Frith of Forth. (Turucr's Aughosaxons, ith ed. i. 2!9.) These new immigrants were alterwards followed by othere, at the same time that ther drew recruits from their brethren estahlished in Jingland; and Mr. Chalmers supposes that, their power being thus progressively angmented, they gradually acquiped a complete ascendency in ill the somthem parts of the kingtom, and commmicated to it their language and manners. (Caledonia, ii. 7.) This, havevar, would have been an extremely ditlicult task; but if, which seems abundantly eertiin, we conchude wilh l'inkerton, that the l'iets, who were in possession of all the low comntry in the sixth emtury, were eongenerons with the saxoms hy whom it was then invaled, the two races would readily amalgamate, and the early prevalenee of the Scandinavian or Gothie tongue in the Lowlands is rationally and satisfactorily arcomited for.
'lowaris the end of the eirhth century, a fresh colony from Ireland established itself in the district now known hy the neme of lalloway, in the AW. part of Scothind. But though these colonists shereded in giving a name to the combtry, they were not suficiciently numerons to introdnce their lampuge into common use. And for several cena turies, long indeed before the inhabitants had any considerable intercourse with other parts of the kingrom, the siaxon tongue was in as miversal lise in Giallowity as in any part of the lowlathes of seothamd.

Exilusive of the Celts, Gothes, or l'iets, Rommon, Seoto-lrish, and saxoms, colonies of bmes and Norwegians established themselves in Caithmens, and other parts of the mainland, as well as in Urkney and Shet land, and parts of the Western lsles. Gienerally however, it may be said, not-
withstambing the late great influx of Irish setters into finasgow, l'aisley, and other large towns, that at present the inhabs, of the lowlands of Scot lame are principally of Saxon, while those of the Highlands, with the exception of Caitlmess, are almost entirely of Celtic extraction.
Populution.- There are few data for estimating the amonnt of the pop. previonsly to the perion of the Union, in 1707, at which time Seotland is supposed to have had abont $1,050,000$ inhabs. In 175\%, the pop, was ascertained by Dr. Webster to amomet to $1,2 t a, 0,000$; and at the census of 1801 it was proved to be $1,608.420$. It was $1,805,864$ in 1811 ; $2,091,521$ in 1821 ; 2,36. 1,386 in 1831 ; and 2,620 , in 1841. The increase, from 1801 to 18.11 , was less than the increase of the pop. of Enerland during the same perion ; and also, much less than the increase in Ireland from 1801 to 1831 . 'Ilis, however, was rather a favourable sympom, for there are gool gromnds for thinking that the wealth of Scothind inereased more rapidly durimer the above period than that of either of the other great divisions of the empire: and inasmuch as her inlab. did not inerease so fast, their condition most have been proportionally improved. The division of the popnlation into five classes, after the same method as that alopted in lingland and Wiles, presents the following result:-

| I. Professional Class |  | $\begin{gathered} 1851 \\ \text { A } 0.004 \end{gathered}$ | 1881 |
| :---: | :---: | :---: | :---: |
| 2. Domestic | " | 1,731,279 | 1,734,295 |
| 3, Commercial | " | 74.7.6 | 84,338 |
| 4. Arricaltural | ", | 388,21:3 | 378,(8199 |
| 5. Industrina | , | 543, 66: | 699, 1074 |
| 6. Indetinite | , | 10s, B 4 l | 118,463 |
|  |  | 2,858,742 | 3,062,29.4 |

In 1861, thercfore, of every 100.000 persons in Scotland, 1,715 hehuged to the professional chase, $\because, 7 \pi t$ to the commercial, $12,3 t i+4$ to the arricultural,
 domestic, and 3,868 are undelined, or ill-tletined.

The incrase of pop. has been chielly in the freat towns. The popi, in some of the cos, has rather declined lately, in conseduence of the consolidation of farms, and the extension of sheep walks.

Agrimulture-Scothand, from being about the midile of the last century one of the worst cultivated comotries of limope, is now one of the best. At this moment, indeed, the agriculture of the best farmed cos, of ticutland is certainly equal, and is ly miny deemed smprior, to that of Northumberland, Lincoln, and Norfolk, the best firmed cos. of Vinglamel. The proximate canse of this extraordinary progress mast be sought for in the rapid growth of manmactures and commerce, and consequently of large towns, and tre propertionally great demaind for agricultural prodace since the peace of Paris in 1763 , and especially sinte the close of the American war. Fortmately, too, the induence of these favommble circmmstances was not comateracted by any vicions institutions, or by anything unfavourable in the mode of letting and ocempring land. Next to the opening of now, extensive, and rapidly increasing markets, the wonderful improvement of scoteh lusbamdry may be ascribed to the prevalence of leases of reasonialble length, usumlly 19 years, and which fenmrally embody clanses to prevent the exhanstinn of the soil; the absence of tithes, and, in most instances, of poor-rates, and of all oppressive publie: burdens; the prohibition of sub-leting, and the inheritance of the lease by the heir-at-law: the introblaction of sheer-farming into the lighlames, amd the great improvement made in the construs:tion of all sorts of farming implements. The general we of thrashing machines, many of which
are impelled by steam, and of ploughs with two horses ariven liy the ploushman, are distintuishiner characteristics of 'scoteh, as compared with English, agriculture.
lanted property in Scotland, as compared with its extent and value, is in lewer hands than in bingland, there being probably not more than 8,000 proprietors in the whole comntry. It is most subdivided in the commes of Fife, ilid-lothian, lienlrew, and Kirkendbright, but even in these there are many large estates; and in most other parts of the comntry the greater portion by far of the land is distributed into very large estates, many of which were held, down to $1 \times 18$, moder is system of strict and perpetual entail; but this system having leen found to be problactive of varioms inconveniences, it was smerseded in the abovementioned year by the stat. 11 \& 12 Vict. c. Bt, which has abolished perpetuities, and placed the heottish law of entail nearly on the same looting as the Einglish, but the former tenure was not nearls, in its practical inthence, so prejudicial to agriculture as might, à priori, have been anticipated. This results from the circumstance of the conrts of law having decided that it was illegal to let lands belongins to an entaled extith, either for an monsually long periow, or by tines (seotice (frossums): so that, in truth, there has been littlo or no dillerence befwem the conditions muler which cutailed and mucntailed estates have been ocompied: and as the proprietors of the former have been empowered to braten the estates, prot portionally to their value. with sums laid ont on necessary improsements and buthlings, they are, sucaking tenerally, in as good order and as productive as the others.
liarms are of all sizes, varying from 5ut to 500 acres and upwards in the improved tillage districts, and from 300 to 5,040 aeres and mpwards in the hilly and mountainous tracts. Except in a fev of the sequestered slens of the llighlands, into which the improved systems have not been introblued, the division of the lam is nowhere earried to such an extent as to be projulicial to ayriculture; aud, in most parts of the eonntry, farms have been gradaally eomsolindating and inereasing in size sithe the American war. At an avernge of the kinerdom, arable farms may vary from 150 to 300 acres,

Down to the close of the American war, the f:um buidlines in most parts of sootland were mean ond inalequate in the extrome. In the hothiars they were commonly rimerel in a row, having the dwelling-house in the middle, with a ham at the one dul, and eatale-homes at the rither. In other parts, they were frequently hutalled together withont any sort of order. The walls were always low, in most instances of stome and clay, the rool' teing invariably thatel. 'The dhaghill was miversally opposite to the door; mal so near it, that in wet weather it was no easy matter to get into the house with dry fert. The change that has taken place in these respects during the last half century has been signal and complete. In none but the least accessibl and last improved districts are any of the ohl 1 onses now to be met with. l'erhaps, indeed. the other extrene has not heren sutheiently avoided: mikdings having, not minequently, been erected that serom to be buth larger and more expensive than newestary. The ofliees are mostly construmed in the form of a square. la some instances, the Twelling-louse makes one of its sibles; bat in the Inetter class ol larms it is removel to some distance Irom the olliees. It is gemerally two stories high, and is woll, and sometimes handsomely. tittel up, betlo houses and otheres are almost always mated.

The expense of buildings is miformly defrayed by the landlord; but the tenant, for whose aecommodation they are in the first instance crected, sometimes pays a pereentage upon the money laid ont upon them. Sometimes, also, the tenants undertake to carry the materials used in building.
'l'he fences in many parts of seotland comsint of iry stone walls; which, though destitnte of beanty; make, when properly lmilt, a capital fence. 'I'lis' shecies of inchosure seems to have originated in the SW. Kirkemdbright and Wigton were carly subdivided with exeellent stone dykes, that are now celebrated all ever the kingrdon by the name of' 'Galloway tykes.' They are of very various heights and degrees of groodness; luit the hest are built double to a certain height, when thes are eapped with broad that stones projecting ia little on eath side, over which others are nsmatly laid single: lout sometimes those lad over the eap-stome are mate to lork firmly together. The best dykes vary from ${ }^{\frac{1}{2}}$ to $\mathrm{t}_{\mathrm{i}} \mathrm{ft}$. in height: and when they have been earelinly fommed, well buitt, and constructed of good stones, they make a must excellent and a very durable fence, lixamples are not rare of their standing for 60 or 70 yomss withont receiving almost any repair. la a lew instances they have been fomad, at above lth years of ater, in a state of perfeet preservation, "But unless they be of superior material and worlaminshij, they seldom last more than frum 25 to ab gears. Mast of the dry stone walls buw tu be met with all over seothind have been lailt, sometimes with more, sumetimes with less shecess, alter the (iallowity model.

In respect of farminer implements, Scotland hats very much the advantare over England. 'The improved seoteh plongh is everywhere mut with in the agrienltural districts, and is milombly drawn hy two horses, driven by the plourhman, Iron harrows are common, Tharashing-machuns are introhned lar more extensively than mine land; and there is hardly, indeed, a comsiderable tirm in any part of the comery without onn. The sontell labourers have never been so alosuril as wattempt to adsame their interests by destroying those valnathe engines.
linring the last 50 years, ame especially since 1810 , improvements of all sorts have beein prosecuted in heotland with extraordinary spirit amd sucess. Dramike has been the great olyect of attention; and, in some extensive districts, it hats been carried to such an extent as to have alfected a material change in the climate as well as in the soil mat apmarance of the comatry, acedomang the perion of harvest by two or three werks! Farms that were formerly wet, late, and suitable only for oats, are now, by the aid ol liorowIraininer and subsoil-ploughing, mate thormurhly (ly, early, and suital)le lur turnips, and for every variety of corn crop. (iamo, boncs, and othir mamres are bow, also, very largely imported; and these, with the inereased gumatity and ellicmy $^{y}$ of farm manme, arising trom the improved mothonds of preserving and applyiner the latter, have ahled broligionsly to the prodnetiveness of the lamel, and to the weight amel fuality of its pronfice.

Seothand may be divided into three agricultural districts:-Of these the tirst, or most sumberly, extending from the Einglish borter to the rivers Forth and Clyde, contains a large extent of monntainous and pasture land. But extensive trats in Iherwickshire and the lothians, on the Fi. enast. are maturally fertile, ind are farmed with a modere of skill, ecomomy, and suceess, mequalled ilmost in any other part of the empire, 'Thre are also large tracts of fortile and wall-famel land in Lamank, hembrew, Ayshitre, (ialloway, and Dum-

outherly, la rivers of momiF., colis. a docree d almost are insin all lum-
frios; but the elimate on the W. coast is not so fivourable, mod agrienture is not so far alvaned on that side the island as on the E. The seeond incricultural division si reteles from the Forth and Thyde to the great chain of lakes comnected by the Catedonian Camal, that runs from Inverness to the Island of Mull. The monntains in this division are on a gramder scale than in the sonthem division, mul the proportiont of waste land murla greater. It, however, contains some of the tinest land in the ompire. The carse of (iowrie, stretching from l'erth to Dumdec, consists of the ridhest alluvial soil; but its agriculture, though wood, is not equal to that of some other districts. Sitathorn, lying to the W. of lerth, is also very fertile. Nost part of the extensive comnty of Fife is arable, and is, in general, highly improved. There are also very large tracts of time lame in Fortarshire and Anges, and smaller portions in Aberdeenshire and Noray. The third division of scotland. or that which embraces the combtry lying to the N. of the Caldonian Canal and the liahes, is, with the exception of the eastern parts of loos-shife, and a few patches beside, wild and momotainoms. Black cattle, sheep, and wool are its principat products.
fixcrpt in the siti. counties, oats are frown in lar greater quantities than any other kind of grain; and, from more athention boing piad to their colture, or the greater suitablemess of the climate, or beth, the produce is greater than in lughand, varyiug from 30 up to 70 lushels an arre, and evel more. Oatmeal, which, till a late priod, formed, in cakes and porridge, the priteipal part of the food of the great bulk of the people, is sill in very extensive demamd; but, latterly; the aise of wheaten bread has become very general in the rural districts as well as in the towns, Tumips aml potatoes are cultivated laronghont most part of the lowlamds. The raising of the former is, ferhaps, nowhere so well eonducted as in E. Luthian and lerwickshire ; and their eulture in all parts, but esperially in the W, cos., hats increasel with extraordinary rapidity darime the last 20 years. Potatoes have of late been rrown in lage quantities in some of the lis cos. for the Landen market: mad they form, we are sorry to sily, in important article of food in most parts of the eountry : but their enltivation, and the grower's dependence on them, have both been lesselued by the recent fatures of the crop. The practice of taking two white erops in succession has been almest wholly abamdoned in the Lowhame.

Gairy hashandry is mostly bursmed in the shires
 lop cherse is made; but it is also introdeed into Wigtown and other cos. Cows of the genuine Arshire bred are admirable milkers, and the average guantits of hutter produed by each has becol extimated at upwards of ziou lise a year. The Giallowny, Fibeshire, and llighland breeds are the lest for fattening, and yield, especially the first and last, exeellent heef. The fallowity caltar are mostly sout up half fed, to be lattened in Norfolk and Sullalk for the Lomdon markets; lut many of them are now fattened at home, and are sent direet by steam to liverpool. Three principal breeds of wherp are reared in Scothand: the dun-fitced, or scandinavian breed, said to have been imported intos seatland from lemmark, of which a few are fonmed in the cons. N. of the l'rith of 'lay ; the black-liaced, or hoath breed, very widely dillised, amb very hardy; and the ('heriots, the fimmes breed mative to the ('heroot liills. 'lhe latter are fomed to thrive in districts that were formerly supposed to be suitable only for the back-faced breed, and have alrealy, to a
comsiberable extent, superseded the latter, the earcase and tlecee being both moch more valuable. More recently an improved cross breed, between the Cheviot ewe and the Leicester rm, has been extensively and advantageonsly introdheed in the hill pastures of the S , cos.
Rent has inereased much more rapidly in Seotland than in England. This is ascribable partly to the extremely backward state of scotel agriculture till after the peace of laris, in 1763, and partly to the exiraordinary advance it has made since the clese of the American war. The chtire rental of the kinudom is not supposed to have execeded $1,000,0001$. or $1,2(00,004)$. in 1770 . In 1795 it is believed to have rather exceded 2,010,0000., and since then it has more than trebled. So rapid in increase of rent is probably momatelied on any old settled comitry, and indicates mastonishing degree of improvement.
'ithe wealth of the famers, and the comblort and well-being of the agrieultural labourers, have increased in quite as great a proporion as the rents of the lamulords. Notice has already been taken of the extraordinary injurovement that his taken place in farm-houses and offices since the close of the American war, and especially daring the present eentury: and the sime improvement is everywhere visible in farming stoek and implements; in the firmiture amd other aceommodatioms of the tarm-honsest, and in the dress and mode of life of their oceminers. No old setted comotry, of which there is any anthentic accomb, ever made hall the pregress in civilisation and the aceumulation of wealth, that Scotland hats done since 1763 , and expecially since $17 \times 7$.
some very great inplowements have, as alrearly seen, been in:trobuced into igrientare within the last few years, and are now rapidly spreading over the comentry. The facilities alforded by steam navigation for the converance of fat eattle and sheep to the great markets of Lomdon and liverpool, as well as to those of Edinhurgh and Glasgow, have also leen of vast importance, and have embled the remotest districts to come into successinal competition with those that are most favourably situated. In consequence, agriculture is at this moment in a rapill state of alvanecment. And, not withstunding the lower pries, farms let better now than at any former period, and the fair mesumption seems to be that, great as has been the improvement of agriculture during the last half century, it will be equal or greater in the future.

The condition of the agricultural labourer has, as alrealy stated, been vastly improved. With the exeeption of those districts in the llighlands and Isles, lnekily few in mmber, into which improvements have not yet made their way, the cottages of the peasantry have been mostly reInilt during the last halt century ; and thongh still, in most instances, withont the rustic beanty and neatness that so frequently distinguish linerlish cottages, they are fir from meomfortable. lin most parts of the country such of the farm labomrers as are married, and have families, reecive the greater part of their wages in specitic quantitios of tirm produce, which do not vary with the variations of price, so that, if they be not so well off as the mannfacturing workpeople, when trade is brisk and prices low, weither are they exposed to sutler like the others, when there is little demand lor labour amd prices are high; on the whole, they mity, suaking generally, be sad to be in decidedy vombertable ememmstances. 'l'he momarided servimts frequently live in the farm-honse. 'They are almost all rexcellent ploughmen; all of them are able for read and write, and
their sons not unfrequently emerge from obseurity, and attain to distinction.

Manufuctures.-For a lengthened period after the umion with Cingland, Scotland made little or no progress in manufactures; and it was not till alter the peace of laris, in 1763 , that the public cuterprise began to be turned into this great channel, and that a rapid extension took phace of most sorts of indastry. A considerable depression ensued towards the close, and after the termination of the Anserican war. But it was not of any very lengthened duration; and the foundations of the cotton trade having been laid about this period, mamfactures have contimued, from 1787 down to the present time, progressively to gain grombl in seotland, and have been prosecuted with equal skill, industry, and success.

The cotton manufacture, which primeipatly eentres in Lamark and henfrew shires, is of comparatively recent introduction, the first steam-engine for a cotton factory having been constructed so late as 179\%. Sut the woollen manufacture has been of long standing, and was formerly much more widely diffused than at present, having been, in fact, with that of linen, a domestic mamofacture, and pursued in every cottage. It was the universal practice of the peasantry, and wecupiers of land, to spith, at home, the greater part of their own wool, as a subsidiary employment, and to send the yarn to be mate into coase cloth to the nearest village.

There is still a elass in Scotland called customer weurers, seattered over the enmitry, bat now principally conlined to the Highlanis, employed by private families to weave yarn into coarse fabries tor clomestic use. Most part of these are also agricultural labourens, weaving only in the intervals ol their ordinary ayocations; they earn from 1 s . $6 d$. to 2s, bid. a day, but few higher than !?s, But except these, and persons living at watering-places, and on parts of the li. coast, where they eugage in tishing or boat-letting for a part of the year, the great bulk of the weavers of Scotland subsist entirely by the loom, and engage in no other pursuits. For some time past this class has been in very depressed cireumstances. Owing to the facility with which the business of weaving may be learned, mud the sort of independence it eonfers on the weaver. it has always been a favourite employment; and, consequently, except in periods of great prosperity, the wages of weavers have generally been ratier low. Of late years, however, the introdaction of power-looms has gone far to supersede, to a groat extent, the business of the regular hand-loom weaver, especially of those enfarged in the manuficture of cottons; and the fair presumption seems to be, that in no very lengthened period the business of the haud-loom weavers will be all but totally anmihilated. But thongh there can be no cloubt that, in a public point of view, this change will be profluctive of greal alvantage, it involves, in the meantime, the class of hand-loom weavers in the greatest difficulties; and much of the ordinary manuffeturing distress proceeds from hand-loom weavers thrown out of employment by the competition of power-looms, or forced to labour for the merest pittance.

Compared with the woollen manufacture of England, that of Scotland is inconsiderable. Flamels, blankets, shawls, plaids, stockings and stocking yarn, tartaus, carpets, aml druggets are produced to a cousiderable extent at Galashiels, Paisley, Ilawick, Jedburgh, and Aberdeen. Some of the finer deseriptions of eloth are made at $\Delta$ berdeen and in its vieinity, and some of its woollen mills and factories are on a large scale. Kilnarnock is the seat of a very extensive and flourishing carjet
manufaeture. The power-loom having hitherio been but little adopted in the woollen manuficture, the weavers enployed in this depurtment get goond wages, are well clothed and loblged, and in all respects exhihit a marked contrast with the hamiloon weavers engaged in the cotton mamuftacture.

The linen mumfacture of Scotland is of very emsiderable value and inportance: Dundee is its chief seat, and the statements griven under that hend (see lownew), show that its increase since IxIt hats been quite extraorimary. Osmaburgs, sheeting, cotton bagging, sail-cloth, dowlas, and other coarse goods, are the artieles principally made in Dumdee and in Kirkealdy, Arbronth, Forfar, Montrose, Aberdeen, and other seats of the mumiliacture in the E. of seothand. The fiber descriptions of linen fabrics, as damasks, flinpers, mad shirting, are principally produced in Dunfermline and its immediate vienity. 'lhe linen weavers necupy an intermediate position between the woollen weavers on the one hand and the cotton on the other. The silk mamufacture is of little importance. The printing of shawls is extensively carried on at Paisley.
'llue iron-works at Carron, near Falkirk, estabished in 1760 , were for a lengthened period the most extensive in the lingelom; but they are now far surpased by those of Cartsherrie, liundyvan, Monkland, and Onom, in Seotlamb, and by many in lingland. A good denl of scotel irommungery, comprising anchors, bolts, axles, mill and mginework, is exported to the colonies and foreign combtries. The manufactare of machinery is atm intportant bramels of industry. Conclies are makle in all large towns. The buibling of ships is extensively carried on in Aberdeen, Humdee, and other ports, hut esuecially in the Clyde. Irom stem and sailing ships are built there more extemsively, and, it is also said, with better suceess than anywhere else in the U. Kingrlom. (lass wares, chiemical products, soaj, canilles, and stareh are monos the other prineipal manufactured goods.

The favourite beverage of the people of sootland has, for a lengthened period, been whisky: a spirit fencrally distilled from malt or raw grain. Uwing to the excess of the clutios with which this spirit has oceasionally been clarged, its smugghag has sumetimes been carried to a great extent; hit in recent years, when the duties were grently roduced, it has been eomparatively rare.

Commerre.-Ilaving little industry, and beins thinly peopled, Scotland had formerly a very limited foreign trale. The exports eonsisteil af wool, skins, hides, and other raw materials, exehanged for corn, wine, and spices. Even so late as the era of Cromwell her mereantite marine comprised only 93 vessels, of the agregrate burilen. of $2,7,21$ toms, and 18 barks. During the reign of Charles Il. the trade of the country, especially that with Holland and the countries round the Baltic, began to increase. It was not, however, till after the completion of the Union, in 170. when the trade to the American and W. Indian colonies was, for the first time, opened to the enterprise and activity of the Scotch, that the comnercial energies of the nation began to be awakened. But for a while the merchants ol Gilasgow, who tirst embarked in the trade to America, carried it on by means of vessels belomgings to Engrish ports; and it was not till 1718 that a ship butit in Seotland (in the Clyde), the property of Sooteh ownets, sailed for the Ameriean colnater. The establishment and rapid extension of mannfactures in Scotlarl, since 1763 , lans needesarily oceasioned a corresponding increase of commorce, and the mercantile marme of Scotland is now very considerable.

The number of sailing-vessels of and muder 50 tons, registered in scotland, on the 3lat day of lecember, 1863, was 1,108 , their tomage, $33, \mathbf{8} 81$; above 50 toms, 1,972 , their tomage 502,860 . The umbler of stenm-vessels, of nuil under 50 tons, was 1 tre, their tonnage, 2,608 ; above 50 tons, 262 , their tomatge, $92,18 x$.
The sailing-vessels registered at Alserleen were 251, their tomage, 7.410 ; at Allon, H1, their tomonge, 10,281 ; it Arbroath, 81 , their tomage, 11,if:2; at Arimossm, 81 , their tomage, 11,345 ; at $\mathbf{A y r}, 40$, their tommage, 6,672 ; at 1 hulf, 115 , their tomatge, 12,8!1; at llorrowstommess, 50, their tomase, 6,072; at Campleetton, 40, their tomare, $1,6 \overline{5} x$; at Dumfries, $11 \overline{7}$, their tomarge, 14,343; at 1hanlee, 205, their tomage, 42,873; at (ilasgow, $\delta: 11$, their tunnage, 197,793 ; at Grangemonth, 39, their tomage, 5,127 ; at (ireenock, 375 , their tomage, 88, 80!? at lavermess, 439 , their tomage, 11,521 ; at Irvine, 37 , their tomage, fi, 225 ; at Kirkealdy, 58 , their tomage, $6,5 d 6$; nt Kirkwall, 48 , their tomage, 2.76 ; at Leith, 186, their tonnage, 23,414 ; nt lerwick, 75 , their ton-
 11,359 ; at Perth, 57 , their tomage, 5,$065 ;$ at l'eterhead, 69, their tommage, 10, i2: ; at l'orttilasgow, 40 , their tommare, 2,857 ; at Stormoway, 43. their tomage, 1,010; at Strmuracr, th, their tomage, 2,417 ; at $\mathrm{Troon}, ~ \overline{7}$, their tomare, 915 ; at W'iek, 63, their tomnge, 3,934 ; at Wigtown, 5: , their tonmage, 2, त्ना.

The stenm-vessels registered at Aherileen were Jf, their tomare. 3,3:3; at Alloa, 5, their tomase, eit ; at Arlrossan, $\geq$, their tonnose. 105; at Ayr, 2, their tomage, 21-1; at Borrowstommess, 2, their tommare, 235 ; nt Complolton, 2, their tommage, 979; at lhumbe, 17, their tomare, 3,538; at (ilasgow, 201, their tommage, 65,787 ; at (irangemunth, 8 , their tomage, $1,: 118$; it (ircenock, 27 , their tomage, 1962 ; at Inverness, 1 , its tomage, 20 ; at Irvine, I, its tomage, 15 ; at Kirkcaldy, 2 , their tomage, 121 ; at Kirkwall, 1 , its tomage, 26; nt Leith, 63, their tommare, 15,984 ; at Montrose, 2 , their tomage, 40; at l'erth, 1 , its tomarge, il ; at Port-(ilasgow, 8, their tomage, 889; at Stranraer, I, its tomnage, 299; at Wick, 1, its tomage, $\mathrm{O}_{5}$; at Wirtown, 1, its tonnage, 284.
The mumber of sailing-vessels entered coastwise in Scotland, in 18li3, was $14,18.5$ ( 14,153 Sritish, 31 forcign) ; their tomatge, 935,838 ( 933,555 liritish, $2,2-9$ foreign) : the number eleared coastwise was 14,479 ( 15,451 British, 28 foreign) ; their tounare, 999,713 ( 996,333 British, 3,380 foreign). The number of steam-vessels entered const wise was 6,1818 (all British) : their tomage, 1,473.55\%: the number cleared coastwise, 6,526 (all British), their tommase, $1,463,017$.

The number of sailing-vessels entered inwarils from the colonies in Neotland, in 1863, was 561 (523 lhitish, 38 foreign) ; their tomnare, 357,078 ( $338,5.1$ British, 18,507 foreign) : the number cheared outwards for the colonies was $70: 2$ ( 606 British, 46 foreign) ; their tonnage, 335,222 (312,0+2 British, 25,1 80 foreign). The number of stcam-vessels cutered inwards from the colonies was 18 (all British); their tomage, 18,419: the number clenred ontwards for the eolonies was 67 ( 66 Jritish, 1 foreisnl); their tonnage, 31,552 ( 31,286 British, 266 foreign).
The number of sailing-vessels entered inwards from foreign ports in Scotland, in 1863 , was 4,769 (1,6.ts British. 3,121 foreign); their tomare, 697,058 ( 290,928 lritish, 406,060 forcign) : the number that cheared outwards for foreign prorts Was 5,209 ( $\mathbf{2}, 052$ Jritish, 3,157 foreign) ; their tomagre, $737,306(329,703$ British, $40 \overline{4}, 603$ fureign $)$. The number of steam-vessels entered inwards from
fureign ports was 401 ( 319 Initish, 82 fureign) ; their tomamge, 14:1,12: ( $1: 2,52 l$ l3ritish, 15,901 furcign) : the number cleared ontwards was $8: 27$ ( 172 Iritish, 50 furelign) ; their tonnuge, $180,03!$ ( $14 i, 7,-12$ Itritish, 21,797 foreign).

Currenty,-'lhe currency of Acothand has, for a leugthened priod, prineipully consisted of the notes of the diflerent banking companies. These, for the most part, are joint-stock associations wilh monerons bodies of partners, and have been managed with great akill und diserction. Very few bunkruptcies have oceurred among the Neotch bunks and they have contributed materially to forwarl the improvement of the comintry by the facilities they have attorided to industrions and cleserving imdividuats of oltainlag lomas; mal still more by the practice, which has home bean acted upon, of taking very sunall sums in deposit, and allowing interest upon them nt about 1 per cent. below the market rate nt the thme. This hins brought, us it were, a number of substantial and well-orgranised savings' banks within rench of all classes; and by furnishing every facility for the safe and protitable constody of the smallest and largest sums, hats powerfully stimulated the desire to save and anass. The subjoined table shows the amonint of bank-notes authorised by law to be issued by the several bunks of issue in Seothand, and the average amome of bank-notes in circulation during thirteen perioks of four weeks from 1)ee, 3, 1862, to Nos. 14, 1863, and from llee. 12, 1863, to November 12, 186.1 , as published in the - Limzette':-

Roads.-With the exception of the military roads, eonstructed in the llighlands after the suppression of the rebellion in 1745, the roath of Seotland were, speaking generally, in the most execrable state down to the American war. Jhat. such and so great has been the improvement in the interval, that they are now quite equal to the best roads in England, and are not, indeed, surpassed by any in Europe. They are laid down on the most approved prineiples; and, notwithstanding the nugged nature of the commtry, it is but seldom that horses in a carriage may not be driven along at a smart trot. The facility with which excellent materials for their construction may almust everywhere be obtaned has materially contributed to furward their formation. The roals
within what is calted the Highland distrlet have huen parly conatricted loy means of iadivace from fovernment, mul he public money hus very rurely been mo pronitatly exprented.

Railurgys,-Scotland is intersectell with rallways to ain extent whith, eonsidering the rugheol mature of the comatry, combl hardly have heen anticipated. There are three main lines of railway from biugland to Seothme, viz. the E:。 linte, hy Nowenatle, llerwick, abal bubbur; the central or Galedomian liser, by Carlishe, Edelefiechan, and Lanark; and the W. lime, by Corlisle, Dumfrlen, Sanulur, aud Kilmarnurk. E, liulurgh, Glusgow, mal all the primeipal towns of soothal are miltent by ruilway. The faelitios of hatereomere that linve thas been afloridel are quite extraurlinary. The following talite gives a list of the railways of Seotlame on the lat of damary, |ctia, with a munmary of the length of lhes in the tive preveding years:-

Comuls.-Of the sootch canals, the monst important is that called the fireat Canal, miting the Friths of Forth and Clyde, and, conseguently, forming an easy water communication between the E., and W. coasts of the istand. Inchuling its brameh to port Dundas, in the vicinity of Chaspow, it is about 38 m . in length; the medium widih at the surfiace is 56 ft ., and at the bottom 27 ft .; average depth from 9 ft . to 10 ft ; summit level, 156 ft . above the sea; it has 39 locks. This impurtant work was begin in 1768 , but was not linally completed till 1790 . It has been as profitablie to the shareloders as it is advantageons to the public. The Union canal joins the Forth and Clyile canal, near Falkirk, nul stretches thence to Fidinhurgh, heing abomt $31 \frac{1}{2} \mathrm{~m}$. in leugth. It was completed in $1 \times 22$, but has been, in all respects, a must unprotitable modertaking. It lans latterly been sold nt a heavy loss to the Edinlurgh anil Glasgow railway company, who employ it in the conveymee of coal amb other heary articles.
There are other camals in the vieinity of Glasfrow; the Crinam canal stretches aeroms the Mull ot Cantire, and there is also a camal in. Aberleenshire. But the grentest work of this class in Sicotland is the Caledonian canal. It stretehes quite across the island. through the centre of the Ilighlames, NE. and SW., from the Beauly Prith on the E., coast to Loed Limhe on the W. It is chietly formed by the chain of lakes, inelading Lueh Ness, Loch Oich, and Loch Loclay, which
owerpy the bottom of the remarkalite glen or depression through which it la carried. Ite fumb lengeth, inelouling the lukes, is bex m. ; lint the artiflefal or excavatent purt is mily 215 m . At the summit it is maly !ifita ame the level of the W. Geean. It is mintly conviructeal man a very grand meale, lexing intcindell to ln 20 tt . depp, sit ft. wite at bettom, and leg ft. at top; the linher
 mud had it heen wholly excentell na was originnily int ended, frigates of ib ynus, mal merehmit ship,

 tirely at the expringe of govemment, from the
 Telford, emy. The entire cont exceeded a millions sterling. 'lite amonit of tomage rates recejem frum resels mavigating the Caledonian cumal was
 in the year ended Ist May, INifi; showime un intcremse during the later pertion of $1 \overline{1}$. The number of pasemges made on the camal in the yar onled lnt May, ixtil, was 1, ,iaif, of which bits were thromgh pansages from mast to west, :atio were throhgh paswiges west to cast, 129 were paysages on parts of the camal, and lige were pmsnages ly ntermers. The mumber of pansoges in the year cudel Int May; INtia, was $1,8 \times 1$, if which absio were through pusages from vald to west, abs were through pasagres from west to cast, 115 were passages oul jurts of the cimal, mal 5015 were puswages ly steamers.

Comstitution.-The comstitution of Scothmal has bepm, from the earliest times, what is callew a limited monarchy. Oriqimally the parliament, ur great comeneil of the mation, comsisted of the king, the barons, mal the prineipal ecelesianties, lurgesses, or representatives for the town, were allmitted into the scoteh parlimment hy liohers. Bruce, in 1326; and in 1227 the lesser liarous or frecholders in the different comitios were andurriseld to semil repreventatives ; bat sal little was this privilgre valued, that it was lardly exereised for hiol yoars, or till the reign of James VI., when the frediohders were compelhel to semd representatives. Scothud, however, derived little or no benelit from her parliament. The nobility, or kreater miroms, and clergy sat and voted in the sume chamber with the representatives of the lesser harons nad of the towns; so that, even if the litter hat leen mare powirliul nad independent than they were, they eomblate mate no effectmal opposition to any measure patronised ly the nobles mul clergy. In point of finct, however, the representatives of the comities were mere mominees of the great lords; and the towns having neither wealih, poulation, nor importanee, their representatives were necessarily as impotent as themselves. The mobility and elotry were, in truth, for a lengthened periowl everything, and the people nothing.
Even hall it been, in other respects, better constituted, the institution of the lorils of the articles would lave rendered the parliament of Scotlaml gool for nothing as a check on the sovereign. This was a committee, consisting of a few members, chosen either directly or indirectly by the crown, to which all matters to be bromght hefore parliament had, in the first instance, to be releirred; and which had power to rejeet such as it disappreved of, and to modily and alter the others in ally way it thought propier. The committee had, therefore, a negative before debate; and the whole daty of parliament was contined to meeting fir a day or two at the end of the session, to confirm the procectings of the lorls of the articles. This system exphains the preponderating inthence

possessed by the novercigns in the Scoteh parlinments : and hal their ability to carry laws into affect been, in may rempect, equal to the lacility with which they could get them passed, the kings of Scothand would have been the mont, instemi of the least, prowerfin of birrouean prineen. The committee of the lords of the arlicles was supre pressed at the Revolation. IBit owing to the fefects in the morle of choosing representatives, the constitution of parliument was mat little improved by its nappresalon; and down to the passfuge of the Reform Aet, in 1832, Neothand had the shalow merely, withont the substance, of a representative govarmment.

Arcording to the articles of union in 1707, the perage of heothod is represented in the llonse of lards of the United Kingilom by It peers, chosen by the whole booly of seotel peors at the comniencement of each parlimment. It was then also arranged that the cos, of Scotland shomith be represented in tho II. of C. by 30, and the bors. by 1. mems. This arragement was conthuned till is: $: 2$, when the borongli representation received nn aditition of 8 mems, the mems. for the cos, contimuing as before.
Courts of Lans.-'The court of session, which was constituted by an act of the seottish parliament in Ibilf, is the highest eivil court of seotlaml, havimg jurisdiction in all civil questioms of whatever mature. It was intemed to nimply the place of the previonsly existing courts, and more expecially of a juclicial committoe of parliament called the ' lords of session,' whence the name of the coort and the titles of the judges. Origimally it consisted ol neven laymen and eight churehmen, incluling the president. In 1640, however, nu ate was passed, providing fur the exclusion of churchmen from the conrt : mud, though repealed in $16 i b$, the principle laid lown in it has ever since been neted inni. Other important improvements were intronheed at different periods, partientarly after the revolution, when the right of appeal from the court to parlianent was, for the tirst time recugnised. At the mion, bower was given to all individuals who considered themselves uggrieved ly julpments of the court of session to njpeal to the II. of Loris; and, fior a lengthened perioxl, the principal judieind business of the II. of Lords comsisted in hearing and deciting ticoteh nppeals. ( Irigimally, and down to 180 x , the whole fifteen jumpes sat together in ome court; fut in that yor int act was jassed dividing the court into two chumbers, the lord president presiding in the first division of seven judges, and the lord justiceclerk in the second, of six; the two remaning judpes trying cases in the tirst instance, or, as it is technically termed, sitting as lords-ordinary. Since then the number of julges has been reduced to thirteen; four belonging to each of the divisions, and tive acting as lords-ordinary, or sitting as single judges. The julgen were at dirst chosen by the Seoteh parliament; but since 1504 they have been appointed by the crown. They are indifferenty styled loris of session, or senators of the college of justice, which last embraces the whole body of barristers (advoeates), and attorneys or solicitors who practise before the court. Thiey must be twenty-five years of oge; and, by the treaty of union. no person can be mamed to the oflice unless he have served as an advocate or priucipal clerk of session for tive years, or as a writer to the siguet for ten. The salaries of the ordinary judges have been raised to 3,000\%. a yrar each; those of the lord justice-elerk and lord president being, resucetively, $4,000 \%$ anl 4 ,inow.

At its outset the conrt of session was intended to scrve as a stauding or perpetual jury for the
trial of cases; the introlnction of ${ }^{\text {metty }}$ juries into the triad of cisil cases in seothand being only of very recent date, as well ins of limited ngplient lon. It was. in fret, luknown till istis, when a spocial or jury court was instituted, for the trial of enses itholving questions as to the value of property, the amonist of damages, or the retermbination of
 and the conirt of nession now avails itself of the manistance of petty juries.

The high court of justieiary was remodellon, and placed nearly on its presenit footing, in l6is. It consists of the joulges of the court of mession, specially comminaioned by the movereign, together with the justice-genernl nud justice-clerk; the former, or, in his nhwence, the later, being president. In 18:S6, the ollice ol lord juatice-general Was comjoined with that of lord president of the: conrt of session. 'The jurisiliction of this court extends to all eriminal cases, exeept those of high treason, whicla are tried by a special commission, in the Euglish form, on the finding of a groud jury, which is not nsed in other cases in Scothnel. The judkments of the conrt of justiciary are limal, no appeal lying from them to the II. of Larids. Círcult or assize courts are held twice a year, by the juiges of this eonrt, in the principal towns if scot land, two juchere nsmally foilig on eneh cirenit; and an meditional cirenit-court is helel at Giangow dirbing the Christmas lalialays. The circuitconrts have gowar to decide in nipuents from inferior courta, where the subject ill dixpute does not exceed ajo. Citses bromght beliore the jus ticiary courtsare tried by petty furjes of io persons, who decide by a plarility of votes, not beink eompelled, as in England, to give manimons verdiets. It is not quing too far to say, that, down to a very recent period, this was, in as fiar as re--prects politienl cases, one of the most corrupt mul worthless tribmals in Einrope. Owing to the mode in which juries were nelected, it was nlwass in the power of the lord advocate, or publice prosecutor, to get a jury appointed finvourable to his own views; and the judges, laving ben apoointed by the crown, and looking to it, most probably, for farther advancement for themselves or their familien, were, witl few exeeptions, ohserguints tools. Hence, in scothand, to be prosecuted for a political oflencewas, for a lengthened period, nearly equivalent to being condemmed. Fortumately however, this disgraceful state of things has been thoroughly reformed. Juries in Scotland are now fairly selected; the accused has the same right of peremptory challenge as in linghand; so that, however disposed, the judges ean no honger dictate vordiets. The old court of exehequer, comanission of teinds, admiralty and consistory courts, are now merged in the court of session.

The number of criminal ollenders committed for trial, comvicted, and aequitted, was as follows for the fourteen years, 1851-6.4:-

| Ycars | Committed | Convieted | Aequilted |
| :---: | :---: | :---: | :---: |
| 1851 | 4,00t | 3,070 | 1,907 |
| 1852 | 4,1127 | 3,048 | 97. |
| 185:3 | 8.756 | 2,821 | 907 |
| 1854 | 3,994 | 2,949 | 979 |
| 15.55 | 3,630 | 2,689 | 902 |
| 18.56 | 3,713 | 2,723 | 981 |
| 1857 | 3,844 | 2,920 | 898 |
| 18:8 | 8,782 | 2, 2 , 0 | 891 |
| 18:9 | 3,472 | 2,is9 | sis) |

| 1562 | 8,6:30 | 2,702 | 92.8 |
| tsti: | :1,40.4 | 2,4:1 | 9.5:3 |
| 186.1 | 3,212 | 2,379 | $88: 3$ |

The inferior courts of law are those of the horoughs, justices of the peace, and sheriffs. The tirst are called 'bailie' courts, from being presided over by a bailie or alderman, with, in some cases, the assistance of a legnl assessor. Their civil jurisdiction within the borough depends on circumstances, being sometimes nearly equivalent to that of sheriffs in cos, ; but their crimimal jurisdiction extends only to petty riots and common police offences. 'The justices of peace decide withont appeal in actions where the demand does not exceal 51 . besides costs. 'They commit eriminals and loold petty sessions, at which two are a fuorum, and quarter sessions; but have in no instance the power of transportation.
'The sherill' courts are very important, and transatt most part of the cominty business, Each co. has a principal sheriff, called a sheritt-ifopute, from his being deputed or appointed by the crown; who, in adelition to duties similar to those devolving upon English sheriths, has a very extensive civil jurisdiction. IIe liold olhee ad vitam aut culpem, his salary varying from 300l, to 8000 , n year, according to the supposed onerousness of his thaties. In the cos, of Vdinburgh and Lanark, the residence of the sheriff-depute is entoreal; hat in the other cos. he is rarely resident, his presence not being necessary, excepit on particular oceasions. Sherift-deputies are, in fact, usually pratisitg lawyers in Edinhurgh, and the ordinary business of the er. is devolved on the sheritfsubistitutes, or depmies of the principal, who are always resident. la extensive cos, there ar, usually several sherill-substitutes, 'This very usefill elins of judges must be chosen from advocates, writers to the signet, solicitors of the supreme courts, or solicitors of three years' standing before a sheriff court; and, though nominated by the sheriff-depute, they camot be displaced without the concurrence of the lord president and lord justice-clerk. At present their salaries, which were raised in 1810, vary from 300\%, to 5501. a year, exelusive of fees. The sheriff, or his substitute, hold small debt-courts for the decision of questions of debt and costs to the amount of $81 . \operatorname{bs}$. 8d., in which the pleadings are all viva voce, the expense small, not exceeding 2s. 6if. or 3s., and the judgment final. Lu his ordinary eourts, howerer, the anthority of which extemils to all personal actions without limit of nmonat, the pleadings are mostly in writing. Until a comparatively late period the sheriff exercised a criminal jurisdiction, extending in some cases to capital pmoishment; but lis powers in this respect are now greatly abridged. He still occasionally tries criminal eases with a jury, but the sentence may be appealed from to the court of justiciary. No sentence, except for petty offences, involving tine, imprisonment, or, at most, banishment from the country or borough, can be prononnced by any legal duthority in Scotland without a jury ; nor can any person be imprisoned for any debt inder 81. 6s. 8d.

IRchigious Estahlishments.-The Roman Catholic religion and the jurisalietion of the pope were aborished in Seothand in 1560; a confession of taith, on Calvinistic principles, drawn up by the celebrated dohn knox, was then also ngreed to, and the l'rotestant religion was established by an ate of the legislature. Kinox, having studied maier Calvin at fienera, introlnced the tienevese or Preslyyterian form of church government ; but, thongh organised, it did not receive the sanction of the legislature thll 169\%. Atter the accession of James V'1, to the throne of Bugland, he endeavomred. notwithstanding the strenuons opposition of the great bulk of the mation, to re-establish
episcopacy; and a struggle was carried on between the abettors of episeopuey and preshytery, who alternately prevailed, necording as the court ur popular party harpened to have the ascendaney, till the Revolution, when presbytery was detinitively established.
Some, however, of the parishes are collegiate, or have two elergymen; aud latterly some of the more extensive parishes have been divided, and assistant, or quoad sarra, ministers have been aj-pointed to them. These are called quoued sacra, "r quod spiritualia, ministers becanse they are not entitled to participate in the civil endowments belonging to the parisl, and are wholly supported by $n$ sum granted mumally by the sovereign. T'liese quoad sacra clergymen were admitted, by an act of the General Assembly of 1833, members of presbyteries and other chureh courts. Bat this act was afterwards found to be illegal by a judgment of the House of Lords.

At present, and since the reign of Queen Anne (1712), the privilege of appointing clergymen to parishes has been vested in the crown or in privite patrons, with the proviso that they mist be selected from among those who have gone throngh the course of study preseribed by the chureh, and been examined and licensed as preachers by a presbytery. The right. of patronage has long, however, been exceedingly mpopular. Its enforcement, in despite of public opinion, occawioned the great secession from the church in 1741 ; and latterly it has become more nnpopular than ever. The General Assembly, by a measure, ealled the veto act, passed in I8 34 , gave the congregations belonging to pars, a right to reject a presentee, if he were not aeceptable to them: but (unfortunately, as we think) it was decidel first by the court of session, and subsequently by the II. of Lords ( 3 May, 1839), that the Generil Assembly had no power to pass the veto aet, and that all proceedings under it were mull and void. 'This decision was not, however, submitted to by the majority of the assembly, by whom it was regarded as an usurpation upon their rights; and no legislative measure having been proposed calenlated to allay the public irritation, or to mitigate the extreme exercise of the right of patronage, the leaders of the dominant party in the assembly determined to secede from the chureh. Accoriingly, on the first day (18 May) of the meeting of the General Assembly of 1843 , the ministers and clders, nembers of that body, opposed to the right of patronage and in favour of the veto, gave in a protest, stating among other things, that 'the courts of the chureh as now established, and members thercof, are linble to be coerced by the rivil courts in the exercise of their spiritual functions; and in particular in their admission to the office of the holy ministry, and the constitution of the pastoral relation; and that they are subject to be eompelled to intrude ministers on reclaiming congregations in opposition to the fumdamentat principles of the chureli and their views of the word of God, and to the liberties of Christ's people.' And this protest having been real, the protesters withdrew to a separate place of meeting, and constituted themselves, and such as might afterwards adhere to them, into a body to be dsnominated the limes Cifunch of Scotiand, The protest was signed by 125 ministers and 77 elders. hut, within a few weeks, no lewer than 470 clergy:man seeded from the establishment, and joined the Free Church. Of these, 273 were parish elergymen, being nearly a third part of the total number of those belonging to the establishment. The rest were quod st ninisters. And whatever may be the thought of its wisdom, this pro-

The 77 elders. 70 clergyand joined cre parish the total hlishmeut. And what. , this pro-
ceeding sets in a striking light the sincerity and zeal by which the secelers were animaterl. 'The voluntary abandonment by so many individuals of their homes and ineomes, rather than hold them by compromising what they believe to be a fundainental prineiple, retlects the highest credit on the Scottish church and character.
The proportion of the members of the varions religious denominations in Scotland may be juched from the returns of marriages. In the year $1 \times 163$, there were altogether 21,201 marriages celebrated in seotland, of which number 9,769 were contracted accoriling to the rites of the Established Chureh; t, xtil aecoriling to those of the Free Chureh; 2,936 according to those of the United J'resbyterian Chureh; 1, wow according to those of the Koman Catholie Church; 378 aceorting to those of the lipiseopalian Church; and the rest aceording to the rites of the smaller religions alenominadions. 'To jutge from these returns, it would appear that 46 per cent, of the popmation of sicotlam are attached to the listablished Chureh; 23 per cent. to the Free Chureh; nearly 14 per eent. to the United 1'resbyterian Churchi 8t per eent. to the Roman Catholic Chureh ; little more than $1 \frac{1}{2}$ per cent, to the Episeonal Church; and is per cent. to all other demminations.
A preshytery eonsists of the clergymen of an indefinite momber of eontiguous parishes, and of an chter from each kirk session. It has cognismee of all ecelesiastical matters within its limits, examines, lieconses, or rejects preachers or camdidates for the ministry, and resiews the decisions of kirk sossions. Originally preshyteries met every week, but now, in general, only once a month. Appeal may be made from their ceeisions to the symods.
A synod consists of the clergymen of an indefinite number of contiguous preshyteries, with an elder from each of the dillerent kirk sessions. This court, which ustually meets twice a year, reviews the decisions of presbyteries; but its own deeisions may be reviewed by the General Assembly, the highest ecelesiastical anthority in the kingdom. Subjoined is a statement, exhibiting an account of the number of synods, preslyteries, parishes, and elergymen, belonging to the Church of Seothand.

The Seoteh Clureh is a perfect demoeracy, all the members being equal, none of them having any power or pre-eminence of any kind over another. There is in each parish a parochial tribumal, called a kirk session, consisting of the manister, who is alwas resident, and of a greater or smaller momber of individunls, of whom, however, there mast always be two selected as elders.

The principal disty of the latter is to superintent the affairs of the poor, and to assist in visiting the sick. The session interteres in certain eases of seandal, calls parties before it, and intlicts erechesiastical peulties. Inut parties who consider themselves aggrieved may appeal from the decisions of the kirk session to the presbytery in which it is situated, the next highest tribunal in the chureh.
The (Generala Asseminey, which consists partly of clerical and partly of lay members, chosen by the dilferent parishes, boroughs, and universities, comprises 386 mems, as follows:-
Elghty Presbyteries send, ministers

The General Assembly meets ammally in May, and sits for 10 days; but it has power to apmiat, a commission, with powers efual to its own, to take up and consiler any matters it may have left molecided. The assembly is honoured during its siltings with the presense of a nolleman, the representative of the sovercign, with the title of lorl hith commissioner. He is merely, however, a state appendage, and canmot interfere in : 11 y way with its proceedings. All matters hrought belore the assembly are decided, after debate, hy a vote. Party sometimes roms as high in the assembly as in the 11. of C., and the diseussions are frepuently as acrimonions and as eloquent.

The stipends of the Seotch elergy are principally derived from the wreek of the tithes and other property that belonged to the Rom. Cath. chureh, which was primeipally seized upon at the licformation by the nobility and gentry, The court of session, as eommissinners of tiends (tithes), have power from time to time to angment, as they may think fit, the livings of suche clergimen as may not he already in the receipt of the whole alisposable tithes of their respective parishes. But in many barishes the tithes have been wholly taken up or exhansted; and in 1812 an act was passed to raise, at the public expense, the incomes of such clergymen as harl less than 150l. a year, exelusive of plebes amb homses, to that sum, At this mur ment, the average income of the clergy of the Clurch of Scotland, exelusive of the ministers of quoud sacra parishes, amounts to about 2001. a year, over and above their glebes and houses, the awerage vatue of which may be estimated at about 301. a year.

The dissenters from the chureh, exchusive of the allherents of the Free Kirk, consist principally of the members of the United I'rasbyterian Synot, the Reformed I'reshyterian Chureli, and the Congregationalists. The first great secession tonk place in 1741, in consequence, as already stated, of the enforcement of the law of patromge. There are some other bolies of dissenters; and of late years, owing to the influx of lrish into the westarn cos, the Roman Catholics have received a great acerssion of numbers.

Historical Sketch.-The early history of Seotland is at once obscure and minteresting. The comatry was long one of the most barbarons in Enrome; and though Kemueth II. (ammo $8: 3 \kappa$ ) is said to have umited the extensive territorics from the 'Iyne N. to the l'entland Frith into one kingrlon, it is abmulantly certain that variots
extensive districts wero in great mersure independent of the crown for several centuries after that perion. In consequence of their carly holding Northmmberland, Comberland, and other hands in England, the kings of Scotland were accustomed to upear in the linglisle court to perform homage for these possessions; in the same way as the English monarelis were themselves accustomed to perform homage to the kings of liance for Normandy and the other provinees held by them in that kingdom. (Stnart's Public Law of Scotland, mote viii.) On the extinction of the direct line of the Seotti, h kings in 1290, by the death of Margaret of Norway, dolm Baliol and liobert Bruce, descendants of the Scottish king Davidl., appeared as competitors for the crown. The pretensions of both were supported by powerfil parties; and, to avoid a civil war, it was agreed to refer the matter to the amicable decision of Edward 1., king of Engtand. This able and politie prince avaled himself of the opportunity to advance the jrineiple, for which the homage that had been performed by the Scoteh princes for their linglisli possessions afforded a colourable pretext, that the kings of England were the paramonnt sovereigns or liege lorils of Scotland, and that the competitors for the crown should do homage to him as such. This was consented to; and Delwaral, tinding Baliol most snitable to his views, decided in his favour. The latter, howerer, being less sulservient than was expected, was sperdily set aside by Edward, who attempted to seize the kinglom on pretence of its having escheated to him throngh the rebellion of his vassal.

The nation, however, was not to be so transferreal. Sir Willian Wallace raised the standaral of independence; and, in the sequel, the famons Liohert bruce, grandson of the competitor of Baliol, appeared in the tield; and after mparalleled exertions, contimed through a series of years, the great victory of lammockburn ( $131+1$ ) secured the independence of Scotland, and established the eonqueror and his family on the throne.
The only daughter of Robert Bruce having married the lord high stewarl, Robert, the issue of that marriage, and the first of the family of Stuart who arrivel at the roval dignity, suceceded to the crown on the death of Javid 11., in 1371. lirom this period, the history of Scothand is comparatively well known; and the continned and extriordinary ill-fortune that attended the lengthened series of princes of the house of stuart, has vested it with more than ordinary interest.
The prineiples of the reformers were early introduced into sootland, and were eagerly adepted liy the great bulk of the nobility and people. The I'rotestant religion obtained the ascendancy in 15tio, shortly before the return of the beantilul but ill-fited Queen Nary from France, where she had been sent to he educated. At this period the royal anthority was at a very low ebb; the most volent contentions prevailed amongst the nobility'; and it wonld have required a sovereign of no ordinary ability and energy of character to conduet the govermment under such diticult eiteumstances. We need not, therefore, be surprised at the failure of Mary, who, thongh not withont good talents, was wholly inexperienced, at the sane time that she had the misfortune to have been strongly imbued with anti-l'rotestant prejulices, and that the violence of her passions made her sacritice her own reputation and imocence, and the well being of the kinglom, to their gratitication. Llavins been deposed in 150ti, Mary was suceceted by ber son, James Vl., then a minor. The latter succeeded, on the domise of t Qucen Viazabeth, in 160:3, to the crown of England, when the two British
kingiloms were happily united under one sovereisn.
lirom the accession of the hotise of Stuart to, the union of the crowns, a period of ahont $2:+1$ years, Scotland, sucaking gencrally, was in a most unsettled, turhulent state. The fendal nystem had been early intronued into the conntry; and the great estates and inthence enjoyed hy sevoral of the nobles enabled them to rival the sovereign in bower and importance, and sometines to despise his orders and insult his person. Jin France, lingland, and other commtries, the sovercigns. by enfranchising the inhabitants of the great towns, and attaching them to their interests, sueceded, thromgh their assistance, after a lengthened struggle, in abating the pride and independence of the barons, and reducing them to obedience. But the kinges of Scothand had no such support on which to fall back: there was not, in faet, a sinele great town in the kinglom; and they had nothing to trust to but the supplies of men and money they conld draw from the crown estates, and from the contributions of such of their vassals as happened to be at the time in their interest, or whom they could coerce. In consequence of these and other concurring eauses, the power of the Souttish kings was eircumseribed within the narrowest limits; the eivil broils in which they were almost always engaged were, in most instances, fomentorl and abetted by the govermment of Eingland; and, a lew short intervats excepted, the comotry was involved in continuous antrehy and conlinsion.

The union of the crowns, in 1fioj;, introlued a great elange for the better into the state of domestic aftimes in scothand, The barms could no longer look to bugland for open or underiamil suphort in their contests with their sovereisns: while, at the same time, the power of the latter was vastly increased by their being able to emplay the resources of a much more civilised, populous. and powerfill monarchy in their disputes with their ancient subjects. llence, though scothmel habured muder numerons grievances, resulting principally Irom the mreasomable hostility of the sovereigns to the Presbyterian form of church government, to which the people were enthusiastically attached, she gained prodigionsly in tranquillity and good order subsequently to $16 t h$.

The mion wi the kingdoms, in 1707, was, as it were, the acessary result and completion of the union of the crowns. Thongh excessively nupopular at the time, and opposed by many of the hest scoteh patriots, it has been of vast advantare to Scotland, as well as to the empire generally. The consequences of the rebellion of 1745 were also advantageons, notwithstanding the unnecessary eruelty exhibited in its suppression. It extinguished for ever the long-cherished hopes of the Jacolites, and it stimulated govermment 10 take ellectual measures for ahating the barbarism that prevailed in the Highlands, and for the introduction of a more edficient administration of justice into all pharts of the conntry.
SCDTARI (an. Chysopolis), a town of Asiatic 'inkey, beng however, in thet, a suburb of Constantinople, opposite the latter, on the wther side of the chamel of Constantinopie, on the Ditlynian shore, about $\left\{\frac{1}{2} \mathrm{~m}\right.$. W. Serarlio Point. ]'m. estimated at 24,600 in 1862 . The tuwn is built on the declivity of several hills, and has a vers pieturesque appearate from the copposite shores: its interior is similar th that of the 'harkish eapital, and it is built in the same style. A patace of the sultan, with extansive gardens, barrack cunstrueted by the bate Sultan Malmonil, soverai handsome mosifuria, a noted eollege of howling dervishes, several large cemeteries, with pablic
haths and hazaars, are the principal edifices and public establishments. It is a rendez rons for the merchants and earavans firom Armenian and l'ersia tradiur to Comstantinople, anm is the first station for the assembling of the 'Turkish troops in Asin.
Scutari is very ancient, and is said to owe its an, name of Chirysopolis to the circumstance of the treasmry of the Persians having been estabished in it when they attempted the conquest of Girece. Its vicinity was memornble from the decisive victory oltained by Constantine the Great over his rival Iicinins.

Sourame, a fortitied town of Europenn Turkey, and the cap, of a pachalic in Albania, S. of the lake Sentaro (an, Labeatis I'alas), at the comfluence ol the Dojana and Drimssi, nbout 16 m . from the embonchare of the former in the Gulf of Prino, in the Mriatice, 45 m . Slis. Cattaro. l'op. estimatel at 20,000. It has a pretty strong eitndel, on an isolated rock; with varions mosipues and (ireek and Bom . Gith, churehes. It wtands th unewon gromal, and is buitt in a very st rageling manner. A rather adive trade in timber is carried an heressels which ascend the Bojano to the lake: tho inhahs, also mannfacture cotton fabries and arms, and buik small vessols, Sentari is supposeld to weduy the site of the an. Scodru, the eap. of the lly rian king Gemtins, ant which sulseepuently atpars to have become a lioman eolony. It is still a place of imporfame.
Sil'lid. and CHIDlirlsDIS: the former a famons rock and town of S . Jialy, at the X . entrance to the narrow strait sepmating lany from Sicily; and the latter an equally famons whirlpool in the strait near the Sicilimen eonst. serpla is a bold rocky headland, abont 20 of ft . in height, projecting into the sad, and hollowed at the base into catwerns by the action of the waves. It is surmomeded by a casthe, in lat. $38^{\circ} 14^{\prime} 15^{\prime \prime}$ N.. lome. $15^{\circ}$ d.t' E. There is a sandy hay meneh side the rock: am the town of seylia, binilt prineipally on the stecp acelivities of the ridse, atretehes down to the shore on wither side. It has . Whout 5,000 inhalis expert fishemen, seamen, and divers.

This little town suffered tremendonsly from the earthquake that devastated Cahabria in 1783. A large portion of the imbabo, with the prince at their head, fled to the beach, believing it to to least exposod to damger. But they had not been long there when an aljoining elift foll into the men; and the waves, driven back by its fall, rushed forward again with such tremendous fury as to rise high mon the shore, sweeping along with them in their recoil 2,475 persons, not one of whom exceped alive.
The rock of Seylla is $6,0.17$ English yards, or nearly $3 \frac{1}{2} \mathrm{~m}$. from the opposite point of Faro, at the Xid extremity of sicily. The whirlpool of (haryblis is not, however, opposite to seyla, but within the strait ontside the tongue of land enchosing the harhomr of Messina. From its prominent position at the month of the straits, Scylla is exposed to the full action of the current, the sa making a loud moise on the caverus it las hollowed in the roek, whieh, of course, is mach incrased in storms. Charybulis seems to be firmed by the main current passing throngh the stats from the N. being thrown over to the Similim shore ly the point of D'ezo, and meeting the lateral current running in an opposite direction It is from 711 to ! 6 fathoms deep, circling in quick vollis. But, notwithstanding the action of the (ontrary currents, and the formilable appearane "I' Harybutis, there is no lomger any real danger in mavisating the strats, provit the cantion be exereised. Althomgh, however, it a fuite obvions
that IIomer, in depicting the terrific dangers eneumatered by Vlysses in this fumous strint (see Dopu's (olysisey, lih, xsi. lin. 大it), has made a very liberal use of the liceme allowed to a paet, still it is abundantly certain that it must have been much more dangerous in antiquity than at present. It was a generally reacival opinion among the ancients, that Italy and Sieily ware onee mited, and that they had been torn asmuder hy some great convalsion of mature. I liny says, - Siciliu, quomhtm Bruttio rupro colucrens, mose interfotso mari acolsa.' (Lib, iii. cal). 8; see also Silius Italicus, lib. xiv. lin. 2; Virgil.) IBut whether this were so or not, it is plain that the action of the emrent for a periond of more than 8,060 years mast have materially widened and deepened the strat, and worn down those rocky prominences that remeder sueh narrov channels beenliarly dangerous. The contiguration of the strait lais also, to dombt, beril materially altered in the interval hy the earthquakess so prevalent in this rexion; so that we are be no means contithed to ancribe the statements of the andiouts, in ra gatel to its dangers, solely to their ighoramee of navigation or their love of the marvellons.

Vessels in passinge through the strats, in order to avoid eoming within the vortex of Charyblis, sometimes rua पum siollit, which gave rise to the famons proverhial expresion-6 Incidit in screllom rompinss vitare (haryblims; apmlicable to those who, to aroid a less, rim into a greater chuger.

SbBASTIAN (N'L), a fortitied trontior rity aml sea-port of Shain, cap. prov. (iuipuscon, in liseav, at the extremity of a low sumbly tompe of land progecting into the Bay of Biseny, 10 m . W. hy s. Fucnterrabia, and dil m, ENE, lifhan, Pop. 6, $) 17$ in Jxita. St. Nebastian having been in a great measure rebuilt since 1818 , it is now one of the meatest and most regularly construeted towns in the peninsula, presenting a favourable eont rast to most other Shamish eities. It is dofonded on the E. and IV. ly strong walls, washed by the sea ; on the N. by the castle of Mota, on Jiomat
 and on the $S$, it is shat off hy atvinced military works, and hy the little river limmen, from its sulmub of st. Catherine. The castle is wetl supplied with water, and is a fortress quite independent of the city, with which it commmacates hy two routes, lioth defenteal by varions batteries St. Selastian has some hambome squares, several churehes and convents, and a civil and military loojpital; its strects are clean, and it is abmindantly supplied with water, thomel not of the best quality. The l rumea is crossed by a stone bridere of $x$ arehes. 'Though secure, and well defented, the harbour is dhthentt of entramer ; it is formed by a mole, and is of small si\%e. St. Sehastian has always been a plate of eonsiderable trade, and was the seat of the l'hiliphine Company. It is the port whence D'impeluna, Vittoria, and lagrono obtain most part of their supplies of colonial and other foreign grouls : mol at which the ervater part of the lrench and linglish manufactures aldestined for Matril, and other towns in the interior, ard imported. Its exports are chiefly iron and wool. It had formerly some large cordage factories and tammeries, but these have mostly fillem into decav It is the residence of a military governor, 2 jus tires, and the seat of a sub-delegration of poliee ; a lottery departmont and a tribunal of eommerer. From its being one of the keys of span, its possession has always been an objeet of great importance in the contests between the Fromel and Spaniards. The former took it in J7l! $17: 91$, mul tros; and hede it from the last-memtomed epoch till 1818 , when it was taken by the british forees
under Sir Thomas Graham, now Lord Lynedoch. The latter were repulsed in their first attempt to carry it by storm in July; but they succeeded, thongh not withont an enormons loss, in the secomp assault on the 31st of Nugust. A tire laving broken ont in the town during the assandt, it was all bitt destroyed.

SEIDAN, a fortitied town of France, on its NE. frontier, dép. Ardennes, cap. arrond., on the Meuse, $12 \frac{1}{2} \mathrm{~m}$. ESE. Mezieres. Pop. 15,536 in $1 \times 61$. Thongly an important frontier town, its works, some of which were eonstrueted by Vanban, have latterly been neglected; and its citadel, at its sid. extremity, has been converted into an arsenal. The town stands on very meven gromad, and is separated into two mequal parts by the Mense, here crossed by a stone bridge. It is well built; the streets, which are wide and clean, are ornamented with mumerons fommtans; the louses are mostly of stone, roofed with slate, and in the environs are varions publie waiks. Sedan has excellent cavalry and other barracks a military lospital for 500 patients; other military establishlments; a Calsimst, and several Rom. Catholic churclies, a public library, commanal college, and a hambome theatre. It is the seat of a tribumal of primary jurisdiction amd a chamber of mamufactures.

Sedan has been long celchrated for its woollen manufactures, consisting prineipally of tine black cloths and cassimeres. On an average, from 11,000 to 12.000 workjeople are employed in the woollen mandactures of the town and its vicinity, of whom from 3,000 to 4,000 belong to the town; from 2,000 to 2,500 belonging to the neighbouring villages, gro to work daily within the town; and the remainder, consisting prineipally of weavers, inhabit the country for a distance of from three to four leagnes round. The last, who also oceupy small patches of land, work at the loom in their own cottages; whereas those who live in and near the town are most ly employed in large mannfaeturing establishments. The greatest harmony suhsists between the workpeople and the mannfacturers. Instruction is much more extensively diflused amoner the workpeople than at linems, and, speaking generally, they have all the sigus of good health; cireumstances chietly consequent on the non-introduction of clildren into the faetories at too early an age. Hosiery, leather, arms, and hariware are also produced at Sedan; and it has mumerous dyeing-houses, with an extensive trade in drugs.

Previously to the Revolution, Sedan was the cap. of a prineipality, which had often changed hands in the middle ages, but which was finally exelanged with Louis XIV. for some other fiefs by the Turenue family. One of the greatest of the French generals, the famous Masinal Toremne, was a native of this town, in the citadel of which he first saw the light on the 16th of September, 1611. His statuc, in bronze, omaments the principal square.
Sl:(iORlSE (an. Segobrigar), a city of Spain, cap, distr. of its own name in Valencia, near the 1;ilancia. 18 m . NW. Murviedro, Pop. 7,232 in 1857. The tuwn has several squares, numerous public and private fountains, a cithedral in which are some good paintings, several convents, a prison, workhouse, and other public editices. Its inhahitants are oceupied in the manulachure of stnreh, earthenware, and paper, the distillation of brandy, and the 'fuarrying marble in the vieinity. Two large fiars are ammally bod here. Vurious lioman autiquitiespave been lound within the city.

SEGOVIA (an. Secuvia), a city of Spain, Oll

Castile, cap, of the prov, of its own name, 48 m . NNW. Madrid, with whieh it is conneeted by rankay. lop, 10,839 in 185at. The city is huit on two hills and the intervoning valley, the mon-
evemess of the site giving it a wild lowk. Jlont evemess of the site givine it a wild lowk. Nont
of the strects are crooked and dirty, the honses also are ill-built, and chiefly of wood. 'The publio: buidings comprise 18 eliurehes, inehuling the cathedral, 5 hospitals, a mint, a college for eadets in the old castle or Aleazar, and military harracks. The eathedral, one of the handsomest chureless in Spain, has a tower 330 ft . high, and exhilits a mixture of the Gothic and Arabian styles, nearly resembling that in the ereat church atsalamanea. The interior is characterised ly a simplicity rarely seen in Spanish ehurehes, the efleet of which is intinitely superior to that of the gildings and omaments elsewhere observable. The Aleazar is in great preservation, oecupying a commandins situation on a rock rising above the open combry: Towards the town is a latge court before the greit outward tower, furmerly used as a prison, but now as a collegre of cadets. The rest of the buildings form an antique palace, once the favourite reridence of Ferdinand and lathella: it eomprives several magnificent halls, with gilt ceilinss, and atong the cornice of the grand saluon are tifty-two wooden statues of the kings of Spain senterl in state. The military college was remodelled on the formation of the present constitution, and the instruction given by the professors embraces mosis hramehes of knowledge comected with military science.

The great crlory of Scrovia is its aqueduct, supposed to have been built in the time of 'rajan, and certainl! one of the mosit perfoet specimens of Roman architecture in Shain. It is not muly an admirable monmment for its solidity and groil masonry, which have withstood the violence of barbarians and the inclemencies of the seasoms during so many ases, but is wonderfully heantiful and light in its design. It consists of 101 arches. in two rames, that nearest the gromul comprising 118, ó which 43 are surmounted by an equal number of others: the whole is built of square stones, without mortar, and at the top is a chamel, one hollow, hat now filled up, mily 8 it. wide, and withont a parapet. The total length of the aqueduct is $\overline{750}$ yards, and its heightit in crossing the valley (mensured close to the Plasa del Azoguejo, where two of the arehes cross the street) is estimated at 102 ft .

The mint of Sequvia, the most ancient in Spain, is situated at the bottom of the city, on the small river liresma, the water of whieh turns its machinery: for many years, however, its operations have been confined to the coinge of maravedis. quartos, and other eopper pieces. Segovia is said to be a decayed city, and most books on simin contain acconits ol the former thourishing state of its woollen manufactures; lout these acconits are very greatly exaggerited, and, when most flourishing, the number of looms in sergovin dill mot exceed 300 (?nestimes Criticas, 1. 37), which. perhaps, is about their present number. It also producos paper, earthenware, and grass. A fair held here in June is much frequented. In the neiphbourhosel are mines of lead and copper, as well as quarries of black marble.

The early histury of Segovia is somewhat ohseure; hut, like most other cities of Castile, it belonged sucerssively toihe fomans, doths, and Moors, from the hast of whom it was taken at the begiming of the lith emtury. During the Peninsmlar var the fown was cecopied by the Freneh from 1sos to 18il.

SEINE, the smallest, but mos populous.

wealthy, and important dép. of France, being that in which the eapital is situated. It extemins hetween lat. $48^{\circ} 1: 3^{\prime}$ and $48^{\circ} 5 x^{\prime}$ N.. and long. $\because 010^{\prime}$ and $z^{\circ} 35^{\prime}$ E... being entirely surromuled by the dep. Seine-et-(tise. It is of a nearly circular shape, about 15 m . in diameter. Arei, $47,5.1 \mathrm{x}$ hertares. Pop, 1.953,ti60 in 18i60. The seine traverses this dip, in its centre, with a general direstion from NW, to NE, , nul receves the Marne within its limits. There are a few hills, but none of much elevation. Mont-Valerin loes not rise to liof ft, above the level of the Scine, and Montmarte is only 311 ft in height, The soil is chietly ralentons, this dip. forming the centre of the ramakable tertiary regrion called the l'aris hasin. (So l'ants and Fuswoe.) but the elalk is covered with a bed of vergetabla mould of eonsildrable thickness; and the mamure supplied hy the ralital rembers the depe very prowluetive. 'The arable lands are estimuled at 29.295 hectares:
 orchards aml gardens, 3, ,if: ditto. Corn is mot extensively mised, and the litlle that is produced is but indifferent. It furnishes very superior peaches and other froits, and there are mumerons market gardens for kitehen vegetables. $\Lambda$ good many cattle, and other live stock, are fattened for the l'aris markets, and there are some theks of superior sheep. The manufacturing industry dentres in l'aris.
sive (ant. Sequma), a river of Frames; aml though by no means the larerest, yet one of the most important in the kingrom, being that on which the capital is lmilt, It rises in the dejp. and mountain-chain of the Cote d'Or (hy which it is separated from the basin of the Lare), about lat, $47^{\circ} 30^{\prime} \mathrm{N} .$, longe, $5^{\circ} \mathrm{F}, \mathrm{F}^{2} 20 \mathrm{~m}$. NW, Jijon. It flows generally in a NW. direction, between the: hasins of the looire on the sW., and of the Meuse and somme on the NE., through the déps, "f Aube, Scinc-et-Marne, Seine-et-Cise, Seine, bure, and Scine lnferieure, to the British Channel, which it enters by a wide asstuary at lavere, about lat. $49^{\circ} 30^{\prime} \mathrm{N}$, and long. to $10^{\circ}$ E., nearly opposite Newhaven in Sussex. Its entire course, in consecpuence of its mumerous windings, is estimated at 500 m ., for nearly 3511 of which it is navigable. Its source is alont 1,420 ft, above the level of the sea. But more than three-fourths of its descent takies place within the first 100 m . of its course, for at Troves it is not more thm Hof ft, above the sea, and at l'aris its mean elevation above the later is only 51 ft , and at Ronen 26 ft . (Bruguiere, Orograpinic.) From its not rising in mountains of any great clevation, it is mither sulgeet to serions inmolations, nor has it a rapid current: and the later circumstance, together with its gentle rate of descent in the lower parts of its course, renders it highly sultable lor navigation. The chinef olstacles to its utility are the shifting samblhanks in its astuary, and somedsallows between Quillebenf and Romen, At laris the seine is from 300 to 5010 ft , in wilth, at its month it is 7 m . in width. It is here sulhjuet, at the return of every tide, to a phenomenom termed the barra, similar to the masearet in the lordogne, the bore in the Solway lirith and fialues. This consists of a wave of great magnitude, with an almost perpendicular front, imfelled inwards from the sea with mach violence as high as Jumieges, and sometimes evell as far as houen. It gives motice of its approad ly a noise which is heard lin forty minutes beforehand, but it is, notwithstanding, frequently produetive of damage to shipping. The tide in the Some is usually pereptible as high as lomen, to which rity the river is navigalle for vessels of 200 Von. IV.

## tons. Respecting the trade of the Seine, see the

 articles Havae and loake.The sime receives several considerable tributaries: as the Anbe, Marne, and fise. from the ND.... and the Yonne, Eure, and Liale, from the s. and W. Besides Paris, several large and thourishings commercial cities and towns are seated on the Scine: as Ronem, Ellnanf. Troyes, Melum, abl Montorgan, with ("hatillon, Jar, Nogent, Corhoil, is, tiormains, and Houlleur: and at its month is Havre, which, Marseilles excepted, is the firat commercial port ol' Pranee.
The Seime and its tributarios are comected hes the camals of Lisiare. Wramos, and Nivernais, with the laite; by that of st. '?uentin with the Somme and Scheldi ; by that of Ardemes with the Mense. and ly that of Juremuly with the Laire. 'Ilw earal of Gareq (see l'abss) also commaniontes with it. The banks of the S'cine holow l'aris have heen muse praisel lor their leatuty.
 Framere reg. N., formerly comprised for the most, bart in the prov, of Nombandy, having Li, the deys. Somme and Oise. S, bure and Calvalos, and W. and N. the British ('hamel. Area, bins.ies heetares. l'op. $78!, 988$ in 1861. Thes. bomdiry consists mostly of the Scine and its iestuaries. I'here are some hill dains, hat mone of much consequence. Consts in qeneral abrupt, presentins a succession of calareons elills. ('limate moist, and colder than on the opposite comst of Einghand. Soil semerall: caleareons or samdy; but in the arromils. af llave and Votot there are: some very fertile tracts, consisting of a tine light clay, The surfice is distributed as follows:
 61,173 do, ordards and gardens, aud $6 \times, x / 1$ do. woods. Agriculture is moreadvanced in this than in most ofter dejs. Iloughs of a superior kima have batterly been introdnced; the ctlieieney of mamures .. well understood: and fallows have been to a considerable extent sujerseded by the introbluction of an improved rotation. Near Havre, on the large farms only, a few acres are in fallow: of the arable land, about one-third part may le in wheat; one-thiril in oats, baricey, and rye; one-sixth in clover; onc-twelfth in peas and vetehes, and one-twelftl in tlax; and these are about the propn . ions throughout most part of the dep. The propertion of lage properties is greater in this than in any other dep. of lirane. The large proprictors seldom or never farm their own lands. Some firms run from 200 to 3101 acres, but in general they are muelismaller: they are almost always let for a term of 9 years, at a rent varying from 30s. to 50ls. per hectare, which is always paid in money, $A$ growl deal of cider is made, and most of the jeasants' cottages are surrounded by small orchards. ('attle, horses, and sheep are all of gool breeds, and ire amoner the best in France: the produce of woml is estimated at about $\mathrm{A} \% 3,000$ kiloges, a vear. Wigres atre ligh, Farm servants always live with their masters; and plobgmen receive from $8 /$. to $1: 2 /$. sterling ia vear; women from 3/. to 61. , generally in money 'ilueir food consists of bread, vegetables of all kinds, somp, eriss, and cherese, with cider lor drink; and butchers' meat once or twioe a week. 'The ocenpiers of farms are prosprons, though but rich. The farmer pays the land, house, window, and personal taxes, and is frequently called on for the support of paty ers. The latter are mumerous, aud as no legal provision is made for them, they are wholly depomdent upon volnutary eontribntions. The dipe, which ranks third in l'rince with resered to pops, is inforior to none in manmfacturing industry. Lomen (which see) is at the head of the
colfon mannfurturing fowns, and lilhoraf is one of the chicl seats of the F'remeh woillen manufarfirre. Manufactures al most ather deseriptions are carriod om: amb the dep, has, through havere, a most extensive trade with Ehghanl, Amorian, thed most parte of the world; and hy the Sime. with I'aris mat the interior of lirance. It is divided into 6 arromds; chidf towns, limmen, the eng.. Wippo, Ilasre, Noufelontel, and Yemet.
 mostly betwern the deth aum toth dege of N. tate. aud long. $20: 10^{\prime}$ and 30 :3' li.; having N. the dépe (bise and Nisne: E. Anbe and Marme; S. Come amd Loiret; amd W.. the last-maned and

 being from Le. to W. The highest hills are in the $S$. The Seine, here foined live thome. traverses the S., amd the Marme the N . part of the dejp. 'The Gureq, baing, and Grame Morin are the other primeipal rivers. The geolurial formations are mosily endeareons, overlain in many parts by a dopp layer of veretable sail. 'This is ome of the timest nurialoural depos, in Framer, mad has a groml deal of rich hand. It is said to comb-

 has a large sumplas of corn, primeppally wheal ami gatse for exportation. lobabos are, also, protty astensively grown. 'Tlos prombere of wine mas. amomut anearly tillo, 0nto herdols.; lat it is mostly of low quality, and is prineipally used for bomecomsumption unly. ('yaler is also produced. Means is binely sitmated in the midst of rich hatharal pastures, which tatten great mumbers of dalle, and the dairy hushamery is also carriod on to some extent. The breat of sheep has been much improved hy crossing with the Merimo hread, and the hatal ammal produce of wod is extimated at $1, \pm 00,0$ ono kilogs. Win and honey are important articles. Nomines are wrought, but a good many hands are emphoyed in quarring pasimes and other stone. Nambactures prineipally of cotton and linen fabries, havelware and cut lery, earthemare, leather and paper. 'This depr, is divided into 5 arronds. : chiof towns, Mclan, the cap. Coulommiers, Fontanblean, Meanx, and I'rovins.

SliNELEOM-OINE (formeny Isle-de-Framer), a dép. of liranee, reg. N., principally hetwem lat. Lso and d!0 N., and long. $1^{\circ} 30^{\prime}$ and $\because 0.30^{\prime} \mathrm{Em}$; having N. the dép, of Oise, F. Seine-et-Marne. S. loiret, IV. Eiure and liure-et-laire: it emeloses the metropolitam depe of the Scine. Area, Stiosias hectares. Pop. 513,073 in lstil. It has no hill 400 ft . in height. The Scine traverses this dep. from NW. to Sle, receiving the Oise mul Essomme within its limits. As it belongs to the great tertiary hasin of Paris, the soil of the thép. is principally ealeareons; a large portion, however, is samly: and it is not particularly fertile, except in the heighbombood of l'aris, where it is liherally manured. Aecording to the oflicial returns, the arable lands comprise $360^{2}, 741$ heet.; meadows. 20,091 do. ; vinevarts, 16,711 do. $;$ orcharels, 7,660 to. ; and woods, "atio do. I'rineipal com erops, oats and wheat. The anmonl produce of withe is estimated at about 700,000 hretol., but it is of vory indifferent quality: evder is also promecel. to the extent of about 100,000 heet, a year. The culture of tigs, cherries, strawherries, and other fruits and vegetables for the l'aris markets, is an important bramed of industry. A pool many sheep are bred, and cows far their milk, which is sent to Paris: bat few ofler kimle of live stoek are rearel. The proximity of Paris has given
rise to a great varioty of manufnctures. Varn anil statles of all kimis, pioner, hair falrices, leather, arallomare, beet-root sugar and chamieal piondhets, are monge the goorls munnfactured. The ded has a very extensive gemeral trade. It is divided into fi arromes: chiof towns, Versailles, the eap., Mantes, Pontuse, lambonilher, litampus. min ( 'ormil.

The primetal or ba arm is leep enongh to be navigable far the largest ships, lont is obstructed hy a har at it month, which damot be crossed, wacept durmer the inumations, by ships arnwite mure thint frem 10) to 12 ft . of water, Vessels umder this armphtit. may, however, abays magate blo river an fir is P'milor, and in the rainy season vessels af from l:io to liou tone averul to lialam, like the Nike, the senegal amually worlows and lertilises the aljacont combry; and in duty, whon the imunlation begins, some French ressels sail in in fiar as
the river is navigable, trading with the matives for gom and other products. A fair, lasting 15 days, is held anmually at. Fort St. Joseph. After this, as soon as the wators hegin to sulnide, the vessels return, spenting only nbout a fortuight in the downward journes, but comsmaing nearly three momthe in their upward voyare.
The Sencegal forms a part of the line of lemareation betwent two regions widely dithering in every respect. Tow the N., within it few miles of its lanake, is the great desert of suhara, with here and there 12 few Moors; while to the S a are the fertile regions of Nigritia, inhabited by negroes.

Sendadi, a mame derived from the above river, given to some smatl French eolomial establishments on the W: coast of Africal comprisiug several ishands, and small jortions of the $\backslash$ frican eontinent, between the senergal and dambia rivers. It is divided into two arrumbe, the N . comsisting of the isles of St. Louis, Bavarhei, Safal, aud Cihebere. near the mouth of the Feneral, with some lew establishonents on the banks of that river, and tradiug stations alonge the coast between Capes de Yerd ind Blanco; and the S., arrond., comprisiug the ishand of doree, Albreda, on the bank of the Giambia, and the other stationss. of Cape de V'erde. The total jup, of these lependencies amonoted, in 1 Neil, to $1 \times, 760$, of whom abont 18,041 were Molammedhis and blacks: two-thirds of the pop. inhabited St. Lontis and its urronds.

This part of the Alrican const is hearly destitute of good harbonrs: those of St. Lonis, and Goree are the best. The soil of the isles and continental shore is sandy, but improves in quality further intand, where it is covered, s, of the senegal, with dense forests, and the most luxuriant vegetation. The climate, though not so pestiferous as that of Sierra leone, is extremely bad. The heat of summer is most relaxing and oppressive, especially during E. winds, though the thermometer does not stand extremely high. The wet seasom, which lasts, with SW. winds, from Jume till October, is particularly fatal to Euroneans, who are attacked with dysenteries, liver complaints, and varions kinds of fevers. The mineral products are few. 'lhere are traces of iron, but little ore is wromght. Basalt is found at (ioree, but searecly any stome elsewhere; and at St. Lomis the most solid buikdings are only of luriek. (iold is procured from the comitries towards the head of the Nenegal, but the ellorts of the French to form settlencuts there have hitherto proved abortive. Near the month of the Senegral are some salt-pans, and in some parts of the interior natron efloresees on the suil. The reqetable products are the most varied and alomdant. They inchule the gigantic haobab (Ademsonia digifutte), palms, mimossis, and gum trees of mumerons kinds, senegal ebons, and other valuable timber, with cot ton, indigo, coffee, arnatto, olives, hemp, and other fibrous plants, cassia, sweet potatoes, millet, and maize. Amoug the wild animals are the clephant, lion, hippopotanus, wild boar, bathalo, tiger-eat, great numbers of deer, game of all species, ind an immense variet $y$ of birds and reptiles. Oxen, buflaloes, horses, and asses are used for domestic serviec, as in Lurope; and goats, sheep, and hogs are reared. Several kinds of artiticial grasses are grown, but the culture of produets for food, or exportation, is pursued only to a very small extent, tenergal being a trading entrepôt rather than an asricultural colony. Few of the colomists are employed in manufictures, except in the working of irn and ship-building. The making of bricks, lime, and salt entploys a few hands: the negroes whave such elothes as they require, lout other mamufactured articles are obtained from Europe. The subjoined table shows
the destination and value of the primeipal exports from the Nenegal colony in the yar lwitl:-

Semegal is governod by a stherior naval ontione, Wh., resides at it. Lomis: (ioree is the seat of a lientemant-goveruor. A court of primary jurisdiction sits at St. Lonis, from the decisions of which appeal lies to a court eomposed of the erovernor, the other chisf functionarjes, and cention principal inhabs. of the colong: The Eurupan force in Senegal consists of half a batation of marines, a eomp. of marine artillery, and a comp. of sappers, altorether momonting to about 370 mon. The French established themselves here in loin, but no settlement of inuch importance was made till the formation of the Nenegal Company in litit. The Fuglish took Semegal in 17at, but it was retaken by the French in 1779: it was again held ly the English from a period shortly after the French liewolation till the peace of 1814.

SliNLIS (an. Aufustomagus, post. Sydeanertes), a town of France, dép. Oise, cap. arroull, on the Nonette, a tributary of the Marne, $2!\mathrm{m}$. s D. by K. Beanvais. Pop. 5,881 in IKtil. Senlis stands on the declivity of a hill, and consists of the town poper and three suburbs. The town is surrommed with thiek walls, parts of which are suppesed to be remains of those constructed by the liomans. It is tolerably well-built; but the strects are mostly narrow and crooked, and it has few poblic huildings worth motice. The cathedral, however, has a handsome spire, 225 ft , in height. Chieory, starch, and cotton thread are the principal manufactures.
The town was of importance in the middle ares: under the Carlovingians it hat the right of coinage, and in 1180 1'hilip Augustus esponsed Elizabeth of Ilamanlt at Senlis.
SENS (an. Agedincum, post. Senones), a town of France, dep. Yonne, cap. arrond. on the 'ome, 30 m . SE. Anserre. 1'p. 11,098 in 18ib. The town is surronnded with decayed walls, attributed to the Romans, and various lioman antiquities exist in and rombl the fown. It has a fine Gothic enthedral, of the same proportions as Notre Dame, in Paris, thongh of less size. In it is the splemdid marble mausoleum of the dauphin, son of Louis XV., and lither of Louis X VI., Louis X VIII., and Charles X., a chef-d'ouvre of Conston. In the chapter-honse is a painting of the death of Thomas-a-13ecket, who took refuge at sens about 1 Bbj . The commonal eollege is a large building, with a museum of antiques, and a public hibrary of abore 6,000 vols. Sens has a seminary, some public baths, a handsome theatre, and a court of primary furisdiction; manulactures of serge, drugqets, wax caudles, and glue, with breweries and distilleries,

slikiallolik, a town in Iritish Iutia, formerly one of the banish settlements in Ilindostan, provi. hengal, on the 1 lomphly, about 12 m . abowe l'akuta, and immediately opposite Barrackjoor. Iom abont $15,10 t)$. It extemds for 1 m . along the river, and is without fortitications, having only a small lattery for saluting. Somapore has long heen the heal-guarters of the Irotestimt missions in India, mad las a large and hamdsome college for the instrmetion of mative youths, and an exInsive missionary printing establishment. It was lare that the Soriptares were trmaslated into varions Indian diatects, maler the superintendence of 'Or. Carey amd others. Serampore was ceded by the Danish govermment to Great IBritain in $1 \dot{x} 16 i$
sLBRES, a large town of Turkey in Burope, in Macedonia, eap, of a loctik, on a deelivity a little S . of the lake Takinos, and 4 l m . Nis. Siamika, Job, estim. at 9 ti,000. Seres is surrommed hy a wall thanked with towers, and eommanded by a citalel. It is well built, the loonses being interspersed with gardens: it has some spricions khons, thmerous mosques, ehmrehes, and fombtains, and several public haths, with linen and cotton mannfindures, and the active trale in cotton, grown in large quantities in its vicinity.

SbliNGAl'A'1'AM (Sri-Romqu-Patmm, 'Yishmis city"), a decayed town and fortress of Imelin, Sof the Krishma, which, mader Ilyder Ali ind 'Hipmo, was the cipital of Mysore, It stands at the $W$. angle of an island in the Cavery, abont 1 m . in lougth by $1 \frac{1}{2} \mathrm{~m}$. in brealth, and is abont gint m. W'itw. Madras. Lat. $120^{\circ} 25^{\prime}$ N., long. ifo $45^{\prime}$ 1:. 'Ihe lortress, constructed by 'Tippo, is an immense mass of bilding, but in several resperts injulicionsly plamed. It was, however, when invested by british troops, strengthened with six redonbts, and other strong outworks. As a capital, the town was lat mean. It has one good bazaiar, and a broad road moder the ramparts, but the other streets have a very indifferent appearande; the homses also are shably, and the public Inildings few. On an eminence in the centre of the island is a large and handsome suburl, in which is the matusolemm of Hyder Ali and Tippoo; and across the Cavery, mear the eity, is a mative bridge of granite, remarkable for its size and solidity.
Seringapatam was besieged by the English on three liflerent occasions: the first two sieges took place in 1791 and 592 ; at the latter, Tippoo purchased a peace by ceding hatf his dominions, and faying 3 erores and 30 lacs of rupees to the British and their allies. Another war, however, broke ont in 1799 ; and on the fth of May, in the same year, Soringanatam was stormed by the British and the Nizam's forces, under Gen. liarris. On that occasion $\mathrm{T} j$ pooo was killed, with the greater part of his fratrison, amoming to $8,000 \mathrm{men}$, and the domibions of the last fornidable enemy of the liritish in the Indian peninsula were added to the Indian rmpire.
SIRVAN (ST:), a town and ven-port of France, dep. Jlle-et-Vilaine, on the liance, immediately he:hind Sis. Malo, of which town it may be eonsidered the continental suburb, thourh comprised in a distinet commme. Pop. 12,709 iu 18til. St. sorvan is well built, and has a good harbour for merchant vessels; diviled dato two parts by the

Soliabor, an isolated tower abont 60 ft , in beight. The doekyarl, which dorives its name from this tower, las tive slips, three of which are mpropriated to the consiruetion of frigates. The naval establishments at St. Servan are considerahle, and there is a thating dock, commecting the port with that of St. Malo. St. Servan hats manufactures of sail-cloth, corlage, and ship-hiseuit, and is the general entrepot for the trade of St. Malo. Amonge its inhals, are many linglish families, attracted by the cheapness of living, and the beanty of the neighbonrlwed.

SliRVIA (an, Mosin-Superior, with part of Ilyricum), one of the prineipalities on the Damber, nominally included in the dom. of 'Turker-inburope, but in a great mensure independent of the P'orte. It extemils between the pond and lath degs. of N. hat., and the lith and zirel of E., long. : having N. the llumgarian provs. of Slavomia and the lhant, from which it is separated hy the save and bambe; li. Wallachia and Indgaria, from the first of which it is ulso separated ly the banube; S. Macedonia, the Balkhan being the bomondary line in this direction; and W. Bosnia, from which it is divided by the Jbar and the I rin. (ireatest length, N. to S., abont 180 m . ; brealth. varying from 100 to 160 m . Area, $12,600 \mathrm{sq} . \mathrm{m}$.; Pop. $1,098,281$ in 1861 . The greater part of the country is coverel with momentans, those in tho: W. being ramotications of the Dinaric Alps, and in the S. and E. branches from the balkham. There are, howevor, some tolerably extensive plains, particularly in the N. and along the course of' the Norava. 'This river, which, after those above named, is the principal in Servia, nearly traverses the combry from S. to N. The elimate is remarkably variable, and much colder in winter than would be inferred from the lat., the Dambe and the save being often thickly frozeln over. The heats of smmmer are proportionally intense: the autumn is the most agreeable season; lmu arue is very prevalent then and in spring. The soil is almost everywhere fertile, though to a great extent menltivated. Every species of grain common in limple is rased, except rice. Naize is the principal; but much mure wheat is prohneed than formerly, and maize bread is not now generally made nse of by the inhabs. of leeprade and other large towns. Owing to the inland situation of the country, and the want of markets, the price of eorn is nsually very low.

The vine is gencrally srown ; but, from defeets of enlture, the grapes of the same vineyard usuallydifter greatly in quality, and being all used priomiscuonsly in the making of wine, it is, for the most part, very different. In the district of lielgrate, however, superior rel wine approaching to claret has been made, thongh to no great extent. lnfact, but little wine is drunk in servin; a spirituous liquor, distilled from phoms, ealled slivovitze or rakia, sold at about a firthing a quart, being used in its stead. lemp, flax, tobacco, and eotton are cultivated, but only in small quantities. The pasture-grommls are extensive and good, thongh little an be sain in favour of the breeds of eattle and sheep. Joth are meagre and impoverished; and the former, though miversally employed, with bullibloes, for draught, are not very numerons. The horses, also, are poor and diminutive. llogs are by far the most valuable and favourite stock. No jeasant's family is without these animals. 'They overspe the the comutry in vast berds, being branded with the proprietor's name, and turned loose in the forests, where they feed on acorns, exepit in winter, when they are scantily fed at home on maize, and other dry provender. 1Logs constitute the principal export from Servia; about

## SEVASTOPOI

2:20,000 are said tobe anmally sent to the Anstrian dominions, where they pay a considerable import duty, having nlso paid an export daty on loaving the servian frometier. The wool of the Servian shere is very inforior; but about 60,6mo lamb and prat shins are mumally disposed of to Austrian morrchants.
'The fureste, which overspread a large proportion of the comutry, might, if they emid be turned to Lromel meconit, be made, muder judicions manarebimet, all ahmest inceshanstile somree of wealth. ()ak, extremely well alapted for ship-huiddiug,
 is prosluren in great plenty. lint the forests in many places are so thiek ins to be all but int-
 fintreserat verotation. 'The eollection of' lanelaes, which alownid in the marshy districtos, has beent carrical to somme "xiont of late years. 'I'hey are divposed of to Fremelo merchants settled in Belprade and semblin, who forward them to laris. Iron, epller, lanl, quidisilver, and coal are fomal in Kervia; hut lew mines are wronght.

Until a more extolnsive commerce take place on the Jandib, or a free eommmiention of some kind be established between the Juler save und the Austrian ports on the Alriatic, the great matural pesourees of sorvia most continue all but mavail-
 pronimes of Austria athl linssia, these states throw ohstacles in the way of her combunce; at the same time that the aljitent 'Jurkish provinces have bo need of her staples. The want of grod ramels is, also, a great drawlack on the prusperity of all the provinces in this remote part of binupe: the ouly hierh road in Sorvia is that which leads firom Bilerate to Difrianople. Servia, however, is less ineomvenienced than most of the combignoms prowinces by the want of roms, their delicieney boing, in bart at tomst, compensated ly the cany arrose to the great nawigable rivers by which she is almost surrominted.

The Serviaus heloner to the widely-spreal Slavonian stock, will which most part of b. Europe is peopled. 'Their lamsnare is the most retined of the Sonthern Slavonian dialeets. and their poetry ramks high among that of the E., Finropean mations. In their manners and customs the Servians dither little from the other Slayonic tribes in their Vibinity: they are in general almost equally umrivilised, lackward in the arts, ighorant, and ste porstitions; thongh in some of the larger towns some degree of advance has of late been perceptible.

Servia is divided into 6 provs. and 13 distriets; chice towns, Belarade, the eap., Semendria, Nissa, Jogodina, Kragajewae\%, and Poselega. In the middle ages, it formed an indep. kingiom, the dominion of which extended over parts of Bulgaria, Busuing, and Allania: it was conquered by the Thrks in 1365. The Turks still grrison Belgrade, which is the residence of a pacha; but nothingt is lelt them beyond this military oceupation, an aelinowledgment of the supremacy of the l'orte, and a small yearly tribute to the sultan. The interual government is wholly in the hands of the Servians, Finry in the present century, a successful revolt took place, headed by Czerny-George, a mative chicf. who, in 180t, took lbelgrale from the Turks, and contimued to govern the comntry till the frace of $1 \times 14$; when it again submitted to the Turks, and Czerny-George fook refuge in Rossia. A new revolt, under Miloseh Obrenowitseh, in 1815, was equally satecesslul, and Miloseh held for a quarter of a century the reins of goverument. The estahlished a representative assembly and a council of ministry: In 183.), a general pill-tax, to meet
the whate expenses, and varions other linameind plans, were idloptes. lint owing, is has beedn ulleged. to linssian intumee, Miloseh was whigeril to resign the government, and rutire to his estates in Winlhe:hia in Ixild, sinee which prion he hat Ineell succeceled liy his sucomed som, l'rime Mi clucd. Ny the ireaty of larla, of Mareh 30, INati, Servia wasueknowlefged a semi-iulependent state, and pladed under the proteedion of ile three gromt Burojean powers. Scrvia has a wimall standing military foreo of about 1.851 mon, 1,500 infantry, 20110 emalry, and 60 aftillerymen; bot all malies capable of hearing arms are ('moulled in the militia, mil $n$ furee of Jn, 10 men maty the collected on an -merpency.
sl:TU linl, or S'T. UbBS, a eity and sea-port of lourtugal, prov. listromalura, caj. Comarea, in the N. side of the hay of its uwa mame, which receives the Salan at ifs SE, extremity, about Is m. Sli. Lishom, with which it is commeted ly railway.
 $\frac{4}{1} \mathrm{~m}$. along the heach, consisting mostly of two on three parallel marrow strects, crossed by others, and some stgares, in one al which is a landsome publice fomman. It is cmelosed by walls partly in ruins, aud defended by the castle of'st. Philipinal a few other detached forts. It has several eonvouts and hompitals, latin seloobs, and comets of justice, broad quays, and a convenient harbour for merchantmen. lis "mvirons, which are very jibturesque mud fertile, bruluce large guantities al mascadel abd white wines, which, with oranges, lemons, and salt, are its primeipal articles of cxprot. The caports of salt from St. Whes have lomy beell of very emsiderahle importamer, and furnish the greater purt of the demand ol swalden and various other coumtries. The pilchard fishery employs a gomel many hamds; and a larde fair is held ammally from the e5th to the enth of duly: Netur it is the hamons ronvent of Amabida, is which pilgrimages are pertiormed.
The an. Cetobrigu is supposel to have stool on the amosite shore of the bey, where varions remains of antiguity have been fumbl; one of which, a Corinthiam pillar, surmoninted by a crucitis, stands in the siguare of the city. Alter the expulsion of the Maors, fictuhal wis all but deserted, till it was repeopled under Alouzo llemriquez aud his son sancho. It was lirtitied during the war of independence in the seventeenth century. It suffered severely from the carthquake so disastrons to Lisbon in 1765.
SEVAS'TOIOL, or AETTAR, a furtilied town anul sea-port of Enropean Rinssia, on the Wr. enast of the Crimea; lat. $44^{\circ} 33^{\prime}$ N., long. $: 33^{\circ} 30^{\prime} \mathrm{E}$. Pop. 10,296 in 18 as. Sevastopol stands on a creek, on the S. side of one of the linest bays in the workl, the Etenus of Strabo. It stretehes E., into the country about 5 m ., with a breadth, where greatest, of about a mile : it has, till within a short distance ol the bottom, near Inkerman, from 6 to 8 fathoms water. There are in the cove on which the town is built 5 fathoms water close in shore. The bottom is clay and mud, and it is quite free from rocks and shoals. The bay is defended by strong forts on both sides the entrance. Sevastopol has been for some time the principal station of the Russian tleet in the Black sea, for which it is incomparably lietter fitted than either Kherzon or Nieolaeff. Strects wide and regular, intersecting each other at right angles; honses extremely grood, and built in the modern Italian style; principal edifices, almiralty, arsemal, hospital, barracks of the garrison, and marme barracks.
scoastopol has beeome famons in recent years by the great siege sustained against the Nigho-

French-'lurkish army, in nll rexpects one of the must extraordinary mieges of mondero times. 'Tha place was invented on the $2 k$ th Selp. INint, and sinally eaptured by the allied troops on the !ith of * pember, Ixis, The linssians, before quitting thei town, amok llee greater portion of their fleet in the larionir.
slivinollis, a market town and par, of Kient, bathe Sutton-at llone, himil. Comishemth, on a ridge of hills near the barent, :2 m. Sisli, lamion, on the Nouth Enstern ruilway, I'op, of jar. d.tas in 1xti, Area of pur., with the liberties of liverhend and W'eakd, $\mathrm{b}, \mathrm{G}$ ! 0 neres. 'I'he town emsists principally of two wide strects, in one of whieh is the market-homse. Many of the houses are harese, and inhabitad by opulcut families. 'The parish whech is spacions and handsome, and is a eonspinuous abject for sevaral miles romac. 'The livings are a rectory and a vientuge in the gift of the Curteis family: There are meeting-houses for bimtists and Wesleynus, a hospital for aged persolls, and a free grammar sehool, both foumded mad endowed by Sir W. Sevenoke, in 1418. The lattir was firther endowed by Gucen Eliznbeth, whose name it henrs; and has an anmal ineome of nome 1 , 0 ond., with seven exhibitions, live sehobarmins in my colloge of either miversity, and wo in Jesis' Collare, Cambringe. In mother sulhoul, fommed in ! 1675 , about 360 poor children are instructed on the matiomal system.

Near the town is Knowle or Kinoll, the magnificent seat of the duken of Dorset: it has belonged, with little intermission, to the Sackville family, since the time of Queen lilizabeth. It is a large, tine, castellated editice. 'The interior, which is mobly furmished, has varions pietures by celebrated masters, and other splendid works of art,

Sevenoaks has no mamufactures: there were furmerly some silk mills in the vicinity, lut they no lomger exist. The town is governed by a warden, a hailill; and four assistants, chosen at an monul conrt lect. I'ety sessions are held on the last saturday in every month, and a conrt of requestson the tirst liriday in each month. Sevenonks is the head of a par. mion, Marketson Saturday ; fairs, July 10 and Oct. 12, for hogs amd poultry; and the Bral Tuesdily in every month for cattle.
sbiviliN, a river of limgland, being inferior only to the 'Thames in marnitude, and perhaps, absi, in importance. It han its source in a small lake on the eastern side of P'inlimmon mountain, in Mongomeryshire. At its ontset it is called the liafren, the name by which, through its whole comene, it was known to the liritons, It llows first towarls the Sli.., and afterwards turns to the NE: as it appronches Newtom, where it takes the name of Severn. Hence, through the vale of Montfomery, its course is almost due N., till, entering the great plain of Salop, heyond Welsipool, it turts abruptly to the sid.; and pursuing the same dircetion, it almost emireles Shrewshury. Flowing through Colebrook Dale, and passing liridgemorth, it fullows a sontherly course as it leaves sialop, amd enters Worestershire at Bewdley. Reing now become is broad and deep river, erowed with barges, it rolls through a pleasant country in a tranquil stream, passimp the city of Woreester, and traversing the vales of livesham and (iloncester. In the latter it divides into two chamels, one of which washes the walls of Gloncester; lhat, being astin wited, it forms a preat tidal river. Its course from (iloncester to Nass Point is tortuons; from the latter it flows siV., till it assimmes the name of the liristol Chanmel, expanding and insensibly losing itself in the Athatic Ocem,

The Severn, particularly below Gloucester, has frequently overilowed its banks, and oceasioned
mind alamage to the surcomuling country. It is remarknble for its tide, which rushos in with a head of or 5 ft . high, and a homel mine. This, no dowht, arises from the wide expanse of the waters of the dthatic in the Bristol Chamel being tralnally narrowed, till ut length they nre fored violently "p the river. Ontwide the ISristol Clum-
 in K゙anger liond, it the mouth of the lower Avon, they rise to the height of $\mathrm{d} \times \mathrm{lt}$., and sometimes more: mid at Chepsom the rise is 60 ft. The opposition which the current from the sea menets with from the alserpar current of the river enedsions that dashing and grinding of the waves known by the name of hyere or catere.
The s.rern is mavighle from Fatholm lighthomse, where it loses itself in the Bristol Chanmel, to Welshpool, a distance of abont 17 x 1 m , ; and its mavipation is continned by the Nont pomery canal to Newton. It is, comsequently, of the highest importance as a channel of internal communiontion; its cmpacty in this respect being materially incrensel by its lumeroms large tributary st rams, and by the canals and railrabls that juin it. liy means of the latter, it commands a large share al the commeree of limmingham, and of the varions trading towns of Stallordshire and Warwidshare, and is mited with the Thmmes, the Trent, and the Mersey. From Welshpool to the sea it has a gradual fall of 225 ft .

The navigation of the Severn from Nass loint to (iloncester is both tedions and dithendt. Tor obviate this inconvenience. a ennal on a large seale has becen dug, from lierkeley l'ill to (ikntecster. It is $18 \frac{1}{2}$ in. in leng(t), from 701090 ft , in width, and lirom 15 to 18 ft , in depth: and may consequently be navigated by vassels of :300 tuns. There is a basin at ench end for the nccommodation of shipping. This camal, which was opened in 18:2, has become the chanel of mextensive commerce; and Gloncester is now rising fast in importance as a tracling mud shipping town. The: harges which navigate the sereern are abont 120 it. 1 lengeth, from 19 to 20 in breadth, and 5 in depth. They carry above $1(10$ tons. The trows are from 60 to 70 it . long., 20 broad, and 5 derp, carrying 7 a tons. They enrry a squaresail, and have a mainmast and topmins.

Of the tributaries of the Severn, the most important are the Teme, the Epper and Lower Avom, the Wye, ame the lisk.

SBVEINDDROOG, or SAVENDHOOA, a strong hill fortress of Ilindustan, in the Mysure territory, 20 m . W. by S. Bamgnore. 'Thourh it is impossible to invest this phace chasely, it was, nevertheless, stormed mud taken withont the loss of' a single man, by the liritish, under Lorl Coruwallis, in 1791 .

SlivhLAli, a celebrated city of Spain, the cap. of Andalusia, and of the prov: of its own name, in a wide and fruitful phain on the findalguivir, $6 \boldsymbol{2}$ m. NE, Cadiz, and 212 m . SSW. Madrit, on the railway from Madrid to Cadiz. 1'op, 81,5.16 in 18.7. The eity las momerons sinbirbs, but the city proper is about 4 m , in cirenit, enclosed ly a line of circumvallation 13 m . in cire. The andient sulurb of 'lriaua is on the right bank; but, with this exepption, feville lies whilly on the E. side of the river. The streets, with few execptions, are narrow and crooked, some of them teing so contracted that one may tonch both walla at the same time. Few are wide chough for carriares; and many throurl, whieh coaches pass, show, by the aleep furrows in the walls, that one mave tonched, and often both at the same time. The street or place, called the Nameda, in the contre of the town, planted with clm trees, is, however,

very magniticent ; being foot yards in length, by 150 in width, decormed with if fommains, and with satues on' Ilereules and Inlius ('iesar. Seville has all the pecaliarities of a Doorish town, and furnishes a menl :prexmen of the architecture of the Moors in their streets and honses, the former of which, marrow, close, and dirty, olpear in strange contrast with the extensive and airy mansions that eqent on them, nemtly white-washed, and stodded with mumerons wimbows, bach haviug its conl lowking, qreen Vemetian shaters. The Paseo and the Phelicins are the primeipal pablic walks, and $\mathrm{in}_{\mathrm{n}}$ pint of rural hematy are superior to any ins Spain. The former is here what the Prote is in Madris! ; and in it the perpo mas be st melied to the Irest adsantage. Ausong the pimble buiddings are Bl ehmehes, incledine the enthedral.monerousharge edities formerly eomentmal, hut many at which have lately berin turned into mannfictories: man "xelhotre, graililatll, to hospitads, one of which is military, an asylum for derided priests, $\delta$ sets of harracks, 7 prisoms, and 2 theatres.
'Tlee cathedral, built in the Itth and ligh renfuries, orempios the site of a Moorish mosefue; but it sermes highly prohalom that it was a 'loristian churels prios to the Mohammedan conquest. It has: 5 mives, but bu dome or emomal tower. It is

 'The only remainintar parts of the mosigue are the Giralala, or belfery, and the reath gate of the eloisters, the fitter of which is a tine sipecimen of the best style of Moorish irchitecture. 'The most admired leature in the enthedral is the Giralda (weathereock), a briek tower :3.w ft. in heirght, and exactly square, cach side being in ft. in breadth. This is surmombed by I smaller towers, which are erowned by a small copola, the whole terminating in the giralde, which grives its mane to the tower, a colosisal bronze stathe of Faith, bearing a thag and palm brameh, if ft. in lacight, and of great weirht, but so delicately poised as to turn with the slightest variation of the wind. The height from the groomel to the top, of the statue is said to be mid span, feet. 'The aseent to the top of the great tower is ly an ineline phain, so grablual that ond may ride nj withont ineomenience; the view from the smmuit is superts, extemding over the entire plain. In point of riches, this eathedral ramked secomd only to that of 'Toledo. It had, alsin, with the chureh of the ('apurhins, and the -lapel of the hospital de la Cariadud, some noble pictures by Murillo; but, though some of these have hee:: preserved, whors have beoome, by purehase, the property of private individuals.

Some of the Castilian monatehs are haried within the cathedral; but these tombs excite no amotions compared to those excited by the sight of the shab, in front of the choir, which once covered the remains of Colemous. It is inseribed $A$ Castilla y Aragon otrar Mundo dió Colon-l'o Castile and Aragon Colon (Columbors) gave another world. The remains of Columbus, after refosing here for about :30 years, were carried ateross the Athatie, and deposited in the cathedral of sit. Domingo: hat, in 17:ai, on the eapture of St. Domingo by the bareks, the ashes of the illustrions dead were agita rased by the whites, and carried to the Havaman, where they are now depasited. It is worthy of notice, that the library belonging to the eathedral was begin in IStit, by the bequest of 20,000 vols. left for the jurpose by Hernando, one of Columbus's sons.

The large organ, which is considerably larger than that of llaarlem, has altogether 0,300 piphes, with 110 stops. 'Nothing,' says a traveller, 'can exceed the mijesty of the masie awakened by this
orginn, and, at times, the effect is almost too overpowerime for lomana selmess.' Imaneliately undar the (iaralda, werpeing one side of a small mpare, is the archbishop's palace with a handsome front, and opmosite: to it is the Jomju, or exchange, a guadrangular ediliere, with a contral jutio, consprisimar apartments, some of which are still ased ty the merchants, though the greater part has becin converted into an Arehicio de les pupdes di Imbias, or remository lor Amacrican archives; the voluminous records here preserved being carefally placed mad tieketed. The thoors are laid in chequered marble, and the grand stairease is of highly prolishod red marble, and remarkably hand somes. A little removed from the Jomia is the Neazar, a royal palace and garilems, said to have beren eonstructed in imitation of the Alhambra, principally by letar the Crmel and Charles V: The exterior has a miserable apparnuee, bat the lirst court, after enterimg the gate. has a gramel efleet. It is 93 ft . in lengith by tid ft . in breadth, Ilaged with marble, and surroumded with a colonnale of white marble Corinthian pillars, of handsome proportions and well expented, the walls hehind heing covered with grotespue designs in the Nourish tiaste. Next to the Court of lions. in the Alhambra, this comrt is perhapis the best piece of Arathic building in Spain for excentom and elelicacy of desing, thongh the ormaments of the palace fa Seville are much inferior to those of that in (iramala. The Aleazar comprises a suite of $\bar{x}$ sumessive apartments, having marved ceilimg. with walls, like those of the Alhambra, with wellpreserved arabesples. $15 y$ far the most splemdid, howerer, is the hatl of Amhassidtors, a splendid apartment alorned with desigos in stuebo, and with a thoor of variegated marble. Within the Aleazar are many fine paintings, by Murillo, Vehastura, Luis de Vargis, and other Spanish masters, with it lew specimens of the Italian schaol; but several of the lest pietures hase, within the last few vears, been removed to the pulilie gallery at Madrid. A comsiderable portion of the palace is now let ont in longring-honses and to private indiveduls, the portion reserval for the wovereign comprising only a small section of the entire pile. The gardens, which are of small extent, are laid ont according to the Monrish tasti, in formal alleys with chipped myrtle hedges amb trees, cut to resemble warriors armed with chals. The walks in some parts are latid with tiles, throngh which jets-d'ent are made to tlow, whidh, ly turmins a sorew, suldenly water mot only the grarden, hat its mawary visitors. The Cuse I'iluthe another of the sights of seville, is a private homse, said to have beren built on the exact mondel of that of the liomat governor of Jormsalens. Within the city, also, are many st motures of Roman origin, Which sill show trices of their former magniticence. The actagoll towne, or Torre d'Oro, was probably buitu be one of the Ciesins. 'The Chans che Curmona, a lioman aqueduet of 110 ) arches, still eonvers water to the city from Aleala; and the fater, especially that of Triana, are very manniticent, thongh of equally ancient origit.

Most of the other objeets worth motice are wibont the walls. The first in orler is the Plase de los Toros, or cirens lor bull-fights, hall woul and half stone, and capable of accompolatiug 14,000 spectators. The next remarkable oljgeet is the royal tolaceo manufactory, a huge editice 4.10 ft . in length by 280 ft . in breadiln, so strongly built and guarded by walls and ditches, as to ajpear like a fort or citadel, raised to werawe the citizens. It employs about 400 hands, of which more than a laif are engaged in making cigars. The camon-foundry is, on the whole, a creditable

mational instifution, though not at present in any great activity. Among the other publie establishiments may he specitiod the envalry barmeks, royal saltpetre manofactory, and mikitary hospital. i'he market-place is larrer, and mdmirably suited to its purponse, the buildings buing arranged in strects, inn ofen space surbunding the whole, with gatos and ormamental fonatains. In the sularb of I'riana is a separate market for the supply of the , iftumos, or rypusies, its chief inhubitants.

The arrangement of the strects is very difforent from that olservable in most other Spanish towns. and is mainly the eflect of the hot elimate. 'lo a similar canse may be traced the intermal arrangement of the honses. 'Ibrey are built almost miniresally in the form of a square, with a spacions rourt-varl, or patio, frequently puref with marble, and surroumded by piazzas ofiening on the apartments of the gromad-floor; the exterior as well is avery other part of the house being kept carefully whitewashed, the massive green woden blimis at the windows being kept clasely shat duriner the dav. In addition te this, the rooms, which are usually paved with tiles, are furuished with ponderoms wiadow shutters half a foot thick, kept shat till the sun is off the windows, when they are partially opened to almit the brecze. Hence the houses are so dark, that visitors at tirst with ditliculty distingroish the immates. The climate may also be said to divide the homses into two distinet parts. During the winter months (commencins in Oct. and ending with April) the family inhabit the upher parts of the honse, which are then thickly matted, and the rooms artiticially heated by brasiers of charconl ; but when the hot weather mits in, theseapartmonts are slut up, and a general move is made to the gromad-floor, which, being considerably eooler, mud opening on the patio, rembers the heat more endurable. "It is a pretty sight, indeed,' says Sir A. C. Irooke ('Iravels in Spain mad Moroceo, i. 45), 'to smanter during the dilicions moonlight evenings of summer along the lanhionable streets of the city; and mothing ean lee more strikingly brilliant than the appearance of the homses and hotels of the nobility and wealthier elasses, On lowking through the trellised iron door opening to the street, you percerive the entore patio brilliantly illomimated, well fiornishent, and with pietures suspended from the marble ealomas of the arches. An awning forms a sutheciont rooting bey night as well as by day, and maverts the space belen into an spacions amd lofty salow, in the centre of which ditherent jets-d'ean - puit forth from a marble fumtain, both cooling the air ind watering a variety of sweet, odorifermas phants, seattered aromal in thwer-pots. Ihere the young ladies of the lamily may be seen enjoying the coolness of the evening, eugaged in work, fomsing themselves with masic and simging, and receiving the visits of their frients.' 'These summar habits are traly Moorish; and even in tritles ylimpes of them become easily visible, as, for instance, in the ematempt of chairs, for which mats and luw stools are pretty generally substituted by all minsses.

The aspert of the polb, of seville differs greatly from that of Malrid. Even in the upper ranks, there is something in the ladies of an eastern apparance: they are more frequently veiled. their checks seen tinged with a here of Moorish blood, and, along with the fire of a Castilian eve, there is mingled a shade of Oriental softness, Among the luwer orders of the women, also, as among the lloors, may be remarked an extravagant and tasteless profinsion of gandy ornaments, immense car-rings and bracelets, and mumerous rings. The dress of the Andalusian peasant is even more
urotexpue and ormamented than that of the women, his jacket and waisteont being almost always trimmed with fold or silver, and every article of his dross covered with silk cords and hittoms. Another striking differesee between Mithrid and seville is in the great mass of ragged, wreteherllooking beop le in the later, in consequence main! y of the heat of the elimute, whids remeders lathoir a disagremble exertion, especially in a conntry where mbinistence is so ensily procural. Leet it small loaf of bread be given to one of these soms of idleness, le makes a hole in it, bers a little oil, not worth refusing, which he pours in, and sonking his bread as he eats it, he is set up fur the day'; and if he sumered in getting a two-guarter pioder, he may procure as many erapes ans his heart ean desires What incitement has such a ome to be busy? The uphra and midile ranks of haville live more luxirimaty, but not better than thone of Madrid; for the luxuries of the former, their iced waters, lemomade, and pomegranates, their cood patios, fombains, and haths, are mecessary tor health and comfort. But even in his orlinary wiet, the Andahasian has the alvanare ower the Castilian for though it be true that, like the inhabitants of the northern provinces, he dines on the eternal puchero, its ingredients ure better in Amdnasia than in Ciavile, the pigs beine fed on the ilex-muts, and the vegetables of S . Spatin beiner protaps the tinest in the workl. The differene between Andalusia and Castile is still further ohservable from the state of society in the two provinees. 'The tertulia of Seville is quite different from that of Madrid, the former being at ans rate more animated, if wot more intellectual, and the dulness helped ont with carls, dancing, lorloits, anl other ammsements, imfepodent of mere ehit-chat aml persiflage. lialls and suppers are reserved fir freat excasiois: but substintial entertainments are anore general than in the capital, perhaps th:canse wealth is more generally dillused. Morals are at a very low cbb.
The feast, the song, the revel here abounds;
strange moles of merriment the hoursconsime.
Nor bleet these patriots with their comntry's wommes. nor tere Wir's ctarion, but Love's rebeck sounds ;
Here Folly stilt his votaries inthralls ;
Aml yomig-eyed Lewdhess walks her midnight rolmits:
(iirt with the silent crimes of capitals,
Still to the last kind Vice clings to the tottering walls Childe ltarult, I. st. 46.
In Seville it is almost a derision to a manried woman to have no cortojo, and a jest against a soñorita not to have ber antate liut winh all this corruption, the comrse of society runs smonth; joblonsy appears not to disturb the mineupe, the barties living together with all the ont ward show of mutual estecom, and inllicting the history of their private lickeriugs only on their most filtinate friends. The ammements of the midile and higher classes comsist of the daily promenatimer in' the P'aseo or Alumedu (the llyte l'ark or Regent Strect of Lomion) ; theatrical entertainments, of which they are passiomately fond, and na mean judges; mal the tertulia, which are so armaged as to succed each other in the arrangements of the day. 'The lower elasses are fomi of dancing; but of inusic they have little knowledire, fir nothing can well be more disagreeable than their erazy guitars.
seville, as a phee of residence for a stramer who cares only for sensual gratitications, is perhaps preferable to any other Spmish city. It is said that there is mot a day throughont the year in which the sun does not shime on seville. Winter is searely felt; and if the heats of summer be onpressive, as they traly are daring the
prevalence of the soluno, the streets, honses, and "ronumy of lite are aduirably alapted to lessen lleve inllanes. The surromiling conntry, with its orange and lemon proves, acacins, mad other Buwering trees and shrubs, is all that one cam desire: fruite of many varieties and elobiee llavour may be had alnost for nothing, and every necessary of life may be proenred in abmanace, and at very moderate Eace. Game frait, and vegetables arre excellent: and the brail (bromght to market from the neighbmring village of Ahralu dos l'anu(hores) is said to be the best in Spmin. Neat is rensemable, lut of rathor inelifferent quality.

Seville has severnl establishments for the promotion of learming, seience, and general edncation; but of these few, if ans, wan be considered ats very edicient. Its mivarsity, fonnded in l5w2, is in the most lackward state possible. 'The wher seholastice establishments comprise a school of mediciur, two mathematical selhools. a college of arrieulture, and an acalomy of the line arts. besides the ancient, thourh deraving, schoul of st. bilmo for mavization and gimmery soville has also several worioties for the promotion of dilforent branches of litoratare and seionce; bint they exercise little intuence, owing to the general wain of somat elementary education.

In the 17th century the silk manufacture attainod to emsiderable importance in seville there being, in ltian, about 3, ,16H looms engaged in the husiness. The manufacture has sime mulergone many vicissitudes; but in the earlier part of the present century it employed ubont 2.4109 looms. Owing however, to the liss of the colonial marliots, and still more to the harassed state of the emmity formany years back, the momier of looms is at present relucerl to from 5011 to 6010 . Comrse woblen clothsare made in consilerable quantities, hint theg are lowth inferior to, and much dencer Ham, similar Enslish lithries, There are several latpe tameries mannfiactories of hats, combs, mad carthenvare; but. as in the rest of spain, the processes are so elmons, that, speaking gencrally, all mamuliactured articles are of inferior quality. The tobaceo manufactory irom fomblry, and saltprete establishanent, have been alromy mentioned as govermment momopolies. The arale of seville rose to comsiderable importance alter the discovery "14 Ameriea, in comsequence of its being vesteil with the monopoly of the commerce between Spain and the New World. This advantage, however, was soon lost, from the dithenlty of navigating the Gualalguivir with large vessels; and the trade was transferred to Cadiz. The river, at certain times of the year, is accessible as far as seville for ships of 100 tons; lant, generally sjeaking, all vessels drawing more than 10 ft . water are whiged to load and andoad 8 m . below the eity. Some efforts, however, have lately been made for the improvement of the mavifation. The exports comprise wool, goat-leather, oil, silk, and fruit, particularly oranges. The trade in oranges is earried on prineipally with England, to which about 40 cargoes are sent every year, comprising about 16,000 ehests, 1-10th of which are hilter, and the rest sweet oringes: the chief part of the export takes place in Nov. and Dee. The imports comprise varions manufactures from Englind; hides, hemp, and Hax, from the baltic; iron from liabon, and colonial produce from Cuba and lorto lico. A considerable conasting trade is carried on with Cadiz, Malaga, larceloma, and other ports of Spain; and there is daily steam communieation with St. Lacar and Cadiz.

Seville stands on the site of the llispalis of the Lommas. It opened its fates to the Moors in 711 , soun nfter their invasion of Spain, and continued
in their possession alove five ecenturies, being the seat tirst of a regal, afterwaris of an aristowratieal
fovermment. lt was talien by the Christians in IOL, after one of the most obstinate sieges montioned in Spanish history ; but since then it has seldon been the recone of military exploits. It is known in diplomatic history live a trenty consclurled in it in 17e! by Noain, linpland, Frame, and Holland. In the mutumn of I $\mathbf{x} 109$, it was visited by the pestilemaial fover which cansed surh mortality at Cadiz, and it is sail that between the 12th Xug. aud lat. Nos, of that vear it lost nearly a fourth part of its inlial., half the sulferers locing (iitanos or gypsies, inhabiting the subarls of Triana. On ile invasion of Spain by Napoleon, in 180 x , seville asserted the mational indejuendence, and received the junta when driven from Madrid. It however surremderea to the Firenad on the 1st Veloritary, 1810, and remained in their lunds till the 2-th Angust, 18t2, when they left it, in comserfuence of their defeat at Salamancia.

Seville has given hirth to several distinguished individuals, anoug whom have leem included in antiquity the emprors Alrian, Iraina, and 'I'herodosius. 'There can, however, be litte or no dombt that these illustrious individuals were all natives of Italica, a lioman city, a lew miles NE. from llispalis. Among the more remarkable individuals of whom seville has to bosast in modern times may he sprecitied las Casas, bishop of Cliapia, the defenter of the ludians; Antonio de Ulloa, the traveller and ecomomist; and lopez de Rineda, the father of Spanish comedy. 'I'he famons navigntor, Magellan, or Magelhaeds, sailed from Seville on the 20th Sept., 1ibl!, on the expedition in which he diseovered the straits that bear his mame.

SiVVREs, a small town of France, dej. Seine-et-Oise, on the scine, abont midway between l'aris and Versailles, being 5 m . NW. the latter city. l'op. 6,328 in 1xill. The town has heen long fimmos for its manufactures of porechain, or Serres china, which for clexance of design and excellence of quality is efmal, if not superior, to any made in burgie. A large musenm is estalilished liere, in which are collected suceimens of most linds of earthenware manulactured in France and other countries: the quarries whence the clay used in the mimulacture of the porcelain hais leen obtained form extensive vallts. The Scine is crossed here by a hatudsume stone bridge.
SBVRES (DEUX), a dip. of France, reg. W., principully between the 46 th and 47 th degs. N. hat., and 10 and $1 \circ \mathrm{~W}$. long.; having N. Maine-ct-Loire, E. Vicme, S. Charante and Charmite Inferienre, and W. Vendée. Area, ina, ins heetares. Pop. 328,817 in 1861. A hill chain, rumning from slis to NW, divides the dej, into two porfions, very unlike each other in their general aspect, the sonthern being nearly flat, and the northern very moeh diversified. I'rineipal rivers, the two Sevres (or Niortaise and Nantaise), whence the name of the drip.: one eliseharges itself into the Atlantic in Vendee, the latter falling into the laire. A large proportion of the soil is stony, but there are some rich tracts. The arohle lands are estimated at 404,855 heetares; mealows, 74,053 do. ; vineyards, 20.803 do. ; orchards, dec., 9,175 do.; and woods, 36,0 on do. Shallow lakes oecup at least. 10,000 hectares. Agrienlture is generally very backward, being, in most parts, distinguislied by an obstinate attachment to old methods; but more corn is raised than is required for home consumption. Flax, hemp, varions fruits, and about 330,000 hectol. of wine, are anmally problaced. The quality of the datter is, with few exceptions, yery inferior, and abont hall the produce is mate into brindy. The ammal jrochece of wool is exti-

The manufacturing industry of the depe is of little consequence. It is divided into four arromels: dhiof towns, Niort (the eapr.), I'ressuire, Melle, and larthenay.
 market town of linglame, cos. Dorset, parlly in sixpuony Iandley humbl., and partly in Neester librety, on the burder of Wilts, Eetim. NE. Worchester, ! 1.5 m . SW . Dandons by road, and 1115 m .

 Iroviously to the Reform Act, the mun. and parl. lumalaries of the bor, which were co-extensive, romprised maly portions of the parishes of the Iloly 'Trinity, St, Jotrr. and St. James. But, since then the monicipal limits have been enharged, so as to include the whole of those parivars, with that part of Moteomb in which binnmure ireen and lomp Cross are situated; and the $^{\text {a }}$ parl, bomalary comprises the entire parishas of C':um, St. Limbalil, Melbury and Compiton Abhas, Sower Provost, hast Stower, 'Iodlsere, St. Marparet's Marsh, Moteomb, Wombead (in Wilts), and Alse chapulty of Jlartgrowe, making a total abea (1) and extends nearly to the verge of a high narrow hilt. 'Thomgh irregular, it is well built, a large propurtion of the honses leing constructed of treestone guarried in the neighbourhood. Shateshury had anciently twelve charches, besides several chantries, a celehrated monastery, and a hospiat. It has now bat three churehes, the principal of which, St. l'eter's, is of great antiguity, and has some elegame, thongh moth distigured by mondern alterations. In the spacions and weliplanted charehyard of IFoly Trinity is inclosed a considerable portion of the wall of shafteshory Nbley, being all that remains of that once famons edilice. It is said to have been rected by the wifo of Edmmul, great grambson of king Alfred, for Benedictine nuns, (C'innden, (iibson's ed, i. bin.) It was afterwards called Sit. Edward's Abley, from Elward the Martyr, who was murdered at Corle Castle, having been buried in it. After the churches, the principal public buidings comprise a haudsome town hatl, built at an expense of 8, mul, and meeting-houses for Friends, Independcuts, Wesleyans, and also Dissenters. A free achool, for twenty poor boys, was founded in 1719; and there are almslonses for both men and women. The town hat formerly a manufacture of shirt louttoms, which employed many women and children; but it has now ceaved, and it has few ontward signs of prosperity, thongh it is said that its condition has latterly improved.

Shaftesbury is mentionel as a bor. in Domesday Book; but its only existing municipal charter is that of Janes I., contirmed by Charles II, It sent two mems, to the II. of C. from the reign of Eidward 1. down to the pussing of the leform Act, which deprived it of one of its members, and at the same time increased its boundaries as already stated. The election for mems was formerly vested in the inhabs. paying scot and lot. Heg, electors, 488 in 18150. Since the Municipal Reform Act it has been gov rned by a mayor, three other aldermen, and twelve combillors. No courts are held within the bor. Market-day, S:aturday; fairs, l'ilm Saturday, June 21, Nov, 23, for all kinds of cattle.

Shaftesbury is supposed to be on or near the site of an ancient British town called Caersepton; but it was of little importance till the fommation of its monastery, and has latterly depended prin-
cipally on its political privileres. It gives the tillo if earl to the mohle limily of Ashley (onprer. SHAll.ABAIS, a district of Úritish India, presid. liengal, prov. Balar, between the ilistricts of Datha, lhalar, and liamghur, on the li. and S., and lienares, Ghazepor, and Sarm, on the W. and N. Area, dibiol sq. III. P'op. estimated at. nownt 1,0 mo,000, umarly all Ilimdons. 'Ihe (itmeres bomads it N., the sone W., and the Carammassi b: It is very fertile, its staples being opinun, tulateren, cotton, sugar, indigo, and hemp: it is melebrated for the excellence of its roads, a distindimmainly owing to a reservation in the orizimal land settlement with the zemmelars of a certain ammal sum to keep them in repair.

SHAIIJEIIAND(onle, a district of IBritish Imlia, prov. Delli, having NE. Nequal, E. (Jute, N. the latter and the district of Furruckahad, and W. NaisWall, lareilly, and l'illibheet. Area, $1, d: 11$ sq. m. Its cap. town of the same name, 175 m . Ni.. Welhi, is reported to le nearly as penmlusis as the latter city.

SIIANGIIAE, a eity allid river port of China, pros. Kimmesin, on the Woosung river, 41 m . lig water from the sea, and 160 m . lisk.. Namkin; lat. $31^{\circ} 12^{\prime}$ N.. loun;: 1210 50' E. Pop. $1 \cdot 14,2,27$ Chinese, and $3, \dot{2}$ is forcigners, aceoriling to a census made in the gear I Nisis. 'The city stands in a level anal woll coltivated plain, producing good crops of cotton, rice, and wheat. Immerliately ousiale the wall by whieh it is ellolosed are several populoms sulmulis. Stronts marrow and tilthy: Fommlling hospitals, tea-gardens, amid vast ice-honses, are the objects most wortly of notice in the city. It has a mint, with manilaetures of silk, vegetable oils and oil cake (ol which vant quantities are ammally sent into the interior), iron ware. flass, pajer, and ivory ware.

Shanghe is the most northerly of the $\bar{\sigma}$ Chinese ports opened to foreignors ly the traty of $18 / 2$, and, exeppting (imon, it is, also, the most important. The river, whieh may he marigated by ships of dill or 500 tons for a comsiderable distance alowe the town, crosses the (irmul Canal, so that Shamgate is an entrepot for all the vast and fortile: eommtries traversed by the canal, and by the great rivers, inc. the Yang tse-Kiang, and the lloangHo, with which it is commectel, hence the presont. importance of this emporimn, and hence, also, the indelinite extension to which its forcign trale will probably attain. Its inland and coasting trades are both very extensive. It is ammally visited hy from 5,000 to $(1,000$ canal and river boats, snme from very great distances, and by 1,500 or $1,10(11)$ coasting junks. The prov, of Kiang-su, in which Shanglate is situated, proluces great quantities of silk; and besides supplying most part of the N. pross of the empire, the shipments of silk to the foreigner are greater from this than from any other port. It is also well situated for the export ol' both green and black teas. Among the other exports are gold and silver, with oil and oil-cako, camphor, drugs, porcelain, cotton, cassia, alum, bypsum, and coal. Of the imports opiom is ly far the greatest ; and at least 20,000 elests of lbonlay (Malwa) and latna opium are anmually disposed of in this market; which, suphosing the chest to be worth 500 dolls., will represent an agraregate sim of $10,000,0001$ dolls., or $2,200,00001$ sterling for which payment is almost invariably made in the precions metals, sugar is extensively imported from Formosa, Canton, and the lhilippines; cotton stuffs, woollens, and iron, from lengland; with sandal woon, birds' nests, biche ale mer, amil other products of the Eastern Arehipelago.
'The inhabs, of Shanghae are mich more hospitable and hetter disposid towards foreigners than those of Canton; and strangers may travel for
miles into the interior, nll romal the city, with wrect serourity. W'ithin the last I" years, many time brick homses have berob bilt thy the Jritish and wher lorefig merrhants in the suburbs.

SllANXON, a river of Irelamb, being ly far the largest mul most inportant in that ishand, and hardly inded inferior, if it be not sumprior, to any in the linted king lonn, It has, in many rosurets, particularly in its meraly insulating an extensive prowe, in the direetion of its comrse the length of its mavigation, and the magnitude of its esthary, a striking resemblane to the severn. Its somred is generally traced to the lane of cinil cagh Monntain, in the Nil. part of Civan. After ruming a few miles, it falls into Lough Allen, almut 11 m . in lengith, and lrom 1 m . to 5 m . hroad: its course thence to limeriek being $\mathrm{S} .$. with a small inclination to the $\mathrm{W}^{\prime}$ : issuing from Lough Allan it passes Leitrim, Carrick, and 'Jarmonhury, entering lomgh Ree, at lameskormgh. This, which is a very irregularly-shaped extensive shout of water, is abont 17 m . in lemgth. Lemving it, the river, now qreatly angmented, passes Athfone, and then winds by shamon Iridge and banagher to l'ortumna, near which it expands into Jomgh Derg, a narrow lake, est m. in lemgeth, with deep haysamd inlets. Fismping from the S. extremity of this lake, it thows on to limurick. Here, havinis met the tide, it takes a Wisll. direction; ami, frablably expanding into a noble estuary, unites with the Athatie, between Kerry llead and Lown Head, abomt 70 mm . lower down. From the head of Lomed Allen to its month, the Shamom has a course of abont $914 \mathrm{~m} .$, viz. lough Allet, 10 m ; ; damen Allen to Lamgh Ree, $1: \mathrm{m}$. : lomgh liee,
 Derg, eis mo; lomgh Derg, to limerick, 15 m, ; and thenee to the river's month, 70 m . Loop llem and Kerry Id add are abont $\mathcal{X}$ m. apart.

The distance to which it has been rendered mavighle is the most extroordinary ciremstanse comnected with the Shamom. lin this respect, imbed, it is superior to the Thames, Sevem, Trent, or any linglish river, If Lourh Allen be (as it is considered by some) reckoned its somrere, it is navigable to its very heal; but, traciner its origin to the base of C'illenarh Monntain, there are only 6 or $\overline{7}$ out of its entire conrse of ahont 230 m. that may not he mavizited. It is ununcessary to insist on the valne of a river of this sort thowing through the very centre of lreland, insulating the preat province of Comanght, and 'washing the shores' of 10 ont of the 32 cos. which the island occupiss. Dnlackily, howevor, the marigation of the Shamon, like that ot most other rivers not of yery sreat depeth, is, in certain places and at certain semsons, a grod deal ohstructed. It may be mavisated, with no very serions ditli'ulty, from the sen to linterick by shijs of 400 tons burden. Bat immediately above the city, ant in some other phaces, its comrse is impeded by rocks and rapids, and large sums have been expembed in improving those parts of the navigetion, partly ly making lateral conts, and partiy by deepening the bed of the river. The lesel of Lomph Allon is abont 1.1 ft , above high-water mark at limerick, the aseent being in a great monsure overcome by one double lock and twenty single locks, placed in those sitnations where lateral ents have been made to avoid the rapids. These couts are from 13 to 14 ft . wide at botom, having the usinal slopes, and are calendated for a deptla of water varying from 4 to 7 ft . in ordimary spasons. Still it must be admitted that. considering its paramonat importance, the navigation of The shamom is by ho meabs in a satistactory state. In dry seasons it is impeded by shallows.
on which there are stmetimes only from 2 to 3 fl. water; and during lhome the chanace of the river, owing to its fregnemty expmating into extemsive lakes, and the lowness of its banks, is not rasily diseovered. Had it heen an Vinglish river, these ditliculties would have heen overeome lomg aby; and the money expended upon it might, had it bren properly und cfleetually aplied, have sultiderl to whiate them. Ihat thie works have not monirepuently been very masilfully and insulliciently exerotel. It is mow, however, muder mudh better management; but it will repuire is consilderable additional expenditure to put the works inta proper order, and to ansure at all times, what is (o) vory essemtan, a safe and easy mavigation, I'lie introluction of stemm tugs amil sterm vessels on the loughs of the Shamon has been of intinite survice; withont them, inderd, it never conla lave been turmed to mash accomit.

The suck, the pmonemal tributary of the Shamom, risen in lioscommon, Its comrse is s., indining to the bi., dividing the cos. of lioncommonand (ialway, by Castlereagh, Athlearice, and Itallinastor, tili it unites with the Shamom at Nhamon Bridge. On its lis. side the Shammon rrceives the lmay, the Liper mul Lower lionsit, Malkerm, Maig, and Fergis. The last two are mavigable to a considerable distance. The int portance of the Shmmon, as a commereial river, has been materially ineremed by its junction with the (irand and liovial Canals from Dublin. Though defertive both in their plan and execution, and made at an immense expense, still it is not to be denied that they are, particularly the diamid ('manl, ol' ereat publie utility. In comection with the Shamon, they have opened a communication by water across the islamd, so that persons living in its centre may send their prodnce, at a moderate exjurnse, to Dublin or limerick, as they find most advantareous. This laying open of new and alinost bommdless markets has given a stimulns to the improvement of the central parts of lreland, of which it is not easy to overrate the inthence, and which will, no doubt, be as permanent as it is powerful. lirom its situation at the head of the erstuary of the Shamom, in a comintry naturally of the most exuberat fertility, 70 m , from the seat Limerick is the principal emporimo of the $\mathrm{W}^{r}$, of $\operatorname{lrel}$ and. SIJEERNEAS, a sea-port and market fown of England, in the par. of Minster, lathe N. Cray, co. Kent, on a low tongue of hand at the NiF. extremity of the Iste of Sheppy, at the conthene of the 'Thames and Medway, on the la. bink of the latter, $1 \times \frac{1}{2} \mathrm{~m}$. WNW. Cimterbury, $36 \frac{1}{2} \mathrm{~m}, \mathrm{~F} . \mathrm{h}, \mathrm{y}$ S. London by road, ant 49 m . by London, Chith han and Dover ralway. Pop. 10,015 in 1 sili. The town, which owes its rise to the formation of the naval doekyard, is divided into three parts, called respectively, Sheerness-proper, Blae-town and Mile-town, the tirst two being enclosed hy tortifications. During the last few years the town has been much enlarged, as well as areatly improved, by the erection of rond brick houses and the fimbation of several new streats, well paved and lighted with gas. The town was formerly very ill supplied with water; but, at the begiming of the present century, a well was sumk by the board of ordnance to the depth of 360 ft ., whide supplies water, mot only to the town and garrisom, but to the shpping in the Medway. A pier with a canseway rams down from the town to low water-mark, and liacing both the river and sea is a wharl of cunsiderable extent. several old shifis of war, also, have been stationed on the shore as breakwaters; formerly they used to serve an dwellings for many of the poorer townspeople, lint few of them are now inhahited. The par. chanch

The doekyard. which eovers an area of abont Fill arres, enidosed by a smbstilntial briek wall, hats theen preatly extemed and inproved during the
 sterling. It has every convenience for the bilatulis. rephir, int fitting out of shijus. It emmprise a wot dock or basia of atont :3f arres, capable of aceomomating $1 / 1$ satil of the line, and in which ther may take on lonard their stores, ammantion, and provisions, and be, in all respects, efpipmed realy for sea. I'lires dry doeks, cach suitable for the areommonation of in lime-af-hat tle ship, have hoen constricted on the li. side of the basin, and (1) houses, with mast-houser, mast ponds, and slip, smithery, and artilicers' workshojs of every deserintion; with handsome resideness for the commissioners, port-admiral, and other oflicers of the establishment. 'The principal othices of the ordnane department were, some years sinee, removed to Chatham, and the area formerly ocolpied lyy them has been adiled to the dockyard. The wharf wall, on the S. side of the basiu in frout of the mast-homse, is 100, and that on the river front ti0 ft , in width, linedon both sides with pranite. Numerons convicts are employed in the flockyard and on the halks, ehietly in the improvement and repairs of the former.

Nheerness, which so late as the time of the Commonwealth was a mere swamp, was fixed upon after the liestoration as an important position for if furtress, The works, however, were still incomflete when the Duteh, under De linyter, in libiz, tonk and ilestroyed the fortress and the shipping. (See Cintian.) The fortilications were niterwards constructed on a latrer seale; mamerons hatteries of heasy artillery were planted on both b:mks of the river. The dockyarl was begin marly in the last century. The mutiny of the leet at the Nore, in 1798, threatened the town and doekyard with destruction, which, however, was happily averted,
slllifliELID, a parl. bor., market town, anil par. of England, cal. of the district of Llallamshire, W. riding, co. York, upper tiv. of wap, Nitatforth and Tiekhill, at the conflume of the Don and Sheaf, the former of which is erossed by \% and the hatter by 2 bridges, 39 m . S. Leeds, $1 \cdot 10$ m. N. by W. London by road, and $\$ 60 \mathrm{~m}$. hy (ireat Northern railway, 1'ollo of ber, 185,172 in 1861.

Area of parl. lor, amd par. which are co-externsive, :2:. x:3a ares. The town, uriginatly comtimed to the shone of a hill rising slio from the lhon, ocelpies the buttom allil sides of serverif low hills. risimg in varimes dirertions lesth from the I hon and Sherf, the whole heing well-paved and hargerd, lighted with gas and abmidandse supplided with wator. 'The ohder streets are sterel, harrow, allal irregular: hat the more modern streets are wide and straght, lined with fowd brick honsens, allil
 of the metromis. 'The simbe, however, prewerting from the inmmerons stean-rngines, firges. and factories, quives the town a dingy, mean ingerar ande, contrastime strimgery with the extreme
 as it is, in every tireetion, hy the dimment villas of the opmlent hankers, merehamts, and manitacturers of Shediedd. The market-phare oroupiex " wille ofrol spare in the tligh Strent, and nean it are the parish chureh and primeipal inms: it is of modern construction, mad romprises latere shambles amd other necommodations. 'lhe rornexchange, also, is a hamdanme mokern buildiner, romprising exoellent aceommonation for thase frequentimer the markets. 'Ihe ellthers hatl in Chureh streot, belonging to the anoidnt wornration of enthers. is a hamdsome stome building, with rooms for the transideting of corporate hasimess, pmblic moetings, and dimers. 'The town has 25 elurches. mont of them of moderin cremtion. The mother clardi of the lloly 'l'rinity is at noble (iothie strueture, 2.10 ft . in lemerth be $1: 3$ ft. in lireadtlo, and from its centre rises a tower surmonited by a lofty spire, of handsome proportions: the part now had for livine servier, which exchudes the ameient chaneel, was rebmilt in inall. and is litted up in a solid and hamdsome manmer, with accommodation for mewarils of 2,01101 persoms: in the chaned are some purions ohd momements, and a line binst of a hate viear hy Chantrey. St. P'ml's, in Norfolk Street (ereeted liy subseription in 17:20), is a rather heavy Greek structure, with a tower surmomed hiv astome, and a cupola ol cast-irom. St. James's, mar the par. chureh. also of (irecian arehitecture, though smalh is well arranged, and at the Li. end is a line staned flises window, representing the ermeilision. St, fieorges on inn eminence, at the W, extremity of the town crected in 18.1, at an expense of $15,1: 301$. , chietly Infrayed by the parl. commissioners, is int the later linglish style, and has a lofty square emhathed towar, crowned with pimancles. St. I'hilip's, uear the intirmary, and St. Mary's on the Sb. side of the town. are in a similar style allit equally bundsome, both havinis heen ereeted, like St. (ieorge's, at the expulise of the parl, commissioners. liesides the churches, which hase atecommondation for upwards of 50,0 , 10 persons, there are nearly to phaces of worshiju for dilferent domominations of dissenters. Nine of these belong to the Wesleyan Methodists, and are amoner the largest buildings of the town: the Imdepondents have alsu a mumber of lirge places of worship, and there is a handsome Loman Cintholie chapol, Comected with the varoms places of worship are mumerous Sumalay selools, furmishing religiths instruction to about $20,(010)$ children. 'l'bere are, also, mumerons mational schools, Laneastrian schools, and infant sehools. A grammar seluol fombded in the reign of James l., has an endowment of about 1.40 . a year, three-lifths of whieh are paid to the head-master and two-fifths to the usher, both of whom receive entrance-fees, and other extra-payments from the pipils. The management of the school, and the mpointment of the masters, is vested in the vicar and 19 lour-
gesses of Sheflield. $A$ sehool of design, under the putronare of govermment, lins also leren resti-
 provides clorlingr, hoard, and instruetion, with an apprentice fee for ! 10 lows, nad a similar establishment for 70 girls was formed in 178ti, A collespiate sehoul, finmed on a joint-stock principle, is well attended; and the Wesleyat banly lave established a proprietary seloon, ilt which :0in) boys are lanaded and litherally ednented, parsly with the view of providing for the better chementary instraction of the intembed ministers of that denomination. Anomg the many charities belonging to the par, ol' Shellield, the prinripal is lord Shrewshary's Ilowpital, for en men and the same number of women: the bniblings, which have been erected on a new site. consist of a eentre nod wings, in the later binglish style. Ilollis's Itospital, a similar establishment fommed in 1703, is endowed with funds for the sulpport of 1t widows of eutlers, mul a small charity-school. There are mumeroms minor charities.

The gemeral intimary, which stands abont of m . N. From the town, is a bandsome stome buidfige, willo semicircular wings and n central protico, its interior comprising many large and ary warls, with arcommodation for abont 200 in-patients. Aljoining. lout distinct from, the intirmary is a large lnilling, eontaining fever warls. The modical and domestic arrangements are complete, and. 'in the whole, it is one of the best regninterl provincial losspitals in the kingolom. It was 01ened in 1797, having cost above 20,000 ., raised ly sudseription. Shedield has, aks, a gencral dispensary, with lying-in-charities, borens societies, provident institutions, a large nusiliary Ibible socictor, and varions religioms associations conneeted hooll with the establishod charch and the several bodics of dissenters. A theatre was bailt in 17 ti2, with attached assembly-rooms. The library altached to the mechmien institute comtains aboint $\overline{5,000}$ vols, : the literary and philosophicenl socioty (established in 1822) has a growd collection of minerals, fossils, and plants, with apparatus for experimentas and the botanima society has a garden comprising is acres, tastefnlly lain out, and a glass conservatory, 300 ft , in lempth, tilled with rare exutic plants. The chief commoreial buiddings are the post-office, excise-othee, and assay-onlice, erected in 1573 , soon alter the rise of the silver-plating trale.
little is kuwn of the carly history of Shetheld, or of the origin of that business for which it is now so famons. llat it had attained to eminence in the making of knives so early as the 13th century ; for Chaucer, contemporary with Edward Ill., mentions in his 'lieve's 'Tale,' the Shellield 'thwytel,' or whittle, in such a way as slows it was then in common use, It aloes mot appear ever to have lost the reputation for cutlery it hat thas early acpuired. In lita the Earl of Shrewsbury, lord of the manor of Shetheld, sent to his friend Lord Burleigh 'a case of Hallamshire whittels, beinge such fruites as his pore cuntrey affordeth with 'tume thronghout the realme.' In 1624 , a corporntion was formed for the 'good order and government of the makers of knives, scissors, shears, sickles, and other cutlery-wares in Ilallamshire,' the government being vested in a master, two warlens, six scarchers, and twenty-four assistants, consisting of freemen only. The principal object in the formation of this corporation scems to have lieen the regulation of the murks or other deviees which every individual was to strike or inpress on the goods lie made for sale. But these renolations cat harilly be said to be may longer in operation. The corporation continued on the
footing fixed in $162+$ till 1811 , when an act was passeril, permitting all persons indiseriminately. withont their being fremern, ar havimg served an apmentideship, or ohtained a mark frmm the corpration for their goods, tu carry on business anywhere within the distriet of İallamshire. 'l'lias liberal and judicions megsure has beren of great service to the town, by inducime men of taldot mil enterprise, from all parts of the combitry, to sertle in in, whrere their competition and indersery lave had the trest eflecets.

For several centurios the maminetures of Sheftichl were contined almost entirnly to the making of shath-knives, seissors, sickhes, and seythes. Alont the begimang of the lath fertury a commont tabaero-lox and the dew's harp were adided to the list of mambineturol articles; but it was not tilt about forty yenrs after that the mannfacture of clasp-knives, razors, abal files, for which it is aow sul famons, was introdiced. It has been remarked, that for abont a century after this periond the manuthetirers discovered more of indistry and perseverance than of enterprise or ingennity in the combluct of their lmsiness. About 17 Fol they begin, for the tirst time, tu carry oll " direct trade with the Continent, The mamifacture of plated gouls was somater eommenced, and from that periond down to the present time, shedioh has made an astonishing progress in the carerer of industry, and in many bratuches of the hariware manafactare has no superior, and in some no rival. Like Dirminghom, Sherlicha was most probably indehted to her situation for lere early mplicanion to the hardware lmsiness. Cond and iron are fommd in ler immediate vicinity. The Ihon, on which she is built, and is smaller rivers which flow into the Don near the town, supply her with power to work mills for forging, entting, and preparing the iron and steel used in her mannfictures, and in this respert she has an alvantage over limmingham. I'le river was made navigable to within ahont :3 m. of the town so early as 1701, mad a lateral camal has sinee prolonged the navigation to the town.

Cublery, an it was the earliest, so it is still the largest and most important branch of industry. The principal articles are table-knives and forks, pen and pooket-knives of every varicty and drscription, setssors, razors, sureical, mathemaical, and optical instruments, seythes, sickles, saws, with all worts of earpentors' tools, and no lorth. The most beantiful and highly tinished artieles of entlery exhihited in the shops of the metropolis, thomgh stimped with the vendor's ame, are mostly made in Sheflichl, and the entlery of the town is deservelly held in the highest estimation in all parts of the worla. With the exeeption of plated sadillery ware, almost all the other deseriptions of phated goods made at Sheflield are rerlioned superior to those male at birmingham or naywhere clse. Some of the best piated artioles have silver edges, and, when used with ordinary care, last for a long time, and can with ditheuty be distinguished from silver. An extensive mannfacture of artieles of (iemann silver is carried ons.
Shethed produces few articles in eopper and brass, and no toys; bint, in liett of these, she hats some peculiar and important bisinesses. 'The comversion of iron into sted is carried on to a liar grenter extent here than in any other part of the empire, and most of the steel used at lirmingham and other plaees is prepared at Shellich. The mamufacture of springs for railway carriages has become an important business. The mannfacture of files is one of the staple trates of Sheltichl. Files are used in immense quantities at home, ant are largely exported. Any one who han ever seen the process of lile-cutting would be likely to con-

Inll act was srriminately, ing surved int from the corhmilless anyInshire. 'llhis ren of spe:nt II'II of tailent c combitry, to and indinary

Fow comparatively of the Whelligh mannanetarer have larefe copituls, and the bosiness is mot sut Lenerally earried on in workslops and factories as at Itirminghan. A persom worth a fiew shilling mave (ommence binimess oll his own aremmat as at enther, and in this elass individuals ure not unfrequenty journeymen one year and masters mother. amal eomversely. It is estimated that the staple mambacture of Shellied employs above 210,11011 hands, one-half of whom, men mind boys, are rillgraged in entlery and tile-making. "Wures in Shetliehl vary from abont 12 s . to 10 s . a week. The labour in some departments is very severe, and in others grent skill is requirel. Girimbers, purticularly those who do not nse water in their onration, inhale the finer particles of stonte nim shed, and ure usually short-lived. Many efliorts have beren made to olivine this, as well as to lessen the risk of mecibonts in the grimbing mills; but the romphement contimues to be more than ismally umheralihy mul damgroms; and as much skill is
 and razors, wages, being inthened by lwath cirramsiathes, are gemerally high. Dimy hamis are amployed in grimding suertarle phlases, most of which, inderd, come from shedicha. The showromas and mandactorios of the leading honses are frove opemed to all respectable strabrers, and alliril almodant pronfs of the ingemity that has raised the town to ita present inportance.

The workmen of Shellem hate been aedased of a tembency to riot and insibordination, and mo donbt several destructive riots lave taken phace during the prasent century, which have requiren the interference of the military for their suppressinn; but these have mostly origimated in extreme distress, or in some temporary and aceidental emmen, mal, speaking generally, the inhabituts are distimguished lyy their orderly, food combuct. None of them live in cellars, like the poorer ranks in Liverpool and Manclester, but eacli family ocenpies its uwn house. The workipople are, ill this respect, mond better off than those in most other large mimuheturing towns, and their houses are also firmshed with better and more costly articles than are usually met with in the dwellings of the same clas, This favourable peenliarity is the more remarkable from their being in the town itself many ohd, crowiled, and tilthy localities.
shediehl enjoys the advantage of a direet camal communication, eastwarll to Jlull, and by n circuitons ronte westwarl to Manchester and Liverpool. The Don was made mavigable to 'linsley in 15i. A canal was subsequently cut for the tramsmission of heavy goods, and the camal-basin of Sheclield is accessible to vessels of 60 tons. More recently Shetlichd has been united by railways with all parts of the kinglom. The lines by which she is comnected with Great Grimsby on the one hand, and with Manchester and Liverpool on the other, afford peenliar facilities to her import and export trate.

Sheflield had no voice in the legislature till the licform Act, by which the parish was created a parl, bor., with the privilege of sending 2 mems. to the II. of C. Registered electors, 8,759 in $1 \times 1.5$. The lighting and watching is condneted by the police commissioners muler the anthority of a local act. There was no proper municipal corporation till 18.13 , when the bor, was incorporated ly charier, dated the e2.Ith August of that year. It is now

Lroverned by a mayor, I ahlarmen, and der rime cillurs. Shiclle he is also one of the polling-plaves

The latter was seized in the civil wars by Nir dolan tiell. one of the parliamentary generals, amb was demmelishent, be order of parliament in l6:li, there being now no remains except of the foumlations. Its site, lowever, is still millen Casile llill.

Slllil'l'o. M.M.II:'I', a market town ami bar. of limgharl, co, Sonnerset, lomal. Whitstame, oll :

 neres. l'op. 5, ,if7 in twis. The town, which comeprises a mumber of uarrow soreets and lanes, has becn much improved of late vears by the construetion of a new briager, and the opening of new roads: mear its centre is a corinas marked-eross, arected in Lown. The elourch, in the carly limplish style, is a spacions cruciform strueture, with a tower and spire at the W. end. Were is the comms brialewell, a large and comspiomos edifice; anil hore, also, petty sessions are held. There are phaces of worslip, for lingetists, Independents. Wesslevans, and h. Catholies; a convent of voitation mins, the only one of that order in the kiugitinn an almshouse fommled in 1699 ; and a free schomi, established in 1813, The town had formerly a Hourishing mannfacture of woollen gromls, but this branch of industry is now much fullen oft: Markets, Tuesduys and Fridays; fiairs, Easter Momiay, June 18, and Nugust 8, for cuttle anl chees.

SILBRBORNE, or SIIER: BLEN, a market town and par. of limglaml. co. • ". ', huml. Nher borne; on the Ivel, which dive st the town into (wo parts, Sherborme and Castleton, Jit m. N. Dy W. Dorchester, and 110 m . Wsil. Lonlon, on the Lomblon mal Sontl Weatern railway. I'op, of par. 5,793 in 186\%. Area of par, 1,900 neres. Shurborne is tinely situnted, partly on the acclivity of a hill, and jarlly in the fertile vale of blackmore. It is emmpatly buitt ; its principal strects, ruming E. and W., ure crossed by smaller strewts in a contrary direetiom. It was male a bishopis see in the 8th century, and continmen such till 1075 , when the see was removed to Nialisburs, and Sherborne cathedral became an abticy church. Portions of the abbey, inchating the refeetory, still remain; but it was in great part lestroyed by fire in the time of llenry VI. The chureh, however, chiclly rebuilt after that event, still exists, and is the modern par. chureh. It is a buililing of very different dates, but mostly in the perpendicular style; the $S$. purch is Norman. The groining is generally rich and good, and in the interior are several ancient monmments. The tower is upwards of l 0 f ft . in height; in it are 6 bells, the largest of which, weighing phwards of 3 tons, was presented by Cardinal Wolsey, The Wesleyans, Independents, liriends, de., have meet-
ing-honses. The huildings of the free prammar neliocol, fommed by bilwaril Vi, n!lioin the

 lanse lior the bisater, formed of the anciont lamy

sllililiss (NOUTII), a parl. lwr., market town, sea-port, aud township of lingland, co. Durham, E. div. of Chester ward, par, Jurrow, on the s. bank of the 'lyne, near its month, and directly opposite Norlt Shields, about 8 mb , below Neweastle, $11 \mathrm{~m} . \mathrm{NNE}$. Jurham, and 272 m . N. Lombon by Great Northern railwny. I'op, of hor. 33.239 in 1861. South Shicleds and its sister town on the opposite lank of the river may be regariled, in some mensure, as the mutports of Newcastle, their pep. ant importance having grown up with the inereasing magnitule of the coal trate nul commerce of the latter. Its lower jart consists principally of a narrow, crooked, ami inconvenient stret, exiending for nealy 2 m . along the river; lont the streets in the upper part of the town are wider and better built, and lighted with gas. The principal editices aud institutions are the townhaill, also used as an exchange, a neat building in the centre of a spacions market-place; a theatre, a scientific and mechanies' institution, charitysehool, dispelisary, and the various places of worship. The chureh, dedicated to St. Hilda, is ot considerable antiquity, but lias been frequently repaired und modernisel. The living is a curacy, in the gilt of the dean and ehapter of Jurham,

Worth 330\%, n year. There are cliapels for varions dismedting merita, to must of whid are attachend
 volent sacidions. In the town-hall perty versions are liela twiee a month, lowides comits leed and buron by the dorn mill cluntor of Wirham, as lords of the manor. Although the appearame of suritls shicks has litle to revommend it, and its hinidings are firr from imposing, yot it is a plano
 two-thirds the width of the Thimes below lamilon Itridge; and the ressels which belong lour rebs dezoons at N. and S. Shlededs are dieposend in tiara on alach sille, as in the port of landon, The town is rapidly inereasing ; a considermble quantite of ground is marhed ont fur building in the lis, alits. directions, and no doulte cans be contertained that
 the rate of incremse would twe minch more ripind. and the seale of huildinge grenter. The whold ut the chapolry is the land of the dean and ehaptere of Durham. somils shiedis hial formorly many salt-pans, noul min extebsive manuftulure of salt; but this has heren ahamdoned, molship-buidting is now the staple hinsiness of the town, mal is very extensively enrried on. It has, anow, very extoli sive thans-works, a pothory, a coal mini (which misy he wid to be in the tovin). and mannfietorios of surla and alam, still, lowevor, the main doperndence of the tenve is om the eosal trmbe of the river. Monst of the large colliors hemomgine th
 hromght down the river in lighters, or herels ; mad as many as bow vessels are frequently seen lying together in the haven. 'Ihere belonged to tho purt, on the lat Jinn. INi.1, seven sailing vessols moder fin, and 307 alowe 50 toms, bersiles is stemmers, of an aghrugate hurthen of exi; tums. The Reform Aet conferred on Sonth Shiclos the privilege of sending one mem. to the 1I. of C. The parl. hor. comprises the townships of Sout Shiells and Westoe. Lieg. electors. 11,75 in 1 kiñ.

Mr. (ireathead, of this town, inventel the lifoboat, the first being built here, by smbserigition, in 1790. Markets on Werluestays: fairs, last Wreal. in April and first in May, last in Oct. and tirst in Nos:

SIIIRAZ, the second city of I'ersia, prov. Fars, or I'ersin I'roper, formerly the eap, of the empirre, in a valley 115 m. NE. Bushire, and 200 m . Shif.
 varionsly estimated at between 20,000 and $40,0 \mathrm{mH}$. Shiay lias alwny beea celebrated for the heanty and lertility of its neighbourhow, which has beed warmly enlogised by the pout llatiz, n mative of the city. It is surrounded with high walls, flanked with round hastions, and has 6 gates, ench with: towers. On entering the eity, the honses, which are in general small, together with the narrow filthy strota, give the atranger but a mean idea of the second city of the empire. The great bazaar. or market-place, built by Kerim Khan. forms, however, a distinguished exception to this Leneral remark, It is about $\& \mathrm{~m}$. in length, made of yellow burnt brick, and arched at the top, having mumerons skylights, which, with its doors and windows, always anmit sufficient lifht and nir, whilst the sum and rain are completely exchaded. The ark, or citalel, in which the begler-ber of Fars resides, is a fortitied square of 80 yards. The royal palace within is far from being an elegant structure ; and some pillars, its greatest ornament, were removed by Aga Mahomed Khan to alom his palace at 'Telieran. Shiraz seems to be rapilly hastening to decay; and most of its public atructures, once very numerons, are already in a mined or neglected state. The principal mosque is a

shiraz is celehrated for its wine. The prineipal vime yaris are situnted at the foot of the momatams tu the SIV. of the town, where the soil is rocky, and the exposure extremely favomrable. It wonli annar, however, that the culture of the vine has degremerated; amb, whatever may have been the case tormerly, little care is now taken in the preparation ol the wine. It is of varions qualities; hat the best of the white varieties is interiar to good Madeira, and the hest varicties of the red (ruly wine of Itatiz) are mot mulike tent, and seem to have bat slender claims to the praves that have hean lavished upon them. The produce of wine may amontin all to from 80,000 to 1001,000 galls.o. of which from 10,0110 to 15,000 galls. may be exported to India. Ihgelad, and bussornh. 'The eommerce of the eity is still rather extensive; it is principally with lhashire, Yeal, Ispahan, and the citics in the NW, of l'ersin.

From Bushire, the chief imports are spices, Chimese, and Indian goods of all kinds, iron, Indel, quicksilver, glass wares, woollen cloths, maslins, linens, arms, ammunition, cutlery, and other European manufactures. I'hese goods, with snit from the neighboring lakes, are sent to lapahan, 'leheram, mal Yezd, in exchange for the mamlictures of those cities and other prodncts. The exports to Bushire consist princibully of wine, rose water, and attar of roses; assafortida, ilried fruits, silk, gonts' hair, Carnmanian wool, sallirun, drugs, horses, urpiment, madder, and tobaceo. The trade hetween Shiraz and lushire employs above 2,010 mules.

Shiraz has no vestiges of remote antiquity, and was probably wot fommelel till after the propagntion of Mohammedanism. It had become a popmons town in the luth centurs, and soon afterwards it was surromeded with walls. Its greatest benefactor, however, appears to have been kerim khan,

 away by flood in $\mid x: 3:$. There are wo remains at Shaster that show it existed prior to the Sussanian dymasty ; but, on the opposite bank of the: Karoon, there are mumerous chambers exatiatal in the rock, ani N. of the city walls are the tracos of a much more anclent town, which appears to lave oxtemed on both hanks of the river, being in this respect difterent from the ance. sinsio (Chesney, Jandinsom, in Geor. Jomrn, iii. and ix.) The inhabs, formerly mandactured large puantities of woollen stialfs, which they exporteal to Bnswornit, in return for Indian commoditios brought from thence.

SIAM (culled by the Birmese Finm/ru ur Yulhia), ma extemsive rometry ol India-bevomil-the-Bralmapmern, comprising, with its dependent states, most of the central mud s. parts of that peninsula; extenting between the fith and 2uth degs, of lat., and the 98 lh and loith of l . lemer. having $N$, the Laos comintry, l:, the emp, of Anam, W. the Birmese emp., the British proves on' Tenasserim, and the Indian Ocenn, and S. the Gulf of Sinm, whieh it enclases on three sides. Its area has been very variously stated, hat probably amounts to $1!00,0100 \mathrm{sq}$. m. Its pepmations has been eatimaterl, though on very vague and unsatisfactory lata, it $3: 1110,000$, of whom, probibly, 1, bun,000 are mate siamese, xom,imin Shans, 250,000 Maliays, and 450,000 C'himese settlers.

Physical Geogruchiy,-The central part of this kingdom consists of the lertile valley of the Heman, one of the principal rivers of SE. Asia, amd the prov. of Chantillon, on the E. side of the Ginlf of Ninm, is also very froitful; but, with hese exceptions, mont part of the comotry, in sa
far at least as it is known to Europeans, is mountainous und rugged. The monntain chain, which traverses the Nalay peninsula and separates Siamproper on the W, from the valley of the 'Thanlwent or salnen river, sometimes rises to the elevation of $\delta, 000$ leet ; and $a$ similar chain shats it off on the E. from its Canbojan province of Inataboug. The only navigable rivers of any conseguence are the Me-nam, the Me-kon or river of Caminja, and the Than-lweng. The last two belong only partially to Siam. The Me-nam or Mei-nam (mother of waters) rims, on the contrary, through the heart of Siam, the prineipal towns of which are situated on its banks. Aecording to mative accomnts, the Me-nam has its origin in the table-land of Yinn-nan, whence it dows generally in a S. direction to the head of the (iulf of Siam, entering the latter near lat. $13 \frac{1}{2}$, and long. $10{ }^{\circ} \mathrm{b}$., after a course ronghly estimated at 800 m . It is navigable for small boats as fur as Changmai, or Zimmey, and large vessels asceml to Yuthia, the olld cap, of Siam. In its progress it encircles several islants; amb at liangkok, about 15 m, direct from the sea, it divides into three separate channels. Only the most easterly of these, or Pak-mam river, is navigable for large ships, the others being obstricted by shallow hars at their months; and even the Paknam branch has a bar 10 or 12 m , hroad, with but 1h fathom water at low tile; so that, even when lightened, vassels entering or leaving the river not nufrequently get aground, though, the bot tom being soft mud, they sustain no injury. The Menam, its mumerous tributaries, and the other rivers of Siam, amually overflow the comntry in July and the succeeding months.
The rlimate, except in the marshes left after the immulations, is usually salubrious, though the smallpux and cholera sometimes make great ravages. At langkok the mean tem. of the year is auout $83^{\circ}$ Fah. ; the heat is, however, not of an oppressive claracter, and the annual range of the thermometer is stated to be only alout 13 degs. What is called the cool season lasts from Nov. to Feb, ; Mareh, April, and May constitute the hot season; and the wet season continues during the rest of the year.
Nutural Products.-Iron is found in the monntain ridges on either side the valley of the Menam; there are also mines of tin, copper, and lead; and the precions metals ure procured in small quantities. lhat the mineral pronlncts of the country are but little known or explored.
Siam is, perhaps, the cheapest comotry in the world for rice, which is commonly under $2 s$. and often costs ouly Is per ewt. This is aseribable primeipally to the natural riehness of the soil, and the fact of its leing annually wertlowed by the Me-mam, or Nile of Siam. Here, as in most castern comutries, government is supposed to be the prineipal proprictor of the soil, but the tenants who pay the land tax rmi but little chance of being ejected; it is said, however, that garlens, orchards, and houses are viewed as the private property of the coupants. The Chinese are at onee the principal cultivators and leaders in every brameli of imlustry.

Besides rice, Siam yields nearly all the most valuable products of the Last, and, muder an intelligent groverument, might furnish vast quantities for exportation, Sugar, pepper, tobaceo, the finest fruits, are the prineipal articles of culture; and the forests, which cover a large proportion of the surface, produce teak, samdal, sapan, rose, eagle, and a varicty of other variegatod and perfumed wouls, with numerons gums. The teak is sain to be of the same quality as that of Limuah; it is
floated down 300 m . from the interier to the capital, and is there almost wholly employed in the construction of native jumks, very little beins exported. Irons, copper, tin, lead, and frld are the principal mineral problucts; the goll is obltained by washings, the tin mostly from the tributary Mialay territories. The will animals are similar to those of lIindostan and the aljacent Ultra-Gangetic comitries: the elephant is most abmulant, and is exteusively employed. A viry rare or white variety of the elephant is sometimes, fomud here, and is hohd in the hifhest estimntion, Imleed, one of the titles of the Siamese monardh is, 'lorl of white elephants,' several of which are maintained as state appendages at the al eonrt. 'He who tiscovers one of these anitals,' says a traveller, 'is regarded as the most fortumate of mortals. The event is of that imporiance that it may be said to constitnte an ara in the ammals of the mation. The fortumate discoverer is rewarded with a crown of silver, and witio a grant of land edual in extent to the space of comutry over which the cry of the elepliant may be hearif. He and his family, to the third generation, are exempted from all sorts of sersitule, and their land from taxation.' The rhinoeeros is more plentiful in this than in most other cometris: tigers, though inferior in strengtlo to those of liengal, are also eommon.
Ritres of Inhubitunts.-The Siamese appear to be of the same stoek with the Laos Shans. to whose comatry their traditions point as thoin original seat. They are characterised by a broal forcheal, a laary sealp descemding so low as to cover, in some instances, the whole of the temples: the lower jaw is long, and remarkably finll unter the zygoma, so as to give a suflare appearance to the comintename. Eyes small and obligue; lips thick; montli large; beard scanty; bair coarse, lauk, and uniformly black ; but that of the chin is softer and of a lighter eolour than is usual amongr the Cltra-diangetie nations, heightened amome the upper ranks by a bright yellow wash. Limhs thick, short, and stont; trunk square; they have a strong tendeney to obesity: average height of men about $\overline{5} \mathrm{ft} .3$ inches. Trisellers arree in representing the Niamese as crafty, mean, ignoramt. conceited, servile, and rapacions. thublence, as might be expected, is also one of their promitent traits. They have, lowever, some redecming qualities, being exceedingly attached to their chidren, reverential to parents, temperate, and. except on great provecation, gentle in their manners. The upper classes, however, are othensively coarse, manifesting a total disregard for tho feelings of others, and an mbommled arrogimee. The Laos, or Shans, tributary to Siam, inhahit principally the N. part of the conntry, where they are divided into several tribes. (See Lados.) Thie Chinese settlers are mostly immigrants from the proves of Canton and Fokien, and the ishamd of llaman. They resort to Siam maccompanied ly their fanilies, intermarry with the Siamese, and adopt their form of religion, with most of their labits. Each male above the age of 20 pays a capitation tax. The greater munber of them are employen in trade, or, if within the tributary Malay states, in working gold and tin. At Bangkok there are a good many Cochin-Chinese and some settlers from 1 limdostan, most of whous are Mohammelans. The lortuguese Christians, or their tlescemlants, of whom there may be about $2,(00)$, are engageal in commercial pursuits, as interjureters, \&c., aud are mostly in indigent circumstances.

Arts and Iurlustry.-The Siamese linve made very small frogress in the uselial aris; nor, under
existing circomstances, can it well be otherwise. All mechanics who evince any skill are inmediately seized upon, and made retainers of the king or of some person in authority, who emploses them for life in some mseless service of vanity or istentation. Wence there is, as it were, a premium on barburism, and labour is dear and ditticolt to procture. The ordinary mechanies are, in fact, nsually natives of China or Cochin-China, In no one useful art have the Siamese ever attained distinction. They make no fabric that can hear to be compared with the cottons of Jlindostan, the silks of Birmal, or the porcelain of China Even in the fabriation of jewellery, a protieiency in whirll hist been often remarked among ruder prople, they exhibit little skill; and, in fact. their gold and silver trinkets, plate, and articles of zinc, tin, and brass, are all imported from China, or obtained from the Chinese settlers. It is through the ingensity of the later that the iron ore with which the comutry abomids has been of late years rendered available. At present a good deal of nailleable irom is produced, and at Thangkok there are several extensive manufactories of east-iron vessels; but these are wholly conducted by Chinese. The latter have also introduced the culture of sugar, now become a staple product, and have errated a taste for commerce and the means of earryiner it on. The entlery and tools in use among the siamese are of the rulest and simplest deseription; and, though the people fabribate arms, they have aequired no skill in the art, and firearms have alway heen supplied by Eturopeans. Even the coase brown pettery in ise is mostly mate by l'eguans. 'The art of dyeing is on the lowest seale, though the conntry abounds in the necessary materials; and printing silksand cottons is not practised by the Siamese in iny slupe or firm. The Niamese population of this cometry is noarly, if not quite, stationary, and the greater part are engaged in its culture. Much more wonld he grown if the people were masters of their own time; but every Siamese male is oblifed to work lin the king during three monthis of the year, and there is no absolnte certainty at what time he may be ealled to do so. Bevond the regular serviee the men are often called on to atteud the kings on any journe: they may make; and althongh the nombur so called is not so numerous as was formerly the case, owing to their majesties having prowided themselves with steamers, and being able thereby to displense with the mannal labonr required for propelling the royal barges, yet the very liahility of leing so called prevents many from growing more rice than they require for their own consmmption.
Architecture is in the same low state as the other arts. The habitations in the alluvial gromeds are all raised on piles, ass in the rest of India-beyond-the-Brahmaputra, though on the higher lands piles are dispensed with. Lut the honses are nearly nll of the same fragile materials, among whith the bamboo and Nipa palm-leas are the principal; and it is only in the capital or in the uther towns that any are to be seen constructed of hrick and mortar, and rowfed with tites. The temples though surrounded with brick enclosures, consist chictly of timber-work; and, though laboriously carved, gilt, and otherwise adorned, exlibit $n o$ taste. Edifices for public consenience and utility seem to have no existence; and neither phety, superstition, charity, nor interest, seem to have led the rulers of this country to constrnet luidges, wells, tanks or caravanserais. The bridges, even at the capital, consist only ol phanks, and no where do we ohserve any attempt to construct an areh. The alsence of public roids is
not less remarkalle. There are bit two of any conseruence int the kinglom; one from Hangkok to Iuthia, and another from Chantibon to 'Iungyai. In the N. and on the Malay istlomus, elephants are used to convey merchandise across the narrow mountain pathways; but these animals are prohibited, except to a few favoured individuals, in most of the towns, and even in langkok wheel-carriages are unknowa. l lut internal mavigation is so extensive, cheap, and comnodious, that in all the eentrul part of the country it supersedes the necessity for roads.

Commerce,-'The foreign trade of Siam was conducted formerly chictly with China, Anam, Jusn, Singapore, and other British ports within the Straits of Malacea; but since the year 18is, when Sir J. lsowring succeded in concludinis a treaty of commeree, a considerable trade has also sprung ap with fireat 13ritain. However, the most important branch by far of the foreign trade is with China. This is estimated to employ at lenst 2111 junks annually, many of which are of sto or tim), and some not less than 1000 tons. They are all of Chinese build, though mostly constricted in Siam; some are oviud by simmese merchants, but many more by Chinanen residing in langkok, and the crews are never Siamese. These vessels make but one voyage at year, faing in one monsoon and returning in the other. Nost of them arrive at Bangkok in Dec. and dan., but they eontinne to cone from the more distant provs. till Jpril, and sail from the Me-nam in June and July. Numerous small vessels keep up a constant interconrse with the coasts of the Gulf of Siam and the neighbonring islands; and two or three Siamese ships, built on the European model, trade to Singapore. An artiticial camal, kept in good order, comects the Me-nam with the Cambeia river; but the trade by it, as well as by Cochin-Chinese seagoing vessels, has been depressed of late years, owing to hostilities between Siam and Xinam. Banghok is the great emporium of trad. ; and has the largest eommerce, next to C'antom, of any city not peoved by Europeans, or their descendamts. The total amome of shipling which entered the port during the year 1 stio, exchuding junks, was 265 vessels, of $10 t, 910$ toms, against 214 vessels, of $8 \times, 460$ tons, in $1 \times 59$, showing an increase of bif vessels, or 23,350 tons. (Lieport of Nir liobert 11. Schomburgh, British Consill at Bangkok.) The imports into Niam from Clina consist of earthenware and porcelain, spelter, quicksilver, tea, laksoy, iried fruits, raw silk, crapes, satins, and other silk fabries, with nankeens, shoes, fans, umbrellas, writing paper, incense, and Chinese immigrants. From the Malay arehipedago, eatl the countries to the westward, the chief imports are British and Indian piece goods, arms and ammmition from Europe, woollen cloths, a little glass-ware, and commodities suited for the Chinese markets, as pepper, tin, dragon's blond, rattans, biche-de-mer, esculent swallows' nests, and Malay camphor. Hesides these articles, the principal exports to China and elsewhere are sugar, cardamoms, eagle, sapan and rose wools, mangrove bark, contom, ivory, stick lac, riee, areca muts, salt tish, the hides and skins of oxen, bulfaloes, elephants, rhinoerroses, leer, tigers, leoparils, otters, buftialo, ox, deer, and rhinoceros horns; bones, sinews, and leathers. The trade in several of the most valuable proincts is a royal monopoly; lut the trade in sugar and pepler, the two great staples of the comotry, is iree. The two kings of simm have, in recent years, largely engaged in trade, being shijowners as well as seneral merchants. In 1 tito they owned twelve vesscls at the port of Dangkok. (Comsular liepurt.)

## SIAM

Gold and copper are not used as moncy in Siam : the only coin is of silver, being merely a small bar thrned in at the ends, and stamped on one side. Conties are the ordinary medium of traffic, and 12,800 go to the tieal, which is estimated to be worth 2 s . Gel. The ordinary weights are the pienl mol catty; the former is the sane as the Chinese, and divided into 50 catties of 2 年 los, each. The Siamese fithom is abont 6 ft .6 in : the sen, $a$ land measure, of 20 fathoms square.
The qovernment is an absolute monarchy, but with this peculiarity, that there are two kings instead of one. 'The first, however, is the chicf, or absolute ruler of the state, the functions of the second king being bereft of any excreise of high anthority. The manners of the court and the etiquette observed are nearly the same in the present day as they are described by the earliest Fintopean travellers. The tirst king, one of whose titles is 'the (iod hoodi,' is supposed by his sul)pects to be a deity, and is revercheed as such; an immeasurable distame being supposed to exist between him and the lighest of the nobility. Next to the two kings, the nobility absorb most of the lerislative and executive power; there being, except in some case of appeal, no extablishments exchasively for judicial purposes. The siamese have, indeed, written haws; but it frequently happens that the first king, on his accession, publishes a new edition, withs his own interpolations, Homeh neither the original corle nor the changes introduced appear to be much regarded by the allministrators of the laws. The same ehicfs who are charged with the military, civil, and revenue administration, are the only judges mad magistrates. Accorling to the laws of inheritance. a man must leave his property to his family in preference to straugers; but mo elaim of primogeniture is recognised, the chideren usually sharing equally. The nature of the marriage contract is much the same as in other eastern countries, polygamy being bermitted, and divorees ohtained withont ditheulty. A breach of the marriage vow is not visited with so severe a penalty as in Anam, but is usually expiable by a pecmiary fine.

The penal cote of Siam bears a strong amalogy to that of China, especially in the liberai and indiscriminate use of the bimboo for the pumishment of all minor oflences. Fior erimes of magnitude, the pumisliments, as in lismah, are of the most savage description; torture may also be applied to extort evilence. 'They have, also, the same sort of ordeals for determining the guilt or innocence of neensed :arties that were common in Europe during the midite ages.

Armed Force.-Wery male inhabitant, from the are of 21 upwards, is obliged to scrve the state for four months a year. The following individuals are however, excepted: members of the priesthood, the Chinese settlers, who pay a commutation tax, slaves, pmblic functionaries, the fathers of three sons liable to service, and those who purchase exemption by a tine of from six to cight ticals a month, or by furuishing a slave ur some other person not subject to the conscription, as a substitute. There is no standing army. The principal force of the siamese consists in their elephants; but whon contrasted with liuropeans, their army may be said to be contemptible. At langikok, there is a mumerous navy of war-junks amd gallers, built on the Chinese model, and monnting heavy guns, mamed by Chinese and other foreigners.

The publie revenue is estimated at about $3,145,0001$. stering a year; of which sum, the poll-tax and tines for non-service in the army may, perhaps, protuce $2,500,(1001$. ; the land-tax,

287,0001 ; tax on truit trees, 65,0001. ; on pepper, 00,0001. ; on spirits and gambling, about $57,0 t 51$. each; the customs, 33,0001 ., \& C. But, exclusive of the taxes paid in money or jroduce, the people are subjected to corvees, and othor oppressive burlens. The collectors receive no salary, being remunerated by a tithe of the revenue realised: an arrangement which generates a varicty of abuses. The receipts and expenditure are sail nearly to balance each other, but there is soldom uny large sum in the publie treasury.

Religion.-'The worship of Boodh is nearly universal in the conntries lying li. of Ilindostan, lint the lhuduhism of S. is very different from that of N. Asia. Gaudama is worshipped in Siam under the name of Somona Codom. Every male Siamese: must enter the priesthood once in his life, though he may quit it again at pleasure. The talopuins, or priests, live together in monasteries, sometime containing several hundred individuals, molowed by the government or ly wealthy persons. The papal church has maintained missions in Siam for nearly 200 years, but there are only abont 2,200 R. Catholies in the comitry, ineloding 8 (10) Anamese, und several descendants of l'ortugume. Neither do the American Baptist and other missions appear to have made many proselytes.

Manuers.-The inhabs, of Siam are decidedly lower in civilisations than either the Anamese or Birmans. They are less gross, however, in their cating than the former, and women are mot wo much degraded among them as among thic lattor. They are also more generally acquainted with reading and writing than the lirmese. bool sexes Iress nearly alike, and wear fewer chothes than almost any other semi-civilised people of the East: a cotton grament reneling downwards from the loins, with sometimes a scirf across the upper part of the body, usually completes the siamese costume. Jewellery and trinkets are little used, but the teeth of married women are: always stained black. They are nearly as much addicted to gambling and cocktighting as their Malay neighbours; they are also very fund ol theatrical entertanments and music, in which hast they display eonsiderable skill. Their languge is radieally monosylabie, and cognate with thase of the Laos Shans and Anamese; but many words have been introduced into it from the Cambojan, a polysyllabic language, and the Pali or sacral tongue, which last the common dialect imitates in the form of its written characters.

As in other Asiatic countrics slavery is common, and some chiefs have humdreds or even thousands of slaves. Some of the conquered districts have been almost depopinated, to bringr their inhabs. to Siam, and at all times an active slave-trade is carcied on along the Birman fromtier. P'ersons are sold into slavery for debt, and men may sell their wives and chideren at pleasure. A common custom is for the master not to support lis slave, but to allow the latter to work for himself for two or three months, to supply necessaries for the rest of the year, Clitdren inherit their parents' bondage.

Mistory.--The Siamese are said to possess records which go baek for 1,000 years; but little in their accounts possesses any interest till 1.51, when the dirst intercourse of Europeans with Siam took place. The l'ortngnese and Dutch had traded with the Siamese for the best part of a century, when the lirst 13ritish ship went up the Me-nam in 1612. In I683, Constantine Phatcon, a Cephalonian Greek, had found mems to get himself raised to the dignity of foreign minister of Siam, and soon afterwards opened a communication with France. Louis XIV. sent

## SIDERIA

an moy (the eelebrated M, ale la lomhire, who give an excellent deseription of the comatry) to fiam in ltixi. The French were, however, expelled the country in 1690 ; since which time humerous wars, either aggressive or defensive, with the surromming states, have been the most conspicuons events of Siamese history.
SIBERALA, a vast territory of N. Asia, belonging to liussia, which see; and, also, the article Ass.

SLBKKM, or SIKKIM, a state of N. IIIndostan, fribitary to the British, between the 2tith and dith deirs. N. lat., and about the 88 th le. long., having N. 'Thibet, L, Bootan, W. Nepaul, and S. the bengal territory. Area, about $4,400 \mathrm{sq} . \mathrm{m}$. Pop. estimated at about $16 i 6,000$. From its siHitition on the S. slope of the Himalaya, its geoaraphy and promacts are nearly similar to those of Buitan and Nepmul. It was placed uneler British protection in 181ti.

SICLLY (an. Sicilia), the largest, finest, most important, and most eclebrated island of the Mediterramean, constituting a portion of the kingrlom of ltaly, hetween lat. $36^{\circ} 38^{\prime}$ and $38^{\circ} 18^{\prime}$ N., and long. $12090^{\prime}$ and $15^{\circ} 40^{\prime} \mathrm{E}$. . It is separated from the $s$. extremity of Italy by the narrow Strait of Messim, only 2 m. across, and from Cape Bon in Adrica by a channel 8.5 m . in width. It is of a triagular shape, and was hence, in antiquity, sumetimes called Tripuetra, hat more commonly Trinarria, from its temmating in the three promontories of Boeo (an. Lilybaum), Passaro (an I'udipnum), and Firo (an. Pelorum). It seems to hive derived its usual name of Sicilia from the sicani or Siculi, its carliest inhab. Leugth, le. and W., about 215 m. ; greatest breadth, 100 m Aren, $10,510 \mathrm{sq}$. m. I'op. $2,302,168$ in 1862.
Tlie Neptunian or Maronian clanin of momtains stretelies from the Straits of Messim, at the Nl: extremity of the island, along its N. cuast to Cape Boeo at its W. extrumity. Some of its summits are of considerable altitule. It gives ofl' sereral spurs to the S., which, with their ramitications, cover a considerable portion of the surfiec. But, exclusive of these, there are some momitians which are quite detached from and unromected withansystem. 'The principal of these
 tians, near the li. comst of the ishand, and hy far the lultiest in sicily, heing not less than $10,4,2 \mathrm{ft}$. adme the sea. (See ExNa.) There are some extensive plains: the principal is that of Catania. at the foot of Eitha; the next in point of size beine those of Milazzo, Terra Nova, Syracuse, and that extending abond the SW. shore for abont low in. B. of Tripani. The rivers, though generally insigniticant in point of size, are mostly edeldated in classic history or poetry. The prin(i)all is the Salso (an. Himera), which, as well as the Platani and Belici, diselarges itself on the IV. coast. The (iiaretta (an. Simetus) waters the plain of Catanin. A great number of small hrooks and torrents disembogue on the N. const; hat none of the rivers are navigable, or otherwise asailable for the jurposes of trate. The onls lake worth notice is that of Biveri, or Lentini, in :he plain of Catania.

Lixeept in some low and marshy tracts, the air of sicily is generally salubrions, and the climate, theugh rather hot, is. for the most part, delightfinl. Cold weather is sometimes experienced, but the severity of the winter is never such as to aflect the verdure of the comntry. lee and snow are never seen except on Etna, and the highest summits of the Mafonian chain, hat the summer heats, especially dhoring the prevalenee of the siruces, or sle. wiml, are often very oppressive.

SICILY
183
The range of the thermometer thronghout the year, at the level of the sea, is from ahbit $31^{\circ}$ to $110^{\circ}$ Fah.; its mean ieight being estimated by smyth at fire ${ }^{\circ}$, and that of the barometer at 29.80 . Whilst the sun is in the northern signs, the sky, although it seldom assumes the derp) blue tint of the tropics, is, nevertheless, beautifully clear and serene; but after the autummal equinox the winds become boisterous, hud the atmosphere heavy and dense; the dews and fogs increase, particularly on the consts, and the rain falls in frequent and heavy showers. Sicily has, oll varims nccasions, been sibject to destructive earthquakes, which usually take place towards the end of winter.
The primary rocks in the momentains are principally granite, quartz, and mica. These are overlaid in many parts by limestone rocks, nul most of the lower hill ranges are calcareons, abounding with metallic ores. The soil, though very varions, is almost everywhere endowed with the greatest fertility, and lias been famons alike in ancient and modern times for its extraorlinary productiveness. Sicily was, in faet, the principil granary (horreum) of Rome. It is said by Livy to have been 'Populoque Romamo, pace ice bello, ficlissimume amone subsíhium.' (lih. xxvii, cap. 5.) And the third orntion of Cicero arainst Verres, or that entitled De Frumento, inffords in every part the most conelusive proofs of the fertility of this fine island, and of the grent importance of the supplies of corn which it furnished to Rome. In some of the valleys the soil consists of a rich loam, from 20 to 30 ft , in depth. The decomposed volcanic products seattered over the surface of large portions of the comintry are also extremely fruitful, being suitable alike for the production of corn, wine and oil. Immense beds of sulphur are found in the centril and $S$. parts of the islind.

The vegetable products of Sicily embrace mu merous tropical as well as Enropean plants. The surface has been divided, accordiner to its elevation, into the lollowing tive regions, each listinguished by its vegetation :-

| Hegions | Ineight | Produets |
| :---: | :---: | :---: |

Sicily was believed, in antiquity, to have frem the native comutry of corn. (I ionl. Niculas, lib. v.) llomer says of its carly inlabitants:-
'Untaught to plant, to turn the glebe, and sow, They all their prodnets to tree naturo owe. The soil untill'd a ready harvest yields,
With wheat and harley wave the goiden fields; Spontancous wines from weighty chisters pous, And Jove descends in each proifice show'r.

Pope's Olyssey, iit. xi. lin. 121.
Agriculture is said to have originated in the island under the auspices of Ceres. But there are now few, if any, comntries in Europe in which that art is in so clegraded a state. 'lhere seems; every reason to tlink, from the number and mas-
nitude of its cities, and other circumstances, that its popuhation in mutipuity must have been much larger than in modern times. Indeed, the fair presmmption secus to be, that it must then have amonnted to at least from 3h to 4 millions. And yet, mot withstanding this greater lensity of pop., it was able to export vast quantities of corn to laly. It does not, however, Mpear very dillicult to account for this melancholy ehange. Aiter the overthow of the Roman power, Sicily was ocenpied successively by the Greeks, Saracens, Normans, ind lirench, till at length it beeame a dependeney dirst of the crown of Spain, and alterwards of that of Nigles. It is to this dependence, and to the intruluction of the feudal system by the Normans, that its dackward state is principally to be aseribed. The multiplied abuses whieh grew up in Spain muler the reign of Ferdinand and his suceessors of the Anstrian line, flomrished with equal laxuriance in Sicily, and proved no less alestructive of the industry and civilisation of its inhabs, than of those of Spain. The Neapolitan regime has been equally pernicous; and misgovermment, the abuses of the feudal system, inscourity, and mequal and arbitrary taxes have here, as everwhere else, paralysed industry and impoverished the people. But the grand curse of Sicitian, as of Sardinim industry, will probably be lound in the oppressive restrictions that have been laid on the exportation of corn. Down to a late period no corn conlal be exported without leave being obtained from the Real Patcimonio, a booly that pretended to take an accomit of the cropis, and which determined whether there were to he any exportation; and in the event of its lecing allowed, it issued, or rather sold, licences to a few fivoured indiviluals, anthorising them to export certain specified quantities. Even had Sicily been ten times more prodnctive than she really is, it is fuite impossible that agriculture dould have fomrished under such discouragements. luckily, however, these oppressive restraints have recently been abolished, and there are no longer any obstacles to the free exportation of corn.

The property of the island was valued in 1811, when the binglish grarisom and lleet oceasioned a preat demand, and high prices tor prodice of all kinds, and this valuation has been continued to this day, as the basis on which the hand and house tax (fondiaria) is levien. A rate of $7 \frac{1}{2}$ per cent. on this valuation was first charged, which was subsequently raised to $12 \frac{1}{2}$ per cent., at which it is now tixed. Thongh there are in Sieily a very considerable number of small proprictors, by tiar the greater part of the land belongs to the elimeli and the nobility, some of whom have very extensive and valuable estates. Duwn to a recent periond these were hed under a system of strict entail, and their ocenpiers, as well as those on the estates of the erown and ehureh, nsually held under triemmial leases, and were in a state ol fendal bondage, and sulpeet to mumerous exactions on the part of their lords. Under such cireumstances, even thourg there had been neither restrictions on exportation, nor a land-tax, the depressed condition of the peasantry, and the low state ot agriculture, need not be wondered at.
But there seems no doubt that the dawn of a letter day has arisen for sieily in recent times. In 1812 and $18: 18$ laws were passed for the abolition of the feudal system, and the complete emamepation of the peasantry; and these laws were followed up, in 1813: by another, by which in future, on the death of any individual possessed of in estate in land, and having more than one son, the hall only of the estate shall descend to the eldest sum, and the other halt shall be di-
vided in equal shares among the other children. Ihis law, which appars to liave been framed on the model of that which regnlates the sucession to property in France, must have nearly similur etlects.

According to an official report of the year IRisl, the net rental of the surline of the ishmi is valued at about two millions and three-quarters sterling, and that of the underground at a quarter of a million. The sum total of $3,000,000$ is divided it the ratios of $2,13,75$, and 910 parts of a thonsand anoug the crown, the conmunes, the churel, mul the lamilords generally, in 699,000 lots, each averaring 4l. per ammm. In 1811 the net rental of the country was declared by the landowners to be somewhat less than $1,000,000 /$. sterling per annum -a sum divided unequally among 2,000 families, The number of landlords among whom the surface is now divided is about 20,000 , and that of mineowners 1,000 . This change of persons is owing to various measures, the prineipnl of which are the abolition of entails, the equal division of the hall of all properties, and the assignment to creditors of encumbered estates. During the last century and $n$ half the growth of wealth in Sieily has outstripped the march of population. In 1716 the number of inhabitants was $1,200,0$ to, and the value of property abort $6,000,000$. sterling: in $174 x$ the population hat risen to $1,300,000$ sonls, inul the publie wealth to $12,000,0001$, sterling. In $16 \mid 1$ the number of inhobitants was $1,8001,000$, and the value of property $18,000,0061$ : in 1857 the popmlation wats $2,200,000$, and the amount of wealth ( $80,000,000 \%$. l'opulation has theretiore only donbled itself, whereas the increase of wealth has been nearly tenfold; or, dedncting one-third for the decreased value of gold, sevenfold in the course of 1 at years.

Exclusive of wheat and barley, hemp, flax, and cotton are raised with bit little labour. The eulture of the last is said to be extending of late years, especially in the neirhbourhood of Mazzario. It is mostly short-stapled, and but little is exported, and that only to Naples and Trieste. It is probable, hovever, that ly attention to its eulare, and the introdnction of improved varieties, its quaility might be improved, and it might become an article of some importance. The sugar-eane was formerly a staple product of the S. shore of Sicily. 13ut, owing to the introduction of cheaper surar from the W. Indies and Brazil, the eulture of the cane is now restricted to some small plantations near Avola, and will probably, at no distant period, be wholly abindomed.

The district round Marsala is the principal sent of the wine eulture; and, thanks to the exertions of some English capitalists established in that city, the probluction of wine is become an important brameh of industry, and it forms a prineipal article of export. (See Mansala.) Vines are generally treated as in lirmee, being eut low, and not fesstomed along other trees, as in S. Italy, But, except in the linglish establishments, little care is in greneral bestowed on the vintage: the windpress is a very rude machine, and in some districts it is altogether wanting, the process of ernshing the grapes being performed in large vats, by the treading of bare-footed peasants. Along the N. coast, the monetain slopes and valleys are almost wholly covered with olive groves, though elsewhere they are rare, and do not furuish sutheient oil for the inhabs. Int for the imperfections in the mode of its preparation, the oil of Sicily would be excellent. 'The olives, however, are permitted to hang on the tree till they come off with shaking, or beating with light canes, and they are then kept in vats till they get quite black, so that the
other chililren. veen frmmed on the suceession nearly similar

principal seat , the exertions ed in that city, ill importaint rincipal article are generally v, and not fes. Italy. Jhit, its, little care re: the winesome districts is of crushiur, e vats, by the Along the N. eves are alnows though elseish sufficient perfections in Sicily would are permitted with slaking, liey are then k, so that the
oil hecomes pumgent and rancid, and though fit for the lamp, is totally unlit for the table. It is only near the enpital, and in a few other places, that a mure improved process is followed, lemons and orames, which grow luxuriantly, are of excellent quality, well adapted for long roynges, and, when intended for exportation, are collected with more care than any other agricultural prokhet. They are hargely exported, and are altogether highly important. Almonds, pistachios, dates, madder, the barilla plant, hazel-muts, the Ricinus pulma, ur castor-oil plant, sallron, and tobateco, might all he raised in any quantity; but their colture is, for the most part, nerfected, or ill-conducted. The mulberry is grown in the vicinity of Messina, and in the XL. part of the island, but the produce of silk dues not exceed $400,0000 \mathrm{lbs}$ a year. The mama ash is grown near the capital, and manna not being monopolised hy the government in Sicily, as in Niphles, it might be a profitable article of trade if there were any public enterprise. liguorice is found growing wild in several parts of the island, and consideratble quantities of juice are exported. The culture of shumae is more attended to, and it lorms a principal article of export. Potatoes, which have been introduced daring the present century, are become a principal article in the diet of the peasantry.

The want of improved means of communication is one of the greatest drawbacks on agriculture, liccently a line of riilway has been constructed from Messina to Catania, Girgenti, and Palermo; lut grood ordinary roads, execpt in the vicinity of Palermo and other great towns, are all but unknown, and the only mode of travelling is by menns of the kettiga, a kind of fly without wheels, holding two persons, and carried like a sedan chair by two mules, one belore and the other behind.
lormerly there were only certain ports from which corn couid be exported, a limitation which gave rise to the establishment at these ports of public magizines, or caricutori, where the com may be deposited till an opportmity occurs of shipping it off. Jrovided it be of good quality, and be bromght in immediately after harvest, or, at farthest, in August, it is warehonsed free of expeuse; what it gains in bulk after that period (about $\bar{E}$ per eent.) being sufficient to defray ah expenses. The receipt of the caricator, or keeper of the magazine, is negotmable like a bill of exchange, and is the object of specalative purchases on the exchange at lalermo ind Messina, according to the expected rise or fall in the price of corn. The depositor of a quantity sells it in such portions as he pleases, the whole being faithfully accounted for. The public magrazines, in some parts of the island, are cither excavations into calcareous rocks, or holes in the gromed shaped like a bottle, walled up, and made water-proof, containing each abont 300 salme of corn, or abont 2.200 English bushels. The neck of the bottle is hermetically closed with a stone fastened with syinum. Corn may be thons preserved for an indefmite length of time; at least it has been found in perfectly good condition after the lapse ol a century.

The rearing of live stock occupies even less attention than tillage. In general, the horses, mules, and asses of Sicily are small and ill mate; the mules of Modica and the asses of the Pantellarian breed being exceptions. The Tunis, or reddishhrown, and loug-homed breed of cattle, are large, strons, and weht formed, and there is a good bread of woits. But the sheep, excepting a few Marino hucks, are very inlerior, and their wool is used only in the coarse manfactures of the comntry.

IIogs are of the wonst possible breed. Forests, owing to waste and mismanagement, have nhonost divapleared, except, on the flanks of litna and on some of the N. mountains. Staves for wine casks, and ship timber, are mostly imported from other countries, and even fire-wood is scarce.

The fisheries are chictly conducted by corporations of tishermen, or monied individuals. That at lialermo employs, during the season, from !100 to 1,000 boats, and 3,5100 tishermen, and the produce is valued at from 20,0000 . to 25,000 , a vear. The fishermen of lalermo belong to two corjurattions, each of which has a physician, surgeon, chaphain, and other officers, who are paid from a fund raised by a suloseription from each member, of about 3 per cent. on lis share of the problues. This fund is also applied to the relief of mombres and other general purposes. Jummes, the tish principally eanght on the Sicilian consts, are takell as in other parts of sonthern ltaly. I'his vahable tish. which was in great request in antiquity, as well as in modern times, is of large dimensions, being genterally from 4 to 8 ft . in length, with it nearly equal girth. Its tlesh is highly mutritions. The shoals of timny enter the Mediterrancan early in the year. The tonntre, or fishing establishiments, on the Siciliam coasts, are more extensive and valuable than those in any other part of the Mediterrancan. The nets belonging to the one in the Bay of l'alermo are so very strong as to be able to arrest the progress of a ship when under sail. The fishery of the sword-fish is continod chiefly to the Straits of Messina, and the anchovy and pilchard tisheries to Siculania. Jentini hats some trade in botarga, baide of the roe of the mullet. The eoral tishery, near Bona, in Africia, is principally frequented by tishermen from 'Iritpani, at which city the coral is polished, and bronght for exportation to Catania, Naples, and Lerhorn.
The minerals of sicily are important and valuable. Sulphur ranks tirst; it is found in great quantities imbediled in blue marl, or in gypum tand limestonc, over most of the central and S. parts of the island. The sulphur mines haye heen wrought for upwards of 300 years; but it is only since $1 \times 20$ that any extraordinary quantity has been prepared for exportation. Subsepuenily to 183:3, the trade with this commery increased so much that the export of sulphur to the United Kingdom rose from 19,122 tons in the above your to $88,65+$ tons in 1838 . In the later year, however, the Neapolitan government granted to a French company the monopoly of the trade in sulphinr, the production of which wats to be limited to 600,000 quintals, to be supplied to the company by the proprictors of the mines at certain fixed prices, on condition of the latter paying to the govermment a bomus of $40 t, 000$ Veajolitan ducats a year. It is needless to dwell on the impoliay and absurdity of such a project. Instead of attempting to limit the export of sulphur, government should have given it every possible facility; and taking the export, inder a free system, at only $1,000,000$ quintals, it would have vichled, at the low duty of ess. a ewt, on export, a larger sum than was to be paid by the company for their monopoly. Lackily, however, a tirm remonstrance by Enghind occasioned the soppression of the monopoly, and the dity on its export having bean wholly repealed in $\mathbf{L 8} 1 \mathrm{l}$, the shipments are now vory extensive. Some sulphur mines are wromght by English speculators with machinery brought from England, and workmen tron Wiles, Cornwall, amd sicotland; but in most of the other mines the processes are rude, and, in melting, a great part of the sulphur is allowed to eseape in gats.

Sicily furnishes salfiwtre of excellent ruality, in sudicient qumbity lior her own eonsmp,ion, but, from want of enterprise, none is probluced for exportation. liock salt, bitumen, gypamm, and marble of diflerent kinds are fond in varions phates; and grood salt is male at Trapani amb other const towns. There are also ores of comper, leat, merenry, and iron; hat very few of these are wronght. There are no iron fombleries in the islimet; amb iron and tin goods are principally impurted from lingland, lead from Shain, and sted from (ieminnes.

In some of the principal cities there are a few manufactures of tilk, woollen, cotton, and linen stuflis, the cotton amb woullen yarn being importerl from Najles mal Salermo. A sncecssful altempt has of late been made at 'Irapmi to spin low hos. "f cotton twist by steam power ; and some pregress is making, both at lialermo and Messina, in the mannfacture of ortinary printed muslins and such like articles. At P'alermo there are also oil-choth aum glass facturies. But both glass and oil-eloth, with colton and coarse woollengoods, India hamblarrhiofs, crapes, and carthenware are principally :ipplied by binglam; tine woollens, printed cotGons, and silk goods come from Frame and IBelgitm; (Germany and [Iobland send the prineipad part of the linen groods; paper amel swiss goods are imported from Genon; imbl dye woors amd colomial prombets come direet from Amerien.
'The sulojoined table shows the total value of the imports ante exports of the islamed of sicily, from and to varions comeries, in each of the years $186^{\circ} 2$ imm Jstie:-

Gorernment.-The temial system was introdnced into Sicily by Comat Roger, soon after the expulsion of the Saracens, in 1072. He also cstablished a representative assembly, or parliament, which subsisted, notwithstanding the many changes the ishaml has madergone, down to our own times. This assembly eomsishal of 3 estates, or braceios. 'Ilse tirst, or bracio ralesiastico, eomprised titi prelales, abhots, and other clergymen; the secomd, or bracio militare, comprised $5: 5$ mbles, among whom were 58 prinees, 27 dukes, ami 37 marquises, but the larger portion of the nobility had nu seat in the assembly: The thitd, or braccio demamiale, comprised 43 representatives of as many free towns. The prince of lutero was hereditary president of the assembly. It is obvions, from this statement, that the nobles and clergy had an overwhelming majority in this assmbly; and white the possession of by lar the greater jortion
stantial aul real equil to the mumerionl asecuilaney of those two clasies, the esfablishment of majorats and enrails, and the servitude of the perasatry, who were in the most absolnte state of depemeney on their lurds, interested the latter in the supprot of abmes that opposed insurmomentile obstacles to the pulbie prosperity. No womber, therefore, that the Siedian parliment should have failed in prodncing the momagres which moderns are acenstumed to aseribe to such instintions; and that it should, in faet, lave beeome a bulwark for the defence and protection of the must oppressive and odiuns privileges.

The crown was quite as anxious as the hurghers 10 limit the privileges of the bruaio militure, provided that conld be dome withont extenting the privileges of the people in a comstitutional point of view. But not laring to upenly attack so powerlin a body, it fell ngon the clevice, worlhy of the bigoted and imbecile grovermment of olid Spain, of ruming the industry of the conntry by laying restrictions on the expurtation af its prodice, that it might, in this way, impoverish the barons. This wretehed system was acted 11 wi during the whole of last century, and Sietily was a prey to every sort of alouse. At length, in $1 \times 12$, a new emnstitution was establislud, muler the anspices of Lard William lentinck, commander of the British forces in the island. Uubler this eonstitution, which was formed on the model of that of England, the legislative power was vested in the king, and in an upper homse consisting of baroms and bishops, and a lower honse elected by the people. Unluckily, however, ficily was mit in a comrlition suitable for the working of such a furm of government. The upher honse han every thing to lose, the lower every thing to gain; and though some members of the fumer san the expediency or rather neeessity of vielding up injurious privileges amd making timely reforms, the firr greater number were firmly opposed to ill imovaiom. Under such eircunstances no improvements conld be ellicted; and the constitution becoming mopopalar with all parties, the crown had little ditliculty in etlecting its abolition in 1810, and in establisining a nearly arbitrary system of government. Since then, and uptorlie year 1860 , when sicily became ammexed to the new lingelom of llajy, the administration of Nicily remolined assimilated to that of Naples.
The lioman Catholic is the established religion, but others are tolerated. There are about 5 s.0.000 Girecks in the island, chielly living in the Pitum dei Grect, near l'alormo, amil a few thousami lows. I'liere are 3 arehbishoprics, lhose of Palermo, Dlessina, and Monreale; It) hishoprics, and priwts in all the communes. The chareh is ehietly minntaned by revemes derived from limded estates. There are numerons monasteries; imbl the educntiom of the luwer classes is almost wholly in the hands of the elergy. lalermo and Catimia have thomishing miversities, both of which hamw hat many distingnished indivituals among their professors: there are colleges and acalemies in $\because 1$ fowns, and primary mod secomdary sehools in cath eummune. In these popmlar seloohs, hesides real.ing, writing, and arithmetic, the pupils are tanght linear drawing and the geography of Sicily. In the prov. of Catania the method of mutual instruetiom has been adopted. 'There are several Jemuis' schools, 3 episeopal academies for livinity stulems, and hoarding schools for the nobility at latermo. Females are usually educated in comvents till the are $\$ 8$ or 20 years of age. Some scientilic journals: are pmblished, especially at Catania, a city distinguished for the superior edncation and morals of

lach intembancy is under the control of a prefoct, with a comell and secretary; and each district muder a sub-intemant, conncil, and secretary. 'The head hoard of pelice for the istand, which sit at I'alermo, has been dissolved, and the intendants ind sulb-intendants now commanicate directly with the Italian ministry. Each communty is moder a syndie mected by the inhabitants from anoms their monber. In each commune, and every quarter of the principal cities, there is a coneiliatore nominated by the govermment on the recommendation of the inlumbe, who gives summary deeisions in lisputed matters not exceeling the value of 6 dusents; a junge for ench circonderio resides in ewey prinejpal town, and ead intendmey has a rivil tribunal with a president, three jubges, an attorney-goneral, and a chancellor; and asuperior ariminal tribunal. The superior courts in the intombincies of I'alermo, Catania, and Messina are at once civil and criminal tribmals, and have six julges each. That at Palermo has the suprene jurisliction throughout the iskand.

Inhahitants.-'The Sicilians are of midhle stature; well made, with dark eyes and coarse black hair; their features are better than their compiexions; and they attain maturity and begin to dedine earlier than the inhabs, of inore northern furions. They are eheorfin, inguisitive, and fimcilill, with a redundance of ummeaning compliments, showing they are not so delicient in natural tahents as in their due cultivation. Their delivery is vehement, rapid, full of action, and their gestirulation violent: the latter is so signiticant as almost to possess the powers of speech, and animates them with a peenliar vivacity, borderines, howerer, rather on conceit than wit, on farce than himour. The upper classes are ineorrigibly indulent, and foud to excess of titles and other marks of distinction. 'lhis love of ostentation is so inveterate that the poorer mobility and gentry are femurious to an extreme in their domestic arrangements, and almost starve themselves to be able to appear abroad in the evening with a mean and foverty-stricken equipage. Notwithstanding the energies of the peasantry are impaired by the midanese of the clinate, and the multiplied oppressions of which they are the victims, they may be said, as compared with the upper classes, to be industrions: they are also sober, but passionate, ignorant, credulons, and superstitions. They are, however, bigots rather than fanaties, and are civil and lind to suel heretieal strangers as may be thrown in their way. There is a great want of keeping and of comfort, even in the best honses; and in them, and everywhere, there is a want of clemliness.

Sieily early became the seat of many flourishing tireek colonies, of which syracuse and Agrigentum were the most celebrated. At a subsequent furiod it was the seene of an obstinate and lengthphed contest between the Cartharinians and Limans, and became the first and most valuable arepisition made by the latter beyond the limits al ltaly. After the fall of the Western empire, it was successively held ly the Vandals, the Goths, and the tireck emperots, till $8: 27$, when it was owerrun by the saracens. In 1072 it was taken ly the Normans, who, as alrealy seen, established the feudal system, and kejt possession of the ishan till the establishment of the Swabian dynitsty, in 1192. In l2tis Charles of Anjou berane master of Sicily; but the massatere plamen! by

John of Procilat khown ly the name of the 'Sicilian Vesurs,' eoh March, 10x2, put an end to the sway of the Anreviaes. It soon alter lo-came a depententy of suain, and was govermed by ipanislı vicoroys till lohs, when a prpular revolution anmexed it to Austria, By the peme of Utrecht, in 1711, it was ceded to Vietor Amitalens of Savoy, who, in 1720 , was compelled by the emperor Charles V J. to exchamge it for sardinia. In 1734 the Austrimes were driven out by the spmiards, and the infant. lom Carlos wis then crowned king of the Two sieilies, While the continental hminions of Naples were held by Nupheon, Palermo was the resitense of the court, the ishand being defended by an linerish theet and garrison. An insurrection that broke ont in 18:31 was speedily suppressed by the Austrimas, Sill, however, there was a great deal of dissatisfaction in the island, and a strong desire fir a more liberal sy:tem of \& overmment. The 1 rry fivourable to the indefendence of Sicily, taking mbantage of the excitement ocensioned be the Fromeh rexolntion of lebruary, 18 s , smminoned a parliament. which, by a resolntion arreed to on the listh April, 18.Js, lormally deposed the loonse of Bourbon from the throme, decharing at the same time that Sicily Would form herself into a eonstitnional monarchimater a soveretgin of her own choice. Conformably to this decharation, the throne was subsequently ollered to the Duke of Genom, second sum of the King of sardinia. But the Sieilians lacked the courage and ability to delend the new order of things, and for a while were again brontht hy
 Sicily dimally liberated itseld from this yoke in 18i0. On the lat of Octuber of this year, inemeral (iaribadi, at the head of a small body of insargents, defeated the royalist army, 30,000 men strong, at the Volturno, and soon after the whole of the island was freed, and ammexed to the kinirdom of laly.

SIDMOUTlI, a sea-port, market town, and par. of Eaglame, co. Wevon, hund. E. Butheigh, wh the Sid, at its month in the Enarlish Chamel, $1: 3 \frac{1}{2} \mathrm{~m}$. ESE: lixeter. Area of par. 1,970 aeres. 1'op, of par. 3,354 , and of town, 2,572 in 1861. The town is situated between two steep ranges of hills, whith enclose it on every side except the S., where it is open to the sea. From its shactered sitnation, freedom from fogs, and the beanty ol its surromiling scenery, Sidinonth has long been a livonrito watering-place, and was frequently visited by George Ill., his queen, and court. The purt was limmerty of some consequence, but beins choked mp by sand, it is now accessible moly by small ressels. The sands, however, have contributed to its popmarity as a bathing-place; and it hats a handsome promenade on the buach, warm hathas, good assembly, rading, and biliard rooms, and the other establishments usual at sueh phaces lior the acommodation ol visitors. The parish chureh, an ancient bitidins, belonged, in the thirteenth century, to St. Michacl's monstery in Normandy; it contains a monnment to 1)r. Currie of Liverpool, the tirst biugrapher of Burns. There are baptist, Independent, and Unitarian ehapels, a national sehool, several elarities for the reliel' ot the poor, and a theatre. Petty sessions for this ant the neighbouring pars, are held monthly at Sillmonth; and courts leet and baron, at which the peace-otheers are chosen, are held ammally. Sidmouth gives the title of viscome to the Aiddington family. Markets on Satmriays. Fairs, bistion Monday and l'uesday, and third Mombly in Sept., lur cattle.

SlliNA, or SJENNA (im. Soma Juliu), a city of Central ltaly, eab. prove of its owit name, on
three small halls, between two trihataries of the

 The nelghbouring conntry is rugged and naked; but the city itself is embosomed in trees, and intored by a fine aveme, which gives it an agrueable and imposing mpenance froni withont. Its strects, howevor, are narrow, steep, and uneven; and its homses, though often dignilied with the title of palaces, are built of brick, and are nowise remarkable for their architecture. The inhabitamts are uetive, intelligent, and industrions. The principul public loaililing is the centhedral, a vast, and, on the whole, masnifierot (iothic edillee, fonadod in the thirtenth century, though not wholly of one date, and built in nlternate conrses of black and white marble. Over the arches supporting the muve is a series of the hemds of popess mult the bavern it is a kind of mosatic-work, much of which is ve" antiful. The sneristy is achorned with n laina. f Pope Pius Il., lurtly pauter by liaphael at wiy early are, and partly from his desifns; and in the sane room is n most benatifin matigne froup of the 'Three Graces. Donder this buildiner is $n$ subterranean chureh, which, if the cathedrul, as is allimen, stand on the site ol a temple of Mincra, is most probably of remote antiguity. The charches of' St. Dominico and St, Catherine, the hospital, eity hall, and theatre, are worth nowice. The city hall is in the great piazan, a sloping semicircular space, lad out in walis, ormamouted with statues, and forming the principal lomige of the inhabitants. The citalel, facing the main street, has an esplanate and ramparts, planted witl trees, which also form livourite publie waks. The antiquities include a Roman gnte, the remains of ancient walls, and it has a fomitain celebrated in I Dante's 'Inferno,' and several good pullic and private galleries of paintings.
Sienua has some reputation as a seat of learning. Its university, foumded in 1330, has a library of ei, 000 vols., and about twenty professors. Its importance has greatly declined; but it is still celehrated ins a school of medicine, and may have about 300 puppils. It laas, also, an ceclesiastical anm several other seminaries, and varions academies mind learmed societies, among which last are the Rozzi and Intronati, considered the oldest cetablishments of their kind in Europe. The Sienese pigue themselves on speaking the Tuscan lampuage in its greatest purity.

Sienna, which is an archbishop's see, has abont forty woollen factories, besides manufactures of hits:, paper, and leather. Its chiel trade is, howiver, in corn and other agricultural produce, and the marble of its vicinity. Angustus sent thither a Koman colony, previously to which this city appears to have been insigniticant, though boasting of very ligh antiquity. In the midille ages it was, like I'isa and Florence, the cap. of' a republic, constantly at war with its neighbours; and it was fenerally flourishing and independent, till Philips T1. of Spain took and conferred it, with its territory, on Cosmo I. of lilorence. The ench took it in 1808; and, previously to 181.t, it was the (ail). of the dép. of Ombrome. No fewer than seven popes, inchuding Jous Il., Gregory VH., and Alexander III., with Socims, and other eminent individuals, have been natives of Sienna.

SHERRA LEONE, a colonial establishment of Gireat Britain, on the W. coast of Africa, comsisting of a peninsula, about 25 m . in length N . and S.; washed by the Atlantic on the NW. and S., and partially bounded on the E. by a bay formed by the Sierra Leone river. Free lown, the cipp, on the N. shore of the peminsulat, is in lat. $8^{\circ} 29^{\prime}+0^{\prime \prime}$ ․, long. $13^{\circ} 15^{\prime}$ W. It hud in $146^{\circ} 2$ a pep. of

41,806, wily 131 of whom- 100 males and 31 fo-males-were Viuropeins. The peninsulat consists brincipally of a range of conical momutains, Irom 2,160 to $\mathrm{i}, 000 \mathrm{ft}$. in height, surromuled by a belt of level ground, from I to 5 m . in breadth. 'This is probably the most mhealthy situation in which Europeans have ever nttompited to establikla a settlement. 'The prineipal characteristic of the climate is lts extreme limmidity. There are two seasons, the wet and the dry. At Slerra Leme and the Isles de Loss, the former extemis from May to Nov., mad at the Gambia from Jume to Sopt. or Oet., and is alwnys ushered in and carriod off by tommboes. Nothing can exceed the glomminess of the weather dhring this periont: the hills are wrapped in impenctrable fors, and the rain falls in such torrents as to prechade all excreise and amasenent ont of doors, At this period fevers of nearly every type, dysenteries, livar complaints, and other disenses, usually make their appe ramor; though they are so prevalant at all times that. they can scarcely be said to belong exclisively to any season.
The colony was founded in 1787 , partly as a commercial establishment, but more from mistaken and ill-considered notions of homataty. leing intended to consist principally of tree hacks, who were to be instructed in the Christian religion, mal in the arts of liurope, it was supposed it would hecome, as it were, a fuens whence: civilisation might be dillased among the surrounding tribes. About 1,200 free negrues who, having joined the royal standard in the American war, were obliged, at the termination of that contest, to take refinge in Nova Scotia, were conveyed thither in 1792. 'To these were alterwards uliled the Maroons from Janaiea; mul, since the legal abolition of the slave trabe, the negroes taken in the captured vessels, and liberated by the mixed commission conrts, lave been carricid to the colony. Bint the edfiorts made to introndace order and judustrions habits, and to lay the foundations of eivilisation amongst the blacks, though prosecuted at an enormons expense of blood and treasure, have been sigually masuecessfin. And this, after all, is the mily result that could have been rationally maticipated. The laziness of the blacks has been loudly conplained of, but without reason. Men are not indastrious withont a motive; and most of those motives that stimulate all classes in coller climates to engage in laborious enyloyments, are maknown to the indolent inhabs. of this burning reqion, where elothing is of little importance, and all but dispensed with, where sullicient supllies of foed may be obtained with comparatively little exertion, and where more than hall the necessaries and conveniences of Daropeans wonld be positive inemmbrances. And lad it been othervise, what progress conkd a colony be expected to make, into which there are ammally imported thonsands of liberated negroes, who, if not wholly incapable of civilisation, are, at all events, in the lowent stage of barbarism? 'The hopelessmess of makiur any beneficial change in the character and condition of the blacks, by keeping up this moxt pestilential establishment, is now so very apparent, that it may be hoped it will be speedily abandoned.

Commercially considered, Sierra Leone appears to quite as little advantare as in other points of view. The country romud the settlement consists of a vast and all but impenctrable forest, only sinall patches of which have been cleared and cultivated. The prineipal artieles of export consist of teak and cam wood, with ivory, palm oil. hiches, sums: and a few other articlo's; but their
males and at fonilusula comsint momintains, from umied by a belt brealth. The goserument of Sierra Leone emmisted, mutil May, 1stia; of a governor and a lerislative conuoil: comprising the bislopy of Sierra Leone, the chicf justice, the colonial secretary, the collector of enstoms, and one or two others aptpuinted hy the crown, liy a new charter issmed at that date (May 27,$181 ; 3$ ), an excentive comeil was created, composel of four menhers nominated by the erown, and the legislative comeil was niale to consist of the members of the expentive conncil, and others appointed by the erown. The chief justice presides in the supreme court of law, hedal alternately in the course of the year at the dillorent stations under lis command; and there are mixed commission courts for the adjudiention of vessels taken in the slave trule. The colony is subtivided into to districts and abont if paristurs, in each of which are one or more schouls on the Laneastrian or the mational system. The total public revenue, in 1863 , umoment to $37,1901$. , and the expenditure to the same sim. There was little increase in the revemue in the conrse of ten years previous to $18 t i 3$.

Nierra Leone was ceded to Great Britain in 1787 by the native chiefs. Four years afterwarils a charter was granted to a company, under the name of the 'Sierra Leone Company:' In 1800 a grant was made to the eompany, by letters patent, of the peninsula, and a conit of directors of the company was empowered to appoint a governor and eomeil, the former having power fo enact laws: this state of things lasted 7 yenrs, when the colony was transferred back to the crown. In 1862 a large tract of comatry, called Sherboro, was handed over by treaty to the colony.

Sl'iMARINGEN (IIOITENZOLLERN), formerly one of the minor principatities of Germany, but, since J8.19, united to l'rassia, together with the principality of Hohenzollern-Hechingen. II.Sigmaringen is separated into two purtions by Il.-Ilechingen: its S . portion is watered hy the hamme, and the N. by the Neckar, it has an area of 40 sq. $m$. Except in the S. the soil is generally poor; still, however, rather more corn is grown than is required for home consumption. l'otatoes, llax, and truits are also grown; but the chiof wealth of the state consists of its timber, cattle, and hogs. The rural popmlation is partly ocenpied in manufacturing cotton and linen cloths, and hardware.
Ilohenzollern-Ilechingen has an area of 120 sq. $m$. It is mostly mountainons, and cattle breeding forms the chief oceupation of the inhatitants. ISoth the territories of HohenzollernSigmaringen and II,-Hechingen were made over to J'russia in return dor a life-rent to be paid to the former princes, representatives of a braneh of the homse of Itohenzollem, from whieh the kings of l'russia are descended.
Sllasth, an important and valuable prov. of the I'russian dominions, laving N. the prove of

Posen, E. Doland anil Cracow, S. Austrian Silesin, Noravia, and lbohemia, and W. Sasumy and Irambenburg. It lies hetwern $1!10$ $10^{\prime}$ and $i=0 \mathrm{~N}$.
 whoms shape extending 大V. and st:, alout.

 (iorlitz, Neisse, (ilatz, amb oppeln. It is divided into three rogencies, ant these again into is circles, Surface rugped and mountamous nlonis its $s$. nod siv. Irontier, but in other parts it is either tlat, or but slightly undulatiug; this la particularly the ease on the lis, side of the Oder. Ghe river bow mentimed traterses the whole lengith of Silesia, and being navigable for barges almost to the extrense $S$. limits of the provinee, it forms a valuble chamel al eommunication. 'The other great rivers, the athnents of the Giker, are the two Xeisses and the loher on the S... and the Malapane and bartseh on the N . Soil varions, leing in many parts loany and highly prondactive, and in parts marshy and sandy. Gireat part of the regency of $\mathrm{O}_{\text {ppelt }}$ is covered loy vast turesus. I'rincipal prodicts, corn, fins, aud hemp, produced in very lare guantities: the stock of shoup amounts to aboit 2,8 on, (1) he heal: wool, of a very superior puality, now forms, next to lincon, the principal article of export from the provinee: among the other prolucts are beet-root sugar, timher, madeler, tobitero, and sitk in small quantities. Silesia is rich in mineral promlacts. Cond is foume in many parts, particularly in the vicinty of Schweithitz and Neisse, 'Ihere aro also valuable mines of iron, leal, zine, ant eoper. Mambactures are important and valuable. Limen is the principal proluet; but, for some years pasi, it has been declining, the cotton manubueture laviug grown up in the interval to a considerable state of advancement. The woollens manufacturid are genernlly coarse, but they employ a considerable number of hamots. The enndition of the inliahs, of this prov. lins been vastly improved, both as respects their command over the neesissaries and comveniences of life, and their intelligence, since they became sulyjects of l'russia. An intelligent olserver, speaking of Silesia, observes (Germany amb the Germans, vol. i.), 'In a conntry where linen is a staple commodity, the majority of the men are weavers, which trade they often exercise in eonjunetion with their employment as agrienlturists; nud the women, withont exception, are spimers of Hax, for we froquently see the better classes pursuing their thrembmaking oceupation, not only in the saloon but in the promenade, und the lower orders in their huts and on the high roal, even while thoir heads are heavily laden with provisions for the market; hut instead of the wheel they use the distatl, which, I was informed, was the prime cause of the superior excellence of the silesian linen, as the thread is by this process rembernd more soft, romel, and less inclined to break. There is, however, a wide difference between the inhabs. of Silesia descended from German colonists and the native Slavonians, particularly those who people the districts on the firontiers if l'oland. The former are indistrions, cleanly, anid manufacturing; while the latter are debased by ignorance, mendicity, and superstition; they alsu resemble their neighbours the I'oles, not only in their language, which is a species of Iolish patois, but in their sheepskin jackets and greasy kapustas, neither of which are ever allowed to contaminate somp and water. Another point of similarity is their inorilinate attachment to bodka, and a deep veneration for Madommas, saints, and crucitixas. lut, verlaips, no distinctive trait of mamers more
characterises looth than their humbliat lug mone of nclinowledging a kimbens, their expression of gratitule luing the servile ' Giadam do "here' (1 fill ut your liet ): which is ma tigure of sperech, firr they will literally throw themselves down and kiss vour feet for the trilling donation of a frew halficure. How nhiget is the state to which finuchal vassalage anil smerstition have reduced this prople.'

Sll.ISTlild ('Turk. Disfra), a fortified eity of

 lating plain, hawing a back mad gemerally vary fertile soil, Ifesides the Wolga, it is watered by the Surit mat other allhemts of the furmer. ('limate in extremes, the simmer heing hot, and the winter able. The Wobra is ammally frozen over for about five montlis. liye, whent, and obloer \&rain are raised in qumatites more than sullipient for the consumption. Ilemp is largely cultivated, with thax, tobacer, and poppies, Except amongr the Kalmueks, the rearing of cattle is not much nttended to, In the N. forests are abomdant. Distilleries numerous; mul, hesides the comrse Gomels mambinetured liy the peasants, there are extablishments for the manufacture of elath, coarse linen and emvass, and eoverlets, with ghlassworks, soap ual candle-works.

Simminsk, the canital of the above government, on the Wolgit, on an isthmis between it and the
 [op. $3: 3,2 \pi 5$ in 1858 . The town stands partly on an rminenee, which commands a fine view, and purtly on $n$ phnin, Strects broad and straight; homes mostly of wood, but neat and eommodious inside. There are mmerons churches, which, with one exeppion, are ull of stome, and two convents. 'The town is in a fertile comtry; and, hesides large quantities of corn, exports the produce of the tislieries on the Wolga. It is a good deal resorted to by the simromeling nobility.

SIMPIIEROPOL, or AkME'CLIEA's, a town of Eurojem Russia, in the Crimea, of which it is the capital, 40 m . NE. Nevastopol. Popr. $5,!\mathrm{N}(1) \mathrm{in}$ 1858. The town stands in a tine but not very healliy sitmation on the river Salghir, and consists of two purts, ome new, built by the Russians, in the linropean style, the other, old and oceupied by the Thrtars. The strects in the former are wide and regular, and it contains the govermmont oflices and a eathedral. Within the last few years some improvements have been made in the 'rartar part of the town, but the strects continue to be narrow, crooked, and filthy, und it has a mean, miserable appearance.

The eelebrated traveller and naturalist l'allas lived for fifteen years in this town. It was his own wish to emigrate thither; and to enable him to gratify it, the empress Catherine II. made him a present of an estate in the best part of the peninsula. Bat being cut ofl from the society he had enjoyed in l'etershurg, and exposed to family mumyater, l'allas became dissatisfied with the
comutry and with the climate he had so highly bitheryrisel. Inving sold his estate, he loft Simpheropol in dingost in $|x| I$, and returmed, "fter mil ilmence of forty-two semes, to his native city lierlin, where he died ill the course of the sume yonr.
SIMDLON, a celelrated pass over the $\mathrm{Al}_{1}$, where a magnifleent rond was constructed by: orilor of Napoleon, establishing an ensy enrriago commmination lotween (ieneva and berne, in Switzerland and Milan. See At,ps,
SINAI (MOUNT), $\mathfrak{a}$ momitatio of Arabia, near the (iulf of Suza, or upier purt of the lied sem, fimous for its comnection with some of the mont memorable events of satered history. It is fenerally suplused to be indential with the monutain called ly the Arabis Djibbed Momsa, or Mombatin of Moses, or simply Ei Tor, the Mountain, in the perimsula betwerif the Gulfo ol Suez mul Nkala,
 eroup of monntains to which simi belonges, thel which also includes Monint Ilorels, Monnt sit. ('atherime, and other remarkable smmmits, Is surrommed on all sides lig desurts oedipied only ha tribes of lledomins, or wmulering Aroles. 'Thie monntains are penetrated by deep chasms, deded by bare perpendicular ledres of rock; and the whole lins a singularly wild and sterile appearance.
The eonvent of St. Caiberine, fonmed by the cmperor Justiminn, in a valley on the slope of the momintain, is the halting-bine whence pilarims set ont to ascend to the smmmit. Ibeing expused to the attacks of the $A$ rabs, it looks more like a fortress than a convent. It is an irrerular ghandrampular editiee, surromuled by high and solid walls, and covers a considemble extent ol promid. To prevent being surprised by their tromblesome neighbours, the entrance gute, which is rarely. opened, is lmilt up; and on orlimary acensions ail] access to the convent is by an antranee abont in feet from the frombl, to which travellers, provisions, dec., are raised in a busket made fast to a rope, polled up by a windlass. 'The interior of tho convent presents little remarkable, nll the apartments and chapels being built of rongh stome, without symmetry or order, communicating ly crouked and dark passages. The Church of the 'Iranstiguration alone possesses any pretension to magniticence. It is 80 ft. in length and 53 in brealth, paved with marble, alomed with a variety of figures. 'I'he event to which it relates is: represented in mosaic, I But the granl treasure of this chureh, and that which is supposed by zealous Catholies to confer on it peenliar sumetity and importanee, is the possession of the relies of sit. Catherine, borne by angels to the neighbouring monntain, whieh still bears her name, und sulnsequently collected and deposited in a marble sarcophagus in this bnikding! The skeleton of the hand, covered with rings and jewels, is the only portion of the remains of the saint that is exhilhited to ler faithfill votaries.
Mont Sinai, as every one knows, is almost an famons in the sacred history of the Mohammedans as of the Jews; and it is a curious fact, that there is a Mohammedan rosque within the precincts of this convent. It has also mexedlent garilen at. a little distance, which is reached by a subterrancan passare, secured by iron gratiss. It prodinces fruits, plants, and vegetables, in the utmost profinsion. The climate is temperate, in consequeuce of the elevation; and snow even falls in winter.

The ascent to the mountain, which lies thromgh a ravine to the SW., commences close to the convent. It is steep, but the labour of aseending has estate, lef lat anll returnurd, *s, to his mative course of the over the $\mathrm{H}_{1} \mathrm{~N}$. onstructed I ensy carriage and Berne, in

 to the collcelding hatliene greatly facilitated by rule steps eut in the rowk. Nt the helgitt of about sine it. from the convent is a spring af tresh and colle water, coverel by a rock, whid protects it from the sam and ratio. Mfter mesembing in little higher, the traveller guins the smmuit of Momut Ioreh, which firmes, to ase the expression of Laborde, a kinul of lirenst frum which Sinai reses. 'Continuing our rome from this halting-plave ly a path, still more rupged and step than before, we arrived in about fif minntes at the xumbit of sima, the apex of a awak not more tham fol garils across at its widest part.' (Weollated, ii. \%\%.)
'The height of Monut Simi has been varionsly extimateot, but, arcording to olservations takem biy

 abuve the comvent of sis. Catherime.
Iha the summit of the mantain is a dilaphilated church, which tradition represents as fimuded on the spot where, muill thombler and lighnnings, anil the smoke of the ugituted mountain, Moses rereived the Derabogne from the hands of the AImights. (Exadno, (all. x.x.) Trouth, however, is shltemi marempanied with error; and hat a few varlu distant from the church are the ruins of a inmenge: this mombaill by a singular enineidenere, heing hallowes alike in the estimation of dews, Christimss, mal Malammedans.
'It serms.' silys Sir Cirelerick Ilemiker. 'to a firsom on the simmit of sinai as if the whole of Arabia Pretram had one beren momen of lava, and that, whole its waves were liturally rombing
 tII stamd still.' Momut Simai itself, Momut st. Catherine, which is still higher, and the andiacent mombtains, rise in sharp, comical, gramite peraks; and from their steep and shatered sides hare masises have beell thrown down. The prospect from the summit of simai is mont extensive : the tinlt of Akaha om the one hand, and that of Silez onl the of her, with Momit Agril, on the Expyptian ronst, are listiuctly visible. Barremess and desulation are, however, its grand daracteristiss, ' Co villages and castles, as in Earrone, here amimate the pieture; !in finests, laken, or falls of water, bremk the silene anil momotony of the sweme. All has the apgearance of a vast and desulate willderbess either grey, harkly brown, or whully hlack.' (Wellsted, ii: !ti.) bint it is the assuriations eomneted with the momenan, and the antonishing events of which it is believel to have bewn the theatre, that inspire those feelinges of awe and veneration felt he all who have cither belluhl or asecomed Momut inai.
('mensiderable dombts have, however, heens entertained, whether the mountain now deseribed be really the Monnt sinai of the Pentatemelh. It might be expected that the summit of the mountain should exhibit some traces of the stuppudens phomumemat that are said to have acempmaied the mamifestation of the Divine presence. But, necording to Burekhardt, meilher Sima, nor any of the :uljoining smmuits, exhibits any traces of volcamic aetion. It is sulpuned by some that the Djiburl Katerin, or Momint St. Catherine, has the best title to be regaraldel as the true simai.
SLNDE, an extensive combtry of NW. India, hetweon Ilimbustan and Belowelistan, comprising the lower course amd dela of the Indus; extemiing between lat. $23^{\circ}$ and $290^{\circ} \mathrm{N}$., and long. $65^{\circ}$ and $7 \geq 0$ E., having N, the l'mjab and Bahawnl-
 Cuteh and the Indian Geem. and W. Belanehistan athl Contelh-fimblava. Its length, N. to s., is about iso m.; its liresulth is very variable; fint

alhout 1,000,000. The varimes prombets of Shate didfer liatle from these of the rest of lulia. liare, indige, bobacen, and shar-ame are among the prime ipal; vines, tiga, pumergatas, and ever
 whent, barley, mat the common Intian grains are: zrown to areat prerfeetimin in Lower simede. There are vast heris of horned matthe and sheep, which are penerally harger than thowe of Hindowan. Camels and linthatoes are mumerms. Cime is sery phomifind, thengh woul is searee. Sult mad salibetre ellhernice almont everywhere ont the soil.
The minin expmerts are salt, riee, shere, hides, saltpetre, cottun, nil, sharks' lins, lark fir tanuint, with assafietiala mul other gums; ('ashmere shanwe, salfrom, hurwe, leather, mask, almm, and various Irugs mil Lems from the comentres on the N. ann IV. The prinupal impurts from Judia are metal's, ivery, ten, thtemgene, and wher China Mares, chinizes, bromd clothe, armas, mud other holian and Surepean manulactures: hat purticularly phinu, in transit from Malwall to lamalay. Pirom lioxia and Srabia the Simblians also ohtain sillo, sworlo. carpoty, hates, rosewater, and collioe Nomrly all the trate centres in Kurachere on the bidourdistan lurilur; there is little commerro anywhere elme, evol in the Imblus. The chice towns are 'Tatia, Myilumbal, Kurachee, Kyrpmor, Shilarpore, and Lairkhimu.
'The simitians are of a mildhe size, slim, mad darker than most of the inhads, of Ilimbontan. Must of theme are Mohammeldens of the shiah seet. There is lithle to praise in thotr elamemer they have nearly all the worst viere of an ent shaved perple. They are however, hrawe in the lield, and, unlike ather Asiaties, pride themselves on being finot solliers, preferring. alw, tha sword to the matchlock. I'revionsly to its amexniom to the liritish territory, Sinide was poverned by anmers, we military chide. A British residemey was established mmorgst them, which, altur the disasters in Alfy hamistinh they hal the temerrty to atack. This hel to hostilities, in which the amierest were signally defeated liy sir $\mathrm{C}^{\circ}$. Nipher in the will
 cumary was timally amexed to the limbay presideney in $1 \times \mathrm{s}$ it.
sidialrohe, a settloment lelonging to Grat. Britain, in Sl:. Asia, consistine of a small islamy at the S. extremity of the Malay peninsula, ind. the town of the same name, the dittor being in tat.

The island is separatel from the main lame hy astrait, which, though searemly $\frac{1}{2}$. in breath, in iss marrowest part, was the route nsinally followed ly ships bet ween bulia and China in the carly stares of Emropean mavigation. But the grand commercial highway hetween the E : and W. pertions of maritime Asia mow passu'; aloug the $s$. side of Singapore, between it anil a chain of desert islands abont 9 m . distant; the salest and most convenient track being su near to Singapore that ships, in passing and repassing. apronalh clase to the roals. The town is wholly indeleted fir its rapide rise and prowing importane to its position on this stait. This hats rendered it. not merely a convenicut rintrepot. for the trade between the Western world and halia on the one hand, and China on the uther; but also for that between the firmer and the Eastern Arehipelago and the Philippines.
'I'he surface of the isl:mad is low and mmalating in some parts, rising into romuled hills, coveret with jungle; thengh none of these is $\mathbf{- 1 0 0} \mathrm{ft}$. in
lidght. It congiats primelpally of Interite resting on sandstone: its N. and li, piortions are, however, of cranite. It alunuleds witli iron ore: but this is the only metallie prembert hitherto divenvered. thomeh, irom the great nlambanme of tin in the mighbouring conntries, it probmbly exists hore nlos. 'Ibe elimute is hot, witlo but little variation of temperature: the thermometer usially ranges from ito to $8: 10$ lialir. The totnl numail fall of rain is about 100 finches; the momonis are little felt ; but the ishand is kept in a perpetual state of verdure ly frequent showers. The smomits of the hills are gencrully sterile; bint on their slopus and in the litervenhig valleys there is oceasionally a good aleal of fortile soil. Gimbler, or catechm, mal the tropical fruits and vegetables are grown int tolerable quantities. Nutmegs, collice, nud pelpur lavesurcended. Cloves have wholly failet; and the settlement debends fir rice on Javin, Itengal, ami Smmatri, and for pigas poilery, and entte, on Malneen. lbwn to $1 \times 137$, when they were in purt remodelled, the regulations as to lanil were great olistructions to the clearing, cultivathin, und prosperity of the islancl.
'The ulsemee of the crephant mal tiger, and other formidable will animals, and of the swarms of inNoits iommon in warm climaters, are ciremmatances favourable alike to africolture and the commort of the inholis. The only gumirnpeds are some small surecies of deer, the otter, porcupine, and a fers others; but it has a great varicty of birils mul reptiles. Tripmig, and regor-agar, a delicate fornlike won-wed, are furnished in grent abmulance by the mighburing cornl rectis and shoals.

A tew manufnctures, ineluding that of pearl sago, agricultural implemonts abl arms, are corried on prinedpalty by che chinese. Thit the entire importance of singupore consists in its heing an cmo jorimen for the commerce of the aljacent conntries, and of that between Eastrorn nud Wextern Asia.
'l'he chice imports are cotton and woullen gends, irm, and spelter from (irent Britain; opinm, Indian piecegoomes, and camvass bags from Cadrinta; dony and cloves from the Maritios; Hanca tin, collee, and spices from the Dhteh setthements: raw silk, cassia, ten, cmmphor, and mankerus from Chinn; mother-nificarl, sugar, rice, oil, hinlion, and some Chinese frools from the Ihilipuines; nearly the same articles from Siam and Corhin China; and rice, oil, silpman wool, tortoiscehell, birds, and feathors, camphor, spires, antimuny ore, bonjamin, entechu, ami engle wood from the varioms islamis of the de. Arehipelaro. Lhat a small purtion only of these groods is inported for the comsumption of the island. The latter, in fact. is essentially an entrepot, the goods hromght to it heing mostly shipped again for other places. 'I'hus, opium, birds' nests, and biche de mer go to Chinn: cottom, pepper, raw silk, and tin to Dimope, or rather to England; Diritish piecegoorls and woollens to Manilla, China, Rhio, Siam, Borneo, and Celebes: cotton twist to the same combries; arms to Bomeo and Whio; glass and from wares to Manilla, Chinn, Sumatra, and Java.'

The principal morelants and agenta are Jondishmen; but some, also, are Chinese, who comprise the lolk of the shopkeepers, with by far the most valuble part of the labouring pop. The European morchants transact business on their own accomet; thit the principal part of their employment consists in acting as agents for honses in London, liverpool, Amsterdam, Batavia. Canton, and the capitals of British India. The language of commercial intercourse is gencrally Malay. Mardiants' accomts are kept in Spanish dollars, divided into 100 parts. The principal weights in use are the picul $=1: 33\}$ lbs. $;$ the coyan of 40
piculs; the bumkat (for golil-ilust) = 832 gr. troy ; the hage of rice:=2 theng, manimis, de.

Singapure, which is main to have twen the earliest plawe settled hy the Malays rmisrating from Simutra, mui anmicient sent of consilerable trale, was purchansed of the sultun of Johore hy the F:. I. Comp, in IKIG, It wat thell ant ineonsiderinble vilhge; but Sir Stamforl liatles, who rownmemed the purchase, clearly approcinted the alvantages of its sitmation for a commercial entreport, and the importance of its acempithon. It was placed at ifst umber a resilent, but hail nu organised government fur several yenn afterwarils, Mr. Crawforil, anthor of the able work on the Pastern Arebipelago, was goveruor ol' Silgapore
 by a couneil of several salaridel atlicers, and a rom corder's comrt has been established. 'I he military force consinta of it wing of the Malras mative regiment, and a mmall detachment of artillery. The puble revenue is derivel from nn excise on tho consimption of pork, opiom, and lume-mile: epirita, government rente, dies, and thes.

The town of' Siugapore is situnted on the S, sido of the island, on hoth bunks of the rivilet or sali creck of its own name, stretahing thence li, fir ulonit if m . to another small creek of the sumb kiml. Its centrul part is occupied with the dwellings of the merchants and the military cantonments; the Malny guarter is at the li., and the printijal Chinese and commercial quartor at the W. exaremity, on the right hank of the risulit, crussed by a womlen bridpe. The strects are in general regularly laid ont, and the houses simpriur to those of l'enimg, thongla the best are mily of brick. Ona hill N. of the town is the govermment lomse; the other primeipal builalinges are the comthonse, gaol, new chatom-honse, missiomary chanel, Armenian church, and the singapore listitution. fommed ly Nir S. Ratles, for the enltivation of the lampuges of Chima, simm, and the istants of the Mabay archipelago, At present it has mu Euglish, a Mulay, and a Tamul seluod, and about II pupils: it reccives a small pension from government, but is principally dependent on subseription. Ships lie in the rouds, or outer harbour, at from I to 2 m . from town. The assistanee of a unmber il convenient lighters, which are always in readiness, enables ships to load or unload with searcely any interruption thronghont the year; and the creck being acressible to the lighters for three-fourthe of a mile inland, the gools are taken in and discharged at convenient quays before the principal warehonses.

On a small island, about 60 m . SE. Singapore, is the Dutch settlement of Lhio, the seat of a Dutill resident, with abont $2 \cdot 1,000$ inhals. It was origimally settled in 1785, and colonised a seemad time by the Dutch in 1818; but its trale has been afmost wholly superseded by that of Singapore.

SINIGAtiLJA, or SENEfAGLIA (an, Sema Galliea), a town of Central Italy, prov. Ancoma, on the Misn, abont $\frac{1}{2} \mathrm{~m}$. from its mouth, in the Adriatic, 17 m . WNW. Ancona. I口p. 24, 498 is 1862. The town is regnlarly, thongh not strungly, fortified with a mound nud bastions, and the gates are handsome. Its enthedral, of the Corinthian oriler, in the form of a Greek cross, has sume good paintings, but nothing else remarkalile. The streets are broad, and the town has a neat appearance; but it is indifferently supplied with water, and is said not to be very healthy.
Sinigaglia is the seat of the greatest of the Italian fairs. The fair commences on the $1 \cdot 1$ th it July, and should terminate on the last day of that month, but it usually contimes five or six days longer. The duties ong gonds bronght to the fiair

The prort helonging to the town, at the river's moneth, is itt only tor manall vessels. Sinkaghia is a bishop's see. According to l'olybins, it was monnised by the Romans, A. N. e, fīl, Ilaving emmed the cause of Marias, it was taken and sackpl liy I'ompey,

SINOt'li, the Sinomb of the Turks, a town of Avia Minor, on the S. const of the Black Sien, lut,
 at 10,500 , sinope is situated on a low narrow ixthmus, comecting the rocky promontory terminating in Cape llozdepeh, or Ada, with the mana land. Its port, which is the best on this comst, on the $N$. side of the town, is protected from the $N$. and Nis, gales ly the isthmus and promontory alrealy mentoned, and is ilefendend by batceries and by a castle, eomstricted during the lower empire. Ships anchor within \& m . of the town, in from 13 to 17 fithoms, or nearer to it, in from 5 tu 7 fathoms. I'locre is a rondstend on the $N$. side of the isthmis, but it is open and exposed. Singue has a mural arsenal and a boidding-yurd, the ouly one in l'urkey exeept, that at Constantinople. 'lhe onk ent on the neighbouring monntuins is of excellent quality, and the ships built here are reckomed the best in the 'Turkish mavy. The situation of the town is such that it might eavily be lortitied so as to be made a place of grat strength; but the fortifications at present existing are quite incapable of allording any effectual jirotection either to the town or the shippint in the port. This was strikingly exemplitied in the latter part of 18is3, when a liussian squadron attacked, and, without any material loss to itself, totally destroyed six 'Turkish frigates with several transports at anchor in the romis. lbeing alnut hulf-way between Constantinople and 'I'relizund, and oceupying an advanced position on the southern shore of the buxhe, Sinope is, in a military and naval point of view, of great importmuee. Its trade is inconsiderable. The princijal exports are timber, salt, cordage, fish, oil, and lecehes.

Shonld civilisation and the arts once more revive in the ancient I'ontus, and the other countries to the S. of the Hack Sen, the excellence of its port conld not fail to restore to sinope some portion of its former grandeur. Even now a considerable intercourse is berinning to take place with the comntries E. and S. of Sinope. Diarbeker on the Tigris, in lat. $37^{\circ} 54^{\prime}$ N., long. $39^{\circ} 53^{\prime} 45^{\prime \prime}$ Le., is one of the principal sents of Eastern commerce; caravans set ont regularly from it for Aleppo, Smyrna, and Constantinople. But there is no doalt that Trebizond, Sinope, and the neighbouring ports on the SE. coast of the black Sea, are the natural channels through which Armenin, Koordistan, and the nortli-western parts of l'ersin may best maintain an intercourse with Earope, And in the event of the commerce with the connVol. IV.

If miciont times, simule wis a rity of gront wealili, manentinde, and importmece- I'mficarum urbium cluosnium. At a very early priond lt was codenizald by the Mifesians. Having elfoyed it lenghoned prow of independence, it was taken hy Phartaces, granilfither of Mithridates. The Inttor male it the capitnl of his enyire; nod on line fill it come, with the eniltigumes territory, into fiof posacesion of the Romames. A colomy was subsequently phated in it by dugnstus, and it continned for at ingthenced perion to enjoy a good deal of considerathan. lt was surrembered, or rather sohli, to the Tiurks in IHil, whell it was mach stronger and more popmons than at praselit.

The limmons philosopher, Diogenes the C'yuic, was a mative of Simoln, where he lirst saw the light anmo: ind In.c.

SISTOW, or SISTOVA, a town of limpopan 'lurkey, prov, Jhigarin, on the Dambe, which is here inore than $\frac{3}{7} \mathrm{~m}$, hroad, 36 m . WsiW. Rinstchuk. I'op, estimated at ed,0100, including many Armeninn and direck merehames. It wecupies a large extent of ground, surrombled hy a palisada and a dry diteh. The town is hematifilly sitmated. A range of well-worded hills eommeneres a leagno or two to the W., and extemds a consithrable wny along the right hank of the Jamber. 'Jhe towi, rising at the water's elpe, whols its way up ihe
 for a while, the houses are lost; then they : plume higher up, and the whole is protected by a ditidnl, which crowns the summit. Sistow has some trule in leather and cotton. It was here, in 10:!1, that a treaty of peace was signed hetween Anstria mal Thurkey, after the latter liad lost liimuik and Ismail to the limssians.
SITPINCiHOULINE, a town and par, of Enerland, co. Kent, lathe Scray, humd. Milton, oir the railway from Lomdon to Cominterbry, 15 m . W. hy N. the latter. Area of par. 1,200 neres. I'on, 4,301 in 18th. It consints chietly of one wide strect, ruming alomer the high romb, and has several fond intis. The parish ehurch, n spat-
 it was destroyed by tire. 'She living, wortle $21 \% /$. a year, is in the grift of the archbishop of C'materbinty, In 150x, (Sueen lilizabeth incorporated Sittingbourne noder a mayor and jurat, with the privilege of semding 2 mens. to the 11 . of C., nud of holling a weekly market anal fairs; but theos privileges seem never to have been exercised, except ins respects the fuirs, which are held on Whit Monday, Tuesilny, mud Wednesiny, and Oct. 10. The markets are held once n month.
SIVACllE, or l'L'TILD SEA, the Palus Putris of the ancients, a lagoon on the east side of the Crimea. On the N. it commmnicutes with the seat of Azoff, by the narrow strait of Yenitehi, being everywhere else separated from it by a marrow, low, sandy tongice of land. stretcling NXW. from Arabat in the Crimea to opmosite Yenitchi, a length of nearly 70 m . The hugoon is shallow, and its W. side, forming the F.. shore of the Crimea, is extremely irregular. Whin the wind blows from the lia, the water of the sea of Azolf is forced through the strait of Yenitehi, and covers the whole surface of the lagom: but at other times it exhibits a large extent of mul, the exlamaions from which are, in summer, exceedingly mincalthy. The salghir, the principal river of the Crimen, falls into this lagnon.

SKllBEEREEN, a rown of Ireland, prow. Man-
ster, in the most sontherly portion of the co. Cork, on the Jlen, which is nivigable from I Baltimore to within $\frac{1}{2} \mathrm{~m}$. of the town, 40 m . SW. Cork.
 and has a comsideratile retail trale. It has a par. chareh, a IR. Cath, chupel, il Methoodist meeting house, several selools, a dispensary, market-house, barrack, conrt-house, and bridewell. I'etty sessions are held on Wednesdays, and it is a constabulary and coast-guard station. It has several large four mills and a brewory. The exports, which prineipally consist of corn, meal, thour, and provisions, are mostly shipped from Oldcourt. 2 m . lower down the river, where vessels of 200 tons load ami monload. Markets on Wednesilays inul Saturdays; fairs, May 14, July 10, Aug. 2 , Oct, 12 , and ilec. 11 and $2 \dot{3}\}$,
KKII'NON, a market town and par. of England, W. riding co. York, wapentake Staincliff and Fiveross, b. dive, in the momatans distr. of ('raven, and on the Aire, 38 m . W. York. Area of
 consisting principally of one spacions street, is built wholly of stone from the nefighbouring hills. The parish church has some momuments of the Clillurd family. The living, a vicarage in the gilt of the dean and chapter of Christcharch, is worth $185 /$ a y year. The Friends, Independents, and Wesleyans have meeting-honses; and there is a flourishing grammar school, foumded in 1528 , the pupils of which are eligible to the exhibitions of lady E. Hastings at Quecols College, Oxford, and to two exhibitions in Christ Collon?, Camlridge. The town has also another emowed, or Clerk's schoot, and a national sehool.
Near the chmreh is Skipton Castle, the seat of the Earl of Thanet, suppoed to have been origrimally huilt soon after the Conquest. 'Though nut well placel for a fortress, it was ci some consequence in that capacity during the wars of Charles I. It was dismantlen in 1646, but is now a spleminlly fitted up noble residence. Skipfon is goverued hy a constable elected ammally at the manorial conrt-lect, and the general quarter sessions for the W. riding are held in its townhall. It has some paper and cotton mills, and a consilerable trade in corn, slicep, and cattle, muel facilitated ly the lieeds und Liverpool Canal, which ibses close loy the town. Market divy, Saturday. Pins, March 25 ; Palm Ǵmmday cio, Eastor eve, anal three Tuesdays next after Baster, for horses, cattle, and sheep; Whitsum (ve, Alg. 5, Nov. 20 and 23, for horses, woollen, and linen cloths, mereery, and pedlery.

SKY'l, one of the Hobricles, which sec.
SLAVONIA, or SCLAVONIA (ILumgar, TotOrszuy), a prov. of the Austrian empire, usually regarded as forming a part of Inmgary, and chicfly inchuded within its military frontier ; between the Drave and Danube on the N. and le, and the Save on the S., dividing it from Servia, Ibsnia, and Turkish Croatia, and having Sustrimn Croatia on the W. Area, $3, t i 4 \mathrm{sq}$. m. P(op). dix, 530 in 1857, principally Slavonians of the Greck ehmreh, but partly, also, German colonists, (ijpsies, and dews. A branch of the Camic Alps, almost wholly of calcareons formation, rums E. and W. throigh Slavonia; but these monntains are of no great elevation, and a large part of the surface is that. The plains are very fertile, though frequently umbealthy from the presence of extensive marshes along the large rivers. Wheat, rye, oats, barley, and most other grains are prodnced in abmodance, besides thax, homp, tobacco, and madler. A gool deal of strong wine is made, reperially in Sirmia. Fruit is extromely plentiful, and there are vast oreharts of plums, whence the
favonrite liquor slinorita is distilled. The hill ranges are covered with forests, consisting of excellent onk, 'The breeding of live stock, particalarly of hogs, which feed at large in the forests, is extensively $\mathrm{p}^{\text {marsuch. }}$ The silkworn suceceds, but is not much reared. The prove is said to possess iron, salt, sulphur, and perhaps coal ; but marble only is raised in any quantity. Manufactures, mostly domestic, excepting some of glass and earthenware, und potash. The trade partly consists in the exportation of the raw produce of the prov., and partly in the transit of products. The principal articles of export are cattle and hogs, which go to the most distant provs of the Nustrim empire; hides, skins, rue whedt, honey and wax, galls, and timber. Shavonia is divided into three connties, and four military districts: chief towns, Esseck, the cap., Peterwirdein, and Posegra.
Slavonia and the banat comprise the most important portion of IImgarian military frontir $r$, the system of defence organised in which deserves some notice. 'The object,' says a well-informed writer, 'has been to maintain, at the least posaible eost, along the whole Turkish frontier of linngary, a force which, in peace, might be employed for the purposes of quirmine and customs, and in war serve as a portion of the standing army. This has been effeeted so perfectly, that in peace nearly 40,000 men do duty along 800 m . of frontier; and they not only feed and clothe themselves, but pay heavy taxes in money besides, and perforni, also, a considerable quautity of labour withont pay. The hand acquired by government along the whole of this tistriet is held as fiefs on the temure of military and civil service, from 36 to 50 acres constituting a ficef. lach of these is bound to furuish, and to maintain and clothe, accorling to its size, one or more men-at-arms. The fiefs are given to families emmused of several memhers, of which the eldest is the house-father, and who, with the homse-mother, has the direction of the farm, the care of the house, and the right to control the whole family. The fiefs camot be solht: the land is cultivated for the conmon grool of all the members of a family; and the protit, if any remain after the taxes and other expenses are defrayed, is dividod among them. In most cases, many married conples, with their children, sometimes to the number of 50 ) individuals, live under the same roof, cultivate the same land, eat at the same table, and obey the same father. The borderfamily has to do civil service for the state, as in the repair of post-roads and bridges, draining of swamps, \&e., one day per anmom for cerey linglish acre, and eight days a year for the village. The borterer's elief tax, besides the furnishing the uniform (government supplying the arms), is the land-tax, amomeng, for an entire fief, to from Ins. to 30 s , a year. In time of peace, the man-at-arns repairs to his military station for seven days at a time, where the family provides him with foonl. Besides this, he has the duty of transporting letters, as well as the money and baggace of his regiment, and of performing exercise. For the ordinary service, the number of men on duty amonts to 4,180 . In times of disturhance on the Turkish side, or when the plague is drawing near, it is increased to 15,800 , and. in times of still greater danger, to 10,000 , In time of war, the borderer must form a part of the regular army, and narch out of the comitry if reguired. The regular disposable force anounts to $34,8(1)$ men, hat if the reserve and the lauduedr he ealled out, to 100,000 . If driven to the last extremity, they can muster to the amonnt of

## SLEAFORD (NEW)

SLIGO
195

200,000 men. Jy means of alarm-fires and bells, this immense force may be smmmoned together through the whole extent of the frontier in the space of four hours. The borderers are divided into seven regiments. Every regiment receives its orlers ultimately from the council of war at Vienna. The Ilungarian diet has no control over the levy and supply of these tronss; and the schools, the langhige of the serviee, and many of the laws in the military border, are exclusively (ierman.'
SLLAFOLD (NEW), a market town and par. of England, co. lineoln, wapent. Flaxwell in Kesteven, on the Slea, 16 m . Nisl. Lincoln. Area of par. 3,160 aeres. Pop. 3,467 in 1861. The town consists principally of three strects, and has a prosperons appearamee, The charch, fomded in 1271 , is interesting for its architecture. The tower, at the W. end, is much the ollest part, aud is carly English, lut surmounted by a spire, 11 ft , in height, of a later date. The aisles and transept are in the decorated, and the chancel and other parts in the perpendieular style. The whole of the cletails of this ehnreh, in all its styles, are very good. In the chancel are several monnments to the Carr family, one of whom funded and embowed a free school in the town, and inn huspital for fe poor men. The sehool was elosed from 1816 to 1885 , during which period the school house was rebuilt; in the latter year it was reopenel, when it had an income of 1891 a year. There are several other eharities, particularly Alvey's school for 40 chillren, which has received many endowments since that of its fonnder. Formerly the bishop of Lincoln had a palace at New Sleaford, but it no longer exists. A new Gothic sessions house has lately been built, in which petty sessions are heid; and various other intprovements have been effected in the town. The hiving, a vicarage worth 1701. a year, is in the gilt of the prebendary of Lineoln cathedral. Market days, Mondays: fairs, Plow, Easter, and Whit Monday, for horses, eattle, and sheep; Aug. 13, for provisions; and Oct. 20, for cattle and sheep.

SLESWICK, or SCIILESWIG, a duchy belonging to l'russia, comprising the S. part of the peninsula of Jutland, between lat. $54^{\circ} 15^{\prime}$ and $55^{\circ} 30^{\prime}$ N., and long. $8^{\circ} 10^{\prime}$ and $10^{\circ} 10^{\prime}$ E., havinge It:tland l'roper to the N., S. I Iolstein, from which it is separated by the Eyder; E. the Baltic, and W. the North Sea. Area, including the adjacent islands, $3,450 \mathrm{sq}$. m. Pop. 409,907 in 1860 . Surface low and generally flat, being in parts varied only by a few umdulating hills. Almost the whole of its western coast is either below or elevated yery little above the sea, being defended from its irnuptions (from which, however, it has frequently suffered much) by immense dykes and sluices. The commtry so protected consists principally of very rich marsh laud, affording pasturage for large lacrels of very superior cattle, as well as great numbers of fine loorses. In the interior the soil is sumdy, interspersed with heaths, and not very proluctive, but on the castern side it is fertile. l'here are no minerals of importance. The produce of corn, consisting principally of rye and harley, is sutheient for home consumption; and thax, hemp, aul potatoes are also grown. But the raising of cattle and horses forms the staple employment; and these, with butter and checse, form the principal articles of export. The tishery is carried on to some extent. The deficiency of timber for fuel is compensated by the abundance of' turf. The country is mostly open ; but it is in parts inclosed with quiekset hedges, and the farmhouses are neat, and have a eonfortable apparance. 'The manufactures, which are mint-
pertant, consist mostly of linen, liempen, and womlen fabries, made in the peasants' cottases. Lace is produced at Tombern, and there are at few paper, tile, and other factories. Flensbors is the principal place of trade: Schlewwig, Flensbors, and Tonningen are the other ehicf towns. The duchy belonged to Demmark till 18til, when it was taken possession of by the Austro-l'russian army, and finally made over to Prussia by the treaty of Irague, of Aug. 23, 18t6.

Sleswick, or Schideswig, a sea-port town of Prussia, eap. of the above duchy, at the bottom of the lons, uarrow gulf, or arm of the seat, called the Sley, 21 m . from its mouth, and 70 m . NNW. Hamburgh, on the railway from llamburph to Flenshorg. I'op. IP, 203 in iscio. 'Thonsh irrern. larly hilt, its brick humses, neatness, and mamer of building make it look like a Dutch town. It has 3 churches, inchuding the cathedral, with several monuments, and a remarkable altar sereen ; several hosjitals, a deaf amd (lomb asylum, shools for the poor, a patriotic mion, and other societies, a numery, a siving's' bank, with manufactures of lace, woollen stutts, and carthenware. Its commerce has been a good deal inereased since the improvements in the navigation of the sley ; still, however, it is aceessible only by the smither chass of vessels. It was formerly it member of the llanseatic league, aud a town of some note as early as the 9th century. In its immediate vicinity is the eastle of fiottorp, formerly the residence of the chakes of IIolstcin-fiottorlo.

SLIGO, a marit. co. of Ireland, prov. Commaght, having N. the Atlantic ( )eem, L. the eo. Leitrim, SL. lioseommon, and SW. and W. Mayo. Areat - $13 \cdot 1,857$ acres, of which $16,5,71$ are momatain and bote, and 8,260 water. Surfince much diversitied ; but though it has a considerable extent of level rich land, it is, speaking gencrally, momtainons, rough, and boggy. There are a tew large bistates; lut a considerable portion of the co, is divided among small proprictors. 'The statements as to the mode of oceupying land, its management, ami the condition of the inhalss., given under the notice of the co. Lismuns, may be applied with little or no moditication to this co. The freat increase within the last few years in the amount of the exports from the town of sligo, show that there must have been a corresponding extension of cultivation in this co. and the contignous portions of Leitrim. But unhappily the extension, and even improvement, of tillage in Ireland is not always aceompanied by any correspondins improvement in the condition of the ocenpiers, which is here extremely bal. The con-arre system has male much progress in this co.; the: competition for land is extreme; aud the oceupier of any over-rented patch that may choose to pirt. with it, never fails to get a considerable sum as 'tenimts' right.' It has neither minerils nor manufactures of any importance. I'rincipal ripers, Gavoge, Arrow, and Awimmore. It is divided into 6 baronies and 39 parishes, and returns is mems. to the 1I. of C., two being for the co. and 1 for the bor. of Sligo, the only town of any importanee in the co. liegistered electors for the co. 3,181 in 1865 . At the censins of 1861, the co. had a pop. of 125,079 ; while, in 1851, the pop. araounted to 128,0015 , and in 1841 to 180,886 .

Sligo, $n$ parl. bor. and sea-port town, on the W. coast of Irelind, prov. Comanght, eap. of the above co., at the bottom of Sligo Bay, and at the mouth of the river Garvoge, 107 m . NW. Diblin, on the Midland Great Western railway. Jop. 10,420 in 1861. Sligo is intersected by the Giar voge, which has its souree in Lough dill, distant about 3 m . The larger portion, which is on the
S. side of the river, is connected with that on the N. by 2 bridges. 'The streets are irregularly laid ont, and those in the older parts of the town are narrow, dirts, badly paved, and badly lighted. Of lato years, however, several new markets, warchonses, and lines of streets have been erected; and it has a good deal of the bustle and appearance of a place of trade. The town has a library, 2 news-rooms, a small theatre, and a cavalry barrack. The ecclesiastical buildings comprise the par. chnrehes of St. John and Calry; a large Rom. Cath. chapel, a Dominican convent, and places of worship for Presbyterians, Independents, and Wesleyan Methodists. The ruins of Sligo monastery deserve notice for their architecture and for a monument of O'Conor Sligo, who died in 1623. There are 2 par. schools, a school in connection with the Board of National Elucntion, one on the foundation of Erasmus Smith, and one under the Incorporated Society. The connty infirmary, fever hospital, and dispensary, and a mendicity association, are within the town, A lınatic asylum was erected in 1850.
The bor., which was chartered by James I. in 1614, is clivided, under the Irish Municipal Reform Act, $3 \& 4$ Victoria, cap. 108, into 3 wards, and is governed by a mayor, 5 aldermen, and 18 conncillors. Sligo returned 2 mems. to the Irish II. of C., and since the Union it has sent 1 mem . to the Imperial H. of C. Area of parl. bor. 3,001 acres; of municipal do. 417 acres. Registered electors, 336 in 1865.
A board of commissioners, appointed under local acts, superintends the police of the town, and the improvement and regulation of the quays and harbour, with power to impose rates for those purposes. Under their management the port has been a good deal improved. An extensive new quay and warehouses have been erected ontside the bar; and though rather difficult of access, the port is now tolerable. There are abont 12 ft . water close to the quay, so that vessels of 250 and 300 tons come up to the town. The assizes and general sessions of the peace for the co. are held here; the latter four times in the year, and petty sessions every Thursday. The linen trade, which was formerly carried on with some spirit, is now nearly extinct. The town has several flour mills, a distillery, and four brewerics. The markets for corn and butter, on Tuesday and Saturday, are lield in buildings erected for the purpose. There is a valuable salmon fishery close to the town. On the 1st of January, 1864, there belonged to the port 10 sailing vessels under 50, and 19 above 50 tons, besides 3 steamers; of an aggregate burthen of 269 tons. The customs revenue, for 1863 , amounted to 28,4631 .

SMOLENSKO, a government of European Iussia, between the 53rd and 57 th degs. of N. lat. nnd the 30th and 26th E. long., having N. the governments Pskof and Tver, E. Moscow and Kaluga, W. Witepsk and Moghilef, and S. Orlof and Tchernigof. Area estimated at $20,220 \mathrm{sq} . \mathrm{m}$. ; юор. $1,102,076$ in 1858 . Surface mostly an undulating plain, in some parts marshy; in the $N$. is a more elevated platean in which the Dniepr and several other rivers have their source. The soil is generally fertile, and more corn, principally rye, is grown than is required for home consumption. Hemp, flax, tobacco, and hops are cnltivated. Cattle breeding is less attencled to, but a good many logs are reared. The forests are very extensive, and the chief sources of wealth. Game is plentiful, and bees are reared almost everywhere. lron, copper, and salt are found. Manufactures few, boing nearly confined to lenther, glass wares, pitch, with sawing works, distilleries, and a few
carpet factorics in the cap. The raw produce of the government is exported to liga, Wilna, and Moscow. It is divided into 12 circles.

Smolensko, a town of European Russia, cap. of the above gov., on the Dniepr, 230 m . W. by S. Moscow. Pop. 17,066 in 1858. The town is situated on both sides the river, and is surrounded by a massive wall flanked with towers. It appears to advantage at a distance, but is in reality a poor town, the houses being mostly of only one story, and built of wood; but since it was burned by the Russians, previously to their evacuating it on the alvance of the French, in 1812, it. has been partially rebuilt of stone and brick. Smolensko has 3 eathedrals, in one of which is a bell weighing 350 ewts, 16 Greek churches, 3 convents, a Lutheran and a Roman Catholic ehureh, a seminary, gymnasinm, a military school for nobles, several hospitals, and some carpet, hat, soap, and leather fictories. In 1838, an iron pyramid was erected here to commemorate the resistance made by the town to the French in 1812.

Smolensko is of considerable antiquity. It has suffered numerous vicissitudes, but has always been a town of some consequence.

SMYRNA, an ancient and celebrated city and sea-port of Asia Ninor, the greatest emporium of W. Asia, on the W. sile of the Meles, at the lottom of the gulf of its own name (an. Hermius Sinus) ; lat. $38^{\circ} 25^{\prime} 36^{\prime \prime}$ N., hong. $27^{\circ} 6^{\prime} 45^{\prime \prime} \mathrm{L}$. . Its pop, may be estimated at from 120,100 to $150,0(0)$, more than half being Turks, and the rest Greeks, Jews, Armenians, and Franks. It is surroundel, at some distance, by an amphitheatre of lofty mountains, which leave it open only towards the sea; and immediately acljoining the city, on the W., is the ancient Mons Pagus, which commands a noble view. This eminence is now called the Castle Hill, from a citadel erected on its summit, in the 13 th century, by the emperor John Comnenus. A triangular plain, spread at the foot of this hill, along the shore, and the slopes of the hill itself, compose the site of Smyrna. One side extends along the shore from W. to E. for about $2 \frac{1}{2} \mathrm{~m}$. The Turks occupy the upper part of the city, their strects hanging down the slopes of the hill; the Armenians are in the centre; the Jows have two or three different places around both; and the Franks spread themselves in the flat ground and close to the shore. Extending SE. is a plain filled with gardens, and every part of the city is interapersed with shady trees. The view of Smyrna from the bay, rising amphitheatrewise from the water's edge, backed by the hill crowned with its old castle, is grand and impressive. Unfortunately, however, its interior has all the features common to Turkish towns. 'If a iirst view,' says Mr. Elliott (Travels, ii. 34), 'be calculated to make a favourable impression, this is not contirmed by an inspection of the interior of the city. The Frank quarter is dirty, ill-paved, and narrow; in addition to which it is rendered almost impassahle hy long strings of camels and porters carrying hinge bales of cotton. The houses (excepting those of the consuls and princijal merchants, which are large und commodious) are miserably built; the sides consist often of planks; and when of lricks, the walls are too thin to keep out cold and damp. Neither windows nor doors are made to shant close; and if locks appear on the latter, it is too much to expect that they shomld be serviceable. There is a great lack of accommodation for travellers. The only inn in the town contains but a single decent room, and the noise of revelry is incessant. Besides this, there are three boardinghonses; but furnished lodgings are not to be procured, nor can furniture be hired for a few weeks
raw produce of iga, Wilna, and rcles.

or montlis. The apparatus commonly used for supplying warmth to the lody in eold weather is a brazier placed under the table, which is covered ly a large eloth held by each meniber of the family circle up to the chin, to prevent the heat from escaping. Grates and stoves have of late years been introdnced, but they are stiil rare, and to be seen only in Frank dwellings. The shops are little dark rooms, but tolerably supplied with Enropean articles. The bazaars, with their long eovered rows of stalls, built with sumery preeations against fire, whose ravages are awfully common, are secured hy iron gates closed at night. As to the rest, Turkish towns in general offer little variety, and the description already given of Constantinople applies to Smyrna, except as regurds the tiner buildings, greater extent, and grauly exterior of the capital.' Smyma suffered severely from a fire in 1845.

The principal buildings of Smyrna are the bazaar and bezestein, or market-place; the vizier-khan, constructed of the marble ruins of the ancient theatre; the palace of the mutsellim, or goveruor, and the varieus mosques, churehes, and hospitals. 'There is a large piblic hospital in the NE. part of the Frank quarter, supported by the Greeks, Franks, and other Christians, which ranks high in Turkey for its school of medicine. Its buildings comprise a laboratory, and three sets of wards aronnd a courtyard shaded by rows of trees. The custle on Mount Pagus is very extensive, and occupies the site of the ancient aeropolis. This fortress has been frequently repaired by the Turks, and aecordingly presents an incongruous intermixture of architecture; but it is now mostly deserted and in ruins, though a few old cannons are still mounted on its walls. Within are some vaults aud cisterns, supposed to be coëval with its foundation: and a large but abandoned mosque, formerly a church dedicated to Saint Polycarp, bishop of Smyrna, who is supposed, though on no very gool authority, to have suffered martyrdom near the same sprot.

Smyrna was the seat of one of the seven Apoealyptic churches (Rev. ii. 9) ; and, according to Mr. Elliott ('Travels, ii. 45), ' there is not one of these clunches within whese precinets the trumpet of the gospel now gives so distinct and certain a suoud. While Mohammed is acknowledged in 20 mosques, and Jews assemble in several synagogues, the faith of the Messinh is tanglit in an Armenian, 5 (Greek, and 2 Rom. Catholic ehurches, and in 2 l'rotestant chapels, one comneeted with the English, the other with the Dutch consulate.' 'The Armenians have a large academy at Smyrna.

Being surrounded by an amplitheatre of mountains, which concentrate the rays of the sun and interrupt the breeze, the heats at Smyrna, from June to the middle of Scpt., are usually intense; and if the inbat, or sea-brecze, fail, the inhab, are almost suffocated. This great heat and want of ventilation, joined to the filthy and crowded state of the streets and honses, and the want of any etlicient precautions on the part of the autherities, seldom fail to generate the most destructive diseases, among which the plague not unfrequently makes its appearance, and commits dreadful ravages. At such periods all commercial and social intercourse immediately cease; and the French inhab, retire to and shitt themselves up in their country houses in the surrounding villages. The T'urks, who are firm predestinarians, have hitherto taken few or no precautions to counteract the progress of the infection, or to guard against it; but it is stated liy late travellers that some change is now beginning to take place in this respect, and that the principal Turkish inhabs, are
slowly adopting some of the deviees by which Europeans attempt to ward off the mulady.

Port and Commerce.-Thongh frepucutly overthrown by earthquakes, and laid waste ly lostile incursions, the excellence of her port, and her advantageous situation for commerce, has always kept Smyrna flourishing; and she still continues to be a great city, while Ephesus, Miletus, and other celebrated emporinms on the same const, have, from the filling up of their harbours, been long since reduced to total ruin. The Gull al Smyrna, the entrance to whieh is hetween the island of Mytilene on the N. and Cape Carabournm on the S., is deep and angular, the distance, fullowing a ship's course from the entrunce to the eity, being about 11 nantical leagues. There is excellent anchorage in most parts of the gill, merely avoiding the shoals on its N. side. Ships of large burden usually anchor abreast of the eity in from tive to seven fathoms; but the water is io deep that they may lie close alongside the quays. The inbat, or sea-breeze, blows from morning till eveaing during the hot months, and is alwoys waited for by ships going up to the city; and there being no obstructions in the way, the serviees of pilots are not required. In the night a landbrecze generally blows from the eity out to sea.

The prineipal articles of import eonsist of grain, firs, iron, and butter, from Odessa and Tagimrog; and of cotton stuffs and twist, silk and woollert goods, coffee, sugar, cochineal and dye woods, iron. tin, and tin plates, rum, brandy, paper, cheest, glass, and wine from Great Britain, France, Italy, and the U. States.

The exports consist principally of raw silk aul cotton, the former produced about Jrusa, and sent. chiefly to England; fruits, particularly raisins and fiss; opium, which goes chietly to America and Holland: rhubarb, and a variety of drugs and gums; olive oil, madder roots, Turkey carpets, valonea, sponge, galls, wax, copper, hare-skins, goats' wool, and sattlower.
The subjoined table gives the value of the principal and other articles imported at the port of Smyrna in the year I863:-

|  | Imports |  |  | Value |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |

The subjoined table shows the value of the principal articles exported from Smyrna in 1863:

The money, weights, and measures are mostly the same as at Constantinople. Aceounts ure kept in piastres of 40 paras. The value of the piastre fluctuates according to the exchange. The oke, which is the principul weight, $=12 \mathrm{lbs} .13 \frac{5}{8}$ oz. atsoirl. ; the quintal $=127 \cdot 48$ lhs. avoirl.

Smyrna is well supplied with provisions of all kinds. Fisl, inchdingr red mullet and oysters, are very plentiful in the bay; and game of all kinds, mutton, and the flesh of wild boars, are good and alundant. Whey and eloted cream are used in great quantities. Sweet lemons, oranges, citrons, water-melons, tigs, and grapes are grown in great perfection in the environs, jartiendarly at Menoment, and the other villages on the opposite side of the gulf; whence boats, carrying fruits and otherprovisions, are continually passing to Smyrma. Most travellers speak of the agreeable society met with in Simyrua; and the Gireeks have begun to adopt the manners and costumes of W. Europe.

Mistorieal Notice.-The accounts of the foundation and carly history of smyrua are obscure and somewhat contradictory. The most probable seems to be, that it was founded by a colony from Ephesis. (Strabo, lib. xiv.) After undergoing various vicissitudes, it was testroyed by Alyattes, king of Lydia, the inhab. being dispersed among the surrounding villages. At the distance of about 400 years, a project for reconstructing the eity would appear to have been entertained by Alexander the Great; but, if so, it was not carried into elleet by that concueror, but by Antigonus and hysinachus. The city built by them was not, however, on the site of the old city, which stood on the tlat shore on the other side of the Meles, about. $2 \frac{1}{2} \mathrm{~m}$. NLi. from the modern city. The almirable port and other alvantages enjoyed by the newly built city rendered it. in a short time, one of the most populous, wealthy, and handsomest of the Asiatic cities. 'It is,' says Strabo,' 'the finest city of Asia. Part of it is built on a hill; but the fiuest editices are on the plain not fir from the sea, over against the temple of Cybele. The streets are the most bentiful that ean be, straiglit, wide, and paved with freestone. It has many stately buildings, magnificent porticoes, majestic temples (incl, an llomerium, or temple in honour of Ilomer), a public library, and a convenient harbour, whieh may be shut at pleasure.' (lih. xiv. smb init.) Under the Romans, Simyrna enjoyed the greatest consideration, and M. Aurelius rebuilt the city, after it had been almost destroyed by an earthqualic. It was mueh freguented by the Sophists; amd, along with diphesus, became renowned as a school of oratory and science.

In more molern times it has indergone innumorable ealamities, from which, as already stated, nothing hut its admirable situation for commerce could have enabled it to recover. It was taken aud given up tomilitary execution by the famous Camertane, or 'Timur Bee, in 1402 ; and finally came into the possession of the Turks, in 14.4.

Smyrna is one of the numerons cities that contended for the honour of being the birthplace of Homer ; and Chios, perlapss, excepted, she would seem to have the best elaim to this proud distinction. 'Homerum Smyrnai suam esse confirmant; ituque etiam clelubrum ejus in oppido dedicaverınt.' (Ciecro pro Arehià, cap. 8.) From being born on the hanks of the Meles, which washed the walls of the ancient as well as of the modern city, Ilomer is sometimes called Melesigenes.
' Blint Melestgenes thence Homer call'd,
Whose puen Phoubus challeng'd for this own.'
Thence, also, Tibullus (lib. iv. eleg. i. v, 21t) calls lis poems 'Meleteas Clartas;' and I'atsanias
says (Arehaic. cap. 5), that a cave was pointed ont at the souree of the Meles, where they were said to have been composed.

Owing to the influence of earthquakes, and the still more clestructive attacks of barbariaus, Smyria has lut few considerable remains of attiquity. They consist principally of portions of' the old walls, especially along the castle-hill, with some vestiges of the thentre and stadium. Many pedestals, statues, inseriptions, and medals have been and are still discovered in tigging; mul perhaps no place has contributed more than this; to earich the collections and cabluets of Europe.

It has been supposed that the mod and other detritus brought down by the Kiodus (an. Hermus), which has its embouchure on the N . side of the gulf, will, in the end, fill up the channel; and. by clepriving the city of its port, effectually consimmate its ruin. But though this effect may ultimately be brought about, it is abmelantly certain, comparing the banks at the river's mouth with the space that has to be filled up, that a lengthened series of ages must previonsly elapse,

SNOWDON, a mountain of N. Wales, in Caernarvonshire, being at once the highest in the range of which it forms a part, and in S. Britain. The mountain, which is about 10 SE . from Caernarvon, terminates in various peaks; the highest peak, the Wyddya (conspicuous), to which the name Snowdon is more particularly applicable, and which scarcely out-tops several of the surrounding summits, is $3,371 \mathrm{ft}$. above the level of the sea. 'T'he W. side of the mountain is very precipitous, and is composed partly of pentagonal basaltic columns. The view from the summit is very extensive. 'I saw from it,' says Pemiant ('Tour in Wates, ii, 337), 'the co, of Chester, the high hills of Yorkshire, part of the N. of Enerland, Scotland, and Ireland; a plain view of the Isle of Man; and that of Anglesey lay extended like a map before me, with every rill visible.'

SOCLETY ISLANDS. See Polynesia.
sOCOTRA (an, Dioscoridis Insula), an islant in the Indian Ocean, about 230 m , from the $א$ coast of Arabia, and 120 m . E. Cape (iariafni, int Africa, its chief town being in lat. $12^{\circ} 39^{\prime} 2^{\prime \prime}$ N., long. $54^{\circ} 6^{\prime} 29^{\prime \prime} \mathrm{E}$. It is of an elongated shape. Area estimated at $1,000 \mathrm{sq}$. in. Pop. probably 4,000 or 5,000 , princjpally Bedouins, with some settled Arabs, Aliriean slaves, and descendants of Portuguese. The S. coast of socotra preserves it convex and nearly unbroken line, but on the N. it is indented with many buys and harbours. The interior may be described as consisting of monntains, nearly surrounded by a low plain of from 2 to 4 m . in width, extending from their base to the sea, The mountains are lighest towards the NL. part of the island, where their granite peaks rise to about $5,000 \mathrm{ft}$ : elsewhere they average nearly 2,000 ft . in height, and consist mostly of a cuntpact cream-coloured primitive limestone. The island is not well-watered; but the E. is, in this respeet, better than the W. portion. The climate does not appear to be particularly salubrious, though it is more temperate than in the adjacent continent. Among the lew natural products, the most important is aloes (Aloë spicata, or Socotrinu), for which the island has been famous from the earliest period. This plant is found growing spontanconsly and in great abundance on the sides and summits of the limestone mountains, at an elevaltion of' from 500 to $3,000 \mathrm{ft}$. above the level of the plains. Its leaves are plucked at any periol, and after being placed in a skin, the juice is suthered to exude from them. In this state they are mostly shipped for Muscat. Formerly the parts of the island producing the aloe were farmed out to dif- church Norma cially of the a litrg The fer comutry plies in Soham Fair, 1

ferent individuals, the produce being taken at a low tixed price by the sultun. At present any one collects the aloe leaves who chooses to take the trouble, and nothiug is levied on the sultan's account. Dragon's blood is the article next in importance: it is the produce of a leguminons tree, the P'erocarpus draco, whieh grows on the mountailes. 'lamarinds, tobaceo, and dates (important as food) are also grown. Agriculture is in an exccedingly low state, a species of millet being the only grain cultivated, and it is little used muless a fillure of milk and dates be experieneed. The aumals are camels, sheep, goats, oxen, asses, and civet cats. Sheep and goats are kept in large thocks in every part of the island: they are generally of inferior kinds, while the catte, on the contrary, though small, are very superior, and aperar to be of the Einropean variety. The trade is prineipally with Muscat, whence dates and other provisions are chictly imported. Accorting to Arrian, the inhabs, of this island were, in antiquity, subject 'to the kings of the incensecountry,' or Southern Arabia. At present Socotra belongs to the Sultan of Kisseen, but his supremacy is little more than nominal, the government being ehiefly delegated to one of the principal inhabs., who again exercises little authority, except over the Bedonin, or mative pop. I'he tribute to the sultan barely amonnts to 200 dollars a year. The population is wholly Mohammedan. The wonen go unveiled, and are partly oecupied in tending tlocks, and partly in making glne, and carding, spimning, and weaving wool.
The only town of any eonsequence is T'amarida, on the NE, shore, in the eentre of a bay which athords tolerable aneliorage. Ilaving been ruined by the Wahabees, in 181 I, it consists of only about L戶O straggling and dilapidated honses.
SOLLAM, a market town and par. of England. ro. Cambridge, hmid. Staploe, near the borders of Suflilk, 6 m , SSE: lily, Area of par, 13,420 acres. Pop. 4,278 in 1861 . The town, which is irresularly built, covers a good deal of ground. The par. chureh is of varions dates, one purtion being late Sorman. Soham has mmerons charities, especially lishop Lancy's, for apprenticing ehildren of the par, with an anmal revenne of near 4013., a large eharity sehool, and several ahmshouses. The fen or mere, which once covered the aldacent country, has been drained and cultivated, mid supplies most part of the dairy promlnee, for which Soham is celebraten, Market day, Saturlay. Fiair, May 7 , for horses and eattle.
SOlisions (an. Noviorlunum, post. Augusta Suessionum), a fortified town of France, dip. Aishe, eap. arrond., on the Aisne, here crossed by a handsome stone bridge, 17 m . SW. Laon, on the railway from l'aris to Rheims. 1op. 10,208 in 1861 . 'Ihe town is well built and elean, the houses being nustly of stome, roofed with shate. There are many curions and venerable public buildings, ine. the eathedral, founded in the 12 th cent., with an altarpuce by linuens, representing the 'Adoration of the shepherds;' the renuains of an abbey fommed in the Ith eentury; and the castle, on the site of that which was the residence of varions Merovingian kings. The eollege, hospital, house of correction, public library with 18,000 vols., and theatre, deserve notice; and in the vieinity are the mins of St. Medarl's Abbey, founded in 55̃7, in which Pepin, Curloman, de., were crowned, and Louis-le-1 ebomuaire was contined by his sons. Soissons is a hishop's see, and has a court of primary jurisdictiom, a commmal college, two seminaries, a society of arts and sciences, mamulactures of coarse woollens, hosiery, and earthenware, and a considerable trade in agricultural produce.
ave was pointel arthquakes, and es of burbarians, a remains of any of portions of the castle-hith, re and stalimn, tons, and medals in digging; and a more than this inets of linrope. e mud and other lus (an. tolerably well built, and has several conspicuous pmblic edifices, incloding, among others, the cathedral of sit. lirse, one of the best ehurches in Switzerland, with several other chmrehes and comvents, a town hall, a square clock-tower in the market-place, the arsemal, with an extensive and curions collection of armour, a musenm, government house, with some good sculptures, hospital, bouse of correction, barracks, and theatre. It has also a gymmasinm, a botanic garden, and a public library, said by Eibel to comprise 10,000 vols. On the whole, however, the town is dull, having few mannfactures, and but little trade.
'The Polish patriot aud general, Kosciusko, resided here during the last two years of his life, which terminated on the 16 th of Oct., 1817. Ilis remains were carried to the cathedral of Cracow, where they repose beside those of the famous John Sohieski.
NOMELSE:T, a maritime co, of England; laving N. and NW. the Bristol Chamel, the Severn, and (iloncestershire, Li. Wiltshire, S . lorset aud bevon, and W. the latter. Area, $1,052,800$ acres, of which about 900,000 are supposed to be arable, meadow, and pasture. With, perhaps, the single exception of Yorkshire, there is no eomaty in liurland that has a greater variety of surface and soil than Somerset. In some places, particularly in its W. and NE. divisions, it is hilly, aud even mountainous; in its midille part, between the rivers $\mathbf{A x}$ and larry, there are very extensive tracts of marsh land, which, in some places, are of extraorlinary fertility: in other places, again, there are extensive moors, of which Jixmoor, at the W. extremity of the co., is the principal. Bnt, exclusive of these, the co. contains a large extent of land equally adapted for tilluge and pasturage. The Vale of 'lamenton is one of the richest and most laantilul tracts in the kingulom. Tillage husbandry is neither extensively carried on, nor in the most approved manner. The land is not injured by overcropping, but it is not properly wroment, and is frequently fonl and out of order. l'rincipal crops, wheat, oats, barley, and beans, In the southern and interior parts the rotation is, 1. fillow, 2. wheat, 3. beans or seeds, 4, oats; in the li, part of the co. it is generally, 1 . fallow, 2. wheat, 3. oats or barley, 4. secds. lotatoes are pretty extensively grown; but turnips are not conltivated to any extent in any part of the co. Lime is frequently used on the arable land; and, with the exception of dlung, is the only manure that is employed. Drilling but little practised; beans mostly planted by the dibble. A large proportion of the co. is in grass, the dairy and fattening systems being both extensively carried on. Ciattle, primeipally of the bevonshire breed, but a great viricty of other breeds are met with. The celebrated Chedder cheese is so called from a village of that mame on the W. side of the Menclip llills; but it is now principally mate in the marshes rumbl Glastonbury. Bridgewater cheese is mate from the marshes between that town and Cross. The stock of sheep in the co. is supposed to amount to about 500,000 head, partly long and partly short-woolled; prodncing, in all, about 10,500 packs a year. Large quantities of excellent cider are made in various parts, but particularly in the Viale of Timuton. The woods and woodlants are supposed in all to cover from 20,000 to 25,000 acres, and it is distinguished by the stately growth of its helgerow timber. l'roperty variously divided; some large estates, lut a good deal of land occupied by yeomen who farm their own estates. Farms of various sizes, but the majority small. Leases, when granted, are uswally for 8 or 12 years; in many instances, however, fatmers
hold at will. Nineral products, numerous and valuable, consisting principally of conl, lead, calamine, fuller's earth, limestone, and freestone. Owing, however, to the lend mines having bern nearly exhansted, or becoming more dithentt to work, the produce of lead is now quite inconsiderable. The woollen manufacture usel to be extensively carried on at launton, but it has griven place to the silk trade, introduced in 1778 , and at present prosecnted on a pretty large scale. The woollen manufacture is still, however, carricd on at Frome, Shepton Mallet, Wellington, and some other places in the co.; but it has long been in a deelining state. (iloves largely manufictured at Yeovil. Irincipal rivers, Lower Avon, Ax, Brne, l'arret, and lixe. 'The Parret is navigrable from Longlort to its month. Taunton and Bridgewater are united by a canal; and there are cimmls in other parts of the co. Somersetshire is divided into 40 bundreds and 7 libertics, and contains $17 \%$ parishes. It returns 13 mems , to the H . of t ., viz. 4 for the co., 2 each for the cities of l Bath an! Wells, 2 each for the bor, of Bridgewater and Taunton, and 1 for Frome. lieg. electors for the co. 20,499 in 1865 , being 11,867 for the castern, and 8,632 for the western division. At the censns of 1861 , the pop. numbered 463,261, while in 1811 there were 485,982 inhabitants.

SOMEN'LON, a market town and par, of England, co. Somerset, on rising ground beside the Carey, $11 \mathrm{~m} . \operatorname{siW}$. Wells, Area of par. 6,$0 ; 30$ acres. Pop. 2,266 in 1861 . The town consists of sonne small streets, with houses mostly of bhe lias stone; und has a town-hall in which petty sessions are held, and one of the co. gaols. The church, an ancient structure, has an eight-sided embatiler tower, 63 ft . in height. The living, a vicarage, worth $259 l$ a year, is in the gift of the earl of llchester. Somerton has a good frec-school, ant an almshouse for 8 poor women.

Though supposed to have been a Roman station, there is no information respecting it till the lleptarehy, when it was a considerable fortified town, and the residence of Ina and other kings of Wessex. Hence it abomuls in Saxon antiquities inchudins parts of the ancient walls, a romd tower, and the castle, in which Jolm, king of France, was imprisoned subsequently to his capture at the battle of Poictiers.

SOMME, a dép. of France, reg. N., comprised mostly in the old prove of licardy, between lat, $49^{\circ} 37^{\prime}$ and $50^{\circ} 20^{\prime} \mathrm{N}$, and long. $1^{\circ} 25^{\prime}$ and $33^{\circ} 10^{\prime}$ E.; having N. Pas-de-Calais, E. Aisne, S. Vise. and W. Seine-Infericure and the English Channel, Area 616,120 lectares. Pop. 572,646 , in 1861. 1ts general slope is towards the NW., which direction is taken by its principal rivers, consisting of the Somme, which divides it into two nearly equal parts, the Authie, forming a part of the N. boundary, and the l3resle, bomiding it on the SW. Tho Somme rises at Fonsomme in Aisne, and runs generally NW. to the English Channel, which it enters a little below st. Valery, nearly opposite llastings, by an estuary from 3 to 4 m . wide, atter a conrse of abont 120 m . Its prin: $\mathrm{an}^{\circ}$ afluents are the Avre and Celle; St. Quf ntin, Ifam, Peromne, Amiens, and Abbeville are on its banks. The Somme is navigable for about half its course, but its navigation is interrupted by shoals. The lateral canal of the Somme (Canal de Picardie), 96 m . in length, commences at Abbeville, and connects this river with the Oise. This dép, has generally a naked aspect, but agriculture is more advanced than in most French léps. More com is grown than is required for home consumption. About 200,000 hectol. of cider, and 100,000 do, of beer, are prodnced annually. Cattle and sheep are

## g. N., comprised

 rly, between lat $1^{\circ} 25^{\prime}$ and $3^{\circ} 10^{\prime}$ . Aisne, S. Gise English Channel, 616, in 1861. Its , which direction consisting of the wo nearly equal of the N. bounon the SW. The Aisne, and rum. hannel, which it nearly opposite 4 m . wide, udter rin $0^{-}-n^{-1}$ affluents "tu, Ifam, l'eon its banks. thalf its course, by shoals. The al de Picardie), Abbeville, and This clép. has icnlture is more eps. More corn e consumption.100,000 do. of le and sheep are
numerous, and the proluce in wool is stated to be alont 780,000 kitog. a year. Minernl products are of little importance, but the dép. is distinguished for its nanufactures. Woollen, cotton, and silken poods of various kinds are made at Amiens and Abheville; cotton and linen thread, oil, and lenther at Peronne, Itam, and Doullens. EsearIntin is the seat of some of the largest hardvare factories in the kingdom; and machinery, payer, and beet-root sugar are produced in considerable qualities. Somme is divided into five arronds: chief towns, Amiens the cap., Abbeville, Doullens, Montdidier and I'eronne.

SOOLOO ISLANDS, a group of the E. Arehipelaro, Ith division (Crawford), extending from the NE: part of Borneo to Mindanao, the most S. of the I'hilippine lslands, between the 4 th and 7 th deges, of N. lat., and the 120th and 123rd of li. lung.; having S. the Sea of Celebes, and N. the Sooluo Sea. They eonsist of about 60 ishnds, taking their name from Sooloo, one of the largest, about the midalle of the group. They produce riee, sweet potatoes, yams, and many of the finest fruits of the last; but sago is the principal food of the inhabs. Pearls, mother-of-pearl, and cowries are among their most valuable products. Formerly the inhabs. carried on a large trade with Japan; at present their commerce is chietly with the adjacent islands of Celebes, Mindanao, and Borneo, and a few jumks that come yearly from thina. The Sooloos are mostly Mohammedans, and live under a sultan, whose power is, however, much limited by a kind of fendal aristocratey. 'Ihev are distinguished for their piracies, and their continual hostility to the Spaniards of the Philippines; in 1775 they destroyed an establishment formed by the $\mathrm{E} . \mathrm{I}$. Comp, on the neighbouring island of Balambagan.

SOl'lllA, or THIADI'V/A, a city of European Turkey, prov. Bulparia, near its W. extremity, in a tine phan on the Bogama, a tributary of the Isker, 63 m . SSle. Widin, and 105 m . SW. Rastchuk. Pop, estim, at 43,000 in 1862 . Sophia is generally considered as the cap, of lubgarin, and as loblting a high rank among the cities of European 'lurkey. The situation, however, is the most untavourable that conld have heen chosen for a rity: sumk in a hollow, it is constantly liable to be inundated; and without canals to carry olf the superabumant waters of the lsker, the phain is almost lust to the labour of the agriculturist. 'The city is the residence of the begler-beg of Ronmelia, and of Greek and Rom. Cath. arehbishops. It has manufactures of woollen and silk stutls, leather and tobaceo, and an extensive general trale. There are some warm baths.

This city, fommed by Justinian, was built, it is said, on the ruins of the anc. Sardica.

SOLA, a city of Southern Italy, prov. Caserta, eap. clistr., on the Liris, 50 m . NNW. C'npuit. Pop. 12,313 in 1862. Sora is about 3 m . distant from lsola, along an excellent road, whieh terminates with the valley itsell at its grates. IIere the liris, thowing from a glen of narrower dimensions, but considerable length, forms a bend round the city, f.nd is crossed by two bridges. The place is consequently in a flat but not unpleasant position, one whole tlank being watered by the river, and the hinder extremity resting agrainst an insulated rocky hill, on which are seen the ruins of its (iothic castle, and those of its still more ancient walls, The dwellings are large, the strects wide and well paved, and the pop. npparently easy and industrions. After its cuthedral, in the front of Which are a number of inscriptions and fragments of sculptures, the principat buidings are four other churches, several convents, hospituls, and
seminaries, and a slowy modern gateway, 'Tlie aljacent country is both fertile and well coltivated.

Sora was of Volscian origin, but became, at mn early period, attached to the party of the Siminites: thongh subdued and colonised by the Romans, it repeatedly threw off their yoke, and vindicated its ancient freedom. Juvenal enmmerates Sora among the comintry towns in which an individual, tired of the bustle and dissipation of Iome, might tind a comfortable residence:-
'Si potes avelli Circenstbus, optima Sora,
Aut Fubraterie domus, ant Frusinone puratur.'
Sat. 1it. 2:3:
Sorn was the birthplace of the well kinown Cardinal Baronius.
SORIA (an. Numantia), a city of Spain, in Ohl Castile, cap. prov, of its own mme, on, and at no great distance from, the source of the louro, here crossed by a fine stone bridge, 113 m . Nli. Matrid. Pop. $5,00 \mathrm{l}$ in 1857. The city is enchosed by ohl walls, and has numerous churehes and convents, a hospital, and Jesuits' college. On the F. it is commanded by an ohd fortress, now partly in ruins; and on the S . is a considerable suburb. It is ill-built, with a few silk fabrics, nud some trade in wool.

Adjnecnt to the town, on the N., are the ruins of the famuas eity of Numantia, destroyed by the Romans, anno 132 n.c. No people ever discovered greater bravery, or made a more gallant stand in defence of their liberties, than the inhnls. of this small state. 'Numantia, quantum Curthiryinis, Capna, Corinthi, opibus inferior, tantum virtutix nomine et honore par omnibus. summum!ue, si viros astimes, Hispaniae decus.') (Fhorns, lib. ii, cap. Is.) The comduct of the Romans in this contest was distinguished alike by perfidy and vindictive malignity. The Numantines having defeated l'ompey, grandfather of l'ompey the tireat, who hat hesieged their city, he conchuded a treaty wial them, But the Romans having, on varions pretexts, broken this treaty, sent a powerful army against the Numantines under the consul Mancinus. The latter, however, being even mors unsuceessful than l'umpey, Was obliged, to satve himself and his army from total destruction, to conchude a new treaty with his successful adversuries, wha, stipulated for nothing but that they should retain their intependence, and be reckoned among the friends and athes of Rome.
Tiberius Graechus, then questor in the consular army, was a principal party to this treaty, the obsorvance of which was sworn to by all the chicf aflicers of the Roman army. But though the Numantines spared by this treaty the lives of 10,000 Roman soldiers that were in their power, and stipulated for nothing that a generous or high-minded peopile could, under any circumstances, have refused to concede, the semate anil people of liome were base enongh to ammul the treaty, and sent Scipio Africanns, who had destroyed Carthage, to wage a war of extermination agrinst the Nimantines. Scipio, who knew the bravery of those he had to contend with, did not attempt to carry the city ly storm, but havintr surroumded it by strong lines of circumvallation, left famine to efleet its reduction. Notwithstanding their inferior numbers, the Numantines made the most astonishing efforts to break through and destroy the works of the Romans; but haviner been repulsed, they were reduced to the most dreadful extrenities. It is uncertain how the tinal catastrophe of this noble eity was consummated ; whether, as Florns atlirms (lib. ii. cap. 18), the Nmnantines set it on lire and perished in the thames, or whether, as Appian states (In Iber.,

## SUUTHAMPTON

p. 311), hnving surrendered, the smull remnant of its inhabs. that were fond alive were sold as slaves. One thing only is certain, that the struggle rellects the highest credit upon the Numatines, and the most indelible dingrace on the liomans. It is due to the character of Tiberius Gracelas to state, that he reprobated, in the st rongest mannor, the perfinly and had faith of his conntrymen in refusing to ratify the trenty with the Numantines.

SORliliNTO (an. Surrentum), a city and seaport of South Italy, the Neapolitan (lom, provi, Naples, on the S. side of the llay of Naples, 18 m . Slis. that capitn. l'op. 7,180 in 1862. The city is well built and clean ; and has been celebrated in antiquity, as well us in motern times, for the lieanty of its situation, and the milhness of its climate, beng hence called by Horace, Surrentum comanam. (lepist. ii. LK, lin. 52.) It is the sent of an arehbishopric; and, besides the cathedral, has several churches, numerous convents, a hospital, seminary, college, school of navigation, and some silk mannfactures. It was supposed in antignity to have been the seat of the Sirens. (Plin., lib, iv, eap. 5 .) Jhat it derives its prineipal illustration from its having been the birthplace of 'Iorquato Tasso, the greatest of Italian poets, born liere on the 11th of March, 1544 . 'Among the many respectable houses termed palaces,' says an English traveller, 'which adorn Sorrento, that in which the anthor of the "Gerusalemme Liberata" was born, maturally excites the grentest interest; it is phacel on the cliff rising immediately from the sea, nui ofkers some pretensions to elegance of arehitecture, bat probably retains in its outwned furm no remains of its ancient appenrance. Sorrento is a place of high antiquity ; nud the varions inseriptions, bas-reliefs, de., found in it at different periods, are collected under an archway in the town, which thus forms a kind of open museum, necessible to every visitor. The ancient walls and towers can scarcely be referred to the Lombards, who erected this territory into a sinall indep. principality. Oil, milk, meat, and game are all excellent in their diflerent kinds at Sorrento; while its veal is, by some, reputed the best in Europe. 'The capital is supplied from it with many of these articles, by boats plying at regular times of the dry.' The beautiful bay of Sorrentu, 3 m . wide, is surrounded by a semicireular range of wooled hills, between which nund the sea is a rich plain, the Pium di Sorrento, in which are many villages and detached honses.
It was on the hills bounding the plain, Colles Surrentini vitiferi, that the famons wine was proCheed, which, in antiquity, vied with the Falernian and Ceecuban.
'Surrentina bibis? nec myrrbina picta, nec aurum Sume: dabunt calices hate tith vina suos.' Nart. Epig., lib. xiii. 110.
It was a powerful wine, and did not arrive at perfection till it had been kept above twenty yours. Owing to the want of care, the wine now produced from Surrentine grapes is among the poorest in Italy. Near Sorrento are the remains of the villa of Pollius, described by Statius.

SOURABAYA, a considerable town of Java, being one of three principal sea-ports of that island, on the N. const of which it is situated, about 160 m . F. Samarang. It stands about $\left[\frac{1}{2}\right.$ m . from the Strait of Madurn, on both sides a river, said to be navigable by boats for 100 m . from the sea, nud deep enongh at its month to receive vessels of 250 tons. The town itseff is of small extent, but it has several suburbs, and round it are a number of handsome villas; its vienity,
though low, being less milienltiy thm that of lhatavin. Mr. Earl (Eastern Scas, 1. 47) Nays that it is also muel nure gny and lively than the latter, and well supplied with provisions of all kinds. Sournblya seems to have the omly secure harbour on the $N$. coast of Java, and the onty one in which the shipping is well defended by the latteries on shore. Its chief entrance is commanded by a strong fort on $a$ low island abont 9 m . from the town. Sevaral English residents, agents to houses at hatavia, aro setted here, thongh Europeans are nyon the whole few. There are mumeroms Arabs abd their tescendants.
sOUTHAM1'TON, a parl. and minn. bor., senport, and market town of lingland, being a co, of itself in Hampshire, at the embonchure of the Itehen, in an inlet of the sea, called Somothampon Water, $12 \mathrm{~m} . \mathrm{S}$, by E. Wiuchester, and $7!10$. WSW, Lomdon, on the London and sonth Wentern ralway. l'oje of bor. 40,960 in 1861 . 'The appronel tor the town from the Loudon ruad, through a tine avenue of trees and a well-built suburb, is exceetingly striking. The principal entrance is through liargate, one of tho ancient gates, which also divides the town into two parts, ealled respectively Above-bar and Lelow-har The High strect below bur, which is more than m , in length, leads directly to the quay, for the improvencent of which the water-gate was removed abont forty years ago. The ancient part of the town was formerly enclosed with walls about $1 \frac{1}{2} \mathrm{~m}$. in circ., of which there are considerable remains on the W. side of the town, and two old gates in addition to birgate. Many smaller streets branch both E. and W. from the principal avenue, and buildings are rapidly increasing, the space occupied by streets and honses now exceed ing $3 \frac{1}{2} \mathrm{~m}$, in circuit. The old town ocenpie nearly the whole of the pars. of St. John, St. Lawrence, Holyrood, St. Michael, and All-Saiatsintra. The pars. of St. Mary and All-Saints-extra are extensive, and were till of late years principally agricultural. The town, however, now extends into both of them; and in the latter the new buillings consist principally either of hantsome town-houses or detached villa residences. The pars. of St. Lawrence and Holyrood, through which the High Street passes, contain the dwellings of the most respectable and opulent tradespeople; in the latter are the market phace, audit honse, custom honse, several of the principal hotels, and the town quay; indeed, in $n$ eom. mercial print of view, these two pars. comprise the most important part of the town. The whole town is well paved, lighted with gas, nad is exceedingly elean; the intabs. are supplied with water from an Artesian well on Southmoton Conmon, which furnishes 40,000 cubic feet per clay. 'The old reservoirs on the common are sulplied from this well in dry seasons. lhesides the buildings devoted to commerce nind other purposes, the town has a thentre and assembly-romens. The military orphan asylum for girls, establisised by the late Duke of York, and occupying the disased barracks, lans been removed, and the builitings are now nppropriated to the establishment for the trigonometrical survey, removed thither from the Tower of London. The handsome suite of baths on the beach have been converted into a dock-house and oflices for the Sonthampton Dock Company; but there are very convenicut baths in other parts of the town. The old Saxon castle, repaired by lichard H., with the view of protecting the harbour, was pulled down a number of yens aro, and a private chapel, in which the Chureh of England service is performed, built inon its site. The town has live par. churches, three of which
liy thm that of (eas, p, 47) says "l lively than the provisions of all e the only secure va, and the only well defended liy 'entrance is conlilow island a hout Sugrish residents, are setthed here, the whole few, geir descendamts. 1 mun . bor., sealnd, being a co. of ibonehure of the led Southamptons ester, : mill Tit m. and south Westio in 1861 . are in the gift of the lord chancellor, one in that of the bishop, of Winchester, and another in the patronage of Qucen's C'ollege, Oxfurd. Ilolyromed ctureh is an ancient editice, with a tower and spire, the portico being the site, before the Reform Aet, for the hastings at elections for the bor. St. Michael's is a large structure in the Norman style, with a handsome tower and syire between the mave and chancel. All-saints is a firceian buihling, with a turret, surrounled by six Corinthian pillars on a square petestal. St. Mary's, also, is a molern structure, and its extensive binrial-gromed loug served as a gencral cemetery for the town; but, within the last few yenrs, a cemetery of 20 acres has been formed on Sonthampton Common. The R. Caths., Independents, Baptists, Wesleyan Methontists, and Jews have cach places of worship; and there is i' Friends' meeting-house. 'There are two chapels, one proprictary and one under trustees in comection with the estublishment, and well-attended Sunday schools, with several day schools, supported wholly or in part by endowment. The grammar school, founded by Edwarl TI., has a small endowment: the premises have been rebnilt, and furnish accommodntion for about florty boys, boarding with the head master. A lospitul, ealled the Domus Dei, founded in the reigh of IIenry IlI., provides lodging, clothing, auld a weekly stipend to four aged people of each sex. Among other valuable charities is one left in 160 by the will of Alderman Taunton, which, besides providing for the instruction of ten boys, furuishes a stipend of 101, a year for sisteen aged persons, and gives rewards to deserving female servants. It has also a female penitentiary, public dispensary, and lying-in charity, a royal hamane suciety, several benelit societies, and a school of imlustry for filty girls, founded in 180s through the inthence of (Queen Adelaide. There are sereral religions societies, a literary society, a polytechnic institution with 400 members, an intirmary, and several news-rooms and subseription libraries. $A$ regatta takes place every summer on Southampton Water, under the direction and patronage of the Sonthmopton Yacht Chbb, and races are held in autumn on the common NW. the town.
Southampton Water alloris geod anchorage, and ships of 200 tons may load nud unlead mengride the town quay, close to which is the enstom honse. A pier of wool and stone, which projects about fove yarts from the shore, forms a convenient handiug phace for passengers from steamers, as well as a promenade for the inhabs. and visitors. It has a carriage-drive to its extremity. Docks, on an extensive scale, have, as already stated, been constructed, which contribute materially to the commorecial tacilities now enjoyed by the port.
Southampton has, in recent years, become a leading packet station. The l'eninsular and Oriental stean Navigation Company run the whole of their vessels from this port to Mexandria ame Liston:; and the hoyal West India Mail-packet Company start their steamships from this port also, and have a graving dock on the banks of the Itchin for constructing ind repairing shijs. From its position on an inlet of the sen, stretching NW. from between l'ortsmouth and the Isle of Wight, at least 17 m . into the country, and which has been prolonged by means of the Itchen to Winchester, 12 m . inland, southampton is the emjrrium of an extensive distriet, and consequently cujoys an extensive trade. On the list of dan. 18it, there brlonged to the port 136 sailing ressels wuter 50 , and 110 above 50 , tons; besides 1.1 stemaers under 50 , and 24 above 50 , toms. The griss amount of chastoms' duties rectived at the

tion with respect to the opposite coast of Pranure,
Sonthamptom his Sonthampton has breen for a lengthened periml an important station for travellers to mad trom the continent. There are daily stemmers for llavre, Diepe, and other lirench purts, as well as for Lishon and the Mediterrmean.
southampton was first ineorporated in the reign of Ilemry I. Linder the Mun. Rectorm Aet it is divided into five warls, with ten aldermen and thirty comecilurs, from which forty mentors are chosen the mayor, sheriff, and two bailifls, The mayor and laihilis are the returning otlicers of the burough. Quarter mad petty sesswins are held mader a recorder. There is a comrt tur the recosery of debts to any amount, and a comity conet is established here. The borough has returned two members to the If. of C. since the 23rd bidwaril $1 .$, the right of election dewn to the lieform Aet being vested in the inlabbs. paying sent and hot. The electoral limits were left nuthanged by the
 is also the election town for the s . division of the co, 11 nuts.
Southampton is snid to have arisen ont of the neighbouring Roman station Clausentum, 1:, the Itchen, which was snceceded by the Saxon Huntume, on the site of the present town. The castle, as aiready stated, was much enlarged by Richard 11., who inso streugthened the furtifications abuut the town and harbour. Ifenry V. set sail from this port, in August, 1415, at the heal of the troops which, on the 2 eth of October following, gained the great victory of $A$ gincourt. The inhabs. were actively engaged in the wars of York and Lancaster, in which the latter party was defented with great loss. Its celebrity as a waterin; phace dates from the middle of last century, when baths were erectel, a chalybente spring was discovered, and great additions were made by the formation of new streets and terraces, and the laying out of public gardens. The shorew of southampton Water, being richly clothed with woon innl stndded with villas, altoril a succersion of tinelydiversitied scenery, set off by the ruins of Netley Abley, about 2 m . SE. from the town. This structure was founded in 1229, by 11 enry 111 ., for Cistercian monks. The refectory and kitchen are in tolerable preservation, ani there nre some tine remains of the abbey chureh, which was cruciform, and had at its E. end a noble window. The whole is embosomed in wood, and near it is a modern tower, used as a tea-house, on the fommiations of a fort erected by Henry VIll., commanding a fine view of southamptoin Water.
SOUTLI MOLTON (or MOULTON), a mmic. bor., market town, and par. of Englani, NE. part co. Devon, hund. S. Moltom, in an eminence near the contines of Lxmoor, 12 in . B. by s. Barnstaple. Area of par. 6,160 acres. Pop, 3,800 in 1 sitil. The limits of the munic. bor. and par. are co-extensive. The town consists chiefly of three streets, diverging from a spacions market-place. Many of the houses are grool ; streets well paved; the footpaths have been flagged at a considerable expense, by the corporation. It is well lightel, and the public walks are kept remarkably clean. The par. church has some good monuments and a large organ. The living, a perpetual curacy, worth 1571. a year, is in the gift of the dean and canons of Windsor. There are free and charity schools; a guildhall, in which petty sessions are held every three weeks; and a giol. The pop. is partly manufacturing, and partly agricultural : the mamulactures are chietly of coarse woollen cloth, but that of lace has been recently introduced, and the trale of the town is saill to be increasing. This bor. sent mems, to the II. of C .
in the 30th of Edw. I., but it dees not appear to have subsequently exercisel the privilege. It was chartered by Elizabeth and Charles II., and is governed by a mayor, 3 aldermen, and 12 conncillors, the latter being elected for life amonir the resident inhabitants. Abont $3 \mathrm{~m} . \mathrm{NE}$, from the town is Castle Ilill, the seat of Earl Fortescuc. SOU'THWARK. See London.
SOU'lllWELL, a market town and par, of Eugrland, co. Nottlingham, Southwell and Scrooby liberty, on an eminence near the Greet, 13 m . NE. Nottingham. Area of par, 4,550 neres. Pop. 3,469 in 1861. The town is neat, well built, and well paved. It has a convenient suite of assemblyrooms and a theatre, but its principal buiding is the minster, or parish churcli. This, which is a large and maguificent ediflce, is said to be, in part at least, as oill as the time of Harold. Its extreme leugth is 306 ft ., its brealth 59 ft ., and the length of the transept 121 ft . The W . front has 2 lofty square towers, divided into 7 stories. There is i low massive centre tower, and a chapter-house on the N. side. The unve and transepts are Norman, the parts E . of the centre enrly English, and the chapter-house carly Decorated. There are some perpendicular insertions, purticulariy a very large W. winelow. Within the church are the monuments of 5 archbishops of York. The chapter-house, which is light and gracefil, has 16 prebends' stalls. 'The early English portions, which consist of the choir, its alsles, and small E. transents, form one of the best examples of this style in the kingrdom. The whole of this church deserves the study due to a cathedral; and though it be not so varied in its styles as some editices, it claims attention for its purity and good preservation.' (Kickman's Gothic Arehitecture, p. 221.) The ruins of an ancient palace of the archbishops of York, the favourite summer retreat of Cardinal Wolsey, stand in the park, and a part is now appropriated is a sessions house for the liberty. The general bridewell for the county is at Sonthwell, which lias also mecting houses for Wesleyans and Buptists, and a free-school, with 2 scholarships nt St. John's Coll., Cambridge. What little trade the town possesses is chiefly in malt, hops, and tan. The living of Southwell is a vicarage, worth 1441. a year, in the gift of the prebendary of Sonthwell. Market days, Saturday; fairs, W'hitMonday and Oet. 21.
SOU'THWOLD, a sea-port, mun. bor., market town, and par. of England, hund. Blything, on an eminence on the E. const of the co. Suffolk, about 1 m . N. from the mouth of the Blythe, 30 m . NE. Ipswich, and 94 m . NW. London. Pop. of munic. bor. 2,032 in 1861. The town consists principally of a long row of houses commencing near the bridge over the Bass Creek, and extending SW. to the edge of the cliff, besides numerous other houses with gardens, lying $N$. and $S$. of the principal street. Near the sen are several guol houses, but the others are chiefly of an inferior description. The guildball is $n$ handsome stone building, and a new gaol was built in 1819. On the cliffs are two batteries, one of which has a parapet and 6 eighteen-pounders, but the other has only 2 guns. The church, boilt in the middle of the 15th century, is a fine edifice in the later Euglish style, with a lofty tower and steeple of freestone intermingled with flint of various colours. The $S$. porch is extremely elegant, and above the clerestory roof is a light, open lantern. The interior is highly ormamented with gritding and earved work; and, on the whole, this is one of the dinest churches in the co. The Independents, Baptists, and Wesleyan Methodists have each places of worship: the town, also, has 3 Sunday
tuools aud a national school. The retail trade of Southwold is triffing, but a sonuewhat more inportalit traflic is carried on in the importation of conal and the exportation of salt. (which is numbe liere), and malt. The principal business, however, is connected with the influx of visitors, who resort to the town as a watering-place during the summer season, and for whose accommolation there are baths, reading-rooms, and a grand promenade. The entrance to the haven is hy the river, anll vessels trading to this port land their foods at Black-shore quay, alont $\frac{3}{4} \mathrm{~m}$. SSW. the town. The superintendence of the haven is vested in commissioners; und it has been improved by the erection of 2 piers at the mouth of the river, which has been mate navigable to Halesworth, 8 m. W. by N. the town. The bor. of Southwohi, which was incorporated in the reign of IIenry Vll., is governed under the Mun. Reform Act by a mayor and 3 aldermen, with 12 councillors. $\lambda$ court of record is established for the recovery of small debts, and there is a. court of adniralty for the regulation of the port, which is suborilinate to that of Yarmouth. Markets on Tharsulay: fairs, Trinity Monday and Aug. 24.

Southwold, or Sole Bay, E. of the town, is celebrated as the seene of the great naval engagement which took place on the 28 th of May, 1672 , between the combined linglish and French tleets, under the Duke of York (afterw:wds James II.) and Marshal de Eistrées and a Dutch fleet under the famous De Ruyter. The aecien was most obstinately coutested, the loss on botid sides being very great and nearly equal. The Earl of Saudwich, who behaved with the greatest gallantry, was blown up along with his ship. The French sulfered but little, in consequence, as is snpposed. of their having received secret instructions to spare their ships.
SPA, a town and watering-place of Belgiam. prov. liegge, on the borders of Rhenish Prussia, 14 m . Sb: Liège. Jop. 4,773 in 1863. The town consists of a clat te" of neat white houses, thrown into the form of two or three irregular streets anil open promenales, the whole embowered amidst trees and gardens, and overhung on the N. and E: by a woody mountain range. It was at one periol a place of great resort, and so highly distinguished for its mineral waters, that 'Spa' becnme a conmon name for mineral springs and bathing-places wherever found. One of its most distinguished patrons was Peter the Great of Russin, who frequently visited it. The Pouhon, or main spring, is a strong and active chalybeate, impregnated with carbonic acid gas, which gives it vivacity, and fits it for being preserved und seut in bottles to all parts of the world. There are several similar springs at from 2 to 3 m . from the town, at all of which there are pump-rooms, ant to some baths are attached. Spa has all the usual structures of a watering-place, including readingrooms and a theatre. 'I'here is also a Capuchin convent.

SPAIN (an. Hispania, Span. España, Irr. Espagne), an extensive and once powerfil king(lom of S. Europe, occupying the E. and largest portion of its SW. peninsula; between lat. $36^{\circ} 5^{\prime}$ and $43^{\circ}$ $30^{\prime}$ N., and long. $3^{\circ} 20^{\prime}$ E., and $90^{\circ} 10^{\prime}$ W.; having NE. France, from which it is separated by the Pyrences; N, the Bay of Biscay; W. Portugal and the Atlantic; and S. and E. the Straits of Gibraltar and the Mediterranean. Greatest length, E. to W., about 650 m .; grentest breadth, 550 m .

The kingdom, inclusive of the adjacent islands, is divided into 49 provinces, the area and pon. of which, and of the 12 ancient divisions, was as follows at the enumerations of 1846 and 1857 :-

| Provinces | Area in Eng. an mile | $\begin{gathered} \text { Popnitation } \\ \ln 1816 \end{gathered}$ | Population In May, 1857 |

The shape of Spain resembles that of a very irregular pentagon, the longest side of which faces the N . The coast line is, on the whole, pretty regular, withont those great and sudden indentations that characterise the shores of many other countries, though an exception may be made as regards the coast of Galicia, which is fringed with bays and headlands, the prineipal among the former being the Bays of Betanzos, Pontevedra, and Vigo; and among the latter the Capes Estaca, Ortegal, and Finisterre. The other eapes of Spain are prineipally on the coast of the Mediterranean. C. Tarifa abuts on the Strait of Gibraltar; and further N. are Capes Gata, Palos, La Nao, and Creux, the last being the extreme $\mathbf{E}$. point of the peninsula. The surface is very much diversified, and intersected with mominains; but the whole may be deseribed as a table land of considerable elevation, Madrid, the cap., being $2,173 \mathrm{ft}$. above the sea, which is the average height of the towns in the interior. Five chains of mountains are pretty clearly defined, running from E. to W. through the peninsula. 1. The range of the I'yrenees, not only divides France frum Spain, but runs in a continuous chain parallel to, and at a short distance from, the N. shore, upwards of 600 m. as far W. as C. Finisterre. The E. division is known as the Pyrenees properly so called, the W. portion consisting of the Asturian Mountains: the highest point in the former is the P'ic de Netore on Mount Maladetta ( $11,42.4 \mathrm{ft}$.), and in the latter the leña de Peñaranda, SW. of Oviedo $(11,031)$. 2. A range extends WSW. from the Ebro, near Tudela, dividing Old and New Custile, Leon and listremadura, and thence rumning SSW., through l'ortugal, to Cape Roca, near Lishon: the culminating point is the Sierra de Grados ( $10,552 \mathrm{ft}$.), at the SW. angle of Old Castile; but the average height does not exceed $4,500 \mathrm{ft}$. 3. A chain branching SW. from that last mentioned divides the basin of the Tagus from that of the Guadiana: the central pertion, S. of Toledo, called the Sierra de Guadalupe, attains a height of $5,110.4$. A range, called the Sierra Morena, runs along the S . border of La Mancha, in New Castile, which, though not continuous, and of no great extent, forms the water-shed between the Guadiana and Guadalquivir. 5. The Sierra Nevada runs from C. Yalcs, near Carthagena, almost as far as Cadiz : it is at no great distance from the Mediterranean, the most elevated part being SE: of Granada, where the Cerro de Mulahacen rises $11,660 \mathrm{ft}$. above the sea : the peak of Veleta is $11,385 \mathrm{ft}$. in height; and further W. the Serrania de Ronda attains an elevation of $6,011 \mathrm{ft}$., while the neiginbouring town of Ronda is about $3,300 \mathrm{ft}$. above , he sea. (See Essay on the l'hys, Geog. of Spain, in Laborde, Itinéraire d'Espaguc, vol. v. last ed.; Bruguière, Orographie de l'Eurple; Berghaus, Erdbeschreibung, p. 316-318; Antillon, p. 226-270. The altitudes are given exelusively from Bruguière.)
The mountain-chains now deseribed regulate the course of the principal rivers, some of which are of great extent, and have numerous tributaries. Immediately S. of the Pyrences is the Ebro, which, rising on the Asturian range, near Reynosa, runs SE. through a succession of narrow valleys, receiving its chief tributaries from the S . face of the Pyrences, and flows into the Mediterranean about 26 m . below Tortosa : its entire length somewhat exceeds 400 m ., and the area of its basin is estimated by Berghaus (Erdleschreibung, p. 237) at $25,860 \mathrm{sq} . \mathrm{m}$. Among the other rivers flowing inte the Mediterrancan are the Guadalaviar and Jucar, falling into the Bay of Valencia, and the Segura in Murcia : the rest are unimportant. Five
large rivers run westward into the Atlantic Ocean. The most N. of these is the Dinho, which rises in the Asturinn Monntains, and ruming first $S$ and then SW., enters the sea a little below Caminha, after a course, including its windings, of abont 150 m . 'The Douro rises in the mountains of Old Castile, a few miles N. of Soria, and takes a generally W. course, by Aranda, 'Lorlesillas, and Zamorn, as far as Miranda, where, turning southward. it forms a portion of the boundary of l'ortugal, through which it flows westward into the sea close to Oporto: its length is estimated at 500 m. , and the country drained by itself and tributaries somewhat exceeds 34,000 sq. m . The Tagus has its source in the Sierra de Albarracin, in Aragon, whence it flows WSW. by Araṇuez, Toledo, Talavera, and Alcantara, to the contines of Portugal : it then turns SSW., and, after expanding into a fine restuary, enters the Atlantic, a little below lishon, built on its N. bank. The Tagus has numerous impertant tributaries, the chief of which are the Hennres, Alberche, Alagon, and Zatas, the last being in lortugal : the extent of its basin is estimated at $29,000 \mathrm{sq}$. m . The Guadiana, rising in La Mancha, runs first NW., then W. as far as Hallajoz, where it curves southward, and enters the sea at Ayamonte, ufter a course of 420 m ; ; it has several pretty large tributaries, and drains an area of about $25,600 \mathrm{sq}$. m. The Guadalquivir, which, with its tribnturies, drains a large portion of Andalusia, rises in the Sierra de Alcaraz, and taking a SSW. direction by Audujar, Villafranca, Corilova, and Seville, turms sonthward, and after crossing a low, unhealthy swamp, enters the Atlantic at San Lncar, after a course of 320 m . its largest affuent is the Genil, and the area of the entire basin is nearly $18,000 \mathrm{sq} . \mathrm{m}$. But, with the exception of those portions of the Douro and Tagus within the limits of Portugal, these rivers, notwithstanding their length, offer few advantages for navigation, owing to the rocks, shallows, and falls with which they are eneumbered.

The Ebro has, however, been made navigable to a considerable extent by means of the Canal of Aragon ; and the channel of the Tagus is also in course of being improved, so as to make it accessible for bouts as far as Aranjuez. Vessels of 100 tons ascend the Guadalquivir, within about 8 m . of Seville. The rivers on the N. side of Spain are comparatively insignilicant, owing to the closeness of the Asturian Mountains to the sea: one of these, the Jidassoa, forms the dividing line between France mind Spain. There are no lakes of any considerable size, though in the Pyrences and other chains there are several small mountainlakes. Swamps and morasses, however, are both numerous and extensive; the principal being the Gallocante, in Aragon; the Nave, near Palencia; and the Lagunes of l'alomares and Caldera.

A central band of granite and mica-schist stretches along the Pyrenees from the Mediterramean to the Bay of Biscay, flanked successively by lods of secondary and cretaceous formations: the primary rocks, however, are by no means so extensive as in the Alps, and do not extend westward beyond the Bidassoa, all the momntains of Asturins and Galicia being of the sandstone and carboniferous limestone that form the lower parts of the main chain. The lofty range that divides the two Castiles, and forms the watershed between the Douro and Tagus, consists chielly of granite and other primary rocks, which pass castward under the santstone, forming the lofty uplands of Soria, in Old Castile: it is tlanked on both sides by sandstone and limestone; hut in New Castilo are extensive beds composed of the debris of primitive rucks asseciated with marls and gypsum,
the marly subsoil being remarkable for the fertility of the surface, whereas the gyjseous ciistricts are remarkable for their barrenness and dismal apticarance, such as is exhibited in the neighbourhood of Madrid. The Sierra Morena also exhibits a large proportion of primary rocks, partly covered by secondary and other rocks, with the nature of which we are but little acquainted. The Sierra Nevada is a mass of mica-slate and serpentinc, flanked northward by secondary and more recent rocks, containing some of the richest marbles of Spain, muny of which adorn the churches of Granada ant Seville: the S. side, forming the deep valleys of the Alpujarras, is principally of secondary limestone resting on slate (highly metalliferous), greenstone, and bhe limestone. The limestone strata of the Sierra de Gador are remarkahle for lead mines, which are extremely rich, and sufficient to supply the whole of Europe whth this mineral for many centuries to come. With respect, indeed, to the mineral wealth of Spain, there can be little donbt that it is very great, and by m means exhausted by the workings of the aneicnts, There are valuable copper-mines in the Sierra Morena and the Alpujarras, and near Teruel in Aragon. Quicksilver is found at Almaden, on the N, side of the Sierra Morena, and graphite occurs near Marbella, in the neighbourhood of Malara. Graphite is found, also, in the high Pyrences, scarcely inferior to that of Cumberland, but wholly mowronght. Sulphur oceurs in several parts of Valencia, and saltyetre, alum, and salt are foun! in many parts of the country. Iron and coal abound in the mountains of liseay and Astarias, and are wrought to a considerable extent; besides which there are extensive iron mines, with smelt-ing-houses, \&c., ut Marbella, near Malaga, and in the Sierra Morena, near Pedroso. Coal oceurs, also, in large seams throughout Aragon and Catalonin, as well as on the Guadalquivir near Seville; and traces of the same mineral have been discovered near Malaga,

The soil of the peninsula exhibits great diversities. The central region consists for the most part of arid, unsheltered plains either of sand or gypsum, intersected with lofty mountains, which retlect with intolerable fierceness the scorching heat of summer, and sharpen into more intense keenness the intense cold of winter. The lower region of the coast, sloping gradually towards the sea, is broken into an alternation of mountains and valleys, producing the most agreeable variety, and presenting a pleasant contrast to the bleak and barren sameness which characterises the central region. It is everywhere fertile, or may be rendered so by irrigation. The alluvial soil of Old Castile is tolerably productive, even without irrigation: New Castile has every variety, from the gypseous marl composing the poor soil about Madrid, to the red marl of Guadalaxara and the limestone of Arganda. The valleys of the Sierra Morena, and the whole of Estremadura, have a soil formed of detritus from primary rocks, and cannot be excelled in beanty and natiral fertility. 'The soil of Andalusia is chiefly of marl and clay interspersed with red sandstone marls, and it is by irrigation only that it can be made productive. 'The Vega of Malaga, however, is naturally of surprising fertility, owing partly to the long establishment of irrigation, but partly, also, to the fact of its being in a great measure alluvial. Valencia has a poor ungrateful soil, yielding crops only by forced cultivation, and the use of water. In Catalonia and Arngon the detritus of limestone is fomnd alternating with tine red marls and waste tracts of gypseous marls, similar to those noar Madrid. Un the whole, the valleys of the Sierra

Norena and the Alcarria, the provinces of Toledo and Gnadalaxara, the Vega of Malaga, and the conntry between Gibraltar and Cudiz, wonld probably repay the labours of agriculture better than other parts of Spain.

The climate of Spain is greatly diversified, being modified by the plyysical conformation of the country. The temperature of the air always varying less near the coast than in the interior, is much more equable in the maritime than the other provs. On the N. and W. coast westerly winds prevail; and, being loaded with moisture from the $\Lambda$ tlantic, discharge abmelant rains in winter and spriug. The coast of the Mediterranean has a calmer atmosphere, with a prevalence of E . wiuds, and a temperature generally rising above $57^{\circ}$ Falir, and seldom descending so low as $32^{\circ}$. Winter, indeed, is almost. unknown on a coast sheltered by the elevated land of the interior, and warmed by the rays of a clondless sun; while the hent of summer is very great, and wonkl be all but intolerable, were it not lessened by the sea brecze, which lasts during the greater part of the day. On the plateau of Castile, the mean height of which, according to lirugniere, about 1,960 fit. above the sea, heat accumulates much more slowly, and it is only during the month of July that the temperature ascends as ligh as $77^{\circ}$ Fuhr. In August, the mornings and evenings begin to be cold, and in winter the severity of its climate forms a very striking contrast with the heats of summer. Except in the N. provs., the climate of Spain is everywhere remarkable for dryness; a freedom from rain and a cloudless sky being advantages that may generally be connted on; but this dryness occasionally becomes so excessive that the rivers are dried up, vegctation destroyed, and men and animals die miserably of thirst. (For. Quart. Rev., ix. 153.) Two kinls of winds are very troublesome in Spain. The gallego, a N. and NW. wind, which comes down from Galicia, is very cold and piercing; cansing, besides other diseases, painful affections of the eyes, often ending in blindness, which is vory conmon in all the more elevated districts. This ophthalmia, however, is attributed by some writers to the vast quantities of minute nitrous particles blown up from the waste. inds, and held in suspension by the wiml. (Faure, Souvenirs du Midi, p. 5-8.) The S. provs. are visited by the solano, which, like the sirocco of Italy, relaxes the system, and produces giddiness, inflammation, and cien death. Owing to its extreme and sudden variations, the climate of the central platean is far from healthy. The Madrid colic is always danfrous, and often fatal to strangers; besides which there is a general tendeney to pulmonary consumption, and other discases of the lungs. Scrofulous diseases are even more common than in liussia, and epilepsy is by no means rare. The yellow fever, which often ravages the $S$. provs., has created much tiscussion among plysicians, some of whom treat it as epidemic, while others are of opinion that it is brought to Spain by infection. Insanity prevails inorc or less in all purts, but especially in the provs. bordering on the Mediterranean.
The mineral products of Spain are rich and varinds, and might certainly be made the source of vast wealth. IBy a curious coincidence Spain itself Was to the ancient what its American possessions have been to the modern world, the principal source of the supply of the precious metals. It is exeeedingly doubtful, however, notwithstanding the mumerons statements to the contrary, whether the C'arthaginians or Romans ever discovered any mines of gold and silver in spain. The more probable opinton scems to be, that the gold was
wholly ohtained from washings; and that the silver, which was by far the noro abundant and important product, was extracted from the lead, which was then raised, partly for the sake of the silver, in vast quantities. (Antillon, Geogratia. 149.) The mine of Guadaleanal, the only one of siiver that is now wrought, was, with that of Cazalla and others, diseovered long after Spain had been evacuated by the Komans.

Tho most valuable of the existing Spanish mines are those of lead in Granada; and the supplies obtained from them during the last 20 years have been so large, that they have occasioned the abandonment of several less productive mines in other commtries, and a considerable fall in the price of lead. The quicksilver mines of Almaden, in Ja Mancha, are also extremely productive, and supply, indeed, most part of the quicksilver imported into this country, and large quantities for the New World. Exelusive of innmmerable salt springs, there are mines of rock salt at Migranilla, in La Mancha, and the mountain of Cardona. In Catalonia, 17 m . NW. Monserrat, is a vast and solid mass of pure roek salt. The iron trade will be afterwards referred to : copper, tin, antimony, and other minerals are found in various parts of the comitry, with every viriety of marble, and the finest building stone. There can, indeed, be no doubt, that, under a goverument capable of developing the national resources, the mineral wealth of Spain would be found to be equal, if not superior, to that of most other countries.

Vegetable and Animal lroducts.-The wheat of Spain, though of very various qualities, is generally excellent, and its bread is said to be the best in Europe. In some districts the quantity grown is insufficient for the consumption, the deticieney being made up from the surplus prodnce of other provs., or by importation, thongh, owing to the badness of the roads, and the consequent difficulty and cost of carriage, there is often a great difference in the prices of com in markets at no great distance from each other. Wine is raised abundantly throughout the country; and the coast districts of Xeres, Rota, Malaga, Benicarlo, and Alicante, furnish large quantities for exportation. The wine of the interior, though seldom exported, in consequence of the bad roads and expense of transport, is sometimes of good quality; and that of Val de l'eñas, in La Mancha, in particular, a dry red wine, has obtained a high reputation for its superior flavour and delicacy. Grapes are also exported both in a fresh and dried state. Among the other productions of the soil are oats, barley, maize, rice, oil, sugar, hemp, flax, esparto or sedge, cotton, satlion, barilla, honey, and silk, with all the European veretables, and some even of those of the warmer regions.

The fruits of the S . are lemons, bitter and sweet oranges, pomegranates, clates, olives, almonds, and pistachio nuts; apples, pears, cherries, peaches, and chestnuts are grown in the N. provs. Immense quantities of hazel muts are exported from Catalonia, and the fruit of the carob-tree is used for feeding cattle. On the Pyrences, Asturian Mountains, the Sierrit Morena, \&c. are luxuriant forests; but, on the whole, Spain has less timber than any other extensive country of Europe; a circumstance owing, not to any inaptitude of the soil for the growth of forest trees, but to an inveterate and inexplicable prejudice of the people against trees, which are mercilessly cut down or destroyed before they attain any considerable size. Indeed, so universal is this propensity in the central provs., that the most' rigorons mensures are necessary to preserve the nvenues of Aranjus. from wanton destruction; and all slatutes for the
encouragement of planting have signally failed of their olject. Spain has eight varieties of oaks; among which are the evergreen oak, or Quercus bullota, which has edible acorns, in taste resembling chestnuts; the cork oak (Q. suber), and the cochinenl oak ( $Q$. coccifera), on which is found the false cochineal, yielling a fine crimson dye. The true Quercus robur, however, which furnishes the best materials forship-building, scarcely exists, except in the N. provs. Among the other forest trees may be enumerated tamarisks, pines, beeches, chestnut trees, nut trees, dirs, poplars, and the sumach (Rhus coriaria), the bark of which is used for tanning.

Among the animal prodncts of Spain, the horse is entitled to particular notice. The Arabs, when in possession of the country, stocked it with their finest breeds; and though the race has degencrated, it still shows many of the points by which it was originally distinguished. In beauty, grace, and docility, the horses of Andalnsia are said to be superior to those of England; but it may be doubted whether they are equal to the same amount of labour. In fact, the number of good horses is rapidly decreasing in Spain, chietly owing to the preference given to mules for thomestic and agricultaral purposes: the importation of horses to improve the breed, and the exportation of colts, are alike forbidden; and the number of horses bred at present is quite inconsiderable, notwithatanding the decrees, premiums, and encouragements of every kind that have been offered by goverimment. The celebrated breed of the sovereigns of Spain at Cordova is nearly extinet; in the Serrania de Ronda (once the Cleveland of Sprain) only miserable animals, called serranos, are now reared: the wealthiest Audalusian nobles have only 2 or 3 indifferent saddle-horses, and there is scarcely a horse in the whole country fit for the drauglit of artillery. Great numbers of mules are bred in Old Castile, being sent to come to their full size in the rich pastures of Estremadura, whence they are supplied to the rest of Spain. The asses are very different animals from those seen in England, being of a large size, carefully bred, and in strength, docility, and surefootedness, nearly equal to the mules. Cattle are small, and not of fine appearance. The bull of Andalusia is found wild in the Sierra Morena. Hogs are bred in vast numbers, and those which feed on acorus are celebrated for the delicacy of their meat, which is, perhaps, unequalled. Sheep, however, are the favourite stock of Spain, and are everywhere raised in considerable numbers, nor are there wanting wild animals, such as wolves, lynxes, wild cats, wild boars, and foxes. The bear, which used to be common two centuries ago, is now found only in the Pyrences. Monkeys are met with in the Sierra de Ronda, besides which there are various reptiles, as chameleons, lizards (some 2 ft . in length), vipers, and suakes. Among the birls may be noticed several species of' vultures, falcons, owls,'ravens, magpies, Coruish choughs, partridges, quails, bustards, and plovers.

Agriculture.- 'No country in Europe,' says Laborile (Itinéraire d'Espagne, vol, iv.), ${ }^{\text {' }}$ is so gencrally fertile as Spain, or has equal advantages at all seasons of the year. Spain, after its conquest by the Romans, became the granary of the Roman enpire. Under the Goths, vast canals and sluices wero formed for irrigating the land, and the amonnt of corn then raised was sufficient not only for the home supply, but also, to a considerable extent, for exportation. Agriculture under the Moors was in a still more flourishing state; for when they invaled the comntry, they earried with them their methoels of husbanilry, broke up the
uncultivated lands, augmented the number of plantations, carried the art of irrigation to a degrea now scarcely attainable, introduced the culture of rice, and greatly improved the breed of horses: in fact, every kind of production was increased under their improving hands; and the era of their expulsion designates the epoch of the decline of agriculture. The Spaniards, thas deprived of the assistance of the Moors, ware compelled to till the land themselves; but for such pursuits they possessed neither talents, activity, nor patient industry. Hence the whole system fell into a state of languor, from which it has, owing to several canses, never recovered.'

The passage just quoted states, in a few worls, what las long been the popular opinioa in regard to the ancient as compared with the molern state of Spain. It, however, is wholly erroneous. The fertility of the country has been greatly exaggerated; and it is doubtful whether her agriculture was ever in so advanced a state as at this moment. A great portion of Spain is, owing to the heat of the elimate and the want of water, wholly unfit for husbandry; and she has, in consequence of the frequency of droughts, been at all times sul)ject to the most destructive famines. Owimg to the numerous ridges of mountains by which she is intersected, her internal commerce has alwars laboured under the greatest difficulties; and there is no evidence that her artiticial communications, that is, her roads, canals, and bridges, were at any former period in a more improved state than that in which they are now. Owing to vicious institutions, bad government, and other causes, Spain has, for a lengthened period, contimed stationary, or mude but little progress, while other nations have alvanced with giant steps in the career of improvement; but there is no real fomdation for the prevalent notion of her having been comparatively well cultivated, rich, and industrious previously to the expulsion of the Moors, or in the reigns of Ferlinund and Isabella and Charles V. Capmany, in his 'Questiones Criticas' (cap. i.), has provell, beyond all controversy, that there were in the 15 th and 160 h centuries the same complaints of the wretched state of agriculture, of the idleness of the Spaniards, of thrir contempt for industry and the useful arts, and their dependence on foreigners, that are still made against them. It is neelless to say, that withont tranquillity and good order there can be nothing like a flourishing agriculture. IBut at the very time that it is sail to have been most flourishing. that is, previously to and during the reign of Ferdinand and Isabella, the Spanish historians represent the country as a prey to rapine, ontrape, murder, and every sort of violence and disorler. Inleed, so early as the 13 th century, the principal cities of Aragon and Castile had formed an association, called the Santa Mermanuled (IIoly Brotherhood), for their mutual protection against the robbers and planderers with which the comintry was infested; and during the reign of Ferilinand and Isabella this institution was still further extended. (Robertson's Charles V., vol. i. note $3 \mathrm{i}_{\mathrm{i}}$ ) And if these facts were not enough to demonstrate the entire worthlessness of the statements as to the flourishing state of agriculture in Spain previously to the expulsion of the Moors, the organisation of the laws respecting the mesta (migratory flocks) would sutficiently evince the trath of what has now been advanced; for had the country not been at the time in a lialf-occupied, semiharbarous state, every one must see that the oppressive privileges eonferred on the owners of the sheep never conld have been curried into effect, or had uny practical existence.

Ilaving thus briefly disposed of the apoeryphal statements as to the former Hourishing state of agriculture in Spain, we have now to inquire into its present state, and the circmustances to which its long-continued depression are principally to be ascribed.

With the exception of a few districts which have peculiar facilities for irrigation, arriculture, at present, is in the most backward state imaginable. Grent part of the land is not tilled, and that which is tilled is exeented in so careless and slovenly a manner, as to prodice a starved erop of com in spots where they might command the most abundant harvests. The corn is usmally dooked up with stones, tilth, and weeds of evory kind. Generally speaking, tillage farms are smali, and rents low; but owing to the exorbitant taxes, and other expenses wholly exclusive of rent, the fammers are wretchedly poor, and, when they require money, are obliged to obtain it at exorbitant interest, by mortgaging their erops. The system of letting land is varions, money rent lieing taken in some parts, while in others the rent consists of a stipulated quantity of probluee, and in others the mettoyer system prevails. Generilly, however, large estates are not let out in firms, but are managed by agents, who, for the most part, are totally ignorant of the business of agriculture, and whose great ohject is to squere out of the land all that it can be made to produe by the most compendions processes. Farmlunses are rarely seen, except nomg the li, const. The firmers live in huts of the mennest construction, crowded together in villages, so that farm buillings, often so expensive in other commfries, cost almost nothing, Spring corn is generally sown on the ground before it has been turned up, and is still covered with the winter weeds; and is then plonghed down, or rather seratched in with a miserable instrument, and left to nature. Uwing to the dryness of the climate, this is a less ruinous system than might have been suppused, for when the heat sets in the corn ripens, while the weeds perish. When ripe the corn is gathered in the field, and after being thrashed or trimpled ont by mules and asses, is left in heaps on the ground till it is sold. The corn speculators of Castile preserve grain in silos, or subterranean caves, sometimes for five or six years, or till a market opens for it. Public granaries, or $p^{\text {positos, are, also, established in most districts, }}$ where corn may be warehoused tili it can be dispused of. I'lie inuplements of husbandry are of the rulest description : it is not uncommon in the S. to see men returning from plough seated on a mule, to the sides of which their whole apparatus is tied: the use of fanners is unknown, except in the neighbourhoed of sea-port towns, to which they have been imported from England: corn is winnowed by throwing it up in the air, and it is more frequently ground by hand, than by either wind or water mills. Land is not supposed to yield to the proprictors more than $1 \frac{1}{2}$, or at most 2 per cent. ; for, when the tenant has paid the direct taxes that fall upon the land, little more remaias than half the profluce, to pay both rent and labour. It is exceedingly difficult to estimate the rent of land by the binglish aere, from the great uncertainty and irregularity of the measures. The term fanegada is used to indicate the extent of land on which a fanega of wheat may he sown, an extent which varies in every village : this quantity of land, whatever it may be, lets, according to circumstances, at from 12 s . to 24 s ., the average value of a fanega of wheat being about $3 x$. $6 d$. Vine and olive-lands are measured ly the cranzude, an equally vagne standard. Vol.iv.

The wages of farm labourers average abont $13 \boldsymbol{d}$ per diem; or, it boarled with their masters, from bidf. to 10 d . 1hint, though tillage has been greatly extended charing the present century, it is still true that in most parts of Spain no improvement has been male during the last 150 years. 'The principal exceptions are in Biseay, Navarre, and Aragon, In the first hoe and sinde lomsbandry protty generally prevails, fud every inch of arible gronnd near the roads seems to be carefilly cultivated. The whent raised in liseay perhaps excceds the consumption of the district, and conEiderable crops are also raised of rye, maize, barley, and nats. lu Leon, Castile, and Madalusia, agriculture, which is in the most clegraded state, is contined to the growth of wheat.

The most careful cultivation is found in the huertas, or irrigated lands of Grmada, Murcia, and Valencia. These traets, imbed, are eonsidered as the gardens of Spain, and nbomad not. only with every varisty of froits, bint all kinds of vegetables and plants, nesciul pither as food or materials for manulactures. The mild red jeppor rased in the huerta of Mureia is celebrated all over spain, and forms a comsiderable artiele of trade with the interior. Rice is the chief product of Valencia. The sugar-cane of Grmabla and Valencia is as food as that of the West ludies; lut it is cultivated at mueh greater expense, and its growth has, in comsequence, been almost wholly abondoned. Considerable quantities of corn are raised in diflerent parts along the SLE. coast. Mulberry-trees ure carcfully cultivated m the S. provinces; those of Mareia and Valencia are white, those of Gramala black. In the caltivation of vines poles are not used, but the cuttings are phanted, and not teing permitted to attain any great height, gradially form thick and very stout stocks. lispuliers, ilso, are numerous, especially in Andalusia, and the grapes on these vines atini. an extraorlinary size, the hunches often weighigr from 12 to 14 lbs. The rish level lauds produce the largest quantities of wine, but here, as elsewhere, that raised on griavelly soils on the hilly slopes is the best. The quality of the wine varies greatly in different districts; but it may be said with truth that, exeept the wines of Xeres, Rota, Malaga, Alicante, and Benicarlo, which are intended for exportation, few of the Spanish wines are egual even to those of third-race quality in France. Being very generally kept in skins, smeared with piteh, they acquire an olor de bota, or peculiar taste, and a flavour not disliked hy the natives, but very disagrecable to foreigners. 'It is surprising,' remarks the British consul at Cadiz, in a rejort on the wines of his district (Commercial Reports received at the Foreign Ollice, London, 1865), 'that when so much trouble is taken to prepare sherry for the foreign market, the spaniard shonh be content with such inferior and ill-made wines as are found in the neighbourhood of really good vineyarts.'

The Pyrenees, the hilly parts of Biscay and the Asturias, the vast plains of Andalnsia, the two Castiles, Estremadura, and Leon, are almost wholly in pasture; and in some parts the travelier may journey for many miles without seeing either a honse or an individual. In point of fact, however, half the pastures really consist of heaths, or of neglected tracts covered with thyme and other wild herbs, that at present are next to worthless. There are few or no irrigated meadows, and hay is seldom or never prepared for fodder. Indeed, notwithstanding the preference given to pasturuge, and the privileges that have been long enjoyed by the migratory tlocks, the quantity of live stock is
comparatively small. The following table gives the numbers, according to oflicial returns of the year 1860:-

| Deseription |  | Number |
| :---: | :---: | :---: |
| Black Cattle | - - | 1,869, 1 ¢ 4 |
| Horses . . | * | 382,1099 |

| Assea | - . | 750,007 |
| Shicep | - | 17,592,538 |
| Cionts | - | :1,1 th, 100 |
| Swtne | - . | 1,600, 203 |
| Cumels. | .. | 1,861 |

The Spaniards distinguish their sheep into the sedentury, or those who remain in the same place cluring the yeur ; and the migratory, or those who move from jolace to place. The lntter, or truaslimmaztes, comsisting chiefly of the Merinos, or fine woolled breeds, are depastured during winter in the vast planins of Andalusia, Castile, Leon, null Estremadura; and are driven in summer to the neurest mountains. These migratory flocks are eollected for their journeys in large boslies of 10,000 and upwards, called mestas, their peregrinations being regulated by a peculiar coole of laws, and by immemorinl custom. It is obvious that this nigratory system has originated in natural canses; and that, in fact, it is an important branch of the rural economy of Spain. In winter, when the mountains are covered with snow, the plains are in the greatest verdure and beanty; and in summer again, when the lierbuge of the plains is withered and burnt up by the heat and drought, the pastures of the sierras, and other momitain tracts, are in a state of compnrative luxuriance. Nothing, therefore, can be more natural than this shifting of the flocks: it is for the matunl inierest of the occupiers of the hills, and those of the plains, and no doubt has prevailed in Spuin from the remotest antiquity, and will necessarily contime to prevail.

The laws and customs, however, under which the migrations of the flocks are condncted, have been, for a lengthened period, singularly inexpedient and oppressive. It appears that, about the midalle of the 14 th century, the depopulation of large tracts of country by a pestilence gave a considerable extension to pasturage, and enabled the proprietors of the migratory flocks to usurp certain privileges, which they have since succeeded in maintaining. Thus they are not only allowed to drive them over village pastures and commons, but the proprictors of such cultivated lands as lie in their jath are obliged to leave for them a wide path, and, which is still worse, no new inclosures can be made in the line of their migrations, nor can any land that has once been in pasture be agnin enltivated till it has been offered to the mesta at a certain rate. In consequence of these perverse arrangements, disputes, which frequently terminate in bloodshed and murder, are perpetually taking place between the herdsmen and those through whose lands the flocks have to pass, However, it is possible that the mischiefs said to be entailed on Spain by the laws and customs in question have been a good deal exaggerated. As already seen, the migration of the flocks is essentinl in Spanislı rural economy; and it does not appear, were government to set resolutely nbout the matter, that any insupernble difficulty would lave to be encountered in defining and fixisy the roads to be taken by the tloeks, and in otherwise regulating their migrations, so as to prevent them from being injurions to third parties. It may be worth mentioning that Spanish writers ascribe the first great improvement in the wool of Spain to the
introlnctlon of a flock of sheep from Fingland, in 1394, being a portion of the dowry brought by Catherine, danghter of the Duke of Lancaster. to her huslanil, the eldest son of the king of I'astile. (Questiones Criticns, 9; and Memorias llistorieas sobre la Marina y Comercio de Bareclona, iii. 336.)

The low state of agriculture in Spain may be nseribed partly to physieal and partly to mural canses. At the head of the former must be placent the lieat of the climate and the aridity of the sind. Most jurt of the rivars with which the country is intersected run in deep beds, and are but little avnilable, except in a few fasoured localities, for purposes of irrigation. l'robably, however, mural have had still more intuence than jhysical cansen in retarling the progress of agriculture in the peninsula. At the head of the former must $l_{\text {s }}$ placed the vast extent of the lands belongine to the nobility, elergy, and corporations. It in atlirmed that the estates of three great lords-the dakes of Osma, Albn, and Medina Coeli-cover nearly the whole of the immense province of Andalusin, and several in the other provinces are hardly less extensive. These vast jussessions have been uniformly held under striet entail; and, speaking generally, are all managed by stewards, anxious only to remit money to their masters, whi are frequently in embarrassed cireumstances. The younger branches of the great families, thongh they inherit all their pride, inherit little or nons of their wealth. 'lhey are. for the most part, exceedingly ill-educated; mill when not employed in government service, pass their days in a siate of slothful dependence. It is singular, notwithstanding their immense possessions, that the Spanish grandees have little or no taste for a country life, or for the improvement of their estates : and the fact is that, from the one end of the peninsula to the other, there is no such thing as a fine country seat. The great estates belinging to the corporations, or towns, are held in conmon; and in consequence are wholly, or almost wholly, in pasture. Luckily, however, the large estates that belong to the church have beell confiscated luring the late revolutions; and their sale and division have materially increased the number of smaller proprietors, and given a stimulus to improvement; and a stop has also been put to the practice of entailing. The interruption given to labour, by the immense number of religious festivals and saints' days, has, also, been exceedingly injurious to agriculture and all sorts of industry:

The Spanish character is also unsuitable to success in agriculture and manufactures. Daring the prolonged struggle with the Moors, a taste for claring alventures, and for an irregular, predatory mode of life, was widely diffised throughout the nation; and the discovery and conquest of America, which oceurred nearly at the same time that the power of the Moors was annihilated by the conquest of Granada, afforded a new and boundless field for the exercise of the peculiar taste and talents formed in the Moorish wars. In addition to the means thus afforled of arriving at wealth and distinction by a more compendions and les laborious, though more hazardons, route than that of sober industry, these honorary distinetions, of which the Spaniards are extremely fond, were eniferred only on those who followed the profession of arnas, and who could show that their ancestors had not degraded themselves by engaging in the debasing pursuits of agriculture, manufactures, and conmmerce! And while the higher and more aspiring classes were thus led to regard the useliul arts with contempt and diselain, the multiplication the coarse teers for would ast Franee. important principal tusiness w the l'yren are mostly manufactu blished wit putteries, coarse qual ever, finer art is only lain manuf of Sivres, stant loss. sive scale best qualit duction and years cond it is probal

There are neveral sonisties in Spain, nssuming the title of ' Friends of the Comitry;' for the encouragement of agriculture and the arts: most of them were fommded in the reign of Charles IIl., and were warmly patronised by Campomanes, the most enlughtenced minister of whom Sjain lins to lyast, and by C'amit Fiorida Blanca. llitherto, however, they seem to lave rendered but little service, if we except that of Malrid, to whose exertions the famous Memoir of Jovellanos ('luforme de la ley Agraria') is principally to be aseribed. The reader will find thix memoir in an English dress in the 4th volume of the translation of the 'Itinéraire' of Iaborte.
Munfactures.-lt might have been expected, from the atmondmee of wool and silk in Spmin, and her extensive colonies in America, that her manufactures would be in a comparatively formrishing state. 'This, however, is not, nor has it ever been the ease. Capmany and other able writers have shown that the statements as to the flourishinge, state of mandiactures in sjain, in the 14th and lith centuries, have no better fonadation than those respecting the flourishing state of agriculture and the magnitude of the pop. at the same perinal. Sume of the circumstances that have contributed to depress agriculture have also contributed to depress manufactures; but they have also bern atlected by others of a peculiar deseription, among which may be specitied the oppressive inthence of the aleabala, and other taxes, corpuration privileges, monopolies on the jart of grovernment, and the want of competition and cmulation throngh the exclusion (in as far as practicable) of loreign manufactured goods. Catalonia, Bisay, and Valencia are the most industrious provinces, and in them manufactures are most inlvanced. Those of silk and eotton, especially the lirst, are carried on to a considerable extent in larcelosia, Valencia, and other towns; but though the fubrics be excellent, the colours are wretched. The blonde mantillas of Almagro, in La Mancha, are perhapse the best of the Sjanish manulatured articles. Broad eloth is mate at Alcoy, in Valencia, and coarse cloths (pano purclo) are extensively manufactured in Catalonia, and in varions districts thronghout the country. But, with the excepition of silks, all the woven fabries produced in Spain, wheiher woollens, cottons, or linens, are at once badly linished and enormously dear : even the comrse, harl-spun mantas, that serve the muleteers for cloaks and blankets, fetch prices that would astonish the peasantry of England and France. In the N. provs. tanning is the most important branch of manufacture, furnishing the primeipal supply of leather for the interior: the business was introduced by, and is chrefly in the hands of, refiggee Ibasques from the French sitle of the l'yrenees. The few tan-works of Andalusia are mostly in the hands of Englishmen. The manufacture of paper and hats has been established with some success, and there are numerons potteries, though the products are principally of coarse quality. In Valencia and Catalonit, however, finer articles are made; but even there the art is only in its infancy. There is a royal porcelain manufactory at Madrid, on the plan of that of Sevres, oecasioning, like its prototype, a constant loss. Soap is male on a somewhat extensive seale in vorious parts of Spain, that of the best guality being exported. In Biscay the production and manufacture of iron has been for many years conducted with considerable activity; and it is probable that the depression occasioned by
the late eivil war, of wheh Biseay was the principal seat, lats alrealy been romoved. It is impossible, howerer, that the iron trade of liseny, luw al balant swever the ore, eman rise to any groat importance, since wood finel is searce, and conl, being at a considerable distance, is little used; while English conl, which might be prosured at about one-third the price, is almost prohilited. Still however, to wome extent at lenst, in almost every village of the prov., the ironware manaficeture is carried ons. Ilorsoshomes and mails, contre loeks, guns, and bedsteads, aro the leading articles with which the liseay manufacturers supply the interior: large enpper iutemals are also made on a considerable scale in this part of Spain. Muskets, pistols, and sabres are mannfactured by the government in Valencia; and severnl minor establishments exist at Saragnsa,' Iharecloma, Malaga, Calio, and Seville. Sword-blades of the timest tempur and quality continne to be prodnced in the Finbriar clas Armas, near 'Foledo; but the quantities ars: comparatively inconsinlerable. The manfactures of saltpetre and qumpwider, brass camon, tobneco. porcelain, tapestry, and mirrors are combucted exclusively by govermment: the suphly is very limited, the prices of the articles produced extravagantly high, and, excepting tobneco, they are all prodinctive of loss. In some parts, mats anil shoes are extensively made of the esparto rush, used, in recent years, in tho mannfacture of paper in England.

Comnterce.-The suljoined table shows the total value of the imports and exports (ineloding loullion and specie) of Spain and the baloarie lisles, by sen, in nationnl and foreign vessels, and by land, in the year 1862:-

The great articles of export from Sipain eonsist. of raw products. Of these, wine, olive sil, wool, fruits of varions kinds, lean, quicksilver, branly, cork-wood, salt, raw silk, and wheat are the mosit important, and are almost all susceptible of tin indetinite increase.

The great articles of import are colonial products, oltained principally from Cuba; cottons and cotton wool, linens, and hemp and tlax, wollens, salted fish, hardware, ghass and earthenwiare, timber, rice, bides, butter and cheese. Subjoined is a table showing, after oflicial returns, the value of the principal articles (inchoding bullion and suecie) exported from Spain and the balearic Islands, in each of the years $I 861$ and 1862.

The importance of the trade that Spain formerly carried on with her vast possessions in the New World was, at all times, much exaggerated; anil she, in truth, was little better than an agent in the business, the greater part of the goods sent in Spanish bottoms to the colonies being, in reality, the property of foreign merchants. The strength of the commercial navy of the kingdom, or the number and tonnage of sailing and steam merchant vessels which belonged to Spain in the year 1860 was as follows:-

| Deseription | Vesmels | Tons |
| :---: | :---: | :---: |
| Sailing vessels | 6,715 | 449,436 |
| Steam vessels (horse-power 7,322) | 68 | 13,369 |

Spain was famous in ancient times for her precious metals, and has still 2,332 silver mines; but some of them are very insignificant. There were also, on January 1, 1860, 37 mines of antimony, 744 of lead, 31 of zine, 26 of cinnabar, 156 of calamine, 270 of copper, 72 of iron pyrites, and 527 of coal-the latter not very productive when compared with the English coal mines. The quantities produced are stated in a report for the year 1780, and anuther for the year 1860. These returns show that the produce of iron has risen during that period from $9,000,000$ kilogrammes to $41,137,800$; that of eopper from 15,000 to $2,704,700$; that of zine from 125,000 to $1,853,000$. The produce of quicksilver has remained nearly the same, namely, 900,000 and 903,726 kilogrammes per nunum, while lead has risen from $1,600,000$ to $8 \mathbf{2}, 498,400$ kilogrammes. There were $1,420,124$ marks of silver produced in 1860. The progress in coal mining has been very considerable. In 1858, the native produce was $1,985,150$ quintals of 46 kilogrammes, and the impor ed quantity $\mathbf{6}, 330,553$, which, without adding 594,000 quintals
of elarcoal, gives a total consumption of $8,315,703$ quintuls, or $382,522,938$ kilogrammes. In 18(in), the Spuish mines promened $3,217,734$ quintals of 100) kilourumures, mud conl was imported to the value of $33,000,000$ reales, ur 330,01007 . In is 14, the importation was nearly $73,000,000$ kilhes.; anal from that year to 1858 the imports ruse 21 t,0100,100 kilogr.; that is, they qualrulled in twelve years.

The trade of a banker, as it is understowl in Great Britain, is almost unknown in Spuin; but several banks have been establishell in Malrint. and there is an extensive circulation of inland bills of exchange. All merchants in gooxl credit call themselves lankers, do lonking lusiness, an! have agents and conncetions in the different towns, to facilitate their operations: but there is, motwithstanding, considerable difficulty in remitting money from place to place, and a diflerent rate of exchange frequently exists hetiween towns only a few leagues distant. In ordinary transactions there are no substitutes for eash, aind a good deal of trouble and inconvenience is experienced in counting, examining, and weighing the coins.

Accounts are kept in reales de vellor, of which about 90 are equivalent to 11 . The pistole is worth 16 s .9 d . British currency. The money in circulation consists of gold and silver coins of very va. rious value, and of copper. Dollars are rarely seen, especially in the N . and near the sea-emast, in consequence of the premium they bear in France, to which they are smuggled in large quantities, untwithstanding the penalties consequent on thoir exportation. Oil is sold ly the arroba mina, 101 of which are equal to, $335{ }^{*}$ English wine-gallous: 4 arrobas are equal to a quintal, or 102 English pounds. The caliz, or measure for corn, is cividel into 12 fanegiss, five of the latter being equal to a quarter. One hundred Spanish varas, or yarls, are equal to $92^{\circ} 5$ Euglish yarls, and a Sjanish legua contains 5,000 varas. The traveller tries in vain to find a rule whereby he muy compare the Spanish land measures with the English ace; and, with respect both to weights and mensures generally, they vary greatly in diflerent provinces.
Ruads, Railways, and Canals.-Spain, until very recently, was singularly destitute of rouds anil other means for the speedy and easy transport of travellers and products from place to place. The king's highways (caminos reales), the only ronils worthy of the name, extended only between the more important places: some of them, as, for instance, those between the capital and Pampeluna, Saragossa, Badajoz, Seville, and Granada, were, gencrally speaking, kept in good repuir; but the great road from Pampeluna by Vitturia, Burgus, and Valladolid, to Madrid, was stated to be infecrior to the second-rate roads of England. The grent road to Valencia was in a wretched state; and so likewise was that running by Tarancon and Albacete into Murcin. In Catalonia the roads ate comparatively numerous and good. The roads of Biscay and Navarre, also (owing to their being placed under a 1 rovincial goverument), are more numerous, better constricted, and more carefilly managed than in the rest of the country. On the whole, the orlinatry roads of Spain were always. an l, to a great extent, still are. in a wretched condition, the consequences of which, for trade and industry, have been only remedied, witlin the last few years, by the construction of a vast and tolerably well planned network of railway. The railway system centres at Malrici, from which four great lines raliate in as many directions, connecting the capital with all the more imp,atant towns of the kingdom. The subjoined taibie slu ws ment. to privat subventio vention' adjudicat lated depo concessiot and read wheever o subventio cession. during th obligation market vo

the total lemgth of the lines, anil their revenne in the yoar 1810: :-

The whole of the Spanish railways belong to private companies, but nearly all have obtained grarantees, or subventions, from t'e governmeat. The principal lines have been conceled to private individuals, or companies, with large subventions. These concessions, when a 'subvention' is attached to them, are given by public aljudications. Any one who has made the stipulated deposit of 'caution money,' may apply for a concession in sealed tenders, which are openel and read in public on the day of adjudication, and whoever offers to make the railway with the lowest sabvention, becomes legally entitled to the concession. The subventions are paid by instalments during the construction of the work, in bonds or obligations, bearing 6 per cent. interest, at their market value of the ctay.

Spain has but few canals. The canal of the Ebro, from Tudela to Santiago, 41 m , below Saragossa, was chictly exccuted in the reigns of Charles 11I. and IV., under the administration of Comnt Florida Blanca; and though of insufheient depth for navigation on any large scale, it is made aviilable during nearly its whole extent for barges of small draught, besides being extremely useful for the irrigation of the surreunding comntry. Mure important is the canal of Castile, openmg a communication between the vast and fertile plains of Uld Castile and Leon and the N. Sen, und attoraling an ontlet for their surplas prodnce. It has been constructed from Serovia on the S., past Valladohid and Palencia to Aruilar del Campor: a branch rums westward to the Rio Seco, and
unother to Burgos, The navlgation of the Tagus has engaged the attention of ditferent Spanish sovereigns; and, at the close of the sixteenth eentury, the river is said to have been made navigablo for barges from 'loledo to its month; but if so, it was subsequently rendered useless throuph neglect, and it is only within the last few vears that a company untertook to make it navlifable from Aranjuez ( 23 m . alove Toledo) down to Lislon. The Guadalquivir was once navigable for tlat-bottomed boats up to Cortova, but seville is the highest point reached at present. Many projects have been set on foot for improving the river by deepening the chimnel; bnt the great and suden thoods to which it is subject must operate as a bar to its successful navigation; nor, even if the part above Seville were considerably improved, is it at all probable that the bars and samd-hanks of the marshy district known as the Marismat could he so far removed as to make the river accessible by sea-borne vessels even us far as Seville.

Population.-The exaggernted and unfounded statements with respect. to the former thourishing state of agriculture, mannfactures, and commerce of Sjain hive alrendy heen noticed. Inasmmeh, however, as the popplation of a country is mostly dependent on its agriculture and manufactures, it follows that the same facts and reasonings which show that their extent and prosperity in the fourteenth and fifteenth centuries had been greatly exaggerated, go fir, also, to show that this mist have been the case with regard to the accounts of the compraratively dense population of Spain at the ara alluiled to. Down to the fifteenth century, or to the junction of the crowns of Cinstile and Aragon by the marriage of Ferlinand and Isabelln, Spain was divided into a number of states, between which the most violent animosities subsisted, and most parts of the peninsula were a prey to violence aud every species of disorder. It would be contradictory and absurd to suppose that a country placed under such circumstances could be densely peopled. No doubt, however, the population of Spain declined considerably during the disastrons reigns of Philip III., Ihilip IV., and Charles II. This decline has been ascribed, in great part at least, to the expulsion of the Moors in the reign of Philip IIl. But thongh it is impossible too strongly to condemn this measure, and that of the expmision of the Jews during the reign of Ferdinand and Isabella, and the detestable fanaticisms in which these acts originated, it must be admitted, notwithstanding, that their inflnence has been a grod deal overrated. The numbers expelled wero magnified far beyond the truth; and it is obvions that the vacuum, such as it was, created by their expulsion would, in ordinary circumstances, have afforded a new fieht for the employment of those who continued in the country, and aeted, in fact, as a stimulus to population. The truth seems to be, that the decline of pop, between the demise of I'lilip II, and the termination of the war of the succession, was a consequence of continued and systematic misgovernment, rather than of any particular acts of oppression. There are severnd authorities for tixing the number of inhabitants after the conquest of Grenada, about a.b. 1500, it 9,320,691. The figures, apparently the result of a census, are for each province as follows :-

| Castlle | . 7,500,000 | Alava | 60, 696 |
| :---: | :---: | :---: | :---: |
| Grenada | - 400,000 | Glipuscos | 60, (ifis) |
| Aragou | - 266,190 | Navarre | 154,165 |
| Valencia | - 486,860 |  |  |
| Catalonir | 326,970 | Total | 9,320,691 | Catalonia: : $\left.\begin{array}{c}48,6,970 \\ 136,145\end{array}\right) \quad$ Total $9,320,691$

'I'his mumber had sumk, in 1715 , to $7,625,000$. According to another census, the population in 109.
mmonnted to 8,204, z9). Aceording to the oflirinl ' ('buso de I'ohlacion en al Siglo XVI.,' compilad from the archives of Simanens mod publisherd in 182! , it mommed in the your 1482 to $7,0001,0001$,

Roligion,-Sjain has long leven, aud still is, the favourife sent of the lion. ('ath. religion, the contury in whide it has beren mainhances in the frentest purity, and to the exclusion of every olhor. The limpuisition was intromberd, or, at alt eronts, was vesfed with a vast increase of power, in the reign of Firodinmad and landollas and that formiduble tribumb alimately suceoceled, by dint of lhe stake and the rack, and such like ntrocions mesns, in extormimuting heresy; or, in other words, all differmee of mpinion as to migious matlers in Sjuin ; midit was, nlso, mainly instramental in prevailing on its weak and bigoted suveroigns of bumish the Moors, Aceorting to I horente, no fewer than 13,000 individmats, neconsed of heresy, were publiely hurned by the diftorent tribumats of constile and Arugon: mad ISh, $11: 3$, acemsed of the sume offince, sudfered other punishments in the brict apace between the enserhlishment of the momern lmanisition in 1.1 l and lals, only two yours nfer the death of Ferclimad; and since then the number of its victims lus hren incomparally gronter. (I'rescott's Ferilinand nud Isabella, iii. U(65.) I'rohably this statement may lee exngrarated ; but it is, not withannoling, nhmedandy comain, that all other jersecolions of which we have my nuthentie aecomts haveberot milid eompared with those intlieted hy this boratthirsty tribumal. In point of thet, however, the mischiovols intluence of the laynisition did mot consist so much in its juclicinl murders, and other atrocinies perputrated in the saered name of relipion, as in its deadly intluence over the mind and feelinge of the mation. It was quite an hostile to all soris of political and philosophical knowledgo as 10 heresy in relighont it was, in fuet, the deadly tie of every thing like free inguiry; and while the importation of most nsefill works from forelgn combtries was a capital offence, nothing could be printed at home unless it were approved by the inulusitors.

The mumbers and wealth of the elergy and monastic ordens were such an might be expected in a comatry where the lnqusition was triamplunt, and where to commit a murder was a less offence than to insimate a donbt as to the ' real presence!' According to an oflleinl statement drawn up in 1812 , it appears that the clergy were then in possession of about one-fourt li part of the landed property of the kingrlom, exclusive of tithes and other casual sources of income, problucing in all a total gross revenue of about elepen millions sterling a year. The revenues of some of the ligh ecelesiastics were immense: the archbishopric of 'I'oledo is said to have been worth from $6 \overline{5}, 0001$, to so, 0100l. a year.
According to the oflicial returns of the censns of 1787 , the ecclesinstics of all descriptions, inchuting 61,617 monks, 32,500 nums, and 2,705 inquisitors amounted to 188,625 individuals. And it appears, from the official returns published in the - ''orreo Literario' of Madrid, in 18:33, that, notwithatanding the nttacks mate upon the ecelesiastical state during the French war and subsequently, it then comprised $175,5 \overline{4} \pm$ inlividuals, of
whom 61,727 were monks, and 21,007 ниו!, Shortly altor this period, howavor, a vory grat chmuge for the better was eflecterd. A ilecroes.
 conventual establieloments witls not more than 12 immintes; and the example thos mot was followed up) hy tho decree of the the of Mareh, istiti, whid entirely sulpressed all conventmal establishoments mad religio-military arders. The monks who were thins turned out of their dwellings ware to rereve small stipenils; nul it is to loe regrettel that, owing to thodeflenlies th which the comitry has since beon involyad, theme stipends have lum very irrofularly pial. Ihat the intenvernisomes idene arising affere only a few individuals, whome clame oll the public symbuthy wero of the slenderest deseription; whereas tho monanaro in which they origimato entmot fail to be problative of grent mitional meminge, mul is, in finct, onf of the mose beneficine results of the late chamgres.
'The whole of the vast property formerly belong. ing to the chareh has been comitemend for the use of the state, mad a eomsiderable portion of it has been alrealy nohl. According to the comatitution, the mation mudertakes to smport the publice worNhip and clergy of the established elamreh; hat, owing to the intestine emmontions that have presvailed in the cometry, and ids limacind difliculies, this condition has not heoth afleetively carried ant: nuld not a few of the clorgy are, at present, hat little removed from a sade of indigence.

It is eertain that, during the last half econtury, mad esuecially since the commencenent of the late sirngegle with limaer, the bigotry of the Sipmiaris, enpecially of the inhobs. of towns, and tho inthance of the priests, lave materially declimod. Amb, by a necoswary, thongh minfortanate, comsiguence, the abuser and vices of tho elorgy have rencted ngninst religrion itself; and, nt this moment, most intelligent persons in Spain, though making an outwarl protession of religion, (matarthin a profoninl contempt for the mummerion rajoined by the clerpy, and are montly, imbed, decided seeptice. Aecording, however, ins the church is pmritied, and censer to be idnontaied with every thing most deserving of reprobution, roligion will, no douht, recover its proper influence, nuld will coase to be degraded in the public estimation by the intolerance, extortion, amd immorality of its protessors.

Government,-At the perion of the union of the crowins of Castile and Aragon, by the marriage ol Fardinand and lashella, each of the kingeloms hal representative assmblies, or cortes, lint shared in the leginlative anthority, and enjoyed vory extensive privileges. Unlnekily, however, thongh the crowns were mited by the marriage now referred to, the kingitoms were not ; each continual to preserve its own laws and institutions; and their mutmal jealonsies enabled the sovereigus to (imploy the one urninst the other, and nltimately to ernsh the liberties of both. 'This resnlt was freatly facilitated by the extensive comquesto al the spanish sovereigns. In the reign of Ferdimand and lambella, Granada, Navarre, nud Naples were subjected to the Spanish erown; so that the princes hecame, in a great measure, independent of the constitutional control of the cortes of their horeditary states. Under Charles V., who possessel, in right of his father, all the dominions of the house of Austria, and under whom all but bonndless territories were acquired in the New World, the preponderance of the external dominions of the crown was vastly inereased; and the defent of the forces of the rebellions Castilians, under Padilha, in his reign, and the execotion of the Justicia of Aragon in that of Philip II., com-

tors and deputies are not to be proceeded arainst or arrested during the sassion withent the permission of the legismive braly to which they may levong, if not taken lin the act of committing my erime; but in this ease, or other in which they nre promecouted or nrrested whilst the cortes are clused, they are to glve immediate information to thelr rexpective co-legislative laslies for their cognisauce. Deputies and senators who receive from the govermment, or from the roynd fimily, any pension or employment which is more thme a promotion from a lower to a hipher alllee of the sanne klow, or a comminsion with snlary, lomones or titles, are suloject tor re-clestion. 'I he senate, in the sesmion of

'The execntive authority is exerdisel, umber the sovereign, by a commeil of reanomsible ministers, called 'secretarins del despucho de estado.' Ali commands or orilers issucd by the sovereign most be sigued by the renimetive ministers; mid no puhlic functionary is to excente sueh orders if not thus signed. The ministers may be senators or deputies, and take prart in the discussions of the two legislative bodies, but they are permitted to vote in that looly inly to which they belong.

The soveruign is permitted to consult, in imprortant enses, a council of state, consisting of the ministers mal thirly-two privy conncillors. The conncil of state was tirst organised by royal decree of July 14, 18 is , which was molitied by a law of the cortes sanctioned September 1, Lxijo. According to this law, all privy eomencillors must be sjanilards by birth, and not lens than twentylivo years of age. The comncil is divided into six sections, mmucly, first, foreign affinirs and justice; second, wor mal marine; third, finances; fourth, interior and public welfare, or 'fomento;' tifth, colonies; and sixth, department for deciding affuirs in dispute between the various ministers. 'The privy councillors, whose numbers must not exceed thirty-two, are nominated by the sovereign.

The laws of Spnin, previously to the Inte revolintion, and the great nubber of those now in foree, are embodied in the colles known by the titles of F'uero juzgo, Leyes de lus Siete Partidas, Orderamiento Real, Fuero Real, and Novissima Recopihtciom. The tirst of these is, in the mun, an abridgment of the Theodosian code, origimally priblished by Alaric, son of liurie, one of the Gothic eommaerors of the peninsula, and successively nugmented by the adilition of new laws. The Ordenamiento Real contains the code of laws established by Ferdinand and Isalbella. 'the Leves de las Siete I'urtidas is a compoumed of Gothic, Lomme, mid ennon law. The Fuero Real (a mixture of homman aul (lothic law) was compiled at Ihesea in 1248, for the use of the kingdom of Aragon: and the Norissima Recopilacion is a digested collection of edicts issued by the kings of Spain, mind enjoys the highest authority. It cannot he surprising that, with so many different and often contlicting eodes, the general system of jurisprudence should be extremely defective. Init the miministration of the laws is incomparably worse than the laws themselves, being slow, complicated, and protracted to a ruinous degrec. There are endless appeals from one jurisdiction to another, and the whole machincry of the courts is alapited to screen the venality of the juiges, and to afford a rich harvest to the escribauss, or attorneys, the only medium of communication between the elient and the judge.

The wretched defects in the administration of justice were. in some degree, obviated, in so fir, at least, as petty cases were concerned, by the adoption of a sort of arbitration system. Índividuals, called alcaldes, manually chosen, according to the
diffirent privileges of the different towns, loromghy, and villages in which they reside, dectde the cases brought lefore them, like Sancho l'anza in the island of Ilaratarin, necording to their own sense of what is right and equitable. llit, with the exceprthon of this defective tribuial, every other part of the Spminin judicinl system is a tiasue of ubuses.

Ianguage, Literuture, and Ejlucation.-It seems probable that the Cantabrian was the mont ancient language of Spmin, of which remmants are supposed by some still to exist in the modern l basciur, spoken by the lliscaymus and other inhalis of the districta lardering on tho I'yrenees. The old hallguage of the penimain must, no doubt, have lreen considernbly alloyed by the admixture of I'hanicim words and phrases during the dinthuginian dominion; and when the Rommes conquered Spmin, they introduced their langiare, which, for severnl centurles was the principal medium of communfation of all except thone living in the most remote districts. The Vinigothes who fullowed the liomans in possension of the jemusula, introduced the lingua Romama, a mixture of the latin and derman languares; but the Latilu, though corrupt, still continued to bo spoken in many parts. Again, when the Moons overrinn the comitry, expelled the Visigoths, and establishod their own power, they brought with them the Arabic language, already lighly cultivated, and well alapted for peetry; anil this, in turn, became the general langrage of the comentry. Thes, out of numerous elements was gralually formed a new language-the Spanish; and though humerons dinlects necessarily arode in the different petty kingdoms into which the country was split, that of Castile became at length the classical language of Spain. Its basis is Latin; and maty of the nncient intlexions, as well as words, are still preserved. There are also a large number of lentonic words ; but the admixture of Arabie, thongh vety considernble, is less than in the l'ortuguese. Force of expression, depth of sound, and mellifiuous calence, are the peeuliar characteristies of the Spanisls; which, however, las a gutturul neeent, derived probally from its Teutonic origin. The abundinee of vowels and liquils makes the languago harmonious when spoken by mative Castilians; it is essentially poetical, and poetry may be considered as the germ of the national literuture. It is a curions fuct, that there is very little putwis among the Castilinns, and that the langonge is spoken by the lower classes with remarknble purity and precision.

The rise of spanishi literature eannot be traced further back than the midille of the $12 t h$ century, for the songs of the Iroubadours belong to : period antecedent to the settlement of the lamguage. The ballads composet in honour of liotrigo Diaz de Vivar, called el Cempeator, or mare popularly the Cid, are amongst the earliest specimens of Spmish writing, and display at once great independence of thought, and felicity of expression. No donlt, howevar, the Moorishi hallads, or those written to celcbrate the chivalrous contests between Cluristinn and Moslem knights, that preceded and aecompanied the fall of Gramadi, form the most striking and distinctive part of the national literature of Spain. 'The Moorish wars had always afforded abumdant themes of interest for the Castilian nuse; but it was not till the fill of the capital that the very fomintains of song were broken up, and those benutiful ballads were producel, which seem like the rays of departed glory lingering round the ruins of Cramula. They present a most remarkable combination of, mut merely the exterior torm, bit the noble spirit of European chivalry, with the gorgeousness and

effeminate luxury of the East. They are bricf, sedalug single nitnations of tho highest jeetic interant, and atriking the eye of the remter with a britliancy of execuiom, so artless in a! enarance withal as to seem rather the effect of aceident than atorly. We are transported to the gay wat of Monrish power, and witnens the abimating bimole, its pminj, and ita revelry, prolonged to the last hour of jts existence.' (I'remeott's F'erilinand and I anbella, li. 200.) But it was, perhaps, harilly neceswary to suy wo much about the Sumish baflads, as the mimirable trusiations of Mr. Jocklart have made their mirit, at leant, familiar to mont renders.
The homone of being the firat to introbuce repalar iramatio writing finto sipain lane been aseribed to 'Torres de Naharro, in the early part of the leth century. Ite was fullowed by looper de Vega, born at Malrid in 15ti2, at once the most originul, must unequal, and mont voliminous of the perininnular dramatists. Conderon, horn in 1 tio0, carried the Sjauish drama to its hifhest perfection, like his great precurnor, Lepez de Vegn, his phays are most uncupal, the tinest scenes being mixerl up with the most revolting barbarism and extravagance. 'The antonishing fecmulty of these writers may in some depree aeconit for, though it eannot excuse, the delects and inconsistencies in their dramas. The published works (which do mot, however, embrace nearly all his pieces) of Lojez de Vega consiat of 25 vols. 4 to, cach containing 10 or 52 plays; and 127 dramas are aseribed to Culderm, bexides a still greater mumber of vaulevilhes anil interludes. The sponish drama, lowever, has loug fitlen into thecay. The lumiliation of the comatry diring the disantroms relgas of Philip IV. and Charles II., and the dendening inthence of the Inguisition, were little tivourathe to its culture; and after the accession of the Bourbon dyansty to the throne, French eritielsm and taste ohtained an ancendaney, while the troubles in which Spmin has been more recently involved have stitleal all poetical talent. Some enidenvours, indeed, have been made to revive the nutional druma; but they lave signally failed, and no modiern name cennected with this branch of literature deverves notice, execpt, perhaps, that of Martinez de la liosa, the nuthor of the "Vinda de l'atilla.' 'The 'Arancana' of lircilla, born in fost, is the only poem that Spain has produced that lias any prefousions to be classed among epics.
C'livalrois romance was early ami assidmously cultivited in Spain. Happily, however, the infmitable sative of Cervantes lest royed at once and for ever the whole race of kniglits crrant. 1lis ' Bon (Quixote,' however, still eontimes to interest all chasses of rembers by its exhnistless wit, the trath of its delineations, and its practieal graxl semse. It has been rembered into almost all lanfuares; and, how defective soever the translation, it never fails to atouse and instruet.
But, with the exception of this unigue and nitmirable work, Spanish works are hat hittle known in foreign conntries; and in most depariments, indeed, the literature of Spain is poor in the extreme. And how could it be otherwise? In 1502 the consorship of the press was established; and the power of carrying it into effect was very som entrasted to the liqquisition. 'Il s'est ritabli dums Mutrid,' says Beaumarchais, with quite as much of truth as of wit, 'un systeme de lilheq té sur lu rente des productions, qui s'cteul même à celles de lu presse; at que, pourvu que je we purle an mes curits ni de l'entorite, ni de ''ultr, ni de lu politique, $n i d e$ la morule, ni des gens en phere, ni des eorgs en crilit, ni de IOpira, ni des antress specturles, ni te persomme qui tienne ì qualyue chose, je puis tont
imprimer libremont, sous l'onspection de acrex on
trois censewrs.' (Marriage de Figraro, acto $v_{0}$ ) Umier ameh ciremnstances, it womld the contrmitiotory and absuril to expeet that the Spmoish wríters should have distiuguished thomselven it philonophical remeareh, origimal dischasalon, or in any pursuit requiring freedonn of lmpuiry. Sjnin lus a few respoctuble, but no eminent, nuthurs.

Since lsion, hovever, a great change for the better has taken place; the consorship of tho prens has bech supprensed; newnpupers have beren established; and the intluence and anthority of the elergy greatly diminished. Ifopes may, theryfore, be reasomahly entertained that literature will Huain revive: bint no sudiden development of tha mental resonarces of the mation need he experted, and many years must clapse before literntare acquires any material inthenee.

Up to a fory recent period the great mans of the population of Spain was in as state of extrome lifmorance. It. was rare, in the latter part of tho 18th century, and at the beginning of the present, to flad a jeasant, or an ordinnry workman, who was able to real, which nccomplishiment, aninit wonnel, was even hehi to he iminoral. Intil Ixis, puble education was in the banuls of the elergy; but late enactmenta, giving the instruction of tha prople in clarge of the govermment, lave male a radical change in this respeet. The state, however, pays bit a very small sum towards publis: education, which is left mainly to the charge of the comminnes anal the parenis themselven; bit the superintendence of the government ovar ethcational matters hins led to vist progress. In lig: only 393,126 chaldren attended the prinary schools, which were very imperfect. In 1612 this cortes tried to introlace some modifieations, lini failed, on aceonnt of the war, in making a radical reform ia popular alacation. Fresh efforts wero made in 18.20 and 1825 , but still without much success. The law of July 21,1838 , enjoining tho expenditure of eonsiderible sums hy the commines for the purpose of publis: inatruetion, proved a grent step in ndwance. Nince that time the lawn have been several times amended, especinlly in 18.17 and 1857, when the manters were nobjected to examination, school-rooms built, and diflerent selolastic institutions founded. The resalt was, that in $1 \times 18$ there were $6 i 83,711$ pupils, and on Janumry 1, 18 tit, $1,046,5 \mathrm{sk}$ pupils, of hoth sexes, divided hetween the public and private schools as follows:-

Midulc-class ellucation is given in fifty-eighlt public colleges by 757 professors to 13,881 pupils. In first-class education, the most remarkable feature is the large number of law-students, namely, 3,755 in 1859-60, divided among ten faculties. There are 10 faculties of literature and philosophy, with 224 students; 7 faculties of sciences, with 141 students; 4 faculties of pharmacy, with 544 ; 7 faculties of medicine, with 1,178; and 6 faculties of theology, with 339 students-in all, 6,181 students.
Revenue and Expenditure.-The budgets of the kingiom for the six years, 1857-63, were as follows-for each financial period, from July 1 to June 30 :-

Revenue.

| Yeari | Reales | $\boldsymbol{E}$ |
| :---: | :---: | :---: |
| $1857-58$ | $1,812,631,400$ | $18,126,314$ |

Grand Total 234,472,493
$2,021,135,280$
The deficit of $410,224,610$ reales, or $4,102,2 \cdot \mid f i l$. thus createl is to be covered by the sale of state property. The national and church property of Spain was and is still of immense value, but there was a reluctance in some people to buy the later on account of religious scruples, till 1858, when a concordat was concluded with the pope, and sanction obtained for the sales, which were then actively continued, the government giving great facilities to the purchasers. The payments are made one-tenth in cash, and the remainder in promissory notes from 1 to 10 , and, in some enses, to 19 years, the property remaining mortgagel tio the final instalment, owing to which the biddings at times have been for even more than double the amount of its value. The cortes in 1859, 1861, and 1863, authorised the government to apply $28,000,0001$. for the extraordinary expenses just enumerated, of which only about $16,000,0001$. has been spent, the money being obtained out of the sums placed at interest by capitalists, corporations, and the public in the 'Caja de Depositos,' or deposit bank, under the direction of the government, for the repayment of which the treasury was accumulating the promissory notes given by the purchasers of the national properties. The quantity of these properties sold from 1855 to December 31, 1863, produced 30,156,700\%. The properties unsold are valued at $13,525,0001$.
In 1851, on account of the inability of the government to meet its engagements in full, certain large debts of Spain were converted into passive stock, that is, a stock not bearing interest, nud which lind to be liquidated by an annual sinking find. The amortizable first and second class was created by a law of August 1, 1851 , to be composed of the internal debt, called 'Deuda sin Interes,' and of some other various debts and claims ngninst the goverument, which were called for liquidation before the 'Direccion de la Deurla Pullica.' By that law a sinking fund of 120,0001 . annually included in the bulget was establishel, besides other advantages, for its extinction; nul a commission, composed of three senators and thre deputies, was ordered to be appointed yearly ly the cortes to wateh and report upon all the operitions commected with the public debt.

The national liabilities of Spain, both funded and unfunded, amounted in July, 1863, to $15,550,000,0000$ reals, or $155,500,0001$., of whirh sum, $14,700,000,0001$., or $147,000,0001$., form the consolidnted, and $850,000,000$, or $8,500,0001$., the tlonting debt. The sale of church property, iu return for which the former owners receive obligations on the national exchequer, has cliefly con-
tributed of late years to swell the national liabilities. A returu orlered by the cortes, on November 1,1858 , gives the following account of the funded debt of Spain at that period :-

| description of debt | Amount ot Debt | A mount of Intereat |
| :---: | :---: | :---: |
| deb | Reales | Reales |
| Perpetual Rentesat $3 \%$ ? <br> Consolidated, Homo | 3,730,617,734 | 111,918,532 |

The lulk of the taxes were formerly divided into two great classes, and the division is not yet wholly abandoned,-the rentas generales and the restas provinciales. The former were collected throughout all Spain, with the exception of Biscay. They ineluded the revenue derived from the postoffice, the stamp duties and customs, together with the royal monepolies of salt, tobacco, and gunpowder. The rentas provinciales wero collected only in the previnces belonging to the crown of Castile, and did not, therefore, affect Biscay, Navarre, Catalonia, Aragon, or Valencia, which had peculiar and less burdensome taxes.
Army and Navy.-Spain during the reign of l'hilip II. had 280,000 men under arms. After the war of suceession, her army was reduced to 75,000 men. Under Charles III. the Spanish army was increased to 90,000 men and 10,000 herses. At the death of Ferlinand the military force consisted of only 60,000 men and 8,000 horses. In 1859, when about to commence the war against Morocco, it was increased to 250,000 men. The army is formed by conscription; but the purchase of sulstitutes is not only allowed, but encouraged by the regular army. The time of service in the infantry is eight years, of which five have to be spent in the iufantry of the line, and three in the provincial militia. For military purposes the kingdom is divided into five districts, or 'eapitanias generales,' at the head of each of which stands a 'captain-general,' with the rank of fieldmarshal. Official returns of the year 1863 state the nominal strength of the army, including the 'provinciales,' or provincial militin, and the 'guardia civil,' or national guard, as follows :-

|  | Staff | Omeera | Rank and File | Total |
| :---: | :---: | :---: | :---: | :---: |
| Infantry | 278 | 2,647 | 57,258 | 60,183 |
| Artiliery | 44 | 369 | 9,486 | 9,899 |
| Engineers | 8 | 72 | 2,288 | 2,368 |
| Cavairy | 107 | 829 | 10,004 | 11,840 |
| "Provinciales" | 173 | 1,510 | 43,243 | 44,926 |

A large number of vessels included in this list are not in a very good state, and probably not seaworthy.

Races and Character.-There are four distinct races in Spain: 1st, the Spaniards. who form the bulk of the population; 2dly, the Basques (about 500,000 ), deseended from the ancient Cantabrians, and living in Navarre and the Basque provinces; 3dly, the Morescoes, descendants of the Moors, about 60,000 of whem still reside in Granada and the Alpujarras; and, lastly, the Gitunos, or gipsics, a race (comprising about 50,000 ) spread all over the peninsula. but especially on the SE. coasts; not strolling from place to place, as in England, but generally pursuing fixed occupations in the towns.* The Spaniards are middle-sized, thin, with well-propertioned limbs, dark hair, black piercing eyes, overshallowell by thick eyebrows, sharp features, and sallow complexions. The women are generally of middle or low stature, but gracefully formed, with almost aquiline noses, full, dark, expressive eyes, dark hair, and complexions varying from the flesh tint of N. Europe to the light olive of the Moors.
The character of the Spaniards has been very variously drawn; but though it dillers materinlly in different provinces, its diseriminating features are not to be mistaken. Though commonly slow, cantious, and deliberate, they become, when their passions are roused, rash, violent, and precipitate in the extreme. Though fermal, they are courteous in their bearing, and, though grave, polite. The pride of the Spauiards is proverbial, and they entertain the most overweening opinion of themselves and their country. Though friendly, they are easily offended, vindictive, and mere inclined to revenge real or fancied insults than to remember favours. They are fond to excess of show and ostentation, and will enilure the greatést privations at home to make a display in public. Their vicious institutions and their climate have made them in the last degree indelent and precrastinating. They are intinitely less jealous new than formerly, and their bigotry has become passive rather chan active. They lave ceased, in fact, to care much about religion, and are satistied if they observe the fasts and uumeaning mummeries which it enjoins. Their ignorance often makey them attached to what is mest ruinous to themselves; and those whe think to gain their favour by denouncing some flagrant abuse, frequently find, to their surprise, that it is the object of popular attachment. They are temperate in eating and drinking, though it may be doubted whether this be not mere the consequence of necessity than of choice.
'The listless indolence,' says an observant traveller, Mr. Swinburne, 'equally dear to the uncivilised savage and to the degenerated slave of

* Tho reader is referred, for a coplons account of these singuiar people, to Borrow's 'Account of tho Gypsies of Spain, 2 vols.
despotism, is nowhere more indulged than in Spain; thousands of men in all parts of the realin are secn to puss their whole slay wrupped up in a cloak, standing in rows agninst a wall, or dozing under a tree. In total want of every excitement to action, the springs of their intellectual faculties forget to play, their views grow continel within the wreteled splitere of mere existence, and they searce seem to hope or foresee anything better than their present state of vegetation; they feel little or no concern for the welfare or glory of a country, where the surface of the enrth is engrossed by a few overgrown famities, who seltom bestow a thought on the condition of their vassals. The poor Spaniard does not work, inless urged by irresistilie want, becauso he perceives no aivantage acerne from industry. As his food and raiment are purchused at a small expense, he spends no more time in labour Han is absolutely necessary for securing the scanty provision his abstemionsuess requires. I have heard a peasnnt refuse to run an crrand. becanse he had that morning carned as much alrealy as wond last him the day without putting hinself to any further trouble. Yet I am convinced that this laziness is not essentially inherent in the Spmnish composition, for it is impossible without seeing them to conecive with what cagerness they pursue iny favourite scheme, with what violence their passions work upon them, and what vigour and exertion of powers they display when awakened by a bull feast, or the more constant agitation of giming-a viee to which they are superlati"ely addicted. Were it again possible, by an intelligent spirited administration, to set before their eyes, in a clear and forcible manner, proper incitements to activity and industry, the Spaniards might yet be roused from their lethargy, and led to riehes and reputation; but I confess the task is so diflicult, that I look hpon it rather as an Utopian idea than as a revolution ever likely to take place.
'Their soldiers are brave and patient of hardships; wherever their offieers lead them, they will follow without Hinching, thonghi it be up to the month of a battery of cannon; but unless the example be given them by their commander, not a step will they alvance. Most of the Spaniards are harly, and, when once engaged, go through diticulties without murmuring, bear the inclemencies of the season with tirmness, and support fatigue with amazing perseverance. They sleep every night in their cloaks on the gromme, are sparing in diet, perhaps nore from a sease of habitual indigence than from any aversion to glattony; whenever they can riot in the plenty of another man's table, they will gormandise to excess, and, not content with enting their till, will carry off whatever they can stulf into their pockets. I have more than once been $a$ witness to the pillage of a supper by the munterous beanx and admirers which the ladies lead after them in triumph wherever they are invited. They are fond of spices, and scarce eat anything without saflion, pimento, or garlic; they delight in wine that tastes strong of the pitehed skin, and of oil that has a rank smell mod taste; indeed, the same oil feeds their lamp, swims in their pottage, and Iresses their salail; in inns the lighted lamps is often handed down to the table, that each man may take the quantity lie chooses. Much tobneco is used by them in smoking and chewing. All these hot dry kinds of food, cooperating with the parching qualities of the atmosphere, are assigued as canses of the spare make of the common people in Siain, where the priests and the innkeepers are almost the only well-fed portly figures to be met with.
'The Spanish is by no means a natarally scrions
melancholy nation misery and discontent have cast a glowm over them, inereased, no donits, by the long habit of distrust mud terror inspired by the luguisition; yet every village still resounds with the music of voices and guitars; and their fairs and Sinday wakes are remarkably noisy and riotous. They talik louder and argue with more vehemence than even the French or Italians, and gesticulate with equal, if not supcrior, engrerness. Like most people of sonthern climates, they are dirty in their persons, and overrin with vermin.'
'The Spanish character,' says General Napirr, - is distinguished by inordinate pride and arrogance. Dilatory and improvident, the inclividual as well as the mass, all possess an nosuril confiltence that every thing is practicable which their heated imaginations snggest: once excited, they can see no slitheulty in the execution of a project, and the obstacles they encounter are attributed to treachery. Kind and warm in his attachanents, but bitter in his anger, the Spaniard is patient. under privations, firm in bodily suffering, prone to sudden passion, vindictive, bloody, remembers insult longer than injury, am cruel in his revenge. 'Ihere is not upon the face of the earth a people so attractive in the friendly intercourse of socinty. Their majestic language, fine persons, and hecoming diess, their lively immgination, the inexpressible betuty of their women, and the air of romance which they throw over every action, and infuse into every feoling, all combine to delude the senses and impose upon the judgment. As companions, they ure, incomparably, the most agrecalle of mankind; but danger and disappuintment attend the man who, confiding in their promises and energy, ventures upon a difficult enterprise. "Never do to-day what you can put off till to-morrow," is the favourite proverb in Spain, and rigidly followed.'

In Spain there is a good deal of aristocratic pride, and the distinction of ranks is much attended to. The hidalgos, or gentry, elaim to be descented from those Spaniards who, on the subjugation of the rest of the comintry by the Moors, fomul an asylum in the fastnesses of the northern provinces, whence they again gralually spreal their conquering arms over the whole country. Besides the hidalyos de samgre, or by descent, there are also hidalgos de privilegio, or by oflice, conferred on them by the sovereign; but of these there are comparatively few. Aecorling to the official returns, there were in the kingrom, in 1787, 480,589 hidalgos, of whom no fewer than $401,0.10$ belonged to the Asturias, Biseay, Burgos, Galicia, and Leon. Even at the present time, the titled nobility of the kingdom is ver: numerous. It consisted in 1863 of 32 dukes, all grandees of Spain; 722 murquises, of whom 54 grandees; 558 counts, of whom 59 grandees; 74 viscounts; and 67 barons. 'There are about half a million persons belonging to the untitled nobility. The grandees of Spain, who are the real nobility of the country, are the descendants of those who, in eonsideration of their ceninent services, aequired the privilege of speaking in the cortes covered in presence of the king. A man may be a tituludo, that is, he may enjoy the totle of duke, marquis, or count, without being noble; and in Spain, in fact, such titles are of little more consequence than that of baronet in Great lbritain. The hidalgos formerly enjoyed various privileges, but these have now been very mneh eurtinled. Amony others, they could citnil lands or establish matjorats; these, lowever, are now abolished.

The mamers and customs of the inhals, vary greatly in different parts of Spmin, and are nuch induenced by climate. (See articles Maveid and

round and round, and from the ground to the ceiling, carrying the imarination back to antiguity, and tis the buteheries of a ldoman holiday. The arema is about 230 ft. in diameter; this is surrounded by a strong woolen fence, about if f. in lieight, the upper lalf retiring about a forst, so as to leave, in the middle of the fence, a stepping place, by which the men may be able, in time of langer, to throw themselves ont of the arem. Behind this fence there is an open space about 9 ft. wide, extending all the way romul, meant as a retreat; and where, also, the men in resorve are in wating, in case their eompanions shond be killed or disabled. Behind this spate is anothor hipher and stronger fence, bounding the amphitheatre, for the speetators: from this fence the seats decline backwards, rising to the onter wall ; and above these there are boxes, which are all roofed, and are, of eourse, open in front. The best places in the boxes cost about is.; the best in the amphitheatre below, about $2 s$. Gisl.; tho commonest place, next to the arona, cost 4 reals.

The piealdors are mounted on horseback, each holding a long lance or pike, and are the first antagonists the bull has to encomiter; they stationed themselves on different sides of the area, about 20 yards from the door at which the bill enters; and at a flourish of trumpets the gate flew open, and the bull rushed into the area; this jrombed a deafening slout, and then total silence. The bulls differ very widely in eourage and chatracter: some are rash,--some cool and intrepid,some wary and cantions,-some cowarlly,-some, immediately upon perceiving the horse and his rider, rush upon them ; oblers run bellowing round the arena,-some make townrds one or other of the chulos, who, at the same moment that the bull appears, leap into the arena with coloured cloaks npon their arms; others stop, after having advanced a little way into the arena, look on every side, and seem uncertain what to do. The blood of the bull is generally first spilt: he almost invariably makes the tirst, attuek, advancing at a quick trot upon the picalor, who generally receives him upon his pike, womnding him somewhere abont the shonlder. Sometimes the bull, feeling himself wounded, retires to meditate a ditlerent plan of attack; but a good bull is not turned back by a wound,-he presses on upon his enemy, even if, in doing so, the lamee be buried deeper in his tlesh. Attached to the mane of the bull is a crimson riband, which it is the great object of the pieador to seize, that he may present to his mistress this important trophy of his prowess. I have frequently seen the riband torn ofl at the moment that the bull closed upon the pieador.

- The first bull that entered the arena was deficient both in conrage and ennning: the second was a fierce bull of Navarre, from which provinee the best are understood to come: he pansed only for a moment after entering the arena, and then instantly rushed upon the nearest picador, who wounded himin the neek; but the bull, disregarding this, thrust his liead under the horse's belly, and threw both him and his rider upon the gromid: the horse run a little way, but, encumbered with trappings, he fell; and the bull, disregarding for a moment the fallen pieator, pursued the horse, and, pusling at him, broke the girths, and disengaged the animal, which, dinding itself at liberty, galloped ronnd the arena, a drealful spectacle, covered with gore, and its entrails trailing upon the ground. The bull now engaged the chalos: these young men show great dexterity, and sometimes consideruble courare, in the ruinning light, or rather play, in which they engnge the bull, flapping their cloaks in his face, runniner

Sevines.) The dict of the middle and higher classen, bef, and pork especially the latter dressed in varions ways, and necompanied by cablage, garbatzos (Spanish beans), mions, and large peas called chichoros. The olla, or cocidn, is a favourite (lish; and the sausages (chorizos) of Cast:le are said to be abont the best in Europe. Wine is used only in small quantities, and the kiuds in common use are seldom mach stronger than the low-pricel wines of France. 'I'le siesta, or repose during the heat of the day, is enstomary to all elasses thronghout Spain. From 1 to 4 welock, in Malrid and most other cities, the shops are eidher shat, or a enrtain drawn before the door ; the shatters of every window are closed, and searce a respectable person is to be seen in the strect. But the moment the siesta is over, all is aguin instinct with life and bustle. Dxereise is nsually taken in the evening, when nearly the entire pop. is abroad. Tertulias, or evening parties, are very frequent in the great towns. The theatre is little frequented. Bull-fights, thongh diseountenancel by goverıment, are in Spain what the cirens was in ancient Italy, the national pastime, fivourite resort, and chief ammsement of all chasses. Though by no menus entitled to ligh rank as musicians, the Spminrds have considerable musical taste: and all orders are passionately fond of dancing, the mational dances being the belero and fianhongo; the former a graceful easy movement, the latter a dance of freer and more licentions charmeter, seldom seen in grod society.

The lower chasses live on wretched fare, rarely eating meat, and tish only oceusionally, excejit on the enast. The farming labourers fare somewhat better, the chief articles of food heing breat, sump, garlie, bacon, and garbanzos, with the necompraniments of wine and oil. Notwithstanding the suppression of the convents, memieity is stil exceerlingly prevalent; and perhups the only remedy for this inveterate disease is the abolition of all endowments for paupers, and the establishment of some provision for the poor, as in England. Cloaks and broad-brimmed hats are very generally worn by the men; and the mantilla and fan are in miversal use among females.

Nearly all travellers in Spain give deseriptions of bull-fights. 'The bull-fight,' says a well-known English traveller, Mr. Inglis, "is the mational game of Spain, and the love of the Spaniards for this spectaele is almost beyond belief. Monday in Madrid, is always, during the season of the bull-lights, a kind of holidny; every body looks forwarl to the enjoyment of the afternoon, and al the conversation is abont los toros. Frequency of repetition makes no difference to the true anateur of the bull-fight; he is never weary of it; at all times he finds leisure and money to dedicate to his favourite pastime. 'The spectacle is generally annomnced, in the name of his mujesty, to begin at four oclock; and, before then, all the avennes lending towaris the gate of Aleula are in commotion; the Calle de Alcala, in particular, thronghout its whole inmense extent, is filled with a dense crowd, of all ranks and conditions, pouring towards the gate. A considerable number of carriages are also seen, even the royal carriages; but these arrive later; and there are also many hack cabriolets, their usual burden being a peasant and two girls dressed in their holiday elothes, for there is no way of showing gallantry so much approved, among the lower orders, as treating to a bull-fight. I had been able to secure a place in one of the best boxes. The spectacle was most imposing: the whole umplitheatre, said to eomtain 13,000 persons, was fillel in every part,

$\qquad$

SPAIN
zigzag when pressed, and throwing down the garments to arrest his progress a moment, and then vaulting over the fence, an example which is sometimes followed by the disuppointed animal. lhut this kind of warfare the bull of Navarre seemed to consider child's play; and leaving these cloaked antagonists, lie made furiously at the other pieador, dexterously evading the lance, and burying his homs in the horse's loreast: the horse aud his rider extricated themselves, and galloped away; but suldenly the horse dropped down, the wound having proved mortal.
'The banderilleros then entered: their business is to throw darts into the neek of the bull; and, in order to do this, they are obliged to approach with great caution, and to be ready for a precipitate retreat; because it sometimes happens that the bull, irritated by the dart, disregarels the cloak which the banderillero throws down to cover his rotreat, and closely pursues the aggressor. I saw one banderillero so closely pursued, that ho saved himself only by leaping over the bull's neck. The danger, however, is scarcely so great as it appears to the spectator to be, because the bull makes the charge with lis cyes shout. The danger of the pieador who is thrown upon the ground is much greater; becanse, having made the charge, the bull then opens his eyes, and the life of the pieador is only saved by the adilress of the chulos, who divert the attention of the victor. Generally the banderilleros do not make their appearance until the lull appears, by his movements, to decline the combat with the picalors, which he shows by seraping the gronnd with his feet, and retiring. If the bull show hittle spirit, and the spectators wish that he should be goaded into courage, the cry is 'fuego,' and then the banderilleros are armed with darts, containing a kind of squito, which explodes while it sticks in the animal's neek.
'When the people are tired of the banderilleros, and wish to lane a fresh bull, they signify their impatience in the usual way, and the sirnal is then given for the matador, whose duty it is to kill the bull. The matador is in full court dress, and carries a scarlet cloak over his arm and a sword in his hand: the former he presents to the bull, and when the bull rushes forward, he steps aside and planges the sword in the animal's neck; at least so he onght to do, but the service is a dangerous one, and the matador is frequently killed. Sometimes it is impossible for the matador to engage upon equal terms a very wary hull, which is not much exhausted. This was the ease with the sixth bull which I saw turned ont: it was an Ancalusian bull, and was both wary and powerful. Many times the matador attempted to engage him, but without success; he was constantly upon the watch; always disregarding the cloak, and tuming quick round upon the matador, who was frequently in imminent danger. At length the people were tired of this lengthened combat, and, secing no prospect of its ending, called for the semi-lura, an instrument with which a person skulks belind, and cuts the hamstrings of the animal : this the bull avoided a long while, always turning quickly round, and even after this cruel operation was performed, he was still a dangerous antagonist, fighting upon his knees, and even pursuing the matador. 'The moment the bull falls he is struck with a small stiletto, which pierces the cerebellum; folding doors, opposite to those by which the bull enters, are thrown open, and three miles, richly caparisoned and udorned with tlags, gallop in; the dead bull is attached by hook to a chain, and the mules gallop out, trailing the bull behind
them: this is the work of a moment,-the dones close, -there is a new flourish of trumpets, and another bull rushes upon the arena.
'And how do the Spaniards conduct themselves during all these scenes? The intense interest which they feel in this game is visible throughout, and often loudly expressed; an astounding shout always accompanies a critical moment: whether it be the bull or the man who is in danger, their joy is excessive. lut their greatest sympathy is given to the feats of the buhl. If the picador receives the bull gallantly, and forecs him to retreat; or, if the matador courageonsly faces and wounds the bull, thery appland those acts of scicuce and valour ; but if the bull overthrow the horse aud his rider, or it the matador miss his aim, and the bull seems ready to gore him, their delight knows no bounds. And it is certainly a tine spectacle to see the thousands of spectators rise simultaneonsly, as they always do when the interest is intense : the greatest anil most crowded theatre in Europe presents nothing half so imposing as this. But how burbarous, how brutal, is the whole exhilntion! Could an English audience witness the scenes that are repeated every week in Mudrid? A universal burst of "shame!" wonld follow the spectacle of a horse, gored and bleeding and actually treading upon his own entrails, while he gallopis romad the arena: even the appearance of the goaded bull could not be borne,-panting, covered with wounds and blood, lacerated by darts, and yet brave and resolute to the cud. The spectade continued two hours and a half, and, during that time, there were seven bulls killed, and six horses, When the last bull was despatehed, the people immediately rushed into the arena, and the carcass was dragged out amid the most deafening shouts.'

Mistorical Notice.-After being in part occupied by the Carthaginians, Spain became the prey of the Romans, by whom she was fimally sublued in the reign of Augustus. The country enjoyed a lengthened period of tranguillity and prosperity under the sway of the Romans, but was invaded at the beginning of the 5th century, by the Vurdals and other Gothic tribes, and in the next century the Visigoths acquired the asecndancy, and established their supremacy in every part of Spain. The latter, however, were not long permitted peaceably to enjoy this tine aud fertile country. In 711 a powerful Aralian force crossed the Strait of Gibraltar, and having defeated the Visigoths, and killed Roderick, their king, in a great battle near Xeres de la Froutera, in Anilalusia, they specdily overran the whole country; lriving the remains of the Visigoths into the fastnesses of the North, where they did not think it worth their while to follow them. But the Saracens having been signally defented by Charles Martel, in France, and their tiery zeal having cooled, the Christians began to descend from the mountains of the Asturias, and gradually recovered portions of the lower conntries. The kingdom of Leon was fornded under Alphonso 1., about the middle of the 8th century; and from that period, notwithstanding the superior civilisation, learning, and splendour of the Sarnecnic sovereigns, the Christian power was progressively increased at the expense of that of the Mohammedans.

The provinces that were wrested from the Moors were not formed into one, but into several independent states, which however were, for the most purt, gradually merged in Castile and Aragon. In the 15 th century these two leading states were mited by the marriage of Ferdinand of Aragon
ment,-the doors of trumpets, and aa.

rith Isabella of Castile ; and, having eonquered (iranada, the last possession of the Moors in 1492, and subsequently seized all that part of Navarre to the S', of the l'yrenees, the whole of Spain was mited under the same govermment, and Naples being at the same time concuuered, and America iliscovered, Ferdinand, besides being one of the ablest princes of his day, becume the most powerful.
Ferdinand was succeded by his grandson, Charles I., known in history as Charles V., emperor of Germany, who adlled, by his father's side, the archduchy of Austria and the Low Countries to the vast inheritance of Spain and the Indies, now angmented by the conquest of Mexico and Peru. Charles, the nost illustrions by far of the Spanish soveregors, was suceeded in his Spanish dominions and in the Low Countries by his eldest som, l'hilip Il., the husband of Queen Mary of laghand, who, having comquered Portugal, in 1580, reduced the entire peninsula into one kinedom.
The conquest of Portugal may be said to mark the colminating point of the Spanish monarehy, The tyrumy and intolerance of Philip had already, indeed, raised a rebellion in the Low Conntries; which, atter a struggle unexampled for duration, for the sacritices it entailed on the waker party, and for its bencficial consequences, terninated in the independence of the seven united provinces. The power of Sjain now began rapidiy to decline. The seeds of this decay had, however, been profusely seattered in the reign of Feriliand and lsabella. The establishment of the Inquisition and of the censorship of the press, and the attacks made on the ancient rights and liberties of the nation, paralysed its energies; and the unsuccessful rebellion of the commons of Cistile under Charles V., and the brital and ferocions bigotry of Philip, iI., extinguished every spark of civil and religions liberty, and subjected the country to the vilest of all despotisms, that which principally depends for support on intolerance, superstitious zeal, and religious quackery. Under such a govermment Sjuin either continued stationary or retrograded, while the surrounding mations made rapid advances in the career of civilisation, IIer sovereigns were mere imbecile despots; and on the death of Charles 1I., the last prince of the Anstrian line, the monarehy was dismembered; and it was the arms of Louis XIV., and the talents of the Dake of lerwick, and not the will of the deceased monarch, or the wishes of the Spaniards, that placed a Bourbon dynasty on the throne.
The new dynasty was less intolerant than that to which it succeeded, and some reforms were introduced during the course of last century. These, however, were of comparatively slight importance; and it was clear that the aboses under which the conntry laboured were so deeply seated, and so entwined with every existing institution, and with the habits and prejudices of the people, that they conld not be eradicated, nor even materially aliated, otherwise than by a revolution. This was brought about by the weakness of the Spanish sovereigns and the immeasurable ambition of Napoleon. Not satistied with a considerable subsidy from Spain, Napoleon wished to rednce it to the state of a prov. of France; and with this view he procured the abdieation of the reigning monarel, Charles IV., and proceeded to seat his brother Joseph on the vacant throne. The opposition made by the Spanards to this transfer, and the importunt results to which it led, are well known, and need not be here alluded to. The pride of the nation was hurt; amd the priests, who kuew that the ascendancy of the French woudd
be a death-hlow to them, did not fail to get them in the most odious light, and used every possible means to make them the objects of fanatical hatred. But the arms of Engrland, and the extraorlinary talents of her great general, more thur the laniaticism of the Spaniards, repulsed the French beyond the P'yrences. It is unnecessary to recapitulate the events that followed the restoration of Ferdinanc. After years of civil war and bloodshed, a liberal government has happily been established. Whether it be destined to last, time only can show; but if it be so there can be nos douit that the ahnses which still infest the country will te gradually exterminated, her frgantic resources developed, und the well-being of her people, and her power and importance in the scale of uations, vastly increased.

SI'AlATRO, a city and sea-pert of Dalmatia, Austria, on the Adriatic, opposite the island of Brazza, lat. $43^{\circ} 30^{\prime} 12^{\prime \prime}$ N., long. $16^{\circ} 26^{\prime} 33^{\prime \prime}$ l E . Pop. 10,920 in 1857 . The city is surrounded by ruined walls, is the seat of an archbishop, has a cathedral, and several other churches, a hazaretto, several convents, a gymnasium, and normal sehool, with barracks, and a military hospital. It has both an outer and inner harbour, the former afforling secure anchorage to vessels of any burden. It has rather a considerable trade, consisting principally in the exportation of the produce of the surrounding country, as well as of products brought from Bosnia, inchuding cattle, horses, figs, rosoglio and wax. There are thermul springs in the immediate vieinity of the town.
Spalatro possesses the ruins of the marniticent palace built hy Diocletian. The emperor belonged to Salona, a now ruined city about 3 m . NNiE. trom Spalatro; and being warmly attaehed to his native country, he retired thither to spend the remainder of his days, after his abdication of the imperial purple, A.D. 305. From the vastness of the palace, it is all but certain that he had begrom its erection long previously to his abdication, though, most probably, in the contemplation of that extraorlinary event. The situation seems to have been most judicionsly chosen. 'The soil,' says a traveller (Adam's liuins of Spalatro), - is dry and fertile, tho air pure and wholesome; and, though extremely hot during the summer months, this country seldom feels those sultry and noxious winds to which the coasts of Istrit, and some parts of Italy, are exposed. The views from the palace are no less Leautiful than the suil and climate are inviting. Towards the W. lies the fertile shore that stretehes alung the Adriatic ; in which a number of small islands are senttered in such a manner as to give this part of the sea the appearance of a great lake. On the $N$. side lies the bay which led to the ancient city ol Salona; and the country beyoml it appearing in sight forms a proper contrast to that more extensive prospect of water which the Alriatic presents both to the $S$. and the li. Towards the N., the view is terminatel by high and irregnlar mountains, situated at a proper distance, and, in many places, covered with villages, woods, anil vineyards.' The want of good water, its only deleet, was obviated by the construction of an aqueduct, which conveyed an abumdant supply from Salona. The palace was in the form of a quadrangle, flanked by 16 towers. Its longer sides, including the towers, were each 698 ft . in length, and its shorter 592 ft ., so that it covered in all neurly $9 \frac{1}{2}$ Einglish acres. It was constructed of a beautifut freestone, but little inferior to marble. 'Four streets,' says (iibhon (cap. 13) 'intersecting each other at right angles, divided the several parts of this great edifice, and the
approach to the prineipal apartment was from a very stately entrance, still denominated the goldengate. The approach was termimbed by a prristylinm of granite colnmms ; on one sile of which we dineover the square temple of Eanenlapins (now the chureln of Sit. Jolnt the Blatint), and on the other the oetagon temple of Jupiter (now the enthedral). The bnillings were all lighted from the top, and appear to have consisted muly of one story.
biocletian expired in this splendid retrent, A.1. 313. The amperor Comstantine lorphyrogenitus, whor eould only see the julace in a berlected mul dernying state, allims that no deserijption could eotury a proper idea of its grandenr. bere now, thourh the town of Spalatro has been prinejpally built out of its ruins, its pronligions rimains give a vivid idea of the weald mad magniticence of the lioman emperors.

Nl'AllllN(a, a nurket town mul par. of England, co. limedn, wapent. lilloe, div. llobland, om the Wellam, 18 m . SNS: Limeoln. Aren of par. 12,070 arms. Jop. 8,724 in 1861. 'Though within the fens, the town is well irnined, the strects clena and well paved, and the houses have a nent npparance. It ronsists of four principal strects, anil has n spacions market-phace, at one ent of which is the town-hall. In the same oren space is the honse of correction for the alivision of Llollamb, a brick huilding, constructed at an experise of 16,0001 ., but eaid to be in several respertes defective. The par, chureh, origimally arected in the libli century, but rebuilt, with some adilitions, foring the 15th, is a light structure in the propendienlar style, with n fine tower nud erosketed spire, and a linndsome poreli. 'I'here are places of worslip for ladependents, Buptists, Wesleyans, liriends, and other dissenters, and many charities, incluting Queen Elizabeth's Granmar school, with common bhe-coat, and other schools, 'There are assembly and card-rooms in the town-hall, a subsajption library mad a literary elab: and sormerly an antiquarina society was established at sjoblingr, of which Sir lsuate Newton, Sir llans Shoane, Dr, Stukely, and othor eminent persons, were members. The Welland is unvigable thus far for sloops of 00 tons burden, which come up to the centre of the town, and land or take in cargoes at the coors of the warehouses. Spaldiug has a eomsiderable trade in corn, coal, and Yorkshire and Norlolk wool; and its wrekly market is the largest in the comity for the fat cattle reared in the adjacent marsh lamds. Most part of the neighbourhool is appropriated to growing. It has long been the principal sent of the law-courts for the div, of llolland. At present, quarter and petty weekly sessions are held in the town, and it has a comity court.

SDANDAU, a strongly fortitied town of l'russin, prov. liramlenburg, gov, lotsdam, at the junction of the llavel with the Spree, 7 m . W. Berlin, on the railway from lierlin to llamburg. Iop, 13,911 ia Isibl, exclus, of a garrison of $2,2,2 \mathrm{men}$. Spanlan is the state-prison of l'rissia. Heing filled with troops it has nore the air of an enormons barrack than of n town; and is, in point of fact, so regarled. Both its citadel and penitentiary are deserving of notice; the former, on acconnt of its position on an ishand of the Spree, the latter, because it is said to be managed with exceeding skill. The citadel is a regular square with 4 ramparts, 40 ft . in height, and good casements; the penitentiary was formerly the residence of the electors of Brandenhirg, and has, on the arerage, nearly a thousand inmates, many of whom are criminals sent from the capital. The principal streets are clean, airy, and spacions, in spite
of the disproportionate helght of the homses. The charch of Nt. Nieholas, constructed in the lith
 dan is the mont of a civil tritmal and a forest baril, and has somo manifactures of woollen mid linen cloths, tolnaceo pijes, ami earthenware, with lireweries and distilleries. It was the serene of Harom 'Trenck's enptivity. It was taken ly the Swedes in 16331 , and the Froneh in lavili.

Sl'ANISII TOW'N, (or Santingo de la Vequ). the cap, and went of the legislature of the lal, of Jamaien, eo. Nidhlosex, on the river Coire, abont dim. from the non, and 11 m . WNW. Kingstom. It is the oflicinl residence of the governor and th. commanher-in-chief, nad the sent of the eomert os chancery, antl the suprome conrt of julieature; but has otherwise very little importmese.

Sl'EV, a river of soothand, in the llighlames. It has its nource in larh Spey, within nbont if m. of the head of lowh Iarliy, ind thence pursues a NE. conrse thromph Hadenoeh and strathasey ta Vochobers, below which it falls into the Moray lirith. It repeives immomable momitnin atrams, lut no very inportant tributary. Following its winlings, the comrse of the Sney is about $\leq 1 i^{\circ} \mathrm{m}$. but it is only abont 75 m , in a direet line from its source to its nomith. It slrains abont 1,310 ma. m. of comintry, anl, hesides being one of the largest, is almitted to be the most rapid of Seoteh rivers, Heing fed wholly by monntain torrents, it is very liable to anderen and destruetive immintions. it llows through what is the hest wooded portion of the Dlighlands. 'The Duke of Wichmonal (prosprictor of the fiorion estates) has several valuable salmom tisheries on this river.
Nl'EZZ/A (Ital. Nprzia), a town and sen-port of N. Italy, prov. (imon, at the extremity of the gu:of its own mame, 50 m . ESEB. (ienoa, on the romel
 town is finely sitnated, is tolerally well bmilt, mud has an excellent harbour. Napoleon l., aware of the advantares of its position, is suid to have intended making it a maval station nul asemal; and, since he drew nttention to itsimportance, its commerce lias improved. The ghlf of Spezaia (ane. Portus Lmaa) is nhout is $\frac{\mathrm{m}}{\mathrm{m}}$. in length, by in average breulth of half as much. It exhibits in one part the phenomenon of a powerfin spring of fresh water, which bubbles up from the bottom, and preserves its purity, unnixal by the surrounding salt water, nearly to the surfuce.

SPILSBY, a market town and par. of England, co. Lincoln, soke lblinglroke Einst, in Jinalsey, on an eminence near the Limb, 10 m . from the sea, and 27 m . LSEL, Lincoin. Aren of par. 2,340 acres. I'on. 1,467 in 1861 . The town consists of 4 streets. diverging from a central spuare, which forms the market place. The latter is ormamentel on its l:. side by the market crose, a plain oetagomil shalt, with a quadrangular base, elevated on 5 steps; and on the W. by the town-hall, built in 1764. The par. church is an irregular strueture, eonsisting of 2 aisles, with a handsome eninttled tower at the W. end, said to have been built in the reign of Henry VII. In the interior are neveral antique momiments. The living, a perpetmal euracy, in the gift of Lord Willongliby d'liresby, is worth 109l. a year. Near the town is a new seasionshomse and prison for the div. of Lhadsey, ocenpying about 2 acres of ground, with a loric portico in front, constructed at a cost of 25,0001 . Spilsby being the principal town in the S . part of Linilsey, is the seat of the general quarter sessions, and of petty sessions. It has several charities; particularly a free school, founded by Lord W'illonglsy in 16il, and which has now an income of G6il., and instructs 44 poor children of the par., besides whom there
of the homses. Thie ucted in the lith conuments. Sibur mal and a forest etares of woollent and earthenwnre, It was the weche It was taken by onch in $180 \%$. tiauge der lat Vreat), thire of the lal, of river Coire, uhout WNW. Kimgsti, "governor anilt" wat of the comirt os ourt of julicuture; nportance.

town and sen-jort of extremity of the gu: Genon, on the roul 11.045 in 18tio. The cably well built, and apolenn I., aware of is said to have inmand arsenal; anl, mportance, its comulf of Speqzia (ane. 3. in lengils, by an ech. It exhibies in powerful spring of 1) from the bottom, fed by the surromalrface
ind par, of lingland, Enst, in Lindsey, on 10 m , from the sea, of par. 2,340 ners consists of 4 streets, e, which forms the namented on its li. in octagomal shait, fed on 5 steps; amd uilt in 17ti4. The cture, consisting of attled tower at the ilt in the reign of re several antique ruetinal curacy, in l'Wresby, is worth is a new sessionsCndsey, occupying a Doric portico in 0001. Spilsly being tof Lindsey, is the ions, and of petty ies; particularly a illoughby in 1611, ( $612 .$, and instructs sides whom there
are nbont bit pay-selwhars, Markel-days, Mondays; fitrs, Momilay before and aftor Whil-Mondiay, asulily, mul thed Momday in July.
Sillilis (Berm. Numier; an. Noriontums), a dity of W. Armany, in IShenish Ihavaria, of which it is the cape, on the Rhine, where it is joined by the Speyor, 163 m . NE. Lamdan, om a shori branch of the railway from Mamhein to Strashurg. I'op. $12,8 t 0$ in Istil. Spires is supposed to be one uf the most ameient as it lomg was one of the chici rities of Ciermany. In the i.lthembury it is stated
 Bith centuries it was the nent of the imporial chamber (Reichslimmery"), or supurior court of apmal lir the fiermanic empire; mad, previonsly fo lise!, it bal 5 suburbs, enclosed within ramparts, I: wates, mad til towers provided with artillery; Hat in that year it was tuken and all bint alestroyed liv the troogis of 1 ,onis XIV.; and thomgh rohailt about ten years afterwards, it has never ntained its previous prosperity, It still ocempies a large axtent of gromal, lomi its walls, which are entered liy 5 gates, suclone bumerons open spaces. 'The catherdral, which withstoml the atempts of the French wholly to destroy it, is the most remarkable builing. It was fombled and completed in the Itherentury, of the site, as is alleged, of a boman temple of Vems; mul it is perhaps the most stupendons edifice existing in the round arched stylo. Nine (ierman emperors, and many other coldorated persomages, have becon buried in it, but their tombs were ransacked and mutiated ly the Fremeh in 1 (8x! and $17!11$.
Siace 1819, however, the Invarian government has done mbell to repair the interior of the cathedral, and the Duke of Nassall has erected a spondid modern monument to his ancestor the Fimp. Alolph. Spires has numerons IS. Cath. and fro latheran churehes, a gymmanimm, an orphan asylum, home of correction, forest sehool, botanic girren, and a hall of antiquities, in which many corrosities found in the province are deposited. The onter walls are still standing of an old pahee, in which nu fewer than d! alicts have been held. tf these the most eolelorated by far was that heli in lity, on the sulject of the religions dispmes that then agitated the cmpire. On this oe ansion the majority, consisting of the prory attached to the chureh of liome, agreed to a resolution by which all changes in the ductrine and discipline of the established ehureh, not previonsly approved ly a general conncil, were deelired to be unlawful aind of' no effect. 'The minority, ineluding the primes and others attached to the doctrines of the lieformers, presented, on the linh of April, 15w!, a protest arainst the above resolution; and from this circmmstance they acquired the name of Prodestumts, which has since become the distinguishing term for hose who have renomed the communion of the church of Rome, how much suever they may differ among themselves.
Noviomafus was included by the Riomans in licmania I'rima. It was the winter quarters of Ciwar, by whom it was fortiifed, as a check on the incursions of the neighbouring Allemanni. Scveral Loman, Frank, Saxon, and Swabian emperors embellished and made it their residence; and IIenry V. of Germany gave the citizens of Suires a monopoly of the transit trade of the lihiae, and other valuable privileges. During the lirench ascendaney Spires was the cup, of the dep. of Mont Tonnère.
splTKBERABLiN (formerly called $E$. Greenland), a group of islands in the Aretic Ocean, being the most N . land hitherto discovered, between the 7ith and 81st degs, of N. lat., and the Qth and 23 zrl of 12. long., about 420 m . NNW. the Yol. IV.

North Cape, and nearly milway lelween Gireen land and Xova \%embla. There are fonr prineipal
 and I'rime Charles's Ialam to the W. of the ohlors; leskides many ixdets mod rosks. 'Ihole miled area loes not apirur to bee equal to that of lecland. They rise in many places into moma-
 of which are covered with show, cocval, brolaph, with their creation. 'The cenats are iron-benn't, presenting only a few tolerable harbomes: the berst of these is smererenberer, off the W. eoant, where the Dutch hat once a emoniderable extablishment. 'The surface is, lior the mont part, rastinute al' an!: veretable or mimal prollucts; bat there arre a fiow horars and lisess, which live upon tish, dre spit\% isergen was lormsrly a primeipal station of the whale-tishers; lont the whales lawe, fier a consider-
 ing seas, and it is now but lithe visitm. It was orifitally diseovered by Sir Ihugh Willoughty in 15:3, and was dint visted by the buteh in leam. Its shores were primeipally surveyal by thatain lhipys, in 177:.
 Italy, prov. I'ormgia, on the shope of an isulated rocky hill, $3: \mathrm{m}$. Slí, l'eruria, and (60 m. N. Lome,

 deep ravine, with a neighbouring hill, by hasons of a stupemidoms aymediet, serving both an a romduit and a bridare, raised upon a lofty mage of Io puinted arches; which, thomgh repaired in mondern times, is, no dombt, of Romam origitl. 'The cathedral, lmait in the time of the lombarils, is of a very mixed styld, having a fromt of tive dinthis: arches supported by tirecian pillars, while, internally, it is in the form of a Latin cross, with a double range of Corinthim eolumas. It has some: howy decorations; near it is a himelsome fonntain. The citalde, a massive stone fortress, built loy l'heodoric, amb repmired by Narses, stamis on at beight overlooking the town. 'The 'T'mple of Concorl has becon converted into a church; but in addition to it, Spoleto has two arches, a bridge, he ruins of a theatre, and several other lioman remains: on one of the gates is an inseription importing that Iamibal's troops wore repulsed in an ntack on the town, after the bat tle of 'lhasymenc. It has a few insigniticant manufactures of wonllen stults and hats. Uuler the Erench it was the eap. of the dép. Thrasymene. It was of incomparahly greater importmee in antiquity than in moxlerin limes, and is reckoned by lilorus mong the muninipiar Itulia splendidissimu.
S'L. HELDNA, an island of the S. Atlantio Ocean, famous as tho scene of Napoleon's imprisomment and death. It belongs to $\begin{aligned} & \text { i reat Britain, }\end{aligned}$ and is situated 800 m . Sli. from Ascension Jilimel, and $1,200 \mathrm{~m}$. W. from the cuast of bengucla, in S . Africa; lat. $15^{\circ} 155^{\prime} \mathrm{s}$, long. $5^{\circ} 46^{\prime} \mathrm{W}$. l.engh, I0 $\frac{1}{2} \mathrm{~m}$; breadth, $6 \frac{1}{5} \mathrm{~m}$. ; area, 30,300 acres. Jop. 6, $14+$ in 1861. St. IItclena appuars from a distance like the summit of a lofty submarine mountain, rising abruptly from the shore in rugiged and nhmost perpendicular clillis, varying from 300 to 1, it) 0 ft . in height, diversilied in a few plaees with deep narrow ravines, descending to the soa, and forming difficult landing-places for the fishermen. In the largest of these, towards the NW., is James' 'lown, the cap. and port of the island. The interior is a plateati, abont $1,500 \mathrm{ft}$, above the sea, divided into two unequal parts by a ridge of mommains rising about jot ft, above the plain, and $2,000 \mathrm{ft}$, above the sea: the highest summit of this rillere, called Diana's I'rak, is $9,003 \mathrm{It}$ in height. The geological formation of the island
comsists almost cutirely of hasalt, over which int
some parts are strata of limestome mingled with thita and other igueoms substanees, proving it to have once been the sent of volemice action. $A$ deep erater-like dell, however, called the bevil's l'unch-bowl, is the only fenture at all resembling an extinct volenno. The climnte is mild, and litte variable, the thermometer rimging between $67^{\circ}$ and $71^{\circ}$ Falir, in winter (! mane, Inly, aud Anf.), and hetween tix and 720 in smmer (.)an., Fillo, mul Mareh). laia is common, especinlly in Feds.
 greatly to moderate: the lieat. The inthence of the climate over the comatitution of residenta in the islaud is, howerer, salid to he most disastrons. Areorling to O'Meara (Vaice from St. Il., ii. dis), it is 'extremely' whatolly, liepatitis and dexentery previling to an extent mat with a siverity selhem paralleled, so that very few pursoms puise their dith year.' Ahnat a tifth part of the cutire surfice is covered with soil, which, though mot deep, is rich nud productive. Laxnriant pastures are finum on the high lamds: agrienltare, lowevar, is lat little attended to; mal the indabs. mostly depend on limerign supplies lor their sulport. The valleys are eliedly lain ont in Farden gromad: and here may he seell noar each oblher, mad all tomarishing filike, the mangoe, banama, tamarind, and sagar-came of the tropies, the orange, eitron, grape, fig, and olive of S . Lurope, and the apple, fooscberry, and currant of a still colder region. The yam and all the Eiarojectur vegetables are ubundant, three erops of potatoes being olten raised from the same gromind within the year. The tops and sides of the hills are eoveral with the cabbige tree, dog-wood tree, and gromwool; and the oak, also, has been introduced. Tlie I'alma Christi und common hackherry are so laxuriant as to be cradicated with ditliculty. Cattle and sheepare not numerons, the Inter being barely sathecient to supply the wants of the shipping. (ionts fraze in inmmense umbers on the high grommds. Neither birts nor beasts of prey, if we execpt rats, are found ; but the later are mumerons and destructive, mul here are many varieties of troublesome and poisonons insects. Game is nbumbant, and the coast firmishes excollent fish. Whales and turles are often seen wear the shore, especially in Jan. and Ayril.

St. Ielena, of which the East Indin Company were 'the lords proprietors' till 1839, is now nader a military govermor, assisted by a civil secretary; and the laws are administered by the chief judige. It is still used as a place of refreshment for vessels sailing northward on the Atlantic, those proceding senthward not being able to make the island. It commerce is trilling; the value of the imports, in lstib, amomated to $110,03 \overline{7}$., while the expurts, in the same year, were of the value of only $2 \cdot 1,1071$.
'fames' Town, the port and the residence of the antborities, is the only town. The anchorage is good in 12 fathoms water, and the port is well protected from the winds. The town is entered by all arched gateway, within which is a spaciens parade lined with official residences. The charch, a handsome building, fronts the gateway; and close by it a street bramehes off into the inner parts of the town. The shops ure plentifully supplied with English and Asiatic preducts, but the pirices are invarially very high. The prineipal inhabs. reside on the higher and cooler parts of the island, and visit James' Town only on Sundays, or when the want of supplies obliges them to come to its shops and market. One of the liandsomest of these villats is l'lantation lionse, a mansion of considerable elegance, belonging to
the goveruor, situated in the midst of extensive gronnds, adorned with a vuriety of fine trees mad nhrials.
Longwoorl, the residence of Nipoleon I., stanis on the platema, in the midalle of anextensive park. When first ocenpied ly the ex-emperor, it was of vary limited dimensions; but nome alditions were sulsecpuently made to it. After Nupoleon's death, the louse was for some time numhabited, but it. lins more recently been restored to its former state.
St. Ildena was discovered on the 21st of May (Sit. Ilulem's day), loot, by duan do Noya a I'orthruese; lat mo exdublishment was furmed. nor was the island indabited, tall the Dateh hecame its masters in the midhlle of the tith erntury. Captain Munden, in liza, took it from tho Duach; and it was soon afterwards hramted ly Charles II, to the Einglish Dinast India Comarany, who, with the exception of the priod of Napuleon's imprisumment, held the proprictorshipelewn to 183 l , when it was restored to the English giverumeat.
The fame of this little island rests on its having been the prison of Nipmolen 1. It is mumeressary to particularise the eirenmstanees connected with this memornble evant. Suallice it to saly, that, after the batte of Waterloo, and liss seconil abdication, Napoleon, having retreated to Rowhefort, allifressed on the 13th of .Inly, 1815, the following letter to the l'rince Regent, afterwards George IV.:-

## ' Altesse Royaie.

- Fin butte aux factions qui divisent mon pays, et a l'inimitie des plas grandes puissanees de l'Lurope, jtai termine ma earrièro politique, et je viens, comme The. mistocic, m'assecir an foyer du peuple Britanniqne. de mo mets sons in protiction de ses iols, que je réelamed V. A. RI, comme du plus pulssant, du plus constani, it du plis générene de mes ennemis. 'Napoleon,"

But though Napoleon was more than entitled to compare himself to 'Tliemistocles, he erred wibly in supposing that the l'rince liegent was another Artixerxes. It was, no dondt, indispensable fir the tranquillity of Earope amal the world, and for the advancement of the projects of the allied sowereigns, that Napoleon should be phaced moter restraint. lhat a sense of what was due to thenselves, and still more of what was due to the extromelinary individual the chance of war had placed in their power, shonld have secured him the best asylam and the most generons treatment consistent with perfeet security. It is needless to contrast what they shonld have done with what they actually tid. The sending of Napoleon to St. Ilelena, and his treatment while there, constitute the most discreditalle chapter in the history of modern royalty. It is painful to have to retert that the government of such a comontry as Eugland should have tahen a conspicuous part in this unworthy treatment of a fallen foe. Every realer of ancient history heartily execrates the viadietive malignity with which the Gomans pursued Ilannibal. And yet, in comparing his treatment with that of Napoleon, it should be bome in mind that the Carthaginian hero never relaxed in his hostility to his ancient and hereditary encmies; he did not place limself in their hands, nor lid he appeal to their generosity ; and the probability is, that if they had fot him into their power, they wonld have despatched him at once, and not have sent their illnstrious captive to some miserable islet, to embitter and insult the few remaining years of his memorable life.
Napoleon arrived at St. IElena on the 13th of October, 1815, and there he expired on the sth of May, 1821. Ilis remains, after laving been te-

s'l'. MAW'E's, a market town and men-purt of Eingland, ro. Curnwall, humd. I'owder, par, St.
 harbour, 2 m . ENE, Fulnogith, Aren of par, St.
 monsists of one irregularly-hmit strect, at the linit of a hill fincing the sen, the inhubs, heing princtpally tishermen nul pilots. The harloner of' St. Mave's is a creek le lomging to that of Fabmonth, the entrane to which is defembed by St. Mawe's Castle, built in the time of llenry VIlI. It is governed by a pertreeve chosen at un momal court-lect. This ineomside rable phee spote mems. to the II. of C. from $150: 2$ till the passing of the lieform Aet, by which it was disfrumehised. Markets ua liridays.

S'l'. Tllonis, one of the Virgin Islands in the West Indies, heloming to the lames, in about hat,
 $37 \mathrm{mf}, \mathrm{m},[\mathrm{O} \mid, \mathrm{i} \geqslant, 8: 0 \mathrm{in}$ isfil. Surface monatainoms, and the island generally hess firtile than St. Crois. Dromghts and violent hurricanes are Irepuently experiened. Sugar mul cotton are the principul products. St. Thomas has long been, and still entinues to be, one of the prineipal emporiams in the West Indies. It owes this distinction partly to its comvenient sithation, partly to its spacionis and sade: harlonar at St. 'lhomas, on the s. side of we ishad, and partly and principally to the moderation of the impurt duties, whidi vary from 1 to $1 \frac{1}{4}$ per eelt. Sit. Thomas lias, in eonsergamee, hecome a depot for the supply at the noighomring istands, goods being sent to it to be warchonsed till opporthnity olfers for comvering them to their timal destination. 'The great articles of importation are manafatured goods, principally from Emgland, but partly, also, from cotler comitries of liurope, with provisions and limber from the
 factured and other gonals imported from Gireat Iritain annomited to $8.11 .2001 /$, or $4,206,1000$ dolls. of which $4.14,8001$., or $2,2 \cdot 1 \cdot 1,0010$ dollars in Mritish ressels, and in foreign $\mathbf{3}!2,400 /$, or $1,962,000$ tolls.: in which is not inclided 118,813 dollars, or $23,-16 \pi 1$. value of $58,17 \mathrm{t}$ tons coals, $\overline{087}$ toms itn excess of 1862, importel during I86:3, of which 26,808 in Itritish, und $313,033 \pm$ in foreign bottoms. (leport of Mr, Lamb, British consul, in 'Commercinl Reports.')
s'l. ViNCENT, Nee Vincent (St.).
S'l'ADE, a town of Hanover, cap. district of its own name, on the Sehwinge, near its month, in the JIbe, 20 m . WNW. Hamburg. 1'op, 8,269 in 1861. On the bauk of the Eilbe, adjacent to the town, is the castle of lirunshansen, near which a ressel is stationed to recoive the tull exacted by the Ilanoverian government on all vesseis parsing up the lilbe. Stale las three Latheran charehes, a gymnasium, a cavalry sehool and a central workhouse. Its inliabs, are engaged in manufactures of thanel, de., and have some share in the transit trade on the Elbe.

STAl'FA, a small island of Scotland, belonging to the llebrides, famons for its basalic colimms and caverns, ofl the W. coast of the island of Mall, 9 m . NN Li. Jona. It is of an oval shape, about $1 \frac{1}{2} \mathrm{~m}$. in circ., consisting of an uneven tableland, resting on clifts of variable height, the highest lueng about 144 ft . above the sea. The eliftis, and the caves by which they are perforated, consist mostly of basaltic colamns, resting on conglomerated trap or tufa. 'The columms are partly
perpendianlar, partly whliyue or horizontal, and partly hant. The urarnge dimmetar of the colamas is alonit 2 ft.; bat they sometimes extema to: and I ft. 'I'hey ure geoldorlly pentagomal and hexaromal; they sometimes, lowever, lave 7 ar ! aden, bit are rarely triangular or rhomboidal. They are bot su exgatately united, nor are their angles as sharp us those of the Cimits Comseway.
Fixerpt ant the Ni: shore of the ishand, int the lunding-phee, it is ahnost evorywhere surromided liy elifis hohowed with enverns. lhat the W'. side being exposed to the linls swell of the Athatic, and beat hy a heavy surge, has heedt compuratively little explored, and the primeipal caverma af whicla we have any eertnin information are on its bi. side. Ot these the most celebrated ly fiar is liugal's Cave. The heigh he eave, from the surfiaee of the water, at mean inde, to the centre of the ceiling or arch, is alont tif ft., the height of its sides 36 ft , amb its dephlı 927 ft . Its sides are formed by rameres of unarly per miteular columas ; a deepehmmelled fiswire, parallel to the sides, extolth along the whole length of the coiling, whieh is formed of the bottous of columns whitened by the intiltration of carbonate of lime into their interstices. The sea never entirely ohbs from the enve, the immost recesses of whill may be discosered from withont. In moderate weather hemis suil upto its farthest extremity.
'It womd be no less presimpituons than nseLews, says Dr. M'Culloch (ieology of' the W. Islamps) 'to attempt a leseription of the pieturesque effect of that to whiels the pencil itself is inndequate. But if this cave were even destithte of that order and symmetry, that richoess arisiner from mu!tiplieity of parts combined with greatness of dimension and simplicity of atyle. which it gussessess; still, the grolongred lengilh, the twilight flowm lanf concenline the playful and varying athects of reflected light, the edio of the masisured surge as it rises abd falls, the transparent green of the water, end the prodemond and tairy noliturle of the whole scene, combl bot fitil strougly to impress a mind gifted with any sense of beanty in art or in tillure.
I'he noblest description of this magnificent cave is that given by the great minstrel:-

- that womdrous domu

Where, ns to shinme thie temples derk'd ly skill of earthly archituet. Niture hereclf, it memit, wonh rabe A minster to her Maker's prabse! Not for at moner and asemd Ler columns, or her arcties bend: Nor of a thenoe less rolemin tells That uighty surge that ebbs mul swells, And still, wetween enth awful panse. From the high vanlt min raswer Ir:aws. In varied tone prolong'd and higt, That mocks the orgun's melorly. Lom of the Isles, cent. Iv. st. 10.
In a note on this passage, the anthor says, 'it would be unpardonable to detain the reader upon a wonder so often described, and yet so incapable. of being understord by deseription. This palace ul Neptune is even grander upon a seeond than the tirst view. The stupendous columens which form the sides of the cave, the depth and strength of the tide which rolls its deep and heavy swell up to the extremity of the vanlt, the variety of the tints formed by white, crimson, and yellow stalactites, or petrifactions, which oceupy the vacancies between the bases of the broken pillars which form the roof, and intersect them with a rich, curious, and variegated chasing, occupying each interstice; the corresponting variety below water, where the ocean rolls over a dark rel or violetcoloured rock, from which, as from a base, the ba-
saltle columns arise; the tremendons noise of the swelling tide, mingling with thederp-tomed echoes "f the vanlt, aro elrcmostances elsewhere mimaralloleal.'
Mnckimon's Cave and the Boat Cave, thoursh inferior to that now aleseribed, are nlso magniticent maviris.

Statha was first mate kown to the public by tho interesting necome of it fiven loy sir Joseph lankes, by whom it was visitel in 1772. (l'ennant's 'lour in Scotloul, ii. 300, ed. 1790.) It is luw, during mimmer, frequently visited by stemners ; but it is unimhabited.
s'laFF(ORI), a contral (oo. of Einghanl, having N. Choshire, F:. Derly and Warwick, L. Worcester, nuld W. Salop. Aren, $72 \mathrm{x}, 4 \mathrm{dis}$ neres. Aspect varions. The N. part, or that portion of the co. lying to the $N$. of a line alrawn from Uttoxeter, oin the contines of Dorbyshire, to Newenstle-maderLathe tonsists principally of moorlands. 'The hills, in some parts of this district, rise to an elo-vation of about $\{, 000 \mathrm{it}$. above the level of the Nea; sometimes consistitug of vast heaps of pravel, and sometimes of huge elitls, having immense maseses of rock suattered ronnd their bases. With the rexception of some lematiful valless, the whele of this district is storile, cold, and Ireary. 'The soil in many places is peat; but in some parts, particularly betwern the rivers Dove and Charnet, it is of a siperior quality and produces grool herbnure. The middle and S . parts of the co. are agreeuhly diversitied with hilhs, level lands in pasture mid corn, phatations, and frentlemen's sents; but, in its extreme s . angle, the iron-works are its nust prominent feature. The valley of the Trent is purticularly fertile and beantifing. Cannoek Ileath, immediately to the W. of Rugeley, is the largest of the remaining tracts of waste land in the co. The enltivated land, including parks, is estimated at 600,000 acres, of which 100,000 ming be meadow and pasture, and 500,000 arable. The latter is distributed as follows: viz, 200,000 acres of clay loam, or more friable mixed loam ; 200,000 aeres of cravelly or sandy loam, or other mixed, inchuding caleareons soils; and the remainder, or ( 100,000 neres, of light samdy, gravelly, or other scils. The air is sharp and cold; and, in the IV. parts particularly, there is a great deal of rain. Stallord is more a mining and mannfacturing than an agricultural co.; but husbandry, though not so far advanced as it might be, is, of late, very cousidenaly improved. Wheat, oats, benns, anil harley are the prineipal crops. The usual rotation on the clay land is, 1. fallow; 2. wheat; 3. beans; 4, seeds; 0 . oats. Various important improvements have been effected within the last 50 vears, particularly on the estates of some great landowners, such as the Duke of Sutherland, who has expended large sums on drainage, on the luilding of new, commodions, and excellent farmhouses, and on other substantial improvements. The cattle of Statiordshire are prineipally of the long-horned breed; but, within no very distant period, they have been extensively crossed with short-horns; and the stocks of some of the principal breeders consist, at present, entirely of the latter. Dairy husbandry is extensively practised; eheese is the principal product, and it is but little interior to that of Cheshire and Derby. The slieep stock is estimated at about 187,000, and the prochuce of wool at about 3,500 packs. Property in estates varying from $10,000 \mathrm{l}$. a year down to 40 s : farms of all sizes, from 25 to 500 acres, but the smaller class is decreasing: leases frequently granted, but the greater number of farms held at will. Coal, iron, and lime are foumd in the greatest abundance in most parts of the country. It is
partlenlarly fumons for its potteries and iron lonnderies. 'The chief neat of the lormer is in a distriet ilenominated 'I'lae l'otterien,' between New-enstle-mular-L,yne and Norton-on-the-Moors, in which there are neveral very eonsiderablos towns mul vilhures, mostly supported by the busimess. The meighbomrhand allotids abmatase of tine clay and coal; lint the finest days ure principally brought from l'urbeek, in Dorsetshire, sompatoini from Cormwall, and tlints from the chalk jits nemr Iiravesend, and from Wales and Ireland. The irnt-worksare principally situated in the $S$. moghe of the co., in the vicunty of Walsall, Wednesbury, and Ilikton. The manfacture of lowks, mails, adre tools, bribles, spurs, and an intinity of othor hambare articles, is prosecented mon n very hargo venle at Wolverhampton, bilston, amd Walsall, and their visinity. Solo, the famons establishment of Messes. Moilton and Whtt, whero there is the freatest manufactory of steantengines in the word, is situnted within this eo., on its extrem sonthern burder. (ilass is also made on the conthes of Worecstershire. Wats, whoes, and bowts are prepared it stafford for exportation, as woll as home consumption; and cottom-mills have becou erected at liveltester and other places. I'rineipul rivers, 'I'rent, Dove, and Stonr. The Trent and Morsey eamal passes through the commty, dividing it into two pretty equal parts; mad it is intensected by an inmense number of other canals, and mave recently by varions railways. It is divided into 5 hundreds, exel. of the city of Liehliehl and the bors. of Stallord and Newcastle-mader-L, yne, mad $145^{\circ}$ parishes. It returns 17 mems, to the 11. of C. . viz. 4 for the eo.; 2 each for the city of lichitid and the bors. of Neweantle-muder-Lyue, Stadhin!, Tamworth, Wolverhampton, and Stoke-uponTrent; and 1 for Walsall. Registered electons for the co. 21,545 in 1805, being 10,704 for the northern and $10,8.11$ for the soutiern division. At the census of I8iti, the co. had 147,105 inhali, houses, and $746,9 \cdot 13$ inhabitants; while, in 1811, Stallord had 97,775 inhab. honses, and 510,501 inhalis.
S'carfond, a parl. and mun. bor. and market town of England, hund. Pirehill, in the above cu, of which it is the cap., on the Sow, crossed here by a neat stone bridge, 23 m . NNW. Birmingham, aid $133 \frac{1}{2} \mathrm{~m}$. NW. London by London and Sorth Western raiway. 1'op, 12,532 in 1861. The town is generally well built, the houses, several of which are handsome, being of brick and slate; and is paved and lighted with gas, under the provisions of a local act. A good supply of water is procured from several publie pumps. The principal strect runs NNIV. from the briclice; and near its centre is the market-square, in which is the county-hall, a large modern building of stone, comprising several handsome apartments, besides an assembly room, a grand jury room, courts for the assizes and sessions, mayor's ollice, and other apartments, The county gaol is also a modern structure of extensive dimensions, and well arrauged, both fur the health and classitication of prisoners, 200 of whon may be accommodated in separate cells. Staflord has two pars., St. Mary's and St. Chad's, now consolidated. St. Mary's is a large cruciform structure, in the early English style, from the centre of which rises a lotty octagonal tower: it has been restored in recent years at an expenditure of 10,000 . More modern editices are Cliristelureh and St. Paul's; the latter is a gool specimen of Gothic architecture. St. Chad's is a Norman structure, with more recent Euglish additions. There is a small but handsome Roman Catholic chapel; and the Wesleyan Methodists, Indejendents, and the Society of Eriends have places of

worhip, mostly with nttached Sunday schools. The grammar nchool, an ancient fomblation, was tauch enlarged by EIward VI.: the incone from the endowment excepds $3 \overline{7} 0$ l. a year, two-thirils of which are puid to the hend-master, and the romainiler to the usher. It is open to all boys of the town; but the number of those on the fommintion selfom exceeds twenty. The appointment of masters is vested in the corporation, subject to the approval of the hishop of lichlleld and Coventry. A diocesan natlonal school is established here, aid a hamenstrim school is supported by saloseription. The institution for the relief of the orphans and witowe of the clerery within the urehdeaconry of Stalfori is not only liberally supported by subwription, but has in income of 2,1001 , a year, arisiug from finded property. Superiunuated or intim clergymen, also, are eligible for the benelits of this charity. 'The eomoty intirmary, in the Foregnte, has accommodation for 120 in-patients, und relieves a much larger mumber of patients at their own dwellings. It has a respectuble medical stall. The connty lumatic asylum, established in IsIx. reccives patients not only from the co. itself, but from the kingidom generilly, thourh the former are reepived on lower terms than the others. This establishment is supported both by subscriptions and fumbed property: it is admimbly conducted, and may rank nomong the principal asylums in the kingrlon. The buildings comprise necommodation for 170 putients, and the gradens cover an area of several acres. There is anlinalinshose; lut it is poorly endowed, nul fast falling to decay: The namufneture of shoes is the prineipal employment of the inhabitants, and several mannfacturens employ 150 hands: 11 good workman can carn from 20 s. to 330 s. n week, nul there is a stendy demand for labour. 'Ihe tanning of leather is no longer carried on to any extent. Stafford is noted, in common with the neighbourhoul, for the excellent quality ol its ale.

Stallord was incorpornted in the reign of Joln. It is divided, under the Municipal Relirm Act, into two wards, its ollicers being a mavor, five aldermen, fund eighteen conncillors. The nssizes and fuarter sessions for the eo, are held here. 'The lur, has returned two mems. to the II, of C. since the 2 brd Edward l., the right of election down to the Reform Act being in the resident freemen. The boundary Act inchuled a part of the parish of Castlechuret with the old borongh. liegistered dectors, 1,195 in 1865. The custom of boroughlanglish, by which lands descemil to the younger son to the exchasion of his elder brothers, prevails within the town and libertjes. Stafford is, also, the election town for the N. division of the co., as well as the principal seat of' a poor-law union, comprisiur el pars. Markets on Saturday: fairs, April $5_{3}$ Nlay 14, Jme 25, Oct. 3, and Dee. 5, clietly for horses and eattle. 'There is also a fortuightly cattle market.
S'LAMFORI, a parl. ame mun. bor. and market town of linglinal، SW, extremity co. Lineoln, on the Welland (crossed here by a stone bribge of tive arches), $38 \mathrm{~m} . \mathrm{S}$. Lincoln, 80 m. N. by W. London by road, and 92 m . by (ircat Northern railway. l'op. 8,047 in 1861 . The town is wellhuilt, priscipally of stone, partly paved, well lighted with gas, and supplied with water from Wothorpe, about 1 m . distant; but the streets are irregularly laid ont. The town-hall, rebuilt in 1-̈̈, a large and tine elifice, comprises a sessionsrom, grol, and muniment-otlice. The town las, also, a small, well-arranged theatre, and assembly $\mathbf{y}$ rooms. The other public buildiugs are the churehes, of which only six remain out of fourteen. St. Nary's, consilered the mother-church, was built
about the end of the thirteenth eenfury, num is chlelly in tho later lioghlisla style, haviag a very fine tower and spire. All shints is a handsomos building, witla a tower aud octangular crueketed spire. The livings are all ith the gilt of the Marguis of lixeter. The Wesleyan Methodints, Indepemients, nud Roman Catholies linve places of Worship, and there are numerous Simalay selhols. The grammar school, funuled in 1518 , is well entdowed, the net income of the master being nemrly Totel. a yoar; bint the mehool has for many years pust been of little service to the inhals. A blaccont school allorils clothing and instruetion to about 150 boys: the petty seleonl was fomindel in 1604 , and a girls mation schoil was established in 1815 . The endowed charitics are mumerons and valuable: several hospitals, or almshouses, luwe been fommed at different times; losides which, there are severnl comsiderable lognests lor the relief of the aged poor. A handsome matimary las been bnilt near the town, nud furnishes aceonmodation for abont thirty in-patients and 150 mitpatients. There are no munufactures; but a considerable business is carried on in malting, and in a retail trude with the neighbourhood. The Welland is navigable for barges from hence to the sea. In the town are excellent hot and cold lonths ; und races are heli in March aud July, on Wittering Ileath, in the vicinity. It lias two weekly newspapers and three banks. Markets on Monday and Frulay, the latter being fur corn. Fiairs: Midlent. Monday, Monday before May 12, and Nov. 8.
Staniford (an. Stean-forde, meming the paved furd) was ineorporated in the reign of lidward IV. It is divided, under the Man. Heform Act, into: 2 wards, its oflicers being a mayor and $\overline{3}$ aldermen, with is councillors. Quarter mul petty sessions are held muler a recorder, and there is a county court. The custom of borough-Finglish, by which landed property descends to the yomirest som, 10 the exchision of his elder brothers, prevails here; but there is only one copyhold honse in the town. Stamford las, with some intermission, sent $z$ mems, to the M. of C. since the reifn of Eilward I., the right of election down to the Iiaform Act being in the resident freemen and inhobs. paying seot and lot. The electoral limits were enlarged by the Bonndary Aet, so as to inelude a portion of Sitamford-baron S. of the river. Keg, electors, $55 \overline{5}$ in 1865. Stamford is the principal town of a poor law union comprising 37 pars. The remains of conventual buidings, which are found abondantly: in dilferent parts of the town, show that it was formerly of some importnuce as an ecclesiastical settlement; and in the reign of lidward 111. it berame, for a brief period, the seat of a university, which, however, soon fell to decay.

Within a short distance of the town, on ...: J. side, is Burghley House, the seat of the Marquis of Exeter, one of the finest Elizabethan residenees in the kingrlom. John Clare, the poet, who was born in this neighbonrhood, worked for a time as fardener in the park attached to Burshley llouse. (Sce Life of John Clare, Lomilon, $18 t \mathrm{tin}_{\text {. }}$ )
STARGARD, a town of l'ussia, prov. Pomeramia, on the Ihna, in a very dertile commry, 91 m . E. by S. Stettin, on the rillwny from stettin to P'osen. Pop. 16,077 in 1861. The cupola of st . Mary's chmreh is supposed to be one of the most elevated in (iermany. It has a college or gymansium, founded by a private ctizen in 16i31, and a school of arts, with distilleries and dilferent branches of mamufteture.
STETTIN, an important town and river port of Prussia, cap. l'omeranin, and of a reg, of the same name, on the left bank of the Oder, 36 m , above where it mites with the Baltic, on the railway

 exelusive of garrisont of $5,814 / 1$ mell. The town rommanieates by a bridge with a suburlo on the right shole of the river, and is very atrongly fortileed. It is well built, und Is the most anciont as Well as the principal town of l'omermia. I'rincijul editlees, the royal castle, fovernor's house, mint, exchange, nivemal, mul thearre, It lus several ehmrehes, of which the principal, St. Marv's, was fonmed la l2aia. 'the warelomses belonging to the salt eompmay are the mont extensive of any In J'russia. The rogal mpare is ormamented by in Ntatue of Frederick the dirent. It is the residenee of the provinciad authoritiss, and lus a conrt of npuenl for the circle, n gymmsinm, fomadel in 15.13, un olservatory, a sominary for the truining of schoolmasters, a poblic library, and various other literary institutions ship and boat buidding, and the forging of anchors, are extensively earried on; there are also distilleries, with a consilerable varioty of mannitiones. Sictin is the notat of an extensive mul growing commerce, and the principal port of importation in I'russiat, I'he town owes this distimetion mainly to her sitmasion. The Oller, which thows thrimgh the centre of the I'rissian dominions, is novignble for harges as far as latibor, wear the extreme southern bomulary of l'rossian Silesla, mud is united by means of canals with the Vistula, lillies, and the Spree. Nitettin is, consequently, the primejpal (mprorimm of some very extensive and thorishing commenios; and is not obly the port of Frankfort-ontho-filer, Breslaw, mid other towns, but also of Berlin.

Vessels of emadideralide burden, or those drawing above sovell or cight ft. water, load and milond by menns of lighters at the month of the river at Swinemilude, the ontport of Stettin, on the E. coast of the isle af lisedom. (See Swinemiende.) There is " great wool liair in the month of June ench year. The principal urticles of export eansist of linens, eorn, woul, bimber and staves, zine, mangasese, bones, vil-cake, and bothles. T'lue imports eonsist of sugat, cotfee, and other colonial prombets, wine, imeligo, and other dye-stullis, cotton stullis, varn, and raw cotton, herrimes, hariware, ail, tallow, coml, mal sult, Stetin lans comsiderable imannfactures of woollen staffs, hosiery, leather, snil-eloth; and tobaces, and the most extensive sugar retinery in l'russin.
STEITBENVIISA: a town of the U. States, in ohio, eap. Jethersom, cor, on the Olio, fis m. WF. by $S$. l'ittsburg. Polo. 6,140 in 1800. It is a nourishing, well-thilt town, having woollon, eotton, steam-engrine, and other machine fuetorion: saw, Hour, and puper mille: and printing establishments, the machinery of which is impelled by stean. It presents every probability of a rapid inerease, the comntry uromul being rich nud popolous.
ST'LiNNING, n market town aud par. of Englaul, eo. Sinssex, rupe Bramber, iund, Steyning; area of par. 3,290 acres, Pop. 1,120 in 1861 . The town, on the Alur, 5 m, from the English Chamel, aud 11 . m . S. Horshnm, consists of four indifferently buile streets. It has a very curions Norman ehurch, with a great variet $\begin{gathered}\text { of exeellent and }\end{gathered}$ very elalorate detail. Irotherhood llall, no old editiee of the time probably of Henry VIIl., is appropriated to a free sehoot, founded in 1614, for the classical education of 10 bry's, This town sent $\approx$ mems, to the II. of C. from the reign of Fhloard II, to the passing of the Reform Aet, by which it was disfranchised. The Iramehise was pominally vested in the inhal, honseholders paying seot and lot, but wus really in the hands of the Duke of Norfolk: the proprictor of the borough. It
milluas petty memaions.
 havinif N. tho eo. I'ertli. Fi, the Frith of Fineth
 barton, nod W. the lutter and Jach Iamend. Area,
 extremely diversifled, commisting purtly of high monitains, partly of extensive mosers, and partle of very rich allitial carse lands. Den Damonil, the most celebrated and lest known of the lligh. lame mountains, In the NW. part of the comint: immediately above dorli lomond, has an altitule of $3,1: 0 \mathrm{ft}$. The Fintry, Canymie, and lemusx hills lie in the midhlle nin! 5 , marts of the ewe ; the surface, from beany NW, to Lach lamond, is in most places very bleak and sterilo. Thue low allovial or earse lanids, whieh are ex. tremely productive, lie on hoth sides the Forth, but principally on its S. bank, extending from Falkirk to nbove stirlinf. They are supposell to
 comist principally of a bluish clay, intermixed will smul, In the W. purishes clay soll predominates: ambl, as it rests on a loottom of haril ferruginoms clay, it is cold and wet. In some places along the rivers the soil is light and eravelly. In the high moners it is mossy, and in the lower gromis thero are cansiderable pent bugs. Several lurge estiteos, but jroperty a geot deal divited. Farms in tha lower districts vary from ets to 3100 neres; but. in the hilly and momitainoms districts, they nre mints larger. Arricultare very varions, but rencrally well suited to the sitmiton mul climate. Drainuge las recently been practised on a very extef. sive scale. In the carsc. Wheat, beans, larliey, nul clover, but partienlarly the tirst two, are thae prin. eipul aropis. On the lighter lands turnipes arn largely cultivated, oats being the prevailing eripl on all the poorer high lamals. l'otatoes generally cultivated. sheep mostly of the black-faced Liniton breed, lat Cheviots have been largely introdincel. Wesides the cattle brod in the co., which are not remurkable firt their goodness, great mambers of llighland eattle are anmmally purchased for feedines at the lialkirk trysts. 'I'lese are the groatest fiirs, or markets fur enttle, of any in Scotland. They are hedi wist the secomed Tuesitay of Aug. Sept., inat Oet.; the hast being the largesi. Catile in all aorts of comdition are lorought th shem from all parts of seothnd. but primeipally from the north; as are also sheep and borses. if an averupe. it is supposed that abont 80,0 on entib.
 prosed of at these trysts.
Stirlinghire is said to lave abont lib, 000 acresif hatural wood, and above 10,000 acres of plantations, I'he b, parts of the co, have a tinely dive: sitied appearance, and the view from stirling C'aslie is perhaps unequalled by any other in Britain. (See next art.) Cond nbuinlant, and there are largn supplies of iron-stone. Extensive works have lonst been estublished at Carron, for the smelting of iron, and the manufncture of all sorts of cast-irom goots, whether for civil or warlike purposes, (Sce Camons.) Exclusive of distilleries, nome branehes of manufacture, on n pretty considerable seale, are carried on ut St. Ninian's, Stirling, Falkirk, and other towns. Principal river. Forth; to whid ure tributary the Curron, Jamuekburn, and other small atreams. Stirling has 25 pars, nud roturns I mem, to the 11. of C. Regristered electors for the eo. $1,9+3$ in 1865. The bor. of Stirling mites with the bors, of Inverkeithing, Duafermline, (Incens-: ferry, mul Culross; and the bor. of Falkirk with those of Linlithgow, Lanark, Airlrie, and Hamiltoln, in returning representatives. At the census
of 1861, the co, hat 12,271 inhal), homses, and ol, 12013 Jhhalitants; while, in $18 / 1$, Stirllug lind

srimisu, a roval and parl, lwre, river port, market town, allil fortress of seothand, enp, of the aluve eo., on the Forth, 31) m. W NW. Filhimurgh, and $2: 2 \mathrm{~m}$. NL: Glasgow, on the Seottish ('entral rallway. I'op, of parl, bor., which fuchules the whluth of St, Ninimn's, $13,70_{7}^{7}$ in $\mid$ Elit. The wituation of stirlimg is magniticent in the extreme. It is bullt on the Ski, deelivity of a hill, which, riving from one of the most furtile plains in Neotland, terminates on the N. nul W., immediately over the river, in an abrupt loasaltic rock, nlwnit ; 314 ft , in lieight, surmominted by a the old castle, It consequently hears a strikinis resemblance tu lidinburgh; but its situation is thoer, more central, and in all respects more sutitable for the capitul of scotland. The view from the eastle, if not unrivalled, is, at all events, unsurpassed by any other in the empire. It combines all that ean give variety, interest, and grandenr to a prospect. 'Io the F ; it extends over the riehest valley in scotland, as far as lidinlorgh, commanaling all the windings of the Forth; to the W. is the fertile strath of Menteith, the vew in this direction befing bumbed by llen Lomond; on the N , it is bonnded by the range of the (efhill hills; and immediately to the S is the tleld of Itannockbint, the Marathon of brice and of seotland. The primeipal street, which extends from the castle down the ridge of the hill, with harrow cross streets branching from it dowa the declivity on ench side, Is open and spacions: and the honser, thongh many of them hear marks of antiguity, are genernlly lofty and comfortable. The primeipnl builiting is the castle. I fortress is said to have been erected on its site ly the Romans, and there ean be no donlot of its great antiquity. Its inaccessible situation in the contre of the kingilom, at the point where the l'urth tirst becomes forinble, rembers it, as it were, dhe key of the Lowlanis on the one hand, and of the llighlands on the other.
Stirling early became a place of great importance, and it was for a lemgthened period a favourite roval residence, and the sent of the lesislature. l'revionsly to the invention of artillery, the eastle was a place of great streugth; but, notwithastunding the athlitions made to the works in more modern times, it could not "fpose any effectual resistance to an army properly supplied with artillery. It is a quadrangular building, with an open area in the eentre, and, besides other strustures, ineludes the wh royal palnce, principally lonitt ly James V.. and the parliament house; but these venerable structures have been converted into barracks. It is atipulated in the articles of union with England, that Stirling Castle shall be always garrisoned, and kept in repair.
Among the public buildings in the town are the town-house, gaol, Cowan's hospital, fommed in 163!, and richly endowed: the athenemm, with a :pire $1 \geqslant 0$ lt, in height, and a hall for the eirenit and sheritf courts. The old ehureh, a venerable Gothic edilice, a portion of which firmed part of the Franeisem monastery, fommed in 149, h, has long been divided into two places of worship. James VI., when a child, was crowned in it, on the 29 th of July, 1567 , the coronation sermon being preached by the famons reformer, John Knox. 'l'liree churches belong to the Establishment; 2 to the Free Chureh, 2 to the United I'resbyterians, and 1 each to the Reformed I'resbyterians, Independents, Episcopalians, Wesleyan Methodists, and hom. Caths. Some of the houses formerly occupied by the principal Seoteh nobles are still met with in different parts of the town. Lieligions
dlagent prevails in Stirling, perhans to a greator extent than in nuy other town of Scotland. Fineneane Eirskine, ome of the miniaters of Stirlogg, was (alonge with his brother liahil, one of the min-
 or desochate syoud, aluot 15 10, The town has loeen fong eminent for itanchomes, particularly thone for cinssiend literature. It hoss also a modimmies lostitute and sevornl pmblie lihrarion, Fixclustive of Cowan's hospital, butiad alove, fommed by a citizen of that name, Stirling has two other well ellowed hospitals, exchisive of the interent of d, (one), left in mortmain for belalf of the juwer.

The chief manufacture is that of tartans, tartan shawle, carpets, and yarns, whith is carried on to a large extent; and the droing of yaris, homemade eloths, and silks is alon enrried ons. C'othon foods are manufnetured, though to wo greut. ex tent, with rones, malt, leather, nomp, and comillen. The town has extelswive markets, the corn exchange leing one of the finest in sionland: it has also a consilerable conating and retail trade. Abont 100 vessels are engrageal in the trade on the Forth ip to Stirling, and atenm- packets jly daily betwem the town and Granton lioer, near lodinhiegh.

Stirling received its tirst charter from Aloxumder I. in 1120 ; it is now govemed liy a provest, is Dailles, and 18 councillors. Corporation revemme, about $3,000 \%$ a year. The bur, mites with Ihunlermline, ('ulross, Inverkeithingr, and S. ()uesinsferry, in sending 1 mem. to tho 11, of C. liegisterel elceton, ti3b in $181 . i 5$.

Stirling and its immorinte veinity has bern the scene of some of the most memornble evonts hat Scoteh history: In $129 \%$ Wallace deleated a formidable linglish army close to the town; amd the victory of liruce at lhanmockburn, in 1311, sereurel the inderondence of Scotland. dames II, was lorit in the custle; and there, in $140 \%$, he murdered the Earl Donglas, whom he had inveighed thither by the grant of a safe eombuct, mil the aswirmices of friendship, Stirling was also the birtlyndee of James V., and his fatomite residence. Hore alwo James VI. resided with his tutor, the eclebrated George lhuchanan (Sootoram sui saruli facile princaps), till he was 13 years of age; and here, as alrealy stated, he was crowned in losia. T'lie abbey of Cimbinskemeth, one of the richest and most magnificent in Scothand, atom on the hamis of the Forth, a short way from Stirling. Its ruins are still very comsiderabie.

STOCKBLII)(iE: a market town and par. of England, co. Lants, humd. 'Thorngate, in the 'Test, a tributary of the Anton, and on the Andener camn, 8 m , WNW. Winelestor. Aren of ןar, $1, \underline{2}=21$ neres, Pop, 93:) in 1 Kibl, 'lhe town has a townhall, a nent editice, erected in 1810 by the marguis of Westminster. From the tirst of Elizabeth down to the passing of the lieform Act, hy which it was disfranchised, this petty place, or rather its proprietors, enjoyed the privilece of sending 2 mems. to the II. of C.

S'TOCKHOLM, a celebratol eity of the N. of Lurope, the eap. of Sweden, at the junction of the Lake Moelar with the Maltic, 46 m . W. ly S. Ietersburg. Pop. 12.,69) in 1xis3. Stocklolm is very strikingly situated, partly on a number of islands, at the entrance of the lake, and partly om the mainland, upon both sides of the strail, covoring altogether an area of about 46 sif. m. The view of the city, when approached from the Baltic, commands the palace, the prineipal bridge, and other prominent eljects, and is extremely grand and imposing. On the islands, and more bartieularly on those called Ntockholm (isil. of the (iastle), Ridlderholm (Knight's isl.), and IIelge Aul's holme (isl. of the lloly Spirit), all so near cach other that
they ure unital by 13 short bridges al stone, and others of wool, stand the king's jalace, the great enthedral, the bank, the hall of the diet, and most of the more conspicuous ormaments of the city; but the larger portion of the private honses are huit on the mamand, which on the N. side, called the Nörrmalm, or N. suburb, slopes gradually backwards from the shore; but on the $S$. side, or the siodermaln, rises in bold nbrupt cliffs, where the white houses nestle beautifilly among shading trees. The streets on the mainland ure in genernl regular, though not very wide; but many of those on the islands are narrow and erooked. On the three principal islands most of the houses are of stone, but in the $N$. and S. suburbs the greater part are of stnccoed brick, painted white, yellow, or faint blue. In the remote suburbs wood is the only naterial employed. In most of the houses the stairs and lobbies noe of a clark blue stone. Most of the great thoroughfares are well paved, fur almost wholly destitute ol foot puths. In nil parts of the city it has been necessary, from the nature of the ground, to buidd upon piles. lixcept some elarehes, few buidings of importance are situated in the N. suburb. It contains, however, the two principal squares of the city, one of which, the 'King's garden,' bordered with large shady trees, has a grood statue of Charles XIII.; while the other, called the square of Gustavus Adolplins (one side of which is formed by the opera louse, in whieh Gustivus JII. was assassinated in 1792), hat a well-executed statue of the hero whose name it bears. From this square a handsome bridge opens a communication with the principal island and the royal palace. and forms the most fashionable lounge in Stock holm. The line of this bridge crosses Ilelge Aud's island, cutting off a small portion of the latter, which, being fitted up as a garien, is the resort of the best society of the capital. The siolermalm, or S. suburl, is commeeted with the city by a lidige, underneath whieh are sluices for rrawing oll' the waters of the lake. It has 2 fine elurches, and a statue of Charles XII. on the military parade.

Though stockholm has numerons statues, it has mat few pablic edifices of an ornamental character. The palace, however, an immense quadraugular edifice, begun during the reign of Charles XII., has a majestic ajpearance from whatever point it may be viewed. Its $\mathbf{N}$. and S . faces being prolonged eastward towards the sea, inelose between them it flower-garden. The lower part is of polished granite; the upper, of brick covered with cement. It contains a musenm of antiquities and senijture, with several good works by Swedish artists; a pieture-qallery, in which are a few tine paintings ly Waphace, 'Teniers, l'und lotter, and Ostade, some other sumerior paintings in the queen's apartment; the royal library, witl $60,0 t 00$ vols., in which a copy of every book printed in Sweden must be deposited; the nint, the repository of mational arehives, and $n$ chapel, very splendidly fitted np. liroad and massive quays, which surromed the palace on its E. and N. sides towards the prineipal harbour, effectually prevent the noise and confusion of the shipping, which at one point is very dense, from reaching the royal apartments. On one of the guays, within view of the palace windows, is a stathe of Ginstaves IlI.; and at the other emb of the avenue leading from this point, a small but handsome obelisk las been raised to his memory. The lingr's stables, on an indiacent island, form a very extensive quadrangular building, having aecommolation for 120 horses. The churehes, extemally, are in qeneral devoid of architeetural merit: lint the cathedral of St. Nieholas's chuteh, abjoining the palace, in which the
kings of sweden are crowned, is imposing from its mass, and has some paintings and seulptures of merit, and a remarkable jicce of carving, representing St. (ieorge and the Dragon. But the mont interesting chureh is the Riddarholm, in which the kings of sweden are buried, anl in which are preserved many national military trophies. The spire of this elurch, destroyed by lightning in 1835, has since been replaced. 'There are also German, Fimish, and scotch Presbyterian churches. The likharlsuset, or llall of the liet, ereeted in the time of Queen Christina, is in a peenliar style of architecture, and has its roof ornamented with statues. The room in which the diet assembles is of moderate size. Its walis are hung with thie armorial bearings of the principal Swedish fanilies, and its seats are subdivided into 4 distinet compartments, withont, however, any dilferenee as to the mode of their tittings. The president's clair, a line speeimen of workmanship, is at the upler end of the hall; the nobles' seats being on the right, those of the elergy on the left, and those of the town and country deputies in frout. The town-honse is an old-fishioned building, with 4 wings. The military hospital, on one of the more remote islands, is among the best establishments of its kind in Enrope. The hespital, formed hy Gustavus III., though spacious, is not so well conducted. There are several well-ordered prisoms, and pmblic charities of various rlescriptions, including a formolling hospital, to which maty children are carried.
There are several public parks in the neighbourhood of stockholm. The most celebrated is the Djurgarten (cleer garden), to the J. of the city. From its great extent and romantic ctaracter, it is, probably, the finest public park in sumpu. The rugged peninsula, of whieh it ocenps's the greater part, is so varied with roeks and trees, that art, wheh must do every thing in the parks of other great eapitals, has liere only not twinjure mature. The margin of the peninsula is covered with old-fashioned eating-houses and places of entertainment. Within this confused cirele runs the beantiful carriage drive, lined with moden villas of elassical design. Swiss cottares, and ltalian verandalis. Among these are placed coflec-hons:equestrian theatres, and dancing-rooms, while the space between them and the road is ocenpied with thower-plots and shrubberies, throngh whieh rustie seats are seattered. In this park is the bust of Hellman, a lyric peet of great excellence, in the time of dinstavins 111. The ambiversary of this puet's birth is kejt with great rejoicings by all clasees, but enjecially the Bacchanalimn Cluh, whose members, headed sometimes by the kiug limself; come ont in festive array, to parale ronnid this bust, which is very appropriately decorated with griples and vine-leaves. Nut far from this popular monument is Rosendahl, a favourite snmner residence of the king. This, like all the other houses in the park, is n portable wooden ediliec, which piece of structure is very common all rumd Stockholm. Drottningsholm and Haga, at different distances from the eapital, are other royal smmer residences. Near liosendahl Palace is an immense porphyry vase, 9 ft . in brigt and It ft. in diameter, which cost is, ut 10,0007. Oppasite llaga is the new burini-ground, a spacions cometery, in which are some fine monuments. Carlberg and Ulriksdale were formerly rayal palaces: hit the former has been converted into a military academy, and the latter into a militury hospital.

Stockholm is the principal emporium of sweden. The entrance to the harbour from the lhatic is intrieate; lout the water is deep and the harbour itself cipacions and excellent, the largest vesods
imposing from and sculptures of f carving, repren. Bat the mant holm, in which mill in which are y trophics. The by lightuing in cere are also Geryterian churches. Diet, erected in a peculiar style ornamented will e diet assembles re hung with the al Swedish famid into 4 distinct r , any dilferente The president's anship, is at the es' seats beiug on the left, and thesse es in front. The building, with 4 a one of the more st establishments sital, foumded ly ; is not so will il-ordered prisoms, deseriptions, into which many

Oppusite a spacious cemeiments. Carluert yal palates; hat into a military ilitary hospital. orimm of sweden. the Baltic is inand the larbour ic largest vesscls
hing close to the quays. The priucipal exports are iron, timber, and deals. (See Swedes.) Stockholm is also the chief munufacturing town of the kingdom, having woollen cloth, cotton, linelu, silk, hlass, aud earthemware fuctories, ironworks, including factories for the construction of steam engines. The more important branches of rommerce are generally carried on by natives of the city; settlers from the provinces being comparaticely few, except such as are engaged in the more laborious kinds of occupationi., During the summer nearly all persons in tolerable circumstances spend part of their time in the environs. At all the pmblic places visitors are waited on by women; and a stratger is surprised to see many amployments entrusted to men in other countries liere undertaken by femnles. The ferry-boats, for instance, are almost all rowed by Dalecarlian lemales, in their peetiliar native costume.
Stockholm has several distinguished acalemies, incluting the acatemy of seiences, established abont 17.10 , with an almirable museum of zoolugy; the Swedish academy, founded by Giastavis III. ; the academy of painting nut scilpture, which has producel Sergel, Fogelberg, and lisstrom ; and that of literature, a college of medicine, schools $0^{*}$ navigation and drawing, with societies of agricuiture, commeree, and philosophy. There are also several clubs and reading-rooms, on the same plan as those of London.

Stockholm appears to have been founded by Dirger, regent of Sweden, in the thirteenth century. It became the residence of the Swedish sovercign soon after Birger's death, but was not recognised as the capital till the seventeenth century, previously to which, Upsala had been the seat of the court.
S'HOCKPORT, a parl. bor, and manufacturing town of England, co. Chester, on the borders of Lancashire, $\overline{\mathrm{m}}$. SL. Manchester, 10 m. N. Macclesticld, mud 183 m . NW. London, by London and North Westerin railway. Pop, of bor. 54.681 in 1861. The parl. and mun. bor. comprises the township of Stockport, with part of those of llrinnington and lleaton Norris, and the hamlets of Brinksway and Edgeley, in the aljacent par. of Cleadle. The town-proper, which is supposed to occupy the site of a Roman military station, $\mathrm{i}_{\mathrm{s}}$ luilt on an abrupt hill beside the N ; reey, which, sweeping round its E. and N. boumbary, is here joinel by the Tanc. From the bank of the river the honses rise in suceessive tiers romal the sides of the hill, from the base to the summit, some laving apartments excavated in the sandstonc ruek; and the mmerous extensive factories elevated above cach other, and spreading over the town, give it, especially when lighted up at night, a striking appearance. The most ancient part of the town surrounds the church and market-place on the top of the hill, whenee various strects diverge in difterent directions. The principal street, called the Caderbank, follows the direction of the old lioman ruad S . to Buxton. Three bridges across the Mersey connect the town-proper with its suburbs of Portwood and Heaton Norris. Portwool, in the township of Brinnington, is large, populons, and of considerable manmacturing and conmercial importance. To the W. of Stoekport numerous strects, honses, and facturies cover the yreater part of the hamlets of Brinksway and Edgeley. Heaton Norris, which is sitnated in Lancasiire, commmicates with the better part of stockport, by a new line of road, and a noble brige of eleven arches across the valley and the river. The areh over the river, built of lard white stone, has a span of above 90 ft, and an clevation of 10 ft , above the water. The arches on the

Cheshire side nie carried across several streets, leaving thoroughfares undernentl.
Steckport is well paved and lighted with gas, and there is an ample supply of water. The pur. clarch, the chief public edifice, appears to have been erected in the 14th century, but has leen much patched up in later times. The chancel had a fine decorated E. window, but this has been removed. At the W. end of the chureh is a lolty square tower, crowned with a piereed parapet anil pinnacles, and in the interior are several anciant monuments. The living, a rectory of the clear aunual value of $1,882 L$., is in the gift of Lady Vernon. There are fourteen other churehes in the town, among them St. Thomas's, an elegant building in the Grecian style, erceted at an expense of 14.555l, and numerous places of worship for 111dependents, Methodists, Friends, Unitarians, R. Catholics, \&c. A free grammar school fimuded in 1487, is under the govermnent of the (Goldsmiths' Company of London. It gives gratis instruction to 150 boys, soms of inhabs. of Stuckport, in the ordinary branches of edacation. Their nomination rests with three visitors appointed by the Goldsmiths' Court of Assistants. Some haudsone buildings for this foundation have been erected, at a cost of about 4,000l. A large national school was established at Stoekport in 1805, and sehoulhouses were built, it an expense of 10,0001 . A great number of childzen of both sexes are educated here, and without the town this establinhtment lus several branch sehools. Most of the religions donominations have their own Sumbay schools. There are almshonses for six pwor ment, founted in 1683, and various other charities for the relief of the poor. A poblic park, called Vernon Park, of 26 aeres, with statues and fomtuins, was opened in 18.58.

Formerly, the winding and throwing of silk were the principad branches of industry in Stockport; but these have decliued in fiveor of the cotton mandature, which now ocenpics the grenter part of the pop. Many large factorics have been construeted of late years. There are also several silk-mills in full activity, the rivers alfording an ample supply of water. The importance of Stockport as a manufacturing town is, however, eliectly owing to its abundant supply of coal, oltained from loynton and the distrieto on the line of the Manchester and Ashton camal, with which it communieates by a branela camal. The weaving of calico has spreal itself over all the neighbouring villages, and ealico-printing is earried on to a great extent, there being many large dye-houses in the vicinity. Fine woollen cloths aind hats ure ulso manuliactured, and the construction of machinery is an important department. The mun. bor. is divided, muler the Mumicipal Reform Act, into 6 wards, :ind is governed by: it aldermen and 42 eomacillors. The ancient charter of incorporation is of nueertain date. 'The oflice of mayor was, till a late period, mostly honorary; the town now has a commission of the peace. Corp. revenue, 15,3291 in 1860. The heform Act eonferred on this bor., for the first time. the privilege of returning 2 mems. to the 11 . of C. Registered clectors, $1,3,7$ in 1865 . The mon:t interesting olject in the vicinity of Stoekport is the stupendons viaduct of the Manchester and Dirmingham ruilway over the Mersey, erected at a cost of 100,0001 .

This town was a military post of some consequence previously to the Conquest, but as it is not mentioned in Domestay lisok, it had probably been destroyed at that epoch. No remains now exist of its old castle. In the civil war, Stockport was first garrisoncd by the parliament;
then taken by I'rince liopert, lut finally refaken by the parliamentary troops, who retained it till the termination of the contest.

S'JOCKTON-ON-T'LES, a town, sea-port, bor., and par. of England, heing, next to Neweastle, Sumderland, and Hartlepool, the principal port in the kinglom for the shipment of coal, eo, burliam, waril Stockton, on the Tees, near its mouth; $17 \frac{1}{2} \mathrm{~m}$. SE. Jurlam, and 238 m . N. Lumblon hy Great Northern railway. Pop. of manic. bor. 13,357, and of par. 13,761 in 1861. Area of parish, which comprises the townships of Stockton, 1'reston-on-Tees, and llarthurn, 4.190 acres. The town, one of the cleanest and handsomest in the N. of Eingland, consists of a straight and wide main street, a mile in length, romming from N . to S., in which are many good houses, built ehiefly of brick, though a few are of stone, taken from the oll castle. Jrom this street, smaller oues braneh oll on the E. towards the river; while on the W. a great many new honses mul streets have been recently buit. In the NE. part of the town is a spacions square, lately enelosed and planted, in which are some good buildings. Shout the middle of the high street is the town-hall, a commodions square edufied, with court, assembly, and other publie rooms, but partly oceupied as an hotel and near it is a handsome Doric cohmm, on the place formerly ocempied by an open eross, Near thes. ent of the town is a landsome stone hridge. with tive ellipiand arches, erected hy subseription, between 1764 and 1769 , at an (expense of $\mathrm{K}, 0001$. The tolls of the ferry over tho 'lees were previously the property of the hishop of Durham, to whom a consideraible ammity was mate payable by the shareholders, bit the whole dobit having been paid olf, the bridge becane toll free in 1820 .

A little further $S$. the Tees is erossed by a suspension bridge, forming part of the Millidehorongh branch of the Darlington and Stocktom railway. The lort Clarence railway terminates on the 'Fees, a little Nb. of Stockion. The par. churnh is a moat brick elition, with a tower 80 ft . in height at its W. end. Ithe living, a vicarage, worth 24 al. uyear, is in the gilt of the bishap of Durham. There are places of worship for haptists, Friends, Independents, Methodists, Unitarians, and hom. Cath., severnl having Sunday schools attached; a merbanies' institute amil lihery, a subseription-linnary, ame a neat theatre. A charity-schoon was fomated here by subseription in 1721, and a selowal for girls in 1803 ; and Storkon, with the aljacent parish of Nurtom, has a selohlarship at Emazemonse Culloge, Oxan. Some ilmshonses, establisheal in 1 iss:, were rehith in 1816, and afford accommodation to 36 poor persons. It lus a dispensary, a savings' bank, and many benefit socicties.

The only mamifacture is that of sail-elotl, for which there are some considerable establishments. New eal mines of harge extent have been disrovered in the neighbourhood, and the trade of the port has increased comsiteribly of late yoars. linen and worsted yurn and lend are also shipped in considerable guantities. There belonged to the jort, on the lst of Jan., 18th, cight sailing vessels under 50 , and 39 above 50 tons, hesites eleven steamers under 50, and four above 50 tons. The constoms revenue amonnted to $\mathbf{7 5 , 0 3 1 5} \%$, in 18133 , The purt dues belong to the bishop of Durham, as loril of the manor, bit are leased to the corporation at a nominal rent. Stockton is supposed to have heen incorporated about the 13th eentury. The mun. borough is divided iuto two wards, und is governod by a mavor, live aldermen, ard eighteen councillors. The bor. has, under the

Man, Reform Act, a commission of the peace and a connty court.

Stockton is of considerable antiquity, and was long the oceasional residence of the bishops of Durham, Its eastle was demolished by order of parliament in itilo.

S'TOKLEULOON-TIBEN', a parl. bor, township, and par, of Jingland, co. Stafford, humb. Pirchill, on the Trent, 2, m. E. Neweastle-tuilerLyne, $15 \mathrm{~m} . N$. by W. Stafford, and $14 \mathrm{~m} . N W$. London by North Staffordsliire and London and North Westem railway. Pop. of par. 71,30x, and of parl. bor. 101,207 in 1861. The parl. bor, eomprises the most populons portion of the par., including the townslijes of Janley, Shelton, lane End, Fenton, with those of Burslem, Punstall, and Ruston Grange, and the hamlet of Sneyl, in adjacent pars., being, in fact, co-extensive with the district termed the Potteries. It has an entire area of abont 16,000 acres. Stoke-upon-Irent is lighted with gas, and well supplied with water. The ohl parish chureh being mueh lecayed, a new and hamisome charch was erected in IX:26, partly by subscription among the inhabs. In it has been placed $\mathfrak{a}$ bust of the great foumater of the earthenware manufictory, the celehrated Josiah Wedrwood, who died in 17!. There are several other churehes, amb chapels for various dissenting sects, and a large mational sehool. The 'l'rent and Mersey eamal passes through Stoke par., and on its banks are momeroms wharls for shipping the carthenware, whieh is the great, and, inderd, alnost the only brodurt of this district. The towns uow inchided withm the distriet ealled the l'otteries have ahonst all risen to importame since about 17 (i0), when Welgwood connmenead his eareer. 'Ihe Reform der ereeted it and the listriets speeitied above into a parl. bor., and gave it the privilere of sembing two mems. to the 11. of C. Learistered electors, 2,8 is in 1865 .

The towns and villages comprised in the Pufteries, or in the parl. Wor. of Nitoke-rpon-'Trent, are so mear each of her, that their limits are mot easily detincd, and to a stranger the entire district has the apmearance of a large straggling town. A very large proportion of the pop, is engaged in, and a still greater is dependent for support on, the manufacture. With the exception of the rolad used in gilding, must of the materink enpioyed are worth very hittle; so that the value of tho timished articles, as well as their exquisite beanty and adaptation to every purpose of utility anil ormment, is mainly ascribable to the skill and lahour expended upon them. The wives and children of the workmen are usually employed; and thongh they work torether in factories, get, as they reside in separate cottages, the mamulacture partakes largely of the domestic character. The noxions process of glazing, so injurions to the health of those amployed, has been remideral nearly free from its deleterions eflects by the sulhstitution of boracie acial for heal, which was formerly wholly used, but now only in the proportion of eight per cent, 'lhe people employed in that branch were formerly mot nimissible into culs, and were considered as degraded ohjects from the insalubrity of their employment; but they are now received into benclit societies. At pursent the Potteries are in a thomrishing comelition; and, speaking generally, the workpeople have a healthy comfortabie appearance. The simety schools in the district are extremely well attended.
STON li, a market town and par. of bing lant, co. Staflord, lumal. l'irehill, on the 'l'rent, and 0,1 the high roal from london to Liverpoul. 20 m . NW. Sichlield, on the Lomden and Nortle W'entern railway. I'op. of town $4, \overline{0} 09$, and of par. $9,38:$ in ished by order of Jeweastle-underand 1.4 m . NW. and London and par. 71,30x, and e parl. bor. eomn of the par., in$r$, Shelton, lane irslem, 'Tunstall, nlet of Sueyil, in o-extensive with It has an entire ke-apon-Trent is lied with water. I decayed, a new al in 1826, partly s. In it las been er of the earthenel Josiah Wredgare several other dissenting sects, e 'I'rent and Mlerpar., and! on its for shipping the eat, and, indeed, his district. The listriet ealled the II to import:nure wood eonmmencel erocted it and the arl. bor., and gitve nems, to the Il. of $1118(65$.
prised in the Put-toke-1!pon-'lrem, heir limits are mot the eurire district raggling town. A op, is engraged in, for support on, the otion of the gold anterials cmployal the value of the exquisite le:auty, ose of utilisy anid to the skill and The wives and isually employed; in factories, ym, ges. the manumbeomestic character. ar, so injurions to as been romteral treets by the suthal, which was foror in the proportion emploged in that issible into clabs, d oljeets from the at ; but they are thies. At present g condition ; and, kpeople have a © The Simmay ely well attended. par. of England, tho Trent, and ma Liverpoul. $\because 0$ m, ad North Western ud of par. $9,88: 2$ in
1861. Area of par. 20,030 aeres. The town eonsists primeipally of two st reets crossing each other, and is pretty well built. The par. chureh is a modern structure, with a low spume tower; the living, a perpetual emracy, wortli 2lill a year, is in the gift of the crown. Jere are chapels for Independents, Wesleyans, and Lom. Caths.; with a free school fumbled in 1558 , and other charitable culowments. The Trent and Mersey canal passes through the town, the inhab of which are principally engaged in the mannfacture of shoes. Petty sesxions are held here every forthight.
Stone is supposed to owe its origin to a monastery founded in 670, afterwards made subservient to that of Kenilworth. Meaford, in Stone par, was the birtlplace of Sir John Jervis, afterwards Eirl St. Viscent, from his great victory wer the Spanish Ileet, off Cape St. Vincent, oin the 1 Hth Fobl. 1797.

STONDHAVLiS, a bor, of barony, sea-port, and market town of Scotland, eo. Kincardine, of which it is the capl., on the German Oeean, at the pinint where two small rivers, the Carron aud C'owic, fall into a small bay, tlanked on both sides hy lofty rocks, $1.1 \mathrm{~m} . \mathrm{S}$. by W'. Aberdeen. Pop. 3.009 in 180l. The town consists of two parts: the old town, on the S . side of the Carron, is irrarularly and badly built; but the new town, on the N . bank of the river, on the estate of Mr . Barclay of Ury, whieh has rapidly grown up, is comparatively well built and landsome: it consists of two parallel streets and eross streets, with alarge square in the contre, and is far superior, in wealth and pop., to the other. The two towns are connceted by a handsome stone bridge. The parish churehes of Junotiar mad Fetteresso are in the inmediate vieinity of the town, which has also wo chapels, belonging to the Episeopalians and seceders. lixclusive of other .aminaries, the town hiss a free school for the education of sixty poor children. The harbour, which is a natural basin, his: been improved by the erection of piers, and athords a safe refige for the smaller class of vessils, The inhab, engrage to some extent in the horring and hadduck tisheries.

Dumbtar Cistle, abont $2 \mathrm{~m} . \mathrm{S}$. from the town, stambs on a lofty peminsulated rock, projecting nto the sea, heing separated from the mainland lif a vast chasm or hatural lisse. The summit of the rock, which is mostly oeempied by the ruins of the enstle, comprises alont it aere. I'his castle was, for a lengthened period, the property and residence of the moble fimily of Keith, parls marisehal. It was forfeited amb dismantled aftor the rehellion of 1715 , on the attainder of its noble proprictor. Owing toits position, it was formerly a place of considerahle strength, and has been repeaterlly hesioged.

STONEAENGE, the name given to a gigantie ruin, eonsisting of vast stomes, partly upright and partly fallen, on Salishury Plain, eci, Witts, Eingland, 2 in. W. Ameshury; and 7 m . N. Salisbury. Though its preselit appearance is that of a eonfised mass, justifying, in surne degree, Camden's (pithet of insema substructio, it is seen, on a little examination, that its oririmal form, which may be easily traced, was cireular. When perfect, it had ronsisted of iwo concentric circles of stones, with two imer gromps of stones. The miter circle, the diameter of which is lot) feet, appears to have urigimally consisted of thirty puright stones, of which seventeen are still standing, Their average height is about. 1.1 ft ., and their sales 7 ft . by 3 ft . bach of these upright stomes has tenoms on its bי! "r ene'., on which were p!aced lurizontal stones or imposte, with mortices to vorrespond with the tenoms; and these imposts leing connected to-
gether, formed a continuons circular arehitrave all ronnd the fiblere, The inner eirele, 8 ft. 3 in , within the onter elrele, consists of smaller stones, more irregularly shaped than those in the anter cirche, and withont imposts. Only cight stomes of this circle are now standing; bit there are remains of twelve others on the ground. Within the inmer circle are two groups of stones, having hetween them a latge that stone, called the altur. Sume of these interior stones are of vast sime, and havo imposts similar to those of the outer cirele, Necording to what appears to be the most accurate enlenlation, Stonchenge, when entire, must have comprised, in all, 129 or 130 stones. They eonsist mostly of a tine, white, compact sandstone, closely resembling, or rather identical with, tho greyweathers and other detached masses of stono seattered over the shrface of the downs in the vicinity of Avebury aud Marlborough.

This figantic structure is surrombled by what must originally have been a deep treneh, about 30 ft. in breadith; and connected with it are 111 avemue and cursus. The former, a narrow road of raised earth, extends in a direct lime from what is supposed to have been the grand entramee to the structure, a distance of 504 yards, when it divides into two branches, one leading to a row of harrows, and the other to the cursus, an artiticially formod tlat tract of gromind. The latter, $\frac{1}{2} \mathrm{~m}$. NL. from Stonchenge, is bonnded by parallel hanks and ditehes, measuring 3,036 yards in length by 110 yards in breadth.

Such is a brief notiec of this stupendous monument and of its priacipal appendages. Nimilar remains are found at Avebors, in the vicinity, and in various places in Britain, the Orkney Islands, de. Conjecture has exhausted itself" in vinin. thongh frequently ingenions, attempts torexhain the origin and use of this wondertul fiblere and others of its class. The most common יpinion is that it. was raisel by the ancient Britons lior a Druidical temple Fisewhere (see Avenurs, I. 305) varions reasoms have been given for helievinar that the statement of its having been comected with the worship of the Druids is altorgether $\quad$ Infounded, and that there is no evidence to show that the ancient britoms raised or could raise so extraordinary a structure. In truth, nothinir is known of this and the other monmments of the same kind, beyond the fact of their existelue. They belomes to n period of which all records have irretrievably perished; and it is extremely improbable that the veil by which their origin and the prome of their fonnters is now hid shombl ner be drawn aside. Inign Jones, the learned Dr. Stukeli; Dr. Sinith, Sir R. C. Hoare, (iongh, in his rid of Camden, have riven deseriptions of Stonehenge.

STONLIIOUSE, See lismoURI.
STOLNOWAY, a hor, of barony, sea-port. and market town of scotlams, oft the Fi, site of the island of Lewis, one of the Hebrides (which sere), on a fine bay, ai m. W. by N. from the mares point of Cromarty, on the manaland. I'op), of town, 2,587 in letil. This, which is the most considerable town in the Western Islambs, has grown m, within no very long period, trom a paltry hamlet of abont a dozen honses, in consequence of its favourable situation for earrying on the lerring and cod and ling tisheries, especially the latter. Though not rearularly built, the houses are substantial and slated, nid there ure some good shopl:. The harbour is formed by a pier; and the bay, which is spasions, and has derp water, is formed by two low heidlands and an ishand. Stornoway Lange, the ocasional residenee of Sir Jumes Mitthesme, hart., proprietor of the islant of Lewis, is in the immentiate vicinity of the town. There is
a parish chureh, town house, and custom honse; the gross revenne collected at the latter was $62 l$. in 18 tis. The means of elucation, whieh formerly were very deficient, have been increased materinlly of late years. Gaelic is the language genemlly spoken throuphout the island: in Stornoway, however, it is giving way to linglish. Small packets, supported by government, ply weekly hetween Stornoway and Pollew, on the const of Ross; and in summer Stornoway is visited by ste:mers from Glasgow.

Witly the exception of a small district immeliately around Stornowny, the island of Lewis was, till recently, in a very backward state, and the inhalitunts poor and wretehed in the extreme; but a great change for the better las taken place since the island came into the possession of its present proprictor, who has expended large sums on its improvement.

S'TOURBMRIDGE, a market town of lingland, co. Worcester, himm. IIalfshire, par, Old Swinford, on the Stour, here crossed by a stone liridge, 18 m . NNE. Worcester, and 142 m . NW. Lomion le Great Western railway. Pop. R, 166 in 1861. I'hough irregularly built, the houses are pretty good: it has a handsome market-honse, a theatre, and a subscription library: The episcopal ehapel, erected by subscription in 1742, is beyond the jurisdiction of the fishop: the living is a curacy, in the wift of the inhalo. houscholders. There are places of worship for varions sects of Dissenters, and a well-conlowed free-school, fonnded by Edw. VI., in which Dr. Jolnson received the rudiments of lis education. Stourbridge has a national sehool, and a great number of benevolent and benelit associations. It is governed by a bailiff and town-elerk, and has petty sessions, and a 40 s. court of requests. It has mamufnetures of glass and earthenware, and hardware : the iron trade of the town and neighbonrhond is considerable. The town commumientes, by a brameln canal, with the Statfordshire anai Worcestershire canal; by which great mumbers of loricks are sent to the metropolis, and elsewhere. Markets on Frilays. Fairs, Jan. 8 and Mar. 29, for horses and cattle; Sept. 8, for cattle and sheep.

S'TOURPOKT, a market town of England, co. Worcester, hund. Dlalfshire, par. Kidderminster, at the contluence of the Severn and Stour, $3 \frac{1}{2} \mathrm{~m}$. sisw. Kidderminstor, with the pep. of which town and par. its own is returned. It is wholly of molern date, owing its origin to the Staffordshire and Worcestershire camal, which joins the severn on its S . side. It is well lmilt, prineipally of brick, and is partially paved, and lighted with pas. The Severn is here crossed by an irom brilge, the central arch of which has a span of 150 ft ., rising to 50 ft , above the surface of the river. Stourport has an extensive transit trade, being, in fiact. one of the primeipal entrepots between the E. and W. parts of the kingrlom. Markets on Wealmesdays; fairs, Easter Moudev, Sept. 15, Dee. 18, chictly for hops and cattle; also a mecting every 'Thersiday for hops.

STOWMALKET, a market town and par. of Empland, eo. Suffolk, hund. Stow, on the (iipjing, at tributary of the Orwell, on the road and halfwhy between lpswich and Bury, 80 m . NL. Lomdon by Cireat Eastern railway. Pop. of town $3,5 \% 1$, and of par. 3,639 in 186 J . Area of par. $1, \frac{2}{2}(t)$ acres. The town consists principally of' a main street, with many good houses, and has a hustling and thrivius apmearance. The parish chureh is large and hamdsome, part of it being in the decornted, and part in the perpendienlar style. It lims a tower and spire of considerable height, and a peal of bells. The Baptists, Met'iodists,
and other seets have meeting-lonses, and there are various schools and bencrolent socicties. Stowmarket is connected by a mavigable canal with Ipswich, and has a brisk trade in malt and harley, with manufactures of eordage and sacking. Near it is the louse of industry for the luud., $n$ handsome edifice on an eminence, ereeted at an expense of 12,000 . It has petty sessions, a manorial court, and is a polling-place for the W. div. of the co, Markets on Thirsdays; fairs, three times a year.

STLRABANE; an inland town of Irelinid, IV. side co. I'yrone, prov. Ulster, on the Mourne, near its confluence with the Finn or Foyle, 1 io. $1:$. Lifford, and it m . SSW. 1andonderry, on the railway from Enniskillen to londonderry. Pol, 4, 1.16 in J8til. The town is built on the estate of the Marguis of Abercom, in a tine valley enclosed by lofty mountains; and has a good linen market, an extensive retail trade, and a considerable trate in the export of grain mand provisions, by way of Londonterry. The older parts of the town, aloug the river, are low, with narrow dirty streets and mean houses; but in the newer parts there are some comparatively good streets, shops, and homses. It has a par. church, a Roman Catholic chapmi, two Preshyterian and two Methodist neetinghonses, a fever hospital and dispensary, a marlicthonse and a sessions-honse, and a bridewell. It is commeeted by a bridge with its suburi) on the laft bank of the river. Under the Municipal Reform Act it has a corporation, entitled the sovercirn, free burgesses, and conmonalty. I'reviously to the Union it returned two mems, to the lrish 11. of C., but was then disfranchisel. It has a par. school, a Lancastrian do., and some other schools. The trade of the town is much facilitated by a canal abont 4 m . in length, from it to where the Foyle becomes navigable for barges of 40 tons. Quarter sessions are held in April and Oetober, petty sessions on altermate Tuestiays, and a minor court, with juristiction to the amount of $9 /$. , is held once a month. Adjoining the town is a valuable salmon fishery, the prodnce of which is mostly sent, either fresh, packed in ice, or pickled, to the Brnisi warkets.

S'lRALSUND, a strongly fortified town of the Prussian states, prov. l'omerania, cip. res. abl circ. ol' the same name, on the narrow strait selphrating the Isle of limgen from the continent, anil on the terminus of a line of railway from Berlin. lop. $24,314 \mathrm{in} 186 \mathrm{II}$, excl. of gurison of $2,2 \mathrm{ix}$. The town was fombled in 1209 . Streets narrow and clirty, lowses ill-huilt; lint it hats a dine arsenal, and some good public buildings. It is encompassed on the laud side ly lakes and marsies, so that it can only be approached by bridges. Its fortilications, which hul been dismantled, have heen renovated and greatly improved since $1 \times 15$, so that it is now one of the strongest phaces in the monarchy. It has a gymusasimm, two public aibraries, and an orphan asyhm, with breweries, distilleries, and various manufactures; and carries on a considerable commerce, exporting eorn, timber, beer, and linens. Its port, though small, is comveniont and safe, but it labours under a deticiency of water, Close to the town the depth dues not excced' 7 ft., at a little distance it increases to 10 ft ., and in the ofling there is 13 ft .

STRANTAER, a parl, and royal bor, mod seaport of scotlime, eo. Wigtown, on that gromal, on the inner or S , shore of the inlet of the sea called Loch Lyan, on the high road from Immiries to lortpatrick, 2L m. W. by N. Wigtown. l'op, 6,27:3 in J8til. The town consists of three streets parallel to the shore, mit ed by several cross streets, The principal streets are neat, and pretty well built; but there are a great many wretched hovels

It has a townhath. giol, a church belonging to the establishment, with varions dissenting ehapels, 1 parochial and 7 thendowed schools, 2 very good subseripfinn libraries, and a gond public reading-room. It is the eentre of a considerable retail trade; but has no manalactures, except some hamd-loom weaving, on account of the (ilasgow manmetheres.
Loch hyan in a tine hasin. Opposite to a place ealled Cairn, on its li. shore, there is good anchorase, and water suthicient to that the largest ships. stramer harbour dries at low water ; but it wonld not be dillienlt, by carrying ont the pier to a greater distance into the loch, to make it acfessible at atl times of the tide. On the 1st of dan. 186-1, there belonged to the port f13 sailing vessels of 9,167 tons. 'The customs' revenue was $30 \%$. in 1863 . Steamers regularly ply between the port and Gilasgow mad Belfast. A large proportion of the pop. are Irish, mostly in an aljeet state of poverty.
F゙NRANBOUNG (an. Argentoratum), a fortified eity of F'rance, on its E. frontier, (lép. Bas-lahin, of which it is the eap., on the [11, within a short distanee of the IRhine, 100 m. SSiV. Mentz, nud yon m. Li. Ly S. Paris, on the railway fron laris
 The eity is of a trimgular form, is enclosed by a hastioned line of ramparts strengthened by muneruls untworks, entered by 7 gates, and las on its li.. side a strous pentagonal citadel, built by Vanban. lly means of sluices construeted under lanis XV., the nuljacent country may be laid under water; and several additional defenees having heen constructed since the peace, it is now one of the most important fortresses and arsenals in Franee, and has the largest depot of artillery. Strasbours is agrecably situated, and generally well haid out: its streets are mostly narrow, with lofty houses; but it has several rather large and rerniar squares. Thongh tor a lengthened period united to France, it still has all the outward appearance of a German town, with which the costume and lamguage of its inhabs, correspond. The 111 and its bramehes intersect the eity in all directions, and are crossed by mumerous wooden bridges. Without the walls are severat suburbs.

By far the most remarkable publie editice is the minster, or cathedral, one of the noblest struetures of its kind. It is said to have been origimally fonnded by Clovis, in 50.1 ; but Charlemarne eonstrueted the ehoir, the only part that survived the diestruction of the old cathedral by lightning in 10107. The moxtern buiding was begran in 1015 , lat not finished till the lith century. The entire lingth of the interior is 378 ft . ; breadlh, 1.10 it .; height lionn the pavement to the roof of the have, Tid lt. 'lise W. or grand entrance has, on its $N$. side, a spire, of the extraordinary height of dint l'aris, or 4653 ling. ft., being, if the diriensions le accurate, abont 7 ft . higher than St. Peter's in liome, and abont 5 ft . ligher than the great pramid of Cheops. It is of open work, and comhimes, with the most perleet solidity, extraordinary lightness and elegance. The view from the top of this spire is one of the most extensive and tinest that can be imagrined: it is, however, enjuyed by few only. The ascent to the top of the tower may, indeed, be aceumplished, withont much difliculty, and the view from it is superb; but the aseent thence to the lantern requires very powerfil nerves, and, in faet, ordinary visitors are not permitted to attempt it. The erection of this fimons spire was commenced in 127t, by lirwin de stembath, mud continued hy his som, his daughter Sabina having also contributed some
fine senlptures to the principal portal. It was finished in 1439, moler the direction of Schulz, an architect of Cologne. Beside the grami portal are equestrian statnes of Clovis, Dagobert, Lodolph of llapsharig, and Lonis XIV, ; and over its centre is a marigoht-shaped window of stanmed ghass, 51 ft . in diameter. The interior has a tine stone carved pulpit, with mmerous monmments stutues, de. There is also a famous astromomical elock, constrncted by Isane llabrecht, which indicates the days of the month, the places of the sun and moon, and other eclestial phenomena. In the choreh of st. Thomas is the marniticent monnment in honour of Marshal siaxe, the chefd'euvre of ligalle. Ilere, also, is a monument to Koch, the historian. The Temple Nenf, given, in lisk, to the Protestants in exelange for the eathedral, the chureh of St. William, the Cheiteren Rogat, the large pablic library said to eomain 130,000 vols, the new synarogne, the theatre (with a handsome front of six lonic colnmms), the prefecture and other public residences, the insemal, barrack:, eamon fumblery, and other military establishments, and varions public schools, are deserving notice. There are several hospitals aml asylums, civil and military privons, an exchange, corn, fish, and other markets, varions assuramee companies, a royal dipit détadoms, and a botanie garden. 'Ilae environs are well entitvated, and strasbourg has many good publis waks; the primeipal of which is the Contades, withont the city, laid ont by the marshal of that name in 176.1.
Strasbomry is a bishop's see, the seat of a comrt of primary jurisoliction, emmeil of prod'hommes and a elamber of commerce; of a miversity academy, royal college, mint, boards of forest economy, roads, and brifges, and of enstoms; the Lutheran consistory for the S. of France, faculties of law, medicine, and sciences, li. Cath, and l'rotestant seminaries, and societies of agriculture, literature, and arts. The masemon of the acalemy is very rieh in the natural prolucts of Alsace. The city is divided into four cantoms, in each of which is a justice of the peace and a poliec commissary. It has an extensive royal manfictury of sunff, for whieh strasbourg is fanums; with considerable manufitetures if woollen, linen, and cotton stullis, sail-cloth, eutlery, steel artieles, metal buttons, cotton twist, leather, hats, paper, phitying eards, earthenware, shell articles, printiug typies, and chemical products, exclasive of dyehouses, breweries, printing establishments, and sugar refineries: the peites cie foies gras of strasbourg have attained to high rastronomical celebrity. 'Ihe trade of Strastourg is very extensive, its sitnation on the Rhine having rendered it a great fromtier entrepot.

Strasbourer is very ancient, and most prebably existed previonsly to the limanns. It assmmed the mame of Struteburguen in the Gilh century: On the lirst partition of the Frmaish territory it was inchuded in the kingdom of Anstrasia, and on the second in Lorraine. In the 10th century it belonged to the German enperors, and subsequently hecame a free eity of the empire, which it continned to be till 1681 , when it was taken possession of by Lonis XIV., and finally amexed to France. Pierre Schadfer, who contests with Ginttenberg the honour of being the inventor of printing, and Generals Kellermann and Kleber, are among the distinguished natives of Strasbourg. The latter is buried in the eathedral, and a mumument has been erected to his memory on the artillery parade.

S'TRATEORD-UPON-AVON, a town, mum. bor and parish of lingland, co. Warwick, hund.

Barlichway, celehrated as the birthplace of shakspeare, 7 ml . SW. Warwiek, and 121 m . NW. domblon, by Great Western railway. 1'op, of nun. bor, 3,672 in 1861. The town is finely situated on a gentle acelivity rising from the W . bank of the Avon, which here expands to a breadth of about 131 yards, and is crossed by a bridge of 14 arelies, built in the reign of Henry VII., but repaired and widened in 1814. In the older parts the honses, though intermixel with gethers, of more modern date, have an mintue apmenance: several new streets have, however, beem eomstrueted of late years, and the corporation has distinguished itself liy the aid it has given to improvements. It has a harge, haudsme, eruciform chureh, with a square cmanat led tower, surmounted by a lofty spire: the transepts, tower, and some parts of the nave are early English; the rest of the building is mostly a mixture of decorated and perpendicular. It has several line old monnments. Of these the most interesting by far is that of Slakspeare, on the N . wall of the chancel. It is construeted partly of marble, and partly of stone; ennsisting of a halflengrth bust of the poet, with a cushion before him, phaced under an urinamental eanopy, between two columns, supporting an entablature. Under the bust are the following lines:-

## 'Julicio Pylium, genio Socratem, arte Maronem, <br> 'rerra tegit, populus maret, Oly;upus habet.'

These are followed by sis lines in English verse; and on a tlat stome, which covers the grave, is an, 'urtreaty not tu disturb the dust ' enclonsed heare,' aud an imprecation against such as might profane the ashes of the mighty dead.
The living of this church, a vicarage, is in the grilt of the eurl of Plymouth. Here is also a chapel, that once belongel to the guild of the - Iloly Cross,' suppressed at the Reformation: it is of thic agre of Henry VII., in the perpendicular - y yle, and has several curious fresco paintings on its walls. Attached to this building is a hall for the brethren of the guild, since used for the meetings ol the corporation; alms-houses for 24 poor persons of botli sexes, and a free grammar scliool for children, natives of the bor. The mondern town-hatl, a building of the Tuscan order, erected in 1668 , has a lall 60 ft . in length by 30 ft . in breadth. Laving been dedieated, at the jubilee in 1769, to the memory of Shakspeare, it is thenee called the Shakspeare Hall. It is decorated with pietures, by Wilson and Gainsborough, of the great phet and Garrick; and outside the building is a statue of the poet, whieh, with the pietures, was presented by Garrick.
Here are national, Lancastrian, and other seliools, 2 public libraries, and a neat theatre. The town is governed by a mayor. 3 atdermen, nud 12 conncillors, but has no commission of the peace. The only manufacture carried on belongs to one of the departments of button-making, and it is by no means extensive. The Avon is navigable by barges from the Severn to Stratford, where it unites with the Stratiorel eanal, which is itself comnected with the Worcester and Birningham canal.

Little, unfurtunately, is known of the life of the illustrious poet to whom Stratford owes all her celebrity. He lirst saw the light on the 23 rd April, 1564. Having married in 1582, he soon after went to London, where he produced the greater part of his immortal works; and having returned to stratford to spend the evening of his days, died there in 1616, on the 23xd of April, the amiversary of his birh. This brief notice comprises nearly ath the authentic information we possess regarding the greatest of dramatic poets, notwithstanding
his death oecurred little more than two centurims agro. 'No letter of his writher ; 110 recorl of his empersation; 10 elaraeter of him, drawn with miny fulness by a contemporary; can be produced.' (Iİllam.)
The house in which the great poet was born, in Henley Street, is still standing, and is the resiort of all visitors to the town. It has, however, been converted into two houses, and otherwise muth altered. The house in which Shakspeare passed the latter years of his life was, to the disgrace of those concerned, demolished in 1759; when the fimons mulberry-tree lec is said to have planted in its garden way also cut down.
STRATFORD (S'TONY), a market town and par. of Eugland, ces. Bueks, luum. Newport, on the Ouse, whieh is here the homary of the e0., mand is erossed by a stone bridge, $8 \frac{1}{2} \mathrm{~m}$. NE. Buekinghan. Area of par. 70 acres. 1'0p, of town, 2,003 in 1861. The town is built on the line of the ancient Watling Street, and is supposed to occupy the site of the Aactodorum of the Romans. Thie houses are mustly of freestone, extending for about 1 m . on either side the road. The parish church was rebuilt in the Gothic style, in 1777; the living, a perpet. curacy, worth 1301 a a year, is in the gitt of the Bishop of Lincoln. There are meeting-honses for various dissenters, national and Sumday schools, and a society for aprenticing chiddrent. At an inn in this fown, the person of the young king Edward V. was seized, and Grey and Vilughan arrested by lichard duke of Gloucester. The ouly manufacture is that of lace, but the inhab, have some trade in corn. Markets, which are well sulpplied with provisions, are held on liridays: fairs, 21st Augnst, Friday before 10 th Octoler, and 12 th November.

STROUD, a parl. bor., market town, and par. of Eugland, co. Gloucester, hund. Hisley, on the Slate or Stroud-water, near its junction with the Frome, 9 m . S. Gloucester, and $101 \frac{1}{2} \mathrm{~m}$. W. Londun, by Great Western railway. 1'op. of parl. bur, 35,517 in 18611 . The parl. bor. is not contined to the town, but includes the whole clothing district, of which it may be regarded as the centre, comprising about it parishes. The situation of the mills on streams in deep ravines; the scattered and irregular manner in which the houses are built on the hill sides; and the contrast between the high land (in) many cases either wood or common, with few inhab.) and the valleys studded with honses and thickly peopled, is altogether very curious. Stroud stands on the side of a hill, and consists chicelly of a long street, crossed by another at its base: the honses are good, and thie streets well paved and lighted. The parish chureh, a large editice, has a tower with an octangular steeple at its W. end. The living, a perjetual euracy, is in the gift of the bishop of Gloucester. There are places of worship for Baptists, independents, and Wesleyans; and sevral charitios for educating poor children, and siving relief to the poor.
Stroud, and the district of which it is the centre, owes much of its prosperity to the Strond-water, which is not only made available for the working of machinery, but is said to be peculiarly adapted to the dyeing of searlet and other colours. The elothing trade has, in consequence, extended itself principally along the banks of the river, on which there are numerous fulling-mills and other factories. The prosperity of the town and district depends, of course, upon the state of the clothing trade, and partakes of the diuctuations incident to the latter. Power-looms have begme to be introduced into the manufucture, but have not made much progress. The Thames and Severn canal,
than two centuries : 110 reeord of his - him, drown with , can be produced.'
t poet was born. in f, and is the resort lias, however, been Id otherwise much Shakspeare plassed to the disgrace of in 1759; when the to have planted in
market town and ad. Newport, on the ory of the co., anil is . NE. Buckiugham, - of town. 2,005 in e line of the ancient d to occupy the site mans. The houses ding for about 1 m . parish church was 1777; the living, a ear, is in the rift of are meeting-houses and Siunlay sehools, is children. At an of the young king Grey and Yiughan loneester. The only out the inhab, have ets, which are well held on Fridays: efore 10 th Oetober,
rket town, and par. und. lbisley, on the is junction with the $101 \frac{1}{3} \mathrm{~m}$. W. London, Pop, of parl. bor. r. is not contined to wle clothing district, as the centre, com'he situation of the ines; the seatteren ich the houses are e contrast between ses either wood or the valleys studied pled, is altogether the side of a hill, strect, crossed by s are grood, and the I'le parish church, with an octangular living, a perpetual shop, of Gloncester. for llaptiste, ludead severall charities nd Giving rolief to
ich it is the eentre, , the Stroul-water, ble for the working peculiarly adapted ther colours. The ice, extended itselif the river, on which Ills and other fitctown and district ate of the elothing nations ineident to begin to be inbot liave not made and Severn camal,
which passes elose to the town, is of great ailyamtare to its trate.
The lieform Net conferred on Stroud, and its adjacent distriot, us specitied above, the privilege of sending 2 mems. to the 11 . of C. Hegistered clectors, $1,3 \times 0$ in 18 Bi . j . letty sessions for the hamd, are lield in Strond. Darkets, on l'ridays: fiars, May 10 and Ahgust e1, for cattle, sheep, and hons.
STLIILWELSSENBURG, a town of IImgary, eap. co. of its own name, 18 m . NE. Lake laluton, and 25 m . S W. Ifuda, on the railway from Buda to I'rieste. 1'(p), $1 \leqslant, 999$ in 1862 . Though fommerly a limman town, and a name of frequent ocenrrence in Hubrarian history, it contains aothing remarkalle. The palace of the bishop, and some of the lnilings eomected with it, are landsome; but the strcets are bally paved, and the whole town disagreenbly placed in the centre on a huge bog. It was, for a lengthened period, the residence of
 sulemen, in which 14 of them are huried. It has a trmuasium and other R. Cath. schoohs, a military aradeay, and a Magyar theatre; with manalictures of woollen eluth, thamel, suap, mind leather.

STUTI (iANB, a eity of s. Germany, cap. of the kinptom of Whitemberg; on the Neselu, a small tribitary of the Neekar, abont $1 \frac{1}{2} \mathrm{~m}$. from its embonchure in that river, 36 m . she by li. Carssuhe, and 120 m . NW. Manich, on the railway from lledelberg to Augsburg. Pop. 61,314 in j © t . The city is situated in an amphitheatre of fertile liills; and having been, for the most part, hid out during the present century, is one of the handsomest towns of Germany. Fhe city may be said to stand in the centre of a garden : on every side it is surrombled by vineyards and orehards. In the ancient part of the town, the streets are nartow and crooked; but, in the modern, they are broad and handsome. The conrt and the nilitary, with the other necessary concomitants of' a capital, give it rather a lively air; and there is usually a great bustle in the streets. 'Ihe new royal palace has the advantage of being situated bith in town and comntry; opening on one side into a dine park, and on the other into a spacious square, planted with trees and fronting the Kônigs strasse, or King's street, the dinest in the city. the palace is an imposinty freestone editice, begho in 1ítis, and completed by the late king. It has it entre and two projecting wings; the whole furming, like Ihuckiugham l'alace, three sides of a square. 'lle para cets are decornted with handsume statues; but th.e roof, inmmediately above the grand entrance, is surmomed with i large gilt crown. There are a vast number of apartments, and several are fitted up with splendid tapestries from the Gobelins at laris, presents from Napoleon l. to his ally the late king. IBesides which, the palace contans many good Flemish paintings and sculptures by Danekker and Canova. In the same public square in which the new palace is situatel are the old palace and the theatre. The former, now occupied by the officers of the court or government, has the aspect of a leudal fortress; and behind it is a Gothic church, in which are monuments of the dukes of W'irtemberg.
Some other buildings are worthy of notice; as the pulaces of other members of the royal family, the Ständehuus, or chamber of the parliament of Wiirtemberg, to the debates and divisions of which the public are always almitted; the city connty-honse, chancery court, new barricks, postofliec, royal and city schools, large hospitul, workhonse, roral stul-house, adjoining the palace, with an extensive stud of tine horses, royul stables, and riding-school. Stuttigard has 6 Lutheran
clurehes, a Calvinist and a liom. Cath. chnrel', mud a synagogne. The public library, open daity from 9 to 12 and from 3 to $\bar{\sigma}$, a viry harge and valuable collection, comprises from 1711,060 to 180,000 vols., inchating a magniticent eollection of Sibles. The masenm of natural history eomprises a remarkalde collection of fussils foumd at Kannstadt. There are royal cabinets of meilals, antiquities, monlels, mans, charts, and many private libraries and coltections. W'ithout havingr the pretensions of cither Munieh or Dresiden, tor be considered usont of the tine arts, Stuttgard las been distinguished as the birthplace or residenco of several of the nust eminent Geramu literati and artists; as Schiller, Wannecker. Menzel, long the editor of the 'litterntur-Blatt,' laaron Cotta, the fumons publisher, and others. Many of Dannecker's finest works are in this eity, and here Schiller wrote his ' Robbers.'
Stutgard is an industrions town, though unfavourably situated for trade. Cotta's publishing extablishment is one of the most extensive on the Continent. Next to printing and bookbinding, the weaving of woollen and cotton goods, and the making optical, mathematienl, and musieal inst ruments, are the chief branches of manufacturing industry. Some agreeable effervescing wine is made on the surronding hills; mul about 3 m . NE. the city is Kannstadt, resorted to by the eitizens und others as a favourite watering-place. Stattgard suffered severely in the wars of the 16th and 17th centuries, but it escaped with little loss during the last war, though repeatedly oecupied by the armies on both sides.
SUDBLSRY, a mun. and formerly . parl. bor. of England, prineipally in the co. Sullolk, but partly also in Essex, on the Stomr, here crossed by it stone bridge, 18 m. W. lpswieh, and 50 m . NL. London, on the Great Lastern railway. I'up. of numic. bor, 6,879 in 1861. The old parl, bor. included the three pars. of St. Peter, St. (iregory, and All Saints, and some small extra-parochial districts on the Sulfolk side of the river, with the lianlet of Ballingrlen-eum-Brunden in Essex. The town of Sudbury lies towarils the S . extremity of the bor. It is a ueat, clean, and wellbnilt place. Linder the provisions of a local act it is lighted, the footpathis flagged, and-the roads kept in repair. The town has been much inproved of late years internally, but the buildings have not extended beyond its former limits. Sudbury has 3 churehes, All Saints', St. Gregory, and St. Peter; mostly in the perpendicular style, but some of the tracery, and other parts, have been much mutilated. Execept a larye lulependent chapel und a laptist chapel, there are few or no other buidiangs wortlo notice; and no remanns exist of the I Senedictine priory, founded in the reign of llenry II. The grammar school, founded in 1491, hiss an income of about 100/ a year; and there are varimes other charities, inelading a mational school, at which abont I50) children attend; but the education of the poorer classes here is said to be very defective.

Sudbury was one of the towns in which the immigrant Flemish woollen manufacturers were established by Edward III. Its woollen trade has, however, been for many years nearly discontinned, though it has been partly replaced hy that of silk. Mantles, lutes, and gros-le-Niples are the articles priucipally manufactared. luequard looms are not very renerally intromuced. The Sudbury weavers are sand to be less expert in muking fine goods than the weavers in Spitalfields, but wages are nearly the same in both. In addition to silk weaving, there is at Sulbury a manufacture of buntings, which employs about

## SUEEOLK

gut looms in the town. These are wronght by women and children, or old men mitit for silk weaving.

Sudhury is fovernod live a mayor, a aldermen, and 12 voumeillors; ind las in emmonissiom "it the peate, and a waekly court of record. Sime lury semt 2 a mems. to the 11 . of' Co 'rom the early bate of the reign of bilizabeth. The biomelary Set increased its limits, as already noticed; but luving been distinguished for a lengrthend priand by the vemality of a latre portion of the constlthent berly, it was disifranchised a number of years simce fior gross bribery.

I ainshorongh, the eminent artist, worthy, as Sir Joslma licyuolds has sated (bourteenth biseomese), to rank among the tirst painters of the liuglish selom, was a hative of sudtmry, where lor first saw the light in $1 \mathrm{TH}_{2}^{7}$. Sulbury was also the hirthplaee of' Dr. Enliedl, anthor of the 'L'onspendinm of I Bracker's Itistory of l'hilosoplyy,'

Sllita, a town and sem-port of ligybt, near the N. extremity of the gull of its own nime. which is also the NW. migle of tho Red sen, 7i ma. Fi. Chiro, on the terminne of a line of railway from
 pendent of the minerons pilgrims and merchants, who are continailly passing thromgh the town, sinez being on the man ronte betwern ('airo and Mecein, and on that by which the eommerce ot limyt with the commtries to the cast ward is carried on, 'The head of the frill' on which the town stimds las almays been the sait of a comsiderable Iramsit trade, mad the ancient dities of Arsinoe anil Kalam stoorl in the meishbourhoord; but Bu'z is a comparatioely modern as well as a very mean town. Its only gate is to the NW.: three eamon mre monated near it, and there are eight more on the bums of the sea. Suez promenes mothing, being on all sides surrommed by the Theort. The clothes, and even the provisions, of the inlalos. are all brought from Cairo, to the last loaf. Jrequent caravans come from dallia anal dorisalem, bringring oil, tobaceo, and soap. It sublered much from the lireneh, by whom it was in preat part destroyed; and it now consists merely of samiried brick homses and unpaved stroets, with abont a dozen mospues, a Greek chardh, and enstom-honse; the whole surrounded by a ruined wall and some entrenelments thrown up by the fremeh. It is wholly destitute of water, which is brought to it ly the Arabs from wolls several miles distant, and, besides being bigh-priced, is of a numseons deseription. The port is acecssible only by boats of from 30 to 60 tons, Steamers and oilher vessels moor ontside a sand bar at a distance of 2 m . from the town. Bat since the establishment of what has been calle ${ }^{\text {d }}$ the over-land route to India, and the opening of the railway from Alexandria, Suez has become a phace of eonsiderable importance, and is now the residence of a British consul, and of several comtmercial ayents.

The Gulf of Suez, which at low water is in many parts so shallow as to be forlable, is memorable in satered history as the secne of the submersion of I'harnoh and his host. The jsthmus ol' Suez, connecting Asia and Africa, is a sandy waste, hetween 70 and 80 m . across. Near Suez may still be seen the vestiges of the .nal eut by l'haraoh Necho and I'tolemy Philar elphus, to unite the Red sea with the Nile-an undertaking which, within the last few years, a French eompany; under M. de Lesseps, has also attempted to accomplish. See EGirt.

SUFFOLK, a marit. co. of England, having N. the co, Norfolk, 1:, the German Oeean, S. Vissex, and W. Cambridge. Area, $9 \cdot 47,681$ aeres, of which
nhent 820,000 are arable, mealow, mal pastite. Surfiace semerally that. Soil various; that of the middle nad most extensive district comslasta primcipally of a strong loam, oll a clay-marl loettom, The district. bombled by the rivers stomr, brwell, and llrett, S. from larstall, is a very rich lama, of extraorlinary lirtility. The maritme distriot, lying alome the fac const, comsists of samly loma find samb, which in nome phaes is eovered with hemth. 'Ihe soil hathe NDF, parts is comparatively poor, eomsistinef partly of samd and partly of pait. On the whole, Sullolk is not inferior, in resperet of matural fertility, to any eo. in the limerden. The elimate is dry; betf frosts are sovere, athe in Noblug the NB, winds are slare mud provalemt. 'tillage lanshandry is proseconted with great. shill, spirit, and suceess. Plompling, in every part of the co, is performed, as in Scotland, by a pair of homestriven by the plomphman, and is extrenely: well execoted. linllowing is mbiformly practised on the heary hames. I'hese, also, are jurtionlarly nilaped for the frowlh ol beans, whieh, as well as peas, mee extensively eultivated. Turnips not so extensively grown as in Norlolk, being primeipally. ratised on the horders of Cambridgeshire. thin clover leys wheat is very genemally phanted by the dibile; bet, when the land will mbmit, all surts of grain, as well as thriops, are drilled. Most of the fand in beans, peas, tares, die, is mos Irilled without any plomphing, being merely seatrified and scodlled, so as to be remdered line ciongh for the drill to work. The usmal rotation in the turuip lands is, 1st, turnips: 2d, barley; 3il, seeds; 4th, wheat: on the heary lamis, 1st, fillow; ed, whent: 3ul, seeds or beme; : 14 , wheat: when the $3 d$ is sceds, beams or oats come in 5 th. Ilemp has been enltivated for a lengthened period, and is reckomed of the finest quality. Carrots ure a good deal grown, and hops are raised in the vicinity of Stowmarket. Sullolk is famons for its breeds of horses, cattle, and hogs. The horses are called purches; and are, as the term impliws, short and compret, being well filted for regular thrm work.

The cattle have sprong from the Galloways, many of which are lattencel in the eo. Like their progenitors, they are polled, and rat her small-sized, They are betted suited than the Gialloways lor the dairy, being excellent milkers. The prodnce of butter is not, however, supposed to be in propurtion to the milk, thongh it is also very romsiderable. Stock of sheep abont 500,000 . Warrens were formerly numerous in the sanly district, but they are how much diminishes. l'roperty muels divided; a goml deal in the hands of respectable yeomen, who enltivate their own estates. Farma generally large, lout many small. They are usially let on lease for 7 or 14 years. I' nimis mostly restrained from exceeding 3 earn crops to a fallow; but, in other respects, they are aft pretty numb at liberty. Farm buildings indifferent. Cottages generally bal. Minerals of no importance. This co. was formerly celebrated for its manufactures, particularly those of wool; but they are now moch decdyed. Mixed silks and worsced stulls are still, however, mannlactured at Sudbury, Gainsford, and other places. There is a considerable manulacture of stilys at Ipswich.

SIJMATHA, the most W. island of the lis archipelaro, and, next to lhorneo, the largent in the lis.
 and loith degs. of E. long., separated on the NE. from the Malay peninanla liy the struits of Mahacea, and on the sle. from Java by the Strnits of sumda, having E. the sen of Java, and murrominded oun marly all other sides by the liditu Oeem. Its directuli is from NW. to SE.., nearly parallel to the Malay jeninsmla, it being divided by the cymar into two nearly equal pert jons. It is ol' an elongated shope, about $1,050 \mathrm{~m}$, in: length, and has no area varionsly estimated at from 122,003
 mated, by the best nuthorities, at about $2,01010,0016)$. Varions momotain chains rum through the island longitudinally, sometimes in treble or four-fold rimpers, rising muler the equator to 14,000 or li, ine ft . in height, and nlways much nearer to the W. than to the lis, const. 'The F., hall of' the island is, in fact, nlmost wholly low, lint, and interseded by anmerons rivers. Some of these, as the l'alembnag, Jambi, Imirugirı, mad Siak rivers, are of emsiderable size, but they have been titherto little explored by Earopeans. The W. side of the island is also well supphied with water, and in the interior are momerons simall lakes. The climate, even in the plains, is mot so bot ns might be expected in a conntry situated in the midst of the forrid zone. I'lue thermometer at midday gensally ductuntes hetween $x: 2^{\circ}$ and $8 ; 0^{\circ}$ Fahr., thourh it sometimes rises ' $0 \mathrm{St}^{\circ}$ or $8 \mathrm{~K}^{\circ}$; at sunrise it is usinally as low as $\overline{710}$. Jonse liges, thunder storms, and water-spouts, off the consts, are very frequent. 'The soil on the W. side of the ishand, Which is that hest known to Europeans, is a still redisish clay, mid a great proportion ol the surlaee, aspecially townris the S., is an impervions lorest. fokd dhast, which is very nbmulant, colpler, iron, sulphur in the momerons volemic districts, saltpetre, coal of indiflerent quality, and maphitha, appear to be the chief mineral products. The coppor ure is very rich, but, owing to the indolence of the inhabs., the mines are little wrought, except over a very limited district. (iold dhat is, however, ant articte of considerable tratlic, and is longht by merchants from the interior to the sen-coast, where it is bartered lior iron, iron tools, and the piece goods of the E. Indies and Einroue. Among the vegetnhle prollucts, the most important is pepper, Ho wierage produce of which may amonit, at present, to about $30,000,1600$ llis. a year, of which about $21,000,0100$ are firmished by the $W$., and $9,000,(1610$ by the li , const. 'This supply amonots, in fict, to more than all the prpler supplied hy all the other commatios int the world. Nearly the whole of this extensive trade is in the hands of foreignors, especially Duteh, Faglish, and Americans. But little Sumatra pelyer goes to Chima.
After the capture of the Molucens by the British, in 1750, the nitmeg and clove were fintronduced at Rencoolen; and ticei culture has well succeeded, though the quality is very inferior as compared with the products of Amboyma and the Sanda lsles. Camphor is one of the most valuable kinds of produce, and the Sumatran eamphor sells in China for 12 times the price of that of Jupan. It is the concrete juice of the Jryobulamops camphora, and a tree of the order Gittifere (whereas the dapan camphor is derived from a species of laurel). It grows only in the $N$. part of Simatri, not being found S. of the line, or beyond the 3 d deg .
al'N. lat. It isa stont iree, its trunk sometimes monmurimg $i f$ or 7 ft, ill diancter. The same tree prom duces, imber fitherent ciremmetances, cumphor, oil, or pitel, which are limul in cuvities of the trunk, but extembing the whole lenget of the tree, hat ill simall portions of 1 and if ft . long at certinia distances. "The methor of diseovering the eannphor is, by making a leep incision with a Malay axe, till the camphor in seen: lomalreds ol trees may be thus mutilated bedore the sought-for tre: is diseovered: when uttained, it is felled mulent in junks, a fathom long, which are ngain split, and the emmphor in fomb in the heart, ocenping a whece of the thickness of a man's arm. The produce of a middling-sized tree is abont 8 Chinese catties, or nearly 11 llose ; and of n large one, domble
 xii.) licesis the principul species of grain. It is of very dillerent varietien, comprised in the two greme clases of upland and lowhand, the lormer being considered the best. The hand dewtind for its enlture is chosen nt the gipronel of the dry senson; mid as fresile gromal is liveguently cleared liar the purpese, the wanten deseruction of fine timber is immense, The rice is sown at the hefimbing of the rains, and rijeros in niont live momater from that time. 'The same spot of low gronnd is, for the most part, used withont intermission for soveral years, the digree of culture bestowed by turning up the soil, and the wer-thowing water, presorving its lertility. I'allows oesur enctionally; but as owenpmey in most parts of Sumatra gives the right of propery in the land, they are not very froquent.

The samuhs, or lields alapted for rice in low and wet situations, ure prepured by turuing into them a mumber af bullatoes; or in parts where it is less permanemly moist, the soil is turmed up either with atonden instrmont betwern a hoe and a pickaxr, ur with a plomph. While the sumahs are in preparation, a small, aijacent, and comvemmont spot of goorl soil is elosen, ill which the sedel grain is suwn as thick as it ean well lie on the gromen; and alter laving grown to the beight of several infhes, it is takell uj, in showery wenther, and tramphated to the sarah, where holes are madr, lour or tive inches asmoler, to receive the phants. To the minnte care thin beatowed upon the latter, Marsden attributes the large jropertion of produce ohtained, which, he says, averages 100, num is sometimes as high evell as 140 lodid. (Marselen's Sumatra, p. 77.) A singular method is adopeded for separating the grain from the ear. The bunches of paddy are spread on mats, and the sumatrans rub out the grain under their feet, sulporting themselves for the more casy performance of this habour by holding with their hands a bamboc, placed horizontally over their heads. As an article of trade, sumatran rice seems to be of a more perishable nature than that of most countries, the uphand rice not being expected to keep longer than 12 months, and the lowhand showing sigus of decaly after 6 . Siago is common in simatra, and is used oceasiomally as food, though not an article of general use. Millet is cultivateal, but in no great quantity. The coena-nut, betel, bamboo, sugat-eanc, various palms, and an abondance of tropical fruits, are indigenous. The sugar-cane is cultivated not for the namblacture of'sugar, but for the snke of chewing the juicy reed; and hemp, insteal of being used lor the supply of materials for cordage, furnishes an intoxienting preparation. 'Turmeric, ginger, cassia, indigo, cottee, caontchone, rattans, many scented woods, and in the N. benzoin, are among the other jrincipal kinds of proluce.

Buflaloes are the most important live stock; the
R

## SUNDERLAND

ox does not appear to be naturalised. The breed of horses is small, lut well-made and hardy ; sheep also are small. The hot and goat are both clomestie and wild. lilephants, and man.y species of deer, abound; and tigers of a large and powerful species, the rhinoceros, hippopotamus, orangoutang, and bears are met with, besides other animala in great variety. Around the shores extensive coral islands are contimally forming ; and cural is one of the principal articies of export, the other exports heing pepper, rice, camplor, and other native prodncts. The imports are elictly Indian piece roonds, salt, silks, and opium, from Jlindostan; coarse porcelain, iron pmos, fold thread, and many sinall articles, from China; striped cottons, spices, krises, rand other weapans, from Java, Celehes, and the rest of the archipelago; metals, hardware, cutlery, and broad cloths from Europe.

Aceording to native t.aditlons, Sumatra and the ndj.cent islands have been the original seat of the Malay race, the type of which is there met in its greatest perfection. The Simmatrans are rather below the middle stature; their bulk is in proportion; their limbs are for the most part slight, bint well' shaped, and particularly small at the wrist and ankles. Upon the whole they are gracefully formed. The women, however, hive the preposterons custom of flattening the noses and compressing the hends of chiddren newly born whilst the skull is yet cartilaginous. They likewise pull out the cars of infants to make them stand at an migle from the head. Their eyes are uniformly dark and clear, and amoug some, especinlly the soutliern women, bear a strong resemblance to those of the Chinese. Their hinir is strong, and of a shining black, the improvement of both which qualities it probably owes, in a great measure, to the early had constant use of cocoa-nut oil. The men are beardless, and have chins remarknibly smooth, the canse of which is that the boys, as they appronch to the age of puberty, rub their chins and upper lips with quicklime, and the few hairs which nfterwards appear are plucked out from time to time with tweezers, which they always carry about them for that purpose. Their complexion is properly yellow, wanting the red tinge that constitutes a tawny or copper colour. They are, in general, lighter than the half-breed of the rest of India; those of the superior class, and particularly their women of rank, upproaching to a great degree of fairness. No negro or other distinet race appents to ocenpy the monntainons regions, as in other parts of the archipelago; and the personal dilference between the Malays of the const and the country inhabs. is so little marked, that it requires some experience to distinguish the two.

The original clothing of the Sumatrons is the same with that fond by unvigators among the inhibse of the Soutli Sea Islands, consisting of the inner bark of a tree, benten out to the degree of fineuess required, some fabrics being nearly equal in softness to the most delicate kid-skin. The Iress of the men comprises short drawers, a close waistcoat with filigree buttons, a robe extending sometimes to the knees, a party-colonred scarf, a sash in which the kris or dagger is stuck, and a small turban, or umbrella-hat, while that of the women consists of $n$ boddice, or petticoat, reaching from the bosom to the feet, a robe with sleeves, and sometimes a ganze veil, with various tiligree ornaments. Both sexes file, blacken, and otherwise distigure their teeth; and the great men sometimes set theirs in gold, by easing the under row with a plate of that metal.

The villages are always on the banks of some river or lake, and consist ef honses built chiefly of
bamboo, and on posts, as in other counfries of SE , Asia. They are, however, much superior to thowe constructed anong many other Ultra-Ganpetic pations. Thelr liurniture is very simple, consistin!, in the best kind of honses, chictly of mats of a the texture, serving for beds, some low tables, coare earthenware, brass waiters, nul iron pans. In eating, nelther knives, spoons, nor miny substitutes for them are used. The diet of the finmatrans is mostly vegetable, but they eat the tlesh of haflaloce, goats, and fowls, curried or otherwise dressed. In a few species of manufacture the Sumatruns exhibit, great akill; such as in working gold and silver tllipree. This art is condueted with the rudest tools. In general they use no bellows, hut blow the tire with their mouths, through a joint of hamboo; and if the quantity of metal to lie melted is considerable, three or four persons sit round their furnace, which is an old broken kuruli, or iron pot, and blow together. Yet the manufartured material is celebrated for its delicaey mal lenuty, not only thromphout the b., but in Eiarops. They weave silik and cotton eloths for home consumption, and some of their work is very tine, an! the patterns prettily frucied. Different kinds of eartlienware, krises, and tire-arms are made, and it is snid that formerly cannons were cast at Achin. Little skill is, however, commonly shown in forging iron, or in carpenters' work. The sumatrniss are wholly strmgers to painting and Iraw. iug; their carvings are always grotesque; and their proticiency in the exact sciences is very limited. Nedicine is in the lowent state, being entrusted to old people who, in a great measurn. depend on charms and talismans for the cure of diseases. The sumatrans are fond of music, and have many musical instruments, though most part of these have been borrowed from the Chinese. Their poetry is by no means contemptible, and is much favoured in point of harmumy by the Malay langunge, the smoothmess and sweetness of which have gained for it the appellation of the Italion of the liast. They write in the Arutic eharacter.
Sumatrn is divided among a number of mative states, the principal being Menanknbowe, in thr centre of the island, Nehin, Nink, l'alemhnng, and Limpong. The European settlenents, Bencolel!. Padang, nud others, are on the SW. coast, trenching on the comntry of the liejmiss. Among this people the inlunbs of the villages are muder the jurisdiction of maristerinl head-men or clupatis, who meet at stated periods and plnces, in an insemily at which the peangeran, or fenial superior, preside., These pangerans clam despotic sway; hut, like the dupatis, have, in fact, little more tham a patriarchal and jodicial power. 'They levy no tax. nor seem to have any revenue, other than necrus from their determination of cuses reforred to then in nppeal from the deeisions of the dupatis. And in the immediate neighbourlood of the more powerfal states, the pangerans seem to neknowledge a kind of vassaluge to the sovereigns of the latter. 'The Rejangs are said to be totally withont religious worship of any kind, thongh not destitute of a belief in supernatural beings. A largu proportion of the inhabs. of Sumatra are, howerer, Mohammedans.
Sumatra was first visited by the Portuguese in 1509, by the Duteh in 1600, and by the English two years afterwards. 'The latter continned to establish fnctories and form settlements in the island, during the 17 th century, but principally in 1t85-6. These settlements were retnined lix the British till 1825, when they were ceded to the Dntel in exchange for Malacea.

SUNDlikLAND, a parl. and mm. bor., semport, and par. of England, being, Neweastle ouly

## SUNDERTAND

SUPERIOR (LAKE)
excepted, the greatest port in the kingdom tor the shipument of eana, co, Hurham, ward Easingtom, on both sides the Wear, close to its month in the North Sea; 10 m . NE., I urham, with whieh eity it is connected by railway, and 2.5 in . NNW. Lamban. I'op, of munic. bor, $7 x, 211$, and of parl. bur, 85,797 lin 1861. 'lhe parl. hor. comprises, along with Sumberland, the townships of IfishopWearmonth and B.-W. I'mes on the N. side of the Wear, and those of Monk-Wearmouth, M.-W. Shore, and sonthwick, on its N. side; the whole includiug til area of $5,090^{3}$ acres. Sumderland and Bishop-W Wemonth, on the S. side of the river, at no distant time, were two distinct towns, at a considerable distance from eneh other. All the homses in Sunderland appear to be of eomsiderable uge; hat in lishop-Wearmonth the intervening space has been gradually eurtailed, and at last tilled up ly buillings, so that at present the two form only one town. Whith the exeeption of one strect, in which there are some respectable honses anul shops, sumberland presents the appenrance of one mass of suall houses crowded tugether, with interstices of nurrow lanes rather than streets. The popmiation in them is no dense as to give the apmarame of unherdiliness, as well as alsemere of clemalimess. 'This is not the case in lishop-Wearmonth: in the new part of the town that adjoins simiderimind, there are some good streets and excellent honses, and it is in this part that the higher elasses of inhabitants reside. I'his town is increasing rapitly, several new streets have heen recently built, and others are in conrse of milnling. Bishop)Wearmonth l'ans is a small district riming along the bunk of the river from the parish of Sumberland to nearly as far as the bridge. Its jup) is wary dense; it contains mome glass manufactories and iron works for the manufucture of such artieles ns ure required for the shipping. Monk-Wearmouth Nhore is a large towniship immediately opposite Sinderland, and part of lbishop-Wearmenth, and has a dense pop., with bint few honses ur inhabs, of the higher elasses. Aljoining MonkWearmonth Shore on the W., and extembing for sume distance along the river, is Southwiek. In it are some conl pits and a railway: the greater part of the township, however, is apricintural, and comtains very little trading popmation, MankWearmonth lies to the N. of Monk-Wearmouth Shore, and does not come down upon the river. lis pupulation is alnoost entirely commerted with the trade of the port. The eapriage commanialtion between the portions of the town on the ( $p$ pusite sides of the river is by the bridge over the Wear, the most remurkable object in this part of the co. It was constructed between $17!3$ and 170, at an expeuse of about 33,4162 , and consists of one magnitecont areh, e36 ft . in span, elevated in the centre above 100 ft above high-water mark, so that large ships sail under it by merely loweriug their cup-masts. It was disposed of, in $1 \times 16$, bya lottery of $(i, 000$ tickets, at a price of 30,000 .

The parish church of sumdertand is large und handsome; its E. end is partionlarly elegant, the altar heing placed in a circular recess inmer a dome. St, John's, built in 17ti!, is a perpetmal curney. Bishop-Wearmontli church has an aneient chancel, and mearly decorated E. window, but the rest is mulern. Monk-Wearmonth clureh has had nearly all its ancient features obliterated by molern alterations, thongh it still possesses a rude Norman tuwer. 'Ihere are nomeroms places of worship for bissenters in the town and vicinity, inelnding a syugrone. 'The exchange, a nent editice in the Hligh Street, erected in 1814, at a cost of 8,000l., comprises commercial, news, and court rooms. 'lise theatre, assembly rooms, barracks, custom-house,
and excise ofllee are among the ehlef pulbie boildings. "Jhe town has a subseription library, a mechanies institute, at wheh lectures are delivered, and several other literary instituthons. A sehool,
 36 pour girls, abil it lus also matiomal, l'riemis', and varions inferior sehools. A hage indmary acenpies a building raisel in 1822 , mul int alnishonse for 10 widows or daurhters of master marimers was fommed and culawed in $1 \times: 30$. There are momerous other almshones and charities of ilitherent kinds. 'The town is lighted with gas, and well supplied witli water.

The port, immediately within the river's month, is formed by two piers, emel about 4.0 yards in lemgth, which projert one from the s.and one from the $N$. side of the river into the Gierman Oeem, At the extremity of the N . pier is a lighthomse, having the hatern elevated it fi, ahown the sea at high water: thero is also a hurbour light. oll thes. pier, which shows during (b) and quartere thook. At springs there is Irom 1 ito 17 ft , water over the lom, had at uenp: from 10 to 12 ft : the ehamel is close ty the N. pier lead. A doek of if mares in exfent, with in hasin, was eonstructent, in IXiks, on the N. side of the rivar; but. owins to the collieries boing mostly on its S. side, this dock alid mot prove so useffll as hal been antioipated, mad the river contimed to be crowided with ships, which at ehb thes were axposed to the risk of danger from grombding. 'I'o obviate these inconveniences, a new dock, $\because \frac{1}{2}$ a ares in extent, was constructed in 18iot-itb, It has a tidal basin at each end, ome opening into the river the town, and the other into the sea at llendom live, alomit 1 m, slic. from the town. lbotl doeks are capalite of hodding up to 500 sail, in 8 to 1 finthoms of water. 'Jhe staple husinesses of the town are the building of ships and the shipment of conl, The former is carrical on to a grent extent. On the lat of dannars, istil, there belonged to the phet 112 suiling vessels under 50 tous, of an angregate burthen of $3,3 \mathbf{B}^{\circ} \mathrm{i}$ toms, and xax sajling vessols above i3) tons, wh angrequte burthen of atis, in- toms. At the same time there were $8!$ stembers, of a total hirthen of $\overline{5}, \mathrm{I}$ a toms. The grose amonint
 cloth, chain cables, glass, and carthenware are extessively minulactured in the town, and these, with lime, grimbstones, and wrunght marble constitute, mext to cond, the prineipal artieles of export. The aljacent village of Deptford, oll the Wear, has a large rope-factory wrought by steam.

Under the Mmincipal lieform Act, the lwor, is livided into 7 wards, and is governed by a mavor, 13 nddermens. and tiz eomncillors. Simaderlimul had no voice in the legishature till the Reform Aet conferred on it the privilege of sennling 2 mems. to the 11 . of C . Rem, clectors, $2,7 \times 1$ in 1865 . It has a commission of the peace, a combty eonrt, and weekly sessions, laesides courts lect aid harmial by the lBishop of Dorhum. Market-day, Salurday; aind for cattle every other Thesilay. Finirs, May 11 and 12, Oet. 12 and 133, for cattle.

SDPbliloR (LAKE), the most westerly and most extensive of the great lakes of the st. Lawrence basin, in N. Ancrica, being the largest ex isting boly of fresh water. It is of a trimugher torm. exteming loetween lat. $46^{\circ} 30^{\prime}$ and $11_{0} \mathrm{~N}$. , anm loug, 8 ; ${ }^{\circ}$ amil $122^{\circ} 20^{\prime} \mathrm{W}$, Its length, le, to W., is abont 3bid m., with a mean breadth of ahont. 80 m., so that its area may be taken at abuit
 it., and the height of its surfice at about $6: 10 \mathrm{ft}$. above the Athotic. It roceives upwards of 50 rivers, but hone is of much inuortance except the

St. Louls, which enters at its SW, extremity, and the liviere an dimad lortuge, Daring the mettfitg of the show, these null the oflier rivers nwerp) into the lako vast qumbities of sami, bumbler atumen, und irift timber. It dindharges finelfi at itm lis, oxtremity luto lakes lluron mid Michigan, by the river anil fulls of St. Mary. This lake embnsomes many large and well-wosied lslanis, the chiof of which is lale Royng. 'The emontry on the X. and If. is representoif as a monnthinoins ombunkment of roek, from equn to l, bit ft. in lueiglit: the cli mutse unfavomable, and the veretation Now mul sematy. Upun the S , the land is niso high, genorally waudy, sterile, and the const dangerons, subject to atorma and shdden trmasitions of temperisture, and to fopm and miste. The mean heat dit dime and duly is about tia ${ }^{\circ}$ fah., but a frightfint winter prevails for nine montles of the yeur. 'The Chippeway lidians inhubiting the whores are pour and iniserable, depending for mubsistence chictly upen the fish of the lake, and the wihd rice of the aljacent sivamaho. Lhat, notwithatanding these minvomrable circumstaneen, the linrhurs of tirmad lsle and Chergimugon liny, on the N. const, are excellent, and tho tuke is now mavi hated lyy wemmlonats and saling vessels equal to the ernit navifrating the lower lakes. 'Tlie limanis lay Company have sevoral atitions romil the conats of this lake.

SUl:AT, a large town of llindontan, enp. prov. of 'Enjent, and of the liritish distr, of its own mume, minder the presid. Bombay, on the 'laptee, about to m. nhove its month, in the (inlf ut Combay,
 INos. The town is about 1 mm , in cire., shaped like a bow, the chond. formed hy the 'raptere, having, nenr its centre, a sumall castle garrisnod liy ofew sepoys and liuropeniss. On other sides the town is simponaled by a wall thanked with semicircalar towers. Withont the wall are some grom limponan honses, formerly owenpied by the French, bit now the rosinlences of the linghenh oflicers: the homses within the town nre vory inferior, consisting buly of timber frames tilled up with brieks, their upper stories projecting wer ench other. The strects, also, are narmow and irregnlar. Surat lins an Euglish churel and an Eurpish school, with numerous lindoo schools, anil a large limropenn eemetery, containing the tomb of Sir (i. Oxemion, one of the earliest goveriours of liritish India. The most remarkable building or institution is a hospital for sick muimals similar to that at Baroaeh. During the last crotnry this hospital contained horses, moles, oxen, sluep, gonis, monkeys, poultry, pigeons, and a variety of birds: also an nued tortoise, which was known to have been there 75 years, The most extraordinary ward was that appropriated for rats, mice, bugs, and other moxions vermin, for whom suitable fool was provided.

Surat had formerly a large trade in all kinds of Eastern produce, but this has greatly deelined, nud its exports consist principally of cotton wool, which is sent in large quantitios to Bombas. Most part of the old manufnetures of Surat, except kincobs and shawls, for which there is little demand, have been superseded by those of Great Britain, and the greater number of the native merchants have beeome poor. Among the traders, however, are numerous Parsees, the descendants of those expelled from Persia by the Mohaminedans, who have the reputation of being wealthy. Vessels of 30 or 40 tons may come up to Surat, but those of greater size must lie about 15 m . lower down the river.

Surat is the residence of a Pritish collector, judye, and military commandant, and is the seat
of a hoaril of cuntoms, a circuit court, and of the Suchler Achanlut, or chief tribumal for the pitire premile of Ilombny. It Is nipposed to be one of the mont ancient citles of' Ilimdostan, heing mentionel! in wone of the earlieat recorila.  inlani, enjoys, from its being akirted on the N. by the 'lifames, mont of the advintares of a maritime co. It has to the N. Mhlilesex, mida small part of llucks, from both of which it is nepurated by the Thamen; on the li.. it is lemuded by Kent, win the S. by Sussex, and on the W. lis limmphire and berks. It comprises all that prio tion of the metropolis to the S. of the 'Thumes and is thus, in fact, a metropolition eo. dren, ilx
 are arnble, memlow, and pasture. With the ex. erpotion of the Wirnht, the surface consists of altermate hill and dale. Fome of the hilts rive to a comsiderable heipht, aftording hiphly diversified and bematiful prosueets. 'The suil comprises every varicty, from the richest loam to the puerest mor. Theri are three portions, the moils of whith are particularly well dethed; viz. Int, the Wiahb, ocengying all the s. part of the co. from Crow hurst to Haslemere: endly, the wamly luan dis. trict, lying between the Wembland the downs: aml, Brilly, the downs, or chalk lam, ocempering the whole li, side of the co. from t'rovilon to Tilsey, but uriolually decreasing W., till it Farnhanm. on the borter of Hants, it is reduced to a marrow strij. 'I'o the N'Lis of' the downs, between them nind the Thmmes, there is a great varicty of moil, partly consisting of stromp dark chy, and partly of sandy lomm. In the NW. und siv. parts of the co., but especially the formet. there are very extensive tracts of heath and moorish gronnd, and smaller tracts of the same kind ure met with in various other placess. On the whole, however, the eo. may he mad to be of an average alagree of fertility. Climate gromb: and, owing to the variety of surfnee, the abundance of wood, nud its contignity to the motrit polis, it is one of the most desirable comities in Enghand for a residence. A large propurtion of Surrey is in tillage; but agriculture, speakius generilly, is in a lackward state, and two of even more, white crops not unfrequently follow in succession. On the rich friable calcarems loams between Croydon and Epsom, 6 quarters of wheat an acre are not unfrequently reiped; and on the rich sandy loams near Godalmiug, 5 quarters is no uncommon crop; but on the poorer swils, and in the Weald, the produce seldom exceds from $2 \frac{1}{2}$ to 3 quarters. The turnip culture was introduced into Surrey sooner than into any other English co.; but even at present turnips are but seldom drilled: their management is bit imperfeetly understood, and tares are generally preferred by the Surrey farmers to any other species of green erop. Tiruwrist ploughs are used ia many quarters, but the swing plongh is most common. Lime is extensively used as manure, and the application of salt for that purpose is dauly becoming more general. Hops are raised ill considerable quantities, and those grown in the neighbourhood of Farnhan are preferred to most others. Peppermint, laventer, wormwood, and chamomile are raised in the physie gardens about Mitcham; and a considerable extent of land at Battersen, and other places along the banks of

 market. There is no peraliar breed of enttle in surrer, lat the short horis und the Nuswex breed are the most prevalent. A comsiderable number of Nuep are kepf, prineipally on the down-land. large mombers of hoges are fed; they comsint printcipmally of the Iberkshire and Chinese variction. The loorking breed of fowls is in hifh estimation: they are large, handsome, pertiecty white, and are disthguished by huvihg six claws to mueh fint. 'lhere are 110 yery large eatates in Surrey. Firms of all sizen : the largest are oll the downlamls, nul the amallest In the Weald; but, it inn average of the co., the siae of fimmes is hot subpposed to exteed 170 acres. They are commomily hedl under lenses for 7,11 , or 21 yenm; but the vicious customs that prevail as to entry detrat the alvintages that might otherwise have renitad from this tenure. IIt the Wealil the firm-houses are menn and ruinons, but they are better lin other places. Cottuges good, mid ireanestly ormanmented with vimes mud tlowers. There ls a great deal of vithmble thmber and coppice wood in Sarrey, particularly in the Weald. Large quantities of follores enrth are dag up in varions phoces, mad there are alan exicollent pharries of freestone and llmestome, lixecpit in so far as it is connested with the metrombin, surrey has few mannfinetures, and those of little ar mimportance. Besides the 'lloames, it is watered hy the Wey, the Mole, and the Wamile; and it is traversed by the Surrey and Croydon canals, aun by a great innuy railwn's. 'lurnpike roaln focal, but eross rombs, particularly in the Wenk, very imdiflerent. It contaias lis himIrouls, exe, of the bors, of Southwark and lamheth, and the town of Guildford, nud is divided into 1.12 pars. It returias 11 mems. to the H . of C., riz. \& for the eo, 2 for the bor, of Guildfird, 1 for the bor, ol Heigate, 2 for lamineth, ind $\geq$ for the bor. al Somthwark. liegistered electors fur the co. 13,090 in 1 (6) 6 , heing $0,!113$ for the enstern, and 4,082 for the western division. At the census of letil, the co. Lad $120,362 \mathrm{e}$ inhab. homses, and 8is3,012 inhahitants, of whom 579,748 belonged to the metropulitan, and $973,26.1$ to the extra-metropulitan district. The gross mamal value of renl property assessed to income tax, in INti2, amounted to $1.12 \cdot 1$, Wibl, in the lastern, and 374,0871 , in the western division of Sinrey.
SUSSliN, a marit. co, of bingland, on its S. const, having N. and Nli. Surrey mud Kent: S, and sk, the Einglish Chanmel; and W. llants. Area, $1,451 \mathrm{sq}$, miles, or 931,911 acres. Surtace und soil varions, $\Lambda$ ridge of chalk hills, to which (thumgh in strictness upplicable only to n part) the term south Downs is usually applied, runs hirough the co. from South Marting and Miland ('hapel, on the contines of IIants, to Benchy' Ilead, where it terminates in high precipitonis elills. Their N . declivity is rather steep, but that on the S. is gently sloping. The soil on the south Downs is generally a light hazelly mould, on it substratum of loose chalk. On the S. side of this rauge, along the coast from Emsworth, gradually deoreasing to near Brighton, there is a considerable extent of fine, rich, loamy land. To the N. of the South Downs is the extensive tract called the Wrald of Sussex, uniting on the E. with the Weald if keat, and stretching as far $W$. as Petworth. The sold of the Weall is similar to that of the Weald of Kent ; being, for the most part, a stiff tanacious clay, with oceasional samly and gravelly patches intermixed. It is thickly covered with ouk wood; and, when viewed from the South Downs, appears like an immense forest. In the
F.. parts of the ro, in what is called levensey lavel, and bear Wimehelsen, are collsiderablo tracts of very llue, deep, marsh lamb. (limata milil, ifry, and enrly. A lurge extelit of Nunarx is unuler the plongh, liat hosbandry in in a hackworl condition, Crops principally entivated, whent, onts, und burley; mud, on all the light hames, turnipa are extensively grown. (ireat guantities of hops are raised, purticularly in the enstern parts of tho conntry. Sussex in deservedly celabrnted for its breeds of cattle and sheep, each heing alonit the very leest of ita kind. 'The oxen are of a deen real colour, amb have tupering turned-up homs; they fatten easily, prosluce excenlent beef, and are not infertor to nay wher breed in thedid latmar. 'The grenter purt of the tillage in tha Wealil is performed by ox-temons. The motive cattle ilo mot, howevor, inswor for the dairy. 'Itie peribliar lireed of sheops belomping to the en, it cabled the Soutls Down, from its being fomal in the grentest perfection on the South Down Chalk llills. 'lhe breed is now widely dilfused; lnit, owing to the extemsion of tilluge on the lowns, and the incronse in the size of the animal, nind the welpht of the tlepee, weither the mintenn nor the Wool is supposed to le so goml as firmurly. J'otal stork of alicep estimated at nearly !ent,01) i.

Sunsex has been colehented, from the remotest. poriod, for the nbumbune mal exednene al its timbre; and in these respects it continmes to bos decindedly superior to every of hor limgllash oo. thak is the principul timber of the Wenld, lat in other parts beceh is most prevalent. To the nhmmbume: of wood ls primapally to be aseribed the circomstance of Lissex berigg formerly distinguished fior the mumber of its iron works; but since pit-coal began to be gencrally employed in the smelting null rehning of iron, these have been wholly abandoned, as well as those that were formorly estabished in Fient. I'roperty much divisled. Averige size of firme in the Weald 100 neres; in the Downs, from 1,200 to 2,0100 arres. A great propurtion of the farms lield he tenants at will; and owing to injurions constomsan to entry, a large part of the capital of the tomant is swallowirl np in thes payments he is compelleil to mako, so that much of the land is very insumiciently stocked. - Onlines invariably thatehed and wenther-boardeal. Mamalinetures of litule importance. Ironstane, fuller's earth, limestone, and sumbtone are all met with. I'te rivers are of wo great magnitude. 'The priscipal is the Arim. It commumicates by a camal with langoort harbour on the W., nad with the Wey and the Thumes on the N. In the Wealil there are several ponds in which freshwater fish are fed for the lamdon markets. Sussex is divided
 contains 310 parishes. it retaris 18 moms to the II. of C.; viz. 4 lior the co.; 2 fir the city of Chichester; 2 each lor the bors, of Brightion, Lewes, Hastings, and shorehmon; and 1 eadis for Aromdel, Horsham, Milhurst, and liye and Winelolsea. Registered electors for the co. 1,277 in 1865 , being 6,670 for the enstern, and 2,607 for the western division. At the census of 186t, the en. had 65,578 inhab. houses, and $\$ 366,836$ inhabitants. The gross ammal value of real property assessed to income-tax, in 1862, was fix5,524l. for the eastern, and $305,844 l$. for the western division ol Sussex.

SU'TIIERLAND, a marit. co of Scotland, ocempying the NW. angle of the comintry, has on the N. and W. the dtlantic, li. the co. Caithness aml the Moray Frith, and S. the Frith of Dornoch, lioss, and Cromarty. It contains $1,152,640$ acress, of which 30,080 are under water. The aspeet of the country is widd, bleak, and, in many parts,
savage. The E. shore haw a small fringe of gool arable land; but the rest of the surfice is rugged and mountainous, being, however, intersicrsel with various narrow straths, or glens, mad some considerable lakes and morasses. Sutherlaud, like the other llighand eos., was, till recently, oceupied loy native temants, similar in all respects to those of hoss. 'These, however, have, for the most part, been recently removed either to villages on the coast, or have emigrated; anci the lands have beren divided into extensive sheep farms, furnished with excellent houses and ohteres. The native breed of cattle is suall, but when erossed by those of Argyle ame Skye, it is said to be equal to any that the llighlauds can produce. Gallownys, mid other varietice, have also been introluced. Owing to the extraordinary extension of sheep farming in this co., the stoek of entte hass been diminished in a still greater degree than in Ross; but sheep being mueh hetter suited to the country, the change las been, both locally and in a public point of view, highly mdvantageous; vast tracts having been, through its menus, coupled with a very estensive drainage, rendered comsiderably produciive, that were formerly almost useless. Cheviots are found to thrive remarkably well in almost all parts of Sutherland. About 40,000 sheep and 180,000 flecees are said to be ammally sent to the S. from this en. Four-lifths of the co. belong to the duke of Sutherland, who has expended vast sums in the formation of roads and inns, the building of bridges, piers, far:n-howies, and villages, and other expensive and substantial improvements. The friuge of arable lome aloug the E. coast las been divited into moxierate-sized farms, well inelosed and drained, and presenting as good a specimen of the improved turnip hasbandry as is to be fomd in any part of the island. No where, indeed, in Scotland have improvements been attempted on a greater scale, or prosechted with roure zeal, skill, and success, than in this remote eo. Sutherlaud has three great deer furests; and ptarmigan, grouse, and blackeoek. and alpine hares are ammdant. Limes!me and freestone are met with. The herring fislery is carried on with spirit and suceess, both on the N. and W. coasts, but principally from 1 elmstale. I'rincipal rivers, Oick-l, Hleet, Bosa, and Itclmstale. It contains 13 pars., bat no consilderable town. The pup., in 1862, was 25,246 , living in 4,926 honses. Regist. electors, 181 in 1865. The oll valued rent was 2,2661 , and the new valuation, 57,3391 . for 186.1-65.

SU'TON COLDFIELD, a market town and par 「Jugland, co. Warwick, hund. Hemlingford, om ue road from lirmingham to Licluicld, 6 m . NNE. Birmingham. Area of par. 13,030 acres. Pop. 4,662 in 18ti. The town, on an acelivity, in a bleak situation, consists prineipally of one long strect. Ilonses goon, and the inhabs. well supplied with water. The par, church, an edifice of the 13 th century, has a statue of Vesey, bishop of Exeter in the time of Henry Vill., a native :und a great benefactor of the town. A flourishing free school, founded by Vesey, and national sehools, almshouses, and several other charitable endowments, exist at Sutton. The inhabs, are prineipally employed in the mamuacture of Birmingham goouls. 'The town, which is of great antiguity, was ehartered by 1 leary VIII, under a warden, 10 aldermen, and 2 justices. The corporation had various privileges, which have since bicome void: petty sessions are, however, still held quarterly. Markets on Mondays: fuirs, Trinity Monday and Nov. 8, for sheep aidl cattle.
SWAFFliAnt, a market town and par. of Englaud, co. Norfolk, hund. South Greeuhee, 25 m .
W. Norwich, Area of par. 8,130 acres. Pop. 3,559 in 1861. The town is limely situated on rising ground, and is well bnilt. The par. elarch is a spacious and hamdsome structure, chictly in the perpendicular style, with a lofty nave, the vanlted roof of which is richly adorned with tigures carved in Irish nak; it has a well-proportioned tower, with curiched embrasures and piumacles, some handsome pillars and munuments, and curions inseriptions. The living of Swallham with Threxton vicarage nuld rectory, wurth $7 \mathrm{~B} \%$. a year, is in the gift of the bishop, of Norwich. The Friends, Baptists, and Wesleymus have meeting-houses. The co. bridewell, ind a beautifiti market-cross, surmonuted by a figure of Cires, erected by Lord Orford, in 1783 ; a public assembly room, and a neat theatre, are the other principal public edilices. Swaffinam has a free grammar and a national school and varions alm. houses. Quarter-sessions for the co. are beld here at Midsummer, besides anmal courts leot and baron, and weekly petty sessions. Markets, principally for butter, on Saturdays: fairs, May leth, July 21 st , and Nov. 3rd, for cattle, sheepp, mill toys.
SWANSEA, a parl. bor., sea-port, and par. "f South Wales, co. Glamnorgan, hund. Swansea, on the W. bank of the Tawe, at its moutlo in the Bristol Channel, 34 m . WNW. Cardill; and 2l" m. W. London by South Wales and Great Western railway. Pop, of bor. 41,606 in 1861. The parl. bor. ineludes the par. of St, John Lansamlet :and the hamets of Morriston and Clas-Lower on buth sides the river, having a total area of aboutt 5.1114 acres. The compact portion of the town is almut 1 m . in length, N. to S., by somewhat more than $\frac{4}{4} \mathrm{~m}$. in neverge breadth, and consists of three in four puralle time of thoroughfares crossed by numerous others. 't is generally clean and prettiy' well built, and has been of some reputation as a watering-place. It has an exeellent market, intended by all the neighbouring district, with a handsome court-house, in which the assizas, quarter and petty sessions are held, an intirmary, assembly-roums, theatre, lurbour offices, erectei in 1860, royal institution for literary and seiculific purposes, with a good library and museum; mechunics' institution, poor-house, honse of enrrection, a dorcas and benevolent societies, a society for prosecuting felons, and a branch of the lauk of England. The town is pared, lighted with gas, and well supplied with water. The pur, chureh is comparatively a molern edifice, with a square tower; the living, a vicarage, wortin 2911, a year, is in the gift of a socicty. There are, also, a synagogne, Rom. Cath. and numerous otlee dissenting elappels; and on an elevated site near the centre of the town is swansea Castle, fommell in 1009, now partially converted into a barracks and stores. A free seliool was founded in the town in 16s:2, but, like many other charities firmerly establisthed at swansen, it has become nearly estinct. There are, however, several natiomil ami Lancastrim, and mumerous private sehools. Swanset is highly prosperous and inereasing. It owes is importance principally to its collieries, and the extensive works for the smelting of copper and other metals established in its neighbor rhood. The latter are upon a very great scale; mind, in fact, ly far the largest part of the eopper i re produed in Ireland, Cornwall, and other parts of the U. K., as; well as in Cula and Chili, is brought here for smelting. Swansea has a very extensive trale in the shipying of conal, also two large petterics. The extensive tidal harbour, below the town, is irmed by inclosing the mouth of the river by 6,0 piers, 600 yards and 300 yarls long,
c. 8,130 acres. I'rp. is finely situated on ilt. The par. church e structure, clicetly in th a lofty nave, the richly adorned with ; it has a well-proched embrasures and illars and momumants, he living of Swallhan d rectory, worth I 3 sk , e bislop of Norwich. ud Wesleyans have lewerl, and a beautifind by a tigure of Cures, 1783; a pullic assmre, are the other prinvafthom has a free ool and various alm.$r$ the co. are held here nual courts lent and sions. Markets, |rinllays: fairs, May lith, for cattle, slecep, and
, sea-port, and par, w, n, hund. Swansea, on at its mouth in the NW. Cardin!, and 2la iles and Cireat, Western 16 in 1 seis. height. The llelags, within the frontier, has an elevation of $6,100 \mathrm{ft}$.

Speaking generally, Sweden may be said to be a that conntry. There are, indeed, some ranges of high grounds and detached liills, but, on the whole, it is wonderlinly level. This is so strikingly the case, that all the way from Gottenburg to Stockholm, by the Orebro rond, there is not a single hill or declivity till within a few miles of the capital. About one-twelfth part of the surlace
 and seven-tenths 28 a ft. above the level of the Baltic. The remainler, consisting chielly of the consts, is of less eleration. These are, for the most part, fenced by numerons rocks and islets. The islands of Gothland and (Eland, in the baltie, belong to Sweden: they are situated opposite the SE. shores of the kingdom, and (Eland is separated from the main land by a narrow strait which in one part (opposite Kalmar) is only about 4 III across.

The S. provinces consist chiefly of vast sandy plains interspersed with small lakes and hills, which are sometimes bleak and barren, but elsewhere elothed with woods. The central region contains extensive plateaux of table land eovered with forests. The N. part of the kingrdom is diversitied with mountains, deep valley; ind glens, alternating with sandy wastes and vast forests.

It was formerly divided into 18 , but is now divided into 24 lains, or governments. The sul)joined table shows the whole population of each lain, or goverument, at the end of 1860 , with a separate statement of the proportion of the number of inhalos. in the towns of each government.

Rivers.-Sweden is extremely well watered. Through its N. and central parts twelve large rivers flow into the Gulf of lothmia. The Tonnea, which has the longest course, runs almost due S . for about $290 \mathrm{~m}_{\text {; }}$; but the largest is the Angerman, 280 m . in length, so deep that shipis of G00 tons load at Nyland, about 70 m . from the sea. Next to these are the Umea, with a course of 250 m ., and the Windel, 235 m . in length. The general direction of the rivers falling into the Baltic is NW. to Sle, liew of them are of any considerable size, and notwithstanding the generally tlat comutry through which they flow, their navigation is much imperded by rocks and numerous cataracts, and is rendered perilous luring the
inundations occasioned by the melting of the snows. Some of them incrense 18 or 20 ft . in height so rapidly as to carry away large trees, and even to detach immense blocks of granite from the momatains: still, however the inundations aceasion little damage, owing to the number of lakes, which serve as so many basins for the reception of the surplus water. There are, in fact, upwards of eighty considerable lakes, occupying in the agyregate a very large surface. The principal of these is the Weaer, the largest lake in Europe, after that of Ladoga, between lat. 58022 ant! $54^{\circ} 25^{\prime}$ N., and long. $12^{\circ} 20^{\prime}$ and $14^{\circ} 12^{\prime}$ E., above 90 m . in length by 56 m . in its grentest breadth, 147 ft. above the level of the sea. It receives many streams, the only outlet for its waters being a chamel about 200 yards in width, immediately below which is the celebrated cataract of Trolluetta. Thongh in parts very deep, a great portion of this lake is so shallow as to render its marigation didlicult and dangerous. The lake next in size is the Wetter, 86 m . in length by 16 m , in its greatest breadth. It is about 25 m . SL: the Wener, and 295 ft . alove the level of the sea. In some places it is 70 fathoms deep: it is often ugitated by sudflen and violent storms. The Molar lake is an inlet of the sea, extending westward frum Stockholm, near its entrance from the Baltie, abut 70 m ., with a breadth varying from 2 to 20 m . It is deep and clear, contains some hundred istands, and is regulaty marigatel from April to November. The lljelmar, a lake lyiur to the SIV. of the Melar, to whid it is united ly a canal, is 35 m . in length, varying to 15 m . in width.

Climate.-For five or six montls of the year the surface of the N. parts of the country, from the summits of the mountains to the botems of the vallevs, is covered with ice and snow. The rivers and likes are also frozen from Oetober to April. In the central parts, the winter seldom lasts more than three or four months; and in the S . and W. parts, the climate is very similar to that of the N . of Germany. In the N. division a great degree of heat is experienced dhring a short periont of the year. The transition from winter to smmmer is there, also, very rapid, oftell oecerring within the space of a few days.
On the whole, however, the elimate of Sweden is muelh milter than might be expected from its high N. lat. The winter is not so cold as in countries in the same lat, further to the E., at the same time that the mean temperature of the summer is but little inferior. The mean annual temperature at l'etershurg is 37.10 Valur. ; whereas at Stockholm it is $41: 43^{\circ}$. The advantage on the site of Stockholm is eliefly in the six winter months, the mean temperature of these being in it $29.4^{\circ}$, and in P'eterstorrg only $21 \cdot 9^{\circ}$. During the six summer montlis, the advantage on the sile of Stockholm amotuts to only $2^{\circ}$; ant in July and August the temperature is $1.80^{\circ}$ higher in Petershury thim in Stockholm. The winter is considered by the inhab. as peculiarly plensant. The roads are always dry; and as the winds are seldom violent, travelling is lyith rapid and agreeable, the traveller defending himself from the eold by warm clothing. The great defect of the climate is the occurrence of frosts in Ang. and Sept., by which the crops are often injured. Near Tornea, at midsummer, the sun is visible during the whole night. The longest day at that town is $21 \frac{1}{2}$, and the shortest $2 \frac{1}{2}$ hours. At Stuckholm, the longest day is $18 \frac{2}{2}$, and the shortest nearly 6 hours in length.

Genlogy and Minerals.-In point of stmeture, the whole of Sweden may, with few exceptions,
be considered primltive. Granite and gneiss are the predominant roeks; but the former is more extensively diffused than the secoad, which is found chiefly on the shores of the Baltic, and in the $S$. part of tiue kinglom. A remarkable geological feature, which Sweden has in common with some parts of N. Germany and Denmark, is the presence of a vast number of caormons erratic blocks of granite scattered over its surface, especially in the central and S. provinces. In the S. they are collected in loug sjits or tongues, resting upon the plains, which are quite uncomnected with hem ; more to the N . they are seattered indiscriminately, and so profusely, that seareely an acre of land is withont one or more leaps of them. They seldom exceed 30 or 40 ft , in height above the surface, and form many islands in the lakes, as well as heaps on the plains. There are mountains of secondary formation in Jemtland, Nericia, l: and W. Gothin, and in the islands of Gothlnant and Gilaud. Shelly limestone and chalk are met with in Scania. Deposits of oceanic shells are found in the comutry near Uddevalla; but at Stockholm, Upsala, Ilernosand, and at other phees on the E. side of the peninsula, the shells tiscovered are of the kints belonging to the Baltic without any mixture of the oceanic. Sweden is rich in mincral products. Among these are irm, the best in Europe, copper, cubalt, zinc, leal, antimony, gold and silver, alum, nitre, sulphur, with porphyry, marhle, alabaster, limestone, millstoue, whetstone, asbestos, nud petters' earth. But the only metals that oceur in any comsiderable quautily in Sweden, and the ores of which are worth working, are iron, copper, and lead; iron leing the most abumbint, and lead the seareest of the three
The subjoined table shows the quantities of the different kinds of minerals and metals produced in Sweden, in each of the years 1861 and 1862.

There is a remarkable deficiney of the more valuable produets fomul in secondury formations, as eoal and salt. The former, indeed, has been diseovered, and wromght, near IIelsinhorg, in the S. of the kingrom ; but it is of very inferior guality: there are no salt heals nor brine surings, and the waters of the Baltic not being largely impreghated with salt, it is wholly imported.

Vegetable Problucts.-The forests of Sweden aro estimated to oecupy abont $98,000 \mathrm{sq}$. miles, of four-sevenths of the whole surface of the comotry, Those of the $N$. recrion consist of birch, pinnc,
nite and gneiss are he former is mure e second, which is the Baltic, and in A remarkable geohas in common with id Denmark, is the f enormous crratic ver its surface, esrovinces. lency of the more condary formations, r, indeed, has beed Helsinhorg, in the is of very inforior a mor brine springs, t being largely imy imperted.
rests of siweden aro $5,000 \mathrm{sq}$. miles. of ace of the comerrs. st of birch, piuri,
and firs, which in the central parts are intermixed with ash, willow, linden, and maple; and in the $S$. with oak, becch, and yoke-clm. Few becches are found N. of lat. $57^{\circ}$; oaks are found as far N. as Sundswall. The linden is found as far $\mathbf{N}$, as lat. $61^{\circ}$, the hazel as $62^{\circ}$, the cherry and ash as $63^{\circ}$, and the general limit of the birch and pine woods is lat. $69^{\circ} 30^{\prime}$. The small dwarf birch, aspen, nountain-asli, and dwarf grey alder are found as fir N. as $\mathbf{7 0} 0^{\circ}$, but only in the valleys and sheltered situations. The walnut and muiberry are almost entirely confined to Goctaland; the chesmut is very rare. The forests were formerly much neglected, and there is now in many extensiye districts a great deficiency of timber. Indeed, a consilerable proportion of the tirewool required for the consumption of Stockholm is brought from Finland. Latterly, however, a great deaI more attention has been paid to the forests. Those belonging to the state have been placed muter the care of a special institution, and very extensive plantations of oaks and tirs have been made. The power of private proprietors to cut down timber was formerly limited; but this restrietion no longer exists. In the interior of the conntry, however, and in such parts as have no facilities ly mems of water-carriage, or otherwise, for the conveyance of timber to the sea-ports, and are distant from mines, there is but little hope that the forests will ever become an object of considerahle attention. Pears, apples, and plums ot all kinds, grow in the open air in the S.; but the grape, tig, apricot, and peach do not ripen exeept in hot-houses. All kinds of melons are grown, currants up to lat. $68^{\circ} 30^{\prime}$, and gonseberries everywhere, even as far N. as lat. $70^{\circ}$. The soil is saitable for all kiuds of pulse crops. Asparagus 1 : quires hot-beds in lat. $60^{\circ} 30^{\prime}$, cabbages cease to come to maturity in lat. $6 . \%^{\circ}$, carrots and parsnips grow to lat. $66^{\circ} 20^{\prime} \mathrm{N} .$, turnips and potatoes nearly to lat. $70^{\circ}$. The yellow beet-rout is produced spontaneonsly; the red is cultivated. A close sward of cummon grass is rarely seen; but ducks, thistles, ras-weed, and such roots as infest the land in more s. countries are seldom observet, even by the road side, or in the most neglected spots.

Animals.- The most common with animals are the wolf, bear, fox, elk, reindecr, roebuck, glutton, ermine, and a species of lyox. The witd boar is now fonnd only in the isle of cilanul. Whales and sea-calves are occasionaly found in the Baltic and Ginlf of Bothmia; and the porpoise (Dehphimas $p^{\text {how }} \boldsymbol{m a}$, limn.) commits great ravages among the tish of those seas. There are few hares, but abundance of other kiuts of game. The cock of the wood, or capercailzie (Tetrao urogallus), formerly met with in Seothand, and recently introduced into that part of the U. Kingrom, is common in the Stockholm markets, whence it is sometimes bronght to London: though inferior in thayour to grouse, it is much larger, sometimes weighing from 14 to 16 lis., and is altogether a very tine species. l'artridges are very plentifin, as are woodcocks and web-footed wildfowl. Eagles and falcons inhabit the clith; the wild swan and eider are hunted for their down; and the eggs of the latter are highly esteemel. The seas surrumding sweden abound with tish; inchading sturgeon, cod, lamprey, rays, soles, turbot, pilchards. herrings, and the stremming, a small species of herring, which has been hatterly very abundant on the L, Swedish coasts. lixeellent mackerel and oysters are found in the Kattegat. 'The rivers minl lakes are well supplied with salmon, pike, perch, tront, eels, and mumerons fish of the gemus Cyprini. The pike, perch, arbel, and craytish are fomm in: the Batic, as in as in the lakes
and rivers. Many of the fish of this sea appear to be of a mixed chancter, between occanic fish and those of fresh water.

Agriculture. - The soil of Sweden, thongh mostly thin and poor, has been greatly improved by the industry of the inhabs. The const land is usually bare of soil, the naked rock appearing everywhere. The that alluvial lands around lake Wener, and in the basius and valleys comnectel with it, consist of a harsh crystalline sand, impregnated with iron, and not very productive; but on the N. side of the lake, in the neighbourhood of Carlstad, the soil is of a superior description. In the country lying between the lake Wetter and the Baltic, there are some very fertile tracts; and round this lake, aum the district round Carlstad, especially the latter, agriculture has made great advances; the lands are well cultivated in large farms, and the comutrs resembles some parts of the interior of lagland, except that the lands under chativation are not fenced by hedges, but by wooden palings. Of the $170,096 \mathrm{sq} . \mathrm{m}$. forming the surface of the country,

22,0...
The agricultural products consist chiefly of rye, barley, oats, maslin (a mixture of barley and uats), whent, potatoes, pease, hemp. Hax, and almost ald the truits and legumes common in W. Enropre. In the s. rye is the most cultivated; in the N. Darley, the culture of the latter increasing in proportion as we proceed farther towards the pole; but the grains of all kinds are generally less mutritions than those of the S . of limrope, and are more ditlicult to preserve. Wheat succeds as fir N. as $63^{\circ}$, but does not ripen in W. Bothnia. Oats seldom ripen N. of lat. $633^{\circ} 20^{\prime}$, but barley is grown almost to the limits of the pine words, in lat. $60^{\circ}: 30^{\prime}$. Hops are cultivatal up to 620 , tobace to $6: 2^{\circ} 30^{\prime}$, and thax to nearly tito. Buckwheat, madker, and woad are grown in scamia. In some parts of the S. the prohuce is equal to that of the best cultivated lands in Eingland and Prance. In parts a return of 7 for 1 is obtained; but gencrally in Sweden the proportion does not exceed 4 for 1 . The unecranty of the climate and the ehances of carly frosts are the greatest obstacles with which the agriculturist has to contend; and some singillar devices are resorted to, to cominteract their eflects. In Jemthand, for example, the people pile up large quantities of wood along the N. side of the small patehes of land sown with corn, that in case the wind should blow from the $N$. or NLi, in the eveniugs of August, they may set them on fire to protect the crop from the frosts. It is nsual also in the S. parts of the cominty to prevent the crop from benig injured by frost when in the ear, to draw ropes across the licals of the gram, and shake off the dew before sumrise, which, bur for this, would then be frozen. In the $N$. potatoes supply the deficiency of corn, and are preferred to all other kinds of food. 'Tobseco is cultivated near Stockholm, but not to any extent. After that of Holland, the tlax prombed in Sweden is probably the best in Europe. llemp is at present not much grown, but the govermment is chateavouring to extend its culture.

The whole arable surface of Sweden is divited into 66, J41. hemmans of land. The word hemman signities merely anl costate, or homestead, and gives no ides. of the value or extent of the land, some being incomparably larger and more waluable than others. It in, in fact, 11 fiwas division, for the purpose of levying the laud-tax according to
ancient assessments. Originally, however, the hemmans belonged, for the most part, to single proprietors; but they are now generally divided into $3,4,8,16$, or more partes, and it is rare for a family to pussess a hemman entire. Of the $66,411 \frac{1}{3}$ hemmans, $731 \frac{1}{2}$ belong to towns, 50, to0 to private individuals, 357 to the crown, 373 to academies nad universities, 201 to colleges and schools, $2 \times 9$ to the church, 204 to hospituls and asylums, 183 to military schools, 31 to saibors, and $4,0.05$ to the army. According to circumstances, the lands are sulfject to a different amount of taxation: of the estates belonging to the nobles, 3,462 are wholly exempted from all public hurlens; and 17,929 extates, partly belongring to them and partly to other privileged partics, enjoy a partial exemption from taxation.
The extates that originally belonged to the nobles, but which, since 1810 , may be indiflerently licld by nobles or commoners, are exempted from the laul-tax, and also from the obligation to furuish a soldier for the army, the notles themselves having been originally homed to persomal service in the army. The land-tax was fised at a certain amonnt of produce centuries ago. It can no longer, therefore, be fairly regarded as a burlen on the land, the valne of whieh really depends on its nett revenue after this fixed charge has been deducted. There is, however, in Sweden, an assessment of 5 per cent. laid on the nett ammal value of all estates. But this, though apparently an equal, is, in fact, a very unequal and impolitic tax. inasmuch as it makes no distinction between the income derived from the rent of land properly so called, and that which is really derived from the capital haid ont on the land, and as it operates as an obstacle to improvements. The occupiers of crown lands in Sweden have long had, and still have, leave to constitute themselves the absolute proprietors of such lunds, on their paying a sum equal to 6 years' value of the land-tax laid on the land. It is not, therefore, the amount of the burdens falling on the land in Sweden, which are really very moderate, but the influence of the 5 per cent. assessment in diseouraging improvements, ani, still more, the minnte subulivision of the hemmans, occasioned by the continued division and subdivision of heritages, in consefuence of the law of equal partition among the children of a family, that are the principal obstacles to improvement. l'roperty is, in many instances, divided into such minute purtions as to be wholly unsusceptible of a proper system of ealtivation, und the oecupiers are often in the poorest circumstances. 'here are parcels of land of not more than 40 yds sq., and a Dalecarlian peasant sometimes sells his handed property for 2 or 3 rix-tollars ( 3 ss .6 d . to 5 s. .), the registration of the sale costing as much as the estate. In some extensive disistricts there are not, at an average, above 14 acres of arable land to a farm; and in the district of Carlstad, where farms are largest, and agriculture most advanced, the average extent of arable land in each farm may be taken at about 72 acres. At an average of the entire kingdon the arable land may be estimated at about 28 acres per farm. (Thomson's 'Travels in Swelen, p .42 C .)
Bet, notwithstanding these disadvantages, and those that originate in its backward climate and not very fertile soil, agriculture has made a very material progress in sweden since 1815 . This is partly aseribable to the encouragement aftiorded ly hovernment, and to the establikment of model liims, some of which are managed by agricultarists from Gireat Jiritain. One of these, in the vicinity of Linkepping, on the S , border of the lake Wemer, consists of about 1,500 acres, of which
about 500 are under the plough. Mr. Stevens, an experienced Scoteh agriculturist, who recently visited Sweden regularly every summer, assisting landed proprietor in laying ont their estates, and putting them under an improved system of management, says thut 'Of late years an enthusiasm has sprung ip for the improvement of arriculture among nill classes of people not to be equalled in any other continental country. This has beed owing, in a great measure, to the exertions of the arricultural societues established within the provinces, and the great interest the landell proprictors now take in the improvement mal management of their estates. Euglish and Gierman works on agriculture are stadied; improved agricultural implements from (ireat Britain and other countries are introduced; and in mamy parts Scotehmen and Germans are seen directing the plough, or conducting the operations of the tield.' (Bremner, ii. 218.)

The best evidence. however, of the improvement and extension of agriculture is to be found in the fact that, previously to $18: 20$, there was genemaly a large importation of corn into Sweten from Dantzic and other parts, wherens that importation has now, in ordinury years, wholly ceavel, and there is, on the contrary, a considerable exportation.
llouses in the comentry in Sweden are mostly constructed of wood, and are roofed with timber, turf, and straw. Gentlemen's houses, however, and houses in towns, are usually covered with tiles. Recently, thick coarse paper prepared with tar has been used for rooting, und is said to answer very well. Slates are very scarce, and there are exceedingly few houses in the kingtom roofed with slate.

It is estimated that seven-minths of the whole pop. are employed in agriculture. Masters ind mistresses are authorised, by an old law, to intlict summary corporal chastisement on their servants, with no other limit than that they do not kill or maim; but this law has become obsolete, and at present the corporal ehastisement of servants is rare in Sweden, and they are treated with great kiadness. The poverty of the soil, and short durit tion of summer, require a great number of hauds during the season for agricultural employments; but daring the remainder of the year they are comparatively ille. Since 1830, the price of agricultural labour has been about $8 d$. or 1 s a a day in the S . und ecntre of Sweden ; but in the N , it cost. 1s. 4d. a day. Labour is generally. cheaper in Sweden than in Norway, from there being a greater number of the agricultural classes who are destitute of property. Lent is most commonly some proportion of the produce, and is usually pail in hind, there being lout few districts in which it is paid in money. Labonrers are frequently paid ly getting a piece of land, which they cultivate fir themselves, working on the proprictor's domain certain days in the week.

Mr. Coxe, one of the most trustworthy of travellers, gives the following details with respect to the condition of the Swedish peasantry. (Coxe's Letters, iv. 275-279.) 'I had frequent opportunities of observing the customs, maners, and food of the peasants. On entering a cottage, 1 usually found all the family employed in cardiug flax, spinning thread, aud in weaving courso linea, or ctoth. The peasants are excellent contrivers, and aply the coarsest materials to some useful purpose; they twist ropes from huys bristles. horses' manes, and bark of trees, and use ecl-skins for bridles. Their food principally consists of sahed tlesh and tish, eggs, milk, and hard bread. At Mishaclmas they usually kill their

 hils with respect to easantry. (Coxe's frequent opportuims, mamers, and ering a cottage, 1 mployed in carting n wearing course are excellent conmaterials to some ropes from hogs' Is of trees, and use al prineipally comfrs, milk, allid hard usually kill theircattle, and salt them for the ensuing winter and spring. Twice $n$ year they bake bread, in large romul cakes, which are strung on tiles of sticks, suspended from the ceilings of the eottag s: this bread is so lard as to be oceasionally broken with a hatchet, but is not unpleasant. The peasants use beer for common drink, and are mach addicted to malt spirits. In the districts towards the $W$. coasts, and at no great distance inland, tea and collee are not unusunlly found in the cottages, which are procured in great jlenty, and at a cheap rate from (iottenburg.
'The peasants are well clad in strong cloth of their own weaving. 'Their cottages, thongh built with wool, and ouly of one story, are comfortable and commodions. The room in which the fimily sleep, is provided with ranges of beds in tiers (if I may so express myself) me above the other: on the woolen testers of the beds in which the women lie, are placed others for the reception of the men, to which they ascend hy ladders, To a person who has just quited Germany, and been aceustomed to tolerable inns, the Swedish cottages may, perhaps, appear miserable hovels ; but to me, who had been long used to places of far inferior accommorlation in Rassia, they seemed comfortable places of reception. The traveller is able to procure many conveniences, and purticularly a separate roon from that inhabited loy the family, which could seldom be ohtained in the Polish and lussian villages. During my course through those two conntries, a bed was a phenomenon which seldom occurred, excepting in the large towns, and, even then, not always eompletely equipped; but the poorest huts of Sweden were never deficient in this articte of comfurt: an evident prool' that ihe swedish peasants are more civilised than those of l'oland and linssia.

According to the oflicial returns, Siveden has $3: 0,000$ horses, $1,800,000$ heads of homed eattle, f,in0,000 sheep, and 600,000 hogs. In general, all kinds of domestic animals are inferior. The horses are everywhere small. There is a dine breed in the Isle of (fland, not more than 3 or 4 ft. high: these, however, are rapilly decreasing. In the $s$. provs., the mumber of horses, as compared with the polb, is much greater than in France, or even in England; there being, it is said, in Scania, $2 \cdot 13$ horses to every 1,000 inhabitants. As we proceed N., the number of horses diminishes; and in Swedisli Lapland they disappear altogether, their place being supplied by reindeer, of which some proprietors possess 1,000 head. In Lipland, the reindeer and dog are the only domestic animals. Swedish black cattle are aiso small; the best are those of bi ( Gothia and baleearlia; in summer they are driven to the momtains, where châlets, similar to those of Switzerlamd, are construeted. The sheep-folds are well kept, and government has endeavoured to improve the brecds by crosses with those of spain, liance, lingland, and siaxony. Sheep are not reared N . of lat. $63^{\circ}$; goats thrive as far as lat. $65^{\circ}$.
Fisheries form a very considerable branch of industry. The herring fishery on the W. mid s. const commenced in 17.10, abont which time herrings began to appear in large shoals on the coasts. 'The quantities ammally taken increased mutil 1798, since which they have decreased; the place ot the herring being how supplied by the stremming, a tish about the size of the sprat, but of much finer flavour. From 1790 to 17:06, the towns of Gottenlmerg, Kongelf, and Marstrand tispumenl of $1,972,211$ barrels salt herrings, anul $2 t 1,071$ hhds, tish-oil, which fetched torether $180,000 l$, about 3 -4ths being sold to foreigners.

But, suce 1805, the average produce of the fishory has not exceeded 2,000 barrels, the herriner having, in a great measire, abandoned the coasts. The stremming is eured like the herring, and is often eaten raw out of the pickle; it is extensively used in Finland and the N. of Russia, and forms a favourite dish even with people of condition. 'The principal stremming fisheries are on the consts of the ciulfs of Finland and Bothmia. The principal salmon fishery is at byefors, on the Klarely, a river whish falls into the lake Wener. The salmon tisheries of Norkopping, (ietle, and hernosand are also very productive, $A$ company in London employs two packet-boats, with wells in the bottom, in trading to Gottenburs for lobsters, which are bought there for $31 / d$, or $5 d$. each.

Mines,-The mines of Sweden, thongh inconsiderable as compared with those of this comery, are a considerable sonrec of national wealth. They are principally situated in the central provinces, which have no fewer than 261 out of the $5 \times 6$ mines suld to exist in the kingdom. Swedioh iron is of very superior quality, and that of the bimemora mines is especially well fitted for comversion into steel; but, owing to injudicious restrictions and the want of eoal, the prodnction in Sweden is not as large as it might be otherwise. The quantities produced in 1861 and 1862 have been alrealy given, under ' (ieology and Minerals." Fahlun, the chief mine, has long been in a dechming state, the number of workmen at present employed not exceeding 500 . The works of this mine are conducted entirely by water-power, and are remarkable for their completeness: comected with them is a manufactory of sulphurie acid. The smelting furnaces and iron works are lieensed to produce certain quannties, some being as low as 50 tons, and others as high as 400 or 500 tons; and some tine bar iron works have licenses for 1,000 tons each. These licenses are granted by thr College of Mines, which has a control over all iron works and mining operations. The iron masters make ammal returns of their manulacture, which must not exceed the privileged or licensed quantity, on pain of the overplus being contiscated.

The college has established courts of mines in every disiriet, with supervising officers of various ranks. Alt iron sent to a purt of shipment must be landed a: the pubtic woigh-house, the superintendant of which is a delegate of the college ; so that it is impossible for an iron master to semul more iron to market than his license authorises. It is true that sales are made to inland consumers at the forges, of which no returns are made out, and in so far the lidenses are exceeded; but it is not supposed that the ipuntity so disposed of excreds a few thonsand tons a year. Fivery furnace and forge pays a eertain ammal dity to the crown. Its mmonnt is tixed by the college when the license is grimited; and care is taken not to grant the lieconse to any one unless he have the eommand of torests equal to the required suphly of charcoal, without encroaching on the supply of this material, reguired for the existing fortes in the neighbourhood. As the surply of pig-iron is limited to the puantity liconsed to he made, the eolleare, in granting new licenses to bar-iron works, always takes into consideration how far this may be done without creating a scarcity of pig-iron. llence the erection of new forges depends-Ist, on having a supply of charcoal, withont encroaching on the forests which supply your neighbours; and 2d, on the quantity of pig-iron which the college knows to be disposible. The courts of the mines decide all disputes that arise amonts the iroumasters re-
garding the excecding of their licenses, an appeal to the college lying from their decision, and ultimately to the king in council, or to the supreme court of the kingtlom.
Manuffacturess.-For many ages, Swellen had none of any importance; the llanseatic Towns took away its raw materials, and re-exported them manufactured to the country: the other manufactures were then, as they still are in great purt, domestic. But alsont the middle of the ITth century, various manufactures, including those of ylass, starch, brass, pins, silk fabrice, lenther, soap, steel, and iron articles, besides printing presses and a sugar refinery, were established: the workers in these establishments were mostly from Cermany and the Low Comitries. Sweden las but few facilities for the formation of great mamfacturing estallishments; but, owing to the long winter niglits, luring which most ont-of-door occupations are necessarily suspended, she has great facilities for the carrying on of domestic manufactures; and the Swedish peasantry not only supply themselves with most descriptions of agricultural implements and houseluold furniture, but with nearly all the coarse woollen, linen, and cotton goods required for their ordinary use. No foreign or factory-made goods, however cheap, can supersede or materinlly interfere with this domestic manufacture; for, as the people would otherwise be idle, its prolucts may literally be said to cost them nothing. Several factorics have, however, heen established in Sweden for the production of the finer descriptions of woven fabrics, some of which have hat considerable success. The government of lilfsborg is the grand seat of the domestic manufactures of cotton in Sweden. Of the woollen manufactures, that of cloth is the principal. It is well made, chicfly of the wool produced in the country; but being principally intended for domestic use, and the cultivators making most of what they require, the sale is but small. Norkopping and Stockholm are the towns in which the largest quautities are made. Foreign cloths are prohibited, but the contraband trade is extensive. The manufacture of other woollen stulfs is confined to tlannels, serges, and bombazines, which were formerly prolibititel, and are now imported in considerable quantities.
The principal glass factory is at Bromeo, in Westrogothia. Eskelstuma is the prineipal seat of the hardware and cutlery business, heing a sort of miniature Sbeffield : fire-arms are made in it at a factory established by government. The quality of Swedish paper has latterly heen much improved, and the quantity so much increased, that considerable supplics are now sent to Denmark aud Germany.
The distillation of corn brandy has been constantly increasing since the reign of Gustavus III. In 1772, government, in order, as is supposed, effectually to suppress drumkemess, prohibited distillation; but, as might have been foreseen, the increase of smugghing and clandestine distillation rendered the prohibition useless, and made it le withdrawn, The Swedes are great consumers of ardent spirits. It is well said: ' $L e$ Suchois est subre, sur tuns les points, à lerereption de l'ean de rie. Cette funteste lublitude commence dies loufunce, et duit être reyurdie comme wne des causes de la depopulation de la suède. (Voyage de Deux Framgais dans le Nord de l'Europe, ii. 42..) $\Lambda$ porter brewery is established near (iottenburg, but the demand fir its prolace is very limited, not expeeding 5,000 lddts, a year.
The suhjoined table slows the number of the several kinds of mannfactories, as well as the mumber of looms and of workmen, and the value
of the articles produced, in the year 1862. The tuble is compiled after oflicial return.

Exeepting oak timber and hemp, Sweden possesses every materinl necessary for the construction of slips. Saltpetre, potash, and tar are among the secondary articles of mamufacture. There are two establishments for the instruction of persons intended for trade or mamuacture, one at Stockholm, and the other at Ciottenburg. A school for mining is established at Faldun. Schools, where gratuitous instruction is given in navigation, have been established in five of the princi;al sea-ports; and no individual can be appointent master or mate of a merchantman without passing an examination in some of these schools, and receiving a certilicate of lis aljility properly to discharge the duties of suel situations.
Trade.-The trade of Sweden, which, from the situation of the commtry, must necessarily be oi limited extent, was rediced for a time below even its natural bounds by the prolicy of the government in endeavouring to bolster up manfactures. latterly, however, this system has been relased; and the trade and industry of the country have both experienced the bencicial intluence of the more liberal policy that has been adopted. 'The expurts consist almost wholly of raw produce, of which iron and timber, especially the former, are by far the most important articles: next to theni are copper, alum, corn, tar, and cobalt. The imports. principally comprise sugar, collee, and other colmial products, salt, wines, silk and wool, cotton, entom twist and cotton stufls, hemp, hiles and akins. The subjoined table gives the total value of the in-

The toreign trade is prineipally carried on with Great britain, the United States, IIolland, ILamburgh, and Denmark, It principally centres in Stockholm and Gottenhurg.
The currency consists almost wholly of paper, and though, siinee $18: 15$, bank notes may be freely exchanged for paper, there is little or no demanid for the latter. The rix-dollar baneo, in which all mercantile transactions are carried on, is worth about 20)d. sterling; the rishs-geld dollar, used as the medium of exelange in ordinary transactions, being worth two-thirls the former, or 133 $/$. Rirdollors bunco are exchanged for rix-dollars specie, at the rate of $2 \frac{2}{3}$ the former for one of the latter, and all rix-dollars are divided into 48 skillings. The notes in circulation vary from 8 skillings to 500 dollars lunco. Such is the prejulice in favour of paper money, that, in the small towns and remote districts, coins, excepting those of eopper, to a small value, are often refused as payment.

The Swedish foot $=11$-gyt Eing. in. ; the aln $=$ 2 feet; the fathom $=3$ ells; the rod $=8 \mathrm{ells}$.

Rouds, Railurays, and Camals.-'The raain roads to and from Stockholm are generally excellent and well kept, but the cross roals are comparstively neglected. A landholder is bound to keep in goonl repair that part of the publie road which prases through his possessions; but it is needless to say that it is very dithenatt to enfore this regralation. 'The system of posting, though aflording every facility for the traveller, is onerous on and injurious to the agriculturists, On all the primeipail rontes, post-stations are established every 7 or 10 m . apart, to which the farmers and peasauts of the distriat are compelled to limilish horses and a driver to the next post-station, at a very low rate, for any traseller who may require them. The station-master has the privilegre of being the only iunkeeper ont of the towns; but he also is obliged to keep horses to perform the same duties as those of the farmers on certain days in the week. Severe penalties, and even corporil punishment, are intlicted on the peasantry for any default in the fulfilment of this duty.

Within the last few years, varions lines of railway have been constructed in Sweden. The main line runs from Stockholn to Gottenburg, with a branch to Jönköping and Malmo, opposite Copenhagen. This line is state property. Various short ralways in the north have been constructed hy private eompanics. The total length of lines opened in Sweden, on the 1st of January, 18id, was $42 . t$ Eng. m. : they were constructed at the average cost of $42,907 l$. per m . The number of passengers conveyed over these railways, in the year $1863_{7}$ was 996,866 . The total receipts, from all somees, amonnted to 160 , wit., and the working expenses to $110,05 \mathrm{t} l \mathrm{l}$, leavi.ug a net revenue of , 14.450 ., or $119 \%$. per mile.

The formation of a system of internal navigation that should eonnect the Kattergat and the laltic, has long engaged the attention, and ocenpied the efforts, of the people and government of Sweden. Various motives eonspired to make them embark in this arduous undertaking. The Sombl. and other channels leading to the lialtic, being commanded by the Danes, they were able, when at war with the Swedes, greatly to annoy
atter by cutting off all commmnication by sea between the f , and W, provs. of the kingdom. Amb hence, with the view partly of obviating this amoyance, and parly of tacilitating the emverance of iron, timber, imd other bulky prodnets, Irom the interior to the coast, it was letermined to attempt forming an internal navigation, by means of the river © otha, and the lakes Wencer and Wetter, from Gottenburg to Nodirkceping on the Baltic. The first and most diflicult purt of this enterprise was the perfectiog of the eommunieation from Gottenburg to the lake Wener. The (iotha, which tows from the latter to the former, is mavigable, throngh by far the greater part of its course, for vessels of considerable burilen; but, besides other obstacles less tiliticult to overcome, the mavigation at the point colled I'rollhoetta is interrupted by a series of cataracts alout 112 ft , in lieight. Owing to the rapidity of the riven and the stubborn red granite rocks over which it flows and by the perpendicular banks of wheh it is bounded, the attempt to cut a lateral camal, and still more to render it directly navigable, presented the nost formidable olstacles. IBut, undismaved ly these, on which it is, indeed, most probable he liad not sutficiently retlected, l'olhem, a native engineer, andertook, about the middle of hast eentury, the Herculean task of constructing locks in the channel of the river, and rendering it mavigable. Whether, however, it was owing to the all but insuperable obstacles opposed to such a plan, to the defective execution, or deficient strength of the works, they were wholly wwept away, after being considerably advanced, ath ater vast sums had been expended upon them, l'rom this period, down to 1793, the undertaking was abmadoned; but in that vear the plan was proposed, which should have been alopted at tirst, of cutting a lateral eanal throt sh the solid rook, about $1 \frac{1}{2} \mathrm{~m}$. frum the river. This new enterprise was begun muler the anspices of a company incorporated in 1794, and was successfully completed in 1800. The canal is about 3 m . in lensth, and has about $6 \frac{1}{2} \mathrm{ft}$. Water. It has 8 sluices, and admits vessels of above 100 tons. In one part it is eut througli the solid rock to the depth of 72 ft . The expense was a good deal less than might liave leen expected, being only about 80,0001 . The lake Wener, the navigation of which was thas opened with Gottenburg, is, as already seen, very large, and is encircled by some of the richest of the Swedish provinces, which now possess the advantage of a convenient and ready outlet for their products.

As soon as the Trollhoetta canal had been completed, there could be no room for doubt as to the practicability of extendine the navigation to Sorlerkoping. In furtherance of this object the lake Wener has been juined to the lake Wetter by the ( Gotha canal. which almits vessels of the same size as that of Trollhocta; and the prolongation of the navigation to the Baltie from the Wetter, partly by two canals of equal magnitude with the above, and partly by lakes, is now completed. The entire undertaking is called the Gotha Navigation, and ranks annong the very tirst of the kind in laurope. Besidey the above, the camal of Arbuga unites the lake Jlieljmar to the lake Moelar; and, since 1819 , a camal has been constructed from the latter to the baltie at södertelge. The eamal of Sitromsholm, so called from its passing near the castle of that name, has ellected a navigable cominumication between Dalecartar and lake Moelar.

Reveme and Expendit:re.- The budget of the kingdom is voted for the period of three vears. The following were the loading features of the budget for the years $1864-56$ :-

Through the energetic efforts of King Charles XIV.-formerly (ienernl Beruadotte-the whole public debt of Sweden was liquidated during the years 1819 to 1840 . Subsequent events, however, made the creation of a new debt necessary, the first part of which was contracted in Engrinnd, in 1852, to the amount of 450,0001 . A lurther sum of $3,000,000$ marks, or 185,0002 ., was borrowed at the Hamburg Exchange in the following? year: and, soon after, a loan of $20,000,000$ rix-dollars, for the establishment of a system of ralways by the state, was negotiated by the banking house of Johus \& Co., Stockhohm, at $5 \frac{5}{6}$ per cent., to be repaid in forty years. The latter sum proving insufficient for the purpose, another loan of $25,000,000$ was taken up by Swedish capitalists, at 5 per cent. interest. The breaking ont of the commercial erisis of 1857 induced the government to eontraet a further deht of $12,000,000$ rix-dollars, at 6 per cent., for the relief of distress in the mining and manufacturing districts. The whole debt of Sweden, at the end of 18152, was close mpon $50,000,000$ rix-dollars, or $11,250,0001$. To this was added, in May, 18ift, a new loan of $2,223,0001$., contracted-at 92 -with British banking houses.

Government and Constitution,-The government is a monarehy, herediary in the male line, with a representative diet, one of the most ancient in Europe. The king must be a Lutheran, and his person is inviolable. He is assisted by a state conneil, composed of 10 members, incliding the ministers of jnstice, foreign affairs, war, marine, interior, tinanee, and public worship, und three councillors. The army and all foreign relations are under the inmediate control of the king; but he cannot decide on any matter touching any other branch of government, without the concurrence of the council. He nominates to all appointments, both military and civil; conclutes foreign treaties, declares war, and makes pence: and las right to preside in the supreme court, and to grant pardons. The princes of the blood-royal are excluded l'rom all civil employments. The different dejmrtments of justice, war, marine, mines, and commerce are ealled colleges.

The diet, or representative assembly, consists
of fom separate chambers, consisting respectivelyof deputles from the nobility, elergy, burghors, and peasants or coltivators, the later class having acpured the privilege of sending representatives towards the end of the 15th century. Since 1820, the proprictors of iron works have oltained the privilege of sending three depnties to the chambar of burghers to watch over their interests. The king nominates the presidents or speakers of the chambers of nobles, burphers, and peusants; the archblshop of Uisal being president, ex officio, of the chamber of elergy, The diet is convenct! every five yeurs, and usually sits for three or four months, bit occasionally, as in 1840-41, fir a much longer period. The heal of every noble family is, by law, a member of the chamber of nobles; but, notwithstamling that the nobitity inchade in all about $13,50 \mathrm{ta}$ individuals, it is hit seldom that the ehnmber of nobles is attended by above 500 individuals. The elergy have 60 depuities, the burghers 85, and the peasumts generally from 140 to 150 , elasen by the arrondissements; the deputies for the clergy, burghers, and peasmes receive salaries during the sitting of the diet from their constituents. No new tax or impost can be established withont the concurrence of the diet, nor can any modilication of the constitution be legally effected withont the concurrenee of all the chanbers composing the diet.
The four chambers deliberate and vote separately; but all questions must, previously to therr decision in the chambers, be referred to standing committees chosen at the commencement of the cliet, consisting of an equal number of members from each order. In constitutional questions, which camot be decided in the same diet in which they are raised, the manimons consent of the four orders is required, but in otler matters the decision of three orders is valid. When two orders are opposed to two, the subject, aceording to its nature, is either dropped, or referreal to the decision of "a special committee, composed of 30 members of each order. Dillerences on minur points are arjusted by the committee, to which the matter was originally referred.
In most cases the deerees of the liet must he submitted to the king, who has an absolute vet"; and it is a curions ciremmstance, peenliar to what M. de l'ralt called the semi-constitutional goverument of Sweden, that frequently the kiug has relused his sametion to the resolutions of the dict, and the diet has negatived the proposals of the king, withont occasioning a change of ministry, or exeiting any deep teeling of animosity on either side. The ling used his privilege of the veto to a great extent in negativing measures agreed to by the diet of 1840-41. This anomily is increased by the absolute legislative power, which the constitution confers on the king in all matters of internal administration and police, in regard to which the diet morely presents adilresses and petitions expressive of their views tond wishes.

Previously to the diet held immediately suhsequent to the revolution of $18 t 69$, the nobility enjoyed several valuable privileges and liseal inimanities. These, however, they then wisely sumrendered, stipulating only for the general freedom of trade, externally and intermally-a stipulation which has not hitherto been fully carried mit. The division of the diet into separate chambers, representing particular orders of the state, is, therefore, less objectionable now than formerly, though it be still necessarily productive of considerable inconvenience.

dent order of the diet, have interests to support that are in many respects peeuliar, and which may sometimes, perhaps, be opposed to those of the public, nt the anme time that they are mostly all more or less depeadent on the crown.
The chamber of burghers consists of representatives of the guilds, trades, and corporations of the different towns. These, as every luoly knows, are possessed of certain franchises and inmanities which go to obstrinet competition, and, emseduently, to eulance the cost of the articles furnished by the privileged elass.
The depuities of the peasants represent by far the greater number of the people, though mit the greater portion of the property of the comutry; and are, themselves, seldom in sueh cirenmstances as to cuable them to act a really independent part. Aud hence, in eonsequence partly of the constitution of the diet, which opposes the greatent obstacles to all orgamic changes, how expedient suever, and partly to apparent rather than real inecpualities in the privileges of the different orilers, a good deal of diseontent prevails in Siwelen. It is, indeed, hardly possible that the present eomplicated and vicions system should be able to maintain its ground much longer; and the best way to avoid the recurrence of another of those revolutions so frequent in Sivedish history, will be to alopt measures for obviating the defeets inherent in the existing political organisation of the comtry, and for making the diet a representation, not of class interests, but of the intelligence and property of the kinglom. Still, however, there can be no doubt, notwithstanding the defects in its constitution, that the country has made a rapid progress during the last twenty years, and that there is every prospect of this prugress being eontimued.
Justice.-The 24 lïns are sublivided into 117 fagelerier, or districts, cach comprising one or more harades, or cantons. At the head of each liln is phaced a governor, charged with the eivil and military jurisdiction, and the receipt of the revenue. Every canton is under the superintendence of a liansman, who is the exceutive otlicer of the administration, and suborlinate to a kronofogede, or kiud of sub-prefect, with authority over four or tive cantons. There are 20.4 courts. of original jurisdiction, or hared courts, with a juige presiding over each. These courts sit three times a year, and 12 peasants are clected by the peasantry of each haerede, who serve as jurymen for two years. There are 3 rosal judicial courts : viz, at Stockholm, for the upper or N. provs.; at Jönköping, for the midille; and at Christianstad, in Semia, for the S. provs. The first has, subordinate to it, 7 inferior tribumals, the second 6, and the third 3. These are the highest courts of appeal from the inferior tribunals, aud have alone jurisdiction in all criminal eases allecting life or property, as well as in all allairs above the value of $4 l$. The decisions of these courts are sulject to the review of the supreme court of justice, composed of 12 councillors, nud presided over by the minister of justice. There are legmans' courts, to whieh appeal is tirst mate from the inferior tribmals, but they are generally considered supertluous establishments. Questions of divoree are brought befure the ecelesiastical courts.
Sweden being almost wholly an agricultural country, with but few manufactures, and only one large town, and having, also, a eonstitutional govermment, and a widely dithised system of public instruction, it might be expeeted," " priori, that it would exhibit a high state of moral feeling, and a remarkable paucity of erime. Suel,
however, ls far from heing the ease; and thongh there ean be no doulbt that the representations as to the depravity and immorality of the Swedes, given by some travellers, are far too hights coloured, still it must be confessed that crine and immorality prevail to an extent not easily accominted for.

Army.-The Swedish army comprises three ilillerent kinds of tronps; vi\%, enlisted soldiers, always on pay and duty, indelte soldien, and the comscription, or lomal militas. The numbers of the two first are given in the following table:-

| Fulisted Truph | Thidelta Force |
| :---: | :---: |
| Horso Guarls . 1,000 | Cavalry . . . 7,000 |
| Artiliery - - $\quad$, 166 | Infuntry . . 24,510 |
| Total - . $8,3.46$ | Total . . 39,8ti |

The militia is roughly estimated at nome 95,000 men, The indelia system, which is peenliar to Swalen, originated with Gustavus Alolphos, was permanently established by Charles Xl., and has continned, with some tritling morlifications, in full operation to the present day. 'To anderstind it fully,' says a traveller, 'it must be borne in mind that the whole of Sweden is divided into military districts or provinces, rael of which is bound to contribute a certain number of men to this branch of the national fores. Each holiler of as much crown land as forms a hemman is botond to provite a man, to whom he assigus a crolt of land, with a cottage, cowhouse, and barn, and an ambal money allowance of about 11. 8s.; one suit. of rough clothes, aud two pairs of shoes. The croft is cultivated by the soldier himself while at. home; but luring his alssence on service with the army at the ammal reviews, or cnany government emplovment, it is cultivated by the landholder for lehoof of the family. When the soldier dies, his widow and ehildren trousfer the honse, de., to lis successor, whom the landholder, under : considerable penalty, is bound to provide within three months. 'To furuish a cavalry soldier with his horse, \&c., two or three hemmais are united; but both in regard to eavalry and infantry, the provinces are divided in stel a manner that the colonel of each reximent shall have his farm (also provided in the way just explained) as nearly as possible in the contre of the regiment; a eaptain in the centre of his company; and so down, through the lowest non-cominissioned oflicers. The farms oceupied by ollicers are large and valuable. The landholders are bound to transport the men, with their baggage, to the ammal reviews, and to allow them so much a day for their expeuses. Goverument furniskes the uniforms, and in time of war gives the men higher pay, which is afterwards raised from the landlords. In time of peace, these soldiers are turned to excellent acconnt, by emploving them on roads and other poblic works; and, when not required for these purposes, they are bound to labour for the respeetive landowners, at the current rate of daily wages. The number of officers in this corps, as indeed in the whole Swedish army, is unusually small, there being only one officer to about every 40 men, while, in France and Anstria, there is an officer to every 12.' Sundays are the usual days of inspection.

The militia consists entirely of foot soldiers, provided with clothing and arms by the goveroment. The artillery train is composed of about. 220 pieces of varions ealibre. The chicl arsemals are at Stockholm, Gottenburg, and Christianstad.
'l'he principal fortresses are, Wanas, on the lake Wetter; Waxhoim, near Stockholm; Carlacroma, and Christhantal. In the istanil of Giothland, where there are no lands lit, fior the maintemance of the tropse, all the inale inlinbs. between the ages of 20 and 50 may be enlionl on to take arms in lefence of the island, if attacked.

The ammal expense to the comitry of an intelta refiment of 1,200 men, amonnts to about 8 , inthl. strerling. The whole cost of the army and fortresses, exchasive of the maintemance of the indelta troups, is thxed in the budget of 186-1-6is, above hiven, at $9,5 \times 5$, , 40 rix-dollars.

Nary,-'lie naval force of sweden consisten, at the end of 1863 , of 2 serew steaners of the line, of 74 and 70 grons and abo sud 300 horse power; 4 serew frigates, of 10 and 8 grans anil 300 and 201 lorse-power: 8 corvetten, of from 5 to 7 guns, of which 4 aresteamers; 125 gmboats, of 1 and 2 guns and from $\mathbf{6 0}$ to 70 horse-power. There wero binidling. at that time, 2 serew trigates, 2 paldle-wheel steamers for trunsports, and a number of gumboats. The permanent senmen at commanil of the government may amomet to nbout 8,000 men. 'They are mantained in the same way as the indelta troons, by assiguments of lands. Together with conseripus, the whole naval force may be augmented to about 24,000 mon. The swodes are excellent sailors, and especially skilful in the management of small eraft. The chief aaval stations are Carlseronn, Stockholm, and Guttenburg.

Roligion. - Tho religion of the state, and of nearly all the inhabs., is the Lutheran; there beind only about 2,000 Catholics and monder 1,000 Jews. 'Ihere is one archbishopric, that of Upanla; and eleven bishoprics. 'I'he fimetions of jublic worship are exercised by about 3,000 ecelesiasties. The higher orler of the elergy are nominated by the king from lists presented by each diocese: the election of curntes mad others of the inferior orders is lelt to the people at large. The revenues of the cleriny generally are derived from church lands: the bishops receive, in addinion, a tithe on com, and one from the inhabs, of the four or tive pars. surrounding the episcopal residence. 'The revenue of the arelibishop of Upsala does not exceed 800 0 . n year. The richest bishopric, that of Linkopping, is worth about 560l. a year. The bishop of Hernosand has scarcely $240 l$, a year. The clergy are an important body. All sects are tolerated in Sweden, but with this important restriction, that Lutherams only can be advanced to any employment under the state.
The churelies are generally well kept, and great attention is paid to the outward forms and ceremonials of religion. Much more libernlity is shown towards Jews in Sweden than in Norway; and there are synagogues at Stockholm, Gottenburg, Norkopping, and Carlscrona. A dissenting sect called Laisere, or readers, has lately become very mmerous in Lapland and the $N$. parts of the comntry. 'In Sweden, generally, says the traveller before quoted, 'al kinds of amusements begin the moment that public worship is over: in the eomintry, dancing and drinking; in the capital and large towns, theatres, equestrian exhibitions, rope-dancing, balls, \&e. In fnet, the Swedes appear to regard the sabbath as terminated with the service of the day; but to atone for shortening it so moch, they commence its observance, at least in the rural parishes, at six o'clock on the Saturdiay evening. As soon as that hour strikes all week-lay labour ceases, the whele hamily clean themselves, and the devotions of the evening are begim.'

P'ublic Instruction,-Elementary instruction is in a very advanced state in Sweden. Every adult
gerson must give proof of ability to rend the seriptures before he cun exprcine miny act of mas jority; and notwithstamding the dispiersion of the pho, it is suid that there is mon one indivihual in 1,000 of the aluit pop), wable to read. Parents in the humblest circumstancer are all able to give fin struction in reading and writing to their ehildren. No qualification is recuired in a tencher by the liveal anthorities other than good charactor, it being left to the public to decide as to the capacity of the teacher and the merls of his modes of instrmetinn
'Ihere are two universities, viz. those of Ujsala and lamd, at either of which the instruction is of a very saperlor description. Sibordinate to these are the gymmasin, or provincial high sehools, in which are tanght the branches of education necessury for the stalents before antering the universities. An neademy for perfecting the Swelish lampuage was fomiled by Gustavis III, in $17 \times 6$ und a roval academy of sciences originally established by Limmets. 'l'here are special selawh. fir the military and nuval service, and others of history.

The press is free by law, every man lefing reeponsible for what he publishes. In 1812 , however, a temporary power for the seizure of perimiical publlentions was granted by the diet, and has been since continued, notwithstanding the elforts to obtain its abolition.
Arts.-The arts and seiences have been successfully cultivated in Sweden. Antifuities formend the tirst ohjects of mational researeli; but their study was supersedel in the time of Linmous and seheele by that of matural history and chemistry. The reign of Gustavis II I. was the most thourisiting period ol the arts and literature. The Swedes ammally inport from 6,006$)$. to 7,0001 . worth of foreign books, montly French, Emglish, and tiorman. Among distinguished anthors and men of science, Sweden has produced an extraordinary number of great men, among them Limmens, Tycho-Brahe, Scheele, ISergman, l'utlendorf, ami lerzelius. The taste of the ancient Scandinavians for music appears in the present day to have elescended to only the higher and midule classes. At Stockholm there is an opera, which, as well as the theatre at Gottenburg, is regularly open during a part of the year.
liaces.-With the exception of a fow Finns anil Laplanders, in the more northerly parts of the kinglom, the inhabitants of sweden are wholly of Guthic descent. The linins, however, are supposed to have at one time occupied the whole comitry, and to have been driven to the forests and fantnesses of the north by an eruption of Goths, some centuries before our era. Aul, whate-er trith there may be in this theory, it is, at ail events, certain that, as no irruption of any other tribe has taken place into Sweden since the supposed (iothic invasion, the blood of the Goths must be found there in a state of comparative purity. The deseription of the Germans given by Tacitus migh, indeed, be applied to the Swedes of the central und southern parts of the kingdom, who are a tall, robust, fine race of men, with fair complexions, lighit hair, and blue cyes. liut to the N. of $6 \underline{2} \mathbf{2}^{0}$ or $63^{\circ}$ lat., these characteristics begin to disappear, light hair becoming uncommon, and the complexion being frequently brown, and even tawn.
During the disastrous period from 1800 to 1810 there was a progressive diminution of the pop.; but sinec then a great change for the better las taken place.

Ifistorical Notice.-The early history of Sweden is obscure, and has little interest. The sivedes beinge discontented with their king, Albert of Mecklenburg, who had been raised to the throne

## listory of Sweden

 est. The swedes king, Albert of ised to the thronein 139., Margaret, queen of Denmark, ntyled the somirnmis of the North, a princess of extraodlmary talent, availed herself of the opportmity to mablish her anthority in Sweden. In this olyeet she was conpletely successful; and hy the fanoms Iraty of Caimar, coneloded in $136 i^{\circ}$, the three kingidoms of Debmark, Swoden, and Norway were nuited under the sway of Margaret. Jiat the Surdes spedily beentue dissatistled with this triom: and the crued mad tyraniend procedings of Clirivitan 11. excited a rebellion that terminated in the emancipation of sweden. The fimous Ginstanus Vasi led the Sivedes in their strugele for indenendence. Ite hoisted the standard of revalt in 1520, asd having entured Stockhohm in trimph, in 1523 , was raised by the mmminous sulligiges of his fellow citizens to the throne. Ginsavis, who subserpuently introbleced the l'rotistant religion, died in 15 tin , in the 70th year of his age, and the Joth of his ruign, Jifully great as a legrislator, a wartior, and a politician, he distinguinhed himself in every station; whether we ronsider his cool intrepidity and enterprising spirit, his bonest integrity mal political foresight, his taknts for legishation, his attaclument to lelters and oncourarement of learning, his allability, mol his solid and enlightemed piety. These great qualities, set oll by a gracedil mad majestic person, wind hightened by the most commanding rloquenec, drew gencral esterm mad admiration; and it may be justly said of him, that the most arbitary monarel inever exercised a more mombonded swiy over his vassals, than Gustavie possessed from the voluntary atlection of his free-born suhjects.
Eric, the son and immedinte successor of Ginstaves, manifested symptoms of that insanity, which, muluphity, has since been exhibited ons more than one ocasion by the princes of the louse of Vasa. Gustavies Adolphns, gramison of Ginstavis Vasa, asecuded the throne in 1611, luder this great prinee, who was at onee an enlightened ruler and the greatest general of his time, the glory and power of sweden atininced to a maximum. At the outset of his reign he was involved in lostilities with the limssimas, the Poles, and the Inmes, which he terminated with the most triumphant success, having acquired lasria and Carelia from the limssians, Livonia from the I'oles, with sundry valuable territories from the Danes. These suceesses, and his rejutation for ability and disinterestedness, naturally made him the leader of the I'rotestant party, in the struggle they hat to wage aguinst the power and mombition of the house of Austria. And though his ghorious and successfinl carece was prematurely teminated by his death at the butle of Lutzen, in lis32, his exertions were mainly instrumental in bringing abont that freedom of religious worShip, mad that equal distribution of power, established by the treaty of Westphalia.
The success that had attended the arms of Sweden under (iustavis, eontimued to attend them mader his daughter Christina, who abolicated the throne in 1564, and his other successors down to charles XII., who became king in 160\%. This extraordinary individual, celehnted alike for his successful exploits and his reverses, well nigh consmmated the ruin of Sweden. Indexible in lis resolutions, which were inspired by an amhition that was elosely allied to madness, the success that attended his carly campaigns made him regard every thing as possible, and precipilated him inte the most extravagint projects. But the battle of lultowa jut in end to hiss enreer of comquest ; reduced linn to the condition of a fugitive; and gave linsiat a lasthug asemblaney over Sweden. Charles XI, and Charles XII. eni-

juyed a nearly absalute anthority; lut the ealamiidis entailed on the conntry by the folly, or rather insanity of the lattor, led, wh the ane ension of his sister Ulien lileomorn to the crown, to the enactling of limitations, by which the roynd authority was very materially circomseribed. It was, bow ever, agaill cularged in 1782.
tinstaves the Ill., having been nssassinated in 17!!?, was shereederl by dinstaver IV, then a minor. As somas athis pritere hat been duclured major he embroiled hinself in homtilities with Framee, from which sweden eertainly hal nothor to fear. We next engaged in a guixotic conterst with linssia; and when the latter had overrm Findand, and was threatening an attack onstorkludm, he had the maparalleled folly to reject the asslatance of 10,0 ofo linglish (rom)w who had arrived at. Gottenburg. Dinder theae circumstancers the dethronement of the king beemme indisprosable to the safety of the stato; and this was efleeted by a bloodless revolation in 180!, when his under, who took the title of ' 'harles Xlll. was raised to the throne, I'rince Cliristian of Ilolstein-Angostenbuge being, at the mame time, derelared rfown prince and sucesestor. On the premathure denth of the later, Marshal Bermalote, prince of linate Corvo, was dected sucessor to the erown by a diet hed at Orebro in |x|t, amb having acedited the homomr, he soon after arrived in swedent, of which he became king on the death of Charles XIII. in |x|s.

There con be no question that the revolution which brought the honse of Bermadote to bweden has been of vast mevantage to that kinglom. 'libe taint of insanity in the princes of the honse of Vasa, even had it been less obvions than in the cases of Churles XII, ame Gustavins IV., was fuite sullicient to justify a change of dymasty.

SWINEMUNDL:, $n$ town of l'russin, in lomerania, on the L. coast of the island of Usedom, on the middle motith of the Oder, or rather of the lagoon, or half, which receives it previously to its fallinir into the sea, lop. fidies in jefti. Swimeminule is the outiont of Stettin ; all vessels destined fir the latter, that draw more than 7 or $\times \mathrm{ft}$. water, being obliged to lond and muload by means of lighters at Swineminde. Fommerly there were not more than 7 l't. Water over the har at the river's month; lont it has recently been so much impored ly dredging, and the consernction of piers, that vessels drawing from $1!1$ to 21 ft. water come to the quays of Swinemtinde, and its port is now the best on the whole S. const of the baltic.

Physiral Geography.-Simond has not inaptly remarked, that 'some idea may be formed of the Helvetic geography by comparing the comery to a larpe town, of which the valleys are the streets, and the momentains gromps of contignons honses.' ('Travels in Switzerland, i. 141.) Indeed, hy far the harger portion of Switzerland consists of mountains, comprising many of the lighent summits of the Alps. There is, liowever, a considerable extent of that ground in the NW., in the cantons of lribunrg, Berne, and Solothurn. The general distribution of the great Alpine chains in the $s$. mad E. parts of Switzerlaud has been already noticed in the article Alds, and need be only brictly indicated here. Two great parallel chains, enelosing the Valais, extend between Mount Blane, in Savoy, near the SW. boundary of switzerland, and Monnt St. Gothard. To the most sontherly of these chains, called the l'ennine Alps, belong Monnt Rosa, $\mathrm{E}, 150 \mathrm{ft}$., and Mount Cervin, or the Matterlorn, $14,836 \mathrm{ft}$. in height. (Sunsure.) To the N. chain, or the Bernese $\mathrm{Al}_{\mathrm{p}} \mathrm{s}$, belomg the Finsteraarhorn, $1+, 085 \mathrm{ft}$., the Monel, 13.497 ft , and the Jugg fram, 13,717 ft. in height. E. of Mount st. Gothard, which may be eonsidered the central print of the Swiss $\mathrm{Al}_{1}$ s, the Rhetian Alps stretelh through the Grisons; while, on the N., other chains cover with their ramitications most part of the four Forest cantons (latcerne, Schwytz, Unterwahlen, and Uri). Among the loftiest simmits of the Whetian Alps are the 1)̈̈liberg, $11, \bar{i} 6 \mathrm{~B} \mathrm{ft}$; and Musehelhorn, $10,807 \mathrm{ft}$. in height. The Alps of the Forest cuntons have several summits, as the Gallenstock and Suostenloun, the height of which is but little inferior. Most of the preceding chains have a general direction from SW. to NE. But the direetion of the main ranges throughout tho rest of Swityerland is generally towards the N. or NW., which, also, corresponds with the general slope of the conntry. In the W., however, beyond the lakes of Neufchatel and lieme, the slope of the surface is towarls the NE. The monutain-system of this part of 'Switzerlund is that of the Jura; a system emposed of several parallel rances of momitains, inclosing very long and narrow valleys, but nowhere rising to $6,000 \mathrm{ft}$. in height.

The great rivers Rhine, Rhone, Inn, Tieian, and Doubs (see the names), have their sources in Switzerimod; ather which the chief river is the Aar. The Aur (see the article) rises at the fint of the Finsteraariorn, and runs at first E ., but afterwards NW. through the lakes of Brienzan! Thun, to about $!\mathrm{m}$. W. Berne, when it turns NE:, and timally falls into the Rihine, near Klingenan, afier a conrse of atont 1aj m. This river, which drains by far the greater part of switzerland, receives on the right the Emmen, Wigger, Sur, Runs, and Limmat, and, on the left, the Simmen, Name, and Thicle. Luterseem, Thm, Berne, Solothurn, and Aaran are on its banks. The Thur and lise, tributaries of the Rhine, are the only other strems. that deserve notice.
switzerland has a greater momber of lakes than any other tract of comutry of equal extent in Sinrope, excepting, perhaps, the grimed duchy of Finband. All these lakes are mavigable and remarkable for the depth and purity of their wates, and their great variety of tish. The following is a statenente showing the area, height of surfan alme the sea level, mid greatest ascertained depth of the principal swiss lakes:-

The laken Mageiore and Lagano are partly, alm, in Switzerlamd. A notice of most of these lake will be foumd in this work moder their several heals, or those of the dilferent cantons in which they are sitnated.

Switzerland is almost wholly composed of primary and sedimentary rocks: volomic formations are rare. The geological constitution of the monntain chains has been already moticed. (Ins and Juna.) The central portion of the Alpe consists of granite, gneiss, porphyry, and other primary rocks, inelosed successively by transition and excondary formations: the fura is wholly of a remarkable limestone formation. But the region between the $\mathrm{Nlps}_{\text {a }}$ and the Jura is vecupied with a peculiar formation of green sandstone, called molasse, or nuyelfluke, alternating occasionally with limestone and granwacke, which extends throurgont all the lower parts of Switzerland buto S. Germany. This deposit has beel classed with. those of a tertiary kind, and Brogniart and other geologists suspected it to be of a date posterior to the formation of the Paris basin.

The mineral riches of the mountains are but little known or explored, a few iron mines in the Jura being the only ones that descrve motice. There are numerons mineral springs, miny of which are resorted to medicinally; and those at Bex, and others in the canton of Basle, fumids comsiderable quantities of salt. A tew insigniticant conl beds have been met nith; but the remaining: mineral products of any value are mostly condined to slate, marble, gypsum, granite, and other kinds of buibling stone.

The climate is not only dependent on elevatim, but on the inthence exercised by the glaciers in cooling the atmosphere, the openings and ex-

There are varions exceptions to this table, conlsequent on ditlerrence of lat., position, and other rinmontances; lut it may be considered as applying to the comintry gemerally.

Among the wild mimals of switzerland are the hear, wolt, lyns, wild boar, chamois, jbex, elecr, aul game of all kinds, the marmot and crmino. The chamois is becoming searce. The remarkable variety of the spanied, so uspful, and the breed of whieh is preserved with sueh care at the hospice of St. liermard, is of Spanish descent, and trequently attans the height of 2 ft. and the lengeth of 6 ft . 'Ihe biris of prey comprise munerotis speries of eagles and valtures, one of which latter, the lammergeyer (land-destroyer), is said to be the largest wative bird of Euroje. Salmom, tront, and earp inhahit the lakes. There is only one vemanoms serpent, the Cobluber berus; but the insect trilies are mumerons.
Property and Agriculture, - Switzerland is a combtry of small proprictors. An extate of 150 or 2Hacres, belongring toan intividual, worth perhaps Iron 90\%, to 10th. a year, would be eonsidered large everyhere except in the enton of 'ressin, or the fminenthal, in Berne, and a few other districts, whe lucal eustoms exist to prevent the toogreat disision of property. Execent in certuin of these districts the property of individuals is at their teath divided in equal shares among their chitiren, without respect to sex or seniority. In eertain
cantons, however, as Glaris, landed property cannot be left to any one not a direct desecindant, and, failing sheh lieirs, it becomes the premerty of the $\begin{gathered}\text { wismment. Indeed, several of the eamions }\end{gathered}$ and governments, as that of lierne, and the grater number of the towns, possess a very grate extent of lamied proporty. but this is generally apportioned in small lots to the ritberent purtices havines right to it, or is ilepastured in common, Switarelamel, in fact, is almost wholly a pastoral combtry: little com is produced, and the cropsare somity and precarious, Cattle, sherp, and grats comstituto the chiaf riches and depembence of the inhalis. 'lhere are, gencrally speaking, no farmers; eath proprictor firming his own small purtion of land, and the momatainous tracts helonging to the ditferent emmanities being depasturid in common. Sos foreighers can become pussessors of lami, nor can mative Jews in several of the cantons.

Switzerland has been istimated to romprise

 3. H111, 0 e0 do, forests. It is only in the eamtom of
 guantity, and even there the home growth does hot exceed two-thirds the rehnired suplly. In liri wo corn is raised; and in cortain parts of the bormese obrerimd whent is treated as mexntic. and rained carcfilly ower twigs. lipe, onts, amil barley are principally cultivaten; maize, however, is grown in seme pirts in considerible gumatitics. beans, lentils, potatues, tumijes. pmolins, lisx, hemp, wodd, mader, poppies, and tobaceo are aloon grown, but tom insignilicant extent. Viues thomish in sevaril of the embens: as an the shores of the lake of tienera, Vand, the Valais, Noufchatel: and dargat. 'The rimoso of Neufchatel has lween estimated to prodice, at an anderge, about iom,omb gatle., follomol of which, at least, are sold in the neigh'rouring cantons. The mannfaeture af'sparkling v: 1 e, in imitation of champagne, las of late vears heen on the increase in Nouflatel, and from 120,1010 to 1 flomon hottles are mow ammally exported. Along the banks of the Lake of tonstanere, and in the cantons on the lihine, apple, bar, and cherry orchards are mumerons; and rider, perry, kirseliwasser, de, are male in large gnantities.
'V'ineyard hosbamiry', viys Mr. Laing (Notes of a Triveller, p, :3ini), 'is altogether a sarken coltivation, in which manalal labomr, massistol by animal power, scarcely even by the simplest me-chamical eontrivance, does evory operation: and this gives the character to all their hashandry: land habor is applied to all erops, such as potatoes, Indian corn, and even eommon grain erofs, more extensivels, hoth in digging andelearime the linde than with us. It is not uneommon to lind agricultural vilhages withont a horse; aul all cultivation dome by the hand, especially where the main article of husibumery is either dhory produce or thit of the vineyart.'
Cows, foats, aud sheep, as alrealy stated, eoblstitute the prineighl wealth of the swiss, the inhabitants of the manufictaring towns excepted; or, to discrimmate more accurately, the moats, in a great measure, silport the poorer class, while the cows sulply the eheese, from which the richer derive their limited wealth. The Swiss peasant is estremely fond of his cow; and to pass the winter without a eow to care for womld be to lim extremely irksome. The eantons of tilaris, the Grisuns, Appenzell, Berne, 'Tessin, and the Valais, are those most distinguished for the extent and excellence of their pastures. With little exeeption, all the land not covered with forests, in the eantons of Schnytz and Liri, is used for the pasturage of cattle. Ihe $\mathrm{Al}_{\mathrm{j}}$ jine pastures are
estimated, not by their extent, but by the number of eows they will maintain; in the lower Alps about 3 aeres, and in the upper from 10 to 1 ir acres, being the usual avorage allowed to each. In several of the W. cantons, these pastures are mostly private property; in the li. they commonly belong to the canton, being apportioned among the different pars., ench having its alp, or common pasture, for its cows. Kach inhab, is entitled to a sleare of this pasture from Jome to Octoher. liew individands, however, have sueh a number of cows as would repay the labour of attending them in summer on the mountains, proprorties being in general so small as rarely to be shbe to maintain above tive or six cows in winter, and asmally, indeed, not more than half that number. The practice, therefore, is for pars, to \}:ire lierdsmen and assistants to take care of the cows in summer when on the monntains, and to make the clieese. The owners of the cows get eredit daily for the quantity of milk furnished by their cows; and the produce of the sale of cheese at the end of the seasom, the expenses loming dedneted, is divided amongst them in proportion to the total quantity of milk furnished by each. When let, the mountain pastures are rented from the midde of May to the middle of Sept., the cattle being kept in the lowlands during the remaining cight months of the year. The term of the lease on which they are let rarely exceeds a stummer. Six or eight goats, or about four calves, sheep, or hogs, are deemed, as to feeding, equivalent to a cow; but a horse is reckoned equal to tive or six cows, becanse he roots up the griss. The swiss cows are very handsome animals, and so valumble that, even in Switzerlant, they fetch abont 201. encl. They yieh more milk than those of Lombardy, where they are in great demand. In some purts of Switzerland, with 40 cows, a cheese of 45 lbs . may be made daily; and in the vicinity of Althorf they make, in the course of 100 days, from the 20 th of Jume, two cheeses daily of 25 libs. ench, from the milk of 18 cows. Cheese appenss to have been an important article of export from Switzerland from a remote period. Many varicties are made; the most celebrated of which are those of Schabzieger (see (inainus), and of Neufchâtel and Griyere (which see). Abont 30,000 cwt. Gruyire cheese is said to be ammally exported; und from the middle of July to Oct., abont 300 horses are employed in transporting Swiss cheeses over Monnt Grias.

The total number of eattle in Switzerland has been estimated at 800,000 , of which $500, t 100$ are cows. They are principally of two distinct breads : one of large size, with branching horns, mostly inhabiting the lower parts of the country ; and another called the Oberlander, a small and inferior species, contined chietly to the Alps. The best cattle are those of the Simmenthal, the district of Samen, and the cantons of Fribonrg and Solothorn; the last being especially remarkable for the excellence of its oxen. Cows, as well as oxen, are employed for the plough. The horses, though not haudsome, are strong and spirited, and well adapted for cavalry and artillery service, for which they are exported to France and elsewhere. Asses and mules are bred in the S. cantons, where they are mostly used for the conveyance of passengers and merchandise. The stock of sheep is estimated at lualt a million, and of goats at about the same number. There are two varicties of sheep, one mative covered with a coarse white wool; and the other a Flemish breed, with fine wool of a dun and yellowish colour. But slicep are not a favomrite stock, and it is only in a few places that the improvement of their flecees, by crossing with

Merimos, has been at all attended to. Jogs are of a large but coarse breed, and are principally kept in the Forest cantoms.

The urgent necessity of possessing folder for the sippeyt of the cattle during winter makes the collectiont of grass for hay 11 work of paramonnt importance. Hence, wherever it is found, it is carcfully collected; and the peasmots, having crampuns on their shoes, to prevent them slipping. gather hay in pheces inaceessihle to eat tle. tira-. not three inches high, is sometimes ent three times a year; and in the valleys, the fields are shaven as close as a howling-green, and atl the inegualities elift as with a pair of sedssors. In Switzerland, us in Norway, the art of mowing seems to be carried to its highest perfection, amil no where is so much skill and attention displayed in harvesting corn and hay. But arable and meadow cultivation are both in a hackward stat. owing principilly to the pertinacity with which the people reject innowations, and eline to ohs and delective methods of hushandry. On arahb lands tallows take place every lith or bth year. and the culture of turnijs fior cantle feeding $i$ ionknown. Great attention is, howevor, paid to the eollection of lootli solit nad liguid manure, lma they are not very judicionsly employed. The wages of agrienltural labour are low ; lint, on the while, the raral jogh, may be considered wedn ofl.

The diet of the Siviss consists more of porridine than is general in Eagrand, and much more mik and elicese is consumed. In other respects, wine and cider being substitnted for beer, the catalogne of articles of food is much the same among the peasantry in both conntries. The houses inhabited by the rural pop, are mostly of wool, Dut capaeious, and furnoshed gencrally with all the articles required for daily use. The herdimen who tend the cattle in the $A$ pine pastures are lodged in chalets, or rude log thits formed of the trums of pines, and having rarely any furmiture, exerft. the necessary dairy utensils.

Chamois lunting, fishing in the lakes, and boat building employ some of the inhans, in the intervals of ngricuitural industry, but to no great extent. A great mumber of Swiss emigrate to foreign commtries, where they act as valets, and embark in varions trades, especially those of confectioners and lakers; always returning, however, to suend or invest their gains in their native land, The Siwiss have also been for centuries the condotieri of Enrope: and have always been ready to barter their blood and bravery, or to enter into the military service of any soveregn or republic that chose to hire their services, and to support any canse, however anprincipled it unjust. There were formerly muncrons swiss regiments in the service of France and Sjain: and they are still employed by the P'ope. The foreign mercenaries are extrenoly economical, and such of them as survive return home with all that they have been able to amass.

Mamufuctures,-Notwithstuading the gearaphical disadvantages of Switzerhand, the inhals. have carried some branches of mambiacturing industry to a considerable state of advancement. Various parts of the comatry have leen noted, since the 13th century, for their manufieturs: and they are now more extensiyely carried wit than ever. Most part of the agricoltural iuhah. are almost wholly ocenpied during winter at the loom, or in otier branches of mannfacturing indastry; and they also engage in them churing the evenings throughout the year, and when their little patch of land does not reguire their atiention. ln the districts devoted to hand-loom labeme from 1 to 4 looms are usually to be formal in a cottage;

Hed to. Hogs are of 1 are principmlly kept

the weaters heing furnished with the warp, mul/ars, have hem fully earried into practice. No rewimil by the manafacturers, to whom they return the woven qools. A line alrawn through Switzerhand in a NNE. direction, neross the canton of Fribourg, nulthrough the Snauen, prettyoneurately divides the (rerman from the Fronch pop., each frotion of which presents in its manufactures some distinguishing characteristic of its origin. lu the French eantons the mannfarture of watehes, nusical hoxes, nud jewellery are most extensively carried on; while cotton nuid silk fabrics are the primipal emphorment of the inhals, of the li. anit Wi, cantons. In the (irisons, and the fialian eantons S. of the Swiss $\boldsymbol{A l n s ,}$, there are lew, if any, manulinetures. 'The principal manufacturing enntons of (ferman Switzerland are $\mathrm{A}_{\mathrm{p}} \mathrm{pen}$ ell (outer Rhodes), St. Gall, Thurgiun, Zurich, Aargau, and Basle: nud in the lreneh part of the country those of Genovn nal Neufchatel. Apunzell anil St. Ganl are the prineipal seats of the cotton trade. Law cotton is imported from Enghad, France, Holland, nad Trieste; cotton twist of the higher mombers being almost wholly bronght from limghat. Cotton printing is condneted to sume extent in Neufchatel, where the quality of the water, and perhaps other physicnl circumstances, conspire to prombee brilliant and beratilinl culturs, in which, iudeed, consists the whole paepllence of the Swiss goods. The eensus returns of INio furmish some details as to the number of persons engaged in the various manufactures, In the ranton of Basle, the minufacture of silk ribhons, to the annual value of $1,401,0001$. , ocenpies f,0to persons; and in the canton of Zarich silk stuffs to the value of $1,600,01000$. are mate by 12.1000 operatives. The manuficture of watches and jewellery in the cantons of Neufchâtel, Genera, Vaul, lerue, and Soleure oceupies 36,000 workmedr, who prodace anmally $\delta(0), 000$ watches-three-sevenths of the quantity of geld and foursevenths of silver-valued nt $1,800,000$. In the cantons of St, Ginll and Appenzell, 6,000 workers make 400,0001 . of embroidery annually. The printing and dyeing factories of Glaris turn ont growls to the value of $\mathbf{6 , 0 1 0 1 \%}$, per annum. 'The mamufacture of cotton coods occmpies ipwards of $1,10110,000$ spinalles, 4,000 looms, and 20,000 operatives, besides 35,000 hand-loom weavers. Strawplaiting, in the cantons of Argovia, Encerne, and Lasic, employs 30,000 persons, and machine building, principitly at Zurich, 6,000. In many of these aceupations, agrienltural labour is combined with factory work.

The fonnutation of Swiss manufactures is laid in the peculiar distribution of property in the comutry, and the necessities of the inhab. Most frmilies have a small patch of land; but, as its cultivation dies not ocenpy half their time, and is besides unable to afford them more than $n$ scanty supply of the most indispensable necessaries, they naturally endenvour to eke out their himited means by engaging in weaving and such like employments. And iunsmuch as all they make in these employments is so much clear gain, so much added to the fund on which they must otherwise subsist, it is plain they can afford to work at the lowest possible rate of wages. The Swiss, from their situation in the centre of Europe, are obliged to pny an whancel price for their cotton and yarn ; so that their whole advantage "ousists in their being able to reduce wages to next to nothing without being driven from the business.
The influcnce of the circumstances now alluiled to has been increased by the wise and liberal policy followed by the government. Switzerland is a country in which the great principles of free labour at home, and free intercourse with foreign-
strictoms exist upan the pursuit of anve branch of trinde. Industry has heen left to itweif. Wialth hans not heen diverted, by legislative interferenee, from its own mataral tembencies. Thare has been to forlinha struggle encouraged by the govermment between the protected monopoly of the few, and the unprotectell interests of the many. Two millions of men lave mate, muder every disadvantage, the experiment of free trade as a system. The consumer has beril allowed to go to the cheapest market, the producer to the dearest; ami activity is evorywhere visible alike in the traling and agrientemal districts. The general prosperity is also favoured hy other extraneons circumstances: laml is, for the most part, rolensed from tithes aml taxes, and the poople sulyjected to very tritling tiscal burdens. In many of the cantions there is mo natiounl debt; nud some of them, indeed, noarly discharge the expenses of their government ont of the interest of the enpital aceomulnted from the surplas revenues of previous years.

Trade.-The federal enstom-house returns classify all imports and exports under three chief headings, namely, 'live stock,' 'ud valorem gools,' nud 'froms taxed per quintal.' According to this classification, the import and export trale of the Confederation 1862 and 1863 , was as follows:-

| Importation | 1863 | 1862 |
| :---: | :---: | :---: |
| Live Stoek - . heal | 815,613 | 812,607 |
| Agricultural Instruments, |  |  |
| Carts and Railwny Carriages for Travellirs, and | 584,778 | 488,232 |
| Merchandise, ad valorem |  |  |
| Goorls trxed per quintai, ineluding loads reduced to quintals - quintais | 14,536,694 | 14,180,728 |
| Exportation |  |  |
| Live Stock . . heal | 101,530 | 111,580 |
| Wood and Coal, ad ralorem frs. | 7,444, 3226 | 5,8:39,2-19 |
| Goods, per load \& quintal quin. | 2,077,543 | 2,053,260 |

The direct trade of Switzerland with its four neighbours, France, the states of the Zollvercin, Italy, and Austria, was as follows in the year 1863:

|  | $\left\lvert\, \begin{gathered} \text { Hcad or } \\ \text { Catbe and } \\ \text { other } \\ \text { Animals } \end{gathered}\right.$ | Ad valorem | Quintals |

Gorremment.--The 22 cantons are mited on
 hat, in most other resperts, pach has its mwin indepoment intermal alministration. The government is wholly republisim in every canton. Thefire $1 \times: 31$, when important reforms took phace in the Swiss comstitutions, the rantons ware dividend into aristneratic and demoratio: bate at present the fovermment is more or less demoratic in all. In Iri, Schwytz, Vuterwalden, tharis, \%us, and Apromadl, the fimetions of leqishation and sovereisity are vested in the lands armeime, or treneral insiombly of the inhals.e, in which every citiaen ol full ago, withont any property qualitieation has a vole. In the other rantons the larishative power is delegnted to the lambruth. or eonacil of representatives, elected in the primitive or general assombly of the inhals., the elective sintrage in which is misersial, or mearly sos. And in some of these cantons, as St. (iall and basle (eomentry), the primitive assemhlies lave a refo on the decisions of their grand eomeil in all matters of an organie darater; while in others the people at larere have the right ter revise their comstitutum in primitive assombly alter a certain momber of years. 'The frame commeil, where it exists, eleets the petty conneil, or exerotive power, at the heme of which is the hurgomaster or acomer of the eantom; in other cantous the handamman, or hisudshaniptmann, is choses by the treneral assembly.
'The form of the genaral govermment, or the finleral constitution, hise also, sine IK.ts, mudergone proat monlifications, A contest was comtimed for a lengrthend period between those who wished to preserve for imlivithal cantons the greatest amount of free action, and those who wished to strengthen the general government, and to remier its anthority paramomit. It would be irksome to enter into any details with respect to this contest. Sithice it to say, that after a great deal of acrimomions ilisenssion, which led ultimately to a eivil war, the party favourable to a more intimate mion of the dificrent cantons frimed a decided prepuiderance. In consequence a new constitition was prochamed, on the $12 t h$ Feptember, Isis. Under this new arahrement the federal assembly consists of two divisions, a national assembly, ind a comacil of state, or semate, The tirst eomsists of deputios ( 111 in all) from pach canton, in the proportion of a deputy to every $2 t, 001$ inhabs, and the secomd, or senate, consists of $\mathrm{l} / \mathrm{I}$ mems., or $\mathfrak{Z}$ for each canton. The ferleral assembly chooses from among its members a mational conncil of 7 individuals, which is, in finct, the excentive goverument. Bhat the powers committed to this conneil are comparatively limitenl: tho foderal assembly reserving to itself the right to deehare war, to make peace, to colt-
clule nll sorts of Ireaties and allianees, to nomimate diplomatie ngents, to tix the manont of the military force, and to regnate the customs mul transit dutios, and other taxes inposed for poblic purposes, the hasiness of the just-olllee, of interhal (onmmunisation, and tho mint.

Lumber the ohd system there was no proper judicial tribumal lior the derision of disputed ghestions bret weren ditherent comens, so that when they ownerred they had always to be submitted to arbitmans the dide being anthorisel, in the event of the arhiters not agrecing. to appuint an umpire. Hinder the new constitution this objectionable system has beell so lar ammend, that a tribumal has beren constituted which determines all questions brtweren the cantoms and the Confederation, Iwewen one canton and another, and betweren eantome and individuals. Hut umfortmatuly the jomiges in this trihuma, who are named by the assembly, are mot appointal lior life, or hariber goon behaviour, hat fir 3 years only. They are really, therefore, the mere nominees of the party which happens to have at the time a majority in the assombly, so that in prolitica! matters hitt litte weight cain be attached to their dereisions.

Formerly the diet met altermately in Barne, Zurich, an! lacerne, two vars in aidh, but now it ments in berne onty. Religions ditherences hat a great deal to do in brimering about the late changes; and it is a fimalamental primeiple in the: new oriler of things that the expmaion of the desuits shall be maintained, and monasteries be everywhere suppressel.

Thine revenueof the Comfenderation consists chielly of a money contingent contributed by the dilkrentit cantons propertimally to their military continfent, and of the tolls on imports collected by the Prontior eantons, and acomited lor hy theron ta
 frames, or $8: 1,81 ; 2 l$, while the expenditure, in the same vear, was $20,32,321$ frames, or sles, in: The nimber of men each canton furnishas to the
 and resumbes. 'Lloe total armed fore of the ConnFederation, aroorliner to the seale adopted in $\mathrm{ks} / \mathrm{In}$,

 Switzerland has, however, no stamding army in the strict sense of the worl. It is only a militia force, in which every male Swiss most serve for: certain mumber of years, hulding himself at all times realy if called on for cantomal or federal service. livery two yents a federal camp is formed fir exercise; and at 'Thun, in the embtom of lieroce, a school for the instruction of ollicers is hela for two monthe cach year.
binch eanton has its own cole of laws, which are, in general, similar to those prevalent in lierminy. In some cantons, as leribourg, Schwytz. dec., the C'arolina, or penal code of Clarles V., was in force down to a late period, trials were nut public, and juries did not exist; but in these respects some considerable improvements have latterly been effected. The prisons in most parts of the comintry are in a badstate. In Berne, however, and especially in the French cantons, improsed and benevolent systems of discipline have been adopted, and at Geneva the panoptic penitentiary system of Bentham has bees introluced.
Rehgion.-It the census of 1860, there were in the repulitic $1,483,498$ Protestants, nud $1,01 \cdot 10.531$ Loman Catholics, Besides the Catholic and lrotestant pep, there are about 600 Anabaptists, and 1.800 Jews. The latter enjoy no politient riglit:The Catholie are much more momerous than the l'rotestant clergy, comprising altogether abuot 6,000 individualis (regular and secular), the in-
alliamees, to nomithe amomint of the te the dustomin anil s inmonsed for pushlie post-ofllee, of internint. vas no proper, judicial -puted questions. brot when they werorreil itterl to arisitration; n the event of the it all nmpire. linder ctiomablessestem hats a tribman has larelu es nll questions loufederation, letwren bet ween cantons and ly the judges in this he assembly, ure mot grool behasiour, hat really, therefore, the $\because$ which haprous to in the asmembly, so little weight can be

In Berne, howF'rench cantons, imms of diseipline have on the panoptic penihas been introduced. of 1860 , there were int stants, and $1,0.410,3,31$ the Cathotio and l'ro600 Anabaptists, anal y no political rirhts. E mumerons than the ng altogether alunt mil seoular), the in-
comes of many of whom are very considerahle. There are finer'lonn, 'ath. dioncoses; Char and it.
 which are sullmanas of the archlishong of Nilam. Tresin is in the diacese of the biskop of Somos. The fovermment af the l'rotestant chareh is comsidered a brameh of the department of pinbige instruction, and as suld belongs to the magistrates in the varic us cantoris.
'The tiwise l'rotestant chareh was originally Galvinistic: in primeiple, and l'reshyturim in is fumb. lhat the zalal hy which the swiss l'rotoetants were formorly distinguished appears wholly exnporated; and it is a singular and bot emily explainerl limet, that, in the I'rotestant eanfans, religion is, at present, less carem for, ame has hos inhlumere, than amphere else in linrope. The perple are not intidels; but are wholly indiffigent to, atad, in fact, carrelows abont religion, This is the result of a sarioty of calmes ; and is principully, perhaps, to be asiribed to something defective in the system muder whirh the elorey are apmintent, and in their traming. It is rifigt, howeser to state that, mot withatanding the meflect of religion, the siviss l'botestamts are eminmaty murgl in their habits; and are lomest and upright. in their clenlings.
liducution,-P'ublie edncation is vary widely dillined. l'arents must pive their chilidren some sort of edacation, from the arge of $\mathrm{i}^{\prime}$ to that of 8 years; or their noglet may be bumished by time, abl, in some eases, evern bimprisomberts The whatinate reflasal of parents to semd their chideren to shool is, lowever, a rare case; beathe buchild locemen able to exereise the rights of cilizenship, or is taken into service of ally kinc. withont having tirst recoved the sacramebs, whel is andministered to those culy who have attained a certain degree of instruction. In every dastrict there are primary sehools, in which the elements of edumation, gengraplay, history, and simging are tamelit a and seromblary selonds for youthe of from $1:$ Io bis, in whel instruction is given in ancient and motern lagungers, geometry, matural history, the bine arts, music, and calligraplay. In both these selools the rich and the puor are edmeated tugether, the latter being admitted gratubtomsly. There are normal sehools in several of the cantoms for the instraction of selooomaters; who are subseguently paid, by the enntons, salaries varyiug
 exist in several cantoms, and hameastran sehools
 in all the chief towns. Diasel hats a university; which was lormerly moch frepuented; and since $1 \times 32$ miversities have heen established in herne and Zarich. In the prineipal towns there are good libraries and literary associations.
Social Combition.-lisery parisls or commonity is obliged to support its own poor, who hecome chargeable on their own commme. lint only those having the rights of citizenship have a right to cleemosynary support, the privilege not being extended to others, though lorne in the commme. In must instances, the commmes have poor-finds administered independently of the cantonal govermment; but if these are not fonnd suflicient, $n$ poor-rate is levied. This rate is always limited, being in Warich mo more than about $2 \frac{1}{2}$ l. a year from each individand. The number of poor apears to he on the deerease.
'The peculiar feature in the condition of the Swiss pop,' says an Einglish traveller alreaty guoted (laing's Notes, p. 8356), 'the kreat charm of Switzerland, next to its mathral seeners, is the air of well-heing, the menthess, the sense of proprey imprinted on the people, their dwellings,
their plots of land. 'Iloev have a kind of liobinson ('rusore induatry abont their loonses and little properties; thes are perputhally himilding, repair-
 tanements. The mirit of the proprictor is not to be mistaken in all that one sees in Switzorland. Some cottages, for instamere are mbormed with lomg texts Irom Seripture painted of or barut into the woml in front over the down ; others, especially in the Simmenthat and Itashethal, with the perligree of the hailder and owner. 'Thene show, nombtimes, that the property has been held for 2010 yoars by the same family. Nonse of the women are exempi trom liell-work, even in the families of very molstantial prasimt proprictors, whome loonas are firmished as well as any comotry homses with ind. All work as regalarly as the jumerest make indivilatal. The hand, howewr, being their own, they have a choice of work, and the limrd work is ganerally done by the men. 'The felling and bringing lame wool fir finel; the mowing grase generally, lot mot always: the carreing ant mamore on their bink; the hamblimg horses and cows, ligginer, amed such henvy labonr, is man's work: the lindinger the vine th the prole with a struw, whieh is donse threetimes in the emorse of its growth; the making the liny, the proming the vine, twitching off the sumertiuons leaves amel tembrils.- liese lightor, yet necossary jobs to be done mbout vineyarils or areharis, form the women's work. Bat fimales, both in Framee and Switzerland, appar to have a fir more important rôe in the fanily, amour the lower and middle elasses, than with 115 . The female, although not exempt from ont-dowr work, and even haril work, mulertakes the thinking and mamaging department in the fimily allairs, and the hasiand is but the excentive othicer. The female is, in fati, very remarkably superior in manners, habits, tact, nind intelligenice to the hushand, in ulmost every family of the uidille or lower classes in Switzerland. One is surprised to see the wife of such good, even gented, manares and sombl sense, and altogether such a superior beran to her station, amd the hasband vory often a mere lont. 'The hen is the better bird all over Switzerlamal.'

The population of Switzerlamal is very unequally divided between the several cantons, as will be seen from the subjoined table:-

| Cantons | Area lo Square Miles | Jopulation jer sug. Mile |

## SYIDEE

SYLHET
In elividing the people of switzerland aecorling

 mot Italime: in a large part of the firisoms, the liomansch tongne, hearing a very close analogy to the andiont latin, is sjoken in severnl diahects. The distinctions of language are the principal anoug the swiss: there are few plysidal dillercuces la the inhals. of the ditfircent parts of the comitry, except that the matives of the momitainous parta are the more mosentar mal aerive. The swiss are muluestionuly a brave people dovoted to thair home and their fredonn, lor the manatenance of which they have often made great saterifices and exortions. The sitmation in which they are placed, thoir wanty membs of sulsistence, tive necessity of hasbanling their resomrces, and the ditliculty of increasing them, hase made them sober, imdustrions and economical. Jlawever, thomgh attached to their comatry, they have no relishl hi,r its magnifleent mataral beanities; amil thomgh an homent, habrions, prudent, amb, on the whole, respectable people, they have little that is moniable or attractive in their claracter.

Mistory,- Alter the eonquest of llalvetia by Julins Casar, the limmans fommed in it several thourishing eities, which were afterwards deseroyed by the barlmians. On the decline of the lominan cimpire, it suecessively formed a part of the kingdonn of lurgmily and the dominions of the Merovingian and Carlovingian kings: while the E. part uf Siwitzerland beeame lirst sillject to the Allemanin, and subsequently it was wholly included in the German empire mader Conrad 11 . in 1037.

The house of linpslourg bad, from an early period, the supremacy over all the li. phart of S.witzerland; and it preserved its ascendancy till about 1307. When Uri, Schwytz, and Unterwalden entered into a confederacy for mutual aid against Austria, which rompact was condimed alter the elefeat of Leopold dake of Anstria, at the battle of Morgarten, in 131i. From 133: to 1353, Jucerne, \%inrich, (ilarns, \%ug, and lierne joinel the eonfedaration. Aargan was conguerel from Anstria in 1115 ; the abbey and town of אt. fiall joined the other eantoms in 14.51-51; Thurgan was taken in 14io; Pribong and Solothumadmitted in 1481 ; the Grisons in 1497; Basle and Schallhamsen in 15011, and Appenzell in 1513. About this time Tessin was conquered from the Milanese, and Vand Was taken from Savoy by the [Jernese, in lifio. The remaining cantons were not finally united to the confederation till the time of Napoleon; and the compract, by whieh all ware placed on a perfect equality, only dates from the peace of 181 t.

SYliNEIF, a town of E. Australia, the cap. of the Ibitish colony of New South Wales, on a cove on the $S$. side of the magnilieent bay, or inlet of the sea, ealled I'ort Jackson, about 7 m . from its month. ['op, of town, 56.470 , and of town and suburbs, 93,202 in 1861 . The town stands prineipally on two hilly neeks of land bounding Sydney Gove on the E. and W., and on the intervening flat gromd for nearly 2 m . inland, and would "ppowar, from the extent it coycres, to contain a mich larger pop. than really belongs to it; but the honses in many parts are not more than one story in height, and are generally surrounded by garilens. In the ohler part of sydney, termed 'the Rocks,' the strects are comparatively irregular, for, owing to a want of attention at lirst, they were laid ont, and the honses built, aceording to the views of individuals, withont any tixed or regular phan. But latterly this defeet has been to a considerable degree remedied in the old st reets, and the new ones are systematically laid ont. On the left side of the eove many handsome houses
rise in sumcessive torraces. The E. penimsula is mhost wholly ocoupierl by the govermmont lomain. The new gevermment homse, an extensive struce
 barracks were till lately in the centre of the twwn, but awing to the frejpent squablles that tonik place betwern the troops and the eitizelis, the harracks have leren removel to the surrey hills, nlant $2 \frac{1}{2} \mathrm{~m}$. from the town. The extemuive birmas and hospitals that were formerly required lior the nervice of the comvicts, have heen appropiatend partly for the tompurary necommonation of immigrants, and partly for other purposes. Among the other publice labilinges are the comrt-house, puilice and comminsariat ofllees, custom-homse, and new faol. Sydney has a eathedral and several linslish churches, a liom, ('ath. chapert, a hamdonme tiothie building, with chapels for l'resbevtiane, Wesleyans, and of her dissinters. Amune ita mincational institutions are the Anstralian College ani Stodney College, which furusho simeriur instrmetion in classics, mathematies, and bingish literature: a normal institntion, with bipiseopalian, I'reshyterian, and Liom. Cath. schools.

Sydney is admirally adapted for the eapital of a great tralinge colong. Dort Jackson is one of the finest natural basins in the worlh. It strotelee alout 15 m , into the comntry, and has mumeromas erecks mad lays: the anchorite is everywhre exeellent, and ships are protected from every wiml. The entrince to this tine bay is between two giramic clills, not guite 2 m , arart. On the mant southerly, in lat. $33^{\circ}{ }^{\circ} 1^{\prime} 30^{\prime \prime}$ S., long. $101^{\circ} 15^{\prime \prime} 3 \prime^{\prime \prime}$ Fi., a lighthonse has bren erected, the lantern of which is clevatel is ft , above the gromul, ami abont 345 fit above the sua. It is mavigable for :hips of nuy burden to the distance of 15 m . from its entrance, or 7 m . alowe Niviluey, ul what is called the J'aramata river. Nilijes come clase a to the wharis and stores of the town, their earger being hoisted from the ship's holi into the warebonses. Syducy is consequently the emparium of all the settlements in this part of Australia, and has a very extensive trade. I'reviomsly tu the disoovery of the gold lields, wool was the great article of export, and, though it is now far surpassed by wold, it continus to be of great importance. There entered the port, in $1 \times 6.2$, thi vessels, of a total burden of 313,302 tons: anil there cleared, in the same year, 835 vessels, of 27 i. 129 tons burilen.
The great articles of importation are wines and spirits, manuftetured goods and apparel of all sorts, hardware, earthenware, sadillery, books and stationery, and carriages from England; tea from China; and sugar from the Mauritins and Calcutta. The value of the imports into Sydaey exceeded for a lengthened period the value of the exports ; the excess of the former being, in fart. the amonnt of the remittances from (ireat Britain on aecomnt of the convict establishment. limt since the latter was suppressed, the value of the exports has been equal to that of the imports.

SYLIIET, a district of British India, presid. Bengal. beyond the Irahmaputra, and chietly between the $0^{4} 4$ th and 25 th degs, of $N$. lat. and the ${ }^{\prime} 1$ st and 93 rd of E. long., having N . the territory of the Cosseahs and Jynteah, E. Cachar, S. Tippremh. and W. the district of Myenansing and Dacsu. Area, 3,532 sq. m. Pop. estimated at $1,2001,001$. It is one of the most densely peopled portions of the lBritish dominions in the liast. Its borien are momintanous, and on the E . and S . the monntains rise to the height of abont $6,000 \mathrm{ft}$. ; hot its central part. Which is flat and intersected by the Jlarah and a great many other rivers tributary to the Brahmaputra, is covered with rice lields. Cut-

silid (an, Scyros), an island lelomging to tireme, in the gromp enllerl the N . ('velates; the mitt of Syra, out the li.. side of the islanl. 10 in. W, from the greater belos. being in lat, 370.20 : $60^{\prime \prime}$

 and unt very fruiffis, it is well enltivaled: and the pulp, which in $1 \times 25$ was not siphesed to exeerd f, ino, is now estimated at nearly 10,1000 , lt is inletited for this extrandinary increase of pop, to the convenience and excellence of its port and its central situation, which have made it a consinderable eommercial entrepoit. Most part of the trade that formerly centred at Scio is now carried on lure; and the island has not only reecived momerous inmigrants from that island, but also from many other parts of Greece. Cirent Britain and most linropean powers have consuls in Siva; and it also is the prineipal seat of the l'rotesiant missumaries to the levant. The town, whirl is in grat part oht, has several new strents abd homses, mad has an appearance of great bustle and animation.
lheryeides, one of the most coldhated of the ancient Greek philosophers, the diseiple of l'ittacus, and the master of p'y thuroras, was a natioe of this island.

SYliACUSE (an. Syracmsa), a famons dity of Italy, island of sicily, prov. Noto, eap, of a ilist. and cant., on the l. const of the island, $31 \mathrm{~m}, \mathrm{sisl}$. Catania, Pop, 19,401 in 18ties. The monlarn city is wholly contined to that small portion of the site of the ancient eity included in the island of Ortygia, separated from the mainhmal by a fosse, and projecting $S$. in the shape of a narrow peninsula, inclosing hetween it and the mainland the nohle basin called the Great Inarlour, which its security and the facility of its access render one of the best ports in the Mediterranean. Ontside the peninsula is the little Harbour (an. Tropilus). Syracuse is pretty strongly fortitied, being defended by a bisstioned wall and other works. The port is protected by the castle of Maniaces, near the S. extremity of the peninsula. 'I'he modern city has little execpt its ancient renown, its noble harbour, and the extreme beauty of its situation to recommend it. The temple of Minerva has been converted into the cathedral; but the portien and front, having been destroyed by an earthquake, are modern, and in bad taste. It has several other churches, with mumerous convents, a seminary for the clergy, a college for general stulies, a hospital, a lazaretto extersive barracks, a museum, and a public library. There are some remains of the temple of Diana, but they are unimportant. The famous fonntain of Aretlinsa (see Anetinusi), the great glory of ancient Syracuse, is now detiled by the almixture of the sea, and is degraded into a sort of washing-tub for the poorer class of townswomen The commerce of the city, the principal pouree of its wealth in antiquity, is also quite inconsiderable; its exports consistiug only of trifling quantities of
 whes a rexdit traveller, 'are narrow and diris; is

The ancient Syranse was fumblel be a colony
 tageons widmation, and the eommersial enterprising -pirit of its inhabitants. speredily rained it to the highest distinction, c'icero colls it the greatest ami most leratiful of (ireck cibles:-1 'rbem Syraétsos murimutue rsse (Brrcurum wrhium, puleherr-
 iv. aprote.). Assem as it hal ontgrown the limita of the original eity, which, like the monero, was eontined within the islame of Grtygia, it hegan to extcual towaris tho: N., covering. when int its zernith, a large (riamgular spure, which, risitur preciphomsly from the sea on the one hame, anil the phins to the W. on the other, memitted of hemp easily fortitied. This now city wrminated ont the A. in the hill of Epipwla, which, however, was not imeluded within it till the thene of the eller Diongsins, who construetell at that point the fortress of llexaplom, the vist ruins of which still atfest its former strengeh and impurtanere 'lio city was dofended parily hy lines of rowlis, and partly by stronte wals. Its cirenit is estimated by strabo at 1 K 0 stadia, or ahout et) ling. im. ; and supposiur that the simosities of the walls wore followed, this statement is probably unt vory wide uf the mark. Among the moratages of the sitit ntion chosen for the site of the new eity was its inexhanstible suphlies of tine freestone; which, though soft and easily wronght in the quarry became, lis exposire to the nir, sulticiontly hard.

The space inchoded within the wadts of the unw or N. city comurised, I. the ghartur of Acranlina, the largest and mos+ moulons of the whole, ad juininer the island . . ertycia, haviare li. the seat: it comained the $1:, \ldots$ of Olympinn Jupiter, the firnm, the prytanen . . de. ; 2. the gumer callenl l'yelie. from its temple to fortme (Tix ${ }^{2}$ ), lyim NIV. from Neralina; and 3, the quarter called Neapelis, or the New City, from its lecing the last built: this, which was the most westerly portion of the eity, and was boumed in part by the Great Iort, contained a spacious theatre, ent in the ruck, upon the slope of a hill; and two temples, one dedicated to Ceres, and one to Libera or l'roserpinc. (Cicero, uhi supra.)

Among the existing remains of Syracose, the mont extraorilinary, jerlaps, are the lutomiaf, or prisons. 'These are immense excavations ent in the solid rock to a great depth, with steep worhanging sides, whence all egress is impussible. 'lhey appear originally to have been quarries (whence their mme), and to have been subsequently formed into prisons. They have heen foreibly and admirably deseribed by Cicero:-'Latomias Syracusamas ommes andistis, plerique mostis; opus est ingens, maguificum, regun ne tyrommorum ; totum est e.r suro in mirauchum raltitudinem depresso et multorwn operis penitus exciso. Nihil tum chot-
sum ent c.ritus, nihil htm sephum undigue, wihil tum

 the lutumiar of the Nemplis is the limons envern, a aller the liar of lionysias. It rins finto the heart of the hill, in the fiom of the letters, the miles heing chiselled quite smooth, and the rous gradually narrowing to 1 joint, ilonge which rums

The lutmuins, on the hill of lipipolie, were selected as the phate of remtinement for the miserable remanis of the vast armament tilfed out by Atheris for the rednetion of Syrachse. Alomit $\overline{7}, 1611$ men arreshid to have been shat up in this prison, expused nlacmately to the herits of a vertical sma, romiered more indolarible lis its reflection from the surromuling roeks, mal to the chills of the cerenings, with insullicient supplines of liurl, and without nus means of preserving eleamliness, or reve of ewitping from the contact of the siek and dead. Every lardship was meemmalated on the heads of the imhappy sullerers, till at length, after nu interval of abre two monstis, most part of those that survived were bromght forth to be suld as shaves, (Tlueval, lib, vii. aul finem.). The latomite were also ised by Verres for the imprisonment, not merely of Syracisan, but of lioman citizells.

The catneombey, in the Acralina, are of yast exteut, and may le truly called a city of the demb. Ihey consist of a principal and meveral smaller strects, all excavated in the roek, with deep contignona recesses on cuch side, comataing cells for the reepetion of the dend. Varions theorics have hom formed as to the era of the formation of these vast subterrancan excavations, which, no denbt, ledong to a very remote antiguity.

On the whole, however, considering the great extent of the city, nud the number and magnificence of its public bildings, the continental portion of syrucuse, with the exception of the lutumia and catacombs, and some remains of the walls and of alleducts, has very few momments if antiquity of which to boast. Swinburne (ii. 834) and llughes (i. 82) express heir astouishmont at the almost total disalpearance of all vestiges of the great public and other buildings, with which the eity was once tilled. This, however, is not inexplicable; the sea has undermined "portion of the walls of Acradina, and the perishable aiture of the stome of which the city was built added to the influence of earthouakes, the raviges of war and of barbarians, and the accumulation of rubbish, have made Syracuse, like Carthage, nom aymoscender propriis ruinis. Among the ruins of some baths, excavated in 1810 , was fomed the torso of' a Veans, worthy of the hest age of the art, and now the pride of the museum.

Varions estimates have been formed of the pop. of Syracuse when in the summit of its prosperity. These, however, are mostly all exaggerated, and entitled to but little attention. Thacydides says that it was nowise inferior to Ahens (lib, vii. p. itu3) ; and that it was a very large and splomdid city is a fiet of which there ean he no mamer of donit; but owing to the great extent of the ojen

Notaces and public buiblinge within ifs wulls, its
 what wonk low comatained in it monlorn eity of the Nome size. I'rolmbly it may have monomino tos
 thing, we suspect that this estimute is beyond the mark.

Syracise appears at first to have been under a repmblienn govermment; lint it sulsequently be. came sulyect to klugs or tyranth, of whom fichon and lliwron were mongig the carliest mand mont eclebrated, the trimuphif the later in the charintrace at the olvonic gimes having been the suls. ject of one of l'indar's molle odes. Jint 'ThraoyImlas, the yomuger brother of the latter, having been expellied the eity, the repililican furm of $\operatorname{tgh}_{\text {Ho }}$ vermment was restorril.

The Syruchans linving leen involved, during the conrse of the lechopemesian war, in conteres with oflere cities of sieils, the dthenians ment a fleer to the assistanere of the hatere; and, from kess to more, Atherns berame so muld mixed mp with Sidilian afliars, that she determine to bring them to a satisfactory andelasing, be underabing the comprest of Syrichese itself. The greatest exortions were male to ellect this grmal olypert ; the zeal of the pulbic was supported by the zenl of private indiviluals: and the armament litted out by Athens for the reduction of Sy ruense is minerailly admitued to have berol the greatest and mont sploudid evor ment furth by any fireck state. The events of this contest, which fixed the attention at' all (irnece, have been deseribed by Thue diden, and lorm the most interesting portion (lils, vi. Bum vii.) of his loistory. It is suthiciont here to state, that the failure of the expedition was as complete
 biades, who had assisted in plaminer the expertition, and whose fenins might have comducted it to as suecesslal issue, having heen mwisely removed from the command, was succeeded by Nicias, an able general, lat one who hitd been hostile, from the outset, to the project, and who, thomgh brave and experienced, wanted the ability and decision required for the comduct of mueh in enterprise. After varions vicissitucles, the besiegers mul besioged ehumped places. The defeat of the Athenian tlect, which had been eoopen up in the great harbour, in an attempt to foree a passage throngly their enemies, may be said to have terminated the expedition, and with it the glory and empire of Athens. 'In hoe portu,' siys Cicero, speaking of the great harbour," Athenicusinm nolilitatis, imperii, glorite nayfra!ium factum existimatur.' (In Verrem, lib. v. caj, 37.)
$\Lambda$ few years after the cefeat of the Athenians, which occurred thno $413 \mathrm{B.c}$., the supreme direction of allinirs at Syracuse was usurperd by Dionysins the lider, whose character presents a singular componnd of greatness and meanness, generosity and cruelty. Dionysins the Younger, who succeeded his father, was tinally expelled from Nicily by Timoleon, who having demolished the citadel constructed by the elder Dionysius, and his maynilicent tomb, restored the Syracusans to their freelom, and, having vanquislied their enemies, retired into private life. They did not, however, long preserve the diberty given them by Timolen. In the course of a few yenrs Agnthocles attaned to the supreme authority. After his death the city underwent various revolutions, being sometimes the ally of the Carthaginians and sometimes of the fiomans. In the end it was sulyingated, thongh not without a vigorous resistance, by the liatter.
'The siege of Syracuse by the Romans under Marecllas is one of the most celebrated in history.

The prineipal rivers of Syria are the Euphrates, Jorlan, and Grontes, severally noticed in this work. The earat line is watered by mumeroms small streams falling into the Mediterramean, which contribute greatly to fertilise the lame, but of these nome are navigable. The largest and most remarkable lake is that of Asphatites, or lhead sica, The next in size is that of 'Jiberias, or Gennesareth, the theatre of some most remarkable miracles, (Inke amil Matt. viii. : Matt. xiv. 25.) It is about 1 (i m . in lengtli, from is ic is $^{\circ}$ m . in breadth, and is traversed thromghont its centre by the Jurdan; of which, jufact, it mav be regarded as an expansion. On its F ., side it is contined by bohl, barren, and precipitous monntains, but elsewhere its shores are genorally level. Aceording to Dr. Clarke (Travels, is, 2l(i), 'it is longer and finer than any of our Comberlame or Wesmoreland lakes, thomph it be jerhaje inferior to Lake Lomond, in scotland. It dies not possess the vastorss of the lake of Gement although it much resembles it in certain points of vicw. In pictureequ. heanty it comes nearest
to the Jake of Locarno in Italy, although it $\mathrm{lx}_{\mathrm{x}}$, deatitute ut any thimg similar tor the islamis love Which that majestic pinee of water is adormed. It is lifferior in magnitmer, anil jurhapis in tho

Of theses, however, 'lubariat, the miserable representative al the muciont Tiberins, is abonst the only exiating rillie. The lake of tiemesareth, lihe ull uther inland meas, is sulject to sumalls and numhen gusts of wimd, that rember ins havigation rather danfuroms. The Bahr-rl-Margi, neme Damasens, mal the lakes of llorus und of Sigi Jempin, nour Antiod, are the only others worth motice. Tho comst of Nyria mul l'nlestine jrenents n nearly Mraight lifie, extenting through six degrees of lat., lecing lat little indented by arms or ingets of the wen, the principul bring the lays of simaveronen and Antheh; and thomph it was in mutiquity the wat of a areat maritime perple, it has very few gomel harhonirs: the best are thase of Seminderoon and Acre. 'The furmer, however, is ineonveniently phecel, quito nt the N, extremity of the comntry; and is hesides very munenlthy. 'The harbours of 'Jyre, Siden, de., se fimbous in mutiquity, are now, for the most part, blled with sand, or otherwise choked up.

Geolopy aml Minerals.- If these we have no anthentic information. The prevalent rock is limestone, abomiline in fossil remons. and holloweal into mumerous enverns, The higher purts al the libanis ranges sem, however, to comsist of greywacke, slate, and other 1 rmasition rocks, and the rocky monntuins skirting the I had Sen, of grmite, gueiss, and dolomite. Aatioch is situmed in a creat tertiary lasin, everywhere broken, however, by serpentine mal diallage rocks. The whole of the llamran is covered with a species ul' blue stone, very hard yet porons, num of which all the mill-stomes of Syria are male. Vulcanic matters cover a considerable extent of comotry, and the traces of extinet volcanoss are met with ian many phaces. There are ocensional molientions of coal; hut, except huildingestone, sult, with which a preat part of the soil is highly imprognated, mal axphaltum, from the vicinity of the Deal sea, are almost the only minernd prouliets of imneh value.

Climate.-Owing to the great diferences of elevation and exposure, the grentest dissimilarity prevails with respect to temperature. On the whole, however, the comotry may be said to have two climates; one very hot, which is that of the const and the interior plains, such as those of lablee, Antioch, Tripoli, dere, Gaza, and llaonran; and the other, or that of the monntains, at least at a certain height, temperate, and similar to thant of France. In most pirts, the aceurrence of the rainy seasons, as well as the quantity of rain which falls, are very variable. 'The winter in the plains is so moderate, that the orange, late, banama, and other delicate trees, flourish in the open air, and it appears equally extraordinary and picturesque to the European at Tripoli to behold under his windows, in the month of Jamary; orange-trees loaded with flowers and fruit, while the lofty summits of Lebanon are seen covered with ice and snow. But in the more
northerly parts of the conntry, and to the $F$., of the monuthins, the winter is mare rigntoms, wiht. orit the summers laning loses hat. Thin is owen-
 of the rean, expured to the purching blaste of the

I'roduils and Resmerers,-The liemity, fertility,

 tulleil hy the heat modern trusellers. It. neremes umbersairs, therefore, to dwell ont whit is No pericrally minitted. But the guestion na to the tertility of l'alendme has given rixe to nombe com-
 prentiar interest, we shall notice it at some little length.

In the snered writings, the fertility of the Iloly land is describerl in the most striking manurr. Moses calls it a land that thoweth with milk mul homery; in lamd of brooks and waters, of fountains anil idpothe, that spring out of the valleys ant hills: 1 h hand of wheat mud harley; of vhers, tigs, and pomgromates; of oil, olives, and bomey : 1 land whore there is no lack or semreity of any thing ; whose stomes (or rocks) are iron; and out of whose mountains lirass may be dugg up. (Ventrmanny viii. 7. *ve.)
It may, perhaps, he permittel to suppose, that as Moses wished to reconcile the dews to the territory on which they were about to enter, mad to exinquish my lorking desire on their part to return to the 'flesh pots' of bigypt, he would represent the 'promised' land umler the most liawurable colours, On the whole, however, it would serm, lespite the statements that have been male to the contrars, that his description is substantially correct. It is strikingly contirmed by Theitus, whonas, spenking of Prilentine, ' Ruri imbres, UBERS SOLUS. Rixuberat firuges, nostrum at morem ; praterque cas balsamuin et pulutce.' (1list. lib. v. cap. ti.). It is true lhat Strabo, in his lith book, speaks in very eontemphoms terms of the comitry romid derisalem; bit he was hy no means so well acquainted as Tacitus, either with the listory of the Jews or with Judea; and besides, even though the aceuracy of his statement as to the country to which he has raferred were almitted, that would not anthorise any inforence to be irawn unfavourable to the general fertility of l'alestine. In antiquity Judea was very cardfilly cultivated; and notwithstamling the great density of its pep., it is suid, when in the zenith of its prosperity under Solomon, to have exported considerable quantities of corn. ( 1 Kings v. 11.) The declivities of the hills were formed into terraces, of which the vestiges still remain (Mandrell, p, 66, ed. 17-10), and were covered with plantations of figs, vines, and olives. It was, as Tacitus has stated, particularly celebrated for its palm-trees, which, in fact, were the emblem of the country; and the aromatic plants that grew in the mentivated parts furnished the wild bees
with the hrimey which they storal in the hollows of the rencha nial trees. lindeal Mannlrell. whowe

At a more recent period Jr. Clarke sald of the Holy lame ('lravels, iv. de:3), 'The delightind phain of Zabolon appeared everywhere eovered with spontancous vegetation, thomimhing in the wililest exubrance. 'The serenery is to the full as dolightind as in the rich vales unom the N. of the Crimen: it reminded us of the linest parts of Kont amb Surrey. The soil, atthough stony, is exenedingly rich. We fomit the valleys W. of Jernsalem covered with plentifinl arops of tobneco, whent, barley, Indian millet, melons, vines, fompkins, mil cucumbers.'

These statements are more than sufficient to attest the matural riches and fortility of this fimous region, ds an arricultural or eorn growing eomitry it is, fuleed, far inlerior to ligyit and many otherstates: but the varioty of its surface and promets, the salubrity of the climate, and the productiveness of its cultivated lants, would make it, were it possessed by an imhostrions, well-governed prople, a most clesirable comatry. lienently, however, the comlition af Syria and l'alestine has been elanged materially for the worse. 'I'he destructive contests of which it has lreen the thentre, the emsequent destruction of property, and the interription of industry, have reduced Syria and Palestine to a state of dopression to which they had never previonsly sunk. During the ascendancy of the Egyptians, Mehemet Ali attemped to introduce the same compmans or foreming system into syria and l'alestine that he hal introdseed into Erypt. With this view the principal ollicers of the fovernment and the army and the more opulent inhabitants, were compelled to undertake the lask of restoring ruined viltages, and the culture of their lands. Government intemben, by means of the increased enltivation of wheat mad barley, to render Syrin indepembent of supplies from without; and, if possible, to obtain
a surplus for exportation. In good harvests, indeed, Syria, particularly its S. part, previously produced sufficient corn for its own consumpition; and had the measures undertaken by the Egyptian goverument been jersevered in, there can be little doubt that there would have been a great increase of produce. But in 1837 the inthence of the new system was paralysed by a drought ; and the events that speedily followed overturned at once the power and the projects of the Egyptian government.

The landed property of Syria, as of the rest of the 'Turkish empire, is supposed to beloug to the sultan, as the vicegerent of God and the I'rophet ; and the principle, that it did so, in fact, was acted upon, it the conquest of the comntry, by the Caliph Omar, in the 7th, and by the Turks under siclim I., in the 16 th century. At present, however, this assumed property of the sultan is a mere legal fiction. Soon after S'elim's conquest, the ruinoms effects of the general confiseation becane so apparent, that mersires were taken for giving the oceupiers a right of property in the land on prying a small yuit-rent. Laind may now be classed under three heads: that belonging to the sultan and government; vacou or entailed lands ; and real property, belonging to the proprictors, and descending by inheritance. The lands and property belonging to the sultan and goverument are those escheating in different ways; such as lands abandoned in eonsequence of non-enltivation during three years, lands left by the extinction of families, and lands confiscated. Entailed property, called rueon el haramein, consists of that settled by private individuals for the maintenance of public earavanserais, fountains, and elaritable institutions; and of that vested in the hands of the clergy for behoof of certain parties, and their heirs or nearest of kin. Some lands are settled on the eldest heir in perpetiity, and cannot be sold, though they may be exchanged. According to the rule of the Ottoman law, Franks and other foreigners cannot hold land in the Turkish dominios ; bit, in fact, they do hold it, by means of long leases or otherwise, which make it little less secure than freehold. In the succession to proplerty, the sons inherit twice as much as the duughters.

In Lebanon, almost every male inlinb. is a small proprietor; and in the neighbourhood of Beyrout there are a great number of landholders who, for the most part, cultivate the white mulberry tree. Large proprictors are few, except among the enirs of Mount Lebanon, some of whom have extensive estates, which they either cultivate on their own aceount, or let ont to farming tenants.

The miri, or land-tax, is not assessed in Syria by any iuvariable rule, or according to any admeasirement of the land. A government is assessed in a certain amomt, which is apportioned among the dillerent villages according to their greater or less amount of pop., or more or less extent of land; and the peasants themselves apportion the payments each has to make. In the enltivation of all kinds of produce, except silk, the landed proprietor supplies the peasantry with seed, and a certain sum of money to buy oxen, cattle, and implements of husbandry; and receives 10 , I5, or 20 per cent. of the produce, according as the gronnd is more or less taxed. The remainder is divided into two equal parts, one of which the proprietor takes, and the other is for the peasants. These last are obliged to repay the money advanced to them, but not the seed.
The old Roman plomph, drawn by linllocks, is thut almost universally employed. Whent, burley, maize, millet, lentils, and sesamum are grown
principally in the plain of the Haouran, which has alivays been considered the granary of Syria, It is inhabited by Turks, Druses, and stationary Arabs. and is visited in spring and summer by several Bedouin tribes. Burckhardt eomputes the resident pop. at from 50,000 to $(\mathbf{j 0 , 0 0 0}$. The liertility of the soil depends entirely upon the water with which it is supplied, and the harvest is, therefore, in proportion to the abundance of the winter rains, and the extent of artificial irrigation. Lands which cannot be irrigated usually lie fallow every other year, thongh a part is sometimes sown in spring with sesamum, cucumbers, melons, and pulse. Where an abundance of water may be obtained from neighbouring springs, the soil is sown witl lentils, pease, and sesamum after the grain harvest. In middling years wheat is said to yied $2 \overline{5}$ times the seed; and the pr wee of harley is said sometimes to average 50 , and even 80 times the seed: though these statements are usually much exaggerated, and but little to be (lipended on. The tirst harvest is that of horse-beans, at the end of $A$ pril : vast traets are sown with these to serve as fool for cows, sheep, and camels. Next comes the barley, and, towarls the end of May, the wheat harvest. The wealth of a cultivator is estimated by the number of fedhans, or yokes of oxen, he employs. The owner of two or three is estimated rich, and he will probably possess, besides, two camels, a mare or gelding, or a couple of asses, and forty or tifty sheep. Taxes are very heary in the Intouran. There is, first, the miri, paid to the pacha, and which is levied on the fedhans, the amount depending on the sum at which the whole village is rated in the pacha's books, and which must be paid so long as the village is inhabited, be the number of fedhans employed frow or many. Next is the obligation to supply the troops with provender; and the third and heaviest contribution paid by the villagers is the hhone, or tribute (identical with the black-mail of the Seotel) claimed by the Bedouins, in return for their poutection, or rather furbearance. Each village pass hhone to the sheikh of a tribe, who is then lonind to protect the inhabs., and pays a tribute of fron 30 and 40 to 400 piastres to the pacha for this privilege. lastly eome the unlimited contributions exacted by the pachas. The receipt of the miri of the whole pachalic, which may nmonnt to $250,0001 /$, is in the hands of Jew bankers, who not only get about 5 per cent., but contrive to extort somethia; further on their own aceount. Families in the LIaouran are constantly moving from one place to another. In the first year of their new settlement the sheikh acts with moderation towards them; but his exactions becoming insupportable, they migrate to some other place, where they have heard that their brethren are better treated: they sumn tind, however, that the same system prevails over the whole cemntry. In addition to all those exactions, the crops in the Haouran are sometimes destroyed by mice, though not so often as in the neighbourhood of Horus and Hamah. But the worst enemies of the agriculturist are the clonils of locusts which sometimes devastate the country, devouring every 'green thing.' 'They are not, however, an ummitigated nuisance, having been used for food time immemorial, and are said to be both wholesome and palatable.

The most cureful cultivation in Syria is exhibited on the slopes of Mount Lebanon and other inaccessible districts, where the inhal. cujoy a comparative exemption from the exactions of their 'Turkish masters. 'Stimulated by their sense of' security' (says Volney, i. 300), 'they have, by dint of art and labour, compelled a rocky soil to become fertile. Sometimes, to profit by the water, they
the Haomran, which the granary of Syria, )ruses, and stationary ring and summer liy rekharit computes thie to 60,000 . The lerotirely upon the water I the harvest is, thereundance of the winter cial irrigation. Lands sually lie fallow every is sometimes sown in umbers, melons, anil e of water may be obrings, the soil is sown amum after the grain wheqt is said to vidil e pr wee of barley 30 , and even 80 times atements are usually $t$ little to be dizpended hat of horse-teams, at $s$ are sown with these ep, and camels. Next arts the end of May, ealth of a cultivator is of fedhens, or yokes of vier of two or three is a prohally possess, beor gelding, or a couple heep. Taxes are very hero is, tirst, the miri, th is levied on the feIf on the sum at which in the pachn's hooks, long as the village is fedhans employed few digation to supply the the third and heraviest illagers is the hhowe, or 'ack-mail of the Scoteh) n return for their proce. Fimilies in the ring from one place to f their new settlement ration towards them; $g$ insupportable, they ace, where they have e better treated : they same system prevails 1 adation to all those Haouran are sometimes not so often as ill the nd IIamah. But the lturist are the clouls levastate the comintry, ing.' They are mot, nisance, having been ial, and are said to be le.
tion in Syria is exhiit Lebanon and other the inhab, enjos a the exactions of their ted by their sense ot ), ' they have, by dint I roeky soil to heemme it by the water, they
conduct it, by a thousand windings, along the declivities, or stop it by forming dams in the valleys; while, in other places, they prop up gromen ready to crimble away by walls and terraces. Almost all these monntains, thus lahoured, present the appearance of a thight of stairs, or an amphitheatre, each step of which is a row of vines or mul-berry-trees. I have reckoned 120 of these gradatiuns on the same declivity, from the bottom to the top of the mountain. So powerful is the influence of even the feeblest ray of liberty and security:'
flie mulberry-tree flourishes on the coast and through the more fertile parts of the Lebanom raure, and a little more uttention to the culture of silk would render it in a few years the principal article of export. The mulberry plants are set in rows $t$ or 8 ft . apart; they are ent off at a eorresponding height, and sulfered to retain only the fresh twigs. The arrangement generally made with the peasantry is to allow them one-fourth part of the silk for taking eare of the worms, and recting it off the coeoons. The landowner provides the leaves, which are gathered by the peasauts. lle also erects the sheds in which the coerons are kept, which are simple reed enelosures, without any roof. The quantity of silk ammally monduced on Mount Lebanon is estimated at abonit 1.200 cantars, or 240,000 okes, fetehing from 120 to 125 pinstres the oke, of whieh abont two-thirds are exported. About 400 cantars is consillered int ahmdant crop in the Tripoli district. Alepporeceives abont 250 cantars from Antioeh, and other quarters. Its chief consumption there is in the manufacture of the cotton and silk goods used for uppare garments ly the wealthy inhabs. ; hut it is also sent into all parts of the T'urkish empire, and quintities are sent to Genon, France, and England. The average amual prodnce of cotton in the vicinity of Acre, Jatlin, Nablons, and other places in the S., is estimated at from 61,000 to $\$ 3,000$ cantars, worth about 350,0001 . In the N. the crops are exposed to great vicissitudes. The quality of the eotton is sometimes good, but hore commonly inferior. The export is chietly to Smyrua, and other parts of Turkey. Not more thain from 1,000 to 2,000 cantars reach W. Europs, the quantity that comes to England being very tritling. The oil harvest is very precarions. From 8,010 to 10,000 cantars may be abont the average consumption in Aleppo, half of which is prochaced in the adergbourhoorl. The average produce around Damasens is estimated at from 4,800 to $\overline{5}, 000$ cantars. The oil has of late years been considerably improved, and its quantity angmented by the introduction of oil-presses from France. W'ine might become an important artiche both of consumption and export; and at some of the convents of Lebanon (where the vine is suffered to tratil on the gromil) a very good wine, called vino doro, is met with. Madder and indigo grow wild; and the former, as well as the sugar-cane, has been partially eultivated. Ibrahim I'acha introlueed the cochineal insect into Syria with every prospect of success; for the cactus, on which it feeds, grows there to an immense size, and forms, in fact, most of the helges in the comutry. The dates of Syria are not equal in quality to those of ligypt or Nubia; but the date pilm is so abundant that. as already stated, it was anciently the synubol of Julea; und it is probable that lownicia was so called from the abumtance of this plant (фows.). Tohaceo is grown in almost every part of Syria, ux consumption heing miversal, both by males and femmes. The hest is foumd in the districts of Alepoo, latakin, Tripoli, and Momit Lebanom, large exports taking julace from Latakia and Tri-
poli to Egypt and elsewhere. The total produce is estimated at 10,700 cantars a year. Scummony, the juice of a species of convolvulus, which grows in N. Syria, is a valumble artible of export, and that from Aleppo is estecmed the best in the markets of Enrope. Inat it is rarely obtained pure, the collectors tirst adulterating it with thour or starch, to give it colour and consistency, and with myrrh, to give it a bitter, aromatic taste. It is then sold to the Jew dealers, who further adnlterate it in the same manner, mixing 4 or is rottoli of starch with 1 rottolo of seammony, in which state it is sent to England at a price of from 250 to 800 piastres per rottolo. From 1,200 to 1,500 loads of hemp are produced in the Damaseas dis. triet ; but it is not in article of export. From 20.1 to $2 \overline{50}$ cantars of bees' wax are anmally collected in the Alepfo district, nearly half of which is sent to liurope.
The forests of N. Syria have lately supplical large quantities of timber, the arsemuls and dockyaris of Egypt having been principally furnished from this source. From $\overline{0} 10,000$ to $\mathrm{x} 0,0 \mathrm{0} 0$ trees, large aud small, or about $1 \cdot 4,000$ tons of timber, principally pine, oak, and beech, are shipped anmally for Alexandria.
The Holy Land in antiquity was eminently distinguished for its abundance of cattle, including sheep, goats, eamels, and asses; and though much diminished in numbers, these animals still constitute a principal part of the wealth of the occupiers. No very large or formitable wild animals exist at present in lalestine; the fallow deer, gazelle, wild goat, jackal, fox, and porcupine are the principal. There are, however, mumerons biris, including two species of voltures, great quantities of pame, and wildfowl, and a great variety of reptiles is met with.

Conllieting statements have been put forth with respect to the actual condition of the peasantry. Aecorting to Mr. Consul Moore, the fellah, or peasant, in Syria, earns little more than a bare subsistence.' 'But Dr. Bowring, on the other hand (heport on Syria, 4!-50), states that 'the eometition of the labouring classes is, comparatively with that of those in Englamd, easy and good. They feed on mittom at 3 piastres per oke, sereral times a week; bread daily; sometimes rice pillans, and always bulgur pillans (a preparation of wheat, husked and brused, or half ground) ; their pillans are male either with butter, olive or sesame oil; checse, eggs, olives, varions dried fruits, and an abumlanee ol veretables, beet roots, tumips, and radishes, preserved in brine or vinegar, and cueumhers and capsicums in vinegar, for winter use. Their elothing is not especially coarse; the time climate permits them to wear light cotton and other similar apparel, and in the short winter they are generally wit covered. Their lodging is gool; generally each family has a separate house, or a set of rooms. Longring generatly in Syria is chenj, eomparatively with most other conintries. The Mussulmans have few holydays; the Clinistians have a great many, and their ammsements are much of the same sort as the Mussulmans, if any thing, less sober; but, on the whole, none of the classes of the pop. can be taxed with labitual juelriety. But it is rure that any of the workinur classes can lay by sums adequate to enable them to pass the decline of life without labouring. In Syria a great portion of the habour is dome by females: they are constantly seen carrving heavy burdens anil fetching water; they briug home timber and brushwool from the forests, and assist much in the cultivation of the fields.' Field labour near lieyront is paid at from $\overline{5}$ to tis piastres (1s. to $\mathrm{Ls} . \ddot{\mathrm{b}} \mathrm{l}_{\mathrm{r}}$ ) ; and artisans, as masons, carpenters,
de., get 11 or 15 piastres (2s. 10d, to 3s, 10d.) a thay. The yearly expentiture of one of the labouring clasers may avarage from 121. to $16 \%$.
The lishuriow are mimpurtunt, execpt that of spumge; which is obtained along all the $\mathcal{N}$. half of the coast ; mal, in a goom seasom, almont 3,500 whes are gatherel, whinh are principally sent to Sinyrm, Ehodes, mad Marseilles.
bew of the manufartures lior whieh Syria was anriently renownel, survive at present. In Damascus, there are alont 4,0ial looms fir silk and cottonstulk, each produciug of or 5 pieces a week, wirth from 80 to 95 piastres eneh. In Aleppo, naraly b, ,010 homens of the sume description wore at. work in 1 se: ; but at present the mumber has diminished to 1,200 , the consumption of rich stultis having fallen of in favimur of cotton goonla, for which lBritish twist is employed, anl which uce"ny nhont 5016 lenmens in that city. Slomen 300) loons are also said to be orecupred in the mambathere of Golli and silver threal stuths, and the totul prombee of the lowns of Aleppo is estimated at 250, , (6in). sterling a year. In gated ail years, from 7,000 to 8,01011 cautars of somp are maile in Alepor; and wrhaps 12, inio eantars at Dimaschs, le crasalens, Nabhons, and other parts of the comatry : it is mot, luwever, exported to any grent distanice. Coarse woullens, glass, eartheiware, and leather are among the other chief roods manufactured. Horus, Ilamah, and beyrone are the ether principal mambiacturing towns. The meient art of lyeing in purple is lost at Tyre, aud bamascus bimes have no longer their former repmation. In Palestine, a considerable trate is carried on in the manufacture of crosses, beads, rosaries, and such like trumpery.

Commerre-In remote antiquity, Sidon and Tyre were the principal emporinms of the world: they were suececed by Damasens, Antioch, and Jopina; and in later times by laduyra, whose grabdeur was mainly owing to her situation on the great route of trathic between E. Asia and burove aud W. Asia. But for a lengthened jerion the commerce of Seria has been comparatively inconsiderable. The internal trade of the comulry is greatly imperded by the want of growl roads, those that exist being mostly mere mule or camel tracks. But, notwithstanding, gum arabic, tragacanth, assafeetida, opiun are brought from the surrommding conntries; galls and barila from beyond the Fuphrates; saflron from l'ersia amd Xitolia; hare, fox, and jakna skins; yellow berries and gonts' hair fromi Asia Minor';and these, with cotfon, goats' and sheeps' wool, silk, tobaceo, and other kinds of raw produce, previously specitied, form the primeipat exports. The impurts consist chielly of colomial produce and binropan mamalactures: cotbee (W. India), from Framee, Italy, mul lingland: surar, from Frame and Great britain; pepper, syines, rice, dyeing ilrugs, copperas, cotton mianufactures, cambrics, shirtings, nankeens, imitation shawls, and cotton twist, for the most part from England; irm, tin, sal-tmmoniac, woollen cloths, from Frame and belgium ; silks from France, glass wares from Buliemia, ly way of Trieste, are the most important. The curavans from Basdad, Mosul, and Erzeromm, to Mecea, pass through Sysia, bringing galls, indigo, Mocha cotlie, buffaloskins, tombiag, gun, Canimere shawls, and a few Indian manutactures, in return for Eiropean mamufactures and cochineal; and constant caravans travel between Alppo and Aintab, bringing oil, grain, and leather for the use of the former, whieh is by far the most important depot in the interior of S.ria. The sulyouned table shows the value of the imports of İritish and Irish produce and

Government.-The immedinte influence of the conquest of Mehemet Ali was exhibited not only in the increase of commeree, but in a better systen of police, and a better idministration of justice, an increase in the value of land and labour, an inerease of cultivation, and greater religions toleration. But the rayals, aut working chasses pemerally, thongh better proteeted, were more Tordened and impoverished. 'They were forcal to tabour for sums far belon the ordinary rate of wages; their camels and cattle were continually seized for the service of the government, and their property and resonrces, of whatever kind, were suljected to fresh exactions. Nothing was done to improve the means of communication in Syria during the leryptian ascemdmacy; few priblic works having been matertaken, except extensive barracks in the large towns. Neither did the govermment make public education so much an object of its eare as in legypt. The foreed cultivation introduced by Ibrnhim lacha enriched only the government, not the subject. But the short period during whieh Syria was held by Mehemet Ali, and the uncertainty of his tenure, were sufticient to limder him, however muela disposed, from undertaking or eftecting any considerable reforms or chauges; though, if we may judge from what

ate influence of the s exhilited not maly at in a bettersystom tration of justice, an ( and labour, an ineater religious toleIl worling classes oteeted, were more They were forwed to te ordinury rate of the were continually verument, and their hatever kiad, were Nothiug was done munication in Syria dancy; lew pablic an, except extensive Neither did the goation so muelı an The foreed cultilacha enriched only ect. But the short s held by Mehemet s tenure, were sultinuch disposed, from considerable relorms ay judge from what
be has done in Egypt, his changes, had he been allowal to introdice them, wonld harilly have befo improvements.
Inder the ligyptians, Syria was divided into 6 districts: those of Alepjo, Damascus, Jaflia, 'lripoli, Saida (Sidon), und Alana. livery town lad a mufsellim, or liead police magistrate ; and in all having a pop. of alove 2,010 pormona, Sciori dirans, or town conncils, were establishod by Ibrahim I'ashan. 'These bodies consistel of from a doren to 20 of the chief inhals., withont distimetion of religion, who acted as a civil and eommercial court, the decisions of which ware subject to apreal to the divans of Aleppo or Damascus, anil finally to the supreine goverument int Cairo. These coirts greatly circumseribed the duties of the redi sent ammially from Constantinople to make the julicial tomr of Syria. Justice was remarkahle fir its promptitule and severity. Murder, lurglary, lighway robbery, and other capital arimes are, howeser, comparatively rare in Syria, buropeans are subject to the jurisdiction of their nwin consulates.
No law exists making provision for the poor, though there are many private Mussulinan endowmonts; nud the other religions sects mostly sup)port and relieve their own sick and paupers. In every parish, or mosque district, there are Mohammedin primary sehouls; and Jewish, Christian, and other primary sehools are established wherever those sects prevail. Sut the instruction in these is mostly limited to that serived from roligions bouks; nut there is no mative sehool in Sirria where a more alvanced education is given than in reading and writing, with the exception of the lireek college at Ibyrout, where geograpliy is stulied from books printed at the Protestant presses. The American missionaries have a suprior collecge in that town, aind varions other schools in the comntry:
The imhalitents of Syria corprise a mixture of diflerent races, consisting partly of the posterity of thase who ocenpied the comatry when it was werrin by the Mrabs, that is, of the Greeks of the lower empire; partly of the josterity of the Arabcomofuerors of the country; and partly 'Turks, or Ottomans. And these, grain, have been intermixed with each other, with the Crusiders, who iavaded and held a portion of the comitry for a consideratble period, and with the wandering Hequins and Kurds. But, how ditferent soever their origin, these races have, in the course of fime, lecome equally maturalised to the comntry. The inhads. are generally of a middling stature; those helonging to the southern are more swarthy than those belonging to the northern plains; and these, aguin, than those belonging to the mountains. On Lebanon, indeen, aud in the monntainous districts rencrally, the complexion does not differ materially from that of the inhabs. of the $S$ of France. Arnbic is the general language of the emmery ; and Volney aflirms, in opposition to the statensents of Nicbubr, that neither Syriae nor modern Greek is any where in common use.
But notwithstanding the family or national resemblance by which the syrians are now distinguinhed, they are distributed into different classes or tribes, all sliftering from each othor in more or fewer particulars. Of these tribes, one of the most famous is that of the Jruses, ocengying the S. parts of Lebanon and Anti-hebanon, and parts If the llaouran. 'They are supposed to be of Arahie origin, and to be disciples of a Mohammedian heretic of the 100 l century. Their religion, motwithstanding the late researches of Mr. dowett, Mr. liobitson, and others, still continues invilvel in a grood denl of niystery. According Voln IV.
to Volney, they appear to have a contempt for all that the Mohamenedaus hold mose ancret ; for, he may, they noither practise circumeision, nor prayer, nor fanting, nor observe festivals nor prohibitions; anci that they drink wine, eat purk, and allow of marringe between brothers and sisters, thomgh mot between fathers and chitdren. Thry have an emir of their own, ant riloy a rude independence, to which, no doubt, their 'openness, sincerity, and engaging manners' (Clarke, iv. 30ts) are mainly to be ascribed. They are divited into two great classes, the learned, or initiated (akent), aut unlearned, uninitinted (djehhels). The former, who enjoy varions privileges, are distinguished by their white turbans. Robinson says that 'the uninitiared perform no religious rite whatever, muless when circumstances oblige them to assume the appearance of Mussulmen.' (ii. 11.) They are eminently tolerant; and live on gond terms with beth Christians and Mobammedans. Mr. Ellist is not very fuvourable to the Iruses. ' Outwarilly', says be, 'they are moral in their deportment; bit it is donfted whether similar decormm prevails lelind the sernes. Though polygamy be permitted, yet few have more than one wife, who, however, may be divored at pleasire. They are extremely luspitable; yet, where aso breach of lospitality is involved, the rights of blood and frimitship, are unhesitatingly sacritied to interest. They have little persomal, but much public pride. The women are distiuguished by an oppenduge as stronge, mimeaning, and hiteons, as female fancy ever devised. Other mations may laugh at the long trains of the ladies of Einglani, the infantine shoes of China, or the monstrons nose-rings of Inrlia; hut the tantour of Lebanom surpasses them all. It is a plated, silver, or gilt thbe, resembling a straight horn, 18 inches long, and stamding out like a mieorn's, at an ongle of $45^{\circ}$ from the centre of the furehead, or from wne side of the head: it is fastened by mentis of a spring. balanced by 3 heavy tassels hangiug down the back, and covered with a white transparent veil.' (IIliot's Trav. ii.)

The Maronites are a Chrlstian seet, principally inhabiting the comutry about Jebanon, aljacent to the Druses. They originated in the 6th century, aud profess themselves to be followers of the monk Maron, whence their name. They eflected a mion with the church of home, from which they had never differed very widely, about. 1215. They are divitled into the two classes of sheiks or chiefs, and common people, and have a spiritual head, with the title of Patriarch of Autioch. They are all lusbandmen; property is sacred amongst them; and, on the whole, they bear a good character. Like the Druses, they have suceceded in maintaining their independence, paving merely a moderate tribute to the parhas. The Metualis, mother tribe, are Syrian Mohammedans, of the Shiite, or Persian seet. The Ansarians, Yezidi, and Samaritans have complicated religious systems, partly Muhammedan and partly I'ayın.

The ancient history of Palestine is familiar to every reader of the sacred writings. Unter Solomon, it became a rich and powerful kinghom; and after undergoing various vicissitudes, it tinally becanse tributary to the Romans. At the perioil of the advent of the Messial, it was divided into 5 provs., Juden, Samaria, Galilee, I'eriea, and Idumea. lis more modern times the Iloly land became the seat of a violent struggle. A simgular combination of credulity and superstition gave hirth to the Crisades: and for some centuries the recovery of the lloly Lamot, ame esperially of the IJuly Sepulchre, was sullicient te precijuitate lun-

SZEGEDIN
dreds upon hundreds of thousands of blood-thirsty fanatics upon the East. At length, after oceans of blood had been spent, the victories of Saladin put an end to this deplorable plirenzy. In 1516 , the comutry was taken by the Turks.
Very recently, or in 1832, Ibrahim, son of Mehemet Ali, pacha of Egypt, undertook and speedily effected the conquest of Syria and Palestine. It is doubtful, as alrendy seen, whether they would have gained anything ly the change; but it would be very ditficult, indeed, to show that they conld have lost my thing. The great Europenn powers, however, with the exception of France, determined not to permit Syria to be disunited from the l'orte; and, in 1810, a British fleet, alter a short but tremendous cannomade, took Acre, and Ibrahim was compelled to ngree to evacunte the province. It does not, however, seem that the states by whom this revolution was effected took any step whatever to ensure the better go-

## TAGANROG

vernment of the country in future; to obviate any one of the grievances ly which it has been onpressed, or to make any stipulation of any kind in favour of the inhabitants.

SZECEDIN, a royal free town of IIungary, co. Csongrad, of which it is the cap., on the Theiss, where it is joined by the Maros, 60 m . WNW: Arad, and 100 m. SF. l'estli, on the railway from Pesth to Temesvar. P'op. 62,516 in 18t52. Sargedin consists of the town-proper, toleralily well built, and chiefly inhabited by Germans; the fortress, the residence of a commandant and garrison, connected with the town by two bridges; the npper and lower suburb, and the corn market. It has a honse of correction, a lyceum, gymmusium, Piarist college, and military school; and is the see of a Greek protopapas. Szegedin has a gook leal of trade, chiefly in corn, soda, soap, and tobaceo, with several soap and other factories. It als, supplies some of the best river eraft in the kingilom,

## T.

TTABRIZ, or TAULIS, a city of Persia, prov. Adzerbijan, of which it is the capo, in a large and tine plain, on a small river which falls into Jake Urumea, $3: 20 \mathrm{~m}$. W NW. Teheran, lat. $38^{\circ} 10^{\prime}$ N., long. $46^{\circ} 37^{\prime} \mathrm{E}$. Its pop. was estimnted by Chardin at upwards of half a million; but it has declined so much in the interval, that it is now probably under 30,000 ; and it is said by Mr. Kimneir to be one of the most wretehed cities he had seen in Persia. (l'ersian Empire, p. 1ól.) Being surrounded by a forest of orchards, it appears, from the high ground above it, to be of immense extent; and a modern traveller considers the circuit of the gardens of Tabriz to measure not less than 30 m . (Rawlinson, in (ieog. Journal, $x$. 2.) Jut the town itself, which is nearly in the centre of this area, is only about $3 \frac{1}{4} \mathrm{~m}$. in circuit ; it is surrounded with a brick wall and towers, and is entered by seven gates. It has few public buildings of note: the principal is the eitadel of Ali Shah, a part of which is now converted into nan arsenal, where many liuropean artisans are or have been employed. A considerable portion of the pop. live in the suburbs, which stratgle over the area of the ancient city, and are built of its ruins. Tabriz is said by D'Anville to represent the aneient Ganzaca, where Cyrus deposited the trensures of Crosus, and which was afterwards taken by Heraclins; and it has been also supposed to be identical with the Ti $\beta$ pos of I'tolemy. But, according to other authorities, it was built under Haroun al Raschid, of whom it was certainly a favourite residence. Its trade, which was formerly extensive, has greatly deelined. Few cities have sufferel so much from the ravages of war and earthquakes. Its climate is praised by the natives for its salubrity; but the changes of temperature are extremely great and sudden, and in winter the cold is so intense, that many instances have occurred of individuals, accidentally excluded from the city by arriving after the gates were shat, being found frozen to death in the morning.
TADCASTLEL, a market town and par, of England, W. Riding, co. York, partly in the liberty of Sit. Peter of York, and partly in BarkstoneAsh wapent., on the Wharf, here crossed by a stone bridge; 10 m . WSW. York, and $185 \mathrm{~m} . \mathrm{N}$. London by Great Northern railway. Pop. of par. 3,126 in 1861. Area of par, 6,i00 acres. The town is well built. The chureli, which is handsome, in the perpendicular style, has a fine tower.

It has chapels for Methedists and other dissenters. Jesus' hospital for four joor men, a free arammar sehool, fomded in the time of (Queen Dilizaberth, and Sumday schools, for some of which spacions buildings have been erected. 'Thore are no munufactures, but a good deal of retail trade. Markets on Thursdays. Fairs, last Wednestay in April, May, and Oet., for sheep and cattle.

TAGANKOG, a fortitied sea-port town of Russia in Enrope, on the N. sliore of the NE. angle of the sea of Azoll; denominated the gulf of the bon, about 10 m . from the mouth of that river. lons 25,230 in 1858. The foundations of Turamern were laid by leter the Great in 1698 , but it alterwards fell into the possession of the Turks; andit was not till the reign of Catharine II. thatt it became of any considerable importance. It has ten churches, of which three are built of stone, a gymmasinm, and a poor's hospital. It was intended by its illustrious founder to replace azoll. the aneient emporium of the lon, the port of which had become all but inaccessible; and its whole consequence is derived from thes circumstance, or from its being the entrepot of the commerce of the vast comntries traversed by that grat river. Of the exports, wheat is by far the most important. The imports consist principally of wine, oil, fruit, drysalteries, cotton and woollen goods, spices, dye stufts, tobacco, sugar, and coftce. The largest portion by far of the trade is carriel on with Constantinople, Smyrna, nud other'Jurkish ports; but a good deal is also carried on with the Italian and other foreign ports, and there is an extensive coasting trade with Odessa and other Russian ports.

Sceing that Taganrog was built to olviate the difficulties that had to be encountered hy vessels entering the Don, through the shallowness of the water, it might have been supposed that care would be taken to place it in a position in which it should be, as far as possible, free from this defect. This important consideration seems, however, to hive been in a great measure overlooked. The pulf of the Don is seldom mavigable by vessels drawing more than from 8 to 9 ft , water, aud ewo these camot approach within less than nbont inn yards of the town. They are principally loaded by carts, drawn each by a single horse, the expenses being so very considerable that it costs from 120 to 150 eopecks to ship a chetwert of what. To obviate these inconveniences, it has been prot
future; to obviate which it has been pulation of any kind

## TAGUS

TAMBOFF
275
posed to make Kertsch, on the E. coast of the strait of Yenikali, a dejôt for the produce of the sea of Izoff; and while the latter would be mueh casier of access to foreign ships, the consters that at present bring down the produets of the basin of the Don from Nakliteheven and Rostolt' to 'Taganrog, would be able to bring them direct to Kertsch, where they might be landed and shipped with much greater facility and less expense. With the exeeption of a few foreign houses, the merchants are mostly all either Greeks, or of Greek origin, and are not wenlthy.
The emperor Alexander I., whose reign will always form a memorable and brilliant ara in the history of hussia, expired at laganrog on the 19th of Nov. 1825.
TAGUS (Span. Tajo, Portng. Tejo), the prinpal and most celebrated river of the Span, peninsuli, throngh the centre of which it flows from E. to IV.. hetween the basins of the libro and lomeo on the N. , amu the Guadiana on the S. It has its somrece in the Sierra Albarracin, on the borters of Aragon and New ('astile, about lat. $40^{\circ} 25^{\prime}$ N., long. $1^{\circ} 35^{\prime}$
 termmem. At tirst it runs NW., but alter having heen joined by the Molina, its conrse is gencrally W. bysily., through New C'astile and Fistremadura, in Spain; and in l'ortugal between Beira and Alemtejo, and through Estromadura to the Atliatic, which it enters alter expanding into a wide estuary, about 7 m . below lisbon. Its entire length may be estimated at nearly 600 m., about three-fourths of which are in Spain. Its principal tributaries are the Jarama, Alberele, Alagon, and Zezere from the N., and the Lio del Monte, Salor, Sora, dre, from the S. Araminez, 'loledo, 'lialavera. Almarez, Aleuntara, Abrantes, I'unheto, Santarem, and Lisbon are on its banks. At its entrance into Portugal the Thagns is 130 yards in width, aud at Punheto powards of 300 yards. thove Lisbon, it expands into a wile basin, from 2 m. to 7 m . across, but opposite that city its breadth contracts to less than 2 m . The Tagns has been celebrated, both in antiquity and in modern times, for its picturespue beanty $:$ nothing, however, can be more incorrect than these poctical deseriptions. It flows, in fact, for the most part, through an arid comentry, bare of wood, and uneultivated; its banks are generally steep, its current impetuous, and its waters turbulent and mudly. It was famous in antiquity for its golden sands: 'Tagus auriferis arenis celebratur.' (I'lin. Hist. Nat., lib. iv. cap. 22 ; sec, also, Silius ltalieus, lib. vii. v. 755; Ovidii Metamorph., lib. ii. v. 251.) At present, however, very few particles of gold are ever found in the sands of the river, and though they may have been more abundant in antiquity, the fair presumption seems to be, that it is indebted for its celebrity, in this respect, rather to the vellow colour of its sands than to its gold.

Hitherto the Tagus above Lisbon has not been of much commercial importance, though it is narigable as high as Abrantes. Attempts have, however, been made to render it navigable from Toledo, and even Aranjuez.

TAIN, a royal and parl. bor. of Scotland, co. Piss, on rising ground, near the S. shore of the Frith of Dornoch, and near the mouth of the river Tain, 24 m . NNE. Inverness, with which it is comected by railway. Pop. 1,759 in 1861 . The town possesses a good academy (founded in 1809), which has attracted a number of families to the tuwn for the education of their children; but it has little or no manufucture, and the sand-bars on the coast deprive it of ally advautage it might have derived from its maritime situation. New county buidings were lately erected on the site of
the old prison, a new grol having been built at the SW. angle of the town. It has a handsome par. clıreh, a Free chureh, a grammar sehool, and 3 branch hanks. It is associated with Cromarty, Dingwall, Dornoel, and Kirkwall in sending 1 mem, to the 1 I . of C . lieg. elect. 109 in 18155 . It is governed by a provost, 2 bailies, and 15 contrcillors. Corporation revenue, 1,2161 , in 18133-6.1.

ISALAYERA DE LA REVNA, a eity of Spain, New Castile, prov. 'luledo, on the Tagus, d 2 m . W. by N. T'oledo, and 65 im . SW. Madrid. l'op. $9,2 \times 5$ in 1861. The town stands on a large and fertite plain, and is divided into two parts by the river, which is here crossed by a stone bridge of 35 arches. and 530 yards in length. The town is very irregularly built, with low honses and narrow and illpa yed streets: it has 8 parish churehes, 8 momasteries, and 5 monneries. Taiavera has in economical society, schuols of Latin, philosophy, and theology, and had formerly some manufuctures of silk, stuils, and porcelain. Its murkets are tolerably well supplied with provisions.

It is supposed to reprenent the Talabrira of the Romans: it was taken by the Noors in 71.1, and various Mourish remains are still to be seen in the city and its weighbourhood. Alter many vicissituites it was destroyed by the Moors in 1109 , but was speedily rebuilt. It afterwards became an amatge of the queens of statin, whence its mame. In modern times it has been rendered famons by the obstinate battle fought in its neighbourhoond, oin the 27 th and $2 x$ th of July, 1800 , between the l3ritish and Spauish forces under Sir Arthur Wellesley (Dake of Wellington), amb the Freneh, mater Joseph Bomaparte, assisted by Marshals Jourdan and Victor. The French, who commenced the attack, were repulsed at all points. The slanghter was great, and nearly equal on looth sides.

TAM13OLF, a central government of Enropean Russia, principally between the 52ud and 55th degs. of N. lat., and the 40 th and 43 rd of E. long., laving N. V'ladimir and Nijni-Nov gorod, E. I'ensa and Sarato, S. Voromere, and W. elietly the latter and liaizan. Its length N.to S , is abont 350 m. , breath varying from 100 to 250 m . Area, $24,4: 0$ sq. m. Pop. $1,910,454$ in 1858 . Surface flat, except in a lew parts, where it is slightly undulating. I'rineipal rivers, the 'I'sua and Mocksha, tributaries of the Oka, tlowing N.; and the Vorona, a tribntary of the Don, flowing S. In the N. the soil is santy and marshy ; a large proportion of the country, principally the marshes, heing covered with forests; in the E., or steppe, so called from its being bare of woorl, the soil consists principally of a black monld, and is comparatively fertile. Corn is the principal product ; but, according to the official accomnts, the crops are extremely variable, and scarcities frequently oceur. The peasantry are well treated, and in good circumstances. Hemp is extensively grown, the value of the quantity exported amounting to $1,000,000$ roubles a year. The forests along the Mueksha supply a good deal of timber for ship and boat luildiug; and the inhabs, are there principally wodeutters, earpenters, coopers, or pitel and tar makers. Cattle, principally brought from the steppes of the Don, the Wolga, and the Cancasus, are numeroms, and are extensively linttened for the neighbouring , governments, and for Moscow and J'etersburg. 'The horses belonging to the gentry are good, and have been much improved by the stud kept by the Orloff family: but the horses of the peasantry are wretehed. The manufacture of woollen eloth is carried on to a consiterable extent. Peter the Great established an extensive cloth manufactory, for the service of government, at the village of boudari.

Tamporf, a town of hinssia in Earope, cap, of the alowe gov., aloutt the eentre of which it is
 31,101 in 185\%. The town, which is ahout 2 m . in length by 1 m . in lremelth, was originally fonnced and fort ified in 1 gill us a defence ngainst the incursions of the Nugai Tartars. The homses are principally of wood; but there are varions stone churehes, a large monastery, gymmasium, civil hospital, and a military orphan nsylum. In the school of calets at Tamborl, nhout itm pupils, noms of nobles, are instructed in Fremely, fierman, and military exercises; and the most intellipent are afterwards sent to the corps ald cudets at Tetershurg. A high sehool for yomg ladies was founded in 183.4, and there are varimes other sehouls. Mamufactures of woollen cloths, alum, and vitriol are entablished, and the town has active general trade.
Tanie, a river of Emghad. See Tuames.
TAMWOLTII, n parl. and mumic lor., market town, and par, of binghand, principally in the co. Stafforel, lut partly also in Warwickshire, being divided into wo parts lis the 'rame, where it ios joined ly the Anker, 8 if m. Sli. Liehtichd, and 110 m. NW. Lamden, by Lomidin and North Western railway. Poph of innie. bor. $1,3: 32$, and of parl. bor. 10,192 in 18(i1. Area of part. ker., which the lommary Aet made co-extensive will the par., 12,920 acres. 'The town is well built, and a handsome lrialge is thrown arross each of the rivers. The parish church, dedicated to St. Bititha, is supposed to ocenpy the site of a very ancient mulimery.
It is a large, handsome editice, with a fine tower, and a crypt moder part of the charela. Some portions are of deeorated date, and some perpendienlar, and both goud; some of the windows have had very tine tracery. In the tower is a curimes double stairense. Nuncroms monuments adurn the interior of this chureh. There are varions dissenting chapels, a hospiten for fourteen pour men and women, fombled and endowed by Thoms Guy, the fumber of the famons hosipital in sonthwark which luatrs his name; a grammar school, which recived endowments both from Edward VI. and Eilizabeth. More reeontly a free seluol has been extablished by the late Sir liohert Jeel, to whom a stathe has been erected in the market phace. lhoys from the grammar schond are eligible to a scholarship in Catherine llall, Cambridge, and a mative of the town to a fellowship in St. John's College, Cambridge. On an artiticial height, near the town, is Tamworth Castle, a seat of the Townshend family. This castle, though now much modernised, is of great antiquity, having, according to some muthorities, been founded by Ethelteth, danghter of Alfred. It was eonferred, with the town of Tamworth, by William the Conqueror, on Lobert de Marmion, lord of Fontenay in Normandy, the exploits of me of whose supposed descendiants have been immortalised in the best of Sont's poems.
Tanworth, which is on the line of the Roman Watling Street, was a place of much consequence, and the favonrite residence of the Mercina kings during the Heptarely. It appears to have been a borough by preseription, but was re-incorporated by Elizabeth. The mumicipal borongh, which is much less extensive than the parliamenary bor., is governed by four aldermen and twelve councillors; it has no commission of the peace, thongh guarter sessions for civil eauses are held. The commissioners of inquiry into the munic. affiars of the different bors., spleak hiphly of the past government of 'Tamworth. 'The governing bonly is wholly self-clected; it does not appear, however,
that the power thas vested in the holly has been in any respert almsed. Neither does it apperar that the corporation, either as regarils the apmeinment of members to the body corporate, or the exereise of the elective framehise, have been suljeed to the operation of any undae local indhenes. The ab. sence af all comphaint hads to the conchasion that the oljects of municipml government have been satisfarturily attained in flis burnugh; that the governing hody has heen jadicionsly solected, justice well administered, and the revemues cardilly aplied tu public purpans.'
Thmworlh has sellt two mems. to the II, of C . since the fth of Elizabeth. Previously th the Reform Aet, the right of voting was ii the inhahitants mying siont and lot. Registered wlecturs, 520 in livin. The late Sir Robert Peel, Murt.. the most disinterested and tried patriotic minister that this comutry las had since the levolution, and, also, one of the ablest, was lourg representative for 'Thuworth, and one of its greatist innefactors. Ilis seat of Drayton Mamor is about I m. S. of the town, mid he is interred, alomg with hii, father and mother, in the elmerch of the mejoining par. of thasset Dravion.
TANJORLE, a distr. of Ilimbostan, presid. MaIras, mal one of the must valuable in liritish latia, ranking in peint of cultivation mud prest duetiveness next to burdwan in bemen. It lies primepally between lat. $11^{\circ}$ and $11^{\circ}$ 30', and the Tith mul kuth degs. of H. loug., having N. the distr. of 'lrichinopoly, W'. Madura, and the arean
 at. 1,301, (h) Wh. Dowt half the prov. is a tlit allusial dela formed and completely irrigated by mumerons bramehes of the Colerom, which constitutes the N. boumdary. This delta is justly considered the gramary of the Madras territuriss: almost the whole of it is cultivated with rise, which is here prodnced in larger quantities muld with more certainty than in any other distr, on the E., const. The average gross produce in rice yearly is estimated at $\mathbf{i x}, 0 \mathrm{~d}$ garec. The rest of the dist. S. of the delta is on a considerally higher level ; its surface is undulating, and it comprises many varietics of soil. Tanjure was formerls assessed under the ryotwar system, but this wa afterwards abandoned for the vilhage settlemum, mider which last both the revenne and enltivation have increased very comsiderably. 'The pop, is for the must part Ilindoo, and chictly agricutural; but there are some mannfactures of cotton and silk stuffs, of copper utensils at Comboconnun, and Manarpooda. These, however, have declined greatly of late years, owing to the importation of cleaper E.nglish gools, though some manufactured articles are still exported with the arricultural prochuce to Bengal, Aehin, Tranguelar, and the aljacent districts. The impurts are iron, saltpetr', dry prain, oil, glue, wax, and tamariuds, from Cuimbatore, Salem, and Trichinopoly. The trale of Tinujore is very considerable.
Taujore was never permanently conquered ly the Mohammedars, and Hindoo institutions and edifices have been preserved in it in much purity and perfection. lu almost every village there is a pagoda, with a lofty gateway of massive thomen not elegant arehiteeture, in which sumdry thalauius are maintained; and on all the great roads leadin, to these phaces are ehoultries for the accommenition of pilprims. The district has been noted fir the prevalence of suttees. In antiquity it constituted the principality of Chola, whence the whale coast afterwards acyuired the name of Curommule It was comquered by the Mahrattas in 16a; lut we came fulietly inte, its possexsion in 1799, on cundition of allowig the rajah a lac of stat

 It is said to be nearly if m . in cire, amd comsists of two sepmatate portions, beth lortilied ; one comsprising the julace and other publie Inilolings; end the uther a celcelrated purom, prompes the timest sperimen in Inlia of a pyrnmidieal temple. Its gramel tower is ! !e! ft, in limight, and is remarkable for its simplicity. In a covered aren in this temple is a bull carved in black granite, 16 ft . in lemith ly let ft . in loight, decmed one of the berit works of thimloo art. Close to the temple stands an limglish church. Tanjure is strongly firtitied, and the city is more regularly built, and has a larger proportion of solid amd ormamental relibies than any other mative town S . of the lirishas. The İritish residency is ontside the walls to the S. 'l'mjore was minsuccesslinlly besinged by the lifitish in 17.la, and the lirench in 1708 ; bitt was taken by the former in 172 B .
TAORMINA (nin. Tunromininm, or Tianromenium), a town of itnly, island of sicily, prov. Messina, cal. cant., on a high, cragry monntain, on the E. eonast of the islami, about half-way hetween Messina and C'atinia, bring 30 m . SW. the
 ixit. ' Travellers speak in the higherst terms of the surrommting scenery. 'Were 1,' says Siwinburue, 'to name a place that pessesses every grame and bennteons qualification for forming a pieture-a place on which I shond wish to employ the powers of a salvator or a lobssin, 'lamorminin shontil be the objeet of ony choier. Every thing belonging to it is in a large, sublime style.' It is fortidied by an irregular wall and lines, constructed by the Saracens, surmeminted by an old Saracenic eastle mul more modern works; and alwre all, on the summit of a tabled clill; is the inconsiderable town and military pest of Moha. 'Though 'raormina has an inmodernte proportion of convents and large buidings, it is ill-lmilt and diry, nad, notwithstanding its elevated sitnation, it is said to be but indiflerently healthy: (On a fomatain, in the main strect, part of the statue of a centunt, with the uddlion of a copper nimbus, is held to represent St. l'uncras, a native of the town, and its protector.

Taormina las some splendid remains of antiquity. lis thentre, which is most probnbly of fireck origin, is the olject of miversal almiration. It is of very nmple dimensions, being capable of accommodather un fewer than 40,000 spectators, and is womderfinlly well preserved. It is principally excavated in the shope of the mountan, its seats being hewn out of the rock: the proseeninn and parts connected with the stage are built of lirick, and are nearly entire; the space allotted to the orchestra is also preservel, as well as the dressing-rooms of the netors. Its greatest breadth is ubout 360 lt.; its extreme length, 300 ft ; and it is so admirably contrived that, even now, the slightest noise, as the tearing of a piece of paper on the stage, is distinctly heard in the most distaat part of the theatre. The seats command the most superb views of Mount litma, Aei licale, Catania, and, it is said, of the country even as fur as Syracuse. 'The spot,' says Sir R. C. Hoare, 'securs to have been created for a public editice: behind and before are steep precipices, which leave just room suflicient to place this most noble and aagnifieent structure. I visited it frequently, and never left it withont regret.' In addition to the theatre, Thomina has an entire side of a nanmachin, upwarils of 350 ft . in length, with the romains of the aqueduct and the reservoirs that suppliad it with water; and in revery direction ronnd the town are selphlines, emotijins, tessellated pavementes, mid remains of romarkable edithers, atfesting its morient wealth and magniticonee. 'lice hominican convent has a large conrt, surrounded with colluman of tine brown and white marble. 'lhe inhabs. have sume trade in wines anl hemp, the firmer being, it is sail, of superior quality, though very inferior to what they must. have been in antiguity, when they ocenpied a high place at the lioman banguets.

Thurmminimm is of mesertain origin: it was aken by bionysins the bider, in the !lth olympind, or abome anno floi n.6: A lioman colony was settlen in it by Jnlins Cinsar. The meient city was ruined by the Sntncens in ?tis; since which it has never recoverel any consitlerable portion of its ancient importance.

TARAN'TO (un. Therentum), a fumbus city and sen-port of S. Italy, prov. Lecee, anciently one of the wealthiest and mos. celebrated cities of Marma (iriecia, nemr the $N$. extremity of the Gult of 'laranto; 12 m . WSW. Brindisi, and 160 m . list:。 Nuples, with both whieh towns it is commected by railwny. l'op. 22,531 in 1062 . The eity stanis on what was formerly an isthmas, but is now an island, seqarating the gulf, or outer sen, from an inner bay, ealled the litele Sea (Mure Piorolo), 16 or 16 m . in circ. At its N. extremity is the oll chamul, leading to the Mare l'iceolo, crossed by a bridge abont 160 yards in length, over which an aquednet is brompht, eonveying water to the eity from the mountains of Mutina, abont 12 m . clistant. The clannel on the S , side of the town is artidicial, having heen originally opened by ferdinand I., and drepened by Philip 11. : it also is erossed by a briclge aboitt is y yards in length. In mintipity the citadel occupied the site of the modern city.

The harbour of Taranto is excellent, and might, with little dilliculty, be male all bit perfect. In antiquity the Mare l'iccolo, or inner lay, was the principul rendeavous of the Tarentine ships, where they lny perfectly secure from hostile attacks, and as safe in other respects as if they hid beent in dock. The entrance to the immer bay is now, however, so clooked up with rublish, that it is aceessible only to small bunts; but it might be ensily cleared ont, and the basin rendered as useful as ever. Acljoining the town, the Mare l'iccolo has from 4 to 6 futhoms water. 'The present, or outer, larbour is at once extensive and safe. There are 4 fathoms water elose to the town; and the bay, which is capacions, is protected by the islands of St, l'eter aud St. I'aul.
The ancient city extended along the shores both of the gulf and the Mare l'iccolo, aud the walls which ran from the one to the other formed the base of the triangular space which it covered. Of its magnificent buildings, which inchided a temple of Neptume, the guarilian deity of the eity, scarcely any vestiges exist, except the outlines of an amphitheatre, some substructions of apparently a lioman work, and an immense mass composed of Iragments of pottery. 'The shape of the morlern city, says a traveller, 'has been, with some justice, ansimilated to aship, being wide in the centre, and tapering at each end. 'I'he principal street runs from one of its extremities to the other in a waving line; and narrow and tortuous communications lead to two other parallel streets; one of which extends along the waters of the outward gulf, but considerably above their level, and is defended from their fury by a parapet wall and projecting battery. Here the best louses are situated. The

Marina, on the contrary, which borders the imner bay, ur Mare Plecolo, is searcely raised above its surfiuce; and nothing can present a stronger contrast than the crowded, tilthy, but lively appearance of the last, upposed to the quict, elean, lont teserted aspect of the formor. 'The Marina in inlubited entirely by fishermen and their lamilies, who constitute more than half the prp. of the phace.' The cathedral, dedicated to Sinn Cataldo, a native of Ireland, is richly adomed within, and has a silver statue of its patron saint, some ancient colmmns, and inlaid work in pietre pure. Tarmito Jasa formidable looking castle commanding its harhour, minnerous convents, a diocesun seminary, two hospitals, an orphan asylum, and manulactures of linen and cotton fabries. Tho great articles of commerce are oil and shell-fish. The neighbourhood was anciently famous for the murex and purpuru, but these have been sujerseded by muscles and oysters, which are reared in inmense numbers in the Mare I'iccolo.

Tarentum was cither originally founded, or, as is most probuble, occupied by a colony from Sparta, about anno 700 n.c. The colonists, influenced, no doubt, by the advantageous situation of their new country for a scat of eommerce and commercial mavigation, became in no very lengthened perion distinguished for their proficiency in these departments of industry, and their city is admitted to have been the greatest cmporium of S. Italy, or Marna Grecia. 'Tarentus Lacedamoniornm opus, Culubria quondam, et Apwlia, totiusque Lucanie cumut, cun maznitudhe et muris, portuque nobilis, tum mirabilis situ: quippe in ipsis Adriatici maris funcibus posita, iu omnes terias, Istriam, Illyricum, İpirnm, Achuiam, Africrtm, Siciliam vela dimittit.' (l'lorns, lib. i. cap. 18.) l'olybius also has ably stated the commercial alvantages enjoyed by Tarentum. (Lib. x. Frag. J.)

The history ol' this great city is very imperfeetly known. ller govermment, like that of most other Gircek states, was diflerent at different periods, being sometimes alministerel by kings or tyrants, and sometimes by the people. She was distinfuished not only by her wealth and commeree, but by the splenionr of her public buildings and works of art. She also became a fivourite seat of literature and science; anit the followers of I'ythagoras, though proseribed in other parts of Jtaly, tonnd here a safe asylum. 'Ithe famots philosopher Archytas, a diseiple of l'ythagoras, was repentelly placell by the suffrages of his fellow-citizens at the head of the government; and showed, by his judieious eonduct in civil affiars, and as leader of the armies of the republic, that he was no less eminent as an administrator and a general, than as a moralist, a mechanist, and a geometer. (Bruckeri, Mist. Philosoph., i. 1118; see, also, Horace's Ode to Arehytas, lib. i. ode 28.)

The refinement produced by the accumulation of wealth and the culture of literature and the fine arts, has been supposed by most ancient writers, and by their copyists in modern times, to have had a most injurious influence over the martial virtues of the Tarentines, and to have oceasionel an all but universai weneracy mal corruption of manners. There does not, however, appear to be any real ground for such imputations. When the progress of Rome towards universal domi ion brought her armies and fleets into the territories and seas adjoining Tarentum, the latter did not seek to purchase a treacherous truce, ly suimitting to the dictates of the Roman generals. On the contrary, she made every effort to maintain her independence; and as she kinew that her own forces were inadequate for such a struggle, she wisely sought assistance from others; and it was at her
instigation that P'vrrhus invaded Italy, After the reparture of l'rrims, Tarentum attached hervelf to the party of llamibal; and it was not owing to any delicieney of bravery, but to treachery; that Fabius ultimately obtained possession of the eity.

The conduct of the Romans on this was consistent with their helaviour on every similar oreasion. The city was delivered up to military execution; and such of the inhab., anomuting to about 30,000, as had esenjed the massacre, wree sold for slaves. (livius, lib, xxvii. caps. 13-16; Plutarch's Life of Fabias.) Tarentum never fully recovered from this ilrealful blow; though, notwithstanding the preference shown by the homans for Brundusium, she had aguin become, in Strainis time, a considerable eity. $A$ little to the $\mathcal{N E}$, of Tareutum, near the Galesus, were situated the fertile valley and ridge of Anlon, the beanties of which have been described in such glowing terms by llorace. (Lib, ii. od. 6.)
'TARARE, a manufucturing town of the $S$. of France, dép. Rhone, cap. cant., in a narrow villey on the railway from I'aris to Lyons, 20) m . $\lambda 11^{\prime}$. the latter. Pop. $14,569 \mathrm{in} 186 \mathrm{I}$. The town is the centre of a mmufacture of plain and figured muslins, which, within a circle of from 10 to: 21 lengues of mountainons country, employs wholly or in part at least 50,000 hands, about 20,000 heing adult haudloom weavers, from 15,000 to $1 t i, 4 m$ women and children employed subsidiary to these, from 4,060 to 5,000 employed as agents or otherwise by the manufacturers; the rest, chiefly females, being ocenpied in embroidering or tigiring the plain goods. Most of the weavers work nt their own homes, nad the manufacturers do not generally carry on husiness on a large seale, or emphy many hainds. A portion of the wenvers in the country get from 75 cents, to $\frac{1}{4}$ fr. a lay ; thine of the town from 2 fr. to 2 fr .50 c . and sometimes 3 fr ., according to their skill. The manntacturer fumishes only the red and the upper mountims all the rest being at the expense of the workmen. Those who are in the town weave all the year round, wherens those in the country do not weave for more than seven months a year, the romaining tive months being oceupied in agricultural employment.
'1'AlAsCON, a town of Franee, dép. Bonches-du-hhone, cap. cant., on the khone, opmsite Beancaire, with which it commmicates by a mew suspension-bridge, $13 \mathrm{~m} . \mathrm{E}$. by S. Nismes, on the railway from Nismes to Avignom. Pop. 13,4×9 in 1861. The town is surromnded with walls thanked by towers, and is commanded by a castle on a ruck overhanging the river, built in the 13th century, and formerly the residence of the counts of Provence. The streets are wide and regolar, and one of the principal is lined with arcades. The par. chureh, a fine Gothic edifice of the 11th century, hus a richly seulptured entrance, and a subterrancan chapel, in whieh is a marble statue of s. Martha. 'Tarascon has a public library, a theatre. town-hall, court of justice, two hospitals, ant barracks; and in the neighbourhood is a vory extensive nursery called the Pepinière de Tomelli. It has, also, manufactures of silk and woollen stuffs, some trade in boat-building, and in wine, brandy, and oil.
TARBES (an. Bigorra, post. Tarvia), a town of France, dep. Hautes l'yrences, of which it is the cap., in a tine plain, on the Adour, here erossed by a stone bridge of 6 arches, 24 m . E. by S . l'ai, with which it is comnected by railway. l'(1). 14,768 in 1861. Tarbes is one of the best built and cleanest towns in the S . of France. ## ost. Tarvia), a town of

 ees, of which it is the Adour, here crussed by $; 24 \mathrm{~m}$. E. by s. Paiu, ed by railway. l'op. : one of the best built . of France. Its houses, be, stone, or brick, andrumfed with slate, have nisually gariens attached, of considerable size. A wide main street, containing ummerons inns and eafés, runs through the centre of the town, which is also divided into three nearly equal portions, by two large open spaces; whe, the Place de Mumbourguet, being planted with trees, and forming a lavourite promenade. The streets erossing the main thoroughfare are almost equally wide and repular, nud nearly all lead tnto suburbs, of which there are 5 , surtoinding the town on every side. Every quartel w' ${ }^{\prime}$ 'nrbes is well supplied with water from the river. There are few public edifices worth motice. The ehiff is the profecture, formerly the bislup's palace, a building of different dates, but with an imposing general effert. The cathedral is on the site, and, it is sail. consists of a portion of the ancient fortress of Bigorre; it is internally adorned with some colomins of Italian breccia. The old eastle of the comints of 'larbes now serses for the prisom. The college and theatre are handsime. 'Turbes is a bishop's see, the seat of trihumals of primury juristiction and eommeree, and a forest bonrd, anil has schools of design mid arehitecture, a royal depôt d'etalons, and some manufactures, principally of comper, iron, nut other metals. It is the great comnercial entrepot for the collntry immediately $N$. of the P'yrenees, mut has a large market, once a fortnight, frequented by individuals from a distance of 20 leagues round.

TAliN, a dép. of France, reg. S., formerly inc. in lauruedoc; principally between lat. $43^{\circ} 30^{\prime}$ and $44^{\circ} 10^{\prime}$ and long. $1^{\circ} 30^{\prime}$ and $3^{\circ}$ li., having, N. and NE. Aveyron; SE. and S. IJeranlt and Aude; SW. Haute-(iaromue; and NW. Tarn-ettarmone. Area, 573,977 hectares. 1'op. 353,633 iit 1861 . This dep. is inclosed by monntainranges on the NE. and S.; it slopes to the W., in which direction its rivers, the chief of which are the Tarn, Agont, and Viour, have their courses. the 'larn rises in Mount lozère, and flows in a general SW. direction, through the dejs. Lazere, Aveyron, und Tarn, to abont 15 m . from Toulouse, where it turns NW., and ultimately falls into the Garome, 22 m . above Agen. Its principal allluants are the Aveyron, on the right or $N$. side, and the Agont on the left. Florac, Milhau, Alby, Montablan, and Moissac are on its banks. It is navigable for atout 90 m . from its embouchure. The arable lands in this dép. are estimated to (amprise 326,410 hectares: meadows, $11,8.88$ do. ; vinevards, 31,243 do.; woods, 80,291 do.; and heathes and wastes, 61,439 do. With the exception of the momntain tracts, the soil, speaking generally, is extremely good, and the valleys are not inferior in fertility to any in Frame. Agriculture, however, is in a very backward state, and the rotation of crops can larilly be said to be introluced. lhut the supply of corn, notwithstanding, exceeds what is required for home consumption. It produces from 400,000 to 450,000 hectolitres of wine, of which that of (iaillac, bartly red and partly white, is the best. It is nproved by a sea voyage: the white wines have imilar qualities. Before the introduction of indigo into commerce, a good deal of woad was raised in the dép, and it is still cultivated round Nhy. Cattle, of a good breed, are rather numerous, and the produce of wool is estimated at 150,000 kilogr. a year. There are mines of iron, copper, coal, and marble. Near Alby is a very extensive work for the conversion of iron into steel. The manufacture of cotton and woollen fabries and yarn, of which Castres is the centre, employs about 15,000 hands. Silk furniture stuff's are made at Lavaur. Morocco leather: paper, cords,
glass, copper wares, and files, in various parts. Tarn is clivided into 4 arromis.: ehief towns, Alby, the capre, Canillac, C'astres, and Ievaur. This dep. is one of the chief seats of l'rotestantism in Frunce, and was a principal scene of the crusides against the Albigenses.
l'AliN-E'T-(iAliONNE, a lép. of France, reg. S., in about lat. $44^{\circ}$, and primeipaliy between the lst and 2 nd degreces of b. long.; having N. the dép. of Lot, E. A veyron, Sk: and $s$. Tharn and llante-(iarome, and W. (iers and lot-et-(iaronme. Area, 372,016 hectares. l'op. $23: 2$, inl in 1861. Surface generally undulating: in the s. nud E . there are, howeyer, some hill ranges of considerable height, the sources of a number of small streams. l'rincipal rivers, Garmme, 'urn, nul Aveyron, all howing through the N. half of the thep. The arable fands are estimated to compriso $229,2:+4$ hectares; the meadowa, $17,3 \cdot 16$ do. ; vineyards, 36,703 do., and wools, 15,387 do. A greater proporton of wheat is raised in this than in any other of the S . dejs. of lirance. Liye, maize, and onts are also grown, and the total probluce of grain considerably exceeds the lome demand. The produce of wine amounts to about tio bectol. a year, of which about 250,000 are exported, mad converted into ean de vic. The tinest are the red wines of the arrond. of C'astel-Sarrazin, the best of which lave a tine colour, but the greater portion are inferior. I'runes, flax, hemp, and oilseeds are among the other principal articles of culture. Irrigation is not well understood, and the produce of hay is small. Live stock are, in consequence, less numerous than in the arljacent defiss ; the quality of the wool is inferior. ILogs and poultry are extensively fattened, the furmer for export to Spain. The want of eapital is a formidable obstacle to the progress of manufacturing industry. Same coarse woollen stutlis, with stockings and other finbrics of silk, are made at Montauban; serges, linen cloths, and woullen yarn in the arrond. of Castel-Sirmzin, and there are some considerable tnmeries, paper and tlour mills. 'Tarn-et-Garome was made a délo. by Napoleon, on account of the importance of its capital, Montanban, It is divided into 3 arronds.

TARIAAGONA (an. Tarraco), a city and seaport of Spain, in Catalonia, cap. prov. of its own name, at the month of the Francoli, in the Mediterranean, 45 m . W'SW. Barcelona, on the railway from Barcelona to Valencia. D'up. 18,023 in 1857. This once lamous city is now contracted to a space which covers only a small portion of its ancient limits, and is ill built and dirty. A large and brond street, with some handsome edifices, has, however, been laid out within the present century. Its fortitications consist, besides the town walls, of two castles, and several batteries to protect the harbour, but the height on which the city stands is commanded by Mount Olivo. The river lirancoli, adjacent to the city, is crossed by a narrow bridge of six arches, and the town is entered by six gates. Near Tarragona is the building called the tomb of the Scipios, in which the father and uncle of S. Africanus, who were killed in battle with the Carthaginians, are said, though on no good authority, to have been buried. It is about 19 ft . sq. and 28 ft . in height, resembling the tomb of Theron at Girgenti. In the front, facing the sea, are statues of two warriors in a mourning posture, roughly cut out of the stones of the sepulchre, and mach worn by the sea air. The inseription is so much defaced that it can hardly be deciphered. The cutherlral of Tarragona is worth a visit, particularly the court and cloisters, which are surrounded with numerous pillars.

The archbishoprie is one of the nuost ancient in Spain, having existed in the 7 th contury. It lias several convents, a hospital, a semlıary, academies of design and naval arehitecture, other nuperior sphools, and a thentre. 'larrugoma is the chief exponting port of Catulonia. Its exports consist of nuts, nimonds, whes. and brandy. The miss nent to the linglish market are known by the mone of tlaredous nuts; but they are neither grown near, nor exported Írom, Burcelona. They are frown more in the interior of the prov., and are all exported from, Tarragoma. 'The avoruge export of unts to linglame is from 25,000 to 30,000 bage ( 4 to a ton) a yeur. 'lhe export of almonds is about 12,000 hags. From $\delta, 000$ to 5,501 , pipes of wine are exportell from Tarragoma to Rio Janeiro, Guernsey, and Jersey, and abont 400 pipes of brandy are exported ehietly for Cette and Cadiz, from which places it thals its way iuto the wine butts of IBordeanx and Xeres, Cork-wool and cork-bark are also exported from Tarrngona.

Pliny nays that Tarraco was founded by the Scipios, who planted a colony in it (lib. iii, cap. 3) ; but most probahly it had been fommed previously, and was only increased by the Scipios. It was the sent of a principal tribual, and was, in fact, not merely the capital of Mispania Citerior, or Tarraconensis, but of Spain, unler tho Romans. Angustas resilled in it for a short period, and Hadrian enlarged its port and crected n mole. It was taken by the Gothos in 457 , and by the Moons in 714, from whom it was retaken by Alfonso of Aragon in 1220. It was several times the place of meeting of the states of Catalonia. Jn 1705 it was enptured by the English, who at tirst intended to retain it as a military post, but nfterwards abandoned it for Gibraltar. In 1811 it was taken and sacked by the French under Suchet. Orosius, the historian, is said to have been a native of 'larraco, though the fact has been disputed.

TARSUS, a celebrated city of antiquity, and still a town of some inmortance, in Asia Minor, pachalic of Itchil, eap. sanjak, on the Cydnus, about 12 m , from the Mediterranean, and 82 m . WNW. Scanderom ; lat. $36^{\circ} 46^{\prime} 30^{\prime \prime}$ N., lonch. $3.1^{\circ} 46^{\prime} 45^{\prime \prime} \mathrm{E}$. Its permanent pop. is estimated at about 7,000; but during winter a great many Tlurkish, Greek, and Armenian families tlock into the town. The modern town does not cover onefourth part of the area oecupied by the city under the Romans, and few vestiges remain of its former magnificence. The remains of a theatre, and of a spmeious circular building, an ancient gateway, and beyond the walls a singular and solid structure, 120 paces in length by about 60 in breadth, are among the principal. Some traces are perceptible of the more ancient walls, but those now inclosing the town are not supposed by Kinncir to be of an earlier date than the time of Marcuan al Kaschid, in the eighth or ninth century; and the castle is said to have been built by Bajazet. The houses seldom exceed one story in height; they are terrace-roofed, and the greater part are constructed with hewn stone, furnished by the more ancient edifices. There are two public baths, a number of mosques, several caravanserais, a small chureh, de. The plain around Tarsus is very fertile, and cultivated by Greeks, chiefly for corn and cotton, which last is a principal article of export, the others being wool, beeswax, gall nuts, copper, goats' hair and skins, ox and butlalo hides, and hair sacks. The river Cydlats is now navigable omly by very small boats, and the greatest part of the produce exported is shipped at Mersia, a port or toadstead about four hours journey W., at which there is suid to be good anehorage all the
year romnd. The value of the imports and ex[orts nmonits to about $100,000 \%$, a year each.

Nothing ls known of the origin of Thrsus; Int it is abmulantly certain that it was very anciont, and that it had either been originnlly fumuled ly tirecks, or hal subseguently received a Ciruinin colony. It was the metroperlis of Cilicia, and was eaptured hy buth Cyrus and Alexander. It contimued to flourish inder the suecessors of the lattor, nud under the Romuns. Stralos says it was very popalous and powerful; aud he further adds, that its schools of philosophy, literature, and seinnce were superior even to those of Athens and Alexandria (lib. xiv.) ; and though this is obviously an extravagant enlogy, there can be no question that it was a most distingulshed seat of learning. it. Paul, the apostle of the (fentiles, was a untive of 'Tarsus, where he was born in the second year of the Christian era, and where he acquirel in competent knowledge of tireak literature before he went to study the law of Moses at Jerinalem. To ingratiate themselves with Julius Ciesar, the inhabs, changed the name of the city to Jullopolis; and it is plain, from the statement of st, I'aul (Acts xxiji. 28), that some of them, if not all, ranked as lioman citizens. Tarsus producel several other distinguished individuals; among whom may be specified Antipater, the stoic, and Athenodoris, the philosopher, and fricud of Aupustus.

TAKTAKY, TAIT'ARY, or TULK Lis'AS, a very extensive region of Centrnl Asia, partly eomprised in the Chinese empire, and partly distributed among the states of Bokilatia, livitiksuas, Kilva, Kokan, and the Kingmis Striple.
'TASMANIA, See Van-Dimmen's Lasio,
TAT'I'A, a town of NW. Hindostan, aud one of the principal in Sinde, near the Indus, about 130 m. above its month, and 5is m. SW. Ityderabut; lat. $24^{\circ} 44^{\prime}$ N., long. $68^{\circ} 17^{\prime} \mathrm{E}, 1^{3} \mathrm{op}$, estimated at $\mathbf{1 5 , 0 0 0}$. Tatta is an open town, built on rising ground in a low valley. The honses are formad of wood and wiekerwork, plastered over with: earth; they are lofty, with flat roofs, but very conlined, and resemble square towers. Some if the better sort have a buse of brickwork, but stme has been used only in the foundations of oue of two mosques. A spacious brick mosque, buitt by Shah Jehan, still remains, but it is crumblinis in clecay; and there is little else in molern 'latta to remind one of its former greatness. Its eommercial prosperity passed away with the empire of Delhi. Of the weavers of loongees (silk and cotton fabrics), for which it was once so famous, 125 families only remain; and there are not forty merchants in the city. The comntry in its vieinity lies neglected, and bat a small jortion of it is brought under tillage.

Tatta has been supposed to represent the Pattalu of the ancients, and with some reason. since at this point the Indus, as stated by Arrian (lib. vi.), divides itself into two branches; but no conclusive evidence has been elicited on this point.
TAVIS'IOCK, a parl. bor., market town, and par, of England, co. Devon, hund. T'avistock, on the Tavy, 13 m . N. 1'lymonth, and 240 m . Will: by Great Western railway. Pop, of bor. 8,857 in 1861. The town is on the NW. bank of the river, here crossed by three bridges, and from which the ground rises, by a steep acclivity on both sides, to the height of several hundred feet. A very contracted valley from the $N$. is also occupied by honses closely packed together. The parts of the town built on higher ground to the N., or werlooking the more expanded valley to the W., are of more modern date. The streets, in many parts, are irregular and indifferently paved; but the houses are good, and the town generally is plei- 1. a yenr each. igin of Tarsus; lint $t$ was very ancient, ghally foumded ly received a in iryian of Cilecin, and was Alexander. It conccessorn of the latter, alow says it was sery is further adds, that rature, and seience Athens and Alexanthis is obviously an he no question that eat of learning. Nt. iles, was a native of in the secound year of - he acquired a comliterature leffore he des at Jerasalem. To Inlius Ciesar, the inse city to Juliopelis: atement of St. l'aul of them, if not all, Carsus produced seveduals; monour whom ie stoic, and Athenurend of Augustus. or TUlikESTAS: a tral Asia, partly comand purtly distributed haba, Dimerishas, noins sterpe. Dhemen's havi. Hindostan, and one of the Indus, ahout 130 m. SW. Ilyderabant; $7^{\prime}$ E. P'up. estimatral town, built on rising he honses are formed? plastered over with: that roofs, but very are towers. Sume if f brickwork, but stmue foundations of one or rick mosque, built ly but it is crumbling to se in modern 'Tatta to greatness. Its comay with the empire of wongees (silk and cota once so fnmous, 125 there are not forty ceuntry in its vicinity mall $j$ ortion of it is
to represent the Putth some reason, since ted by Arrian (lib. vi.), hes; but no conchusive this point.
r., market town, and humd. 'Tavistock, in h , and 240 m . Wsil: Pop, of bor. 8,857 in iW. bark of the river, , and frum which the vity on both sides, to ed feet. A very conis also occupied by er. The parts of the d to the N., or overvalley to the $W$., are treets, in many parts, fity paved; but the ra generally is ples-
sant. Taristock appears to have owed its origin to an albey ol Hack friars, fumbled here by wn earl of Devon, in mil. At the dissoluthon of the monasteries, this abbey, atong with the loritship of the town, was given loy the king to Johus lired linsell, the ancestor of the present duke of liedforl. Some remains of the monastic edifice still exint: the former refectory is now used as an aswemilly roum, and near oite of the bridges is a large handsome arched and pinnacled gateway, apparently of the time of Henry VI. The princtpail remains of 'Tavistock Abbey are in the purpendicular style. The par. church lins fumr nisles, a chancel, a tower at the W. end, and in its interior are several growl monnments. The living, a vienrage, worth 2!sl. a year, is in the gift of the duke of lledford. There are meeting honses for Wesleyans, Independents, Unitarians, nud Friends, a large and cunvenient workhuse, a national sehool, chiefly supported by the duke of Bealforl, some small educational endowments, almahouses, and uther public charities. Tavistock was one of the finer stamary towis in the co., and is poverned by a portreeve, chosen yearly at the lori's court, who is also the returning wificer of the bor. It has sent two members to the II. of C. since the $2: 3 \mathrm{r} \boldsymbol{\mathrm { l }}$ ! of lichard $I_{.}$; the right of roting, down to the heform Aet, having been in frechmilates of inheritance in possession inhalating within the borough. Reg. electons, 428 in 1865. The pop. is chiefly agricultural, though some serges and conrse linens are made, and mining and the working of iron orcupy a few hands. Markets on Fridays. Fuirs: Jam. 17, May 6, Sept. 9, Oct. 10, and Dec. 11, for cattle.
ir Franeis Drake, the famons navigntor and naval commander, belonged to the immetiate vieinity of Tavistock, where he was born, in or near $15 \%$
TAUNTON, a parl. bor, and market town of Fingland, co. Somerset, W. division, humd. Tauntum Dean, on the Tone, 37 m . SW. liristol, and 163 m . WSW. London by Great Western railway. lop. of purl. hor. 14, if67 in 1811 . Area of parl. bor. about 1,450 aeres. Taunton is one of the principal towns in the co; the main streets are spucious, well paved, and lighted with gas. They run mostly from E. to W. and from N. to S., the town being about 1 m . in length, and nearly as much in width. The honses are gencrally goor, and have frequently extensive outlets and gardens; the appearance of the town indicates a prusperous, respectable community. There are, however, several tmes and courts (popularly called colleges) branching from the main strect, which were fonnerly tilled with inhabs, hut little above the condition of paupers, who had been drawn into these close and umwholesome recesses to be within the limits of the bor., and to exercise the franchise extended to every inhabitant housekeeper. The most striking public edifice is St. Mary Magdaten's church, in an open space in the heart of the town. It is 98 ft . in lengeth by 86 ft . in greatest breadth. Its nave is diviled into tive aiskes by four rows of clustered columns, supporting bluntly-pointed arches; and at its $W$. extremity is an elegant quadriateral tower, with a pinmacle at either corner, their entire height being 150 ft . The church is richly decoratel both without and within, and has numerous monuments and a lhe urgail. Mueh of its decoration is said to be due tif Henry VII., in return for the strenuons support of the Lanenstrian cause by 'Tmunton; but the tower and other parts of the edifice seem to have been crectel somewhere about the end of the fourteenth century. St. James's, the old conventual church of Taunten I'riory, is a plain but strong
and well-furnished builting. There are several other churches, and chapela for ludepembents,
 Roman Catholics, There is also a Prancisemn monsent, recupying what was origimally intemed for a general lowpital. At the W. pul in the tavin is the castle, built in the time of llemry l., on the site of amother liortress, built, aloot iow, by lan, king of the Weat Sixmes. This adille eminprivers the hall, in which assizes fur the cos are heht in Lent, general quarter sessions at. Michuclmas, unil a court of refuests weekly. The market hunse is a large brick editiee, comprixing the corn market, town hall, and asembly-romins, and beside it is a handsome buildiug in the Ionie order, the lower part of which is a tish and poultry market, and the ulper a library nand realing-romu. The Tantston and Somerset Institutiom, established in Ikel, has aspmeions reading ant news romen, and a valuable, though not extensive, library. There is a neat thentre in the town. The numerons charities of Tanuton include the grammar seloon, fonulend in Lis2, and haviag a small endowment; a schond for eighty boys and fifty girls, sulported by voluntary contribution; several almshonses; the Tnunton and Somerset hospital, with necommodation for twenty-six patients; an eye intirmary, and a lying-in charity.

Tamuton was one of the first towns in Eagland in which the woollen manufacture was established; but the woullen trade of the town has greatly declined, and the industry of the inhubs. is now chiefly exercised in manufactures of silk stuffs, as criples, sarsencts, ant of tace. The town le:rived eonsiderable advantage from the construction of the Tamano and Bridrewater comal, by which a geod deal of Weleh coal is brought to it in return for the arricultural produce of the vicinity. Tanton was formerly a manieipal boromph, bitt in eonsequence of ugtlect in tilling up the vacancies in the corp., it lost its eharter in 1792. It is a parl. bor. by prescription, and appears to have sent 2 mems. to the 11 . of C . as early as the $2: 3 \mathrm{rrl}$ Edward I. I'revionsly to the Reform Act, which contirmed its privilege of sending 2 mems., the ripht of voting was in not wallopers not receiving alins. lieg. electors, 817 in 1865 . The returning officers are the bailiffs, chosen at an amual court-leet.
Tamuton, though not allucled to in the 'Itinerary of Antoninus,' was, in all probability, known to the Romans, as a great number of imperial coins have been found in nul near it. In the time of the Heptarchy it was a place of considerable note. In the civil war it silled with the l'arliament, and in 16-45 its castle sustained, with suceress, a long siege against the ruyal forces under Lond Goring.
TAURIDA, a govermment in the S. of European Russia, consisting partly of the peninsula of the: Crimea, and partly of a tract on the mainland, lying bet wen the Duiepr, the Bhack sea, the sea if Azoff, and the Berdn. Area, $2.1, \stackrel{*}{2} \mathrm{~s} f$. m. Pop. ti87,343 in 18:38. The mainland part of the grovermment, which, though the least interesting, is the most extensive, eonsists almost entirely of vast, and in many parts sterile, plains, denominated the Steppe of the Nogais, from the Tartar tribes, by which it is principally oceupied. 'These,' says a traveller, 'are a very diflerent people from the Tartars of the Crimet; they are distiaguished by a more diminutive form, and by the dark copper colour of their complexion, which is sometimes almost black. They bear a remarkable resemblance to the Laplauders, although their dress and mamer have a more savage eharacter.' Nbove 17,000 Germams are colonised to the E. of the
river Muhotchina. (For farther particulars see art, ('ルию:A.)

Tily, a river of scothmi, being the largent of the Newteh, aldi, ill resporet of the gumitity of water it cobseges to the sen, it is the greatest of hae dritish riviops. It rises in the high momitiminnes comine a little to the N. of laneh l,omomis. and, thowing Ni; liy Killits, expanile intu the
 Issuing thenere, ita course is N. and If, to lagiorait,
 ditte to tho W., to Perth; NE. to the peint of lihiml; theas morth-masterly, pmat bimilue, till it filla into the nent betwern T'entsmour l'oint mind Ituttomines, J'rom lihind I'oint to bhiplee the chanmel of the river expmida intormantmary colleal the Frith of 'Tay. Fromin ita source to Dunkelil the 'lay thows with a rupid emrreit, pirtly thromgh a very wida, and partly throngh a highly pietaresplor.
 I'erth, is thromgh a comparneively frititil eonhitry; and, frum the hater to the sent, it thows through the richers mud thest valley in sicothand.

From Ihttommens to Jhmileo the river is muritrable firr shipes ol' $6(0)$ tonis' burden; mul, at hight witor, veseds of mbow 100 tons' hurdent rinch
 hava Ineon erected on lhattonness, to mark the entrance to the river, The har at its momith has eff fithons water aver it. Jhuilee, the purt ut the 'ling, has wet docks and a pior harhour: the latter aries at low ehb; late at high water sprimges it lans
 large ships anchor in the elmangel of the river. The mouth und chomed of the 'l'oy are a growl deal emombered with sumd-hanks; and its mavigntion is rather ditlienlt, partly on that necomb, num partly from the strongth dif the thes.

Amomer the more remarkable of the tributaries of the 'lay may he mentioned the lyom, which joins it hear fortingal. The lammel has its somrees in the moor of limmoch, and tlowing flimugh the loch of that mume, is joined, mear the pass of Killiecrankio, by the tinry, from the cundines of lach liricht. 'The mited river lalls into the Tay at Jagidrat. Near Kinduren the Tay receives the mited waters of the Xirdle, the lati, and other rivers towing $S$. from the monntains on the contines of Alerdeemshire. At lihind lount it reecives its important tributary the fiarn, thowing li, from lach lann. The hasin of the Thy
 Smeatom ascertained that it carries to the sea more wher than even the J'hames. Its conrse from its suirce to luttonness is estinated nt about 110 m , It is the finest salmon river in (ireat Iritain; its tishories let for a large sim, the tixh being mostly comvered, packed in ice, to lomolom.

TCLIERNLGOFL, a govermment of European Russia, to the E: of the Duiepr, and between the goverument of Smolensk on the $N$, and that of Pultown on the $s$. The estimates of the area differ very widely; perhmps it may be taken at abont 19,1000 su. m. l'op. $1,471,8 t i 6$ in 1858, surface lhat ; soil fertile; climate dry, healthy, and mild. Principal river Duiestr, which bounds it on the W., and Desma, by which it is intersceted. AII sorts of com are rinsed, but principally rye, barley, and oats. l'roduce of the harvest extimated at about $4,000,000$ chetwerts. Flax, hemp, tobaceo, mal hops are also enlivated. Oxen, of a very fine breed, are raised and fattened to a great size. Horses small, hardy, and active. There are some pretty exteasive forests. Free cultivators are common in this and the other governments of Jittle Russia. Mannfucturing inilustry, though still very backward, has made much progress
dinring the preanent century, Sipirite largely eon-

 putinl and homparal.

Tlif'lis, or 'I'IFI.Is, a eity of W. Asia, the ral. of Cororgin, and of all the Comensian nud 'Trmaso Cimensinur prown of linsain; oll the Kirr (min,

 mont of whem nro Armenialis, will some Dhematman finmilies. 'Tethe,' way a a modern traveller, 'escuphes the right bank of the Kirr, in a contractol valley formed ly irregnlar monotains, parillad with the stromm in the shle we the rity, and hills coning down in a paint guite to the water's eilge on thoother. A cérenhar fort eovers this puint, mid together with a small suburl is united to the city by a bridge of a single wooden areh, thrown owr the river; while the ruined walls of ais ohd citmed erowit the thy, and extend down the side of a part of the ghmsite mombatio. The ald and antive purt of the rity is huilt lumin the truly (Oriental phan of irregnlar marow hanes, mal atill mure irregular mul diminutive lanses, thrown tugether in all the emulless comblimations of merident. Hare and there buropean taste, nided by linssian power, lans worked ont a passable rond for carriagres, of bmilt a devernt homse, worlooking mind jutting (1) shame all its mud-walled and dirty meibhthurs. A line of bazars tow, extending alome the river, and bramehing ont into suveral streets, togrefor with mueh histle nul husiuess, dinplay some neathess ani taste, mad is commeeted witli two or three tolarable caravanserais. Sowaral ald and sobstantial ehurehes, displaying their beliries mad cupulas in diflerent parts, complete the prominent fintures of this part of the city.

In the N. or linssim quarter, all the palaces, fovermment atires, and private honses, lining
 Europenan asped, and oxhibit in thoir pillarid fromes something of that taste lior showy nrelifterture which the edithers of their aplitul have thurht the linssians to udmire. Tedies has the appearance of atn excessively binsy and puphlons phace, Its strects present not only 11 crowded, tma, molike many Uriental cities, a lively sucue, Every persom surius harried by hosiness, Nor is the varioty of enstumes, repreventing ditherent mations and tomgoes, the lenst noticenble feature of the scone.
'The Amenian eathedral is a large and somewhat striking edifice; there are two mosques, and umong the other places of worship is a liuman l'rotestant compel. Tretlis lans many remarkahle sulphareons hot springes, their temp, varying from 1010 to 1120 Filh.; mind to these, it is shlyosed hy some, the eity owes its mame. Over some if these the linsian govemment has erected the crown-buths, a plan editice, but which, by being kept in rood order, dithers widely from all the other bath establishments in the efty, and realises n handsome revenue. 'letlis is very finvourably' sitmated for trade, and its commerce is pretty extensive, having greatly incrensed cluring the period of linssian ocenpation. Almost all the trade is, however, in the himds of Armenians; and a few years only half a dozen mercantile hunses existed belonging to any other foreigners, In 1830 , the Russians fomded a school in 'Teclis, which has since been erected into a gymmasium; and there are some other schools. Ceorgia in general, and its capital in particular, has been long celehrated for the beanty of its women; and, accorling to the authority referrel to above, 'this has not been overrated, for we have never seen a

 tionul whomil, a quaty on the river, and a dingyari, in which shenps of war abil veselels of 2011 inus' huriden lave lexen built. Dinat 'J'rigmonoth ehureh is mostly a molern miflee: the living, a prometmal eurncy, worth 128\%. a year, is in the fift al' the viear of Dawlinh; and here, also, are a Ibapist chapol, an andowad selool fur tis porr chilitron, sume gemal inns, a thentre, realing- Fonms, and other establishments asaal in a wateringplace, Theigmonth is governed by a pertreose, chosen ammally at the eomrt-lect if the loril af the manor. Many of its inhates, are emploved in the eonast dishery, end others in the supply of goond to visiturs: a good deal of the llaytor granite is also shipued from thls port; but the bar at the mouth of the river renders the harbour necessible only to conating versels.
'Trigmonolh is of high antiquity, and is said to the the place at which the Danes tirst lamed in -ix. It gives the title of baron to the shoro fumily.

I'R.l.LICII lilliv, a town of Hritish Indin, prosid. Nalras, mal one of the primeijual sea-purts in the district of Malabar ; on the W. conat ul 1 lindostan, $12 \mathrm{~m} . \mathrm{NXW}$, Calient; lnt. $11^{\circ} .5^{\prime} \mathrm{N}$.
 charry was the chice trading settlement of that Itritish on the Malabar coast previonsly to 1 nem. when the E. I. Compang's warelouses were trans-
 wenllly natives, however, still reside at this town: which emitinues to be the mart for the best mandial wond from above the Ghatas, and cardanoms from Wyuad.
'IENI:SNAK, n royal, free, and fortitied town of IIm, name, in a marsliy platin, on the Alt llegn river; 72 m. N.NE. Webrate, on the railway from l'isth to belgrade. P'op. 24,897 in $18: 5$. She town has two hundsome squares, and a number of very line luildings. 'The comty-hall, the palace of the bishop of Csanad, the resitence of the commander, and the town-honse, are all remarkable for their size nul appenrance. 'lemeswar was taken from the Turks in 1716 by l'rince Eugene, who lail out. and strongly fortitied the modern lown, which is now one of the principal fortresses of the Anstrina monarcliy. It has a liom. Cath. aut a (ireek eathedral, a symarugue, seminary, l'iarist gymmsium, arsenal, military sehool, some barracks, and various other military establishments, and is the seat of the principal civil establishments and anthorities of the linnat. Goorl water is raised by machinery for the suppiy of the town. It has mannfactires of silk and woullen stuffs, paper, tobacco, and oil; and an extensive trade in these
articles and in the transit of agricultural produce. Its inhates, are sain to be generally op,ulent. Its commerce has been considerably facilitated by the excavation of the Bega canal, abont 73 m . in length, which, passing by the town, unites it with the mavigable portion of the Bega, and, consequently, with the Theiss and the Dambe. This canal has also been advantugeous from its assisting in drying the marshes by which the town is surromeled, though in summer it is still rather unhealthy.
''emesivar is supposed to represent the an. Tibiscoss, to which Ovid was bamished. It was taken by the Turks, under Solyman, in 1551, who held it ill 1716 .

TEMPE, a famous valley and defile in the NE. part of Thessaly, streteling from near Baba to the (iulf of Salonica, from 6 to 8 m . in length, between Olympus on the N. and Ossa on the S. It is traversed by the Solembria (an. Peneus), and is, in parts, so very narrow, that there is merely room for a military road alongside the river. In some respects the detile bears a striking resemblance to the pass of Killiecrankie in seotland, but the scenery is incomparably more marniticent. The appearmes of the chasm, and the traditions current in antiquity, leave little doubt that the rocks had been rent asmender by some trenenems convulsion of nature, which opened a passage for the waters that must previously have deluged the greater part of Thessaly. In some parts it is grand in the extreme. The precipices consist of naked perpendicular rocks, rising to a prodigions height; so that the spectator can scarce behold them from below without gichliness. Livy's deseription, therefore, in adhlition to its intrinsic grandeur, has all the majesty of truth: 'Rupes utrinque ita abscissa smat, nt despici vix. sine vertigine quadam simul coulorum animique possit. Terret et sonitus et altitudo per mediam rallem fluentis Penei amnis.' (L.b. xliv. cap. 6; Clarke, vii. 3i0.)

The character of this gorge or defile is cvidently that of wildness and savage grandeur, and docs not, therefore, harmonise with the descriptions the poets have given of the Zephyris agitata Tempe (1lor. Od. iii. v. 24), and the viriduntia Tempe. (Catullus, Carm. Ixiii. v. 285.) No denbt, however, their descriptions apply not to the pass itself, but to a vale at the mouth of the pass next the sea, 'which, in situation, extent, and beauty, ample satisties whatever the poets have said of Tempe.' (Cramer's Ancient Greece, i. 378.)

TEMPLLALOLE, an inland town of Ireland, prov. Munster, co. Tipperary, about $1 \frac{1}{2} \mathrm{~m}$. W. irom the Suir, and near the E. foot of the Devil's bit Mountains, 74 m . SW. Dublin. Pop. 2,973 in 1861. Templemore is a neat town, in a comparatively rich and improved part of the country. It has a handsome par. chureh, a Rom. Cath. chapel, a Methodist meeting-house, a school on the fumdation of Erasmus Smith, a fever hospital and dispensary, a market-house, a bridewell, and large intiantry barracks. I'etty sessions are held on Wednesdays: fairs on Jin. 30, March 30, May 17, June 2x, July 30, September 3, October 21, and Deember 7 .

TENASSERIM PROVINCES, the name given to a long and comparatively narrow slip of territory in India-beyond-the-Ganges, belonging to Great Iritain, comprised within the Bengal presidency, with which, however, it has no natural comection. It consists principally of the provs. taken from the Birmese in $18 \% 5-26$, or of the W. or coast districts of Siam, comprising Martaban, or Amherst, Ye, Tavoy, and Merrui, with its archipelago, extending between $11^{\circ}$ and $10^{\circ} \mathrm{N}$.
lat, and ahout 080 and $00^{\circ} \mathrm{E}$. Jong., having N . the independent shan country, B. and S. Siam, and W. the lirmese empire and the Indian Ocean. Area estimated at 32,060 sq. m., aul pop. at $1: 5,1000$. These provs, are shut off from Siam hy one of the great mountain ranges, which, brancliing from the table-laud of Yuman, traverse the Ultra-Gangetic peninsula in a S. direction. The chain rises, in this part of its course, to the height sometimes of 5,000 feet, ant is eserywhere elathend with dense forests. Immediately along the coast the country is an alluvial ilat covered with mangroves; and more inland, wherever it has been cleared, is foond to be very fertile. It is extremely well watered; the great river, Tham-lweng, of Thanluen, divides the prov. of Nartaban from Birmah, and there are a variety of minor rivers, some of which are navigable to a considerable distance.
In the N. provs, the year may be divided into the rainy and dry seasons, each of about six months' duration; but the latter resolves itself into the cold and hot seasons. These last are not very distinctly marked; but the coldest months are December and Jamuary, when the therinometer is sometimes, in the morning, dewn to $55^{\circ}$, but in the loottest part of the day rauges between $70^{\circ}$ and $80^{\circ}$. The het season immediately succeeds the cold, and contimes until the rain begins to fall in April or May. The rains then commence, and continue until September or Octoler; and although, during a part of this time, the sum be in its zenth, yet the almost incessant fall of rain readers this season the most refreshing part of the year. The annual fall of rain, during these six months, is about 200 inches. In the S., where both the elimate and products in many resjects differ, it rains at least every fortnight thronghout the year. The Tenasserim provs. are, upon the whole, much more healthy than many parts of India. As in other tropical climates, the most frequent diseases, common to both natives and forcigners, are, dysentery, with intermittent, remittent, and bilious fevers. They seldom pirove fatal to the natives, and usually do so to Europeans only when the constitution has been impaired from other causes. The staple product is rice, of which a dozen different varieties are cultivated. Upland rice is grown on the hill sides ly the Karean tribes, and mueh rice by the limese and other settlers. In the lowlands, in the begimning of April, the farmer weeds his gromml, and about the first week in June, when the rains commence, he hires a drove of butliloes, if he have none of his own, and drives thetm about in a compact body over the wet field until the whole soil has been sufficiently worked to receive the secel. The principal harvest is in December. when the grain is remped by a sickle, somewhat like the English. The ears are trodden out by butlalues, and the rice is huskel and bruised by means of a wooden mortar, or by a handmill, formed of two grooved logs of wood, set upright and titted into each other; a kind of machinery superior to that in use for the like purpose among other nations in a similar staye of civilivation. Indian corn is nut much raisel, but sweet potatoes, yams, beans, onions and cucumbers are common. T'ohaceo is cultivated all over Tenasserim, as every one smokes, 'from the chihl of three years of age to the decrepid grandsire; from the governur's wife to the rice beater.' (Low's Mist. of 'Teuass.) The sugar-cune is also general, though no marketable singar le made. Cetton, hemp, indigo and pepper are only partially cultivated. Cardamoms, lour pepper, eatechu, and cocoa-muts are gathered widi. Fruits are numerous, and the forests produce teak,

## VINCES

snpan, aloe, and many other valuable woods, with hamboos, rattans, anil many balsamie und melicinal plants. Iron ore is fonnd in Ye and Tavoy, tia is very abundant in the S. provs., but has not been seen in the N. Like gold, which is also widely diffused, it is obtaised chicelly by washings. 'Trenches are dug, leading into the creeks, down which rapid streans run in the rainy season, and wash down the metallic particles. The workman gocs into the water, with a wooden dish in the form of an inverted conc, and having filled it with saud and pebbles, whiris it romed on the surface of the water, by which motion the lighter materials fir nut, and leave the leavier down in the vortex of the inverted cone, consisting of a tea-spoonfal, or upwards, of tin and sand. Without further cleaning it gocs to the smelter, and produces from 50 to 75 per cent. of pure metal. Although all persons, Birmans or Kareans, are at liberty to procure the metal without any interference from government, yet few engage in the work, from which it may be rensonably inferred that the returns are not remarkably protitable. Coal has been discovered in Mersui. Salt is made in numerous parts along the coast, and large quantities of saltpetre have been obtained from the bats' dang, collected in immeuse limestone caves in different parts of the comitry. The mumber of elephants inhaliting these provs. is supposed to be proportionally greater than in any other part of India. The lirmese settlers hunt the elephants, and carve many kinds of articles from their ivory. lihinoceros' horns are an article of trade, but the valuable skin of that animal is not met with in commerce, and, indeed, the trade in all kinds of lides, which might be made very protitable, has hitherto been wholly neglected. Wax, honey, tortoiseshell, and edible birds' nests are the principal commercial products derived from the animal kingrlom. The insect races are in great varicty, and constitute one of the greatest pests of the comitry.
The manufactures are few ; those of cloth and silks are the principal, but they have been, in a freat degree, superseded of late years by the cotton goods imported from England and Jlindostan. The weavers are almost exchusively women, and there will hardly, perhaps, be found a house throughont the provs. which has not a loom. The inhabs. of 'Tenasserim and Mergui earry on a brisk petty trade with the ports between those towns and langoon. They also occasionally visit l'inang, the Nicobar Islands, Achin, Chittagong and bacea, exchanging their own produce for betel nut, raw and wrought silks, white muslins, cartisenware, woollens, petroleum, cutlery, Clinese umbrellas, a little opium and ambergris. The merchants of Tavoy are richer than those to the S.; their exports are of much the same kind; their imports are cotton, tobaceo, petroleum, piece goods, cutlery, iron in bars, European and Bengal articles. But Martaban is the prov. best situated for eommerce. Besides its trade seaward (see Maulaian), a great deal of internal petty tratlic is carried on by boats of from three to thirty tons burden; and caravans arrive occasionally from the contines of China, bringing lac, drugs, swords, manfactured cottons and silks, raw silk, candied sugar, earth nuts, blank books, ivory, and horns; and taking back salt, spices, cotton, quicksilver, a asafutida, borax, ehintzes, piece goosls, broad cloth, and varions Enropean articles. The weights and measures, as well as the usigges and habits of these provs, are mostly lirmese; the present inbabs, being of Birman extraction, though, aceording to tradition, the carliest inhabs, of the country were Siamese.

Manlmain is the eap. and residence of the governor and chief liritish authorities; subordinate offiecrs are resident in Ye, Tavos, und Mergui. Malcolin, the American missionary, has pointed out some of the advautages derived by these provs. from their comection with Fingland. (SouthEastern Asia, 173-4.) 'English influcnce,' says he, 'in a variety of ways, has improved their condition. It has abolished the border wars, which kept the people and their neighbours continually wretched. Varions other improvements are pereeptible. Coin is getting introxluced insteal of masses of lead and silver; manufactures are improving; implements of better construction are used; justice is better administered ; life is secure; property is sacred; religion is free; taxes, though heavy, ure more equitably imposed ; and courts of justice are pure generally. Furmerly men were deterred from gathering round them eomforts suberior to their neighbours, or buiking better houses, for fear of exactions. Now, being secure in their earnings, the newly-built houses are mach improved in size, materials, and worknamship. The presiding officer in each prove sits as magistrate on certain days every week ; and before him every citizen, male or female, without the interveution of lawyers, may plead his cause, and have immediate redress. Everywhere, in Iritish Birmah, the people praise English justice.'

TENBY (Welsh, Dymbyeh-y-Pysgod), a parl. and minn, bor., market town, and sea-port of Wales, co. Pembroke, hund. Narberth, on the summit of a promontory on the W. side of Carmarthen lbay, $9 \mathrm{~m} . \mathrm{L}$. Pembroke, on the Great Western railway. Pop, of bor. 2.98: in 1861. The town consists principally of one long and broad street. lined with good houses, and pretty well paved. It is purtly surrounded with walls, and is further defended by some batteries on the shore; its castle, supposed to have been built by the Flemings, by whom this part of the country was formerly occupied, is in a state of decay. The chureh of Si. Mary is a spacious structure, 146 ft . in length and 83 in breadth, with an elegant spire 102 ft . in height supposed to be the loftiest in Wales, and painted white to render it a conspicuons mark for seamen. The roof of the have is s!pported by areades, having fluted pillats, and the ceiling is formed of earyed wood, ornamented with several figures and armorinl bearings. In the interior are severnl monuments. An ancient edifice within a few feet of the W. entrance is now used as a school. A flight of steps on the ontside learts to the apartment near which is a small areh in the style of Henry VII., and two others oceur in an old wall opposite. These are supposed to have formed the principal entrances to St. Mary's College, once a eonvent of Carmelite friars, founded in 1399. The remains of St. John's chapel are situated in a marshy spot 200 or 300 yards from the town. Those of St. Julian's stand upon the pier, near its extremity. Opposite the town are some wild masses of rock, forming the islands of St. Catherine, and more distant are those of St. Margaret and Caldy. Lastward streteh the Norton sands bounded by grand and high cliffs. Round the S. and W. sides of the town are the white or whit-sands, presenting a romantic and agrecable walk, 2 m . in length, to Giltar. The town-hall, court house, new market and slaughter houses, public baths, assembly rooms, theatre, readingrooms, and bowling green are the other most conspicuous oljects at Tenby. The town was formerly u place of much commercial importance; and, after the settlement of the Flemings here, it exported considerable quantities of woollen cloths. At present its trade is inconsiderable.

Tenby is a creek of the port of Milford. Nine or ten vessels from l'lymouth and Brixhotme make it their station during the lishing season, and supply the Bristol market. Its oysters, whieh are of superior quality, are sent pickled to London, liverpool, and other places. 'Tenly is now principally distinguished as a watering-plaee, for which it is singularly well alapted, by the great beauty of its situation, and the protection from rough weather which it receives from the contifuous liead-lands. It has grown rapilly, especially in food honses; most of which have been built within the last 40 years. The public baths are both extensive and elegant; they comprise mumerous bath and dressing rooms, warm and vapour baths, bed-rooms for invalids, a handsome promenade room, and are approached by an exeellent earriage roal. The water of their large reservoirs is ehanged every tide.
T'enty is foverucd by a mayor, three aldermen, and twelve comeillors. Its carliest charters appear to have been granted abont the time of Lilward IlI.. by the carls of Pembroke, but the earliest extant is of Richard III. I'revionsly to the Municipal Reform Aet there were nearly 400 burgesses in the corporation, but their functions were merely nominal; and the whole management of the bor. rested with the common comeil, which consisted of about 40 members. The town has only a few small culowments for eharitable purposes. Courts of petty sessions weekly are held, but the only gaol consists of two large cells, formerty the old garrison dungeon. P'risoners are rarely contined here: when the term of imprisonment exceeds a month, they are sent to the grol at lawortordwest. The Reform Aet did not alter the previons limits of the parl. bor., which now semis 1 mem. to the 11 . of $C$., in conjunction with Pembroke, Wiston, and Milford. It liad previonsly sent one with Pembroke and Weston only, the right of voting having been in the burgesses, who, neting under the intluence of the eommon council, returned the nominee of the patron of the borough. Repristered electors, in the different bors., 1,510 in 1865. Markets, Wednesdays and Saturdays; fairs, May 4. Whit-Tnesday, July 31, Oct. 2, and Dec. 4.

TENEDOS, a small but celebrated islaud of 'Turkey in Asia, 15 m . SSW. from the month of the Dardanelles (an. Hellespomtus), and about 5 m . W. from the shore of the Troal, which it still serves to point ont; its lighest summit, Mount Sit. Elias, leing in lat. $39^{\circ} 50^{\prime} 15^{\prime \prime}$ N., long. $26^{\circ} 3^{\prime} \mathrm{E}$. Pop. estimated at 7,000 . Though rugged, it is tolerably fertile, and well eultivated. The red muscudine wine of Tenedos is the best of the Levant. It begins to tose its colour whon about 14 or 15 years of age, but retains its thavour and streugth for a much longer period. The town, on the NE. side of the island, is defended by a small fort. On the N . the port is protected by a pier, and it has pretty gool anchorage. In nntiquity it was a sort of depot for the proluce destined for Constantinople; and Justinian erected in it a large warehouse, the ruins of which are still extunt, where ressels londed with eorn from Alexandria discharged their cargoes when they happened to he prevented, as was frequently the case, by contrary winds from making a passage through the Hellespont to the eapital.

Tenedos, according to Strabo (lib. xiii.), had a temple dedicated to Apollo, lut it is principally known from its having been mentioned in comection with Troy by llomer-
'Thou sorrce of ligitt whom Tenedos adores;'
Pope's lliad, i. liue bs.
and by Virgil. Acording to the latter, it was the
place to which the Grecian fleet made their feigned retreat before the sack of Troy :-

- Est in conspectu (Troje) Tenedos, notissimn famâ Insuia, dives opum, Iriami dum regna manebmit.' Enedd, II. line 21.
TENERIFFE, or TEYDE (PEAK OF), a famons conical and voleanie mountain in the centre of the island of 'Teneriffe, of which its busis occupies the greater portion (see Cavary lstanies), risiug to the height of $12,172 \mathrm{ft}$. above the level of the sea. The leak consists of an enormous clome of trachyte, covered with layers of basalt. The summit of the cone (El Piton, the sugar loaf') is terminated by a crater surrounded by a circular wall, or parajet. llumboldt, who lescended to the bottom of the crater, found the heat was pereeptible only in a fow creviees, which gave vent to aqueons vapours, with a pecular buzzing noise. (Persmal Narrative, i. 173.)
The ascent of the leak is distinguished by a difference of vegetation somewhat similar to that which is observed on the aseent of Etha. Abore the lower and more fertile tracts near the sea, where date trees, plantains, sugar-cancs, Indian figs, vines, and olives flourish in profision, rises what is catled the region of laurets. These are fed hy a vast mumber of springs, that rise up amid a turi covered with perpetual verdure. lixtensive plantations of chestmuts occar in the lower part, above which rise four speeies of haurel, and an oak resembling that of 'Thibet. The underwood in the lower part consists of arborescent heath, and in the upper part of ferns. Above this commences a vast forest of tir and pine trees which characterise the colder regions of the earth. Succeeding to this is a vast plain, like a sea of samd, covered with the dust of pumice stone, which continually fills the air. It is embellished with tufts of the beautifut slirub ealled the retama (Spartinm mabigenum, Aiton), growing to the height of nime feet, and loaded with oloriterous tlowers, which are said to communicate a peentiar excellence to the thent of the goats that feed upon them. At the entrance of this plain the rich verdure of the island terminates, as well as all appearance of habitat'm; and the traveller ascends afterwards througn a complete solitude. Above this sandy plain are the Malpuys, a name which the Spaniards apply to gromuds destitute of vegetable mould, and cosered with loose and broken fragments of lava. The ascent here is steep, and extremely fatiguing, as the blocks of lava roll from beneath the feet, and oftel leave deep hollows. At the extremity of the Malpays is a small plain called the Kambleta, from the centre of which the Piton, or conicnl summit, rises to the height of about $2,350 \mathrm{it}$. Here are fonmd those spiractes which are ealled by the natives the Nostrils of the Peak, consisting of crevices whence issue watery and hot vapours. The aseent of the l'iton is steep, and reudered dillientt by the loose ashes with which it is covered. At the top there is scarcely room to stand, and the crater, as already stated, is enclosed by a steep wall. The view from the top of the leak, though characterised by peculiar beauty. falls far short of the magnificent prospect from the summit of Etna. The cultivated and wooded parts of the island are, however, seen in close proximity, and the steep and naked declivities of the unier parts of the momitain strikingly contrast with the smiling aspect of the commtry heneath. The transparent atmosplicre enables the spectator to distinguish minute objeets, such as houses, sails of vessets, and trunks of trees. Beyond the eve

the Canaries. It has been allegel that the view extends as far as Cape Bojador, on the coast of Africa.
The summit of the leak is a solfatara, or extinguished voleano, whence no erruption has taken plare sinee its diseovery ly Buropeans; but some eruptions lave taken place from the sides of the monutain during the course of last century. In 1704, one oceurred in the district of Guimar, which buried several vulleys, and approached within a short distance of the port of Orotava. Two vears after, in li06, the lava, issuing forth in a different quarter, buried the town and port of Garachien, then the finest and most frequented in the island. Anuther eruption happened in June, 1798, not far from the summit of the Peak, but it was not productive of much damage.
Notwithstanding its proximity to the equator, and to the coast of Airica, the litom, or cone, is covercd with snow during several months of the wiuter, and snow is alwnys found in the hollows not exposed to the sum's rays. A powerful heat is always felt on the ground at the summit of the cone, and lumbulltt mentions that his hands and face, and those of his party, were frozen, while their hoots were burnt by the heat of the soil on which ther walked. (Itimboldt's Persional Narrative, i. i.17-194; Lyell's (ieolory, ii. 138.)
TENNESSLE, one of the $\mathbb{U}$. States of N . America, in the basin of the Mississippi, between iat. $35^{\circ}$ and $35^{\circ} 40^{\circ} \mathrm{N}$., and long. $820^{\circ}$ ind $!00^{\circ} \mathrm{W}$., having N. Kentucky and Virginia, EN. Carolina, S. (ieurria, Alabama, and Mississipni, and W. the river Mississippi, which divides it from Arkansas and Missouri. Area, $45,600 \mathrm{sq} . \mathrm{m}$. Pop. $1,109,801$ in 18ifo. The E. part of this state is intersectel hy the Allerhany chain, which here sometimes rises to the heighit of 2.000 ft ; the middle part is lilly, while the $W$. portion is an extensive undulating plain. Prineipal rivers, alter the Mississippi, the Tennessec and Cumberland, both tributaries of the Ohio. The Temessee rises near Praklins in N. Carolina, and runs at first NW. to alout 3 is in . WsiW. Knoxville; it then turns to the sil., and continues in that direction to near Deeatur in Aladama. After a bend to the WNW. it again enters the state of Tennessee abont long. $88^{\circ} \mathrm{W}$., and its course thenceforwaris is generally northward to its mouth in the Ohio, about 20 m . SW. Salem. At its outlet it is about 600 vards in width. It is navigable for steam vessels of large size for 250 m ., and as much further for boats of 40 or 50 tons. It has several tributaries, some of which are navigable to a considerable distance. At present, no towns of consequence are situated on its banks. Tennessee is generally well watered, and, except in the mountainous parts, comprises a good deal of excellent land. Agriculture is the cliief occupation of the inhabs.
The products are mueh the same as those of Kentucky, with the addition of cotton. Indian con, wheat, and oats are the prineipal corn crops. Cotton is grown in most parts of the state. Tobace is also cultivated to a consilerable extent, its produce being estimated at alout $36,000,000$ lus, In the E. grazing is a good deal attended to, and considerable numbers of cattle and sheep are rearel for the murkets of the eastern states. Coal, iron, salt, marble, and nitre are found ; and same of these, with cotton, Indian corn, wheat, flour, tobaceo, fruit, tar, turpentine, rosin, whiskey, live stock, salted meats, laril, coarse linen gools, and gumpowder, constitute the principal exports, being nostly sent down the Mississippi to New Orleans.
The legislature consists of a senate of $\mathbf{2 5}$ mems., amb a honse of representatives of 75 mems., who, with the governor, are elected for two years. The
juiges of the supreme court are clected by a joint vote of both houses for twelve years, and those of the inferior conrts, in the same manner, for twelve years. In the election for representatives, every free white male citizen has the right to vote in the co. of which he has been an inhatitant for six months previonsly. The pay of senators and represcutatives is four dollars a day. Murircesborough was the former eapital, but Nashville is now the seat of government.

The colonisation of Temuessee commenced ahout 1757, and the settlers entered warmly into the revolutionary war. The territory belonged to N . Carolina previously to 1790 , when it was ceded to the United States; and on the 1st of June, 159\%, it was received as a state into the Uuion, It sends 8 mems. to the Honse of Represcntatives

TENTERDEN, a mun. bor., nar. town, and par. of Eugland, co. Kent, lathe Scriy, the mun. bor., comprising all the humd. of Tenterden, and the par. of same name, together with a part of the par. of ELomy; 13 m . SL: Lombon. Area of par. 8,620 acres. Pop, of par. 3,656 , and of tor. 3.762 in 1861. The town, whieh is finely situated on an eminence, environed by hop-gromads, is well built. It consists principally of a single street, contimuns with which is the straggline village of Bird's Isle to the N., and a little to thie L. is the hamlet of lye Green. The par, ehurch, a spacious strueture, consists of a nave, N. aisle and chancel, with a well-thoilt lofty tower at the one end, on which are sculptured the arms of the monastery of St. Augustine, to which fondation this elurch was appropriated in 1209. The living of Tenterlen, a vicarage, worth 175, a year, is in the gift of the dean and chapter of Cuterbury. It has, also, chapels for Baptists, Wesleyans, anid Unitarians, a free sehool founded in 1521, for six seholars, and which has been greatly enlargel by voluntary subscriptions, and several minor charities. Tenterlen has no manufactures, and depends entirely on its retal trade with the rich agricultural combtry in which it is situated, and upon its proximity to Romney marshes: which has made it a place of residence for persons engaged in the grazing of sheep and cattle on the marsh.

In the reign of Henry VI.. Tenterden was incorporated mill annexed to the town and port of Rye; hut the earliest existing charter is that of Eilizabeth. It is governed, under the Mum, Reform Act, by a mayor, 3 aldermen, and 12 councillors, who hold petty sessions weekly, and a court of record every fortnight. Market day, Friday: finir, first Monday in May, for horses, cattle, and pedlery.
TEQUENDAMA (FALL OF), a celebrated cataract in the repul. of New Granada, Colombia, in the conrse of the Bogota river, a tributary of the Magdalena, a few miles W. from Bogota. A short distance above the full the river is 140 ft . in breaith; but being forced into a narrow, though deep bed of emly 40 ft . in width, it is precipitated at two bounds down n perjendicular rock, to the depth of $6 \overline{0} 0 \mathrm{ft}$; and, even in very dry seasoms, llumboldt says the volume of water still presents a side view of 90 kq . metres. 'The cataract forms an assemblage of every thing that is sublimely pieturesque in beautiful scenery. This fall is not, as has been commonly said, the loftiest in the world ; but there searcely exists a cataract which, from so lofty a height, precipitates so voluminous, a mass of waters.' (Ilumbolidt's Researehes, i. 17.) The booly of water, when it first parts from its bed, forms a brodd arch of glassy appearance; a little lower down it assumes a theecy form; and ultimately, in its progress downwaris, it slowts forth into millions of small tubular masses, which
chase each other like sky-rockets. The noise which attends the fall is quite astomming; and dense clomis of vapour are sent up, which rise to a considerable height, and mingle with the ntmospisere, forming in their ascent the most beantiful rainbows. The conparative smalluess of the strumb which rins off from the foot of the fall, proves that a large proportion of the water is lost by evaporation. (Mod. Trav., xxvii. 330.) What gives the Fiall of l'equendama a remarlable aprpearance, is the grent dillirence in the vegutation surrounding its different parts. At the summit the traveller 'tiuds himself surrounded, not only with the aralia, begonia, and the yellow bark tree, but with oaks, clms, and other plants, the growth of which recalls to his mind the vegetation of liurope; when suddenly he diseovers, as from a terrace, and, at his feet, a comintry produciag the palm, the bamana, and the sugar-cane. The true amse of this phemomenon has not been satisfactorily explatined. The difterence of altitude, abont liă metres, is, as llumbolit has stated, too inconsiderable to lave mueh influence over the temperature of the air. (Researches, ]. 79, \&e.)

TRERANO (an. Interamnia P'rertutiat), a city of Southern Italy, eap, of prov. of same namo, 147 ft . above the sea, in the angle formed by the Veazola, where it joins the Tordino, 16 m . W. from the embonchure of the latter in the Alriatic, and 19 m. NNli, Monte Cormo, the highest summit of the Apennines. l'op. 16,036 in 1862 . The city was formerly surrounded by strong walls, but is now quite open. With one exception, its strects are marrow and dirty, and its honses, for the most part, mean-looking. In the ontskirts, however, some of the honses are in better taste. The catheiral has been moternized. There are several eonvents, lospitals, and asylums. It has but few manfactures or industrinl establishments; but it is the seat of the civil and eriminal tribumals of the prove, and has a royal college, a seminary, or establishment for the instruction of the clergy, and is the residence of several opulent families. Its vicinity is in general fertile, prodncing com, wine, and oil in almolance: in the time of the liomans its wine was in ligh estimation:-

- Tum, qua vitiferos domitat Pratutín pubes, Lata laborts, agros.'

Silius Italicus, lib. xv. v. 568.
Some buried arehes, the vestiges of a thentre, bathes, and some other edifices, are the principal remains of the ancient eity.

TLERCERA. See Azones.
TERLIZZI, an inland town of S. Italy, prov. Hari, cap. cant., on an elevated site, 18 m . W. Bari. Pop. 18, i663 in 1862. Notwithstanding its size, the city possesses little worth notice beyond a superabnadance of religions editices, except a gallery of pictures, comprising works by severnl of the great Italian masters.
TERMINI (an. Therma Himerenses, and simply Thermar), a marit. town of Italy, island of Sicily, on the $\mathrm{N}_{\text {. }}$ coast of the island, intend, of Palermo, cap, district and canton, near the mouth of the river of its own name, 24 m . JSSE. Palermo. Pop. 23,193 in 1862. The eity is finely situated on the declivity of a hill rising from the sea; and besides beinir surromnded by an old wall, is farther defended, towards the sea, by a castle on a high rock, commanding the town and port. The streets are, for the most part, narrow and dirty; but it has some good public buildings, among which are several churches and convents, a royal college, 2 hospitals, an asyhm for females, mul convenient bathis over the hot springs, for which the city has been celebrated from the remotest epoch, and from which sle las derived her modern as well as her
ancient name. The town is a caricatore, or shipping port, and exports corn, vil, shumae, dried froits, and mmma. 'The sardine and muchosy fisheries are also netively carried on. The harbour, which is but indiflerent, is open to the N.

About 6 m . E. ly s . from Termini, are the mins of the ancient Himera, near which tielon, tyrant of Syracuse, tutally defented and destroyed an army of Carthurinims, said to have eomprised no fewer than 30t, 1410 men, commanded loy lamilear, rrandfather of IImmibal, who lost his life in the action. The Carthaginians were the allies of Xerson, and their defeat is said by Ilerodotus (lib. viii, cap. liti) to have happened on the same day that the Greeks gained the victory of Salamis, anmo $\cdot \mathbf{x} 11$ n.c. Lhat theugh it is abmudantly ceriain that Gelon gained a great victory over Ilamilar, it is extremely improbinble that the forees of the latter amonited to hald the number mentioned abrere. Ilamibal never had 10t,00t) men at any one time muder his eommand; aud the probnbility is, that 30,000 would be moll nearer the number of 1 litmilear's army than 300,00n). At a subserguent period 1 lumibal avenged his grandfather's disustor by taking and utterly destroving llimera. Such of its eitizens as escaped the massnere which took place on this oceasion, songht an asylum in Therma. (Cicero in Verrem, ii. cap. 35.) Allfustus raised the latter to the rank of a colony. Stexichorns, one of the most aneient and celebrated of the (ireck poets, was a mative of llimera.

TlikNatte. Siee Mobicca Ishands.
TliliNl (an. Interamma), a town of Central ltaly, prov. l'ermpia, in a rieh and fine valley, near the riglit bank of the Nern (an. Nar),

## 'Sulfurea Nar albus aquà.'

Eucid, lib. vil. line 514.
about 4 m . W. from the famons falls of the Velline, and 49 m . NNE. Rome. lop. 12,818 in $1 \times 6)^{2}$. The town is surromnded by a wall and towers; lut thongh it las wide streets, some tolerable buillings, and a charming situation, it is, on the whole, poor and mean, retaining but few traces of its ancient splendour. It has a cathedral with a superb altar, a hospital, a monte-di-pièta, and some other charitable fomdations, a handsome theatre, and a building, ereeted in 1827 , for the reception of the waters of the Vellino for the public accommodation. Among the remains of antiquity are some vaults of an amphitheatre construeted inder Tiberius. portions of temples of the Sin and Cybele transformed into clarches, and the remains of public baths. The surromaling comntry is extremely prodnctive, fecundissimos Italise campos (Tacit. Annal., lib, i, cap. 79); and on the river are flour and oil mills and tanneries.

The historian Tacitns is said to have been a native of Interamma, bint there is no evidence that such was really the case. The emperors Tucitus and Floriams are also said, but on no better gromeds, to have belonged to it.

The falls of the Vellino, ealled the Cascata del Marmore, abont 4 m . E. from Terni, are amongst. the most striking objects of the kind that are anvwhere to be met with. The total height of the fall, which is divided into three leaps, is probubly (for there is the greatest discrepancy in the statements on the subject) from 650 to 750 ft . The water is conveyed to the fall in an artificial channel, more than 1 m . in length, origrinally dug br the consul Curius Dentatus, amo 274 n.c. (Cicero, Epist. ad Atticum, Epist. 15) ; but the chamed having been filled up liy a deposition of ealeareous matter, it was widened and deepened, and in part altered, in 1596, and again in 1785. Byron has approprinted some magnificent stanzas to a notiee

TLESSN，or I＇ICLNO，the most $s$ ．vanton of Switzorland，between lat． $15^{\circ} 511^{\prime}$ and $43^{\circ} \quad 37^{\prime} \mathrm{N} .$,
 the main clanin of the $\mathrm{Al}_{\mathrm{p}}$ from Vri and the firi－ sons on the N．，winle on other sites it is surrommed chictly ly the Anstrian ant Sardinian territorien， the lakes Magriore and Lagrano lomning parts of its s．frontier．Area， $1,034 \mathrm{sg} . \mathrm{m}$ ．Pop． $131,3, n i$ in I8tio．Mlost part of this canton is either mome－ tainous，or divided into nuncrous valleys by alpine： ramitications：in the s．，however，it sinks to the level of the plain of Lombarly．＇The＇Ticino， whence this canton derives its mane，las its sumeres in Momat St．Gothard，in the Valli Bealretto，l＇iora， and Blegno．Its conrse is generally sonthwari， and after intersecting the canton mear its centro， and traversing the Sago Maggine in its entire length，it forms the bondary between lombardy and l＇iedmont，falling into the lou at Jiwit，after an entire comrse of alont 100 m ．，about ta）of which are navigable．The climate of＇tessin is mild； and thonght its pastures he not so fool nor so well watered as those of the cantons $N$ ．of the $\mathrm{Al}^{2}$ ， its soil is generally very fertile．Agriculture is， however，extremely backwaril，partly from the ignomance and want of industry of the inlabitants， and partly from the too great subdivision of the surfiace into small properties，purtions of which，at great distances from cach other，sometimes belomp to the same proprietors．Wheat，rye，and matize are the principal grains raised ：a good deal of to－ baceo is cultivated．Wine is grown in many dis－ tricts，but will not keep for any considerable period．The silk of Tessin is of superior quality， and a supply worth from 200,0010 to 300,0000 Swis： frames is sent ammally into other parts of Switzer－ limel．Most of the fruits common to Lombarily flourish here：the chestnut woods are extensive，
and chestnat thour is largely used by the inhabs. The cunton aboumds with timber, but much of it is useless from the want of roals and expense of carriage. Alont 3,000 quintals a year of cheese are sent into Italy, and ealves, sheep, and hors are also exported. The chamois is a mative of this cimton. It sometimes lireels with the domestic foat, and the resulting progeny is greatly prized for its skin. 'There are scaresly any manufictures, and the trade of Tessin is chictly in the converance of goods between Switzerland and Italy. A great many of the male matives of the canton emigrate to Milan, Venice, 'Trieste, 'Turin, Marseilles, and the atjaeent combtries, where they serve as conlectioners, choeolate manufacturers, and waiters in collie-houses, leaving the labours of the fied and the care of the cattle to the women.

Tessin was merely a territury suborlinate to Switarlami till $1 \times 15^{\circ}$, when it was admitted into the Conferderation, in which it holds the eighteenth rank. Its govermment was materially altered in 1siso; when the grami comencil, which bohds the sovereign and logishative power, was made to consist of 114 members, dosen in the diflerent commumes by all the eifizens horn in the eanton twenty-five vears of are, and who possess inmoveahle property to the value of eno frimes, or the usufruce of such property to the value of $\mathbf{3 0 0}$ frames. It chomses its own president, alul meets eath year by rotation in Bellamona, Locarno, and Lagrano. The exemotive body, or lesser comeil, eonsists of nine members, chosen by the greater conncil amoner its members. Equality belore the laws, the fredom of the press, and the right of petition are gnarantect. 'Jessin is subbivided into eight distriets and thirty-eight cireles. and the latter acain into commanes. In every commune there is a momicipal conneil of from three to cleven memhers, with whom rests the direction of the local police. A justice of the patae sits in each cirele; in each district there is a colut of prinary jurisaliction; and, for the whole canton, there is a suprense tribumal of thirteen members. Criminal processes appear to be more common in this than in most other cantons of Switzerlame. The public revenue, prineipally derived from salt and constoms' duties, momonted to 1,03 , it it franes in ! Siti, and the expembiture, in the same year, to $1,219,9 \% 5$ francs. Contingent to the army of the Swiss Confederation, l, rit men. 'The inhabs. of 'Tessin are of middle stature, and generally square and strongly built, though they seldom attain a great age. la many respeets they resemble their Italian meighbours, mat their lamgange is a dialect of the latiam. Among them have been several eminent painters, senlptors, and arelitects; the Iatter including I Donenico Fontama, who completed the dome of St, leters, and execnted many other great works in liomes. Hat the bulk of the inhabs. are very backward in point of elacation.

TETBUKV, a market town and par, of England, co. Gloneester, hmmal. Longtree, near the smores of the Avon, $16 \frac{1}{2} \mathrm{~m} . \operatorname{SE}$. Giloneester. Area of par. 4,980 acres. P(op. of par. 3,274 , and of town $9,2 \times 5$, in 1861. The town emsists of several strects, meeting in its centre, in which is a large market hoose. It is well built, the houses being mostly of stone. The par, chureh is a handsome editice; having, with the exception of the tower and spire, been rebuilt in 1781 . It has chapels for holependents and baptists, a grammar school, a wellendowed Sumday school for all the poor children of the par., and an almshomse for eight poor persons. The busimesses of wool-combing and woolstapling are carried on, but to no great extent. The supply of water used formerly to be very aleficient; but the deticiency has been obviated by
the sinking of several deep wolls. Markefs on Weducsilays; fairs, four times a year, for eorn, cheese, mattle, lamhs, and horses.

A fortitied camp. probally of the ancient liritoms, formorly existed loce; and liomant coils have been frequently dug inf in and near the town.

TETUAN, a town and seaport of Morneco, kin dom Fez, prov. Hashat, on the shore al the Mediterrmean, it in, ste. Tangier. [op, saill to
 Jews, 2,000 blacks, and sum herhers. The town stands on the declivity of a lill crowned with a square eastle, the residenee of the goveruor. It is of comsiderable extent, and its walls are llankel in dillerent parts with square forts. on which a liw pieces of ordmanee are momented. Cannon are abot placed on the castle, and on a spuare tower at the mouth of the river forming the port; but it comid not oppose auy effertmal resistance to a liuropean liree. The stiects are narrow amt dirty, and as in le\% and other cities of Moroco, many are mearly envered in by the mper stories of the lmasis. The latter are frequently of iwo storias, and toldrably well built and tinished: and there are wemen
 rmks next to Fez, from whieh place it receives the gronts bronerht by the caravans from Tunis, Algiare, Alexmdria, and 'Timbuctoo. Wool, corn, and other provisions, was, hides, eattle, leather, some mamufactured stutls, and other African prombere, are exported to Spain, France, and Italy, in roturn ehiefly for buropean mamabetures. "The port of Narteen is abont 2 m . lionn the sea, on a small river, the month of which is now so chokided ul, with saud as to adolit omly of the entrimere of small craft. The roadstend, formed by a high point of land which rins out into the set $V^{\prime}$. if the river, is sheltered from $\mathrm{W}^{\text {. winds }}$; but darine the prevalence of those from the E. Vessels mow retire to some other pace.
 ket town, and par. of linghanl, co. (iloucester. humd. Tewkeshary, on the hron, nemr its romfluence with tho wevern, on the border of Wores-
 Lomdon by the Midland railway. I'plof our, $5,87 t i n 1865$. Area of the mond. parl. bort, whind is isentical with the par. 1.890 acres. It consists of two principal thoromphlares, meetimes in tha form of the letter Y, and from which many smaller streets branch ont. The three principial stredt are wide and respectable, but the other streets are inf rior, and are principatly oectupied by the pors and labonring por. The town is nearly insulated by the 'Mill Aron' (an ancient ent, by which the Avom has been nearly diverted from its ompinal chamel), and its tributaries the Carron and Swillgate brooks; and it is in comsepuence compartly built. Many ol its honses are hambome, and it is well-paved and lighted with gas. The rivers encireling the town are crossed by several bridges: and, in lseth, an olegant cast-iron bridge, having an arch 172 ft in spam, was thrown over the Severn, about $\frac{1}{2} \mathrm{~m}$. from the town. 'The parrinh churel, which formerly belonged to a flomrishing lienedictine abbey, that grew out of a monastery founded here in 715 , is a large and noble structure. Its length $; 317 . i$. within the walls, and that of the tramsen: : $2: 2 \mathrm{ft}$; the choir and side aisles are 70 ft , in breadth, and the W. front lim ft : the height from the area to the rool is $1 \geq 0 \mathrm{ft}$.. and the height of the tower is 152 ft . 'The nave is Norman, the piers are romed and very lofty; at the intersection of the cross is a very tine Norman tower, alomed with arehes both within and without, in several stages. The choir has a multan-
ells. Markets on a year, for corn, fthe ancient liriand Roman cobins in and near the
port of Moruces, In the shore of the gier. Poph, said $1 /$ f, 1000 Moors. l. 2 (h) erbers. The tuwn ill crowned with it the governor. It is s walls are tlanken orts, on which a frw 1. Camom are: alo spuare tower at the e port ; but it conle tance to a European and dirty, and as in co, many are nearly ries of the homs". woxtories, and toleand there are severtal
 - place it receives the ; from Tunis, Algiars, W'ool, corn, and other e, leather, some miaAfrican proshuce, are and Jtaly, in retara netures. 'The port of the sea, on a small a now so choked up - of the entrance of formed loy a high it into the sea IV. 1 V. wiods: but darine the E. vessels mut

It cominists ures, mecting in the , which many smather bree principal stredt the of her strects atro occupied by the pour wou is nearly insulateni ient cat, by which the rted from its original the C'arron and Swill,nseguence compactly re hanksme, and it is th gas. The rivers fed by several bridgre: st-iron bridge, havint was thrown over the he town. 'The parind inged to a flomrishinu ew out of a monistery rage und noble strucwithin the walls, and ; the choir and silu and the W. front liou a to the roof is 120 ft . r is 152 ft . The mave nd and very lofty; at is a very tine Norman both within and withchoir has a multan-
gular east end, with additional chapels and a $\begin{aligned} & \text { speets from each other. The first, or level, region }\end{aligned}$ chapter-honse, all of excellent decorated chat racter ; the windows of the aisle and transepts are some decorated and some perpendicular. 'The W'. window is perpendiedar, inserted into a very lofty Sorman arch of great depth, with slatis and mondings. In the wintows of the choir are considerable remains of anciont stained reass. There are sume traces of the eloistars remaining on the S. side of the nave; they were perpendicular and very rich. There are several portions of very fond serem-work and stalls. The abley qute is standimg, thourh much dilipidated. The market-homse, a handsome structure, has Doric colmons and plasters, supporting a perliment in fromt. The town-ladl, the lower part of which is used for the comrts, and the uper part as a eomoci-hall and assombly-rom, was erected in bax by Sir Willimm Cotrington. The other public buibilings include varims dissemtine elatels, a theare, the burming gain, aut the corn exchamere, the latter

 hameastrian seloods, with almshouses, a dispensary, lying-in-charite, and several other benevolent cetablishments. The town formerly promaced considerable quantities of woollen eloth and a superior kiad of mustarl. Its primeipal manofactures comsist of eottom lasiery. Wages of the weavers vary from 8s, to ks. a week, the average bempe about tis. A few are aloo employed in the bublinct-lace trale, and in the makinis of nails. The carrying trade up the severn and the cornmarke liave deelined since the improvencents in the maviration at dibucester and the construction of the railroad hetween stratford and Moreton; lut, on the whole, the fown is still in a thriving state.
Tewkeshury has returned 2 mems, to the JI. of ( ${ }^{\text {s. sime the }}$ th of James I. The right of votiug. down to the liderm Aet, was in freemen and halders of burgage tenements, of whom there were
 mun. is co-extensive with the parl. bor. The fown is quyerned by a mavor, 1 aldermen, and 12 cumbillors. It has a commission of the peace, a sparate conrt of fuarter sessions, and a court of recom for debte not above 50 . Narkets, Wednesday and Saturdar.

- In a field in the inmediate vicinity of the town, still called, from the circumstance, the 'Bloosly Meadow, was fought, on the Jth of May, 1471, a derisive angagement between the Vorkists, under Edward IV., and the Lamenstrians, mader kueen Darcaret and her son. The Lancastrians were totally defeated, with the loses of a great many pursoins of distiuction, and about 8,000 soldiers left on the field. Marraret and her som having been taken prisoners, the latter was immediately assassimated.
TliNAS, formerly an independent republic of N. America, but since isto incorporated with and lirming one of the U. States of N. America. Its limits formerly extended from the e 26 th to nearly the $80 t h$ der. N. lat., and between the gimed and with deg. W. long., being separated from Mexico on the W. and S. by the Rio Grande, or Bravo del Norte, and by the Jied River and Arkansas river from the territories of the U. States; but the actual area of the state is $23 \pi, 321 \mathrm{sq} . \mathrm{m}$., the remaining partion being ineorporated into the territory of New Mexico. The feneral aspect of the country is that of a vast inclined phane, gradually sloping from the mountains on the W, eastward to the sat, and intersected by mumerous rivers, all having a sli.. direction. The territory may be divided into three separate regions, differing in many re-
extends ulong the eoast, with a hreadth inland varying from 100 m . to 70 and 30 m . The soil of this region is principally a rich allovinm, with scarecly a stome. yot singulaly free from stagnant swamps, Broad woollands fringe the banks of the rivers, betwent which are extensive and rielt pasture lames. The second division, the hurgest of the three, is the molulating or rollingrpraite rerion, which extends for 100 or 200 m. farther inland, its wide frassy tracts alternating with others that are thickly timbered. 'These last are especially prevalent in the li., though the bottoms and river valleys thronghout the whole rexion are well wooded. Limestone and samdstone form the eommon substrata of this region: the mper soil consiste of a rich friable loam, mixed indeed with samal, but sohlom to such an extent as to prevent. the eulture of the most exhansting prombets. The third, or monntamons region, sitmated primejpally in the SUF., inclades the Nierra (imadalonger, it portion of the Mexicam $\mathrm{Al}_{\mathrm{p}} \mathrm{s}$, and a desert tract at the font of the monntains. It has been litthe explored, and is withont settlements. 'The monntain sides are clothed with furests of pine, oak. cedar, and a great varicty of trees and shruls, aml they inclose extensive alluvial valleys, most of which are suseeptible of irrigation and culture.
After the rivers alroady named, the primeipal, proceding from N, to S., are the Necdes, 'Trimdad, Brazos, Colorado, and Nueces. They all fall into the (iulf of Mexieo, or rather (except the Drazos) into its bays and lagoons. 'The latter bear a considerable resemblance to the hallis aloner the s. shore of the baltic, except that they are upan a much latrer scale; and the eonast, as llumbohlt has stated, presents everywhere formidable ohstacles to mavigation, in the lome, low, marrow belts of land ly which it is fencent, and which bound the lafoons; in the want of harbours for vessels drawing more that $12 \frac{1}{2} \mathrm{ft}$. Water; amb in the bars at the months of the rivers. Still, however, stam vessels have been able to enter and aseend these rivers to a emonilerahle distance. The Lio (irande del Norte, a moble stream, having an estimated course of $1,800 \mathrm{~m}$., is, though in parts broken by rapids, an important commereial channel, fialveston lhay, into which the Trimidad flows, by far the finest on the coast, is about 85 m . in length N. and S., and from 12 to 18 F. and W . Its average depth is from 9 to 10 fect, but in the chamel there are from 18 to 34 ft . water.

The Texan year is divided into a wet and a dry season. The former lasts from Deeember to Marcli, during which N. and NE. winds are most prevalent; the later from March to the end of November, during which the winds vary from the sie. round to SW., may be subdivided into the spring, summer, and autumn. From April to September the thermometer in difterent parts of the comitry has been found, at a general average, to range from $63^{\circ}$ to $100^{\circ}$; average heat, 9 a.m., $73^{\circ} \mathrm{F} . ;$ at noon, s:30; 3 p,m., $77^{\circ}$. These great heats are, however, tempered by continnal and strong breezes, which ecmmence soon after stmrise, and coutime till abont 3 or 4 o'elock p.m., and the nights thronghout the year are cool. From Mareh to October little rain fills, thongh thumer-storms frequenty ocenr. During the rest of the year wet weather is prevalent; the rivers swell and inundate the conntry, and the roads are generally rendered imbassable. Snow is seldom seen in the winter, except on the monntains. The surface is in most parts covered with luxuriant native grass, comprising, with the common prairie grass, the grama, mospuite, widd elover, and wild ye, and allording excellent pasturage. It has, also, an ample supply

## TENEL (THE)

of timber, as well for use us fur ornambit. live oak ( (2ureres semprevirens), so valumble for shipmilding, is here more uhmidant and of loteter guality, prompes, than in uny other purt of Amoria:a. Whitr, black, and pinst oak, ash, elm, hickury, musulute (anelia), walmut, syamure, bois drure, so callorl from tho Indians nsing it to make their bows, eypross, mad eaontehonce, are among the rommon trees; and the monntainoms parts in the She, ahomad with pine ande eelar of fine quality. Among the matural embionies of the combiry is the '('russ-timber' of' N. 'J'exas, a conttinnons series of forests, varyiner in widh from is tw itt m., and extending in it direet line abont the longe of $9 \%^{\circ} \mathrm{W}$. from the wooly region at the suarees of the Trinidal, morthwaril fothe Arkamsas river. It appears at a distance like an inmonse wall of wool. and from the W., sum is its linesar remalarity, that it lowks as if it ware planted hy art. It forms the great boundary of the W. pricires.
'lexas is amply supplied with fruits aml garden probedes. 'Therelimate of the lowdimes is tow warm for tha applo, but almost every other fruit al temprate climates comes to prefertion. Venches, molens, tiges, urmures, lemons, pine-apples, dates, amd olives, may he qrown in ditherent localities with little cost. firipes are abmaliont; and being frece from the "foxy' thavour common to the grapes of most parts of Amerina, very tolorable wine has bern made from them. Vimilla, indigo, sarsaparilla, and a large variety of dyeing and medicinal shruls and phants, are indigenoms; and on all the river-bottoms is an undergrowth of emone, so thick as to be almost impervions. Along the water-comrses also and near the seat, the harger trees are sometimes wreathed with Spanish moss, which serves buth for fiodiler and for the mannfincture of cheips bedding. 'The floret of 'Texas is particularly rich and eopions. Cotton is the ereat agricultural siaple. The best eotton is proultued in the low allurial suils, and on the rolling or undulating lanis.
'Ithe reariner of' live stock has been long the prineipal and fivomrite occupation of the Texan settlers, and many of the praitios are eovered with a valuable breed of oxen, which searedy require, and erertainly din not receive, mach more cire or attention tham the prairie deer. It is usually estimated that 160 eowes and colves, purchased for 1 , (moth colls., will, in tell years, have increased about 36 fold, thas numbering 3, tion, worth, at
 in cattle is opend with New frleans, and the West India islands obler coltere, of which the Toxans use large quantities, in exchange for cattle. The rearing of horses and mules is also extensively pursmed: sheep thrive on the mper lamds, but reguire folding. Vist herds of bulfiloes and widd horses wamder over the prairies, and deer are everywhere abmudant, Bears, congars, peecaries, wolves, foxes, and riconins are combon; and most of the planters are obliged to keep packs of large tund powerful dogs to prevent the destruction of their stock.

The governor is clected for two years, and is mot again eligible for a similar term. The legislative power is vested in the congress, emposed of a senate and a honse of representatives. The latter body consists of tit mems., who are bienmially chosen by miversal sultrake, and each of whom must be at least 2 a years of age, and have resided in the en. or district whidh he represents for the six months next preceding his election. The senators, of whom there are 21, are chosen every four yoars, by districts as nearly equal in free pop, as practicable. Ministers of religion are
incligible to a went in rither lonne of congress. l'exas is substivided into about dll conuties. It i, finther divited into 111 judicial disaricts, in ewh of which is a jublere. There is, also, a surterme comrt, with a dhef mad two prisur juliaes, chosen for nix years: their salaries are 2, (tho dollars a year cach, no distinction being made in fasour of the chiof, sessions are helil ence a year at Anstin, the cmp, of the state, commenting on the neromel Nambag of therember. The rourt has appellute jurisitietion within the limits of the state: hat in riminal eases, and apyeals from inlorlonetory julterments, it is muder legishative resinlations. Julfres are nominated liy lhe fovermor, and eontimed by (wo-thiris of the seluter they may lae removed by an ableres of two thirils if tooth homses. 'Ilor joidges ar' the dist rict courts are chosen for six yours, and hold a cont twicr a year in mell combty: The district compts hast original juriseliction in all crimimal cases, amb in all suits it which more that 100 dollars are at stake,
l'revionsly to 1690, Texas formed at remote and morrly moniniml part of the rompuests of 1 ortuc, inhabited almost wholly by predatory ladian tribes; but in that yerar the Sbamards, having triven out a colong of lirench who hat establisheel themselves at Matarorda, made their first juranment settlement in the comutry. On the consmmation of Mexisan indeponience, 'Texas was constituted one ol the federal states of Mexiow in conjunction with the aḷacent state of Combuila: a limion very mumplar with the Tevins, ant which was prohactive of the first disagreיmeme with the central govermment. The war of sepa-
 the 21 st of $A$ pril, Is:3ti, the independence of Thesis was linally seenred by the defeat ot the Mexitan presincent, Santa Anib, at San Jacinto. After a lengthened negutiation' Texas was inally admimed into the Amerienn miom, 2! th Decemiber, 1 ats, In the great civil war ui |x(b)-1;is, the state joinel the eanse of the Condederates, decharing its seppor ration from the union by an det of Seression, lated Jan. II, !stil. Thie whale of the state was bot recongtured by the armies of the United States till the spring of 1stin.

TEX lis. ('T'UE), an island belonging to I Dolland at the entrance of the Zuyder-Zee, off the paint of the Cleller, at the N. extremity of the pris. if North Ilolland, trom which it is separited by the ehamel, abont $2_{\frac{1}{2}} \mathrm{~m}$, acwoss, called Mars-die $p_{\text {, }}$ its most sontherly point being in alout lat. $53^{\circ} \mathrm{I}^{\prime}$. . . lemes. $10 \cdot 16^{\prime}$ li. It forms a canton of the armal. Alkmaer; length NE. to SW. 13 m., and where bruadest mearly i m . in willh. l'op. 5, ,t!10 in 18til. The isfand is low, and in part marshy. but is defended from the irruptions of the sein, partly and primeipally, by a line of dines, or sam!banks, which extelid along its W. emasi, and partly by strong dykes. The district of lixarland (comitry of eges.), so called from the vast mimmer of eggs deposited by the sea-fowl on its sham during the breeling seasom, was formerly a distinct island, having been united to the T'exel ly a dyke in $13 ; 30$. The auil, which is extremely fertila. is mostly employed in the feeding of cattle and sheep, the latter being of a peeuliarly fine lont wonled breed. The inhabe, who ocenpy a towla, Burg, in the centre of the island, and some villages, in adelition to agriculture, engare in tishims and boat-building, and net as pilots. 'There is an excellent rombstead on the F.. cualst of the islamb which is the usual place of rendezvous for merchanmen from Amsterlam, waiting lior a fivourable wind to leave the Zuyider-Zee. The mumbit of sand-banks make the approach to the island
difitienlt; and on the W. side it is all but iunccowible.

Ihring a tremembus storm in Fehruary, 1825, the wat broke through the dykes hy which the inlame is mefended, mad lade a large portion of its surfiter unter water, destroying great mumbers of athe and sherp, and otherwise oecasinuing ut heavy loss of property. 'the brench, however, was soon after required, and it is now suppused to be better protered than ever.
Scral maval cogagements have taken pace ulf this imabl. Of these, the most celchaterl was that betwern the Dutch lleet muler the fanoms admiral the senior 'Tromp, and the Finglinh Heret nuder Monk, afterwaris chake of Nllsemarle, "'l the atst of daly, Iti53, 'The action was maintimed with the utmont vigour om both sides, till the death of 'Tromp, who was shot through the heart hy it masket-tall, decided it in favonr of the lustivis tera.
T'HANE, or 'TXME', n market town and par. of Eughand, eo. Oxford, humb. 'Thame, oll the Thame, a Iributary of the thames, l:2 m. Vi. Oxford, and ix m. WNW. Lamion by (irent Wisaturn
 latil. Arat of par. 5,310 acres. The town conssistsol the wincipal strerts, miting in a spacions market-phace. It has alsu a market-louse', wer which is the town-hall. The par. elareh, a harge well-built ermeiform structure, comprises a hase, two aishes, a N. and li, transept, a chancel, and bins a tine rmbattled tower, sulported by bions meare pillars. The intarior is of moble pirymertions, and contains munerons momuments, but is ill haid out, and spmiled by irregular galleries. Cear the churchare some remains of the prelnemal homse of 'Thame, now mempied by oflices lielonging to the parsomage farm; and in 'Thame I'ark, abut ! m. Sk. the town, considerable portions of an anciont Cistercian monastery aljoin the mansions. In 165 s Lart Williams establinhed atre selool at 'Thame: it is oprell to all hoss of the par., and in trust of the warden and fellows of New Conlege, Oxford, who nominate the master, sulyeret to the aprohation of the arl of Abingaton. It
 is now much fallen ofl. Another free sehoos, an almslouse for tive poor people, and varions annal domations to the poor, exist here. Tho: polo is mostly agricultural; lace-making by women and children is the only mandfacture, The Thame, being navigatile for barges, promotes the trathic of the town, and the market is well supplied with com and cattle.
Thame is supposed to have been a Roman station, and was of some eonsequener in the time of the saxons, and during the civil wars of Charles I. The famous constitutional latwer, Sir John 1lolt, chiet justice of the Kingrs Beneh, was a mative of this town, where he tirst saw the light in 10.12.

THAMES, a river of Fingland, being the largest in that part of the U. kinglom, and, in a commercinl point of view, one of the most important in the world. It rises in (iloucestershire, beine fonned by the junction of the Isis, Lech, Colne, mol Chmonet, rivulets which have their sources in the Cotswold Hills. The first, which is the most important, rises on the borders of Wiltshire, a little to the SW, of Cirencester: it thows E. by Cricklade: and, being angmented by the other strams, the eombined river takes the name of 'lhames, and becomes navigalble for barges at lechate, on the contines of (iloneestershire and liekshire. Its eourse is thence NE., till, being farther angmented loy the Windrusls and the Evenlode, From the borders of Gloncesterslife, it

Inrns, a little to the N. of Wyitham Honse, to the S. After passing Oxford, if hemds suddenly to the W. hy Numeham l'ark to Alingden. Ilavingr again resimmed its somblerly dirertion, it is juinemp, a little below Dorchester, ilı Oxfordshire, by the: Thame.

This latter river has several sontres, of which the most remote are in the central purts of linckinghim, near Kíreslow and Wemdon ladge. 'They muite at 'Ihame in Osfordahirs, from whirlo point, to where it joins the 'I'hones, it is navigable. It may here be proper to state, that, wrording to the common spiniont, the Thames obtainod its name (said to be 'thame-ixis, shortenerl to 'Thames) from the jumetion of the 'I hame with the lais, or with the river coming from (iloncestorshire. l'robably, however, this opinion, notwithstanding its dparent necermey, has no gomal fomman:ome A. all evolits, it appears to lat aboulantly certain that the river which passes Lechhale, formed by the fination of the rivalets alrualy retirreel to, hats Ironin a very remote prow been called the 'lhames; and that the mane lais, fiven to it by the literafi of ©xfiril, is mot mentioned in inneint charters or ley andicot historimas, and is wholly muhnown to the common prople in the eomentry through which it. flows. (Camdens lititamia, (aibsonis alition, i. 1(0); C'mupell's l'olitioal Surver, i. 13:!.)
l'rom Wallingliral, a little below the intan oil the 'Thame, the rivar Hows almost dae s . till, passing lansilan loark, it turus lí, to lameng, where it is joined by the Kemmet: it then flows Ni.. to (íreat Marlow ; thenees. to Mathenheal, allid SE: Wy Windsor and siames, till it receives the Wrey. Its course is then lín, with many loblal awerps, io lamolon; and llowing thrungh the metropolis, and being angmented by the lat from Ilertforabiare and the Darent, it ematmes its conres bat it it mites with the sot at the Nore light, did m . helow lomolon liridge.

The distance from Lomalon Bridge to Jimblade, where the Thames heromes mavigable, bollowing the windings of the river, is $1 / 16 \frac{1}{2} \mathrm{~m}$.; the totnl rise from low-water mark at the former to tha later being nbont 25 x ft . , This ascent is overeome hy moans of several locks, constructed at dillerent
 above hondon liridere; thes, consequently, is the linait to which the tide lows. The low-wator surlince of the river, from Tralingeton lack to lamion Bridere, falls about 16 ft. !t in., or about 10, in. a mile, at an avertge. The higl-water mark at Teddington is about. 1 ft . 1 i in, above the ligh water-mark at the bridge; and the time of high wator is about two hours later, The average fitl in the bed of the river, from Teddington to lombon liridge, is about 1 ft , a mile; the breadih of the siver at london lirilge is $6: 0 \mathrm{ft}$.

Thourh not a rapit, the Thames is ty no means a shggish, river; it rolls lorwarel with an equable and stealy current, and was formerly romarkable for the plority of its waters. It has be're admirally described by Denham, in his 'Cooper's Ilill':-
Though deep, yet clear ; though gentle, yet not dull ; Strong without rage; withont certfowing, full.'
But it is as a navirable and commercial river, having london on its binks, and bearing on its bosom numberless ships lraught with the produce of evory conntry and every climate, that the Thames is principally distinguisherl. lts depth of water is so great, that, as a shipping port, loudon enjoys peculiar alvantages; even at chb tide there is from 12 to 13 ft . Water in the fair way of the river above Gresmwich; and the mom range at the extreme springs is about 22 ft . 'ilse river is, in fact, navigable as far as Deptford for ships

## Dictus et Amphion, Thebnne conditor areis, <br> Sinxa movere sono testudinis, et prece blanda <br> Ducure quo veliet.'

Hor. Ars Poet., Hin. 394.
The city had seven gates ; its circ. is varionsly statel at from 43 to 70 stadia, and its polv, might perhaps monont to about 50,0 onf. It hail many magniticent temples, thentres, $y$ momsiums, and other public edilices, adomed with moble statues, paintings, and other works of art. Its government, like that of all other Greek cities, was tluctunting and various. Originally it was subject to kings or tyrants, and after the repmblican govermment had been established, the aristocratical
and demoeratical parties altermately prevailed, Owing to her proximity to Athens, from which, of course, she hadd everything to fear, Thelies was for a lengthened period what may be called the natural chemy of Athens, and during the Pelojomacsian war was the most elficient ally of lat cedamon. But after the failure of the expectition against Syrachse had broken the power of Athens, and Thebes had no longer any fear of her hostilite', dissensions began to spring up between her and Lacediemon, mod the Thehnas, under their great leaders Pelopidas and Epaminombas, aepuired a decided suberiority over the batter, aud became for a short while the leading Greck state.

Alter the lattle of Cheronea, in which the Thedans bore a principal part, 1 'hilip phaced a garrison in the citadel of Thebes; but, on his denth, the Theboms rose in arms against his som, Alexander the Creat. The latter, however, haviner taken the eity by sturm, cuno $335 \mathrm{n} . \mathrm{c}$., rased it to the fomdations, the house that had heen ocenpied ly limar being alone excepted from the fremeral ilestruction ; suel of the inhalse, amometiug, it is said, to 30,0141 , as had not heen kihleol, luing at the same time sold as slaves. (iece Mittorl's Grecee, wii. 339,850 , el., and the authoritics there quoted.)
But about twenty years after this catastrophe, the city was rebieit by Cassander, when the Athenians, forgetting the ancient animasities flat hat subsisted between them and the Thohans generously contributed towards the reconstruction of the walls. Subsemuently the city muderwent many vicissitudes. It appears to have sulfered from the exactions of Sylla. Strabo calls it a poor village (lib. ix.) ; and Pamsamias, who deseribes its temples and other remains, says, that, with the execption of the temples, the lower town was wholly destroyed. (Lih, ix, calp. 7.) The fertility of the surromeding phain, which prowheres corn, wine, and oil in the greatest abmatance, and the excellence of the air and water, appear to have been the principal canse why Thelies has been able to survive so many disasters, and is still a consideralhe and increasiny town.

Thebes is particularly famus in the early and hervic ages of Greek history. 'Nee cedentes 1 thenis cluritate, qua coonnomimutur Berotire Thebs, duorum numinum, Liberi atque Herralis, mi rohut, putria.' ( ${ }^{\text {Plin. Hist. Nat., Iib. iv. cal. 7.) }}$ The stories, also, of Laius, docasta and Wilipus, and their unfortumate progeny, and of the wars of the seven chicfs and their descendiants, the Epiogomi, against Theles, have supplied topies of the ilecpest interest that have engaged the attention of the greatest poets of antiguity and of molern times.
The air of the Bocotian plain is less pure than that of Attica, and this circmanstance was pretty generally beliered in antignity to be the canse of the duhess of the Thebans, who, speaking generally, wanted the quickness, penetration, and vivacity that distinguished the Athenians. But this dilference of character was probably owing rather to a difference in the ectucation and institutions of the two people than to my dilference of soil or climate. In respect of illustrions men, Theises need not fear a comparison with any city of ancient or modern times. The names of titesiod and limdar, of Pelopidas and Epminondas, are alme sutlicient to illustrate and cunoble a nation. It was, indeed, as alrealy stated, the extraordinary talents and virtues of the latter that rased his romotry to a prepomberating indluence in the athairs of (irece. It desersers, also, to be mentioned, to the honven of the Thebans, that the odious prac-
tiec, tolerated in other Greek states, of exposing children at their birth, was forlideten in 'Thedes.
'IUELS'S (an. Tibisers), a great river u' Inugary, being the most important of the tributarics of the bimule, parallel to which it flows in the lower part of its course throngh the great lumgarian phan. It has its sources in the Carpathian Mountains, on the contines of the Bukowine, within a short distance of the senrces of the Pruth,
 by the junction of two streams, the Black and the White Theiss. Its course, which thromghuat is extremely turtuons, is tirst qenerally WNW. to Tokay, from which puint it thows with inmumerable windings, SSW. and S., till it enters the limmbe. nearly chposite to salankement, in lat. $1 ; \circ 100^{\prime} \mathrm{S}$. lomer. $210^{\circ} 23^{\prime}$ E., after a course of at least 500 m , taking only its more inpwrtant winlings into aecomet, for the greater part of which it is navigable. It constifutes the line of separation between 2 of the 4 great divisions of Dungary, thence called Ilmyary-m-thus-side- (or N. and W.), and Thugry-heyond- (or S. and E.) the Theiss. Its chice tributaries are the Bodrog, Schajo, with the Hernall, and Zaryva un the right, and the Nzamos. Körös, Maro:, \&c., with the ofler prineipal rivers of Tramsylumia, on the left. The area of its basin is estimated at opwarts of bifllill $\mathrm{sq}, \mathrm{m}$. The tratie on the Theiss was formerly contined to the conveyame downwards of salis (from the co. Marmaros, in which it rists), and in timber in rafts, but in vecent yars steam mavigation has been established, which lats ereaty adted to the prospority of the aljoining pronimes, The slow mudly waters of the Theiss seem to suit the tish hetter than those of any other river in Hangary. It is sailt that, after an overthow, they have herol left in such quantities as to be used for feeling the piss, and manuring the gromat. The stargeon of the Theiss, though smaller than that of the Bamube, is remarkable for its fatuess and delicate flavour.

TMELiNOD'LAE (from $\theta$ epuós, hot; and rudn, a gate, or pass) ; a famous defile on the shore of the Malian Gulf, on the NE, coast of tirece, man the month of the Ilechada (an. Sperchins), letween the steep precipices at the E. formiatainh
 long. $2: 20$ 89' E . The detile is about 5 m . in length, and, where narrowest, was not, mecienly, more than 60 paces acrosis. 'In cujus aulle iul Muliucum simum vergente iter est mon latias qume serayinta passus. Hece una milituris ciu est, yma traduci exercitus, si nom prohbecuntur, pussint.' (Liv. lib) xxx. (apl, 15.) At present the amly practicable road threngh the surat is by a narrow cmaseway, on either sile of which is an impussable morass, bounded on the one side by the momtains, ind on the other lyy the sea. This phass is now, as in antiquity: the principal, and, inderel. almost the only road by which (irecee can be ehiered from the NE.; and ats it may the deflemed by a compratatively small force, its oceupation is of the utmost importance for the defence of the comotry. At the narrowest part of the pass are hot springs, a circumstance which, as seen above, hats given the decile its peenliar name.

It was in this pass that, eatho 480 n., C., the Spartan king Leconidas, with about 1,0100 (irecks, resisted for a while the whole firce of the l'ersinn army insaling Grece under Nerxes. Aiter the Persians had suceceded in opening a pasage lys another ronte across the momitions, lemilias, having dismixsed almost all the other tirectis. devoted limseld with ito simartans, in olecticme to the laws, which forbade spartims, moder whatever disadvantage, to fly from in enemy, and,

agreably to the answer of the orache, a sacrifice to insure the independence of his comntry. (llerodotns, lib. vii. cap. 2ll-2:28.) This event has given Thermopyla all its interest, and will make it le helif in 'everlasting remembrance.' Siter the tinal defeat of the Persians a magniticent monument, the ruins of which still remain, was rected in honour of Leonitas and his heroie commuions. It had an inscription, said by Cisero, hoy whom it has been translated, to have heen written hy simonides ('T'uscul., i. eal). fie), and which has been rendered into English ns follows:-

## To Lacedemon's sons, 0 stranger, tell <br> That here, obedient to their laws, we fell.'

The ground vear the Sperchius, on which the army of Xerses was encampen during the attack on Thermopyla, could not passibly have acemmodated his troops had thair lumbers apmonached to any thing like those specitied by Ilerototis. But there camot be so much as the shatow of a hallt that these are grossly, and, indeed, ludiromsly, exagererated. To suppose, as is stated by the vencrable lather of history, that the army which Xerses led to Thermopylie and his theet comprised $5,283,220$ troops, sailurs, and male followers af all descriptions (llerod., lib. vii. cap. ision, exclusive of women amol cummelis, is a palpable absurdity. It may be emitidently atlimed that no such force ever was brought together, and hat if it wore it could neither be fed nor liept torether for the shortest period. The statemoniss of therodotus are foumded merely on rumour, which is always sure to exaggerate that which is really croat; and the Greeks wore particularly prone (o masnily their exploits beyond all reasonable hontuls.
Thl:'TMORD, a parl, aml mam. bor, of lenrlame ehietly in the co. Norfolk, but partly in Sutbolk; being separated by the little Ouse into? anequal parts, at the intersection of the roads from Newmarket to Norwich, and from Rottestale to Syun; 2t m. SW. by W. Norwieh, and 9.5 m . Nb. Loman by (ireat Eastern ralway. Iop, of hor. 4,20s in 18til. Area of parl. bor., whieh cumpres the 3 pars. of St, Cuthberf, St. Mary, and $s$. Peter, $x, 2$ ofo acres. The town is stragerlingr, and irregularly built, with little trade or manifactures; but it does not appear to be decaying, and has a clean and respectable appearance. It has, however, increased in late years very little hevond its former limits. St. l'eter's, ealled the 'black churel,' from being constructed mostly of thint, was prineipally relnilt in 1789 ; it is proviled with buttresses and bittlements. The suiddhall is a tine old buidling, erected in the lime of Charles II. The market-house, roofed with iron; the jail, a large bat ill contrived building; the bridewell, workloonse, several dissenting elapels, and a theatre oecasiomally opened, are the other principal buidings. $A$ loopital fior two poor men and two women, and a free grammar schoot, were established in the reign of dames 1 . ; and it has, besides, almshouses fommed in l(xot, a mational sehool, finds for apprentieng poor children, and many minor charities. Thettord is governed by a mayor, 3 aldermen, and 12 eomeillors: its earliest extant eharter is of Willian III, It has no commissjon of the peace, but petty sessions and a court of record are held weekly. The eorp, revelue is prineipally derived from the tolls on wavigation from 'Thetforl to White Ilonse Ferry, under local acts. Thetford las sent: mems. to the 11. of C. since the reisn of lidward VI. : previously to the Reform Aet the right of voting was vested in the mayor, bur-

Eesses, and conmomalty. The limits of the parl. bor. were not albeeted by the Bomodary det. Req. clectors, 2.23 in Ixtio. T'lue town is a pulling-place for the W. div. of Nurfolk.

Thetford is generally supposed to ocenpy the site of the Sitomagns of the Romans. During the lleptarchy it was the cap, of the bist Anglian kingdom, nud on the E. side of the town are remains ol intrenchments supposed to alate from that period. In the time of Camute a convent was founded in the town, some rematins of which are still extant. 'The gateway of a priory, fombled in 1101 , and some traces ol a momastery. establishlied at a later perionl. may also be seen. In the reigh of Belward Ill, it is sain to have had e.t principal streets, 5 market-places, 20 churches, 8 monasteries, and 6 hospitals, besides other public fommdations: lat these statements are ol chabatial authenticity, and are probably much exasperata $\therefore$ It has beed oedeniomally visited in more monderin times by some of the lifitish sovereigns, partienlarly dames l., who had a hanting-seat in the neighbourlood. Among the natives of Thetford who have att racted notice, the most celobrated by far was Thomas l'aine, anthor of the once famons but now lorgotien pamphlets, entitled 'Common Sense,' 'Rights of Man,' 'Age of leavon,' (fre. lane was born on the e9th of Jannary, $1 ;: 37$; his father, who was a stamaker in 'thetfind, belonged to the Quakers.
'TlIBlil'I', or 'TJBET (native Toup'ho, Bhote, and P'ü̈-kotchim, 'snowy rexion of the north'), a very oxtensive region of Central Asia, mostly comprived within the Chinese empire, betwern lat.
 N. Chinese 'lurkestan and the desert of Cobi; lis. the Chinese pros. of Se-tehmen; S. Y'm-anan; N. birmah, and the freat llimalaya, separating it from Assam, bootan, Sikkim, Nepanl, and the upper British provs, and W. the lomjab territories N. of the II imalaya, Butukh-shan, the lieelont 'Tigh Monntilius, de. 'The W. parts of this vast tract, ealled Little Thibet (including Ladakh, La, Baltee), appar, however, to he independent of China. Its bommaries on every side but the S. being so meertain, and sur kinwledere of the country so limited, it is impossible to form anything like an accurate estimate cither of its aroa or pro. Thibet, thomerh it does not inchule the highest summits of the IImalaya, emmurises a large portion of the elevated table land in the centre of the eontinent, with the sources of almost all the great rivers of s. Asia, ineloling the loblus,
 lwoug, and Menan-kong or river of Camboja, as well as those of the great Chinese rivers, thir Ying-tse-kiang, and Iloang-Ho. Its mountain-chains generally run parablel to the Great llimalaya, of wheh Thibet is the N. slope; but some are said to streteli in a NE, direction to the frontiers of Koko-mor, mid others extend lrom N. to S. between the valleys of the great rivers in the sle. 'I'libet has numerous bakes; the chief are the 'lenerkirinor, the largest, abont 110 m . NW. Latssa; and the lake I'alte or Y'ano-rouk, s. of the Sim-po river, which surromols in the form of a ring a large island of a shape similar to its own.

According to Mr. 'Turner (Thibet, pr. 216), there is a very striking eontrast in the face of the comentry in pasing from lbootan into Thibet. 'Bootain presents to the view mominains coverel with perpetual verdare, aud rich in forests of large and lolty trees, while not a slope or narrow slip of hamal between the ridges lies mimproved. 'llibet, int the other hame, strikes a traveller at first sight as one of the least farvoned comentries under heaven, and nypers to be in a great measure incapable of
culture. It exhilits onl- low recky hills, withent any visible veretation, or extensive arid plains, both of the most stern and stuhborn aspeet, promising full as little as they produce. Its climate is cold and bluak in the exireme, from the severe effects of which the inluabs. are obliged to seek reluge in sleltered valleys and hollows, or amidst the warmest uspects of the rocks. Yet the advantares that the one comutry possesses in fertility and in the richness of its forests and fruits, are amply counterbalanced in the other by its numerons ilocks and invaluable mines. As one seems to possess the pabulum of vegetable, in the other we tind the superabundance of animal life. The variety and guantity of wild-fowl, game, and lemets of prey, thocks, droves, and herds in Thibet are astonishing. In Bootan, except dumestic crentures, mothing of the sort is to he seen.'

The same division of the seasoms prevails here as in Bengal. The spring, from Mareh to May, is marked ly a variahle atmusphere, heat, thmulerstorms, abil oceasionally refreshing showers, lirom June to Sept. is the damp season, when henvy mul continued rains throughout most parts of the cmmery swell the rivers, which bear of the surplus waters to augment the inundation of Bengal. From Oet. to March a clear and uniform sky sueceeds, seldom obsenred either by figs or clouds, and for the tirs, three months of this season a degree of cold is felt, among the lofty mountain ranges of the S., fur greater, perhaps, than is known to prevail in Europe.

This region is remarkahle at all seasons for the dryness of the winds, and meat and tish are prebirred for carriage to any distance, and will keep to any season of the year. by being dried mp by exposure to the frosty air. Vegetation is frequently aried to brittleness, and every plant may be rubbed between the fingers into dist. Goitre, syphilis, and smallow appear to be the most severe discases in Thibet, and, unfortumately; are very prevalent. Syphilis is said, by an lenglish surgeon, to make a more rapid progress, and rage with more violence here than in any other country. (Sanders, p, 410.) Catarrhs and rheumatism are more frequent than in lengal.
Of the greology of 'Thibet there exist omly seattered notices. Moorerolt found that the hills in parts of Little Thibet consisted apparently of clayslate, fragments of granite and guartz being strewn upon their sides. (Noweroft's Travels, i. 439.) The batter rocks, with primary limestone, tale, and similar formations, seem to enter most largely into the mountain ranges, where they are often interspersed with beds of clay and 'sand, and occasionnlly of chalk. Tineal is obtaned in inexhanstible qumutities; rock salt is met with in many parts, and nitre eflloresees abundantly on the surface of the soil. Gold is found in lumps and irregular veins, or in the form of chast in the rivers, and is frequently of great purity. There are mines of lead, silver, copper, and cinnabar, but few if any of iron, though chalybeate springs are very frequent. The diticulty of proeuring fuel for smelting the less valuable ores proves an insuperable obstacle to sucecss in mining: timber of all kinds is rare, mad the dung of mimals is the only substitute for fire-wood. The discovery of a cond mine would be an invaluable acquisition to Thibet.
The usial crops are barley, conse pease, and wheat. The first forms by fir the largest proportion of the whole; wheat never enters into the food of the poorer classes, and rice is not caltivated. A brief notice of the agriculture mad vegetable products of little Thilet will be found under the artule Labakit. Turnips and radishes are almost the only garden vegetables, and fruits are of little
variety. For most vegetable products, and, indeed, medicinal plants, 'lhibet is dependent inBootan, Nepaul, and the other comutries S. of the Himalaya.
Among the useful animals of Thibet, sheep merit a distinguished rank. The theks of these are mamerous, and upon them the chief reliance of the inhabs. is placed. A peculiar variety, which seems indigenons to the country, is of simall size, with black heads and legs, and soft wool; their mutton, Which is nlmost the only animal food used in Thibet, being said to be the finest in the world. The sheep are oceasionally employed ins beasts of burden, being laden with salt and grain. They are the bearers of their own coats to the best marts, where the wool is usually made into a marrow, cloth resembling frieze or thick coarse blanketing. The skins of both sheep and lambs are commonly cured with the wool on; and, in order to secure : silky softness of the flecee, the ewes are sometimes killed before their time of yeaning, when their skins bear a high grice in Chima and all over l'artary. The Thibet goat (Cupre hircus), which atifirds the valuable material for the shawl manfacture, feeds, tike the sheep, in large mumbers together. These are perhapis the mist bemuiful among the whole tribe of gonts. Their colours are various; black, white, of a faint bluish tinge, and of a slade something lighter than a hawn. They have straight horns, and are of a lower stature thain the smallest sheep in Eugland. The material used for the manufineture of shawls is of a light tiue texture, and clothes the animal next the skin. A coarse covering of long latir grows abowe this, and preserves the softhess of the interior coat, The creature is, no doubt, indebted for the warmoth and fine quality of the latter to the nature of the climate and comstry it inhabits. On removing some of the goats to the hot atmosplere of liengal, Tumer says they quiekly lost their beautiful clothing, and a cutaneous eruptive humour soun destroyed almost all their coat. 11 c was also unsuccessliul, atter repeated trials, in attempting to acclimatise the animal in Eagland. (Thrners Thibet, p. 35t.) Recently, indeed, the Thibet grat has been naturalised in France; but it is quite certain, from the great diflerence of the elimate, that the wool will, in no long time, lose all its distinguishing and most valuable qualities. The most valuable species of cattle is the yaik, or grumting ox (Bosgruniens), which is also indigchous to the country. Their cows supply an abmadane of rieh milk: they are very nseful as beasts of burden, and throughont Ilindostan their bushy tails are in great request as chowries to drive away thies, de. For agrieultural habour, small eathe, like those of Bengal, are chictly employed. Most ot the native animals of 'Thibet, as the hare, lharal (Ovis ammon), dog, de., have long furry coats. Among the wild animals, perhaps the most enrious is the musk decr, which delightits in exerssive colcl. It is about the height of a moderitely-sizel hog, which it closely resembles in the figure of the borly. It has a small head, a thiek nond romen lind quarter, no tail, and extremely delicate limbs, The hair with which it is covered is prodigionsly copious, and grows erect all over the boly, in sonic parts to between two and three inches in length, thin, llexible, and modulated. Its colour at the base is white, in the middle black, and lrown at the points. The musk is a secretion formed in a little bag at the navel, and fomid only in the made. The musk deer, valuable for this product, is deened the property of the state, and is hunted only by permission of goverument.

At the end of the last century, the valley of Jhausu in Thibet was particularly famons for the

Its colour at the e blaek, and brownat secretion formed ina ommenly in the male. this prodituct, is deemed ud is lunted only by
century, the valley of cularly famous for the
manufacture of woollen cloth, for which there was an extensive demand. The eloths, which were condined to two columes, garnet and white, selilom exceeded hulf a yard in brealth, and were woven very thick and close. A good deal of cloth is alsor suid to be made at Lassa, sreat quantities of a red colour being ammally exported into China. Doorcroift ('Travels, p. 71-7.4) describes the process of weaving at liti, in Little Thibet, as follows:The two ends of the warp are fastened together, and it is then stretched upon two rods, one tixen to the borly of the weaver (who is invariably a woman) by a cord, which adrits of the work being fonsened or thrhtened ut pleasure, and the other wed fastened to some stones at a distance, epual to half the length of the cloth. The whole is clase to the eround, on which the workwoman sits, hat the portion close to her is slightly elevatel by a thirl rod; loops, each ineluding a thread, anil receiver upon a small stick tike a rattan, supply the place of a hedille: of these there are three sets, which draw up parts of the warp anternately as repuired. A large heayy mesh, into which a thin har of iron is inserted, is a substitute for the reed, and three or more heavy strokes are made inth its armed edge upon every thread of the wouf. The list instrument must be taken out alter the insertion of each jiece of yarn, and when placed perpumbienlarly, with its two edges separating the warp, abnillunce of room is given for the passare of the balls of worsted made nse of without the eovering of a slattle. This part of the process is tedious, but the warp is prepared in a quick and simple way: several pegs are driven into the ground, so near eaeh other that the whole may be reached without any material movement of the body; the yarn is fastened to one of them, and carried on round the others till a sutheient quantity has been wound; atl are then taken out except three, which have their places supplied by rods, and the warp only requires sprealing. Evers woman knows how to weave, but only half their number may be considered as employed in the manufacture, for if a house contain two, one is usually busy in domestic aflairs. I'wenty-six thonsiand yards, 17 inches wide, may be fubricated ammally in the l'iti district, i which abont hatf is exported.' Further N. a course lowm is in use, not very unlike that common in Europe. Several varicties of eloth are manufactured; some thick and heavy, with a long map, others finc. All the wool used is of a coarse kind, and in consequence the finer cloths have a hardness, something similar to that of camet or plaid, to which they are little inferior. Very grod sacking is also mate of the hair and wool from the yaik.
Thibet has, from time immemorial, been a comntry of considerable traflic; but here, as in Buatan, foreign trade is monopolised by the goverument, and a few of the tirst oflicers of state. The commeree is principally with China, the Chinese trade being carried on partly at Sin-ning. a garrison town on the W. frontier of China, and partly at Lassa, by caravans which come there in Octuber. These consist of 500 or 600 persons, who bring goods on cattle, mules, and sometimes horses, exchanging tea, silver bullion, brocades, and fruits, for tine and coarse woullen eloths, gold dust, and Bengal goods. The imports from China are large, consisting principally of tea, and, next to it, of tubacco, quicksilver, cimnabar, firs, purcelain, musical instruments, Enropean chtlery, pearls, and coral. From Bootan and lengal, Thibet receives Eagtish broad-cloths, piece goods, Allahabad eloth, kimeots, coarse sugar, tobaceo, indigo, paper, rice, simulal wood, spices, gims, and otter skins. Mans. of these artieles come through Nepand, which re-
eoives all its Chinese imports through Thibet. 'The trade with $\mathbf{A}$ sam is vory limited, lont small quantities of rice, coarse silk, iron, and sticklate are imported; from Turkestan come horses and camels. From Lamlakh lis. Thibet receives tried fruits, shawls, gamboge, and saffron. The general returns of 'lhibet are in gold dinst, silver, tincal, musk, woollen cloths, poat and lanh skins, and rock salt ; the goats' hair is almost all sent thromgh Ladakli to Chanmere for the manuliacture of the Cashmere slinwls.

In Little 'Thilet taffic is carried on ehietly by barter, and money is almost moknown. Stalt, wool, turyuoises, shecp, and goats are imported from Chan-than, or Chinese 'Thibet, and are paid for with grain, woollen eloth, amd horses. From Bisahar and kinlu (to l'iti) come iron, cooking utensils, brass, copper, tobaceo, rice, atried fruits, tea-cups, timber, and amber, paid for in a similar way. The iron ann metal vessels of the S . are sent to lé, in exchange for tea, coarse cloth, coral, amb dyeing drugs. lurther details respeeting the trade of Little Thibet will be found in the art. Ladakit.

The modes of convevance in Thibet differ altogether from those of Bontmin. In the latter all species of goorls are carried on the shombers of the people, chicfly the females; in 'llibet, they are conveyed hy the chowry cattle, horses, mules and asses. Thie honses, which are very docile, are not natives of 'Thibet, but mostly brought from 'Iurkestan, after having been carefully emaseulated, to prevent their propragating their suceies. China has been justly celebrated for her manuiticent bridges and public works, but Thibet is far from sharing in this celebrity. Over one river, crossed hy Mr. Thruer (bimbassy to Thibet, p. 2e93), was constructed a loner bridge, יиoon 9 piers, of very rute structure. 'The piers were composed of rough stones, without cement; but to hold them together, large trees, with their roots and brimeles, had been inserted; and sone of them were vegetating. Slight beams of timher were laid from pier to pier; and upon them large latt stones were loosely placed, that tilted and ratted when trod n1pon; and this, I foar, is a specimen of their best bridges. Many were extremely dangerons to jasis over.' The boats, also, used to cross the rivers are of a very rude kind; some are male chiodly of leather, consisting of a rude skeleton of wool, with thwarts and ribs, over which a bull's hide is stretehed.

I'lie country is politically divided into. Wei and Tsang, or llither and l'arther 'lhibet. Wei is that division bordering on China, having for its call. Lassa, or I'lassa, the residence of the Dala Lima. It is divided into 8 cantons, that of Lassit being the principat; and 39 fendal townships, called tooszes, which lic northwarl, contignous to some similar townships in the conntry of Ko-ko-nor. Tsang, or Dherior 'Jhibet, is W. of the tormer, and extends W . from about long. $90^{\circ} \mathrm{E}$. It is divided into 7 cantons, its cap. being ']esthooLoombon. These 2 jrovs, are under the direction of two ministers, sent from the imperial cabinet at l'ekin; and of two high priests of Thibet, called Dalai Lama and Bantelin-erdeni. The ministerial residents govern both provs. conjointly, consulting anly with the Dalai lama for the alfaits of Ilither, and with the Jantehin-erdeni for those of Farther Thibet. All appointments to oflices of government and titles of nobility must be approved by the Chinese oflicers. Bht in minor matters the residents do not interfere, leavinur such aflairs to the secular rleputies of the high priests, called Whela. The govermment of the 39 feulal townslips in Hither 'lhibet, and of the Camuln or Dam

Mongols inhahiting the N. frontier, is entirely in the lameds of the residents. 'Two oflicers, matives of' the conntry, are zent to cach eanton from Lassa, and relieved every three yours. The subordinate manarement of the conmmmities is intrusted to two ollicers in each, the d'heba and vazir, the former appointed from lassa, the latter a native of the place, who, with the chiof lama of the village, form a sort of local combil, dependent on the provineial mathorities; who natin are obliged to refer to the eapital for instructions in all extraortinary cuses.

Thibet is remarkalle as lecing the central seat and hemlquarters of lhuddhism, where the budthic religion is preserved in its greatest purity. The whole nation is divided into two distimet and separate elasses, those who carry on the business of the world, and those who hold intereorse with heaven. No interferene of the laty ever interrupts the regulated duties of the cherey, nor do the latere ever employ themselves in secular athairs. In this, and in the absence of eastes, consist some of the most striking differeneers between the religion of 'thibet ant that of' Ilimbostan, all distinction of caste being utterly repurliated by the Bhuththic faith. The priests of thithet are all called lomas, and the Gramd, or Dalai, Lamid, who resides at lassa, is believed by his adlerents to be an inearnation of the livinity in a laman form. On the diswolntion of his berly, he is supposed to reappear in the body of some infant, who subsequently passes through the term of his mortal existence with all the honours of the Grand Lama. The Teeshoo Lama amd others are also supposed to be divine inemations, oectpring sucessively ditherent borlies. The Bhatdhists of Thibet have comvents for men and womem, aml their religions institutions present several striking coincidences with those of the $R$. Catholic elnureh.

The written laws of Thibet, which are said to be of high antiquity, have in recent times been morlitied in aroritance with thase of Chinal. labbery or dacoity is nsually pmished by perpetual hanishment. murler by death. Alultery is mot classed amomer sorions riminal oftemes. and strict chastity before mariage is mot expected in the fair sex. In Thibet, as in liontan andother commtries of the llimabya, the practice of poly-
 with all the broshers of at fimily, without restrietion of ace or mombers. 'The closie of the wife is the privilege of the wher brother.

The people of Thibet heloner to the great Tartar famidy. Their physimal apearame has been atreads moticet. (fee Isma.) They are said to be mild and humane, but their intelleet is shageish, and they have never exhibited the enterprise of the in nedibheme cither to the N. or S , At lhas, in W'. Thibet. Mooserolt (Travels, ii. 4;)" fomm the pap. muld addicted topilfering ; but he says that this is not the eharacter of the people in gencral, aperially of thase who follow the faith of liuddia; the people of Ihas are Mohnumedans, and, like thase of tadakh gencrally, have suthered much moral detriment from comiaet with the Cashmerians. In this part of Thibet the honses are buitt. of pebbles, emonted with earth, having terraced roofes, without chimneys, Further Fi. the peasimts' (Wwellings are menn structures, resembingr brick-hilns in shape and size, and built of rough stones heaped pown cach other withont coment. 'The qreat satareity of timber in 'ihibet prevents the higher rassot inhalis. from boarding the toors of their roums, whel are acoordingly of some or marble. Bedsteads appear to be wholiy unkmewn; the general custom is to spread on the tloor, by
way of a bed, a thick materase, which serves for a sent be day. Both sixes dress ehielly in woullens, in which yellow and red are predominant colome with npper garments of shep, gront, or jarkal skins, and high and thick boots; but the uplor classes partly in silks, mod in cloaks lined with salhe or other furs. Their food principally eonsists of barley, varionsly prepared, with tein, wirits, beer and mutton, which last they preter raw, Their meals are taken at no stated times, but maler the impulse of himger. The husiness of the day usually hegins by prayer ; they then fillow their peenliar avocations till evening, whieh is alvays spent in recreation, music and dancing being amoner their prineipal amusements.

The art of printing has, from a very remote age. been practised in Thibet. But no improvements appear to have been made in any branch of science known to the inhals. Their mode of printing has probably been derived from China, but they esteem the city of Benares as the tralitimail source of hoth their learning and religion. There aphears to have heen from the remotest time a eombection between Thibet and India; and the urhen eharacter, in which the saered writings of this people are presorved, bears a strong resomblance to that of the Sanserit. 'The umin, or ordimary character of business and correspondence, is distinet from the former.
Several remarkable customs prevail in Thibet, In every visit of ceremony a silk searf, manally white, and with the mystic sentonce bom mand puece me oom interwovel at both ends, is invariably oxchanged at every visit of ecremony, and acconspanies every letter sent, between prople of every rank and station in life. 'This nawe' sare 'Turner, 'is observed in all the territory of the beh Ragah (Bootan) ; it ohtains thrombont Thilet: it extends from Turkestan to the contines of the (ireat Desert; it is practisel in (hima, amel. 1 doubt not, raches to the limits of Mintehoo 'fartary.' Another custom, which the poolle shame with the l'arsees, is that of exposing the bodies at the dead among the laity to be devoured by carnivorons hirds. The torlies of sovercisn lams after death are dried by exposure to the air. and preserved enshrined: those of inferior lamas an asmally harnt, and their ashes inclosed in littlo metallic idols. Other corpses are committed to the rivers, but the inhmation of the dead is totally mknown.

Thibet appears to have had relations with the Chinese empire at a very early perind; lut it wa guverned by its own princes till about 1720, when the emperor king-he acquired its soveregnty. Sill the greater share of power was left in the hands of the Grand lama till the invasion of the Nepand (rorkhas in 17:00, when, on their expulsion by the Chinese, the present form of quvernment was establibhed, and strangers, formerly permitted to enter the comery, were exeluded.

TIIEL'T, a town of lelerimm, prov. IV. Fhnders, armad. Bruges, cap. cant.. a little S. of the railway between Bruges and Ghent, 13 m . Sisl. the fonmer. Dop. 10,510 in 18tio. Thielt has mo govermment establishments or public buililings of any sonsequence; but it is a busy and thourishing town, with mamenetures of leather, hats, suat. and lace, being imbleded for its prosperity to its situation near a tributary of the lys, whieh give it the advantage of a considerabie inland navigation. It unites with loperingen in sending three mems. to the provincial states. Among tlie matives of Thielt was Oliver Ledain, the barber. and afterwarls the favomite, of Louis XI. TlllbiRs, a town of France, dep. Fry de dome, eap. arrond., on the Durolle, 23 m . EN Li. Clermont. I'p.p. Lis, 901 in 18161 . The appearance of the town is picturesque, being situated on the dedivity of a hill, and tolerably well bilitt; but its atreets are barrow and steep, and its vicinity is so arid and bare that its inlablas, have heen always dilised to depend maninly on thair manutiacturing industry. It lans considerable fabrics of hardware aad puthery, and of woollons, paper, leather, Se. It is the seat of tribunals of primary furiseliction and rommeree, a chamber of manifatures, a pouncil des proulhommes, and a communal college. It owes its origin to a eastle existing here in the carliest period of the French monarehy. annl is suposed to derive its present name from Thierri, kine of Met\%, early in the bth century.

THIONVILLE, a fortitied town of liance, dip. Mandle, eap, arrond., on the Moselle, $16 \mathrm{~m} . \times$. Neta, on the railway from Mct\% to Laxemboure.
 lailt, auls. malike mont fortitied towns. has broald strects. It is entered by three gates, and communimbes with its citudel across the river ly a woden bridgo. It hats a hamdsome place d'armes, thee sides of whieh are ocelpied by barracks, mat the fourth ly the cavalry stables, considered anomer the hest in France. The new par. elareh. corn market, theatre, college, eivil hospital, and the former mansion of the erovernor, now the sub)pratedure; the tribunal ol primary jurisiliction, mayor's residence, and grondarmerie, with the botanke gaden, are all deservinis of notice. Hosiery, woollen cloths, caudles, leather, liqueurs, abid spirits, are manufactured in the town and its vicinity.
The kings of Fromee, of the first and second races frepuently resided liere. Aher the Carlovingians, Thionville sucensively belonged to the
 and sumin. It was repeatedy heviered amb taken in the lith and 17 the centuries, but has belomend to l'rance ever since it smrendered to the l'rince of tromke in ltil3.
'I'IllSSK, a parl. bor., market town, and par. of England, co. York, N. Liding, wapent. I Birdforth, on the Cobbeck, an athuent of the swale (here (rusad he two stone bridares), by which the town is divided iuto Old and New Thirsk, $22 \frac{1}{2}$ m. NW. York, on the (ireat Northern railway. Pops, of parl. hor. $5,3.50$ in lstil. The parl. Lor. comprises the townships of 'Thirsk, Sowerby, Carlton-llinintt, and simel-I Iuttun, in the par. of' 'Thirsk, with the aljacent fownships of N. Kelvington and Tharby, including an area of 9.810 arres. 'The odd town is ehictly componsed of one long strect of rather ant mpromixine apmarance, at the commencoment of which is a small open space. In the new town, al:n, the homes are, fir the most jart, of an inferior class, and inhabited by small tradesmen. The par. chareh is a large anil hamdsome edifice, in the Perpendientar style; it has a lofty W. bower, and is wholly of one design, with piered latilements; the details are grooly and the sencral appearance elegant, A part of this ehoreh is satid to have been buitt out of the ruins of the eastle, helonging to the Mowbray family, erected in the juth and destroyed in the 1 ith century. on the site of which New Thirsk is partly built. The living of Thirsk, a perpetual eurater worth 1431. a year, is in the gift of the archbpl. of York. There are several places of worship for Dissenters, charity sedmos, and a diypensary. The principal emplogment is the mandacture of coanse linens and sacking. 'Thirsk is governed by a bailill, chosen an-
manlly, and sworn in at the comert leot of the loral of the manor. The former bor comprised only a part of the whe town ol Thirsk. It sent iwo mems. to the II. of C. in the 2:3rd Edwaril I., aml again from the refign of Elward V I. down to the passing of the keform Act, the right of election being in the owners of hargage temements. The lieform Set leprived Thirsk of one of its mems. Lig. electors. 112 in INBia, Narkets on Mondays. Fiars, cight times a year for cattle, horses, slicelp, and leathor.

THOMASTOWN, an inland town of Ireland. prov. Leinster, co. Kilkeniy, on the Nore, Is m. N. Waterlord. I'on. 1,1219 in $18 t i 1$, nganst 2,314 in [K]I. The town. Which eonsists mostly of mean houses, is primeipally ocempied by arricultural laburers and small tralers, senerally in very depressed ciremmstances. The public binildings include the par, chureh, a liom. Cath, chapel, a court honse. and a hividewell. Lighters of from 20 to 30 tons come n! to the town, which has three large thonr-mills, and exports considerahte: quantities of llour, corn, and provisions: it las also a tamery and two breweries. 'Thomatatown sent two menic. to the Srish II. of C., but was disfranchised at the Dinion. Guarter sessions are beha in January, April, July, and Oetober; and petty a s sions every altamate week. It is a constalmary station. Miarkets on Mondays and Saturdays.

THOLSN, a fortitien town of the kinglom amd prov, ul' I'ruscia, reg. Marienwerder, cap, eire. oul the Vistula, here crossed by a loner woolen hetider, ahont 90 m . from its mouth, and 52 m . SSiV. Marienweriler, on the railway from loutziz to Warsaw. Pop. 5 , 50.5 in $18 i h^{\circ}$, exclusive of sarmsom of 2.081 men. 'Thorn consists of an olil an! a now town, separated hy a wall and diteh. There are three liom. Cath. and two d'rotestant churehes, several comvents and aschmos, and a latheram Eymnasium. It is the seat of the courts fior the circe: and hats varions mandactures, and at consi-
 having been preaty improved and absmented since labis. It was fombled by the dirst grand master of the "eutonite order, in 12:31, and mass part of its principal edifices are of old dats. Liat its chicf claim to notice is derived from its havins been the birthplate of Copernicus, the diseoverer, or rather restoracio of the true theors of the world, born on the l!th Pebrusy. 14\%. Ilis great work, - The Revolutionibus Orbium ('relestimm.' in six books, was published at Nuremberg, in liab, a few day shefare the death of its illust rions anthor, which trik plate on the elth of May of the sime year.

TUOLNELUEF, a market town and parish of
 valle of Berkley, 11 m. N. hy B. Sristol. Area al par. It, aso acres. l'oph of town, 1,497 , and of par. t, I9) in $1 \times(i)$. The town consists primemally of three streets, arraned in the limm of the letter $I$. The elhureh is a hambsome ernciform strustare, with a lolty tower, ornamented with rich openworked hat lements amd pinnacles. The living, it vicarase worth jobl. a yar nett, is in the silt of the dean and ehapter of Christehmelh, Osford. There are two subordinate curacies in the par., at. Ohllury and Faltield. It has also baptist, Iudepemlent, Quaker, and Wesleyan meeting houses; a grimmir sehool for boys, mother free silool for thinty-sis chiblren, ami ahmonses. liat it is primepally remarkable for the remains of a marnifieent easile, begun by Stalloral, duke of Buckinirham, in 10 l , but left in an mbinshed state when he sulfered on the seallold, in $152 \boldsymbol{2}$. Its site is very commanding; its st yle is the late lerpendicalar, with good details; and it is especially inter-

THURGAU
during the heat of the light without being notiend by any one! (Livy, lib. xxii. cap. 5.) It th: ent, however, the trimmpli of llamibal was cunplete. The Romans lelt 10,000 men, inchadine their consul, Flaminins, whose rashness had toll them into the share, deal on the tield of lattle: and, aceording to l'olybius, they lost abont the same number, taken prisoners. The loss of the Cartharinians did not exceed 1,500 men. (sis Livy, ubi sumra, and the excellent account of l'olybins, (icneral Ilistory, lib, iii. cap). 8.)

In moticing the lake of Tlirasymene, Byron has alluded to the incident of the earthquake as follows:-
'And such the storm of battle on this day,
And stich the frenzy, whose convuision blinds 'To all wave earnage, that, beneath the fray, An enrthquake reel'd inhectedly away !
None felt stern Nature rocking at his feet,
And yawning forth a grave for thuse who lay
Ujon their bueklers for a wiuding-shect;
Snch is the absorbing hate when waring nations neet! Chiltu Harold, iv, 6:3.

TIIREE RIVERS, or TROIS RIVIERI领, the third town of Lower Canada, cap. clistr. of its own name, on the Sit. Lawrence, where it is joined by the St. Maurice, 16 m . SW. Quebee, and 75 m NE. Montreal. 1'op, 5,280 in 1861. The town derives its name from 2 small islands at the month of the St. Manrice, which divide it into 3 ehamels, but the town is on the W. bank af that river, The situation is agrecable, though not the town itself, which is one of the olilest in Canada. It contains about 500 dwelling-houses, mostly built of wood, a hundsome court-house, a strong gaol, a Catholic and a l'rotestant church, an Ursuline convent, founded in 1677, and varions other public buildings. The river is deep near the town, and the steamers stop to take on lwarl passengers and finel. Here the courts of justice for the district are held; and here, at one period. a great share of the fur trade centred. Some firs are still brought down by the Indians, and purchased by the agents of the lludson's Iay Company; and there are a fuw breweries, and potash factories. But its generul trade has been mostly absorbed by Montreal and Quebee.

Trois Rivieres was of much more importaned formerly than at present, having been originally: the cap. of Canalia. Its popr. is still principalli French, and the names of its streets are all tracenble to l'aris.

TILURGAU, or TIIURGOVLA, a canton of Switzerland, in the Nid. part of the confed., between lat. $4^{\circ} \circ 20^{\prime}$ and $47^{\circ} \cdot 10^{\prime}$ N., and lons. $8^{\circ} 41^{\prime}$ and $y^{\circ} 30^{\prime} \mathrm{E}$. ; having S. St. Gall, W. Zurich and Schafflausen, and N. and E. the Rhine and the lake of Constance. Area, $268 \mathrm{sq}, \mathrm{m}$. I'op. $90,5 \mathrm{t} \boldsymbol{7} \mathrm{im}$ 1861 Thurgat, though it cannot be culled nometainons, has a very uncyen surface, consisting of low hills interspersed with narrow valleys. The eanton derives its name from the 'Ilnir, which traverses it about its centre; next to whieh, the prineipal rivers are the Marg and Sitter. Agrienlture is the prineipal ocenpation of the inhabs., atid though the soil in certain parts requires a great deal of manure, 'lhurgau may, on the whole, be considered one of the most fertile cantons of the eoufed. There are extensive vineyards over nearly half the canton, and the value of the produce of wine, in average years, is estimated at $80,000 \%$. sterling. The internal consumpion may be about a fourth part of the whole quantity, the remaining three-fourths being exported to St. Gall and Aprenzell. Considerable quantities of fruit and eyder are exported in the same directions, but the quantity sent to Germany has of late

Iop. $90, \mathrm{~s}+7 \mathrm{in}$ camot be called monusurface, consisting of narrow valleys. The om the 'Thuir, which ; next to which, the rg and Sitter. Agripation of the inhals., rtain parts requires a tur may, on the whole. host fertile cantons of msive vineyards over the value of the proyears, is estimated at mal consumption may e whole quantity, the us exported to St. Gatl ble quantities of fruit the same directious, Germany has of hate
peas diminished. Abent 100,000 hectols. of wheat are rused anmually, being abont two-thirds the consmoption. Oats, hemp, tlax, potatoes, and hopis are the other articles ehietly raised; oats and brandy are among the exports to Appenzell. The breeding of cattle is inimportant; but a large proportion of the S. part of the canton consists of the pasture-land, and lean cattle being imported and fattened, are suldsequently exported to the neighbouring states. Nearly one-third part of the inhabs, are more or less engaged in mandacturing labour, principally in weaving cotton and then fabries, and spimbing flax. The manufacture of linen is, however, deelining, and its anmal vulue is not now supposed to exceed s,010) a year. From 3,0100 to 5,000 looms are employed in weaviug cotton goods, the chief dentes for which are St. Gall and Kurich. Weavers' wages range from about $\overline{\mathrm{J}} \mathrm{l}$, to ls . lill. o day. There are some rather exteusive establishments fur cutton printing, the prints being sent elietly to the levint. Silks are mannfactured for the Fruch markets; and a good deal ut the packing gancass, sold in Basle and Zurich, is made in 'lhurriul.
Ihe constitution, revised in 1831, is democratic. The great conncil of 100 mens., which has the sole legishative jower, consists of the representatives of the 32 circles, into which the canton is divided, elected by all the citizens above 25 yeurs of age who pay taxes on property to the value of 200 thorins, and are not panfers, or otherwise disgualified. The great conmeil assembles twice a year, for 15 days at a time, moss its sessionsbe prolonged in special aceont: it is wholly renewed every two years, half the mems. going out yearly. Thic csecutive duties are intrustel to a comieil of $t ;$ mens., who must he 30 years of age, and who hoted office for 6 vears. Two lenulummans are chosen anmually, and preside for 6 months alternately in the great and little comucil. Each commune has its own eomeil, composer of the syudic, or mayor, and 4 other mens., and its police and petty civil tribmal. There are courts of arimital jurisdiction in cath of the 8 districts of the cunton, and a supreme court of appeal, in Francufoll, the cap. 'I'he public revenue of the canton, in lsit amomited to 899,262 francs, and the experditure to 875,308 franes.
As early as the 5 th eentury Thurgau was governed by its own comots. It afterwarils passed t" the dukes of Zaehringen, and the connts of Kybure; and, in 126d, to the lousie of llapshurg. Ini 1 lit!, it was conquered from the latter by the confederated Swiss cantons, and governed hy their bailitls or prefeets till 1798. It was then cumstituted a separate member of the coufenl., in which it now holds the 17 th place.

THURLES, an inlaud town of Ireland, prov. Munster, co. 'Tipperary, on the Suir, $77 \mathrm{~m} . \mathrm{SW}$. Dublin. Pop. 4,788 in 1861. The riverintersects the town, the commmication between its sillerent parts being maintained by a bridge. The public buiditigs comprise a fine Rom. Cath. chapel, which scrves for the cathedral of the see of Cashel, a lium. Cath. college, 2 numneries, with chapels anuexed, a market-house, a conrt-house and bridewell, and a barrack. The town stands on a wide, scantily-wooded, uninteresting plain. It is tolerably prosperous; for, having no larger town nearer to it than 40 or 50 ml , it supplies an extensive interior elistrict, and is besides an imfortant market for comotry produce. There are 15 ammal lairs and 2 weekly markets held at thurles. 'There are two momeries; in one of which are "0 muns and tio boarders: there is also a liom. Cath. show belonging to the Rom. Cith, insti-

tution. (General sessions are held twiee a vear; petty sessions on Saturilays : it is a constabialary station.

T'HULRSO, a sea-port town of Scotiand, N. shore, eo. Caithness, on the Pentland l'ritl, at the bottom of 'T'urso l lay, between I warrick Hearl on the E. and Holburn Head on the W., at the point where Thurso river falls into the
 1861. The town is irregularly built, and rather ill paved; but in the sulurbs are some neat freestone honses, and the chureh, bnilt, in $1 \times 532$, at an expense of $6,000 \mathrm{l}$, is a landsome structure: it has also a mecting-house for original seeeders, an Indepentent chapel, and several schools. A short way to the E. is Thurso Castle, the scat of Sir (Beorge Sinclair, bart., proprictor of the town. Though the most northerly post town of Great. britain, it las a daily commanication by a mail coach with Inverness and the south, and it communicates by regular tralers and stenmers with Leith, Wick, and other ports. 'I'here is a liarbour at the montls of the river for the accommonation of vessels drawing 12 ft . water; and ships of any burden may anchor on the W. site of the bay, in Scrabster Roads, muder cover of llolhmen Itead. A little straw phat is mannfactured in the town, and it has also a roje-walk and some tameries. The town has 3 magistrates, appointed by the Sinclair family, the superiors of the lor.
IlIBlill (an. Tibris, Ital. Tevere), the most celehrated though not the largest river of Italy, rises in the Apennines, about 5 m . N. I'ieve sim Stefano, and has a general SSE. course to within 20 m . from Rome, when it turns $S W$., and enters the Mediterranean by two months, 17 m . below that eity, after a course of alnotht 150 m . It is said to have been anciently navigable for vessels of considerable burden as far as liome, and for small boats to within a short distance of its sonrce (Dion. Mal., iii. 44 ; Strab., v. 218 ) ; and it still continnes to be navigable, in certain seasons, as far as the contluence of the Nera, 38 m . NN E . Rome: but its navigation is at all times difficult, especially at its embouchure, and in the vicinity of Rome, and requires continual attention. The entrance of the river from the sea, and its sulsequent mavigation, are, in fact, so troublesome, that the harbour of Ostia, at its mouth, was relinquished in antiquity for that of Centum Celler, now Civita Yechia, which still continnes to be the port of Lome, though it he eonsiterably more than twice the distance of Ostia from the eity, with which it is commected morely by a ronic. (Sce the articles Civita Veccumand (osra.) Its prineipal tributaries are the 'Topino, Nera, and Teverone from the E. , and the Nestore, Chiana, and Nepi from the N. and W. By the Chiana, it communicates with the Arno. Besides Rome, Borgo Nan Sepolcro, Citta del Castello, liratte, Orto, Otricoli, Magliano, and Ostia are on its banks, and Perugia and Orvicto in its immediate vicinity. In antiquity the Titier divided Etruria from Úmbria, and the territories of the Latins and Sahines.

Notwithstanding its immortality of renown, the banks of the Tiber are not picturesque, and at tirst sight generally disapperint strangers. The river is muddy, and during the floods. to which it is very sthliject, verities the description of IIorace:-
'Vidimus flavim Tiberim, retortis Litore Etruseo violenter undis; Ire dejectum monmmenta regis.

Od.i. . .
But at other times it fows with a comparatively gentle current:-

Et terram Ifomarham vendes, ithi fodills, arva Inter ophon virum, hent fluit agmite Tibris. Emeil, it. v. ist.
It was anciently called $A l / h u l a$, and this name, as well the the epithet, fherms, siven it by llorace and other writers, was wo dondt derived from the Fellowiwh lane of its waters, discolomed by the imul with which they are boaded. some travellers, measmring its mase of waters by its bulk of fane, und tindiug its appearmuce inferior to their proconceptions, lane represented it as a petty mud insigniticant stremmet. Llowever, thongh liar inferior in breadh to all the great rivers, yet as it is generally, from n few miles nowe lame to the
 witi, justice, be considered a contempible stream. Thonigh the 'Tiber at lione be mot so wide as the tlyde at diangow, it is deeper, and has rertainly a larger volume of water. Nowe and below the city it roms throngh groves and gardens, and waters the villas and ret reate of the richer lamans. lut beyond l'onte Wolle it rolls through a home fract of phans and hills, fertile and greeth, hut uncultivated mud deserted. lot lhese very banks, How all silenec and solitude, were onore, like those of the 'Thames, eovered with life, activity, mul rural heanty, linel with villases, and mot unlesquintly decorated with palaces. "I'luribus props? solns, quem retari in ommibus terris cemmes, ameolitur aspicilaryue rillis.' (Illu. Mist. Nat., lib. iii. !1.) bielow the dity, when it has passed the Viller Mhullizan, it fills again into a widlerness. It forminates in a marshy pestiferous truet, its two arms inchsing the lavhi Sarre of theancients.
 Lant of Firr,' so called from its apparent rolcanoes by its discoverer Magellan, or Magelhnens, a lare island, or rather gromp of ishands. lying off the s. extremity ol S. Amerian, from which it is separated by the Strait of llatellan. The gromp, whed extends between the 5:3rl and bith deges of S. lat., and the tilth and $\overline{\text { antlo }}$ of W . longe, consists of Kingr Clarles' Soath Lamd, Navarin, lloste, Clarence, and some other ishanss, Cape llorn forming the most N , point. 'The E . part of King 'hames' S. land is low, witl plans hike those of l'atagonia; but near its $W^{\prime}$. side it is traversed by momatain chains nearly l. (10) 'ft, in height, covered with perpetual show, Slate is abundant, but hornblende is said to be the prevailing roek here and in all the alincent islands. Lava and other voleanie products have been fomme. The eometry, in miny parts, seems well wooded and Wiater's hark (Drymis Winferi), introduced into medicine ill I579, was diseovered here. A kind of birch (Betule antarrticu) with a stem from 30 to 40 inches in diameter, is one of the principal forest trees, and probably otler trees may be foume ; but the interior has hitherto been very little explored. finamacoes and foses appear to be the most mumerous wild anmals. The Fuegians are a peenliar race of savares, in noarly the lowest stage of barharism. 'Their most striking physical peculiarities are a very small low foreheasl, prominent brows, small eyes, wide mostrik, large month, thack lips, lomer black hair, aud large body, as eompared with the extremities. They go nearly nakel, but smear ower their bodies with varions sthastances: live in wigwams made of the trunks of trees, and subsist almost wholly on lish, seals, and testacea. They are oceasionally cemmibals, and have, in fact, no objection to any kind of frod. They are not wholly ignorant of the arts, beiner acquanted with the one of fire, and availing themselves of bows and arrows, and in the $N$. of the boles of the l'atagonians. On the whole, however, they would appear to be decidedly below many of the lower

## 'TIMOR (TITE E.AS'T')

aninals lin respect of combiort, and to be but litth above them in saracity and invention. Their langunge is said to prescit many atlinities with the Armeanim.
'Tlifils. See liurminates.
'1llilltity, a town of Ilolland, prov. N. Hra-

 Isib. Tilhurg is the best huilt town in the pros., thomgh, from lying ont of nuy great roal, it is little visited by travellers. It has three charelow, a chaped, and a hambome castle: and ham very extensive hobrics of line ame comese wollen cloths, abl eassimeres. It sends 3 deputies to the provincial states.
'I'llsl'I', n town of the I'russian stales, pros, I'masia, rag. (Gmbinnen, cals, cire, on the Niomen or Momel, where it is joined by the 'Tilse, $6: 1 \mathrm{~m}$
 of garrisum of 75 men. The town comsists prinaipally of a lomig nud wide street, with a few gam lowking honses. The Niemen, which is naviablb. up to the town, is here crossed be a lirifere of
 timber, corn, hemp, thas, provisious, was, aud leather, sent down the river in llat bottomed hoats, for shipment at Memel. The cottine of the camal of ( Iginaky has, hy miting the Nirmen with the lnidpr, eflected a commmaination hertween the baltio and tho bank Nea. It has :un old bastla, s.veral charches, a royal gymmaina, lospital, amd hoaral of taxation, with mambarturis of woollen cloth, hosiery, gloves, leather, and harimare.

This town is famous in diphomatic history fur the treaty signed here on the Tth al duly, ixwio. by France, Russia, and l'russia. 'The emiteromes that led to this treaty were hed betweren Xipoleon and Mlexamder, who met, for the tiret time, with: great jomp and ceremony, in a ralis mooral in the middle of the Niemen, on the wh of lime.

TlMt) (ThIE EAST), an island of the E. Archipelame, 2ad division (Crawford), prine pally belonging to the Dutch, hetween the le:ird and lestlideqrees of $S$. lat., mat the 13th and lith
 from the NW. coast of Australia. It extemb obliquely from NE. to SW., its length being estimated at 250 m , and its average breadth an
 800,100 . The matives of the interior are liapuan negroes; the consts are inlubited mostly by Malays, Chinese, Dutel, and I'ortugnese, the latter possessing the town of Dilli, on the NL: side of the island. Surfinee mountainons, hut withont voleanoes. Its rivers are small; and the soil is, mon the whole, not particularly fertike Sandal-wood and wax are the most valuable ponducts: about $10,000 \mathrm{cwt}$, a year of the tisst wem fiomerly exported to Java. The natives cultivate rice, maize, millet, yams, sweet potatoes, and cotton; rice and maize, with the surar of the lontar palm, and sago, are their principal artide of food. Goln is found both in grains and large pieces; but the aborigines are said to have a strond aversion to seareh for it, and once masatered: party of lutch, sent inland to eollect the metal. The imports are rice, arrack, sugrar, tea, coltice betel nut, and Clhinese, Jndian, and Euronean manufactures; the duties on the trade have heen said to sutlice for the keeping up of the Duth establishments on the island. The Duteh fixel themselves at Coppang, on the SW. coast, in lain; but we learn, from recent acennts, that they have now all but abantoned 'Timon for Sandaidwoul

TIMBLCTOO, or TOMBLCOTOO, a town of fentral Africa, on the S. Leriler of the great desert of Salara, about 8 m . N. from the lolibn, or Niger, but near one of its arms or tribitarios, in about hat. $17^{\circ} 80^{\prime}$ N., long. $3^{\circ} 40^{\prime} \mathrm{W}$. Stationary poln. probably 10,1010 or 12,0100 , but, aceording to the ealdulations of one of the visitors, Jr. Barth, at times above 20,010). The existence of this city has heen long aseartained; but as till recently it was muly known to buromeans by vage reports and suspicions narratives, the most condieting and contrabletory reports have been made respecting it. Cortaninly, lowever, the ignotum pro maguifico has soldom been more atrikingly exemplitled than in this instance, the most exaggeratel and unfunded statements having been jut forth respectine its magnitude, commerce, and pop. These Hatements have now heren completely dispelled, and fimbuctoo is ascertained to be a very poor town in a wrotehed country. It is situateal amid burniur and moving subis on the verge of a moras. It is of a triangular form, about 3 ms in circuit, and is surromaled by walls. The better sort of hanses, built of bricks tried in the sum, atre larige, hut not high, consisting entirely of a grommi-floor. lach homse forms a simare, contaninir two immer "onrls, romul which are ranged the chambers, widunt windows or chimmeys, and serving at once fir magazines and bed-rooms. But within and without the town are many straw huts of a cirenlar firm, spriog as lodgings for the poor and for slaves, who well merchandise for their masters. The strects are clean, ind sulliciemty wide to allow three horsmen to pass abreast. The fown has sevell mosques, two of the largest of which have walls alonit 15 ft . in height, and are each surmonuted by a tower. lt is chiotly inhabiten he negrees of the kissom nation; hut it is also the rowilence of a consiterable number of Dowrs, who earry on the trade of the town, and who leave it as soons as they have aecumblated a little proferty. The inhabitants arezealons Mohammedans.
The trade of 'limbuctoo is consilerable, it being a station fur the caravans between N . Afriea and the Soudan, or Nigritia, and also a depót for their produce. Salt is, however, the staple merchambise of the place. This important artiele, which is wholly wanting in coudan, is brought from the mines of Towileyni, in the tesert, abont 185 m . N. from the town, being conveyed thither in the fom of cakes on the backs of cmmels. In iuldition to salt, the caravans from the Barhary States bring dates, stulis of European manulacture, with fireams, gumpowier, harilware, glass ware, coral, thacen, paper, and other artieles, which they exchauge for slaves, gold-dust, ivory, astrich-leathers, palm-oil, nul gioms. Owing to the sterility of the surromaling comntry, all the provisions repuired for the use of the town have to be bromplt from Jemne, on the Niger, abont 300 m , SsilV. Timductor. These are eonveyed by an arm of the river to Cabra, whence they are carried by camels, almut. 3 m ., to the town. Jemue, nccording to Paillie (Travels to Timbuctoo, ii. 48), is a more important, richer, and more commercial town than Timbuctoo. The Tounriks, a warlike and savage tribe, on the banks of the Niger, exact heavy duties on all the commorlities imported into Cabra, and ncasionally eommit extensive out rages. 'Timhuctoo is governed hy a negro governor or prisece,
who receives presents, hat imposes un duties either ons the inhabs. or the prombeta bromght to the town. The gevermment is, in fat, patriardaal, mind the shaves, of whom there are great monbers, are well treaterl.
Thimbuctoo is sad to have been fommed A.b. 1213 , and to have somin after become the atpo at a great Monrish momareliy (Waldknaer, ledederehes
 eujoy this distinction, its trade, as well as its imprortanee, is helieved to have greatly der lined. But it is not at all likely that a fown in such a sitmetion shomld ever have been the emp, of any considerable state; and it neems probible that the acconnts of its ancient have bit lifle better fommchation than those of its modern prosperity. hittor, who hus culleeted and disensed the diberent atecomis of limbuctoe publishard previonsly to that uf Caillin, hats exaggerated alike its muportane and its trade, amil has farther indulaenl in sume rather fameiful sueculations as to the incrase of the latter. ( i monraphy of Afriea, Jir. trans. ii. $81-112$. ) It would indeed be casy to show that the barbarism of Mrica depends on matural and permanent, and wot on artiticial or aredidmal circommstances; and thongh its eommeror and civilisation lay mo douht be materially inereased in the eonrse of time, the fair presumpition serms to be that, wing to the mature of the eountry and climate, the wants of the matives and their indestry will always be mach ton limited tormit of their ever beoming exteusive emsmors of Eurnperan products.

TINLAN, one of the Ladrome lshamds, which see. 'INELE'ELLS', a district of lbritish India, presid. Malriss, at the Le cestremity of llindostati, hetween lat. $x^{\circ}$ and $10^{\circ}$ N., and primeipally bro tween longs $77^{\circ}$ and $7 \mathrm{t}^{\circ} \mathrm{E}$., having N. the district of Malura; E. and Sli. the (inlf of Mamar, sephrating it from Ceplon; and sw. and $\mathrm{IV}^{\prime}$. 'Travancore, from which it is divided be a danin of momtains. Aren, $5,5!30 \mathrm{sm} . \mathrm{m}$. l'np. estim. at mearly 900,000 . 'The face of the eomotry is a litele mind lated, but the gemeral apmearame is that of an extensive plan interspersed with small hills. 'The lower partsare well sulplied with tanks, and athord great quantities of riec. On the hanks of the rivers are also mumerons padily fiedds. . There are several thats that rum to a great distance, on which abundanee of cotton is puonheed; the higher grounts are well oultivated, and covered in the season with luxuriant crops of dry grain. S. of lalmacottah, towaris the extremity of the peninsula, the conntry hecomes simbly and bare, eovered in general with l'almyra topes. Towards the li. const, and all romd to the S. , there are several hills of red sand, with which the atmosiphere is often darkened during the windy season. Closo to the sea bench, all along from Thatacurin to Cape Comorin, the small villages are inhabited by fishermen, who are all Christims, and several homan Catholie chorches are sitmated close to the sa,

Tinnevelly is intersected by many winding rivers, which are sipplied with water by both monsoms. The climate of some parts is remarkable. In the N. it is simmar to that of Madura, but in the monntailus on it $W$ W. side are several openings or passes which, while the rest of the comntry on the li. side of Judia is parched up with heat, admit the cool winds prevailing at that perion on the Malabar const. The chef of these is the Arumgole pass, near which is Kotallum, a place of great resort for Earyjeans, on account of its bracing olimate.
lice and cotton are the chicf products of this district ; the last, which is of the lourbon varict: is grown of a smperior puality. Many fruits, ronts. and greens are enltivated, but some of the most

in 1861. Its extensive luit now ilismantled walls finclose a large extent of gromil not lmilt on, with a large spmare, in which is the amient townball. It has mamitactures of woullen chothe, thanmols, and hosiory, oil, soab, earthenware, paper, and saddlery, with potteries, breweries, mul distilluries. It was formerly much more popmilons and thriving, having been one of the most important places in lirabant; but being repeatedly taken :und retaken by the Spaniards, French, mil buteh, in the seventecuth and cighteenth conturies, it athed greatly in consequence.
Tl'CllElEiLIS, a market town and parish of Gimghd, eo, llants, div, Farelam, lumd. 'Titehfieh, on the 'litehiche river, near the month of Suathampion Wiator, $7 \frac{1}{2} \mathrm{~m}$. LiSE. Sonthampion, Irea of par. Jo, 1660 acres. lople $4,0 \cdot 13$ in $1 \times 131$. The town is small bat well built, and is the residence of many fimilies of respectability. a part un the ehured is said to have been built by Willam of Wryeham, in the fourteenth century, and wther parts are still more mucient. 'Ihere is an lmopondent meeting honse, and a charity school for wenty-four children.
Near the town are the remains of 'litelatield llunse, in which Charles I. took refige alter his esiape from llampton Court, in 1617 , built hy the first earl of Southampion, oll the site of a former lommonstratensian abore; hat the mansiun is nuw uearly dilapinated, the entrance grateway and the stables being the only oxtmat remains. 'iatchtided gives the title of marguis to the bentinck family.
THITCACA (L.AKl: ()F"), the largest and most wevated of the S . American combiment, is partly comprised in the dolivian repullic, and partly in that of I'ern; being enelosed by the Corillleriss. of the table lmul of C'azeo, and extending chictly between lat. $1.5^{\circ}$ and $17^{\circ}$ S.. and long. bilo and
 very irreghar, beime divided by a momber of headlands into a main body, of an ohong liom, and thare subsidiary portions. Its area has been extimated at 4.1000 sq. m., and its beisht above the ocem at $12,8+7 \mathrm{ft}^{\text {. It }}$ is said to be in many plates nenrly 500 ft . in depth. It contains many small montanons islands, and from the largest, at its wh, extrenity, the lake has received its nome, which signilies 'the Leaden Monntain.' This i.hand is 3 leagues in leugth by 1 in width, and alont 1 m . from the shore. It is mostly moultisated, but very fertile; and on it tradition places the tirst appearance of Manco Capac. (Geor. dum., v. 8.2.) The island was consequently held in rreat veneration: a temple was ere ted on it by the succeeding ineas, in which a great deal of wealth is said to lave been acommated; ami this, it is alleged. was thrown into the lake by the ladians, on the Spaniards becoming masters of the comintry, Mr. l'entland states that mumerous leruvian rums are still foum on the island.
The lake of 'titieaca reccives several rivers, its. only visible ontlet being the Desarmadero, which flows s., and is soon afterwards lost in the lake of Aullagis. Its waters, though not very potable, abound with tish; and sudden squalls and storms remer its navigation rather dangerous. ©The low hank of the lake,' says a traveller (Meyen, lieise um die lircle), 'are lined with rushes, which are here of great utility, being emploved for almost as many purposes as the bamboo in the E. The liuts of the poor are made of rushes, as also mats fir the thor, and bed covers. The boats med on the hake are also made of rushes twistel together; the rudider and the mast only being of wood. these boats are frequently made with great taste aul ingemuty; the larger venture to some distance
from the linnks of the lake, which, even in calm weather, is suljeet to a hearv swell.
 par. of lempland, co. Devon, limme. 'Tivertom, ont the lise, where it is joined by the loman, 13 m . N. by E. bxeter, and ixt m. WiW. Lomion, ly tireat Western railway. Pope of bor. $1111^{\frac{1}{2}}$ in |x61. Area of par., which is identical with the parl. bor., $2(0, t+6)$ acres, The town is sithated partly on the tongue of land between, and partly on the "pposite banks of, the two rivers, cemb of which is crossed by a stone bridgr. It is nearly-
 greatest lifendtla: it consists chiedly of several tolerably brond and well-paved merets, rmming N. and S. on both sides the lise, and mostly joining Fore Street, the main thoroliflifare, it right angles. The more marrow limes mat streots ara s. of Jore Sireet. 'Iiverton is wateral by small streams from a branch of the loman, calleit the Town leet. On an eminence betwen the rivers are the remains of the enstle, a conspictoms ohject, wedpying about an acre ol' groumb. 'Ihiss fort ross was erected in the reign of stephen, and afterwards came into the possession of the Comrtenays, earls of Devon: In the eivil wars it whs garrisoned ly the royalists, lat after a short siege was taken ly lairfix. The chureh, oll min cminemee near the castle, is reekomed the dinest emen-
 It has a tower $1 / 16 \mathrm{ft}$. in height, and is diedy in the Perpundienlar style, thomenthere are sume remains of an earlior date and all artiched Norman downaty. The ceiling is coverl, mat has tracery and rich pendants; like many works of that time, the design is hetter than the execution, The church has some rich soreon-work. In the have are some carious monumental inseriptians; and the pulpit, which was probably made alout the time of Charles IL., is ormamented with the arms of many levonshire fimilies painted in scparate emmpartments. The altar-piece is a rich pinting of I Peter delivered from prison. There are $t$ other charches and several metini-honses, a spacious market-hotse hoilt in $1 \times: 30$, it corn market, town-hall, bridewed, assembly and sabseription reading-rooms, and a theatre.

I'iverton has numerous charitics. A free gram-mar-school, in min ancient and venerable stone edifice, founded and endowed by a rich elothier of the town, named Blundell, in 1604, has now an ineome of nearly 7001 a year. It fuminhes instruction for 150 boys, and sends $f$ stulents to either of the miversities, and I to landiol College, Uxford; and it lans 2 exhihitions of $30 l$. a year ench, besides other sehoharships. Another free school was lomaled by R. Chilectt in 1611, and there are several miwor schooks of a similar kimil. The almshouses for 9 poor men, founded by direenway in 159 , have ant income of nearly 200h., and the market trust money distributed io the poor by the corporation amounts to 3366 . a year. The argregate income of the various charities of Tivertom is estimated by the charity commissioners at 2.600. a year. The mannfacture of lace employs from 1,200 to 1,500 people. The tuwn was at one period famons for its baizes, scrges, plain eloths, kerseys, and other woollen goods, and even as late as 1612 was regrarded as the head manufacturing town in the W. of lingland; bat its manafactures received a severe blow from a most destructive tire, which oceurred on the 5 th of Augnat, 1612 . from which it never fully recosered, ant the introduction of Nurwich statls, in the midille of the last contury, conpleted its decline. At present the woollen mambature employs only a fow hands. 'Tiverton is divided

Hor. 1ib, l, ot. vli, v. 10.
In modern times, the upher or principal fill was, ill a great de gree, artiticial, from the water laving been precipiated over an embankment that had been formed to dam ip, the river, In 18:2if, however, one of those destrinctive thomes. that oecasionally oceurred in antiguity (Plin. lipist., lib. viii. 1 ), as well as in uir own timen, swept away the whole of this embankment, along with a charch and some eontigu has homses, so that the uper fall was nearly destroyen; at the same time that a brameh of the river which ran fhrough the town was dried nif. Ifit now ehatimels linve been sinee ent, by which, we believe, the river has been agaia precipitated down a lolty fill.

In the conrt-yard of an inn in the town, overhangius one of the cascates, is the elassieal ruin of it temple, supposel to be either that of the Sibylla Tilorrtim, or of Iesta, constructed in the reign of Augustus. 'This betutilul structure is a rotunda, $2: 2 \mathrm{ft} .11 \mathrm{in}$. in dianseter, surrounded by an open portico of composite columns. Though expused to the weather, without any rool or covering, it is better preserved than might have been expected. 'It derives,' says Eustace (Classical Tour, ii. 23:2), 'much intriusic merit from its size and proportions, bat it is not architectaral merit alone which gives it its principnl interest. l'laced on the verge of a rocky bank, it is suspended over the praceps Anio, and the domas ressomatin of the Nainds; Augustus and Maceenas, Virgil and llorace, have reposed under its columus; it has survived the empire, ind even the language of its fommers; and, atter 1,800 years of storms and tempests, of revolutions and barbarism, it still exhibits its far-proportioned form to the eye of the triveller, and claims at once lis applanse and
abmiration. It may be worth menioning that an Dimplish mohleman, tho late liarl of linatol, who taineal frermisxion I'rom the anthorities ot Timali to taks: dowit and varry away lhit rlassumb ruin, with the view af witting it up ngala in hia park has lingland, latikily the dexerration was prevented by the intorlereme of the: l'mal government.

piece of ice is often put in : 2 or 3 pieces will last the whole winter. They use ne stoves, and have neither chairs nor stools. The furniture consists of a few carthenware utensils, and a set of teatable appendages. The women never eat or drink till the men have done, and then seldom in their presence. Owing to the thinness of the pop, and the immense distances between the different towns, edncation is very little diffused, anel besides the schools in the cap. there are hardly a dozen in the rest of the government. Except 'Fobolsk, the cap., and Toumen, there are no towns worth notice.
Tonotsk, a city of Asiatic liussia, the cap. of W. Siberia, and of the gov. of its own name, on the Irtish, close to its junction with the 'Jobol; lat. $58^{\circ} 11^{\prime} 42^{\prime \prime}$ N., long. $68^{\circ} 6^{\prime} 15^{\prime \prime}$ E. 1'op. $16,2+10$ in 1858 . The town proper is built principally on the flat summit of a hill commanding an cxtensive view, and is surrounded by a strong brick wall with square towers and bastions. When aproached from the W. it has a remarkably fine appearance: it contains some good and solid baildings, most of the government otlices, and the residenees of the liussian and German settlers, being within the walls. Along the banks of the river are suburbs, inclosed by a ditch and palisade, and inhabited mostly by 'lartars. 'Ihe streets, which eross cach other at right angles, are mostly paved with wool. Among its publice edifices the most remarkable are the cathedral, in the byzantine style of architecture, with 5 cupulas, the archhishop's and governor's palaces, a monastery, and] a large hospital. The climate in winter is very severe, so much so as sometimes to frecze mercury : but the dress and houses of the inhabs. lecing fitted to resist its inthence, it is not so disarreeable as mirht be supposed. The rivers furnish an inexhaustible supply of fish, and prowisions, fur and game of all kinds are cheap and abmolant; and shops, theatres, and places of public amusement are numerons. Being on the great road from hissia to China, it is well supplied with most European and Chinese goods; and Freuch wines, Eherlish porter, an!? books of all kinds are to be met with. Dobell (Travels in Siberia) says, 'the society of Tobolsk may fairly stand a comparison with that of some of the best provincial towns in Rasesa.' Among the inhabs, are many descendants of the S;vedish officers, sent thither alter the battle of lultowa, to whom Tobolsk is mainly indebted for its superior civilisation.
The city, which was founded in 1587 , is the residence of the governor-generai of $W$. Siberia, comprising the govs. of Tobolsk and Tomsk: it has two ecelesiastical and several Lancastrian schools, and various charitable institutions. No conviets er malefactors are sent thither from European Russia, althengh persons banished to Siberia for political offences are sometimes permitted to reside in Tobolsk.

TOCA' (an. Berisa), a town of Turkey in Asia Minor, pach. Sivas, on the Tosamlu, near its conflatence with the Jezil Irmak (an. 1ris), on the military road from Samson to Kharpost, 35 m . $S \mathrm{SlE}$. Amasia, and 55 m . NNW. Sivas; lat. $40^{\circ} 7^{\prime}$ N., long $36^{\circ} 30^{\prime} \mathrm{L}$. Tocat would appear to have latterly declined rapidly in pop. and importance. Tournefort, by whom it was visited in the carly part of last century, says it was then much larger than Erzeroom ; and he estimated its pop. at 20,000 Turkish families, with 4,000 Armenian, and 300 or 400 Greek do., which on the most moderate hypothesis, would make an aggregate of above 120,000 inlıabs. The pop. was estimated by liinneir, in 1810, at only 60,000 ; and, according to Mr. Brant, by whom it was visited in 1850, it was
then reduced to a pop. of 6,730 families (between 35,000 and 40,609 individuals), of which 5,000 were Turkish, 1,500 Armentian, 30 Rom. Cath.,it) Jewish, and 150 Greek. The position of the town is strikiug and singnlar, being built partly at the bottom, but principally on the dedivities of two steep hills, on the side of the narrow valley in which it is situnted. The greater number of the louses, which are mostly of wood, have two stories; the strects are well paved, and the springs rising on the hills on which the town is buitt are so numerons, that cach house has its peculiar fomntain. Owing to its situation, the climate at certain seasons is oppressively hot; and it is then. also, apt to be unhealthy. With the exception of the mosques, Armenian charches, and khans, it does not appear to have any bnilding of consequence.
The valley, for about 3 m , above the town, is occupied by grardens and vineyards.
TODMOULDEN, a narket town and chapelry of England, partly in the par. of Rochdale, co. hancaster, and partly in that of Halifax, co. York, 1m . NNE. Manchester. Pop. of town, 11,79\% in 1861. The inhabs. are principally employed in the manufacture of fustian, cimity, velveteen, and other cotton grools, with woollen fibries similar to those mamufactured at Halifax and Rochutale, The lewhate canal, which passes ly 'Jowhorden, has greatly promoted its prosiperity, which his increased rapidy within the last 20 years.

TOKAY, a town of llmarary, co. Kemplin. at the contluence of the bodrug with the Theiss, 113 m . NE. hy F. I'esth, on the railway from P'esth to Kaschan. P'on. 4,138 in 18 a7. The town has a cathelral, a Lutheran, a lieformed, and a United (ireek chureh, a convent of liarists, and one of Capuchins, and was formerly defonded by a castle demolished in 1705. 'Tokay derives its celcbrity from its being the entrepot for the sale of the fabous sweet wine of the same name, made in the hilly tract called the Ilegallya, of submontine district, extenting 25 or 30 m . Nilf. from the town. The Tokny is produced by allowing the grapes to become dead-ripe; the tinest phality, or essence, being that which flows firm the grapes before they are trodden by the mere pressure of their own weight; the next quality (ausbruth), is that which is obtained by treadili, the grapes, with the nddition of a certain quantity of must, or juice derived from common grapes; the third and lowest quality (maslas) is that which is obtained by the application of a greater degree of puressure to the grapes, and the addition of a still larger quantity of must. When new, 'lokay wines are of a brownish yellow muldy colour, which, when very old, ehanges to a grecuish tint. The wine made in favourable seasons will keep for almost any length of time, and continues to improve with age. The best qualities are extremely rich and luscious, bat cloying; and, meses very old, too sweet for palates accustomed to austerer wines. The tinest and ohlest varicties of Tokay feteh inmense prices. The best qualities are usually bought up for the imperial cellars; small quantities being sent as most aceeptable presents to foreign princes and distinguished individuals.

T'OLEDO (an. Tolctum), a celebrated city of Spain, formerly its metropolis, in New Castile, cap- prov. of its own nume, on the Thagus, is m. SSiV. Madrid, on a branel line of the railway from Madrid to Alicante. Pop. $17,2 \overline{7}$ in $180 \overline{4}$. The city stanis on a rocky lill, nearly encircled by the river, and encompassed by n wall thaked with abont 150 small tuwers, built by the Moors. luternally, 'loledo is ill-built, poor, aud mean,

with narrow, steep, and badly paved strects. hut, with the exception of Gramada, its situation is the most striking of any town in Spain. Its fine, irregnlar line of buitdings covers the summit and upper part of the hill, behind which, as appronehed from Madrid, the dark range of the Toledo mountains forms a majestic backgromd. Besides the numerons towers of its convents, churches, and stupendous cathedral-the metropolitan chureh of Spain-the ontline is broken by other buildings of a more grotesgue or more massive form; while, here mul there, the still greater irregularity of the outline points to ages too remote to have left to modern times any other legacy than their ruins.
Down to the recent changes by which the Spanish ceclesiastics wre strippel of the greater portion of their wealtre, : in ennes of the archfisitup and clergy of i" is, "se immense: and the pop. of the eity consisted principally of priests and friars, and thicir dependants. The cathedral, futulet in 587 , is in the same style as those of Seville, Burgos, Milan, Siena, and Bologna. It is internally 38.4 ft . in length, 191 in breadth, and 10 in height. It has a tower and spire, but the latter is in the style of the Flemish and German spires, a heap of blue turrets piled one upon another. The rouf is sustained by 8.5 columns, which divide the church into tive aisles. The collums that rum along the aisles are 45 ft . in circ. there are tis painted windews, and surreunding the choir and the highr attar are 156 marble and ןwrihyry pillars. Its interior is elcgantly, as well as magnitioently adorned. The clour is covered with carvings representing the conquest of (iranada, executed by Berrugucte, a puib of Michael Angelo, and Philip de Borgona; aud nmong the paintings are works by linbens, Titian, Domenico Greeo, Vandyke, Guido, E. Cases, Vincolte Carduclo, Bassano, and other masters of the first celebrity. The ceiling of the sacristy is painted in freseo, be L. Giordans, and has a pieture of the Assumptioni: Ly Carlo Maratti. The peple and the king of Spain ire always canons of this cathedral; and the revenne of its archbishop once amonuted, it is helieved, to little less than 100,0001 a a year. The gold, silver, and jewels, the plumiter of Mexico and Pern, preservel in the churdh, mostly eseaped falling into the hands of the French. 'The arehbishop carried away the more valmable articles to Calliz, those that remained in their places being releemed for the emmparatively tritling amount of 90 arrobas, or $\mathbf{2}, 250 \mathrm{lbs}$, of silver.
The alcazar, once the residence of the Morrish. and afterwards of the Castilian sovereigns, is the other principal edifice in the city. It is a noble pile of 3 stories, surmounted by a balustrade, and forning a square of $2 \mathrm{e} t \mathrm{ft}$. It is built clelictly in the Corinthian and Composite orders, of the dark stone with which the liseurial is built. The N. and $S$, fronts were erected in the time of Charles V., the former by Covarrabias and Vergara, and the latter ly Juan de IIerrera. When Toledo ceased to be the metropolis of Spain, the alcazar was converted into a workhouse, and it was subsequently employed for a silk mamifactory, established liy the archbishop; but it is now untenanted, nul utterly neglected.' Besides the cathedral, there are numerous churches, monasteries, munneries, and other religions buildings. Few, however, of these are worth notice. The lirancisean comvent is a time edilice, and has a chureh built in the time of Ferdinand and lsabella. The late Abp. Lorenzano established a lunatic hospital at Tolelo; built the modern editice for the university, which in 1830 had more than 700 students, principally in jurisprudence; and founded a colluge for girls, eath of whom is dowried, provided they
do not go into a convent afterwards. There are several other colleres, numerous hospitals amd asylums, a handsome town-hall, two bridges over the Tagns, one originally a himan work, hearing a Roman inseription, and terminated on one side ly an areh with Corinthian columns; and a mint, silpposed to date from the time of the homans. There are a few pleasant promenades aromed the city, but the only public lounge in Toledo is the Plaza Real. Bht this square is half monopolised with blacksmiths' shops; and all the others nro small, mean, and principally useful as marketplaces. The houses are mostly floored with brick, and are consequently dusty ; and the Roman aqueducts being destroyed, water is sold about the streets, carried in small barrels on asses' backs. There is no pablic phace of diversion of any kind: formerly there was a theatre, but it was suppressed by a royal order ohtained through the head of the university. Nowhere are Spanish customs seen more pure than in Toledo, and nowhere is the monotony of the tertulia more striking. The sole amusements are talking, or playing busto for a very low stake; amd aiter a glass of agua freserf, the party separates. In Toledo, a certain circle ngrees to form a tertulia; one honse is selected where it is to be bede, and the same individuals assemble at the same honse, and at the same hour, every day throughont the year. No almisture of foreign, or even of modern, innovation is to be seen in 'I'oledo. Men of all ranks wear the cloak; and the small round high-crowned Spanish hat is worn, not only by the peasantry, hat umiversally hy persons of all classes. Ximong the women no colours are to be seen; black is the universal dress, and scarcely any one enters a chureh unveiled.

Toledo has, from a remote period, been famons for its manufacture of sword blades. The royal sworl manuliactory, which is of grent extent, ind about 2 m . from the city, is close to the river, which turns its machinery. It once employed many hundred hands, but the number has greatity deereased in recent times. In 1860, ahont :i) men were emploved, who finishel abont 8,000 swords a year. They work by the piece, and make usually about 100 reals (20s.) per week; some of the most industrions 2 l reals more. The art of tempering the steel hat, for some time, declinet, but it has since revived. 'The tlexibility and temper of the blades,' says a traveller, 'are surprising: there are two trials which each blade must undergo before it is pronomecel sound; the trial of flexibility, and the trial of temper. In the former, it is thrust against a phate on the wall and bent into an are, at least three parts of a circle. In the secom, it is struck edgeways upon a lemlen table, with the whole foree which can be given by a powerful man, holding it with both hands. The blades are polished nion a wheel of walnut wood,' In addition to its sword mannfinctury, Tuledo fabricates church ornaments, a few woollens for hospital use, with paper, guitar strings, and coarse glass, and has some dyeing and filling works.
The origin of Toledo is lost in obscurity. After having belonged to the Carthaginians it hecame a Roman colony, Few traces of Lioman editices, however, exist, except part of an amphitheatre, and some seattered remains of the Roman walls. In 467 it was taken by the Goths, and became the cap. of their kingdoin in Spain, till taken by the Moors in 714. Alphonso VI. and Rodrigo Diaz expelled the latter from Toledo in 10xis; and, notwithstanding three vigorons sieges in the succeeding century, it has remained in the hands of the spaniards ever since. Its decay dates from

TOLOSL
the removal of the court to Madrit, under I'hilipr II. The celelorated Cardiual de Ximenes, regent of Span daring the minority of Charles V., was, for a lengthened period, archbishop of 'loledo.
'TOLOSA (an. Iturisa), at town of Sman, in Biseay, prov. (imipuscon, of which it is the eap., on the Oria and Arajes, 13 m . S. by W. St. Sebastian. I'op. 7,639 in 1857 . The town is placed in a narrow detile, surrounded by a pentagonal wall, flanked with towers, antl entered by several gates. It is handsome, and well built; the strects, which are furnished with footwins, are elean, ambl lighted at night; and it is tolerably well supplied with water. Here are '2 parish ehurehes, both tine bunlings, 2 convents, a liospital, prison, posthouse, a stone bridge across either river, with manufactures of arms, eopper and earthen wares, woollen eloths, paper, hats, and leather, threefourths of its inlalnitants being artisans. Tolosa is one of the 18 indep. towns in which the provincial assembly of Guipmseoa is held, one of the 4 altermately the seat of the high judicial court of the prov., and the place in which the provincial archives and military stores are kept.
'T'OMSK, a town of Asiatic liassia, eap. of the gov, of same name, on the 'Tom, a tributary of

 town has several workhonses for exiles; comse choth, leather, and soay manufactories; barracks, pmblie magazines, military and other hospitals; an orphan honse, and a dispensary. There are a nmmber of handsome houses, bit the town is irresularly built, exeept the part that ocenpies a hill overlooking the river Tom and the eomitry round. Its principal buildings are the eathedral and mother church, the tribunals, treasury (in which are the magazines of furs eollected as tribnte), and two comvents. The inhabs, carry on a brisk trade with the Calmucks and Ostinks, in cattle and furs; and the town is an emporium for distilled spirits and Chinese goods. It was fomsted in 160.4 .
'The govermment of whiel Tomsk is the eap, is, with that of Tobolsk, muler the authority of the governor-general of $W$. Siberia, Since $183 x$, it has eomprised a portion of the former govermment of Omsk, and is supposed to have from $1,000,000$ to $1,100,000$ inhabs. About 1,400 poods of groll are anmally obtai aed from the ilfferent gold washings in this govermment. In its general features it is very similar to the more sotherly parts of the governments of 'robolsk and Yeniseisk.
TONNEINS, a town of France, dep. Lot-etGarome, eap. cant., on the Garome, 20 m . NW. Agen, on the railway from $A$ gen to lhordeans. 1 Pop. 7,917 in 1861. 'lomeins is one of the best situated and most aetive towns in the dep., having a considerable trade in cordige, hemp, and tried fruits, and a royal tobacco factory. It is elean and well built, and commmaicates with the opposite bank of the river by a new suspension bridge. The esplanade, a good square, on the site of an old eastle destroyed in the religious wars; the town-hall, a neat theatre, and some pmblic haths, are worthy notice.

TODLIT' (or Tocplitz), a town and wateringplace of Bohemia, eire. Leitmeritz, mud, next to Carlshad, the most popular place of resort of its limed in Germany, It is pleasantly situated on the Saubach, a small stream in a valley between the Erzgebirge and Nittlegebirge mountains, 47 in. NiV. Prague, on a slourt brameh line of the railway from Prague to Dresden, lts resident pol. amomats to little more than 2,700 ; but in the height of the reason, in July mad Mugust, it is sometimes visited by 15,000 strangers. More

## TOPSHAM

than one-fourtb part of its houses are inns, and nearly atl the it are lolging-honses. The town is neat, aud has been improved ol late years hy the adilition of toot-pavements in the strects, and it is well lighted at night; but it has no buihlings worthy of notice, exeept such as are comected with the baths. The principal baths are distributed in fonr distinet buiklings; the Stembad, Viarstembader, Fiarstliche-Franenzimmerbat, and the llerrnhans, or mansion of l'rince Clary, the proprietor of the town. All these are in the Batade platz, or bath square. The Steinhad includes tloree bathis, for the gratuitous use of the public; one for the neen, a second for the wives and danghters of citizens, and the third for tho female peastantry: the tirst and last are muchergromad, and raulted over, and may be eompared to large inmolated cellars, In the same lomse are some very comfortable private baths, supplied directly from the source. The Firstenbad and Franenzimmerbad comprise a number of superiur brivate baths; the first for gentlemen, and the second for ladies. In the Herrnhaus, the usual residence of the King of P'russia, when at Töplitz, there are many bathing apartments fitted up with great elegance; and attached to this mansion are some extensive and beantifin gardens, always open to the public, and a theatre. "The baths in the Girdlerlams also in the Chade-nlatz, the Jews baths mud others are supplied from the main springs. Withont the town, and in the might bouring lamlet of seliontan, are many baths of a lower temperature than in the town. In all there are abont 90 private baths, whieh are in such constant requisition when 'Toplitz is full, that, by a strict requlation, no person is allowed the use of a bath and dressing-room for more than am hour at a time, for which from 10 to 20 lireutzors are usuatly paid. The springs are saline, with a dash of iron ; the hottest, or hauptguelle, has a temperature of about 122 Fahr. It emerges from a porpliyry rock, and so ahmadantly that its supply, per hour, has been estimated at $1,189,070$ cubie feet of water. The waters of röplitz are particularly esteemed in gout, and rhemmatic aflecions, and diseases of the joints, requiring tonic treatment. The invalids of the l'russian, linssian, and Austrian armies are ofien sent here, and lodged in nppropriate bildings Of late vears a punp-room has been established in the gardens of l'rince Clary.

The hotels and lodging-houses are good and cleap. Dr. Granville, 'Spas of Germany', says, 'The livimir at 'Töplitz is, beyond comparison, cheaper than in any other watering-place I have visited. A dimer at a table dhote withont wine will eost abont 1 s . 3 ll . Apart"nents may be hired at one of the be:t latels, consisting of a bedrom and sitting-room, lir not quite a guinea a week. lathing is the ehicl ocenpation of the moming. The dinmer hour is one or two velock; the afternom is commonly spent in exeursions; the evening in the theatre or the salons; but, 'except on ball nights, and on the oceasion of sone great concert, the town is haied in dead silence by ten o'clock.' Public ganing is not allowed; but it is alleged that gambling is, notwithstundin!, extensively carried on. Toplitz was the seat of' a diplomatic eongress in 1813, mud again in 1835.
TOPSHAN, a market town and par, of Eurland, eo. Devon, liund. Wontord, on the lixe, where it is joined by the Clyst, 4 m . NE. Eiseter. of which it may be considered the port. Area of par. 1,7t0 acres. Pop, of par, 3,503 in 18ibl. The town consists of several good streets; the strand in particular, at its S. extremity, has mamy respectable residences. The chureh is built on an
ses are inms, and onses. Sit. lixeter. al lle port. Arcia of 3,503 in 18bl. I'lu strects; the strintl. mity, has many relurrel is bnilt on an
eminence overlooking the river. The living, a prepet, curacy, wurth 2:27. a year, is in the gift of the lean and chapter of Exeter. 'The chief business of the town is ship-building, and most of the iuhabs. are comected with shipping. The yina, which was originally constructed in the Itti century, is spacions and convenient; but from the corporation of lixeter (to whieh it heporgs) neglecting to clean the chamel of the river, vessels drawing more than 9 or $9 \frac{1}{2} \mathrm{It}$ are mable to come nip, to it. An active coasting trade is, however, carried on from Topshan, Markets on Saturdays: fair, tirst Wednesday in Aurrust.
TORBAY, a spacions bay of the English Channd, on the sE. coast of Devonshire. It is of a scmicircular shape, opening to the E., and nearly 4 m . across from Torquay or Rob's Nose its N. to liery Point its S. buundary. Its shores at its mouth are on both sides formed by ramparts of rock, but between these, in the centre, at the buttom of the bay, the ground forms a vale, gently declining to the water's etge. Ships anchor all over the bay in $6,7,8$, and 9 fathoms water. The gromed is strong clay, and holls remarkably well. This spacious basin has frequently allorded sholter to the fleets of Enghond, and is celebrated in listory as the place where William III. landed on the 5th of November, 1688.
TORtiAl, a town of l'russia, reg. Merselmurg, emp, circ. Torgan; on the EHe, 66 m . SSW'. herlin. Pop. $7,!185$ in t861. The town is strougly fortilied, is the seat of the prineipal conrts fir its circle; and has manufactures of woollen cloths anl hosiery, with some trade in corn and timber.
The ricinity of Torgan has been the scene of several contlicts. Or' these, the most important took phace on the $23 d$ of November, 1760 , when the I'russians, under Firelerick the Great, furced, after a desperate resistance, the intrenched camp of the Austrian army, under Marshal Daun, and gained a tecisive victory.
TOLENEA, a town of the lussimn dom., NW. frontier of the grand dachy of Finland, on a peninsula in the river Tornen, where it falls into the Gulf of Buthia, lat. $65^{\circ} 50^{\prime}$ s $0^{\prime \prime}$ N., loug. ${ }^{2} 4^{\circ}$ $12^{\prime} 10^{\prime \prime \prime}$ E. Pop. 950 in 1858 . The town, which was built by the Sweles, in 1602, consists of two prineipal streets of woolen homses. It has a considerable trade in the exportation of stock-tish, rein-leer, skins, furs, iron, planks, tar, butter, aud pickied salmon. The climate is very severe, though less so, perhaps, than might be expected from its hirh latitule. In Jume the sun is visible at midnight above the horizon.

Tornea is eelebrated in the history of science for the visit made to it in 1736, by the Freueh atealemicians Manpertuis, Clairant, Momier, and Camus, aecompanied by the Swedish astronomer Colsins, with a view to the determination of the exact ligure of the eartli. The eperations do not, howeyer, appear to have been conducted with sulficient acenracy; and there is a diserepancy of about 200 toises between the length of the degree as determined by the academiciaus and that measured by the swedish astronomer Svanberg, in 1801. This town, along with the graud duehy of Finland, was ceded to Russia by Sweden, by the treaty of Frederickshausen, in 1809.
TOKO, a town of Spain, in Leme, prov. Zamora, cap, intend; ; on a hill, at the foot of which runs the Douro, 32 m . NNE. Salammea. Pop. s, 684 in 1857, The town is enelosed by old and dilapilated walls, and entered by six gates. The streets, though broad, and on a cleclivity, are dirty, and the houses indifferent. It has a collegiate ard 18 pira, churches. It formerly had

13 convents, with 3 hospitals, a ruined alcazar, or Momish castle, and a palace belonging to the dukes of Berwick, tharracks, and a ןrison. The iuhahs. are prineipally wecupied in the growing and trading in wine, but they have also mamfactures of coarse woollen and linen cloths, brundy, and leather.
Toro is of great antiquity. It is famous in history for the victory obtained in its viciuity in 1.176 , by Don Perdinand of Aragon, over Alphonso V. of Portugal, and for the collection of haws framed in litho, and inserted in the spalnishs statutes under the name of Leyes de Toro.
TORON'TU. formerly York, a town of Upper Canada, of which it is the cap., on the N. shore ot Lake Ontario, towardy its W. extremity. in lat. $43^{\circ} 32^{\prime}$ N., long. $79^{\circ} 20^{\prime}$ W. Pop. 48,344 in 18641 . Toronto was founted by Governor Simeve in 173.1, and was burnt by the Americaus in 1813. In 1833 it had only abont 4,000 inlabs., its sul)sequent progress haviug been more rapid than that of any other town in Canada. It is now a handsome town, with spacious streets crossing each other at right angles, many of its buildings being of brick, to which timber is gralually givint place. The public edifices are well adapted to their purposes. Among the most inposing of the latter are the new coarts of law, the ollices for the legislature, the R. Cath. cathedral, St. Georme's Church, the huatic asylum, and the collese. The grarison is stationed abont 1 m . W. of the town, where the entrance to the harbour is guarded by a battery and two block-houses. Toronto hariour, or bay, is formed by a long and narrow peninsula, stretching out to the $S W$. for about 6 m ., and terminating in Gibraltar Point, on which a lighthonse has been erectel. The bay is nearly circular, and about $1 \frac{1}{2} \mathrm{~m}$. across; it has a considerable depth of water, and affords extensive and sate anchoring ground.
Kingston, at the other extremity of Lake Ontario, on its N. shore, about 140 m . ENE. Toronto, was the former capo of Upper Canada, and though less central has been considered by many as more eligible than Tormanto for this distinetion. It has an excellent harbour, where ships of the line may lie close to the shore; and is also the site of the principal uaval dockyarl in the colony. . It eovers a cousiderable extent ol gronod, and many of its honses are of stone. It has the tinest pultic buidling in Camadi. It is of stome, and cost 90,010 doll. ; it inchudes a town hall, ontices for the eorpuration, and the post othice. Kingston is the prineipal entrepot of the trade between the Upper and Lower prov.
TOHOPETZ, a town of European Rassia, gov. 1'skof, on the Toropa, 245 m . S. Petersburg. Pop. 8,190 in $185 \%$. The town is entirely surronated by lakes and rivalets, and communicates by the Toropa with Riga, whieh renders it a place of some trade. It has 13 chureles, inchuting a cathedrul, and 2 convents. A few of its honses are of brick or stone, but the major part are of wool, the streets also being paved with planks. Un an island in the Toropa is a dilapidated fort.
This town, under the name of Krivitch, is mentioned as early as the introluction of Christianity by Vhadimir, about 990 . It was the calo of a republic, which lasted through the whole of the 12th century, but whieh in the 13th became subject to hereditary princes. Towards the end of the 15th century it belonged to the Poles, bett it was retaken by the hussians in 1500 .

TORRINGTON, a mm, bor., town, and par. of Bngland, co. Devon, hund. Fremington, partly on the summit, and partly on the declivity of an emincure on the E. baik of the Torridge, $5 \frac{1}{2} \mathrm{~m}$.

SSE: Bidefori, and 30 m . NW. Exeter. Area of
 fown eonsists primipalty of two paralled lines of thuroughtires, nearly 1 m . in lenghth, connected by several short streets. The par, churelh, whieh had been mostly blown up by an explosion of frompowier in the civil wars, was rehuilt in 1651; mad, in IN:30, a new tower and oetagemal spire were erecten. The living, a perpht, curacy, worll ltaz. a year, is in the gift of 'llisistelumed Call, Oxford. It has a market-place surromuled hy goos honses, a weat town-hall, phaces of wowhip for bajtists, Imlependents, Wesleyans; almishonses, a charity or blue cont school for 32 buys, mad varions minor charities. Near the town is stevenston, the seat of Lard loulle, who cut a cmal in 18:3, which skirts the hamlet of Taddiport, on the opprsite side of the 'horridge. At this hamet is a hospital for the poor of the pars. of both (ireat and litule 'Torrington. A bowling-green now oceupies the site of a castle creeted on an eminenee 5 . of the fown in the 1 Ith century. 'The chief aerupation of the industrious chasses is the manufacture of ghoves, which is not combined to the town, hat rives conployment to many fanilies of the surromuling district.

Torrington apporars to have been first chartered by l'hilip and Mary: it is now soverned by a mayor and 3 addermen, and 12 comeillors, who holit petty sessions every three werks. Other courts firmerly hed have gone into disuse. 'Torrington sent mems. to the II. of C. down to the reigu of llemry Che, when it appears to have last or relinguisheil the priviluge. At the restoration, the carldom of Torringten was conferred on (ien. Momk, and it now gives the title of viscount to the beng lamily.
TOLSLIEK, or TOLDOK, a town of Earopean linssia, gov. Tver, cap. distr., on the Tveran, 138 m. NW. Mosenw. Pop. $16,120 \mathrm{in} 185 \mathrm{x}$. The town was uearly burnt down in 1767 , since which it has been rebuilt with comsiderable regularity and with rather wide streets; and though its houses are still generally of wookl, its publie buiklings are mostly of stone; the latter includes a cathedral and 20 other churches, 2 convents, a govermment honse, normal sehool, and orphan asstum. It is fammen for a holy spring, which attrarts pilgrims from all directions. heing on the high road from I'etershurg to Moseow, it is a place of considerable name, and has three large ammal fairs, lts principal manufacture is that of satiron, or coboured and prepared lansia leather. A large trafic is carried on in shoes, gloves, and varions artiches of this material, embroidered with gold and silver.

TORTOLA, one of the Virgin lslands, in the W. Indies, belonging to Great Britain, lat. $18^{\circ} 27^{\prime}$ N., long. $64^{\circ} 3 \cdot 4^{\prime} \cdot 5^{\prime \prime} \mathrm{W}$., between St. Jolm's and Virgin (iorda. It is about 12 m . in length hy 3 or 4 in its greatest breadth. Pop. 6,0at in 18til. The island consists of a range of hills rising in some places to the height of $1,600 \mathrm{ft}$., and encireling a spacims harbour, or basin: they are, for the most part, harren, rocky, and precipitons, and there is but me valley of any extent throughont the island. The town of Toriona is on the W. side of the harbour at the foot of these hills, which rise so close behind it that many of the houses are built within sea-mark, and consequently suffer trom damp. 'The barrack and hospital for the troups are at the SE. extremity of the town, and as they bie open to the trade winds, which blow arross the harbour, they are not much incommoded hy heat. Jhut consideralile siekness, particularly from fever. has heen found to prevail among the trow is at Tortola.
TUlitond (an. Dertona), a town of N. Haly
prow. Sardinian States, diy. Alessandria, eap. prov, of its own name, at the fout of a hill crowned by a ruined casile, 13 m . t. he s. Messandria, win the railway from Messandria to l'ineema. Pop t:3,2ls in istie. Tortoma was a phee of considerable strength till dismantled by the French in 17ah. It is the see of a bishop, the seat of a court of primary jurisdiction, and has manufactures of silks, and some trade in corn mal wine. It apprare from inscriptions to have been a Roman colomy, muler the name of Julis.

TOETOSA (an. Derelosa), a town of Spain, in Catalonia, on the N. bamk of the Eibro, about 2: m. from its month, and 9 m . NW. Barechoma, on tho railway from larecloma to Valencia. Pop. 15, x: :in in 1857. Tortosa is defended by several outwork, and is diviled into the old anil new towne, lueti of which are walled. The cathedral is near the river, and moder the protection of the castle. 'The front is Lomic, with massive pillars, some of singh stones: the choir is of Corinthian architecture: but the editice is void of taste, and its interiun i. much overloaded with ormament. The see of Turtosa is a bishoprie, and was very rich. There are severat par. churches, nine eonvents, a latin schoul, huspital, and pulbic gramary; lut, next to the cathedrat, the principal chlitices are the hishomis patace aud the mansion of the Yall Cabra family: Turtosa is the resideme of a military governor, the seat of an ceclesiasiceal court, anil has manufictures of carthenware, palder, and leather : a coulsiderable trade in corn and silk, and an active ishery and eomsting trade. Within a leage of the city are sume quarries of valuable marble, kuma as Tortosa jasper. 'I'le herertr, or plain of Tortosa, says a traveller, 'is most telighthfin. Far as the eye can reach, you look down upon a plain covered with vines, wives, tigs, pomepranates, apricots, mullerries, mad all kinds of grain; and through this fretile vale yon trace the meanderings of the l:hro, which is here wide and navigable.

This town had the privileges of a homan municipium conterred on it by Scipio. On me oreat siom, during the wars betwen the Spaniards amb the Mours, the women of Tortosa distinguished themselves so much, that, in 1170, the militity order of la Hacha, or the 'Flamberan,' was instituted for them. They also enjoyed several privileges, most of which are now lost ; lont it is said that, in all matrimonial ceremonies, they still maintain the right of precelence.'

TOTNESS, a parl. and mum. bor, town and par. of England, co. Devon, humd. Coleridge, on the 1)art, 9 m . from its month, 20 m . s. by F.. Exeter, and 201 m . WsiV. Londom ly Great Western and South Devon railway: l'op, of hur. 4,00t in Istil. Aren of parl. bor., which eomprises the whole par. of 'Totness with the manor of Bridgetown, 1.101 acres. The town, which is neat and elean, consists principally of one long street, that communicates at its le. extremity, by a bribge of thre arches, with the suburb of Jrilgetown, on the opposite side of the river. The town is fincly situated, the main strect gradually rising from the water till it reaches the site of the ancient casile, now a ruin, on an immense artificial nomad, commanding an extensive view of the neighbouring country. It was anciently surromoded by a wall. and some of the gateways still remain. The homses are old-fashioned, some of them having piazas, and their upper stories frequently proujecting beyond the lower. But, with the exception of a tew on the Plymonth road, all the modern buidings are in the Iritgetown division. Th: chureh is a spacions, haulsome structure, in the lerpembicular siyle, with a well-propurtiumed fower at the W. Cud, which hats octiggual pin-
sandria, cap. prov. a hill erowned by F Alessamdria, on
jiacenza. Pop, place of consiler y the Fronels in the sent of 14 court 4 manufactures of wille. It npesirs, a lioman colony,

bor., town and par. Colerilge, on the n, S. by P:. lixeter, Great Western amd bsn: $+4,001$ in $1 \times 61$. ises the whole par. Bridgetown, 1.111 at and clean. concet, that commmia bridge of thric ridgretown, on the he town is tincly ally rising from the the ancient eastle, ificial monnd, comit the neighbourint roumded by a wailf. till remain. The e of them having es frcquently prowith the exception Id, all the modern wn division, Th: e strueture, in the well-proportioned has octigunal jiu-
nacles and rich buttresses. In the chancel is a ridh stone sereen : it has also a stome pulpit, enriched with tracery and shidds; but the altarpiece is tirecian, mid dees not correspond with the rest of the buidding. This churela ippears to have been rebnilt abont 1432 . The living, a virarage worth 200 . a year, is in the grift of the crown. fliere are meeting-lionses for Independents, Wesleyans, and Unitarians, an old guililanll and council-chamber, a small theatre, and assemblyrowns.

Judlanel de Totmais, to whom the manor was given by William the Conqueror, erected the castle, and also a benedictine priory, whish, it the dissolution, ham a revenue of $12 \cdot 1 /$. 10 s. a year. It lans munerons fommdations, momer which a grammar selool, established in lowt, having ant incone of $70 \%$ a year. 'Totness hat formerly a thriving woollen trade, but at present it has mo mamulactures. Many of the inhabs, are employed in arriculture, some in tishing, and some hurigatim, the Dart being navigable to the town for small vessels. It was first incorgorated by King Juhn, and is now governed by a mayor, three aldermen, and twelve comeillors. It has no commission of the peace, but a court leet is held once a year, and petty sessions occasionally, 'The bor, has sent two mems, to the 11 . of $\mathbb{C}$. sine the 2Bral of Lidward I., the right of voting, down to the Reform Act, having been in the corporation and freemen. Iecristered electors, 363 in $1 \times 65_{5}$.

Among other distinguished individuals, Totness has given birth to biward Lye, the learned anthor of the 'Dietionarimu Saxonico et Gothico Lattimm,' 2 vols. folio, 1772 , which, however, he did not live to see printed. It is also the birthpatace of Dr. Kemmicott, the Ilebraist. In lis yomurer days kemicott was master of the grammar sehool in the town.
'loUL, a town of France, dép. Neurthe, cap. arrond.; on the Moselle, here crossed by a handsome stone bridge of seven arehes, 13 m . W . Naney, on the ralway from Nancy to Chalons. lop. 7,687 in 1861 . 'The town is gencrally well built, and its streets are macadamised. Its principal buildings are the cathedral, a tine (iothis: structure of the 15th century; the town hall, formerly the bishop's palace; the cavalry harracks and magazimes, civia lospital, corm-hall, colleuc, and abattoir. Its manubictures eomprise calicoes, muslins, wooilens, hosiery and earthenware.
This town was anciently the cap. of the Lewei compuered by Ciesar. It was ceded by Charles the Simple to the Ennperor Ileary the Fowler, and was not delinitely amexed to France till 155\%. laron Louis, Admiral de ligny, and severad distinguished generals, have been among the matives of toul.

TOLILON, a sea-port town of lirance, being the second haval port in the kingrlom; dép. Virr, at the lottom of one of the tinest harbours of the Mediterratean, 32 m . Lisli, Marseilles, and 190 m . Sisk. lyons, on the railway from Marseilles to Niee. 1'op, 8t,987 in 1861. The town, which is of an oval shape, the longer side facing the sea, rises gracelinlly towards the N., extending her ramparts to the foot of a chain of high mome tailes, stretching from the E. to the W. The position of the place would be pieturestue and beautilul, were there the least verture; but the roeks and momatains are arid, bare, and totally destitute of covering, or monbrage of any kimil. 'The town is st rongly fortilied, being surronided lys. a double rampart, ant a large and deep diteh, defended to the E., W., and N. by hills eovered with redoubts. Among the forts that of ha

Malgue (on a peninsula to the sk.) is the most remarkable, not only for its extont, but the solidity of its construction. 'loulon is divided into the old and new town; both are tolerably well built, but the streets of the former are marrow and crowded, and all the squares, exerpt one, are small and irrernlar. The new quarter, in which are most of the maval eatablishments, is muel superior in point of appearance. 'I'he principal street, the line de labiayete, which interseets the town in its whole extent, and is partially planted with trees, is the seat of the market, and is a scene ol great bustle and actavity. It termanates near the port in the lace d'Armes, a hamsome square planted will trees, one side of which is formed by the admiralty-honse. 'I'he town-hall, lacing the commercial port, with two colossal statues in front, by l'uget, regariled as clurlo d'envres: the honse ocenpied by that distingnished semptor, the old cathedral, there other charches, the court-honse, military arsenal, "wchysing an meient coment, maval, military, civil, and foumding hospitals, and a hatusome communal college, are tho other ehice public huilitinfs. 'thourl on an arid soil, 'Tonlon is well supplied with water by springs from the momitains, and several of its momerons public fountains are ormamented with statues. The suburts are but only increasing, bat from the rapid aumentation of the pop. and inportmace of the place of hate years, it has been fombl neesessury to add admitional stories to the odder honses. Since 1 sizo , two new guarters lave siprous up withont the walls. one on the road north-cistward to Valette, and the other on the road west ward to Ollioulles. The latter is fetid and abominable. It goes ly the name of Navarin, and is chistly oecupied by the (ienoese labourers, who oceapy the same place int this that is oceupied by the lrish habourers in mosit linglish towns. ()wing to itssituation at the foot of high bare hills that intercept the winds from the N., and retlect the sims rays, the climate in summer is extremely hot.
'loulon is the brest of the Nediterranean, and may be looked upon as the l'lymouth of lirance; thongh since the construction of the breakwater in l'lymonth Somad, the latter is superior ass a rombitead to the inmer roal of 'Tomlon. Hoth the ohd and new harbours are artiticial. 'The latter, lomed by hollow and bomb-prosi' jetties, ruminer oll from the las and $W^{r}$. sides of the town, is suificiently extonsive to acemmonate : 30 stil of the line, ats many frigates, and int equal proportion of small eralt. 'lhe entrance is shat by a boom, and it is never rulled by any wind to oecasion damage. 'I'he onter sides of the jetties present two large batteries, even with the water's edge. 'The entrance to the imer road, on which the harlome opens, is between the firosse 'Tonir on the whe side and Fort Equilette on the other, abont $t ; 01$ fithoms apart. The road is a good deal encumbered with banks. and the anchoring-gromed is, in part, fonl and rocky; but in other places this is not the case, and altogether it is a very time hasin. 'l'he onter, or great roadstead, to the li, of the lat. ter, bomuled out the S. by the narrow peninsulat, terminating in Cipe Cepêt, has deeper water and better anchorage than the inner: but it is open to E. winds, which sometimes throw in a heavy som. The lazaretto stands on a secure eove, Jat Veche, on the S. side of the outer road, witlo from 4 to 8 fathoms water.

The arsenal of Tonlon is one of the finest in Burope. It. ocempies a surface of $351,1 \cdot 10 \mathrm{siz}$. metres (87 acres), and has dry doeks, and every aceommonation for the construction, repair, and outtit of ships. In general, from 8,000 to 4,1000
workmen are employed within its walls: but in some years, when musual activity prevails in all the firench ports, there are between 6,000 and f,0ti0 lubourers enjployed, exclusive of above 3,500 eriminals.

The rope-honse, constructed by Vanban, is 1,120 ft. in length and 64 in brealth. The docks, slips, sheds, must-honse, suil factory, and masazines, are on a grand seale, though, as a slip-buiding port, 'Tonlon has hitherto been inferior to L'Orient and liochefort. A new arsenal, an appendage to the old. has been recently constructed. The depot of oak timber is the largest in France. The bagne, instituted in $1(682$, is, from want of room on shiore, established on board some hulks: it is occupied by criminals eondemned to hard labour for 10 years and under. The eost of each criminal amonits to abont 1 fr, a day. 'The mercantile port, which is bordered by a tine guay, is shat off from the harbour, for men-ol-war, by a line of dismasted vessels.

The imports consist chiefly of corn, flour, salt provisions and timber, for the use of the naval establinhments; and the exports, of oil, capers, firs, raisins, almonds, oranges, and other fruits, with eloth, hosiery and soap, manufinetured in the town. The trade of the port was formerly ineonsidcrable, but it inereased after the conquest of Alsiers, and will probahly contime to increase. Tonlon is the cap. of an arromel, and two cantons, and is the residence of a naval prefeet, a commis-sary-reneral. and of numerous other grovernment wilicers and foreign consuls. It has tribunals of prinary juriseliction and commerec, a board of customs, a college, schools of hedrography and marine artillery, courses of geometry and mathematies, a society of arts, and an excellent naval museum, public library, govermment, pawn, and savings' hanks. a theatre, with a stationary eomjany, and public baths.
'Tomlon appears to have existed in the time of the liomins. In more molern times it was wedasionally attaed by African corsairs, and to defend it from these incursions, Louis XII. commenced the erection of the Grosse Tour at the entrance to the inner road, whieh was tinished by Francis I. Nenry IV. commenced the eonstruction of the old port, now appropriated to merelant vessels, in 1594. But it is wholly intebted for its modern importance as a great naval port and a strong military position, to Lonis XIV., who expended vast sums on its fortitications, and on the arsenal and harbour. It was unsuecessfully besicged by Prince lagene in 1707 . Having, in 1793, been delivered up by the royalists to the linglish and Spaniards, it was retaken by the republicuns, after a siege in which Napoleon l, gave the first decided proofs of his extraordinary military talents. On evanuating the town the Allies set fire to the maguzines, and to the ships they were umble to carry otr. The fortifications have since been thoroughly repaired, and several new works constructed, so that it is stronger than ever, and, if properly garriconed, all but impregmble.
'TOULOUSE, or THOULOLSL: (an. Tolosa). one of the principal cities in the S. of France, akp. Llante Ciarome, of which it is the cap, on the Garome, at the junction of the canals of Languedoe and lbriare with that river, $132 \mathrm{~m} . \mathrm{sk}$. Bordeanx, on the railway from Bordeaux to Cette. 1'op. 113,229 in 1861 . The city is very irregularly laid out; its streets, which are mostly marrow, crooked, ill-paved with rombled pebhles from the river, and dirty, form a complete labyrinth. Nearly all the buildings are of red brick cemented with mortar, which, being hackened ly age, gives the town a gloomy apmearance: the
older honses, and those in the lower quarters, consist of sun-Itried bricks, in frames of woodwork, and are often dilapidated. The shape of 'lonlonse is an irregular oval; the city comprises an island in the Garome, and, on that side, is bordered by grood quays: on other sides it has been till lately enclosed by walls, flanked with large rouml towers. lhat these are gratually disappearing, and their place is being onempied by gowel houses mul regrular streets. The city comnnmicates with the suburb of St. Cyprimi, neross the Garome, by a massive free-stone bridge of 7 arches, built in the latter half of the ltith century. at the further end of which a modern triumplai arch has heen erected. The principal open spare is the Place du Capitole, serving for the $g$, 1 daily market, which is adminably supplied. 'This latre quadrangle is ornamented at cach of its four eorners with a handsome fountain. The capitol, or town-hall, from which it derives its name, m its E. side, in the lonic orter, is nearly 180 yards in length. In it are several spacions halls; one is ornamented with the busts of the most distinguished natives of the city ; and another, callod the Salle de Clemence Isaure, las a marble statue of that distingrished lady, the sreat patroness of the 'Floral Gimes,' The thentre ocempies one wing of the eapitol, but it is badly phaned am! decorated. The other sides of the square are chictly oceupied by lootels and cafés. Reveral of the other squares are ornamented with fumbans, and planted like the pollie promenales on the banks of the eanals, and the Garonne.

The cathedral is planned on a magnifiecut scale, but unfinished: the nave, which is the oldest part of the buililing. probably dates from about the 13 th century. The most ancient elureh, that of St. Servin, has been erected on the sin? of a very celebrated temple of $\Lambda_{p o l l o: ~ i t ~ i s ~ a ~ h e a r y ~}^{\text {pol }}$ Gothie lniding, part being said to date from the 9th century, though the greater portion is mudn more moelern, particularly the choir Amome its ornaments is a bas-relicf caricature of Calvin, as a hog in a pulpit preaching. 'The chureh is rich in relies presented hy several popes, and other persons: it has a cupola supporting a lofty spire. 'The churehes of La Danrade and Dablhime doserve mention: in the former Clemence Isaure is supposed to have heen buried, and on the grand altar are preserved the golden tlowers presented to the sucecssful joets at the thoral games. Toulonse is said to have had, at one perion, 80 churehes, but many have been converted to other purposes, One serves for the museum, in the picture gallery of which are some productions of the best masters of Italy, with a much larger number of copies; while in the eloisters attached is a fine collection of antiquities excavated near Martres, in 18:27. The best modern building after the capitol is the prefeeture, formerly the arehbishop's palace.

Toulouse was, till recently, ill supplied with water; but it is now amply provided with that necessary, furnished to numerous public and private fomtains from a handsome chntean d'ean, or reservoir. Among the other public buildings may be specitied 2 large hospitals, the lonts-Jumenux, or clouble britge over the 2 canals at their jutiction, the veterinary selwol, public slanghterhonse, mint, new edifice for the royal conrt and tribunal of primary juriseliction ; the public libraries, containing together about 60,000 vols., school of frtillery, harracks, arsenal, polygon, gmpowder and other large mills. Tonlouse is the eap. of the 10 thmilitary div, of liance, and mu arehbishop'ssec. I'reviously to the lievolution it was the seat of one of the leading French universities; and it las now a miversity academy, with faculties of law, seiones,

iterature, and theolosy. It has also a royal academy of sclences, societies of medicine, paintint arts, aul agriculture, some of which grant prizos tustevessfill camdidates, after the example set at the thoral games of old. The jartin des plantes at Tonlouse is the largest and tinest in France after that of Jaris.
The floral games, previonsly alluded to, appear to have been instituted in the early part of the I Ith century. They were origimally held on the lat of May, and consisted of a trial of skill among the prets and trombadours of the vicinity, those who recited the best verses receiving the prize, which consisted of golden thowers. C'lemence Isare, the laty mentioned as the great patroness of these games, bequeathed, in $15 / 0$, the bulk of her fortune to the eivie authorities, to be expended be them in fetes and prizes at flotal games, to be liehd ammally in her house, on the lat and irol of May, Thuse games were timally superseded by the cration of the awdemy of belles lettres in litil, the directors of which gave prizes for the best papers.

Tonlonse has manufactures of coarse woollen eloths, silks, ganzes, printed cottons (Indiennes), cotton sarn, tiles and steel wares, paper, wax lights, minical strings, and vermiechli, with due-ing-homses, distilleries, a camon foumbry, and a ruyal tobaceo manufactors. It has also a large tride in the promence of the surromading comitry, Sumish wool, and colonial produce.
Nothing is known of the origin of this city hut that it is vory ancient. It was the eap. of the Tectosages; and having been taken by the Romans, unno 106 B. C., they afterwards embelhinbed it with numerons splendid editices; but, owine to the combined influence of time and the attacks of the barbirians, these structures have been almost wholly destroyed, so that some vestires of the amplitheatre, and of a few other buiklings, are all that now remain to mark the woalth and power of its lioman masters. It was suecessively the cap. ol' the Visiguthic kingriom of fianl and I'fuitaine, and was thencforward governed by its own feudal coments till 1271 , when it was aninesed to the erown of lirance.
'lomlouse is principally celcbrated in recent times for the sanguinary conflict that took phace in its vicinity on the 10 th of $A$ pril, 1814, between the alked army, under the Duke of Wrellington, and the French, under Marshal Sonlt. The Allies were superior in point of numbers, hat the adrantage of position was on the side of the Frenel. Notwithstanding a desperate resistance, the latter were driven from the Mont lave, and obliged soon after to evacuate the city. The loss on both sides was very great, especially on that of the victors, who hat $\mathrm{d}, \mathrm{i} 59$ men killed and womded; the freneh loss amointed to about 3,000 men. Uufortitmately, this was a useless sacritice, as Napoleon 1. lad already abdicated; but, thongh the contrary has been stated, it is certain that Marshal Sonft was wholly ignorant of the circomstance. Napiers Peninsular Wiar, vi. 63i!.) Tonlonse has hiven birth to many distinguished individnals, among whom may be spocitied Cujas, the preatest rivilian of modern times, born here in 1520, and liarmond, count of 'Tonlouse, so celebrated in the inst crusade.

JOLLNAY (Flem. Doornik), a town of Belgium, prov. Ilainants, calp. arromd. and of two cantons on the Scheldt, close to the French frontier, 45 m . W'sW. Brassels, on the ralway from Brussels to Lille. Pop, 30,82t in 1860. 'Tommay covers nearly as much groumal as lille, though so much less populous. Its former furtitications were demolished by the emperor Joseph II., but since
181. it has heen surrounted anew with militars Works, and has a groul citadel. The tohehte, erussed here by several tlying bridues, tisibles 'Tomraty into two parts, called the Old and New Towns: the latter is well built, and has a line quay along the river, which forms a ficourite promenale; bit, excepting its historienl recollections, the former has little to render it interesting. The eathedral, a fue Gothic building, with tive towers and spires, supposed fo have been a hishop's see as early as the jth century, was formerly richly atorned, but suffered greatly fiom the French revolutionary phrenzy. The old abany of St. Martin has been of hate years levelled witi the gromme, to give place to the town-hail and publie gardens. Few other bililings are worthy of notice, though there are several hospitals and asylams, including one for agel echesiastios, a conrt of primary juristhetion, chanber of emor merce, exchange, theatre, athenemm, adalomy of tine arts, and episcomal seminary. Withont the walls are several suburls.

Tournay is one of the most active manufacturing towns of the Netherlames, and most have been celobrated for its industry at a very early period, since it is mentioned in the Notitia Iniperii of the oth century as one of the fifteen towns in the empire having manufactures of woollen and linen yarn. At present, three-fourths of its pop. are employed in its varions mabufactures. and from 12,000 to 16,000 lomms ate supposed to be employed in its commome. I losiory, calicoes, and linen fabries, canlets, yarn of vaions kicais, waisteoats, and all kinds of articles of dress, with carpets, for which 'lourmaty is fimoons, are the principal articles of trade; but larre quantities of carthenware, bronze goomls and harilware, Curacon, and other liqueurs, are made; and there are mumerms breweries, salt retineries, tameries, and dyeing-honses. Tournay has varions charitable mintitntions for the benetit of sick workpeople, and for pensioning the witows of weavers, and children are not suflered to be too laborionsly employerl. 'The Shelelet, which is mavigable to the town for ressels of 150 tons, is the principal chamel for the conveyance to the town of coals, spices, dyeing materials, tobneco, deals, bramby, wines, and for the export of mamufactured foods, elatk, and building stone, produced in the town and its vicinity.

Tournay has probably experienced as mans vicissitudes as any town in 户iurope. It is the Civitas Nerviorum, taken by Julins Ciesar, and has since belouged to an inlinite number of masters, and been taken and retaken over and over again.

TOURS (an. Cesstromatus), a city of Framee, dep. Indre-et-Loire, of which it is the cap., on the narrow tomgie of land between the rivers Loire and Cher, close to the print of their conthence, 127 m . SW. l'aris, on the railway from I'aris to Burchayx. Pops. $41,061 \mathrm{in} 18 t 51$. The older parts of the city consist of narrow, crooked, and lirty streets, with mean and ill-built honses. It is surrombled by planted boulevarils on the site of its ancient fortifications, and has 12 dillerent entrances, and 5 suburls. It commonicates with the opposite bank of the Laire by one of the tinest bridges in Larope, constructed ehietly hetween 1762 and 1777 : it is of stone, level on the summit, 475 yarts in leugth by 16 in brealth, and has 15 arches, each $26 \frac{1}{2}$ yards in span. Over the Cher are two bridges, one of 17 and the other of $x$ arches. From the lridge over the Loire a noble stret, the Rae Inporiale, straitht, spacions, bordered with footways, and lined with miform buildings of Jrecstone, intersects the town in its
rutire hrealth, terminating on the S. in the Avenue de Grammont, lending to the smaller bridge over the Cher. At the commencement of thls street, close to the Loire, is a handsome spuare; in which are the town-hall and the departmental musenm, new and symmetrical buildings, the latter contuining npwards of 2000 paintings. The cathedral is saill to have been foumded in the 4th century, hurnt down in the lith, rebuilt by Gregory of T'burs, but ayain burnt down in the 12 th century; after which its reconstruction procecled so slowity that it was not completed till 1550. It has a moble front, flamked by two towers, built by Henry V. of Englame. Its interior, though not beantiful, is richly ornamented, and contains much stnined glass, together with the mausolenm of the chilitren of Charles VIII. A curious collection of MSS. is kept in this eathedral. The other churelies are mostly small and sloomy, and possess little worth notice. The su-called Tower of Charlemagne is the only remaining portion of the abtey of St. Martin, destroyed in 1797, of which the kings of lrance used to bo the abbers. The arellisislop's palace is one of the hamdsomest in France: the prefecture, court-honse, college, genernl hospital, exchange, theatre, barracks, priseni, and a highly ormanented fountain in the narketplace, are the other most conspicnous objects. This city is the seat of courts of primary jurisdiction and commerce, a chamber of commerce, comncil of prudhommes, societies of agriculture, sciences and arts; and has conrses of practical geonctry, a library comprising 40,000 volumes, a cabinet of natural history, aud botanic garien. It was here that Lonis XI, established the silk manufacturers he invited out of Italy; and it was for a considerable period famous for its silks; but it has long been far surpassed in this department by lyons, which has peculiar advantages for the prosecution of the silk mamufacture. Next to that of silk, which is carried on to a considerable extent, the manufactures of Tours consist principally of woollen eloths, carpets, and woollen yarn; but they are not extensive; and the trade of the city is chictly in the retail supply of its inhabs. mid visitors.
'The promenades rouml'Tours,' says an Eaglish traveller, 'are ciatrming: among these the elmaveme is the most comspicuous; the quay is nlso pleasiunt. The environs of the eity firmish the most agrecable walks; immmerable little paths lent in every direction through the diehls, mad among the knolls and eopses. Tours, 20 years argo, was as chenp a residence as any place oin the Loire; but a grent advance in the prives of every thing, and particularly house-rent, has naturally finhowed the approbation of Tours by the Eaglish. lommediately alter the war, a large house, with every convenience, and a garden of two or three acres, might have been had for 201. a year; but this sum may now be more than doubled Provisions are still moderate in price, and wood is less expensive here than in must other parts of France.' l'esides the English, 'Tours is much resorted to by lrench gentry, who, though in independent circumstances, are not rich enough to athord the expense of living in the metropolis. 'The castle of P'lessis les Tivers, bult by Louis XI., where he principally resiled, is about 1 m . from the city. It is constructed of briek, is embosomed in woorl, and has a vencrable appearance. In its chapel is a fortrait of Lonis, dressed in armour, taking off his loclmet to the Virgin and Infant.
Among the eminent men to whom Tours has given lirth, may be speecitied Carlinal Amboise, prime minister of louis XII., anl lap in, the anthor of the much admired Latin poen, 'De Cultu Hor-

Adde umilras nemormu teternas ; et nollin semper Gramine prata novo, et numpuam shine tioriluns lurtos.' Lib. i. line 485, ed. de Drotier, Parts, 1780.
Grecourt, the poet, was also a native of Tours: amb st. (iregory, hence called Gregory of Tours, was for a lengthened period bishop of the see.

Tours was anciently the cup. of the Turomes, conquered by Ciesar, anno 5511.c. In the ith century it became the cap. of the 3rd Lyommaise. After many vicissitules it fell into the hands of the lluntarenets, and formed a part of the English dominions, till 1204, when it was amexed to the French crown.

TOUM LEN a considerable town of Asiatic Russia, gov. Tobolsk, on the Tomra, 120 m . SW. 'Tobolsk. Pop. 10,950 in 1858 . The town is situated in it fertile tract, and its inhabs, are said to be buth wealthy and hospitable. In almost every homse the manufucture of a coarse kind of carpeting soll all over siberia is carried on; and its tanncrics, which are more extensive than any others in the government, employ nearly 300 workmen, and pruduce goorls to the value of more than $1,1001,0101$ roubles a year. In the neighbourhood are extensive forents, and vast quantities of mats, with carriages, and various woolen articles, are made for exportation; besides which the town has a large trale in timber, tallow, hides, embroidery, vegerables grown in the vicinity, and enttle. It was the first town founded by lic linssians in Siberin, having been built in 1586 , on the site of a previuns Tartar city called Tchinglis-Tora, or 'the town of Genghis.'
TOULiNUS, a town of France, dép. Saône-tiLaire, cap. cant., on the Saône, on the railway between Macon and Chulons, 16 m . NNLE. the lormer, and about the same distance $S$. the latere. Pop. b,bis in $1 \times 1$ il. The town stamis on a declivity crowned by the remains of a lenedictine abbey, which formerly possessed extensive privileges. It is clean, well-built, and has some fund public elifices. Its trade is principally in curn, wine, and building stones, sent down the saone to Lyons.
ToWCESTER, a market town and par, of limslamd, co. Northampton, hund. Towester, om the Tow, here crossed by three hridges, 8 m . sill. Northampton. Area of par. 2,790 acres. J'op. 2,715 in 1861 . The town consists principally of three streets, at the union of the roads from stany
 on the ancent Wating Street, and was probalily a homan station. The church is a neat editier, supposed to date from the 11 th century. The living, a viearage, worth 217l. a year, is int the gift of the bishop of Lichtich and Coventry. Lere are clapels lor varions dissenting sects; a gram-mar-school, founded at the dissolntion of the momasteries, and endowed with part of the revennes of a college dating from the reign of lenry VI., and several almshonses. Markets on Tucsiliys: fairs, four times yearly.
TliAFALAAİ (CAPE), a promontory of the SW. coast of Spain, prov. Andalusia, 25 m . NW . 'Tarillh, in the strait of Gibraltar, of which it forms the NW. extremity; lat. $31^{\prime} 010^{\prime} 15^{\prime \prime} \mathrm{N}$., lous. $6^{\circ} 1^{\prime} \mathrm{W}$. This cape, which in antiquity was calleml the promontory of Jmo (Jnomis promontorium),

s low, and torminates in two points, the most easterly of which is surmonnted by a round tower. Cajo Trafilgar is famons in history for the great hattle fought in its vieinity on the 2 ist of October, |xins, between the combined French and Spanish thect, under Admirnds Villeneuve and Gravina, and the linglish fleet miler Lord Nelson, 'The former had $: 13$ sait of the line and 7 large frigates, while the tleet of the latter only amonited to 27 sail of the line and 3 fripates; bit the superior skill and gallantry of the Iritish admiral, and of his ollicers and men, far more than compensated for the nomimal inferiority of the lingllsl fleet, and seenred for the comutry the greatest naval victory recorded ia her annals. No fewer than 19 French and Spanish line of battle ships were eaptured, and 4 that had escaped from the action were subsequently taken by Sir lichard Strachan, the other vessels that exenped into Cadiz being, at the same time, nustly rendesed unserviceable. Unfortunately this great and decisive victory was not nequired withont a very heavy loss. Nelson, who was mortally wounded early in the action, lived only to be unde aware of the destruction of the enemy's Hert.

TRAJANOPOLI (called by the Turks Orikhovo), a tuwn of Euronean liurkey, prov. Roumelia, nanj. (iallipoli, on the Maritza, $\mathcal{L}^{-} \mathrm{m}$. SSW. Adrianople, lat. $41^{\circ} 7^{\prime} 30^{\prime \prime}$ N., long. $26^{\circ} 18^{\prime} 15^{\prime \prime} \mathrm{E}$. It is said to have a population of 15,000 inhabitants $;$ is the see of a fireek arelibishop, and has a considerable tommerce.

TliALEE, a parl. bor. and marit. town of Ireland, prov. Munster, co. Kerry, of which it is the cal.. within abont 2 m . of the head of Tralee Bay, near the Hallymullen river, 5.5 m . NW. Cork, with which it is comnceted by railway. l'op. of parl. bor., which inclades an area of 546 acres, 10,191 in 1861. The public buiddings and establishments cumprise a hatdsome par. chareh, two large liom. Cath. chapels, a numery, to which an excellent sidhool for girls is attached, several meeting-houses for dissenters, a new commty court-house, a handsome and commodions stricture, a fever hospital, a lumatic asylum, a county infirmary, and infantry barracks for 1000 men. 'The town stands on the estate of Sir Edward Denny, who has thrown open the pleasure-grounds, attached to the castle in its immediate vicinity, to the inhab. Sir E. Denny is also patron of the living of 'Tralee, worth above Juh), a year. Exchasive of the girls' sehool, Tralee has a Catholic free-school, and other sehools, two of whieh ure subordinate to the board of education in Dublin. It sent 2 mems. to the lrish 1I. of C., and since the union it has sent 1 mem, to the 1 m perial II. of C. Previously to the Reform Act the nght of election was noninally vested in the old corporation, dissolved by the act $3 \& 4$ Vietoria, cap. 108 ; but it was, to all intents and purposes, a nomination bor. There were 315 regis. electors in $1 \times 65$. The co. assizes are held here, and general sessions four times a year, and petty sessions on 'luesdays. It is also a constabulary and coastfruard station. The Tralee workhonse was opened in 1814. Narkets on 'luesdays and Saturdays: fuirs, May 3, Nugust 4, October 9, November 7, and December 13.

The port is included in that of Jimerick. Owing to the shallowness of the water in the river, barges of more than forty tons were, till lately, loaded and mloaded at Blemerville, about 2 m . SWW. from the town, while vessels of greater burden were compelled to load and miload by means of lighters, at the Samphire islands, in the bay, abont 6 m . W. from the town. With the view of obviating this inconvenience, a slip canal, 15 ft . deep, has been cut from the bay to a basin aljacent to tho town,
Vol, IV.
where ressels of but) tons may now load and unload. 'I'lis camal has been of great servico to Tralee. The shipping belonging to the port on the 1st of January, 186\%, consisted of $1 / t$ sailing vessels, of a total burthen of 4166 tons. The customs' revenuc amounted to $18,791 l$. in 1863.
'TRANI, a sea-port town of S. Italy, prov. Ilari, cap, cant. on the Adrintic, 26 m . NW. Itari. l'op. 22,356 in 1862. The town is surrommed by is bastioned wall, with a fosse on the land side, and has a citadel, but is not a place of any strength. The streets, which aro narrow and dirty, aro Hanked with ill-built honses, except round the port, where there are some private dwellings that would not disgrace the best parts of lione. Its. large cathedral, erected more than six centories apo, is in a very mean taste, with preposteronss ormments and clamsy pillars. Exclusive of the eathedral it has abont $20^{\cdots}$ ther churches, with 6 eonvents for mouks (one . . . hich, the monastery of St. Clare, is a magniticent structure), 2 nunneries, an orphan asylum, a large seminary, and a thentre, said to be inferior: ly to those of Najules. Trani is the seat of a supenor criminal conrt, of a civil tribmal lor the prov., and is the residence of many old families. It labours under a preat deticieney of springe water, so that the inhabitants are obliged prineipally to depend on rain water collected in cisterns. It exports corn, oil, sweet wine of food quality, figs, almonds, and other products of the vicinity. Some cottonstulls are prodneed in the town, of cotton raised in the cant. The ramparts command a tine view both towards the interior and the sea. 'I'he harbour, which is nearly encireled by the town, has maturally deep water, but owing to the accumulation of samil thrown in by the sea, and of the filth from the surrombling honses, it is so mneh tilled up as to be necessible only to the smallest hoats, while in smmer the stench is intolerible. 'Ihe few vessels that carry on the languishing trade of the town are obliged to anchor about $\mathbf{2} \mathbf{m}$. oll shore, being laden by lighters.

In 1502 a contest took place under the walls of this town, between eleven Freneh and as many Spanish knights. The combatants fought till there remained only six Spmish and four Freueh knights: the latter then alighted and delimded themselves behind their horses, as behind a rampart, till night pitt an end to the contest.

TRANQUEBARA, a town and seaport of Britislt India, formerly belonging to Denmark, on the Corromandel const, between two arms of the Cavery, 140 m. SSW. Madras; lat. $11^{\circ} 0^{\prime} 15^{\prime \prime} \mathrm{N}$. .j long. $81^{\circ} 54^{\prime} 30^{\prime \prime} \mathrm{E}$. Pop. of the town and its small territory, about 20,000. Trmquebar is strrounded by bastioned ramparts, faced with masomry, and at its SE, angle is the citadel of Dansburgh, in which is an old castellated building, serving for the government offices, and having a lighthouse on its highest point. The town is small, but very neat and elean, there not being a native hut of other mean structure within its walls. The prineipal streets may be called handsome, the whitened honses being of two or threc stories, with little Grecian porticoes of three or four pillars projecting into the street, and windowed generally with rattan lattices. The government house, two l'rotestant churches, and a Portugnese Rom. Catlı. chapel, are in the town. There is no harbour in the Cavery for vessels of a larger class than boats, which have accordingly to anchor outside the surf in the bay. It has, however, some trathic ly sea with Bengal, the Malabar coast, the Straits' settlements, and Ceylon: it las nlso manufactures of ${ }^{-}$ salt and cotton goods. The town and its surromeling territory belonged to l)enmark from $175 \%$
till 1816, and in the latter year was ceded to Great llrituin.
TRANSYLVANIA (Germ. Sicbenbïrgen, Magy, and Slav. Eirdeli, an, Dacia Mediterraneat, the most l: prov. of the Austrian empire, comprised between the 45 th and 48 th degs. N. Int., and chiefly between the 22 nd and 26 th F. long., having Mungary on the N. and W., nud on the E. and S. Moldavia and Wallachin, from which it is sepnrated by the main chain of the Carpathians. It is of a square shape: greatest length and breadth abont 140 ml , ench. Area, $20,40 \mathrm{~s} \mathrm{sq} . \mathrm{m}$. I'op. J,926,797 in 1857. Most part of the surfnce is covered with ramitleations of the Carpathinn monntnins, which riso in Mount Bukliest, near Kronstadt, to nearly 8,700 feet in height : these, however, give place in the $N$, to the valley of the Szamos, in the eentre to that of the Maros, and in the S, to that of the Alutn. All these rivers, of which the Maros is the principal, rise in Transylvania, and liave, more or less, a W. course, the general slope of the conntry being townals the W. The first two are tributaries of the Theiss, the last joins the Danube in Wallachin: the banks of all, and particulnrly the Maros, are densely wooded, (whence the modern name of the prov.), and possess considerable picturesque benuty. It is in genernl well watered, und in the s . are some extensive marshes, As the country at large is rather an elevated table land, the elimate is cold, though in most parts healtly. The soil is of various qualities : the mountains are generally granitic or calcarcons, but the plnins and valleys are often very fertile, ant, notwithstanding the backwarilness of agrienlture, a surplus of com over the quantity required for home demand is generally proluced. Wheat, barley, oats, rye, buckwhent, and maize, most kinds of pulse, potatoes, and garden vegetables are cultivated; wine is one of the leading products of the conntry; in the orchards, npples, pears, plums, apricots, almonds, mulberries, and chestnuts are grown ; and tobacco, hemp, flax, saffiron, and clover are ordinnry erops. The lands are, in general, held under a feudal tenure, as in Ilungary, execpt in the Saxon-land, which division of the province is by far the best and most industriously enltivated.

Transylvania is diviled principally among three distinet nations.-the Magyar, the Szekler, and the Snxon, each of which has a share in the government of the country. They inhabit different districts: the Magyars (with the Wallachs) occupy the whole W. and centre; the Szeklers the Le and Sid. ; and the Saxons, the greater part of the S., with a portion of the NE. (Paget, ii. 360, and Map.) The first occupy at least three-difths of the entire principality, of whicin Clausenberg is the eap., and the Szeklers and Saxons about one-fifth each; Maros-Vasarlely being the chicf town of the former, and Hermnnstadt of the latter. With these races are intermixed a number of loles, Gypsies, Jews, and Armenians. Abont one-lialf of the pop. are Wallachs, while the Maryars number nearly 500,000 , the Saxons 300,000 , and the Szeklers 200,000. The Magyars and Wallacls have been already described under Hungany. The Szeklers, termed by the Latin writers of the Lower Empire Siculi, are probably the descendants of a barbarian horde that had settled in the province during the decline of the Roman power. The Magyars, on entering the country in the tenth century, finding the Szeklers cognate with themselves in features, langunge, and character, left them in the undisturbed possession of the lands they had inherited, on condition of their guarding the Magyar frontier on that side. They were not even rendered tributary, and to this day the Szeklers hold them-
selves to be nolle born, free, and equal. Ilat in the lnpse of centuries many clinnges lave crept into their condition. 'The richer and more prowerfin,' says a travelker, 'have gradually introducel on their own estates the system in operntion in other parts of Transylvnnia, and the peasant and the seigneur are now found in the Szekler land as elsewhere. Iltles, too, and jintents of nuhility' have been freely senttered through the comntry; taxation, nlso, and the forcible introduction of the border system, insteal of the desultory service of former times, have mode grent changes. As almost all these chnages, however, have been intrudnced without the consent of the people, nul often by the employment of open force, they are still regarded ns illegal by the sigeklers, who are cossepuently nmong the most discontented of any portion of the Transylvanians.'

The Saxons nplpent to owe their origin to a eolony transplanted thither from the Ithine by one of the sovereigns of Hungary in the twelfth century. They live inder a count or chief, who, like their clergy, is elected by themselves; and they enjoy freedom from tolls within their clistrict, mill other importnnt privileges. 'One of the fiundamental laws of the Saxons,' says the traveller just quoted, "is the equality of every individual of the Saxom nation. Iliey have no nobles; no peasants. Not but that many of the Saxons have received letters of nobility, and deek themselves out in all its plumes; yet, as every true Snxon will tell yout, that is only as Inugurian mobles, not as Saxums. Their municipal government was entirely in thris own hamds; every village chose its own ofliares, and munnged its own affnirs, without the interference of any higher power. Bht a few years ugo, a great and completely arbitrary change was made in this institution; the ellects of which have been to deprive the Saxon communities of the free exercise of their privileges, and to theliver them into the power of $n$ corrupt bureancracy, over which they have lintle or no control. The Saxons, however, are a slow people, and though they lave long complained, they have seareds ever ventured to demand a restitution of thrir rights. Hitherto they have been among the mut certain adherents of the crown: they linve rafly joined the liberal party. They preserve, fur the most part, the dress, language, and habits their ancestors brought with them from Germany. For the rest, the Saxons are undoubtedly the most industrious, steady, and frugal of all the inhabs of Transylvania; and they are consequently the best lodged, best clothed, and best instructed.

The peasants of Transylvania are in a more depressed condition, and much more ignorant, than those of Hungary. It is rare that the pensant's cottage has more than two rooms, sometimes only one; liis furniture is scanty and rude, his crockery coarse, and those little luxiries which in the Ihuigariun denote something beyond the indispensable are rarely scen in Transylvania. The ignoranc: of the Transylvanian peasant is often int cuse, and he is generally superstitious and deceitful : these qualities are most conspicuous in the Wailachs, but the Magyars are by no means free from them. Schools are extremely rare. The peasants beloneing to the Greek church are undoubtedly the most ignorant; those of the Unitarinn and Lutheral churches the best educated. 'We had remarked,' says Mr. Paget (Hungary and Transylvania, ii. 31'1), 'throughout the Szekler-land generally, a better state of enltivation and greater signs of industry than in most other parts of Transylvania. But the Saxon-land, on the Aluta, appeared like a garden in comparison even with the former. The whole plain seemed alive with ploughs and

- We had remarked, and Transylvania, ii ekler-land generally, a and greater signs of illparts of Transylvania. e Aluta, appeared like even with the formet. alive with plonghs and
harrows, and on every side teams were moving about, manure was njrending, and the seed was being scattered abroud with a busy hand. 'The most startling feature in the pichure was the very active part taken by the women. Some were sumgr eorn, others using the fork and spaile, whers holding the plough, and others driving the team.'
'Transylvania may hereafter rank high as a wise growing country : it abounds with cleclivities of a nugred or voleanic soil. No less than one-ninth part of its present pop. is dependent on the culture of the vine; all the gentlemen, and even superior tradesmen, grow their own wines. The mode of making them is very ill understood; lut there are several superior kinds of wine procluced, mostly in the valleys of the Maros and its tributaries. They are in general white, well thavoured, and full budica. The highest price, in an ordinary year, of the better sorts is about $2 s$. the eimer ( 16 buttles).

The rearing of horses and other live stock is one of the most important branches of national industry. In the szekler mountains, a small wiry horse, similar to the Welsh pony, appears to be indigenous; but, for improved breeds, no less than sisty celebrated studs are said to exist in this small territory, twenty of which have probably a atrater or less infusion of English blood, the Eng[ish hreed and modes of treatment of horses haring been introdnced of late years. Buffaloes, scarce in IInugary, are common here. 'The shee], which are long-woolled and curly-horned, are sent into Wallachia to graze in the winter. The oak and becch forests, which are estimated to cover narly $3,9 \cdot 10,000$ acres, feed large quantitics of hougs.

The mineral proluce is a principal source of the wealth of 'Transvlvania, There are numerons goll mines in the country, and almost every stream amd river is anriferons; the anmual produce of gold is estimated at from 2,000 to 2,500 mares, and of silver 5,000 mares. The gold mines of Zalathma, in the basin of the Maros, are supposed to have brit wrought ever since the time of the Liomans; and those round Nagy lanya are certainly of that era. From the latter, anil some other mines, the wre is sent off monthly to Kremnitz, to be smelted. (iuld-washing in I'ransylvania is almost monopolived by the gypsies. Government grants agypsy hand the privilege of washing the sands of a certain brook, on condition of their paying a yearly rent, which is never less than 3 ducats of pure gold per head for every washer. A gypsy captain settles this matter with the govermment, and is answable for the rest of the tribe, from whom he collects the whole of their earnings, which he redivides among them after paying the tribute. irom, leal, copper, antimony, arsenic, and mercury in the form of cinnabar are also found in Transylvania; and the mines of Izekerem are the richest in tellurium of any in Europe, and those ia which metal was first discovered. Marshal Harmont (Voyage en Hongrie) states that coal, of very gool quality, is found in some parts; but it is not made use of. Salt is much more important: rock-salt abounds at Maros and Szamosljvar, about 600,000 centners being amually produced, which, excepting about 30,000 centners consumed in the neighbourhood, is wholly exported to liungary. The miners work from 3 to 11 A.s., and get about 10 d . a day. The centner of salt is delivered at the pit's mouth for about the same sum, and sold in I'ransylvania at $3 \frac{1}{2}$ flor. or $7 s$ s. the centuer. The greater part, however, is sent by the Maros to Szegedin at an expense of 10d. nore each centner, and sold there at $7 \frac{1}{2}$ gul-
den or 15s, the centner. The F. of Transylvania is supplied from mines in the Szekler-land. Alım, sulphur, saltpetre, sulphate of sonda, and many erystals and inferior kinds of gems, are found in the prov.
lixcept those of woollen, cotton, and some other fabries in Cronstailt, II ermanstadt, and other parts of the Saxon-land, few manufactures are carried on to any great extent. Woollen and linen stulfs, cotton fabries, lints, leather, shagreen, potash, earthenware, paper, and gimpowder are made in dillerent places; the clothing of the peasants being generally of comestic manufucture. Some forges, breweries, and vinegar factories are seattered over the country ; lint woollen, silk, and linen fabrics, jewellery, hats, and glass wares aro prineipally imported from abruad, in return for salt, corn, cattle, horses, hogs, lides, wax anil honey, timber, metals, and other raw produce. The trade is mostly in the hands of the Grecks and Armenians; ant, as yet, little facility is afforted for commerce with Huncary and Wallachia. The Maros and Szamos are navigable, and are the chief rontes for the conveyance of goods. The roads and bridges are everywhere it the most wretelted state.

Transylvania senols deputies to the llungarian diet; but has also a diet of her own, composed, in 1863 , of 165 members, of which number 125 were clected by the people, and 40 nominated by the crown. In the elections every man has a vota who has attained the age of twenty-four, and pays direct taxes to the amount of 8 thorins, or $15 s$. ; and capable of being elected are all citizens of the age of thirty who are 'of irreproaehable character,' Magyar Transylvania is divided into eleven commties; the Szekler-land into live, and the Saxonland into nine stuhls, besides some subordinato districts. The government of the Masyar comilties and Szekler stuhls, and of the towns, is nearly the same as in IIngrary: that of Saxon Tramsylvania has been already noticed. In the call. of each co. and stuhl is a court of primary jurisdiction. subordinate to the Transylvanian ehancery at Vienna, A band or zone of conntry along the S. and E. frontier, with a pop. of abont 140,000 , forms the Transylvanian military frontier. Here are maintained two Wallach and two Szekler infantry border regiments, and one regiment of Szekler hussars. 'The inhabs. of this tract are subject to the Austrian military frontier laws.
The majority of the clergy, and particularly the Wallach priests of the Schismatic Greck church. are little superior to the peasantry in puint of education. Those of the United Greek chureh are better edueated, having a lyceum, gymnasium, and normal school at Balasfalva, and enjoy the same general privileges as the elergy of the Rom. Cath, faith, which is that most livoured by the government, and entitled to the tithes in case of dispute. The great body of the Protestani elergy is also derived from the poorer elasses of society ; and its members, during the perion of their education, are commonly maintained by the lord of the village to which they belong, till sent to college. Besides six gymnasia, the Calvinist church has four superior colleges, one of which, that of Enged, stands higher for general education than any other college in Transylvania, and has an annual revenue of 1,000 . The Lutherans have a college at Cronstadt, and seven gymnasia. The government of the reformed churches in Transylvania is somewhat like that of the Presbyterian chureh of Scotland. The Unitarian is an established religion in Transylvania, where it was introdaced by the Polish queen of Zapolya I., in the sixteenti century, and for some time contimued to be the

TRAVANCORE:
religions of the court. 'I'he linitarians include all the I'oles, with some of the Magyans and Sizeklers, and reside chlelly in the szekler-land, where they have abrut 100 churches: they have a college at Klanscuburg, and two gymunsia elsewhere.
"'lise habits of socioty in 'Transylvania,' says an Fugtish traveller, 'in many rempects differ little from thowe of Fingland abont the end of the last century. In wome of the all fiwhioned honsen almost a patriarchal simplicity is kept up. The honses of the richer nobles are Inrge and roomy, and their establishments are comblneted on a seale of some splendour. It is true that they are delio cient in many things which we shonld cousinger nhsolate necessaries; but, on the other hand, they exhibit innny luxnries which wo should comsider extravagnat with twice their incomes. It is mo uncommon thing, for instance, in a one-nturied hosise, with in thatehed roof and nin unempered thor, to be shown into a beilroon whore all the washing ajparatus and toilet is of solidsilver. Bare whitewashed walls and rich Viemma furniture; a lady decked in jewels which might Inzzle a court, anil $\boldsymbol{n}$ laminaid without shoes and stockings a a corriage And finir splemdid hores, with a coachman whose skin preps ont between his waisteat and inex-pressibles,-are some of the anomalies still to be foand in 'I'ransydvania.'

This principality had heen eonnected with Inusgary for many centuries previonsly to the conguest of that country by the Tharks, after whiel it threw ofl' its allegiance, mad becamo a quasiinlep. kinglom, nle ermately tributary to Turkey, or muder the inthenee of Austria, to which latter empire it was munexed by Joneph II. in Itia!, Since this period it has enjoyed eomparative tranquillity.

Thil'ANI (an. Dreputnom, from Spémavos, a seythe, the tomge of land on which it is built being enved in the form of that instrument), a sea-port town of ltaly, island of Sicaly, cap. prove, dist. and cast. of sume mome, on in projecting point of lami on the W. const of the islaul, 15 m . W. Dalemmo, the light-honse on Colombaria roek, at the month of the larbomr, leing in int. $3802^{\prime}$ N.: long. $12^{\circ} 300^{\prime} 18^{\prime \prime} \mathrm{E}$. $I^{3}$ op. 30,337 in 18122 . Trajuni is a military post of the second elnas, being surrounded by a wall and bnstions, with ravelins in good repair, and covered by a glacis. The harbonr, on the S . side of the town, is protected by Siria fort, at the extrenity of the tongue of land on which the eity is built, the fire of which is erossed by that of a linttery on Colombaria rock. The castle, in the N. nugle, though unwortly of the name, is the residence of the fovernor and other military authoritles. The streets are regular, and the town is commolious and pretty well built. The cathedral and senatorial palace are tine editices. It has many eonvents and numeries, and nearly 40 churches with 2 hospitals, a college, 2 seminaries, and an oratorio. The church of San Iorenzo is sald to be ' a simple and mnjestic specimen of eorrect architecture.' Despite the number of its priests and friars, its inliabs. are industrious and enterprising, sud aftord the best artisans and sailors of the island. It has produced excellent selolars, painters, and architects, and the art of engraving on gems, which had been lost during the dark ages, was here recovered and brought to perfection by Mazarielli. Many of the inbabs. are distinguished as sculptors and carvers of coral, amber, wood, shells, rings, and alabaster. To the W. of the town is a well designed promenale. The harbour is said to have been much damaged by the great enrthquake of 1542 ; but though small it is secure, and might be ensily enlarged. It has a tolerably good mole, on which is the pratique
ollice, necessible to vessels of ano tons, veswels of larger burilen anchoring nenr the Colombaria, in B or 9 fathons water, mudily bettom. Water is conveyed to the town ly unaguednet from the fint of Mount San Giniliano (an. Eiryx), a little to the NE. of the town.

The trale of the town is very considerable. 'The malines, in lition to the Sk., neis the most extenvive of any lin the islund. 'The salt, whieh is of gann
 on the caral tishery on the const of Africa to in conslderable extent, and the cutting and pulishing of coral is one of the principal branchas ol ladastry earried on in the town. Jhesides sait and cornl, the exports comprise sobla, alabaster, rongh or eut into vases, statues, and a variety of other articles.

Lixcopiting vestiges of the male formed ly Fahnes to foin Cobombaria to the continemt,? motilated lims' heals, that griece a fonmain, and some fromments of marhle, there are to remains of antiquity here, thoth coins of Drepaninu have beren oecasionally fommi. Drepmam is very ancient. It is represented by Virgil ns havin, beron visited by Fncus, aud ins the place when Anchises brenthed his last. (Encil, iii. lin. Fili.) It was early oreapied by the Cartharioians; and. from its atvantapoons position and exerellent purt, was considered by them as of the tirst ingurtamere. Duriog their struggle with the homans it wasthe: acene of frequent contesta. Of these the thont celebrated was the great sea-light anno $2: 17$ nos., between the lioman fleet under the consal Clandian l'uleher, and the C'arthagininn llent umber diherlab. The latter gained a complete and decisive vietory, with tomparatively little loss on their part. (l'olyhius, hib, i. cap. 4.)
'I'liAVANCORE, a state of Ilindostan, sulsidiary to the Isitish, nud formmg thes S. extremits of the Indian peniosula, between the 8 th and loth
 long., having la, the liritish districts, Tinnembly. nuil Dimiknl, N. Coehin, amd on other wiles tho
 lrendth, tio m. in the N., aud gradually oliminis. inf to 20 m . in the S . Area extimated at nearly 4, 100 t ) so. m., and pop. at semewhat less than $1,000,000$. The surface, which is varied with hill nud dale, rises in the Ji. into a monntain clain, covered with forest trees and jungle. It is well watered, and highly nulapted lyy its climate to the wet eultivation, and rice is grown in large quantities; besides which, pepler, carilamoms, casia, gillger, turmeric, betel mit, and cocon muts are among the clicf regetable products. Tobacco is principally imported from Ceylon, and is a folvernment monopoly, from which the rajah is stated to derive a revenue of 13 lacs of rupees a year. Elephants, bullaloes, and large tigers inhabit the more remote parts, and ivory, bees' wax. and some other valuable animal prodnets areamony the exports. Indications of cond are said to the met with. The land is nssessed on the ryotwar system, $n$ fresh survey being made every if or l! years. Lands, the jiroperty of the fovemment. are assessed according to the quantity of send sown on them, and the rent in general amomes to less than half the prodnce: lands, the propert! of individuals, pay, in many cases, under ó per cent. on the produce. The lowness of the landtax was formerly compensated for, to the native government, by the monopolics of pepper, letel. cardamoms, and other valuable protucts, whads the inhabs. were obliged to supply to the slate at very low prices. Most of these monopolies were destroyed, and replaced by a more equitalule system of taxation when the comitry came mader the ad-

I
minisimation of the Irisish, Bixeept, however, as pexpects the light hess of the land-tax, the mative poverament of 'l'rasancore was mont appreaslse. There was a chain of utlleers from the dewen to the lawest inhabb, exercising all the powers of government, military, julicial, civil, and revenue, without any cheek or control whatever; and, hesides this, several of the suborilinate chasmes, sulbjpet to a eapitation-tnx, were formed into companies of about 100 mene ench, undar a mequrate oflleer, mind obliged to perform all klinla of work lior the betrelt of the government at the pleasire of the revenne servants. Under the British, this chaln of revanuse scrvaits was abolished with the capitation-tax, and the various monopolien, except those of pepper mil tobaco. At the same time, however, the hand-tux was increased, a circumatance which in sof far contervailed the other improvements.
'Travancore, being an integral portion of the ane. Malabar, the prevaillog nsages and enstoms are generally similar to those which prevail along the adjacent parts of the W, coast of Ilimiostan. I'le numinal movereignty of the commtry, homorary dignities, and even property, devernd in the femate line, as in Comarin. The former ruling family is lliadoo, mal the principal part of the pap, consints of Ifralimina and Nairs; but there ure also many Noplnys (Mohammedans), and it is extimnted that, in I'rnvancore and Cochin, there are 100,0101 Syrima Christians. In mome commatnitios, Claristitur charehes are considerally more numernus than prorodas or mosfoues. The 'l'rivaleore rajnh, nbout the midalle of last century, sululued most of the smaller states in his neightmurhoul, and extemled his donn., bit, in IG!日, these would have fillen a prey to 'lippoo Sails hut fur British intervantion. The flum subsidiary reaty with the liritish was entered into in Intui. J'rincijul towns, 'Trivandermm, the enpo, Anjengo and flailon: 'Iravancore, the lormer cajb, is now in a state of decay.
TKlill $\%$ NNO (an. Truprzas), a city and seaport of Asin Minor, on the SLE. comat of the Bhats Soa, 120 m. NW. Vrzeroum ; lat. d $10^{\circ} 1^{\prime}$ N., long.
 fi,000 to 30,000. The town is luitt on the slope of a hill deelining to the sea, and backed by steep eminenees rising behind. Its central portion is surromided by a eastellated and lofty wall: on cithor side of the walled portion is a deep ravine, filled with trees and gardens, looth ravines being crossel by bridges. Ovarlooking the town is a citadel; but it is dilnjidated and neglected, and commanded by neighboming locights. 'Ithe walls of the city are, hownver, sutheiently strong to serve as a defence agrinst, trums without artillery. The space inchoded within the walls is of preat extent, but it is principally filled with fardens and platations. The hooses, whith are mostly built of stone and lime, and roofed with red tiles, have in general only a ground-tloor, and as ench is environed by a garden, the town from the sea has the appearance of a forest, scarcely a house beine visible. 'The walled city is solely inhalnited by Nohammedans; the Cliristians dive outside the walls (jrincipally in the eastern suburb), where are also most of the bazaars and khans. Ihesides nearly 20 churehes and ehapels, still retained for the service of the Greeks and Armenians, nlmost all the mosifues have formerly been Christian churehes. The handsomest mosque is that of St. Sophin, 1 m . W. of the city. It is of suall dimensions, built of hewn stone, in the form of a cruss, and divided into a mave and 2 aisles, lighted from a cupola supported by 4 marble pillars, The princijal entrince is adorned with 4 white marble pillars. The principal entrance is
alorned with I white marble Corinthian colummen the lioman eagle is comspiotumes over the gate below it are numbers of small reliefo, and a bennliful cornice rans round the extrion of the edither. Several of the other mosepuen and churches are in the mano style; but the mont curious alitice in the city is the besestein, a huge syuare strncturs with two small windows in ench front, protably erected by the benoese an a powder mugatine. A high nguare tower and the masyy remmants of many other buildings crown the rminences near the mosigue of St. Sophin; but none of these, nor nny other remains at Trehizond, are of an age miturior to the Cliristlan erat.
Trelizomil has two joits, one on cither side of a small peninsula projecting from the town into the nea, 'l'lat on the li. is the best whelterad, and is the place of anchornge for the largent ships. It in exponeal to all but S. galen; but it does not appear that, with ordinnry precmution, any danger need le apprehended. The gromind lrom if to of im , Li, from the point is clean, and holds extremely well, Shlpe moor with open hawser to the N. and a good hawser and stream-anchor on shore as a steru-fast, At night the wind always come off the land. After the autumans equinox, the 'lurkish aud buronean veanels resort to Platana, nin open rondenteal, abont 7 m . to the W. of 'I'rebizond. In mutiguity, and in more modern times previonsly to tha conguest of Constantinople by the 'lurks and the exdlosion of all forejgen vensels from the Black Sen, Trubizond was the sent of ant extensive trale. It is the antural rmporimen ol all the commeries to the SE., of the Bhack Sen, from Kirs on the li., rombd by liarbekir to dmasia on the W. L'revionsly to ls'lo, howevar. ita trade had dwindled to the export of a lew pronlucts of the conntry to Comstantinople, the mupert of' iroll from 'lagranror, and a tratic with Ahassah, carried on in small craft, which carried
 factures, liringing in roturn the raw productions of the Cancusis, and alaves. Ihat the treaty of Alrituople, ly oproing the Black Sen to Viurojuan shijes, restored the old chamel of commmication letwern liuroge and , larlia, and l'ersia, thrungh 'Irrohizond; and the liussian polity of 18:31, by putting an end to the immmities enjoyed by the liassimn purts s. of the Cnucasus. has given Trebsizond nn importance it did not previonsly poseses. Its principal articles of import are mambinctured cottoms, mostly from (ireat Iritain, shrar, collee, rim, salt, tin, and wine. More than halt the articles imported are destined for I'ersia. 'The exports to liurope consist of' silk, sherpis wool, tobaceo, carpets, mawls, falls, and drugs of varions sorts, box-woul, mits, with some wax, honey, and beans to Comstantinople; but all in comparitivoly tritling quantities. lich veins of copjer and leat exist in the neighbouring mountains, but they are badly wrompht.

I'his city was originally fommed by a colony from Ninope, but subsequently outstripped its parent eity, mud all its sister ports nompr he conss, in wealth and importance. It was a tlourishing emporimm when it was reached ly X(mophon and the 'Ten 'Thonsand at the close of their memornble retreat. It contimued to be an important city of the Greek empire till the sulpuration of the latter by the Crusnders, when its duke, of the Conneni family, assumed the dipnity of emperor. Ilis dominion extenulal from Sinope to the l'lasis, and his fumily reirned lor more than 2ino yenrs, iill Trebizond came into the possession of the Turks in 146t.

TRBGONY, a market town of England, co. Cornwall, lund. I'owder, par. Cuby, on the Fal,
$16 \mathrm{~m} . \mathrm{SW}$. Bodmin. Area of par. 2,410 aeres. Pop, of par. 699 in 1861 . The place would not be worth notice but for the circumstance of its having sent 2 mems. to the II. of C. from 1599 down to the passing of the Reform Act, when it was most properly disfranchised. The right of election was in potwallopers residing within the bor. The pop. is almost exclusively agricultural.

TRENT, or TRIENT (an. Tridentum), a town of the Tyrol, but within the natural limits of Italy, on the Adige, which is here crossed by a tine bridge, 14 m . NNE. Roveredo, on the railway from Verona to Botzen. Pop. 14,350 in 1857. The town stands in a small but beautiful valley; being, however, from its elevation, exceelingly cold in winter, and, from the reflection of the surrounding mountains, equally hot in summer. It is surrounded by a pretty high wall, is well built with houses in the Italian style, has wellpaved though irregular, narrow, and dirty streets, and a square ornamented with a handsome fountain. The palace belonging to the old prineebishops of Trent, in a corrupt Gothic style, is of large dimensions, has some good apartments, fine fresco paintings, rare marbles, and extensive gardens. It has also a cathedral and several other churehes; in one of which, Santa Maria Maggiore, the famous council held its meetings. It has also three convents for monks, and a numery, a large hospital, an orphan asylum, a lyceum with several professors, and a gymnasium; with manufactures of silk and other fabries. It is one of the seats of the transit trade between Germany and Italy; and exports wine, corn, tobacco, anl iron, produced in the surrounding country.

This town, which is very ancient, became, in the middle ages, the cap. of a lordship under its lishops, by whom, in 1363, it was united to the Tyrol, in which it has since been comprised. The bishopric was secularised in 1803, but the bishop is still in the enjoyment of a handsome revenue. Under the French it was the eap. of the defp. of the upper Adige, and is now the seat of the goverument of the cirele of the same name. But the celebrity of Trent is entirely owing to its having been sclected as the place of meeting for the famous general council of the chureh, convoked by Pope Paul III., and which, after much procrastination, met for business on Dee. 13, 1545, and continued, though with several interruptions, through 25 sessions, till 1563 , under three successive pontiffs. It consisted of dignitaries of the chureh, representatives of the different universities, and of ambassadors from the princes and states attached to the communion of Rome. It was intended to revise, fix, and declare the doctrines of the church, to remove the abuses that lad crept into its government, and the conduct of its functionaries,-
-_s succurrerc lapsis
Legibus, at versos revocare in pristina mores;
and, if possible, to restore peace and unity to the chureh. It may be said to have fully aceomplished the first object, and, in some degree, also, the second; but, as might easily have been foreseen, it wholly failed in the third object, or in the attempt to smooth the differences and allay the violent struggles and animosities that then divided and agitated the Christian world. The constitution of the council, indeed, and the commanding influence which the papal legates early aequired over its deliberations, deprived it of all pretence to the character of an impartial tribunal, and fully justified the Protestants in repudiating its authority and rejecting its decrees. The latter were subscribed by 255 legates, cardinals, archbishops,
bishops, and other dignitaries, and have been generally admitted to contain, along with the creel of Pope Pins IV., a complete, authoritative, and well-digested synopsis of the principles and doetrines of the li. Catholic religion. The intrigucs of whieh this council was the theatre have been developed with singular talent by Sarpi, in his famous 'History of the Council of Trent.' lunt as Sarpi was the implacable enemy of the court of Rome, and has dexterously endeavoared to shus that its pretensions were almost always unfounded, and its advoeates in the council almost always in the wrong, his conelusions are not always to lie depended on. The history of Sarpi, though an able and ingenious, cannot be said to be an honest or trustworthy, work. Tiraboschi cautionsly says of it, 'Io son ben lungi di sostenere, che gli si delba credere ciò ch' ei raconta, solo perchè egli il raconta!' (Letteratura Italiana, viii. 131, ediz. Modena, 1793.)

Trent, a river of England, being, next to the Thames and Severn, by far the most important stream in that part of the $\mathbf{U}$. kingdom, not onty on account of the length of its course, but of thie fertile districts through which it passes, the immense number of canals with which it emnmunicates, and the considerable rivers it receives in its progress. It has its source near the Cheshire borter, in the moorlands of Stafferdshire, albout 4 m . N. from Burslem. At tirst its course is nearty SE., when it makes a sudden turn by the E , $\mathrm{i}_{1}$ the N . near Burton-on-Trent. It afterwarls divides Leicestershire from Derbyshire ; and pursuriug a NE. course, by Nottingham to Newark, it turns more and more to the $\mathbf{N}$. After dividin: Nottinghamshire and Lincolnshire, and passing Gainsborough, it enters Lineolnshire at Wet Stockwith ; and flowing N., with a little inclinstion to the E., unites with the great estuary of the IIumber at a place called 'Trent Falls. It mar be navigated by vessels of 200 tons as far as Gainsborough, and by barges as far as Burton-minTrent, a distance of about 117 m ., having in this lengthened course a fall to low water-mark if only 118 ft ., or very near a foot per mile. Frum Burton-on-Trent to its source, the rise of the rives is about 376 ft ; at least the summit level of the Caldon eanal, which passes near the liead of the Trent, is 494 ft . above the sea.

Of the subsidiary streams that fall into the Trent, the most considerable are the Bythe. Tarne, Dove, Derwent, and Soar; but of these it is only necessary to notice the last two. The Derwent rises in that part of Derbyshire callel the High Peak; after passing Matlock, Cromford, and Derby, it has a circuitons course from the latter to Wilden Ferry, where it unites with the Trent. It is navigable as far as Derby about 13 m .; but it has been superseded, as a channel of communication, by the Derby canal. The Soar rises E. from Winckley, in Leicestershire, it flows through a rich grazing country, and more than half encompasses the ancient town of Lecicester. After receiving the Wrake, its course is N., with a little inclination to the W., till, passing Loughborough, it falls into the Trent near Cavenulish Bridge. It is navigable to near Loughborough, a distance of about 7 m .

The canals that communicate with the Trent are of the greatest importance: assisted by them, it affords an easy means of export for the manafactures of a large distriet of Laneashire ; the salt of Cheshire; the produce of the Potteries of Staffordshire; the coal of I Perbyshire; and the agricultural products of Nottinghamshire, Leciestershire, and lineolnshire. It also opens a cantmunication with the sea by way of Lancoln aul

THENTON, a town or city of the U. States, state Neiv Jersey, of which it is the cap., though, not the largest town, co. Hunterdon; on the Delaware, at the head of the sloop-navigation, 30 m . NE. Philadelphia. Pop. 17,220 in 1860, and 4,035 in 1840 . The town is regnlarly lad out and well bnilt; the state house, prison, various churches, the bank, and several cotton'factories, are among the most conspicuous buildings. The river is here crossed, immediately below the falls, by a wooden bridge, $1,000 \mathrm{ft}$. in length. The Delaware and Raritan canal passes tlirough the town; and Trenton communicates with New Brunswick by a railway 27 m . in lengrth.

It is famous in the listory of the American revolution for the victory gained over the British und lessians, Dee. 26, $17 \frac{6}{6}$, by the troops under Washington, whose decision and intrepidity on the wataion materially promoted the progress of the hevolution.
TREVES (Ger. Trier), a city of Prussia, prov. Ihin , cap. of a reg. of the same name, on the Mos.slie, near its contluence witl the Sarr, and near the frontier of Luxembourg, 60 m . SW. Coblentz, on the railway from Coblentz to Luacmbourg. I'op. 21,215 in 1861, exclus of a garrison of 3,456 men. 'Ihe streets of the city are broad and straight, and some of the public buildings imposing. Among the latter may be specitied the cathedral, remarkable for its altars and marble gallery; the church of St. Simeon, of great antiquity; the elector's palace, now turned into barracks; the bridge over the Moselle, ei90 l't. in lengeth, the piers of which are supposed to have beca built in the 28th year of the Christian ara; the gate of Mars (Porta Martis) of colossal dimensions and great antiquity. Its ancient university was suppressed in 1794, but it has a college or seminary for the education of Catholic elergymen, a gymnasium, a collection of medals, and a public library, both of which belonged to the muiversity; the latter comprises above 80,000 vols., many of which are scarce and valuable; it has also several hospitals, and a theatre. It is the seat of the government, has a prov. council, a tribunal of appeal for the prov., and a tribumal of commerce, with mamulactures of linen, woollen, and cotton stuffs. lhoats for the navigation of the lihine are built here, and it has a considerable trade in Moselle wine.
Treves is, perhaps, the most ancient, and was long the most celcbrated, of the German cities. A Roman colony was planted in it cluring the reign of Angustus, and thence it was called Augusta 'Treviromu. From that period it becume a place of great importance, and was reckoned one of the bulwarks of the empire on the side of Germany. Constantine the Great and several other emperors occasionally resided in 'I'reves. Ammianus Marcellimus calls it Douicilium prinсірин сlarum. (Lib. xv. s; 27.) Ausonins, in his poem 'IDe Charis Urbibus,' celebrates its praises, and notices the extensive commerce it carried on by the Mosellc. Besides the bridge aud the P'ortu Martis, other remains of buildings that still exist, and many eoins and relics found in the town and its vicinity, attest the power and splendour of its limm masters. Beyond its walls ure the ruins of an amphitheatre, cot in the side of a lill, where Constantine is sad to have exposed some thomand Gauls to be torn by wild beasts. I'reves
was successively laid waste by the IIuns, Goths, Vandals, and Franks, and as often rebuilt. It was for a lengthened period the cap. of the arehbishopric or electorate of Cleves. Latterly the pop, has increased considerably ; though there is little probability that it will ever recover its ancient fame and importance.

TREVISO (an. Tarvisium), a town of Austrian Italy, prov. Venice, cap. deleg. of its own name; on the sile, 16 m . N. by W. Veniec, on the railway from Venice to Trieste. 1'op. 22,165 in 1857. The town is irregularly built, and surrounded by old walls. Most of the streets are wide and well paved, with colonnades in front of the houses; and there are numerous palazzi and religious structures. The old cathedral of St. Peter, a tine though unfinished structure, has in it a painting by 'litian, and others by P. Bordone (a native of Ireviso) and Domenichino. The Gothic chureh of S. Nicolo, the town-house, and theatre are good buildings; and in the monte di pieta is a fine picture by Giorgione. Treviso is a bishop's see, and has an episcopal seminary, gymnasium, public library, butanic garden, several hospitals, a castle, and theatre. 'I'he university, alterwards removed to Padua, was tirst established here. A large lardware factory, an extensive pottery, and manufactory of silk twist and stulfs, woollen cloths, paper, and cutlery, with some trale in corn, wine, cattle, and fruit, ocenpy most part of the inhals. A large fair is held each year, from the Bic' to the 18th Oct.
'l'his town appears to have been a Roman mumicipium. Under the Lombards, it was the call. of one of the two marehes or margraviates, which they established on the contines of their kingrlom in Italy (Ancona having been the cip. of the other). Under the French it was the calp. of the dep. Tarliamento. Napoleon conterred the title of Juke of Treviso on Marslal Murtier.
THEVOUX (an. Triva, or Triviam), a town of France, dep. Ain, cap, arrond., on the declivity of a hill, on the saône, $13 \mathrm{~m} . \mathrm{N}$. Lyons, on the Piatis Mediterranean railway. 1'op. $2,7(0)$ in 1861 . 'lhe town was formerly surrometel by walls and towers; and, on the summit of the hill on which it is built, are the ruins of its old castle, commanding a most extensive view over the surrounding plain. It has an antiquated appearance, with narrow streets, and mean-looking houses. Ilaving been formerly the eap. of the principality of Dombes, and the seat of a parliament, it has still to boast of some considerable ancient edifices, including the hall in which the parliament meet, the hall of the courts of justice, a hospitul founded by Anne Marie Louise d'Orleans, and a quay on the Saône. It has, also, a tribunal of original jurisdietion; a cloth mandactory; a royal establishment for the retining and assay of gold nud silver; and some trade in the products of the surrounding country. It is very ancient. The emperor Severns defeated, anno $19 \overrightarrow{7}$, his competitor Albimus under its walls.
Trevoux has attained to distinction in literary listory. Lonis Auguste Bourbon, prince of Dombes, endeavoured to make it a sort of literary capital, mud in this view lie established, in 1695, in cousiderable printing-oflice in the town, in which he also intended to found a college. Not long after, in 1701, the well known and very learned monthly publication, entitled the 'Journal de 'Irevoux,' conducted by the Jesuits, began to issue from this press, where it contimued to be printed till 173., when it was trunslerred to l'aris. Here also nipeared, in 1704, the first edition of the 'Dietionnaire de 'Trevoux,' in 3 vols. folio. 'there were soveral subsequent editions of this
valuable work, most of which, however, were printed and published in Paris. Of these the last and best edition, in 1751, was so much enlarged as to comprise 8 vols. folio.
TMRICALA, or 'TRIKILALI (an. Tricca), a town of European Turkey, cap. of the prov. of same name, identical with the an. Thessaly, on the E. side of a mountain ridge, 2 m . N. from the Sclymbria (an. Peneus), and $37 \mathrm{~m} . \mathrm{W}$. by S, Larissa. Pop, estimated at from 10,000 to 12,000 , chiefly Thurks. It is of considerable extent; and the houses being intermixed with gardens and trees, it appears to be built in a wood, and the lofty minarets of its mosques rising above the trees frive it a pieturesque appearame. It has several Greek churches and syuagogues. At the lieight of 10 or 12 ft above the pavement, a wooden trellis-work, interwoven with wines, is curried over the streets, completely slading the passengers below. The shops are clean, and tolerably well furnished.
Accorling to Strabo, this city had a magnificent temple of Asculapius, but no traces of this editice are now known to be extultit. On a hill above the town are the ruins of a castle, apparently dating from the time of the Gireek emperors, and commanding a fine view over the phinins of Thessaly. These are depastured by numerous tloeks of sheep, and also produce a good deal of cotton, the manafacture of blankets, coarse woollens, and cotton stuffes occupying many of the inhabs, of Tricaln. Its trade is also pretty extensive, from its being on the principal roal from Yanima to Constantinople, and commanding the only pass by which supplies of eorn and other provisions are brought from Thessuly into Albania. The latter circumstance renders it important as a military post.

TRICLINNOPOLY, a uiutr of british India, presid. Madras, chielly between lat. $10^{\circ} 30^{\prime}$ and $11^{\circ} 30^{\prime}$ N., and loug. $78^{\circ} 10^{\prime}$ and $79^{\circ} 30^{\prime}$ E., having N. Salem and S. Areot, E. Thaujore, S. the latter and Madura, and W. Salem and Coimbatore. Area, $3,169 \mathrm{sq}$. m. Pop. estim. at 580,000 . The Cavery runs from W. to E. through the country, irrigating a consilecrable extent of rice land. In addition to rice, sugar-cane, with tobaceo and betel-leaf, are grown in the tracts watered by tanks and wells; in the dry lands the other usinal prolucts of the Carnatic are extensively cultivated, and there is gool pasturage for sheep and cattle, which are numerous. The principal imports are glac, vil, tobacco, pepper, and areca nut, while the exports conprise cloth, indigo, sultpetre and cotton. The principal manufactures are cluth, for domestic use, and indigo, with some subsidiary articles made in the town of Trichinopoly.
Tminnowous, a large fortified town of British India, presid Madras, cap. of the above distr., on the Cavery, 186 m . SW. Madras, on the railway from Madras to Tanjore. Pop., exclusive of troops, estimatel at 74,000 . It is of an oblong form, nearly 1 m . in length, N . to S ., by about $\frac{1}{2}$ m . in breadth. Exclnsive of some outworks, it is surrounded by a denble wall and diteh, with a covert way and glacis. But its defences are now mostly in a ruinous state, exeept the citadel near its N. extremity, which, being situated on an clevated rock, commands any military oper,tions carried on in any part of the vicinity. on this rock also stands a large and massive pagoola, and a pillared square building, with a statne of llamman, occupies the highest peak, while in the S . fince of the rock is a small sculptured excavation ill the style of some of the cave temples at Eilora. The jewellery made at 'Trichinopoly lad formerly much celebrity, and Trichinopoly clains
are still in request. Cotton cleths, table linen, and harness are made here, and the town is an emporium for a great varicty of manuffectures. It is well adapted for a military station, as, besides being well supplied with different kiads of merchanlise and artisans, it has a station on an important line of railway, and the orlinary ruads of the district are so good as to admit, at every season, of easy communication with Madras, VCl lore, and Mysore. Hence also diverge all the great roads leading to Tanjore, Madura, and Dindigut, the three chicf stations in the $S$. part of India.

TRIESTE (an. Tergeste), a town and principal sea-port of the Austrian empire, cap. gov. aud circ. of its own name, prov: Illyria, on the Alrintie, near its NE. extremity, 73 m . E. Ly S. Venice, on the railway from Viema to Vevice. Pop. 64, 096 in 1857. Trieste is divided into the old town, the new town, or Theresienstadt, the Josephstadt, and the Franzenvorstadt, or Frameis' suburb. The old town stands at the foot and on the declivity of a steep hill crowned by the citidel; it has dark, narrow, winding, and frequculysteep streets, with gloomy-louking houses, and is surrounded by the remains of ancient fortifications. The new town, immediately NW. of the former, and built on level gromed, partly taken from the sea, cousists, on the contrary, of handsome streets, crossing each other at right angles, and lined with neat buildings. It is partially intersected by the canal cut by Maria Theresa, by mems of which vessels drawing 9 or 10 ft , water may lom! and untoad at the doors of the warehouses. lictween the new and old towns runs the Carse, the principal thoroughfare, brond but winding, furnished with good shops and coflec-houses, and opening successively into spacions and handsume squares. The principal of these is the liazza Gramde, with a tine public fountain, and the culum and statue of the emperor Charles VI., to whum Trieste is principally indelted for its inpurtance in modern times. In this square the great vegetable and fruit market is held, and on one side of it is the locaudd-grunde, or principal hotel, contmanding a fine view of the harbour. The exclange, the finest building in the city, stands in another square, in which is a statue of Leopold ! Continual improvements are taking place in and aromed Trieste; many new streets and promenades have been laid out, and public walks plauted with trees; new moles, and a gigautic hospial, the cost of erecting which has been estimated at 800,000 tlorins, have also been constrneted.
The cathedral, in the wld town, is surposed to occupy the site of a temple of Jupiter. It is in the Byzantine style; its interior, like St. Mark's at Venice, is ornanented with mosaics, and many lioman inscriptions and ca'vings are built up in the walls. It contains the monument of Winkelmann the antiquary, assassinated here in lifis. There are five other liom. Catholic, two lprotestant, and two Greek churches, a synagoguc, and an English ehapel. The finest of these edifices are the (ireek churches, particularly that at the heal of the grent caunl, with a magnificem marble altar. The chureh of the Jesuits merits attention by its architecture aud tine paintings, and the palace of the governor is also ant impowing structure. One of the hamdsomest private residences is the house formerly belonging to a (ireek merchant of the nane of Carciotti, who, haviat berm business in Trieste as a predler, died worth $1,000,0001$. sterling. The castle furmerly ronstituted the main protection of the town and harbour, and is still mantained in a tolerable state of defence. The great thentre is spacions, and therp are several minor theatres. Aunong other oljects

TRIESTE
TRIM
wortlyy of notice are the barracks, post-house, doekyard, lazarettos, one of which is among the most perfect establisliments of its kind, and the terrace of the casino ormamented with several statues.
Trieste is in the S. what IIamburg is in the N., the great commereal entrepot of Germany. $A$ larbour, which, though rather limited in size, is casy of access and convenient, has been formed by the Theresian Mole, founded on a ledge of sunken rock, and projecting NW. into the sea from the S. extremity of the old town. At its termination lias been formed an irregular platform about $1,100 \mathrm{ft}$. in cire., on which have been ereeted a fortress and lighthouse, with an irtermittent light 106 ft . ubowe the sea. Another lighthouse, having the lantern 103 ft . above the sea, has been ereeted on the point of Salvore, about 18 m . W. by S. Trieste. The port, with the Mole, forms a creseent $1 \frac{1}{2} \mathrm{~m}$. in length, being a contimued quay, faced with hewn stones, and with stairs and jetties for the convenience of embarkation. On the N . side of the port is a dock or harbour, appropriated exclusively for vessels performing quarantine. It is walled round, and furnished with hotels, warehenses, and every sort of aceommodation for passengers and goods. Ships under 300 tous burilen lie elose to the quays, those of greater size mooring in the roads in front of the city. The principal defeets of the port are its limited size, and its heing exposed to NW. winds, which sometimes throw in a heavy sen. The gales, however, are seddom of long contimance; and the bolding ground being grood, when proper precantions are token, no accident oecurs. 'Trieste beiug a free port, gools destined for its consumption, and that of the adjoining territory, pay no dhties; lut such as are taken into the interior for consumption pay, of course, the duties in the Austrian tariff, 'The transit dhaties and shipping eharges are extremely reasonable.
The exports are varions, consisting partly of the raw and partly of the manufactured proflucts of Austria Proper, Illyria, Dalmatia, Inngary, and ltaly; with foreign artieles imported and warehoused. Among the principal articles of raw proluce may be specitied, corn, chiefly wheat and maize, with riec, wine, oil, shmmae, tobaceo, wax, silks, silk rags and waste, hemp, wool, flax, linen rags, hides, furs, and skins; the produce of the mines makes an important item, consisting of guicksilver, cmmabar, iron, lead, copper, brass, litharge, alum, and vitriol ; the forests of Carmiola furnish timber, for ship-building and other purpuses, of excellent quality, and in great abundance, with staves, cork wood, box, and hoops; marble also ranks under this head. Of manufaetured articles, the most important are, thrown silk, silk stufls, printed cottons from Austria and Switzerland, coarse and tine linens, and all sorts of leather. Uuder this lead are also ranked soap, Venetian treacle, liquenrs, with jewellery, tools, and utensils of all sorts, glass ware, and imirrors, Venetian heads, retined sugrar, and a host of other articles. 'lrieste is also a considerable depot for produce from the Black Sea, Furkey, and Eyryt. The prineipal articles of importation consist of sugar, coflee, dye-stuffs, cotton-wool from the Levant aill the U. States, cotton goods and cotton yarn, silks, oil, tin plates, salted fish, and a host of other articles, The value of the imports always exceeds that of the exports, oceasioned in part by their being subsequently trausshipped to other ports, and partly by their leing tul excess of exports as compured with imports from other parts of the empire.
istise has a larger amomet of slipping than any other port in the ennire. 'There entered the
port 10,378 vessels, of 735,860 tons burtlien, in $1861 ; 10,905$ vessels, of 769,352 tens, in 1862 ; and 10,578 vessels, of 725,574 tons, in 1863, 'I'le great steamship company, known as the 'Austriant Lloyd,' has its chief seat at 'Trieste, in an intmense edifice, called the Lloyd arsenal, constructed 1852-56, and ineluding wet and dry doeks, and building slips for the largest steamers. The company maintaius regular steam communication between Greece, Turkey, and Egypt, and in its hands is a large part of the commerce of Trieste.

Trieste is the seat of the administration for its gov, and the Illyrian coast, of courts for the town and circle, a tribumal of commerce, the central board of health for the empire, and a board of police, and is a bishop's sec. It has an imperial aendemy, a school of navigation, normal, femake, Jewish, Greek, and elementary schools, many eharitable institutions and learied societies, and several periodical publications. There are mo public banks, but several private establishments of undoubted solidity, and various insurance offices. Trieste has manufactures of rosoglio, wax-lights, leather, soap, playing cards, musical instruments, with dyeing-honses, sugar retineries, potteries, and distilleries. It is hetter supplied with provisions, chietly from Dalmatia and the country round Fenice. A mixture of all nations is met with here, and all the prineipal merchants and traters are foreigners. (ierman is spoken by the authorities and in the public offices, but Italiais is the prevailing language of the middle chasses, while the lower sjeak a slavonie dialeet.

Traees of an amplitheatre and other lioman remains exist at 'Trieste. During the middle ages it was the cap. of a small republie: lut its histury presents little remarkable till 1719, when Charles VI. made it a free jort.

TlilN, an inland town of Ireland, prov, Leinster, co. Meath, of which it is the cap., on the buyne, here crossed by a bridge, 25 m . NW. by W. Dublin. Pop, 2,057 in 186l. Trim is a very ohd town, having been given by IIenry II., as part of the palatinate of Meath, to I Iugh de Laey. The latter constructed the castle, which, from its extent, strength, and elevated situation on the hamks of the river, was at once the larpest and most important of the numerous fortitications erceted ly the English within the limits of the Pale. The ruins sufliciently attest its ancient grameleur. (Hn the other side of the river are the ruins of St. Mary's Abbey, an ancient and extensive edifice; and there are some other ecelesiastical remains Tle town had, also, been surromuled by walls, considerable portions of whieh are still entire. Indeed it was anciently the occusiomal seat of the lords-lientenant, and several parliaments have been held within its walls. It was taken, without opposition, by Cromwell, in 1649 . At present, however, notwithstanding it is the co, town, 'Irim is of little importance. Its principal public building is the new co. gaol, an extensive structure on the raliating plan. It has, also, an ancient parish church, a Rom. Cath. chapel, a dispensary, an infantry barrack, with a co. infirmary. It returned 2 mems. to the Irish II. of C. till the union, when it was disfranchised, and since then it has continued to decline. The assizes for the co. are held lere, and general sessions twice a year, and petty sessions on alternate Siturdays. It is a constabulary station, and has a dlour-mill, a brewery, and a tannery. Markets on Saturdays: fairs, March 27, May 8 , Wednesday after Trinity Sumday, Oet. 1, and Noy, 16

About $3 . \mathrm{m} . \mathrm{S}$. from the town, on the roal leadinir to Summerlill, is Dangun, formerly the property of the Liarl of Murnington, and memorable
as the birthplace of the Dake of Wellington. The house in which the great general first saw the light has, however, been wholly pulled down ; but a handsome pillar, surmounted by a statue of the 'iron duke, has been erected in the town.
'IRJNCOMALELE, a marit. town of Ceylon, on its N E. coast, near the entrance to one of the finest bays in the world, abont 150 m . Nli, Colombo; lat. $80^{\circ} 32^{\prime}$ N., long. $81^{\circ} 87^{\prime}$ E. The town, which is lut inconsiderable, is built at the foot of a rock, on which is the fort, on the ontside of a narrow peninsula or tongue of land bomeding the harbour on the E. It has but few European inhabs, and, what is remarknble, few Singalese; the lower classes being principally Malubar R. Catholics. The fortitications form a sweep of above 1 m . in length along the shore. Fort Frederick is a station for four companies of a European reginent, a company of royal engineers and artillery, and detachments of the Ceylon rille corps. Fort Ostenberg, on the termination of a ridge of hills, abont 3 m . SW. Trincomalee, commands the entrance of the harbour, and the dockyard close heneath. It forms the head-quarters of a detachment of artillery and a European company. The firtilications here were mostly constructed by the I'urtugnese; the Dutelidid little or nothing for the improvement of the place while in their possession.

The harbour of T'rincomalee was styled by Nelson 'the finest liarbour in the work.' It is almost landlocked, and the water is so deep that it is nll but practicable in many places to step from the shore on board large vessels moored alongside. buring the NE. monsoon, when all the slifis on the Coromandel coast and in the Bay of liengal are obliged to put to sea, Trincomalee is their principalplace of refuge, and a vessel from Madras can reacl it in two days. The town, which may be considered as the military caph of Ceylon, surrendered to the English in 1795 .

TliJNG, a market town and par. of Englamd, co. Hertford, innad. Dieormm, on the London and North Western railway, and on the road from Loudon to Aylesbury, 30 m . NW. London. Area of par. 7,390 aeres. Pels. 28.81 in 1861 . The town consists principally of two strects; it is tolerably well built, the houses being mostly moden. The church is an embattled structure, with a massive tower and low spire at the W. encl. The living, it perpet. curacy, worth $15 \bar{i} l$. a year, is in the gitt of the dean and chapter of Oxford. There are meeting-houses for baptists and Independents, and a Lancastrian seliool. The inhabs, are principally employed in the mamiacture of straw plait, canvos, and a few silk fabrics. Markets on Fridays: fairs, Easte: Monday and Oct. 11. Tring I'ark, in the vicinity, was built in the reign of Charles II.

TRINIDAD, an island of the W. Indies, or Antilles, being the most southerly of the group enlled the Windward Islands, and, next to fammica, the largest and most valusble of the islands belonging to Great IBritain in this part of the world. It lies immediately off the $N E$. coast of Colombia and the N. months of the Orinoco, between the luth and 11th degs. of N. lat., and the 61st and 62d of W. long., its NW. extremity being only abont 13 m. from Punta de la l'ena, the extremity of the peninsula of l'aria, and its SW. cape belng bit 7 m . from the delta of the Orinoco. Gn the W. 'Irinilad bounds the Gulf of Paria, and on all other sides it is surrounded by the Atlantic. It is of a square or oblong form, with considerable projections at all its angles except the SL. Length. N. to S., 50 m .; averare brealth (exclusive of its projections), about 33 in . Area estimated at $1,200,000$ acres, or about $2,000 \mathrm{sq}$. in. 'The popin'-
lation of the island, in 1861, amounted to 8.1,438: $4 t, 074$ males, and $3 x, 36+$ females, of the following classitication: Trinidad, dif,936; British colonies, 11,716; United Kingrlom, 1,040; Foreign, 4,301; Chima, 461 ; India, I3,488; Africa, 6,035: ; nondescribed, 461.

The mountain claains run from W. to E., and may be regarded as continuations of the chains on the opposite const of Venczuela, from which this island has most probably been detached by some convalsion of nature. Along the N. shore a bold range of momitains rises to the height of $\mathbf{3 , 0 0 0} \mathrm{ft}$., broken into the most rugged and abrupt forms, and elothed to the summit with forest trees, Towards the S. extends a chain of hills of less elevation, and of a more pastoral claaracter; while the centre of the island is ocenpied by a gromp of that or romod-topped hills, dividing it, as it were, into two extensive valleys, which are occasionally intersected by a succession of hill and dale. The whole ishand is well watered by numerous streams. in every direction. The principal are on the 1 : coast : the Caroni, navigable for 6 leag. from its mouth; and on the E. the Oropuche and Nariva, which last is said to be navigable for vessels of 250 tons to a league from its source. The N. and E. coasts are not well furnished with harbours, which is nufortunate, as the winds blow from those guarters for three-fourths of the year. But the W. coast has numerons bays and inlets, and the Gulf of Paria is an extensive inland sea, in which ships of all sizes may ride securely, and anchor anywhere without the smallest risk, and in any convenient depth of water.

The greater part of the interior of this isham is menttivated. The low gromuds are in pirts, marsly, while the more elevated portions arre, for the most part, covered with a dense vegetation of forest and underwood. The suil is, in general, deep, stitl; and tenacious; and, if properly conlivated, conld alone suplyy sugar adeguate for the consmmption of England. It might be suphered that, in in island so extensive, mountainoms, and covered with forests, the atmosphere would be gencrally overlonded with moisture. It does not, however, appear that the fall of rain is as great as in Gniana, the averure being about 65 in. a year, and this is said to diminish with the progress of cultivation. The dry season commences in lee., and ends in May; but it is a peculiar advantare of this island, that it is exempted from those destructive droughts common to all the other $W$. India islands from Barbadoes to Cuba. During June and July showers are freguent, and in dus., Sept., and Oct. the rain lalls in torrents, oftellaccompaniod by violent storms. The weather generally moderates, and the rains become more slight towards the end of Oct., and there is seldom any fall after the legiming of Dee. The nights are generally cool and pleasant.
It has been estimated that only about 1-30th part of the surtace of this island is incapable of cultivation. The settled portions of 'Trinidad are mostly contined to the NW. and a few places along the SW. coast. Of the cultivated land, $\$ 2,000$ acres are under the sugar cane, being divided into above 180 estates, the capital invested in which is estimated at $2,200,000 l$. sterling. The rest of the cultivated lands are oceupied by coeva and collee plantations, and provision and phature grounds.

This island, like the other W. Indimn colonies, has suffered greatly since the emancipution of the slaves from a want of labour ; for, from the aboudance of the land and its fertility, it might, were labour to be hat on rensonable terms, maike a rapid progress. 'To obviate its deticiency, coolics hase

W. Indian colonices, emancipation of the for, from the abunility, it misht, were e turms, make a rapid iciency, coolies have
been importerl from India, and immigration from India and China is fully encouraged by the government. Tha amonnt voted in aid of that object in 1863 was $32,890 \%$. By the census of 18 til there were 13,488 coolies, and 401 Chinese. Since then there have been imported, in $180^{\circ} 2,1,967$ collies, and 152 Chinese; and, in 1863, 1798 eoolies, giving a total of 17,253 coolies and 913 Chinese. These immigrants (coolies and Chinese) are located on $15 \cdot+$ different estates. The largest number on any one estate, in 1864, was 206, the 'Orange Grove Estate,' county of St. George. The revenue collected on account of the annual outlay was, in $1863,16,137 l$. sterling.
Cocon is more extensively grown in Trinidad than in any of the other British Antilles, and is of superior quality. The coeoa-tree somewhat rescmbles the cherry-tree, and grows to about 15 ft . in height. It flourishes most in the new soil on the banks of rivers, delighting in shade, to procure which plantain or coral-bean trees (mudre del cacao) are planted between every other row. The cocoa seeds are placed in small mounds, two seeds being sown together, and the weakest plant of the two afterwards destroyed; the survivor is transplanted after attaining 15 or 18 inches in height. Until the age of 5 years, all the tlowers are destroyed as they appear. The frait grows in a pod, which, as it ripens, changes to a bluish red or lemon colour. The erop is gathered throughout the year, but prineipally in June and Dec. The rije pots are broken or cut open, and the seeds extracted with a wooden spatula. They are alterwards spread out to iry in the sun on rush mats. When quite dry and hard, the muts are lightly packed in boxes or bags, and kept dry for exportation. Coffee, indigo, tobaceo, and cotton come to perfection, thongh mostly grown only in small quantities. Dlere also are all the froits and veretables of the adjacent tropical climates, and the vines trausplauted from France or Spaiu are said to equal their paront stocks. The monntains, like those of the adjacent continent, consist chictly of argillaceons and micaceous schist ; milky quartz, ferruginons sand, pyrites, arsenic, alum, sulph. copper, plumbago, and sulphur are foumd; but the most abumant mineral is asphaltum, which may be supplied in any quantity. It is found in the greatest profusion in the lake Brat, or pitch lake, an area of about 150 acres in the NW. side of the island, about 30 m . S. from Port Spain, and about sol t. above the level of the sea. Though called a lake or lagoon, this depot of piteh is for the most part quite solid, rent, however, by chasms, varyins from 3 to 30 feet in width, but of no creat depth, se that they are traversed without much diticulty. Here and there, wherever there is any soil, are clumps of stunted trees. The liguid part of the lake, on the side nearest the sea, is supposed to be about 3 acres in extent, and consists of thuid pitch of unknown depth, in a state of slow eboulition, and exhaling a strong bituminous and sulphurous odour. 'This vast pitchy caudirun must be approached with extreme caution. It has been attempted to apply the asphaltum brought from this lagoon to the same purposes as pitch and tar, but it is found to require so large an admixture of oil that it becomes too expensive. If it could be economically applied, Trinidad might furnish abumdant supplies for the whole world.

Exelusive of the pitels lake, 'Trinidad has several extinct volcanic craters, aetive mud volcanoes, and other evidences of voleanic agency. Nilight shocks of earthquakes have also been ocensimally felt, but happily the island appears to be exempted from the seonrge of huricanes.

Trinidad was greatly neglected by the Spa-
niards, and previonsly to 1783 , when emigration to it was tirst actively promoted by them, no more cocoa, indigo, and other products were exported than sutliced to treisht a small schooner two or three times a year to Sit. Eustatius. Since then the progress of cultivation has been comparatively rapid. The subjoined statement gives the total value of the imports and exports of Trinidal in each of the years $1850-63$ :-

| Years | Importe | Export: |
| :---: | :---: | :---: |
|  | ¢ | £ |
| 1856 | 666,474 | 674,767 |
| 18.78 | $800,424)$ | 1,073,878 |
| 18.8 | 825,969 | $78.5,8193$ |
| $18: 9$ | 734.902 | 820,606 |
| 18(i) | 829,304 | 7t.4,603 |
| 1861 | 8:1,7, 26 | 645.561 |
| 18132 | 783,898 | 7331,507 |
| 1863 | 710,75: | 796,497 |

The public revenue amounted to $184,3 \pi \bar{i} l$. in 1863, and the expenditure to $188,981 l$.

Trinidad, like St. Lucia and British Guiana, is governed by a governor and council, acting under the orders of the home govermment. The legislative comneil of the island consists of 12 ments. 6 of whom are styled ofticial, holdiug ligh otlices, and 6 non-ofticial, being selected from among the inhabs.; all are removable at the pleasure of the crown. The laws of the island are a mixture of those of Spain and England. The otlice of coroner does not exist here, nor trial by jury in the supreme eriminal court. Every person about to leave the ishand must first give puhlic notice of his intention, and oltain a pass from the soveruor.

The settled part of Trinidad is divided into 11 districts. The cap. and seat of government, lort Spain, which, in 1861 , had 18,980 inhals., is situated on the W. coast of the islam, near the month of the river Caromi. It is one of the hamsomest towns in the West Indies, being built wholly of stone or brick, with wide and well kept streets, some of which are shaded with rows of noble trees. It has l'rotestant and Roman Catholic churehes, a l'resbyterian secession chureh, and a Methodist chapel. The stores and magazines are crowded with valuable merchandise, which, however, is partly destined fur the supply of Colombia. In the vicinity of the town are Fort George, now nearly dismantled, and St. James's barracks. 'The latter are said, in the 'Irinidad Almanae,' 'to be placed, on account of an infamons job, in one of the most pestilential spots in the ishand,' 'The harbour is good, and, as ulready stated, the entire Gulf of Laria may be regarted as a magniticent harbour, Numerous public and private sehools are established in Trinidad, and are well attended. The regular military force amonnts to about 500 men, including officers.

Trinidad was diseovered by Columbus in 1.198, and was taken possession of by the spaniards in 1588, an event followed by the almost total extermination of the Indians. Kaleigh visited it 11 1595. The French took it in 1696 , but soon afterwards restored it to the Spaniards, who held it till taken by the English under Abercrombie in 1797.

ThIl'OLI, the most easterly of the Barbary states, the dominions of whieh, exclusive of Tripoli l'roper, eomprise larea and Feqzan, noticed in other parts of this work. Tripoli l'roper lies between lat. $29^{\circ}$ and $383^{\circ} \mathrm{N}$., and long. $10^{\circ}$ and $20^{\circ} \mathrm{E} . ;$ having E. Barea, W. Tunis, S. Fezzan and the Desert, and N. the Mediterranean. It stretehes along the North African coast about

800 m . E. and W. Its breadth inland varies greatly, owing to the frequent interruption of the desert; but its area has been estimated at nearly $100,000 \mathrm{sq}$. m., and its pop. at from $1 \frac{1}{2}$ to $2 \mathrm{mil}-$ lions, principally Moors and Berbers, with some Thurks, Negroes, Jews, and Christians.

In antipuity, Tripoli Proper was caller the Regio Syrticu, from its lying between the Syprtis Dajor, now the Guff of Sidra, on the E., and the Syrtis Minor, now the Gulf of Cabes, on the W. The former, or Syrtis Major, is a very extensive hay, extending from Bengazy on the E. to Cape Mesurata on the W. abont 280 m . laving where greatest a breadth of $1 i j 0 \mathrm{~m}$. This gulf was reekoned in antiquity, next to the strait of Seylla and Charybdis, by far the most dangerous part of the Mediterrancan, principally on account of the shallowness of its waters, which were sail to be enemmbered with quicksands, and partly also from the irregnlar action of its tides. 'Verum importuosus atyue utrox, et ob vadorum frequentium brevia. magisque etiam ob ulternos motns pelayi aulfuentis et refluentis infestus.' ('omp. Mela, lib. i. eap. 7.) The dangers of the Syrtis have also leen frequently alluded to liy the poets, who have given it the epithet of inhospitable :-

## - per inhospita Syrtis <br> Litora, per calldas Libyre sitientis arenas.' Lucan, lib. 1. v. 31;7.

See also Virgil, Encid, i. v. 110 ; Horace, Odes, i. $22, \& \mathrm{c}$.

But though the navigation of the greater and lesser Syrtis, especially the former, be not free from dainger, this has been greatly exaggerated by the ancients. During strong N. gales a very heavy sea is certainly thrown into the gulf, and the S. shore being low and samely, a considerable portion of it is snbmerged, and the waters of the entire gulf have an extremely agitated and turbid appearance, but in ordinary weather it may be navigated lyy midelling-sized vessels with little or uo ditliculty. 'The Gulf of Sidra,' says Captain Simyth, 'has few or no dangers, excepting little leads of rocks senttered about different points, nul the tides are insignificant. W'ith the hamblead going, a vessel may approach all parts; but oft what utility can it be to enter liere, thore being but one place in the whole gulf worthy to be called a port? We conld tind anchorage for small vessels ouly at lhashaifa and liraiga, at the bottom of the gulf; and Gharra lsland, Karhora, and Bengazy on the E. coast.' But it is obvious from this statement, and from the want of harburrs ind roadsteads, that when the vessels of the anciento, who had comparatlvely little skill in mavigation, got embayed in this gulf during the prevalence of northerly gales, they mast have heen in an exceedingly perilons situation, and we need not therefore be surprised at the exaggerated terms in which they lave described its terrors.

The coast-lands, except at the bottom of the Gulf of Sidra, where the desert and sea are conterminons, are here, as in the rest of N. Alfica, extremely fertile. These, however, seem to be the only valuable portions of the surface. The Atlas ranges approach neurer the sea here than in most other parts of Barbary, and immediately beyond them the country is a sandy arid desert. Tripoli has no river of imy consequence, though a number of small rivulets descend from the mountains to the sea. Neither are there any lakes in the country, which, accorilingly, depends for its irrigation and consecpuent. fertility almost solely noon the rains. These, when they occur, fall inecssantly for several days and nights; they
then cease suddenly, and not a drop more descends for several months together. The most severe famiues are sometimes experienced from a contimuance of drought; but when this is not the case, the country appears to have lost none of its ancient productiveness. Accorling to a French traveller, M. Blaguiere, 'A more luxuriant tract than that in the immediate neighbourhood of the capital camot be imagined. Country-lionses, extensive pleasure-gardens, groves of orange-trees, and immumerable fountains, tugether with the incessant progress of vegetation, form an assemblage of rural beanty here which is rarely to be met with. The fairy scene does not, howerer, reach more than 5 m . inland, when mothing lut an immeasurable waste of sand is presented to the cye, and forms a striking contrast with the cultivated fielis, to the elges of which it approaches. It should be observed, that a want of industry, and of proper encouragement from the goverument, are the only reasons why cultivation is not extended beyond its present limits. There is probably no country so lighlly favourd by nature as this is with respect to a rapil succession of the crops. The rains generally begin after pathering the dates, towards October, in the beginning of which montl the Arabs plough and sow their grounds. In December and Jamary the weather becomes ilry and extremely pleasant, like our spring in England. In the heginning of April, the market before Tripoli is abumdantly stocked with cattle, poultry, and vegetables of every kind. Towarls June, almonds, tigs, apples, pears, plums, peaches, neetarincs, grapes, ind melons are in season, and incredibly abundant, Cotton has been cultivated very successfinlly ly various individuals; but, owing to a want of encouragement, loes not form an article of export. loormerly, a quantity of raw silk formed one of the exports: hut its cultivation las latterly been nuglectel. Mulberry-trees are, however, to be found near the capital in great mumbers, so that silk may at any time become agrin a staple commodity of the comntry. The castor-tree (Ricims Palma Christi) is foumd in the vicinity of 'limjoura, where a great deal of that oil is made ammally, though it has not hitherto been exported in any great quantity.' 'The exportation of corn, which otherwise wonll be very comsiderable, is prohibited except when carried on by the pacha for his exelusive benclit. 'lobacco, sailron, madiler, \&e, are grown in small quantities; senua and galls are produced in the mountains, and the cassob and lotus are indigenous. But dater constitute the princijal food of the inhabs. The dates of Tripoli are tiner than those of any other part of Barbary, and, besides its fruit, the tatetree yidds a juice called layhibi, which, when drunk fresh, is a very agrecable beverage, and, when suftered to ferment, forms an intoxicating Hhin, in great request among the Mohammedaus, notwithstanding the prohibitions of the Koran.

Each village is usually surrounded by plantations of date and olive trees, the surplus produce of which, with the straw mats and carthen jars made by the villagers, are partly exported, but are mostly disposed of to Bedoнin traders. The vines along the const yicld grapes and raisins of the finest quality, and might be made to produce excellent wine. According to Della Cella, the neglect of such an advantuge is less owing to the denmeiations of the Prophet than the exceeding sloth and ignorance of the people. Cattle, sluep, and poultry are reared in large numbers in some places, and, as animal food is little consumed, they are principal oljects of exportation. During the war, Malta drew large supplies of cattle and

other live stock from Tripoli, and still inports most part of the enttle sent out of the country. Beef, though small, is very good, as is lamb: nutton is of inferior quality. A kind of wild cattle, the wild hog, antelopes, bustards, and several other wild aninmals useful to man, are met with ia abundance. Large beds of rock salt exist in lifferent parts of the country. On the coast, fish of every kind are mest abunlant; but, with the exception of 14 few boats employed from the capital, tishing does not form a part of public industry.
The native's of this regency manufacture carpets, bournouses, haiks, and other woollen fabries, camlets, mats of palm leaves, goats' lair sacks, Moroceo leather of different kinds, earthenware, prepared skins, and a few other artieles. The manufacture of potash, like the exportation of salt, is a monopoly of the bey. The principal trade comsists in the barter of European produce for thowe of the interior of Atrica. Irom Tripoli caravans go to Mourzonk, where a large finir is held in lecember and January, and to which the proulucts of Bormon, Sockatoo, Houssa, Timbuetoo, dc. are bronglit. (See art. Fiszzan.) The Fezzan merchants proceed in February and Marels to Tripoli, where they receive their goods for the s. upon eredit, paying by exchange one year for the fooms purchased in the preceding. They bring from the interior ammally about 1,500 negro slaves, 10,000 metacali (simall pareels, each worth a Venctian sequin), of gold dust, 700 ewt. of natrom, and $1,6(0)$ quintals of senna leaves. The articles they take back are swords, pistols, mock parls, brass, tin, coral, writing paper, and cotton stutlis, and these articles, with provisions, colomial pronluce, timber piteh, spirits, coclineal, indign, clamask, and other silk fabries, spirits, lookingglasses anl toys, constitute the prinejpal imports from Europe. The exports from Tripoli by seat are wool of excellent quality, mantles, and other articles of dress, oil, sema, and other drings, matder, barilla, hides, foat and sheep skins dressed, dates und other fruits, cattle, ostrich feathers, iron, grold dust and sattiron.
The government is in the hands of a bey or pacha, who rules with despotic sway, and is chosen from among the Turkish officers resident in Tripoli, being confirmed in his authority by a tirman from the Turkish sultan. He presitles in the divan, and is assisted in his various duties by a bey-commander-in-chief; an aga commanding the Turkish soldiets; the kaya, or grand judge, who dispenses justice daily at the castle gate of the capital: the chief officers of the treasury and houschold; the sleik-cl-bled, or head poliec magistrate; the mufti, or heal of the priesthoed; and the cadi, or judge in matters respecting the Mohammedan faith. The district governors seem to have powers equivalent to the bey in their own distriets; thus, the aga of Mesurata, besides lis military attributes, unites in his own person all the judicial and legislative powers of the state. The revenues of the bey are derived from the tribute of the district governors, and the Arab tribes in the interior, taxes on the Jews and merchants, a tax of 10 per cent. on all land-produce, import and export tuties, monopolies, presents, and exactions, fines for the mitigation of punishment, and contiscations, their amount loing estimated at from $2 \overline{0}, 000$. to $^{2} 26,0001$. sterling a year; in addition to which a large portion of the necessaries for his use are procured by extortion from his subjects. His standing army is said to amount to 3,000 men; but in time of war an army of 10,000 irregular cavalry and 40,000 foot may be raised by levies from the Arab tribes.

The character of the natives of Tripoli uppears to be very indifferent. A recent British traveller asserts that drunkenness is more common than in most towns in lingland. There are public winehouses, at the derors of which the Moors sit and drink withont any scruple, and the greater part of the better sort of people also are great drinkers. M. Blaquiere, the Freneh traveller before eited, says he was umable to discover any good qualities to be contrasted with the attributes of revenure, avarice, treachery, and seceit, which predominate alike in the prince and the peasant. Anll yet such is the promptitule with whieh justice is administered, that crimes in Tripoli are less frequent than in linropean countries, and the people are more civilised than in most parts of larbary. Intolerance towards Christians was formerly very strongly marked; but foreiguers are now treated witl respect, piracy and Christiam slavery having been wholly ubolished.

This territory contains some lioman antiquities, bit they are much less frequent than in the anjacent territory of Barca. In the middle nges it generally shared in the fortunes of the rest of this portion of Atrica. In 15:2 Tripoli was given by the emperor Charles Y., who had beeome possessed of some authority over it, to the kilights of Rhodes; but these were driven from it by the Turks in 1551. Fezzan was rendered tributary about 171.4 ; but the unthority of the pachas, or cic either that cometry or Haren, appears to be litth: more than nominal, or at any rate very much disturbel.
Tutholi (an. (Eta), a maritime eity of N . Al'rica, cap. of the above resencev, on a low rocky tongue of land, projecting into the Meliterrancini; the castle being in lat. $3: 2^{\circ} 53^{\prime} 5 t^{\prime \prime} \mathrm{N}_{\text {, }}$, long$13^{\circ} 10^{\prime} 5 x^{\prime \prime} \mathrm{E}$. Poppestimated at 95,000 , of whonit ubout 2.000 are Juws, residing in a suburb of their own. The town is mueli smaller than either Algiers or T'unis; it may be $\frac{3}{2} \mathrm{~m}$. in length, by $\overline{6}$ firhouss in breadth; but its shape is very irrerular. It is encompassed by high and thick walls, the original stone-work of which appears to have been ver: good; but they have been patched up in all directions with mud and fragments. A good many cannon are mounted on the ramparts, and Tripoli has some degree of strength as a fortress; it is entered by two gates, one to the li. and the other to the S. Viewed from the sea, the town appears to be semicirenlar; and the extreme whiteness of the square flat buililings, covered with lime, which in this elimate eneounters the sun's liereest rays, is very striking. The baths form clusters of large cupolias, to the number of 8 or 10 , crowded together in dillerent parts of the town. The mosques are in general surrounded by plantations of Indian tigs. and date-trees, which, at a distance, give the whole city a novel and pleasing aspect. Internally, bowever, it has narrow and irregular streets, mil meant houses. The prela's castle is at the li, end, withia the walls, with a duckyard aljoining. It is very ancient, and inclosed by a high strong wall; and the numerous buildings which have been added at ditlerent periouls to its interior, to receive the junior branches of the royal family, have both deprived it of all symmetry, and increased it to a little irregular town. Tripoli is, in most reejeects, inferior to the eapitals of the other larbary regencies. However, in point of trimquillity and cleanliness, Tripoli might be taken as a noolel by some European towns in the Mediterrancan. Though it possess neither the elegance nor the regularity of Valetta, there are few acts of violence committed in the strects, and rolluerie's are altogether maknown. Independent of a nightly patrol, there is a ghard stationed in each strect, who is

## TRIPOLIZ:A

responsihle for whatever may oceur in it, 'lhere is, besides, always a mumber of persous kept. for the express purpose of sweeping the town. The caravinserais, mospues, and homses of the diflerent consuls and higher elasses, are usually built of stone, and regnlarly whitewashed twice a yar; then lwellinge of the lower orders are of earth, sumall stones, and mortar. 'Tripoli has timonges of the first rank, with minarets, and tismaller ones. The great mosque has a root composed of small empolas, sipported hy lit elagunt Doric columns of fine grey marble. 'I'here are 3 syuagognes, one or two phaces of worship for Chisistims, severul murketphaces, cafés, and liuropean hotels. Ji, of the town, on a tract of rocky and elevated ground, is the site of the anciont cemetery, where several rumains of matiguity have heen diseovered, and some portions of lioman tossellated pavements, frogincuts of cor Jmmos, and entablatures, huilt up in modern walls, are met with in the eity. 'The mont striking relice of antiquity, howerer, is a magniticent trimmphal arch, near the marine gate, at present used as a storehouse. Thongh half wnok in sand, its upper part is still in gookl preservation ; and an inseription shows that it had been ereeted in 16.1, in homonr of the emperors Aurelius Antonimus ann] 1. Yerns. It is built of huge blocks of marble. without rement, ant has been ormamented with warlike trophies and other earvings in relief. The eciling also is beantifully semptured.
'The harbour of 'Tripoili, though not very spacious, is saff, and empable of aceommodating a barge bleat of merchant ships, Small frigates, whose draught of water does not execed is ft., may also ride there in perfect siffety. It is formed by a long reef of rocks rmming out to the NLi., and by other reefs to the E . In the deepest part there are from $)^{5}$ to $i f$ fathems water. It is de.femed by the new spanish and lirench forts, the red' mal insmated rocks on the W., and by two other forts on the beich to the li. It is the principal entrepot for the maritime trade for the regency.

The sulgioined table shows the total value of the intuorts and exports from and to varions comotries at the port of 'Iripoli, in the year tedil: -

| Countries | 1mports | Exprorts |
| :---: | :---: | :---: |
|  | £ | . |
| $\left.\begin{array}{l}\text { Great Britain and } \\ \text { lossessions }\end{array}\right\}$ | 26,880 | 16,670 |
| Italy. - . | 12,900 | 44,170 |
| Turkey | ?, 2190 | 22.500 |
| Pranco | 2.6100 | 11,4610 |
| Tunis | 1.000 | 12,2(6) |
| Venice | 2,700 | 4,000 |
| Total . | 66,750 | 121,600 |

The shipping, in 1864, comprised s:34 vessels, of $2 t, 739$ tons, which entered the port. Of these, 37 ressels, of a total of $5,0+7$ tons, with curgoes of 28,2001 , in value, sailed moder the British thar.

Thiroli, or Tababide, a town amd sea-port of'Syria, capl. of the pachalie of its own name, on the Dediterrancan, $130 \mathrm{~m} . \mathrm{SW}$. Aleppo. Lat. $34^{\circ}$ $26^{\prime} 22^{\prime \prime}$ N., loug. $35^{\circ} 5 t^{\prime} 32^{\prime \prime}$ J. 1'op. estimated at 15,000 . The own stands at the foot of a branch of Mount eebanon, on a small triangular plain, at some ' ttle distance from the sea: the Marimn, SW. from the city, on a projecting point of land, is the place where merchant ships usually load and unload their cargoes. Tripoli is one of the neatest towns in Syria, and is surrounded by tine gardens; hut its neighbourhood being marshy, its chmate is froquentily unliealthy. It is traversed by the small river kindisha, which, however:
is too shallow to be navigable even for boats, The honses are principally of stome, and many purts of the city bear traces of the arehitecture of the Crusadens, particularly some ligh Gothic arcales ovar eartnin streets ; lint there are no public huilsings worth notice. 'Triposi is commanded by tut ohi eastle on the helghts behind, built during the E 'risades by the Comint de Toulonse. 'The mane Tripoli is durived from its being liormerly dividel into three separate towns at short ilistancers from eneh other; and, in fact, lil Mina, as the Marina is sometimes called, is a distinct town from 'T'ripuli proper. Numbrons granite columms and uthor ruins may still be seen nlong the shore. 'Ihe prort ol' 'I'ripuli, to the N. of the Marima, and opposite the town, is imerely a rondatend, sheltered on the W. by some rocky islets, and is sale only in tine weather. It is dangerous in winter, and partichlarly at the equinoxes, from the fonluess of the botion and the prevalence of atrong anales. It has, however, some trude, exporting silk, wow, cotton, and tobaceo, with small quantitios of oil, wax, cochimeal, galls, and somp, manufactured in the town. There aro mumerums (ireeks tumons the inlabitants, and a large share of the trale is in their hamds. It is, ilso, the see of a tireck hishop, and the residence of neveral bimopean consuls.

Tripoli was taken by the Crusalers in 1108. It had previonsly been one of the most thorishing seats of Orienital liferature, and possessed a very large collection of Persian and Arabic works, it is said that 100 colyists were constantly kept employed copling manuseripts, and that the princes of 'Tripoli were in the habit of sembing messengers into foreign combtries to diseover anl purchase rare and valuable works. Unfortumately, however, this extensive amd precions collection, amounting, it is said, to $10 t, 000$ vols., was drostroyed by the Crusadern, who displayed on this occision the same famatieal zal of which they necused, though perhaps minustly: the Arabs in the case of the Nlexamitian ilbrary. (See AlexANmiti.) A priest in the suite of Comit lertraml the St. Gilles, having visited an apartment of the library in which were a momber of duplicate copies of the Korma, reported that it contained none but the impious works of Mohammed, and that, consequently, it should be destroyed. And thereupon it was forthwith set on fire. balbi states, aftrr Quatremere de Quincy, that this Jibrary contained no fewer than $3,000,000$ vols. (libliotheques de: Viemne, p. 81.) Nichand most properly rejeets this statement as incredible and absurd, and adopits in preference the reasonable accennt riven by Novairi. (llistoire des Croisades, ii, 43, ed. 1841.)

TRIPOLIZZA, or TRIPOLITZA, a town of the kinglom of Greece, cop. dep. Mantinen, and, under the Turks, the cap. of the Mosa, near the centre of which it is situnted, $20 \mathrm{~m} . \mathrm{S}$. by W . Argos. Dop. $8,150 \mathrm{in} 1861$. 'I'he town stands in a plain nearly $2,000 \mathrm{ft}$, above the level of the sea, and before the late war was about 3 m . in circuit, and probathly more populous than Athens; but we can form no estimate of its present population. It is of modern orgin, and is supposed to owe its name to its having been prineipally constructed of the ruins of the three eities of Tegea, Mantinea, and I'allantinm, the sites of all which are at no great distance. Previously to the Greek revolntion it had some large and conspicuous buildings; but it suffered severely during its capture and sack by the Greeks in Oct. 1821, and its ruin was conpleted when it was retaken by lbrahim lacha in 1825: an arched gateway is now said to be the only existing relic of the Turkish period. ThOA1) (THLE), or site of the ancient city of Troy, nad the neene of the lant les deseribed in the diaid. 'The sitnation of this elassient region has fren prointed out witl sufficient precision by Jhomer, and has been admitted, from the earliest autiguity, to comprise that portion of Asia Minor bunded by, and immerliately S. of, the W. ent trance to the Ilellespont, opjosite the islanil of Tomedos, having Monit Ja an the lia, and the qulf of Alrmmyti on the S. Here, no doulit, are the enmpi uhi Troja fuit: -

- Jtace Ihat Simols ; hle est Sigelia tellus; Hide stetarat l'rinmi regin codna semis:

Itic liucer malussos terruit Hector efuns.'
Ovid, Heroiles, I. Iln. 3:1.
lhat, not withatanding the immortality of renown that has been comberred on the • heaven-built city, and the interest which the Trond has nlways excited, such have been the chamges brumght about be the inthence of war, the raviges of harbarimas, and the lajse of ares, that it is now mo easy matter to reconcile the aneriptions of llomer with the exivinit apmearames of the comitry.
The 'I'romil has been examined by several lemmed travellers, ineluding Chamiler, Womi, (lievalier, Clarke, IIobhonse, Gell, and others. lhat as mone of them liad the means of making a proper topeographimal plan of the comitry, and as itsapparance, and especially the marniture and evell momber of the rivers, ilithers at alilerent seasoms of the year, ve need not be surprised nt their condiating statements, even hal they not been mostly under the inthence of some preconreived therory. The system of Chevalier, which for a while was pretty gencrally nequieseed in, was foumberl on the assumption that the Mendere, the prinepal river of the Troad, was the sintois, and that the small river to the $S$. of the latter, the Bomrnalmshi or Kerki-joss, was the Scamander of llomer. 'This hypothesis is now, however, fenerally abmaloned, and it is indeed surprising it shoudd ever have obtained curreney. lumsmad, however, as it would be impossible to make mimute details intellirible without the aid of a map, we slanll merely observe that Major Rennel and Mr. Maclaren have all but demonstrated that the Mendere is identical with the Scamanter of the lhide ; and the suggestion of Dr. Chandler, that the 'Thymbrins (now the Dumbrek-sont), a river to the NL: of the Mendere, with which it unites before they fall into the sea, is the Simois of Ilomer, appears to be satisfinctorily established by Mr. Maclaren. It is, in fact, the only river in the Troad, excepting the Mendere, that in any respect corresponds with the descriptions given in the Iliad of the Simois; and the plain between the Mendere and the Thymbrius is the only one of sullicicat extent to nllow of the batales described by the poet being fought.
Dr. Clarke has conelusively shown (iii. 133 , 8vo. ed.) that the ruins at Pulaio Cullifat, or Isarlik, are cettainly those of the New Ilium of Strabo. They are situated on a rising ground about 3 m . from the sea, and about milway between the Mendere and Thymbrius, Here the learned traveller found not only the traces but the remains of an ancient citadel; and at the very moment of his visit the Turks were employed in rising vast blocks of marble from the fotindations of this editiee, which exhibited the colossal and massive style of architecture peculiar to the early ages of Greek history. The ground around was
eovered with fragments of broken pottery, anil malals have been diseovered amomig the rans,
la the time of Ntralo, New Ilinm, whone position is thas clearly identitled, was belleved by lis inhab, to occupy the identient site of the andent elty, and such lind heen the belief unformly enttertained by them from the emrliest periond: 'Hence,' says Tacitus, 'Ilienses antiqnitatis gluria pollehont.' (Anual., $1 l$ lh. iv. cap. bis.) strabis, however, places the old city considernbly more 11 the E., but we agree witl, Mr. Maclaren ia rojecting this statement, ind in believing that the old anil new city stool upon the same site. The finet is, thut "tity tuken by an enemy, and given up t" nilitary execution, is never completely dest royel; the fommations, with portions of its walls and temples, are always suro to remain, and these with the ruins ntfiorl muny facilities fior the comstraction of a new eity. 'I'here is no reason to think that the destruetion of 'Troy was in any respect more complete than that of Thebes by Alexamier the Girent, and yet the lutter was rebuilt in the conrse of 'th) yeans. And it is further to be observenl, that the rongueror now mamed visited New llimm, in the full conviction that it represented the ameiont city, sacrilised to. Minerva and the manes of l'riam, conferred immmities on the inhabs, and tave orders that the walls of the town shomla bo rebnilt, which intention was carried into cellect alter his death by tossimmehus. It is childish to suppose that $\boldsymbol{a}$ exander shonh have dome this moless he hat been satistied of the identity of the old and new eity; and neither Arrim, mor any one else of his historimns, so murh as insinmates a doubtupon the suligect. It would be rash annl unwarmatalile to set axide such evidence on the sole authority of Demetrius of Seepsis, who has, in this instance, been followed hy sitralo, more: especinlly as it has been shown that the site ol New linm corresponals incomparably better with the Ilium of Homer than any other site on the 'Troinl.

I'erhaps it may be said, that, before endeavouring to proint out the situation of 'Iroy, it might have beell as well to entouire whether that eity ever existed, and whether any such war as that of 'Troy was ever carried on. Jut such enquiries wonlil be wholly misplaced in a work of this kind; anl thongh it had been otherwise, they would be wholly supertluons. It is the mere wantonness of scepticism to call in question the existence of Troy. Even if there were nothing more, the Iliant, which obvionsly teseribes real and not fictitions events, woulal be conclusive of the question ; and when we add the concurrent testimony of the most ancient and best (ireek nuthors, inclutling Ilesion, Herodotus, and 'Thneyelides, and the traditions universally prevalent as to the event, we should be quite as much disposed to deny the existence of Nineveh, Babylon, or even Jerusalem, as of Iroy.

Exclusive of Troy, the Troad contained, at a later periol, some other cities, such as Sigenm, on the seashore, at the mouth of the Hellespont, near the promontory of the same name, and adjoiniur the barrow or mound called the tomb of Achilles. It was founded posterior to the siege of Troy by an Aolian eolony. It hat, however, ceased tio exist in the time of Strabo. But the town of Alexandria Troas, on the coast, about 17 m . S. from Sigenm, was by far the most important of the towns in the Troad built after the destruction of Troy. It was founded by Antigonus, one of Alexander's generals; and became, under the liomans, one of the most flourishing of their Asiatic colonies. (Straho, lib, xiii.) It is twice mentioned in the 'Acts of the Apostles,' and was the seene ol
a miraele. (Acts, caps. xyi, and $x x$.) Its site, now called Eaki Stambonl, is identitled by the remains of walls and other buiddings, including a thentre, gymuasium, nud a magnifler'st aqueduct, that sumiciently atest its ancient magnillcence.
'THONDHJL:M (vilg. Drontheim), a town and sen-port of Norwny, eap. prov. of its own name, on the Nill (whence lts an. unme Nidrosin), at its month, in the deen galf called 'Irondlijem-tiond,
 fortress of Mankloolm, briatling with camon, stands on a small island in the fiord opmosite the city; but it is more serviecable as a prisom than a military ontwork. I'rondlijem is, on the whole, well buitt, though its homes are almost all of wood. The strects are spacions, with water cisteris at their intersections; and the town has a singulat air of cleambess and comfort, The nust remarkable edifice is the cathedral, huilt principally of stome, und fonnded earls in the lith century, thomgh little of the origimal structure remains ; that little, however, is emongh to show that it had been originally one of the most magnithent ceclesiastical structures in liurupe. I'art of the archlteeture is Saxom, the rest fothic, and fommd mul puinted arches are fropuently intermised. 'The extreme lenefll has been 3 hif ft ., and its breadth 81 ft ; but the W. end, where was the gemmd entrance, had a chapel at enel corner, making the breadtli of that frome 1.10 ft . Only the transept mod L., cond of the building are now roofed in and used; the W. part serves for a timber yard. There are three other chmrehes, all phan structures; a lowpital for the ared and intiom: a workhonse; a pmblie library amd masemm, in which are collections of books, minerals, natural listory, and antiguities, a puldic grammar school, lanconstrinu sehools, a theatre, amd many hospitals and charitable institutions. The balace of the military commandant, thomen constructed wholly of wood, is held the first editice of its kind in Sćmolinuvia.
The toron is governed by a corporation of twolve prosous, eleeted from mong the mereantile body ; and is the seat of the superior conrts, for all the comitry N. of the Dovre-fjeld. The roadsteind of Trondlijem is but indilfgrent, being muprotected both on the $\Sigma$. and W., and the bottom loose gromad in 20 fithoms: the river dues mot admit vessels ilrnwing more than 10 or 12 ft , water. Dried fisli, tar, deals, and eopper from liorans, are the principal articles of export. 'Iromilijem-ford never freezes; and the cold of winter, thomgh severe, is not nearly so great as at liorans, wheh
 studded with merehants' villas; and immediately beyond the town is an extensive suburb, reached by a gool woolen bridge across the river.

Tromilhjem is comected by a contimous cat-riage-road with the Swedish capital; and there are steamers ruming between Trondlijem and Ilammerfest, calling ofl' 'lromste and other intermediate ports, from spring till Selit. Enflish is understood mad spoken by many of the inhabs, The lower classes generally read and write; and, amoner the opment, many are distmgroished for their literary taste.

'THOND (ST'), Flem. St. Trayen, a town of belpium, prov. limbourg, eapr. cant., on a tributary of the Demer, 20 m . W. by S . Maestrieht. 1'op. 11,039 in 1860. The town is sulposed to owe its origin to a Benedictine abbey, foumded here in $6 j^{2}$ : it was formerly fortitied; but its works were dismantled in 1697 . It has a considerable manufacture of tire-arms, and some trade in lace and leather. A sanguinary action
took place betreen the French nul Anstrians, in its vicinity, in 1793.
'Tlioon, a sea-port town of Ayrshire, on a point of latud projecting into the sem, 6 ln . $X$. bu W. Ayr, and $8 \mathrm{~m} . S W$. Kilmarnoek, ['op. $2,1, i$ in 186 Cl . Troon is a neat, well-huilt town. The par. elmerd is at Dmulonald, about 4 m . distant; but it luns a chapel-of-ease and a chupel helongin; to the Uuited Secesvion church. Troon Ifarlmur, om the N. vide of the promontory on which the town is built, is the most aceessibfe of any in the Ayrshire const, has 16 ft . water at low porine eblos, and sutlicient accommodation for a kreat. mumber of shijs. Its alsantages had, however, been wholly ueglected till it cume into the presNessioll of its present proprictor, the Dake of lort land, who has comstructed a largo dry or gravin: duck, for the huilding or repair of vessels of harge sise; a manller dry dock and a wet dock, that will aceommodate 00 sail. It is also limentated with commoblions warehouses and a harhourlight. The Troom has been mited, by a railwas, with Kilmarnoek, by which it has heen made, i, some extent at least, the port of the latter. Cireat quantities of eonl are raised in the vicinity, which. buing bronght to this port by the railway fir whipment, are exported to the amome, in ordiany
 ploys lrom 1010 to $2(90$ hands; and rope and sailmaking, and the trales commeeted with them, ans: al:s careied on to some extent. On the let 心 Jan. I8til, there belonged to the port 7 sailims vessels, af 915 tons burthen. The (ibispow, Dinsley, and Ayr ralway pases within less that n mile of 'lruois, with which it is comected by a bramela ralway.

TliOPl:\% (STM), a maritime town of France, délo. Var, om a bay of the Mceliterramean, is m, E. by N. Tomlon. Pop. 3,3is in lsitit. The inserigions, medals, dec., fomed here prowe that it oerupies the site ot Ihern'len, an important maritime town of antiquity. It hass a citalel, and towards the seal is defonded by some ohl walls; its purt is xpacions and grodj, bint is little freghentel, except ly fishermen, which comprise is large proportion of its inhalis. St. 'lropez is the seat of a tribmal of commeres, a comacil of prol'hommes, and a sehool of naviration.
'TliOP'SAJ', a town of the Austriall dominions, cap. Austriam Silesia, anm of the principality inn: circle of its own name; on the Oppa, a tribintary of the Oder, 37 ml . NE. Olmutz, on a brand line of the railwny from Vienna to Cracow. I'm. 13,861 in 1857 . The town is walled, and enterend by four gates, and is well built. Its principal edifices comprise a castle, town-hall, theatre, high sehool, and smodry chnrelies. It is the seat of courts for its province, circle, and duchy; a tribumal of eommerce, a gymnasium, to which a tomrishing musemm was attached in $1 \times 1.1$, and considerable manufnetures of woollen and linen fabries, with others of soap and leather.

Troppan was, from 20th Oct. to $20 t h$ Nor., 18:20, the place of meeting of the diplomatic congress, which afterwards removed to haybach.

shaded with trees, and weil lighted. Many of the publie huililugs are clegant, purticularly the cont-homse, with a (irecian front, and the episeopal chureh, one of the thent viecimens of mulern finthic architecture in the linited states. There are muny churches for other nects, 2 large female sumburies, the lienswelner listitute, a lycum of natural history, acalemy, lanotastrimi sehool, ophan asylum, lonse of indust ry, county prison, medanie's, national, and other halls. I'se clty is ahmedantly watered by subterranean irom pipes frotn a hasin in the neighonring town of Lansinghurg, ": ft. above the eity plain. The height ame volume of whter are sullicient to furnislo jets d'ean in the eity, mul to throw large stremms, in case of fire, throush hose, without the intervention of engines. Two streams join the lladson within the cily, and afford water power for many facturies. Iroy has several cotton mills, with paper and slitting mills, mail and iron works, breweries, tameries, and leather factories. The trade of Troy by land is with an extensive range of comentry E. and N., within which there are above a hinimed cotton factories. W. Troy is on the l'uited Champlain and lifie canal, and at present commmientes with the rest of the city by a bidite. Remsselaer and saratoga railroad crosses the Iludson at I'roy by a bridge $1,(600 \mathrm{ft}$. in length, resting upon 8 stone piers. Troy was irst incorporated in $\mathrm{J} 9 \mathbf{9 6}$, and has now become the third city in the state, in wealth and inpritanee.
ThoWblill (iki, a market town and par, of limghand, co. Wilts., hmud. Melkshatn, on a trihutary of the Avon, the Were, which is lecre crossed hy a stone bridge, el m. NW. Salishury, mil 10.5 m . WSW. London by Great Western ralway. I'op). $9,1 \mathrm{i} 26$ in 1861. The principal street is spacions, bat the others are gramerally marrow and inconvenient, and though some of the hunses are good, the freater proportion are bit imblitherent. Many ure, however, constructed of stone, aud the town is paved, and lighted with gas. Trowbridge Church, a large and striking califies, consiste of a nave, chancel, two side aisles, with attached chmpels, in the wimbows of which is a good dend of stained ghase, and lolty N. and S. purches. The two side nisles are separated fram the mave by five pointed arehes, springing fom elnstered columis, and are extermally emhatted ind ormamented with crocketed pimacles: at the W. extremity is a large tower with n taperimer spire. The living, a reetory, worth (i000. a vear, is in the gift of the Duke of lintland. Trinity Chureh, at the W. end of the town, is a fine haiding, with a considerathe momber of free sitting. It has, also, meeting-honses for General aud l'articular Maptists, I'resbyterians, Wesleyans, lulependents, and other dissenters; a free sehool and an almsionse. The manufneture of woollen deth was established in Trowbridge at an early period. Cassimeres, fancy kerseys, and tweeds, and other narrow woollens, are the principal products. The Kemett and Avon canal passes abont $1 \mathrm{~m} . \mathrm{N}$. of the town, placing it in communication with London on the one hand and Bristol on the other. Trowbridge is under the jurisdiction of the co. magistrates, who hold petty sessions here monthly, and a court of requests, for debts not above 5l., every three weeks. Markets, 'Thestays, 'Thursdays, anil Saturdays: fairs, Aug. 5 to 7, for cattle.

Crafbe, the peet, was for 18 years rector of this par., where he died, Feb. Brol, 1832.
THOYEN (an, Trece and Augustobona Trictssimm), a town of France, clep. Anler, of which it is the enp.o on the seine, which partly surromads it, lob. IV.
and is partly diverted into its interior ly numerons camals, far the surply of ite varloms factories 12 m . Lisli, l'aris, on the railway from l'arin to Hasel. l'op, al, ilis. 'I'he town is melowed liy an olld wall in pretty goul combition, and has severnl suburbs. Tlie town is bit ill-lmilt, most of its housea beling comatructed of timber; though soma of its new quarturs are clemn mud sutlelently well laid ent. Before the lievolution, 'I'roves eomprised e2 pars., but their mumber has nince beent greatly diminishied, The cathoulral is a the diothis struetire, chicily constructed on the site of a greviuns alille, in the linh eentury, thumgh not thished till towarils the end of the lith. Its interior length is 37.1 ft ; breulth, 16.1 ft . ; height of the vault, 96 ft ., and of the cupola extermally, 20.4 ft . There is a good deal of curions stained glass In this church, the fignres representing the kings of France, connts of Champugne, Lishous of Troyes, nad other persongyen of the li3th century in the peculiar costume of that perion, mal of the size of life. Some of the other clurches deservo being visited. The tuwn-latl is an elifico of the 17 th ecutury, with a handsome front, and a hall in which are the marble busts of the movt clistinguishad matives of 'Iroyes, 'The museung contains collections of minoralogy, mataral listory, and paintings; mul the public library is said to eom-
 The hall in which these works are phaced is alonit 160 ft . in length, and 30 ft . in width; and on its banels are paintings hy fonthier, representing the principal achievements of llenry IV. 'Iho prefecture, hishop's palaee seminury, hospital, comrt-louse, public bathes, and abattoir ure tha other most remarkable buililiugs. 'The environs are particularly henutiful. It is the seat of comrts of primary jorisdiction and conmeres, a chamber of commerce, council of prod'hommes; the residenee of an inspector-gencral of mavigation. It las manufactures of entom, hosiery, calien, woollen cloths, blankets, and cotton and woollen varn; with fhenching establishments, for which the water of the Seine is sail to be most sutitable; and paper-mills.
'Iroyes was formerly the cap. of Champarme, and it was here that lion. V. of Euplame esmoned Catherine of France. In I Pe9 it was taken from the linglish by the Fremeh troops, umber Joma of Are. In the campaign of 1814, it was the heanlquarters ot' Napoleon. Among the distinguished individuals, matives of Troyes, may be specitien l'ope Urban IV., the sculptor Girardon, and the painter Mignard.

TRURU, a parl. and mun, bor, and market town of' Englami, co. Cornwall, himd. Powider, ont the Fal, 7 in. N. by E. Falmouth, and e! ${ }^{2} 0 \mathrm{~m}$ m. WSW. London, on the Great Western raifway Pop. of parl. bor. $[1,337$ in 1861. Truro is the handsomest, and, including its suburbs, the latgest town in Cornwall. It owes its incrense and prosperity partly to its being in the centre of an innportant mining district, and a principal stannary town, and partly to its situntion on a river navigable at high water by vessels of 100 tous. 'The streets are partially paved, and lighted with gas. The town and bor, are comprised in the 3 pars, of St. Mary, Kenwyn, and Sit. Clement's. St. Mary's chureh is built of Rohorough stone, which, at tirst sight, seems like granite, in a rich and beantiful perpendicular style. The interior has, however been modernised; and a stecple has been attached to the churel. The living, a reetory worth $13 i / 1$. a year, is in the wift of Lord Mount Edrecumbe. 'There are meeting houses fur Independenis, Wes. leyins, Baptists, Unitarians, Frients, Bryanites, and varions other sects; and a grammar sehool,

comparatively high priced. Among the other fabrics of Tula are mathematical and physical instruments, jewellery, and platina wares, with silk and hat fabries. The town is the resitence of a military governor, with authority extending over the groveruments of Tula, Tambolf, Riasan, Orlof, Voroneje, and sometimes Kaluga.

Ancient Tula, which existed in the twelfth century, did not oceupy the site of the modern town, thongh it was at no great thistince. The present city was founded in 1509 , by Vassili-Ivanowteh, who fortified it with a stone and brick wall. Its defences, however. were insutlicient to prevent its being frequently plundered by the Tartars, it beiner on the high roal to Moscow from the Crimea. It has often sufferet severely from fire, the last visitation being in $18: 34$.

TULLAMORE, an inland town of Ireland, prov. Leinster, King's co., of which it is uow the capn, on the Tullamore river, an alluent of the Brosua, and on the line of the Grand Canal, in the centre of the Bog of Allen, 49 m . W. by S. Wuthin. Pop. $4,79)$ in 1861 . In consequence of its alvantareous position on the Grand Camal, Tullumore, whieh in 1700 was an obseure village has risen to be the prineipal town of the co. The streets are wide and regular, and the shops and private dwellings are most respectable. Large quantities of conn and other articles of provision are shipped here for the metropolis. In conseriuence of its inerensing size and importance, the assizes and other co. business were transferred thither in 1833 from Plilipstown. The priacipal public buildings are the court-house and gaol, on the radiatiog plan, which stund contignous, on a raised platform, at the W. end of the town. It has also a parish chureh, a large Rom. Cath. chapel, a Quaker and two Methodist meeting-houses, some large public schools, a market-house, Iarracks, and infimary. It is a constabulary station, has three breweries aud two distilleries, and larre quantites of bricks are made in the vicinity. Markets on Tuestays and Saturdays. Fuirs : Mely 10, July 10, and October 21 .

Aljowing the town is Charleville Forest, the seat of its noble proprietor, the Earl of Charleville, to whase liberality and munilicence the town is greatly indebted. The pleasure grounds are open to the inhalse.

TULLLE, a town of France, dép. Corrize, of which it is the eap., on the Correme, 72 m . SW. Clermont. P'op. 12,413 in 1861. The town stands partly on the steep declivities on either side the river, and partly on the narrow space of ground between. It is small, and its buildings are old and unprepossessing; but it has a pleasant promenade on the river's bank, good quays, many bridgres, a church in a semi-Gothic, semi-Carlovingian style, a well-plauned court of justice, some large buildings appropriated to a manufactory of tirearns, a well-kept hospital, gendarmeric barracks, a departmenta prison, college seminary, theatre, and public library of 2,000 vols. It has several mansious ornamented with Gothic and other seulp)fures, testifying the opnlence of its ancient fanilies. One house in particular, in the principal square, called the Maison Sage, and dating from the fourteenth centary, has its front decorated with arabesques in gool taste and of superior execution. The cemetery of Tulle is in a remarkable situation, on an isolated hill commanting the town, on which alsu is a lofty square tower, supposed to have been built by the IRomans, which has long served for a prison.

Tulle has tribunals of original jurisdiction and commerce, a school of geometry, a society of agriculture, and manufactures of wax candles, oil,
nails, and hardware, paper, and leather; but it is a curious fact, that thought the linen fabric ealled T'ulle most probobly derived its name from this town, it is no longer produced either here or in the neighbourhuol. It has twelve fairs a yoar, one of whieh, lasting the three first days of Jume, is a great mart for horses. The principal races within a circle of several déps. are hehl near 'Tulle, The town is supposed to be not older than the seventh century; but about 3 m . northward are the ruins of Tintiquac, probably the Rutiestum of Ptolemy, exhibiting trates of a large amphitheatre, and of other extensive edifices.

TUNBRIDGE, or TONBRLDGEE, a market town and par of England, co. Kent, lathe Aylesford, hund. Tunbritge, on the Medway, $27 \mathrm{~m} . \mathrm{N}$. London, on the South Eastern railway. $\mathrm{P}^{\prime}$, 5,919 in 186t. The town appears to have owed its origin to a strong fortress erected in the eleventh eentury, of which the entrance gate, flanked hy two rombl towers, and part of the keep still pemain. It consists princijally of one long, wide, and pretty well built street, payed, lirhted, and very clean. The public buildings include the chureh, grammar school, town-hall, and markethouse. Several bridges cross the Medway, which is here divided into different streams, the primepind being erected in 1775, from a tesign by Mr. Milhe, arehitect of Blackfriars Bridge, Lomiton. There are several dissenting chapels. The grammat school, founded in 150.4, by Sir Andrew Juld, a native of the town, is uniker the government if the Skinners' Company, amd has one exhibition to either university of $18 l$., two of $12 l$. , six of $101 .$, and several to a less amomit; besides which, Bati", are pai!! for master's salary, leaving a considerable ammal surphas. Thee are abont forty-tive shew. lars on the foum ation. Holme's school at sumblborough, at which lilty ehildren are taught the rudiments of instruction, has an income of town : year; and there are several minor establishments for education, besides varions other endowmellis for the benelit of the poor, amounting altugetion to upwards of anh, a year. The town has a mar ket on Friday, and four ammal fats. The rammar school has had some very distinguished matters, among whom may be specilied the learmend Vieesimus Knox, D.D., anthor of 'Maral and Literary lissays,' a treatise on 'Liberal Edncation.' and various other popular and exceedingly useful works. Dr. Knox succeeded his lather as master of the school in 1778; and having held the sitution for thirty-three years, or till 1812, he was in his turn succeeted by his son. The doctor died at T'unbridge in I821.

The fayourite watering-place, Tunbridge Wells, is partly in this par. and partly in those of spelhurst and Frant in Sussex, being about 5 m . S. Thunbridge, on the railway to Instings. Tunbritge Wells consists of several divisions, as Mounts Ephraim, Sion, and Pleasant, and the Wells; the pump and assembly rooms, public parades, chapel of King Charles the Martyr bens in the latter. The springs, which were first discovered in the reign of James I., soon attracted the notice of the fashionable world. Henriett: Maria, queen of Chartes I., paid a risit to the wells; but there being at that period no houss nearer than Tunbridge, and those not particularly suitable for such a guest, her majesty and hit suite lodged in tents pitched on lishop's Dorn. The wells were also visited by Catherine, quem of Charles [I., Queen Anne, and other distinguished personages. The water is a chalybeate, with an exc. of carbonic acid gas, very similar to tha: of the Pouhon spring at Spa in Belgium.

Tunbridge Wells resembles Spa in some other

## Bagrala.

Silius lial., lib. vi. 140.
The Mejerdah receives no large tributary, nor is there my other considerable river in the reireney. lut the S., about 40 m . inland, is the Sibhnh, a remarkable tract 70 m . in length, NE. to SW pritims of which formed the P'alus Lybia, $P$ '. Tritomis, of antiquity. In winter it is covered with water to the depth of 2 or 3 ft ., but at other times it is adry plain, the surface being entirely covered with a salt inerustration. Sir (1. Temple, who, in the dry season, spent seven hours in crossing the Siblah, says (Excursions in the Mediterranean, ii. (60) that, on approaching it, 'the grass and hashes become gradually scareer ; then follows a truet of same, wheh, sone way beyond, is in parts covered with a very thin layer of salt; this, as you advanee, becomes thicker, and more united; then we find it in a compact or mbroken mass or sheet, which ean, however, be penetrated with a sword or other sharp instrument ; and here I fommd it to be 11 inches in depth; and fimally, in the centre, it becomes so hard, deep, and concentrated, as to ballle all attempts at breaking its surlace except with a pickaxe. The salt is considerably weaker than that of the sea, and is not adapted to preserving provisions, though its flavour is very agreable.' Nout the centre of the lake are the fnumdations of a circular tower, where caravans halt to feed their camels; and in several harts are elemated plateanx, forming islands in the rainy senon, the largest of which, covered with in luxuriant vegetation of date palms, is the Phla
his lake onee communicated with the sea ly means of a river, lut no traces of such comminication appear to exist at present. There are no other inland lakes of consequence, but severnl considerable arms of the sea, as the Gulf of Biserta (an. Sinus Hipponensis) and the Lake of Thmis. The coasts of 'lunis are greatly iadented by bays, those of 'Tunis, lhammet, and the Gulf of Gabes, or Lesser Syrtis, being the principal. The principal promontories and heallanils are the Dakhol, a long tongue of land terminating in Cape Bon (an. Prom. Mercurii), the scene of several events in the 5 th book of the Fincid; Capes Serra, has-el-ahiad, or the white promontory (an. P. Cundulum), and Ras-Zibeeb (an. P. Apolinis). The shores in the N. are frequently bold, but in the S . they are low and sandy.

The geology of this country has been little or not at all studied; nor have its mineral resourees been turned to profit for many ages. Copper and lead were among the exports of the Carthaginians; and these metals, with silver, are still to be foumd in the momntains: there is also a quicksilver mine near lorto Farina, but mining is altugether neglected. The climate appears to be less hot than might have been supposed. Wir G. Temple, alrendy quoted, says, the average hent in Ang. and sept. nt Tunis is $83^{\circ}$ Fah.; and in the year of his visit, the thermometer seldom rose to $96^{\circ}$, and never exceerled that limit. From the 19th Dec. 1832, to the 19th Jan. 18333, it averaged 5is ${ }^{\circ}$; the highest range during that period being $60^{\circ}$, and the lowest $522^{\circ}$. Rainy weather commenees about the ent of Oct., and continnes, at intervals, till May. As early as Jam. the surface is covered with fresh verdiure; and, on the whole, the climate may he said to be healt hy as well as pleasant. It is true that the phage is not unfrequent, and that its ravages have been supposed to be a primeipal canse of the depopnlation that is almittod to have taken place daring the last half contury. Bit this is to be ascribed far more to the shattimhess of the inhalss, and the want of precantions, than to any thing unfinvourable in the climate.

The vegetation is, for the most part, the same as in the aljacent regency of Algiers, and on the יpowite shores of Sicily and S. laly; the olive, pistachio, carob, with dates, melons, and the lutus, are conmon products. This region was, in antiquity, celebratel for its extraordinary fertility. It exported large quantities of corn to liome, of which it was one of the gramaries. I'liny, in praking of the extraordinary productiveness of the soil, states that n plant of wheat (triticum), sent from it to Augustus, had little short of 400 stalks; and another, sent to Nero, had 3-10. In untiquity, indeed, the common opinion was, that in this favoured region the labour of the husbandman was rewariled by the enormons inerease of one hundred fold. Hence, says Silius Italiens:-

# Rura magis, centum Cerezí fruticmatin eulmis.' 

Lib. ix. iin. 204.
And it would still seem to be endowed with the same wonderfil prodnctiveness. Sir G. J'emple ays, that 'whilst halting in a field of young barley to feed our horses with its tempting crop, I comited on one plant 97 shoots or stalks, and this was not selected by me as being the largest, but as the nearest to where I was sitting.' (lix cursions, ij. 108.) In fuct, there cannot be a doubt, that were Tonis subject to an intelligent government, it wonlit, at 10 discant period, fur-

According to Strabo, Tunes existed before the foundation of Carthage. The chief events in its history are its mumerous sieges and captures. Louis IX. of France died before its walls in 1270 ; and it was taken by the emperor Charles V., who defcated Barbarossa uniler its walls, in 1535. On this occasion about 20,000 Christian slaves were freed from bondage; but, unfortunately, 30,000 Moslem inhabitants of the city were put to the sword, despite the efforts of the emperor to prevent it, by the victorious troops, while 10,000 more were carried away, and sold as slaves.

TURCOIN(i, or ' 'OULRCOING, a town of France, dép. du Nord, cap. two cantons, immerliately adjoining the Belgian frontier, 10 m . NE. Lille, on the railway from Lille to Courtray, Pop. :33,498 in 1861. The town is regularly laid ont, and pretty well built : the town hall in the great square, two charches, a college, a charitable asymm , and the remains of an old fendal castle, are its most conspicuous oljects. The inhab. share in the manufactures common to Lisle and Ronbaix, and their condition has been notieed in the article on the latter. 'Tourcoing has fewer looms than Roubaix; the articles woven are chiefly coarse cotton goods and linens. The weavers gain 9 or 10 franes gross per week; the other working classes (adult males) get from $1 \frac{3}{4}$ to $2 \frac{4}{4}$ fr. a day. The weavers are the most moral class in the town ; they attend to the education of their children, and seem contented with their condition.
'TURIN (ltal. Torino, an. Augusta Taurinormm), a city of N. Italy, the cap. of the prov. of same name, near the Po, where it is jeined by the Dora, 80 m . WSW, Milan, on the railway from Genoa to the Mont Cenis. Pop. 179,635 in 1861. The city is of an oval shape, and about 4 m . in circuit: it was formerly fortified, but is now open, standing in a rich, well watered, and well cultivated plain: it is approached by four fine roids shaded with forest trees; the surrounding hills being covered with handsome edifices, among which the chureh of La Superga is pre-eminent. The impressions which Turin produces on the traveller are very much governed by the circumstance of its being the first or the last city he visits in his progress through Italy. Mr. Woods, an English travelter (author of 'Letters of an Architect'), who had nlready seen the best productions of architecture, states that being built on a flat, I'urin makes no Nhow at a distance; the domes and towers are neither numerous nor lofty, and on looking down on the city from the neighbouring hills, the dingy red tile roofs hure a disagreeable appearance. IBut another traveller, Mr. Forsyth, a severe as well as an excellent judge, says that Turin is admired for the regularity of its plan, the eleamess of its sireets, the symmetry of its squares, the splentour of its hotels, and the general elegruce of its houses; and adds, "Turin forms a perfect contrast with all the cities we have been aceustomed to see in Italy: it is new, fresh, and regular, instead of antique and in decay; and the buildings, all alike, are collectively magnilicent, if not quite so
in detail, the materials being only brick conted over in imitation of stone. A profusion of runaine water keep: the fine wide pavement clean. All round the uwn, ancient trees of luxuriant growth oppose their impenetrable shade to the in tolerable heat of the sum, and the views of the Alps are magnificent.' On the whole, it may be suid that, were it not for the taste for meretricions ornament, which is offensively prevalent everywhere in Turin, it woald be one of the finest cities of Europe. It has but few modern works of art, aad little to interest the antiquary; and there is searcely any thing to charncterise it as an Italian city: to most travellers it has appeared rather like a new and handsome French town.

Exeept in the oid town, which forms about onesixth part of the whole, the streets, which are bordered by houses four or tive stories ligh, are straight, and cross each other at right angles; and here, as in the new town of Edinburgh, and the NW. and other parts of London, entire rows and streets of considerable extent are of precisely similar architecture. 'The royal palace stands in the centre of the town, in the Piazza Rale or di Castello, a very large and elegant square, surrounded by many other publie builtings, and having in its centre the former palace of the loukes of Savoy, a castellated mansion environed by a moat. The Strada del I'o, a noble street, $\frac{1}{2} \mathrm{~m}$, in length, leads to this square from the river, which is here crossed by a fine stone bridere of five arches, erected by the French; but which is said to be surpassed by anew bridge over the Dora recently conpleted. The Strala di l'o, like the Sirala Nuova and di Dora Grande, the Piazaa heale, and $S$. Carlo, is embellished in its whole length with arcades over the footways, which give a most agrecable and imposing appearance to these parts of the city. The royal palace is little remarkable in its architecture, but it has some spacious aut richly adorned apartments, and a good collectinn of paintings, ineluding many of the likmish school, and others by Titian, Gucreino, Albani, and Murillo. In this edifice is the equestrian statue of Amadeus I., the figure in bronze, the horse in marble. Attached to the palace are garlens open to the public, the fashiomble resort thring day; the Ronde, between the city mul the I'o, and Valentino grounds being the finvourite resorts in the evening. The old palace of the dukes of Savoy is a singular buidding, with four fronts of different architecture. Three of these derive comparative ugliness from the beauty of the fourth. This last front, composed of one Corinthian peristyle raised on a plain baseurent, is the noblest elevation in 'Turin, where it holls the post of honour. The private palaces would strike a stranger who had just erussed the Alps as very magnificent, but there are many in ltaly equally large and in a much purer taste. 'Ihat of Prince Carignano has a remarkable staircase by Guarini, who, along with Guivarra, has been the arehitect of most of the principal edifices in Turin.

The eathedral, a Gothic structure, built about the end of the 15th century, has heen praised fir the richness of its appearance, particularly the W : front, which is ornamented with well-executed bas-relicis. In it is the chapel of the Scanto Sinode, in which the winding-shect of our Saviour is preserved with all the attention lue to so important a relic. This eathedral was formerly among the wealthest churches in Italy; but its plate has been sold, and the produce applied for the most part to secular purposes. In fact, the riches of this cathedral, its imarres, vases, and candlesticks delrayed the cost of erecting the bridge across the I'o in this city, and embanking that river, as well
; only hrick conted profusion of runaing vement clean. All of luxuriant growth de to the intolcrable ews of the Alps are it may be said that, eretricions ornament, lent everywhere in the finest eities of ern works of art, and lary ; and there is erise it as an Italian has appeared rather neh town.
tich forms about onee strects, whieh are five stories high, ate at right angles; atul : Bdinburgh, and the adon, entire rows and ant are of precinely yal palace stands in e Piazza Reale or di eleg:unt square, surublie buildings, and er palace of the Dukes sion environed by a noble strect. $\frac{1}{2} \mathrm{~m}$. in from the river, which elridge of five arches, which is saill to the ver the Dora recently Po, like the Sitilla e, the l'iazza Reale, 1 in its whole leugth $y s$, which give a most carance to these parts ce is little remarkable as some spacions and and a good collection any of the Flemisin m, Gucreino, Alhani, ice is the equestrian figure in bronze, the d to the palace are the fashionable resurt ween the city and the being the favourite he old palace of the ar building, with four wre. Three of these from the beauty of nt, composed of one on a plain basenent, Turin, where it holls rivate palaces would ast crossed the Alps as e are many in ltaly purer taste. That of markable staircase ly nivarra, has been the cipal editices in 'Turin. structure, built about r, has been praisell fir e, particularly the N : (1) with well-excentel el of the Santo Sinode, of our Saviour is 1 rea due to so impertaut \& formerly amoug the ly; but its plate has applied for the most In fact, the riches of ases, and caudlestichs the brislge across the fing that river, as well

as if improving the Thileries and buibling the Lime le livoli in the lerenell capital.
The morehes of Sim Filipos, Sion Christima. and many others are riebly ahormed; lint they all find the palm to la superga, witmated on a hill ahnut ofin. from 'lurin. It was on this spet that the buke of' Simoy (Vietor Amalens) and I'riner
 of the Fromeh, and the deliverame of the dity in liati; and the shmed was eonstrueted by the duhe ins a momument of his pratitule to the (ionl of battes for having given a sigmal vietory to his arms. The editice is not unworlhy its origio. It is of a cireular form, and sumomited by a dome. All the colmmes in this buthline are of marble of dithernt colours, mul give the alitice an ippearatmo momanlly rich and stately. Instead of piehares, the altars are decorated wibl has-relialia: fle patwont is of variegated marble: in whort, all the thithernt parts of the buikling, and even the details of exechtion, are on a sonle of marnifierane.
 It consists of 5 bacolties, or callegeng comsisting of theolory, with 1 protessors ; law, with 5 do. ; medirine, with if do, ; surgery, with $\bar{b}$ dos. amb the arts, with er. It is masally attemed by abuat 1.200 students, who bard orit in private fimilies. Its library is said to have 112,0 tot vols. Its buitafags are extensive and well arragreal: the comrt is surromaded with a donble tier of portienes, matar which is a rollection of ancient soolptures, hasrelides, do., from the excavated homan dis of Indestriat, about is m. distant. In the masemun of the Aealromy of secienors is the valuathle collection of liseytian antiquities, formen hy Drovetti, and perrehased hy the kiner of sarelinia for Wh, 1 , in fir. It comprises several colossal stathes of lisybitim sovereigns, domostic and agricultural implements, pipuri, and the limmen laite table. linder the same roof are masemme of hathrat hishary, amatomy, and medals, and har roval himary, fomprising an extensive and valable enllection "f histurieal anm other works, inclaling an extensive series of Bibles.

The citided of 'lurin is a regrolar pentagron, phaned hy Urbino in the ltith eentury: it has extensive subterramean gallerios and is still of contsiburable strength. 'The qutles of the eity, which were cased with marble, were demolished by the fromeh, and the ramparts dismantled and converted into public walks. The Valentino palater, mul the other royal soats arombl the city, are mow cither deserted or appropriated to sehmols and musemms; these, with 9 howpitals, 2 asylums, the rulleges of the desuits amil lemoratalli, an arsmal, with a sehool of military chumeringe a wram!川hera-honse, ranking as thio Sril theatre in laty; $\because$ smatler theatres. the emetery of the aristoerace, wharsatory, botanic sarden, royal acalemy of bainting, Bul monte di pieta, eomprise the oflere establishments worth notice. 'Tutin is the seat of' a tribumal of primary jorisdictim, an archbishapes ser, and has chambers of agriculture and emmmeree. Its manafactures eomsist chictly of silk fatmics and twist; but it hats others of wodlen and cottom grools, hariware, arms, pupr, elass, mirnlenware, and liqueurs, and its printing business is pretty extensive. The shopse am hotels of the city are rood, but the supply of water is band and the prevalenme of fogs rember it rather an muteasant residence in antumn and winter. The manners, habits, amil languge of the inhabitants are move Fremes than Italian.

Tharin was male a military station by Julins Casar onl his invasion of dialli. In $31^{\circ} 2$ Comstantime gainod in ats vicinity a great fietory wor Maxentius, Charlematye amoxed this city to

The marquinate of susa; it camefinto the possession of the llokes of Navoy in lo: $2 \cdot$; and bexame their calp. in 10x1, It wastaken ly framois 1 . in lisiti, and hedd for eti yeare by the fremelt, who main took it in 16/0. Hat the most endelorated by far
 was investal loy a puwerfil fromeh amy, Voltaire has deseribed the immense preparatone malle
 the incaparity and disingrement of the F'remeh fencrals, anif the talents of l'rime bugene and the lhuke ot Saver, newred for the latere an casy and complete viciory. All the vast stores acenimulated by the Fremeh fell into the hamds of the concpuerurs, and the besidging army was wholly dispersed, Under the bremeh asermbeney, from Is(0) to Isl-I, Jurin was the cap, of the dejp, of the l'o, After the peace of Viemar it beeame once more the capital of the kings of Sardinia, and on the latter grining the crown of laty, 'Turint, for is short while, was lowed upot as the eapital ot the ney kingilom. But it lost this advantage in the Noring of asio, by the removal on the comrt, the two Romsen of piarliament, amb all the higher govermbent fimedimaries to fiberence.

TULikil', or the ot'TOMAN EMPDLE, a very extensive ronntry, party in Ni:. Vinrope, ani partly in IV. Axia, comprising some of tho mose edelorated, best sithated, and naturally timst provinces of the continents to which they indones. Tla limits of the 'arkish empire are not casily defineal ; intamueh as it is nstably reprenomed as indmeling several extemsive emmitios, which are sulsfantially indepembent. Mohdavia amb W'allatchin, and servia, in liurnean Thrkey, are now connected with the lorte only hy we shembered ties: thomen, as same of their foriresess are garrisomed by Utomantrops, and as ther continne (opay tribute to the lorte, they may still he proprely included within the wide range of the 'arki.sh ifminionts. Eisypt, however, and the ohber Sriman turituries Hat formerly belonged to the Porte, may mow be comsidured is being but mominally cominered with the Ottomath empire.

Very different estimates have been formed of the extent and peppof of this great comentry, amb neiller is knowio with any thing : mprondhing to precision. Acemaling to the must reliable extimate, the total area of the emprese, incheting the
 and the extent and pepmation of the several erand divisions in biarope, Asia, and dirica ate as tollow: -

The Turks or Omamis who have for more than fone centuries, heren the dominant rare, were origimally of Seythian or Tartar extractiom. But the Turkish bhen has beren largely intermixed with the Mongolian and J'ersian; and, in Eurupe, the higher class of Turks have generolly firmished their harems with the tincest women of Cireassia and ficorgia; white the inferior Thurks have allied themselves with Servians, Altanians. Bugsarians, and frecks. In conseguence the origimat und distinguishing features of the race are now, in Eurppe at least. very much obliterater, and the Turkish, frum being one of the uelinst of Siatic mations, is become, speaking gencrally, one of the hambumest ; thangh, from the pereuliar mode in which the race is mantaned there is necessarily the greatest varicty in their stature and appuirince. 'Tarkish ladies have, in general, very white delicate complexions, a consequenere of their sedentary mode of life, and of their habit of veiling themsidves when they take the air. Their mode of life, and their great addiction to the hatl, render them rather dispused to embompinint; but it is absurd to allege that this comstitutes the we p/lus ultret of a Mussuman's ideat of leanty. had such heen the case, the Circassians and (ieorpians would not have constituted the pride of the harem.
The national character and disursitions of the Chuss have changed as well as their physieal constitution, but in a less degrec. They are now, ns of old, phlegmatic, promd. and sensual. 'Their prite is a consequence of their ignoranee, and of the recollection of their furmer vintories and eonquests; and their scusmality is in part, at least, a conseguence of the peculiar nature of the Mohnmmedan paradise, and of their wish to realise in this wordd some portion of that lelicity which is to be the pertion of all trae believers in the next. Other nations have affected to believe in the dectrine of predestination, but in this respect the 'Iurks alone have given a practical efleet to their syeculative tenets; and their stationary state and long comtinned contempt for the incentions and discoveries of others may be, in no small degree, aseribed to their conviction of their inutility, arisung from their bolief that every thing that oceurs is determined by an overruling I Povidence, ugainst whose decisions it would be alike vain and impions to conteme. Speaking generally, the Turk is hos-
pitable, true to his worl, sincere, and honourable in his lealings, contrastinge in this respect mont adsantageonsly with the tireeks and others of the sulyngated races, amonie whom hypocrisy mid hald faith, the result probably of their degraided condition, ure extremely prevalent. The 'Turk is not prone to anger, nor liable to sublen gusts of passinn; but when provoked his fury has no limits, and he becomes brutal and ferocinus in the extreme, involving the innorent and the guilty in one common ruin, Ilis religion interdicts the use of wine: and, thongh not always respected, this preepgt has, on the whole, had a sahutary inthence on his comburt. Though eapable, on emeranences, of rreat and vigorons exertion, laziness and apatly are distinguishing characteristies of the 'Turks, There is mothing in which they take so mond delight as in reclining in the shade from sumrise to sumset, apparently in a state of total indillirence, occasionully sipping cotlee and inhaling the fumes of tolnteco. Whatever may lo their olject, they sannter theroger the strevts with the same measured and monotomons stap. They converse little, and the presumption is that their mind is as indolent as their looly.
lerhaps no mation ever jossessed so little talent for governing others as the 'lurks. They hime never struck their roots, or aequired any solid fonting, in the conntries they have congurand. They are enemmed in and orevpy them; but they huhi them by notie other than the sworl. They have nevar eoblesed with the original inhals:; they look ipont themslyes as the nation, and the rest of the piople, or those at least who have but cmbraced Alohammedanism, as an inforior riler, which it is, if uot a duty, at all events hint a vemial whence, to insult and irample upom. In this respert they differ widely from the Tartars who over:m ©hina, and inded from every whor perple; and to this, more than any thing elow, their weakness, and the wreteherl state: of the combtrics sulyect to their dominion, are to be aseribed. The more important features in the centstitution and character of the ather great rates inhabiting the 'Turkish empire will be fomad motiod moler the articles Amama, Ammexis,
 h.Arilia.

Property,-There is, in many respects, a considerable similarity betwern the monde in which property has ben distributed in Tharkey, and that In which it was distributed in linrope during the midule ages. In loth eases, in making this distribution, the estahbishment and support of a militia, who should be hound to repair, at their won expense, to the standard of the sovereisn, and to follow him in his cmpraigus, was a principal object. Jat the support of the national religion and the sulsistence of the sulijugited population had also to be provided for, llence, when the 'lurkish sovercigns made any new conguest, the lands wore usually divided into three protions; one of these was appropriated to religions and charitahle purposes, that is, to the support of mosques, schools, abd hospitals: anothor jortion was distrihuted as private property to the conquerors and the conquered; the lorner paying a tithe of the pronluce to the state as paramonit lamollurd, while the latter, if they were not Mohammedans, were sulyjected to a land-tix, or impôt fourier, and, also, to a bherurl;, that is, to a personal tribute, or empitation-tax jropurtioned to their means; the third and last jortion, which was usually the largest, and might be called the crown lands, was divided into estates, wherof some wore the peenliar jronerty ai the sultan, others of his mother and wives, und others of the treasury and

respects, a emill monde in which 'urkey, amil that urope during the naking this dis11 suppre of a remair, at their the sovercign, fus, was a prinof the national the suljuratesl led for. Ileurr, le any new conided intor thre priated to reliis, to the sulpurt s: mother ןwrerty to the conirmer paying a as paramonut were not Moa land-tax, or al , that is, to a propurtimed to tium, which was alled the cruwn ereof some were n, others al hiss he freasury wind
great. oflicers of state. Ilat the greater portion of the crown lands was divided into estates, callent from their greater or less size zuimets, timuriuts, and breyliks, which the sultans assigneel to the more deserving or most favoured of their followers. The latter, however, did not succeed to the heroditary or alsohlute property of these estates. On the contrary, they only held them durius life or gool hehaviour; and whenever any vacaney occurret, whether ly death or forfeiture, the sintan made a new appintment to the vacant fief; and instanes lave been known of the same lordship laving been held by eight different masters in the course of a silugle campaign. But in the conrse of time most part of these estates, thougl mot all, wre assigned, like the fiefs in Luropean comeries, to the heirs male of the former proprictors, mud thus hecame, in effect. herelitary. It shonh, however, be observen, that while the Turkish institutims were in their vigour, and the illogal exactions of proprictors mad pachas restrained by the vigilance of the sultan, the interests of the raymahs. or peasamtry om all sorts of estates, were carchill: attemed to, and their rights as well as their obligations detinod and enfurced. Heace, when a new lurd had a zuimet or a timen ient assisned to him, he combl only temand of the temants, in full of rent. a certain portion of the proluce of their land and of the increase of their stack, or a certain :mmment of survice, or corvies; and in consileration of this. he was not only bemad to perform military service to the sultan, but also to protect the cultivaturs on his estate. This state of things contrasted most lavourably with the rapine and amarehy that then prevailed in the greater part of burpe. '1 have seen,' says a contemporary of Solyman the Marniticent, ' multitudes of' línugariain rustics set tire to their cottages, and tly with their wives and clididrom, their cattle auli instruments of labour, to the Turkish turrituries, where they knew that, besides the payment if the tribute, they wombld be sulperect to mo impaste or vexations.' (hemelavius in Thure. Imp. Statn.)

Hammer has given a view of the primepal institutions of the thtomin empire, at the perion of their sreatest ellicieney, at the death of solvman the Magnilicent, from which we bers to subinin the linlowing extract:- b’apres le kuran, la terre entiere appartient à Dien, qui la legue à gui lui plait; en sorte que tonte proprifte relevant origihairement de Dico appatient a limam (sonverain), qui est son ombre sur la terre. Mais apres la comquîte d'm pays, limann atiene som droit de propritté en laveur des Musilmans it la chatrge de payer la dime, ou bien des nom Musulmans, it lat clharge d'être somis ì un impôt foncier et à un impot sur les jroduits: les monveaus possesseurs acquièrent ainsi sur ces biens un véritable droit de propriété transmissible de pire en tils, ave la faculté de les vendre, de les partager ou de les consacrer à des fombations. Le prince a de semblables droits sur ses bicus de famille et sur ses biens (lomaniaux (kass), dont il lui arrive somvent d'assiguer les revenus ì titre de traitement à de latuts lonetiomaires. Les domaines du pays, ceedés comme fiefs en recompense te services militaires, ne jonissent pas de ces avantages; lenrs possesseurs n'out pas sur eux ce druit de propricté illimité, et ne penvent les aliéner, les partuger, on en instituer des lomdatons. Les dumaines se perpétuent ì la vérité dans la ligue màle des fendataires; mais, comme I'Eiat sent en a la propristé, il est nécessaire qu'a la mort de clacgue fomatnire, ses fils reçoivent la prince un nowvean diplome d'investiture. En lisypte, on thonue le nom de fermes anx memes biens pui, dans lanatulie et hat Romailie, sunt aplreles fief's, cest-i-dire
ceus qui sont concédes en rícompense de services militares; mais il ya me gramle diflirinee emtre le fenlataire et le fermier ligyptien. (ee dernier ráa ni les mêmes obligatisus ni les mêmes aramtapes que le promier; car, tandis que le lem latnire proprietaire viager ne paie ancun impôt in l'bitat et regoit de som paysan on raya thus les revenns, le furmier an contraire paic al l'Etat un truit do fermare et partaye avee le paysau le surplus des promituits.' (IIstoire de l'Empire Ittomm, vi. Stis.)

Aceorling to the imperial survey orlered by Solyman. the number of zaimets, or estates, ewtimated at 501) acres of hand andupwards, amomutel to $3,1: 12$, and the nomber of timurs, or estitest valued at from 300 to 3010 arees of lamd, amoment to 50, thin; the whole furnishing a revenue if nearly l, ,1m,010 rix-tols., appropriatel to tho maintenance of an ariny of about bis,016 men. At the end ol the last century, it was computend that there were in the Einropean part of the empire !11 \& zums, and 8,3is timars; the momber in Asia being nearly the same, nud the whote lirruishing a militia of ahove bib,000 men. In 1816 , it would appear that there were still $\mathbf{0} 1.4$ zeims in Burpue, and in Asia 1, tat; the anmal revenue from these amounting to from $25,0(1)$ (1) l(k),1016) aspiers ench, whieh, at low aspers to a Thrkish piasitre, would give a yearly income of about but. on an averaye from each; but more recently the mumbers of buth were still firther relucei. After the disorganisation of the empirr, which began to be stromgly maniliested during the (irst half of hast century, all sorts of abuses ereppt into the mangement of the estates lield by the fental horts or syehis. These were oppressed amb plumlered by the pachas; and they, in their turn, oppressed thie cultivators, inereased their temant for corvees or other services, and chamed and (xacted, thoush illegally, a much greater purtion of the prombee than they were lecrally entitiond to. Ame yet, despite their pillage of the cultivalurs, many spathis were, like the zemintars in Ilindhatian, timed to abambon their estates; and in many districts, especially in Asia Minur, uwiug partiy to the illegal exactiuns of the lurds, but still more to the arbitrary exactions of the pachats, the cultivators wholly deserted the lands, which are now quite mocellient.
It was for a while a common opiuion in Western Europe that Turkey was a comutry in whide there was no security of property; allul if this memat that it was expmed to illergal exactions of all kimis, partly by the feulal lork, atul pirtly and principally by the pachas and their sulnidinate anthurities, nothing conld be more correct. But nothing, on the other hamb, could be mure ineorrect than to allege, as many have done, that in Turkey private property is not recogniseal by law, or that it may be seized at the pleasure of thie s:ltan. This, no doubt, has been the case with the property of persons in the publie service, whense lives and fortunes have been made to answer for their real or imputed misconduct; and, in some: degree, also, with the fendal estates, or those held by a military licence. But all other sorts of property have been respected in Turkey. And even a pacha, or other public functimary, who hall acquired property by the must oljectoinable means, might, if he pleased, easily place it beyond the grasp of the grmal seignior. To acemplish this, The hal meroly to settle it on his family aud direet heirs, leaving the reversimary interest in it (1) some mosque, which, on receiving anminal puitrent, took charge of the property, which conld un) louger be either forfeited or allected by the erimes or miscombet of the origimal finuter of the fimily or his heirs. Property so left is denominated
rucouf or muff. But this device. Though guite eflectual for the obyeret in view, temded, int the emel, to acmumate much too great a quantity of property in the hamds of the chareh; so that, in obvating one albuse, it oecasioned another.

The reforms whieh have heen introduced of late vears lave effected a great change in the law refating to property in Turkey, and also a considerable improvement in its allumistration. With the exception of those belonging to the mongues and charitable institutions, most part of the fendal or military estates (spohiliks or brylihs) and lamed properties not strictly hereditary, have been resumed hy govermment, and are now held dmine its plensire. This proceeding involved very many instances of extreme hardshij, mul even injustice; but it has been carried out, in as far as wis pracetienble, and was supposed to be neressary to the intronduction of an improved system. The mew proprietors very often comsist of eivil mul military ollicers who reside in the towns, and who are this to a considerable extent dependent on the government. They are not, like their predecessors, reguired to furnish trongs to the state; the reeruitment, pasy, and maintenance of the latter bejus provided for ly grovermment. But, in lien of this obligation, they are charged with the parment of a tithe or tenth of the prouluce, as the rent dae to the state, or real owner of the land, and, also, with an income-tan. 'The vice of this system is that the lanilords, not being absolute or even hereditary proprietors, have but little interest in the prosperity of the lands; and that the government is wholly mable, hawever good its intentions, to hinder them from making illeral denamels on the peat stamry or cultivators, a resnlt which may be emontidently expected, seemg that their revenie depends on the excess of the retums they receive wer what they have to pay to the state. It is true, no doubt, that the new plan mikes the sumerior lorts exert themselves to protect the rultiviturs from the unjust exactions of the pachas and revenue oflicers. lout this, also, was in mome denree the conse under the old system. On the whole it is evilent that mothinge would he half solikely to put down abose, mul to lay a solid fommationi for fiture jumpovement, as the miversal establisho ment of a right of private jropety in land.

When the new system was introndered, it was fyumb that its application was armatly limited hy the growth of the system of rerouf, anm the inimense extent of the tamde held by the cinureh. and. therefore, exempt from taxation. Vel, however great, this was at abse with which, owing to the religions projudieds a! the perple, it was very dillientt to deal. The govembent, lowever, are sain] to be determined on the sequestration of the church juroberty.

Agriculture:-In Turkey the cultivaturs do not live dispersed over the conntry in hambets, or in single firmhonses, lat are eongreceited in villages, which, owing to the tep"pulation of mast slistricts, are frequently at great slistances from ench other. These vilhages present a very striking picture of primeval mamors, each family providing itself with most articles required for its consumption, white their municipal athitrs, or those in which the community have an interest, are conducted by their ehlers, 'The village commomities in certain districts, especially of linropean Turkey, mioy consitcrable powers; and wherever this is the case, or where a tract of comatry happens to belong to a powerful individual, the cultivators, speaking generally, are comparatively prosperons. This, however, is the exception, oppression and a want of security being the ttanal consequences of Turkish ascemdency.

Turkey is not dependent peen any fureipen comutry for the subsisteme of its inhals.: it videls, on the contrary, corn and other produer. sutlicient not only for the home demand hitala for exportation. 'Fen times the produce might. however, be rajed in these tine combries were it loetter policy adopted, and the inlobos. proterted giginst vexations exactions. The bative ravahs or petasats, hy whom cultivation is carriedi on, lave generally little or mo capital: and as tho tas on the rrop has generally to be paid boforn the prowluce is gatherem, they are in host eaves obliged to harrow the money fir this purpose at a mitomes rate of interest. Agricolture is acrochingly in a vere hackwarl state throughout mos parts of the compire. In Thrace, the rutation of crops is tolerathy well understood; but macwhere in European l'urkey cultivation is extremuly depressecl. Manuring is next to unknown, and in the momatamos parts, particularly in survia and Nlbana, mimmense waste of timber neenrs, from the forests locing lurnt that the gromod may be fertilised hy their ashes. The ploughs (except in Wiallachia and a few other provs.) are of the most wroteled deseription, heime sehbom shod with iron, and tit only to scratcla the surlace of the earth; a bunch of thoms performs the functions of a harrow ; and the other tarming implements are in general equally hat. Thrishing is performet, as in mosi enstorn comiltries, low trealing ent the grain with cattle; the straw ísing subsequently chopped ly draggias over it a sort of heavy exlinder stuck with shar; thints. lint the fertility of eertain portions of the empire, as Thessaly and the valley of the Maritza, is so great, that despite the low stite of hashamirn, the average prodace of corn is said to amount to from lis to 30 times the seed.

Maize is the principal species of grain eultivatedin Durorean I'urkey, inthe montain-vallevs ass well as the phans, except in lhonia, where the climate is toocoll. Wheat. ryo. harley, wats, and huchwhent are also pretty gemerally cultivated: mad millet is grown in the more shettered plases. Liere is qrown onle along the hamks of the Maritzal and other marshy tracts in the s. prove. Tho quantity of this prain prodnced in laropesan Turke heing insuthicient for the ronsumptinh, is portion of the repuired supply is imported from Eigryt and Asin Ninor. Cirmat quatities of harients, beams, mblages, onions, melons, chemobers, tomatas, and eapisicums are raised as artieles of fond: but the potato is caten only in Dasnia. (roatia. Heragovina, Montenegro, and a fion places in hervia nud Albania; lentils, turnije: artichokes, asparagus, beet-root, and many other verctalles comamon amongst us, are almost but knww in 'Turkey. Thongh not usually drumk hy the Mussulnians (except those of Lower Albania), wine is growin in most prove, of Turkey in lintope. hat Wallachia and Moldaria (which see), Dhegaria amd servia, are the prineipal wine combtries.
'lurkish wines are mostly red; white wine is produced only in Walbehia, W. Bulgarin, and at Sememelria, and a few other places. The best wines are very high coloured and somewhat smilar to those of Cahors, and of hadicopmain Italy. These are frown chiely in Marolonia, in the basins of Sentar: and Prisen in Albania. Mostar in Hermegovina, on the hills along the servian Morava in Thrace, and in the vicinitios of Lovdseha in hulgnrias and Meteorn in Thessitly. Certain growthe in the SilV. of Macedonia deserve purticular mention. 'The inhals, of those places pussess, in fact, a valuable sontree of wealth, for there is no dombt that several of their wines might be advantageously exported. The want

 there be a prowect of a plentifit harvent. fir tha ropls Mon the gromind to be seized ly the pathat at a low valuation, and theob jut me the the ligher bideler. This system, wo destruetive of indistry: may be traced to the ill jumperl hut favmurits pulicy of the Porte in combinually changing the governors of ther provinces. lest ify being retthed for as emsiderable period in their gevermments. they should shake off their allegianee as many have atremly done. The pelcha, therefore, whi, during the short time be remmins in fivelur, has not ouly to feed the avarice of the impuat minisbres, thit also to acemmulate an indenendeney for himself befire his retirement from oflice, is liectlese of the intereste of the farmer, or of thase who are to sureed hime and only anxious to collect wenlh. We ernsequently obserye that those provinues where the ehiefs maintain their indepentcone, are invariatly the richest, best perpled, and in every replect the most flouri-hing; since they find it their muterest to enewurage the cultivators if the land, who are comtinually desentimg thane parts of the comery immediatele governed ley the sultan's oflieres, to place themselves mulder their protection. The prosincrity of the provinces of Asia Ninor is in this manicer always thactuating,
to the actions amil diopositions of their reypurtive ruldres. sometimes they are well prob phed anul cultivated (1 speak compuratisely) amal at whers wate and firsaken; whele village emi grate lrom one district to aluother without mued tromble or expense, since their honses are simple and of casy construction, and their articles of firr niture so trilling as to be transpurted wihl ficeilit? 'me the bukes of the cathe, which sulply then with milk during the jomruey, and everywher timel abmulane of pasare. the fireks, callent Siurnmi by their Turkish lurels, comstitute a coll villeralle portion of the prasamery in this part in the empire, and are mot, in my of inion, the tallen and dastarily race nsmally represented. The pulitical or religives institutions of a state: athert without donlt, the character of a pueples and this is mowhere mure complicuons tham thrmghome thuse puarters if the ghole where the bifightinte donetrines of Mahomit have been diffised. Th., my unt and cruel preacutions carried on by tha Thrks have dampent the tiory spirit of the lifreck.
 ucessary to the saftety of their persons and prio perty; whereas, meder a more enlightened and lese despotic gevernment, the batomal charearer if that pende would prolable rive to the standaril of the inhalitants in mest if the civilixed comatries of bumpe. To me they have always a peared as diepirited amd lroken-hearteld; but :at the same bime realy to rise, if supported, and crusl their vindietive rulers to the carila.'
'There are in Thrkey great mombers of shef pama Fuats, the tlend of which comstitues the prinumpal amimal fone of the inlabitants: but there are prosprionally fewer cattle than in other romatron
 ly the 'lurks. The sheep are nearly all of a $a$ mall, thick-mulied breal, with a white ilecee; Merime. harge-tailed, or obler improved hrects, are mad with only in servia. moto which ther were intr..
 lachia the sherp have tall spirat horns, and thar woul is a principal seuree of wealth. The biatures there are fine and extensive, and harg dous are bonght thither from Transilvania, to hae depantured during winter. At the same semem tha sherep from the table land of "appadacia are Irisent into the phins of N. Syria, and many of the mgratury Kowel amd 'Turkman tribes of Asial seck the preture lamds almut Amgrab, the trathers of Which town sumpe thar vations wants, receiving in retmon the wom, skins, and other produee of their thonks, in which artiche's Augora hals a verg comsiderable trate. The catte alomer the bamb of the save and bambe aplear to be a degenerate Itungatian hared. Thase of the more s. provs. are diticrent, being of molium size, and shertlurned. Wxen are everywhere empluyed in tied hatrour. Butiahes are emmon, barticularly in Bulgaria and Thrare. In bonnia and other W: pross, some tolerably gronl checeses, similar th Cirusere, are mate; but the cheese of most parts of 'Thrliey is in general tow insipid to suit war maste. lim makiug cheese, the milk of ewes and quats is partially cmployed, hut in general only in the absence of that of the eow ambl buflato. 'Turks abher the hig so mueh, that they the not gellerally permit its sale in the towns, where they form the chicl propmortion of the pop. Neverthelens, they are reared in vast mumbers in Servia, Bosura, andi nother N. and $W$. prows, and, in fart, cemsti tute the ehief resource of the Servians. The Turh are gumb horemen, and take pride in their hursts. Little of that care is, however, hestowed on them thiat is common in W. Diurye. They are fed only twice a day, sometimes they are not put into
stialles, and are not growmed and trimmed as in Europe. The horse of buropean 'lurkey is generally of midalle size, or rather helow it, with a short merk, strong limhs, and a lay chestmot, redalish brown, or white, seldom a grev colour. 'They are usually fed on limrley, mats lociug used for horses ouly in the NW. jroves. The horses of Asiatic Thrkey seem to be chictly of Arabitm descent. The Montetik are ans excellent race of horses, lired by a great trilue of that name on the hamks of the Eaphrates. In Armenia and Koordistan a prodigions momber of tine animals might loe procured at a elamp rate for the eavalry: the horses of bagedad are large, and many of them show a rereat deal of bhand; but where bred in the thesert bordering on limasecus are, upon the whole, the tinest. The ass is murh wed in Rommelia and S. Albimia. Mulen are searee in those provs., hut very mumeroms in Montenegro, and other momitailions parts of 'lurkey.

There are mines of copler, argentiferoms lead, iron, and other minerals in varions parts of both Faropean and Asiatic Turkey; and it is gemerally believed that several of the momatain chains, whid bonnd or intersect the Turkish prows, fontain ores, not only of the nseful, hut of the precions metals. The W'allachian and Moldaviau gipsies colleet from the heds of the rivers pellets of gohl mixel with a small guantity of silyer, by moans of which they are enabled to pay into the treasury the amimal tribute of a dractim of grold imposed ujoun each man. lhat mining indestry is not proditable in 'Turkey from varions chases. 'The ignorance of the peop,le,' (salvs Mr. Thorntom, 'Present State ol' 'lurker'), "in the art of working the mines with econmang, is perhaps one mane of the neglect with which ille thtomans appear to treat this somere of wealth; but the ehale onstacle to exploration is the rapacity of govermment, which would weike mon the allamtises ol any new discowrs, and subjert the provincializts to the marerompensen labour of opromer the mines and extrace intre the ore.. Asphaltom, nitres: salt in Wiallachia, and eail in Bulsariat are amoner the mineral products of the empire, hat are lig no monas raised to the extent that they would lie moder a tiberal julitial system. Detwen liski-shehr amd Sorvi-llisalr, in Asia Hinor, the substance called mereschatm, no moth laved lor tierman pipes. is fimmed in large gumatities. It is a porons friable stone, almost emtirely compored of small-gratined vitreons of tramparent felspar. decomposing and passing into
 pipe-bowh are mamulatured from this material, and seat to Constantinoplefor export intofermany.

The manufiet tures of 'lurkey are more numernis, and display greater exrellence, than might have been expected in a comotry so backwaril in the arts. lidecol, her shesess in manulacturime indontry is, upon the whole, preater thim that of several comitries ramking hipher in civilisation. The sations and silks stutlis, the velvets of Brusa and Alepo, the serges mud camlets of licrota, the cripes and ganzes of salonica, the printed muslins of Constant inople, the carpets of Simerm. and the silk, linen, and cotton stulfin of C'airo, Seio, Macrocsia, Tokat, and Custambol, establish a fivourable. but mot an umfnir, eriterion of their fencral skill and industry. The workmen of Constantinople, in the last century, excelled those of Fratue in many of the inferior trades. They still practise all ihat they fomm practised; but, from an indolnee with respect to innovation, they have not introdnced or chemuraged several asefial or elergut arts of later invention. The 'Turks call in no forcisn assistance to work their mines: from their own quarries their own labour eatracts
the marble and more ordinary stone which is empheved in their pulble Inidinges. Their marine architerfure is ly no means contempilibe, and thrir linges and smaller logats are of the most gracefill constraction. 'Their fomblry of' loriss cimnon has beed motela admired, and their moslict and pistol harrels, and particularly their sword blales (though the sword blades of bimaseons are: not so famons as formarly) are held ingreat estimation even by foreigmers. Their momatictures of Morocec nid other leather, and of gold and silver hece, de. deserve also to be mentioned with praise.

Ihit it appenrs that most lramehes of mamifacture formerly carried on in 'lurkey have do. rlined, and are now in a very depressed state。 The domestic manufacture of cotton stathe wiol formerly spreal aver almost all the buronem provinces; and in Ambelakia and some ohtwr paces the pimbing ami dyours of yarn and the labric of staflis was carriod ou upon a large malo. Bat the introduction of the eheaper yarn and stulfs of binkland has all but whally destroyd the 'Turkish factories; atul it has, also, preatly reduced the domestic manufacture. These resulas might, however, have heen anticipated. liarept iu a few peculiar products, Turkey has mo lincilities lor the prosecution of manufurturing indastry. She is essutially an arrienltural country; and such is the excellence and variety of her sinil and raw products, that her exports inight be inerased in a degree not casy to be imatimed.

The 'Turks have mate wo progress in the tine arts, and are but little acquatinted with the lityher sciences. 'Their huildings,' siys it recent traveller, 'are rule incoherent coplies, pusecesins nuither the simpticity nor unity of arigrinal invention. lleavy in their propurtions, they are impsing only frum their lalk: the parts do not harmonise, nor are they sulsarvient to one leandins primeighe; the thetails are band hoth in taste amil exechtion; the decorations have no nser, mo mean-
 is unthing which intientes the eonceptions of gemins. 'The phernies of the latter are eliblend and repressel he the monotomy of Turkioh hahis: and the austerity of their custums. Their cities arn
 is to aliven or to cmbellish. The circons, the forum, the theatre, the bramid, the whelisk. the colamot, the trimmbal areh, are interticted bex their prejuliers. The erremonies of religion abre their only puthic peasures. Their temphes, thein haths, their fimmains, and sepulehral momments. are the ouly st ructures on which they hestom ang omancut. 'Taste is rarcly exerted in other relitices of public ulility, khans and hezestius, brideres and aqueducts. Seblpture in wood or in staceo, and the enfraving of inseriptions on monmments or sends, are perliommel with neathess nad admirablo precision; and the ceiliugs and waluseotiug of rooms, and the carved ormanents in the interior of Thrkish houses, show dexterity and even taste. But their paintings, limited to landseape or architecture, have little merit, pither in denign or excention; proportion is ill observed, and the rules of persjective are unknown. They reckon lime by lomar revolutions, so that, in the space of a3 years, the Thrkish months jazs thromgh every season. 'I'heir knowledge of geography does noit extend beyond the frontiers of their empire. Their surgery is rude, from want of science, of skill, and of iustruments.,

Trade.-The increase in the trade and commerce of Thrkey within the hast thirty yours has been very great. In 1831 the trade with limgland amounted to $888,68 \cdot 11$. in 1839 to $1,130,22.41 . ;$ in

In Enropean Turkey, after the capital, Ndranophe and salomien are the chiof centres of trade, and the tirst being the great depot for all the rouds coming to Cimstantiaple from buyrland, lerance, and Austria, sulylies all the fairs thrughont lomuelia and lhugaria. Next to Smyrna, Alepos is the chief seat of commere in Asi!. Caravans bring hither pearls, shawls, Indian and Clinese goods, from limsoraln and longlad; camels from Arabia; cotton stalls and themd. Doroceo leather, goats' hair. and galls Irom the pachalies of Mosnl, Diarbekir, Orlia, and Sintals; furs, goats' hair, wax, gum ammoniac Trom Vin, lezeroum, and Kars; silk, copper, furs, and linens from Asia Minor; silk, Mocha cotlene, somp, seented woods, ambergris, ilrugs, and pearls from Syria aml Arabin; rice, collec, mul birypian pronluce from Latakia; silk mannfactures trom Bruse and Damaseas; Birropean coton and woollen stalls, priated maslins, hardware, watches, Wronght amber, and fir from Smyraa and Constantinople. The priacipal articles of export are sheep's woom, guats" hair, cattle, horses, hogs (from Servia), hides, hare skins, wheat, raw cotton and silk, tobacco, raisins, figs, almonds, mastic aud other gums, gall-nuts, valonci, leceless, lones; wax, sallion, malder, anise and linseed, turpentiac, sathower, meersiblation pipes, whetstones, carpets, silk and cotton finbries, leather, copper, and metallic wares, with Aralian, l'ersian, Indian, and Chinese goods. The lritish trale with 'lurkey in Manchester, Glasgow, Ifirmingham, and Shettield manaffetures, and other British probluce, has been stemli!y inereasing for some years past.

The wealthier class of Thrks are gencrally too apathetic and indolent for commercial pursuits, which they leave to the Greeks, Armeniams, Armamis, and Jews.
The extreme simplicity of commerec, from the absence of all legislation on the subject, is visible in the establishment of a merchant; no hooks, sare one of common entry, are kijt; no credits are one of common entry, are kipt; no credi
given: no hills diseounten; no bombls, nor evelt reodips; the rimsinctions are all fior rondy moner: mo tictithons capital is created; morisk or loss form bankruitey to inemr. A morelant, whose cupital

Thwat it a recout proull he might put thase enguged in his survier to death at pleisure; but hat he intertionel in illy wity with property ind in trose to a mospac, or ourared the law he drimhing wine in pulsio, he wonth haver rum ateat risk of excitiner discontent, mal, if he persisted in such comblet, of berine desheromel.
'The Tharks, sins an acrurate olsiserver ('orter's Ohsurvations an the 'lurks, i. 1161 , 12 mos , cal.), 'leam very early that if the prinee be of right divine, he fomms it on the Korm; that he is contstituted suel by the sidered coule u' laws, whidt, as a true believor, he has stulied, and knew, before his accession to the throne, it wondil ever be his daty to ubserve; and that, comsiequentiy, he is as moll lound and tiod bre all those laws as they themselves are. This is so explieitly and fully lain down in the Koran, that Mohammed thonght it uecessary to throw in rules of exception expressly for himself. Ilome, when the people are notorionsly agreieved; their property or that of the chureh repatedly violated; when the prince will riot in blool, or carry on an unsucecssfill war, they ippeal to lime, pronombe him an intilel, a trant, minst, incupable to govern ; and in consequence, depuse, imprisom, iml destros him.'

This dependence of the sultan on the Koran, thumes it limits, in some derree, his power to tyramise over his subjects, ofposes, at the same fiume, the most formiabible obstabes to his attempes to introduce any organic changes, how expedient or necessary socver. 'Ihe rights and sodial comdition of the people, living in the Turkish cmpire. who have not cmbraced the religion of the conquerors, is supposed to be determined by the Koran ; and hence the difficulty-without. as it were, overturning the very fomdations on which
the monarchy ressa-of cflecting any material changes in the situation of the depronident pornilation. 'I'he T'urlis cammet, miless they ubimiden their own religion, mmatramate with them, or raise them to the same level as themsolvens so that the mation mast always comsiat of tha distimet parts-the I'urhish, or moling portion; and the ragahs, or anhynged inlidels, when exim "!nit sullirmme, and enn never arrive at my sithation of pewer or comblament. The charather of the Molammuedan religion is, in trult, an all lout insuperable ohatacle for any thing like real reform. Thumeh loses intolarmat than most oftores, it is unare combemptumas. It rives itself no tronhbe almat the comversion of these whom it clowpisers. It inculeates on the mimes of its votaries the mest "xalter inlens of their own importanere and the must probimal comempt for 'Cliristian dogs' ame ot her mobelievers. 'There may, no dondo, be am imiation of limonem tadies, and an attempt to introlnere something like the priatioes ame instithtions that prevail in linropeans stafes; lout it is imporsible, so lonie an the refigion ol the l'romet mainaine its ascembaner, that they can have any comsilerable intluence. Submissioni to their puwer has savorol the mbelieving pumbation of the commIry from doath; but mothing short of their combrawing the religion of the combuerors cam eflemfably proted them from insult and contromptand consergemty, alsu, from extortion and tymany.

The grame seprenior is assistel in the grownment of the empire ly a tabinet-rommeil or diem, comsisting of the principal ministers of the empirn. and of the mufit or luan of the lnw. I'ntil wers rexently the sultans were in the hablit of delegsathen the sreater jurtion of their anthorite to the grame viziar (riziernerm), wheberame, an it were, rement of the rimpire, being at the hoinl of the rivil fovermment, and grateralissinn of the military and maval lorees. Bhat of late years the powers of this hish functinary have beeds very mish curtailent. The fimetions of the other ministers correspont with those of minister lor forregn affairs (reis eftrolf), of the interior, commerro, and finatace (tefterhar), and of a commanhler-intechiel (sertskier). and a grand almiral. The court of ('mbstantimple is gemerally loown in other bimtobean conintrios ly the title of the Soblime lorte: as devignation derived frosn the Bhbl IImmeyon, or principal outur gate of the serarion, whener the hatti selerifis, or imperial edicts, are ustally insilucd.

The sheik-ul-isham (mufti), or head of the clergy and chief interpreter of the Koran mal the mamonical laws, is a very important fume: lomary. He mominates to all the principal ollices in clmorel and law, mal takes precelence of every other sulped in the empire, even of the frimal vizier. On most great ocensions the sultan aplies to the sheik-nlisham for a fetura, or legal opinion, to aseortain whether his intended conrse of action be in inscordance with the Koran. But this is mot indispensable, and has very rarely been refiseel. latterly, too, the opinions of the mufti have bocome of less importance. The mufti is always chosen from the miemm, a borly comprising the clerey, with the interpreters and administraturs ul the lisw. But, though they all stury furether, the lawyers and julges are quite distinet from tho elergy, it being lelt to every young man brought ир in one of the collecres of the order to determine for himself, when he lase at tained a proper age anil aequired a sullicient stoek of learning, whother ho will become a priest, or a doetor of law, or a julfer: lut it is th the latter, or the lawyers, that the title of ulema is more peculiarly appropriated.

Throughout 'lurker; the ministers of relieno.

are all sulwrimate to the eivil athorities, who rerreine over them the power of dineresams. Ma-gi-tratios may sulpersede and romove chergymen who miseonduet themedves, or who are miegtal to the: preper disedarge of the duties of the ir othere. The mapistrates themedves may also, whenever they think proper, perfirm nil the saterdatal limetinis: and it is in virtue, of this preregutive, jonect to the: inthenere which they derive from ihar jumbinin! puwer and their richers, that they have so marked a pre-eminatice and at propulderant an anthority, over the ministers of public worship.
The members of the ulema constitute a surt of aristocracy. They pay no thase or pulitic imposte, amb, ly a peculiar privilene, their property is lereditary in their fanities, and is not liable to arhitrary contiscations. 'Their persons are saerel; their bhow call on no aceromit be whed; bur em they be logally pminhed in any way hat liy intprisument and exils. It is to be olserved. howare, that the power and dignity on the ulemas are not hereditary in individnals, inut in the order. Formerly they hedt their whices lier life, but, about hee dad of the 17h century, thry were made remevable at phasure, like inther public limutime arics. Thery are buw aponinted only for a sear. Finh individual, bowever, rujes all the privilerge of the urder, indepembentiy at his hodthus any oilice, we exercising muy buinhe cuphement. There have berol instandes if multis dedining to forey the commands of the grame seigenior, and of their rememstrating with him on the impropriety or illagality of his combuct ; though, as the sultain makes the multi, and can thepere and exile ham at phature, such combuct must meessarily le very rave exelp when some liomidalde conispracy is onf leost, and when the powers of the sultain are "misefumety circmaseribec. In the reigu if Mustapha, the people put in death the mufti for having, as they aldeged, misted the sultati. A Turkish historian. Demut trins ('antemir, tells a curicuas story of Sultan Murat IS. having combmanded a mintit to be poumbed in a marthe mortar, suying, that 'heats, whose digniy exempts them from the sword, murlit tole struck with the pethe? Sumang gencratiy, the intlaene of the muti and ulemat is matiomly opposed to all mensures of refirm, at least to such als might be suppesed to militate in any way against the peculiar doctrines and regulatious cenforeed by the Kiman.
fiesides the olema, there is a privileged order, himited to the descemdants of Mohammed leg his daughter Fiatimil. These are called vomra, or ameers, have symf pretixed to their bames, and are authorised to wear green turhans. Inasmurh, however, as they are very numerons, oomra, like brahmins in Inilia, are found in even the most alyjeet ranks oll life.
Distribution und Gocermment of Prowiners.Formerly the governments (pechititis or beyder-beypilss) were much larger than at present; and it not mitrequently happened that a pacha at the head of a large gevernment, having tilled up the subordinate situations with his ereatures, was able to cast afl his allegiane, and to dely the sultan. Hence it has been for a long time past the bulicy of the l'orte to dimminish the size of the pachatiks, and so to lessen the danger of insurne:lion on the part of the pachass. At present the territories of the Turkish empire in Eurple are divided into 14 eyolets, or govermeness, and sulduviled into dis samdiaks, or prowinces, and :iat kazas, or districts. in Turkey in Asia there are 18 eyalets, $7 s$ smalfaks, and sing kazas; and in Turkey in Arica, 3 eyalets, 17 sandjaks, and alj kizans.

other call ever secure the tranquillity of the comutry.

Instion-The Ottoman embire is governed by a conle of laws (imwltcka), foms. cel ull the preerpits of the Koran, the oral laws of Mohammod, his traditions, nsuges, and opininns, torgether will the sentelures and rlecisinns of the early caliphis, and the deetors of the first nges of lalaminath. this conde comprises a collection of laws relatilng tor religion, civil. erimimal, palitical, and military allairs; all cepully resperteil as bering thenerationi. canomial, and inimutable, thomgh obligatory in differnt ilegrees, acerorling to the anthority whices aceompanies each preepp. In sombe instaneses it imposes a duty of etermal obligation, as haing a trillserije of the bivine will revailed to the I'rophot: ill uthers it insites to an innitation ul the Traphert in his life mal combluct. And thomgh to slight the example be blamember it dores toot antail "um the delingurnt lho imputation or promaty of groilt; while the drexingos of doetors om questions hat have arisen sime the death of the I'rophet are al still intiorior anthority: Whan a matter necers that has bot herot lioresion or provided lor ly the early jromblators of the law, the sultan prommoces a decision: and lise anthority is nisolate in all mattors that do mot intorifere with the dendrines or prationl duties of religion, The multekn is, howerer, nlome cont-
 "1 the sultan (hatti solneritt), wh whinh a rompilation was manle by Solyman the Maratitieeme, under the mame of amom nammel, are monsideral is rmanations from haman anthoritys and, iss such, are sinseptible of modilieationt, or even abolifinh, remaining in force only diritur the pleasure uf the shlatu or his sumedeswors. 'The adet, or provinrial costoms, are allowed romsiderable inthente.

In all the distriets and towns of the empire. jumtior is administered by judges (comis), whor are of sliferent ranks, accorimer to the importatioe of the phace in which they are extablishat, each rali lneing assisted by a dejuty, or maib. Nothiner eme be more simple and experlitions than the firms of proceenliag in 'lurkinh courts. bach party represents his case, massistorl by combsellors, adsueates, or pheaders of any kimb, and supores his statemont be the prodnction of evidence. 'The doposition of two emmpetent witmeses is admitted as complete legal prool', in all case whatever.

The promptitude of Turkish justice has heen often praiked. In Thrkey wo ordimary lagal anthority can detain an lintried man in griann more than three days, and in criminal canses the excention of sellemers fullowed clase uph the alecision of the juldere: but neithor of these regulationss :pperes lo br advantageons; for, in the ane case, suthiciout time was mot allowed to propare cither a deffoce or an measation; and, in the wher, the immertiate execotion of the senterner prevented the power al apmal to a sumperior tribumal. and consequently touk awioy the mity momes "1" \&etting an mingst derision revorsed, inul, what is of more conseppemer, an minjust or iphomat judge exposed and degrated. Bhat, in these respects, a gerat change tor the better was collected by the nen penal rode, or rather by the new prineijples of penal law, issined in 18ín. The sultan therein ensares not to put to deah any inalivilual, whether publicly or privately, either by poisan (sueh is the terni usen) or othervise, mandes bue be comvieted and enalemand aceording to law. All empital cases are honctiorth to be tried in poblie, and tha sentence to be sulmitted to and approved by the sulatio. The pmixhments to be awarded to ecrtain erimes are, nlso, sipeetied.

Imprisumment, the galleys, and eapital pllivinment, ly hamging. drowning, lechembing, or
 of rriminals. Death lavil sumbimes to lin awarded for what we shomblemsider eompara-
 ing int the part of trademonen; though a butaher or baker comsioted of short weisht was more frepulatly sulperenel to the wot inapprepriato fenalty of bing mailed by the rar to fle dome ot his: shojp.

The prame vice of Thrlinh justien consmas in the corroption of tho fuldere anil the toleration of prerjury. A riel or powerlin! 'lurk has, in most. instaneres, little or bu dithioulty in ohtainins a

Colliee, however, stablishment. of the lower orders, we a great varidty the latter consist of liban or congulated is very early. It its cross-legreal on low table. In the on, hamlsome ivory ieks, are laid beside served singly, and
in rapid suceession, sometimes to the number of go or 30 ; the giests lielf themselves, sometimes with their spoons, and sometimes with their dingers. Inshed lamb, poabhed egers ard lemons, stowed fowls, pireons, pillaws, roasted meats, 0 whole lamb stulfed with rice and almonds, are favourite dishes: they are all highly seasoned with salt and spices, and sometimes with onions and frarlic. The dessert consists of sweetmeats, of which the 'Turks are exceelingly fond; with colfee, sherbet, fresh honey, grapes, and figs. lonring dinner, nothing is arunk lont water or lemomade. 'The supper is vary similat to the dinuer.

The month of Ramalan is observed as a fast; and trom dawn till sm-set, daring this month, the 'lurks neither eat nor smoke. But the moment the sum goes down, they eat a hearty meal; ant the practice is, for the rieher chassess to keep the fast by sleeping at this soason during the day, fund sitting np eating and drinking during the greater part of the night.

The national dress of the Turks is loose ann towing; that of the women, with the exception wi the turban, differing bat little from that of the men. 'The shape and colour of the turban serves to distinguish the different orders of the penple, and the functions of publie oflieers. Latterly, fowever, it has become fashionable to imitate the fress and manners of the other buronem nations ; thongh the former is inconvenient in conseruence of the bumerons ablutions, the performance of which is enjoined by the Koran.

All women of the upper classes, when they appear in the streets, have their finces carelinty veiled. And such is the privacy of the harem or women's apartments, that, unks on very rare oceasions, all males are excluded from them exeppt the master of the family. 'Lesphes proches $7^{\prime \prime}$ rens, tels que les fremes, hes onrhs, hes beanr-pires, $n$ 'y sont regus qu'ù certaines spmques de lormuce, čest-i-tlire, dems le's derux fêtes de beyram, et al lorousion dies noces, des comehes, at de la circomeision dess 'ufians.' ( 1 'Ohssmn, 'Tab, Gémirale, is. 318.) lolysamy is anthorised by the law of the ['ophet. thit is a privileare not often resorted to. If a man marry a woman of equal rank, the matriage of any other wife is frequently guarded against by the marriage contract. In cases of polygamy, the wives are nsmally either slaves or women of an inferior rank to the husband. The seelusion, or rather shavery of the women, powerfilly contributes to the mantenance of the worst prejudies of the Ottomans. But the practice is deeply rooted in Oriental habits, and will not lee easily chamed. It is a curions faet that, so late as 1 sill, a hatio s.herifl was issued forbidding women from fropuenting shops, from beins ont after sumset, and hom employing yomg or Christian coachmen.

There is a regular shavemarket at Comstantinople; but shaves in the bast, and expecinlly in Turkey, are far from being in the depressed condition we might suppose. 'The laws of Turkey protect the shave lrom ill-msage; and, in this respere, the constoms of the conntry are in complete, harmony with the laws. 'The most docile slave,' says Marshal Marmont, 'rejects with indighation any orter that is not personally given him by his master ; and he feels himself pliced immeasurably above the level of a free or hired servant. Dle is us a child of the honse; and it is not uni anal to see a Turk entertain so stroug a jredilection lor a slave he hats purchased, ans to predier him to his own son, He often overloads him with favomrs, gives him his contidence, and raises his position: tund, when the master is powerling, he opens to his slawe the path of homotar and of public employ-
ment. If we seek for ans confirmation of the truth of this assertion, let us lask aromid the saltan, and ohserve who are the most distinguished men within his empire. Khosrew lachat, the uld selaskier, the minn who has governed and ruled all things in Constantinople, was a slave from the Cancasus, purchased by a capudan pacha, Whose protection has raised him to the highest ofliees. I lalil l'acha, the som-in-law and most distinguished servant of the sultan, and to whom the brightest prospects are open, was a slave to the seraskier,'
The Turks are excellent horsemen, and throw the djerid or lance with the greatest dexterity and force; but, excepting this exereise, and that of wrestling, they indulge in no active exertion. Their delight is to recline on soft verdure anter the shate of trees, and to mase withont dixing their attention, lulled by the trickling of a fomintain or the murmuring of a rivalet, and inhaling throngh their pipe a gently inebriating vajonr. such pleasures, the highest which the rich can enjoy, are equally within the reach of the artis:un or the peasant. They never lance themselves, but enjoy public dances, the perlormers in which however, are reckoned infinmous.

Thrkish usages are, in truth, in almost all respects, the oplosite of those of the West Burupean nations. The elose and short dresses of the latter, eallenkite ${ }^{1}$ for promptitme of action, arpear in their eges to be wanting both in dignity and modesty. 'I'ley reverence the beard as the stombol of manhood and the token of inderentence. Int they practise the depilation of the borly from motives of cleanliness. In performing their devotions, or on entering a dwelling, they take oft their shoes. In inviting a person to appoach them, they use what with us is considered a repulsive motion of the hand. la writing they trace the lines from right to left. The master of a homse dues the honoura of the table by sominer himself tirst from the dish, he drinks withont noticins the company, and they wish him hoalth when he has tinished his dranght They lie down to sterp in their clothes. They affect a rrave and sedate exterior: their amusements are all of the tranguil kiad: they eonfonnd with folly the noisy expression of gaiety: their utterance is slow and deliberate; they even feel satisketion in silence: they attach the idea of majesty to slowness of motion: they pass in repose all the moments of life which are not ocenpied with serioms business: they retire early to rest, and they rise before the sum.

Lanyuage, Literature, and Erlurution, - The principal langiates spoken in buropean Turkey are, 2. The Torkish and Tarturic lamsuagers, sooken by tho Osmanlis, 'lartars, and Yaruks (desemennts ut the Tureman settlers in Macerlonia). The Turkish lamsuase is very much intormised with Arahie and l'ersian. It is expressive, solt, and musical, and easy to speak, but not easily written. Its construction is artiticial amd laboured, and its transpositions are more remote from the matural order of ideas than the Latin or German, 2. The Arabic. the written lamgnage, nsed at conrt ant in puble worship. B. The new Greek or Rometic, which consists of a great many alialects, and difiers from the Stellenic, or anciont Greek, still in some measure preserved among the inhabs, of the Epirotic mountains, and in the valleys of the Cassiodorns (Suli), though greatly intermixed with foreigu worls and pharises. i. The Sheromic, in several dialects, spoken by the Slavonians, Bosmiates, Croatians, aud Bulgariams. 5. 'l'he Armentim. 6. Wulla lion, derived mainly from the Latin, lut much intermixed with other
languages. 7. The Armautir, Skiptarim, or Almonith, is not, as was formerly smposed, a jartom formet of the admixture of a bumber of languages, but is a pecoliar and distinet languge, having regular grammatieal forms, and an essential character of its own. 8. The Jerrish: i.e. Hedren, intermixed with Spanish and ltalian words. © The Limgm Framer.

The Turkish characters are, with some sight difteronce, the same as the Arabic and Jersiam, but they have a variety of hamdwritimes. 'The ArabinKini, in later times Meseli (literally the characters used in transcribing), is omly nsed in copping the Korm, mul other sacred works. The Diwami is the handwriting used in business, letters, pulbie documents, julicial proceedings, diphomatic aftairs, ollicial orders, and pasports. It is written from the right to the left in an obligue direction. expecially at the conclusion; all the letters are juined to each other, and twisted torether, and the more they are so the more elegant is the writing eonsidered. The Dsheri is used in patents, diphmas, inseriptions on mosques, burial-plates, and wher public editices: its heanty consists in its ahliphe direction, upward and downward, and in the words being placed alternately above and helow each other. 'The Talic writing was originally therrowed from the Persians, and properly signities a tlying or ruming hand. It is mure pheasing to the cere than the wher hams, and is a the operimen of Oriental calligraphy. The Kirma, consisting of disjointed letters, is nsed in ledgers and reginters. The Sulus (i. e. redoly thick) serves fur tith-pages, devices, and inseripitons puon coins. Thereare momy more varicties of hamlwriting, which it is needless to specify. Instead of pens the 'Turks write with a reed (Calm, Chlumns), which is cut like a geen, hut without a slit. The voweds, which, as in Arabie ant l'ersian, ate blaced above and below the comsomats, are gencrally omitted in writing (the kintim exerphed), which rembera the reating didioult to an unpracised eve. There are mo marks of punctuation. As they are withont tables, they usallaly write mom thi left line or hamd, and instend of moving the hamd, they move the paper in the process of writing.
The iirst printing press introlaced into Turkey was established at Constimtinuple, in liati, bis lews, who were, buwever, proliohted from paiblishing any Arabic and Turkish works. About 150) sars alterwards, llrahime a lhugatian renegate, succeeded in establishing a Turhish gress: and it is wortley of remark, that in the hatti scheriff autherising its intruluetion, the sultan, Achmet III., felicitates limsid" that prowidene hat reserved so great a blessing to illustrate lis rigign, and to draw down mon his amgent persom the benedietions of his suljeets, and of all Mhssulmen, to the end of time. (Tenlerini, 1) Plla Letteratura Turchescia, 3 vols., Venezia. 1̈̈~7.)
Jown to 1742, 17 works in e3 volumes had jssucal from the press. from 17.12 matil 17an it was not employed at all, and only at intervals mutil 1783, when it was attached to the newly established school of enginecrs. In the bugiming of the present century it was transfored to simtari, and attached to the miliary harracks in that phace. Several of the sultans did mol to advance its elficiency and extend its ntility. 'Whe 'Turks, however, have a prejulice against printing, origimating partly in mon aprehension lest the Koran should be printed, which they would regard as the highest profination, amp partly in the opmesition of the vast numbers of seribes and copyists, which the general use of the press would throw out of employment, and who, in eonsefluene, take every opportunity to inllame the prejulices of their
fellow-subjects against it. Huf, despite these difficulties, the art has mule, and is contiming to make, progress.
So somare were the 'lurks eonverted to lslamism, than they began not anly to staty the Korim, lut also the works of the Aribians, their superiors in eivilisation. It is an error to suppose that the Koran disconrages learuing. On the comirary, the Massulnan doctors reckon among their anthentic traditions that 'the ink of the learned ind the blene of martyrs are of equal value in the sight of heaven;' and that the world subsists ly four principles, viz. 'the seience of the leanmid. the justice of prineses, the prayers of the faithlul. and the valour of the brave.' (see the earians:
 thèque Oriontale, $i$. be! ).) But malackily they give the mane of seibince to a sparions sort ol metaphysies, to grammar, amb mere verlal inquiries. Thongh their religion does not interelict, it is rally incompatible with anything like philosophical disconssion, or free investigation.

Law and theology are favourite studies. In the interpretation of the Korm and of the traditions, they follow the Arabian anthorities, and most Turkish divines occuly their time with hugraphies of the l'rophet, and evidences and reasonings in favour of the Mohammedan religim; these, with the inmmerable commentaries on the. Koran, form a mass of works which fill the ereater pirt of their libraries. Llistory, poetry, and metaphysies are not, however, nerflected. II ammer, in his claborater amb valuable llistory of the binpire, hiss referred to an immense number of Tourkish historians; and in his llistory of (Ottoman l'ontry (the tirst volume of which was published at l'ath in 18:3i) he grees short sketches of the lives of $: 212$ 'Turkish prets, with specimens of their worhs. fat he acknowlerlges at the same time that the firks have mo genins for original peotry, and that the whole of their poetry consist of translations from, and imitations of, the Arabic ami lersian puets, to whom they stand in notirly the same relation that the Romais poets did to the Greck.

Jurisprudence, a livourite pursuit of the 'Turhs. is studied in the works amb laws of the lemroed imams, sheiks, and sultans, and in the traditimal law of the Prophet (Stmona). 'Tlie most remarloable printed eollections of fotwas ( (lecisions) are by Mafti Dshemali, Abhubralman, ambl Mustaplat Kodosi: the work of the latter. phblished at Con-

by these establindments has been of eomparatively little value, In sehools the pupils have been baught to real and write the tirst clements of the 'lurkish language; the class-bows being the Koran, and some commentaries noon it. In the medresses, which are the cotleges or schooks of the ulemas, the pupits are instructed in Arabic and Persian, and learn to deevpher and write the different sorts of Turkish charasters: instruction in a sucies of philosophy, lugic, rhetorie, and murals fommed on the Koram; and these, with theology, 'lurkish law, and a few notions on history and gengraply, complete the course of stuly.

The ignorance of the higher classes of Turks in regard to matters which are elvewhere known to everyborly, is such as almost to stagser belicf. But the eridence of the faet is umplestionable. Hammer states that when it was regurted at Comstantineple, in Libe, that a Rassian tleet was athout to sail from the laltic for the Mediterranem, the divan treated the statement with contempt, leing satistied that there was no communication between them. And he farther states that, when he was interpreter at Comstantinghte in 1800 , and it was proposed to bring to the assistance of the I'orte an Anglo-fudian force from ladia by way of the Red sea, the gramd vizier denied the pussilility of its being done; and that Sir Sidncy Smith with great dillienty convinced lim, by the exhibition of charts and otherwise. that the lied hea was really emmected with the Indian Ocem. (Ilisture Ottomm, xri, els.) It is possible there may have heen a change for the hetter fince the time of Sir siduey smith, Amone late improvements may be noticed the fommation of a new miversity in 185; and the sulsempuent organisation of at pan of primatry aut secombary instruction. Sipecial schools have alas heen provided, where instruction is alliorded in the scimees necessary to the prosecution of the varims military and eivil emphoments. If must. However, bu" berne in mimb, that Turkinh selhools are attomded by bows only. In Thrkey edneation is now considered uecessary to a girl; so that hy far the preater mumer of women, knowing litife or mothing themselves, can commmicate nothing to thuir elhitheng. 'Laes femmes,' sitys M. Bhampui (Voyage en Bugarie, p. 2lis), 'dimement chargees de la jremiere ćlucation ales culants: et, nayant á lear apprendre, car elles ne sament rian, clles M隹sent, sans le voular, une barriore infranchissalde ans progres de la civilisation. Telle est la phaie la phas essentielle de ITslamisme. Tant que les femmes seront manames dans l'état de siguestratiom presque alsolu bit elles vivent, il sora impussible de faire fentrer an rave de lumire dams la nuit profonde qui emare l'empire intemana.'

Rucemuc and Erpentiture-The revenue of Thrkey was formerly divided into two portinns, the miri or public reveme, and the hazion private revenue of the sultan. But of late years ilis distinction has been abolished; some vexations petty imposts have, also, been sulpresect; and the collection of the ot tiers a gexul deal simplitied. The actual reveme of Turkey is chaidy derived from taxes of three denominations-the Verghi. the Aashr, and the Ronssummiat, The werghi, or poll-tax, is a tax on the whole pupulation, paid at a fixed rate for cach homse or latuily. The colbection is left to the heals of the diflerent communities, whose duty it is to distribute the tax betweon the rich and the poor accorling to theie means. The secomb tax, the atshr, or tithe is a tan of ten per cent. upon the produce of cultivation. The thirl tax, the romssomiat, is revenue derived from the sale of the customs,
stamps, the sole of amimals taxes on shops, bat kerins, butcheries, ant mills, and from the rent of lands belonging to the croswa.

Total Expenditure for Cot-ce'
1

## Leaving a Deficit of .et, it t, 5im

The exeess of expenditure over ineome, dating from the year lsion, has given rise to a rather large pullide deld. The liabilities of the Otoman empire are divided into two categories-the exterial or hyputhecated idelts, contracted, as their designation implies, abrome, and secured on special someres of reveme; and the intermal delits, known , rineipally mader the generic term of eonsolinds, issued at Comstantinople abone, and herefore dependent only on a compact between the l'orte and its subjects, and secured on the general credit and resources of the empire. The external debts, with the exception of one loan, which was contracted in 18.50, and graranted by England and France, bear an interest of 6 per cent.. with a simkiug fund of 1 and 2 per cent. The internal rebes, four the most part, bear an interest of tif jer cent, with a sinking fund of 2 per cent. In both cases the sinking finm is applied to the payment of obligations af par by ambald drawings.
The furcign debts of Turkey were as fullows, at the ent of 1501:-

| Years | Orizinal Amonit | Intere st | Sinking Yuut | Annual |
| :---: | :---: | :---: | :---: | :---: |
|  | ¢ |  |  | e |
| 1sit | 3,010,0009 | 6 per eent. 1 per eent. |  | $\because 110,6100$ |
| 15.0 | $5,14 \mathrm{H}, 10114$ | $t$ berent. I peremt. |  | 2-31,4164 |
| 1sis | 5,100,4100 | $6^{6}$ per wat. - per mont. |  | 40610189 |
| 1860 | 2,110.064) | tjer cent. 1 per cont. if per cent. 2 pre cent. |  | 1-11.109 |
| $1 \times 162$ | 8.61616 .1001 |  |  | 6.41,1410 |
| 18i3-1 | $8,1100,000$ | if yer eent. 2 preent. |  | (441, 11110 |
| Total | 1,100,009 |  |  | 2.2 Stanm |

The internal debt consists principally in treasury ohligations, called 'Ehamus' amil'serghis.' repayble, aceording to promise, at the ent of it and of to years.
Instorical Notiec-Othman, chicef of the Osuxian 'tartars, is generally accomed the fommer of the Turkisls empire. Thl lis suceeding his father in lewa, his dominions were enmaratively inemsiderable, being contined to the hordshin, of Signta, in Dithynia, and a small tract of "uljoining. territory. But the tallent of Othman, and the Imasery and zath of his followers, enabled him to ald qreatly to his paterual inheritance, and to beturath the whote of Bithyia and Capmanda to his som and stcceesser. Frum this perind the tille of 'Turkish comquest began to roll forwarl with a foree that enuld not be cheeked by the feedle resistance of the (irecks. In 1335, the (ttomans tirst obtained a footing in Eurpe. In 1Btis, Amurath, the grandson of Othman, instituted the jamizarics-the tirst, and for a lengithened periond the most powerful, numerons, and best-diseiplined standing irmy estahbished in modern times. The conguests of limour threatened to subvert the Turkioll power; but it som recoyered from the rule shocks it hat sustainel, and, in 1563, Mahumet 1I. entered Constantimple sword in haml, and established himself' on the throne of Constantine and Instinian. But the mulisturbed possession of all the comatrics from Monnt Amanns to the bambe did not satisty the restless and insatiable ambition of the Turks. Selim, the grand-
som of Mahomet II., added Syria and Egypt to the dominions of lis ancestors; and Solyman the Magniticent, the contemporary of the emperor Charles V., and the most aceomplished of all the Ottoman princes, congured the greater purt of Hungary, and in the East extended his sway to the Euphrates. At this periot, the Turkish enpire was, unguestionably, the most powerfinl in the word. 'It yon consider,'says the historian Knolles, who wrote above two centuries since, 'its begiming, its progress, and minterrupted suceess, there is nothing in the world more admirable and strange; if the greathess and lustre thereof, nothing more magniticent aud glorious; if the power and streugth thereof, mothing more drendfinl and dangerons; which, wondering at nothing lint the leanty of itself, and drmak with the pleasant wine of perpetual felieity, hohleth all the rest of the world in seorn.' Nor had this mighty power even then reached its greatest height. Solyman was sureceeded by other able prinees: and the Ottoman arms comtimed to mannan their aseendaucy over those of Clisistendom until, in llix:3, the lamons lohm solieski, king of loland, totally defeated the 'Tumish army rmployed in the siege of Viema. This event marked the arat of their deeline. For a while thev contimued to opmose the Austrims and Ihmgarians with donhtind fortme and varions success, bat the vietories of brinee Bugene gave a decisive sumeriority to the Christians.
The dexpotism of the sultams, and the vast extent of their power, comeributedfor a lengthenod period to acelerate the prouress of decline. For a while, however, it was otherwise. The peribus: cireumstances under which the Turks were originally placed, and the ditliculties and dangers with which they had to strugerle, whiged their chiefs to exert all their faculties. Having to rule over bold and fanatical suljects, to act as their generals in war and their legishaturs in peace, ther were eompelled to practise the military and civil virtues. Comsidering that, exeept in a single instame a periox of nine raigns, and of 26.1 years, is wempied from the elevation of Othman to that of Solyman, by a series of warlike and able prinees (tiblom, xii. 57 ), it must be alluwed that something more than chance, that the necessities of the times hand produced this long line of able monards. Xou somer, however, hat the tide of Thrkish eompuest been stomped by the tirm resistance of the llungarians and Germans on the one side, and of the Persians on the other, than the Ottoman monarelis logan rapilly toderenerate. The evil was aqgatrated by the regulation of Solymm the Magniticent, who, in order to hinder the rebellions and internal divisions that had sometimes occorred, fistablished it as a principhe, which has since been strictly adhered to, that nome of the sultan's soms shoud be appointed to the eommand of armies or the government of provinces. 'This regulation had it fital eflect: instead of being edneaterl, as firmerly, in the comncil or the tiekd, the heirs of royalty and of aluost omapotent power have since been brought up in the slothful luxury of the palace. Shat up in seraghos, without experience of public affiars, depraved by the thattery of women and of slaves, their intellects and the ir haibits were enfeebled and dehased; and their gorverument, when they suceseden to the throne, maturally hecame corrupt and worthless.
The vast extension of the 'lurkish empire was nnother cause of its decline. It multiplied the comemies, not the subjects, of the state. 'Tomamate the varions and discordant classes of people comprived within its widely-extemded limits with the same spirit, and give them one common interest,
would have required the adoption of a liberal and enlarged system of policy ; and to act in this mamer was utterly repugiant to the maxims of Otteman hegislators. The inhabs, of the conquered provinces who refised to embrate the roligion of the l'rophet were brauded with the title of Infidels. They existed only on sullerance; mal though their rights were legally definut, their prond and fanatical masters seldom hesitatedabont trampling them under foot, and sulbjecting then to every species of insult and ill-treatment. It has heel comtended, indeed, and it may, perhans, le true, that the tyrmay to which thie nom-N.Nhammedan portion of the pup, lats been suly jest has, by subluing their energies and debilitating their minds to the level of shavery, tented to secure the tranquillity of the empire. But whether this be so or iot, it, at all events, ellsured its dequpulation, impoverishment, and degradation. Luter this miserable goverumem, palaces were changed into entages, cities into villuges, and fremen into slaves. It mast mot he emposed that the abuses of which this wretched state of things was the result, were not perecived hy the more intelligent l'urks. sor early as lasum it was proposed to reform the tiscal policy of the empire, and to interest the rayalls in the pulbic prosproity, by commuting the varions taxes haid upon them, and their contributions of compmesery latuon and hurses, for a single tax which shomith be perpetual and invariable. But the opposition to relorm was then too pawerfil to be arereme; and abluses of all sorts continued to gain gromend down to the accession of sultan Mahmoul 11 . in 1808. It then became evident to every ome that, without some radical changes, the dhiwnfal of the empire conld not be long avertel. The sultam had sagracity to phan and vigour to carry them into effect. It would be too much to say that the poliey which he and his suceessons fo the present day; wha all, more or less, followed in his footstepr, carried out, was in all cases the wisest or hest that might have been adopted. But emsidering the diffienlties with whieh the latter rulers of the empire have had to contend, they are entitted to the highest praise. And yet it is very doubtful whether the dissolution of the empire can be prevented, With the assistamee of lur allies, the late content with linssia was hrought to a successful termination. Most likels, however, this has been hut a short respite. The implacable animosities of the races by whieh the enuntry is oecminied, and the momerical inferiority of the Turks, are circmustances that cau hardly fial, sumer or hater, to terminate their dominion.

TLANHOL'T, a town of Delgium, prov. Antw.opp calk. arromb, in a wide healthy distr., 25 m . 1:NL., Antwerl. lop, 14,979 in 1860. The town is well built, and has manulactures of cuthery, linen cloths, hace, carpets, aud oil, with bleaching and dyeing establishments, tameries, brick and tile factorics.

TUY (an. Tulde al Fines), a foritied town of Spain, in Gallicia, prov. Pontevedra, on the Minho, which separates it from the Portuguse territory,
 The town stands on a height surromeded by several small rivnlets, and has always been a firtress of sume strength, and a key of Spain on this sude. It is regularly had out, and las well paved and clem streite, several squares and bridges, a cathedral, several hopitals nad convents, a seminary, edollesre, and 2 barracks. Its primeipad mambacture is of table linen, in which its imbabitants trade with Portugal; but it akso produres hats, leather, ant lipheurs. Its climate is rendered mulealthy by atjacent marshacs.

TVER, a move of Eintonman Rassia, between the fith and 5!ith degs. of N. lat., and the 32 I and Seth of bi , long.; having N. Novgoron, le, darosilal and Vladimir, S. Moscow and Smolenski, and W. I'skof. Area estimated at $2(t, 0 t) \mathrm{s}(\mathrm{f}, \mathrm{m}$, Popl, $1,419,127$ in 18.58 . The surface of this govermment is generally more elevated than that of other parts of Europeran Russia; and several large rivers, an the Wolga, Tvertza, Mologa, and Mednevitza, rise within its limits. In its W. part are several lakes. The Wolga has its somree in the Lake of Selighur, and afterwards traverses the government in nearly its whole length from W. tul li. The elimate is severe, and the soil is but indifferently fertile. The harvests are precarions, and searcely ever produce more than sutherient for home consumption. A goorl deal of hemp and thas, with beans, are grown, but few kinds of froit suceced. The forests are extensive, partiendarly in the N., and abont 319,000 deciatines of forestland lolong to the erown. Mambinetmes of little consefuchee, but inereasing: those of dyeing materials and spirituons liguors are the principal; and there are others of bricks, slass ware, ripes, leather, and woullen eloths. 'This government is, however, distmgnished for its commercial activity, and the capital of its merehants has bern estimated at 17 million ronbles. The trade centres mostly in 'rear, the cap., and is facilitated by the Vischnij-Volotschok eanal, which establishles a water commanication between the Baltic and Caspian Seas. The district of the government traversed by this canal is inhabited by a tribe of Carelians, and in the cap. is a (ierman eolony; but the pop. is mostly liussian, of the Greck chureh. The government is divided into twelve districts; elicie towns, TVer, the cap., Torshok, lijef, and Bejetsk.

TVER, a town of European linssia, cap, of the above gove, on the Wolgi, where it is joined by the Tvertan and Tmaka, and ant the rallway between Moseow and l'etershurg; 90 m . NW. the former. Pup. 25,260 in $185 \%$. In resject of the regularity of its streets and buidings, Tver ramks next to the two linssian eapitals, but wants their bustle and animation. It is divided by the several rivers into the town proper, suburbs, and citadel. The last, surmumbel by a rampart of earth. comprises the governor's resjdenee, an imperial palace, the cathedral, and semimary; and its mmerons towers and cupolas give it, at a distance, an imposing ppearame. The eat ledral is a square editice, with a lotity spire, summonted by a gilt copper dome, and surrounded, lower down, by four similar domes. The seminary, fonnded in $17 e^{-}$, for the instruction of $\bar{i} 00$ pupils in the seiences and ancient languages, is established in a combent built in the $1: 3$ th century. There are mumerous charches, goverument haihlings, barracks, a theatre, and several public promenabes, planted with trees. 'Tver whes its present ragnarity and beanty to a tire which almost tatally derirned it in figa; alter which the bimuress Catherine ordered it to be rebuitt on a miliorm plan. Some honses are of stone, but the greater part are of wool, and the paving is mostly of the same material.
Tver is a place of considerable trate, a large part of its pop. being merehants, or engaged in the mavigation of the Wolga. It is an entrepôt for corn from the s. destined for l'etersbuts, mil for goods conveyed overland to and from liegn. It is of considerable antiquity, having been the cap. ol a principality as early as the middle of the 13th century. It has frequently sutfered from the phague, and been taken by buth the Tartars and Pules, but it has remained, with little inter-
ruption, attached to the dominions of litussia since $1.4!10$.

TWEED, one of the prineipal rivers of Seotland, forming, in the lower part of its conres, the boundary between Seothand and Enghand, las its sourees oin the lis, side of Errickstane llill, about if m . from Moffat. Its course is lirst Nli, to Peebles; then L, with a little inelination to the s. to Melrose; it uext passes Coldstromm and Kelso; and, pursuinge a north-easterly direction, lalls into the sea at Berwick. The descent from the source of tha: Tweed to Peebles is $1,000 \mathrm{ft}$, and thence to berwick abont 500 ft , more. The waters of the Twe are particularly pure and limpinl. The first part of its comrse is through a lime pastoral commers esuceially colebrated in senttinh song, and the later thromen one that is rith and well eultivalded. Ineludiner windings, its lensth is reckuned at rather nore than 100 m . Notwithstanding it sonvers is large hooly of water to the sen, it is mot navigialise for any considerable distance. 'The salmon tisheries on the 'lwed are of very considerable valuo and importance, being, in this respect, seend mily to those of the Tiny, The tish is almost all coniveyed, packed in ice, to London.

Among its prineipal tributaries is the Etterick, which, thowing from the S. parts of Selkirkshire, joins it at the Eildon Hills, A little lower down it reeeives the (iala, from Mid Lothian, and the Leader from the borders of East Lothian. The 'reviot rises in lioxlmirghshire, on the contines of Dumfriesshire, and flowing NE:, and recevins several tributaries, it falls into the Tweed at Kelso. The 'Till rises in Northumberlaml, mat logram, and, pursuing a morth-westerly course, falls into the Tweed at lilmonth. Near lerwiek the Tweed receives the Adker, a consideratile river, formed by the junction of the Bhackadder and Whitender, having their somrees in the Lammermoor llills. The basin of the 'Iweed is estimated at about 1,870 sq. m.

TWENTY-VOUR IERGUNNAIS, a district of British India, presid. and prov. Bengal, hetwern lat. $21^{\circ} 30^{\prime}$ and $23^{\circ}$ N., and long. $88^{\circ}$ anll $y^{\circ} 0^{\circ}$ F., having N. Nindea, E. Jessore, W. the districts of Calcutta, llooghy, and Midnapore, from which it is divided by the Hooghly river, and S. the biay of Bengral. Area, $3, t 90 \mathrm{st}, \mathrm{m}$. I'op. estim. at 600,000 . Its surface is a dead that, intersected by arms of the Ganges, and comprising many extensive jecls or marshes, with a considerable portion of the jungly tract known as the sunderbunds. It has long been progressively increasing in produetiveness and importince; but, like the adjacent district of Backergunge, has been moturims fier the prevalence of dacoity or gang-robbery. The llindoos are reckoned in proportion to the Mohammedans as 3 to 1.

IWHCKENJAM, a village and par. of linsland, co. Diddlesex, huml. Isleworth, on the Thames, 10 m . W. by S . Wondon, anil 2 m . Sill. Lichmond, on the London and South Western railway. Pop, of par, 8,071 in $1 \times 61$. Area of par. 2.ito acres. 'I'lie village consists of a strect nearly parallel to the river, and of a number of detacheal villas. It is famons for laving been the tiavourite residence of the most larmonions and eorrect of linglish puets, where he composed many. of his noblest works, and where he expired oul lice
 levelled witlo the gromm, and the structure now lives only in his verses: cven his grotto,

Where, nobly-pensive, St. John sate and thonment: Where Britiwh sighs from dying Wyutham stole, And the bright thane was shat through Marchmont's soul,'
has been sumered to go to rum.

## TYRE

The churdh, in brick building, erected in 171t, contains the remains of the gret ami of his parents. 1'ope limedf raised a momment to the memory of the latter; mud a monument to homself was raiseel, some yeurs after his death, ly his friend anl literary legrate, Bishop Wharmuton. It is of grey marble, in the pramidal form, and has a Lusit or mediallion of the pret.

Amons the existing villas in the vicinity of Twickenham, the mont edeldrated is that of Strawberry Itill, long the residence of Ilarace Wapmese, by whom it was huilt, in a sort of trmumery Gothic style, and tilled with a singular collection of rare, theurg mostly trifting, articles. A national sehool, for the chlueation of children of both sexes, was established in the villige in 1 som.

TYXE, in important river in the N, of Enrland. is formed hy the junction of two very ennsilerable stremms, the $X$. muls. Thene. The latter rises on the borders of Durhan and Comberland, near Cross ledl. ane of the highast momatains in the great central range: anil the former in the noordands of Sorthminerdand, close to the S'outish berder. 'They mite a short way from Ilexham. After their junetion. We river takes an efsterly direction ; ind dividing Northmberlmud fom ©urham, and pasing Newenstle, tallo intu the sea at 'lymmoth, having the towns of N . amen Shichls close to its embuchare.

The The is mavieatle for ships of trom 300 to d(m) toms Durden, as far as Neweasle, and is havigated a fow miles farther by keds, a perndiar deseription of erall employed to carry coal to the cond ships. The banks of the Tyme at Newenstle are steph and the gromen rises in etch side to a considerable heght, Hown to a comparations late perion the salmon tisheries in this meer were of considerable value and importance. Ia latio. no fewer them eto tish were caught at one draught at Sewhern; and, in 17.7, 2... were landed at une draught at the low lights, near the month of the river, The tisheries have however, tor years pant.
 han heom varionsly aceromed for, but which pertap is must properly to to aseribed to the lodse construted at Bewell to impore the narigation of the river, preventing the asent of the tish in the brecting semsen to the shallow strems in the upper parts of the river. For an accome of the tratle and shipping of this river the reader is referred to the articles Newosmas, Soutu Simains, and Tranamem.
TYNEMOLTH and NOLTM SHLELDS, a parl. Lor., ev. Northmberl:mul. on the N. hank in the Tyne, at its month in the (iermm Ocean. im-
 easild, and 283 m . N. Lundom ly Great Norbern railway. 1'op, of parl. bor, at, $i=21$, and of townshipis 16,560 in 1 xiti. The piarl. Dore consists of the townships of Tymemonth, N. ihiells, Chirton, 1'restm, ind Cull rconts. The township of Tymemonth ocenpies its most E. angle, and at its Sil? extremity is the town of N. shiclds. The tuwnship of Chirtom streteles alung the whole SiW. sile of the par. adjoining N. Shichls, Preton allouns hoth that town and the township of Tymemoutl) ; it is of amall extent, but contains some excellent houses, and a large pop. for its small area, ats compared with sume of the other townshins. At the N. extremity of the township of Tymemouth is that of C'ullereoans, which comtains she fishing town of that mame. 'This township comprises only alout of of acres of lamb, the Mreater part of which is covered with buildings. Tynemonth has been much culatered of late years; it is in peneral wed buitt, and, foring the summer season, is much reserted to for bathing. Its mosi
remarkable edifice is the enstle, orizinally a priory crecten in the llth century upen a previons funtidation; it stands on a lofty mad rowiky peninsulia, mat is approached from the W. by a gateway thanked ly towers, the whole being inelosed ber it wall which rums for the most part alonig the eibe of the cliff, ut the NE. mugle of which is a lighthomse. (ireat care is taken ly fovermment topresurve the remains of the eilitice, which forms a sum-mark for ships apponding the harlour or navigating the const. The ruins of the priory within consist of a turret, now serving as a harrack and other buidhing converted into military magazines. These exhiont vary tine sperimens of monmastic romans, mul the parts now existing, which heloused to the E . emb, and some other portions of the clureh, are of remarkably bemutiful desigh. The style is early lenglish, with comsiderable enrichmint, and thomgh the stone is much derayed, it slows great delicacy of excention. A mimumeat has herou bected in homor of Lord Collinewood. This churd was provelial till $16 \frac{1}{2}$, when a new dhurch was built near N. Shiches, The living of Tymmonth, a vicarape, worth 2961 a year, is in the gilt of the Duke of Northmbertand, at whese cost several other churehes have been erecten.
North Shielde has inereased rapidly of hate yors in size and inportaner, aloug with the increaning tralle of the Tyue. It has many grool streets athl spuares a good market-place, gats and water works, a public bibrary, seicntitic institution, neat theare. Lancastrime ambether sehools, a sailors relided socicty: mecting-homes for most of the principal disenting sects, and a werky newspler. The Aastor Mariners' Aylmu, the site for which was
 stone edilice built on the road leading from North Shields to Tymemouth. New decks, called the Northmberland Doeks, is acres in extedt, athl with acemmothation tior 100 sail. have heren mate
 site the Jarrow Dock. T'ummoth hat a pier. of molid masemry, haree-quartirs of a mile in lenght, which, with :mother pier on the somth side of the river, forms a hatour of rechige. There is a har at the river's month, hat at high water it may be crossed by vessels of am tons, and those of ato toms lies close to the quins.

The town is included in the port of Neweatle. but there beclong to it expecially about :350 shipw. and some business is done in slip-building. The: ratrance to the 'Tyue is idefemed by Cliflomis Fort, on its NE: bank, near which is the low lightlomse, the high lighthouse being on the hill opy"site Dockwray Square. The shipping of coal is the staple business of the port.
'Tlue town is under the jurisdiction of the $\%$. maristrates, It is lighted and wateded by commissioners under a local act. The erection of a hridge over the river was formerly contemplated; but hate project has been ahandoned, and the commbinisation between the towns af North and Sunth Shichels is maintained ly mems of a steme firry. 'The lieform Aet comberred ou the lers. if Tyuemonth the privilate of returming 1 mm , to the 11. of (C. Registered electurs, 1,185 in 1stia.

TYRLE (Tvosos, the principal city of lharnian, and the most celebrated fimprimu of the andiont work, on the sbe. const of the Mediterramain, where the inconsiderable town of 'Isour, with 1,501 imhabs., now stands, lat. $3: 35^{\circ} \overline{1}^{\prime}$ N., lomus. $35^{\circ} 14^{\prime} 3 \overline{5}^{\prime \prime} \mathrm{E}$. 'The harbour of the modern town is clowed up, and the site represents nought but a dead memorial of the commeree, arts and havigation of the Tyrians, the most distinguished mercantile people of antipuity.

Tyre was fommed hy a colony from Silon, the Arabia and India have always heron himhly exmont ancient of the l'hernician cities. 'lhe alate al this event is not certanly known, bint harcher sulpuses it to have been l, 600 yours before the Christitu arn. (Chromologio d'llirorlote, eap. ii. pr. 1:il.) It is singular that while llomer menthinss Sidon, he takes no notice of 'Tyre, whose fory speedily eclipsed that of the mother city : but this is no conclusive prowid that the latter was mot then a considerable emporimm. The prophets Isaiah, Juremiah, and lizekiol, who thourished from 760 to tibl years before Clirist, represent Tyre as a city of narivalled wealth, whase 'merehants ware princes, and her tratlickers the honourable of the earth.' Origimally, the city was milt on the main land; but having been besioged for a lempthened period by the Bahylonian monareh Nelnehadnezzar, the inhabitants eonvered themselves and their goods to an iskime at a little distance, where a new city was finmaled, which engoyd in increasised derree of colebrity and commoreial prosperity, The ald eity was, on that accomet, entitled Palietyre, and the other simply Tym. The new city continued to llomish, (xtembing its colonies and its commeree on all siles, till it was attacked by Alexamder the fireat. 'The resistane made by the Tyrians to that conqueror showed that they hat not berin enervated by luxury, and that their matial virthes were mowise interior to their eommereial skill and enterprise. The wrorthrow of the l'ersian compire was a less dillicult task than the eapture of this single city, which wis not effected till a momad hatel been catrind from the matin land to the islathe on which is was built. 'I'se victor had not mamanimity to treat the vanguished as their heruie combluct deservel. In despite. however, of the ernelties inthictal on the city, she rose akain to comsidemala eminence. bit the lommation of Alexmbrial, by diverting the eommerce that had furmerly entered at 'Tyre moto a new chamel, gave her an irropariolike how: and she grabally deremed till, [onsistemtly with the demmetiation of the prophet, her palaues hat been levelled with the hast. and she has begome 'a place for the spreadint of nets in the midst of the seat.

Commerce and Colonies of Tyre.-I'lumicia was one of the smallest comatries of antiquity. It menpind that part of the syrian enast which strateles from Aradus (the modern Romand) on the N., to a little below 'ryre on the S., a distame al about jol leagnes, Its breadth was much less embsilerathle, heing for the most part bounded by Momat Libamas to the E., and Monnt Carmel on the $S$, 'Ihe surface of this narrow tract was gemerally rusped and monntainous; and the soil of the valleys, though mollerately fortile, wis not atherd sullicient supplies of food to leed the pop, Libames and its deperment ridges were, however, coverel with timber suitable for ship-buihling; amd, hesides Tyre and sidon, Phamicia possessed the ports of 'Iripoli, Byblos, amb bervtus. In this situation, ocenpeing a combtry mable to supply them with suflicient quantities of corn, hemmed in by momotains, and by powertal and warlike neghbours, on the one hamb, and having, on the other, the wide expanse of the Nediternacan, stmbled with islands, and surrombled by fortile countries, to invite the enterprise of her cirizens, they wore naturally led to chage in maritime amil commereial didventures; and theame the boblest and most experienced maniners, and the greatest discoveres, of ancient times.
lirom the remotest antiguity, a pomsiderable trale seems to have been carriad on between the easern and western worlds. 'The shices, druess, frecious stones, and other valuable products of
stecmed in liarope, and have exchanged for the gold amd silver, the tin ame wines of the later At the lirst dawn of anthentic history, we lind Phonicia the principal cemire of this commerese. Ter inhabs, are designated in the early samed writings by the mane of Canamites, -a form which, in the lamuage of the lisast, memes merchants. The productsof Arabia, lombia, imbl I'resial were orisimally eonveyed to her be eompanies of travelling merchants, or caravams; which serom to have bred constituted in the same way, and fo have pertormed exactly the same part in the commere of the East, in the days of , Jacol, that. they do at present. (Gen, xxxvii. 20.) At it later perionl, however, in the reigus of bivid amil Solomon, the Pluencioms, having formed an alliance with the llehrews, acepuired the ports of lilath and Exiomseber, at the NLi extremity of the lad Sca. Ilore they litted ont tleets, which truldod with the ports on that sea, and probably with thase of Sumbern Arabia, the W. emast of India, and Ethiopia. 'The ships are sad to have visited Ophir; and a great deal of erudition has leren expended in attempting to determine the exact situation of that emporimm of the comery. But most historiams agree with lleerem, that it wiss bot the mame of any particular place, but that it was a sort of general designation given to the enasts of' Arabia, ludia, and Xírica, hordering on thenhdian Ocena; somewhat in the same way as the terms East and West holies are mow lised. ( Wee the chapter on the Nivistation of the Commeree of the l'homicians, in the transation of IIceren's work.)

The distance f the Red Sea from 'Tyre beinge very considera' e, the converance of gomels from the one to the ofler by land mast have been tedions ami expensive. 'lo lessen this ineonvenieme, the fyrians, shartly alter they got
 Rhinocularit, the pert in the Mediterrancinn nearesi to the Real sear. 'The promets ol' Iraliais, ladiat, de., being earied thither by the most eompondinms routs, wore then put on boarl shife. ithe converal by a bricf and easy vorage to 'lyre. lixedpt the transit by ligyit, this was the shomest ant most direct, and for that reasom, no domb, the cheapest, chamel by which the commerce betwern sonthern diat and liurope enotal then tre conducted. Bat it is not bolieved that the Plannicians posessed any permanent limting on the Led Sea after the death of Sulomon. The want of it does mot, howerer, seem to have semsibly aftected their trade; and Tyre contimed, till the Commlation of Alexandria, to be the graml emporium for bastern prolucts, with which it was suphlied by caravans from Arabia, the hottom of the P'ersian Gulf, and from Babylon, by way of 1almyra.

The commerce of the I'homicians with the commries bordering on the Mediterrancan wats still more extensive and valuable. At an carly previnl ther established settlements in Cyprus amil lilouks. The liomer was a very valuable acpuisition, from its proximity, the number of its purts, its lertility, and the viriety of its vencetable amil mineral probluctions. IVaving passed sucerssively into Greere, Italy, and Sardinia, they proceded to explore the southern shores of France and Shatin, and the northerm shores of Atrica. They altorwards adventured upon the Athatic, anil were the tirst people whose thag was displayed bevonal the pillars of Iterenles.

Of the colomies of 'Tyre, Gules, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Crois to have originally

## 'TVRE:

heen distinginhed by the mame of Tartenfan or 'Thrshish, mentioncd' in the stared writingo. (I) pletat et da Surt ales Anciennes Colonides, pe 1l.) Hereren, on the other hand, contemdes, as in the ense of Ophir, that by Tarshish is to be interstout the whole southerri part of Spain, which was carly oecupied mud settled by lha dician colonists. (See mase Ilnet, Commere des Anciens, cas, 8 , At all evolits, however, it is certaill that Cadiz early became the centre of a commerce that extembed all alomig the consts of Europe an far as Hritain, and perhnis the Bnltic. I'lere enn be no donbt that by the Cassiterides, or 'lin Islames,
 Scilly lalimels and cornwall. 'The matipation al the Ilamidians, probably, alsa extembed a considerable wat along the western const of Xiriea; of this, however, modetails have reathed us.

Bint of all the colonies limaded ly 'Pre, Carthage has been hy liar the most celobrated. It was at tirst ouly a simple linetory, but was materially increased hy the arrival of a large buly of colomists, forced ly dissumions at lome to lave their mative lame about ss:; years 13. C. (St. ('rois, p. 20.) Imbued with the enterprisiber merembtile spirit of their ancestors, the Carthaginians rose in no very long perion to the highast eminene as a maval ind commereial state. The settlements founded by the I'heniciaths in drien, -pain, Sicily, de. \&ralually fell into their hands; and. after the destruction of 'Sy Carthare engrossed a large share of the commeree of which it had previonsly been the econtre. 'Ihe histury, commeree, und institutions al Carthase, and the mufortubes by which she was werwhelmed, have, hwwever, been illrealy moticed in this work (sec Camramote) ; and we shall omly, therefore, olserve, that eommeree, instemb or being, as some shallow theorists have imatrine the catuse of her teceline, was the real soture of her power and proatuces; the means by which she was mabled tor ware a lemerthened, doubtful, and despurate contest with liome herself for the empire of the workl.

The commerce and mavigation of 'lyte prolably
 13. C. St that period the Tyrians were the fiteors and merchants al the evivilised word, and they enjoyed an undisputed pre-eninence in maritime aftiars. 'The prophet lizekiel (chap. xsuii.) has described in magnificent terns the glory of 'I'yre, and hats enumerated several of the most valuable prombetions iwimb in loer markets, and the evomories whence they wore hought. The tir trees of beruir (llemmon), the redars of l.chamon, the oaks of hashan (the country to the E .. of tialilee), the jvory ol the ludies, the tine linen of bery it, and the jurple atul hyaumb of the isles of bilishath (l'enghnesus), are sureitied among the artieles nerel for her ships. The inhabitants of siden, Arval (Aradus), and lichel (liyhos) servelher as mariners and carpenters. (iold, silver, lead. tin, iron, and vessels of brass; slaces, horses, mules, sheep, and goats; je lis, precions stomes, and coral; wheat, balm, loury, oil, spiece, and gums; wine, wool, and silk; are mentioned as being broment iato the port of Tyre by veat or to its markets hy land, from Syria, Aribia, Dimascus. Greece, Tarshish, and other phaces, the exact site of which it is dillicult to determine. There is, in Inr. Vincent's Commeree and Navigation of the Ancients in the Imdian Ocenn (vol, ii, 1月). 6e:l$\mathbf{6 i z} 2$ ), an claborate and (like the other parts of that work) prolix commentary on this chapter of lizeliel, in which most of the names of the things and paces mentioned are siti-factorily explained. (See also lleercu on the l'houicians, cap. iv.)

Such. aceording to the inspiryl writer, was 'Tyre, the ' "nicell of the waters,' lafore whe wis
 alrealy remarked, the result of that siege dial mat alleet her trade, which was as suceresfilly and alvantareonsly carriod on from the new rity na from the ohd. luasmach, however, us Cirtlitue soon alter legan to rival her as a maritime mal mereantile sate, this misy, perhans, be comsiderma as the kera of her greatest celebrity, It would not he ensy to owornte the bencticial indurnese of that extenisive commerce fro:n which the Ihanirians derived suelt immense wealdh, It inspirel the prople with whom they trinded with now wants and desires, it the same time that it wase them the means of gratilying them. It everywhere quve fresh life to industry, and a new mad guwerfil stimulas to invention. The rulde, murivilizerl inhals. of Greace, Spain, and Northern Dirida, neguired sume kinowhenge of the arts and sciencers prationd be the lominicians: and the alvantages of whisli they were fombl to be productive semureal their gradual thongh slow advallurement.

Nor were the lhemicians eelchrated omly fir their wealdh, thal the extcut of their commerese amb navigation. Their fame, and their risht ta be classed amongst thase who have conferrel the greateat benclits on mamind, rest on a still more mansathable fommation. Antiquity is mamimans in nerihing to them the invention and pration of all thesearts, seionecs, a mal coutrivanoes that lieflitate the prosecotion of commercial mallerakines. Thes are helal to be the inventors of trithandio: weifhts mul metsimes, of moner, of the art mi kerping aceonits, and, in short, of everything that helonges to the business of a combing-homse. I luy were, also, fimmens fior the invention of ship-hniliing and navigation; for the dineovery of shass: for their mannlactures of tine limen and tarestry: for their skill in architecture, and in the art if working metals and ivory; and, still more, fir the incomparable splenenar mal beanty ol their purphe dye. (see the learned work of the l'resident do Guguet, Sur l'origine des Laix, Eing. trans.. vol. i. p. e!ti, and vol. ii. phe 4,i-lif! ; ser allon the chipter of Heren on the Mammetures and Lamel Cimmeree of the Pherniciats.)
lint the invention and tissemination of these highly uscful arts form but a part of what the" people wi burope we to the Pheriniams. It is not pessible to sivy in what dexree the religion of the Cirecks was burruwed from theirs; hut that it was, to a prefty large extent, serms abumbantly certain. Ihercules, muler the mame of Melarthes. was the tutelar deity of 'lyre; ant his experditions abong the shores of the Meditermenan, and to the wraits eombertins it with the weam, serm to be merely a pretical representation of the proyress of the Plmencian nanisators, who int roduced arts amel civilisation, and cetablished the worship' of Ilerondes, wherever they went. The temple erected in honour of the frod at (iades was lons regareled with peenliar vencration.

The Grecks were, however, indebted to the lhamicians, not merrly fur the rudiments if civilisation, but for the great instrment ol its future progress-the wift of letters. No fact in ancient history is lefter established than that a Knowledge of alphathetie wrating was tirst carrial to (ircece ly lhenician adventurers; and it may: be safely aflimed, that this was the preatest hoom aty people ever recejved it the hambol another.

Ielore quitting this subject, we may brietiy alvert to 1 he statement of Ilerolotus with respert to the circummavigation of Alrica by Phonician sailors. The venerable father of history mentions.

 are musily calcarems. Bemating ther thtal ex-

 mombains, glaciers, and shaw-tracis. Tha pro duets and hinsiandry in the s. are muds the same as in the N. parts if Lambarly. In ather part: of the Tyrat, maize, what, and buke are grown in the bothons, and sienty crepis of lanckweat, rye and nats on the montian sides; but the prowdine of corn is insulicicat fir the comamption. the 'Tyrol is in filet, like the ereater burt of Swizerland a pastoral comatre: the chicl' wealth of its inhals, comsisting in their catle and other live stonck. The cattle are kept in the valleys thromghout the winter, hut :are in spring driven to the ulands. proweding higher ind higher as the luwer meadows heeme exhansted mil the ulper divenced in show, and returning again in september. The maculows yielding the thickest grass are set aside for a hay crop. The bas, when cut, is cardinly dried uider cover. and stored up in sheds; but it is guite insuthicint fir the winter sulply if the calthe, mayy of which have to be fed oin maize stalks and and leaves. In the circle of Raveredn, and other parts of the comentry aljoimug Italy, a \&oul many silk-worms are raterl; and the amual average probluce of silk is esti-
 birks, thugh apparently an insignificant lranch of industry, is extensively carricil on at Jmst, amal other whees in the valicy of the han; and the Tyrol suphlies most parts of Europe with these songsters. Among the wild animals are wolves, widd boars, and bears: the cledis of the rocks athird shelter to the marmots: and the chamuis tinds refuge on the highest summits, or in phaces secure from the approach of the hunter.
The precions metals and eיpper are met with, but they are of little importince. Irom anm salt are almalant in certain districts, and thongh mining industry is in a rather backward state, are producet in comsiderahle quantitics. Silk is manafactured in the s. ; next to which, iron wire, phates, maik, ami other kinds of hardware are the principal products. Leather, lmen fabrics, wooden articles (some of which are exceated with great skill, and dieplay much ingemuity), glass, paper, toys, and some cotton gowls, are produced. liut the principal exports are cattle, cheese, silk, irm, salt, wine timber, tobaree, and other raw prolues. in return fir corn and most sorts of manufactured goods. The inhals, are exceedingly indintrious, ingenions, and inventive; but the peverty of the commtry obliges them. not withatanding, to migrate in great numbers; and several thousamels annually leave their homes for Swabia, Bavaria, Italy, and more distant countrics, where they excreise various

B B
functions, and contime for a longer or shorter time till, by dint of cconomy, they have savel what they sinpose will mainain them nt home, when they immediately return. A emosiderable transit trade is corried on achoss the Tyrolese Alps, between Italy and the S , pats of Germony. The principal ronte for this trmie furmeriy was the old road over the Ifrenmer piss, between lmasbrack and Itrixen, and thence to lbolzano and lioveredo; lant in reeght years this route has been superseded hy the railway from Innsbruek to lioveredo. At its highest point the railway attains to an eleration of $1,133+\mathrm{fl}$. At the W. extremity of the 'l'yrol is the fimoms military road over Monte Stelvio, rising to the height of 8 gitio ft. ahove the sen, being the highest clevation of any carriage roald in buroje.
'line 'l'yrol is divided into seven cireles, their chiof towiss being lhitan, schwart\%, lmst, ISrumerk, 'Trent, lioverodo, and liregenz; in emeln of whish is a court of justice. Like the other divisions of the Amstrim empire, the 'Tyrol has its provineial diet, commetent to make lomal laws. Immstruck is the gemeral cap, and the wrat of the highest juticial tribumb. 'The jofo. is almont wholly li. Cathotice, mader the sujerintendene of ten bishops suboritimate to the arehbishop of Salzburg.
'I'le character of the Tyrolese is said to contrast favomably with that of the Siwiss. la the N. or fieman prortion of the comintry they are neither so calembatime nor mereenary as the latter; and in the $S$. they appoach the Italimestandard in thacir manoers and disposition as well as their language. Though quite as attached to personal and mational liberty as the Swiss, the Tyrolese have always been steadfant adherents of Aistria; mol, next to the arehchehy, the 'Tyrol may be depemed upon as the prov. most likely to remain limmly attached to the llouse of llapsiburg in the event of any future dismemberment of the cmpire. But the Nustrians draw little or 130 disposable military force from the I'yrol. Its inhalos. form an irregular militia, and act with the greatest vigomer mad alacrity in the defence of their comutry; hut their natural repugnance to a diseiplined military life is so great, that all attempts to extend the conseription to this prov. have proved more or less unsuccessful. Of late, indeed, a part of the regiment of Jägers, raised in the 'Tyrol for its own defenee, las been removed into another prove; but this measure appears to have produced much dissat isfaction.

The dress of the peasantry is pecoliar. The principal fincry of the men consists of a straw hat ornamented with ribands and nosegnys: the Iress of the women consists of a thick and short gown, stockings with cross stripes, and it eap tapering in the shape of a sugar-loaf. Music and dancing, rifle-shooting and athletic exercises, are the favourite amusments of the Tyrolese; in all which they excel.

From the fill of the Roman empire, this region ceased to be permanently united under one lead till 1288; not long after which period it passed by inheritance to the dukes of Anstria, to whose descendants it has ever since belonged, with the exeeption of the period from 1806 to 1814. From 1806 to 1809 it helonged to Mavaria. The government of the Bayarians was, bowever, very disturbed; and the Tyrolese muler IIofer maintained a doubtful contest with them and the Fruch till 1801 ; when IJofer, having been taken and shot at Mantua, the Tyrol was governed
by the French tlll 1814, when it revertel to Austria.

TYRONE, an inlanil co. of Ireland, piros. Ulater, having N. Londonderry, li. Lough Nemg and Ammagh, S. Monaghan amil Fermanagh, and W. Donegal. It contains 754,395 aeres, of whith 171,31.t are umimproved nomintain and bog, and a 7, ,alil water, bing a fraction of lough Neagh. Sutface in many places, beperinlly on the N. and W., rough and momentamons; lint there in, notwithstanding, a large extent of fertile lama. l'roperty mostly ill very large extater. Farmas of various sizes; those in the mombtainous districts largre, and seldom mueh sublivideal. 'liblage farms small, alla! generally held imuler partnershiz) leases; and it is almost needless to adil that, wherever this is the case, agriculture is exemable. A great ilenl of work is dones by the spate; and, where ploughs are used, they are sometimes drawn by horses, bullocks, anil milel cows, all yoked together. Jotatues and onts the primeipal crops. Contle and shop very inferion. Habitations of the bulk of the people extremely mean: they live principally on oatmeal and potatoes, rarely anting butcher's meat. Limen mumufacture genorally dillised. A coal mine is wrompht hetween 1 mingimmon and Stewartston, but the coal is inferior. There is a grool jottery near Dmpramon. This is one of the comuties in which illicit distillation was most prevalent. Priacipal rivers, Blackwater, Foyle, Balliuderry, with several others of inferior importance. Tyrone contnins 4 baronies and :his parishes; and returns 3 mems, to the II. of $\mathrm{C}^{\prime}$., being 2 for the co., and I for the bor. of lhungannon. Legistered electors for the co., 8,121 in 1865. St the census of 1861 the co, had 44,577 inhal, houses, 41,722 families, and 238,500 inhabs. ; while, in 1841 , Tyrone had 54,919 inhab. honses, 57,337 families, and 312,951 inhabs.

TYSDRUS, or TYSDHA, an ancient and considcrable, but now ruined, eity of N. Africa, rog. of 'Tunis, at present represented by the incomsidurable village of EL Jemme, 110 m . S. by le. 'Timis, and 30 ml . W. by $\mathrm{S}_{\mathrm{t}}$ the port of Mehadiah, or Africa. The walls of the ancient town may still be distinetly traced, and it comprises, hesides the foundations of temples and other buildings, the mutilated fragments of columns and statues, liut the distinguishing feature of the place, and that which gives it all its present interest, is its st:perb amphitheatre. This noble ruin, the exterior of which is in a high state of preservation, is of vast size and magniticence, being 429 ft . in length by 368 ft . in brealth, and 96 ft . in height, so that it is inferior only, in respect of magnitude, to the Colosseum and the amphitheatre of Verona. It consisted origimally of it arches, and 4 rows of columns of the Composito order, placed above cald other. At each extremity was a grand entrance; but one of these, with an areh on cither side, was alestroyed, about a century ago, by one of the beys of 'Iunis, to prevent the ruin being oceupied as a fortress by his rebellious subjects. The arena is nearly circular. 'There are no inseriptions by which we may learn the date or founders of this magnificent structure; hut Dr. Shaw (Travels, p. 117) supposes, from its similarity to other strurtures of the same perion, that it is of the are of the Antonines; and as the elder Gordian was promclaimed emperor in Tysdrus, he concludes that he may, probably out of gratitude to the citizens, have presented them with this grand structure for the celebration of those barbarous sports then so much in fashion.

UDINE

UDINE, a town of Northern Italy, cap, deleg. Udine or triuli, on the Roja, 60 mi. NE. Venice, on the railway from Venice to Trieste. I'op. 25,201 in 1857. The town is fortified amd well built, but, from its simation in a wide and level plain, its external appearance has nothing striking. its streets are lined with arcades; and in the great square is a tine monument in commemoration of the treaty of Campo Formio (which village is in the immediate neighbourlood). Principal buildings, the cathedral, with some handsome marble columis and las reliefs, two par. churches. the chief guard house, surmounted by a tower and two iron tigures to strike the hours, the town-hall, Lishop's palace, and a good opera-honse. The old castle, on elevated gromud in the middle of the town, is now a prison. The Frenel, luring their wechuation, constructed sereral public walks, and utherwise embellished the town. Ldine is the seat of the provincial assenbly and superior courts, and has a lycem, 2 gymasia, a high sehool, equiseopal seminary and library, a society of agriculture, several hospitals, and asylums. The inhabs, are principally engaged in the silk trate, but they also manufacture linen fabrics, leather, paper, and liqueurs.
dist, NOLITI AND soutil. See Hemates.
ULEABORG, a town amd sea-port of Finland, cap. linn, or district of its own name, on a peninsula, at the mouth of the Ulea in the Gulf of Bothnia, 68 m . SSE . Tornea. Pon. 7,018 in 1858. The town is regularly built, and is, after Abo, the principal commercial town of the prov. Its harbour is however, in great part, cloked up with sand. The chicf exports are pitch, tiar, fish, and salted butter. It was founded in 1605, and has frequently suffered from fire, by which it was nearly destroyed on May 25, 1822.
ULiA, a fromtier town of Würtemberg, cap. cire. Dambe, on the Damube, where it berins to be navigable, 45 m . SE. Stuttgard, and 44 m . W. by N. Augsburg, on the railway from stuttgard to Angshurg. Pop. 22,836 in i861. The town has an antiquated appearance, and, though it has some traffic, it is call. The cathedral, a tinc Gothic buitlling, has an unfinished tower, $3: 37$ Germ. ft. in height. The boly of the buikling is 416 ft . in length, 166 ft . in brealth, the nave leing 152 ft . in height, so that it is larger than any other church in Germany, except the eathedral of Cologne. This edifice was erectel, between $137 /$ and 1.194, at the sole expense of the citizens of 1 lm . It has some beantiful stained glass and carved work, and a tablet commemorating a showman's feat of the Emperor Maximilian, in 1492, who is said to have stood on the parapet of the tower, on one foot, balancing a coach-wheel with the other. Severn other buildings are worthy of notice, as the town-hall, government mul custom houses, corn-hall, and arsemal. Ulm has a gymhasium, a large and richly endowed hospital, a temale orphan asylum, and the house of correction fir the circle. Tobacco pipe-bowls, linen fahrios, leather, paper, and vinegar are made by the inhabs., many of whom also engage in horiticulture, loat-building, the transit of gookls, and the rearing of sonils for export to Bavaria and Anstria. Large quantities of Rhenish, swiss, and other wines are brought thither to be slipped down the Dambe.

Ulm was formerly strougly fortified, and a military post of importance.
In $1805,10 \mathrm{~m}$ was the theatre of some important military events, Austria havimer declared war against France. pushed forward a strong army into Bavaria, under General Mack, who established his lead-quarters at I'lm. But Napoleon having succeded, by a series of masterly mancouves, in rutting off Mack's eommunications with Austria, the latter was cooped nu, in the city with all that. portion of his army, amomating to alout $2 t, 001$ mon, that had not alremy fislen into the hands of the Fronch. Considering the strength of the plaee, and the numbers of the esarrisom, a vigoroas resistanee might have been anticipated: but. instead of this, Nack eapitulated on the 17th of Octoher, and delivered up the town, and his army as prisoners of war, withont firing a shot.

LLSTEL, , one of the provine into which Ireland is divided, and the most uortherly, comprising the cos. of Doneral, Lomdonderry, Antrim. 'Tyrone, Fermanagh, Monaghan, Armanh. Down. and Cavan.
ULVELS'ONE, a market town and par. of EDighand, humi. Lomsdale, eo. lameaster, about. 2 m . from the W. side of the rmbourhure of the Leven in Morecanbe bay, on a tract apparently almuloued by the sea, 14 m . \W. Tameaster. Area of par. 29,100 acres. Pop. of par. 11,461. and of town $\mathrm{f}, 680 \mathrm{in}$ 1881. (if late vears the town has greatly improved: it las now a neat theatre, two subseription libraries, bows and assembly rooms; and, liesides the par, charch, several uthev churches. The par. chmreh is a handsome modern structure, in the style that prevailed in the time of LIenry V1ll., with a cood altar-piece of tho Destent from the Cross, and an E., window of stained glass. There are also mecting-houses for Dissonters, and some poblic schools of a minor kind. In 1795 a camal was rut from the river Leven, by which vessels of 40 tons reach it large. basia, and load or mindad close to the town. 'Thu' inhabs. principally mamufacture eotton goods and canvass hats, and are necupied in convering coastwise copper and iron ore, limestome, corn, and slates, the latter being exported in large quantities. ['lverstone belongs to the port of Lancaster. It is the scat of petty sessions for the humdred, and of a comity court.

UNITED STATES (TIE), a feteral republic of N. America, and the leading state on the American continent, ranking immediately after the great powers of Europe. The U. States claim the sovereiguty over a vast portion of the N. American continent, stretching from the Athatic on the E. to the lacitie on the W., between the I British territories on the N. and those of Nexieo om the $S$. and inchuded within the 25th and d!th 小es. oi N. lat., and the bith and l2th of W. long., comprising in all an area of above $3,1 t 10,0000$ sq. miles. But large portions of this vast terribory lave not yet heen divided intostates, and searedly explored; thomgh from the wonderfal increase of ponulation, and the rapid extension of civilisation, it isall but certain that, in no very lengthened period, the entire country from the Athantic to the l'acifie will be distributed into states, and occupied by a people of whom it would be diflicult to exaggerate the intelligence and the enterprise.
l'hysicul (seography,- The entire territory be1313

Ionging to the $\mathbf{U}$. States is divided into four preat regions: ist, the Atlantic slope; yud, the vast basin of the Mississipgi and Misomuri; Brd. the romatry between the Rocky Momatains and the Sicerra Nevada; and, th, ihe Paditic slope. These divisions are formed by three momitain ranges-the Appalachian chain towarls the E.., the liocky Momtains in the centre. and the Sierra Nevada on the W. The Appahehian or Ahergany chain is more remarkable for length tham levight ; it extends from the state of Missisipupi. NE... through the stater of Ahabma, ticorgia, Trmuesser, N. Caroliusi, Virgiuia, lomusylvania, New York, and Vormon, for about
 boh m. firm the Athantic, and consints of swoma paraliel ratses of an average apergate breadh of abour 100 mi . The mean height of the Alleghatien
 hatl' of which consists of the clevation of the montains alwe the adjacent plain, and the rat of the elevation of the latter aboue the seab. 'Tla White Momatius, in New Hamphire. which he-
 The black Momenan, in N. Cambla, is said to rise $6 . t$ th fio ahove the sea; and other stmmits reach di,010 fto and upwards. The Rocky Mountams are a prohumation of the great Mexican Comilllara. Their average height may be about 8 ,ine th. above the acem, but some of their summits attian to from 12,000 to nearly $10,000 \mathrm{ft}$. About 10 or 12 der. W. From the Rocky Momintains is the great roast chain of the Sierra Nevala, or Snowy Momatains, which extende, mader different names and with diflerent altitules. from the peninsula of Califoruiat to Russian America. It is of still greater clevation than the Joneky Mombains ; some of its passes (within the U. Siates) being about ! ! 110 ft., and some of its summits $15,500 \mathrm{ft}$. above the level of the sea. The region hetween these two vast monntain ranges comprives the castern and most extensive and sterile pertion of Oregon ; the great inland hasin of L'pler ('alifioruia, elevated from 4,000 to 5,0 ,0w ft . alowe the lacitic, and mostly a desert; and the romutry drained by the greai river, the Coburado, and its atlluents, W. of the Sierra Nevada is the 1'aritic slope.

The country extending from the Athantic nearly to the E. hank of the Mississiphi was, in its mative state, almost coverel by a continnous forest; and the greater part of it till remains in the same primitive condition. The portion of the basin of the Mississiphi and Missomi, on their right hank, is by far the most extemive. It comprises, 1st, a tract of low, flat, alluvial, amd well-woorled land, lying along the rivers, and streteling inwarls from 100 m . to 200 m . or more; and, 2 wht, the prairie and wid region, extending from that last mentioned by a pretty equal aseent, to the liocky Mountains. The priaries are of immense extent; hat they are not, as is commonly sumposed, level. Their surlace, on the coutrary, is rolling or billowy, sometimes swelling into very considerable heights. They are covered with long rank grass, beine interspersed in Texas and the S. States with clumps of magnolia, tulip, and cotton trees, and in the N. States with oak and black wahnt. The prairies gradually diminish in beanty and verdure as they stretech towarts the W., and heeome more elevated. till at length they imperceptilly innite with and lose themselves in a desert zone or belt slirting the foot of the Roeky Mountains. In the S. this desert helt is not less than from .400 m , to 500 m . in width, hat it diminishes in breadth in the more northerly latitudes. it is, in most respects, similar to the sandy, sterile deserts of Cen-
tral Asia. This sterility is also, as already statel, characteristic of a large protion of the extmose territory between the Rocly Momutains and the Nierra Nevala. The Pacitic slope, comprisiug the comutry W. of the Sierra Nevala, ineludes mari. timu Califurnia, so lamous for its mincrals, aul the hext and most fertile portion of the Oregon turritory. Like the Athantic coast it is, for the mosit part, heavily timblered. (Darly's U. States, p.

Rivers.-- The rivers of the 1 . Wates are of prodigions magnitente and importance. of thane
 and Misomuri, whish, with their tributaries, the Ohio. Arkansas, and lied hiver, sive th the interior of the louited states an extont of inhand marigation, and a facility of eommmimation, miequalled, perhaps, and certainly not surpanat, in aty oblur continent. The Mahana and Dpalachicola inw, tike the Misissippi, into the finti of

 netient, and Pounswot into the Atantic; ;and tha (swern, Cuyaboga, and Mamee into the great lakes of the Sit, Lawreare hasia. of the rivers which have their sources 15 of of the ridese of the Rowly Monatains, and their combonchure in the Pacitic, or in same of its arms, the principel are the Cohmbia, which falls into the Paciac: the San doaguin and sacramento, which fall iuts the great bay of sam Franciseo; and the Calurado, which, with its tributaries, after drainits a vast extent of comitry, falls into the Gulf of Califomia.
Next to the great Lakes Sr penion and MicurGas, 11 the basin of the St. lawrenee, noticed in separate articles, the largest lake within the limits of the U. Sitates is the Great Salt lake, in F Califirnia, in the territory of Ctah, in alont $41^{\circ}$ N. lat. aud 113 W . lomg. Lake Champlain. hetween New York and Yermont, is also of considerable dimensions. Numerons small takes ureur in N. York, Mane, and especially in Wisconsin :un! the Minesota territors:
The coast of the Athantic is indented by many noble bays, as those of lassamaquodly, Shasichusetts, Delanare, and Chesapeake: and sheral extensive and sheltered inlets are formed by the islauds ofl the coast, the prineipal of which are Lout lsland Somd, near Xew York, and Mbe marle and Pamlieos somuls, in N. Carolina. Thu coast of the Gulf of Mexico has, also, many valuabl imlets and lack waters; and there are some, though fewer, on the shores of the great lakes. The great bay of San Prameisco, in Californiis, on the lacitic, is one of the tinest basins anywhere to be inet with. Altogether, the Linited States are lumished with some of the best harbours in the world.
climate.-In a coumtry extemding through 21 degrees of hat., and hearly (00 of hong., the climate must, of necessity, vary considerably. In the N., alont the british fromtier, the winter is very severe : duriug this seasm the suow is suficimaty abmudant in the N. Fughand states to admit the use of sledges, and the iee on the rivers strong enough to brar the pasage of horses and wagrons. In summer, on the contrary, the heat isproportionally oppressive. As far south as New York, Pembsylvanin, and New Jersey, the thermmeter fatls in winter below zero; rising, in summer, to nearly $100^{\circ}$ Fuhr. The climate of the Athatic conat, between the 41 st and toth degrees of hat., is colder in wiuter, and warmer in summer, by nearly 10 degrees, than the parts of Eurple mader the smue parallels; and even at New Orleans, where the summer heats are intense, a winter seldom pasises
without frost. Snow, however, rarely falls farther $\therefore$ thm lat. $30^{\circ}$, nor is it often seen S , of the $\mathrm{P}^{2} 0-$ tomat river, except on monntains. The mean anmal temp, of Allony is abont $49^{\circ}$ Fahir. ; of 1'hiladelphita, $51^{\circ}$ : of New York and Cincimnati, nearly $i 1^{\circ}$; of Natelees, $65^{\circ}$; and of Chatomment Browe, in Florida, $i 2^{\circ}$. The prevalent winds are from the NW., SW., and SE. The tirst is by far the driest and coldest, and predominates in winter. 'The second prevails throughout the basin of the Mississippi for most part of the year, except during about 2 months ol the winter season. The NE. wind brings moisture, particularly in the N. part of the Linion. The rains are much heavier than in most parts of linrupe, resembling rather the torrents of tropical comentres. 'The mem ammal fall of rain in the Conited States (E. of Mississippi) is about $3 \overline{1} \frac{1}{8}$ inches; that of NW. Europe amomed to $31: 32$ inehes; lut evaporation is quicker, and there are more dry days in the vear in the United States than in Great Britain.
The temperature in the country along the Pacitie is a good deal higher than along the eorresponithg latitudes on the li. const. 'The year is divided into two seasons; the wot, extembing from $\Lambda$ pril to November, and the dry. In the former, the rains, thouglo not by any means continnous, are frequent atid heary. In the s. parts of the eonst the ofry season commences soonor and continues longer than in those more to the N .

Fegetable Products.-The liorests of the E. section of this sreat tarritury eomprise 140 different kinds of trees, of which st are said to attain the height of 60 ft . and upwards. Among them are momeroms species of mak, ash and pine, the hickory and tulip tree, Amorican evpress, and plane, several manolias, and walnuts. In respect of its vegetable products, the commtry, E . the Roeky Mrmatains, may be divided into the following restions:-

| therions | Irsolucto |
| :---: | :---: |
| Northern : |  |
| N. Uf Jit. $4 \pm^{\circ}$ | Birch, Anlerican elln, red and white pinte, momerons willows, surar, and otlor maples : many herbaceous plants common to N. Emope ant siberia: few climbing or peculiar acuatic plants. |
| Nindle: from lat. $4^{\circ}$ to $::^{-0}$ | Numerous oaks, hickory and ash |
|  | trees, W, plate, white combar, fewer willows, sassatias, witela hatch. rat maple, willow hireb. atome ebimbing and burhacerns plants, and many tine flowering nymaties. |
|  |  |
|  | çiress. Carolmat joplar, Mag. sulia gramultora, live ask, swathp hickory : very many clinhbing, forthacomis, and repaatie plants. S. of lit. $: 0^{\circ}$ the <br>  in that of tropical vogetation. |

Apples, pears, cherries, and phums flourish in the N.; pomenranates, molons, higs, gripus, olives, ahmombs, and uranges, in the s. section. Metize is frown from Mance to lonisiana, and whent throughout the I nion; tohaceo as lar N. as about lat. $10^{\circ}$, and in the W. Statess. of Ohim. Cotton is not much raised N. of $33^{\circ}$, thomerit grows to $3!)^{\circ}$. Lice is enltivated in Carolina, Geargia, lanisiana, aud as fir N. as St. Lamis in Missouri. The sugat-cane grows as high as $: 33^{\circ}$, hat does not thoromphly sheceed beyond $31^{\circ} 30^{\circ}$. 'The
vine ant mulberry tree frow in varions parts of the Union; oats, rye, and barley in all the N. and the momatainolis parts of the S. states; and hemp, hax, and hops, in the W. and midillo states. The cultivation of these crops will be treated ol hereafter.

The animal kingdom comprises the buffitho (Bos Americanus), and the musk ox (Bos mosclatus). The former, thourh its mombers have of Inte years been greatly reduced, is still found in the boumdless prairies $W$, of the Mississippi in very large herds. Among the other quadrupeds are the moose, or American alk (Cerrus ules), the promg-horned antelope, peculitur to N. $\operatorname{Im}$ rica; the Virginian deer, cougar, black and qrisly bears, American fon (Valpes fulrus), racoon, opossum, beaver, skutk, and flutton, Mmongr the birds are the white-healed eagle, several vultures, and a great many hirds eommon to the whole work, theugh few of the wating species resemble those of burome. The alligator (Croc. lucius) is a mative of the s. states, but does not occur N. of the Carolinas and the Red liver. The rattle-snake is among the serpents of the Cnited states, and the siren is a native of the muddy pools of Gieorgia and Carolima. Cod, mackerel, and salmon abomed on the shores; and shell-fish are particularly abuntant in the rivers of the Mississipli basin. The domestic animals of the states are the same as in limone.

Geokeg! anel. Mirerols.-The White Momentans consist of gramite, which is also very prevalent in the ereater part of New Lampshire and Naine. The liocky Momtans and the Nierra Nevala consist principally of granite intermixed with voleanic matter. Sienite, porphyry, and greenstone oeeur in the NVI. part of the $\mathrm{A}_{\mathrm{p}} \mathrm{pa}$ alachian chain; gnciss forms the nper rexions in New lork and Xow Jersey; most of the momntain summits S. of the Juniata river consist of fuconal smolstone: and taleose mica, chlorite, and other slates, with erystalline limestone and serpentine, lie along the $W$. side of the primary belt, in the middle and S . parts of the Union. Blue limestone, red samistone, shales, anthracite, coalmesasures, and other transition formations, flank these rocks in many places. Seroudary strata ocenpy by lar the largest portion of the V. States; but no strata eorresponding in dinte with the new red sathature or oolitic groups of Emope appar to be present. 'Tertiary fomations, many of whech abound with fossil remains, have been fomed in many parts of the Athatie slope, in Alabama, and in the s. part of the Missisnippi basin; but they seem to be almost exclusively contined to those regions. The most extensive and remarkable allusial tract is that arount the month of the Nlississipni. If we except a few small insubated ticlds. all the bituminons coal in the U. States lisw Wh. of the Appalachim ehain, where a vast sories of eoal-heds streted from the mommanas westward thromph ohio, lmdiana, and Illimos, and parts of Kentucky and Alabama, into the state of Jlisomit, and even as far as 200 mm . heFond the Mississippi, Anthracite coal, or that best suited for manufictures, lies at the N. extremity of this great fiehl, in lemusylvania, and in the $W$. part of Virginia, the Ji. part of Ohin, and llinow, 'The betis ol' l'emoyrania likewise contain immense and apmantly inexhatatible stores of mineral oil or petroleum, whel sushes lowth in streams wherever it tinds an oullet. Numerous salt springs cxist in New lork, Virginia, I'emsslymin, and the W'. states. Iron is distributed most abmandy throush the coal measures in I'emyslvania, Ohio, Virginia, and Tennessee, where the ore contuins from 25 to 33
per cent. of metal, though it has hitherto been little wrought. It alsonibunde in the NW. states, and in one part of Vermont the ore is said to vield 78 per cent. iron. A large proportion of the ore fomm in this part of the Union is marnetic. Lend is next in importance: it is fonnd in varions placess, especially in Missomri. Wisconsin and lllabis; and its average mmund pro-
 some parts of Wisconsin the leat ore is so very ried as to yield from tit to a 0 per cent. of lead. Copper has been found in harge deposits in tioe state of Michigan, in the penimsula whiclo stretehes intu lake superior. lmmense sheets, or walls, of mative copper oceur in some of the mines in this district ; and it is a comrions fact that. thongry ouly recently re-discovered. they had evidently been opened and wronglit at a remote period by the Iudians. (iold has been fonnd in small yumatios in cortain parts of Virginia, both Carolinas, fieorgia, and Tembesse, and at a large seale in the rivers and ravines at the foot of the W. slope of the Nierra Nevala, in Coblifornia. Guicksilver, copper, zine, manganese, with lime and buildingstone, constitute the other ehief minaral jroducts. Substances of voleanic origin apmar to be rarely, if ever, found in the lJ. States, li., of the Rocky Monntains.
Population.-The progress of jopmation in the 1. Atates has heen rapid beyond any previons eximple in history: The fact, however, may be casily explaned, from the feendiar circmmstaness under which they have been phated. They have the grood fortune to possess an all but bonndless extent of fruitfin soil, and a elimate which. as it is, speaking generally, neither too hot mor too cold, is most fivourable to the exercise of industry; they are, also, well sithated for commerce, and enjoy an alonost uncqualled extent of inland navigation; and at the perion of its diseovery this vast comtry, posscossing such natural advantages, was oceupied only by a few thousand savages. The colonists wholdit liurope to settle in America had therefore, after the dithenties incident to the foundation of the first settlements had been fot over, umparalleded opportanities for increasing in wealth amil population. They carried with then the science and the arts of the most civilised nations of the old world, and they apmied them to the enlture of a virgin and buncempied soil. liach colonist got as much lame as he could colltivate or occupy without heing sulgect to any edarge for lordslijp or rent. at the sabe time that his taxes were quite inconsiderable. In fict, all that the colonists had to do was to provide for their intermal fovermment, as lisitain took umon herself and defraved the cost of their delenee against foreign aigression. She, also, suppleal them with mannfietured probluets at the lowest pussible rates, so that they were alle to apply all their cuergies to agrienture. whieh, under the cirenustances, was especially protitable. In such al state of things, the demand tor labour condel not he otherwise than astonishingly great: for a high rate of wares, combined with it larility of procuring land, apedily chames the lahorers into lamdords. who, in their thrn, beeme the employers of fresh litourers. Ibaler such eircumstances every min might enter into matrmomial emgagements without being deterred, as in old settled and densely peopled comotrise, hy the tear of not being able to provide for the chilile that might be expected to spring from them. In America, indeed, and in all similarly sitnat ed ematries, a large family is a somred of wealth; marriages, in consequence, are at once comparatively general and early. And in addition to the extriordinary
stimulus thus given to the principle of popilation in the United States, they have been ever since their settlement a 'land of promise; to which industrions and mmbitious individenals in depressed circmastances luve been emigrating from Dimpope; innd they have, also, been'a city of refure,' in which the victims and the fies of political or religious intolerance have foumd a secure asylun.

The jopulation of the U'aited Stutes has been ascertained at all times with great acearacy, The census is taken in the states in obedience to urticle I, section 2 of the constitution, which provides that 'representatives mad direct taxes shall be apportioned among the sevoral stutes which may be included in this mion according to their respective numbers;' nud the same mertion directs that 'the netual emumeration shath low made within three vears after the first meeting of the comgress of the United States, and within every subserpuent tem of tell years.' Lumer thesos provisions, und the laws passed in pursuance of them, the ceasas of the United Sitates has been taken cight times, numely in $17!90$, in 1800 , in 1810, in 1820, in 1830, in 1840, in 1850, and in 1810.

The following table gives the total purnlation of the Lnited States, distinguishing white and shave, in each decemial period from 1800 to 1860:-

| Years | White | Slave | 'rotal, hecheding <br> - Free colared. |
| :---: | :---: | :---: | :---: |
| 1800 | 4.30.1.489 | S101,041 | 5,30: ,92:5 |
| 1810 | 5,862,0104 | 1,191,:364 | 7, 2939,814 |

The first negro slaves were imported into Vir－ ginia in 16t！，ann in 1400 there were about 2,000 negro slaves in the colony．The tirst slave ship fitted ont in the linglish colonies sailed from Buston in 16．18．＇I＇he importation of slaves into the United States was internlicted hy taw in 1 sus． In 1751 the legishature of Khode Island interdicted
the importation of slaves into that colony；and the next year，and while still a British colony， passed a law of emancipation，by declaring the clildren of all slave mothers to be born free．Mas－ sachusetts abolished slavery by the bill of lights． in 1580．Conneeticut，in 1784，put a siop to ilie introdnction of negroes，amil declared all born after March 1 of that year free at the age of twenty－ six．Pemsylvana prohibited the introhection of shaves in 178＊），and aleclared free all elnhirem of slave mothers born aftur the pasing of the law． Virginia prolathited the impurtation of slaves in 1788，and Marydand in 1783 ．Slavery was abo－ lished in New llampshire in 17！2．in New York in 1799，and in New dersey in 15－2．The great civil war of 1861－60 practically abolishe shavery thronghout the whole of the Cinited States，leaving the complete emancipation of the hata race is mere matter of form on the part of the so－called slave states．

The total slave population of all the Ameriear
 to 808,041 in 1800 ，to $1,181,36-111810$ ，to $1,538,038$ in 1820, to $2,009,0,13$ in $18: 0$, to $2,1 \times-105$
 1860．The increase of slaven in the several demene， from 1790 to 1 sid，was very regular，mamsy，in round numbers， $2 x, 28,25,29,30,24,28$ ，and 24 jer cent．

The sulboined table exhibits the value of real estate ami promad property accorling tor the census of 1850 ，aml the censins of 18850 ；also the increase，and the incrase per ent．：－

The following table shows the number of arrivals of passengers from foreign combtries duriug periods of uearly ten years each, indicating the prugress of immigration :-

| Periods | Paswenkers ot For. Blirih | Amerlean and rurdign |
| :---: | :---: | :---: |
| In the 10 years ending sep- ) cember 30, 182? | 128,502 | 151,636 |

The following is a statement in which the number of immigrants have beon sprend over equal decomial perionk, by the aid of the quatterly reports. It shows, miore clearly than lie foregoing gable, the tide of immigration into the United States:-

## Three Census Priods

In the 10 years previons to Jumo 1,1810 In the 10 years previons to Jmme $1,18: 10$ In the 10 years previous to dme 1, istin

The immiaration during the years $1860-63$ was above the averate. 'Ithe total number of forcign inmigrants arrived in the lonted siates during the year lsia amounted to $196,5 \cdot 40$. The greater momber of thase immigrants cinne from Ireland.

The subjoined table shows the distribution of ages of the immigrants on arrival :-

| Ages | Number of Ages stated from 1820 to 1860 |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  | Malea | Females | To(al |
| Unilers | 218,417 | 200,676 | 410,093 |
| 5 and nuder 10 | 199,504 | 180,60) | 380,810 |
| 10 and whuler 15 | $10.4,2 \times 11$ | 16id, 83: | 361,413 |
| 15 and moler 2a | 414,338 | 349.755 | 754.09\% |
| 31 nad muler 25 | 6699.85 .3 | 428,917 | 1,098.827 |
| 25 and mmder 30 | 576.829 | 266, 504 | 846,875 |
| 8010 and mustor 3.9 | 3:9,61! | 16:3,7\%8 | 516.397 |
| 35 and muler 40 | 2:39,464 | 114,16\% | $3 \mathrm{Ba}, 4 \mathrm{tan}$ |
| 40 and upwards | $342,122 \times$ | 200,522 | 542,344 |
| Total | 3,107,823 | 2,174, 663 | $5.272 .4 \times 6$ |

The places of hirth of the mumbers of immigrants arriving in the Uniled States from 1820 to 1860 , are shown in the sulyoined statement :-

| Place or Mirth | Number |

The following is an estimate of the mumber of naturalised citizens residing in the Unided States in the year 1sim, with the commtries whence they have originated:-Ireland, 1,611,0110; Germain Siates, 1,198,010n; Englamd, 430,000; IBritish America, 250,000); France, 14t.0006; Scotland, 10.5,000; Switzerland. 54,000; Whles, 45,$060 ;$ Norway, 4:3,000; 11ollaul, 28,000; Turkey, 28,000; Italy, 10,010 ; Denmark, 10,010 ; Belginin, 9,000 ; I'oland, 7,000; Mexico, 7,000 : the Antilles, 7,000 ; (Chinia, 5,1000: Porlugal, 4,000; Prussia, 3,000; varions comaries, 901,010 ; total, $4,13 \mathrm{ta}, 000$.

The rapid inerease of population, and partienharly the contimual extension of the white settors fintiber W., will, are longe. go far to extimgnish the native races. 'The Sioux Indians, estimuted at 27,1100 or $2 x, 000$, still hold their ground W. of the Misoissipp; and nearly all the region from that river to the Rocky Mominains, and from the Arkansas to the head waters of the Missomri, are inhanited by nations more or less comected with them; but of the tribes formerly inhabiting the cotntry E. of the Mississippi, few remnants exist. Of the Iropuois and Algonquins, there are now estimated to be only about x,000 individuals in all, chicfly in New York and the New Enumband shates. Fiurther S. a few Cherokees and Chicksaws still orenpy their origrinal seats; lint a war of extermination has leen haterly carried on agamst the Indians of Vlorida, provolisel in a erat mensure by their hostility the whites, 'Ihe Indians who remain within the stites are allowed to retain their owy growerment; but inducements have been hed wit to them riher to become ritizens of the slates in which they reside, or to emigrate to the I'latte comitry, W', of Arkansas and Missomri, where lamls have been provided for the purpose, and where they are supplied with igrimultural implements, and other necessaries of civilised lifo.

The mortality of the entire population of the
 against 323.90 in s.t!, dre averge in ench of those years being po $1 \cdot 27$ to $1 \cdot 11$. It varied, in 186io, neeordines to labitude. the nature of the pophlation, the suil, amb other canses, from $10 \cdot 1$ per cent. in Washington territory, to $2 \cdot 01$ per ceat. in Arkmsas. The next highest mortality to that in Arkansas was in the two states of Massachusetts and Lonisiana, mal the same $1 \cdot 70$ ger cent., in both. The next highest ( $1 \cdot 7 \cdot 1$ per eent.) is set down to the district of Columbia, in which the

rate of the momber of $r$ in the United States combtries whence they , 1,611,0011; Gcrmain 430,000 ; İritivh Amp10 ; Scotland, $10 ;$, 1100 ; es, 4̀,000; Norway, 'urkey, 28,1000 : Italy, elginm, 9,000; Joland, Intilles, 7,000 ; China, tussia, 3,000; various $136,000$. mulation, and particu11 of the white settlers far to extinguish the Indians, estimated at heir ground W. of the the region from that ins, and from the Arof the Missouri, are r less comected with -merly inhalitinur the i, few remmants exist. quins, there are now 8,000 individuals in d the New lingland herokers and Chieknal seats; but a war latterly carried on a, prow to the whites. The lie states are allowed ent; lut inderements eitlar to become rihey reside, or to comiW. of Arkansals and een provided for the supplied with arrier necessaries of 'in il-
population of the
 avorage in cach of , 1-4]. It varied, in e mature of the pojuatuses, from $1 \cdot 1 \cdot 1$ per , to $2 \cdot(36$ per ceat. in mortality to that in ess of Missachusetts e, 1.76 per cent., in - 74 jer cent.) is set mbia, in which the

capital is situated. Taking the comery by regions, the l'aritie poast and the morth-wistren states show the lownst, amit the Minmanipi Valley the lifichent rate of mortality.

Lame ame Ayrionltice- In the N. States extensive landhohders are not common; and, where they exist, a great part of their poseresionas is maproductive. The woil is chlatly cultivated by its owners, who in many resperts resemble the triants of sootland, and aften proform a great purtion of lhe manabl labanar of the firm. lhat in mative patis of the comatry, which have been hage metthit. the farmers are opilent, and hire a gronl deal oif libour; and in the more recontly setten tracts they so mot labour hard after the tirst there or finar vears from their sithement, In the se estates are larger, anm in the rice phatations of laniviman a
 The price of land is vers variable: memr lhataaldphia lama of tine quality ame in lish condition maty he had at from lell to ent dohars atl are ; but there produce of all kinds fetche: a hiph price, mad the stray af a wheat erop has bectu suld at ;if dollars per acre. In sume paris of New York, as
 tine cleared land; but, in other parts of the same state, hand is sometimes suld be anction for less than one-half the price. Mmost every farmer in the li. states who has a family, or is in statemed circmastames, is wiltine to self his lamal, and move to the W. states, wher: he can oltain suil of an equal ur hetter quality, and in a liner elimate, Manally at one-twenticth part of the price. In Midhigan, thonsh the praitic lamis sumetimes detel from 3 to 6 dells, an acre, the govermment upset price is only $1 \frac{1}{4}$ doll., and the rieh lamd in Illinois, and elsewhere in the Linon, is often to be lad at the same low rate. The terms of rent, at least in the N., are almost equally variahle, Near tow, in, and in thickly peopled distrists, a small rent is paid in money, and a lease of several vears taken. In remote situations land is eommonly let in slares from year to year. If the owner of the suil furnish seed and laburing ammals, he gets fwo-thiras of the probluce; if the tenamt suphly mimals and seed, the lamduwner gets one-thind. bhat terms wary aecording to sitnation, soil, and crop.

The quantity of hand unocenpied within the $U$. States is of prodigions extent, The cleared lime is indeed quite inconsilerable, as eompared wath the whole surfice. In the country li. of the AIlearhanies, which, however, is fat ot very limitel estent, all the land worth orcupying belongs to private iblividuals. Bat, even of this, a great part is covered with forest; mad in all situations near a village, or where there is ready abess to water carriare, foreat land is more valuable than that which has been cleared, fied, in many phaces, having latterly beeme very dear. liseept on the banks of the rivers, the soil lin of the momatains is gemerally so inferior, that much of the ham covered with wood is not worth cultivating, and should the trees be cut down, it is likely to remain in pasturage, or be preserved ats a furest for the prolnetion of new trees. 'The price of firms, however, varies from $\%$ to $\% 0 /$ an acre, aceordiner to the qualiay of soil, buitelings, and situation. This part of the states has a comparatively aboudant supply of labomr, and a realy market for all kinds of produce. Market pardening and dairy hiswlandry are here the most protitable branches of industry.

The soil IV. of the Alleghanies is generally muth superior to that on their E. side; and large tracts produce, for a while at least, Indian corn and wheat without manure. Almost all the land
in the li. part of this resion leflonge ! prlvateladividuals, thomph a lar popropertion in till empereal with fureat trees. Onthe W. wide of rhe Disuissippis the greater part by fir of the comitry is bublle property; but, in either enser great yimu tities of land aro alwors in the market. lathen ean gencrally be had, exeept in the extreme $\mathrm{VI}^{\circ}$. liarm prombece is in constant ilemand, and prices are regulated ly the markets of Xew Orheina, to which it is sent by the Mississiphi, these hing in part fowerned by the prides ont the li., conat, and in part hy those of the llavamuth and wher grent $W^{\prime}$. Intion prits. Mannes are seldom ued exeept uear the harger towns. 'The price of farmes of an embal quality of woil vary necording to their distance from the manas of transport, from a dollar to $10 /$. the acre. The money wages of labour may he statel to be narirly tha same from the li. to the extreme $W$., any dillerene being towarils a rise in the W. Init lame is there so cheap, that every prodent labomere is able to purchase a tiam fir himsell in a yar or iwn, and it is only the imprutent who continu lathorers.
Speaking penorally, arriculture is litule kown as a science in any part of Imerica, atal bint inperfectly miderationd as mint ; and it comble not rationaly he expected that it shomble be utherwise. In all thase combtrios in whidh, as in the greater part of America, portions al tiothle amb mosenpied land may be obtaiacel for little more than a nominal priee, the imariable pration is, after clearing and treaking up a piece of land, to subject it to a comerse of comtimans croppinis: and, When it is exhanstel, to resort to some other tract of new gromad. leaving that whieh has been abandoned tor reover itself ty the and of the ris metheotris nature: But in those parts of the Fistern or Athmac states that have been home settled, and are fully orempied, this seomrgins system ean no lomger be advantageonsly fohowed; aind there, fonsequently, a better system of atigriculture is beximing fo be introndiced; and a rotation of erops, and the mamurint of lamb, are bractised sometimes with more and sometimes with less sucers. still, bowever, even in the hest farmed distriets, agrienlture is in a wery hackward state; and, execpt whore, the land is maturally" of a very superior quality, the produce is samty, compared with what is ohtaneal in the West Enarbeanstates, ami in froat Britain in particular. 'lo following table shows the averuge produce jer atere of the corn erops in the state of Niw York, in confrast with what is believed to be the produce of similar crops in Enghtame:-

| l'roduce |  | Suw York | Finaturt |
| :---: | :---: | :---: | :---: |
| Whent | bushels per acre | 11 | 2014:3 |
| larluy | - | 119 | : |
| (bits | - | 24 | 111 |
| 1mian Corn | $n$ | 2.5 | nome |

It results from this statement that the returas per acre are ahnat twice as great in lingland as in New lork, which hats some of the lese eorn growinge land in the linion. In Olin, which is sut) prased to be the most prodnctive of all the states, the results are similar, the prodnce of wheat and hatery in it being respectively 15 and 21 howels an acre. It is trae. no roabt, thitt these returns may be increased; but this can only be chone, if it be done at all. by the employment of greater capital and skill in the culture of the lamo. In the meantime the New York farmers, and those of the other Athantic States, have to withstand the competition of their neighbours in the newlyformed states on the Mississippi and Missouri.

The sulyoined tublo shows the extent of tands improved aul mimprosed, in eath of the states mill territuries of the Linited statex in the year 18ito :-

Maize is the great staple of American husbandry, and it frows on soil mot particularly rich, as respects other prodncts, for a successiom of years, without manure, in all the vigour mod luxurimee of an indigenous plant. It has been justly called the 'menl, meadow, and manure' of the farm, as it is used for both haman foom and the supply of the farm stock in winter, and furnisics more nourislment for man or beast on a given space, and wibl less lahour, than any other breal-com. But it is not snccessfully culicated heyond hat. $43^{\circ}$ N., where it begins to be superseded by the grains of Europe. Temessee is the principal maize-growing state, and next to it are Olio, Kentueky, Indima, and Illinois.
The surfice of the New England states is often lilly, mul the soil rocky, or of the most inferior hind of sand. The prineipal crops are oats for horses, and rye for distillation, the corn produce of these states heing insullicient for the support of their inhabs. Boston, the largest corn and flour importing port in the Union, receives nearly all her sulplies of these artieles from the S. states. Tolneeo is grown from lat. $39^{\circ}$ or $40^{\circ}$ throughout all the S ., and in a part of the W. states; it is a
staple prownet of Kentuekv, Tennessee, Maryland, Virgina, and Mlissomiti. "The tolaceo of" the 1:' states is of viry sipurior quality; but it is a crop which senurges the lamd, wnd the labour attending ins cultivation is sery severe.
Contton anill rice ure the great staples of the S .
 Hlae culture of tobacen in some of the cos, of Virginin. A little cotton hand been raised firr ionnestios bise In the Southern states, previonsly to the revolutionary war; but its pronbee was guite ineon-

 $2,010,000$ pumbls. Theneeforth it went on increasing at an onormons rate, as exhibited in the fiollowing tahle, which shaws the pronduce if colton during the seventy-iwo yars irnu 1790 to 18ifi:-

American coltom, the proluce of the Gossymium herloceum, is of two kinds, generally known ly the names of sea islaud and upland. The formir arows along the low sandy islands off the shores of Curolina and Geurgit. It is long in the staple, has an even silky tixture, a yellowish timge, is easily separated from the seed, mal is tlecidedly superior to every other description of cotton hitherto bronght to market. Unhekily, howecer, it cam be raisel only in certain situations; so that its quantity is limiten, and has not, in fiet, been at all increasell since $1 \times 05$. At preseut 97 or 98 ler cent. of the colton prolneed in the United States consists of what is denominated uphame, from its being grown in the comparatively high gromul at a distance from the coast. Thungh of varying qualities, it is all short-staplenl; and its separation from the seed and pod, it attempted by the haud, is so very liflicult, that the cotton is hardly worth the trinble amlexpense. This, however, was the only way in which it could be made available for home use, or exportation, in 1791; and had any one then ventured to predict that $10,000,000$ ibs. of uphand cotton would ever be
exported, he would have heen looked upwn an a visionary, Bot the gemins of Mr, tili Whitney alid for the cotton phaters of the Cuited Nitates what Arkwright did for the manufacturers of Bughand. He livented a machine ly whela the rotton wool is separated from the ponl, mand elenued with the great -t ense and expedition; and in this way may lee sald to have more than fombled the weilth and budistry of his comintrymen. The alliet of the machine has been, tike that of Arkwright, all bat miamelomes. Amerimat cottin is felleratly experted in bales, tirmly packed, and
 tily of retth proklared per nere varion, on finel latilx, from zen to dito llose, nod on interior lands

The sulbunted tuble shows the quantities of the three grent staples of cotton, ricer, und tobarom,
 of the secretury of the trensury of the L'nited Stuter:-

Lice is proluced chicely in S, Carolina. It was introlucel into the states in 169.4 from Madapascar. The usmal time of plantint rice is from the 20th of March to the 20th of May, and the harvest begins about 1st Scpt. No prain yields more abundantly. From 40 to 70 bushels an acre is an ordinary crop, but 80 and 90 lenshels are often produced on strong lands, having the alvanlage of being overtlowed by a river or reservirs. The water is not let in, upon the fied till alter the second hoeing, and is kept on frequently for 30 days.

The sugnr-cane grows in low and warm situntions as high as lat. $33^{\circ}$, but the climate does not
suit well N . of $31^{\circ}: \mathrm{m}^{\prime}$. In lamisinua, however, it is cultivated with nuceess, thongh the crop is very variable. several varietiem of the rans, as the Afriwan, Onheife, W. Indian, and Libhnid, are grown. The last is the mumt prolitle of juice, and all mere of grombl, properly managed, will

He, therefire, tiuls it nore comemient to receive them from the handry of nature in that indiflerent state han to herp up their size, by a care and hemrishment that womh cost lim much lathur.' 'This, bu doubt, is the caluse of the lean and wretelied emblition of ' in catte in most parts of the damite states; but. wherever the pastures are of especial exectlone, the eattle are eompratively gonl; mal tine pratso tands are not unfrequent even in the ohd setted states. An English traveller, Mr. Shirrelf, silys of the Genessee lats in the state of New York, ' P 'erhaps no genteman's park in Britain equals them in fertility and benuty. They dither from the rest of the surface in this part of the comatry, in having been cleared by nature; and are chiely in griss, allording the richest pasturage ! ever saly, with the exception of some tields in the neighbourhood of Boston in Lineohnshire.' Hat the great eatte-breeding states are in the W.; ann herds of some theosauts are brought up from Kentucky, for sale at New York. They bear some resemblance to the IIercford cattle, and when 4 or 5 years old nre estimated to weirh at an arerage 80 stone. The dairy is now attracting considerable attention in some states, and the ex-
ports of eheese lare astonishingly increased. On improved iarms the sheep are mostly erosses of the Saxon and Merino; for, thongh the Lcicester and Catswold breeds are reared, the former, particularly if pure, is not found to answer. 'The stock of sheep, in 18(0), amounted to 2:3,317,756. Inlinois appears to be the state best alapted for sheep, as it is for most other kiuds of husbutadry ; and so much of its surface remains to be disposed of, that, estimating the tlecee of a Merino sheep at 3 lbs., and its price at 6 ft cents the lb, the wool of one shece in a year will nearly purchase 1 f nere of land. Wool can be transiorted from, Illinois to the 16 , states for 3 or 4 ceuts per lb.
'The stock of hogs in the U. States amounted to $32,555,263$ in 1860 , and their breeding and fattening is a most important branch of rural ceonomy. lixeept, indeed, in seasoms when there is a large export of Indian corn to supply the place of the potato, almost the entire produce of that grain is employed in distillation and in the feeding of hogs. The latter are usually allowed to tom wild in the woods till 5 , 6 , or 7 weeks before they are to he killed, when they are turned into the fields of ladian corn to fatten and harden their tlesh, Ohio is the principal hog-feeding state, the killing and packing departments of the busineas having been gradually concentrated in and about Cincimati.

The following table shows the namber of live stack, and quantities of miseclianeous articles produced in the United States, in ench of the years 1850 and $1860:-$

The condition and mode of life of the arricultural pop, is very different in dillerent parts of this extensive region. I'le NE, states, the oldest
settled portions of the country, bear the greatest resemblance to Great Jrituin. The villages of New lingland are uniformly clean, airy, and neat, with spacious openings near the eantre, in which churches form the most prominent feature. The houses are, in some instances, bailt of brick, but more frequently of wood, painted white, and with green Venctian blinds opening to the outside. loth charehes and dwelling-houses seem to be painted amually; at least they are never seen in the slightest degree dingy coloured. The honses of every size amb labric have a Jight appenrance from the uumber of windows they contain. They seddom indicate either extensive wealth or poverty in the inmates, and the villages want only the judicions aid of flowers and shrubs to render them beantilul. Landscape gardening, and similar orninnented work, is, however, very backward in Ancrica.

In the newly settled states of the W., the farmer must dispense with much of the civilisatim of the le, und live in his log-house with a few beeessary articles of furniture, in the rudest and most primitive mommer. But if his style of life be less comblortuble, he reaps the benctit of his privations in a more rapid accumulation of wealih. The settler of Illinois places his house on the forest or on the open fich as fancy may dictate. The prairie furnishes snmmer and winter foul for any namber of cattle mud sheep, and poultry and bigs shift for themselves until the erops ripen. With the preliminary of fencing, the plough enters the virgin soil, which, in a very few months alterwards, yields a most abumbat erop of Indian corn, aind, on its romoval, every arricultural operation may be executed with facility. Pastoral, arable, or mixed husbandry may be at once adopted, and prodnce of all kinds obtaned in prohnsion,

The agricultural labourers of the U. States are well fed, and renerally etheient. 'Ihe hours of labour are usually fron sumrise to sunset. Near New York farm labourers get from 10 to It dollars It month, with bed and board, inchudng washing; spadenen get 75 econts a day, withont hoard, all the year round, Near Philadelphia, wages are about the same. In Michigan, where labour is scarce, a good farm lelp obtains 120, and an indifferent one 100 dollars a year, with bed and hourd ; and a female help reedives, in private families, one dollar a week, An ordinary farm labourer in 1 llinois gets the value of 80 aeres of land a vear: in Shitain, due allowance being made for the board of the labomer, to does not get 1-10th of the value of an acre of groal land; so that, when wages are compared with land, the farm labourer of lllimes is about 800 times better rewarded than in Jritain.

Manvfictures.-Manufecturing industry in the United States, though iery considerable, is carried on under several disadvantages ineident to the sitnation of the country. Cuder the peeuliar circumstances in which dinerica is placed, agriculture is necessarily the most monatareous employment in which her popnlation ean engage : and it is a short-sighted policy to endeavour, by dint of custom-honse regnlations, to force up it manufacturing interest. The bomulless extent of her fertile and mocempied land gives her extroordinary advantares as compared with almost every other people in respeet of agriculture ; but she has no such alvoutage as regarls manufactures; and vet it is plain that, unless the workpeople entgrged in mimafactures in diflerent parts of the Dhion realised the same rate of whres, and the eapitalists the sane rate of profits that is realised by the workmen and capitalists engaged in ugri-
or the greatest he villages of airy, aud neat ntre, in whiel feature. The tof brick, het hite, and with the outsile. s seem to be never seen in The houses ht apperarance antain. They althor poverty vant only the orender them and similar - backward in

lustry in the rathle, is car* ineident to - the peculiar placed, arriItageous emcill elgrate: mleasour, by , furce uj: ess extent of her extranhlmost every but she has netures; and kpeople enparts of the ges, and the it is realised ged in turi-
culture, they wonld either never engage in the former, or speedily abmulon it for the latter. llenee the futility of all attenptes to establish the ther branches of manafuenure in Amerien, withont burdening sinular articles when imported from abroal with heavy duties. The coarser description of articles, or those which are bulky and heary, and in whiel the value of the raw material exceeds the value of the workmanship, must uf course, in America as elsewhere, he alwass probluced at home. But the tiner description of quonds, or those of which the value or price is priacipally made uf of wages and profits, woudd, thet for the interference of congress, be wholly imported from comatrios in which wages and protits are comparativaly low. And it is medless to say that every attempt to limit or hinder such improtation is inconsistent with and subversive of erery sund principle of political conomy, If the cotton and woollen manufactures now carried on in the United States eamot exist withont a lighl daty being laid on forcign cottons and woollens, it is plan that the existence of such mannliatures obliges every individual in the Linited States to pay the additional priee of the duty for every yad of foreign produce that he lans oceasion to nse. And even this is not all ; for the prohibition withoraws a large portom of the publice capital and industry from employments in which America has minadvanage, to make them be vested in employments in whiels the advantage is on the side of others.
No doubt America will gradually become more and more suitable for mamufacturing indusiry. ller command of water-power and coal, and her facilities for internal transport and mavigation, are cireumstances cminently favonrable to mannfactures. Still, however, it is certain that her natural progress to manufaeturing eminence cannut be advantageonsly hastened by the policy on which she has embarked. When population has becone dense in America, and her unocomied lame has been generally appropriated, she will necessarily undertake, and will no doubt snecessfilly carry on, such branches of manufacturing industry as are suitable to her peculiar capabilities ; but this natural development of her maturer growth cannot be protitably forwarded by interfering with the free exercise of industry.

The subjoined table furnishes a comprehensive survey of the productive industry of the United States, showing the total value of the productions of the leating manufactures in the year ended June 1st, 1860:-

| Leadisg Mantfactures | $\begin{array}{\|c} \text { Value of Pro } \\ \text { Huce } 1 \mathrm{n} \\ \text { ToundN unlerg } \end{array}$ |

| Sony and Candles | 17,000,000 |

The Ameriean cotton manufacture, thourh consisting primeipally of coarse fabrics, is, in extent and value, next to that of the U. Kinstom. It is principally lecated in the Xew England States, especially in llassachnsetts, which has nearly hulf the mannfacture, Rhode Island, Comectieat, and New llampslire. The American fabrics comsist principally of shirtiugs, sheetimis, printed calicoes, sams, and sail-cloth, in which the raw material forms a large portion of the value of the tinished artieles. Lowell is the prineipal seat of the mamafacture in hasadelanetts.

The mamblacture of woollens has heen extensively earied on from an early propod in the history of the states; but it is principally conducter in prisate limilios, and it is only in recent time: that woolten factories have been established on any large scale. liond cloths, cassimeres, satinets, thamels, jeans, linsers, blankets, yarn, and carpets are the groods principally made.
The manufictures of loather, mod articles made of leather, of limen and linen yam, iron and hardware, klass, soap, mud camblles, are alt carried on extensively. Steam-engines, and all kinds of machinery, mails, fire-grates. and stoves, chan cables, agricultural and medanical implements, and ire-arms, are extensively mannfactured ; but all the tiner deserijuions of hambare and enttery, and a great variety of hardware articles, are imported from Eughand. Vast quantities of whisky are distitled in N. Carolina, Pemsylvania, New York, Massachnsetts, and other states. Cincinnati, in Ohio, is, however, the grand centre of the whisky manufacture. It is wholly made from Indiati coms.
'The returns of the domestic mamufachures of the Luited States, including fisheries and the produce of the mines, show that whereas, accoriling to the census of 1850 , their total value was $1,019,106,616$ dollars, it anounted lor the year enting on Jome $1,18 t 6$, to $1,900,000,000$ dollars, or an increase of more than 86 per cent. in ten years. It is assumed that one-third of the whole population of the United States is supported, directly or indirectly, by manufacturing industry.

Commerce.-The commerce of the United States is most extensive, thongh scarcely commensurate with the immense area of the comery, and the wealth and activity of its inhabitants. Sinbjoined is a statement exlibiting a summary view of the exports of domestic produce, specie and bullion, of the United States, from June 30, 1817, to June 30, 1861 :-

The in the sil-ton United 1813 :-

Fisheries and Navigatiom.-Notwithstanding the extraordinary tenptations to engage in agriculture atlorded by the cheapuess and faeility of obtaining land, the Americuns have always been distinguished by their skill in fisheries and navigration, and by the vigour and success with which they lave pursued those branches of industry: They commenced the whale-fishery in 1690 , and, for about litty years, found an ample supply of fish on their own shores ; but the whale having abandoned them, the American muvigators entered with extraordinary ardour into the fisheries earried on in the Northern and Sonthern Oceans. From 1700 to 1775 , Massachusetts empleyed ammally 183 vessels, carrying $!3,8: 20$ tons, in the former, and 121 vessels, carrying 11,026 tons, in the latter. Mr. Burke, in his fimons speech on American allairs, in 174, adverted to his wonderful lisiphay of daring enterprise as fullows:-'As to wenlth,' said he, ' which the enlonists have drawn from the sea by their tisheries, you hal all that matter fully oprenel at your bar. You surely thenght these acquisitions of value, for they semed to exeite your eusy; and yet the spirit by which that enterprisiug emphoyment has been exereised ought rabler, in my opinion, to have raised esteem and admiraltion. And pray, sir, what in the world is equal to it? lass hy the other parts, and look at the manner in which the New England people carry on the whale lishery. While we follow then among the tumbling mountains of ice, and behoh them penetrating into the deepest frozen recesses of Illudson's lay and Davis's Straits; while we are looking for them beneath the Aretic cirele, we tind that they have piereed into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the south. Falkliand Island, which seemed too remote, and too romantic an olject for the grasp of national ambition, is but a stare and restingplace for their victorions industry, Nor is the equinoctial heat more discouraging to them than the accumulated winter of botio poles. We learn that while some of then draw the line or strike the harpoon on the coast of Afriea, others run the longitude and pursue their gigantic game along the coast of Brazil. No ss., but what is vexed with their fisheries; no elimate that is not wit ness to their tuils. Neither the perseverance of Holland, nor the activity of France, nor the dexterons and firm sagacity of Euglish cuterprise, ever carried this most perilous mode of hardy industry to the extent to which it has been pursuced by this recent people-a people who are still in the gristle, and not hardencd into manhowl.'
The progress of American shipping is exlibited in the subjoined table, which gives the registered sail-tomage, as well as the total tomnage, of the United States from the year 1789 till the year 1863 :-

The total tonnage of the steamers included in the above statement amonnted to 768,751 in 1859, to 867,937 in 186i0, to 877,204 in 1861, to 710,463 in 1862, and to $572,970 \mathrm{in} 1863$.

Railuays.-The following table shows the total length of the railways in each state of the United Stutes, in each of the years 1850 and 18150 , and the total cost of construction in the year 1860:-

| States | Mileage |  |
| :---: | :---: | :---: |
|  | 1850 | 1860 |
| Malne | $245 \cdot 59$ | $47 \times 17$ |
| New Hampshire . | $465 \cdot 32$ | 65669 |
| Vermont | $270 \cdot 57$ | 556.75 |
| Massachusetts | 1,035.74 | 1,27946 |
| Rhode Island | 68.00 | 107.92 |
| Connectleut | $413 \cdot 26$ | 603.00 |
| New Engrand States | 2,507•48 | 3,669*39 |

Coins.-The American rold coin, the Eagle, contains 232 pr pure gold and 26 alloy. This eoin is made the equivalent of 10 dollars, so that the English sovereign is equal to 4 dolls. 87 cents. The doll. is worth at par about $4 s .3 d$. Weights and measures same as in England.

Cimstitution and Gorernment.-The government, as established in 1787 , is a federal temocracy. The legislative pewer is vested in the congress, an assembly of two separate bodics, the Senate and the House of Representatives. The senate consists of 62 mems., 2 from each state, closen for a term of six years by the legislatures of the several states they represent. The qualifications necessury for a senator are the having at tained the age of 30 years, having been a eitizen of the U. States for 9 years, and being an inhab. of the state for which he is elected. The senate
has a coneurrent vote in the ratification of treaties and executive nominations. and the sole power to try impachuments. One-third of its mumber goes nit of oflice every two years. The house of representatives is composed of mems, from the several states, elected by the jeeple for the term of : years. Aceording to an act of congress, the inumber of representatives is ixed at $2: 33$, Am the entire 'representative population' of the difforent states (five slaves heing reckoned equivaly to 3 free persoms), as ascertatinel ly the decomial censuses, Ix:ing divided hy 233, gives, of combe, the prombation entitled to send a member to congress. Some of the returns given in the preceding table of the pop. fir listo are net quite completi'; lout they are sulliciently aerurate for most practical purposes. And it results from then that the reprementative pop. may be taken at abuit 21,710, 1010, which, being divided iy $2: 33$, tives :33,100 for the representative unit. Nence the mumber of members which each state will be entifled to return during the next 10 gears is at once ascertained hy dividing its representative
 as is usually the case, the entire numiner of members, the defliciencies ure sumplied by the states which have the largest hurepresented fracthonal pop. Thus, Comnecticut will, according to the late census. be entitled to simd ? mems, to congress, and will have in addition, an urepresented pop. of 91,385 , so that she will be all but certain to have a th mem, assigued to her. During the bast 10 years the representative muit was 70,680 . New York, Peunsylvania, and Ohio will have the largest number of rejresentatives in the new congress.
The qualification for representatives is, their having attsined the age of 25 years, and been 7 years citizens of the U. States. The honse of representatives latas the sole puwer of impeachment, and of originating money-litls. Congress innst assemble at least mice a year, on the tirst Monday in Dec. Lach honse chooses its uwn spenker and other ollicers, the president of the splate being the vice-president of the $\mathbf{U}$. States Both honses are divided into a number of cominittees for the tespateh of business, chosen by ballot. The mems, of both houses receive a salary of 8 dollars a day during their attendance, anil travelling expenses of 8 dollars for every 20 m . The speakers of both honses have 16 diollars a day. The exceutive power is rested in the president, who is chosen by the electornl colleges of the several states fur the term of 4 years; he must be 35 years of age. and a matural-born citizen who has resiled for $1 . t$ years in the $\mathbf{V}$. States. The president is commanter-in-chief of the land and sea forces, and has power to make treaties, and appoint to the principal civil antl militury oflices in the states, with the consent of the seniate. He has a veto on bills which may have passed both liouses of congress, though, if these be passel a second time by a vote of twothirds of each honse, they hecome law without his sametion. His salary is $2 \mathrm{n}, 000$ dullars a year. The president is assisted by a cabinet of sis ministers, who hold effice during his plensure : the secretary of state. the secretarics of the treasury, war, and navy, the post-master-general, ant thic attorney-general, the salaries of each being 6,000 dollars a year. Besides the general congress, each state has its own separate senate and honse of representatives, elected by its inhaho. The qualifications of electors are not the same in every part of the Union, as will be seen by referring to the articles on the several states. The iulividual states are in most respeets independent

In orter that the reader may be filly acpuainted with the institutions and govermanent of the Cuited States, there is subjoined a copy of the goneral constitution of the U'nion, as arreed upon in $1: 87$, and of the amendments that have since bece mate upon it.

## CONSTITUTION OF THE UNITED STATEF.

We the people of the U. States, in orler to form a more jerfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the hessings of liberty to ourselves and our posterity, do ordain and entablish this constitution for thic U. States of Americh:-

Article I .
Srer. I.-All legislative powers herein pranted shall be vested in a congress of the $[$. States, which shall consist of a senate and house of representatives.

SkTT. I1,--1. The house of representatives shall he composed of members chown every serom yerr, is the people of the several states: and the eloctors in end state shall have the cquititeations replisite for electors of the most numerons branch of the state lerisiature.
2. No person shall te a representative who shall not have attained to the are of 2. years, and been seven yerrs a citizen of the U. States, and who shall not, when electel, be an inhabitant of that state in which be slall be chosen.
8. Representatives and direct taxes shall lie apportioned anong the several states whith may be incladed within this mion according to their respective nambers, which shall be determinen by adding to the whole number of free persons, including those bonnd to service lor a term of years, nud exchuling Indians not taxed, three-fiftlis of all other persons. The actual enumeration shall be male within three years after the first meeting of the congress of the U. States, and within every subsequent term of ten years, in such mamer as they shan by law direct. The nmmer of representatives shall not exceed one for every thirts thomsand, but each state shall have at luast one repre sentative ; and, mintil such enume ration shall be made, the state of New Hampushire shall be entitled to choose 3; Massachuantts, 8; Rhole 1sland and Providence Plantations, 1; Connecticut, 5; New York, 6; New Jersey, 4 ; Pennsylvania. 8 ; Nelaware, 1 ; Maryland, 6; Virginia, 10 ; North Carolina, 5 ; South Carolim, 5 ; and (icurgia, 3.
4. When vacancies lappen in the representation from any state, the executive authority thereof shall jesue writs of election to till surh vacmucies.
i. The house of representatives shmll choose their slienker and other oftheers, and shall liase the sole power of impeachment.

SECT. III.-l. The senate of the U. States shall te composel of two senators from each state, chosen by the legislature thereof, for six years, and each senator shall have one vote.
2. Immediately after they shall be aseembled, in consequence of the first election, they shall be divided as equally as may be into thrce chasses. The seats of the senators of the lst elass shall be vacated at the expiration of the second year, of the 2nd class it the expration of the fourth year, and of the 3rd classat the expration of the sixth year, so that one-thirel may be chosen every second year; and if vacancies happen by resignation, or otherwise. during the recess of the legislature of any state, the executive thercof may make temporary appointarents until the next meeting of the legislacure, which shanl then nill such vacancies.
3. No person shall he a senator who shall not lave attained to the age of 80 years, and hen mine sears a citizen of the U. States, and who shall not, when electet, be an inhahitant of that state for which be shall he chospa.
d. The vice-president of the $U$. States shall be presitent of the senate, but shall have no vote, minless they be equmbly divided.
The senate shall choose their other offcers, and
Vol. IV.
alse a presilent protempore, in the absence of tho vicepresident, or when ho shail exerclse the ollice of president of the $\mathbf{U}$. States
6. The senate shall have the sole power to try all impeachments: when sitting for that purpose they shall be on oath or aflimation. When the president of the $\mathbf{U}$. States is tried, the chief jusilce shall preside, and no person shanl he convicted withont the conemrrence of two-thirds of the members jresent.
7. Judpuent in cases of impeachment whall not extend furcher than to removal from onller, and dispualification to hoh amd enjoy any ollee of honour, trust, or prott, miler the LV. States; but the party convieted shall, nevertheless, be liable and sulgjent to indict. ment, trial, julgment, and punishment, according to lnw.

SBrar. IV.-1. The times, plases, and manner of hobling elections for smators and representatives, shall he preseribed in each state by the legislature thereof; but the rongress may at any time, by law, make or alter such regulations, except as to the phaces of choosing semators.
2. The congress shall assemble at least once in every sear, and such meeting shall be on the thrst Monday in necember, unkes they shall by law appoint a different day.

SEct. V. - 1 . Fach house shall be the judge of the elections, returns, and quadithentions of its own members, and a majority of each shall constitute a quorm to do bnsiness; but a smaller number may molourn from day to day, and may be nuthorised to comped the attendance of absent members, in such mamer and under such penalties as carh hotse may provide.
2. Each honse may letermine the rules of its proceedings, punish its members for disorderly behaviour, and witb the concurrence of two-thirds expel $n$ member.
3. Wach house shall keep a journal of its proceedings. and from time to time mbilish the same, excepting such parts as may, in their judpment, require sectece: and the yens and mass of the mombers of either honse on any question shail, at the desire of one-lifth of those present, lie entered on the journal.
4. Neither honse, during the session of eongress, shall, withont the consent of the other, adjourn for more than three days, nor to any other place than that in which the two hones shall be sitting.

SEet. VI. -1 . The seaators and representatives shall receive a compensation for their serviecs, to be ascertained by law, and pain ont of the treasury of the C . States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest daring their attendance at the seseion of their respective honses, and in golng to and returning from the same; and for any speeeh or tlebate in either house they shall not be questioned in any other place.
2. No semator or representative thall. during the time for which he was clerted, he appointed to any civil olfice muder the authority of the U. States, which thall have been ereated. or the emoluments whereof shall hase been increased during such time ; and no wrson hoddine any oflee mader the U. States shall le a member of either house during his continuance in office.

Sbect. VIl.-1. All bills for raising revenne shall origimate in the lonase of representatives; but the senate may propose or concur with amendments as on other bills.
2. Wery hin which shall have passed the lone of representailives and the senate shall, before it become a law, he presened to the president of the U. States: if he approve, he shall sign it; lint if not, he shall return it, with his ohjections, to that house in which it shall have originated, who shall cuter the objections at large on their journal. and proced to reconsiter it. If, after such re-ronsileration, two-thirds of that house shall agree to pass the bill, it shall le sent, twgether with the objections, to the other honse, by which it slanl likewise be reconsidered, and if approved by twothlrds of that house, it shall become a law. But in all such cases the rotes of both homses shall be determined by yeas and nays; and the names of the persons voting for mul neainst the bill shall be entered on the journal of each honse respretively. If any bill shall not be returnel ly the pereident within ten days (Sundays excepted) aftor it shall have been presented to him, the same shall be a luw. in like manner as if he had signed it, unless the congress by thedr aljourn.

C C
ment prevent its return, in which case it shall not be a law.
3. Evely order, resolution, or vote, to which the concurrence of the semate and house of representatives may be necessary (exeept on a question of adjournment) shall be presented to the president of the $U$. States; and before tho same shall take effect shall be approved by him, or betng disapproved by him shall he remmend by two-thitrds of the senate and honse of reperentatives, acording to the rules and limitations preseribed in' the ease of a bill.

SErc. V1It,-The congress shall have power-

1. To hay and collect taxes, dities, imposts, and excises, to pay the diebts and provile for the common defence anil genernl wolfare of the U. States; bat ahl duties, imposts, mad excises shall be uniform throughont the C, States:

The juiges both of the surpeme amil inforior conts shall hold their offoes during fook bebaviour, and shall, at stated times, recelve for their services a compensation, which shall not be diminished daring their contiunance in oflee
SEct. 1I.-l. The jurlicial power shall extend to all cases, in law and equity, arising under this constithtion, the laws of the U. Stutes, and treaties made, or which shall be made, muder their mathority;-to all cases affecting ambasalors, other public ministers, and ernsils ;-to all cases of admiralty and maritime jurishetion:- -to controversies to which the U. States shall be a party;-to controversies between two or more states; -hetween a state and citizens of another state ;-letween citizens of different states; --hetween cithens of the same state elaiming lands under grom is of different states, and belweell a state or the citize ins thereof, and foreign states, citizeus, or sulyjects.
2. In all cases affeeting ambassmors, other phbic ministers mad consuls, and those in which a statechald he party, the supreme conrt shall have original jarisdiction. In all the other eases before mentionet, the supreme court shall have appellite jurisulietion, both as to law and fact, with such exceptions, aud under such regulations, as the congress shall make.
3. The trial of all crimes, except in cares of impeachment, shall be by jury ; and such trind shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the triel shall be at sueh place or places as the congress mny by law have directed
SECT. 1II.-1. Treason against the U. States shall consist only in levying war against them, or in adhering to their encinfes, giving them aid and eomfort.
$\because$ No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.
B. The congress shall have power to declare the pmishment of treason, but no attainder of treason shall work corruption of blool, or forfeiture, exerpt durligg the life of the $p$ reson attainted.

Abticle IV.
Sect. I.-Full faith and crealit shall be given in each state to the public acts, records, and julicial proceedings of every other state. Aud the congress may, by general laws, preseribe the manner in which such acts,
records, mit proceelingashall be proverl, and the effect thereof.
sket. II.--1, The eitizens of each state shall the en-
 several states,
2. A persom charged in any state with treason felony, or other crime, who shall tee from justice, uni be foumbly mother state, shath, ondemand of the exe cutive anthority of the state from which he thed, be delivered up, to be removed to the state having jurisdiction of the crime.
3. No person held to serviee or fatone in one state. noter the laws therof, esenping hito another, shath. in conserfence of uny law or repulation therein, be tilschurgen from such service on labeur, but shat ine delivered mu chim of the party to whom sueh service or labour may le dur.
SECOR III,-1. New states may be almitted hy the congress into this mion: Lut no new state shall bio formed or erected within the juristiction of any other state ; nor any state le fomed by the jumetion of two or more states, or parts of states, withont the emsent of the legislatives of the states eonermed, as well tas of the empress.
2 . The congress shall have power to dicmise of and make necuful rules and requlationa resperting the tarritory or other property belonging to the L. States and nothher in this constitntion shall be so efonstrint as to prejubice any clams of the U. States, or of any barticular stati.

Svet. IV.-The 10. States shall gumanter to every state in this uion a repuhican form of gevernment. and shatl protect each of them against invasion ; and of amplication of the legishater or of the exentive (when the lowislature camot be convand), ugainst demestic violenee.

Ahtictes: V .
The congress, whenever two-thirds of both limses whal deem it mecessary, shall propose ame miments to this constitution, or, on the apmication of the legislatures of two-thirds of the seserma states, shall call a convention for proposing ammbments, which, in elther case, shall be valid to all intents and purpwes, as part of this constitution, when ratitied by the legishatmes of three-fourthis of the sevemal states, or by conventions in three-ionthis thereof, as the one or the other monde of ratiliention may be pronsent liy the congress ; provfled that no amendment, whirh mity le made prior to the vear lsis slull in any mamer affect the 1st and 4theranses in the thla section of the ist article; and that no state, without its consent, shall be deprivel of its efpal siffruge in the semate.

Anticies Vl.

1. All dehts contracted. and engrayements entered into, hefore the adoption of this constitution, shall be as valid against the U. states under this constitution as muler the confederation.
2. This constitution, and the laws of the $\mathcal{V}$. States Which shall be mule in pursanne thereof; and and trenties made, or which slatl le made, under the anthority of the U. States, shall be the supreme law of the land; and the judges in every state shall be hound therehy, anything in the constitution or laws of ang state to the contrary notwithstanding.
3. The senators and representativos before mentionet, and the members of the geveral state legislatures, and all exeentive and judicial otlleers, hoth of the U. States amb of the seviral states, shall be bound by onth or aflrmation to support this constitution: but no religions test shall ever le required as a qualitieation to any office or pullic trust mader the Enital states.

Ahticte VII.
The ratifieation of the conventions of nine states shall be sutficient for the estahhishment of this constitution between the states so ratifying the same.
Done in convention, ly the unumimons consent of the slates present, the lith day of september, in the year of our lood 17 s 7 , and of the indelemience of the U. States of Amorira the 1:th. In witness whercof we have heremnto snbserited our names.

GEORGE WASIIINGTON, President. and Deputy from Virginia, \&c.
[Congress at their first session ander the constitntion, held in the city of New York, in 1769, proposed to

## LNITED STATES

the legispatures of the several states, twelve amendmonts, ten of which only were mopted. They are the dirat ten of the following amendments; and they wore ratitied by threc-fourths, the eonstitutionsi number, of the states, on the listh of lecember, 17!1. The elaventh amendinent was propmed at the first sesslon of the third congress, and wns declared In a mussage from the president of the U. States to botl bouser of congress, dated the Sth of Jannary, 1798, to linve becn nilopted hy the constitntionn mamber of states. The twelfth nmendment, which was jroposed at the first session of the elfhth congress, was alopted by the eonstitutional number of states, In the year isol, nccoriling to a public notice by the secretary of slate, dased the 2tath day of September, 1804. ]

## AJPENDMENTS

To the constitution of the U. States, ratifled secording to the provisions of the 5 th articie of the foregoing onstitution.
Aur, I.-Congress shall make no lnw respecting an establishment of ridigion, or prohibiting tle free exereise thereof ; or abridging tho freedom of suecell, or of the press: or the right of the people peaceally to assemble, and to petition the goverument for a redress of griovnnces,

AllT. II.-A well regninted militin heing necessary to the sceurity of $n$ free state, the right of the people to keep and bear arms shall not be infringed.

Ant. IIT.-No soldier shall, in time of pence, bo phartered in any honse, without the consent of the owner, nor in tinie of war, but in a manner to be preseribed by law.

Aut. IV.-The right of the peoplo to be seenre in their persons, honses, papers, and effects, agninst in rensomable geareles and seazures, shall not le violated, and no warrants shall issue but upon probable cause, supported by outh or affirmation, and particularly deseribling the place to be searched, and the persod or things to be seized.

Ant. V.-No person slanll be held to nnswer for $a$ capital, or otherwlse infamons crime, unless on a presentarent or indietment of a grand jury, excejt in cnses arising in the land or navnl forces, or in the militia, when in actual service in thoe of war or putblie danger: nor shall any person le subicet, for the same offence, to be twite pat in jcoparily of life or limb; nor sliall be compelled, in nny criminal ease, to le a witness ngninst himself, nor le deprived of life, liberty, or property, withont due process of law ; nor shall private property be taken for public use, withont just compensation.

AnT. VI. -In nll eriminal prosecutions the neensed shall enjoy the right to a speely and public trial, by an impartial jury of the state mad district wherein the crime shall have been commlted. which distriet shall have been previously ascertained by haw, nad to be informed of the nature and cnuse of the aceusation; to be confronted with the witnesses ngainst him; to have compulsory process for obtaining witnesses in his favour, and to have the assistance of counsel for his defence.

Ant. VII.-In slits nt common law, where the value in controversy shall execed 20 dollans, the right of trial by jury shall be proserved ; and no fact tricd by a jury slanll he otherwise re-examined in may conrt of the $U$. States than accorting to the rules of the common law.

ARt. VIII.-Excessive hail shall not be required, nor excessive fines imposed, nor cruel and unasual punishment inflicted.

Aut. 1X.-The enumeration, in the constitution, of certain rights, shall net be construed to deny or disparage others retained by the people.

ART. X.-The powers not delegated to the U. States, by the constitntion, nor prohibited by it to the states, are reserved to the states respectively, or to the people.

A RT'. XT.-The juticial power of the U. States shall not be construed to extend to nny sult in law or equity, commenced or prosecnted against one of the $U$. States by eltizens of another state or by citizens or subjects of any foreign state.

AR'I. XII.-The electors shall meet in their respective states, and vote by ballot for president and vice-
presilent, one of whom, at lenst, shall noc be an ln. hablitant of the samo state with themselves; they shall name in their ballots the person votel for as president, and in distinet ballots the person voted for as vice-president, thul they shall make distinct lists of all persons voted for as president, nind of nll persons votel for as vice-president, mull of the number of votes for each, which lists they shall slen and certify, and transmit sealed to the seat of tho government of tho U. States, dirceted to the president of tho senate. The presilent of the senate slinll, in the presence of the wenate and house of reprosentatives, opell all the certithenter, and the wotes shall then be connted: the persen haviug the greatest numbur of votes for president shall the the presklent, it such number be $n$ maiority of tho whole mumber of clectors apminted; and if no perem have such majority, then from the pereons having the highest mumbers, not experting three, on the list of those voted for as president, the honse of reprevithtives shail choose immedlately, by hallot, the president. but in choosing the president, the voters shall ha taken by states, the representation from eneh state having one vote; a ghorim for this purpose shall consiat of a member or members from twothrds of the states, and a majority of all the states shall be necessary to is choice. And if the house of representatives shail mot choose a presilent, whenever the right of choice shall devolve upon them, before the 4 th day of March next following, then the vice-president shall net as presdent, as in the case of the death or other constitutional Itsnibility of the president. The person baving the greatest number of votes an rice-president shall be the vice-president, if sueh number be a majority of the whole number of electors appointed; and if no persom have a majority, then from the two highest numbers on the list the sennte shall chomse the vice-president a gnorum for the purpoee shall consit of two-thirds of the whole number of senators, anm in majority if the whoie number shall he necesary to a choice. But no person coustitutionally ineligitile to the office of president shall be eligible to that of viec-president of the U. States.

The judiciary pouter of the $\mathbf{U}$. States resiles in a supreme court at Washington, and a number of distriet courts, one or more in each separate state, territury, und district. The supreme court consists of a chief justice, with a salary of ( $(1,500$ ) dolls. und nine associate julges, who ench receive 6,000 dolls, a year. The U. States are divided into 10 circuits, which are travelled separately twice a year by the judges of the supreme court; and the circuit courts have jurisaliction in all criminal cases, and in civil causes to the amount of more than 500 dolls., and, in some cases, excreise a jurisdiction of appeal from the inferior courts. The laws of the U. States are bused upon the common and statute law ol Englami, but capital punishments are less frequently resorted to than in Great l3itain.
Educution.-Public instruction is nowhere more extensively diffused than in the N . part of the Vnion: and the education in the eommen schools is of the best description. Their attention to the etheation of the prople, and the liberal provision made to insure that grand olject, are most creditable to the American legislators. Everywhere in New lingland, except in Comuceticnt, the primary schools are supported by a property tax ; and some of the states have school fumds in adilition, the income of which is distributed among the towns in proportion to the number of pupils educated. The common or public free sehools are manared in each district by 12 directors, chosen by the people; and the chililren are tanght gratuitously, the ouly expense being for books. Each town has oae of these schools, and one is generally established in every rural district of 5 or 6 sq . mi. The instruction which is thus brought, as it wore, within reach of every boty, embraces the rudiments of Euglish edncation, including arithmetic and reography; and, in the larger towns, Latin and (iveeh

The instrucre, within reach ac:uts of Enelish ind reography; 1 Greei,
is aduptation to country, and is
probable influence over the character and condition of the penple, were set in the most striking point of view in a specell delivered by Mr. Wehster, in an assembly held in Massaehusetts in 1801 :'Fior the puriose of pmble instruction,' suid he, 'we hold every man subject to taxation in proportion to his property, and we look not to the question whether he himsedi have or have not ehikdren to be benefited by the edneation for which he pays: we regard it as a wise and liberal system of puliey, by which property, and life, and the peace of neciety, are secured. We seok to prevent, in some measure, the extension of the penal code, by inspiring a salutary and conservative prinejple of virtue and of knowledge in an carly age. We hope to excite a feeling of respectability muld asense of character, by enlarging the eapacities and inratang the sphere of intellectund enjoyment, Hy general instruction we seek, so fur an possible, to purify the moral atmosphere; to keep groul sentiments uppermost; tunil to turn the strong current of feeling and opinion, as well as the censures of the law, and the denmeiations of religion, against immoralay and crime. We hope for a security beyond the law and above the law, in the prevalence of enlightened and well prineipled moral sentiment. We hope to continte and to prolong the time, when, in the villages and farm-houses of New England, there may be undisturbed sleep within mbarred doors. Knowing that our government rests directly upon the public will, that we may preserve it we endeavour to give a safe and proper direction to that public will. We do not, indeed, expect all ment to be philosophers, or statesmen; but we contide..tly trast, and our expeetation ot the duration of our system of goverument rests upon the trast, that by the diffusion of general knowledge, and good and virthous semtiments, the political fabric may be secure, as well against open violence and overthrow, as arainst the slow but sure nndermining of heenstionsiness. We rejoice that every man in this community may eall all property his onv, no far as he has cecasion for it to furnish for himself and his children the blessings of religious instruction and the clements of knowh-lge. This celestind and this earthiy light he is entitled to by the fundamental laws, It is every poor man's molothed birthright; it is the great blessing which this constitution has secured to him; it is his solace in life, and it may well be his consolation in death, that his couniry stands pledered, by the faith which it has plighted to all its citizens, to protect lis children from ignorance, barbarism, and vice.'

Out of Sew England an alequate provision for public schools exists in all the populous states, as Pennsybania, New Jersey, Maryland, and Virginia; and whites may everywhere procure free edueation. In the newly settled states the provision for the support. of common sehouls has been settled by congress; and every township is divided in 36 sections of a $\mathrm{sf}, \mathrm{m}$, ench, one of which is appropriated to the support of schools. Superior instruction is, also, provided for in the most liberal mamer, partly by the central and docal governments, and partly by private individuals and associations. Academies of various degrees of excellence are found in every part of the Union. In these the ancient and modern languages, grammar, history, logic, rhetoric, natural and moral philosopliy, are taught. There are, besides, about 120 colleges and universities, supported by dillerent religious denominations or by the states; and, in the more popalous parts of the country, there are but few districts of any considerable extent without one or more of these institutions. The princilal are Harvard University in Massachmsetts,

Vale College in Connectinut, Dartmonth Cuion ant Ratger's Colleges. There are boont intheological, tis metieal, and 13 law schools, the list of which are the lemet frequented.

Army.- lly the eighth section of the first article of the constitution of the Cinited States, Compress is empowered, in general, 'to raise anul surport armies;' and, hy the second section of the secomal article, the presildent is appointed commander-inchicf of the army and mavy, and of the militia when called into the service of the United States.' On Angust $\overline{\text { G }}$, 178:, congrens established a department of war as the instroment of the president in carrying ont the jrovisions of the constitution for military athairs. A amber of 'Original Rulea and Articles of Wiar' were enncted hy the congress of $17 \boldsymbol{7 6}$, and continued in foree under the constitution, with several mohilications. These rales were the lasis of the actual Articles of War whith were enacted in 1806, and have leen but whighty altered since that time. 'They form the military code which governs all troops when mistered into the service. In 1790, the rank and tile of the army, as tixed hy act of congress, amounted to 1,216 men; to which foree, in the nest year, one reqiment 900 strong was adided. In 1792, an net of eongress provided for a miliorm militia throughont the Linitel States, and the system then arrimged has received but. slight alterations mutil the present time. The nominal strengt? of tho militia thus organised is riven in a statement below. In 170ti, the regular army consisted essentally of a corps of artillerists and engineers, two companies of light dragoons, and fonr reciunents of infantry of eight companies each 1 his force was little increasell, execpt dinring oceasiona! periods, till the outbreak of the civil war.

At the breaking ont of the civil war, in the eommencement of the year 1sisl, the Uniterl States army consisted of about 14,0100 regular troops, stationed chietly in the Sonthern States. A large namber of these joined the canse of the Confederate Sitates, reducing the Federal army to less than 5,000 men. On april $10,18 t i l$, the president called ont 7,000 vohnteers for three mont hs, to defend the capital, which was threatened; and on May 3, he called out 42,000 volunteers to serve for three years or the war. On July 22, 1861, Congress passed an act authorising the president to aceept the services of 500,000 volinteers for such terms as he might deem necessary, rangitug from six months to three years or churing the wir. On July ens, 1815, the president who again authorised to call ont 500,000 , making in all $1,010,000$ men. The mumber proving insutlicient for the active prosecution of hostilities, and the repair of losses oceasioned by the war, a draft was ordered in the summer of 18630 , by proelamation of the president of the United States. Exemption from the draft, however, was to be purchased by payment of a sum of 300 dollars to the government. 'This latter clause was repealed in duly l80.l, when a bill passed the cougress that all men cirafted most either serve personally or furnish a substitute. liy a new proclamation of the president of the United States, dated October 17,1863 , a levy of 300,000 men was ordered, and another call of 500,000 men was made, Febratary 1 18ti. The total number of men called into the tield by the govemment of the United States, from 1866 till the end of the civil war, in 1865 amounted to $2,039,718$. Of these it is calculated that 580,000 died from wounds and disease. The Sonthern, or Confederate, States lad in the field, during the greater part of the war, an army of 400,000 men, of which, it is estimated, they lost 300,000 from wounds and disease. The Southern
uriny was entirely dinbanded in Spril，Isin：Int

congress were not deflued,-there was mo settled form of govermment ; but, their authority being of a revolutionary or prowisiomal character, they expreised such is the necessition of the thes rapuired. The revolntionary government contimed until the comfenderation was organised. the urtieles for which wore atopled by the cougress as early as November $15,15 \overline{5}$, hut were not finally ratified by all the colonias matil March I, lixa. On the following day (March 2, lixl) congress assembled unker the confederation. The confederate govermment was intended to be jurpetual; but it was swon fombl to be so defeetive, inediegent, and even powerless, that a conven fion of itrelegates was called to meet at I'hiladelphia on the 14 th of May, $178 t$, 'for the nole anm express purpose of revising the articles of confederation, and reportints sumb alterations and prowisions therein as shall rember the Federnl Constitution adequate to the exirencies of the govermment and the preservalion of the Lnion,' The eonstitntional fovermment wasi he result of the veliberations of this emvention: for they moperd, on the 17 th of reputember, 1787 , the charter known ans the Constitution of the United Siates. Bleven of the states having ratitied this constitution, congress, on the 17th of September, $178 x$, resolved that it should po into operation on Wednesday, the 4th day of March, 15K!.

The linited States, from this perion, contimed to fonrish until they freame involved in the wars that raged between tireat Britain and France, :mad at length, in June 1812 , took uparms arginst the liritish for the vindication of their rights as a nentral power. The American commore now fell off to a very low ehb, and the states sultered considerably from the more direet consequence of the war. In liklt, peace having been concladed in Europe, the question in divpute between Britain and Aneriea ceased contirely, in a proctiena view, to possess athy interest. Accoringly, the commissioners of the two powers, who had met at Ghent, agread to aljourn the controversy, and in Desember a treaty of peace was sigucd between them.

The history of the United States was one of almost minterrupted prosperity from this period till the breakine ont whe the ereat eivil war, at the commencement of the vear 1 otil. Dissatistied with the election of I'reshleut Lineoln, eleven of the Sonthern States seceded from the Union, in the following order:-
South Garolina
Mixissippi
Florida
Alabama
courcia
Lomisiana
Texas.
Yirrinia
Argimia
Arkansas
North Curolina
Temmessee
Dec. 20, 1860 , by Convention.
Jan. 8. 1861, ,"

The above states having ordanised a selarate government, under the name of the 'Confeaterate states,' the people fathful to the Linion resolved to bring them back to the old form of gevernment. and succealed in doing st, after a gigantic strugrle extending over four vears, at an immense cost of blood and treasure. But great as was the strugerle was its fruit, since it resulted in the total abolition of shavery, and the opening of a nobler carecr than ever before entered upon by the people of the Enited States.

HNTEHIVADABE, one of the four forest cantons of switzerland, near the enentre of the eonferd, in which it holds the bith rank: between lat. $46^{\circ} 40^{\prime}$ and $47^{\circ}$ N., and long. $8^{\circ}$ and $00^{\prime}$ E.,
hasing W. Lucerne; $N$, the same cant., and the lake of lanerne; $\mathrm{F}:$. Lnt and N, the Bernese
 whom 11,399 belonged to $1 \%$, suit 11,861 to 1 . I'nterwalden. 'The territory consiste primepally of 4 valleys, hiscosed be momataias of varimas lieights, the luftiest of which, the Tillis, rises to mearly 11 , itill ft , above the sen. T'wo slremens called Di, hardly deserving the mame of rivers, thow into the Lake of Lucerne; and there are several small lakes and momerons caseales. The climate is trmperate, partioularly in the ki, where various kinds of fruit are grovin. The valleys and lower hills afford fine pasturage, which makes catlehreeding the chicf ocenpation of the inhabs. 'The catle are small, lut a ganil con is estimated to vich a profit of from it to 100 florins a yeat 10 the owner; and about 10,000 heat of cattle are ammally depastured in the canton. The cheese of Unterwaliden is reckoned interior only to that of the limmenthal; and consideralle quantities are sent into Italy. In good years the valite of the cheese exported from the valley of Eugelberg amounts to abont $\mathbf{4 ( 0 , 0 0 0 )}$ Ihorins. Agricilture is comparatively neglected; and eorn, to the value of at least 120,00 thorins, has to he lmported from Lnceme. The vine does not sneceed, and the plate of wine is supplied by liquors made from difterent fruits. 'Ihe forests are a chief souree of wealth, a grod deal of timber and fuel being exported. Jine and fir. and, after these, heceli, onk, and elm, are the principal trees. The extensive forest of Kermvath has formed the line of separation between the repmblies of lawer or N., and Upper or S., Unterwalden, ever since the 12th century. Nining and manaliactures are insigniticant; some linen thread is, however, spun in the valley of Enuelberg.

In both jarts af the canton, the constitution is wholly democratic. Upper Uuterwalden eonsists of 7 commones, all the male inhabs. of which above 20 years of age meet in $n$ genoral assemthe, exercising the sole deliberntive and legishative power, on the last sumblay in April, at the eap. Sarnen. The executive berly, consisting of 1 t principal fimetionaries, chosell by the fencral assembly, mul tis other mems. appuinted by the different parishes, exereises all the high juiticial and other functions, except in case of capital punishment; when the triphe ronncil, an assembly composed partly of special delegates, must pasis sentence. Dower Unterwalden eonsists of 13 commmes. Its general assembly is similarly constituted; but its fowormment, earried on at Stanz, the ap., is more complieated than that of the other part of the canton, being combucted lis a great variely of contulds and assemblies. I'ublic coluention in everywhere rather backwarh. Loth parts of the canton lave bat one mited voice in the siwiss diet : they contribute 3 s 2 men to the Swiss army, and $1,907^{\circ} \mathrm{fr}$ a year to the ledaral trensury.

Lintowalden, with Liri and Selowst\%, formed the melens of the swiss Confedration anty in the lth ceutury ; hut little worth motiee las occurred in its subsequent histors, except that the inhabs. of lawer lioterwahlen made a vigorous opposition to the fremeh revolntionary troops in ligh, for which they suffered proportionally:
[1'SAL, or Cl'sidnd, a eity ol Sweden, cap. pros. of same mame, on the sala, hy which it is divided into two parts, 37 m . N. by W. Stock-

It lins no manolicture of muy importance; bitt a consficirable trade is curricil on in corn, malt, mal cemala; and a good deal ot ehler is bronght here for shipment from lereford anl other purts.

ClilliNi) (an. Vrbiamm Morrase), a fortilied town of' ' 'entral laly, prov. L'rbioo a I'esaro, on

 specimen of the military works of the lath centtury. Its old castle now forms part of a Carmelite convent, in which and in the charelies are several the works hy Liaphat and wher distinguished artists. Urbino has an amoint ducal palace, which, like the lalazoo Albom, is a large and tine bililime; a newly bilt enthedral. with a rich chapter and archbishopric; a miversity, with about 200 stulents; a college, howpital, seminury, an asoociation called by the simgular title of Academia Aswarditoram, nud a conrt of prinary jurisaliction. lat the legate and other ehief mithorities of the legs, of Urbino and l'estro resinte at the latter town. Urbino is celebrated for its brass, manmbetured to the value of about 14,1000 erowns a year.

Among other illustrions imlividuals, Urbino has to boast of having piven birth to haphael, lane called by the Italians hathello d'Urbino, unnuess tionably the greatest painter of modern times. lle Was born om Good Friday, 148:3, and died at liome in 1520, on the mmiversary of his birth, at the carly are of 12 -a womberfally brief space in Which to have attained to such matehless proticioney, and to have evmpleted so many freat works: 'Jhis was also the birthplace of Bramaute, one of the ereatest mowion arehitects, a relative of Haphatl; of the machinist Zabiglia, and other distinguished persomarges.
L'lif, a canton of Switzerlaml, in the SE. part of the confed., between the thith and dith deess, of N. lat., and $88^{0} 30^{\prime}$ and 10 F . long. ; having N . Schuviz and the Jake of Laceme, li. (ilarus and the (irisons, S. Tessin, and W. the Valais, the Bernese oberlanl, and Luterwalden. Area, $1: 0$ sq, m. Pop. If,itil in litil. The canton consists mostly of one prineipal vallev, that of the lieuss, into which several others open haterally : and the whole are shat in, except at the $\mathcal{N}$. and S . extremities of the ramton, by lofty and generally impussable momatais. Among the momutains comprised in this canten is the celebrated hit. Gothard, the pasage across which is the prineipal romte from ltaly into E : switzerlant. The transit trale by this roal was, and to some extent still is, the mist protitable oecupation of the inhabs, of Uri. Varions wher lofty and remarkable summits are ineluded in the ranges surronuding the canton. The principal river is the licuss, which rises in Monnt ist. Gothard, med after a course usually N., through U'ri, in its whole

The pastures of this cantom are very supering. and these and their catile constitute the entite wealth of the inhats. A good many cathe, tembed liv lergamesiue cowherds, are ment thither from lialy to feerl diring summer. The cheese of the rimion is ill high repute, but it is not extellsively promenced; and the macok of aleep, fonts, and hags is not more than mallieiont for the wants of the pur. Agriculture is entirely nempected. The aspert of the conntry le thos deseribed by an bimplish traveller:- 'Throughout the whole of the unper part of the valley of the liouss ane in the vale of U'rsern, not one "stalk of any kind of grain, nor one enltivated vegetnhle of miy kind, is to be sern. There is ous dombt, however, that these might be successtinlly caltivated. The vale of l'rsern is better sheltered than almost any part of the limgadine, and is less clevated than many ot leer purts where rye is grown abumiantly, where wher grain, even whent, is mot a fialite, and where all the harilior vegretables are plentiful. Nont two leagues lower down than Ambernat, the valley winkens. Cotages are sprinkled here nod there, mad now and then a hambet; still, however. grass only was to he seril. I sum many warm stripes, and evon little phans, alonir the river side, where wheat and vegetables conld have been suceessfilly eultivated; but I still continued to meet parts laden with dour and potatoes. As I descended still lower in the valley, the suenery became more varied aml more heatiful. Charming mealows lity by the river side, prettily diversitled by clanges of walnut and pear trees, and eottages and hambets thickly dotted the shoness, Altorf is surromided be garilens and orehurds: vet even here, where the climate is mild, and where the ordinary fruits come to great perlection, scarcely an ear of corn is to be secth,' 'Ihis, however, does mot originate in any want of industry, hat in what is most probably a well founted convietion on the part of the inhab., that it is most advantareons for them to combine their attention to the breeding and depasturing of cattle, and to import their corn, flome, imblath provisions, and such mamafactured goods as they do not produce in their eot tages.

Lri is subdivided into two districts, Úri and Crsern: Altorf is the cap. The constitution is strictly democratie. The legishative power resides in the general assembly, composed of all the mate pop. above 20 years of age, which assembles every year un the first sunday in Mare to choose the cantonal council of it mems., to which is contided the direct execotive power. There are several inferior combeils for separate departments of service. Each distriet hias its own assembly amd tribumals; and in the cap, is a tribman of apment, eomposed of 15 mems., and presited over by the handamman. The communes are generally too poar to support public schools all the year romud, and education is very hackward. The inhabs. are muder the ecclesmatical jurisaliction of the bishop of Chur: they are mosily of the Germin stock, thengh in the s. an lanian atialect is spoken. Contingent to the Swiss army, 23 j men; do. of money to the feleral treasury, $1,18 \mathrm{f}$ fr. a year. This canton is supposed to have derived its hime from the urus, or wilt bull, which formerly inhabited its valle's in great numbers. Uri was one
licrman empire in lawä, ami formod the muelens uf the swlose conteal. It was a principal theatro of war hetween the Fromeh and Xustrians, in $15!!!-\mid x 111$.

 S, and long, bes and ingo W.; havolig N. Itracil, Fi, mind the Athatie thean and the arsmary of the lablata, and W. the limguay river, by whith it is separated from the Argentine or lia liata
 185io. The conat preselita the asprote of a low that Hhin, whont wordof any kind, and, as far as the eye can ranll, quite level in apmarance with the water. Inhand, however, and partiendarle in the N., the comitry is intersected he many hili-rmpest
 alluents of the Vrugiars. In this territors, the bumidity of the suil, which is watered hy cimerons rivers, is corrected ly the panduro, aremarkable alry wind. The climate of lirugnay is proverbially healthy, and it is evident that the thimess of the pop. must arise from the mondo of life followed hy the settlers, or from politional causes, and hot from any delicient fertility of the soll, or other matural or hecesary eanse. It is divided intu! dejes., nud posmesses ib priméjal towns, Monte Video, Lat Cobomia, and Maldomdo, I small towns, and 8 hanolets, without inchading estmbcias or farms, and ranchos or cottaces. The public revenue for the 18 monthe, July i, isfio, to
 same expenditure. The public debt, in Feb. I Fitis, was alwitt $1,010,0,010$. On the ordimary peatefooting, the army is eomposed of lithle more than 2,000 ment but in the spring ot ktio, when L'ugnay, in allinge with linzil and the Argentine repablic, entered war against laragialy, it was raised to 3,50 m men.
Monte Video, havilis a better port and as good a govermment, hiths lair to become a city of greater trade and wealth than its olpusite rival, Ihemos Ayres, (For its trale and that of the republic generally, see the nrt. Monts Vibso.)

Urugiay is an integral, mot a federal repubic: it formed a prove, under the sov of linenos . Ivres, till 1821 , when it was takeal by the Itakiliams, and incorporated winh brazil winder the title of Irov. Cisplatina. In $1 \times 20$, however, it dedared itself independent: and its independenee was reengnised in 18.28 by a treaty between 13razil amb La llata.

ULEMEA, OORMLAII, or SLIAHEE, a town and considerable lake of l'ersia, prov. Azerbijan, The town stands in a the plan, watered by the Shar, 8 m . W. the lake, and $6 \mathrm{a}^{5} \mathrm{~m}$. SW'. Thatriz. lts pop. has been romghly estimated at $1:, 010$. It is fortitied with a strmg wall and deep diteh, which may be tilled with water from the river. Thongh supposed to be :he Theborma of Strabo, it is said to possess no remains of antipuity worth notiee: it has, however, been rarely, if at all, visited by recent burojean travellers.

The lake of Crumea, or shahee, was visited by Major liawlinson in lris. It extends above a degree of lat. in length, and is about one-third of that distance in extreme brealth. The greatest dephl of water that is fomm in any part is fome fithoms, the average is about iwo fithoms, tut the shores shelve so gradually that this dejeh is rarely atained within 2 m . of the land. The speeilie qravity of the water, from the quantity of salt which it retains in solution, is so great, fhat a vessel of 100 tons' burden lats a dranght of no more than 3 or 4 feet. This heaviness of the water prevents the lake from being much aflected
by storms, which, from its extreme shallowness, womblethorwise rember its mavigation hangerons, A grale of wiml raises the waves but a few feet: amel, as soon us the storm has paseed, they subside. It is an old opinion that the waters of this lake are too salt to support animal life. No fish, certainly, are fommd $i_{n} \mathrm{it}$, but the smaller class of \%opphytes are met with in considerable numbers. The islands in the lake, until lately, were barren aud umiuhabited; lout the largest has been recently colonised, noll settlements on the rest have been propusent.' (Geug. Jommal, x. 7.)
On the le, side of the lake is the village of Shishowan, the restlence of a Persian prince, Malik Kasim Mirza, a brother of the late slonh, who has adopted in every particular European habits and jursuits. Ile has built a palace in the European style, near which he has established malbery grarilens for the culture of silk, a farm yard, a glass work, a pottery, looms for weaving cotton, silk, and worsted qooms, and various other l:inds of manufactures. Ihe has also built a vessed of 100 tons, which he employs in trading on the lake; on which, also, be conitemplated the introduction of steam mavigation. (See Rawliuson in (ieos. dourn., x. $\mathbf{a}-5$. )

USIIAN'~ (Fr. Ouessant), the most W. of the islamde ofl' the coast of lirance, forming a portion ol a group near the W. coast of Britamy, dép. P'inisterre, in lat. $18^{\circ} 9 x^{\prime} 8^{\prime \prime}$ N., long. $b^{\circ} 3^{\prime}$ W.; 26 m . WNW. Brest. Its area is 30 kilometres in eitenmfureuce, and it had a pop. of 2,391 in 1861. The island is ditlicult of aceess, lut is tolerably fertile. allording pasture to a good many sheep and hurses. It has a village. several hambets, an old castle, and a small harbour lieguented by fishing logats.
sir Edward Lawke totally defeated a French flect, muler Almiral Comilans, ofl the comst of this isham, in 1759 . Wwing to the violence of the weather, two of then British ships acecidentally got inhore and were lost. At a later periond, on the 97th duly, $177 x$, an imbecisive action took place ofl the islam, between the English tleet muler Admiral Keppel, who had been second in command in the former action, and that of the Frenel muler Connt d'Orvilliers.
USK, a parl. and mm, bor., market town, and par. of' Emeland, hund. Usk, eo. Mommontl, on the Tisk, mearly in the centre of the eo., $12 \mathrm{~m} ., \mathrm{SiW}$. Mommonti. 'The modern bor., which is more extensive than the ancient, has all area of 110 aceres, with a polp, in $1 \times 61$, of $1,5 \%$. The town is neatly, but irregularly built, the honses being mostly detaehed and interspersed with gardens and urchards. The chorch, which belonged to ant andent priory, appears to have been crected in the Norman period. It was origimally ernciform, but has been very much altered; the sipure embattled tower, mow at its li. enul, seems to have been formerly in its centre: its interior contains little worth notice. Here, also, are chapels tor Imbenendents, Wesleyans, and R. Catholics. Over the marketphace is the town-ball, a handsume hablding, erected at the expense of the lobe of Beanfort; attached to which is a lock-up house for the cosstorly of prisoners till they can be conveyed to the co. grab. The educational establishments comprise a free grammar school, fomnded and endowed in 1621 , to which a writing school has since been attachelf; a mational school for both sexes, supported by volmotary contributions; and almsJomses for 24 immates. Near to the latter are the remains of the ancient priory previously alluded to.

The earliest clarter of the bor. dates from 1398 , but it has not been governed for a long period by
this or any other eharter. The loeal authority is vested in i portreeve, chosen annually; a recorder, 2 bailils, 4 constables, and an indetinite number of burgesses. It is associated with Newport and Nonmouth in returning 1 mem . to the 11. of C . Total electors for the three bors., 1,812 in 1 nin . Quarter sessions for the co. are held here, as well as a county court.

Usk is a place of remote antiquity, and appears to have formerly been of much more importance than at presecit. On an eminence raljoining the town are the extensive remains of its ancient castle, formerly one of the most considerable structures of its kind in the comotry. It cane through the Mortimers, earls of March, into the possession of the crown, and was the fitoourite residence of Richard duke of York, nephew of Jlenry VI, whose sons, Elwarl IV. and Richard III., were born within its walks. At a subsequent perion it belonged to the carls of Penibroke; and is now the property of the duke of Beaufort.

USKUP or SCOP1A (an. Scopi), a considerable town of European Turkey, prov. Macedonia, eap. sanjiak, on the river of its own name, a tributary of the Varlar, 110 m . NW. Salonica. Its pop. is estimated at abont 10,000 . It has a good inany handsome mosques and Gireek churehes; but its streets, though wide, are tilthy in the extreme. It is the see of a Greek archbishop, mind has some mannfactures of leather. $A$ 'rurkish garrison is stationed in its old dilapidated castle.
USTIUG ( Feliki, or 'the Great'), a town of Russia, gov. Vologrla, at the contluence of the Jong and Sonchonia, tributaries of the 1)wina, about 100 m . from the White siea, and 550 mm , E. ly N. J'etershurg. 1'op. 8.359 in 1858 . The town has momerons tallow, somp, candle, leather, and tile fastorion, with saw-mills, and some jewellery and silver worka; lut its trale is chiedly in corn, larel, linen, ship timber, and sail eloth. Its merchants trale with the Siberian towns generalle, as far as Niachta, and a large ammal fatir is held here on the sth July:

D'lall, a central region of the $U$. States, arectel into a territory in 1850, having N. Oragm, F. the crest of the liocly Mountains, s. the pirrallel of the $37 \mathrm{th}^{\circ}$ deg. of N. lat., and W. Cali-
 sive of lulians, 88,193 in 1863. It is for the must part momitainons. hit it also contains a considerable extent of forest and cultivable land, especially alones the hanks of the Colorado and its attluents. In many parts, however, it is still wholly umexplomed. It inchudes the (ireat Salt Lake, on the E. side of which is a settlement of Mormons, or '1atter lay saints,' comprising almost the whole white inhabs, of the territory. The absurdity of their temets occasioned their expmsion from the other parts of the Union, nad the violent death, or, as it is called, martyriom of their prophet, Joe Smith. Here, however, they fomm a secure asylum, and their numbers are rapidly increasing. The governor and secretary of Utah are appointed by the presilent of the Uinited states for a term of four years, but their commissions are at any time revocable by the appointing power. The others are chosen muter territorial anthority. The legislative power of the territory is vested in a legislative assembly, composed of a council and a house of representatives. The comncil is compused of 13 members, elected by the people of the territory for two years; and the house is composed of 26 members, chosen in the same way for one year. The legislative assembly meets aminally at Great Salt Lake City, on the second Monday in Deeember, and its session is limited to 40 days. I'lie

U'ILCA, a town of the U. Sintes, nearly in the centre of the state of New York, on sloping grumad, gently rising from the Mohawk river, imd on the line of the lirie canal, $8: \mathrm{m}$. Niw. Albany: and $180 \mathrm{~m} . \mathrm{N} . \mathrm{l} \mathrm{y}$ W. New York. Pop. 32,530 in 1860. The town is regularly laid out; The streets, which generally cross each other at right mugles, are, in some instances, shaded by roins of trees; and the houses are, for the most part, handsome aba! sulstantially built. 'The liric camal, whice interent; the town, is crossel within its limits $\because$ sueral bridges, and here mites with the Chenange camal, which opens a commmication with the Susquelhamab. Utica has above a dozen chmehes for ditlerent religious bodies, some of which are large and costly editiece. It has also a lyecum, and various superior public and private acalemies; a mechanics' assoriation for the promotion of manutinctures; a voung man's association, with a library and realing room open to the publie; nu apprentices library, a theatre, and numerous religions and charitable institutions. Its situation, at the jumetion of the Eric and Chenango canals, has mate Litica the seat of an extensive and riphilly increasing commerce; and it has mumerous banke, insurance companies, and other joint-stock associations. Its manufactures are also extensive and varions; anul it is in the centre of a district which is well suphlied with water-power, and in which there are manulactories, with power-looms, for the weaving of cotton and other cloths, the spiming of eotton yarn, \&c., with saw-mills, grist, and thour-mills.
In 179. Utica was an inconsiderable village; and, so late as 1820 , its pop. amounted to only 2,172 : but the Eric camal having been opened in 142:3, its subsequent iucrease has been astonish1ingly great. It was incorporated as a town in 1817, and as a city in 185:2; aul in the charter by which it was erected into a city, the licensing of shops and houses for the retailing of ardent spirits was expressly prohibited.

UTRECH'T (an. Ultra-Trajectum), a city of Inolhand, eap. prov. of its own name, on the Ohd Rhine, by which it is divided into two parts, 20 in. S. by E. Amsterdam, with which it is comnected by railway. Popl. $\dot{0} 5,541$ in $1 \times 61$. Ltrecht is oval-shaped, and is one of the best situated towns in the kingiom, being built on an madulating tract of haud, more elevated than the surrounding territory, and having, in consequence, a Wrier and purer atmospliere. The country impediately around is fancly wooled, and well--jurinkled with farm-honses and cottages. lields of wheat and other grain are seen instead of unvarying green pustures; and the novel spectaele presents itself of rivers and canals flowing below the generall level of the country, and not above it on the rops of mommes. as elsewhere in 1lolimat. The approach to Utrecht, from Amsteriam, is very line, being through a long avenue of lime trees, which forms a favourite publie walk. The city was formerly defended by lolty brick walls; buit these are now broken and dimantled, and the old ramparts have been converted into boulecards. Since the separation of Ilolland and Belgium, however, some outworks have been thrown up.

Ui recht has an antipue uppearance, many of the honses being Juilt in the Gothicstyle: as in other Dutech towns, the material for building is mostly brick. The strects are more regular, the houses more modernised, and the squares more spacious, than in other towns of Hlolland. In some of the streets there are canals, or rather branches of the Rhine, for though they soon terminate in stagnant
panals, they have here some motion. The water is so far below the level of the thoroughiares, that the wharfo on its sides have doors opening to a kind of eaverns umber the streets, in whirh many of the prorer elasses lind habiations. The fine puhtic walk called the Mall, on the E. side of the town, about 2,0100 yards in length, is divided into nlleys ly rows of linden trees. The cathedral, lormerly a tine editice, has been so much dilapidated, that only the chom. transept, and tower remain: the last is wholls letached from the other parts, leaving rom for a wide strect on the plate tiormerly dexupied by the nave. It must have been originally larger than York Minster, but less elegant, ocing mostly constructed of brick. The transepts are slum up, and the only portion at prosent in use is the choir, titted up in a phain manner for the I'reslyteriam service, though it has some tine monnments. The tower is a huge spuare structure, $3 x 8$ ft. in height ; and from its summit the riew extends over a wide extent on' comatry, comprising many cities, towns, and villages.
Ditredit has a celebrated university, finumded in 16:36 at the exprnse of the eity, which ranks next to that of Leyden: it has 5 faculties and $1: 1$ professors, and is attended by about tive stulents. The miversity luildings have no outwarl show, but they comprise a valuable library, a pretty grow miseum of natural history, anil extensis: eollections in anatomy and pathology, expecially one of beantifully-executed models in colonred wax. This city has also acquired distinction from the number and excelleme of its sulperior selowh. It has a tribunal of commerce, an anademy, founded in $1 \bar{a} \times$, which gives prizes for the best memoirs sin scimititic suljeerts, a branch of the Society of Prublie ciond, nul a mint, the machinery of which is partly wrought by airprossure.
Utrecht, being in the centre of a populous agricultural district, is more bustling than the smatl Duteh cities in general. It has considerable manufactures of eloth amd other woollen stulls, velvels, linen fabries, silk twists, fowlint-pireses, and pins, with blemeling-grounds, sugar and salt relimerics, brick and tile works. The tamons act, called the Union of Litrecht, declaring the independence of the seven United l'rovinees, was signed here on the 2!nth of Jan. 15:! ; and the treaties of Uirecht, which terminated the war or' the Sumish sucesesion and gave peace to Burope, were conchuded here in 1718 and 1714. Among other distinguished individuals, fope Adrime YI., the preceptor of Charles V... was a native of this. city.

UTRERA (an. Iliturye Verioulum), a town of Spain, in Andalusia, prow, Sevithe, cap. distr. om the railway from Madrid to Codiz, 11 m , s.E. Seville. 1'op. 12, 141 in 185\%. Etrera stands in lhe midst of a vast phain, that may be comsiderent the tirst step from the marshes of the Guatalyuivir towards the Remda Mountains, 1:2 m. distant to the E. $\Lambda$ slight mond, that rises in the centre of the town, and is cmbraced ly an extensive cirenit of dilapidated walls, donbthess oflered the induecment to buila a town here: and these walls, some parts of which are very lofiy, and in a tolerally perfect state, appear to be Ewnan, thugh the castle nad its inmediate outwork are Monrish. The town is large, and mot walled in; the strects are wide and clean, and a pleniful stream, remarkable as heing the only rumbing water within several miles, rises near, ind traverses, the phace. It has a spacious square, 2 par. churches (one of sintgular architecture), varions eonvents aud huspitals, a good town-hall, prisen, and cavalry barracks; and near it is a convent, resorted to by a qreat comcourse of devotees during a festival which lasts
eight days from the 8th of September. The bulls and many of the modern houses are handsnme bred in the vicinity are the nost ferocious of any und substantially buitt. The market-honse, in Andalusia, and a considerable trade is carried on here in cattle and horses; it has, also, some manufactures of hats, soap, starch, wax, und leather. In its vicinity are prodnctive salt springs.

Utrera is an important military post, being at the divergence of several cross-rmils. The lireneh, When advaneing upon Carliz in 1810, made strenuous eflorts to reach it before the Spanish troops under the Duke of Albuquerque ; but, being anticipated by the latter, Cadiz was prevented from falling into their lunds.
UTTOXE'IER, a market town and par. of Fingland, co. Stafliord, lumd. Totmonslow, near the bove, 17 m . SW. Derby, and 134 m . NW. Iondon by Midland railway. Pop. 3,6-5 in 18tit. The towi stands on a hill sloping towards the river, and consists prineipally of three streets, diverging from the market-place in its centre. With the exeeption of the tower and lofty spire, which are ancient, the church has been rebuilt; the living, a rectory, is in the gift of the dean and canons of Wiudsor. Here also are several dissenting chapels. It has a free sehool lor 14 boys, founded in 1588 by Mr. Thomas Allen, a native of the town, celebrated by Seden, Camden, and others for the extent of hismathematical and antiquarian learning; a national school supported by subscription; almshouses for 12 inmates; and a fund for the apprenticeship of poor children. Petty sessions are held weckly by the co. magistrates. The hardware manufacture is carried on to some extent, and there are numerous iron forges in the vicinity. Owing to the fertility of the surrounding cometry, especially the excellence of the pastures along the Dove, the market held here for agricultural prodnce, cattle and sheep, is one of the best in the comety. Its trade is facilitated by the Caldon canal, which joins the Trent and Mersey canal, coming within a short distance of the town. Market-day, Wednesday. Fairs, ten times a year, ehictly for cattle, horses, and sheep.

UNHHIDGE, a market town and ehapelry of England, par, of Hillingelon, co. Middlesex, himul. Elthorne, border of Buckinglamshire, on the Colue and Grand Junetion canal, and on the malway from Lomion to Oxford, 15 m . N. hy W. the former. Pop. 3,815 in 1861. The town is situated on a slight eminence sloping to the river, and consists mostly of one long street, with a smaller one on the road branching ofl to Windsor. The main strect is paved and lighted with gas ; erected in 1789 , is a brick building. 140 fect in length by 49 in width, supported on abont is) wooden colmmas. St. Margaret's chapel, built in 1447, is an irregular editice of tlint and brick in the l'ointed style, with a low square tower: the Baptists, Frienids, Independents, and Methodists have each places of worshig. Two free schools. on the Laneastrian system, are supported partly by volumtary contributions, and partly by annual subseription from the manor funds and market tolls. A school of industry was lounded in 1809 , and there are several other charitable institutions for education and the relief of the poor.

Uxbridere has one of the largest country cornmarkets in the kingriom. A great deal of flour is nade at the tlour-mills in the town and its innmeliate vicinity, and its millers and mealmen are in general as opulenc as they are respectable. Large guantities of malt are also prodnced in the town, the trade of which is greatly facilitated by the Great Western railway and the Grand Junction canal. It has also an extensive manufactory of implements of husbandry. The mumicipal govermment is vested in the hands of two constables, four headboroughs, and other offieers elected anmially. l'etty sessions for the town and several adjoining pars, are held every fortuight, and a court of requests for debts under $40 s$. once a month. The unsuceessful negociation between Charles I. and the parliament in 164.1 , took place in an old brick buidding called the "Treaty llonse," which has been converted into an inn. "Markets, Thursday and Saturday : fairs, four times a year.
UZES, a town of France, dép. Gard., cap. arrond., on the Auzon, 1: m. N. by E. Nismes. Pop. 6,242 in 1861 . The town is biilt on the deelivity of a hill, at the foot of which rises the stream which was anciently condncted to Nismess by the I'ont du (iard. It is old, ill built, and ill laid out. It was a bishopric in the time of the Visigoths, and the old episeopal palace, and the former residence of the clukes of Lzés, are the prineipal elifices; the last is a luge castle, inclosed ly high walls flanked with romad towers, and bearing a good deal of resemblance to the Bastile in Paris, clestroyed in 1789 . Uzés suffered much in the religions wars, when its bishop, elajnter, and most part of its inlulis., embraced lrotestantism, and destroyed their cathedral. It has a court of primary jurisdiction, a communal college, and manofactures of silk, losiery, coarse ; woollens and pasteboard.

## V.

VAL-DE-PENAS, a town of Spam, in New Castile, prov. La Mancla, part. Cindaut-Real, in a tolerably fertile phin, 112 m . S. by E. Madrid, on the railway from Madrid to Seville. Pop. 10, t t8 in 1857. The town is well built, the mansion of the Marquis of Santa Cruz, and the warehonse of the royal tithes, being conspicuons among many other good editices. The town is best known by the dry red wine proluced in its neighbenirhood, and lience called Val-de-Penas, which is in mach request in Matrid, and approaches in quality to some of the stronger Bordeans wines. The bread here is also of peculiar excellence. Some linens and soap are also mannfactured, and woollen stuffs are sent to the town
to be dyed. It has a large fair on the 7 th of Angust.
FALAIS (Germ. Wallis), a canton of Switzerland, in the SE, part of the confecl., between lat. $45^{\circ} 50^{\prime}$ and $46^{\circ} 40^{\prime}$ N., and long. $7^{\circ}$ and $88^{\circ} 25^{\prime}$ F., having N. the Bernese Oberland, NE Uri and 'T'essin, E. and S. Piedmont, and W. Savoy and the canton of Vaud. Area, 1, bif0 sq. m. Pop. $90,880 \mathrm{in} 1860$. This canton consists of the valley of the Upper Rhone, and may be deseribed as 'ain immense trongh, 70 m . in length, $1 \frac{1}{2} \mathrm{~m}$. in depth and 2 m . wide at the bottom. The monntains on each side are among the highest in Europe; they form two walls of rock, rising from 10,000 to 14,000 feet above the lhone; this valley may

therefore be considered as the deepest in the known world. On the N. side are the Alps, to which belong the Finsternarhorn, Jungfrau, Ilreitshorn, and other enormons peaks, while the s. Iomulary is formed by the great ehain from Monnt Blane to St. (rothird, including the Cervin and M. Rosa. At the upper end of the valley these two ranges mite. Sixteen lateral valleys, some of considerable extent, open into the main valley of the Lhone; and where they join it, the wiftli of the that part of the valley is increased. Thirteen of these lateral valleys are inhabited. 'Ihat part of the valley below Sion, formerly distinguisled as the las-Valnis, is a that plain, swampy and unhenlthy, where the heat of summer is intense, and millions of mosquitees, with intermittent fevers, eutaneons diseases, and cretiuism in its worst furms, ahoumd. Above Nion, in the Haut-Valais, the marshes disappear, and time pasturage and vinevards indicate a more favomed region. The Valais is remarkable as presentiug within the smallest known area all the different climates and kinds of vegetable products met with between Italy and Iceland. At the foot of the Bornese $A l_{\text {gis }}$ the vine stieceeds remarkably well, and very good wine is prodamed, thongh in its management the imhabs. are botli maskilful and slovenly. Indian ties, almonds, chostunts, and pomegranates grow with little or no culture along the banks of the lanom, and com of all kinds is produced at dillerent clevations. The cattle of the Vialais are inferior to those of most of the other swiss cantoms; lat the raring of stock is the primeipal branch of raral industry, the surplus produce in cattle and chaese being exported chietly across the Simplon into Lombardy. The poj, is much poorer than that of the liernese Oberland, which is generally attributed to two canses: first, that the land belongs to a few great proprieters, and the peasantry, beins merely tenants, feel but little interest in its improvement; and, next. the prevalence of the liom. Cath. religion, with which there is usially fomad combined in Switzerlatd moch ignorance and indolence. Iron, copper. lead, silver, cobalt, and small quantities of gold are met with, but mining industry is altogether negleeted. IIempen cloths, woollen yarn, and woollen cloths, with a few other articles, are mate, but these are almost the only manufactures. Next to cattle breeding, the trainsport of grook across the Simplon is the prineipal oceupution of the inlabs., for which purpose many males are bred. The mineral waters of llrieg and Lonéch are of some advantage to the canton, being resorted to by many invalids.

This canter is divided into 13 districts, called dizains: Sion (Germ. Sitten), on the Rhone, a town of 2,500 inhabs., a bishop's see, is the cap. The supreme power is in a diet, composed of four deputies from each dizain, chosen for two years by the dizain councils, which are elected by all the citizens above the age of 18 years. The presidents of the dizain are mems. of the diet by virtue of office, and the bishop of Sion has a voice in the diet equivalent to four votes. The diet meets amually on the tirst Mondays in May and November. The executive power is in a state commeil of five mems., elected by the diet, and Who are all re-eligible, except the grand-builli, or president, who is eligible only alter an interval of two years. Each commune has a court of primary juristiction, from which appeal lies to the district tribunals; the supreme court for the canton consists of 13 judges, nominated by the diet for two years, but always re-eligible. Io respect of education, the Valais is belind most other parts of Switzerland. The public reveme, derived chiefly
from salt and transit duties, amounted to $68,3,168$ franes in 1862, and the expentiture to 698,965 franes in the same year.

The inhabitants of the Bas- Valais are chiefly of French, and those of the Mant-Vulais, of (ierman descent. 'The Valais formed a part of the Burgundian, and afterwards the lrankish, dominions; it next became subject to its own connthishous; but, in 1032 , it was anmexed to the Germanic empire. It was allied, not associated, with the cautons that formed the Swiss confed. in the 14 the century. In 1 Ias it enterel the confed. as a cauton; but in 1802 was detached from it to form a separate republic under the protection of liranee. In 1810 it was incorpurated with the French empire as the dep. of the simplon, and in 1815 it again became a canton of the eonfed., in whish it holds the 20th rank, contributing $1,2 s 0$ men to its army, and $!1,600$ franes to its treatury.

VALIDIMA, a town and harbour of Chili, prov. of same name, of which it is the cap. The town, on the river Calacutta or Valdivia, about 16 m . from its mouth, is an insignificant assemblage of woolen huts, and was. for the most part, ruised by the earthquake of Nor, 7,1837 ; but the harbour is probably the tinest, as it is one of the most strongly fortition, in the lacific. it is in lat. $39^{\circ} 53^{\prime} 20^{\prime \prime} \mathrm{S}$., long. $7^{\circ} 033^{\prime} 24^{\prime \prime} W^{\prime} .$. and consists of an astuary, formed by the Valdivia amd several smabler rivers, entered ly a narrow stritit, the shores of which are lined hy numerons batteries, monuting, in all, nearly 130 pieces of comom. Ships of the lime ride liere in perfect safety; the depth of water, in the centre of the bay, being from 6 to 7 fathoms, and close to the sloore 5 fathoms. During their struggle for independence, this valnable station was etiptured, with a very inferior Chilian torce, by Lord Cochranes, on the 3 rd of Fel., 1820 .

VALENCE (an. Julia Valentia), a city of France, cap. of the lep. Drome, on the thone, liere erossed by a handsome susiension bridge, is mm . S. Iyons, on the railway from Layons to Marseilles. Pop. 18,711 in 1861. Valacice lies pleasantly on the left bank of the river, surrominded by a fortile conntry, abounding in mulberry, almond. and other fruit trees. Opposite the town, a emical hill rises flose to the lhone, and abont a mile beyond, a long range of vine-covered hills rums paraliel with the river, producing the different species of St. I'ray. The town is enclosed by an old wall tlanked with towers, and entered by several gates. It is irregularly laid ont, but is well built: aud lans latterly been mond improwed, both in its houses, a large proportion of which are of stono from the quarries of sit. l'eriy, and in respeet of cleanness. It has several public squares anil promemades, as the Champ de Mars, planted with trees, the Places d'Orleans amd anx Cleres. The eathedral or chureh of St. Apollinarius is a buikling in a degraded lioman style. It has a large square tower of four stories, and in the interior is the tomb of Poge Pins VI., who died at Valenee, in 1799, with a buit of that pontiff by Canovia, and some fine paintings by A. Caracei and other artists. Near this church is a private mausoleum, worth notice for its architecture. The harracks and eitadel, the old residence of the governor, the court-ionse, prison, public library with li, 010 vols., and theatre, are anomg the prineipal builangs. Near the town is the polygon, a ground for the artillery-school practice.
Vuluce is a bishop's see, the seat of a court of primary jurisdiction, a commomal college, ch, of manulitures, societies of agriculture, commerce, and arts. It has two semidaries, a school of design, several asylums, a convent, a Latlieran
chureli, a vard for building boats for the navigation of the river, mmufactures of cotton gookls. silk organzine, gloves, hosiery, leather, and earthcownere, with marble works, lime and brick kilns, and sawing yards. It is a depôt for the wines, silk, and other produce of the S. of France, and hats six fuirs a your. It was anciontly the cap, of the Segalami, and beeame a lioman colony mader Vespasian, but it possesses mo limman antifuities. It formed successively purt of the kingdoms of Burgunly and Arles, and of the dominions of the counts of l'rovence and l'onlonse: it sulsequently became the cap, of the Valentinois, mad was governed by its own femdal mohles till ceded to Loulis XI., in 14f9. From the 4th to the libth century eight church enun-ils were hold in Valence.

VALENClA, a kinglom or principal livision of Spain, in the le. part of the peninsula. principally between the $3 x t h$ and 4 ist. deg. of N, lat., and $0035^{\prime}$ E. and $1035^{\prime}$ W. long., emasisting of a lour and comparatively narrow strip of comatry, extembing along the Mediterranean, which boonds it on its whole length on the band haviag inland from the N. rumbl the s. Catalonia, Aracon, New Castile, and Murcia. Area, $7,683 \mathrm{sq}, \mathrm{m}$, FaJencia is, upon the whole, one of the finest and most productive prorts of the penimsula. A grent propertion of the surface. particularly in the $N$. and W ., is mountainous and rude; bit the plain commery, which stretches along the eomst, and is watered by the Gumdataviar, Nuear, Morra, and Sugura is a kind of sarden, All travellers coincide as to its extreme beauty, and superior cultivation, compared with the rest of Spain. Mr. luglis, who travelled over many of the tinest parts of Eurupe, says, 'The view of the plain is superl). Thomgh not greener or more beantiful than the vale of Durcia, its immense extent and great populonsuess produce a more striking effeet. The plain is probably little less than 90 m . long and 20 wide: on three silles it is lomuled low the momintains, and on the Sth by the sea; and throughout the whole of this vast extent there is not an aere that does not broduce its erop) of grain, vegetables, or rice. 'Theolive, mulbery, ilex, algarroh, orange tree, ind palm, with all of which the plain is thickly dotted, give it the appearance of a union of garlen and orehard; but the populousness of the plain is even more strikng than its beanty allul fertility. It forms altogether a prospect that, in richmess and amimation, camot be equalfed in any other comery. The platin of Valencia produces every lind of erop congenial to the climate : two and three crops in the far are taken from it, and the greater part of the land retums 8 per cent. The rice crops are among the most valuable; they are ehietty produced in the territory of Albuferi, surrommling the lake of the same name. 'This was the property tirst projosed to he granted to the Doke of W'ellingtom, hut the eortes of Valencia oljected to it, and the estates near tiramada were substituted. The rice grounds produce only one crop in the year, but the return is from s to io per cent. The rice is put into the gromed in June, and cut in September; water is then let in upon the gromml, and when the stubble rots, the land is plonghed up, and no other manure is required. In Talencia nod its neighbourhood rice is in miversal use by all classes, but the produce is much greater than the consumption of the plain, and the surplas is exported to the diflerent purts of Andalusia. The whole produce is estimated at $12,000,000$ arrohas, one-half of which at least is exported, and the average price may he taken at
 other chief produce st the white nultherry, once the souree ol great riches, through the silk factories
of Valencia. 'The produce of silk from the plain is now computed at afout $1,000,000$ lise. a year; by far the greater part is exported in its raw state, at ath average price of from Ks , to 10 s . per lb . The export of fruit from Valencia is large, particularly of raisins; these are of two kinds, the museated and an inferior raisin ; Int neither is equal to the raisins of Malaga. The export of tigs, oil, ami vine from the prov, and liflerent ports of Valencia is also considerable, barticularly the lat ter, called Ben Carlo, exported from the town of the same nume. This wine is sent chietly to Cette, from whence much of it tinds its way, hy the canal of Langredoc, to Bordeaux, to give body and colour to the elarets.' Barilla, sugar-cane, satiron, and anised are also grown.
lint, despite the abundance of the prov., the peasantry, as is frequently the case in the most productive parts of Spain, appear to be in a very depressed condition. The huertu of Valeneia belongs, for the most part, to great proprictors. The Duke of Medina Creli has a revente of $7.5,000$ clollars a year from his estate there, and the families of V'illa llermosa and Beneveno have almost as much: und, in fact, there are very few prersous who cultivate their own land. fiml, though state taxes do not weigh down industry in this prowe, the Valencians are sulject to heavy leudal serviees and scignorial demands, levied in kitud on the produce of the soil, amonnting to 1-7th, 1-bith, and, in some places, l-4th of the crop. No great number of cattle or horses are kept, and the sheep, though numerons, vield wool of only a medioere quality. A gook many tmmies are taken on some parts of the coast by a method similar to that practised in the Neanolitan dom. Nereury, copper, sulphur, arsenic, urgentiferous lead, iron, and coal exist in many places, but are procured only in small guantities. Salt from sprines, marhle, and putters' clay are the principal mincral produets. Mamfactures are umimportant: woollen mbl linen falrics are indeed made in most of the towns, and silk groods in Valencia and Gamdia. but, at present at least, in very inconsideraole quantities. Cordage is mate from the fibre of the esparto (stipn tenucissima), aloe, and jmous, and tiles, similar to the Delft manufacture, soap, glass, and paper are made in small quantities. An active internal tratie is kept up, the N. supplying the S. (listricts with timber, earthenware, linen and woollen stutls, esparto, brandy, eattle; while the latter send to the former corn, fish, levant probluce, silk, and algurrobs; Valencia sends rice, silk, fruit, and tish to Aragon and Castile, for corn, wool, and eattle; and thax, hemp, silk, sil, rice, and soap to Mureia and Granada. Its foreign commerce is chictly with Italy, England, Franee, 1 lolland, and S. Anieria, from which comitries corn, salt tisl, ship-timber, pitch, tar, iron, tine linens, and other mannfactured goods are importel. Alicante, Valencia, Vinaru\%. Murviedro, Buncarlo, and Guardamar are the principal ports. Very difherent opinions respecting the character of the pop. have been entertained ly different travellers. Upon the whole, the Vilencians would appear to be an airy, lively, active. but efleminate people, very dillerent in manner from the Castilians; while their character forms apparently a still stronger contrast to the savare heroism of the Catalonians and Aragonese, 'Tlieir dialeet, though much akin to the Catalonian. is said to difler from it in retaining more of the Provengal.

This prov, was successively sulbject to the Carthaginians, Romans, and Visigoths, from whom it was taken by the Moors in 713 . They held pussession of it till 123x, when i was conquered by the Spaniards and ammexed to Aragon. It after-
from the plail 010 lhs. a year; in its raw state, 10s. per Ib. The rge, particularly ls, the muscatel $r$ is equal to the of tigs, oil, mul orts of Valencia he latter, callend wh of the same to Cette, from loy the canal of body and colour ne, salliron, and

Thei Catalomian, is more of the
$t$ to the Car rom whom it hey held posconquered ly on. It after-
wards formed a component part of the Spanish momarchy, but contimed to preserve its represemative body and its privileges, till the early part of the 18th century, when having, in the Whr of the sucession, taken purt against the Jourbon drnasty, it was, on their establishment an the throne, deprived of ita old eonstitution, and ubliged to conform to the laws of Castile.

Vabrica (an. Valentia Edetanoram), a city of Spain, cap, of the prov, of smme name, on the Guadalaviar, about 1 m , from its month, amillos m. Lisk. Madrid, with which it is comected by
 in a wide phain on the bank of the river which washes its walls, and separates it from its suburbs, with which it commmancates by ib bideses ol from 10 to $1: 3$ arehes. The eity is incarly circular, and about $2 \frac{1}{2} \mathrm{~m}$, romml, endosed by massive walls, with towers, aud t grates. The old streets are erooked, narrow, unpacel, and frequently destitute of thormghfare; lut some new quarters have berol laid out, with brom strects and squares, which are said to be well pated and well kept. Fillencia is well lighted, amd suarded by a patrol of watchmen, termed serroos. It is fimmished with phbie sowers of great solidity, which some allim were ewnstructed by the limans: and it hats many private wells, though only one public fombtain. Good quass faced with stome, ind planted with trees, lined the riser in the whole lemgth of the city. A time view is obtaned from any one of the bridses; the line of irregnam buildings following the enroe of the river, and the britges, one beyond another, with the great Moorish gates, give it an air of much granteur. Few citics, even in Spain, formerly had so many religions editices as Valencia: amoner these were reckoned no fewer than 27 convents for men and 22 for women, 16 ehurches, and $2 f$ ehapels and hermitares. The cathedral is of intermixed Greek and Gothic architecture, surmounted be a dome. It has numerous altars, a good dedof the marble, some bas-relicfs, and paintings by some of the first Sjanish masters. It is very rich in phate and relics. Some of the ehurches have domes, but the greater part tall, slenter turrets, with all sorts of pilasters and whimsieal devieres. In the multitude of sacred ediliees, some may be found that excel in particular parts, or strike by the richuess of their decorations; but all are overloaded with ormaments. In most, however, are tine paintings ly Juanes, Expinosa, labalta, Jamirez, Victoria, a pupil of Carlo Maratti, aud many other artists, all matives of Yalencia, The famons Supper of Kibalta is in the Corpus Clrisai College; and the same sulject by Juanes, a work reckoned among the tinest pictures of Valencia, is in the ehureh of Nt . Nieholas, which also possesses sundry other tine pietures.

The exchange, custom-honse, the temple, a palace built for a military order, by Charles III., the archbishop's palace, college of lians V., and several noble residences, are worthy of motice; there are 5 hospitals, one of which is a large establishment for medical treatment of all kimels, several asylmms, prisons, barracks, and a theatre. Valencia is one of those cities in which traees of Moorish cominion are the most visille: not in any splendid Alhambra or Aleazar, but in every day sights and eommon oljects. Gateways are oceasionally seen sculptured in marble upor Moorish desigus; stomes over the doors, or muderneath the windows, show by their ehiselled marks their ancient lashioners. All the Moorish tokens also distinguishing the pop, of Seville, Malara, and San felipe, are lonid in even greater distinetuess in Valencia.

The miversity, fombled in I41I, was formerly considered the hest in Spain, particularly for the stuly of medicine. The jrofessors, of whom there are ubout 710 , are frimes, except those who instruet in law: their salaries are from 50l. to 1301, a year. Lectures are delivered from Oet. Il to May 3I. Educhtion in the miversity is nearly gratuitons, and many of the students are in the halit of receiving portions of the food distributad daily frum the eonvents. The university lihmory has not more than lo, thon vols., bat its deticioncies are compensated by a good library in the areloLishopis palace, with attached cabinets of antigues, and medals, open for 6 hours daily. 'There are $\boldsymbol{i}^{6}$ other colleges, and many inferior academies: the rosal acarlemy of saint tharles, for the instruction of stulents in the fine arts, is the only institution in fhe city not moler the superintendence of the prists.

The manufactures of velvets, taffetas, flowered damasks, and other silk stulls, are said, at the emal of last exntury, to have employed upwards uf
 in the interval. 'J'he existingr manatiefures comprise woollen fabries, cmonlets, hats, table amb wher linen, gatues, artiticial thowers, leather, ghase, paper, with the. Vabemeia tiles,' used for the thoring of homes in all the cities of the so of sam. lhese tikes are at once cool, and highly ornamental; but they are far from chomp, those of the best quality being much more expensive than an egual extent al the most sumpthous carpeting. 'The port of V'ilemetia is at Grao, abont 2 m . distant. It is comnected with the city by a broad phated avenue, forming the favomrite poblic promenade around the city. 'The harbour is suitable only for luats, and the roarstead is exposed to the S. and sil. grales. The elimate, thongh hot, is agreeable and healthy; and the eity is a good deal resorted to by invalick. Society in Valencia apmars to difler little from that in other S. Sbaish towns. Many persons of rank and wealth reside hore, hut without any display. Jravellers bear testimmory to the agrecable vivacity, ready wit, frechom finin altectation, and obliging elisposition of the inhats.
Valencia was held by the Moors from bia:; lont taken from them, in 109.l, by the celebratiol Cin, Iniz de Diaz de Bivar. After his death it was governed by his wilow Ximene, under whom it sustamed suecessfully one siege arainst the Moors of Cordova, but ultinately eapitulated to them in 1101. It was retaken by James I. of Aragon in 1238, and peopled afterwards with Catalans and French settlers. It was taken by the French under Suchet, in 1812, and held ly then till Junc, 1813.

VALENCLA (NUEVA), a city of Colombia, repub. Vencancla, prov. Carabobo, in a plain about 3 m . W. of the lake of Talencia, and is m. A , by Jis. Puerto Cabello. Pop. estimated at 16,000 . It covers a large extent of ground, most part of the houses having only a ground-floor. The streets are very broad, and the market-place is of creat size. The entrance to the town from the N. is hy a good bridge of three arehes, huilt of stone mid brick: near which is the gloriata, a large circular space where the indabs, meat in the evening lor dancing and festivity. Ilumbohlt says, 'It is regretted, and jerhaps justly, that Valeneia has not become the 'apital ol the comintry:' Its situation near I'uerto C'abello, with which it is said to communicate ly a gond road. wives it many alvantages, and it is a phace of brisk traliic. Sut it has the great disadvantage of being infested with white ants, whose exeavations molorgromed at certain seasons become very daugerous to the buildings of the city.

The Lake of Valencia, or Tacarigan, is !arger thun the Lake of Neufchâtel in switzerlam, Dunt in its general form it has a nearer resemblance to that of Geneva, which is about the same height above the sea. The opposite lanks of the lake also offer a similar contrast. Those on the S. are desert and almost minhabitel, and a sereen of ligh momentains gives them a gloomy and monotomons appearance; the N . shore, on the contrary, is checrful, pastoral, and set oft with sugar, colfee, and cotton phantations. There are numerous islands in this lake, the waters of which are gradually diminisling. Its mean depth is from 12 to 15 fathoms; where deepest, it is mot more than 40 fathoms. It abounds with fish, and is used for the purposes of commerce; but it is a singular fact, that for more than two centuries none of its navigators ever thought of using a sail. An Enerish traveller, of no very distint period, says that a mative of Biseay, settlet in Valencia, had then tirst tried the experiment, 'and the circumstance formed wo small part of the conversation of those who were assembled at the pulperia of La Cabrera.'

FhbicilenNEs (an. Vulentiana), a town of Frince, thép du Nord, cap, arromb; inn the sichelett, where it is joined by the Rhonelle, 28 m . Ssit: Lille, on the railway from Paris to Brussels. Poph 24,966 in 1861. Yalencienmes is a secondary fortress, and has a citadel constracted by Vaubai. It is tolerally well built, but ill laid out ; a part of it was much damaged by the severe hombardment it receivel in 1793 , the marks of which are still visible. The sidelelelt intersects the town from N. to $\mathbf{S}^{\text {., dividing it into two unequal parts. }}$ There are several public buildings. The townhatl, built in 1612, is uf mixed arehitecture, highly decorated, and contains some fine apartments; thic 2.1 story is ppropriated to a pictare gallery, in which are some works by lubens. Attached to it is $n$ belfry, constructed in the 13th century, 180 ft. in height. The lower part of a handsome theatre serves for a corn-hall. The general hespital, fombled in 1ziol, is one of the largest estathishments of its kind. The public library has 18,000 vols.. and the museum of natural history is rich in collections. There are military and fomdling lospitals, barracks, magazines, an arsenal, a colllege, and an acadens of the fine arts fomuded in 1782. Besiles Valenciennes lace, a good deal of fine cambric. cotton yarn, hosiery, and blankets, irom plate and nails, starch, saltpetre, linseed oil, chicory, earthenware, and toys are made in the town, which has also cotton-printing works, tanneries. distilleries, and salt retineries; and a considerable trate in wine, brandy, oil, soap, timber, and charcoal.

Valencienves has sustained several sieges, the most memorable of which took place in 1793, when it was invested ly in Anglo-Anstrian army under the Duke of York, to whom it surrendered at the end of six weeks, during which the besiegers sustained great loss. It was retaken by the French from the Anstrians in the ensuing vear. Among the many distinguished natives of this town have been-Froissart, the historian of clivalry, Watteau, the painter, and D'Argenson, the minister.
VALERY (ST.), usually ealled St. Valery-enCaux, a town and scn-port of France, dép. ScineJufiricure, cap. cant.; on the British Channel, 832 m . NW. by N. Roucn. Pop. 4,710 in 1861. lts port, enclosed between two cliffs, is small, and not fit for the accommotation of vessels of considerable burten. St. Valery has manufactures of soda and cottom thread, with some trade in the exportation of lioucn fabrics, and in the importa-
tion of timber, dried fish, and corn. Maly of its inhats. are engaged in the cod, herring, and mackerel tisherics, and ther enjoy the repatation of being good scamen. The country round is mostly in pasture.
St.Valery-sur-Somme is another sea-port town, on the N. const of France. dep, Somme, 11 m , NW. Abbeville, on a branch line of the railway: from Amiens to lhoulognc. Prop. $3,45 t i$ in $146 i$. Its port is mach larger than that belougiag tothe above town, and admits vessels of from? to 4 (19) tons. It has large salt magarines, with manofactures of cordage and sail-cloth, and a brisk general tratlic.

VALB'I'A (LA), See Malita.
VAlıabolio (an Pintia), a city of spain, cap. prov: and dep. of its own mane, in Ohl Chatile, on the l'ismerga, where it is joined by its trilutary, the lsqueva; 78 m . SW . Burgos, and 109 m . NW. Matrin, on the railuay from burgns to Madrid. Pop, 39,519 in 1857. The city stands in a plain bomded by limestome hills, and is surromulded ly an old wall. whicheneloses a large extent of ground. It is full of edifices, which, chring the reigen of Philip. III, who made it lis constant residence. were the palaces of his great otlieers and nolility. Being abmomed by their ownes, who fullowed the court in all its different emigrations, they are fallen to decay, and exhibit a picture of the utmost desolation. The private houses are ill-huilt and ugly. The great sfoure, sume strects built upon pirticoes, and many colloges and emvents, are still gramd, and denite something of former magniticence; but. in general, Valladolid has the appenrance of having been run up in a harry to recrive the comrt, and as it it had been meant to relbild it afterwarts, at leisure, of more durable matrerials than bad brick and mul, the composition of most of its present honses. Upon passing the tirst gate from the Madrid roal, the traveller enters the campo gromede, a spacions area surromele by 17 convents, the scene ol' repeated auto da fé.

Valladolid has numerous churches, comvents, chapels, culleges, hospitals, and asv.lums, though, except some of the religious buididigs, none deserve mueh notice. The eathedral, an untimshed ellifice, built by Juan de Herrera, at the expense. of Philip II., was intended to have been one of the most sumptuous in Spain; but it is lieary and inelegant. The church and convent of st. Benito are handsme, but the chureh of st. Paul is most worth attention, from its general elegance, and the finish of its bas-reliefs and urnaments, which, after a lapse of 300 years, seem to have suffered little by their expisure to the weather. The royal clancery is a large and tine structure in the Tusean order. The old palace, in which Philip II. and III. were born, is an utter ruin.
Yalladolit has a miversity foumded by Alunzo XI. in 1346: it was formerly distinguislied for its sehool of jurisprutence, aud contimued to flomish till the end of last century ; and it appears, even now, to be more freqnented than Salamanca. Anong the colleges of the city were one for the Scotch and one for the English, both of which were well endowed. The school of the fine arts is privileged as an academy, and has a superior collection of models in sculpture, urehitecture, and painting.
Valladolid was formerly an opulent commercial city, but its manufactures of woollen stutls, lats, silk ribands, linen and cotton yarn, paper, liquorice, perfumery, carthenware, and leather, are now little more than suldicient for the supply of the town: its trade, however, would most priobably iucrease were the Pisuerga made navigable

Yallatolid is the see of a bishop, under the archlishop of Churgos, the residence of a captaingeneral and military intendant. It was incorporated as a city, and made a bishop's see by Philip II.. and was the residenee of the court from his time till that of Philip IV., who removed to Madrid. Colmmbus, the diseoverer of the New World, expired in this eity on the euth May, 1506.

Vallabohid, or Mechoacan, a eity of Mexien, cap. intend. of same name, in a tine valley, 120 m . WNW. Mexieo. Its pop., early in the present century, was estimuted at 18,000 , and is probatly abnut the sume at present. Mr. Ward savis (Mexico, ii. 374), 'I know few places the appronch to which (from the N.) is so tedious as that to Yallatolid. For more than two hours yon see the city apparently below yon, while the road continues to wind among the surromding hills. At length a rapid descent eonducts you to the plain, where a long eauseway, built across a marsh, forms the entrance to the town. The suburbs are poor and insigniticant, but the high strect is fine, and the cathedral, standing alome and open, has a very imposing effect. The view of the town from the Mexico side is leautitul: gariens and orchards form the foreground; while the lofty aqueduct, ereeted toward the end of the last century, the gorgeons churches, and a bold range of mountains behind, fill up the remaining space. Nearly all the public elitiees, not immediately connceted with the government, are due to the munitiecnce of the bishops, most of whom have contributed to eurich or adorn the town. The cathedral, hospitals, and aqueduct are all the works of the elhurch. The first is a magniticent building and wealthy, though despoiled of much of its treasures during the revolntion.' Valladolid has a handsome public promenade; and its climate is temperate, as it stands nearly $6,400 \mathrm{ft}$. abuve the level of the sea. Itarbide, the shortlived emperor of Mexico, was a native of this city.
Valognes, a town of France, dép. Manche, cap. arroud., on the Nerderet, 12 m . SE. Cherbourg, on the railway from Paris to Cherbourg. Pop. 5,812 in 1861. Valugnes is a well built town, and has a handsome communal college and pablic library, with 15,010 printed volumes: mamufactures, on a small seale, of carthenware lace, gloves, and leather; and some trale in provisions and shell tish for the Paris market. The ancient Roman town Alauna was situated in its vicinity. In the middle ages it had a strong eastle, which, however, has been totally destroyed. Tourneur, the translator of Shakspeare, and the celebrated anatomist Vieq-d’Azyr, were natives of Valognes.
VALPARAISO, the primeipal sea-port town of Chili, prov. Santiago, on the Pacitic, 60 m . NNW. Santiago. Pop. 25.000 in 1856. Valparaiso is inconvenient and ill-built, but its appearanee from the sea is imposing, being built, somewhat like Hastings, at the foot of a precipitons ramge of hills. It eonsists chietly of a straggling, long street, or rather terruce, for it is built only on one side, with some narrow and ineonvenient thoroughfares leading ont of it up the several ravines. In one of these is the plaza, a small triangular space, where the market is hehl; and near it are the prineipal chureh, the Dominiean and Francisean chapels. A little to the N. is the castle of Alltonio, mounting about a dozen guns; and between.
Vol. IV.
it and the plaza are a number of how buihdings and sheds, trimed the arsenal. In the N. quartir of the town, in a recess larger than the other ravines, is a collection of marrow lanes and nean honses; and many isolated dwellings are seattered about amonig the hills, the only ateess to which is hy winding foot-paths. 'ine suburb Almemiral, on the sandy shore to the S., is more regularly laid out: the honses liere, where there has beci more rom to build, consist mostly of a gromd-floor ouly; but in the town of Valparaiso all have stories alove the groumd-flow. They are in peneral painted of lively colours. About the middle of the Almendral are the ruins of the chureh and eonvent of La Mereed, which, like many other huidings in Falparaiso, was destroyed by the earthquake of $18 \times 2$.
The bay of Valparaiso is open to the N., hat sheltered by heighits on all other sides; and the holding promad being mostly a stind elay; oflers a secure anchorage, execpt during N. gales. Opposite the enstom-honse, 100 yards from the shore, there are 5 tathoms water, which suddenly deepens to 10 and 20 fithoms; at the distance of E 00 yards, and in the centre of the hay, are from 26 to 30 fathoms. The harbour is defereded hy the easthe, and 2 forts at the N. end of the Ahmemiral, and another firt inland. There is mo mole, own :aty facility for lamding goods, exeept ly hameles, which are meored to the shore, atmat atross which all packages are brought on men's shoulders; or hy beats, which, however, can ham in all weathers in the Fisherman's Bay, between the castle and Fort St. Antonio. There are generally ateonsiderable number of vessels in the bay, the greater part British and American; and Valparaiso contimes to be the eentral denft tior the trade of Chili. Large quantities of corn are shipped liere for Calla and l'anama, especially the former. Whent, tallow, hides, eopper, the precions metals, indigo, wool, and sarsaparilla are anown the principal exports. The market of Valparaiso is well sulpplied with meat, pmiltry, tish, bread, fruit and vegetables, at very monerate prices and of rood quality; and its elimate is generally agrecable.
VAN, a city and eonsiderable lake of Asiatic Turkey, pach. of same name, the city being on the E. Gank of the lake; $140 \mathrm{~m} . \mathrm{N}$. by E., Mosul, and $140 \bar{m}$. SE. Erzeroum. Pop. estinated at 50,000 . The inhabs. consist of Thrks, Kurls, and Armenians. The town is situated in a tine plain. covered with gardens, nearly 5,500 feet above the sea, at the sil. fout of an isolated ruck, on which is its citadel, It is inclosed with donble walls of mud and stone, having large rumbl and small sfuare bastions, and is tarther deffendet, though not on all sides, by a diteh. The town has 2 large Armeuian churches, 4 large mosques, several baths, and caravanserais. The great boast and dependence of Van is its gardens, which cover an extensive area between the city und the mombtains. They comprise vineyards, orchards, melon-grounds, and fields. lii summer the inhabs, of the town mostly reside in the gurdens, the roads in which being lined with honses, the whole appears like an extensive village. Streams, bordered with willows, run through the main avenues. The eastle on the NE.. side of the town is built on a high and alrupt limestone roek, and, if the works were in proper repair and ellieiently mamed, would be all litut impregnable. There are some very extensive excavations in this rock
The trade of Van is inconsiderable. Ahoat 5010 looms are employed in manuficturiug coarse calicoes from cotton imported from I'ersia, mostly fur home consumption, though some are sent to lithis to be dyed and exported. Almost the only

D D
other articles of export from Van are fruits, wine, and grain, the produce of the surromming gardens and tields. livery person of respectability has a honse in town, with a conntry honse, an orclard mad vineyard, and perhaps a few tiedds.

Van is very motient. 'I'he walls of the castle are in part Cyclopenn, and many inseriptions in the cmeiform eharacter have been diseovered in the town and its environs. It is even allimed that the castle was originally fonnded by semiramis; but it is needless to say that there is no evidence by which to support this very improbable statement. Timour Bec, or Tamerlane, who took Van towards the close of the 14 th century, is said, by the l'ersim writers, to have endeavoured, though metlectually, to destroy its ancient monnments.

The Lake V'on, the Arsisa of l'tolemy, is of a very irregular shme; grentest leurth, NE. to SW'. 70 m . ; qreatest brealth abont 28 m . Area estimated int 1,000 greogr. sif. m. (Geog, Journ., x.) It seldom freczes to any distance from the shore, exeent at its NE. ent, where, beiug shatlow, in severe winters, it miy be crossed on the ice. It has several islands, on one of whieh is an Armenian monastery. It is movigated by 5 or 6 crazy boats, which are sometimes employed to eonvey cotton cloths to Tadvan on their way to bitlis, briuging hack grain and timber. Front the nany wildiow that frequent it, there is no dondet that tish abomol in the lake; the tishery, however, occuphes very few hamis.

VANCOI:VEIS's lSlaND, a large island belonging to Great Iritain, on the NW. coast of N . America, being the most sontherly of our possessions in that quarter. It stretelies in a NNW. and SSE:. direction, between the $48 t h$ and 5lst degs. N. lat, and the 123 rl and 129 h h deqs. W. long., being about 300 m . in length, by from 40 to 50 m . in breadth. It is separated from the continent by what is in most parts a narrow chaunel, called on the S. the Straits of Fuen; in the middle where it is the widest, the dulf of Georgia; ant, on the N., Queen Charlotte's Sound. The island was originally supposed to form part ol the continent of North America, or New Albion, as it was then called. In April, 1792, Captain George Vanconver of the royal navy entered the Straits of Fuea, and, surveying and exploring as he procecded, passed into the ocean by a passage eonsiderably to the northward, and arrived at Nootka Sound in August of the same year, having thus circumnavigated the land, and determined its separate existence as an island. He named it the island of Quadra and Vanconver out of eompliment to Señor Quadra, the Spanish commandant at Nootka. The former name has, however, fallen into desneande, and the island is now generally known and recognised as Vancouver's Island.

The mountains are generally eovered with pine, but rise, beyond the reach of vegetation, to the height of 16,000 feet. The soil is fertile and capable of successful cultivation. Coal, good in quality, has been found at many points, and has been worked to a considerable extent at Nanaimo on the east coast. The climate is beantiful, more especially from early summer to late autumn, or what is commonly called the Indian summer, somewhat resembling that of the south-west of England without the rain.

The eapital of the island is Victeria, situated at its south-castern extremity, a flourishing town of 7,000 inlabitants. The number of the aborigines has been estmated at about $\mathbf{1 7 , 0 0 0}$. Victoria is a free port for goods open to the commerce of all nations: a small due is levied upon shipping by way of an entrance and clearance fee.

VAN DIEMEN'S LAND
The revenne of Vancouver's Inland is raised hive direet taxation, a tax of one per cent. "porl the: assessed value of real cistate, and specific tax ont certain prolessions and trades being imposed. The taxes levied in 1863 mind their anounts were as follows:-

| Renl Estate Tax |  |  | ¢8,83t |

Till 18.19, Vaneonver's Island was only eceasionally rearteal to by the sarvants of the Jimdsmis Dhy and l'uget's Sombl Companies; bit in that year a lease of the island was granted to the firiner company for 10 years. The imperial government, however, reserved to itself the right of rosuming it at the expiration of this perion, on certain conditions. Accorlingly, in 1859, it was made a British colony; Mr. Donglas, who hail acted as goverioor under the Hudson's Bay Company, was contirmed in that appuintment. The govirnor is assisted by an executive and a legislative conneil, nominated by the erown, anil be ant assembly of 15 members, elected by inlablitants possessed of a $1 \geqslant /$. reital ; or a freelohil of 201. acres of land, or of the value of 501 . In $1 \times 6.5$ there were 1,051 registered electors in the islaml.

VAN HILMEN'S LAND, or TASMANIA, an ishand and colonial settlement, belonging to (irent Britain, in the S. Pacitic and Eastern Oecmes, uff the S. extremity of Austrulia, from which it is separated hy Bass's Strats; lietween lat. $41^{\circ} 20^{\prime}$ aud $43^{\circ} 40^{\prime} \mathrm{S}$., and long. $144^{\circ} 40^{\prime}$ and $148^{\circ} 20^{\prime}$ E. It is shaped like a heart. Area estimated it $26,215 \mathrm{sa} . \mathrm{m}$. 1'on. $58,468 \mathrm{in} \mathrm{1861} \mathrm{being} 33,$, males, and 24,768 females. In 1804 , the total pop. 1 mmbered only 78 , of whom 68 males and 10 females. The country is in general hilly or mountainons. 'l'be momiains rise to 3,500 or 4,100 fit, not forming continuous ramges, as in the adjacent continent, but generally isolated paiks. The surface consists alternately of elevated table lands and fertile valleys, most part ol' it being tit either for cultivation or pasturage. Several considemable rivers water the colony. The principal we the Derwent and Tamar, formed by the tumion of the N. and S. Esk, all which rise towards the centre of the island, in about lat. $42^{\circ}$; the first running to the SE.., and the rest northward. There are several large lakes in the interior, one of which is 60 m . in circ. 'The coasts are very much indented, and abound with excellent harbours, The elimate is comparatively healthy, being apparently more congenial to European constitutions than that of Sydner. The winters are colder, but the country seliom suffers from those long-continued Ironghts which are the bane of New S. Wales, nor from toe much rain. Saudstone, limestone, und basnlt are among the prineipal geological roeks. Indications of coal have been met with, and iron ore has been dug up, some of which is said to yield as much as 80 per cent. of metal. Copper, lead, zinc, and manganese exist, but no mines have been hitherto wrought. The upper soil is usually sandy or argillaceous; or else consists of a rich vegetable mould.

There appears to be comparatively a much larger tructs of the named with lit mulers dearing plours limber llion wood, respect animal ypecies anong mumber sohous n!̣icen moiv ald race of in the be igno arts, as cmees. since tl years in the llass's

The winters fifom suffers from hich are the bine nuch rain. Sandamong the primons of coal have aas been duy up, s much as 80 per e, and mangancse itherto wrought. or argillaceons; le mould.
ely a much larger
proportion of gool soil than in Anstratia: liue trates of land are foumd quite down to the borders of the sea, a circumstance monsum in the lastnamed continent: and extensive tract, povered with luxuriaut herbage, and free from timher ur nulerwood, and which, consequently, require wis rlearing on the part of settlers prevously to being plomghel, are met with in all parts of the interior. Thimber, however, is by no means searee. The Hom and Adventure bay pines, and the black woul, aro peenliar to the comintry ; in must other respects the vegetnble products, as well as the animals, are similar to those of Austrulia, A species of panther, which commits murih have naonge the tlocks, and kangaroos are found in great mumbers: thicre is, however, no mative dog. Priisumoms reptiles are less numermis than in the aljacent continent. The aloriginal imiabitants, now almost extinct, appear to helong to the negre race of the E. Archipelago: they seem to be sumk in the lowest depths of harmurism; and are said to be ignorme even of the most useful and obvinus arts, as lishing, and the construction of the rudest canoes. Their numbers have rapilly decreased since the estublishment of the whites, and a few vears since the greater part of those remaining in the colony were removed to Flinders' lislind in Hass's Straits.
The settled portions of Van Diemen's land stretch across the interior from the N . to the sti: const along the comrses of the Derwent, Tamur, aul other rivers. All the W. and NE. parts of the island are not merely masettled, but harilly ereu explored.
From the settlement of the enlony down to the 31 st December, 1862, the extent of hund granted aund sold to settlers amonuted to $3,335,289$ acres, $1,814,291$ aeres being at the same time held under depastmring liceners. The plan of selling the mnapproprinted land by anction is now adopted in this colony, as in most others belonging to lingland. The following table shows the extent of laud under the various kinds of crops, and the prolluce thereof, in the year 186:2.

The great articles of export are wool, whale wil and whatelume, and bark. The imports comprise every ileseription of mamuactured poots, colotial prohluets, wines, arming utensils
The constituiom of 'Tasmania was settled be loeal act (18 Vict. No. 17) ; by this act al legrislative conncil and honse of aissembly are constituted, ealled the • Darliament of Sian Diemen's Lamb.' 'The lugishative comaril comsists of 1.5 members, clected for 12 electoral districts. Fivert member of the legislative romucil holds his senit. for ti years from the day of his slection, at the expiration of which time his seat shall be vacimt. The eompetency of the council is not allieeted by vacancios, so lunir as 7 members remain, Nit juige of the suprome eourt can be a member ol the legislative conacil: 23 Viet. cap. 43. The fualification of members is :3 years of age, and a matural leom or maturalised sulferet. The qualilication fur electurs is the possession of a frembid estate of $50 \%$, manal value. The loonse of assembliy consists of 30 elected members, and there are $2 \cdot \mathrm{~d}$ electural districts, Any matural bern or naturalised subject can be elected, provideld that be is not a juige of the suprome rourt or minister of religion. The duration of the asambly is live years.
The set tled part of Yan liemen's l.and is divided into 15 districts. Hohart 'Town, ar lloharton, the eafh.. is in the district of same name, on the Der-
 in 1862 . The town eorers alont one su. ma: it stands upou the dedivities of two gentle hills, and is intersected by a the stream from the heights of the 'Jable Momatain, which tower abere the town on the W. to the height of :3,!3ib fert. The streets are wide, and intersect sach wher at right angles; and, having been from the tirst laid ont on a miform plan, it is hile with much greater regularity tham syduey, its honses are sulstantial, and 2 stories high ; it has some good public buildings, ineloding almout 20 phaces ol pablie worship, the new govermment homse, in the ( Sneen's Park, on the banks of the Derwent: and a quay, close to which vessels of the largest burien load and umloal. Ifobarton possesses one of the finest harbours in the workd. The Derwent, which here forms a tine shect of watcr, is mavigatle for shijs for 3 m . above the town, and continues to aftiond a safe passage for vessels of of toms as far as New Norfolk, 20 m . higher up, where a ridge of rucks abruptly puts an cend te the narigation. The suburlss of Ilobarton are increasing and receiving much embellishment: villas are springing up in every direction. The principal settement on the N. sille of the colony is Lameestom, on the Tamar. about 40 miles from its month, and 105 miles N. by W. Iobart Town, with a pop. of $10,35!4$ in 1662 . The river is mavigable to it for vessels of 300 tons. The other towns are insignificant.
This island was originally discovered by the navigator Tasman in 1642, and subsequently received its name in honour of a governor of the Dutch E. Indics. It was afterwards visited and partially explored by Cook, l'urneaux, and D'Entrecasteaux ; but it was not ascertained to be an
indand till llass sailed thromgh the straits which lear his name in 179s. The lirst English penal rettlement was establishlied here in 180:1, and till 1sl:3 it was a pluce for tramportation from (iremt Britain and from New south Wales, of which colony it was a dependency. Transportation to New Sinth Wales having ceased in the sear 18.1, 'Tasmania, to which had heen amexed Norfork Ishand, breame the only colony to which criminals frum (ireat lititnin were sent; but this eensed in 18:33, when transportation to Tasmania was abolisherd.

VINNES, a town and sen-port of Prauce, dép. Morhihan, of which it is the eup., at the hentom of the Gulf of Merbihan: bis m. WNW. Nantes, on the railway from Namtes to Mrest. l'op, 1.1,5it: 1 in 1 siti. The town was formerly furtificed, anal entered hy six kates, five of which, with sume thwers, still remain. It is clustered aromed its cat hedral, and exergit one or two tolerable strects is irregularly and hadly built. The eathedral, reluilt in the lish mitury, is a massive, but locary edifice; in its interior, however, are some good nemuments und pintimgs. It has another chureh and several chatels, one of which, attal hed to the communal collyge, is of good architecturc. The prefecture is an ancient castle, and a convent has been converted into the residence of the bishop. There were formerly many monastic estabishments at Vames; bittheir buildings have now mostly received other destimations, ant one is appropriated to the Institution du Pire Piternel, which, besides buarding nud educatugg fif pour girls, has a great many out-seholars receiving primary instruction. 'Ilice elifice, now the theatre, has sersed at difierent perionds for the mectings of the states of Brittany and the parliament of liennes. Vanues has 3 hospitals, a comminal college, school of navigation, a polymathic society, established in 1826 , for the culture of the arts and seiences, a public library of 8 . (1)0 volumes, and manufactures of evarse cleths, linen and cottom yarn, and lace. Its port is small, and the entranee being shallow, it is fit only for yessels of small burden; on one of its sides is a phanted promenade, and on the other are slips for building boats and small craft.

It has been supposed that Vannes occupies the site of Darioriynm, the eap. of the Veneti; but the better opimion seems to be that the latter was abont 5 m . N. by W. Yames, at Locmariaker, where the remains of a circus and Roman road are still extant.

VAR, a maritime dép. of France, reg. SE., between lat. $43^{\circ}$ and $44^{\circ} \mathrm{N}$., and long. $5^{\circ} 40^{\prime}$ und $7^{\circ} 15^{\prime}$ E. ; having W. the dép. Bouches-du-Rhone, N. the Basses-Alpes, NE. the dep. of Alpes Maritimes, from which it is separated by the river Var, and E., and S. the Mediterranean. Area, 608,325 heetares. Pop. 315,526 in 1861. The surlace, particularly in the N. and E., is mostly covered with ramifications of the Alps, consisting of primitive or caleareous formations covered with a gravelly and arid soil. The dép. is, however, well watered, and on the banks of some of the rivers, as the Var and Argens, are some very fertile tracts. The Var, whence the dep. derives its name, rises in the dép. of the Basses-Alpes, about 6 m . SL. Colmar, and, after ruming generally southward, falls into the Nediterranean at st. Laurent, $3 \frac{1}{2} \mathrm{~m}$. SW. Nice, after a course of 68 m ., for abeut half of which it is navigable for rafts. The Esteron and Vesoubia are its chicf tributaries, no towns of much consideration are on its banks. Numerous lagoons and marshes border the eorast of this dep., which is generally abrupt, rocky, and indented with numerous inlets. 'The
armble landy are estimated to comprise $118,0,2$
 do.; and wastes, nisult 187,800 do. Agriculture is very backward, and the supply of eorn is inadequite for the consumpion of hall the pep, the pronduce in wine, wives, and fruits of varinets kinds is, however, considerable. Cnpers, ormages, lemons, chesmuts, and perfumery are among the ;rincipal expurts. (irasse is espoeinlly fambens for its essences and liqueurs; mad reser, jasmines, and other flowers are grown there mad clsewhero in large qumitities for their mumufacture. The furests comprise many cork-trees, and hottle curks are made in several jlaces. Kermes mil a little tolaceo are among the ohther products. Few horsw or centle, but a good many mules, are hred. Lamb, conl, copper, Irom, anil nianganese are met wifh, thongl very few mines are wrought. The tumy and anchosy tisiseries are of comiderable impurtance, and coral (ff rexol quality is tished uf on the const. Mannlictures of mo great consequenee; but silk twist, perfmery, somp, pipher, and lenther are produced to some extent. The dep: is divided into 4 arrond.; chicfis towns, Draguigman, the enp., Toulon, Brignolles, and Grasse.
VAliNAS, a town of Venezula, eap. prov., on a tribntary of the Apure, $300 \mathrm{~m} . \mathrm{SW}$. Caracas. Iolp, extimated at fi,(wio). It is the primeipal mart for the excellent tolneros grown in its prov.; but has nise a considerable trade in sugar, collice, cottun, iuligo, and eattle, which are mostly exported by way of the A bure and Orinow.
VAlSA, a fortilicel town and sea-port of Enropean 'furkey, prov. Bulparia. on the Black Sua, at the month of the l'ravadi, 47 m . E. Sehumla; lat. $43^{\circ} 122^{\prime}$ N., long. $27^{\circ} 54^{\prime}$ 1.. P'op, estimated at 16.000. The fortifications have been considerably enlarged and strengthened since it was oceupied by the Russians in 182!). Thongh the residence of a pacha, it is but indifferently built, and has only an open roadstead. The latter, however, being sheltered from NW. winds, which are the most to be feared in this sea, and having grod holding ground, presents but little danger. Varna las always been a principal port for the shipment of wheat and other lhuggarian proluce to Culnstantinople ; and latterly her importance in this respect has been greatly increased. and she now supplies corn to all parts of the Levant ; she, also, exports considerable quantities of tallow, with lides, cheese, dried heef, and wool. The imports consist principally of manufactured goods, especially cottons and cotton twast, colonial prodace, spirits, and oil.
A great battle was fought near Varna on the 10th of Nov. 1444, between the IIngarians and their allies, under their king Ladishus, assisted by the fanous John Ilunniades, and the 'I'urks, under their sultan, Amurath II, The Christiaus, who had broken a truce which they had a short while before sulemnly sworn to observe, suffered severely for their perfinly; their king having becn killed in the battle, Iİumiades taken prisoner, and their army totally defeated.

VASTO (an. Histonium), a town and sea-port of Southern Italy, prov. Chieti, on the Adriatic, 31 m. SE. Chieti. P(op). 11,455 in 1862. The town is walled, and has two collegiate churches, one of which is said to occupy the site of a temple of Ceres, several eonrents, and hospitals, with many good private buildings. Its iuhab), are mostly occupical in the manufacture of earthenware, in fishing, and the cultivation of olives and vines. On the 1st of April, 1816, this town was the theatre of an extraordinary catastrophe, by which it was partially destroyed by a sudden falling in and sliding of the soil, supposed to have
o cemprise $118,015 \%$ to.; woods, 2311,7" 00 do. Agriculture uplly of corn ls itrnt of half the pops: null frutits of various e. been oceasioned by the escape of subterranean water.
VAUCLISEE, a drp. of lirance, reg. SLe., hetween 1at. $43^{\circ}$ d $0^{\prime}$ anil $41^{\circ} 25^{\prime}$ N., and long. $10^{\circ} 401^{\prime}$ and $j^{\circ}$ to' b., having N. the elép. Drome, li. IfassesApes, S. Houchen-lu-Rhone, from which it is mpurated by the burance, and $W$, the hhone, separating it from Garl. Area, 3:1,750 hectares. lon. 208,205 In 1841. The general slope of this dip. is to the $W$., in which direction it is traversed hy many small tributaries of the khone. Soil, mustly calcareous, mit it is only in the neighlourhood of the larger rivers that it posserses much lertility. The urable lants are estimated tu comprise $107,73 \&$ hectares; vineyards, $2 x, 001$ do.; wools, ti2, III do.; willow plantations, 2,717 do.: and heaths and wastes, 67,760 do. Agriculture, though still very loackward, is said, of late yearn, to have made considerable progress. Oxen, horses, or mules are used indillerently for the plough, bat the last are prineipally employed. The seareity of other manure obliges the firmers to ent the wild box on the hills, which, being macerated and sulfered to sot, is used for the purpose, and found peculiarly suitable for mamuring vines. Wine ant silk are among the most important products of the defp.: the prombee of wine may be estimated at about 500,000 heetolitres, of whieh a considerable portion is exported. 'The best wines are those of Coten-brulé, near Arignon, and of Chatenaneaf, $4 \frac{1}{2}$ leagues from Orange. Spenking generally, however, too little attention is paid to the colture and care of the vine. I'le produce of wheat is insutheient for hone consumption, but a grod deal of rye, and some maize, barley, buckwheat, and potatoes are grown, besides salliron, madder, and coriander and anise sceds. Alinonds and other fruite, and essence of lavender, are among the exports. Artificial grasses are sown, but the pasture lands are not extensive, and the quantity of stoek is less than in any other of the $S$. defs. Bees are wumerous: the honey is of good quality: and about 60,000 kilog. of wax are exported ammally. This dep. does not appear to be rich in metals; but buililing stone, of goorl quality, lime, and potters' elay, are plentiful. Silk fabries are made ai Avigoon and Orange: and the town of Apt is famous, in the s. of lirance, for its earthenware and confectionery, as is Avignon for its printing establishments, and manufactures of yrinting types, bells, and other metallic goots. Copper, lead, and iron-plates, prepared madder, woollen stutl's, leather, paper, cordage, linen thread, glass wares, and tiles are mate in this dejp., which has also many distilleries and dyeing-houses. Vauclase is sublivided into 4 arronds. : chief towns, Arignon, the cap., Apt, Carpentrus, and Orange.
Vauclitse, a fumous fountain in the above dep.p. close by the small village of the same name, 4 m . W. Isle, and 15 m . W. ly N. Apt. T'his fonntain has its source in a vast eavern at the lint of a rock 800 ft . in heiglat, at the bottom of a narrow gorge in the monntains. Within this cavern is a deep losin of the purest water, the surface of which appears to be perleetly smooth and placid, but which, notwithstanding, emits so great a quantity of water as to give birth to the small river Sorgnes, an attluent of the Rhone. Alter the melting of shows, or the occurrence of long-continued rains, the How of water is greatly increased; but even in the uriest season it is copions. In ordinary states of the fountain the water escapes by percolating through the rocks, stomes, and gravel that form the out ward side of the abyss, wherens daring floods it overtlows its banks. It is possible, taking proper precautions, to lescend, when the water is

VAUD
4115
low, to its edfe. Owing to its great depth it np,pears ns if it were jet black, thongh, as alreaily stated, it is limplif in the extreme.
'Ihis fountain is celebrated in the history of Petrarels. All old eastle near the vilhure, which belonged to his lifiend the Hishop of Cavaillon, was frequently visited by Ietrarch, and is thence called his castle. The poet, however, lived in the village. Je here frequently saw Ianra, who ls sapposed to have been the wite of the connt de la sade, the lord of the village. Init this is donletful, as well us the liatonism of her lover.

VAUD (Fr. Pays det l"uml, (iarm. W"umlt), a cantom of switzerland, holding the loth rank in the confederution, between lat. $4 t^{\circ}$ and $17^{\circ} \mathrm{N} .$, and long. $\mathrm{ti}^{\circ}$ und $\mathrm{o}^{\circ} 12^{\prime}$ Fi.. having $N$. the cmiton and lake of Neufehatel, Fi, firihourg nuid the limene Oberland, S. the Valais, Savoy, mul the lake and territory of Geneva, and W. the depe of Jura in
 lhoth the Sli. and NW. extremities of this canton are mountainous; the former quarter is eusered by ramitications of the Alps, one summit of which, the Diablerets, rises to $11,1 \underline{0}$ lt. above the level of the sea; the latter region is traversed by ranges of' the Jura. 'The midalle of the canton, betwean the Jura mominins and the lakes of (ieneva and Neufchatel, is a rich molulating comotry, and so celebrated for is agreeable character aid pietirresgue benuty, that it has long been resorted to by visitors from many parts of Euroje. The raisinir of eorn and wine is the chicl neeupation of the pop. The vincyards, reckoned the best in Nwitzerlanal, are supjosed to comprise about 18,000 acres, and to employ 20,000 vinedressers, independently of women and children. The whes of La Vaux and La Cote, both growis on the shores of Lake Leman, ure the best: the tirst is profluced near Vevay, where the liomans, who erected a temple to Bacelus at Cully, are supposed to have originally planted the vine. A society of lifh antinuity in that town exercises a survey of the vineyards in the district, and celebrates a remarkable lete, atteuded by a great concourse of strmufers, every 1 th or 20 th year. The number of catile in $\dot{\text { Gud }}$ has of late jnereased very much: it is supposed to have alront 75,000 head of cattle, 23,5111 horses, and 77,0100 sheep: and the improvement in the breeds is said to have kept pace with the increase of numbers. Almost the only salt springs in Switzerland exist at llex in this cant. They were diseovered in the lith, and bourht hy the rovermment of lherne in the sueceeding eentury. Marble, eoal, crystal, sulphur, petroleum, and ia few metallie produets are mot vith, though not raised in any large quantities. Nanntactares are very unimportant, and mosily conlined to those of leather and yarn. The transit trate l'rom l'rance into Switzerland and Gernany is of more consequence to the inhabs.

Fand is subolivided into 19 districts and $\mathbf{0 0}$ circles ; all the towns of more than 3,000 inhabs. forming a separate cirele. Its constitution is more aristocratic than that ol most of the other Swiss cantons.

The legislative power is vested in a grand comeil of 184 mems, clected for $\overline{5}$ yoars, which meets yearly in May at Lausanne. The electors include a certain portion of those anoong tho citizens who are taxed to the highest amount, and must be neither domestic servants, recipients of public relief, bankrupt, or under penal contemmation. Each eircle sends 1 deputy to the gramil conncil, who must be an inhab. of the cirele, 30 years of age, and possess property in the cinton of the value of $2,500 \mathrm{fr}$., or some equivalent thereto. The town of Lausame sends 4 deputies: 4 eandi-
dates are also nominated he phelt of the circles,

It is surrominded by ruined walis, with decaped towers and ruinoms curtains, and is but indifierently built, It has a town-hall by lhamante, and some the palaces. The primeipal square has a tine fountain, and a bromze statue of l'ope Chement SIll. The Borgian Mu*emm. now in Naples, was originally established in the Burpiam lanace, in this town. The inhals, are mostly peasants, who work in the meighbouring tields and vineyards, mod at hight retire to the town, the arr of which is extremely goor.

Filitre alyears to have been one of the most considerable cities of the Volsci, and is said by bionysius to have been fortified by Coriolamus.

It was the residence of the Oetavian family before they suttled lin liome; und is colebrateni as the hirilyphace of Auguntins, who was borit here on the gelad sept., anmo bibl II, C., In the comasulatip of t'icers.

Vlíid, olifina town and fortress of Iritish Imilia, prosid. Malris, illstr. Areot, $\mathrm{N}_{\mathrm{o}} \mathrm{mI}$. W, by s. Madras, on the slaitras railway. 'J he fortrese. which is of comblilerable extent, comprises mpaclons Darracks and the other necessary aceommonations fur a gatrixon, with various handseme buildings, rombl a square, oll oue stile of which is a curom, phgola, now heed as a magarine. The mative town, whel is large and populons, is nituated t., the S. of the fort, with whel it is connected by addithonal battlements. In llizi it was taken liy Sivajee; and, during the war of $17 \times 2$, was relieved by Sir livre Coote, in the face of llalar's army. Nfter the capture of Seriugapatam, 'Tippurs family was removed thither. Ill isfiri a formitable revolt of the mative troops, followed ly a massacre of the linropeman, took phace bere, of which 'Tipposis family were supposed to have been the instigators. 'This occasioned the removal il' the latter to Calentta.

VENDlil: ( $1, A$ ), a maritime dep, of France, reg. W., formerty inclucled in the pros, of I'oiton, anil exclusive of the islands Dhen and Nuirmontiers, extending between the flith and 1 all degrees of N. lat., long. $0^{\circ} 35^{\prime}$ and $2^{\circ} 10^{\prime}$ W.: having N. Lovire-Infiricure and Maine-et-Laire; Vi. Teux-Kevres; S. Charente-Infiriente; ani SiV, and W, the Atlantic. Aren, $67(1,5 / 4)$ hectares: por. 395, i95 in 1861. No portion of the surlace is nuch elevated ; the E. part of the dijp. is umdnlating, though nowhete rising to the height of selle ft. Ihe prineipal rivers are the Nevre-Nantaise aud Niortoise, Antise, Penthe, Lay, Yom, and Vic, The Ventee rises in the drip. bens-sevres, rme gencrally in a SilV, direction, and joins the Sevre-Niortaise, after a course of about lif leagnes, only a small portion of which is navigable. Fontenay is the only town of eomsequence on its banks. The depp is subdivided into 3 districts; the marslies, the plain combtry, and the bowaye. The marshes extend priseipally aloug the const: the bocage, so malled from the wood sprinkled over it, ocenpies the centre and mpkr protes of lab Vemdée; and the plain combtry, a freat part of which is very fertile, comprises the rest of the surfince. The arable landerare estimatat
 do.; vinusards, $1 \overline{7}, 700$ do. ; and woods, 29,600 d. 6. Agrienlure is conducted in mueh the same way as in the aljacent dép, of Levite-Inferienre. Levises run from 3 to 7 yoars. In the plains, the gromm is left inlle the secomd year, as in Loire-lnfericure. The whole of this deje is, with a very few exceptions, most niserably firmed. The farmers are withont capital, and badly provided with implements, and have not half the mumber of haloniress reguired for the land ; the tiehls are always full of wecols, for the roots are left entire be the ball ploughis in use, and from the want of hands to bluck them ont. A greater quantity of wheat, however, is grown than in any other of the 11 . thess: and, next to it, harley is the grain principally cultivated. Flax and hemp are grown to " considerable extent in the marshy tracts. A large quantity of wine, principally white, but of a prors ymulit, is produced. Throighont a great part of the dép, estates are usually divided into farms of from 4 's to 90 aeres; and in the plain comtry few firms of this size have fewer than 60 or 80 shcep. The anmual produce of wool is extimated at 600,000 kilogr. Oxen are sold from the plain to the bocage fimmers, who fatten a good deal of

VENDAME, a town of Firance, depe Laire-ct-

 1sepl. The town is well hmilt, denn, aml handsome. 'The rematins of an andiont castle, the commumal college, eavalry bartacks, thentre, and public library, are the objecte most worthy notice. It has mannifactures of kill ploves, cottof cloths, hosiory, yarn, puper, and lealoer.

VENECL (Ital. Venezia), a fimons maritime city of Northern Ituly, formerly the calso of the ropiblie of the name hame, oni a cluster of ninmorous small ishads, in a shallow but extensive hagoon, in the NW. portion of the Alriatic: 75 m . W'. hy S. Trieste, on the railway from 'Iriesto to
 of Venice, from whatever side it may be "pproached, is strikius and simpular in the extreme. Whing to the lowness of the islamis on whieh she is built, whe secms to dont upon the sen,

> As from the stroke of the enehnteres wand.'

Venice is divined into two principal portions of nenrly equal size, by the (irand Camal (II Cumale Maggiore), a serpentine chammel, vary ing from ahont 100 to 180 ft, in willh, crossel by the principal bridge of the city, the celebrated Rialto. The various ishads, which form the fomblations of these two grand divisions, are connected by numerons bribues, which, beity very steep, anid intemed only for foot passengers, are cint into stepsom either side. The cantils, or rii, erossed by these brideses, intersect every part of the town, and furm the 'water-strects' of Venice; ly fur the preater part of the intercourse of the city being carried wh by their means in gomdolas or liarges.
lint, besides the canals, Fenice is everywhere triversed by strects, or rather passiges (crille), so very narrow as to be in fencral only 4 , and sehlom more than 5 or $\mathrm{i}_{\mathrm{t}} \mathrm{i}$ in wilth. The only exception is the Merceria, a street in the centre of the city, lined on each side with handsome shops; but even this, which may be regarded as the kegent Strect of V'enice, is oinly from 12 to 20 ft , across. To ride in a carringe, or on horseback, is here wholly out of the question. 'The streets, or lanes, are not puved with ronnd stones, or bloeks, but with lagrs, or marble slabs, having small sewers for carrying off the filth. Almost all the priacipal houses have on one side a canal, and on the other a lane, or calle. 'The former, however, is the grand thoroughfare; and fondolas, or camal-boats, are the universal substitute for carriages and horses. They are generally long, narrow, light vessels, and,
thongh rowed only by a mingle gomblolier with one orar, cut their way through the water with extracrilinary velocity, A sumptuary law of the ohl regime directed fint the exindolas should alt
 litted with glase wholow, blinds, minl conhhons for the aceommonlathen of t persins. Sume of the gombohs, le lomging to prwate fimilies, are magnitleconty titem ${ }^{11}$.

In many parts there are small squares, or rompri, in whinh nere uswally cinterns, fir the carrful pre:sersation of ratil water; bat the only unen spaed of ans magnitude is the piazan of St, Mark, whlt the piazaetta lealing to it, and firmlige the state entrince to Venice from the wen. The piazzetta,' says a traveller, 'is at right allotes with the grentequare, bramelang wf in a line with the chureh of it. Mark. On min side, ant thming a wile front to the port. is the whi puilace of the duges: on the other side are the sara, or mint, and the library of st. Mark, the regular architueture and fresh and mosderol apprarance of which serem to mock the fallen majesty of their antigue moinhhour. On the soashore, which forms the toli side of the piaszetta, stan! two magnilicent \&ranite colmmas, ent ol a simple blowk; one crounded with the winged lion of Sit. Mark int bromza, and the other bearing the stane of st. Theodore. Vetweens thesetwo columas, fin former times, public excontions took place.' 'The pinaza ol'sit. Mark is min oblong area, about Nimit. by is.in, thargeal over. 'Two of its sides eonsing of regular Buldings, with derep areales. liah side is itself mifirm, thongh not similar to the other. (in the N. is the I'remorntorie Vierhie: on the S., tha I'rocuratoric Nowe. The IV. side was formerly ocenpied by the charch of st. (ieminimis; bit this was taken down hy the French, whan erectend in its stead the stairase of the hew improial palace. At the opposite end are the atherimal of St. Mark, the Grolcgha, mid the Combunile; aml in front of the cathedral are 3 tall poles, supported on handsome bases of broman, whence the thags of the Moren, Crete, and, ' 'vprus were formerly displayed. Firam lowing the only piece al open gromind $i_{2}$ Venice of my romerpurace, this sepuare is almost constantly thromed with companys. and it is the scene of all the public maspuerades and lestivals that take phace in the city.

Fenice has a vast momber of tine private palaves ly Samsorino and l'alladio: hin many of its publie buildings ne more remarbable fir grorgeonsuess and disphay than for purity mul tasto. They present pencrally a helerogeneons intermixture of lyamome, ur other pantern, with Greek, Roman, and Gothic architecture. 'the celebrated ehurch of St. Mark is uot linthie, Sariacenic, or lionan, but a mixture of all those stylest neither a charch nor a mospue, but something hetween the two; too low fur grambleur, tom heave for beanty, no just proportion being preserved anoug the different piarts. Fet it has the cfliect of samdeur, and $n$ sort of hemity, from the ribliness of the materials, and the profusion of ornatment. The original chureh was founded in $x: 9$, but the present editice was foumbed in $97 \%$, under the dircetion of architects from Constantinople. The nave is $2 \cdot t^{\circ} \mathrm{ft}$. in length, the transept 201 ft . the mildle dome is interunlly $9 t$ ft, in height, nand the 4 other domes 80 ft . cach. The front is 170 ft . in width, and 72 ft . in height, withont its surmonting figures. In its lower part are jo recessed doorways, each marneal with a storios it lintle columas, thongh these are mostly ill pro portioned, und their capitals nearly all chalerent. Over these arches is a gallery or baleony of
marble, in the centre of which are the fimons bromze horses, most probably of Chian origin, and carried to Constantinople by Theodosius, whene they were conveyed awny ly the Venetinns, when they took and plumered the capital of the Eastern ampire, in I2th, For 18 years, or from 1797 to 181:, they crowned the trinmphal areh in the Pace da Caronal in Paris. Immediately helinal the horses is a harge circalar window, on cithor sille of whiel an arehed doorway opens upon the baleony. The front terminates in pointed arches, surmoninted by a crowd of spires, pimmacles, statues, and crosses. The tinishings are in the style of The Italian Gothic of the 15th century, but orercharged and heave. The vanling and great part of the walls are fovered with mosaics, and the rest with rich marloes. The eolumns of porphyry and verd-antigue; the pavement of minute pieces of white and eoloured marbles, jasper, agate, lapis lambi, varionsle, ame for the most part, bemotifully disposed: the inlaid ornamentas, and gilded capitals, produce a pieture gramd as it is magniticent. 'The orologrio, or elock-tower, on the N. side of the cathedral, has little to recommend it ; mad the campanile is morely a large square tower "pwards of 800 ft. in hoight, terminated by a pramid. In it Galileo male many of his astronomical observations. The lorgia aromel its base, now converted into a lottery-oillice, is a beantifal hilding of the Corinthian order, from the designs aif Sansovino, The I'rueuratorie Nuove, now the royal palace, is a rich line of buidding, fronted with all the dillerent Greek orders.

The dheal palace was originally fommed in the oth century, lint the present cilifice dates only from the niddle of the $14 t h$, when it was erected hy the doge Marino Faliero. Exterually, it prerents a donble range of arches, supporting a great. wall of brickwork, pierced with a few windows. The corners are cat to admit thin spiral colamns. Notwithstanding its many defeets, this structure derives an imposing eflect from its grandeur of dimensions and unity of design. The palace is entered by 8 gates, the priacipal leading into the cortile, which is surromded on 3 sides by 2 stories of arcales. One side is richly ornamented, thongh the whole he in bad taste. A noble dight of steps, ealled, from the colossal statmes of Mars and Neptune, by Simsowino, the Giants' Stairease, leads up from the cortile to the open areade, where, under the Repablic, the lions' months gaped to rereive commanications or surmises of pots against the state. From this exterior corritor the state apartments are entered. The walls of the Sala di Quattro Porte are covered with paintings by 'Tintoretto, Vicentino, and 'litian. The hall of the Great Conncil, Sala del Grau Consiglio, 153 ft . in lengrth. is now principally appropriated to the library, of which Petrarch was one of the fomoders; hut it is alsa rich in treseos, by bassano, and contains a tine collection of ancient seulpture, and the portrats of the Venetian doges. The Sala sei l'regadi, and momerous other aparments, are richly gilt, and exhibit all the frories of the Venctian school of painting. In the hall of the Commeil of 'Ten, comverted hy Nilpoleon I. into the chamber of a court of cassation, the ecilings have been painted by lial Veronese; and on every side the eye rests on pietotial representabions of the achievements and glories of the repuhlic. In the lower parts of the palace are the fommer tribunals and dingeons of the state inquisition, from which a passage leads across the Ponte de' sospiri, or I Bridge of Sighs, to a door now walled $1 p$, but which formerly opened intu a thamher where prisoners were despatehel.

Sext to the buildings in the neighbourhend of

St. Mark's, those bordering the harbour and the canal of dimdecen are the linest, inclinding the Dogana or enstom-honse, the chureh of Sa Salute. ant those of San Ciorgio and II Redemptore, both slesigned by Palladio. These last were on the point of heing pulled down hy the French, and only saved by hriug redeemed for a large sum of money. The liedemptore is admirable hoth in phan and elevation, and its interior is almost perfect in its proportions, simple, grand, and barmomions. It is one al lalladio's chef d'cenves, and is perhupis the linest ehureh in Italy, thomer inferior to a great many in costliness and magniitule. Besides a Gireok church and 7 synagugnes, Venice has nltorether about 100 fiom. Cath. chorehes, which are, on the whole, among its beot buildings. There were formerly many more; but the French pulled them down, with a number of comvents, in pursinance of their plans for the improvement of the city. Several of the churches date from the middle ages, though few of them are worth especial notice. One, however, is interesting, from its containing the remans of one of the greatest painters aul of one of the greatest sculptors that Italy has produced-n'titian and Canova: the grave of the former is marked by a short inseription on a plain stone let into the parement. Camova has a line pyramidical monument, from ome of his own designs, the expense of which was defrayed by contributions collected in all parts of Europe. The famous painter, Pan Veronese, is buried in the church of St. Sebastian, where he has a monmment. The belfries of all the churches are detached, and appear to be built on the model of St. Mark's.
The general cemetery or burying-place for the city is on the island of San Cristoforo di Murano. ILere, rich and poor, the noble and the beggar, are all interrel, the expenses of the hurial of the latter being defrayed by government. Thiscemetery was formed, and the plan of conveying all dead bodies to it from the city enforced, by the Frencl.; and it has since been continued. $A$ gondoli, moored to the island, is appropriated to the transmission of corpses. 'The Jews have their buryingground at Malomoceo.
For a lengthened period after the foundation of the city, the communication between its $\left[\begin{array}{c}\text { a a a } \\ \text { a }\end{array}\right.$ W. divisions, across the gramd camal, was elfected by Perry-boats. A woden bridge was subsequendy estalbished; and this having fallen to decay, it was determined to replace it by one of mirble from the tesigns of Antonio da Ponte. The huilding of the Lialto was commenced in 1588 ; but, though it consists of a fine elliptic arch. usither its bemuty nor its magnitude correspond with its lame and the attention It has excited. Its arch is 89 ft. in span. The roadway of the bridge is divided into three parts, riz. a narrow strect in the middle, with shops on eark side, and two still narrower streets between the shops and the balustrades. The shops distigure the bridife. and make it look hoavy. It is lofty in the midde, and is ascended, like the other bridges, by lomis thights of steps at either end. The view from the stmmit, along the framd canal, frepuently presents a very animated scene, and is one of the tinest in Venice.
The palaces of Venice, buitt, like those of Amsterdam, on piles, are masive structures; but, except such as have been built by lallalio, Sansorino, Sammichele, Longhena, Scamozzi, and a few other architects of eminence, they are mostly deticient in good taste. They in general exhibit too many orders in front. Venice, in truth, is more atiractive from its singularitios than its architectural elegance. Yet it is still highly in-

This cemetery veying all dead by the Jrench; A gondoli, ed to the transe their buryinsreen its Fi, ard al, was eflected as subsequently en to decay, it one of marhte Ponte. The enced in 1588 ; , elliptic arch, wde correspond it has excited. "adway of the viz. a narrow each side, and the shops and are the bridue. in the middle, idges, by long view from the repuently pre those of Am ructures; but, Palladio, Saltimozzi, and a ey are mostly eneral exhilit , in truth, is ities than its cill highly in-
teresting to the student of architecture, who may here, in the words of an architect, 'trace the gradation from the solid masses and round arches, the only remains of the ancient grand style in the fith, 7 th, 8 th, and 9 th centuries, through the fanciful forms and grotesque embellishments of the middle ages, to its revival and re-establishment in later times.' Many, however, of the old patrician mansions arc deserted, and not a few of hhem have been pulted down. Necessity too hisis, in many instances, obliged their owners to part with the tine works of art, with which they were formerly embellished. Still, however, some of the palaces have yet to boast of good collections of pietures and statues. The Manirini Palace has a splendid gallery of pietures; and the Palazzo Barberigo hats some fine works by Titian. The (irimani Patace contains the only extant statue of Marens Agrippa, and a line bist of Caracalla; and in the Pisani Pralace is Dredalns fixing wings on his son, the first group executed by Canova. But, notwithstanding their magnitude and imposing exterial uppearance, the rooms infrabited by the family, in the greater number of the palaces which are still occmpied, are often small, ill furnished, and uncontirtahle. P'ersomal accommodation and the enjoyment of good air have been saeriliced that space might be found for the exhihition of statues, pietures, and other works of art. All the larger houses, or palazzi, are from three to four stories in height, being generally of a square form, with an inside court containing a cistern, in which the rain-water is carefully collected. As already stated, they have, for the nost part, two entrances-the principal opening on a canal, and the other on a street or alley. some of the finest palaces are built wholly of marlje. 'The grand canal has on each side many such buibdings.

The houses ocenpied by the midale and lower classes are built of brick, and are in general covered with wood. liew of them have arcades, but they are mostly provided with halconies. From the extreme narrowness of the streets, the honses are usually ghomy, and are miserably deficient in the approperiate distribution of their different parts, and in all those eonveniences and adaptation to comfort that distinguish houses in this comintry.

The arsenal, which opens upon the port not far from St. Mark's, together with the dockyard, occupies an istand between two and three $m$, in circuit, and is detended by lofty turreted walls. The entrance is guarded by two towers tlanking a gateway, over which the winged lion still frowns deliance; and in front of this entrance are four lions, brought from the Pireus, two being of very tine proportions, and probably of l'entelic marble. The magazines and docks are kept in good order, and ship-building is one of the ciniet branches of industry at Venice. Besiles the armoury, magazines, forges, fomiries, and other necessary establishments, here is a rope house, $1,000 \mathrm{ft}$. in length. One of the walls of the armoury has a statue of l'isani, famous for his contest with the (jencese, and a beantiful monument by Canova, representing Fame crowning the Venetian admiral, Augelo Eimo.

During the times of the republic, the Bucentaur was the great lion of the arsenal. This was the state barge, in which the doge, accompanied by a splentid cortege, proceeded to espouse the Adriatic. 'The ceremony was performed by the doge dropping a riug into the sea, pronouncing at the same time the words, 'Desponsamus te, Mare, in siguum veri perpetnique dominii.' In these days, however,

The sponseless Adriatio monrns her lord,
And annual marriage now no more renewed.'
Byron adds that the Bucentaur 'lies rotting, unrestored;' but, in fact, she was burued by the French soon atter the downfal of the republic.
Venice has 6 theatres, the largest of which may contain 2,500 spectators : the Venetian drama is, hovever, in a very low state. The Dogana, tho old exchange, is a fantastic edifice of the 17 th century; and the new prison, built by Antonio da Ponte in 1589, is much too handsome for its purpose, being an elegant Doric edifice. The bisliop's palace and seminary, the various hospitals and barracks, are among the other principal edifices. A thourishing academy of the fine arts, 4 sehools of music, and a public selool for each corporation of tradesmen, are among the principal institutions for edheation. 'Venice, says a celebrated (ierman traveller, Herr von Rammer, 'holds a prominent place in Italy forits charitable institutions. Thero is one house within the city in which 700 poor people are lodged, and many more have free lodgings and receive peemniary assistance ont of the establishment. There is an orphan house for about 335 children; all infirmary for 36 women; a wealthy institution for the reception of penitent women; a hospital, capable of receiving 1,0100 patients; a honse of education for 90 young girls; a founding hospital, se.; and the yearly revennes, chietly arising from endowments, amount to about 580,000 florins.'

Venice has been represented as a delightful residence; but though it may be, and perhaps is, an aquatic paradise to the amphibious bipeds born within the somnd of St. Mark's bells, it is very dillerent to a stringer. At lirst, no doubt, it surprises and gratifies by its novelty ; but it soon becomes tiresome from its sameness, the incessant recourse to boats, the narrowness of the strecta, the want of room, the ahsence of all rural beauty, and the constant sense of imprisonment. It would not, in fact, be habitable were the water fresh; but the saltness of the water, and the flux and rethux of the tide, make it toleribly salubrious, The later phenomena, however, which are at all times much less sensible in the Mediterranean than on the British shores, are in summer so inconsiderable, that the canals become starnant, offensive, and mhealthy. The characteristics of the climate ure, a summer much hotter thin in England, aceompanied with occasional visits of the sirocco; a winter, not of great length, but sharp, particularly during the prevalence of the NW. wind, which blows across the interior of switzerland and the Alps. J:ans are frequent, particularly in spring ; and there being no springs or wells, the inhabitants, as already stated, supply themselves with water collected in cisterns, from the tops of the houses.
It should, however, be ohserved, that the Venetians are no longer wholly withont trees and Howers; very extensive gardens, with a tine strect leading to them, were constructed by the French, and are a noble monument of their taste and muniticence. 'These gardens,' says an linglish triveller, 'excite interest from the monle in which they were formed, more than from their beanty : not that they are deficient in taste or variety. They were formed with immense hbour hy tho introduction of artiticial earth, brought at ain inmense expense from terra firma, and no expense was spared in their completion. There are several serpentine walks over mounts, many trees and shrubs thriving very fast; and all this, with the different views of the lagoon, the many islands interspersed, and Venice, make this promenade buth ingreeable and interesting. The gardens are
nearly 2 m , round, and are comnected by a handsome bridge.'
The islands on which Venice is built lic within a line of long. low, narrow islands, ruming $\mathrm{N}_{\text {. }}$. and S., and enclosing what is termed the lagoon or shallows, that surround the city, and separate it from the main land. The principal entrance from the sea to the lagoon is at Malamoceo, abont $1 \frac{1}{2}$ league S . from the city; but there are other, though less frepuented, entrances, both to the s . and the $N$, of the latter. There is a bar outside Malamoceo, on which there are not more than 10 ft . at high water at spring tides; but there is a chamel between the western point of the bar and the village of sam l'ietro, which has 16 ft . water at springs, and 14 at neaps, Merehant vessels usually moor off the ducal palace; but sometimes they come into the grand camal which intersects the city, and sometimes they moor in the wider channel of the Gindecca. Yessels coming from the S. for the most part make lirano or Rovigno in the coast of Istria, where they take on board pilots, who carry them to the bar opposite to Malamoeco. On arriving at the bar, ships are conducted across it and into port by pilots, whose duty it is to meet them outside, or on the bar, and of whose services they must avail themselves.

The chain of low narrow islands which bounds the lagoon on the side next the sea, being, in part, broken, the remblic constructed, during last century, a mole several miles in length, to till up the gaps in question, and protect the city and port from the storms and swell of the Adriatic. This vast work, formed of blocks of Istrim stome resembling marble, comeets various little islands and towns, and is ndmirable alike for its magnitude, solidity, and utility. It bears the lollowing inscription:-

- Ut sucra estuaria, urbis et libertatis selles, perpetmum conserventur, colosseas moles ex solido marmore contra mare posnere curatores aquarum, unno salutis, 1751 : ab urbe condita, 1330.'

The Old Brenk of Veuice was founded so far Lack as 1171 , being the most ancient establishment of the kind in Europe. It was a bank of deposit; and such was the estimation in which it was held, that its paper contimed to bear an agio as compared with eoin down to 1797, when the bank fell with the government by whieh it had been guaranted. At. present there are no corporate hanking establishments in the city, and no hank notes are in eirculation. There are, however, several private banking honses, whieh buy, sell. and diseomit bills, and make advances on land and other securities. They are under no legal regulations of my sort, except formally declaring the amount of their capital to the anthurities when they commence business. The legal and usual rate of interest and diseount is 6 per cent. It is not the practice to allow interest on deposits. lills on Laidon are usually driwn at 3 months, and on Trieste at I month.

Morals and Manners. - Most travellers have been accustomed to represent Venice as distingrished by a peculiar protigacy of m mals. It may be donbted, however, whether she be entitled to iny peculiar pre-eminence in this respect over most of the other great cities of Italy; and the lass of her commerce and of that wealtly which the expentiture of govermment brought int o the city, has reduced alike the means of, and incentives tu, eorruption. It is now generally acknowledged that the inpressions made on forcigners during the carmival season were in a great degree exaggerated; and that much of what they took for intrigue and prolligacy, was no more than what
the licence of the period, and the universal use of masks, nllowed even the most scrupulous persons to indulge in without any violation of propriety. Undmbtedly, however, the conduct of the guveriment, the nature of her religion, nod the vast wealth that formerly centred in Venice, all tended to corrupt the morals of the people and to immerse them in sensual pleasures. We hardly think it was ever, as Aldison has stated, a part of the policy of goverument ' to encourage idleness and luxury in the nobility, to cherish ignorance and licentionsness in the elergy, to keep alive a continual faction in the common people, to comnive at the vicionsness and debauchery of convents, to breed dissensions among the nobles of the territ firma, and to treat a brave man with scorn ant infamy:' ('Travels, art. 'V(ince.') 13ut, whether intended or not, this, no doubt, was the eflect of their jealous despotism, which, by its intolerance of all that was truly great, gencrous, and noble, shut up, in as far as possible, all the avenues to distinction in polities, literature, and even war, leaving little, sive intrique and lieentionsness, to occupy the publie mind. lhat, as already stated, society in Venice, has been materinlly chmored since the revolution of 1797. Lord liyron says, that 'of the gentiluomo Vereto, the name is sill known, and that is all. He is but the shadow of his former self, but lie is polite and kind. It may surely le pardos.ed to him if he is querulous.' But, notwithstmoling the changes to which they have been subjected, and which have reduced them from haughty loris, but 'one degree below kings,' to abject suljects, the Venctians are now, is of old, most aqrecable companions, and the Paphian Queen still holds her court in the sea-girt eity.
"In Veniee Tasso's cehocs are no more,
And silent rows the songless gondolier;
And silent rows the songless gondolier;
Her palaces are erumbling to the shore,
Those days are gone-but Beauty still is here.
States fall-arts fade-but Nature doth not die ;
Nor yet forget how Venice once was dear,
The pleasant place of all festivity,
The revel of the earth, the masque of Italy 1 '
Foreigners, especially, are extremely well received, and society is on a very easy footing in Venice. Owing to the facility witli which the city is supplied with provisions from the plans of Lombardy and elsewhere, by means of the railway, and the lowness of rents, living is here unusnally cheap: and were it not for its disalvantages in other respects, it would be a very desirable residence.

Historical Notice, - The ancient goternment of Venice was one of the most singular that has ever existed. In her carlier period she appears to have been groverned by doges, or princes, who were clected by the popular voice; but who, on being elected, became the absolute rulers of the state. The doge enjoyed, however, only a precarions disuly ; lor, in the event of any disaster ocourring to the arms of the republic, or of his becoming unpopular, he was not mfrequently depused, and sometimes assassinated. To obviate the disorders that grew out of this state of things. it was resolved, in the 12 th century, that each of the six districts into whieh the city was then divided should nominate 2 individuals as electors, and that the 12 electors so chosen should nominate a grand council of 470 individuals which should represent the public, the general assemblies of which were henecfortl disemtimed. A semate was at the same time crented, and 6 comeillors were appointed to assist, or rather control, the proceedings of the doge. But notwithstanding the intluence of the popular voice was greatly
lessene which i it was casions revover cer, t length, 1:31!!, t clerted, in its tablishe himi thi ame j chance deration sehepre otlices nobles one else determi in some dividua institut chosen pwwers the inst s-lected with al ings of t int the lieved rid not picion : sul1s; a spies, to lisisilple it were the fear tives pros even fro An ung quently draw th merely sisech, pletely jerlous exting mind, it lengthe is true, (in) all ass liable called $t$ blest go Venic preriorl. mo. lern rasion the inht territory riillis, f cluster Brenta, tion the its subs they co period t and the petition to engro till the of Good new cha the weal porsessi tilteenth
lessened by the establishment of the grand council, |homet [I. entered Constantinople sword in hand which included all the most distinguished citizens, it was still very comsiderable; and on several oecasions the prople emdeavoured by violence to rebover the power thev hat lost. In this, however, they were wholly mencecessful; and at lengeth, alter varions struggles, it was resolved. in 13l!!, that the gram commel shonld no longer be dected, but that the dignity should be hereditary in its members. The aristocracy was those evtablished on a solid fommation; hut no somer Inal this been done than the dignitied families became jealons of cach other; and to avert the chance of any individual nequiring a preponIfrating inlluence in the state, a carelully devised seleme of indirect clection to all the higher ollices was established, at the same time that the nobles sulpected themselves, the doge, and every one else, to a system of despotism, which not only determined the public and private conduct, but, in some measurc, even the very thourlits of individuals. This was accomplisised, partly by the institution of the Comeil of 'Ten, a committe chosen from the Grand Comeil, to which all the powers of the state wore cutrusted, and partly by ble institution, in [4j-l, of three State Inomisiturs, wrected from the Comeil of Ten, and invested with all but unlimited authority. The proccedines of this most formidable tribunal were shrouded in the most impenetrable secresy; lont it was believed at the time, and is now ecrtain, that it did not wait for overt acts, but proceeded on suspicion and presumption; that it had seeret prisoms; aud that it mate lree use of the areney of spies, torture, and even of assassins An individual disappeared, by what means no one knew; but if it were supposer that he had fallen a victim to the fears or suspicions of the inquisitors, his relatives prodently abstaned from all complaint, and even from making any inquiries respecting him. All mognarded expression, if reported, as was l'requently the case to the inquisitors, was sure to iriw their attention to the oflender, so that not merely the freedom of the press, but even of sifech, at least out political matters, was comphetely ammililated. Although, however, this jarlous tyrany did not fail to repress, or rather extinguish some of the nobler energies of the mind, it must be admitted that it preserved, for a lengthened period, the peace of the repmblic. It is true, also, that its depotism pressed equally on all chasses and all individuals; the doge was as liable, and as likely, if occasion required, to be ealled to aceount by the inquisitors as the hamblest grondolier.

Fenice was the carliest, aud, for a lengthened period, the most considerable, commercial city ol mokern liurope. Wer origin dates from the ins vasion of Italy by Attila in $4 \mathrm{~h}^{2} 2$. A number ol the inhabitants of Aquileia, and the neighbotring teritory, tlying from the ravages of the barbarians, fomnd a pror hat secure nsylum in the clnster of small islands opposite the mouths of the Brenta, on which the city is built. In this situation they were forced to cultivate commeree and its subsidiary arts, as the only incans by which they could maintain themselves. At a very carly period they begm to trade with Constantinople and the levant; and notwithstanding the competition of the (icuoese and Pisans, they continued to engross the principal trade in Liastern products, till the discovery of a ronte to India by the Cale of Good Hope turned this traffic into a totally new channcl. ' 1 ?e Crusades contributed to increase the wealth, and to extend the conmerce and the possessions of Venice 'Fowards the middle of the tifteenth century, when the Turkish sultan, Ma-
andplaced himself on the throne of Constantine and Justinian, the power of the Venetians had attained its maximmo. At that period, besides sereral extensive, populoms, and well cultivated proves, in Lombardy. the republic was mistress of Crete and Cyprus, ol' the greater part of the Morea, and most of the isles in the Erean Sea. She hat secured a chain of forts and factories that extended along the coists of Greece from the Morea to Dalmatia, while she mompolised a!most the whole foreign trade of legyt. The preservation of this monopery, of the absolute dominion she had early usurped over the Didriatic, and of the dependence of her eolonies and distant establishments, were amongst the principal ubjeets of the Venetian government; and the measures it adopted with that view were at once skilfully devised, and prosecuted with inflexible constaney. With the single exception of lome, Venice, in the 15 h century, was ly far the richest and most magnificent of Europeancities; and her sinerular situation in the midst of the sea contributed to impross thase by whom she was visited with still higher notions ol her wealth and grandeur. Sammazarins is not the only one who has preferred Cenice to the ancient capital of the world; but none have so beantifully expressed their preference,

- Viderat Adriaeis Venetam Neptunus in undis

Stare urbem, et toto ponere jura mari.
Nune miht Tarpelas quantumvis, Jupiter, arees Otjice, et illat tua muenfa Martis, ait:
Si Tiberim pelago phefers, urbom asipice atramque,
bllam homines dicas, hand posuisse Deos.'
Though justly regarded as one of the principal bulvarks of Christendom against the Tarks, Venice had to contend, in the early part of the lith century, against a combination of the European powers. The famons leagne of Cambriy, of which lope dulins II. was the real author, was formed for the avowed purpose of elfecting the entire suljugation of the Venetians, and the partition of their territories. The emperor and the kines of France and spain joined this powerlial comfede:racy. Int, owing less to the valour of the Venetians than to disseusions amongst their enemies, the league wis spedily dissolved without materally weakening the power of the republic. lirom that period the policy of Venice was conparatively pacific and cantions. but notwithstanding her elforts to keep on grood terms with the 'lurks, the latter invaded Cypros in 1570, and compered it after a grallant resistance continued for eleven years. The Venetians had the principal share in the decisive victory gilled orer the Turks at Lepanto in 1571 ; but, owing to the discordant views of the conliederates, it was not properly followed up, and could mot present the lall of Cyprus.

The war with the 'lurks in Candia commenced in lift, and continued till ltiado. The Venetians excredel all their comergies in defence of this valuable island, and its aciuisition east the 'Turks above 200,000 men. 'The loss of Camdia, and the riplid decline of the commeree of the rejublic, now almost wholly turned into other chammels, rediced Veusec, at the close of the 17 th century, to a state of great exhaustion. She may be said, indeed. to have owed the last 100 years of her existence more to the lorbearance and jealonsies of others than to any strengtl of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797 , the 'maiden city' subinitted to the yoke of the consucror; and the last surviving witness of antiquity-the link that united the ancient to the modern worlilstripped of power and of wealth, lell from the list of independent states of the world.

Present Trade and Munufactures of Venice,From the period when Venice came into the possession of Austria, down to 1830 , it seems to have been the policy of the government to encourage Trieste in preference to Venice; and the circumstance of the former being a free port, gave her a very decided advantage over the latter. Afterwards, however, a more equitable poticy has prevailed. In 1830 Venice was made a free port, and up to I866, when ceded to ltaly, participated in every privilege conferred on Trieste. But, notwithstanding this circumstance, the latter still continued to preserve the ascendancy ; and the revival of trade that has taken place at Venice has not been so great as might have been anticipated. The truth is, that, except in so far ns she is the entrepôt of the adjoining provs., Venice has no considerable natural advantage as a trading city; and her extraordinary prosperity during the midulle ages is more to be aserited to the comparative security enjoyed by the inhabitants, and to their success in engrossing the principal slare of the commeree of the Levant, thm to any other cireumstance. Still, however, her trade is far from inconsiderable. The great articles of import are sugar, collee, and other colonial products; indigo aud other dye stuffs, olive oil, salted tish, various descriptions of cotton, woollen, and other manufactured goods; wheat and other grain, from the black sea; tin plates and hardware, and raw cotton. The exports principally consist of silk and silk goods, wheat and other grain, paper, jewelry, glass and glass wares, Venctian treacle, books, with a great variety of other articles, including portions of most of those that are imported. The smuggling of prohibited and overtaxed articles into Austria was formerly practised to a great extent.
The manufactures of Venice are varions and exteusive. The glass-works, which produce maguilicent mirrors, with every variety of artitical pearls and gems, and coloured beads, situated on the island of Murano, employ, in all, about 4,000 hands, including the women and children employed in arranging the beads. Jewelry, including gold chains, is also extensively produced; as are gold and silver stutts, velvets, silks, laces, and other expensive groods; and treacle, soap, earthenware, and wax-lights, to a greater or less extent. lrinting is more extensively carried on in this than in any other city of Italy, and books form a considerable article of export. Shij-building is allso carried on to some extent, both here and at Chiozza. In 1836, the first steam-engine seen in Venice was set up tir a sugar retinery.
From the circumstance of Venice being situated nearly opposite the mouths of the Brenta, which bring down large quantities of mud, the probability is that the lagoom, by which she is surrounded, will ultimately be illediup. Under the republic this was a saljeet of great apprehension, and every deviee was resorted to that seemed likely to avert it result so preguant with danger to the independence of the eity. lint now that there is no particular motive for lindering the mud from accumulating in the lagson, it is probable thut, in the conrse of time, the shallows will be converted into terra firma, and Venice lose her insular position.
VENLOO, a fortified town of Holland, prov. Limbourg, cap. cumt., on the Meuse, 40 m. NE. Maestricht, on the railway from Maestricht to Wesel. Pop. $7: 304$ in 1861. The town is surrounded by a marshy tract of country, but is the centre of an aetive transit trade, and has manufactures of pins, wafers, tobacco-pipes, and various other small articles, with tameries,
sugar refineries, and vinegar distilleries. It was formerly one of the Hanse Towns; in 1702 it was taken by the troops under Marlborough.
VENOSA (an. Venusia, on the frontier of Lucania nnd Apulia), a town of Southern Italy, ןrov. Potenza, 24 m . N. Potenza. Pop. $\mathbf{7 , 6 5 1}$ in 1861. The town stands on a perfectly Hat, but not very extensive plain. It is reached by a long, winding ascent, when it breaks on the slght under a favourable point of view, chielly due to the vencrable assect of its castle, an edifice of the 15th century, which, though a complete ruin, exhibits such magnitude of dimensions and regularity of construction as to form a very striking feature in the landseape. The walls of Venosa have long since been levelled with the ground, but the gateways still exist. It is well-built, and has numerous public edtices, including a large enthedral, 5 par. charches, an abbey church, a chureh crected in the 10th century from the materials of a Roman amplitheatre, in which are the tombs of liohert te Guiscard, and other Norman chieftains; a hospital, two workhouses, and a museum of antiquities.

Vemusia is celebrated as the birthplace of Horace, the prince of Latin lyric poets and satirists, born on the 8 th of December, anno 66 в. C . (A. U. c. 688), in the consulship of L. Manlius Torquatus.
'O nata mecum consule Manlio.' Llb. iii. od. 21.
A bust of the poet, on a column of rough stone, has been set up in the city. In the vicinity are many places which have acquired interest from the references made to them by Horace.
VERA CRUZ, a town and the principal seaport of Mexico, on the SW. side of the Gult of Mexico, cap. of the prov. of its own name, 225 m . SL. Tampico, and 195 m . E. by S. Mexico, with which it is combected by ruilway. Pop. estimated at 10,500 in 1864. The town is well built and clean, and its towers, cupolas, and battlements give it an imposing appearance from the sea. It is, however, surrounded by barren sand-hills and ponds of stagnant water. and is excessively mhealthy, being the primeipal seat of the yellow fever. The older inhabs, and those accustomed to the climate are not so subject to this formidable visitation as strangers, all of whom, even if coming Irom the Ilavamah and the W. India islands, are liable to the infection. No precantions prevent its attack, and numerous individuals have died at Xalapa, on the road to Mexico, who merely passed through this pestilential focus. The badness of the water at Vera Cru\% is supposed to have some share in producing the complaint. The houses of Yera Cruz are mostly large, some of them being three stories high, built in the old Spanish or Moorish style, and generally enclosing a square court with covered galleries. They have that rooff, glass windows, and generally wooten balcomics in fromt, their interior arangeneat being the same as in Oht spain. The town and castle are built of madrepore, the lime that forms the eement being of the same material. There is toe tolerahly good sipare, of whieh the governmenthouse forms one side, and the principal church the other. The footpaths are frequently under arcades No fewer thim 16 cupolas or domes used to be counted from the sea, but only six churches are now in use; and most of the religious buildings have been neglected or abandoned since the $\mathrm{S}_{\mathrm{j}} \mathrm{anniards}$ were expelled from the town. Lainwater is carefully preserved in tanks; and most sorts of provisions, excepting tish, are dear. Crowds of valtures and buzzards perform the oflice of scavengers.

The castle of St. Jnan , de Ullon, which communds the town, is built on the small island of the same name, abont 400 fathoms from the shore. It is a strong citadel, and its NW. angle supports a lighthotse, with a brilliant revolving light, 79 ft . now the sea. The harbour of Vera Cruz is a mere rondstead between the town and eastle, and is exeedingly insecure, the anchorage being so very bad that no vessel is considered safe unless made fast to brass rings fixed for the purpose in the castle wall; nor are these always a suthicient protection during strong $N$. winds. But notwithstanding its numerons disadvantages, Vera Cruz maintains its commercial importance; though latterly 'Tmupico, in a healthier sitation, with a better port, has been growing into consefuence. The precions metals, cuchineal, sugar, tlour, indigo, provisions, sarsaparilla, leather, vanilla, jalap, soap, logwood, and pimento are the prineipal artieles exported; and linen, cotton, woollen, and silk goods, paper, bramly, cocoa, quicksilver, iron, steel, and wine form the chict imponts. The following table shows the total valne of imports and exports to and from the port of Vera Ciuz in ench of the years 1858, 1859, and 1860:-

Vera Cruz was founded towards the end of the 16 th century, on the spot where Cortez first landed: it recired the title and privileges of a city from Philip 1II. in 1615. The castle was taken by a French squadron, after a vigorons bombardment, in 1839 ; bat was soon after restored to the Mexicans. It was again taken by a French force on the 8 th of December, 186I, and became the nuclens of the war operations which led to the establishment of the Alexican empire. The new emperer, Maximilian I., Janded here on the 29th of May, 1864.

VERCELLI (an. Vercella), a town of N, Italy, prov. Novara, on the Eesia, and on the railway between 'lurin and Milan, 89 m . NE. by E. Thrin. 1'op, 24,038 in 1862. The town lias a large marketplace, one of the best cathedrals in Piedmont, several other churches, and good private buildings, a large and well kept hospital, with (in its envrous) some tine promenades, Its fortifications were destroyed by the French in 1704. It is the see of an archbishop, and has some silk manufactures; but its clinef trade is in rice, raised in the neighbourhood. A canal conneets Vercelli with Ivrea. The date of its foundation is uncertain, but it was a town of some note in the time of the Romans. After suffering severely from the northern invaders, it revived innter the Lombards, and took the lead of Thrin till the latter became the resilence of the court.

VERIDUN (an, Verodunum), a town of France, dép. Meuse, cap. arrond., on the Meuse, where it begins to be navigable, and by which it is divided into tive separate parts, 30 m . NW. by N. Bar-leDuc, on the railway from Paris to Metz. Pop. 12,394 in 1861. Verdun has a citadel, and its defences were improved by Vauban. It is tolerably well built; but several of its streets are badly paved and steep. The bishop's palace, new cavalry Larracks, military magazines, and thentre are anong the most remarkable buildings. It has 6 churehes, including the cathedral; a Protestant chureh, a synagrogue, a communal college. and a library with 14,000 vols. A planted esplanade
separates the town from its citadel. Verilum has mannfactures of tine striped serges, flannels, cotton yarn, and liqueurs, and several large tanneries. It Was a station of importance under the Jomans; and in the midde ages, under the Germanic emperors, it enjoyed the privileges of a free inıperial eity. It was detinitively annexed to France in lifk, and is best known in modern times from its having been selected by Napoleon l. for the residence of the English prisoners detained in France after the rupture of 1803.

VFRMONT, one of the states comprised in the North American republic, in the NE.. section of the Union, making part of what is called New Jingland, between lat. $4 \geq 040^{\prime}$ and $45^{\circ} \mathrm{N}$., and lonit. $71^{\circ} 18^{\prime}$ and $72^{\circ} 55^{\prime}$ W.; having li. New Jlampshire, from which it is separated in its whole extent by the Comnecticut river; S. Massachusetts; W. New York, lake Champlain forming half the tmondary on this side; and N. Lower Cinnada. Length, N. to $5 . .157 \mathrm{~m}$. Arerage brealth abont
 The surface is generally hilly: it is traversed from N. to $\mathrm{S} . \mathrm{by}$ a ramge of mountains, some smmmits of which rise to mpwards of $1,000 \mathrm{ft}$. in height. Ahont the centre of the state they divide into two ridges, the prineipal of which passes in a Nl:, direction into Lower Canada. These hills, being coverd with tine forests of pine, cedar, and spruce, are called the (ireen Domntains, and their vordant apparance has given its name to the state. The rivers are inconsiderable: most of those flowing E. are merely small tribntaries of the Comecticnt; those on the W. side are larger and longer, and some of the prineipal rise on the E. side of the momstain chain, which they break through to fall into Lake Champlain. The elimate varies accorling to differences of level and other circumstances; bnt the winters are collder than might have been expected, either from lat. or elevation. 'The soil is moderately fertile, the best arable land being between the hills and Lake Champlain; but the greater part of the surtace is more suitable for pasturage than for tillage. Wheat, maize, rye, and potatoes are the chief articles of agrieultural produce. Barley, buckwheat, hops, ind tobacco are also grown, but in small 'quantities. Apples succeed better than in Europe, and are grown more than in any other state of the Union, New York excepted. The breeding of stock for export to Buston and the adjacent states is the chief branch of industry, and there are said to be abont $1,400,000$ sheep, 350,000 head of cattle, 60,000 horses, and nearly 300,000 hogs in Vermont. Iron is very abumiant, and copperas to the value of from 70,000 to 80,000 dolls. is made annually from native pyrites. Marble of good quatity is quarried, and lead is also among the mineral products. Linen and woollen fabrics are made in most families, and about $3 \frac{1}{2}$ million yards of cotton cloth and 112,000 lbs. of yarn are ammally furnished by the varions mills and factories. learl-ashes anil lumber are among the other chicf exports; but as the foreign trade of the state is princiually earried on throngh the adjacent states, no proper estimate can be given of its amount.

The legislature formerly consisted of a single house of assembly; but in I836 two separate honses (a senate of 30 members, and house of representatives composed of 1 member from each town) were established, which, together with its governor, lientenant-govemor, and executive conmeil, are chosen annually by the people. The right of sutfrage is vested in every male inhab. twent $y$-one years of age, who has residel in the state for the year previonsly to the election. The judicial power is in a supreme court of 6 julges, and co.
courts, each eomposed of 1 judge of the supreme eourt and 2 assistant julges. 'The supreme court sits once, and the co. courts twice, in each co. Julges are chosen anmully by the general assembly, and a court of rensors by a popmar vote once in seven years. Vermont is divided into 1 t ros. Montpolier, the cap., and Burlington, whore the miversity of Vermont is sitmated, are both small towns. Schools are widely dillused in this state, and Middleburg college and Norwich miniversity are flomrishing institutions. The public revenue, in 1863 , amounted to $2,852,451$ dullars, and the expenditure to $2,-30,018$ dollars.

This state was tirst explored by the French Camadians; but the earliest settlement was made by the English of Massachusetts, in 172.I. Subsequently, New ILampshire and New York disputed the clain to this territory; but it was timally ceded by the IBritish parliament to the later. IGut, dissatistied with this comnection, it declared itself independent in 1737.

VERONA, a celebrated city of Northern Italy, eap. prov, of same uame, on the Adige, at the point where the last declivities of the $\mathrm{N} p \mathrm{ps}$ sink into the great plain of Lombardy, ( f 4 m . W. Venice, on the railway from Miban to Venice. Pop. 59,169 in 18:37. Verona is divided into two mequal parts by the Adige, which sweeps throngh it in a bohl curve, and forms a peninsula, within which the whole of the ancient and the greater part of the modern city is enclosed. The river, which is wide and rapiol. is here crossed by four noble stone bridges. Veroma is am extremely well situated, well built, and most interesting eity. 'Fou enter it,' says a traveller, 'by a magniticent approach, aud a street probably the widest in burope. 'This street is indeed short, and single in its breadth, but the eity in general pleases by its picturesque appearance, to which an abundance of marble quarries has not a little contributed, thirty-tive varicties of this species of stone being found in its neighbourhood.' The houses frequently present, in their form and ornaments, fine proportions and beantifus workmanship. The old walls aud towers still remain, and the city has five gates, two of which are tine structures by Sammichele. Its former military defences were destroyed by the French, alter the revolt of the inhabs, in 1797 ; but extensive fortitications have again been constructed, in recent years, by the Anstrians.
The great glory of Verona is its amphitheatre, one of the moblest existing monnments of the ancient Romans. Excepting the colosseum at Rome, it is the largest extant edifice of its class. Like all other structures of the same kind, it is elliptical, the extreme length of its transverse and conjugate diameters to the outside of the outer wails being respectively about 510 and 410 ft ; while those of the arena are 249 and 146 ft . Its outer wall or cincture, which had 72 arches in every story, has been mostly destroyed, with the exception of one frugment containing three stories of four arches each, rising to the height of abont 100 ft . Over this, however, there was a fourth story, so that the entire height of the building, when perfect, must have exceeded 120 ft . Internally it has sullered comparatively little, and its concentrie rows of benches or seats, of which 43 still remain, exclusive of 2 sunk below gromid, with its corridors and stairs, are wonderfully well preserved. Jiach row of seats is $1 \frac{1}{3} \mathrm{ft}$. in lieisht, und as much in breadth; and allowing 1 $\frac{1}{2} \mathrm{ft}$. of space to each individual, the amphitheatre may have accommodated 22,000 spectators. The interior of the amphitheatre having been in parts a good deal dilapidated, it was repaired at ditferent periods in the 16th century, when the broken and
wanting seats were replaepl by others. But these repairs, thongh, on the whole, highly ereditable to the Veronese, do not appear to have heen well executed. The ancient benches were formed of vast blocks of marble, admirably ent and jointed; wherens the modern benches consist of a suft thats stone, which has in parts yielded to the weather; but little care has been taken in laying the stonmes, and in parts the elliptical curvature has not evan been observed. These defects, lowever, are mat visible on a cursory inspection of the building, which astonishes alike by its mass, its antipuity, and its preservation.

Owing to the want of inscriptions, ind of all reference to its origin in the classical writers, we are without any authentic information either as to the fommers or the ara of this grat work. Most prohably, however, it was built somewhere between the reirns of 'Titus and Trajan, or in the early part of that of the latter, lin the middle ares it was sometimes used for the exhibition of shows and sports, and sometimes as an arena for judicial combats. In more modern times, a bull tight was exhibited here in homour of the Empror Jesepli lI., then at Verona; and, at a still later period, the l'ope, in passing throush the city, gave his benediction to a vast nultitude collected in the amphitheatre. The French, wholl masters of Veroma, had the bad taste to ereet in the arena a wooden theatre, in which plays, farces, and equestrian feats were performed for the amberement of the troops.
The amphitheatre is not the only monument of autiguity that distiuguishes Verona. In the middle of a street called the Corso is an ancient lonble gateway, which, on the strength of an inseription importing that the aljacent walls were built by Gallicnus, has been mamed after that emperor; but though loaded with supernumerary ornaments, the Veroncse antiquaries affirm that its style is too grood for his age. Each gatewiy is ormamented with Corinthinn pilasters supporting a light pediment, and above are two storids with six small arched wiudows in each. The Whole is of marble, 'The remains of another gateway, of a similar but chaster form, probably the entrince to the ancient forum, are to be seen in another street ; and near the old Gothic castle is the areh of the Gavii, perhaps part of a sepulehral editice, but, at any rate, of very remote antiquity. Two arches in the purest style of Roman architecture make a part of one of the bridges, and the remains of another bridge, and the traces of a very large ancient theatre and naumachia are stili extant. Addison and beelyn speak of a trimmphal arch of Flaminius, as one of the noblest remains of antiquity in Enrope; and of an ared commenorating the victory of Marius, with varions temples and aquedncts; but as few or no remains of these exist at present, it would seem that the antiquities of Verona had sulfered greatly since the begmaniag of last century.

The ecelesiastical buildings comprise interesting specimens of middle-age architecture. The cathedral, an edifice of the 12th century, has nothing particularly remarkable except the Assumption of 'litian, and the tonb of pope Lucins [11., who, when driven from liome in 1185 , found a secure asylum in this city. In respect of architectural merit the cathedral is very inferior to the chureh of St. Auastasia. built liy the Dominicans at the beginning of the 13 th century. The church of St. Zeno, a curions structure, with a remarkable erypt, is said to have been founded by Pepin, but it was not completed till 1178. Its front is cuvered with bas reliefs in stone, its doors with seulpture in bronze of a very early clate, and

near it. are the remnins of upalace in which the firmon emperors oscasionally resided during the 12th and listh renturies. Several other churehes are worthy of notice: in that of San ( iompio is a tine piefure of l'ant Veronese. The tombis of the Scala family (Scaligrri), once lords of Veroma, stand in an inchosure in one of the thoronghfares. They are models of the most clegant dothic, light. open, spiry, foll of statues caged in their fretted niches; yet, slenter us they seem, these tombs have stood entire for 500 vears in a putblic street the frequent theatre of sellition. The Poute ded Castel Vecelio, luilt in 135) t, is remarkable for un arch 161 ft . in span, forming part of a circle. The town-hall is ornamented externally with lousts of the most celebrated matives of Yerona, and has within it some time paintings, The exchange; the Maseo Lapibario and l'hiotot, toth having extensive collections of ancient momaments; the opera-house, the fine Ionic portico of which forms, with the areales of the musemm, three sides of a handsome spuare; the episeopal and new viesrogal palaces; the lobazzo Bevilangua, an edifice by sammichele: the Canossa palace and several nther moble residences; the freem. phithormonic academy lomuted by the Dinquis Mathei, und arscmal, are amoun the most conspienons edilices in the city. Verona is the serat of the high court of justice and of the superior military anthorities for the now reduced lom-Lardo-Venetian kiughom, and of a eourt of primary jurisdiction for its deleg. It is a bishuphs see, and has several gymatia, a theolngieal seminary, and momerons royal and other sehools, learned societies, publie and private libaries. Eaglish travellers are shown what is ealled 'Juliet's tomb,' which is merely an old sareophagos withont a cover, lying in a garden where it has been made use of as a cistern.

Verona has mumerons silk twist factories, establishments for weaving silks, large leather, earthenware, and soap factories, and tactories for the weaving of linen and woollen fabries. Its trade is chiefly in the product of these, and in raw silk, grain, oil, stmmach, and other agricultural produce. It has two weekly markets, and two considerable annual fairs, each lasting 15 days.
There exist no certain details as to the origin of Veroma. Under the Romans, however, she became a tlourishing city, and in the time of strabo was superior to Brixia, Mantna. Reqiom, and Comom. She was the cap. of the kinglom of Italy from the time of Oloacer to that of lerengarins, and from the 12 th to the 15 th century she was the cap, of a considernble territory, goverued suceessively by the scaligers, Visconti, and other nobles. Under the former, in the 13th and 14 th centmies, vecurred the feuds between the Cappelletti and Monteceli, immortalised by Shakspeare. In 1405 Verona sulmitted to Venice, of whose dominions it continued to torm an important portion till the overthrow of the Venetian republic in 1797 . In 1822 it was the seat of a congress.
l'erhaps no city of Italy has given birth to a greater number of distinguished men than Verona. Among these may be mentioned Catullus,-

## Tantum magna suo debet Verona Catullo, <br> Quantum parva suo Mantua Virgilio. <br> Martial, lib. xiv. epig. 195.

Macer, Cornelias Nepos, and Pliny the Elder, who shed in antiquity an imperishable lustre over the place of their birth. At a later period Guarmi, Calderini, Canvinius, and Fracastorius contributed to the revival of literature and of the ancient fame of their native city; which in more mo-
dern tímes has been still farther extended by the labours of the fanons painter l'aolo Cughiari, surnamed Veroncse, born here in lsilo; Bianchini, distinguished alike as a mathematician, a listorian, and a critic; Maffei, whose 'Verona lllustrata' is a work of the greatest researeh nud value; and the poet lindemonte. Vitruvins, in antiguity, and the tamous Julius Cuesar sealiger, have also been included, thongh on no groml aromols, mong the illustrions matives of Veromis. The latter, indeed, represented himsolf as tho chlest som of one of the sicaligers, loris of Veroma, and as entitled to that seigniory. But it has been shown that there is not so mineli as the shadow of a foundation for this statement; that sealiger was, in finct, the son of a miniature-painter of the mane of lourdoni, and was most probably born at I'adias.
VEASALLLES, a town of lirance, formerly the chict residence of the Frenel court, dep. Sidine-etOise, of which it is the capb, in an imblabating plain, 9 m . SW. l'aris, with which it is contnected by two lines of railway, l'op, 43,549 in 186t. Versailles is one of the handsoment towns in lrame; it comsists principally of three wisle strects, lined with trees, diverainir from. the lhate d'Armes, an open space in front of the patace: the central and widest of these streets is callen the Avenne de Paris; and those on the N. amp S., the $A$ vemes of sit. Clond and siceans. 'Ihe oh her streets, though of less width, are eanally remidar. cross eneh other at ri',..t angles, and are lined with handsome residenees. The cathedral of sit. Lomis, fommed ly Lumis XV. in 17.13, that of Notre Dame, built after the design ol Dansard, in the previons reign; the elurch of St. Sy mphorien, the town-hall, prefecture, theatre, royal college, publie library with 48,000 vols., civil ind military huspital, barracks, depot of naval and colonial archives, and hall of the jen de panme, in which the deputies of the mational assembly made their famons declaration, are anong the principal public buildings. In one of the open spaces is a marble statue of General Hoche, a mative of Versailles. The town is ornamented by many handsome fountains, but it wears . dull and deserted appearance, being no longer resorted to by the conrt and nobility.

Versailles is wholly iuflebted for its celebrity, and, indeed, for its existence, to the ruyal palace in its immediate vicisity. Louls Xlil. had : hanting seat here; but the present editice, whin is of prodigious size and magnificence, was erected by Lous XIV., who expended immense sums on its construction and embellishment. On the E . site, where it faces the lhace d'Ammes, it consists of only an irregular succession of baiklings, inelosing a few small courts. But on the opposite side, facing the grartens, it presents a noble façade, $6 \cdot 1 j$ yarts $m$ length, 3 storics in elevation, ornamented with lonie pilasters, and with 80 statues 16 ft . in height, allergoricalty representiog the months, seasons, arts and sciences. and crowned by a balustrade. Its galleries and saloons, enriched with every varicty of coloured marbles, and splendidly gilt, are alike vast and maguiticent. 'The Salon d'llereule, and the Silles des Maréchanx, de Venus, Diane, Mercure, Mirr, Apcilon, l'Abondance, and de la Ginerre, so named from the paintings on their ceilings, walls, or other appropriate devices, are all noble apartments. The Grande Galerie is 228 lt. in kength, by 32 ft . in breadth, and 42 ft . in height: the ceiling, painted by le Bron, represents some of the most striking events in the early part ot the reign of Louis XIV. At one of its extremities is the Salon de la l'aix, corresponding with the

## 416

VERSAILLES

## VESUVIUS (MOUNT)

Salon de la Ginerre. Lesides its innumerahle njpirtments, the palace has an elegant chapel, in which the unfurtumate Marie Anteinette was united to Lonis SVI. on the 16th of May, 17in, nad an "prera-house, or theatre, capable of accommodating 3,000 spectators.
'Ihe palace had not been occupied lyy the court sinse $17 \times 9$, and was getting into a state of disrepair, when it. was renovated and transformed by King lounis I'lilippe into a national museum, to illustrate the history, and to exhibit the progress of art, arms, and civilisation in France. In pursuance of this desigu, many small apurtments, formerly appropriated to the lotging of the varions finctionarin's at tached to the comrt, were emberted iuto noble saloms. Of these, the salle des Marichamx, noticed ahove. containing purtraits of all the marshals of Framee, the Gaterie des Batailles, the Salle de 1830, and the Galerie de Sculpture, are amongst the must striking. The palace is filled with an immense collection of statues and paintings, exhititing all the principal personages and events in the history of the momarely, from the reign of Clovis down to the present day. The library comprises coppies of all works having reference to the history and state of France.
Immediately adjoining the palace on the W . is the little park, comprising the gardens, mumerons reservoirs, fonntains and pmblic walks; the orangery: Bains d'Apollon, and Bassin de Neptune, both having sculptured yroups of much merit. In this park are also the Grent and Little Trianon, two royal palices on a minor seale, and the grand waterworks, of marivalled magnitude, which, however, phay only on great ocensions. They are supplied from the Neine by the aqueduct of Marly. The great park comprises a large tract of comitry, including several villages.
Versailles has some manufactures of cotton yarn and wax lights, but only on a limited scale. It is the see of a bishop, and the seat of tribmals of primary jurisdiction and commerce, and of societies of literature and agriculture. Philip V. of Spain, Lonis XV., Louis XYI., Lonis XVili., Charles $\mathbf{X}$., and several other eminemt personages, were born at Versailles. It is also intimately conmected with the history of the revolution. The states-general met in the great hall of the palace in the 5 th of May, 1789. Aud here, on the 17th of June, the tiers itat, having been joined by the whale body of inferior elergy, and some of the unbles, constituted themselves the mational assentily, and the sole representatives of the people. On the 20th of the same month the depnties, finding the doors of the hall in which they had been aceustomed to meet shut against them, retired to the Temmis Court, and took the famous gath, by which they bound themselves to contimue their sittings till the constitution of the kingdom had been tixed on a solid basis, The revolution, thus fairly begun, set in with a violence which the vacillation of the good-matnred imbecile king served only to aggravate. On the Sth and 6 th of October the palare of Versailles was foreed ly ' mob, consisting of the lowest scum of laris, wh suceceded in carrying off the king and his fami $y$ to the capital.

VELiVIERS, a town of Belgium, prov. Liege, cap, arrond., on the Vestre, by which it is intersected, and which is here crossed by two stone hridges, 14 m . E. Liège, on the railway from Brussels to Cologne. Pop, 31,893 in 1860. Verviers is divided into the upper and lower town; some of its streets are wide and well built, but many others are quite the contrary. When erected into a town, in 1651, it was surrounded with walls, but these were afterwards demolished
by the Frenel. $A$ new churel, the town-hali, and a little theatre with a fromt of the lemic order are handsume buildings. It has a tribunal and chamber of commerce, a college, lowsital, num several asylums, mearly thirty pulblic schewls, mal a philanthropic society. The Yesdre is divided into numerons canals, for the use of the varions manufacturies, which have inerensed rapidly of late years. These comprise numerous woollen cloth factories, dyeing-honses, with filling and other mills, soap werks, breweries, iron and leand fomidrics. It has two markets weekly, and four ammal fairs. (irent guantitics of fullers' earthare dur un in the vicinity.
Vesiol L, a town of France, dép. Inutp-Saine, of which it is the eap.; in the valley of the 17urgeon, at the fiob of the Motte de Vesoul, a height covered with vineyards and meadows, 56 m. EXF. Dijon, on the railway from l'aris to Basel. P'op. 7,579 in 1861 . The town is well buite and clean most of its streets are wide and struight, and it has several good public buildings, inchuliar cavalry barracks, civil and military hospital, theatre, prefeeture, pur. church, puiblic baths, court-house, and town-hall. It has, also, a pulhia: library, said to comprise 21,000 vols, a muscum, and a departmentul nursery-ground; with mannfactures of calico and gold lace, and some trade in corn, wine, salt, mails, and hardware. Near it are mineral waters, but they are turned to little accomat.
VESUVIUS (MOUNT), a celebrated mountain of S. Italy, AEtnai ignis imitator, being the only active voleano, of any consequence, at present existing on the European continent; on the E: shore of the Bay of Naples, and 10 m . E. hy s . from the city, the crater being in lat. $40^{\circ} .18^{\circ} \mathrm{N}$. , long. $14^{\circ} 27^{\prime}$ E. Vesuvius does not belong to the Alennine system, but rises, altogether menconnected with any of its ramifications, out of the great plain of Campania. Including M. Summa on its inland side, its consists of a circular mass, the extreme height of which, about $3,890 \mathrm{ft}$., is to its diameter, 8 m., nearly as 1 to 11 : it is somewhat less elevated thai Mount IIecla, and only two-titilis the height, with considerably less thair onc-third the circuit of Etua. An English traveller, Mr. Maclaren, by whom it has been careflully examined and elaborately deseribed, gives the following account of its external appearance:--To gain a distinct conception of the aspect of the hill, shupe out for yourself, by a mental effiort, the fullowing objects:-F̈rst, a sloping plain, 3 m . long and 3 m . broad, stretehing up, with a pretty rapid aseent, to an elevation of more than 2,000 ti., very rugged in the sulace and eovered everywhere with black burut stones, like the scorice of an iron furnace; scened, at the head of this phain, and towering over it. a cone of the same black burnt stones, with sides remarkably straight and uniform, shooting up in the blue sky to a further clevation of $1,500 \mathrm{ft}$ : ; third, behind this cone, a lofty circular precipice (the front of Monte Summa), 1,400 ft . high, and 3 m . long, standing like a vast wall, and of the same hurnt appearance; fourth, at the lower side of the plain, between the burnt gromrd and the sea, it belt of land, 2 ml broad, laid out in vincyards, but intersected every one or cwo furlongs by terraces of the same black calcined matter, projecting like oflshoots from the central mass, and now and then unveiling old currents of lava from beneath them. Very little lava is visible; but the course of the different currents is traced by the long terraces of scoris which cover and tlank them. The top of the cone, which is about $2,000 \mathrm{ft}$. in diameter, las a regularly formed crater, shaped exactly like a

(ieologically comsidereif, Visasins is lat the representative of a more musion and moch laterer volomos, of which Monte Somma is a remmant, amd in the reatre of whidid the mullerin vent has theon mplaraved. Monte Somma, on the Nis, side of Vesuvius, is a ridge cestemdinge 3 m . in lemgth, forming about one-third part of a circle, and rather fess lafiy than the present conte of Vesmeins. The averare distance of the esearpment of Somman from the centre of the some is about 1 mo ; the batck of the ridge dips outwards at mu angle of et; ${ }^{\circ}$, while the front towards Vesmbins is mearly vertieal, riviue $1,375 \mathrm{ft}$. ( 120 ) motres) alowe the lavel spme which divides it from Fesmins, and which is cablen the Atrio dei Cavalli, or 'restibule of horses,' broanse visitors to the crator are obliged twleave their horses, and perform the rest of the jomruey unf foot. The Atrio dei Cavalliforms the segment of a circular ring, abont one-third m, itt hrealih, at the base of the conc, dividing it from Somma, and la wing a contimation, in the shape of a depression, on the other sides, where a slight projection, called the ledimenta, is supposed to budicate the place of the rest of the ancient evearpment, which, when complete, must have fonmed a ring is m , in rire. b bing of greater extent than any erater with which we are acpuainterl. Hener, Mr. Lyell (Geolugy, ii. 80) considers it probable that the ancient volemon was higher than Vesmins, and that the tirst recordel explosion of the latter blew up a great part of the come it self, 'so that the wall of somma, mad the ribge or terrace of the l'edamentina, were never the margin of a rater of eruption, but are the relies of a runed and frumeated cone.' 'This species of phenomenom has not been wiblout an example in modern times. Durine the ernution of October, 1822 , more than 8:l0 ft. of the cone were carried away by explosions, relueing the height of the mountain from ahont 4,200 to $3,460 \mathrm{ft}$.
'The rocks of Somma and Vesuritus are mineralogically distiuct. Komma, like Vesurius, is composed of strata of fragmentary and stony matter intermised; but the stony mater of V suvius consists of lava, more or less cellular, scoriareous on the surfice, and forming long harrow hands on the surface of the lill. 'rhat of Sommat is a leacite porphyry, containing shells, and contimons with the lieils under the thita which forms the soil of the phain of Niples. Mr. Lyell says (ficologer, ii, 92), 'It is an extraordinary fact that in anl area of 3 sg . in . rommd Fesuvins, a greater number of'simple ininerals have been found than in any otherspot of the same dimensions on the surlace of the globe. Hany only emuncrated $3 \times 0$ species of simple minerals as known to him; and moless than 82 had been finm! on Vesuvins before the end of the vear 18.28.' Many of these are peculiar to that locality. The flora of Vesuvins is also peculiar in Ituly, embracing several Suphorbiacea and other plants not found elsewhere in that penimsula. The greater part of the mumtain has, indeed, a bare and rugged aspect ; hat aromul its base, as previonsly stated, is an extremely fertile and picturesque region, teeming
Tol. IV.
with plantations, villares, and white romntryhomses. 'The lamd here is ilivided hatosmall farmas

 persoms to a m. lague. 'The land is ralt isumen, like
 varar, withont lallows or mamire. The proprictar of the soil usially rereves two-thirts of the groses prombese in kitul for his rent. The leases are lonta, nind the intercourse lertweren firmer and temate is generally mild and liberal. It is on the whepe of Vesuvilis that the Lucryme Christi is Lrowno. 'This, which is a red hamedns wime is heder ktown by name than in realite, very littlo of it buinur prodheed, and that little herines principally ro. served for the royd codars. 'Ithe rino Greet and the mascatine wines of Vesublis are also deservedly celehrated.
Yesuvins, being so near Naples, is usually visited by strangers resorting to that eity, in bimglish itaveller gives the following notice of his aseent to the momntan: "We laft l'ortici. ascemeling gradally among cultivaterl tichls and vindyards qeasionally taversed by streams of what latva, black, romgh, and sterile; and in 13 hener reached the llermitage, a comvent where a fiew monks keep a sort u' imn for the visitor. of Visnvias. Further up, we travarsed large fielis of lava, extrembly rught and at the base of the cone prepared for the ascent over a lienp of crimbling ashes and cinulers, extremely stecep, of course. as it formed an angrle of nearly $1 ; 0^{\circ}$. In about one hour, stoppages inchuled, we fommi murselves on exarmely hot gromid, intoleralle to the haml, amb fatal to the soles of our shices; it teemed with hot, vipours, and was covered with beantiful affloreseences of sulphur. Smoke issued from mumeroms crevires; at the entrance of which a piece of baper or a stick took fire in in few seconds: and, what seems strange, a stome: thrown into one of these openinfe increased the smoke at all the: others. Stophing low, we conlil hear a moive vars. like that of a liguid boilines. 'The hard but thin arust upon which we stood appeared to have sattled down in some places; a wofthl indication of its hollow state. Nfter it few steps more, we came to the edge of a prombigions hole, on the vers: summit of the eone, loeing the erater formed by the last eruption, four montha previously. 'This luge was not by iny means the tromendoins thing: we expected-a fathomless abys, fiery and bhel. with lava boiling at the botton-lut a slope of grey ashes and cinders, much like that by which we had ascended, or seareely more precipifons, and ending at the depth of lini) or 500 ft., in a leved pace, with grey ashes like the rest.' 'Ilse viow from the smmait is far inferior in extent and marnificence to that from libua, but is, notwithstaniing, extremely varions, rich, and beantiful. The whole ascent and deseent to and from Naples naybe readily aceomplished in suren or cirht hours.

From the period of the earliest recorts down to the reign of Titus Ve-pasian, the voleano seems to have been inactive: the appearance of its crater and its cavernons structure leing the only indications by which Strabo conjectured that it misht at some distant period have been on tire. liat in the first year of the reign of Titus (A. n. 7!) the volcano that hat so long been dormant burst forth with renewed and tremendons energy, in one of the most destructive eruptions of which histury has preserved any accoont. The large athd thourinhing eities of ITerenlanemm and Pompedi, near the sea, were both overwhelmed by its lavas and ashes. Liven the tigure of the coast was materially changed; and for the space of more than 1 , the $^{\circ}$ ) years all trace of the buried cities was completely

Since the destruetion of Heremaneum and Pompuii there lave been 少 aumentiated ermptions; but nome of them lave beren equal to it in dertructive pwwer. If thase which lapmoned down to the lethe contury, we huve few accomen; anul from 113s to 1631 there were hat two slight eruptimens: during this interval, however, Bitum was in a state of great activity, mul the formation of Monte Nuovo, in the Philegram Fields, took phace. In lai31 a viobent cruption we morrel, duriug whish seven streams of hava poured from the erater: and, from libib to the preselat time, there hats been a series of ermpioms, the homgent intervals between them haviug rarely exceedel ten years. The mergy of Vesusins, when in ation, is extromely great, and the spectacle magniticent :und sublime. la the eruption of 17 a !, jets of liguid hava were thrown up to the height of at least $10,0,160$ ft., haviug the mpearme of a culumn of tire: and, in that of 17033 , millions of red-hot stmes were shot into the air to lith half the lieight of the cone itself, and then hembing, fell all round in a the arch, covering morly half the cone with fire. The lava, however, does not always issue from the crater at the summit, lout, as in bitua, sometimes from small cones raised in variuss parts of the declivity: and ocemsimally thre or four of these emenes are in a line, which generally points thwards the great crater. 'The ernptions of 1ain, La!l, and lsish were of this description.
 chicelly betwem the shith and kituth deres. of N. lat., ame tive llith and jth of E:. longe, having K. Yologita, E. Derm, S. Oreubourg and Kasan, and W. Nijui-Novgorod nud Kostrmal. Area, estimated
 slope of the comutry is towards the W. and S., in which direction the Viatkis, a tributary of the Welga, flows, traversing the govermment nearly in its centre. 'The Kama, whicle forms part of its B. and S. bomalarim, also rises in this gov. Surface generally undulating amb even montainems towarils the "E., where it comsists of the lower Ouralian rauges. The soil is mostly goon, thaugh encumbered in parts with extensive marshes. Climate severe in winter, but not usually muhealthy. Agriculture is the prineipal ocenpation of the 른ahs., purticular!y along the banks of the large rivers; and in ordinary years an excess of corn is grown. liye, harley, amm oats are the principal crains; very little wheat is raised, hut pease, lentils, and buckwheat are grown, with large quantities of hemp aud dax. The surplus prombee gocs chielly to the N . Jiussian prows. l'otatues are not nuch cultivated. Fruit is not phentiful; aplues seareely ripen. The furests are very extensive; they consist mostly of firs, intermixed with oak, elm, alder, lime, lirelh, and other trees. Cattle brceding, though a secondary branch of indi-try, is still of improtance ; and a goocl many small lut robust horses are reared. Sheep are few. Fors, tar, irom. and copper are nmong the ehief prolucts. Manufactures, though not extensive, appear to be on the increase : there are
factories for woollen clotha, linen and ention

 2 million arehines of woullen, und perhap, nearly domble that qumetity of linen cloth, are sulpmed to be ammully mate in the honsem ill the peasautry ; ani large fuatities of spirits are
 fintury of arms, and at Votka mullurs, futb earriages, and irom madinery of varime hindy are mate on a latpe seale. The gowrment axports corn, thas, linsed, homer, tallow, lenther. silk gonels, irmo nud copper to Arehangel, mai corn and timber to surathen mal Astrabhan. It rercives manfatured grouls from Mosenw and Nijni-Nowgurol, ten from Irhit, and salt from Perm. Viatka, the enp, is the great cmpurinm of'the trade. It is subativided intw 11 distristYiatki, shobodskei, and Surapual lwing the chidep towns. The inhahitants eomsint of varions rases: Ritosians, Viotiaks (of a Finuish strek, aum from whom the prov. has itwame), 'Tartars, Banchairs, and Trphiars, prolessing many dillerenut religions. The Mohammelaus are estimated at marly
 This government is united muler the same gu-vermor-weneral with Kasan; but the 'lartars and Finus nre subordinate to the jurisitiction of their own chicfs.

 tical utility. In those af uther comatries we lanse seen articles of gremter inlividual rarity: entire asemblages of certain brathehs, mare enpions mal complete; but in no one were the varibus objecte, to our aprehemsum, wo ally ind lucidly arraiged, labelled, deseribed, nud exhibited, as at V'ionna: and this, too, in a city where nate and light are *o defiective. They are linlly exhihited so the public. during a moivenisent mumber of hours, and the student lans ample grbortanity of foblowing upe his researches therem, in eombection with lectures grathitemsis aborded on the principal branehes of seience:

The imperial arsemal has one of the richest armonrias in liurope fat the upher roman lin, ito stand of arms are kopt; and, hesides a larpre store of weipens and armour of different dates, there are the buff eont worn hy (iustavius Aholphas at the battle of Latzen, the arms of Marlbormatsh, lingene, Stahrembers, and Montecurnli. momerons stamiaris, and the enormons chain thrown across the Dimule by the 'lurks in liot!. The city arsemal is a the building, constracted by the citizens at their uwn expense, and has, with mang curiosilies similar to the above, arms sulliaidit for es, 0000 civie phards. The imperial rislingschom is also a hamoliome edifice hy Fiseher of Erlach, but lost among the buililings of the palace. The royal stallome, in the suburbs fatuin the Burd-thor, is a moble palace appropriated to the royal llmgarian gromrd.
Viema has live grod theatres; the primeipal are, the Ifot-theatre attached to the palace, athd that at the kirmolhor-1 hor (Carinthian-natc). The first is devoted solely to the pertormance of the regular fierman drama; and, though not the largest, is by far the tinest a heatre in Viemm. It is both chean and well lighted, mul is salil somewhat to resemble Drury lame. The acting here is at benst egual to that of Berlin; and the performers have, after ten years' service, a handsome pension settled on them for lite by the govermment, with an ammity after their death for their wionos. The Kibuther-hor is the opera-homse of Viema, and the singers and orchestrit are masurpassed in tiemmy. This house is very large, laving six complete rows of boxes and a hald circle next the fit; but the largest theatre is one on the Wien, approprinted to equestrian pieces. The really national theatre of the Yiemese is the Buyn tasperl, the lepopoldstadt. This theatre, the Alelphi or Ambign Comigue of Vemma, is appropriated to farces, and is the arema on which the mationald clamater is painted in the most lively colnars and broadest manner. Here one circumstance is noticeable, an indicative of the power of 'the million,' even in Anstria. The police, thongh excecelingly strict in the regular theares, are satiol to wink hard at the political jokes that are fre-
guently cracked on this stage while the phase of

 history abll chemintry as applied to rommorece, Irawing, and mathemat ies; for whid instrurtion the purpils pity only a th. a month, ame, for a small cstra simn, are taght latin, linglish, fremel, and lablim. Among other eollections. this sehowi has a mosemon al the products of aris and mannfictures, both . Instrian mul foreign, and a valuable library. The Theresiamm, for the soms of the aristocracy, and the mormal selmol of St. Amme, were buth established by Maria 'Theresa. 'I'ho furmer was sulpressed by dosephl Il., but restored hy Prancis; and it has now a library of : $2 \mathrm{a}, \mathbf{1 0 1 0}$ printed vols.. Berines Msis. and pamphlets. duajh II. extablished beth the (riental Analomy and the dosephinn: the latter, an insthtution fir the education of army surgeons, which has attaded to it a hospital sapable of roceiving $1,2 m$ pationts, and a collection of amatomian ligures in was, by Fontama, I besiders these entablishments, Vioma has a special semimary for the ednation of the secular clares, a l'rotestant sominars, fommed in 1x21: 6 military colleres, with mearly l.boo, and d! minor establishmonts lior matiary education, with nearly :3,000 pmpils; an acalems of the tine arts for about 1,304, and a musical acalemy for 200 stments; liesides alsut 60 infarior public sehools. In aldition to the libraries abready mentioned, the Archduke Chardes him onte
 Prince Metternich al en, (mon, I'rime Vistorlatis of 20,000 , exelusive of many inferior collertions. Hut, with all these applaness lor kmowledse. Vieman cammot be comsidered so mueh a resomt if learming as of the the arts. In painting she is, promps, the richest eapital of burone. The abllery of Irince Liehtenstein consists of 25 splendid
apartments, filled with exghisite origimals of the I Galian, Flemish, Fromelo, ambl Dutch masters, in-

 and ciarla bolde. The bistordatay gallery contains mparals of boll pietures, of which ol are by Spanish mators, whose works are ramely fomat ont of
 works by Canova and Thorwaldsed ; and bo,000
 rach, lambere, and many uther moblemen, have cohlertions of choiere pantings ; and in the patare of the Arehluke Charles s a eollention of 180.000 ensravinge: 'the forconas galleries are all opeot to dre priblie at stated times.

In statuary, abso (thomern not in publie statues of emporated men), Vimmat is very ridh. ('anova's (gromp of thesens hilling the "entane desorves experial mention. It was ariginally intended by Xapoheon lo to sumomat the grame arela at Milan, but is now phaced in the 'lhesemme a lorie temple, on the Volksparten, in imitation al the temple of 'Thesems at Athens. This aromp is of larmata marhle. The here is in the act of ermaping with his loft lamid the throat of the centaur ; while his right arms raised behind his helmeted head, chenches the club with which he prepares to intliet the fatal blow. The whale edaracter of the gromp is in ('imova's most efleetive syle.

Iospitals athl other Choritiosi- Vew eapitals are so ahmindanty furnished wat chamitable institufioms as Viomat. Many of the primeipal. as the gemoral hospital, homse of in alids, and deal and chmb asylhm, were fommalol hy Joseph II. 'The' pememal lospital is a vast huiding, ramed aromad 7 quindrangles, having e. 0 omo heals. It is said to racive annally from 10,000 to 16,000 paients. It partly answers the purpose of a sandoriam, there being separate bed-rooms, which, with modiral attembante, and every eomfori newessary fin an invalid. are wittin the reach of persoms of limited income, on the parment of a small sum analy. 'The hospital of the Charitable Bredaron, sumperted partly by voluntary contribuibus, is a monastie establishment, but ojen equally to dews, Turks, and Christians of all persuasions. The honse of invalids is similar in its kind to Chelsea Tlospital. having leen fimmed for sothold soldiers. In its great hall are two large jictures of the Battles of leeipsis and Aspern, The beaf and Dumb Asylum is well combucted; and those among tie pupils who evine intelligence are ofteln alderwarls emploved instate athits requiriner secres. There are schonls for the blind atol a lunatic asylum, which is, however, said not to be so well comblacted ats mosi of the other pmblic establishments. Attached to the General llospital are the maison diacouchement and fommaling haspital. In the former of these not even the mane of the applieant is demanded; she may elter veilei or masked, a d remain incog. the whole time she continues in the honse; sle ats merely to deliver a sealed paper to the superittouldent, contaning her mane and roal abilless. that, in the event of denth ensuing, her relations may be apprised of her fate. The person who lribges a chilh to the fomblling hospital recoves a thiket, hy presenting which the child may, at any time, be rechamed: if it be not taker away, it is, at the proper are. broupht up fos some employment.

Commerre amd Trude. - Viemna is the wreat
 and important depot for the interchange of gonds betwonl li. and W. Burope. It has extensive establishmonts for cotton printing, and for the mambiacure of silks and velvets, and of cotton fabricy, 'The porcelain manulacture of Viema is
amomgst the most celelrated on the Continent, and it has an imprial camon fumblry, and a mat-

 other metallic forels, mereselamm jipers, musimal
 thar, hosiary, thowhate, mal liquenter, are among the other primeipal products: it hats several large printers and masie; empravers. Many of the ment wealdyy morantiln homes beloner to (ireds. 'The hationall hatak of Viomat, entabilished dhrine the
 has the exdusive priviluge of issuing motes in the Anstri:me empire, and hat numeroms branches in all the more important towns of the empire. The bamk alvanced larpe sums to the govermment during the war with l'russia, in the summer of istif, in eomsequence of whelh its whe and tive thorin notes ware decelared to be state-motes, with lored currence. 'The fotal amomit of these notes in circolation, in S'pitember, I titi, was estimated at bou million thorins.

The lot (l) are of two classes: living in those of first-rate excellouce cowts about one-thind more than in I'aris; but those of the secoml class are very food of thoir kiml. Lohlgings are twice as dear in the city as in the suburbs, where a rom tolerably finmished may be had for ti thorins a month. 'The caffis of this city are mot deoratend with the same spleughor as thase of Paris, hat they arequ te as muth lirequented, being resorted to in the eveninges by both sexes of the midnles elasses, aul tht oflar times by rembemen to play at billiarts. Ya blat is well supplied with prio visions of al himes, which are fromerally elac!ls. Honse rent is salil to be lower than in laris; serviants' Wares are much less; furniture is sifil chatuer; and a paiv ol fool Itumgarian carriare horses, tho kney it whiwh will eost aboul :ob/ : vear, may be bought for fol, ' No fown' says an linglish traveller, 'exhilnits such an apperamore of' !ecople living amian phenty, such am absenee of ancasy chasses, and of anything that emn represent poverty. I'le hackney donches are an neat, clean, and showy as private carriages; the horses are generally in execellent eondition. The shops, thonglo in such marrow streots, are as thashing as thase of Lomben or laris, and most of them lise sign:, with paintings almost worthy of museuns. The booksellers' and picture shops are maneroms and harge: and, besides the literature of every state in dermany, yon may lind many purnair books and the principal engravings published in Eneland and livanes,

Parks and Amusements.-The principal amusements of the Viemese are music, dancins, the theatres, and freguenting the Prater and other tine promenales which encircle the eity. The I'rater, the IIyde lark or Champs Eilysécs of this capital, is handsomer than either, and may be considered the finest public park in Earone, it is nearly 4 m . in length by half as much in brealth, being enclused between two arms of the Dambe. Ikesides the fashionable drives, the I'rater contains a great monber of rollee and ice loonses, pavilions, and shows, ame is gencrally tilleal with a throng of people, 1 articularly oin sumbays and holidilys. The ghocis is studded in a similat manmer with places of entertanment. and the Augarten and Brigittenau, both N. of the Dinube, ind the Volksparten, within the city; are promenales in much the same style. The doceing saloons, or pablic ball rooms, are not in Ho fal what can be called fashiomable places of inmusement, thongh the inporial fimily and higher aobility attend the balls in the liodontensaal at the carnival and other times. They

Viemathas andired the elaracter of beder the most dissolute ripital in birrope. But withoul stupping to empuire whether it he entithen to this distimetion, it is, at all evonts, a most arreable plare lor at stranger. A liveliness and bemhomis pervinles society; in buste and ardivity V'ioma rivals lamdon and Paris; and the parsuit of pleasure appears one of the mana wectupations of the areat mass of the inhals. The peace of the eity is prespred with the utmost care. The arrivals, departures, athd residenees of stratigers are abrefully noted; pasiorts are strictly examind, and great rare is laken that visitars shall show that they have the means of patying their way. With residents, lownerer, the palide interfore bint littes and never ohtrusively. Amoner the drawhateks on a residence here are, the lintons driving in the crowded thoromghiares, through which pudestrian: have to wind their way amomer heags of find, the hewing of which is incessanty arriod on before the deors of the honses ; the ereat variabolity of the elimate, and the indiflerence of the water.

Viemar is an arehbishopis see, the residnare of the J'rotestant superintendent for all the sid. prows of the empire, the seat of the high juticial tribmans, and cennral bureanx of the Xustrian dom., of the court of appeal for the archatachy of Anstrin, and the provincial govermment of the pros. helow the bims. Thongh not in general fimmons as a seat of literature, it has, among many other associations. a literary society. of whieh Vom Hammer, the Orientalist, the pwet (irill parmer, the historian Maihall, the novelist Caroline Piehler, the mineralogist Mohs, Balli, and wher eedebrities, are, or were, members. 'The mper chasos sporak Englisli, l'rench, and Italian almost as well as their mative language.

The emeirons are picturesque, but the roals around are very had. About 2 m , from the city is Schobbram, the fivemrite summer residence of the emperor. It stauls in it larere park stocked with deer and mime of all kinds. The patare, built by Maria theresi, is a vast monotomons pile, but richly larmished, and possesses many interenting portants of the imperial lamily. It was twiee necupied by Napoleon 1 ; the traty of Sedannbrom was sipned in it in 1809, and here the Duke of Reichstadt, son of Napolem, died in L aise. In
 temple, from which a line view is ohtaned; a menagerie, a splendid botanic comservatory and gardens, with eating-homes, music, and daneingrooms, lur the public. Not far from the tichänbroma are havkenhurg, brihh, and baden, freguented by pleasure parties from the metropulis, in moch the same way as Itichmomb, (irenwich, or sit. Clous.

History, -Vimbabma was remarkalle in anfiquity as the phace where Mareus Aurelius expired. It was suceessively taken by the lioths and the lluns, and subsequently by Charlemagne, who
plated it moder the fovernment. of the margraves of the li, part of his dom., thene called thenterreide, or the Liantern-realm. 'Ihe margranes, afterwards dukses, heht Viemais till the midelte of the

 it was tahen ly the llumgrians, whose kime, Inathias, mande it the seat of his romet. Since the (ime of Masimilian l., it his heren the usmal residenere of the arduhanes of Austria and dmberors of Sirmans. It was bexidend ly the 'lurlis in lizen and lise: : wh the firal waision it was re-
 Solsieski of loband, whatotally defotind the 'momy lnoldenth its walls. In libl! it was mesucorsisfully harkaded by the Bohemian I'rotest-
 hat its siege was averted hy the paine of Labon. The Fremeln tow it, howerer, in 18 gh; and lsal!. The famous compress which parcelled ont Europe into its mew divisions sat here from the did Nov. 18IJ, to the !th dume. INI后.
On the ith tot. Ixix, it formilable insurreption broke wit in Vimana, Ghe af the ministers, fomit. Latour, having bern ansasinated, and the others comperled to sede their sithety in flight, the town fiell into the possession of the insurgents. lint that revolitimary sipit did not extemil to the ohlor portions of Anstria I'roper ; and the army havinis continumed fandafin to its soverign, the city was Prdared to obedience on the :3st Oct., aid the insurrection suppresset.

VILLA-LICA, a town of Brazil, cap. of the prov. of Minat-Geraes, on the Guro-preto, hy which it is interseeted, and which is here croseed by four stone bridges, 190 m . NiNW. Rio, Jameiro. l'op. 10.330 in 186 ?. The town occupies an elevated site, lat it has no yery striking inproach; mor, on a nearer view, does it present to the eve of a traveller any olject eorresponding with the sramdere of its name. It is siluated on the declivity of a high mometain, lorming part of all immense chain. Nost of the streets range in burallel rows along the vide of the momatain, lueing errmed by athers leading up the aedivaty: These have numerons puldie fomitains, and the town generally is almirably shphied with water, which is comvenienty combucton into almost every honse. The streets are ill-pavel; but there are many groul homses two stories in ledight, luift of tome, tiled, and whitewashed. The govermors revidence, the town-hall, 2 par. charches, mumerous chapels, the mint, college, and thentre, were, atew years age, the principal edifies. some of these are superior to the puldic luildings in most wher parts of Brazil. The guvernor's homse commants a view of nearly the whele town; and in its front is an open space surrombted by a sort of parapet, on which a few hass swivels are monnted. Several of the churehes are ridhly ormament. The mint is in the lower part of the town, attarlach to the treanny and chatom-home. The climate of Villa-licat owing to its elevateal situation, is very arreable; the usinal range of the thermoneter is fom $6.1^{\circ}$ to sill $\mathrm{F}^{\mathrm{F}} \mathrm{Fh}$. in summer, and from $15^{\circ}$ to $70^{\circ}$ in winter. Thumder-storms, though emmnom, are not violent. The gardens leere, which extend in raised terraces along the side of the momatain, produce exeellent kitchen vegetables; but, beyond these, the vicinity of the town, nombithstanding its fertility, is wholly umcaltivated, and the catle and other stock are allowed to pasture at rambom. 'The markets are ateordingly ill suphied; and when Hawe risited the comitry, most sort of provisions and vegetables brunght a very ligh price.
The inhabs, ate chictly interested in mining speculations, Villa-Rica heing the hean-quarters of the gold-mining district of Brazil. The metal, finm in the mountain on which the town is hnilt, is imbedded in a matrix ol slaty clay schist resting on granite, gneise, or sandetone. Bars of this valuable product, with precions stones, cotton, hides, marmalade, and cheese, are sent to lion where ther are exchanged for slates, mannlactured goods, wines, and hams. Owing, howerer, to the filling off in the prowluctiveness of the mines, this tride is now much less considerable than lormerly. The goldsmith trade is prohibited in Villa-Rica, bat almost all other handieralts are cartied on. There are also manfactures of guppowler, hats, and pottery. The inhals. generally dejend on mining; and in consequence of the uncertain, hazardons nature of their emplogment, which has greatly deslined, they are very generally idle, pow, and diswolute.

Vhbliflideches, a town of France, dep. Averron. calp. arrmal., wh the Averrons, 26 m. W. Rhowiez. Pop 2,911 in ledil. The town is well built: four -ratlel thoroughfares divide it into nine parts vides which it has several suburls interspersea rith plantathas. The ohd colleriate chmred, and the hoipital, formerly a conventual building, are remarkable specimens of
anthic arehitecture. The public establishment comprise a college, a publie library, musemm, and clul, or sulnecription twons. Thip pincipal manutartures consist of linems and erpmor wares; it has, also, a comsiderable made in com, cattle, and other rural produce, and [2 amual fiirs.

Amither thwn ol the same name is the rap. of an arroms. :h the dho of the Rhone, on the saine,
 consists chicfly of one very long and wide atrect, is well built, and has agrecalbe ensirms. Its manufactures consisi principally of line fabrice, cotten, thread, and heather, in whinh articles, with the addition of wine, cattle, hemp, tlas, and hempen clohlas, it hats a brisk trate with other towns in the S. of Prance. Near it are some lead mines, which were wrought muler the limams.

VILBLEN (an. Turbulte or Arbucultu), a town of spain, prov. Alureta. cap distr., in a the plain :32 m. NW. Nicame. on the railway from Madrid
 castle and huerta, and is a place of some size, with several emenents and churches. The vine is extensively grown upen the lower :c.clividies of the neighomring siertat and is almost all converted into brandy. Viltema gives title to a marfuis, whuse palace, a town-hall. 2 elurches, many chapels ind comvents, a hospital, and some harracks are its principal elifines. It has some sump fietories: and, in the neighburing marrher, a arowh deat of sialt is miale.
 call. ctant., on the rual to Combommiers, within a
 Vincemes owe itsorigin to l'lialip Angustus, whe surrombled the wood of its mame with walls, and built at one of its extremities a royal residence, on the site of which, in lim:9, the juresent cintle was erecterl. 'lhis chatle comtinumed to be a phace of resort for the lremel hing till the time of Lunis X1., when it was made a state privon, a dextimation which it retanel, with little intermisiom, till laces, the great Conde. Biderot. and Mirabeau having bert among the momber of those emfinel within its walls. . lonter Napofeon I., it agian served the same purpwe: and here, on the elst March, 1son, the Duked Enghien was shot. The castle of Vincemes is of an ohborr liom, about 360 sards in length ly 210 in bread h. surmanded by dry ditches, and entered by two drawbridges. The keep is a square tower, tive stories in height, with limer turectio and a baleony outside the fourth story. The chapel, limumed liy Charles V., in lias, but monily robuilt umater his sucessors, is a rich Gothic calitied, with some lime stained glats cour Imprisiale, is surrommal by modern buildings, in which tre some well fiusnished apartments, and a large collection of arms. In the fosse, a plain columu of gramite, on a lion of black marble, and lowaing the inseriptiom $\cdot 1 / \mathrm{i}$ recifit,' prints ont the spot where the buke d'Enghien met his lite. The wowl of Vincemes, comprising about 1,500 acres, is, with the town, a gand deal resorted to by the l'arisims on holiditys, particularly the fate puitromale on the loth of hur.

## VIRGINIA

some considerable nud well-watered valleys, the soil of which, eonsisting of a fine black mond of samb and elay is experially aldites for the culture of sugar. In the upher gromods the soil is light and simdy. St. Vincent is of volcanic origin, and a tremendons armotion of one of its moantains, in $1 \times 12$, weasiomed great miseliad. The mome tains are chothed from their base to their sammits with immense forest trees: hat the gromed having everywhere the advantare of a grallabl slope, and there being little jungle ar brush-wom, ventilation is not imperded. 'The valleys also are suliciently wide, and free from execssise vegetation, to wise a heahby character even to the montivated portion of the ishand; and there is little swampy gromme exept in a few places mear the serio. Gnly abont one-third part of its surface is moder enltivation. The atmosphere is generally homith, amel the dews hativy; but, notwithstanding, St. Tincent is considered one of the most healthy of the W. Judia inlamls.

The chiof imports are Dritish manufactures. while the exports eompri-e sugar, molasses, rum, colles, and coeco. The total value of imports and exjerts, in the year INiot 62 , was as follows:

|  | 1800 | 1801 | 180\% |
| :---: | :---: | :---: | :---: |
|  | 发 | E | ${ }_{\text {d }}$ |
| Imports | 1514,31:3 | 125,906 | 1.10 .259 |
| Exports | 15:20\% | 18:, ,67] | 11:30:3 |

The guvermment is vested in a governor, a conncil of 12 , and an assembly of 19 mems. Representatives of the llouse of $\boldsymbol{\lambda}$ ssembly must have an income of $300 /$ a year, or, il representing the town of Kingstom, a house in that town of the vearly value ol 100 . Blectors must possess a frechold of 10 acres, worth $20 /$ a year in Kingston, or 10l. a year elsewhere. The julbic revenue, in
 23, faik. Sit. Vincent, with its depenaenes, the Grenadines, is divided into fi pars. Kingston, the cap., lies at the bot tom of a bay, near the Sill. extremity of the island, with in amplitheatre of wooded hills in its rear. The troms, amounting to nearly ! No0 men, are prineipally cuartered at Fort Charintte, on a very step hill, ahout $1 \frac{1}{2} \mathrm{~m}$. NW. the town, amd 600 ft . above the level of the sea.

St. Vineent was diseovered low Colmmbus, hut was inhabited only ly Caribs till the latter part of the both century, when a slave ship from Guinea haviner rom ashore on the islani the blacks mostly escaped, and settling here lecame in the sequed the most formidable enemies of the Caribs. It sulsequently fell into the hands of the French, who ceded it to the English in 1763. In 1779, it was re-eaptured by the l'rench; bat it reverterl, in 17x:3, to Cireat Britnin. The sum awarded, in 18:3, for the manmission of the slaves in St. Vineent amomnted to $5!9,509 /$.

YNCENT (CA1'L ST: , the Sucrum Promomtorium of the ancients, a promontory forming the Sill. extremity of Portugak, prov. Agarve, 170 m . S. Lishon, lat. $37^{\circ} 2^{\prime} 54^{\prime \prime}$ N., home. $8^{\circ} 59^{\prime} 30^{\prime \prime} W$. This rane is celebrated in history for the great victory graned in its viemity on the 14 th of Fehruary, 1797 , by the Eritish tleet maler sir John Jervis, over a spanish tleet. The Britisla fleet comprised only 15 , whereas that of the Spmeiards amonated to $2^{-7}$ sail of the lime. But notwithstanding this disparity, the latter were completely defeated, with the loss of two ships of 112 , ane of 8.1 , and one of 'it gins. The vietorions admiral, in acknowlemment af his gallantry anal success, was elevited to the peerage ly the title of Latrl st. Vincent.

VIlaE, a town of Firanee, dep. Calvalos, cap. arrond, near the somre of the riser of its own hame, 35 m . sill. Curn. Pop, "8.6.7 in $1 \times 61$, Tho town is well built, primepally on the deolivits of a hill, on the summit of whith is the fonmiling asylum, and at the lase the meneral hospital : on the ascent, among wher builangs, are the convtlomse, sulb-prefecture, town-hali, and urew primm. with a handsome square. In the midhle ares. Vire had a castle, of whid some remams still exist; but the greator part of its site is ocempied ly the town-hatl and il planted promenade. Tlie principal clameh is a tine Gothic buildimg. A geent deal of activity juevails in Vire. Which has mambectures of "coarse and time woollens, womblom yarm, paper ol ald kinds, Mededes. and other stem articles, with tameries ind filling mills, it has tribmals of primary furisilietion, and commeres. a chamber of manulactures, conncil of pruthommes, commmal colleqge, and jublic library. Whamel, and some other eminent personage. were matives of Vire.
Vhaidild, one of the states comprised in the repulbic of J . States, being the most entensive in the Chion, on the Athatic, oreween lat. 3 , ino and 010 N., and long. $7^{\circ} \circ$ and $\times 1 \circ$ W., hasing N. amd NE. I'cumsylvania and Maryhand, from which has it is separited by the Potomac, NW. Ohio, the river of the same name forming the bomblary, IV. Kentneky, s. Tennesse and N. Carolina, and E . Chesapeake bay and the Athantic. length, li, to W.. abont 350 m .; average brealth, nearly 200 m . Area (stimated at $61,300 \mathrm{sq} . \mathrm{m}$. J'op., exclusive of West Virginia, $1,261,307$ in 1860 . The Alleghany: Bhe, and other montains traverse this state from N. tos, in several parallel ranges, fommine its centre into a table land, which in some parts rives to nearly 6,000 fere in height. The western ? tion of the state is also very momenainoms. The extreme western part is composed of a congeris's of hills with alluvial bottoms; but the actual momtain ridges eneroach so near Ohio river, and the hills are in themselses so generally abriph and lolty, as to give an alpine appearance to the conintry. The risers may be dividet into thase that dow into the Athantice, and those that join the Ohio. The 'rotomae rises in hat. $3!9$ 1.2'N.; it flows at first NE. to about lat. $36^{\circ} 50^{\prime} \mathrm{N} .$, and thence in a SE, direction into Chesapeake bay, which it enters 70 m ., in a direct lime, below Washington, after a course of about 360 m . It receives its principal atluent, the Shenandoah, from the sily., at the celehrated momentan-pass of Harper's Ferry, where it breaks through the line Monntains, amid some of the gramest seenerv of the U, States. The Potomac is mavigalle for shif of any burthen to Alexandria, upwarls of 160 m . from its month, heing the most distant point from the occan to which ships of war can be navigated in the interior of the Lnion. James' riser, on Which the cap, of Virginia is built, rises in and flows throught the eentre of this state to ('hesapeake Bay, being naviguble for ressels of 1.10 tons to lichmond, 100 m . from its mouth. Over one of its atlluents, about 25 m . N 1 l . Lyuchburg, is a stupendons natural bridge, 90 feet in leugth, actos:s a chasm above 200 feet in depth. The Romoke lies partly within the state; the Rappahanmer, Vork, and Nottaway are the other prineipal streams on the Atlantic side. The ehief atluent of the Ohio is the great lienhawah, which rises in N. Carolina. joins the Ohio at Point Pleasiant in Vimisia, and is navigable to Cobarlestom, 60 m . from its mouth.

As regarels surface and soil, Virginia may tre divided into 4 sections. The E., or sea-board sedtion, extending about 100 m . inland, or to the

rginia may be sea-boardil ser lud, or to the
head of the tide waters, is generally low and level, but samdy and moproductive, parts of it being mere swimps, and rabilibine mbost as deshate an apparane as the pine laments of New derses. The second seetion, whid inchates the comitry between the latter and the blac Monmtains, is, perhatis, the most produrtive; the alluvial lands along the risers in this part of the state are, for the mont part, very fine; thowe of James' river expeciatly lieing remarkable for their fortility. The thir! section inchudes the valley between the Bhe ridge and the Alleghan Manitains, and, thomg in parts broken by momtains: has a great deaf af tine fertile land. 'The fimeth seetien includes the eometry betwern the Alleghany cham anm the Ohio; this portion is in genmeral wild ant broken, and is in great part covered hy primeval liorests. Dint it also contains large tracts of the land, with vast deposits of coal, irunstone, and malt.

The wheat of Virginia is inferior, lint maize. cotom, tobacon, and momerons fruits attain to prorfiction. In average vears, npwards of 38 midlion hashels maize are reabeel in this state, beine more than was prombed in ally of the Bastern states of the Enion; there are also reapeal 12,200,0100 bushels wheat, and $11,000,1010$ bushels nats. Tobacen is the primeinal erop in the lis. part of the state: but it is suitathe only for the very tinest lamls, which it rapilly imporerishos, and the imbividuals emoraged in it are in a continued state of exertion, beyond the powers of nature to support.
The enlture of cotton is earrical on to some, thongh to no grat, extent; sume wine is made; and small quantities of sugar are oltatined, partly from the canc, and partly from the maple. Agrienlure in most parts of the state is in a very depressed and bathward shate; and the crope we very inferior, eompared to what they might be under a ditherent system. Land that hasts been cleared is usmally cropped without intermissiom or manure, till it is exhatusted, when it is telt to recover itself. lisewhare the three shift system frequently prevaids. by which a erop of maize in one year is suceeded by one of what, rye, or oats in the mext; and this mot be a fallow, but be a year of rest, during which weeds and other heronge, the spontameons produce of the soil, athord a scanty subsistence to a few halffed cattle. In parts of the country, however, and especially on the l'otomac, some improvements have been made in agriculture; and W. of the mountains alonm the Olios are some well irrigated meadows. The mineral riches of Virgimia are of tirst importance. Coal is very widely aliflised; the bituminous on the W., and the semi-fitmminous and anthracite on the E. side of the monntains. The beds of coal are in many plates from 30 to tio ft. thick, and alternate sometimes with dense befs of iron ore. The coal in the lichmond basin is rather extensively wromght, and the works at New Comron furnish considerable fuantities of irom. Gypisum, magnesia, alum, atod pecroleum, are among the mineral proshets. The region, including spotsymana and some other eometies, where the gold is fomme abounds in quarto, containing culses of sulphuret of iron. often party or totally decomposed, the eells of which are sometimes tilled with gold, 'The latter is fomm also on the surfitee, esbecially of slate, and in its fissures. The metal is cotained by tiltration, or washing the earth, amd by an amalgam of quieksifion. On the whole, however, the seath after gold here has not been very productive, and it is doubtind whether it will ever be of any innortance. 'There are mu merous salt, and other mineral springs; thase
on the Kenhawalı furnishing a very large suplly of salt.
'lhe mamfactures of Virginia are mimportant

The semeral assembly meets ammally at Richmond in December. The state semble lis representatives to consress. Virginia is divided intollat cos. amd 10 julicial districts: Richmond un dames' river is the eap. and seat of gros; Williamsharg. Ferdericksharg, Charlotesvilte, Lymehbars, and Lexingeton, are the other principal towns. Courts of appeal sit once a your at lewisburer for W'., antat Richmomb for la, Virginia, and a cirenit suprior court of law and chancery is held twice a year in each eo. and corporation.

Virsinia has several colleges and other seminaries. The miversity at Chanlotesville, estat blished in lsig, has a library with l6,000 vols. The colloge of Willian and Mary, estal. hy the Baptists in 169 i , is, excepting liarvard Collere, the oldest institution of the kind in the Eninn. There are many other superior schools and acalemies. An historical and phitosplacal sucioty wats formed in 18:3: Baptists and Methanists are the prevailing religions sects, next to whom l'resby , tians are the most mamerous; there are but few 1. Catholies, Friends, Lnitarians, and dews. Nearly the whole of the baptist assoriation consists of coloured persmos. The importance of Virginia hats, in conserpunce of the rapid growth of other states, declined rapidly since the la wolution!. The principal towns are lichmond, the capital, P'etersburg, and Norfolk.

Cirginia was the sat of the carliest colmy ghaten by the Jinglish in the states' territory, it part of it hasing been settled in ltant. Its name, given in homour of Gueen Vilzabeth, was originally applied to the whole R. coast of N. America. The tirst lecrislature of Virginia met in 1614 . Notwithstanding arions dipputes with the stuarts, Virginia sumputed the royal mase in the eivif wars ; and Charles II. wat prochamed here hefore the aews of this restoration hat arrived from lingland. Virginia took a learling part in the great civil war of lsbl-tion, esponsing warmly the eatuse of the "Confederate States' X portion of the inhabitants, however, remained fathful to the erontral govermment ; and, to oppose the insareetion, they constituted themselves into a new state, called 'Wes Virginia,' which whs almitterl into the mion on the 20th of dinn, witis. Among the distinguished matives of X'irgimia is Wimhimgtom, the father of American imbowndence, born in Westmoreland co., on the 11 th of Fobmary, 1762. It is also the mative commery of debersom, the author of the 'Decharation of lidependences, and

## VITTORIA

of the＇Notes on Virginia，＇and president of the l＇uiom，from IstI to Ixite．

Itilll rivers of Comral Eurone，thowing from s．to N． through loband．The hasin of the Vistula is sifated between those of the blbe to the WY．，the Niemen and Whiestr to the NLS．and N．，and the Oniper to the sli．It rises in Moravia，in a branch of the dimpathims，close on the frontier of（iaticia， and ahout $? 0 \mathrm{~m}$ ．SE．Terehen；and at a short distance from its somree is precipitated over a fall 180 ft ．in height．It proceeds at tirst $N$ ．fir ahonit （1） m. ，and then turns to the E．，separating Billesia，the territory of Cumow，and the kingom of foland ont the N．．，from Galam on the S ． Shortly after passing samdomir it again tows morthivard，which comrse it retains throughthe ＇entre of Poland to berond Warsaw．It then turns W＇NW．，and pursurs qearally the same di－ rection to the intux of he brai，e3）m．from Thorn；after which its carse varies little from NNi．to its month in the lablic．Its entire length is estimated at bis） m ．It ruccives a vast momber of tributaries，the primeipal of which are the Nita，Kamient，Jiliea，and lirat，from the W＇．；mill the San，Wiepra，and lhig，with its tributarises from the E：．At Cracon it is only ahont lan ft．in width；at Wirsam it is erossed hy a bridge of boats $\mathrm{J}, \mathrm{iolog} \mathrm{ft}$ ．in length．After reesiving the bur，atrem nemrly erpal in size to itself at Monlin，it proceds gencrally in a very wide chammel pist l＇lock，＇Thorn，colm，and marienwerder，about 15 m ．below which hast，and alant ：ill m．from the baltic，it divides into two Ereat ams，the most easterly of whidn，called the Xerat，flows past Marienborg and bilbing intothe Friaselie llatf．The $\mathrm{VF}^{2}$ ．arm，or main stream， suldivides arain at about 16 m ．from the sea，the bi．brameh falling into the Friesele llall，and the V．making a loug detour round by lbintzic． The river is of rery considerable eommercial im－ portance，being，as it wero，the great highway of the extemsive comotries thromgh wheh it thows； the channel by which their wheat，timber，and other producteare conveyed to lhantzio and bilbing for exportation，and by which they receive sup）－ plies of colonial and other foreign produce．As it Hows for the most part through a level comory， it is maigable throughout the greater part of its extent．

Large flat－bottomed boate convey the produce of the combtrios thromen which it passes to the fort of bamzie，and Waram is thus plated in tifect commmication with the baltic；while，by means of the naviration of the Nogat，the colomial prothee impoted into Komsherg finds a ready areces to J＇olamd，Morivia，am！Hungary．The Tistula is comected with the lille by a canal from the Braia to the Netz．belween Bromberg and Nakel；and with the Niemen lye means of the cimal of Sugustowo．
l＇l＇\＆illio，a city of Central Italy，cap．deleg． of same name，in the t＇ampagna，anil on the road
 fermer．pop． 13.870 in $18 t^{2}$ ．The town is well Inilt，witio voleanie tufin，imb well paved，having a latge and hamdsome square， 10 par．churches， and momerons noble residenees，and publie form－ tains．The cathoolral hats a range of columns on each side．with grotespue capitals supportiner semicirobar arches．The Prinita is a handsome modern churels，in the furm of a Latin cross，with a dome in the centre．＇The ehureh of st．Firancis is a large buihding：the transegt has pointed vanliner and there are e tine archways of the puinced st ble．lemding into chipeds and some fiothic tumbs，It bonsts also a painting by Sebastian
del liombo，from dexigns by Mirhael Angelo， The pontitical palace is a the buiding．Viterme is the seat of a cardinal delentite，and a conet of primary jurisdiction，It has no manuliactures Worthy of motice：thourht almm，vitrioh，sulphur． aud other volemie prodads are obtained in it， neighbonrhoor，which aboumes with mineral surings．

Titerbo is supposed to necupy the site of the Fanam I＇oltamua，the plate where the gencral an－ sembly of the bitrasem nations was held on sulemn uceasions．＇The mondern town was encircleal with turreted walls by lemiderina，the last kinge of the Lombards．It hias been the residence of manerons popes，several of whom are horied in its chureloes． In its vicinity are many villas lelomging to amo of the more ophlent lioman families．

Vlllib，a town of France，drip．Vilaine，eap， arrond．，on the Vilatine，esi m．W．Hennes，Pop． x．OMd in Jsth．The town is cuclosed by walls of Gothic character and thaked by romid lowers． Vitré is ill built，ami destitute of any pablic promenade；thonhth the environs are agretable， and in the vicinity are two parks open to the public．Abont $1 \frac{1}{2}$ in．S．from the town is the Chatean des Roehers，the seat of Madame de Sivigur，the most accomplished of letter writers， who sometimes also oecopied a honse in the town． Near the town are also the ruins of the castle， formerly belonging to the lonkes de la＇Trimonith： The peasantry of the neighbourhood wear winter cloaks of goit skins，which，with eoteon hosierer， sail cloth，thanels，leather，amd barrels are amonis the principal anticles manufactured in Vitre．Wian． honco，and eantharides are here considerable articles of trade，and the town has no fewer than $2:$ ammal fairs，savary，the traveller，was a native of Vitre，where he dirst saw the light in 17ist．
VITHY－LE－FRANCOBS，a town of France dép．Marme，eap．arromd．，on the Marne， 20 m ． SSl：．Chalons．Pop． 7, tee in lval．The thwn is spuare shaped，and is enclosed by corth ramparts， and hastions，ontside which is a derp mont．It is tolerably well laid out ；and thongh most of it． homses ire ohd and murepossessing．it has a groal many new buildings crected since the peace．Its charch，an editice in the Cormintian and Composite ＊yles，was the earliest of any consequence built after the restoration of the arts，in the time of liraneis I．moder whom this tow，was fombed． Viary has a good public hall and theatre，and， agreeable publie walks，with some mamuficetures of cotton yarn and hosicry，hats，and leather．

VT＇iURLA（Span．Vitoria），a town of hpain in biscay，cap．prov．，on the ralway between hur－ gos and hayome． 60 m ．NW，the former． $\mathrm{l}^{\prime} \mathrm{op}$ ．
 new town，very diflerent in apmearame ；the latter being elean and handsome，while the former is quite the contrary．＇fle llaza Nuevil has arcaldes at its sides，under which are very gook shops：the S．side is ucenpied by the town hiall．and the area sorves for a market place，＇ilie hall of the lis－ envan kociety，orphan asylum，and general hompi－ tal are among the princijal editices．Vithoria hat a collegiate and four pan：elmeches，six comventat estahlishments，a school of denign，public bibrary． cabinet of coins and lioman mimpities．its manalactures comprise chars amd cabinct furni－ ture，copper utensils，earthenware，cutlers．and linens，and being one of the principal enirepots for the trade letween Savarre and Ohd Castile and the ports of St．Schastian and billono，it has a considerable trathe in iron，woul，womllen，and sills fabries，articles of chothime and colonial p，odtece．

'Thumph the loss of' men in the hattle was mearly equal, the limen were totally deleated, with the loss of all their artillerve hagrage, ammanition, amb treasure. and whiged to make a rapin rof reat acruss the l'erenees, this battle haviag all but amililated their puwer ins spain.
 India, presid. Madras, const of Coromandel, cap. of a district of same name, in the N. ('itears. at the month of a small river, lat. $10^{\circ}$ for $30^{\prime \prime}$ N. long. $833^{\circ} 2 I^{\prime} \mathrm{E} . \quad \mathrm{It}$ is mot a place of any strometh, its only defensive works being a thick wall enclosing the Zillah eonrt lumse, hompital, other burohean builitinge, and a bazatar in the centre of the town. The barracks aum other publie editices are mutside this wall. $A$ frood many well-lmilt honses stretch along the shome; bitit the great insalubrity of the town has driven most of the liomer Euronean residents to Wialtier, a village at some littlo distanese
VLADIMlli, a government of Furopean hussia.
 the 38 th and dirol of E. lomp.. having N. Jambial and Kustroma, l:. Nijni Noverod, W. Tver, amd S. Mospow, Riaisam, imil 'lambuf. Area estimated
 almost a level plain, watereal by mmerons rivers, the primepal being the Oia in the E., the Wuma in the W., and the Kliama, a tribntary of the Ika, in the centre; all ol which have, more or les, a NE. comrse. The soil is not genemally fertile, and a large part of the sovernment is covered with lorests, marshes, pools, aml heaths. live. harley, oats, summer and wiater wheat, millet, pas, hemp, and flas, are erown: hat the crops of eorn are insutienent for the emsumption. The gatdens and orehards are nomerms and well attomed to; and Vablimir is fimons for its cherries and apples. A good many elommbers and some hops are raised. Cattle rearing is a secmbiny hosiness, and is far behind. The forests are of vast extent, those belonging to the crown alone eovering abont one-ninth part of the entire surlace. lixtensive and valuable heals of iron ore have been found in the forest of Mourom ; and at Vixa, on the Oki, are some of the most extensive iron-woriss in liosia. 'The poverty of the soil, and other comemring eiremstances, lave thrned the attention of the inhals. towards mamfaetures, which appear to have succeederl better in this than in mant other linsian grovermments. The eotom manufuture, whin is by fir the most extensive, is orimepally earried on ar 'homia and Ivanova. The mandature of woollen and linen is of less importance; but about loto0 hands are employed in iron fomblries; and abont 1,500 in phase and erystal work, exeluvive of those emplayed in the production of leather and earthenware. The varions prodacts at the govermment atre sent down the Kliazma and ()kia, ar elso fo Duson, ha means of land cartiage. ('om, cotton-twist, mail thax, from the meghbourins gevermments of $\mathfrak{k}$ ostroma, datoslat, and Nijni Novgoros, are the chef articles of import. Vatimir is divided into l: districts: chide towns, Vhatimir, the calp, Chouia, and Mourom,

Viamman, a town of Faropean Linssia, cap, of the above govermmont, neat the Klitzan, and on

 tris. The town esculies a site rather more elevated that the rest of its soverument. 1t is surrommed by a ditch and earth rampart, and like
almost all the ancient towns of lasia is divided moto there promins. Its prineipal atreet is lomen, wide, and lined with honses, of woud and stame intermixed. 'The crons streets are mont? meatis. 'The priméal strueture is the rathedrat of the Asmuption, a sumare edifice, smmumad by tive

 abent a doze'll uther wherehes. The firmar palace of the archbishomen serves for a seminars. 'The Hovernors honse, comet-honse, and ermmaimu, are brick adifices. Vladimir is mot monsitemed : wealthy town or a primipal empurinm, owin! partly to its distance from any larer mavisabm river, aml partly to the proximity of Jlowow. Being, hawever, on th : irreat romito lhe lairs of Nijui Newquret and hait, ant ont the gramd line of commaniation betwern Rassia and Siberit. it,

## WALLACHAA ANJ MOLDATIA

Viarthrualies sometimes oecur, hut hippily they are rarely violont. Most part of the comitry towards the Danule consists of a rich alluxial soil; - Wewhere tertiary and calcareons, and in the I'nrpathians primary formations are prevalent. IIt the later, ores of gold, silver, mercury, iron, ropper, and wher metals are fomul, and several miness were opened during the linssian secupation of these provinces. At present, axept salt mines, few ohers are wrought, and the gold obtalined is chictly by washing the river deposits, an oecol1 ation alhost solely contined to the gijusies, who pay thar tribute jartly in gold dast. Jetrolemo, sulfinur, nitre, and coal are met with, hat not much somght after. 'The salt of Willachia, which is of the purest kimb, forms marticle of sole in all the hazatars of the conntry. Oak, fine, fir, heech, maple, clm, ash, wahnit, and white mulherry are the elifef liorest trees. The climate is maxuitible for the lig and alive, hat apples. pears, phons, cherries, and apricots eome to perfection with litule culture. Asparigus is indigemous; cabhages and artichoker grow to a great size, and chenmbers amd melons are among the principal articles of fool. Dher, wild goats, and hatres are very numerons. Wolves. when pressod tyy hungor, come down from the monntans and cominit much devastation amoner the thocks and herds; but at other times, like the bears aml other wild animals in these provs., they rarely attack man.

Land und Agriculture-Thos land principally belongs to the nobles, or hoyars, thongh it is seldom cultivated by them on their own iteconnt. No regular system seems to be pursued as respects the arrangenionts between the lathodders and eultivaturs; that, for the most part, the ealtivators pay to their lamdlards a tithe of their whole proluce of form, and, in aldition to this, they are bondul to pay the lamb-tax and other burdens. and to work thirty days in the year lor their lamploms. Owing to their subdivision among the ehibiren, on the death of a pareat, there are now but few latere propretios. The mode al thane dues not slither much from that in other parts of Eastorn Eurupe. Oxen are usially comphoyd for tield labour. Mimure is never used; het, alter a erop of com, the lamal is Inft fallow for a sansom, mul then sown with wheat. maize, rye, and harloy, which are the princigal crops. Gats are but little cultivated. Maize and rye are the hread corns in gencral use, and luals of them, lut expecially the former, are largely exported. Wheat is mosily raised for exportation; banley is primeppally used in distillation and as lowd for cattle, but it is sometimes also rather extensively shipped. Speaking gencrally, the wheat of Moddevis, though intiorior to that of Eingland or boland. is trom to to le per eent. superior to that of Wallachia. In the latter pros: the wheat is mosily solt, whereas in the former it is mostly harel.

No very accorate estimate ean be given of the probable protuce of the corn erojs in the prineipalities. lhat since the trade of the Danube was opened by the treaty of Alrimople in 18.29 , and especially of late vears, the oxports have increased very greatly; and such is the fertility of the soil. that with seeurity and trampillity at home, and a realy demand from abrond, these provinces would most likely beeome one of the principal grimaries of limrope, Galacz (which see) is the prineipal port of Dolldavias and Dorala or Brahilow (which see) of Wrallachia. A few years ago hambian wheat was gencrally damp, anil had an arilly smell, from its leing kept in pits dug in the gromod, hut laterly it has been much improved. A gacol elal ol wine is made on the hill slopers, particularly in Mohlavia. It is mostly of very
indillerent quality: lout some of the wines are pleasant and wholesome, resembling the listat whes of l'rovence, and they are latrely exported to lenssia and Transylvania, The strengila and spirit of the wine are increased by a procosy common among the rieh proprietors, and practised also in Russia.
At the first appronch of severe coll, the wine lutts are exposed to the severity of the wather in the open nir: in a fow nights the booly of wine is encircled with a thick crust of ice: this is perlorated by means of a loot iron, and the wine, thas deprived of its aqueons parts, is drawn ofl dear. strong, and capable of being preserved for a long time.

The rearing of cattle, rather than agriculture, has been, aud rontinues to be, the principal cmpheyent of the Whalachians. Their tlocks and lisrids timd almmant and mutritive pastures in winter in the phans, and in smmer on the Ciarbathians. 'The mumber of' shecep annl goats in Wallachia has heen (stimated at $1,0100,0010$, and the
 quintals. There is mo publie estahlishment for the washing of wool, but private individuals sometimes wash it at home. which commonly inerenser the price about (1) per cent., but the greater part is sold in the grease.
Taking their size into acconent, Mohdavia is richer in horned cattle than Wallachat, which. on the contrary, takes the lead in sheepr. In twiln primeipalities the cattle and sheep are bought up hy the dealers, who pasture them thronghont the sumner with the view of selling or slanghterines them in Angust and Suptember. The monber if horned cattle littened in this manner for sale may amount to 70,000 or 90, timo head. The luyers commonly advance one-third ar a half of the prive for some montlos. The high price of eattle pronceals from the great consumption in Austria, into which numerons herds are ammally sent, particalarly from Mohdavia, lut partly also from liesarabia and Wallachia. Many of the inhabitams on the Anstrian frontier are cogaged in this tradr. A part of the catte, and ebrecially the sherp. traverse the Damube far sale in lingaria. There are several breeds of horses, and the best, which are those of Moldavia, are bought il! in large numbers for the Anstrinn and Jrussinn envalyy, Tallow is, next to eorn, the primeipal article if export. The buftalo thrives in Wathachia, and poultry and game of all kinds are in great plents: Ifoney, was, and hare-skins are of the best fuality; of the last about 500,0000 are ammally exporiell. 'Timber, yollow herries, butter, cheros' hides, staves and masts, linsed, rapeseed, and hones are the other chicf articles of export. The Nohlawin oak timber, whieh is liner than the Wallachian, is well calcolated for the eonstruction of vessels, and many of the Turkish ships are buila. of it, and litted out with masts and roples of Iln\}davian growth and manfacture. The yollow berries are inferior to those of smyrna, and only in demand when the erop of Asia Minor is deticient.

Manufictures and 7ruale. Coarse wowllen eloth, hats, carthenware, eommon linen fabries, glass, jewollery, and saddlery are made, and there are estimated to be abont 5,000 liactories of ditlerent kinds in the two principalities, inc. clistillerics. But, for the most part, manufactured grools are imported from other parts of Europe, in return for the raw prodnce of the principalitics. (balame and Ibritila are the gramed centres of the trade of the pross., and the prints whence imported goods are sent to Jassy amb Jhucharest. Comee, sugar, spices, ail, rum, lemons, and lemon juce, winges, and wines are fle prineipal imports, C'otton and woollen

gools, earthoware, and hariware, are lirought chictly from England and Girmany, and linsia supplies the principalities with harge quantities of furs, taking in return spirits, wines, and sprecie.
Prople and Condition. - Notwiflstanding the varims irruptions of the Goths, (iepila, Lamhards, Itums, 'Tartars, and 'Turks into these provs., the inhahs. nt the present day appear to be, with rumpratively little intermixture, the descendants of the aneient Dacians, to whom, as represented on 'Trajan's collumn at Rome, buth in fiatures and costume, the montern Wathachs hear a remarkable resemblance. They still sall thensilves Rummai, or lomans, and their eomery \%ura Rommon-Esha. It is a curious finet, that in a prow which was anome the last amexed to the limman empire, and in a situation more expusel than any uther to the irruptims of invalers from the Fi., the common diatert mow sumen contains, tugether with mang slavomic and tireck terms, a very large infusion of purely hatin worls; so much so that a stranger opeaking in hatin is permerally mulerstowl by the hativers. In alpearame the emmom Willach prosents a deciled ditherence Irom either Makyar, Sichave, or fierman. In hoight he is helow the medium, amb promerally rather stighthy luilt and thin. lis features are whens fine, the buse arehed, the eyes dark. the hair hang, black, and wary; hat the expressinu is tow witell whe of liar amil cmuing to be agrevalic. The dull, heary look of the slowak is sellom scen ammer them, hut atill more rarely the prond sill-rewpecting carriare of the Maryar. The homercontinued misgovernment to which the Wajlachians and Moldavians have heen sulject has corrnpted their morak, weakened their energies, and given them most of the vires of shaves. All the worst consequences of 'lurkish despotism are exhibited in these provinces. Thonghnot withont huspitality, and some uther releming qualities, the inhabs, are treachermes, revengsfint, indelent, and often cowardly. The women, indeed, on whom most part of the latomur devolses do mot share in the idleness of the men; but their industry exhibits muels want of methol and thriltimess, and 'to be as busy as a Wallach woman, and do as little, is a proverlial comparison among the German settlers in Tramsylsania.
The peasants' dwellings tirmughout the eomutry are all huilt in the same strle and of the same size. The walls are of clay, and the rowfs thatched with straw, neither of which is caleabated to prostoct the inmates from the inelemency of the weather. In winter the penhle retire to caves under ground, kept warm by fires made of dried dung and branches of trees, and which, at the s:inie time, serve for cooking their scanty food. Each fimily, however mumerous, sleeps in one of these sulterranem habitations, their beds comsisting of a piece of coarse woollen eloth, which serves in the double capacity of mattress and covering. These under-yromed dwellings have, in fact, been the winter resilenee of the inhals. of sieythia from the remotest antiquity, and have been idmirably described by Virgil:-

- Ipsi in defossis specntus secura sub) nitia

Otia agment terri, congestange rotora totasque
Alvolvere focis ntmos, ignidue demire.
Hic noctem tude ducmit, et pueuta beti
Fermento attue acidis imitantur vitea sorbis,'
The ordinary fool of the peasants consists of the flour of fudian corn mixed into a dungh with milk. For the tirst few days after Lent some indulge themselses in meat, inut the greater part ramot adhiod this, and coment themselves with rages fried in buture. In their holidays, which are multiplied to an absurd extent, they spend
most of their time in the villate wine-honses, where they amue themselves with hancing luid withessing the vagraties of gipwes. 'There are no
 the ir masters, may, minging due motire, quit. their habitations and pass over to the estate of nowher, with their families and movables: this, however, is more an apmarent than a real ailvalutare, and the peasants are still in a vary oflressed emblition. The gipwies continue in it state of partial savery. Smace are complayed as domentic servants; the rest are sullerend tio stroll about the commery, breedinis eattle or horese, matimulacturing wouten and irm utemsils, or momenimf themselves as shownem and musiotims. Fin this likerty they himl themselves mot to puit the comutry, and pay an ammal ribute of : 30 piastres ner man th the sownmant.
The molibity and derey are in femeral sxempted from tases fior tha serviere of the state, ami from the temands of private erediters. Thes are in comsedurene overasaring, extravagat, anil dissolute. Thair caluatien has hithertor berent little s:aperior to that of the common people; inel thengh ontentations in their ifress mal equipaspo their mamurs present lithe refinement. In Mohblavia, which is the mont civilisedol thesepress., the great lamber proprietors bestow esonsiderahb: attention upon the manarment of their entates; but in Wallachia these are montly left to the care of agent.. The hoyars, who julil mo pitace unter gowernment, spomb their hisure in alsolute millourse, or in vinitiles carh other, to kill time. 'Thery have,' suys a traveller, 'aloptell indiseriminat ly the viees, withum inheriting the vivality, of the Cirecks.' 'This statement aplies, however, rather In their past than to thair present state. (If late years some improvenents have been introulued; and theng'l society is still very backwarl, it is, at all events, suffrior to what it was memer tho Turkinh regime.
Gocernment. - For a lengthened prow these provs. were poserned by raitudes, or priners apointed be the sultan from amome the (ireeks of Comstanthophe; and, during the emantinance of this system, the comery was a prey to every sperces of abuse. Since $1 \times 29$, however, thei tave been mominally omly muler the soveraguty of Turkey, being really imbler the protection if Hassia. The mion of the two primapalities of Wablachia amd Mohlavia was sranterl by a tirman of the sultan, hatel Nuv. 12, 1Nfil, but prorisionally mily for the lifetime of the former ruler of both comntries, Colonel John Conza, rlectel hospunhar of the principalitics in 1x:9, which otliee he heth till Ixtif, when he was suceceled by l'rince Charles of Hohenzollern. The mion of Wallachia and Mohlavia, under the mame of 'Sammania,' was solemmly pruchaimed at Bucharest aud Jassy, in i) ceculier 23, $\mathbf{1 x t i t}$.
The present eomstitutiom, Irawn up by Coblomed Cuna, was sulmitted to the wote of the wor phe May 10-1.1, Ixtal, and aceepted by Gese, bixi vites agimest ifi,918. This comstitution vests the lemislative power collectively in the prinec. a sonate, an! a chamber of dejuties. The semate emsists of tit members, me-hall of whom are nominated by the prince from anomg persoms who have lied the lighest fumetions in the comtry, or who prossess an annual income of sill dincats, or :3till. The other 32 are dected from the members of the gemeral district commeils, and nominated ly the prince from a liat bialt belowe him al three members for each of the :32 disisiots. The bl memben of the subate are renewed exary three years in the promrion of mathath The clamber of deputics consists of Ifil members, of
whom Rof for Wallabhia all! $7 . .5$ lur Mollavia. 'I'he members are chasen by intireet mention, the tirat vaters mominatimg plectors, anml these, in Howir tirn, the deputios. Voters are all liommans. ased es years, who can read and write, and prose the payment of ammal taxes to the ammint of I ducats, or $1 /$. lis.s. ench. liligible as meputies are all liommans aged 30, and jussessing a yearly income of tom alucats, or $30 /$. 'I'lie prince hims ant absolute reto over all laws gassed by the ehamber of deputies and the semate. The exerntive is in the lames of the reinning prinee, assisted by a commal of live ministers.

Wallarhia is divided into 18 , and Mondavia ints: 13 distrids, catch of which has a profeent or Fowernor, a receiveremeral of taxes, a civil trihamal, emsisting of a president and two other juderes: and Moldavia hase a rivector al police and a town council in cath monicipality. Inders are removalile at the pleasure of the sigureror atiHorities. 'lioe langal condes are bomided uponthe divil haw and the enstoms ol the primipalities: lat thomeh the system of jumisumence has bex math amender, imany reforms remain to be offected, especially in the mhininstration of the laws, whicls is satid to be most corrupt. Nearly all the popmation belome to the fireek ehmed and cury vilhare has a small charela or elanold with one or more priests, who act iss eurates. The ecelesiasties of this order are ehosen from amonis the people, from whom they are lithle distingrinded in alpearance, and whese arocations they follow when not engated in their elerieal fametions. 'The qemerality al' them can neither real nor write. and marely reate the larmatie of their service from memory : they have: however, an mbemaded inthenee aver the ignorant prope of these romotrics. 'Lhere are many larpe anm rich monasteriess and $t$ or $\mathrm{i}^{5}$ seminaries for the edaeation of the sunurior clarey,

Puthir instruction, thominh still backwart, appears to have advanced sime le:3. Golleges and hancastrian schools have heen establishod int the princibal towns, and the latter have ly this time probably spreal into the rural districts. 'The higher clases in these provs. have set about inprovines their mational dialeet with romarkable vigour ; and it "plears probilhle that their lathghage will ultimately be rondered much nearer akin to the ancient Roman than even the Italian. A printine press at bucharest is in active employment. and trimstations of forciun ats well as ariginal works are comtimbally beiner promaced by mative aulhors. 'This is a consequence, amd by un, manns the ouly salhtary one, that is likely to follow the enframbisement of the principatities.

The military, force is orgitnised on the plan of the liussian army, and the stall wheres are princibally linsiaths. The militia is formed by the pensamby. in the proportion of 2 ment for every 100 fimilies; lat aloug the banks ot the Dimulie all the inhalitants capable of hearing arus are orgmiserd into a military force. complosed partly on the puarantime servite, amd partly and principally ans a mational or rivie sumal. The tromes amd militia of all descriptions amonat in Wiallathia to about lo, 000, and ian Moldatia to about

Wiarminamer is supperad to have beret a linman station, trom the diseowery of coins, wapums, a posellated parement, ant other antightas in the virinity Market days, sumrday f fairs, :6 times a year, for cattle, sherp, honss, aind cherese.

The manor anif loriship al Wiarminster is the property of the Marguisol hath ; int alumt lle m. II. From the town. in the combints of sumeractshire, is Longleat Itase, the magnitioent seat of that noblemath. 'Ther park in whirh it is situated is of great exdent, and is linely laid ont.

WhliliditiluN, a parl. Mar.. market town,
 Derly; in a low situation on the Maresy, 17 m .
 Landon and North Weatern railway. lopr ib mminc. ber. $2 l i, k: 31$, and of parl. bur. $2 t, 416$ in filil. The parl. bor. comprises the townshipe of Warrington and Lischtord, with purtions ol that of 'lhelwall. 'The town prinupally eonsists of four mainstreets, one or two of which are spuldons, and contini some hatmsome builinges but the other strects are for the mast part narrow. The most important pmblice builatimes are the sersions homed readed in ls: 4 ; the market-lall, aver which ate the assembly roms; Hired rloth halls. the publia masomi and library, ereced in ls:ia, a pablice hall, opened in laviz, and a thentre. The palt. chateh, which is of saxoll ,rigill and exista, at the time of the Comquest, is a large massiso crucilam structure. The tower, which rises from the inaresections of the tramsept, was robuilt in li:解; the interior of the eharel, which is lolis and handsome, contains two chapels, and shmo line anciont monnments. beneath the chanerl has lately been diseovered an anciont erypt, now comverted into a vesury. At the rintrince of the chorcharal are two handsome gates. The living. a rectiry, has moler it the preppetual curacios iil st. P'al and the Iloly 'l'rinity. There are: I . Contholic chapols, fommed severally in $1 \mathrm{se}: 3$ annl La3t; and 12 other phaces of wrirship for ditlerent sects. The free grammar-school, famaded by Sir ' I , lioteler in $\mathrm{j} \boldsymbol{5} \mathbf{6}$, has an anmal income of between $700 \%$, and x00\%. The bluc-cuat sehonl, established in 16ã, has suce received legacib; and benefactions amounting to upwards of $2,01610 /$. and has an anmal income of $4501 . ; 30$ boys amil 20 girls, chidren of settled mhatitants of the town, are looked, mantained, and clothed in tha
 day selmars. A general subseription library was established in 170 D . A society was formed here early in the last century, for the purnose of allome ing assistance to widows and orphans of clergy-
men in the arehatenconys of Chester: and the 1 relinf dixpernsed by it monints at present to nlant $1,1001 \%$ a year. A handsome buidling, in the Bizaheethan stylo of arehitecture, has been crected for the edfucation of the orpham daugheres of clortimen. A disuensary and brameli of the hoval Ilmmane surioty ure among the other momerons clarities, and there is a small bit commodions intirmary, to which two wards for cases of fever are attachen.

The aplearance of Warrington is less bustling and amimated than formerly. l'util the opening wif the railway it was the great thoromghate lietween Manchester and liverpon; 70 public carriages daily passing throtish it between these great cmpurinins. Initt its tratlic with the above towns is, motwithstanding, very emsilerable; for, though mot strictly spaking a purt, it posmesses ly means of the Jorsey mal Irwell Navigation, biang of the advallages of a port, At sprinstides the Mersey rises from 10 to 12 ft , at Wiarrimgton liritge, and vessels of from 70 to 100 tons burden havigate the river ul to this point. It is also a station in the great. NW. railway from Lombon to (blasgow, amb is consequently comected with all parts of the kingitom.

Wiariugen is distinguished by the number and varicty of its mannfictures. Thie making of sailcloth and sacking was formerly carried on here "pon a very large sate, bat it is dwindled to invirniticames. At present, amonr the many that are carried on, cotton spming and power lomo weaving ocenpy a promisent place. The refinime of suratr, thongh not entirely relinquished, is mot a leadmig brameh of indastry; but the soaj mannfacture tontimes to be of great importance. The mannacture of tlint and plate ghass is carried on ywn a large seale, and lass long rankulamomis the primepad businesses of the town. Warrington is also the prineipal seat of the manufacture of 'hameashire tools,' under which desigmation are comprised files of the very best quality, chisels, gravers' tools, wateli anil elock makers' tools, and in sume of its factories may be sem collections of the articles in question of unrivalled excellence. I'in-making is also carried onf and Warrington lus long been celebrated for its malt and ale. The suil in the neighbourhood being expeaially suitahle for hortienltural purposes, fardening is well mulerstood and sucessfully pratised. The gowernmont of the town is vested in police commissioners and comstables chosen ammally in Oetuber at the eonst leet of the lord of the manor. The lieform Set emferred on Warrington, for the first time, the privilege of sending 1 mem. to the II. of C .
 aud Nat. Fairs, 18 th July aml 30th Nov., each lasting 10 dass, for horses, cattle, and cloth, and every other Wed. fir cattle.
 cap. city of Polamd, palat. Masovia, on the Vistula, bion nit Sb. letersburg, on the ralway from st. letershure to Vienna. Pop. 230,2:5 in is6.1. The city which, with its gardens and sulnurbs, covers a freat extent of ground, is on the left or W. bank of the river, which is here about as broad as the Thames at Westminster liridge, beins comneeted with the suburb of Iraga, on the right, by a tine iron bridge, resting on gramite piers. Warsaw, being situated partly in a plain and partly on an ascent gradually rising to the river's bank, has a magnificent appearame from the Petersburg road. Jat the impresision of gramienr is not supported on entering the town. It has, indeed, many tine palaces, public buildings, and nohte mansions, and, latterly, its private houses have heen improved, by prohibiting the construction of new
 cioms, are badly javed, hally lightad, amd direy: the greater part of the bonses in the city, mud atil more in the sulmotos, are mem and ill comstructerl, nhove one-fourth part of their munher being ui Wond; and the whole town exhihites a painial contrast wif wealth and puverty, divilisation amil Darharism, luxury and misary. The suburly ul I'ragat on the li. bank of the river, ome externas. is how all but deserted. There are still, howewer, weverat ohber suburts of barge extent : and thoos mparent to the city proper are included within is rabyart and ditch.

The primeipal pmblic buiding is the Zamok, a huge editions formerle the palace of the kings if Pohand, and that in whith the emprorstill rosildes when he visits Wiarsaw. 'The hall of' the Dolish diet, a splembid gilt lall rom, and the nationnd archives of Pohand, are in this buidtinge: Dot the tine paintings of Canaletti, with bla library and other treisures, have been remowed simeo 1 xa: 1 to the linssian capital. 'flure are several other royal palaces. That called the padace of Casimir, which was appropriated to the university, has in its sfuare a stathe of Coprmions. The labais ole saxe is a large buidling in one of the fillest squares.

At the beok of this palace are the principat public gratens in the interior of Warsaw, whar't resomble in some respects the park at lirusols. thongh eonsideralbly larger. Another haminome: public garden, much frequented at the fasdiomabla: hour of $1: 3$, helongs to what is called the governmunt pabace. 'lhis latter is one of the most elanand really beantifil architectural elevations in tho lodish aipital. It is strictly in the latian sty. and contains the national theare, enstom-hains, high tribunals, ame otlices of the minister of the intorior. 'Ihe palase of the minister of tinamere, which is quite mondern, forms, with the new exchange, a very imponing object at the end of the street lealing to the lireslain gate. The sharievida bazatar is a latre sipate, the four sides of whict comsist of cowered arcales, with dwellings for tha merehants above, and shops for the merchandio: nuder them; the latter amonat to about sion. besides several warehomses. A great number if churehes are to be foumd in the city; some if which are of really eolnsial dimensions, ats the catthedral of St. Jolin and the church of the lloly ('ross. In the former are an altarpiece of areab merit by l'ana Nowa, and a large standart wrested from the 'Turks by Sobieski at the siome of Viema. 'The Latherms have ako a marniticout chureh, erected at an expense of $2 \overline{2}, 001$, and ant perior in beanty and boldness of design to all tho. Catholic churches in the place, having a dome and tower of promi, rions elevation. Which way soever a traveller turns, he camot fail to pass some one of the monuments which stand in the squares to commemorate the reign of a sovereign, or the achievements of a lolish warrior. The colossal statue of Sigismund Ill., cast in bromze, gilt, aml phaced on a lofty pillar of marble of the cotmary. produces a very grod eflect; and the equestria: gromp in bronze of I'oniatowski, by Thorwaldsen, is another monument worthy of admiration.
ladependently of the public gardens, Warsaw may be saill to have in its vicinity sume of tho finest drives and promenades in Europe for wilth and extent. The numerons avenues of the Ujasdow, planted with lolty lime and chesmat trees, are the remlezvous of hearly the entire pelp: of Warsaw on Smmelays and other holidiys, and are almirably calculated for horse and sledse rices, both of which take place here. In the intmediate viemity is the royal villa, formerly the

'Ihis citadel was hilt from the prombe of at loan raiseal in lobland: and, in latio, when the Vimperer Nicholas visitod 1 Varsaw, III his way from the comgress at löplit\%, he listinetly infirment the eivie anthorities that , oll the tirst slisturhance breaking out in the eity, the guns of the citand shombl level it with the promal. The therat was arilin held out in the insurrection of lobit, and served, in a great mensure, to prevent an outbreak in the eity. A cest-iron obelisk has bern crected in the citnilel in homos: of the late empror, inseribed ' 'Io Neximuler, he Conqueror and Dencfactor of l'olamb,"

The miversity of Warsaw, established in 1shi, pussesed timelties ut thologes, jurisprawence, merlicine, philosophy, befles-letires, abl fine arts, moll a librars eontaining it is said, 1.20,00(1) vols. of printed books, exclasive af rare Insis., with all ohservatory and intimic enatem, mabinets of natural philosogils, zoolorer, minerals, mandels, and eoins, and printias and lithoraphic presses. lint the mitersity no hager exists, hisving heen suppressed subserpulatly to the illfated insurrertion of labis, its time ibrary being then, also, removed to leteraburif. Of late years there las been a II. Catholic college at Warsaw. with twelve professors; but the atherents of the Klaso-Greek churd are rapidly inereasing here. ins in all other countries subject to Russia, and have now a eathearal and ofluer churchew in the city. The Jews, of whom there are abont $2 \boldsymbol{2}, \mathbf{0}, \mathrm{How}$, have soveral symagogues; the domenians, too, Itave their places of worship, and the linglish have a chapre. Amang the educational establishments are mumeroms superior, special, and elementary schowls; all of them being modelled on the new system, and having attached to each a mative liussian as a tencher of his ow'm language, a comshlerable proticieney in which is now an indispusable qualification for labling tury bublic athice.

Warsaw has alao a deal and thomb asyhm, a musieal conservatory, societies of friemds of literature and matural science, a bible society, and some newspapers mal other perimbiend publications. 'These, however, are subjected to a rigorons censorship, and are, eonsequently, worth little. Its manfactures comprise wollen and linen cloths, saldlery, leather, carriages of diflerent kimes, ironmongery, paper, and tobaceo, with chemical and cotton printing works, anl mumerons breweries. Wursaw is the great eommereial entrepot for forlimd, and has two large mmual fatirs, in May and Sept., attended by traders from many parts of Europe and Asia.
In comparing this eity with Petershurg, an English traveller, Itr, (irampille, says, 'There is a motable differcnee between the general aspet of the inhabs. of Warsaw ant those of the eap. he had just left. 'Ilie women here are hamismmer than the men: at l'etersburg the impreseinn I re-
ecived was of an oppowito haturn. 'The alwencon of
 lent in all the streets of the lios-ian mbe, lemts. in great mosamer, to give to the righ, of lobanila more limenean avpedt lint there is somethine else that contribatris to prothue that ellint. 'Tlu" ['oles are miturmly merry they are lond chat terors, fomd of ammsment, and as partial to liviné in the orren nir, duing mothing, as the I'arisian fieinemats and the lunhefmes of the lalais lineal, the

'I'he flory ol' Warwiok is its east!e, thr seat al
 the ancient fendal mansions ol the lingli-h mobilits, still heed as a residence. It stauds on a rock orirhamging the Arom, a little to the stio of the town. It retains moll of its ameicht arambenr of appearance, and, uninjurel by time, presents an interesting memorial of berone ages. Its fimmotation is attributed to lithelflema, danghter of Nired, in !!5; hat no anllontic trace now romains of the origimal halding. (eesar's towor, 1.18 ft . in hoight, supposed to have heen built at least 700 years arn, is in a pertect state of preservation. Guy's Tuwer, ios fr. in height, illil Inilt in 18! 1 , is also nearly perfect; it apmears: to lie of a decorated character; and thomela very Hain, is purlapss the most perfect remains of is kind in existence, and eurims alike as to eomposition and construction. The principal entraner finces the las. side of the town, mad the apmond to it is a broad winding road ent in the solid rock. Belore the front is a disased moat, a stome arch over which has rephaced the ancient dranbrilge. On passing the donble gateway, the visitor finds himself in the inner contr of the castle, surmmidel on nil sides by lolty embattled walls aud ramparts. 'This castle was formerly a strong fortress; and by means of open thights of stone steps and passages on the tops of the walls: there is a line of eommmication all rombthe building. The parts of this vast and venerable pile that are ocenpied ly the family are maniniticently litted up, but so as to harmonise, in all respects, with the style and charactur of the buildias.

Thuringian forest, and to the basins of the EJbe and Weser; its principal rivers being the llm, Siale, White Elster, and Unstrut. Agrienlture is the principal oceupation of the inlialos.; the soil, consisting of a clayey loam upon a calcarcons hasis, is moderately fertile. Owing to the minnte sublivision of the land, tha oceupiers are tor the most part poor. 'They live harder than day lalourers, and, despite their industry and economy, are often nomble to increase their resources. In the vicinity near Weimar the soil is a rich hack mould, producing, notwithstanding its defective culture, very sujerior crops. The villages in this part of the dithy are thickly placed and 1 woulous, hut, in consequence of the smalleses of the larms, there is a great searcity of cattle. Of late years, however, the rearing of eattle has been a good dal more attended to; and the stock of sheep) hats heon rreatly increased in comsequenee of the ready and advantageous market for wool allorded in lingland. fiame is extremely plentiful, and the wools eomprise abont one million l'rasian morgen of lamb. Nost of the $\mathfrak{j}$ wasants houses are built of timber.

Coal and salt are looth raised, the former in no great quantities, but the production of the latere, at Kretiburs, may amomut to $1,1010,000$ lls. a year. Iron and manganese are the chief metallic profucts. Mandiactures are not very important: woullen cloths, earpets, hosiery, linen stuffs, iron, hardware, and tobaces pipes, are the principat produrts. 'I'here are a guol many loreweries and distilleries. Mamfacturing industry is most active in the circle of bisenadh.

The government is a limited monarely ; and the roval family of Weimar took the lead fill termany atter the peace, in introlucing a free representative system in their dominions. The eonstitution of the grand duehy was granted May 5 , 181ti, but slightly altered by the law of Octoler 15, 18.19. Aceording to this elarter the legislative fower is vested in a house of parliament reprewinted by one chamber. It is composed of 31 members, of whom 10 are chosen by the proprietops of nobiliar estates: 10 by the towns; 10 others by the inhabs, of rural tistricts; and 1 by the senate of the miversity of Jema. At the general election, which takes place every seventh your, not only the representatives themselves are chosen, but likewise a sulstitnte for every member, who has to take his slace in case of ilhess, teath, or prolonged alsence. The ten members for the noblility are elected directly by all proprictors of rittergiter, or noble estates, even ladies being allowed to yote. In the representation of towns and rural elistricts the mode of election is indirect. 'The whole body of voters in a town choose a certain number of delegates, in the propertion of one to evary 50 houses, and these depinties elect the member for the place. To be a member for a town a property qualitication of abont $50 \%$ per annmm is requisite, which rises to $75 \%$ in the case of the two cities of Weimar and Eisenach. The election of mombers for the rural districts takes blace in the same manner as that for the towns; but the choice of members is limited, inasmuch as they must belong to the same elass as the electors, Neither two brothers, nor lather and son, are alable of sitting in the chamber at the same time. The president of the chamber is in earlmarshal, elceted by the deputies of the mobility, whe is assisted by two vice-prosidents, chosen by and from among the representatives of towns and rural districts. The elamber meets every three rears, and a standing committee of nine members continus to sit during the adjumment. Juring the session the members have an allowance of foner
thalers, or 11 s. 8/, per day- besides a moderate sum for travelling expenses. The powers of the chamber extend to all the branches of legislation, and its consent is indispensable to the validity of all orders and decrees of the government.

The ministry is in three departments, those of justice, linance, and public instruction. There are courts of primary jurisdiction in the principal towns, nud curts of appeal in Weimar and Eisenach, in which, with Weida mad Dermbach, are also criminal courts; all having appeal to the supreme court of Jena, which is also the supreme tribual for the states of Sase-Coburg, Meiningen, and Renss. P'oblic education is nowhere in fiermany so widely dillinsed arid so well attended to, as in Saxe-Weimar. 'T'i - ondget is granted ly the chamber for a period of three years. That fromi $1 \times 63$ to $1 \times 60^{\circ}$ comprises an ambial income of 1, bijx, bitix thalers, or $\underline{2} .18,8081$, and nu
 leaving a surplus of 4,110 thaters, or $6191 .$, for the year. The clief items of revenue are, per anmum, -hndirect taxes, 145,115 thalers: income-tas, 25n, 810 thalers; and domains and forests, 428,230 thalers. Unier expenditure, the largest smms fo for-civil list of the grand-dluke, 280,000 thalers; public aldst, 230,017 thalers; and army, $2033,1 \mathrm{kt}$ thalers. The public delot amointed to $1,0,60,000$ thalers, or $68.1,0001$, on diminary $1,1862$.

Sixe-Weimar has to contribute $3,3 \bar{t} 0$ troops3,316 infintry and 34 artillerymen-to the army of the Confederation. The number, however, is schlom kept in full forec. Saxe-VVeimar holds the $15 t_{1}$ place in the Confed, having one vote in the finl diet, and with Saxe-Cohurg, Meiningen, and Altenlsure, one in the committee.

WEIMAR, a city of Central Germany, eap. of the above grand duchy, and the usual residence of the grand duke, on the Im , an afluent of the Sanle, $104 \mathrm{~m} . \mathrm{W}$. by S. I Presten, and 116 m . SE, llanover, and 136 m . SW. Berlin, on the railway
 The city, whieh is partia!ly surrounded with walls, thongh irregularly laid ont: has several gooil strects and handsome honses; and deserves to ramk with (terman towns of the second order. The llat, which flows along its E. side, is crossed ly 3 bridges; it traverses the centre of the clucal piark, the chicl promenade of the inhals. ; and has, on or near its W. bank, the dneal palace and mews, the riding-house, rothe schloss or red castle, pulbic library, and several other public buildings. The ducal residence is a good building, and is tastefully furnished: lut comfort rather than marniticence was the olject of the late grand duke, by whom it was built. The town church has a large organ ; an altar-yicce of the Crucitixion, by Late Cranach, in which are introdnced portraits of his friends Luther and Melancthon, and of himself; and monnments to Herder, and numerons members of the ducal family interred here. In the park is a handsome temple containing some beantiful arabesfues, and a portrait by Angeliea Kaullmin. An avenne from this promenade conducts to the Belvidere, a summer palace of the gramd duke, abont 2 m . distant.

If Dresilen be the Florence, Weimar was once fairly entitled to be called the Athens of Germany; having been the residence of Wielamel, Selitler, Gijethe, and Iterder, invited thither by the late grand dreke. (iöethe and Schiller are buried is the new cemetery, whe on each side their patron. buring their superintendence, the theatre at Weimar was among the most celebrated in Germany ; and its g!era is still very well conducted and supported, the inhabs. of the city beine great lovers of music. 'The grand ducal library holds a

 ns of Germany; cland, sclitller, her lyy the late er are buried in le their patron. he thentre at brated in Gerwell eonducted ity being great library holds alhigh rank, and has 96,000 , rinted wels., besides Dhs. It is open to the public, who are even allowed the use of the lamks at their own houses. In this library are some tine busts, and sone paintings by $A$. Durer. One of the prineipal aljeects of notice in Weimar is the Landes-Indus-trie-Comptoir, a vast printing and publisting estahlishment, in which a great number of persons are employed in translating such foreign works as are likely to be read in Germany. Weimar is the seat of hearly all the superior educational institutions of the grand duchy. It has a famous neademy, several hospitals, an orphan asylum, and central prison. The minnfactures of Wicimar are ensiderable: a few linen and woollen eloths, iromwares, paper, and leer are the principal products. The town has some trade in eorn and wool. Weimar was the birthplace of Kotzelne.
WELLLINGBOROUGIL, a market town and par. of Englaud, co. Northampton, humd. IIamfordshoe, on the shope of a hill, 10 m . ENE. Northamptom, and tis m . NW. Landon by Midland railway. Areat of par. 4,190 acres. l'op. of ido. 6,382 in $1 \times 61$. The town, which was a place of some consequence in the tme of the siaxons, consists principally of finur streets, mecting in a market-place. The houses are brilt of red sambstone, and the town having been almost wholly destroved by a tremendons tire in 1738, has now a comparatively modern appearance. The elureh, a large editice, with a tower and spire, is, like most churehes in this co., of a mixed style. It is, however, richly decorated with carved work ; in its E. window is sone stained glass. and on each side of the chaneel are three stalls like those in cathedral elowirs. Here also are places of worship for Baptists, Friends, Wesleyms, and other dissenters. The free school, fomided ly Edward VI., has an Encome of $11 \% l$ a year, and is open to all boys belonging to the parish. The number varies from 12 to 20 , who are thught Lating gratis, but who pay 11. 1s, a quarter for Euglish, writing, and arithmeti :The governors are the trustecs of the town estate, the right of appointing the master and usher is vested in the inhals. payine taxes. The town estate, yichling an income of $3 \overline{0} 0$, a year, partly sulports the free sehool; and the hisher's salary, with a elarity selool for the primary instruction of jo children, is partly depentent in Fisher's endowment of $13 \%$. 10s. a year. 'there are several charities for supplying bread to the poor. The manufacture of loots and shoes was carried on very extensively in this town duriug the war, ani, though fallen off, still continues to tre its staple business. The corn market, on Wednesdays, is emsiderable.

Wellinglorongh derived its name from the wells or mineral springs armun it, which formorly enjoyed such celebrity that, in 1 tieb, Charles I. and his queen resided here in tenss for a considerable period that they might drink the waters pure from their source. The eo. magistrates hold petty sessions for the division weekly in the town hati. Fuirs, Easter and Whit Weduesday, and Oct. 29, for live stock aud cheese.

WELLINGTON, a market town and par. of England, co. Salop, lead of a div. of Irradford humired, on the ancient Watling street, 10 m . E. Shrewshury, and 151 m . NW. Louton by North Western railway. Area of par., which, besides the town, includes 6 townships, 7,930 aeres. Pop. of do., 12.998 in 1861 . The town consints mostly of narrow streets; but, of late years, these have been mueh improved, and are mostly lined with well buitt houses. The par. chureh is a handsome structure of frestone with cast-itom pillars, the wiadow frames being also of iron, llere are
several dissenting places of worship, free and mational selowhs, and some almshonses and several minmer charitices. Near the town are chatybeate and sulphureous springs, frepuented ly visitors. Most of the inhabs, of the par, are employed in working coal mul iron mines, and limestone quarries; and there are in the par, many smelting frrmaces, wrought by machinery, with nail-works and glass-works. Malting and some trade in timber are also carried om. The town is governend ly a mayor and 2 constables, appointed annmally at a mayorial court, who hold petty sessinus weekly ind a court of record for debts imder $30 /$. at specitied times. Market-lay, Thursday. Fairs, four times yearly, for cattle and stock.
Weldingros, a market town and parish of Eugland, co. Somerset, huml. Kings, ury Wiest, on the railway from Bath to Bixeter, 46 wil, sil: the former. Area of parish, 1,830 acres. lope of do. 6,00ti in 1861. The town is regularly laid ont, and has been mostly rebuild during last century : it principally emsists of two spacious thomoghfires, erossing each other at right angles, the main street being about $\frac{1}{2} \mathrm{~m}$. in length. The churel at the N . entrance is a handsome structure of mixed arelitecture, 110 ft . in lengeth and int fi. in breadth, comprising a nave, chancel, two aismes, and two small chapels. At its $W$. end is a tine embattled tower, 109 ft . in height, crowned with a turret and pinnacles. Within are several momoments, inclucling a marnificent tomb in honour of Sir Jolm l'opham, ehiel justice of England in the reign of Eilizabeth and a great bencfactor of the town, and a new altar-piere ranking among the finest in the W. of England. A very elegmint chapel-of-ease, of Grecian architecture, has been crected at the s. extremity of the town, and there are chapels for liaptists, Lidepenlents, W'esleyans, and Friends, the latter being here a very numerons sect. Several schoois are attached to the various mecting-honses, and there are endowed almshomses for both sexes. fommed hy Sir John Popham, with some minor che: ites. A new mar-ket-honse, over which is the town-hath, was crected in the centre of the town in I8:3.
Wellington had formerly a thourishing mamfacture of woollen goods, but it is mow much fillen off. It still, however, produces druggets and serges, and has a small mamufacture of earilienware. The corn market on Thursday is large and well attended. Welliupton is groverned hy a bailiff and subtordinate ofticers chosen at the annual manorial court.
This town enings the distinction of haviner sucesssively conferred on Arthur Wellesley (thind son of the seeond Earl of Muruinston), the greatest of English generals, the titles of viseomut, earl, marquis, and duke. An obelisk, npwarls of 120 It. in height, has atso been erected in honour of the illustrions dake, on a lofty hill about 8 m . sE. from the town.
WELAS, a eity, and a parl. and mun. bor. of Euglaud, eo. Somerset, hund. Wells Forum, at the s. foot of the Mendip Ilills, 17 ms . SW. Batin, and 134 m . W. London by Great Western railway:Pop, of eity, 4, tits in letil. It is situated in the centre of the large par. of St. Cuthbert, which contains numerous hamlets, and has an area of alout 14,000 aeres. The parl, aud man. bur., which are now eo-extensive, do not, however, inelude the whole par. of St. Cuthbert, but eomprise only the old eity, the liberty of St. Andrew, and some additional pertions. 'I'he city comsints mostly of four principal streets, named from the four verteries into which it is dividel. They are well paved and lighted, and have many rowed houses. The market-place, an extensive area,
commomiating by an ament grateway with the rathedral-close. lias in it the town-hall and a handsomes publie conduit, by which the city is well supplied with water. The great oljects of interest in Wells are its fine ecelesiastical edifices. 'The eathedral, it the lis. extremity of the eity, is mot only one of the most perfect in its original plan, but is nore complete as respects its appenlages than any other in the kinglom. It was principatly designed in the early part of the reign of Ilenry 111 . It is built in the form of a cross: from the interscetion of which rises a large gutaAramentar tower 178 lt . in heisht. The W. Front, fiot ft. in breadth, is fanked ly two smaller towers, each 130 ft . in lecight: the total length of the chareh, from E . to W., is about 380 ft . ; its breadth, 131 ft . The situation of this edifice and the moljoining patace is bematiful; and though no whole side, exeept the $W$. front, is visible in any ome view, the cathedral is well displayed from several puints, partienarly the north-west. As at leterboromerh, the palace and several other buillinges adjoin the cathedral, and adm much to its general apparance. The character of a late prition of the halding is carly limglish, with portions of the fwo later styles. which are very beatibifilly acommodated in their forms to the ohfor parts. The mave and transepts, and part of the towers, are arly binglish; the W. front is remarkably rirh in miches and stathes, and not less so in shalts and other small ormaments appropriate to the style. The lower parts of the sides of the westorn towers are simblarly euriehed, but the whole of the remaining exterior of the building is rather platin than otherwise; the upper parts of all the towers are much later than the luwer, and much accommodated to the earlier prorions as to lines and forms. The eastern part of the cross and the chapter-house are of deeorated character, and remarkahly elegant. The cloisters are perpendienlar: the nave and transepts, and a morth poreh oht of the nave, present an early English arrangement very remarkahle fir simplicity and chogance. 'There are varions excellent portions of stone sereen-work, chapels, and momments, and some stained glass, the effect of which is peculiarly good. This cathedral is very rich in details of the best as well as the most singular kinds: and, in point of composition, some of its best parts vield to no editice in the king(lom. 'The bishop's palace, thongh it has been altered, and, in sone parts, much modernised, contans some fine portions, an early decorated chapel, and some parts of carlier date. Taken altogetlier, the palace is one of the most valnable remains in the lingelom. The gates and other buildings in the precincts of the eathedral deserve carefil examination.

Wells was tirst erected into a bishop's see in 00\%. In the 13 th eentury it was united to the abhey-charch at Bath; but the writ of comge dilive for the election of the bishop is still adt trensed to the dean and ehapter of Wells. The chabter comsists of a dean and 6 other camoms, 4 priest-vicars, and 42 prebendaries. Wohsey and Jahul were bishopis of this see. St. Cuthbert's chureh is a linndsome perpendicular cditice; but its principal feature is its tower, one of the tinest of the kind. The living, a vicarage in the grift of the dean and ehinter of Wells, is worth 564l. a vear. 'There are also places of worship for InCeprendents, lbaptists, and Wesleyans. IIere is a collegiate shool, under the patronage of the dean amd chapter, and a mited charity-school, fommed in land, which affords instruction and chothing, to $3 t$ boys and 20 girls, and has an ineome of $511 l$. asemr. Under the town-hall is a hospital,
fonmed and endowed in the libth century, for aged men and women, which las now in income of nobve 3itol, a year, and 30 inmates. There are numerons other charities, including several wellendowed almshonses. Several mannfactures that were formerly carried on in the town have either ceased altogether or have greatly declined, mud that of silk has been wholly given up. Much of the property of the city lielougs to the ecelesiastical or the city corporations, whiels cannot grant long leases, dind give no encomrngencont to building. The corn-market, which useal to be very considerable, has materially declined, but the market for checse is still one of the most considerable in the W. of England. The trade of the phace is mostly, however, contined to the retail suphly of the inluits.

The earliest charter of Wells dates from the 3rd of John; but the governing charter, previously to the Mun. leform Act, was granted by Blizabeth. By the last-mentioned statute, the town is governed by a mayor, 3 other aldernen, and 1: comeillors. A conrt of guarter-sessions, the jurisdiction of which is contined to cases of misidemeanonr, is held 1 times a yeur; but it is merely a matter of lorm, all trials being reforred to the co. assize-comrt, and the court of record has alsor fallew into disuse. The co. assizas are heh alter nately here and at Tamiten. Wells has returued two mems. to the 11 . of $C$. since the reign of Edward $1 . ;$ the right of voting, down to the Retorm Act, having leen vested in the mayor, masters, burgessen, and prisons admitted to the frectom of the city, which was obtainable ly lirth, marriage, or apprentiecship. Registered clectors, $9!1_{5}$ in 1885 . It is also a pulling-phate for the E. division of the co. Markets, Wednesday and Saturday, and every fourth Saturday a large market lor corn, eattle and cheese. l'airs, five times a year, mostly for cattle, horses, and pedlery.

Weats, a sea-port town and par, of Engrland, eo. Norfolk, himd. N. Greeulue, on a small creek, about 1 m , from the sea, 28 m . NWV. Norwich, on the Great Eastern railway. Area of par. 2,ent acres. Pop. of do. $8,46.4$ in $18 t 1$. The town consists principally of two streets, only partially paved. Ihe par. ehureh, a spreions editice buite mostly of tlint, with a lofty embattled tower, has some curious sompture and paintings. Here are several dissenting chapels: a free sehool for tio poor childrell, supported by a part of Lingar's endowment in 16 as of 120). a vear, and other condowed charities to the amonnt of cigl, a year for the genemal relief of the poris. The towin has a neat theatre and a subseription library. The harbour of Werls is indiflerent, and apt to be choked up with shifting sands, but it has been considerably improved of late years, through the exertions of the harhour eommissioners.

The principal trade consists in the shipment of corn and malt, and in the import of coals and timber. There belonged to the port, on the Ist ol'Jan., 1864,76 sailing vessels umder 50 , and $7: 3$ above 50 toms, besides three small stemmers, of : th angregate burden of 37 tons. The customs dutius amomited to $122 l$. in 1863 . Oyster lishing gives employment to a eomsiderable number of persoms. Ietty sessions for the linud, are held onee a fortnight, and courts leet and baron once a year. Fair. Shrove Tuesday. The races formerly held at Wells are now discontinued.

Abont 3 m . W. from the town is llolkham, the maguiticent seat of the Jarl of Lecester, and the conntry in the vicinity allords some of the best specimens of what is cailed the Norlolk system of firming.

Jrom $17 x \cdot 2$ to 1 rin. Welshpool was the chief market in North Wales for the sate of Welsh thamels; but in the hater vear the preater part of the trade was transferred to Nowtown. The thannel manufacture carried on here is not of much importance. Flamel markets are still held onece a fortnight, but the business is mostly combucted by private sales. Malting is carried on to a considerable extont, and there are several rather large tameries. The severn is mavimble to within a slomt distance of the town, and by mems of the lillesmere canal it commanicates with the lirmingham and Chester canal lines. Vinder the Mins. lieform Aet the town is governed by lour aldermen and twelve combilure; it has a eommission of the peace, petty sessions for the hand. of Course, a court leet, and is, twise a year, the seat of the co, assizes.

Welshoool was formerly joinol with Montgomery in the exarcise of the elective franchise, lint was disfranchised in 1728. linler the lieform Aet, however, it has been agnin reinvevted with the framehise, and is united with Lhanilloes, Lanfyllin, Machynlleth, Montgomery, and Newtown, in returniug one mem. to the 11 . of $(\therefore$ lieg. electors, in the united bors. 90. in l865. Ahout 1 m . to the S , is Powys Castle, the magnificent seat of earl Powys. It stamls on an clevated site, in the centre of an extensive aud tiuely-wooded park. The priucipal entrance is a gateway between two massive romed towers. It has in front two immense terraces rising one above another, the aseent to the eqstle being by a vast lighit of steps, It is superbly titted ub, and Vn.. IV.
has many fine pictures and works of art, includingr several pieces of senlphare from Ilerculaneum. In the vieinity are the lireidern llills, on the loftiest of which an obelisk has been erected in honour of lord lionluey.

WBN, a market town, par., and township of England, co. Salop, huml. Bradiord, on the lionlen, a tributary of the severn, 11 m. N. by li.. Shrewsbury. Aren of piar. 13,3:3) acres. 1'op. of slo. 3, (i) 2 in 186 i . The town consists principally of one spmeions street, from which several smaller streets branch oll. The par. charch, a handsome edifice, has a lofty tower and a tine chancel; the living, a valunhle rectory, with a curacy, worth 1,atiol. a year, is in the gift of the lonke of Cleveland. The market home is a neat brick and stone building, and in one of its rooms courts leet are held, at which the t wo hailitl's groverning the town are chosen. The free schond, fommed in lisit by sir ' C . Alams, a native of the town, who becane lord mayor of London, and who also fommed an Arahic prolessorship in C'ambridge, has a total income of about :3.101. a year, and fwo of c'areswell's exhilhitions in Bridgenorth sohool. There are charities making provisions for the poor, but to no eonsiderable amomet. The inhabitants of the town are mostly engaged in tanning and malting.

Ilorsley supposes that Wem ocempies the site of the anciont lintunime; it liomorly had a castle, latt of this ellitice mothing remains. The manar of Wem having come info possesion of the crown by the attainder of lhilip, earl of . Armodel, in the reign of Elizabeth, it was comferred ly dames 11. on his titting towl. chancellor Jetliries of blomly memory, who hat the estato, and who was alse ereated baron Wem. Wycherleg, the dranatist, was burn near this town in 1610 .

WENDOVEL, a market town and par. of England, co. hadkingham, hund. Ardesbury, in the vale of that name, 32 m . NE, Lombon. Area of par. 5.2:0 acres. Pop. of do. 1,932 in $1 \times 61$. The town is ineonsiderable, and meanly built; but notable for the circumstance of its having enjuyed, from the 21 , dames $l$. down to the phessing of the Reform Aet, by whom it was disfranehised, the privilege of sending two mems. to the II. of C. The right of election was hominally in the homsoneejers not receivine alms, but really in the lord of the manor. The famons John llampent (to whose family the nanor belonged) represented Wemblover in tive suceessive parliaments. The living, a vicarage worth 3001 a year, is in the crift of the crown. l'atty sessions are held once a fortnight, amd courts lect and baron are also held in the town.
WBELOCK (MECH or GEEAT), a parl, and mume. bor., market town, and par. of limglam, co. Nalon, hand. W0enlock, on a small tributary of the Severı, 11 m. SE. Shrewshory. Area of par. 8,120 acres. lop. of do. 2,491 in 18ts]. The parl. hor. is co-extensive with the large district called 'Wenlock Jranchise,' consisting of sixteen parislies. in alhition to that of Mach Wenlock, the whole having, in | 8 iti, a pop. ol 21,590 . the limits of the ohd munc. bor, were formerly identieal with those of the parl. bor. : but the motern municipal bor. is of much less extent, comprising only the three pars. of Dawlev, Madely, and Bruseley, the town of Wenloek itself being altogether exchaded. The later, though an ineonsiderable place, and indillerently buitt, has come handsome residences. It consixts chiclly of two strects, the houses beine mustly of brick, The church, a spacious editice in the Norman and early linglish stele, has a tower summounted by a spire at its W. extremity, The living, a vicarage pid
worth 1801. a year, is in the gift of sir W. W. Wym. It has also a Wesleyan ehapel, a free endowed school for twelve boys, almishonses for four women, and several minor clarities. There ure extensive limestone quarries in the vicinity, and copper mines, now abauloned, were formerly wronght to a considerable extent. The manic. bor. is divided into three warls, and is governed by six aldermen and twelve councillors. It has a commission of the peace, which is opened twice ayear; petty sessions once a fortnight, or oftener, if required, and a court of record also once a fortnight: the last, however, hat latterly fallen nearly into disuse.
Winlock received its first charter from Elward 1V., nuder which it sent, in 1 ife, one mem. to the II, of C.; but Broseler and Little Wenlock being alterwards alded to the lor.. it was empowered to return two mems., a privilege it has since continuen to enjoy. Previonsly to the Reform Act, the framehise was vested in the freemen of the bor., such treedom being acquired by lirth or clection. Rear. electors, 999 in 1 stij. Wenlock probally owed its origin to the fommation of a fimmens abley, of which the ruins still exist, a little s. from the town. This elitice, fommed towarls the end of the ath century, was mostly rebuilt, soom atter the Compluest, in the Sorman and eurly Ehilish styles. The entrance from Wenluck was by a strong gateway, one massive tower of which is still standing. Of the chareh, which dates from 1080 , a large portion of the s. side of the nave, the whole S. wing of the transept, several arehes on the N., and the fommations of the choir and Lady Chapel, remain. The ruins sulliciently attest the firmer magnificence and splendome of the structure, the preemets of which included an area of thirty acres. Its revenues ammuted. at the dissolutiom, to d01/ a year.
WEOBLS, a market town and par. of Euglame, co. Herctiorl, humd. sitretford, $10 \mathrm{~m} . N W$. Ilerefurl. Area of par. 3, lito aeres. P'ope uf do, 849 in 1861 . The town consists principally of one street, havine several modern and well-buift honses. The church is a spacions elitice, to which are attached two or three ancient burial-chapels. The Jiving, a vicarage worth 2361 a year, is in the gift of the Bishop of Herdind. A free grammar-school, tomaded in 165 5 . allords instruction to 15 boys. lere is also a national school tor both sexes, sul)prorted by subsecription. No particular brameh of industry is carried on in the town. which indecel would hot have been worth notice, but for the circomstance of its having sent 2 mems. to the It. of C., from the reign of Bdwarl III. down to the paissing of the Reform Act, by which it was disfrumehised. It has a market on Thursilays, but this is little more than mominal.
WESEL. (Germ. Niederueser), a frontier and strougly fortitical town of Rhenish l'russia, reg. Dusedilorf, cire. leees, of which it is the eatp., on the Rhine, where it receives the Lippe, 20 m . SE. Cleves, on the railway from Cobgne to Amsterdiam. Pop. $17,+2!$ in $18(11$, exclusive of garrison of $\overline{5}, 0$, 0 men. Wesel is of high amtiquity and was formerly one of the Llanse Towns, It hats some manulitictures of cotton and woollen stuils, leather, and tobace", with distille ries: its port is comvenient, and packets ply regularly between it and Amsterdam. Its defences have been a pood deal strengthened by the erection of Fort Blificher on the oplosite or W. Lmak of the liline.
WESEL (all. Jisurgis), a river of NIW. Germany its embenchure being in the North Sea, and its basin having that of the lelbe to the E., the Emis to the $1 \%$, and the Rhine and Mayn to the SW. and S . It is formed by the union of the lulda
and Werta, The former of these rivers has it source in the Rhougebirge, about lat. $510^{\circ} 27^{\prime}$. ., and long. $110^{\circ} \mathrm{E}$. ; and traversing the cectorate of 11 esse-Cassel, it passes the cities of Filla and Cassel. The Wierra rises in the Thuringian Forest, in about the same lat., and long. $1^{\circ}$, and introsects several of the smaller Saxon ineritories, with parts of l'russian Saxony, Inese-Cassel, and IImover. Both have a generin inortherly direction, and mite at Minden, near the southern extremity of the lianoverian dom. The combined river, or Weser, flows in II N. course, though with numerous windings, through the territories of IlesseCassel, Prussiau Wostphalia, Brunswick, LiplyeDetmold, Dlamover, Bremen, and Oldenburg, falling into the North seal by a wide estury, abont lat.
 is estimated at nearly 290 m . Its chicl" afluents are the Aller and Winnme. The Weser is of eonsiderable conmercial inportance, Iremen being on its hanks. Vessels drawing 7 ft . water mavigate it up to that city, ime it is navigable for bouts nearly to its commencement. Vessels drawing from 13 to 11 ft . Water ascend the river to Vegro sack, 13 m . below Bremen. Ships of large size stop at Hremerhafen, where a new harlugr has bernf emed. Besides the foregoing towns, Minden, Nienhurg, Rinteln, and llameln are on the Weser, anul Lhuover, Brunswick, and Oldenburg are on its tributarims.
WEST BHOMMTICI, a market town and par. of England. co. stathird, humd. Ollow, on the hight road from birminghant to Liverpool, 5 m . Nxil: birmingham, and $1: 33 \mathrm{~mm}$. NW. Lomudom, by Great Western railway. loob of par. $41, \frac{105}{}$ in $1 \times 10$. Area of par. 5,3eil neres. 'Ihis, which was formerly an inemsiderable village, has inereased rapidly in size and poph, in consequence of its sithation in the centre of one of the principal eonal and irom districts of the empire, and of the grand seat of the hariware mandacture. The main street, nearly 2 m. in lengetl, contains some goon houses; bint the town is, fir the most part, very irregularly laid out, and its proximity to coni-pits, gas, and iron works gives it a black and very buprenwsessing appearance. The old elhurch of 111 saints, oul an eminence, in the NE. part of the town, is in a mixal style of architecture, and surmonnted by a tower. Tile living, a perpetual curacy, worth stibil a year, is in the fift of the carl of lartmenth. Chiristchurch, a haursome Gothic edifice, erected in I 8 ? ? is. a cumaey worth 330\% a year. Besides a very tine Rom. Cath. chapel, there are varions plates of worslip for I'rotestant Dissenters, and a mational and some other seloohs. The gas works in this town, belonging to the stalliurdshire and lirmingham Gas Compuny, are probably the most extensive of any in existence. They supply lirmingham, Bistim, W'clueshury, aud a vast mumber of other towns and villages within a rathus of 16 m . Here are also some extensive crown-glass works, which, with the gas manufacture, and the extensive collieries in the ricinity, furnish the chicf oceupation of the labouring classes. The Birmingham and loulley eanals, in the immediate vicinity of the town, give it the benotit of very extensive water communications. Market day, Saturday. E. of the town is Smolwell Jark, thin scat of the earl of Darmonth. The honse is built on the site of a priory of Benclictine monks, founded in the reign of Itenry ll., of which some tritling remains may still be seen.
WESTBLEY, a parl. and munic. bor., market town, and par. ut England, co. W'ilts, humd. Weetbury, at the NW. extremity of Silisbury Plain, 22 m . NW. Salishury, and 169 m . W. Loidon by Great Western railway, I'op, of parl. bor, $\mathrm{t}, 14 \mathrm{i}$

in 1861. The anciont bor. comprised only some purtions of the town, hint the modern bor, is coextensive with the par, and hond, of Westomry, having an area of 11,3 Jo neres. 'The town, which is insigniticant and irregnlarly built, is seattered wer a consinderable surlace, the principal strent rmming nearly N. and S. 'I'lie chureh, an old cuctiform structure, has a tower rising from its centre, and some fine momoments. The living, a vicarage, to which are amened the emracies of bratton and Dilton, worth ests/ a vear, is in the gilt of the precentor ol salisbury cathedral. Itere are several Dissenting chapeln, a mational schood for I0 bevs, endowed with 1 , (104) , ha a benevolent burgess, who also bequeathed a like sum for the ammal clothing of 20 poor women. The town hall, a hamdsome buidinis, was erocted in 1815. Westhury and its vicinity hat formerly an extensive wodlen manatiature, but this has much fallen off. Some malting is also carriol on, and, mon the whole, the trade of the town, such an it in. may te considered in a thriving state. The charter by which Westbury was incorporated is not extant; the corporation, by which it has till lately been governed, comsisted of a mayor, recoriker, and 13 capital bugesses. W'esthary returmeal 2 mums, to the 11. if C. From the 27 th of Ilemry VI. down to the passing of the lieform Act, which deprived it. of 1 mom. D'revionsly to the Act now relerred to, the franchise was vented in the vecupiors of til burgage tenements eomprisel in the ald hor. lieg. electors, 305 in 180.5 . The bor, court, lifll intmually on the end of Nov., is the only court. held within and for the bor. The election of the bor. atlicers appears to be its principal duty.

Westbury, thomgha phere of consinderathle antiguity, is hot commentel with any historical event of importance. It hats two abmand fitirs, and a nominal market every Tuesiay.
 Leinster, having N. Cavan and Dlath, E. the latter, s. King's Connty, and W. Woseommon (from which it is separated by the Shamon), and hong-
 improved bog and motmtain, and li,333t lakes. Surface agrecably diversitied with woots, lakes, streams, hills, and bogs. The sulistratum being limestome, the verlure of the fieds is remarkibly tine, and the soil gencrady excellent. Property in moderate-sized estates. Leases commonly granted for 21 yats, and a life. Grazing-gromads extensive. Tillage firms much subdivided, and hmbandry, in most respects, similar to that of Meath, which see. l'rimeipal rivers, Shamom, lumy, and limsina. Westmeath is divided into ${ }^{2} 2$ baronies athl tie parishes, amd returns 3 mems, to the II. of C'., viz. 2 for the co., annl I for the bor. of Athome. Registered clectors for the co. Bistis in IStis. At the census of IStil, the ca. han llianst
 tants; while in $18+1$, Westmeath had $21,102=$ in-

WERTMIS'l!R. See LoNbos.
WEs'ryOliliLAND, a marit. co, of the N. of Fingland, having N. Cumberland, Durham, and Jorkshire, s. Lameashire and the extremity of
 acres, oll which only $\mathbf{I} 80,000$ atre said to be arible, meadow, and pasture. It is what its mame (Thest-nowr-lamil) imports, a region of lolty monntans, maked hills, and black barren mours; but the valleys, particularly those of the biden in the N. and of liendal in the s., are firtile and well enttivated. The agriculture, state of property, charinter, and eondition of the ocenpiers of Westmoreland are so similar to those of Combertand, that the statements as to the latter may be anplied,
with very little variation, to the former. Average rent of land the lowest of any in linghand. Westmoreland abmads in slate of the finest quality; in lean: and, in some few places on its s , mut $\mathrm{V}^{\circ}$. bormers. there are coal mines. I'rimepal rivers, Diden, Lame, and Kent, The lakes are even more celchaterl than those of (cmmberlame: Windermere, on its W. lorider, is the most extensive lake in England. The co. is tividel into t wards and its parishes. It returnsid mems, to the 11 , of $\mathrm{C} .$, viz., 2 for the co, ante 2 for the lour. of Kendal mod some inljoining districts. Reg. electurs fur co. $\cdot 1,233$ in 1xiti. At the census of |xisi, the co. hat 11,293 inhab, honses, with ti0, 916 inhablitants, while in 1811, Wentmoreland hanl 10,818 inhab. houses, nud jtr, list inhals.

W'Esll'lldAh, prov. eontaining all the N. portion of the l'rassian dominions to the W. of the Weser, having N., Hamover; li.., the latter, and some of the smatler German States; S., the latter, and the l'rissian prove of the Rhine; and
 in Istil. I'rincipal towns, Mmster, Minden, 1'aderborn, Arnsherg, and llamm. It is slivided into :3 rearencies, and these again into 87 cireters. l'rincipal rivers, lims, Weser, Lippes. Surface in the V.., NE.., and S.. lilly or momitanoms ; but it is level in the midalle of the prove. and in the NW. aljoinins llolland. In some places the soil is very fertile, but there are some extensive marshes and heaths. Most part of this, as well as of the adjoining pros. of the linine is divided into small hatms, the owenpiers of which live together in villages. The rent is pilid sometimes in mones, bint freguently in prodece or sorvices, or loth. The aceupiors are a kind of copybolders, their lands descemding trom tather to sob. The lihine pross. being in possession of the fremeh, when the limous ediet ut 1811 was publisheal, making coppholders fremboders in the whe states of the I'risaian monarelas, it did not aply to them. (See l'acssia.) 1'rimipal products, com, flan, and potatoes. it is also piroductive of horses cattle, sheep. and hogs. 'lhe later fimmish the IV (esphahlian hams, sto ahbulant, and so excellent. There is also great plenty of game and homey. There are vast heds of com, with mines of iron, lend, e日pper, and rock-salt, with salt springs, Minnfactures, principally linen, cotons, hardware, and entlery, the litter being largely produced at Iserlohim, Dortmmal, Itaren, amil other phaces; with paper, spirits, tobacco, and various other artiches.
W'Estl'Oli'l, a sea-port town of Ireland, eo. Mayo, brov, dialwas, on a small river hear the
 and 13 m . WNW. hithin, lop, i,911 in Jsit. This is a modern, meat, and rather nice-lookins town. It ocempies a marow vallev, and on each side and paraflel to the stream by which it is jutersected is a street planted with trees: the other trees brameli from these on either side, and are for the most part incomveniently step. The par. clurel is situated within Lord iligo's park, immediately aljoinime the town, and it las also a large liom. ('ath, thapel, with plitees of worshup for I'resbyterians amil Methodists, several schools, a barrack, a market honse, a linen-hall, and comrthotse. A manor court, with jurisdiction to the amount of lol. sterling, is held once a montli; general sessines in April and October, and petty sessions on Thumenters. It is also a constabulary and eonst-gnard station. The linen trade was, at 110. very distant period, carried on extensively in this town and its vicinity. Latterly, however. this branch of intustry has greatly declined, and the inhabs, are now principatly depentent on the
fishery, and on the export of corn and provisions. The port and corn warehonses are situated a little below the town, on the biy, vessels drawing 13 ft . water coming close to the quays. Clew bay has at its montl Claro Islant, on the most northerly point of which is a lighthonse: there are many small ishands within the bay, which, in many phaces, athords comvenient and secure anchorage. The shipping belonging to the port is inconsideruble.

Croagh Patrick, or the Reek, rising 2,499 ft. nhove the sea, is situated immediately on the s. side of the bay, 1 or 5 m . SW, from the town. I'his is not only one of the hirhest, but also one of the most celehrnted, mountains in Irelamb, being the spot where Sit. Patrick is suid to have eollected the sumkes and other venomons reptiles fiom all parts of the island, and from whiel he precipitated them headlong into the sen! Aa altar or cairn is arected on the summit of the mountain in memory of this grame achievement, and it comtimes to be a frequent pline of pilarimage and devotion. 'The view from the summit is marnitieent. The land in the vicinity of the town is diviled into very small portions, and the nempiers are, for the most part, miserably poor. Loral shequ's park or debuesue, to which stmogers have acons, is very tine: but the rest of his immense estate is but little romoved from a state of niture.

WENF(Olll, a marit. co, of lreland, prov. Lemster, having on the S. and E... St. George's Channel; on the N., the eo. of Wieklow; anil on the W., Carlow, Kilkems. and Waterford llarbamr, hy which it is seppated from Waterlome Area, jazi200 acres, of which 18,5010 are minnprowel momatan and bug. Surlicer, pleasamtly fiveritiod: rlimate mila. Soils either light or s. Iiflichys. Iroperty in prefty considerable estates: fimms, of varions sizes: hat there is less of the extreme sablivision of hand in this. than in most other Irish cos, Daities mumerons, but hatly manared; some districts have been long moted fir their great eropes of harles. Average rent ut bamb in weneral is too ligh, ind the competition for small patcher is carried bevond all reasomable bombls, The baroms of looth, orrapering the silv, angle of Wexford, differs widely from the rest of the co, and indeed, from every other distriet of Irelimil. It was settled at a distant buriod by a colony irom South Wales; amb, till very recently, the Welsh hamange was spowen ly everyone, ind is still mulerstom by the where inhals. The people are inhastrons, provisint. peacobble, and cleanly. The farms are smath
 from 30 to 40 are most common. The land is cleith, and well cultivated; the crops of wheat and beans, both of which are extensively grown, are excellent, and the improved scoteh pough whth two horses is in miversal use. The farmhouses are substantial, and the cottages clem and comburtable, lorming, in this respect, a striking rometast with those in most other parts of the eo. ''ersms of ditherent religions creets live in this barony har nomonsly together. Land here, as in the reni of the eo, very high-rented. W'exford has neither minerals nor inamuliactures of any imporance. Principal rivers, klamey and barrow, Wexford is divided into 8 haromies, and 142 parishes, and returns 4 mems, to the 11. of C., viz. 2 for the eo.. and 1 each for the bors of Wextord and New linss. Repristered electors for the eo. G.tiot in 18ib. At the census of 1861, the co. hand $2 i, 011$ inhab, houses, 28.899 fimilies, and 143,934 inhalitants; while in 18.11 Wexfurd had 33,507 inhah, houses, 06,594 lamilies, and 202,033 iuhabs.

Wexponen, a parl. bor. and sea-port town of

Ireland, pros. Leinster, co. Wexford, of which it is the cap, at the month of the estuary of the Slanev, on the W. or inmer side of Wextoril Haven, $\mathrm{fin}^{-1} \mathrm{~m}$. s. by W. lnblin, with which it is connested by railway. Iop), 12,015 in I861. The town is buit wholly on the S. sile of the river, and consists of a row of honses along the quay fronting the harbour, of a strect parallel to the latter, and of momeroms eross strects; but, excepting the quas, they are mostly narrow, irregular, ill-paved, nud dirty. A long and poor sulmol, prinépally ocempied ly tishermen, uxtemds to a considerable distance $\stackrel{\vdots}{-}$ from the town. The commmication with the combtry on the opposite side of the harbone is maintained ly means of a woolen loridge, which, with its embankments, is mearly 1.700 ft . in length, hatving a drawhidge in the centre, the river beline havianble to Enniverthy. The expense of kenting it up is defrayed by a toll. 'The public huiliings and establishments comprise two l'rotestant clatrches, soveral liom. Cath. chapels, two Methonlist meeting-homses, the conme comrt honser, a harge and handsome gat, a lever hospital, dinpensary. lanatie asyhm, a diocesinn selhool fior the see of forms, and varions other selools : a lioni. Cath, college, sipported by private endownomt: a priory, a nomery, a pubile horary, chamber of commeree, assombly rooms, clab-house, and harricks. 'the old walls, by whieh the town was formorly surrounded, were repairel in $\mid$ sill, but they have since been allowed to go to ruin, athe thie suburls exteme considerably bevorl them. Nalting is carried on to a considerable extent.

Wexforl lhaven is al great extent, ame has a fine ap!earance; lot it is shallow, and owine to a bar at its mouth between the two low. long. sambe peninsulas which form its external bomulars, it cannot be entred hy vessels drawing more thin! ! or 11 ft . water, and even these shombl, with mont tides. have four hours thool to enter. But notwithstambing these drawbeks, Wextiod. from her situation in a fertile comsty, and on a river novigable to a eomsiderable distance by barues, and other eircumstances, has at eonsiderible trade, and is one of the priacipal secombary ports of Ireland for the exportation of rorn, moial, and thur, lintter of superior quality, provisions, and eattle. Shamers ply between Jiverpool and Wexford. Exacllent opisters are fomm in the bay, and the tishing hasimess is carried un to a comsiderable extem. There belonged to the port on the lat of dimanry;
 tons, besides 4 stemmers, of all ageregate burthoil of 6 lit tons.

Wexlord has several charters, the first having been griuted by the liarl of lembroke in l:ins. Under the Irisli Manicipal Lelomm Adt. 3 \& 1 Vi toria, calp. lor, the corporate boly consists of a mayor, bailils, free burgesses, and commonally. The bor, refurned two mems. to the I rish II, of $\mathrm{I}^{\circ}$ ', from 13 It lown to the Union ; and it has since returned one mem. to the Imperial II, of C. liers. elece, $30 . \mathrm{in} 186.5$. The assizes for the eo, are leth here, with general sessions in Jamary and at Midsummer, special road-ses sions twice n year, atml petty sessions and a bor. court for debts not excecting \%l., once a week. Markets, Wednestays and Fridays, liairs sin times a vear.

In lis49 Wexforl was taken by Cromwell, when a considerable number of the inhabs, were pat to the sworl. Juring the rebllion of 1708 it was, tir a while, the head-quarters of the insurgents, by whom it vas evacuated after the battle of Vinegir llill. 'The town is possessed of considerable proberty ; but it is let on loug leases, at a low rate.

The homses here, which are larere and hambome, are ehiefly oroupied be visitors, attraded to the town ly its alvantages for sea-hathing, amo other rempeniences. bat with one or two exerptions, the eratiler momber of the other strects are mostly
 ground on which Moleombe stands is low, and has heen redaimed at diflerent times liom the BackWattre. Gn the N., abont $\because 0$ aeres of this lame have been encloser tor the purpose of forming a park, and between this and the sea there is a barrow space, built over with gomd homser.

Weymonth, on the $s$. sile of the harbour, not being resorted to be vinitors, retains, in treat measure, its original charatere of a tishinis-mown, ame is irresularly ame ill built. It is chietly inhabited by the labomints chasos: in the ontskirts, however, there are some good ratiges of houses, nad hambsme detached ilwelliness. The parish 'hurch of Medember, reluile in $1 \times 17$, though a spacions ediber, is mot remarkinle fir its arelio tecture: the chapel wh ease in Weymonth, opposite the font of the bridere, is a tavtefinl momern middins m the fothic style; the living, a perpethal curacy is attached to the rectory of Wrae lienis, to which par. Weymonth belongs. There are several disanting elapols: ant in Neleombe are spacions assembly-robims a small town-hall, neat theatre, gum libraries, haths. and other estaDishments usual at a watering-piace. There is a wat, but of a very inlerior deseription. 'Two mational seloods have heen fommeal, and amones ather elaritable institutions for the edncation and relicf of the poor is a bequest of "5/. a year for the apprenticing of poor chidiren. The town is lighted with giss; but the inferior streets are batly paved. Fibing the sea is the lodge built for the residence of the royal timily, ly whom the town was freguently visited daring the reign of Gieorge III. An equestrian statue of that monarch has also leen creetel at the N. extremity of the main street. On the Dorchester roabl, hear the town, are barmeks, now ocenpied as private homses.

Freestone from the live of Portant, Roman cemont, bricks and tiles, are amoner the principal exports. Shiphilding, imd repe and sail making are carried on to a small extent. On the lat of
 vessels under 00 , mul 42 alowe in toms, besiles 11 stenmers, of an agaregate burthen ol aif tons. The gross amome of customs' reveme was $9,6 \cdot 17$ in $1 \times 1.0$.

Weymonth was but of little eonsequence till Georce III. made it his summer residrones. Nimed then it has eontinmed to inerease. It is frequenterl ly momeroms visitors during the smmmer sitisom, aind a great nomber of respectable limilies have made it their promanent resilonee. The tine simbls along the shore, and the grablatly ine arasing depth and purity of the water, remer it highly suitable lor a bathog pace. A raised torace or esplanade has been constructod romm a great portion of its pieturesplue hay, which eonstitutes the finshomable promenale of the inhahitants. Liaces, mad a regata, take pace ammally in Amens.

Iharbour aud Breakuate, -- The harbour, which eonsists of the inlet between Weymonth and Metcombe, so liar as the bridge, is harrow, while the har at its month has omly tif, water at low elb; and ats spring tilles do met rise here more tham ti or 7 fi., the port is not amomsible torge vess.ls. There is, however, excellent inmorape in I'ort-

manufactures of copperas, white lead, tohaceo and leather.

Wilithy, a parl. bor. and sen-port lown of linghand, N. riding to. lork, horerty of Whitly Stamot, at the month of the bisk, here croseed by a swing irombridge, 2 m . NXl:, Yurk, mad $217^{\circ} \mathrm{m}$. N. Ianlan, by (ireat Northern railway. 1'op. ol bor. l2, 0ibl in |stil. The parl. bor. indudes the townships of Whithe, linswarp, llawker-eumStainsacre. It is lailt nlonge both banks of the Fisk, the direction of which, from S. to N. determines that of the town; hut, as the level gromad ly the river is of very limited dimensions, the buiklings on buth sides are carried up its banks, which, on the li, side, are especially precipitans. 'The homsen, partly of' stome and partly of brick, in the lower part of the town, are closely packed together. and the strocts are for the most part marrow, while thase an the bank are meomemienty step; they are, however, well pased and lighted with gas, ind some new streets on the $\mathrm{W}^{\text {a }}$. side of the town are emparatively hambame, The more opulent inhabitants have residenees in the movirons, which are beantiful and romantio. 'The ohd par. chureh is situated on the top of a clill nearly 200 ft , above the sata, on the li. sille of the town, the ascent to it being by a light of l!ot stome steps. 'Ihe liviag, a armey in the gilt of the Arehbishop of York, is worth ewhi. a year mett. It has ako phees of worship for Methodist , gatakers, P'resbyterians, Indepumbents, Limm. ('abluliess. and uther dissonters. Amons the eduational and charituble institutions may be memtoned, lancastrian sehools for ehildren of both sexes: two jnfant schools; a seaman's hospital, for de widows nnd their chidren; a dispensary, established in 1786; a large workhouse, and several minor charitios. The publie buiddings inchade the townhall, erected in 1ass; a building with publice baths: and apartments for the subseription tibrary, and the literary and jhilosiphianal suciety, erected in 18:26; a handsome nows-rom and costom-house. The Lion Mill, for supplying the members with flour at a reduced price, on the $\mathrm{IV}^{\prime}$. side of the town, is a ronspicuous ohject.

The harhour is formed by twopiers ; that on the W. side, 6.40 yards in lemeth, terminates in a cireubar head, on whicha lighthouse, having the lamtern elevated s 2 lt, above the sea, has been constructed. 'Ihere is a moble yuat, extembing from the bridge to the west pier. 'The opposite pier extends about 215 yards from the clitt' on the lis. side of the river. "The ehannel between the piors forms the harbomr, which, huwever. labours mader the drawback of nearly drying at low water ; and in rongh weather, when the wind is from the N. or NE., a heavy sea is thrown in. To obviate the latter inconvenience, an intemat pier hats been hoilt, and the inmer harbour, or that above the drawbridge, is but little allected by the weather. There are dry docks and slips for the construction and repair of ships, the buldings of which, though less now than formerly, is carried on to a considerable extent. The mambeture of sail-cloth and cordace is also carried t.

Whitby is principally indebted for its rise to the alum works in its vicinity, commenced in 154\%: the exports of the ahm, and the import of the coal required in its manufature, giving hirth to a considerable trade. 'This, however, is by moans so extensive as formerly. On the lat of Jan. 1864, there belonged to the port til sailing ressels meter 50 , and 353 above 50 tons, besides 3 steamers, of the aggregate burthen of $1 \cdot 1+$ toms, The gross castoms revenue amomated to $\overline{6}, 5 \times 10 /$ in 1863. The shipping belonging to the port is principally employed in the Baltic, Ameriean, and E. Indian

The town is umber the superintemilence of the

 Ileat. P'op. of pirl. hor., which inclutes Wick, P'ultenes Town, and lomishurg, 7.175 in $1 \times 61$. Wiek, properly so called, or the old town, is on the N. side of the river, and is imosularly and meanly built, and dirty: it has to the X. the suburli of lomishoris, amil is commected by a bridge with l'ultenes 'lown, on the S. side of the river. The latter, biilt on rising gromed. lened from lowd Duthes by the British lïshery Suedety, is lain ont on a uniform plan, and is one of the himblomest tishing villares that is anywhere to be met with. Buh towns are lighted with gas. 'Ihe pare chureh at the W. end of the town, with $1,8: 3 \mathrm{~s}$ sittings, was erected, in 1830, at a cost of $4.7 \times 1 /$. There are, also. Free churehes in Wick and in l'ulteney Thon: and the I nited Associate seceders, Independents, Lelormed Presbyterians, and Rom. ('aths., have places of worship. lixclusive of the churches, the town-hall, comety buildings and prisom, and commercial hall, are the principal publie editioes.

Wiek has been for upwarils of half a century the principal seat of the herring tishery of scotland;
anl. besides its own hoats, its harbour is froghented, in the thaing menon, by groat mombers
 Hobland. Its purt at the month of the Wriok hoing small, inebuvenient, and unsufe, a new harhour was commeneed, in $1 \times 11$, hy the Britiala Fishory Socicty, which they eompletad at a comet of 1, , owhe, of which s,simb. were defrasel by fovermment. Lat the arommodation leingestill insulicient, a new or onter harbene, ul larger dimensions, nud having decper water, was come. pleted, in Is:II, at an expense of $41,0 m \%$. (On tha 1st of Jan, INit, there belonged to the port :sailing ressels under bot, and 3 K above sil tons.
 The lishery is subject to great Hoctumions: for while, in goos vears, the produce of herrines
 some years, not more than from 30,00610 sh, 10 , barrels are takell. In eomsequente, the businesa partakes convilerably of the mature of a gamblines pursuit, amd las mot the beneticial inthence that might wherwise have been expected.
The buiding of ships mol boats, especially the latter, is carricil on to a comsillerable extent; anal the town has, hroilos, roper-walks, a lrewors, amd a distillers. The prineipal. or rather sole orrat pation of the femala in mad romm the town ronsists in the yiming of yarm fors and in the makine and mendinis of, herving nets. The trate of the port is limited to the expent of herrimes, and of com, wool, cattle, and ofler farm prowhits, ame to the impurtation of eoals, timber, and qroodrios. It has an interourse hy stomm with Leith, Ab,rdeen, Kirkwall. and lerwick.
Wick was male a royal bor. hy dames Vh. in 15x: It mites with Kirkwall, burnocll, ('rumarty, and lhingwall, in sending I mem. to the: 11. of 8 . laceistered electors in Wick :30: in Inia, It is governed by a provost, ebailies, and ! momathors. (orp, res., liall. in 1sti.t.
'Ihe comery in the vicinity of 11 ick has heen greatly improved within the hast hatf century. ever so late as in $17!0$, there was mot a eart in the comity, nor potatoes, turnips, mor ryo-grase; and sude a thing as at rotation of ceros land not then heen leard of. The land was split into miante portions, and held muder a switem subversive of all industry and improvement.
WICKLOW, a marit. co. of Irelame, pros. I einster, having N. the co, of bublin, Fi. St. Georpe's Chamel, S. Wexford, and W! Cindow imbliblare. Aren, $199,8!11$ teres, of which! ! 1.010 are mimproved momentans and bug. Jlis is a very monntainous eo, In some phaces it is wrill wouled, and extromely picturespue mad beantiliul. Vistates mostly large: themost extensive, valuable, amal best cultivated belomge to earl litzwillian. Farms of varions sizes; many small. Speaking erenerally, rents are much too hish; the labouriner 10ן that of the small farmers, as bad as possilile, But little wheat is raised, and that principally in the Ea parts of the co. Wieklow has to boast of considerable mineral treasures; and some guld has heen fombla in stream-works in different parts of the co. These, however, have been wholly: abmodoned, the protuce of metal being insufficient. to repay the expenses. From bion to 900 persoms may be employed in the eopper mines of Cronebane. Ballymurtugh, and Conorree. The ures are shipped at Wicklow, and are smelted in Wiales. Bismuth, manginese, and zine, have also bere met with, but in inconsiderable quantities. Marl is very abmolant in parts of the co., and is said to have womderfilly increased the fertility of some districts. I'rincipal rivers. Slaney, l'ustia,

## WILTSHARE

and rather more eorn is grown than is required for home consumption. Lye is the grain principally cultivated. Ilemp and tax are rarely grown; and hops and pulse are raised in gardens: fruits are nerglected. 'The forests are very extensive, the crown possessing nbove 400,000 deciatines of Porest land; and there is a considerable trade in teals, timber, tar, potasl, and other woodlind products. Lime trees are very abumlant; and to this eanse is attribnted the exeellence of the honey, for which this grovernment is famous.

The breeding of stoch is neglected; the horses are, however, strong and active, thongh of small size. Game is very plentilul: elks, wild boars, bears, and wolves, are mumerons; uecasionally the urns is met with; and fox, martin, and squirrel skins are articles of trale. Nineral products tutimportant. Namfictures luve increased a little of late; but they are still quite incousinderable. The trade, which is almost entirely in the hands of the Jews, is prineipally in timber and agricoltural produce, sent down the Dwina to liga, or be land into Prussia. Wilna is slivided into 11 districts ; chict towns Wilna, the eap., and Kovno. It preserves several of its old forms of administration. As respects education it is, thourh far behind, in alvance of many of the governments.

Winna, a town of the Russian empire, eap. of the above gov., and formerly the cap, of Lithuania, at the eonthenee of the Wilenka and Wilna, (9) m . Ni: Grodno, on the railway from St. Petersburg to Warsaw. l'oり. $51,15 \mathrm{f}$ in 1858 . The town is surromoded by moluhating hills, and enclosed ly a wall. Its streets are marros and crooked, and its houses mostly of timber though it has sereral hundred dwellings built of brick or stone. Formerly a royal castle of the Jagellons existed here, but nothing is left of it except its ruins. 'The catherlral, founded in 18:37, has some grood paintings, and many eliapels, one of which, appropriated to St. Casimir, and built wholly of marble, is very handsome. The borly of the saint is premred here in a silver collin, made by order of Figismund IIl., and weighing, it is said, 30 ewt.! 'The chareh of' St. John is storomaded by the buildings of the miversity, founded in $15 \ddot{\circ}$, and suppresised in 1832. llere are in all about 40 charches, mumerous comvents, a mosque, and + syhaqogues, a magniticent town-hall, in arsenal, exchang: theatre, 2 hospitals, barracks, and magazines. The governor's palace and some residences of tazs nobility are fine lmildings. Previonsly to its dissolution, the miversity of Wilan was in a flourishing state, and possesseci an ohwervatory, collections in mineralory and matomy, aud a library of 52,000 vols. A medico-dirurpical school, to which are attached the botanic sarten and some of the university eollections, an crelesiastical seminary, and 2 gymmasia, are the principal public schools: most part of the mivarity extablinhment has been removed to lide. Wilna has deaf ond elumb and fomdling asyome, various other charitable institutions, a few mannituctures, and a considerable trate.

It was finmed in $1: 32 \cdot 2$, mod is reported to have had, in the middle of the 16 th ecntury, 1 tot,000 inhabs. It has often suffered severely from tire.

WILTON, a parl. and munit. Dor., and par. of lantand, co. Wilts, humd. Branch-and-Dole; on the Willy, a tributary stream of the Avom, 4 m . W. by N. Salishury, on the Londen and South Western railway. 1'op. of bur. 8,657 in 1861 . The old bor, comprised only the greater portion of the town ; but ithe modern bor. inchudes, besides the whole par. of Wilton, 11 adjacent parishes and parts of 5 others, with an extra-paruchial district; it hats a total area of about $\mathbf{3 8}, 000$ acres.

Wilton is a neat country town; the main street is paved and lighted, and is crossed by a smaller struet nearly in its centre. A handsome church, in the Italian style, with a separate campanile, or bell-tower, has been erectel at the expense of the hight Ilon. Sydney Herbert. The living is in the gift of the Earl of Pembroke. It las also chapels for Indepentents and Wesleyans, an ent dowed free-school, estublished arly in the 1 Xth century, for the education and apprenticeshy, ol 20 boy's; a bequest of 1,000 ., the interest of whiel is ammally distributed in mariage portions fo. 1 young wonen belonging to the town, and several minor charities.
The hospiral of st. Johm is the only one remaning of the numerous monastic establishments formerly existing here. The lospital itse:t is an ohl priory building, consistiug of four distince apartments under one rouf, with a garden for the use of the immates, who eonsist of 2 brethren and 2 sisters, presided wer by a prior nominated by the dean of Sillisbury eathedral. 'I'he rents reserved for the maintenance of the immates amomet. to about 301 a yar. Wilton had, for a lengthened geriod, a dhorishing mamufacture of woollen goods, especially of earperts, and it was here, imbeed, that, the first carpet made in England was mambitetured. This business, however, gradually deelined, and though it has somewhat revived of late years, it is still but inconsiderable.

The earliest existing chater of the bor. dates from the Ist of IIcary l., but lrom a very eatly period it has been coverned by a mavor and an molimited number of burgesses, inclading a recorder and five aldermen. This bor. sent two mems. to the 1l. of $C$. from the ? 3 d of bidward 1 . down to the passing ol the Relorm Aet, which deprived it of one of its mems. Previously to the last-mentioned act the franchise was vested 'in the mayor and burgesses, who are to do all corporate acts and reacice the surument, In joint of fact, however, it wats a nomination bor. belongins to the liarl of l'embroke. Registeral clectors, 26.4 in 18 \&

Wiltun is very ancient. It had a famous abber, originally fommed in 76 , and greatly improver and enlarged alter the Conquest. Wilton llonse: the magniticent seat of the carls of Pembroke, oceupies the site of this abbey. It is built in a tine park, watered hy the ivilly ; its garden Iront was rebuilt from designs by Inign dones and more recently it was enlarifed and considerably altered by wyatt. especially with a view to the better display of its superb eolleetion of ancient statues and other works of art. Wiltun was most probably the birtlphace of the dramatio: puet Massinger; and arehteason Cone, author of - 'ravels in Switzerland and the North of Earoper,' and ol various valuable histurical works, was, fir a lengthened period, recter of lienerton, in its immediate vicinity. The town has no mathet, but four ammal fitirs, that on the $12 t h$ of sipht. being one of the largest sheep fairs in the W. ol Engrland.

WHLTSHILEE, an inland eo. of England, in the $s$ part of the kingdom, havinit N. the co. (iloncester, E. Berks and Hants, S. the latter and Dorset, and W. Somerset and dilomesester. Area, 865,092 acres, of which about 800,000 are arahlo, meadow, and pasture. It is divided by the rivers Kennet and Avon, and the canal by which they are mited, into two grand divisions, popularly termed, from their situation, North and Sunt $h_{1}$ Wiltshire. The latter eonsists, in great part, ol Salisbury Plain, extending from Westhory and Warminster, on the W., aeross the co. to Hampshire, and from Lavington, on the N., to near the

WILTSIIIRE
WIMBORNE MINSTER
461
eity of Salisbury on the $S$. It consists principally of chalky downs, intermixed, however, with some fertile, well watered, and beautiful valleys. 'Though called a plain, the surface, as in all chalk land, is molulating: the most level part lieq romid Stomenenge. There is a gend deal of rieh land in the s, division. berween 'rowbridge and Pewsey, and between the Willy and the Dorsetshire border, E. to Wilton and Silisbury. Marlboromerh lowns, which bear in most respects a close resemblance to Salishury Plain, lie in the N. clivision of the comnty, between Marlborongh and Swmion; but, with this exception, this division consists principally of rich vale land, considerably exereding in extent and importonce the cultivated gromme of the S. division, There are some large estates, but property is, notwithstanding, a gool leal sublivided. litirms of all wizes, and pe11 rally let on lease, for $\overline{7}, 14$, and 21 years with unulijectionable conditions ta to entry. Farmhouses, in the S. division, were formerly built tumether for the eonvenience of water, but the more mondern ones are generally detached. Agrienlture in Wiltshire is in an alvanced state, and rellects great cre⿻lit on the skill and enterprise of the firmers. The land under the plough is remarkably clean and in goom order. It is lelieved, however, that tillage on the down lands has been too much extended. When once broken up, it is extremely alificult to pet them again jnto good comlition as pasture; while, maless corn fetches a high price, they are most proluctive in the latter. I'rincipal corn creses, wheat and barley; the latter being, howevar, eontinel, in a mreat measure, to the light chalky soils. Turnipis, rape or cole seerl, and potatoes, largely cultivated. Much of the rich land in the N. division is appropriated to the dairy hashamery and the fattening ol cattle. 'The cheese, which, excepting inferior butter made from the whey, is the only groduct of the dairies, was formerly sold as Glonresturshire cheese, hut is unw well kown and much valued in lomden and elsewhere by its own promer mane of North Wiltshire cheese, breed of cattle varions: they are partly sharditered in Bath and silisbury, but the greater number are sulf to the Lamdon limehers. In dexpite however. of the encroachments made by the phometh on the downs, sherp eontmone to lie regardend, in the freater part of the eo., as the principal support af' the farmer. 'They alford the chicl' article of manare used on the lamp while the sale of limbls and wool furnishes the principal means of paying the remt. In comseppence, as it woula serm. of this depentence, and of the higrh price of wowl during the last years, there have been fower complaints among the Wiltshire farmers than amongst those of most southern comnties. 'The sheep stock, eonsisting partly of the native horned breed, but in a far greater degree of south lowns, and crosses between the two, is estimated at abont F00,000, of which about issi,000 are depastured on the downs, and the rest on the cultivated lamit; the tlecees of the former are supposed to weigh at an average $-\frac{3}{3}$ lbs., and those of the
 of worl. The irrigation of water meadows is to be sech in the greatest perfection ins. Wiltshire, and is practised ou a large scale. Many logrs are kept, and Wiltshire haem is highly esteemed.

III the vicinity of some of the towns of $S$. Wiltshire, a grool deal of garden hosbandry is carried on. Stonelienge stands, in rude magnifiecone, in the midile of Salishory Plan. (See stonemenge.) The mamfactures of Wiltshire are considerable; they eomsist principally of varions descriptions of siperline woollen groeds, made
at Bradforl, Trowbridge, and Westhury; thicksets, and other sorts of cotton gools, are also propared, thongh in small quantities. Wilton was long celebrated for a carpet manufactory, estitblished by one of the carls of I'mbroke; hat this, though it has latterly increased, is mot wearly so considerable as formerly, Spakimer gencrally, manufactures here, as in other southern comnties, are on the decline. I'rincipal rivers, Thames, l"purr and Lower Avon, and Kemet. Dxclusive of some local juriediction, Wilts contains 28 hmodreds and $\dot{0} 00$ parishes. It returns 18 mems, to the II. of C., viz., four for the co., two for the eity of Salishory, two cach for the bors. ol' (hippenham, Crieklate, Devizes, and Marlborourlh, and one each for Calne, Mamshory, Westhury, and Wilton. lemistered electors for the eo. X.fN: in 1 etis, being $\mathrm{j}, 14 \mathrm{fi}$ lor the Northern, and $3.3 \mathrm{il}:$ for the Southern division. At the census of Isial, the co, had 53,059 inhall. houses, and $2: 31,0,27$ inhabs; while in 1811 Wilts had $50,87!$ inhabited houses, and 258.733 imlals.

WIMEOLNE MENTlEI, a market town amd par. of Enghond, eo. Dorset, huml. Bathury in a valley hetween the rivers Stour and Allen, carh of which is here crussed by a bridge, 2 m . Sistl. Salisbury. Area of par. 11.680 acres: pop. of ditto, t,807 in 18til. The town is pleasantly situated, hat the streets, though clem, are irrosilar, aml the bonses have but little miformity; it is well supplied with water, and has been consideably improved of late years. It is principally remarkable for its magnibient minster or charch, which was formerly collemiate. 'The date of its original fombation is meertain; but it has been usually referred to the sth century, whan a momastery was established here by a sister of loa, king of the W. Sasoms. Some antignaries are of oplinion that the li. tower, and most part of the charch, are pasterior to bit semen alter the (onn-
 in lenth from l., to W.. with two lowers, one, a shant, massive, Norman tower, rising from the midalle of the roof', Jormerly surmonnted by a lolty spire, destroyed by lightning early in the 17th eentury; the other tower, in the l'erpendicular style, at the W. end ol the buthling, lavia tine window, which has, however, been elosed ap, The interior is elivided after the manner of it cathedral, and till within the last few years the eathentral service was perfiomed heve. lathe elancel are sixteren stalls, with emopies of earved oak. It has some monuments of distinguishel persomages, but time and the hand of violence appar to have destroyed a great many mors. This edfice molerwent extensive repairs ind inprovements from $1 \times 36$ to $1 \times 20$, at the joint expense of Mr. banks, the eurl of Devon, and the clake of Beanfurt. The hving is a rectory in the patromage of the earl of shaftesbary, lifere aho are chapels for Imlependents, Wesleyams, aml Baptists. The free grammar schonl. uriginally lomuded in 1.497 , and re-established hy ghein Elizabeth, has an income of about loof. a yar. Snother free schoot, foninded hy the endowment of a private individual in 1695, has an ineome of 24. a year, and in lxat was mitended by sixtean pupils. Sit. Margaret's almshouse, which is of very ancient fommlation, has ant income of about 120. a year, and the agregrate produce of the funds for charitable and religions uses in the parish amounted, at the period of the late enpuiry by the eharity eommissioners, to nearly !,0001, it year. The trade of Wimborne is limited to that arising from a small manufacture of woollen grods, and stocking-knitting. l'etty sessions are held here for the Wimborne division of the hand.,
mul munnal court at Michachmas in a fything of the town, at which two bailills are upininted by twelve jursmen; but these have no anthority wer other pirts ol the town. Wimborne is suppased, from the varions eoins and antiquitios fombd there, to have been a homan station. Market day, Friday; liairs l'requently, for cattle and cheese.

W'INCANTON, a market town and par. of Hoshame, co. Somerset, humbl. Sortom Ferris, on a theclisity besite the small river Cale, here erossed by a stone bridge, es m. S. Batl. Area ol par. Siskit acres. P'ope of do. 2, liot in 1xit. Wincanton, having been destroyed by dire in 15ta. has been since regularly laid out in four principal atreets. The chureh, a spacious elitice partially relmilt in läth, has a spuare embattled tower. The manufacture of sorges, Ded-tieking, and dowlas, thongh much fallen oll, is still carried on, and the wilk mannlacture has been introduced on a small acale. Wincantom is an important mart for the cheese male in the surromaling eonntry. The town. divided into a bormugh and tything, is mater the juristiotion of sparate oflicers; two constables for the former, and at tything-man for the latter, being chasen ammally at the manorial comrt; besides whioh last, an immal court leet is hela here. Market day, W'ednesday; fatirs, twide a year.

Wincianton is a pace of remote antiquity, and is mentioned in • Domesday beok,'

WIN('llCOMBE, a market town and par. of Lingland, co. (iloucester, humb. Kiltspate, amidst the Cutswold llills, 6 m . NE. Cheltenham. Area
 The town comsists mosily of three streets: the louses ate in gencral of istone. The charcia, the erection of which conmeneed in the reign of Henry VI., is a moble Gothic structure, with a lolty sifuare tower embatiled and pianaded; the mave is scpatated from the aisle betagonal pillars and eompressed arches, and from the chancel hy a sereen of carved oak, 'The free selood, fomaded in the l!th dames l., has a vearly income of $49 / .4$ s., but has long declined trom the comblion ol a stammar schond; and at the last enumiry it aflorded only radimentary instruction 10 331 boss. An endowment of 201 a year sup, phes elothing to the poor. 'The inlabse are prin(ijatly wemped in the mannfacture of silk goods,
 combe is of great antiguity, and before the the of C'ante formed a co. of iseelf, bemor then surromaded with walls, and having a fanous atheres, fommed during the heptarelsy, but of which, as of its andent castle, there are now few or to traces. The fown was made a bur. in the time al D.dward the Comessor, lat its charter has lomer becel olsolote. Nomit $1 \frac{1}{2} \mathrm{~m}$, distant are the remails of sudeley Castle, now the property of the duke of linekingham.

WINCll EiLSE:L, a bor., cinque port, and markot town of linglame co. Sussex, b. div. humb. Staple, on the small river bired, about $1 \frac{1}{2} \mathrm{~m}$. from the liuglish (hamed, $\because \mathrm{m}$. S . by $W$. live, on the South liastern milwas. Area oit pars. $1,1=0$ acres.
 font of importance muler the Romans, sithated oun the const at the mouth of the liother, was destroved by the endoathments of the seat, between 12 si and $1: 2 x$ an. Before its destruction was completed, the intals. remuved to New Winchelset,
 silf, trom the rumed town. The new town. which was surounded with walls by Edward l., covored a space of abont 2 m . in cire., had thate churdies, was regularly laid out, and enjosed a
considerable share of the trude with France, especially of that with Bordeans. lhat, by a singular fatality, it was ruimel by a cause precisely the - ${ }^{\prime}$ mosite of that which lad destroyed the did lor. listeal of encroaching, the sea bergat in the lith century to recede from this part of the coast, leaving, in the cond, the town withont a larbur, $1 \frac{1}{2} \mathrm{~m}$. from the sea, and in part surrounded with at salt marsh. Since this ehange was chectel, it has progressively andined, and wonld most probably have been wholly leserted. but for the circumstance of its having enjoged, from the dend of blward III. down to the passing of the lieform Aet, ly which it was distimelised, the imbortant privilege of sembing two mems. to the II of $\mathrm{C}_{0}$ It is now inclulded in the bor, of live. Of its three churches, only a portion of that of 'St. Thoman mow remains. It has several ohel monnments, one of whish is said to be harlly exceeled by any in the kingelom for beanty of composition. The living, a rectory in private patromare: is
 malernath are of Siaxom arehitecture. Abont a mile Ni: of the town are the ruins of Wiachelsea Castle, luilt in the reign of Ifenry Vlll.
 linglam, co. Hants, of which it is the cap., hamet. Bullllestate, on the Itchin, I2 m. N. ly E.Siomliampton, and lis m . SW. Londem, on the London and South Western railway. Pop. of city. 14.7-7 in 1861. The town standing on the decilivity of a hill gently rising from the river, is regularly latid ont, clean, well paved, and lighteal with gas. In its centre is the 1 ligh Street, a spacions thoroughlare, rumine from E: to W., with parallel streets of wither side, cussed hy others of nearly int equal length. Nost of the Sk: part of the town, but without the limits of the city proper, is oerotpied by the eathedral and some other ecolesiastiond ealitices and their precincts. 'The houses are mostly' substantial and well tuilt, many ol them being its all antigue style. and having a venerable appearance. It was formerly surmomed with walls, but these no longer exist : and of four ancient gates only the $W$, now remains. Of the public editiees the cathedral is bey liar the most interesting, partiy from its vast size and autiquity, partly from the variety of its arditeature, and partly from its ancicut innortance. It was lommed in luag, by bishog, Walkelvo, a relative of 1 illiam the Conifueror. who constmeted the erypts, transepts, abl tower; the work was contimem muler succedins prelates, aml was nearly eompleted by the fimons william of Wykehm, between 1:30 alnd 1.100 . It is of a cruciform shape, with a low tower rising from the eentre; and, thangh rather heavy, has a irand and imposing appearance. Its extrume length, from E . to W., is iolij ft. : length of the nave from the 16 . probelito the irom doors at the entrance of the choir, 3.sl ft.; leneth of the clowir, l:30 ft. ; brealth of the eatheitral, x- lt. amil of the ehoir, to ft ; length of the tramsept. Istifit: height of the central tower, 150 lt . The chat racter of the lmiding was originally pure Noman, and the transepts and rentre tower, built by hishop Wabkelyn, are almitable suecimens ol that style. 'Ihe li'. front, in the decorated (iothic, built by Wilhiam of Wrehem, issingularly beantiful: it has a large and two smaller duorways, and a magniticent window, with two slendor lantern turrets. The Norman parts of the lmilding are bold, simple, and well executed; the tower massive and tincly ormamented. The groining is varied in diflerent parts of the ehureh, ame that of the mave is remarkable for its intricacy and richuess. In its smabiar structures, sereens, monnmental chapels, and stall-work, this cathedral
sith France. CsBut, by a singuse precesely the yed the olid bor. The chapure Nirman, wer, built hy cimens of that rated Giothic, pularly beanHer devorways, two slendic Sof the builavecuterl: the The groinec church, and its intricater ures, s.ryems, this cathedral
is yery rich. The altatr-piece is of late Perpendiconlar; and over it is a painting, by West, of the 'Resurrection of Lazarns.'

The coup, d'ail, on entering the cathedral by the W. door. is grand aml imposing : the vast size of the buibinge; the loftineses ment long line of its vanlted rowif: the lancet pointed windows shedding on the different whects a 'dim religions light; the lines on' ellustered pillars and branching aisles; the numerons chantries and monuments of eminent men; and the silence that prevails within its walls: conspire to impress the mind with a deep sense of awe and sublinity. In the midtle of the preshyters, betwern the cluir and the altar, is a collin tomib said to enchse the remains of Willian linfos, killed white hanting in the New Forest, and buried here in 11 w. Several Saxon monarchs are also interred in this cathedral. Among the episeopal monuments. the most interesting are those of William of Wykeham and Wayntlete, two of the most illustrinis prelates of whom Englimul hats to bomst, The first, who, was bishop of this see from 1:36; till his death in 1-10.4, bexides completing the cathedral, fommed and endowed a college or school, in the city, the seholars edacatea in which were afterwards to be sent to finish thair miversity elucation in Sew College, in the miversits of Oshord of which Wykeham was also the maniticent founder. Wisutlete, whe was bishop of Winelester from $1 \%$ to IN Migglalen Coblche. Oxtimb, whe of the wealthiest limmations in that miversity. Here also are momments in homur of the celebrated bishop Hhanlley, and of old Isatae Walten, the prince of anglers.

The bishoprie of Winchester has long heen ome of the most valualle in the kingiom, its net revenue having amounted, at an averige of the three years comber with $1 \mathrm{~s}: 3 \mathrm{l}$, to $11, \mathrm{l}, \mathrm{h}$, a year: lut, in purstance of the remmmendations of the Commissimmers ul Ecelesiastical hupuiry, its reveme will be reluced on the deceate of the presint incumbent. Dr, Summer, who has hed the

The diocese inetules $3 \times 1$ parishes, comprising, together with Hants, the greater part of Surrey and the Chamel Islands. The cathedral estal)lishment consists of a dean, ty camons, and of minor camons, who enjoy amongst them a gross anmal income of almot 12,0010, is year. Winchester is sild to have had at one time no fewer than !!if chureches and chapes; but of these many were attarhed to monasteries and ohler religions estat Mishments dextroved at the Refirmation. There are still. however, as many as 9 churehes in the city aull suburbs. Of these, the small churid of st. Lanrence, searcely visible for the buiddines by which it is surrumbent, is sulpused to be the mother church of the eity, and the bishop takes pnsiession of the diocese by making a soldem entry into it. St, Manrice, the primeipal parochial church, was pultell down in 1 sita, and an elegant and commondions structure has been ereeted on the site of the ancient clitice, which had beeme incomenient and minoms: the expense of its construction was defiatyed by subseription. Among the other churches are St. Swithun's, hailt over a powitern quate; and St. Nichacl's, a hambume maniern editice in the pointed style. The livings, exceptst. Bartholomew-II yde, a vicarage, and St. John's, a perpet. curaces, are all recturies, and are in the patronage either of the crown or the bishop of Winelester. But, motwithstanding the number if its extablished churches, dissent is here previalent : and the lompendents, Baptists, Wesleyans, :und Ruman Catholies, have all places of worship. The chagel of the latter, a lanulsome editice in
the pminted style of arehitecture. was construeted in 13\%.

The colloge, or school, foumbed, as alrealy stated, by Willian of Wrykham, and completid
 scholastic establishment. Its buildings ebulowo two large qualrimpular comrts, ditered by sparions gatemass and besides apartments lior the necommodation of the warden mad seholars, it luss a moble hall and chatuel. The whole struenture is richly ormamented with pimameles, battreses.s. and staties. It is primepally in the perpendicular style. Over the dorr of the solhoul, a moble hall, constrneted in $16 \sin ^{2}$, at the expense ol arontlemen edneated in the eollege, is a tine hronze statho of the founder, Iy Cibber, the seulptor, liather of the
 the colloge is appropriated to the residence of the boys attemdine the seloml, bint not on the fimmiation, where they are placed moder the spurial inspection of the head-master. The buidtines formerly used for this purpuse loping fommel to be inconvenient, was pulled down, as well as the homse of the head-master, in Ix:3!), and a new and splemid editice has since been ereded in their
 by subseription. This magniticent institutinit is the most ancient of the existing pmblie sehmels of Fingland, and famed the mond for thome of liten and Westminster. 'The estaldishment consists if a warden, a sehoblmaster and usher, 10 fellows, : chmplains, 3 clerks, 16 choristers, amb 70 selmbers: but there are in gencal alove 2 on boys in the sthon, including those not on the fimmation buys on the fommation are providen with boart illal longring within the walls of the eoll ge: thas only payments to which they are subject, exthsise of travelling expenses, amomiting tor athont 20/, a vear. linss not on the fimmdation lodire. as already stated, in an adjoining pile of hoildings, mador the superintendence of the hemb-master and subject to college discipline. Seholars are sent, as vacmbies werm, from this schosl to Now Cullege, Oxford. (Siee Oxfons.) Among the distinguished individuals effeated in this sehond may be sperified bishop lowth, Sir Thamas Brown, Sir Ifenry Wotton, Otway, the tragelian, Yomm, author of ' Night 'Thoughts,' Gullins, aud the two Wartoms.

Amoner the public buildings in the Iligh Nitreat is St. Johu's llunse, in ancient strusture, formerly the property of the knights templats, and an hos pital. The great rom in this building, ite ft. in length and finely proporimen, was dited up: in its prent clogant stive, lay lew. Brydges, Eng.. a commetion of the chandos family, and a libural benclictor of this city, of which he wis lome : parliamentary representative, It has a line whole longth portrait of C'harles II.. by lely. In the rear of the building are neat edities acempiod by six poor widows, who, exclasise of their lobarims, receive a weekly allowance of llos, and uther alvintages, la 1s:3:3 an important noldition was made to this charity by the crection of a buidfing in the litizabethe 't style of architecture, with a spacious quadrangle, intented to serve as an asylom for twelve nged females and six ohl wem. Christ's Jownital, fommed in lixt, suymerts sis old men, three hoys, and a woman. An almshouse, fomuded by Bishop Morley, in 1 bize, sop ports 10 clergymen's widows. Here also are charity sehools for boes and girls, a national schuol for children of both sexes, and a mechanies institute.

Among the public buildings may be specified the eross in the High Street; a the strueture of the age of llemry VI, in the later pointed style.

## WINDSOI:

alsove 40 ft . in height. The quillhall, rehoilt in 1713, has in front a statue of gueen Ame. The original Winchester bushol of ling Eigar, and other ancient standards of lengeth and eabacity, tumerly breserved in this buiding, have been removed to an apartment wer the W. gate of the city. A bridewedl and house of correction hats luerth erected on the site of a magraticent monastery, in which the remans of the great Alfred are miil to have been interrerl. On the N. site of the city is the co, gaol. The eo. hoppital, in Parchment Street, is in the structure, which han reently ben comsiderably enlarged; a new corn exchange was ereeted in Ik $3 x$. Beyond the W. wite is an ohelisk, erected in 176!), to commemorate atreadfinl tisitation of the plague to which the city was subjerted in libs!. 'The phees of ammsement ind lmbe a theatre and assembly-remms; races take phace in duly, abont 1 m . firm the city. It has also a publice library and reading-rooms, and $n$ savinge' bank,

Whindmeter has no mannfactures, lut a very comsidamble retail tralde, and all the publie business lor the co. is tramsacted within its limits. A larse extent of the surmonding district belonge to ecelesiaticen and other eoporate hodies, which, not heing empowered to srant lome leases, give bo encouragement to builinge. The tissize courts for the co. are held, and other juldie business tramsacted, in what was once the chaper of the eastla, built ley the Compurar. At the E. cend of the hath is suspented a large romd wouden table, is feet in diamoter, popularly ealled 'Arthur's liomul 'Tahle,' but which is, no dombt, of a much less remote antiquity. It was painted in the time of Ilomry Vlll, 'lhe ciremastance of its being the (ap). of the eo. makes Winchester the residence of at erat mumber of gentlemen connected with the law; and heing also the rosidence of a mumer of elergymen, and of wentlemen attracted to the city he the beraty of the sithation.

Winelester was lirst incorporated in the reign of Iloury 1I. Under the Mur. Reform Act, it is divided into 3 wards, and is govemed by a mayor, 5 other aldermen, and 18 commeilors. It has a recorder, who holds eourts and a commission of the peare, and a eomity conrt. Winchester has sent 2 mems, to the 11, of C . since the 23 d of Edward I. l'reviomsly to the Lelomm Act, the right of election was vested in the members of the corporation, who had power to mement their number. Sargistered alectors ! ! 3: in 1860.
This is certanly one ol' the most ancient of the Enelish towns. linder the liomans, it was a place of considerable importance, and it subsefocently became the capital of the $W$. Saxms. Willian the Conqueror erected a rastle here, under the pretence of protecting the eity, whimh hat sutfered much from the inctrsions of the Jancs, but really, perhapls, in the view of userawing the inhabs. From this perionl. bowever, lundom beame the eapital of the king(lom, and Wincluester gradually declined in inpurtance. but its eastle was repeatedly ocupiad by the Numan mourchs; Jlenry lll.. hence called Wenry of Winchester, was born here in $1 \geq 07$, and various parlitments were hedel in the city in the l-th and loth centuries. Here, ako, in lisio, Hemry VIIl. entertained his illustribus guest, the emperor Charles V.; amb here the mamiage al Mary, datughter of Henry, with Philip Il., oldest son of Charles, was solemmised Julve 2i, loint, la the reign of charles 11 . it again bemme, thongh for a short period only, a rosal residnuce Charles, indeen. was an minch attaidhed to Winchester, that in lisis. he employed the fimoms architeet, wir Christopher Wrem, to erect a new and magniticent
palace on the site of the old casile. The sleath of the kiug put a stop to the progress of the building, before it was linished; aud, after various matations, it is now used as barracks.

Dbont 1 m . s. from the eitr is the ancient hospital of St. ('ross, fomuled, in 1132, by 1lemry of Bhois, hishop of Winchester, nud brother to lining Stophen, The present establishment, which apipronches nearer to a momastery than any other in Finglame consists of a master, a chaphain, a steward. and 1: resident brethren. The buildings onee composed two courts, bat they have beed parlly balled down. The elapel, in the interior court, is built in the eathedral form, with a mave and transepts. and a low, massive tower at their intersection, and athorals a tine specimen of the transition of the Norman into the early English style of arditecture. 'The cutrance gateway has a handsome tower, with a statue of the limader. cardinal Beanfort.

Notraces bow remain of the monastery proviously referred to as containing the remains of tho great Almed, relnilt in the reighof Itemry Il. the revemes of which amomed at the disushindoll to siant, a year. Neither are there any remains of a miversity limuded in the reign of Alfred, anm other similar establishments.

About 4 m . li. by N. from Winchester is Avington, a tine seat belong to the dake of Burkingham.

WINLSHOR, a town, parl. and mom. hor., par., and royal residence of Eustime, co. Berks, humi, lipplesmere on the 'Thumes, $20 \mathrm{~m} . \mathrm{W}$. by s. Lomblon by road, and $21 \frac{1}{4}$ by (ircat Western railway. Poje of bor. 9,5020 in $1 \times 6 i$. l'revionsly to the beform bet, the parl, bor, was nearly co-extensive with the par.; the mokern parl. and mun. bor. comprises abont hall the par., with the lown ward of the castle, mul a small portion of the adjaceut par. of chewer; having an area of about 1,500 acres. The tum, partly situated on low grombl, along the river, and partly on the d clivity of the ridge occupied by the castle, the W. ead of which is surromeded by its buidings, embsists of six principal and several smaller strects, mal is well paved, and lighted with gas. It commanicates with litom, on the opposite bank of the 'Jhames, by a handsome iron bridere of three arches, raised on granite piers. Of late yours, many buidtings of a superior kind have been crected in the W . part of the town, in that prortiom of clewer par. inclated in the modern parl. lor. The par. chureh is a hamdsome new fiothie structure; the living, a vicarage worth 40,1 , a year, is in the gift of the crown. The guildhall, a ueat editice, supported ou columus and arches al Portland stome, orempies a conspicnous site in the Hight Street. On its N. side is a statue of Gumen Ame, and on its s. one of Irince beorge of bent mark; in the interior are mumerons pertrats of royal and ofter distinguished persons. The cavalry and infantry barracks, the new roval stables, a neat theatre buili in 1815, and several discenting ehapels, are among the other primeipal buidings. 'The charity school, fomoded in 170., hat, at the date of the late enquiry, an ineome of lial, a yent, and was attended by on children: it hats also a ladies' charity school for girls, national and Sumday sehools. Cieorge III. establishal :in hospital for invalid soldiers in 178. ; a lying-in charity was fommed in 1801, and the royal general disperisary in $|8| 8$, and there are mumerous minor charities, having an aggregate income of abont 800. a year.

Under the Bomdary let, the alterations previonsly allunded to were mate in the limite of the bor. Reg. electors 650 in 1stio. Under the Mnn. Reform Aet, the hor. is divieledintos wards. and is covernedbe a mavor, other athermen, and is eommeillors. It has a commission of the peace and a eomety court. Wiadsor has no manufincture of inportance; and. being out of any princibal line of road, its trade is merely one of retail. being eontined to the supply of groots to the inhalos, mind visiturs. It has mumerons inns and lodging-honses, thourh, considerine the resort of company to the fown, the former are cortanly of a very inferior deseription to what might have been expeeted. The ale of Windour chions a considerable repotation, amb is sent to Lonton and other prees. Aarkets, Wednestiny and Saturday, the latter principally for eorn Fairs, Easter Tuestay, July ${ }^{\text {E }}$, and Ótober A, for loorses, cattle, sheep. and whol.

WINDsol: CAS'LLE is the princibal eountry seat of the sovereigns of limplam, and one of the most murnifieent royal resibences in burone. It appars to have been fommed by Willimm l. soun aftor the Conquest, and it has been entarged or (-mbellished by the greater number of his sucessors, patticularly ly Edw. Ill., Georre lll., and George 1V. Cinder the latter it was, inted, in great part rebuilt. and themghont renovated ly Sir Jeffrey Wratville, and hats been fitted mpin the most splentid strle. Beiner bated on the summit of a lofye eminence rising abouptly on the $S$, side of the river, it commamis very extensive views, and is, at the same time, a most consphoms and interesting objeet from all the surroming eountry. It is of an oblong form, and is rivided into an upper, a middle, and a lower warl, the entire area eommised within its outer wall beine about le acres.
The mper or li. warl consists of a quadrangle, having on the N. the state aparments shown to the public; on the $S$, the apartments appopmated to the use of visitors; and on the li. the private apartments of the sovereign: on the $W$, the upper ward commmoncates, by the Noman and St. Goorge's gateways, with the middle ward, a narrow enclosure round the base of the Romm fower, which crowns the summit of an artiticial mond in the centre of the Castle, The lower ward, which is considerably smalter than the upyer, has on itss. and W, sifles the houses of the military knights, and the Sinlishury, Garter, ant Licll towers; and on the N. St. (ieorge's chapel, and Wohser's tombhomse, behind which are other buildings enclosing several smatler quadrangles: it is entered from the town of Wimdsor at the SW corner by llemry VIII.'s gateway. On the N side of the Castle, outside the state upartment and midile warl, is the North Terrace, originally constructed by Gueen lilizaleth, and afterwards conarged and improved by Charles II. This moble walk, resting partly on precipitoms ledges of rock, and partly on masomy, rises abont a ft, over the mendows at its luse, amb is at once the finest terrace of its kind in the kingdom, and adistimpuish ing feature of the Castle. On the le, side of the Castle, opposite IIer Mlajesty's private aparmonts, are the sunk or royal gariens, comprising about two acres.

The primeipal and most marnifieent entranee to the Castle is on the S., by the gateway of tieorqe 1V., between the York and Lancaster tovars. The Gork tower, on the right hand, formed part of the andient colitice; but the Lameaster tower is wholly

Sol. IV.
new. its fommetam having been lath on the lent of Aurust, Ix: I. The towers are stmunetrial. being about loo ft. in height, with machicolated bittlements. Limmediately opgosite to this pateway is the principal entrace to the state apartments. The gramd stairease, with the puardroom at its top, is, perhaps, amoner the hapliest eflorts of Wyatvilles gemins. The stairense is herhted live an octarmal lanturn low ft. above the pavement, and has a marble statue of George IV. by Chantrey. In the vestibule is the entlection of pinitings by West, represemint the exploits of Edward 1IJ: and in the ghard chamber are the coats of mail worn by Jolan king of France, ant David king of Scothan, while prisomers in the Castle, with busts ol Marlboromerh, Werlingent, and Nelson, the later on a pedestal formed of a portion of one of the mats of the Vietory.

The decorations of the lingrs lrawing-room are very sumerl: the reiling is painted in compart ments, representing the restoration of charles 11. the habours of llorenles, and other subjeed; and on bath site the rom are momernis pantings bos labens, and the ams of several of the linglish kings. The eviling of the audience-chamber hat an allurovial representation of the churel of Fingland; and in the same apartment are West's Installation of Kinghts of the Garter, and several portraits. The ball-rom, 96 ft, in lengeth, :30 fis. in width, 31 do. in height, is finished in the grorgeoms style of lomis XiV. It is lunger in part with Gulelin tapestry, representing the story of Jason and the (iohlen Flecece, said to have belonged to the mifortmate Amie Antamette. Sit. Georges llall, the banquetmen room of the linights of the garter, is 200 ft . in length, with an arehed ceiling divided into eompartments antil panels, in which are nearly 700 shickds, cmblat moned with the arms of the kingres down to the present time. At the li, end is the throne, muber a rich camoly ; and on the S. side of the hatl are the portaits of the iliflerent sovereigns, from James I. wh icorre IV..ly Vmulyck, Lely, Kuclher lawrence, de. The Waterloo chamber, 100 ft . in length by dt in widh, has portrats, principally painted ly Sir 'Thumas Lawrence, of most of the sovereigns, warriors, and statesmen who took a prominent part in the contest with France termimated by the battle of Waterloo. The other state apartments to not require any particolar notiece; they have the inconvenience of all entering from each other, so that to get to the last in the ramge all the others must begone through.

The entrance to llor Majestr's pivate apartments is at the SE. corner of the upper warl, through a hamesome hall, from which a domble stairease leads to a magnidient corridor jot fi, in lemeth. The private apartments consist of a dinineroom, of ft. in loneth by 37 in wilth; a Irawingroom, bit lt, in length liy 30 in width; : smaller drawing-rom, 41 ft . in length by $2 \mathrm{~B}_{\mathrm{i}}$ in width; librare, ju ft, in lenerth ly do in wifth; with bed-rooms, dressing rooms: boudairs, \&e: These romms are, as might le expected, most sumptuously furnished. 'the apartments for :arvants oceapy the lower and higher stories of the palace.

The round tower was originally built by the celebrated William of Wykeham, the arehiteet employed by Edward III. It stands on :in artiticial momit, and is approached ly a covered light of fu0 steps. From a court in the interior, another thght of steps leads to the hattlements. whence, in a clear day, portions may be seen of no fewer than 12 cos. This tower, which has been much mudernised, is $3: 2 \mathrm{ft}$. higher than formerty, aul is surmounted by a turret 20 ft . in heght, 11 II

## WINDSOR CASTLE

whence the royal standard is displayed ; it is the residenee of the governor of the Castle. At the base of the tower is a bromze equestrian statue of (tharles II., erected by one of his pares.

The great objeet of interest in the lower ward is st. George's Chinel. 'This,' says Mr. Kickman (Gothie Arehitecture, 1 , 12 l ), "is one of the thest prependicular buidengs in the kingolom; it is re-fular in its plan, and nearly all in one style. It is a cross chureli, with the tramsepts emiding in octagomal projections which have two heights of windows. At each end of the aisles are also small octagonal projectious sideways; all these are separated by sereens, and form monsmental chapels. In the li, wall of the chapel is a dowrway ol carly Paglish date; and perhaps other portions of a date prior to the prevent chapel may remain; but the whole of the erapel is a sperimen of the perpendicular style in its alvancerl. but not latest, perion. 'The rowi' of' the mave is painted with armorial bearings, and the whold highly enriehed, so that it now presents man of the hest examples of the eapability of linglish architecture for the reception of splenidid colonering and gildinge.

The interior is divided by the sereen and orman fallery into two parts, the bonly of the chaped amb the choir. The Wr, end of the former is wholly orempied by an emormons wimlow, ditted with painted glase, which, however, is ateficient in britlianey and richmess of eobouring. The tittings of the choir are mostly moolerin. Sit. (ienrige's Chapel was built between Ifat and labt, chicdly mater the direction wif lieanehamp, hishop of Salisbury, and Sir legimald hray, minister of Dlenry Vli. It has servel as the burial place of Ilemry VI. (removed hither liy lieh. Ill. from Chertsey),
 seymour, and Charles I. It has a few ohlamome ments, induding that of bilw. IV., ol hammered stect. llere also is a monmment in homonr of the late Princess charlote; but it is gromally admitted to be in had tuste, stiff, and umatimal. Aljominer the chapel on the li. is Whoseres tombhouse. lmilt by llem. VIt, but which afterwards came into the possession of the Cardinal, James II. Litted it up as a liom, Cath, chapel. It remaned inoceropicd from this eria down to that of (ieorge Ill. hy whom it was repaired, abla a valt bemeath it titted up as a mansolemon for the royad fimily ; and in it are now deposited the bodies of Geo. Ill. and his queell, (den, IV., Will. 1V., the Dukes of York and Kicnt, the Irincess Clarlote, and other selons of the llanowerian dynastr.

But alespite its magnificenee, it most he admitted that Wimanor Cinstle is extremely deticient in many things that one shomble expect to meet with in an ancient and fambuite sabt of the kings of Euchand. Execpt the associations commeded with the buidding, and the names of some of its towers and apartments, it has but little to comect it with the nation, or to make it an ohjeet of interest. In its interior, every thing has been sterificed to gratily the taste of Geo. IV. for ostentation and valgar tinery. Not a single apartment las heen allowed to continue in its ancient state, to carry the visitor back to the diays of the Eidwards, the IIenrys, Elizabeth, or even the Situarts. Everything that was venerable for its antiquity, or interesting from its listory or associations, has heen demolished or changed; so that one might suppose it had been wholly constructed within the last 50 years. Nor is there any thing in the fit-tings-up and embellisbinent of the apartments to atone for the destruction or metamorphosis of all that was old and interesting in the building, It has mothing to mark it out as the chosen seat of the constitutional sovereign of the British cmpire,

WIRKSWORTH
Excepting the busts of Marlhorongh, Wellington, and Nelson, there is harilly, in the state ajartments, any memorial of any one of the many Ereat men whose exertions have contributed to increase the power and glory ol the liritish mation. We look in vain for cither bussa or portratits of Shakspeare, Bacon, Milton, Newton, Locke, Dryden, and lope. Much as the Euglish mation owes to Watt and Arkwright, Windsor Castle has no momment of either the one or the other. An! the sime may be said of most of our great parlitmentary leaders. and even of the men who bronght about the lievolution, and phaed the Ilamoverian family on the thrones. The library is wretehedly aldident in books comected with the history and stated'the comery and its colunies: and the whale internal armagements are such that a stranger might fairly suppose the palace to have been lite el 11: for the residence of some opulent upholsterer. W'indsor castle has, in finct, execpt int its tine sitnation, size, and external ipporamere. but litale appropriate to or worthy of its destination.

The Little Jark is a tino expanse of lawn, eomprising nearly tum andes, romal the lid mat N. sides of the (astlo. In it is the tree usmally supposed to be identiad with the llerne's Oak of thathspeare. Wiadsur Great lark comprises about : , xill ateres on the s. side of the Castle, heing well wonled, amb exhibibing a great variety of gromad. Itre is the lomg walk. a moble avenine, nearly : m. in length, cxtemeliner in a straght line fiom the gramil entrmee to the ('astle to the top of': hill, on which a colossal hronze equestrian statue of dieo. 111 , by Westmacott, has been ereeted. On the s. sive of this hill is Virginial Wiater, int artiticial lake, with a tishing temple in the Chinese style. Windaor forest, the theme of D'ope's tine pocm, is a tract 5if m. in circ., latid ont by Willian the Conqueror for the purposes of homting, and kept np by the suceceding sowereigns. Latterly, however, it has been mostly enclosed. Its limits embance one market town. Wokingham, and numbrums villages. Ohl Wimdsor, where the sinom monarehs are said to have had a residence, is on the Thames, abont I m. Sle: Windsor. (For the history of the Castle the reader may refer to Lyson's Magna lbritmmia, i, ph, 415-1;3.2.)

W'INkillorillt, a market town and par, of Englamd, humd. of same name, co. Derby, at the S. extremity of the lead mining district, $1 \pm \mathrm{m}$.

 encireled by hills, consists principally of ex wedis formed by the intersection of 2 thmpike roaks at right angles. The chureh of St. Mary, a spacions editice in a mixed style of architecture, consists of a mave amd side aisles, a $N$. and a S , transept, a chancel, and a sipuare tower supported on 4 massive pillars. The living, a vicarage worth lish, a year, is in the gift of the lean of lineoln. There are chapels fur haptists, ludependents, imd Wesleyins, A free grammar-school, fommed and endowed in 15at) by Anthony (iell, lisa?, for an molimited nmmber of scholars, has an income of above $2(0) /$. a vear. There are several almshouses, and the funds for general charities richl an income of above l3\%, o year. The mont athl sessions hall,
 shambles underneath. Whe tead mines in the vicinity, thongh now comparatively neglected, still furnish employment for a considerable number of the inhabs. 'The chief brimehes of industry consist of cotton spinning, silk weaving, woil combing, and the making of hats, tapes, and losiery, The Cromforl canal passes nbout $1 \frac{1}{2}$ m. to the $N$. of the town, crossing the l)erwent by in aqueduet of one arch so feet in span; and the

WISBE.MCH
WISCONSIN
467
Wigh Peak raiway has its terminns a little to the N. of Wirksworth. The town is under the jurisdiction of a constable and headhoroned, l'etty sessions for the hama. are held weckly, and a manorial eonrts every your in the moni hall, in which all busimess ralating to the mines is decerled.

The manor of W'irkswortl forms a part uf the duchy of lameaster. It was aequired by Nir Lichard Arkwright, the great liumaler of the cotton manmfature, who died at his house at Cromforitu this par, in 13! !2.

WISBBACII, a mom. bor. morket town, riverport, and par, of Eingland. eo. ('anshidge, humb. Wisbeach, in the Isle ol lily, elose to the border of Norfolk, on the Nene, $11^{\circ} \mathrm{m} . \mathrm{S}$. from the munth of the Nene, in the Wash, and $: 3 \mathrm{~m}$. N. Canbridge, on the (ireat lastorn raitway. Job. of
 fular shape, was co-extensive with the jar, of St. l'eter's: the moderm lar. is much more compart, and of less extent. lat romplises a sularb of IVisbeach called New Watsoken, on the li.. side of the riser, excluded from the whe bor., and has m area of about $1,2(1)$ acres. The central amil main portion of the town hes in an angle hetween the Nene and 10 ioluath eamal: other streets extemd lior some distanse N. and S. aloner buth hatis of the river, and abour the eamal, be whid the town commomiates with the Onse in a sibe alirection. Nost part of the houses on the E . side of the canal belong to the par. of Walsokion, in the co. of Norfolk: this suburb has been buitt within the Jast thirty years, and ilpowes to be still extending. 'The inhabs, consist chiefly of the labouring elasses emplayed in or comeneded with the interests. of Wisbeach. The town is irrgenlarly haid out, lont has, of late, been much improved: in its centre is a hamhome erescent, erocted in 1816 on gromad formerly necupied by a castle fombed som alter the Compliest. Mast parts of the thomphit fires are well paved and lighted with gas. The par. churela of St. Jeter is a spacious but singular editice, havine two maves and two aisles. It exhibits a mixture of the Noman, theorated, and Perpeudicubar styles, It has a fine tower, and has within several monuments of dist ingusherl families, but is at the same time muel encomhered with monlern galleries. The living, a vicarage, to which the curaer of St. Mary's is attached, is one of the most valuable in this part ol' the conntry, beine worth 1,799 a year: it is in the kilt of the lifishop of lily. $A$ chapel-ufease has an endowment yieldine 200 2 a year; and the Baptists. Friends, Unitarians, Indeproulents, and Wesleyms have paces ol worship. The other primeipal buiktings indude a tuwn-hall and cos-tom-honse, comprised in one buibling, erected in 180.t; a corn-exchange, assembly-romes, and a theatre. Here, also, are some good libraries, and literary and other societies. The free grammarschool, of ancient fommation, allords instruction to 20 boys, and has two exhilitions of about $\mathbf{r t y}$. a year to Magdalen College. Cambritige. Amonis the other educational establishments are two charity sehools, partly supported by voluntary contributions, but chibety by beguests; one lior boys, having an ineome of alowe 2507. a year, and one lor çirls, of abuve 2.29 . a yar. There are is well-ralowed almshonses, and the fumels in the hands of the corporation fir the support of sohools, abmshouses. apprebticing of ehiblrem, loms, and the sencrat relief of the four, amount to above 1,13st/. a year.

Wisbeath has no staple manuficture; but it Ins an iron fombly, sards for builditg and repationg vessels amd luats, rope-walks, in extensive brewers, and several large malting establish-
ments. The trade of the town is considerable, from its heing the emporiam of an extensive tract of' country. 'Thae exports primecipally consist of corn, woil, rape-semts, and other primbets of the fens; and the imports of coal, timber, and groearions. The trale of the port has been largely benelited by the great improsements that have been manle, molur acts passed in $1 \times 27$ and $1 \times 39$, in the conrse of the Nine from Wishath to its outfall in the Winh. These comsisted principally in decerening and atraighteming the bed of the river, and in the drainage and embankment of the adjacent fens. This important work cost
 by the eorporation of Wisbeath, who were at the sane time anthorived to leve inereased port dars (mow 3al. per ton) on vessels frequenting the part. The later may now be reached by a comparatively sale and sperty havigation, at sprine tides, by vessels of lifi tons burden, and, at other times, by vessels of 80 toms. There helonged to the purt on the lat of Jan., 1 Nibt, le sailing vessels under 50, and 15 above in tons, besites 1 stamers, of an ngeregate burden of 7.16 toms. The grows
 increase in the amount of shipping belomsing to the port, which has trubled since lsin, when the Nene Outall was tinished, and of the colstoms" dutics, shows the sulstimtial atedantages it has derived liom that improvement.

Wisheach receivel its tirst charter of incorporation from Dilw. V's., others being granted to it by dames 1. and Clarles V. Énder the Min. lichorm Aet, it is divited into two warls, ath goveruch liy $i$ aldermen amb is commellors. 'The curp. revelue principally arises from harbour dues. Wisheach has a commission of the peace, gioty sessions amd a combty cont. The asizes are thed here ammally. 'The ancient castle of II isbeach was lome the episeopal palace of the hishops of lely, but mo traces of it now exist. A eattle-marke was established in listo. Wisheash has fireguently suthered from inumbations. Marketday, Saturday. Fairs, tive times yearly, chiedy for cattle, horses, hemp, and flas.

IVISBS', a town of the ishand of fiottame, which ser.

WISCoNsin, one of the states of the Amoriean Lnion, comprised between the 4 min ami lath de-
 having N. Iake Superiur: NEE and b. the state aml hake of Michigem; S.. Illinois; and W., Lowa and Xlinesota, from which it is prarty separated by the Mississipui. Area $53,4!2$ sq. m., pol. 7as, ski in latio. The surface is in part broken liy billowy ridges, which, however, nowhere rise mach alowe the general level. The N. part abomals with lakes, eriving rise to streams flowing E. to the great lakes of the st. Sanrence Basin, hut mostly W. and s. to the Mississippi. The Wisemsin river, which falls into the latter, after a southerly conrse, divides the state into two nearly equal portions, liy far the sreater part os this state was till lately inhabited only by wherering tribes of [ndians. The country S. of the IIth tleg. of lat, is that over which the settlers are prineipally dispersol. The sid. cos. inelate a protion of the rich lead district of the I Inere Mississippi. In winter the climate, especially in the N. pats of the state, is severe; lint speaking gencrally, the comntry is very healthy.

There are some begs, wild rice swamps, and cranlery marshes in the $S$. cos., and there are also some samdy tracts; but a great proportion of the land is of good quality, fertile, and easy of multivation. Jetween liock liver and liake Dichogin the surface is well wooded; but W. of

## WISMAR

## WITNEY

tor former the land is chisely prairie, and there is a delicioney of timber. Girecn Bay, an arm of Lake Michigan, and nemrly parallel to the latier, has sevoral good harbons, Milwankic, on lake Naehiginn, is the best harbour hetween Green bay am. Cliearo, in IHinois, at the bottom of the lako. In no part of the D , States have pop, nal improvement whimed more rapidly tham in the N. gart of this state.

The quvermor, lientenant-governor, secretary of state, trensurer, suferintembent of poblie inatrie-
 peival comminaioner are rhasen by the peopile to serve for a term of foo years. 'The inemeral chertion is liced ant the tirat 'luestay in Nowminer. Sto naturs, $3: 3$ in momber, colectod for two yours, and
 Pear, romstime the legindallure which is styded
 of the lemishature are allowidel en dollats prer diy for attembance, and lil cents per mile of neresary travel. The legistature is reguived to assomble in rexular nession ammally, on the seconal We thestay io hamary.

The jutidial power of the state, both as to matters of taw and equity, is vestad in a supreme court, ribenit courls, couris of probate, and in justices of the peacer. The torishature has purer to oxtablish monicipal eonrts, with jurisaliction in their resectivemmaidpalities, not excecdine that of the eirenit courts, aml also to ereate inferior comerts in the sevaral comutios, with dimited civil and criminal juristiction. The fovernor has 1,2 and doll. th yoar ol salary, and the jubges of the supreme abid cirmit eobrts, who are elected for of years,
 has bern made for education, and an institution for the instruction of the blind has ben opened at damesville. Madtison is the seat of government, but Milwakie is by far the largest town of the state. Wiseonsin, atter having been formed into a teritory, was ahmitted as a state into the Lizon, "9th May. 1818.

W'SMAL, a town and sea-port of N. Germany, in Meeklenburg-selowerin, capl, Iordship of its on'ı name, at the botton of a deep bay at the conthoence of the Stor with the vea, is $\mathrm{m} . \mathrm{N}, \mathrm{by}$ li.. Schwerin, on a branch of the railway from selwerin to Rostock. Popr 1:1:28 in $1 \times 62$. The harbour, which is very extensive, is commodions and salfe. beind nearly land-locked by the islands of Poel and Wall'seh. Close to the town there is from $x$ to $\mathrm{S}_{2}$ ft. water ; in the inner roals there are from 12 to $13 \mathrm{lt} .$, and in the outer from 16 to 20 ft . water. The town is fortibed, and has 6 churches, : hospitals, sevaral selools, wath mamfictures of tohaceo, playing cards, sail-cloth, and other fabrics. Ineweries, and di-tilieries. ship-bulding is also earried on to some extent, and Wismar is second in commereial inportanee to no town in the dirand 1) nely but Rostock. The articles of import anil export are the same as at liostock (which see), but the trade of the town is more limited. It appears to have been fommed in 1229 , and afterwards became one of the llanse towns.

W'SSEADBOURG, a town of Framee, dep. BasWhin, cap. arrond., on the Lanter, on the hivarian frontier, 33 m . N. by L. Strasbonrg, on the railway from Straslourg to Landau. Pop, 4,420 in 186 i . Wissembour is a fortified town, and of some int portunce, as it commands a defile leading from the plain of the Rhine into the Vosges momatans. and is comected with a system of military works stretching along the comrse of the Latuter for some distance, called the lines of Wissembourg. It has an old collegiate chureli, built in 1288: a l'rotestant church, in which is a bust of Lather, and
manufactures of hosbry, ntraw hats, roap and earthenware It originated in an abbey fombled here in the $\mathbf{7}$ the century, and was anmexed to France by the treaty of liyswick.

Xotwithotanding the voil i . but of modium lertility, and ugricultur. is in "rery backward state, more corn is produced than is requiren to smply the wants of the inhabs. Homp amid has are growin ou a large seale, pease, luans. hopso and froit in the smaller endonures. Illa forests are very restensive, 121, dime deciatimes of larest land belonging to the crown. 'Ilow grass lands are also extensive, and a gond mamy bumser and cattle are rearme thomgh of inforior broals. The sheen vided only coatrae wool, and homey is
 manolactures are insigniticant, the last being, with the exception of a few eloth fiactories, atmost wholly restricted to distilleriss and tamorios. The trade of the govermment is fin ilitated by the fwina and the canal of throxima: it is primefoally in the hamis of the merehamts of the prinuipal towns, many of whom are dews. This gove is divided into 12 circles; chicf towns, Witepsk, the cap., Wicliz, Wmaburg, and l'olotsk.

Wrimesk, a town of Russia. cap. of the abowe gov., on hoth hanks of the I Wwina, where it receives The Vitcha, :300 m. S. by W. I'etersturg. lopl.
 and is surromated by whl walls: it hats mumerons Cireck and some liom. Catlo. charehes, convents. and symagogues. Thongh by lar the greator momber of its hooses are of woul, it has some dwellings of stone, a high seloool, a bazatar, an oht castle, several hospitals, with manulactures uf woollen eloths and tanmeries. The (irand buke Constantine, brother of C'zir Alexander l. of Linssia, died at Witepsk on the 2̄̈th Jme, lsis.

WITNES, a market town and bar. of Englamb, co. Oxford, hund. himpton, on the Windrish, a tributary of the Thames, 10 m . W. by N. Oxtimit. Area of pare 7, liste acres: pope of ditto, $5,1 \mathrm{kO} \mathrm{in}$ 1861. The town is woll built and checran, the main strent being on the high road between burford and Woudstock. The town-hall, a stone buibling. has bencath it an area used for a market place. Near it is the maket cross, erected in ltises, and repanred by sulseription in 1811; and in the lligh Strect is the staple or blanket hall, it handsome stone enlitiee, built in 1721. 'The ehurch. at the s. extremity of the principal sucet, is one of the handsmest in the eo., being a large eruciform structure in the early linglish, Jecorated, and l'erpendicular styles, with a tower and lofty - pire, ormanented with minarets. lu the N. transept is a time window, and within the building are several incient momuments, and a handsomely carved and gilded burial clapel. The living. i valuable rectory, being worth 1,2 entl. a year, is in the gift of the bishop of Winehester. Here also are phaees of worship for Westeyans and ladepenclats. The free grammar sehool, fommed in libio, for 30 boys, comprises a spacions school-room, dibrary, and apartments for the master. Another free sehooh, with a small rudowment, was established in 1693 . A school for the edamation, clothing, and apprenticeship of wermers' sons wats

Makiets on Fridays; laiss, sept. 2oth, for catte and chacese.

## WORCESTER

WORCESTER, an inland co, of England, having a vory irrugular outline and several metached portions, is bomuled on the $N$. by the eas, of Sidop and stallord, W. ley Hereford, s. by Gloncester, and li, by Warwick. Area, $462,72 t)$ aeres, of which abour 400,000 are supposed to be arable, meadow, and pasture. This is an extremely beattiful and well-watered co. It is traversed from N . to S. by the Severn, and in part also loy its important tributaries the $A$ ron from the le. and the Teme from the W. Surface tinely diversitied; the Malvern hills divide the SIV. part of the co. from Ilereliardshire; the Bredon hills, to the S. of I'rshore, have an clevation of nearly 900 ft .; and there are some considerable hilla on its N. frontier between llales-Owen and Bromsgrove. The vales of Woreester and livesham, or rather of the severn and Avom, are alike beantiful and fertile; but the soil in other parts, bipecially on the li. side of the comntry, is cold and powr. Hesides corn, cattle, and daily produce, Woreester probluces large quantities of tine wool, apples, hops, and excellent eyder. Agrienlture is by no means in an advanced state. There is no rotation as to cropping; nor are any pains taken to relieve the ground from water, though it is in many places very wet. Plonghing is badly performed, amd the whole management of a slovenly description. Estates of all sizes; farms for the most part small. Coal is fomm in the N. parts of the eo., and the brine springs of Droitwich fimoish inmense quantities of salt. The city of Woreester is the primeipal seat of the leather glove manulacture; the iron, hardware, and glass manulactures are earried on with spirit and success at Indley; Kidherminster is famons for its carpets; and needles and fish-hooks are made to a greater extent at ledditch and Feekenham, in this co., than anywhere else in Engrland, or, indeed, in the world. Worcestershire is divided into 5 humdreds, and 171 parishes. It semels 12 mems. to the 11 , of C., viz., 4 for the co., 2 each for the city of Worcester and the bor. of Evesham, and 1 each for the bors, of Kidderminster; Bewdley, Droitwich, and bulley. Liewistered clectors for the co., 12,0!n in 1Nin, leing ti, $\times 75$ for the eastern, and $\pi, 2,21$ for the western division. At the census of lstil, the eo. had 62,126 inhabited houses, and $29.1,90^{3}$ inhabitimts, while in 1841, Woreester had 16,919 inhatu. lonses, and 283,336 inhabitants.

Woncester, a city, parl. and mum. bor, of Jingland, locally situated in the co. of Woreester, of which it is the eap., but lomming a co. of itself; luud. Oswaldslow, on the Severn, 25 m . SW, Jirmingham, $106 \mathrm{~m} . \mathrm{W} \mathrm{NW}$. Lomdon by road, and $124 \mathrm{~m} . \operatorname{ly}$ freat Western ralway, I'op, of city 31,207 in 1801.

Woreester is fincly situated on the E. bank of the river, in a fertile and beantiful country; and is one of the lest built, handsomest towns in the kingrdom, laving every appearamee of walth and respectability. The main streets are wide, well paved, and lighted with gas; the central street, which traverses the city from N. to S., is of considerable length, and kept particularly clean and neill. A eonsiderable extent of gromid compriser in the suburls is mocenpied by honses, and comsists principally of gardens and meadows. Of the puthic buidelings, the principal is the cathedral, oripinally founded in 1084, hut not completed till 1:3.4. It stands towarels the S. extremity of the town, and its appearance has been greatly innprowed by taking down the ancient ehurch of St. Michael, a most my rainly elitice, which stood close to the Nli, extremity of the cathedral, and greatly marred the prospect. Its exterior is plain, and its attractions consist prineipally in its size and
the lishtuess of its architecture. The central tower, thongh the stone is munh decared, is extremely fine. It is built in the lorm of a double eross; its extermal longth, inchading thittresses, is I26 ft., and the intermal 304 ft ; the nave, from the front to the W . transept, is is0 ft . in lengtl? ; the tower, which is atont 200 ft . in height, is ornamented with light and clegrant pimacke. The general character of the buikling is early English; there are, however, sume earlier parts. A crypt, part of the mave, nad the chapter-house, are Norman; parts of the nave annl aisles are decorated; the cloisters, and a fine S. porelt are prpendicular. The interior is very spacious, mostly in the early linglish style, with relegant. details, and good groining. Arross the Sle. transept is the monumental chapel of frince Arthur, son of I Ienry YII., and in the middle of the rlosir is the tomb of ling Johm, the top stage of which, with the effigy, is evidently of a date soon altur his decense. There are several tine ancient momuments in diflerent parts of the chureh, inchuling that of the celetrated Julge littleton, one of the fommers of the English law, a justice of the Common I'leas moder Edward IV., who died in 14 s 1. Among the more modern monuments is that of' the celebrated scholar Stillingtleet, anthor of the Origines Sacra, and other valuable works, bishop of the see from 16s9 till his deatl in I699, with an extravagantly enlogistic iuseription written by the famons In: Bentley. On the lis side of the cloisters is the chapter-liouse, the library belonging to which comprises a valuable collection of books and manuseripts, chiefly relating to thenlogy and common law. The chapter, previously to 1 s:3i, consisted of a dean, 10 prebendaries, and 8 minor canons. The canoms or prebendaries were then reduced to 8 , ineluding the dean, and their emolnments were also considerably rednced. The ineme of the establishment averages about 19,0001 . a year. The bishop's palace, on the bank of the river, is an ineongruons lat commodious relifier, formerly surrounded with walls. It serves as the leanery; and the bishop resinles at his loone at llartlebury, 10 mm . distant. Su ancient gatt way, called bdgrar's 'Tower, leads into the precincts of the eathedral. There are remains of several monastic establishments, including a commandery ol the Hospital ol' Sit. Johm, in diflerent parts ol" the city; and it had formerly a castle, every trace of which has been obliterated, excepling the momml on which the keep stood, Several of the parish churehes deserve notice: that of St. Amirews hits a square tower, 90 ft. in heinht, summonted by an
 total elevation of the latter elfo ft. 6 in. The church is very ancient; but the spire is eompatitively modern, having been added in 175!. All the livings in the eity, except that of St. D'oter, are rectories; and, except All Saints (which is in the gift of the erown), they are all in the patoomage of the dem amb chapter. The most valable are St. Martin's, worlh :3Fl.; St. Nicholas, worth 2tinl; and st. Peter's, worth 2 abl, a year. lixelasive of its mumerots ehurches, Worcester has chapels for R. Catholies, Independents, Calvinists, Wesleyans, Friends, and other dissenters. 'The guilhliall, a large brick edifice, constructed in lias, the front of which is omamented with colmm:; and statues, has a hall for the aceommodation of the courts of assize, and a comeche chamber. The old co, jail and homse of correction was defective in its plan and accommodation; lut a new jail at the top of Foregate Strect was lmilt on Howard's plan, in $18 \cdot 4$. The shire lanll and comrts, built 1835, in the (irecian style, is a tine edifice, as whll as the new corn exchange. The old eity jail, in

## YORCESTER

WroRKINGTON

Friar Sireet, was formerly a lrancisean convent. The market-homse, in the high Street, is a spacious and convenient building; and the pubhe subseription library, in Furegate Sireet, contains reading and news rooms, and a eomsiderable collection of books. Here is also a small theatre.
The royal grammar-school attachen to the eathedral wis finmated in the reign of Itenry VIII. fir to sololars, who are prepared for the miversities, aud instructed besides in various submerlinate departments of knowledge. It has two exhibitims to Batliol College, Oxford. The free grammar-
 beys, has $1 . t$ exhibitions to the universities, of :uil. ©ach, and seholarships at Woreester Coblege, Magditen Hall, Oxtiond. The great Lort Somers and Buther, author of 'Itudibras,' were educated in this selowi. Ilere also are subseription sehouls on the Madras and Lancastrian phans, with several other schools for children of both sexes. The whole momber of chituren at sehool may be estimatel at about :3,000. A biocesan board of Edumation for superiutemding all the seluods in commexion with the Church in the diocerse has heen estathished in the city. It has varions almslomses, the oldest of which appras to be those of St. Uswath's hospital, fommed in teis: a ejty amd comaty intimary, erected in $1 \bar{a} 01$; a lyinc-in institution, honse of industry, female penitentiary, and dispensary. Several inedical and other soedeties have beenformed; a mosie festival is hed every thind year, the meeting in the intervening yars being itt. Gloncester and hereford: the proceds are appropriated to the reliel of widows and orphans of the clergy. Laces take patae in Juty anl November.

Wurecster had firmerly a considerable mamfaeture of woollen goods; hut this has been discontinued, and the chief business of the eity eonsists at present in the manafieture of gloves and china ware. The mumber of master manufachurers in the glove trale has of hate years been a good deal reduced; but the trate itsell is at present in a flourishing combition, and empheys a grent mamy hands. Chima ware of a sumerior quality nsed to be prodeced here on an extensive seale; but, owing to the superior facilities for its prodaction enfoyed by the mandacturers in the Potteries, the business declined, and is now restricted to two findorics. One of these, however, is on a large seale, emploving about 000 hands; and its produce, as rexpects beanty of denign and exceilence of material, is not surpassed by any in the kingilom. Here is an extensive mannfactury of damask and hair seating. The otherprincipal products are lace, spirits, tmmed leather, nitils, and turnery ware. There are some large irmen fumdries on the canal and river banks. The inland trade is carried on by means ol the Woresster and birmingham canal, anm the Oxfurd, Worcester, and Wolverhampton railway. The canal commmicates with the severn, the banks of which have been furuished with good guays and splacious warehouses. An act: paseed in 18.12, phaced the mamarement of the improvement of the river in the hambls of public commisioners, elected by the cities, towns, and landowners along its banks, within the distance of 12 m . from Gloucester to stomplort, which wan to be improved. $A$ comtinums depth of 8 ft. water exists from the contrance of the berkeley eanal at Giloncester to Worester: and from thence a depth of 0 ft. to Stompert, where the severn is joined by the statlorel and Worcester emal. Ascembing the river, the dirst weir is placed a little below the city of Worester. The elamel is left clear to that peint. The improvement in the npper part of' the
iver has been quite suceessful, and ressels of tom toms burden, Mrawing 6 ft. water, now navigate the Severn from Worcester to Stourport at all seasoms of the year wibhout let or himblrance. But in the lower part of the river the phan for dredping has not been equally successlul. As it is, howerer, vessels drawing 7 ft. water have emme up to Worcester. About 30,000 tons of salt are ammally sent down the Severn from Druitwich. The other articles of trade are ceals, iron, and chinatecta, groerries, amoming in all to alont 500,1010 toins a year. The hop phatations of Womestershire extend over about $1,0: 010$ aceres, and most part of the produce is bromght hither for sille.

Worester was alhatered in the lst of lichard I.; but the charter was not contirmed until the zand of IE enry 111. Varions other charters were afterwards granted by diflerent sovereigns; but that by which the city was governed previonsly to the licform Aet dated from the l!ent of danes I. It erected the cities am liberties of Worcester into a co. separate from, and indepondent of, the co. of Worcester. Linder the Municipal lidfirm Aet, the rity is governed by a may, it wher addemen, ant :bi comeillors: It has a commissiom of the peare, with jurisdietion in mearly all femmes, wespting such as atifect life and limb, A sherifls' court is hedd once a momin by the mader-sheriol': a court of eommon pheas, and petty nessinns weekly; and it is the seat of a comentyonts. The assizes for the co. are also hold here. A pulice force has been organised, and the peace of the town is well mantaned. Worester las returned 2 mens. to the H . of C C since the e3rd of Bawarl 1.: the right of voting previnuly to the Reform Aet having been vested in the fremem. Reng. electors, $2,15 \mathrm{t}$ in $186 \mathrm{~m}_{\text {. }}$. It is also the sait in election and principal polling-pace for the WI. div. ol' the eo.

Worcester is of great but mecrtain antiquit: It is principally celebrated in listory from its giving mane to the deeisive vietory dotained here by Commell over the forees of Chiarles 15., min the Brd of Sept., J651. Among other eminent individuals, Woreester gave birth to the distingnished statesman, Lord somers, born here in 1652. Markets, We hessday hul Saturday. Fairs, cleven times a year, mostly for cattle, lambs, horses, linen, hops, and cheese.
Woncesten, a town of the U. States, in Massachusetts, cal. co. Worcester, 3.5 m. W. by N . Buston. D'op. $25,8: 0$ in 1 w60. The town is pleasantly situated in a fine agricultural district ; and being at the junetion of several importaiat roants, as well as on the great railway line betwen Bostom and Albany, it is the centre of a comsideralle inland trade. The principal street, upwards of 1 m . in tength, is well built, and has many goon private houses and hotels. The court-house, , iail, several churches, a state asy hum for the insalle, the hall of the American Antiquarian Suricty with a museum, and a libray of 12,010 vols, are the ehief public edilices. Worcester has numerons woollen, cotton, and paper-mills; machine fiactories, and printing oflices, The Bhackstune Canal comnects the town with lrowidelee, and other canals with Boston and the Comecticut bine. The permanent settlement of the twwn took phace in 161 k , and its incorporation in 5 t 22 .
WORKiNCiTON, amarket town, par., and seaport of Eugland, co. Cumberlaud, ward Allerdate, on the Derwent, near its month, $7 \mathrm{~m} . \mathrm{X}$. by l Whitelaven, on the railway from Whitehasen to Carliste. 1'op, of par. 7,834 in 1861. Area of par., 7, 730 acres. The strects are mositly narrow iund inemerenient; but of late vears many groed houses have been crected, In the upher town a new

## WORTHING

square has been built, in which the com market is heh. It has a small wat theatre, assembly and news rooms, and varions other pablic; luililings. 'The Derwent is crossed here by a stame bridge ol' three arehes. The par, chureh, rebuilt in litio, has a fine attar-piece; the living is in the grift of the Curwen fimily, whose mansion, Workington Hadl, a fine castehated struchure, on a richly wouled beight, overlooks the town. A chapel-oi'ease, in the linscan style, was built in $1 \times 2: 3$; mut hore, also, are chapels for Independents, Methodists, l'resbyterians, R. Gatholies, and other dissonters. A grammar school, limmed in labit by sir I'. Curwen, has since ceased to exist; thie fommer having had only a life interest in the prouerey with which it was endowed. There are, however, Lameastrian and fermale sehools, a dispunsary, and varions institutions, for the benefit of the poor, supported loy sulbeription. Workington has mandactures on sailedoth and cordage, aud a valuable salmon fishery on the lerwent, the property of the liarl of lomsdale; bat it derives its jrincipal importance from the extensive collieries in its vicinity, which firmish considerable quantities for shipment to lreland.

Workington harbour is protected by a breakwater, amb has good quays, but it nearly dries at low water. It is a creck ol the port of IVhiteliaven. On the 1 st of dim. 1sti.l, there belonged 10 the port 83 sailing vessels, of a total barthen of : $21,3 \mathrm{~B} 0$ tons, besides a small stamer of 17 toms. There is a fair amount of shipbuiding. Markets, Wednestay aud Saturday; fairs, May Is, and Oet. 18. liaces are held ammally in August.

WORKSOP', a market town and par. of bugJmal, co. Nuttingham, wapent. Lassel law, on the liston, a tributary of the lille. 23 m . N. Nottingrham. and 1.16 m . N , london ly (ireat Northern raiway. l'op, 7,112 in litil. The town, consisting chietly of one street, crossed by two others, is wall built, pived, and lighted. Its chursh, which formerly ledonged to an Augustine priory, is a tine old editiore, with two lofy towers, and his within several ancient monuments. The living. a vicarage worth:3s8l. a your eloar, is in the gift of the duke of Nortolk. Were, also, are places of worship for varions sects, a mational sehool, and some small embwments for parochial and charitable purposes. 'The town is celebrated for its malt, and was fommerly, also. celobrated for its liguoriee, of whid large ghantifies were raised in the abjoining district; latterly, however, its culture has been wholly abmabod. Worksem may be regarded as the cap. of the district popularly called the 'dnaery', from its eomtaning Wurksopmanor, formerly a seat of the duke of Norfolls, ('lumber J'ark, the seat of the duke ol' Neweastle, and Welbeck Abiney, the seat of the duke of Portland. These are all marnitieent residenees in tine parks. But the duke of Neweastle having purehased Worksop-manor, the house, which hat heen rebuilt in 1763 , has bern pulled down. ('timber l'aks, now abont 11 m , in cire, ant fincly laid out and wooled, was, so late as the ara of the Americtur war. little better than a hack heath, interspersed with bogs and marshes. In this alistrict. also, is Thoresby, the seat of earl Manvers. Markets on Wednesilay.

WFORAS (all. Borbetomagus), a city of W. (fermany, grand duchy of llesse Darmstadt, prov. Lawer Ilesse, cap. cant. on the $\mathrm{NV}^{\text {. }}$. hank of the lihine, near the border of lihenish lavaria, and
 Manheim. l'op. 11,308 in $186 i \mathrm{l}$. Worms was formerly an important free city of the empire, but is now much deayed, and is summaded by dismanted and ramed walls. Its interior comsists
of a single good street, lined with tall mansions, inlabited by persons of an inferior order, and $n$ number of hack lanes and aletached buildings, many of them vacont and desolate. la a piece of opely grombl liehime the man street stands the catliedral, a building of red sandstome, its fommdation dating as far back as the begiming of the Itth century. The original part of this editice is Gothic, lint the larger portion is in the Byzantine style; the interior arches being all romided, and the pimacles and dome fretted in the Moorish taste. The building contains a mumber of excellent pieces of senlpiture, and the high altar at the Li, end is environed with ancient carvings in oak. The cathedral has 2 ehoirs, cach surmonted by a empola, me of which rises 137 Itt. above the paicement. The $W$, choir is a good specimen of the architecture of the $12 t h$ century, and has a masnilicent rose-window of that period. The latheran chured, in the market place, in which is a pminting of Lither lefore the Dict of Woms, in 152 !, ocenpies the site of the eouncil-hall, in which that event took place. This hall was destrused when the city was bombarded by the French, in $16 \mathrm{si}^{\prime}$ ) ; at which time. also, a vast mumber ol houses wre destroyed. liom this period, in fact, the deray of Worms may be dated; many of the inhals. having afterwarts settled in other German towns, and in llollimbl. Some of the other charches descrve notice; and there are 2 gyasorgos. Charlemagne was marred at Worms; and it was fremuently inhabited, both before amd after his time, by the Frankish sovereigns; but no remains of the imperial palace exist, exeept a lew fratsments of a wall, forming part of the Bairgerhops. a prisom, amp police-otlice. Worms is the seat of a eomsistory. ahome half its inhabs, being l'rotestants; and it has several convents and hospitals. a fymusinm, an! dementary sehools, supported by different religions sects. It las mamilactures of tobacer, sealing-wax, and hats, but its principal trade is in wine, and other agricultaral prodace. 'The vicinity of Worms, celobrated by the ancient Nimesingers as the Womnegru, or 'lame of jor,' is in great measure covered with vinevards, producing some of the best growalis wh the lihine. The famons Lisbfiranemmileh is grown aromad the church of Notre Dane, close to the city.

Wrums is sipposed to owe its origin to a fort erected here by Dasus: many Roman antiguities have heen discovered in and hear it. Among the eomeils hed at Worms, that in 112: was the most famons. Diets were also, held here in $14!2$, $151 \overline{6}$, and lizi. The latter is famons from the tatet of Thuther having, ats abready stated, appeared before it to explain and answer for his opinions. On appearing belore the Diet, he displayed equal tirmoess and moderation. An ediet was, however, iswed aganst him on the 2lith of April, hy which he was excommmoented as an olstimate heretic. Rat previonsly to this, in consequence of the detemination of the emperor and the other prinees who had given him a safe comelnct, not to forleit their word, he was allowed to withdraw from the eity in safety.
WOR'lliNG, a maritime town and fashionable watering-phace of bugland. on the Eingli-h Chamel, co. Sussex, rape Bramber, humb. Vrightford, in the par, of lbrombater, a village about a mile to the N., $4!\mathrm{m} . \mathrm{S}$ by W . Lomdan, and 10 m. W. Brimhtom, on the Lovitom, Erightom, amd Sonth Coast milwily. l'op. 5,805 in 1861. In the middle of hast century, Worthing was only an ineomsiderable fishing village, and is intebed lor its increase and relebrity to the visits of the roval family darinn the litter part of last cen-
tall mansions, or order, and a hed buililiugs, to. tury. The buildings of the town extend along the coast for about 3 m ., innd the main street runs for somewhat more than $\frac{1}{?}$ in. in a $N$. direction. lixeepting in its centre, the honses are mostly arranged in regnlar terraces, though many are isolated and interspersed with tields and gardens. The ranges of building fronting the sea are generally faced with cromm-colonared bricks made from a peculiar elay fonnd in the vicinity, and the town is well paverl. lighted, and has an ample supply of water. 'The charch, erecter in $181^{\circ}$, at a cost of $1 \geq 0000$., is a very neat edilice, with a Durie portico. The living, a euracy worth thol. a year, is in the gilt of the rector of Brombater. Here, also, are elapels for Independents and Weslevans, to which Smblay sehools are attached; with well attemded mational sehools, for both sexes, supported by subseription; a savines' bauk, and a small, but clegant theatre, opened in 1807 . 'The market-phaee comsists of ranges of cowered stalls bailt aromal a spuare area. The esplamade, a raised eansewny, extemos aloner the shore for the whole length of the town: near its W. extremity are the roval baths, eomprising two comphete suits of apartments. 'The new l'arisian haths atjoin the sea Honse lotel. The town has mumerous lutels, with assembly-rooms; libraries, robling and news-roms, comvonient hathingmachines; and the other acommondations ineident to a well-attended waterimerphore. Fine sands rxtend along the coast for 7 m . In the W. and : m . to the li, of the town. These, with the gradual increasime depth of the wather, which gives the oppormaty of bathing at any time of the ride, arded to the mililness of the elimate, in eonsequence of the sholter ablorded on the N. and Ji. by the south Downs, rember Worthing especially sutable as a place of resort lior invalids. No mamufacture of any kind is carried on; but the mackarel and lerring fishories are manally vers productive, and comtribute largely to the supply of the London markets. Aln ammal fair is held on July ${ }^{2} 0$ : market-day. Saturday and every altarmate Wednealay for corn.

W'libNll.L.I, a parl. bor., market-town, and par, of Wales, co. Denbigh, limul. Bromield, on the railway between shrewshury and (luester, 11 m. S. by W. the latter. I'op, of bur. 7 .ifies, amb of par. 19, ind in Istil. The par. of Wroxhatm inClmes no fewor than 12 townships, 2 only of which and a small dataled portion of a thiril are included in the parl. bor.. which has an area of 1.145 acres. Wrexham is a handsome town, with spacions streets crossing each other at right angles. and neatly and substantinl! louitt homses; it is also well paved, lighted with gas, amel plentifully supplied with water. 'lhe chureh, dedieated to St. Giles, a larere ant venerahle structure, is regarded as one of the principal ecelesiastical edilices in the prineipality. It was erooted abont $14 \%$ on the site of a more ancient structure: it is in the perpendicular style, and is eovered with grotesque seulpture; but in correctuess of design and proportion it is surpassed by few buildings of the same date. It consists of a nave, with side aisles and a chancel, the whole lengtle being 178 ft ., and the brendth is ft.; the aisles are separated from the nave by ehsitered colmms supporting pointed arches; and the eciling is of oak, in imitation of groined stone. The tower, which was not eompleted till about 1506 , is 135 ft . in leeight: it comsists of several steccessive stages panelled thronghout, mal decorated with mumerons statues of saints placed in nieles of the buttresses, which latter are surmonited by 4 light open-work turrets rising el ft. above the balastrade that surrounds the summit of the
tower. It has a tine-altar piece, and some into ${ }^{-}$ restmg monuments: among which are two to members of the Middelton fimidy, admirably semptured by limbilliac. 'Ihe living, a vahablite rectory, worth ittil, a year, is in the gift of the hishop of St. Astuh. It has, also, a lioman Patholic ehapel, and four places of worship, fin I'rotestant dissenters; a honse of correction for the county, with 7 wards ; a frec endowed grammar school, 2 parochial mational sehools ; a puhbie library: realing, news, and lecture-rooms; agricultural and horticultural socicties; a neat theatre: and a property yielding 2301 a year, for distribution amoms the poor and other charitable purposes. The town-hall, at the hem of ITigh Street, has a large room used for public meetings, Annual races take place in Getober. The town is muler the jurisidiction of the co. magistrates, who here lablil montlily petty sessions for the limils, of liromfield sumd fiale.

The lieform Aet conferred an Wrexham the privilege of votiner in the return of a mem, to the 11. of (' along with the bors. of Dentigh, Ilolt, aml Ruthin. Registered rlectors for Wrixham amul the c.ther lors. $8 \mathbf{x}, \mathrm{in}$ istin. It is one of the polling phaces for the co. Nor particular bramelh at trale or manulacture is now earried on here, thonerh Lelamel ieserbes it, some conturies since, as containing 'sum merchanites and gomd broke ler (huckler) makers.' It owes its present degree of attivity principally to its situatinn on the man ruad limon North Wiales through Chester to Liverpool. Coal, iron, and leal mines are extensively wrouglit in the parish, which has also some large iron works. Exclusive of several of minor importance, a larede fair, which contimes for 3 I days from the espol of Mareh, and is attended by traders from a great way round, is leded here ammally, for the sale of horses, cattle, Manchester. Birmingham, and sheffield guenls, Irish linens, Welsh thannels, Yorkshire and other woollen claths.

WÜL'TEMBERG (KINGI)OM OF) one of the secomary states of the Cerman Conferleration, in the s. part of whirll it is situated, between lat. $47^{\circ} 5^{\prime}$ and $4!0^{\circ}$ :3' N., and lohg. $x^{\circ} 15^{\prime}$ and $100: 30^{\prime}$ E., havinar N., W., andSW. the territory ol Baden; F. and SiE., Bavaria; and to., the Lake of ('mo stance, and the former I Lohenoollero primeipalitios, which it nearly encloses. The kingrom is dividend into 4 Kreise, or circles, of the fillowing area and population, acourling to the census of becember 3 , 1858, and December 3, 1861:-

| Cincles. | $\begin{aligned} & \text { Aran in Fing. } \\ & \text { S4. M. } \end{aligned}$ | Population |  |
| :---: | :---: | :---: | :---: |
|  |  | 18.5\% | $18: 1$ |
| Neckar | 1.308 | 4*6, 510 | 497.175 |
| Black Forest | 1,86t | 425.8190 | 4:3, 6 6i8; |
| Dalmbe | 2,5.49 | 368, 6196 |  |
| Jaxt | 2,124 | 409, <0:2 | 411,901 |
| Total | ! 7,840 | 1,690, 598 |  |

The increase in population is very slow: little more than $1 \frac{1}{2}$ per cent. during the three years from 1854 to $1 \times 61$.

Plysicul Geoqraphy,-The surface is in great part momitainous, being eovered by ranges of the Back Forest (Schucarzrold), Bualian, and lanbe monntains. The Oberhohenherg, near l)eilingen, rises to abont 3,278 , and the Kniobis to 3,100 feet, ahore the sea; lot, in general, the varions ramges are less than 3,000 feet in lieight. W'urtemberg belonirs partly to the basin of the banube, and partly to that of the liline; hesides which the principal rivers are the Neckar, with its trilmarios, mal the lller, a tributary of the Dimble, liscept

nexi upon the recrister of the lamolwelor, or militia, fir the delface of the eomitry.

The tutal revente of the kingrom in the year
 in the same perion, to $1, \underline{2}$ (x, then. The publie cleht of W'iartemberg has more than donbled within the last twenty vears, owing chidefy to the establishment of the rablway lines of the kingom, the whole of which, withont exerption, are state property. Aceorting to an oflicial return, pithlished tme 30, 1stio, there hat been expended at that poriod, both for railways amel steanters, a sime of $42, x-2,4$, capital was borrowed at from $3 \frac{1}{2}$ to $4 \frac{1}{2}$ per ecolt., and the net income ol' the ralways, all expenses dedncted, and making allowance for wear and tear, amounted to between six anl seven per cont., the insestmont so made eontributen embsiderably towards lishtitening the burthens of the tax-payers. The length of lines given to the tratlic amounterl, on (Wetober lis, 18thl, to ebiti Vinglish miles; but this did not complete the whole network of railwars, which is expected to be finished by the end of 186 t .

Mistory,-Wiirtembers alerives its name from a castle near Stuturaril, the principal seat of the rugning fimity. It wats formerly it dukedom. The French orxran the comatry in 1790 ; but the sovereign laving mate his pace with the conguerors, important alditions were male to his territories in 1800; and soon after the battle of Austerlitz, Napoleon raised the duke to the ramk of king, Cuder the comgress ol Vioma, W'ïrtemhorer loblds the sixth rank in the Gierman Confeleration, with 4 votes in the fall diet and 1 in conmittee; and contributes 23,259 men to the confederated army.

WClZBULAG, a eity of Bavaria, circ. Lower Franeonia, of which it is the enp., on the Mayne, by which it is divited into two parts, 62 m .5 S . biv E. Framkort, on the ralway from Frabkfort to Nuremberg. 1'op. 34,120 in is6i. Wiarzhurg is tusely situated, in a hollow survomaded by vinecowered hills, ami triversed by the Mayne, here a large and fine stream, covered with boats and barges. The greater part of the city is on the right or N. bank of the river, the commanication with the citalel, and a suburb on the opposite bank, being kept up by means of a handsome bridge. Wiirzhurg is endosed hy walls, and, beiner one of the oldest towns of Gemany, is irregularly lain ont, its streets being generally marrow anil angular: it has, however, some venerable editices. The eathedral was orginally fomuled in the sth century, but the earliest prortions of the present haileling appear to date from the 11 th or $12 h_{1}$. The interior has been moklemised with little taste, but it has some monnments worth notice, includingr those of a long series of the prinee-bishopso 0 Wirzbures, the sovereigus of the eity and adjacent deritory, for upwards of 1,000 vears. 'lhere are i2 other Gharches, the finest of which is the Marienkirche, in the pointed finthicstyle. The roya. formerly the episeopal residence, in a small squat: was erceted carly in the last century; it is of an oblong form, on the plam of the pialiee at Versailles, and is of great extent, inchuting, besides a magnifiecut staircase, llwards of 280 ipartments, mostly fittel up in the style of Louis DIV, The mardens attached to it form a fivourite promenade. The great hospital is an extensive and well eondueted establishment, partly subsidiary to the sehool of medicine, for which the miversity of lliurzburg is fimons. This university was fomided in 140:, and revived in $15 x 2$ : at diflerent periods it hats been in a very fomrishinis state. It has some good scientitic collections:, and a library of Vul. IV.
120.000 volumes. In 1 asie it hat 521 students, of Whom $91+$ attemed the menlimal clases. Ithe the law, 118 the divinity, and io the philowonheal: but the momber has since derelined, and does not at present amomit to 400 . It hats also a gymmat itmo, a tenchors seminary, masiad and polytechnic institutions, a society of urts and seiencros. and an intirmary for the cure of deformities. Only three or four al the mumeroms monastic institutions formerly entablished in the dity now exist. W'ir\%hars is the seat of the court of appal for the cirele, and a bohnp's see. Its manulactures consist pindipally of woulen stufls, lants, leather, sealiurwas, and surgial instruments. It is the primeipal Wepot for Frameonian wines, which are mostly sent down the Mayne to lirambert.

Whabanger was socularised amb given to the Arelndaler Ferdinmal of Anstria in 1 sug, amd was coded to Bavaria in $1 \times 15$.

WYCOMIBE (C'IHIPING, or IIItill), a parl. and mun, bor., market town, and par. of Emaliand, co. Buckingham, haml. Desorongh, on the Wick. a small tributary of the Thames, and on the hish ruad from Lomiem to O.storl, $27 \mathrm{~m} . \mathrm{W}^{2} \mathrm{~N}$. the fommer by road, and :st hy theat Western tailway
 in INil. The oha jarl. aml muna bur.. which were co-extensive. did not inelmle the whole of the town; lat the molern mun. hor, is rather more than three times the size of the former, and the monlern parl. bor, is itentical with the par. The litter lans an area of b,3w0 acres. Wremule extemuls for $1 \frac{1}{2}$ m, along the valley in which it is situated, and thonerh it has increasied but little of late years, its gencral apparance is that of a wollbuilt, prosperons market lown. The primeipal roads commmanating with the comantry to the NW. and sli., averge from the market-place in the centre of the ligh strect. The chureh, a harere and venerable structure in the perpentioular and early-decorited styles, las a tower at its W. end, $10 \mathrm{x}^{\circ} \mathrm{ft}$. in height, crecten in 152.2; but the reme of the ehareh datex chicelly from the later part of the 13 th century. The interior has a fine altar-pince. and several monuments, among which is one by Schemakers, to the Earl of Shelburne, father of the tirst Marguis of Lamsdowie, who died in 1761, anm another by Carlini to a comatess of shelharme. The living, a vicarage worth $140 /$ a y yar, is in the gift of the Marquis of Lanstowne. The ludepenclents, Ihaptists, ant Friemols have places of worship here. The town-hall, erected in 1725 , is a largo anm respectalbe brick building, supported on stome pillars. The free grammar-school, fomuded ly Queen Elizabeth, hats attached to it some almshouses, and an income of about 360 a a vear. Itre also is a girls' Lamesstrian sehool, with mumerums beguests for the general relief of the poor. The manufacture of chairs is the only one of any importance carried on in the town. Some vars since a considerable quantity of jiilow lace was produced here; but this branch of industry has been nearly superseded ly the machine-mate lace of" Nottingham and wher plaes. There are several emsiderable paper-mills now the town, on the Wick, and others in different parts of the parish. But the prosprity of Iligh Wyeombe is mainly owing to its being the market town for a district of 10 m . round. It has an extensive corn market.

The carliest extant charter dates from 10 sit . Under the Mun. Reform Aet it is governed by 1 addermen and 12 comeillors. The bor, has returned 2 mems. to the II. of ${ }^{\prime}$ C. sinee the $2 x i l l$ of Edward I. Previonsly to the Reform let the right of alection was vested in the mavor, aldermen, hailifls, and burgesess, of whom there were usaally aboat 180. As ahrealy seen, the limits of
the mondrm par, bur. have heon comsiderahly enlargel. Registered elveturs, 191 in 1 wis. Wialler, the weet, was mem, for this lur, in heis. A little SW. From the town is Wyembe Abley, the seat of Larel Carringlen, ly whene anesetors it was purehased frem the Lanshowne family. Market dar, Fridar: fiar, Monday before Michatemas.

W'SONBLAM, or WYNDHAM, a market town and par. "il Gugland, co. Northolk, limul. Fireluer, ma a hill, ! m. SW. by W. Norwich, and 1115 m , NE. Landom by drent Bastern midway.
 Area of par. 11 :2:0 a arres. The town, unt the high rual liwus homdon to Nurwich, hat a market-phace
 structure, in a mixed atyle, ennsints of a mave with ainles, a lare W'. tower, mad mother at the intersecion of the mave with the tamsepps. Originally it firmed a part of a manastery fommeld in the time of llenry l. to which the thwn appars to have owed its carliest importance. Within are many crioms monuments, inchuding that of the fomber, Willian de . Whini, and al large earved fout. The living, a viearage worth bibl a year, is in the gift of the hishop of blas. Here alsin are chapels fier Judepoments, Werleyans, haphists. Fribuls, and other diswoters. The grammar school, lumeded ly Edward V'I, has a total income
 and 1 governors, and is tree to all loyes of the par, ; but, in consequence of a puding chaners.
 It has two exhibitions at Camhindre, and a share of ans extrihition fin selmbarinipw, a natiomal school atfirids instructlom to abont 100 boys and 70) girlv: : 200 children attenel a Sumay seliwe attached th the church. and ulowt the sime mamber frephell whe attached to a diswonting chapel. It is estimated that abut one-xixth part of the pay. is supprated by weavine. principally bombazines, cranus, and other Norwidl gonhls, The average wages of weaters amomit to omly abobt 7 as. a wed. $A$ court leet is held mumatly, and a mamorial court wemionally. A lithle to the N. of this town is limberley latl, the seat of larit Wiolchome, in an extensive and thely-wouldeal park. The Wyullam lamily, me of the mont illantrims in the ro, of Norlik, which derived its name from this town, has prolneed, among of her cominent individuals, the diatimpuished partionmentary leaders, Sir Willian Wymam of the reigns of tienge I. and 11 , and Mr. W'ynthan, of that of Geopge III. Narkerts a Wymomathan, om Eridays; biairs for cattle, Feb, loth, May 1t, mul Scpt. 2!th.

$\mathrm{X}^{1}$
 Vera C'rue, on the raitway fiom Vera (ruz of The city, properlys so called, is cmbraced by an

 f:3in) ft. above the hered of the sea, surmmided ly fine mountain scemery, and sometimes sulyect tio havy fogs. Its elimate is generally mild and salhubrions, though it is neinher su clean nor so well built as Verat (ruz; lout it hats numerous homses of 2 stories, built atier the okd Spmish mamer, in a spoarre enclosing a court planted with trees mad thowers, with a momanin in the eentre. The eathedral and other charches, thongh in an indillerent stye of architceturs, are very gorgrons. This was formerly a great entrept lior the Eurupean trade with Mexico, and hage fairs were held here; but its tralle has greatly timinishod, and its shops ant warehouses do bot now make much show. 'The more wealely inhabs, of $\checkmark$ Cria Cruz, amd, indeed, of all the alljacent const district, or tierras ceticutes, resort to Xalapai in the stmmer to aroid the heat, insects, and levers of the low comatry, from all which it is fice.

The well kbown medicinal leerb jatap, grows abmulanly in the vicinity of this town, to which it is indeched for its name.

XBRES DEE BADAJOS, or DE LOS CABALLEROS, a town of Spain, in Estremadua, poos. 1:adtajos, near the Ardilha, a tributary of the lina-
 'The town is wallel, aud, ike must famish town, had mumerons monastic institutions: lout from its being out of any great rome, it is rarely visited hy travellers. It has mannfactures of linen labrics, leather, hats, soap! and a large trade in catle, which are extensively reared in its neighbourhued.
XLBES DE LA FRONTERA, a eity of Span, in Andillusia, prove Cadiz, wn the ruad from Cadiz, to Seville, near the (iamblatete, 17 mm NNE. Comiz, on the railway from ('adia to sevill. Proln $3 x$, sat in 1s.it. Xeres is situated in the hay of two rommed hillocks, which sheleer it to the E. and
 al narrow, ill-milt and worse datincel alreets; but this wall is of no great rirenit, and is so intermixem with the homest of the suburbs at 10 be visihle only here and there. The limits of the amient twin ate, however, well detined by tha mumeroms gateways still standing. Sume if the wh buildings and narow streets are striking in apearance, and the mumber of gables and chimneys camot lail to strike one whe has been lomis accustomed to the flat-routed cities of Amdahaiat. The city has cight pare churches, mung which is one that is collegiate, with a library and a molIection of enins: a town-hall, munerous comsents; a fomuding, an urpham, and other hospitals; sereral seluols, a college, a public granary, infintry bartacks, and an bli fortress, are the principal puthic elifices. The streets, even in the trent parts of the city, ire lithy; and the want of clembiness is the main somree of the destractive epidemics with which the town is frequenty visited.
Xeres derives its principal importance from its hoing the great emporinum of the well-known whe, :alled sherry, grown in its vienity. The prineipal wine merchants reside mostly in the sulurbs, where are, also, the largest warehones. These are all alove gromad, and are immense buildings, with lofty ruofs supported on archer. springing from rows of slember colums, having their wails piereed with mumerons windows to almit of the thorough cirenlation of air. The vineyards, mostly situated on shopes, are seatermed at cinsiderable distances; they may extemb ower 12,000 acres. It is not ensy to form any very aceurate estimate of the produce of the sherry vineyards, partly hecanse there is no accuratio account of the exports and of the stoks on haml, and partly hecause a considerable ghanity of the light wine, called mogure, grown on the ri,hi bank of the Gundalquivir, is mixed ull with the

were wooded; but, as it is, the luke is far mferior in respect of beanty to those of Italy or Switzerlame, mat is excelled hy some of the scot tish lakes. An ishand opmaite the jeninsula has a chareh mad monastery. The description given ly modern travellors of the site of Vimina amb its lake, answers perfectly to that of the city and lake of Earea by l'rocopian. Instinian bult a fortresent Eurata, apjarently on the identical site now ocenpied liv the eitadel of Yaniaa.

YAliKLND, the chbel city of Chinese Turkestan, in a fortite plain, on the river of its own name; lat. $38^{\circ}$ 1! $!^{\prime}$., fong. $76^{\circ} 17^{\prime} 4 \bar{o}^{\prime \prime}$ L. Its ponj. has been varionsly estimated, hat may probathy amonnt to 50,006 , exclusive of the Chinese garrinom. It is euclosed by an eartl rampart, piered with tive gateways, outside which are exfensive sulnorbs: there are two citudels, one in the sulburbs, and the other in the town. The houses, built of stome and clay, are mostly omly one story in lofight; the streets are intersected by mumerous canals and aqueducts, which briug water from the river for the use of the inhals, Sarkmal has two large bazars, mumerous mosques, and 10 or 12 Mohmmedan colleges, most of the mative inhabs, being Massulmen, thongh much more lax in their religions prejudices than their neighbours to the W. Abont "do0 Chinese merchants reside in the place, and some Cashmerians and Jersians, bit buly a few llimbos, and neither dews nor Nogai 'Tartars. When Mareo lolo visited this city, he finmel some Nestorian Christians mmong the mhabs. 'The productions ol' China,' says Sir A. lhurnes (Bokhara, iii, 193), 'are transmitted to this prov., and sold to the natives of Bokhara and Thibet, who are pormitted to frequent certain fixed markets. No Chinese crosses the frontiers, the trade to Boklura being earried on by Mohammedans, who visit larkund for that purpose. 'The same vigilance to prevent the ingress of foreigners is here exhibited as mon the sca-const.' Horses are a great article of trade.

Yarkund, with the alljacent prov. of Cashgar, formed the principality of a Dohammedan khogir. Dissensions arose in the reigming family in the time of Kien-long, and they called on the Chinese government as a mediator, which, as frequently happens, acted the part of a compueror. The period which has elapsed sinee the capture of Yarkund has in no way diminished the precat!tions of the Chinese government. Yarkind is still considered but an out post. The Mohammedan natives till the sulfordinate ollices of state, but under the strict superintendence of the C'linese authorities. The garrisons, consisling of from 5,000 to 7,000 soldiers, are recruited from boys of 14 and lif years old, who are sent baek, after about as long a period of service. According to some Chinese documents, the annual tribute of the Varkund people to the Chinese comprises 30 oz. of gohd, 35,tut do. of silver, 30,000 sicks of corn, 80 lb . onl, 57,000 pieces of hinen, $15,000 \mathrm{lus}$. cotton, and $8,000 \mathrm{lts}$. copper.

TARMOUTH, a parl, and munic, bor, and seaport of England, partly and prineipally in the co. Norfolk, but partly, also, in that of sultolk, on the Yare, at its mouth, in the North Sea; 19 m . B. by S . Norwich, 108 m . NE. London by road, and 121 m . by Great Eastern ralway. I'op, of bor. B1,810 in 1861. Theold parl. bor., which included the liamlet of Sonth-town, in Sultolk, in the par. of Gorlestone, on the s. side of the river, had an area of 2,110 aeres, but the modern parl. bor. includes the whole par. of Gorlestone, comprising the village of that name, and has an area of 3,940 ancres. The part of the town on the li.. site of the Yare, or Earmouth preperly so called, oceu-
pies a narrow peninsila, between the sea on the one hand and the river on the other. It comsistes of four principal lines of strects running nearly parallal with the river, and of an immense mander of harrow lames, or rows, that lorm the lateral commmaications between these streets. Very fiew of the rows exceed from 5 to 8 ft., and mily two of them at the opposite conds of the town were passulile for common wherel carriaues matit the widening of some others in the centre ol the town. not long since, formed the street callod liegent street. The principal streets are woll bnith and whe, oproning in some places into a spacions quas, market-pluce, and nquires; and the town preselits, on the whole, a thriving apporance, 'The best dwellingr-houses are situated along the guay: many of these are substantial and handsome, as tre, also, many of those in the other principal strects. Most of the shops are sithated in the market-place, King Strect, Broad Row, and Market Row ; and the warchonses, gramaries, mallhonses, and fish-oflices, together with the inferion dwolling-honsen, are in the diflerent rows. On the N., E., and S., the town is enclosed by old walls, beyond whiclt is an futemixture of every description ol buildings; but principally of extensive warehousing premises, and residences of an inferior class. A comsiderable extension boyond the ohd walls has taken place on the li. side: and lonir lines of streets, besinles many detached dwellings and extensive fish-ollices, and other fremises commeted with the trale of the place, now aconpy agreat part of the space between the town and the seashore, particularly towards the new jetty.

Vamontl is comected ly a bridge over the Yure with Sonth-town, or Little Yarmouth. 'I his sulurt, forming the N. part of Gorlestone par., consists principatly of neat and substantial private residences; with dueks, timber wharls, and building yarls, on the river, in which much of the business of this port is carried on. The other distinet gronp of buildings in Gorlestone, which forms the village or town of that unme, lies considerally more to the S., nearer to the entrance ol the harbour. Yarmoutly guay is one of the most. extensive and finest in Fingland: it is upwards of 1 m . in lengtl, and in some places 150 yards in breadth, having in its centre a planted prumenade. llere is the town-hall, in hambome edifice with a Tuscan protieo; the comeil chamber, which is lighly decorated, has a full-length portrait ol George 11. The Star Im, near the town-lath, was once the residence of limdshaw, president of the lligh Court of Justice which condemned Charless I.; and some of its apartments still remain apparently as he lelt them, or even as they were at int earlier perion, for the house is of the Blizabethan ase. Yarmonth parish chareh is one of the largest ecelesiastieal ratieces in the kingolom. If Was originally fomuled in the titne of William 11. ; but the most ancient parts of the present elitioe date no further back than about lato: only a portion of the building is early linglish; of or parts, partieusarly the windows, beiner of the Decorated and l'erpendicular styles. It is 230 ft . in its greatest leng'th, by 108 ft . in brealth. At the W. end are four octangular towers, the outermost of which are surmounted with plain pinnacles, ats are the octangular towers at each angle of the s. transept. The tower, at the intersection of the transepts with the nave, formerly decorated with pinnacles, is now embattied, and supports a tall timed spire erected in 1807, a conspicuons matk from the sea. The part of the interior W. of the tower forms a spacious choir, the ceiling of whith is purelled in compartaicuts, having coits of :arme,

It the sath on the ther. It consista is running nearly immense ammber form the lateral trecte. Viry fiw th., and only two of the towis were rriages mutil the entre of the town. et enlled liegrent re well built and o a spacious quay, the town presernts, rance. 'lhe best along the quay: Iuld handsome, ils e other principal sitmated in the d Low, and Margranaries, malt. with the inferior Derent rows.  wher proprictors of the neighhmoriner castle of taistor. The orean in this chureh is one of the thest in finybuni, and it has many interesting monnments, The living, a perpethal curacy, worth ellil, a year, is in the filt of the dean and chapter of Xorwich. $\lambda$ chapet-of-ease was huilt in 1716; and the living, a earacy worth loth. a vear, is in the gilt of the corporation of larmonth. the minister's salary being derived from a local duty on coal. 'The livingerfst. Deter's churd, int edibiee in the thoturstyle, built under a recent aret, is a perpetmal emrasy, worth thiy, a year, in the gift ul the incmubent of St. Nicholis's church. Atacled to the living of dorlestone and southtown is a curacy, with a separate charch, a modem erection, called it. Mary's Chapel. 'Ihare are several other churehes anal chapels for li, Githolics, Independents, Unitarians, lhapists, friemes, und We'sleyans. Some remains exist of varions convents suppressed at the lieformation. A free grammar-sehool was formerly sipported by the corporation, but it censed to exist about the emb of last ecntury. The Chiddren's hospital, fombled in the reign of Eiduard l. is amber the government of the corporation, and has an income uf sinl. n year: it servesus a workhouse, and also mantains and chothes :an boys and en erirls, and loit children are tanght as day schohirs. All chiblen of parents belonging to the town are cligible to be admitted the day seholars, and as vacancies ocenr, to becone boarders by rotation, aneording to seniority. The charity shomi, fombed in 17 li , clothes mud educates a considerable numher wehiddren: here, also, is a Lamciastrian sehool, Which edncates abont liso boys; a girls' selhool, finmuled in $1 \times 10$, for eduenting and clothing si foor girls; and a projrictary grimmar sehool, founded in South-town m1 1 si33. The Fisherman's lospital, established and built in 170;3, was chietly supported by an ammal government grant of $160 \%$. " year, deducted from the beer duties, till 18:39, when its was diseontimed, in eonsequence of the repeal of the beer duty. The hospital is, however, otherwise endowed, and, at the date of the lite inquiry, had an income of $5(6)$. los. a year. Wirren's charity, established in $169 \cdot 4$ for the Gelleme relief of the poor, sick. orphans, and widows, hats an income of about $37 \mathrm{j} /$, a year; and there are several other endownents for schools and other charitable purposes.

Ship-building, mul the varions tuades with it, are carried on to some extent in Yarmenth; nevertheless it cammot be considered as amamfacturing town, but derives its importance and prosperity from the trade and commerce which it owes to its situation and port. The rivers Yare, Waveney, and Bure, which unite in Braydon water adjoining the town, are navigable; the tirst to Norwich, the second to lhomgay, and the Bure to Aybham; and they seeure to Yarmonth an extensive trade in the exportation of the argicultural produce of the districts traversed by these rivers, and in suplying them with conls and other heary goorls. The export of grain and malt from this port is considerable, of birley greater than from any other part in linglamd; but the primeipal business of farmouth is the herring and mackerel tisheries, and the coring and exportation of the herriugs to fireign comtries, farticularly the states bordering on the Mediterrancan. An extensive timber trade with the baltic is also carried on, and a considerable umber of square-rigged vessels belong to the port. Yarmonth roads have long been the principal rendezvons of the vessels in the collier trade, and the town derives some advantages
from the supply of frosh provisions to them. The harbour of 'armonth is formed be the river Vare: it has an awkwari rintrance shesimeted by a bar. tireat attention, however, appears to lie hestowed on remedying this dofeet, and on the improsement of the port gemerally: Vessels arawing about las ft. water, or of aboint goo tons bimrilen, call crows the bar, and proered up the town at spring tides. The chaf improwements of the harbour were offeeted by a butchman maned Johnson, em;ine ed fir the purpesi, whe first erected piers at tha month of the river.

Camonth lionls, between the town and a lino of onter satud bumke, though so much freiumental, are liy no means free from damere They aro marked by buoys and thoating lights. ibore belomped to the jart. Wh the lst of Jin. IRGII, 111 sailing vessels mades att, and 199 ubove 50 toms, the former of anm tigremate of $12,0,0$, and the hatter of el, x.la tons. There were also, at tho same date, 1 stermers, of a total hurthen of rise tons. Yarmouth is the primeipal seat of the binelish herring-tishery. The herringes usmally make their apperarame in the roads alwnt the midille of September, when the tishery berios, and emtinnes till towarils the end of November. 'lhey are purtly enred and partly sent fiess to the mefropolis. The lishery of eot, mawlorel, skate, woles, rod mullet, mul whithgs is also extensively earried on. In $\{$ Ni;i) the gross constoms duties re-

Yarmontl has loedi, for a long time more or less fremuented as a bathingr-phare, for whieh, indeed, it is well litted by its salubrity and its tirm, shelving sea beach. It has, also, a per poojecting 400 ft. into the sam. with publie bathes. assumbly-rooms, a neat theatre, a public library, pmblie gardens, and all the establishments asuail att a watering-place. To the N. aml S , of the town, lacing the sea, are open ind level pieces of gromad covered with verlure, called the Denes; and on the most sontherly of these is a beantiful Huted cohnom designed loy Wikins, rrected in 1817 in homour of Nelsm : it is 1.41 lt, in height, and is surmomed by a statue of liritamia. Un other parts of the Jenes are various bateries, the barracks, a tine edifice, formetly a maval hospital, buit in 180!, at an expense of $1 \geqslant 0,10101$; n new workhouse, erected in $583!$, at an expense of $8,(0001 . ;$ and a raccourse. On other sides, the environs of Yarmonth have no particular hetaty: bat the conntry is well cultivited, and the markets of the town are well supplied. Within a lew miles, on the Sutbolk side, are extensive remains of the Roman station Gariutuonnm, so called Irom its situation at the moutl. of the Garienis, or Vare; and within a siminar distance on the Norfolk side, are the ruins of Caistor Ciantle, formerly a sumptuons mansion erected by Sir J. Fastoif soon after the bittle of drincourt.

The tirst charter of incorporation possessed by Yarmontl appears to have been granted by Johin in 1208; bit the govarning charter previonsly to the late acts was that granted by Queen dime, in 17a!. Under the Mmicial Ficform Let the borough is divided into 6 wards, and is governed by a mayor, 11 other aldermen, and 3 is comeillors. farmonth has sent 2 mems, to the II. of C., with little intermission, since the time of bilward l., the right of voting, down to the Reform Act, having been in the sons of fremen, and in apprentices serving a seven vears' apprenticeship to freemen within the bor. Registered electors, 1,6106 in 186is. The bor. has a commission of the peace, and a fran, in admiralty court, and a comnty court. The matitime jurasliction of the corporation extends for $10 \mathrm{~m} . \mathrm{H}$, the rivers Bure, Yare, and Wivente:

hers of horses are bred in most parts. Thase in the highest estimation are called theveland bays, lartly from the district in which they were wigimally fonnd in the greatest perfectom, and partly from their colour; but they are now very widely diffised. They are in extensive demand as earriare-horses. Cattle very varions: they consist mostly of the lomg-horned breed; but there are conisiderable numbers of short horns with emilless varieties prodnced by erosses between these and other breeds. The 'leeswater and Iloldermess breeds are the grentest fivourites with the griziers; but the lomer horns, or a cross between them and the short horns, are preferred by the dairy farmers. Yorkshire supplies most of the cows nsed in the Lomdon dairies. Their average yidel of milk may be estimated at from 22 to 24 quates a day, but it does not yield a proportional quantity of hatter. Sheep of all varicties, and stock very large, supposed to amount to about 1,200,000 head, producing ammally about 28.000 backs of wool. Many hoges are kept, and Yorkshire lams are celebrated in all parts of the country. Property in the W. and N. ridings very moth subdivided; lat in the J., riding it is less suiniivided tham in most parts of lengland, and many families in this riding have held their estates for centmies. Farms of all sizes, hat the majority seem to be masually small. Most part of these farms are beld from year to year, or by tenals at will; and, notwithstanding the statements that have been made to the contrary, it is probable that this specias of temure, by diminishing the seenrity of the fimmer, has orerated in no ordinary degree to retard the prugress of improvement. Farm-houses and buildings for the most part rather indiferent.

The W, riding of this co, stands in the very first rank as a manufacturine elistrict. Leeds, bradford, ILudersfiehl, Halifis, and Wakelieh are the great seats of the woollen manufacture ; flax-spimmine is extensively carried on at Leeds; and the hardware manufistures of Sheftield rival, and in some departments, as that of cutcery, far surpass those of limmingham. There are extensive iron-works at hotherham ; and hatterly the irom-works of Vorkshire have made consiterable progress. Cotton manufactures have been established at liasingwold, and in some other barts of the W. riding. The manufactures in the other ridings are but of trivial importance. The valuable lieds of eoal fomed in the vicinity of beeds, Shetliede, liradlord, and Waketield have been the principal source of their prosperity: besides coal and irom, Somshire has mines of lead and veins of eopluer; alom works were established near Whithy in the reign of Elizabeth, and are still worked (see Wuruy); and there are in varions places excellent limestone and freestone quarries. Principal rivers, Onse, Swale, Ure, Wharte, Aire, Calder, Don, Derwent, llull, and Esk; the waters of all these, except the last, being poured into the great asstuary of the llumher. The canals, particularly in the $W$. riding, are mmerons, being some of them of great ins portance, and the princibal towns are also conheeted with railwiys. The eo. is divided into wapent thes and liberties, and contains 613 parishes. It semds 39 mems. to the 1 I . of C., viz. six for the co., being two for each ridingr two each for the city of York and the bors. of Leeds, thelliedd. Hall, Beverley, Bradlard, halifax, Doncaster, Pontefract. Ripom, Kharesborough, Maltom, litemmond, and scarborough: and one cach for the bors, of Huddersifeld, Whitly, Wakediedd, Northallerton, and 'Thirsk. Registered electors for the N , riding, 15,138 in 1865 ; for the 1 ,
ridinc. 7,100 ; and fir the W , riding. 10.605 in latia. The fross ammal value of real proparty assessed to income-tax. in 1862, whs-for the North riding, 1, tsi, ititil.; for the East riding, $1,2 \times 6,7 \pi 11$; and for the West ridius, $3,96 \cdot 1,8 \cdot 20 /$.
IOKK (an, Rbortum), an ancient and celebrated city of barland, being, muler the liomans, the cap. of britain, aud at present the second eity of the kinglom in respect of ramk, thomgh not of importance. It is a county of itself, and a parl. and mun. bor., locally situated near the centre of the co. Sork, of which it is the cap., at the junction of the N., E., and W, ridings; on the Onse, at die confuence of the Foss, 22 m . NE, Leenls, 33 m. NW. Ilull, 170 m . NNW. London, and 164 m. Sik. Ddinhureh, on the Great Northern railway. Pop. of parl. city, 45,385 in 1861 . The city is inclosed by its ancient walls, supposed to have been erected by Edward L., abont 12s0; they are tlanked with numerons towers, and having been repaired and renovated in 1831 , form a delightfin promemade. They are piered by tive principal gates, termed bars, and by five smaller gites, or postems, some of the former being remarkable structures. The Ouse and the Foss traverse the interior of the city, uniting at its s. extremity. The foss is crossed by four bridges, and the Ouse by a single bridge, a handsome structure of three arches, constructed between 1810 and 18:0, at a cost of 80,000 . The span of the central areh is 75 ft ., that of the other arehes 6i) ft . ench; the total width of the bridere withia the parapet is 10 ft . A new irom bridge leads from I, endal on the one sile to the ralway station on the other; it was erected at a cost of 35,00011. Ifandsome flights of steps at each end eombuet to pacious quays on both sides of the river, called the King's ind Queen's staiths, to which vessels of !o tons may be moored.

York consists of several parallel tines of thoronghfare, rmming N. and S., crossed by others which are fenerally shorter and more irregular, in an opposite direction. The prineipal of the former nearly 2 m. in length, consists of Bootham, Jetergate, Culliergate, Walngate, with their continuitions. 'Ilse line crossing it, and eomposed of Micklegate, Ousecate, Javement. S't. Saviomr'sgite, is almost as long. In the centre of the city is a tine troad open space called l'arliament Street, terminatiog at one edd in Sampson Square; ant at the other end in the l'avement, the site of the corn, poultry, and other marlets; and wool and leather fairs are held in Peaselosme Grech, an open space in the l.. part of the eity. There are a few other open spaces in the heart of the city as St. Helen's Square; but none of them teserve any particular notice. lork has been mueh improved and modernised of late years, but it still preserves an air of antiquity in its narrow strect: and old-farhoned houses, Many of the latter formerly overlung the streets, the upper stories projecting beyond the lower; but a good many of these have been taken down, and bniddings in a modern stvele have been erected in their stead. Some of the strects also have been widened, and the city generally is well paved and lighted with gas, In comserpience of the rise of Liverpool and Manchester, the increasing importance of many of the large towns of Vorkshire, and the greater facilities of commanication between the diflerent parts of the kirgdom, York no longer enjoys that pre-minence in the N. sle possessed in the earlier part of last century. Still, however, she is not dechining in any respect; but is, on the eontrary increasing in size. ln the ontskirts many substantial aul even superior lmildings have beon recently erected; and the city is extending itself
ing. 10.60. in real propert:-was-for the Bast riding, $4,3,96 \cdot 1,8 \cdot 307$. ent and cele$r$ the liomans, he second city' thongh not is lf, and a parl. r the centre, p., at the jumeon the Otise, m. There are It of the city, them deserve cen moch imrs, but it still harrow streets of the latter upper stories cood many of buildings in a 1 their steat. widened, and lighted with Liverpool and ce of mally of he greater fathe diflirent or enjoys that in the earlier r, she is not the contrary, s many suibs have been tending itsell
nearly in an equal degree in almost all directions. "for the NE. of the town was formerly an open space known by the name of Heworth Mowr. In $181 \%$ this was enclosed; and in this neighbourhood a great number of substantial and excellent honses have been built since the period of the enelosure. Here also many market marilens are cultivated; and altogether the distriet is thriving and populous, and presents umboubted testimony of progressive and prosperons industry. On the W. of the Ouse along the rond from Leeds to the 'Micklegate' are sesceral groot bouses, many of which lave been recently built, and are ocenpied chicily by persons $\because \cdots$ bave either retired from business, or are es.rpera: is business in the older part of the town; the mumber of these houses is constantly increasing. The parishes berond the Foss, through which the road to Hull passes, contain for the most part a pop. of a poor description.

York minster, or catlectral, is the tinest editice of its kind in the kingilom. It stands in the N. part of the eity, and, exeept on its N. side, where a considerable space of ground has been cleared, is closely hemmed in by mean-looking buildin ;s. The present editice, sail to hase been raised on the site of a chureh originally fommed by Edwin king ol' Northmberland, in the 7th century, was prinejpally erected during the 13 th and 14 th centuries. It is withont cloisters, and built in the form of a cross; consisting internally of a mave with two aiskes a transept, with aisles and a lantern in the centre; a choir, with aisles, and vestries or ehapels on the S. side; and a chapterhouse, with a vestibule, on the N. sitle. Its principal measurements are as follow:-length, internally, $52+\frac{1}{2} \mathrm{ft}$. (being greater than that of any other cathedral in linglaud, except Winchester); intermal lengrth of trimsept, $2 \cdot 2 \cdot 2$ tt. ; length of uave, 26t lt.; do. of ehoir, 131 ft ; height of both, 99 ft.; breatilh of nave, 109 dt. ; height of great tower, e34 l't. ; height of W. towers, each 190 ft . This magnitieentstructure has a portion of all the styles of linglish architecture; but the Norman only appears in a tine erypt, under a part of the ehoir, which reduces the general appearance to the three later styles; of these, the transepts are carly linglish; the nave and arches supporting the great tower are decorated; and the choir and upper part of the great tower are perpendicular. The W. front has been compared to that of the cathedral of Rheims for richmess, and beanty of architectural design. It is divided into 3 compartments, by 2 massive graduated buttresses enriched on every face with tabernacle-work, and the elevated battlemented gable is covered with ornamental tracery of the most florid kind. There are 3 alitrances in this front ; wer the central of which is the morivalled $W$. window. divided into 8 portions by upright mullions, which in the upper part beantifidy diverge into the leafy tracery peculiar to the lith century. The magniticent towers which tlank this side exactly correspond; they are supported hy buttresses, anul have at their smmmits 8 crocketed pimacles comeeted by a lattlement. Almost the whole of the W. Pronit is tilled with niches, but these, with few exceptions, are emptr. The S. side, thongh limished less elaborately than the W. tront, is very inposing. The porch in the S. transept is the insin! entrance to the church, and is deeply recesset by mumerous mouldings: over it is a beautiful marygold window, and the gable is surmomited by an enriched pimacle. The N . side is in a similar style to the S., though finished in a planer manner; and in its transept is the remarkable stained grlass window termed the 'five sisters.' The E., like the W. Iront, is in three grand divisions, separated by buttresses, the
contral of which is wholly orenpied by a masniticent wimbow. Like the W. front also, it is covered with niches, though only a very few of the statues formerly oceupying them now exist. On this front the influence of time is very perceptible. The central tower, e3. ft. in height, is probably mininished. It has two large windows, with two tiers of mullions, in each of its four sides. But it wants a spire; and, when contrasted with the IV. towers, has a heavy appearance.

The interior of the minster eorresponds in beanty and grauleur with the exterior. A eareful restaration of the cathedral in most of its parts haid heen completed, when, on the Bud February, $18: 3$, it was set on fire by a lumatic; the conthigration thence ensuing destroyed the time organ, and all the woodwork and root of the choir. Another destructive fire broke out on the 20th. May, 18.10 , in the SW. tower, hy which its tine ring of 10 bells and the clock, with part of the roof of the nave, were burnt. These injuries, however, were emupletely repaired; the choir was renowated after the fire of $18: 9$, under the superintendence of Sir R. Smirke. The new roof is wholly constructed of teak, presented by goverıment; and is covered with lead procured from the mines of the (ireenwich hospital estates. The remarkable stone sercen, which separates the choir from the nave, stands in its original position, aml is of a most gorgeous and thrid style, ornamented with tifteen statues of the kings of England, from William 1. to Heury YT., all of which, except the last, are of ancient senfpture. The new organ, placed above the sereen, and presented by the late liarl of Searboronsh, is of the most superb deseription, and has some pipes 32 ft . in length. A great deal of fine stained grass, many sculptired coats of arms, and the tombs of many of the arehbishops of York, attract notice in the interior: though, on the whole, this eathedral is less rich in monuments than many others in the kingiom. From the N. transept, a vestibule leats to the chapter-honse ; this is an octagonal building. 63 ft . in diameter. and $67 \mathrm{f}^{\prime}$. 10 if . in height, supported on the wintside by eight massive buttresses. "The more mimutely,' says Rickman (Gothic Arehitercture, 1 26is), 'this magniticent ellitice is examined, the more will its great value appenr. The simplicity and bollness, and at the same time the great richness of the nave, and the very great ehastioy of design and harmony of eomposition of the choid and great tower, render the building more completely one whole than any of our mixed eathedrals; while the exquisite beanty of the early character of the chapter-lonse, and its approach, forms a valuable link to muite the early Vaglinh transepts and the decorated nave. This chap,terhouse is by fur the tinest polygonal rom withont a central pier in the king(om, and the delieacy and variety of its details are nearly unergalled. Trom marh praise cannt be given to the dean and chapter for their carcful restoration of every deeayed portion. IBy this restoration the whole of the W. front may be considered in as grool a state as when tirst crected; a comsiterable portion of the S. side is also restored.' 'The vestries on the s. side of the church contain. amoner many other antiquities, a chair in which several of the saxom kings were crowned, and which is saill to be older than the cathedral itself; and the lrinking horn of Ulphus, a Saxon prince of I)cira, presented to the eathedral in 1031, with a large extent of comntry to the E . of lork, still in the possession of the see. The dibrary is at a short distance from the eathedral on the N. side. The chapter eonsists of a dean and 4 eanons residentiary, sharim:s un income of $1,352 l$. a year, and 26 prebendaries
having separate revemues. The archbp, of York has the title of grimate of lingland, with the pri$\checkmark$ ilage of erowning the queen-consort, and ceclesiastical anthority over the province of lork, romprising the sees of York, Durlam, Carlisle, Chester, lipon, and Sodor and Man.

Previously to the dissolntion of the religions houses by IIenry VIII., besides 17 chapels, iti lowpitals, and 9 religious bouses, there were in lhis city 41 par. chorehes, but of these last only $2: 3$ now remani. Many of these woull be worthy of notice elsewhere, but they sink into insignibemme after the cathedral. St. Michael-lebinfres, in the minster yarl, is the largest and most elegint, and with fit. Martin's in Coney Street, is in the late perpendicular style. All Saints, North Strect, and St. Mare's, Castle-grate, lave towers and lofty spires, amp are mostly perpendienlar with some carlier portions; sit. benis, St. Lawrence, and St. Margaret, have good Normatn toors, with portions of later tate ; and St. Mary lishop-lill, the elder, has portions of eood early English and decorated work, amist vit riens alterations and insertions. In many of the churches are comsiderable quantities of old staned plass. Ill Saints in the lavement is of very ancient fomblation, amo its N. side is almost wholly hailt ont of the ruins of Ebornemm, thongh ather parts of the editice are quite modern. A large lamp still preserved here used to be hung at the sommit of this buildiar. as a beacon lor travellers at night through the forest of Galtres, which extended from beotham-bar a considerable distance $\Sigma$. of the eity. Nlast of the livings of these churches are rectories or vicarages in the gift of the crown or the dean and chapter of lork.

The remains of St. Mary's Abbey, originally fommed by William linfins in thss, and relinumded in 1:20) for baek monks of the Benedictine order. are very interesting. The abbot was mitred, and lade a seat in parliament; and at the time of the dissolution the reveunes of the abbey amomed to $2,085 /$. Is. ind. at year. The buililings were for the most part destruyed, hetween 1701 and 1717 , abl their materials used for rehuilding the castle af' York and Sit. Olave's chureh, and repairing leverley minster. Almost the only parts remaining are a gateway, and the N. wall of the abbey cliureh, 3 fift. in length, having tine light (rothic window-arehes, with highly finished carsed capitals. The remaining part of the church firnishes the richest and most beantiful secimens of transitions from carly Eusilish fo decorated that remain tor examination: hat being entirely exposed, it is fast dectying. The abley hat an extemsive ind strongly furtilied precinet withont the anciont walls of the eity; and some of its walls and fowers, furming an extraneons portion of the old city defences, may still be seen between bouthamhar and the Guse. The remains of st. William's Collenge, fommed hy Hemry Vl., exist in a street natar the cathedral. St. Willian's chapel stood on the old bridge over the Ouse, and was conserpuently taken down with that structure. The eloisters of st. Leonard's and St. Peter's hospitals, "urions remains of the arehitecture of the time of William l. and II, are now hsed as wine valts. 'the tissenters, who form a numerous and respectuble bowly in York, have at least a dozen places of worship, the oldest of which is the l'reshiterian (Unitarian) chapel, in sit. Saviour-mate. The Wesleyans have an ehgant new chapel in the same sirect, with a masive lonic portico, besiles three other chapels. 'Tlie ludepenceuts lawe two chapels, one of which (Salem Chapel), crected at the emd of st. Siviour-gite, is a large
and handsome edifice. There are also mecting houses for Primitive and other Methodists, ind Friends; a fine liom. Cath. chapel, a numbery, and chapel outside Micklegate-bar.
York Castle, towarts the S. extremity of the city, between the Onse and loss, near their confluence, occupies a space of hearly 1 acres. It was originally built by William the conguror, who also crected another fortress, at York, on the other side of the Guse Jut only a small portiom of the original structure of the castle romains, except Clithord's Tower, a keep adiled by the Compueror to the rest of the edifice, and erceted upon an artifecial moumd. which hat probably serval for the site of a limman fortress. York Castle, which was long garrisoned for the king in the civil wars, is not now a defensive military post, hut has been comverted iuto the co. prison and hall. The hasilica, or co. hall, on the W. side of the great area. is entered by a portico, supported ly lonic cohmms, and internally divided into civil and criminal courts, with himelsome rooms, for the use of the graud and petit juries, and comssel. The lmildine, on the le, sile of the area, which is miform in design with the court-house, is chicfly appropriated to female prisomers. Between 1821 and ls:3t, a new prison was built here, at an expense of 203,2300 , on the panoptien prinejple, with 8 aning comrts, the whole being surromded by a lolty stone wall. 35 ft. high. The city giol and lowise of correction is ou the W. side of the Onse; its moter wall eucloses an area of nearly three-fourthe of a mile in circuit: it is apropriated partly to prisoners before trial. Near it is the retus bullium, or old baile, a monom corresponcling with that on which Cliftord's 'Tower is built, having probably had the sume origin and purpose.

Most of the oflier elitices, of public interest, are in the N. part of the city. The mansion-lionse, a large and handsome editice, erected in 17at, has in front a rustic hasemeut supporting an Ionic colommale, with a pediment on which are the arms of the rity. The state-room, 49 ft . in lengeth by 273 ft. in breatth, has paintings of William Ill., George IL. and IV., and of several nolitemen and gentlemen. The guikhall, behind this edifice, built in 1. Ati, comprises one of the tinest Guthic halls in the kiugrom, !!fift. in lengtl, 49 ft . in width, and 292 ft . in height, the roff being supported by 10 getagom pillars on stome basers. [ia the windows are some tine specimens of stained glase, and over the entrance is a full-longth stathe of' (ieorge 11. In this hall, the lords-vresident of the north furmerly held their court; and liere also the seoteh received the 2000.0641 . paitl them by barliament for the assistance they afthrted agsanst Charles 1. At the end uf the hall is the rity assize and sessions court, and adjoining, are the rouncil chambers of the corporation. The assem-hly-roms were erected, by sulseription, in 17:30, and are entered muder a portien, resting npon light stome cohumus, supporting a bahostrule. The walls are supported by di light and elegant Cominthian columus, with it beatiliul comice, the upper part of the buidding leing of the composite prder, tuil richly adorned. The rooms are lighted by it wimlowis. The gramd assembly-room is constructed from a design ly Palladio, and measures 112 ft . by $40 \mathrm{ft} .$, and 10 ft . in height. It was usel for eoncerts till about I $8: 2 i$, when, being fomad too small. a magniticent concert-ball adjoining was built, $1 / \mathrm{F}$ f. in lengtla, 60 ft . in hreadth, and $45 \mathrm{ft} . \mathrm{m}$ height, capalile of colltaining 1,700 persons, 400 being aecommodated in a gallery supported ly east-irom pillars. It is lighted with gas, and litied up in a style of muchs

Megance; its cost, ineluding the purchase of the erromid, amomed to ! 1000. The theatre, buit by Tate Wilkinsom, in 17nin, and recontly altered cixtermally in the Elizabethan style, is extremely commontions. The Yorkshire phitosophical Soeict y , founded in 18:2, ohtained, in 1825i, a grant of $\frac{5}{3}$ acres of lamd, part of the site of St. Mary's Abhey, from government, for a suitable building and botanie garden. The maseum, built between $1 \times 0.7$ and 1830 , is an elegent edifice, with a front tuwards the Onse, 200 ft . in length, and has a spacions hall, a library, a theatre for leetures, with larse collections in geology, mincralory, mologry, comparative natomy, and a chemical baboratory. 'lhe alfars of the society are eonducted by a conmeil of 12 members, and ollicers dected once a your. The York Subscription Library, with 1 ibino vols., oceupies a spacions suite of rooms in St. Leonard's I'lace: it is supported by about d00 members.

Outside Momk-lar is the eo. loospital, fommed in 174! by lady Ilastings, with an income of alsut 1 , fion, a year. The building has a front

 capable of aceommodating loo patients. W'ithout bootham-har is a lunatic asylum, built by subveription in 177\%, 3 stureys in luight, having a front 182 ft . in length, with extensive gromme; and abont 1 m . from the city is the leetreat, an establishment of a similar mature ander the mat marement of the socioty of thakers. Here, also, is a dispensary, founded in 1758 ; an eye intirmary, established in 18:3, and various medieal and other charities for the benctit of the poor. The calneational establishments are on a very extensive sale, at least in so firr as elementary and the more ordinary branches of instration are eonecrnel. A masters' selool, in conncetion with the Vork Diocesan Society, oceupies the extensive premises in Monkgate, formerly used as the Linitarian collegre. This last, the chiof seminary of the Unitarims in England, was removed from Manehester to York in $1 \times t$ :i, but has lately been asain removed to Danchester. Jere also are mational selools, extablished in 1812, in which above 700 children of both sexes are calncated; British schools for abont 200 boys and 300 girls; the hane coat boys and grey coat girls sehools, a tablished in 1 inj, having an income of about 1,ioul. a year; Hamghton's charity sehoul, for the education of 90 poor children of the pars of st. (rux; the spiming school, established by two laties in 1782, where alout tio girls are instructed in reating, knitting, and sewing, and prinepially clothed; with Simday sehons.
bishopsthorpe palace, the seat of the archbishop: is about 3 m . Stis from the city. The grounds of the last are frequently resorted to in summer by the inhals., whose principal public promenade in the eity is the New Walk, a gravelled terrace phanted with ehns, extembing from the neighbourhood of the castle for nearly 1 m , along the Onse.

The city of York elaims to be a eorporation by preseription. Its enrliest extant charter is one of Ilenry II., withont date; but its governing charters, lefore the Municipal lioform Act, were of the lith Charles II. and the 10th (ico. IV. By the lattor, the corpmation ollicers were the mayor, 12 aldermen, the 2 acting and the former sherill's, the recorder, city eommsel, town clerk, foroners, and 72 common conncilmen, who sat, as in landon, in two separate courts. All the corporate oflicers were fremen, the fredom of the city being aequired by birth or apmenticeship to a treman within the city liberty, and by gilt or
burchase from the upper house, the price of purchase varying from ezible to liall. Lumer the Mnmicipal leform Aet, the bor. is diviled into is wards, and is governed be a mavor, recorder. is aldermen, and 36 comeiliors, if from each ward. The chief magistrate has the title of Lard Mayor, conferred by lichard J J., in l:189, which title he cousequently enjoyed before the chicf magistrate of the metropolis. York sent 2 mems. to the II. of C . in the d!th of Ilen. [Il., and has continued to do so regularly from the time of Edw. l., the right of election having been formerly vested in the corporation amb fremen. Lieg, electors $4, \mathrm{ta}_{2}(0$ in 1861 . The election for the N. riding of the eo. ol' Fork is held here. C'murts of assize for the co. and the city are also held here twiere a vear, besides guarter sessions, a conrt of pleas, and puity sessions twice a week; and there were formerly sevaral other comerts, now obsolete. The eorg, if York had explnsive juristiction orer the Ainsty, a large district eomprising abont 85 towns and vilhares, from the time of 1 lamry VI. till a late act annexed the Ainsty to the $W$. riding of the eo.
l'uler the liomans, lork was, no dombt, the commercial emporimon of the $N$. part of the isliad, and it appears to have been a dity of some commercial importance in the time of Jidw. Ill, who astablished a woollen manufacture in the edty which continued to flomish for a lengthened period. At present its trade is comparatively small: and the largest amome of catpital now employed in any one brameh by the citizens is supposed to be in the drug trade. Consideralite business has, however, been olone latterly in the iron trade, and there are several latge foumdries: printing, brewing, and comb making are also extensively carried im. The erlass manulacture was established at Jork at a somewhat early period; and phials aud blint $\frac{\text { ghass wares are still }}{}$ made liere. Jinen choth. sacking, twine, leather, gloves, jewellery, buper-hangings, fringe. mosical instrmments, brass wares, and tobacoo pijes, are among the other grods made at York. Many guilds or trating companies formorly existed, bit all of them except three aprar to be dissolvert. The Company of Merchant . Weenturers of York is an ancient corporation ly prescription, now consisting of about $1-2 \mathrm{t}$ ) members, mater a governor and deputy-goverior, having property vielding -2001. a year, with a chapel and hall and a tosplital in Fossgate. The Merchant 'Taihors' Company, ineorporated by charter 14 Chas. Il., eomsists of from 30 to 35 inembers, with exchasive privelages in the city, and an income of labl. a year. 'The other company is the Gohlsmiths', anthorised be ate of parliament. The Ouse trinstees have lately spent large sims on the improvement of the river nawgation; and stemmers now ply to and from Ihall at all times of the tide. Cuals are bromerit to the town ly water and by railway. A deeided increase of trade has leen experienced since the completion of the railwars, ha which York communcates with Neweastle, Jirlam, and Carlisle northward, and with leeds, llull, the Liverpool lines, aud other purts to the S. The York station ol these railways is an elegant lmilding, immediately within the walls mear Micklegate. Large sales of cattle aud horses take phace at fairs held here once a fortnight, besides which there are monthly fairs for leather; many others in the year for thax and wool. Markets, Tuesdays and Siaturdays; the latter chichly for corn. A now cattle market was opened in 18.8 outsite Fishorsate. laces, which are extremely well attended, a held three times a year on knavemire, a lare plain abont 1 m . S. from the city, where is a pacious gramd stand.

YORK
YSSENGEIUX
Antiquities amd Jistory--York, thongh suc"essively the residence of lladrian, Severus, deta and Caracalla, Coustantins Chorns, and Constantine the Great, has few striking Roman antiquities. Such as do exist comprise a remarkable multangular tower, a long wall, with altars, putera, tombs, monnments, and the foundations of ancient builtings. The polatiun of the lioman emperors is supposed to have occupied soveral areses near the cathedral, extending from Christ Church through all the space between Goodramwite and St. Andrewgate to Aldwark. Not far from this, in St. Cuthbert's cemetery, many lioman sepulehral remaius have heeu found. Outside Micklegate-bar, a loman vault, with a perfect skeleron, was opened in 1807: and a tesselated pavement was discovered within the same har in 1814. Severus died at York A. D. 212; and his funcral obsequies wonld appear to have been performed on some beiphts a little W. of the city, still called Severus' hills. Constantins, who died in 307 , is traditionally said to have been luried in the par. church ol' St. Helen's. Under the Saxons, York was successively the enpital of the kingloms of Northumberland and Weira. It was taken and its meighbourhood devastated by William the Comqueror in 1069. Several parliaments have been hell in Fork, the lirst beng that summoned by Ifenry II, in 1160 . In 1540, 1Ien. VHII. established in this city an oflicer called the Lord l'resident of the Noril, and a comeil with very extensive powers, which existed till the civil wars, when York was frequently a prineipal station and residence of Charles I.; it, however, surrendered to the parliament in $16 \% \%$.

Yonk, a town of the U. States, Pennsylvania, cap. co. York, on a creek tlowing into Chesapeake Bay, and on the railroad between Harrishorgh and laltimore, 40 m . N. by W. the latter. I'op. 6,863 in 1860 . York is an agreeable and flomrishing town, in a rich, agrienttural district. It is constructed mostly of briek, and las some good buildings, ineluding momerons churches, an episcopal academy. court, market, and almshouses. Its trade is chiefty in agricultural probluce.

YOUCIIALL, a parl. bor. and sea-port town of lieland, prov. Mlunster, co. Cork, on the W. side of the eestuary of the Blackwater, immediately within its mouth, 27 m. E. by N. Cork, with which it is comneeted hy railway. 1'op. 6,3.28 in 1861. The town is built close to the water's edge, along the foot of a steep lill, and consists principally of a main street, extending for about 1 m . parillel to the straml, and of varions other smaller streets atd lanes. It was formerly surrounded by walls: and these in part remain, and form, on the summit of the hill to the $W^{\prime}$., the boundary of the town. 'The principal public building is the parish chureh, a large dothic edifice: in its immediate vieinity are the ruins of an old abbey, one of the windows of which is extremely beantiful, and yuite entire. 'The churchyard is interspersed with lime and other trees; and, like everstbing cise alont Youghall, has many remmants of antiquity, old tombs, old ivied, moss-grown stones, and luxuriant weets. The town has also a chapel of case, several Roman Catholic chapels, and meeting-houses for varions chasses of rlissenters, an infirmary, a dispensary, a barrack for infantry, mumerous public schools, a convent, the college, now in a neglected state. the property of the duke of Devonshire, a court-house, customhonse. ferer and lying-in hospitats. The honse accupied by Sir Walter Raleigh is still preserved in gooll repair, and with hit little change. Youghall sent 2 mems, to the itwh 11 . of C.; and
thas sent 1 mem. to the Imperial II. of C. from the ara of the Union downwards. liegistered clectors $237 \mathrm{in} 18(6 \mathrm{i}$. U . Under the Irish Mmicipal Reform Act, $3 \& \pm$ Vietoria, cap. 108, the corporation is extinet, and the corporate property has been vested in commissioners.
The manufactures of the town are ineonsiderable, consisting only of small potteries and brickworks. It is too near Cork to have much foreign trade; but owing to its situation on a fine navigable river, it is the emporimm of a considerable tract of comotry. The great aricles of export consist of grain and meal, provisions, cattle, and pigs. The principal articles of import are timber and coal. The bar at the river's month has ouly 4 ft . water at ebb tide, and it is inaccessible for vessels drawing more than 12 or 13 ft . water, execpt at high springs. Youghall is ineluded in the port of Cork, but its shipping is ineonsiderable. The heach is fine, and the town is well titted for sea-bathing; though, in this respect, but little advantage has been taken of its capabilities. It is belieced, apparently on good gromods, that the introduction of the potato cultivation in I reland dates from 1610, when Sir Walter Raleigh sent a few to be planted on lis estate in the vicinity of this town.

Yl'liES (Flem. Ypern), a fortified town of belgium, prov. W. Flanders, cap. arroml. and two cints., on the Yperlec, $29 \mathrm{~m} . \mathrm{SW}$. Bruges, ant 16 m . NNE. Lille, on the raibay from lirussels to Dunkerque. Pop. 16,709 in $1 \mathbf{8} 60$. In the 1 thth century lipres is said to have been nearly equal in pop. and importance to lruges. It is well built, and like most towns in Flanders, it las extensive water communications, being comuected by canals with Nieuport, and l3ruges. The conrthouse and cloth-hall oceury a vast Gothic buidding of the 1 th century, surmounted by a tine tower. 'I'he cathedral, a Gothic edilice, has a painting attributed to Van Eyck; and the tomb of Jansen, bishop of Yires, and founder of the seet of Jansenists in the 1 Ith century. There are several other churelies and chapels, 4 hospitals, an exchange, and a royal college. I'pres was formerly famots for its mantactures of woollen and linen cloths, ant the fabric called dimper (origimally $d$ 'Ypes) derives its name from having been origimally made in this town, Linen yarn and lace are now the prineipal articles mamfactured; but there are still some woollen and linen eloth factories at Ypres, with tameries, bleaching and dyeinct-houses, one or more salt-refineries. Fpres experienced many reverses in the wars of the 17 th and 18th centuries. Under the French it was the cap. dèp. Lys.

YRlEX (S'T.), a town of France, dép. HanteVieune, cap. arrond., on the lone, a tributary of the Isle, 21 m . SNil. Limoges, on the railway from Limoges to Bordeans. 1'op. 7,613 in 1861 . The town owes its origin to a monastery foumded here in tle bth century ; and is ohd and ill buitt. It has a collegiate chureh, a curions Gothic editice of the 12th century, 4 other par. churehes, an hospital, a court of primary juristiction, and a society of agriculture, with manulactures of woollen stiffs, linen yarn, and porcelain, and 12 anmual fairs. Ilere are some iron works, and works for the preparation of antimony: all the porcelain clay used in the ehina-manufactory of Serres comes from St. Iricx.

YSSENCEAUN, a town of France, dép. HauteLoire, cap. arrond., on a rocky and elevated site, 14 m . NE. Le l'uy. Pop. 7,9 : 1 in 1861 . Though irregularly built, and assez triste, it las a good modern cburch, and is improving. lt has no manufactures worthy of notice, its inhabs. being
of C. from liegistered Municipal te corporiaperty has

YUCATAN
7.AFR.I

103
principally engaged in agriculture and cattledealing.

YUCATAN, the most E, prov, of the Mexican empire, consisting of a peninsnia, projecting northwards, between the Caribbean Sea on the E., and the Giulf of Mexico on the W., and between the 18thand 2lst degs. of N. lat., and the 87thand 91st of W. long., having $S$. the provs. of Tabaseo, Chima, Vera Paz, and the British territ, of Henluras; length N . and S., abont 250 m. ; average breadth, 200 m . Area, $70,200 \mathrm{sq}$. m. Jop. $6,68,6 \pm 3$ in 1857. Yueatan is one of the poorest districts of Mexico. On parts of it, maize, cotton, rice, tobacco, pepper, and the sugar-cane, are prodnced. lint the scarcity of water in the central parts of the peninsula, where not a stream of any kind is known to exist, and the uncertainty of the rainy season, render the crops very variable; and years frequently oeeur in which the poorer classes are driven to seek a subsistence by collecting roots in the woods, when a great mortality ensnes, in consequence of their exposure to a very deleterions climate. Yucatan has no mines. An active intercourse was formerly carried on with the llavamah, which Yucatan supplied with Campeachy wood, salt, hides, deer skins, salted meat, and the jenequen, a plant from which a sort of eoarse threal was made, and wronght up into sacking, cordage, and hammoeks. This trade was cut short by the war: and as few foreigners have been induced to settle in Yucatan, the inhabs. have lerived but little advantage from the late change of institutions. The chief towns are Merida, the eap., Valladolid, Bacalar, Campeachy, and Vittoria; but none of much importance.

YVERDUN (Germ, Iferten, an. Ebrodanmm), a town of Switzerland, cant. Viand, cap, distr., on the Thicle, at its month in the S. extremity of the lake of Neafchatel, $17 \mathrm{~m}, \mathrm{~N}$. by W. Lausimme,
on the railway from Neafomel to Lausamm, Pop. 4,986 in l860. The town is well built, eonsisting of three principal streets, with a handsome spuare, a new chureh, and town-hall, with several bridges across the Thiele. Its principal ediliee is a castle. Lnilt in the leth century, nud which, from 1805 to 18:5, served for I'estalozai's ceutral sehool, conducted by himsell: Iverdun lias a college, a publie library, with a musemm of antiquities, and a tolerable harbour on the Thisle. Its trame is brisk, it being the great depot for the wine of the cant. exported northward.

IVETOT, a town of France, dép. Sine-Inferieure, cap. arromd., on the ralway between Have and Ronen, 20 m . NW. the latter. I'op). 8,921 in 18131. The town stands on a bare and arid hill, destitnte of my ruming water, the inhabs, being supplied from wells. It consist: chictly of one long street; but this has few grood thonses, and the rest of the town is very meanly built. It has, however, a planted promenate; and the surrounding comstry is fertile and popnlous. Yvetot is the seat of conrts of primary furisliction and commeree, a chamber of manufuetures, and has manufactures of linen and cotton cloths, cotton velvet, handkerehiefi, hosiery, cutlery, and hardware. It has also a considerable trale in conn and sheep.

Towards the end of the 13th eentury, the spanish, Italian, and other merchants used to proceed from llartleur to Ivetot, where they eonducted their chuef mercantile transactions with the French; and, perhaps in the view of eneontraging commerec, the licf of Yyetot was declared, in 1370 , free of all fendal serviee to the French crown. Its lords soon afterwarls coned their own money, and assumed the title of king. The exploits of one of these petty monarehs form the subject of one of beranger's eharming songs.

## Z.

/AANDAM, improperly SAARDAM, a town of N. Hollaud, on the Zaan, a tributary of the Y, by which it is divided into E. and WV. Zann-
 18ibl. 'The town is excessively trim, quict, and minntely clean. The streets are pived with clinkers, and daily washed; the honses are built of wool and painted white and green, and their principal door, that of eeremony, is only opened at baptisms, marriares, and fmerals. 'The dockyard, in whieh 300 vessels were formerly built and repaired annatly, have disappeared; its herring and whale tisheries have also vamished ; but its vast number of windmills employed in sawiug timber appear, with their dependent operations, to give fiull operation to the inhabs.

At one period, Zaamdam ranked anong the greatest naval arsenals in Europe; but the prinenpal celebrity of the arsenal, and, indeed, of the town, is derived from the circmanstance of Peter the Great having wrought in it as an ordinary ship earpenter during his visit to 1 lolland in 1697. The hut which he ocenpied is still kept up, and has been visited by numerots distinguished personages, including Napoleon I., and Alexander, emperor of Rinssia.
ZACAT'LCAS, a city of Mexico, cap. of the prov. of its own name; in a harrow valley, 290 m . NW. Mexico. l'op, 24,300 in 1857. At a distance, its numerons churches and convents give the town a fine apparmee, and it has many excellent houses; but its streets are marrow and
filthy. Its markets appear to be abundantly supplied with tish, fruits, veretables, de. Gumpowder and some cotton fabries are mannfactured there; and Zaeatecas is mext to Guanamato, the principml mining city, and one of the chief mints in Mexico. In the latter establishment 300 people are constantly employed. The prov. Zacatecas is one of the richest mining provinees in Americas. As a mining district, it diflers materially from Guanaxuato, for in lien of one great mother vein, it has three lodes nearly equal in importance, with many inferior lodes; non all which nearly $\mathbf{3 , 0 0 0}$ pits or shafts have been opened. N. and li. of /acatecas, the conutry is divided into vast breeding estates, and is very thinly peopled. The state has no manalactures, exeept those of the cap, nud a lew in Aguas Calientes; the pop. liviug by mining and rural industry.

ZAFRA (an. Seqedre), a town of Spain, in Esitremadara, prov. Badajoz, 40 m . Sl:. Badagoz, on the railway between it and seville. lops. 5,96 in 1857. The town is regatarly bnilt, and has two squares surrounded with arcades, and many honses of a superior class. Among the latter is the magniticent residence of the dakes of Medina Celi The eflleriate chureh is also a fine edilice, and several other churches are richly adorned. This town had formerly manufactures of gloves and jewellery; but these have decayed, and carthenware and leather are now the principal articles made at Zaifra. It was taken from the Mours by Ferdinmed 1II. in 1\%10.
\%.AMOLSA, a city of Spuin, in Leom, eap. prov. of its own name, near the combues of loortugal, on the Donro, here crossed ly an ancient stome bridge, 3.4 m . NXW. Salmanca, on the railway from Madrid to Vigo. P'op. 9,531 in 1857. Its fortitieations are of considerable extent, and enclose !iparats of 20 churches, 10 comvents, 3 hospitals, infantry and cavalry barracks, $n$ court-hunse, public gramary, and bishop's palace. Without the walls are the remains of an ancient castle. The inhahitants manulacture hats, serges, leather, liguens, mind gunpowiler, and have several dyeinghomses. The eity, which is supposed to have been the ancient Seatica, derives its molern name from the turguoises fome in its vicinity, for which Kamora is the Mourish term. Ahphonso the Catholic took it from the Moors in 7.1s, but it was retaken by the latter in 98.5. Ferdimand the Great tinally amexed it to (astile in 1093, and it was the seat of the Cortes in $12: 3$ and 1302 .

ZANESVILLEE, a town of the U. States, in Ol:io, cap. co. Muskingum, on the Muskingum
 The falls in the river here have made Zanesville the seat of many tour, paper, and siaw mills, sme iron-fomulries, and cotton-factories. ii has inn atheneum, and sereral other schools. Two bridges connect with the town with the village of l'utmam opposite; and it has water communication with both New York and New Orleans; from cither of which stean-boats ascend to Zanesville.

ZANTE (mn. Zarynthus), one of the Ioniam Islamds (which see), of which it is the third in print of magnitude and importince, about 10 m . off the W. coast of the Morea, its eap. being in lat.
 somewhat oblong shape; greatest length NW. to sis. ibvout 20 m .; greatest. breadth, 10 m . Area,
 mostly mountamon, particularly its W. portion, where several summits rise to the lieight of 1,309 fr.; but on the E. side, behind the town of Zante, is an extensive and tertile vale, so covered with curramt bushes ( Jitis Corintliacta), olive trees, and cypressers, iss to entitle the island now, as of old, to the epithet of ' woody.'
'Jam medio apparet fluctu nemorosa Zacynthos.' Sine 4, iii. :270.

About $9,000,000 \mathrm{lb}$. of currants are ammally probluced in this fertile vale. They are acemuted better than those of Cephatomia, but inferior to those of the Morea, 'They are gathered in Aug., and spread ont to dry for three wecks; and for this jurpose a plot of gromm is levelled and kept try before every house in the valley. Mueli depeunls upon the process of drying: a shawer of rain will sometimes diminish the value of the artiele by one third, and a secomd entirely ruin the crop. The learned traveller, Dr. Chandter, has piven the following details with respect to the treatment of eurrants, which may be worth ftuoting (Travelsin (irecce, cap. 79 ) :-'When dried by the sun and air, they are transported to the city on horses and mules, guarded by armed pensalits: and poured down a hole into magazines, where they cake together. When alout to be shipped, the truit is dug up with iron crows, and stamped into casks by men with bare legs aml feet. In the ships it sweats, and, as we experienced, often tills the vessel with a stench scarcely tolerable. The islanders believe it is purehased to be used in dyeing, and in general are ignoraut of the many dishes of which eurrants are an ingre'lient.' 'The honey; oil, and wine of the island are mush estecmed; of the hatter no fewer than 40 dillerent sorts are said to tee mate. Oranges,
lemons, aul citrons are alsio experted, and ahmit 41,010 barrels of salt are ammally pronlueed from the salt works of the islaud. The pitch wolls, visited and describell by Heroleths (iv. 195), are situated towards the S. extremity of the islam, in a small plain, open on one sile to the sea, hint elsewhere circumseribed by hill ramges. It is, partly at least, of voleanic formation, aul occasionally suffers from earthquakes, ome of which, in IXII (Oct, 30 ) committed the most extensive ravages. fin the wells, a dark sulstance is continually foremer itself from the bottom throug. the water, boiling up in harge ghobules, whim hurst when they come to the surfice. The pitch is eollected wath large spoon-like implements: the average amual produce is about 100 barrels, used for smearing ships' bottons.
The town of Zante, on the E. shore of the ishand, is the largest in the Imian ishmels, having about evo,0e0) ifilats. It stamds partly on thin level shore, and partly on some acelivities, one of which is crowned hy its citadel, ancienty callol $P$ 'sophis, fommed by the Areadian Zacyuthus. The town, which is well kept and clom, is supplied with water hy an aqueduct construeted by the lirtish geverument. The reflection of the sun renlers it extremely hot in summer, thongh the heat is a gool deal moderated by the action of the sea-brecee, whel blows during the day. The harbour is capacions, and protected from N1:. winds by a mole, at the extremity of which a lighhouse is arected. Ships anchor opposite the town, at from 500 to 1,009 yards distance in from I2 to 15 fithoms water. Zante is the see of a liiesk protopapas, and of a Rom. Cath, bishop, aud has numerous churches, two synuryues, a lazaret to, and a lycenm ; with some manufactures of linen, cotton, and woollen stuths, liqueurs, soan, ant jewellery. This town suffered severely from the earthinake arremy athudell to.
At the time of the I'elopomesian war, Zaeythus belonged to Athens: it was at an after perion alternately a possession of the Macelonims ant the Romans. Several curions antipuities have been diseovered in the island, and it has been supposed that the remains of Cicero were deposited in a tomb discovered here in 15 H .
ZANZ1BALS, a small ishand on the E. comast of Africa, opposite to Kanguchar, from which it is distant only about 20 m . the town of the same name, on its $W^{\prime}$. side, being in lat. $6^{\circ} 3^{\prime} 1 \mathrm{n}^{\prime \prime} \mathrm{s}$., long. $310010^{\prime} \mathrm{E}$. It is about $\lfloor\overline{5} \mathrm{~m}$. in fength from N .10 S . by about 15 m , in breadth. Pop, estim. at 250,000 . The W. eonst is low, and in parts marshy; but the const is bohd and well wooded. There are munerous harbours between the island and the mainhand, formed by sumber istands and reels, which are sate and not ditticult of aceess. The anchurage opposite to the town is at once secure and eapacions. The indmit is well watered, producing considerable quantities of excellent sugar, with rice and other grains; and provisions and fruits of all sorts are almudant and cheap. Thomgh the hills in the interior are not sulliciently thigh to interrupt the course of the sea breeze, the island is but indiflerently healthy, at least to Europeans. The inhahs. are mostly of Arab extraction, aurl profess the Dahommedan religion. The island belongs to the Imaum of Muscat, who oceasionally resides upon it. The town is built in the Arahiam style, an! is defended ly a castle, which, hwever, is of little streagth.
Zanzibar is the centre of a consilerable commerce, with the opposite coast of the continent, Madagasear, India, and Aralia. The experts comprise gums, ivory, antimony, blue vitriol, cocoit-nat oil, hides, horns, and sugar. Formerly

Il, and about rowluced from pitch wells, (iv, 195), are the island, in the sea, but nges. It is, n, and occane of which, ast extensive tance is rontorn throny bules, whicol

erable come continent, The exports to vitriol. Formerly
shaves wrore a principal artiele of export. Fancy shells are also exported, altil the shell known in commeree by the name of the bull-mowh, laving been used in the mandacture of imitation eamens, was extensively imported into (ipat liritan while these articles ware in fashion; but since the demand far them has fallen off, the value of the shed and the quandity imported have proportionally declined, The imports comprise arms, glthe powiler, cutlery, coarse cotton stalls, beads, wire, and iron. Simall vossels of about 200 tons borden, calloil dows, are built on the istand.
Z.ARA (an. Judera), the coly. of Dalmatia. cire. of sume nime on the Alriatic, opposite the ishand
 The town stands on a small peninsula, and is fortitied with bastioned walls nud several ontworks. It lans many goor privatedwollines, but its strects are natrow and ill-drainod, and it sullion from a deficieney of water. It has a cathedral and several ot lare charehes, 10 convents, a musal and military aremal, full a thentre; with a lyemm, gymmasiom, episcopal seminary, many inferior sehools, nul a musemm of antiguities, Its harbour is spaeions, but exposed to N, wimls, which sometimes blow with tremendons violence. The coasting trale and tishories emplove most part of the inhabse, and a ereat mamber of vesseds are owned in the port. The mannfacture of rosomfio is almost the buly other lwanch of indinstry earried on, and that at present to a very limited extent. Zara is an archbishop's see. the residence of it geucral eommandant, and the sat of all the siperior provincial emots of Dilmatia. Without ins wallsare the remainsof an ancient aqueduct; but, with this rxreption, few other lioman antiquities exist in Kara. in conserpence of their haviag been wostly emplayed in the buiding of the fortilimions.

ZEXiL. INI), the largest and most important of the Danish iskands, being that on which Copenhigen is situated. It lies nostly between the bith allul sbth dexs, of N. lat, amil lones. $11^{\circ}$ and $120 \cdot 10^{\prime} \mathrm{j}$, at the entrance of the Batice, being separated from sweden by the somod, and from Fumen and Lamgeland by the Great Belt, Area, $2,830 \mathrm{sq} . \mathrm{m}$. 1'01, 565,510 in 1860. like the rest of the Danish islands, it is lat, or at most gently undulating, and is in parts intersected by camalis. The climate is mist, amb similar to that of the S . of seothand. It is well eultivated, and is exceedingly fertile, producing grain of all surts, especially rye, barley, oats, and wheat, The pastures ate excellent, and the island is celebrated for its breed of horses. It is also well stocked with cattle and sheep. Wood is plentifill, except in the middle of the islimb, where turf is used for fuel. It is studded with cottages, limme, and comotry-houses; bearing a greater resemblance to bighand than is exhibited by most comtinental districts. It is also the pribicipal seat of the manafactures and trade of 1 lemmark. It is snbdivided into $\tilde{0}$ batimicks, and is governed by a gramb-baitifl ; it forms, of itself, a separate eaclesiastical superintendeney.

ZEDM.NND (NEW), a rampe of Circe principal and some smatler istands in the S. lacitie Orean, helonging to the Anstralasian group, and forming a British colong: The range extends in a curved line, hetween $3 ; 0^{\circ}$ and $47^{\circ} \mathrm{S}$. lat., aull $166^{\circ}$ and $1790^{\circ} \mathrm{E}$. Lonk.g about $19^{\circ} \mathrm{E} . \mathrm{of}^{\circ}$ Anstratia and Vian Diemen's Land, Wening the land nearest to the antipodes of Great britain, The principal islands are, from their position, called the North, the Jiddle, and the South, or stewart's lshand. 'The first two, which are by far the largest, are siparated by the narrow chamed called Cook's Stait, in about the Hot deg. of S .
lat.; the sonthern becing separited from the midale isham ly a similar strait, in about the dithe deg. $s$. lat. The lenget of the enrved line extending thromerh the three inamis, from tho N. to the S . Cape, is about 900 m ., the two laresest being of great length as compared with their brearlth. The area of the contry is cotimated at. 12e,061) square miles, or nearly sil minion actens two-thirds of which are fit ed for arrieslatere and grazing. The North Island contains ahoat : 11 ,
 Stewart's lslami, minhabited-amb, as many think, uminhabitable-contains abont $1,000,0109$ acres.
'The population of New Zalamb, acominis to the eensins of l hec., leti, is given in the following table:-

| Proviners | Males | Females | Total |
| :---: | :---: | :---: | :---: |
| Ancklant. | 13,49] | 10, 20.6 | 2t, 0 (2) |

The estimated total population of New Zealamd, caleulated after the returns of the liegistrar-Gome-
 18ti3, of which number there were -il, biso matics and $4 f, 1: 2$ females. The British trouss stationed in the colony and their familien were not inchuled in these retims. The increase of population in: $\mathbf{B}^{\prime}$ years had been nearly 72 per cent.

Now Kanamb, like the majority of the S. Sea Ishands, is of vole:mie origin. A chatin of lafiy momatains ocempes the econtre of the Niddio lsiand through its whole lenghl, extentiner also through more than half the length of the $N$, Island, The momatains on both sides slope erritdually towards the sea, leaving on both sides a large extent of shelving lorest, plain, ame mash lants. Here and there along the line of the Cordillera several high smmnits, overtopping the rest, rise into the region of perpethal show. There are likewise several suborilinate ranges of hills, and some detached outlying mountains of large dimensions. A few of the mombains are barren, or clothed with fern : but by far the greater mumber are covered, up to the ranige of perpetnal snow, by magniticent timber trees. There are some pretty extensive phateans, or tracts of table lamu. The comatry is extremely well watered: a great number of streams, athording an malimited eommand of water power, desemb from the central chan on both sides. leew ol the larree rivers have been surveyed to any great distance, but the Wrakiato and others are of considerable size amil iengeth. There are numerous lakes. The storess are in parts iron-bomed and dangerons: lout all the ishands, and more particularly the N., have mang excellent bays and harbours.

Among the mineral productions are frold, copper, iron, and eond. The gold-riggings are in Auckland, Nelson, and Otago. Those of Anckland are not very productive. The Nelson digetines yield gold to the value of 2,000) a week. Nineral stores of immense extent are believed to be in existence not liar below the soil in varions parts of New Zealame. The total quantity of gold rexpurted tram New Zealand from spril 1, Exit: t. September 30: 1863, amounted to 1,130,7(is vz.,

## 7EAILAND (NEW)

of the value of $4,37,7,7081$. Coal las been found innl wrought to some extent at Nelsom, New I'lymonth, and at other points in both the larger indands, Iron ore is nbmulant, which also is anlirmed to be the case with copper, manganese, mad other metals; amb pumice-stone, sulphor Whinstone, limestone, slate, marble, fullers' carth, and chay for brick-burning are met with in the preatest profusion. There are some aetive volcanges: and in the N. Ishand are varions cavities, which appear to be extinct eraters, in the vicinity of which muncrous hot springs are met with: some of these, as they rise to the boiling peint, are used by the matives for cooking. Mommt ligmont, an extinet volcano. in the SW. portion of the Northerin Island, hear the $N$. entrance to Cook's straits, is suid to be $\mathrm{s}, \mathrm{8} \cdot \mathrm{f0}$ feet in height.
The elimate is tempernte, bearing a considerable amalogy to that of France and the S, of Eughame. The comutry is free from the oppressive heats that prevail at indediy in Sydncy; and, what is of greater importance, it is not subject to the long continmed dromghts that athict the Austratian continent, Jut it is sulyject to severe storms and hurricanes. Strong winds, principally from the NE. or SW., always oceur at changes of the moon, froquently bringinis rain, particularly in the winter months. In the interior, the weather is colder, bat more equable than on the coast. The chmate appars to be gencrally salubrions, and favourable to longerity; the prevalent dlseases are mostly those which have been introduced by Europeans, thomgh in sme situations the matives suther from serohulous and glandular affections.

The following comparison lats been made between the chmate of london and that of Wellington, nearly in the centre of the group:-

|  | London | Wellington |
| :---: | :---: | :---: |
| Mean Ammal Temperaturo | $60 \cdot 39$ | $52 \cdot 50$ |
| Jean of Winter - . | $39 \cdot 12$ | $48 \cdot 8.5$ |
| Mean of Culdest Month | $37 \cdot 36$ | 44-0.5 |
| Mean of Hottest Month - . | $68 \cdot 43$ | $6.4 \cdot 25$ |
| $\left.\begin{array}{l}\text { Average Number of Dave on } \\ \text { which hain falls. . }\end{array}\right\}$ | 178. | 12S |
| $\begin{aligned} & \text { Mean Aumal Quantity of } \\ & \text { Rain in Inches . } \end{aligned}$ | 24'80 | 28.73 |

The country presents the aspeet of perpetual vegetatim, most of its indirenon veretable products being evergreens; and the soil, which, in most of the valleys hitherto explored, is a deep luam, or vegetable mould of great ferility, is well alapted to the growth of nearly all the usefin vegetables of Europe. New Zaaland has neither a tropical chmate, nor is it a limd m which edible vegetables and fruits, indigenous to such regions, grow and flourish spontancously and abundintly; and it has no mative animals adapted for the food of man, and easily obtainable by the chase. The ishands are, at present, in great measure, menltivated wastes, consisting of mountains covered with dense torests, of phains and molulating grounds, sometimes heavily timbered, and sometimes overrun with fern and sernb, and of swamps and marshes, covered with rushes and thax; but it has eomparatively few open spaces of grass-land for tillage or pasturage, or of downs and hills for sheep. In many vast tracts there are no living animals, wild or domestic, to be seen; and whatever is produced for the leod of the pop., whether of grain from arable lanl, or of stock from pasture, or of tish from the sea, must be the result of censiderable labour, care, and expense.

When once cleared, the soil is generally of a superior eleseription, and suitable to all sorts of hushandry practised in Britain, 'Ihe dry, alluvial,
and heavily timbered tracts are the most fertile; and the swampy traets, especially it they be covered with thax, are also, when drained, extremely prownetive. The dry uphand uromods, it' they be well eovered with luxuriant fern and scrub, are saill to be, in most localities, of a fair average fertility ; but where the forn is short and stmated, the soll is decidedly inferior. Where the sides of the momitains are well wonded the soil is frenerally goon; bit, except where the slopes are formed into terraces, it is apt to be washed down on the trees being folled and their roots rotted. The soil of the purely volcanic districts depends on the extent to which the surface mat ter is decompused; in some parts it is very fertile.

Grain of all kimds, fruits, and vegetables grow lasmriantly. Potatoes, originally introduced by Captain Cook, now form the principal food of the natives, Two crops are ammally obstained frem the same gromul. The smbjuinell table shows the extent of land under crop, in the possession ef Europeans, at the commencement of 1861 .

| Description or Crop | $\begin{aligned} & \text { Land under } \\ & \text { Crop) } \end{aligned}$ |

Timber, of which the supply is all but inexhanstible, has alrealy become, and, no doubt, will continne to be, an important article of export to Sydney and other places. The trecs, which are principally of the pine species, sometimes attain to an extraordinary size. $A$ tree, of the variety called haury pine, cut and shiplyed recently, meaisured $I 50 \mathrm{ft}$. in length, und 25 ft . in circ, at the base. A species of gam exndes copiously from the stumps of these trees when cut down. It hardens in the air, and being collected by the natives is exported as an article of merchandise. This tree is only found in perfection in the $N$. parts of the N. island, and the gromed on which it grows is quite mensitable for cultivation. The hahikatea, or white grmm, and other varieties, are finnd in the greatest perfection in the middle and sonthern islands. There are a great many woods suitable for furniture and faney work. Some of these are tinely, rained, and may probably bear the cost of a voyage to Engriant.
Flax is one of the principal products of the colony. It is obtaned from the leaves and not from the stem of the Phormiam tenax, an indigenous plant, fomm in the greatest abmanane in the marshes of the larger islands. The best varieties are distinguished by the length, toughness, and tlexibility of the fibre. Much ditherence of opinion has, however, prevailed in regard to its quality, and the imports into England have not sold well; but this has been ascribel partly to an inferior variety having been exported, and partly to its defective preparation, which was, at tirst, wholly intrusted to the native women. The tihore, or silky variety, is said to lo very superior, and its preparation and mannfacture are beginning to engross a larger share of the attention of the colonists.

Exeept a fow eattle and sheep in the possession of the misisionaries, and a small number of eronts,

I the pussession mimer of goats,
no kind of live stock existed in New Zealand, down to a very late epuch, except pigs, These, which werointroduced by Captuin Cook, have, from the great abundance of fern roots, their favourite food, multiplied exceedingly. They have been allowed to rum wild by the natives, who eateh them by means of dogs. The number of each kind of live stoek, in the possession ul liuropeans, in 1860 and 1801, is shown in the following table:-

|  |  | 1860 | 1801 |
| :---: | :---: | :---: | :---: |
| Horses | - - | 10,58, | 11,912 |
| Cattlo | - | 106,502 | 137,204 |
| Sheep . | . | 1,0.1, 37t | 1,523,324 |
| Swine | - . | 411,318 | 40,734 |
| Goats : | - . | 10,089 | 11,797 |
| Mules and Asses | - | 104 | 122 |

It is remarkable that when New Zealand was first discovered, it had no indigenous nummalia whatever ; indeed, its only quadrupeds were a few species of lizards, which the inhabs, held in veneration or terror. Horses, eattle, sheep, and other useful animals, have all been imported: even the flog and the rat liave been introduced by Earopeans. A gool many parrots, parroquets, wild dueks, pigeons of large size and fine tlavour, inhabit the forests; and ponltry are fonnal to thrive very well, though not yet reared to any great extent. Indeed, almost the only animal food used by the New Zealanders, previonsly to the settlement of the English, was the fish, which abound round the eoasts.

The soil and climate are well suited to the growth of cattle, sheep, and other useful animals. The wool of New Zealand is of a very good quality, and the exports of it are progressively increasing, though the want of down lands and of open spaces for their pasture makes the increase of sheep less rapid than in Australia. The weight of the fleee is greater here than in NS. Wales and the contiguous settlements. The depasturing by sheep is said to improve the quality of the runs, the fern disappearing, and fine grass springring up in its stead. Cattle attain to a large size, and thrive extremely well. The seas and bays round New Zealand are stocked with a great varicty of excellent fish, and the country is extremely well situated for the suceessful prosecution of the S. whale-fishery. This branch of industry is carried on to a considerable extent, and whale-oil and whale-bone make prominent articles in the list of exports. The colony appears to possess every facility for the binilding of ships.
'l'he natives, who are called Maorians, probably belong to the Malay family, and, if so, are by far its best specimens. In general the men are tall, many individuals of the upper classes reaching the height of six feet and upwards. They are strong, active, and almost uniformly well-shaped. Generally speaking, the forehead is retreating and nerrow, though rather wide at the base. Hair commonly straight, but sometimes curly, particularly that of the women, who are frequently handsome. Colour resembles that of a European gipsy, but varies in individuals from a dark ehestnut to the light tinge of an Euglish brunctte. Eyes dark, deeply sunk and full of vivacity; the teeth, which are white, even, and regular, last to old age; the features, though prominent, are regular; their plysiognomy bears 110 sign of ferocity, but is easy, open, and pleasing. They make excellent seamen, in which capacity they are extensively known. Except occasional camibalism and infanticide (both of which have greatly decreased of Vol. IV.

Inte years), they manifest fewer of tho vices of suvures tham ulinost any other savage people. Their mannfactures, when thrst discovered, were but few, and mostly contheal to the firniture of their huts, articles of dress, weapons, and uther neecsaries. But they prepared mats and other articles in thax of great heanty, and evinced murh ingenuity in carving and buitding canues. They lave an ahminate of poetry of a lyrieal kind, in a metre which appenter to be regulated by a regaril to quantity, and are passionately fond of masic. They lave also a kind of astronomy, and, aceorling to baron lligel, there is not a tree or even a weed, a tish or a biril, in the N. Island, for which the natives have not a nume universally known. Unlike most other uges, they have evinced the greatest aptituce tor acquiring the arts, and the greatest desire to partieipate in the advantages of civilised life a considerable proportion of the natives nre sla res to others, who are themselves dependent, to some extent, on certain arekees, or head chiefs; hit: the lotders of slaves appear, notwithstanding, to have independent eontrol over their own lands, and to dispose of them at will, without the consent of the arekee. Polygamy is practised by such of the New Zealanders as continmeatmehea to their ancient stiperstition ; but the missionuries, who have establishments in many parts of the islands, have, aecording to thei: own aecount, been eminently suceessful in converting them to Clinistianity. Schools also have been established in which the matives are instructed in the Jingrish language. The total number of ahorigines, in each province and district, according to the repurns of a census taken between September 1857, and September 1858, was as follows:-

| Provinces | Nales | Females |
| :---: | :---: | :---: |
| Anekland | 21, 1:30 | 16,560 |
| Taranki (New Plymonth | 1,751 | 1,264 |
| Wellington | 4,5\%31 | 3,540 |
| Hawkes Bay . | 2,044 | 1,629 |
| Nelson - | 6812 | 428 |
| Canterbury | 31! | 2 2 : |
| Otago - | 285 | $2 \cdot 40$ |
| Stewart's Island \& Runpuke | 110 | 90 |
| Chatham Islands . . . | 247 | 263 |
| Total | 31,667 | 24,303 |

After having made remarkable progress in all the arts of civilization, and, mofortunately, acquired also the art of using guns and gunpowler. the natives engaged in sangninary warfare with the European settlers at the begiming of 1863, and the strughle kept raging, with more or less intermission, all through the years 1863, 186-1, and 1865.

New Zealand was discovered by Tasman in 1642, but its extent and elaracter were not aseertained till the voyages of Cook in 1769 and 1774. From that period, the consts were occasiomally visited by whalers, and some communication wis held with the matives; but no permanent settlement appears to have been made by any people till about 1815 , when a missionary station was established in the Bay of Islauls, towarls the N . extremity of the N. island. Though the right of Great lbritain to these islands was recognised at the general peace, no constituted authority was placed over New Zealand till 1833, when a resident, subordinate to the government of New South Wales, was sent hither, but with very limited powers. Meantime the shores hat become infested by marauding traders, rnn-away convicts,

K K
and other unscrupulons characters, who introduced a taste for ardent spirity, varions diseases, and much demoralisation. These persons also swiulled, or attemited to swindle, the uatives out of large tracts of laul, by getting them to subscribe contracts, of the real import of which they certninly knew little or nothing, by whieh entire districts were eonveyed awny for the merest trifle. Under these circumstances, it be came neerssary to establish a government sulliciently strong to protect the aborigines and the real interests of the eolonists. Accordingly in Jan. Ix.II, New Zealanal was constituted a colony, and a governor appinted, who immediately proclouined, moug other ammonecments, that all purehases of hand would, in fiuture, be void unless comburted through the liritikh heal government. lhat shartly befiore the furmal ocempation of these islands, the munia for speenlatugg in land attained to an churmous extent ; and vast tracts, equal, in faet, to provinces, were aequired by a few individuals, belonging to the islunds, to Syduey, and other parts. It was nut, therefore, enough to prevent such wholesule acpuisitions in future. Jnstice to the natives, on the one hand, nod the best interests of the colony on the other, made it imperatively necessary that the gromuls on which the claims to land were mate should be carefilly inquired into; that in all cases in which the matives had been swindled the grants slowld be cancelled; and that, when contirmed, their extent should be limited. In eonsequence of these eonsideratious, a commission was appointed to inquire iuto the validity of all chaims to land; and the commissioners were instructed to reeognise those only which were fomided on fair and equitable considerations, with the innportant proviso, that no claim for land, when allimed, should be allowed to a greater extent than 2,0600 acres.
The N. Zealand Commany, established in 1841, for the promotion of colonisution in the islands, acpuired in this view a right to extensive trats of land. It had not, however, been long estalhished till disputes hegan to arise between its directors and the novernment ; and great diticulties were also experienced in adjusting the rival land chains of the crown, the natives, the colonists, and others. Hence the affais of the islands were fo: a considerable period in the greatest confusion. The natives and the colonists went to war, and the rend or alleged grievances of the $\mathbf{N}$. Zealand Comptuy engrossed a large share of the attention of parlinment. For a time, however, these differences were adjuisted, and it was not until the year 1863 that, as above stated, a new struggle, liercer than auy precediug one, broke ont between the natives and the Eirropean settlers.
The present form of government for New Zealand was established by statute $15 \& 16$ Viet., cap. 72. By that Aet the colony was divided into six provinces, sinee increased to nine-viz. Auckland, Taranaki, Wellingtom, Otago, IIawkes Bay, Mariborongh, Nelson, Canterbury, and South-land-each governed by a superintendent and a provincial council, consisting of not less than 9 members. These members of council are chosen by the votes of the inlabitants of the different provinces, and the qualification for members and electors is possession in the district for which the vote is given of a frechold estate of the value of 501 ; or a leasehold estate of the annual value of 101., held upon a lease which at the time of registration has not less than three years to run; or being a householder within the district of the clear annunl value of 101 , or within the limits of a town of the clear amual value of $5 l$. Aliens are disqualified. Every council continues for four
years from the day of the return of the writs, untess dissolved by the governor. The superintendent and council of each province, with certain restrictions spectlled in the act, have the power of making stiels laws as may be required for peace aud order. Such laws are, however, to be sent to the governor for his assent, and may be disallowed withlu three months after their receift. No laws havo any furce until assented to by the governor. A general assembly, consisting of the governor, a legislative commel, and a honse of representatives, is also established by Aet 15 \& 16 Vict., eap. 72, Legislative councillors may hold their sents for life. Members for the homse of representatives are elected by clecturs possessing the smue qualitications an those who can vote for provincial comeillors. An elector is also funtitled to be $n$ member. The house of representatives is to consist of 53 memhers-see 24 Vict., cip. 12-elected by 43 electornl distriets.
The total revenue of the colony for the years 185ti-62, and the expenditure for 1862 -former years heing murepred-are shown in the subjoined statement :-

| Years | Hevenue | Fxpenditure |
| :---: | :---: | :---: |
|  | $£$ | $£$ |
| 1856 | 188,398 |  |
| 1858 | 34,665 |  |
| 1869 | $469,6,19$ |  |
| 1860 | 464,738 |  |
| 1861 | 161,464 |  |
| 1862 | $1,186,009$ | $1,513,697$ |

The control of native affitirs, and the entire responsibility of dealing with questions of native foverument, were in 1863-6.t transferred from the imperial to the colonial government.

The prineipal British settlerents consist of AuckJand, the cap., on the E . side of the N . island, on the $S$. side of Waitemata harbour, lat. $30^{\circ} 51^{\prime} 27^{\prime \prime} \mathrm{S}$., long. $174^{\circ} 45^{\prime} 20^{\prime \prime} \mathrm{E}$, ; Wellington, the eap, of the S. prov., on the le, side of Port Nicholson, near the S. extremity of the N. island in Cook's Straits; New Plymouth, or 'Taranaki, on the E. const of do.; Nelson, at the head of Tasman's Gulf, N. shore of the middle island; Akaron, near the extremity of Banks's Peninsula, on the J. coast of do. $\boldsymbol{A}$ settlement established at Otago, on the SE. coast of the middle island, is patronised by the Scoteh Free Chureh; and a settlement entitled New Cauterbury, has been founded under the patronage of the leaters of the established chureh. It may be doubted whether nuel judgment has been displayed in the selection of the majority of these sites. At Auckland there is no good landing place even for small vessels, and the water in-shore being shoal, ships load and unload with difficulty. It is stated by Mr, Southey (Treatise on Colonial Wools, $]$. 145), that a slip laden with coal, of which the inhab. were at the time in wint, was obliged to leave the port from there being no chance of her being able to diseharge her cargo within anything like a reasomable time. The town is also indifferently supplied with fresh water, and the comntry is bare of wood, and comparatively unproductive. Wellington is hemmed in by ranges of mountains which in great measure shint it out from all communication with the interior, though this disadvantage has been in part overcome by the carrying of good roads through the ranges in question. It is also frequently exposed to heavy gales of wind; and the water in-shore is so shallow as to linder vessels of ahove 80 or 100 tons burden from reaching its wharfs. luit despite these serious drawhacks, the town is said to be

ZEALAND (NEW)
in a thriving state. The situation of Nelson is also oljectlonable, being built at the head of a deep bay, having a narrow and dangerous entrance. Aecording to governor (irey, the harbour of Akaron is one of the best in the colony, and he farther says that its soil and climate are excellent. Althourh New \%ealand is justly celebrated fior the number and excellence of its bays nud harbours, lat little sagacity womld apjear to have been evinced by the early settless in prolting lis them ; and it is probable that the sreat emporia of the istands will be fomuded hercatter in situmtions more aceessible and better suited to shipping and mavigation.

The total value of ingorts and exports of the

| Total | 8,935 | 92,339 | 84,290 |

When New Zenland becomes reasonably wellpeopled, or has a pop. of one or two millions, she will probably be distinguishel by her manufactures. Her geographical position, temperate climate, and the conmand of vast water power, of unlimited supplies of coal, iron, and the useful metals, and of timber, woot, flax, and other raw materials, give her almost mequalled advantages for the successfal proseention of manufacturing industry. Agriculture, however, including therein

ZOMBOR
499
the clearing of the land, mines, and fisheries, but especinlly the flrst, inust for a lengthened periord be the most advantageons business in wheh the colonists can engage.

New Zealand lass been crected into a bishopric; and it has a mumerous body of clergymen of varions denominations, and of missionaries.

Zlill'\%, a town of l'rusian Saxony, reg. Mersethar, cap, cire, on the White lijster, hore erosed by a stome bridge, e2m. Wisll. hainsic, on the rilway from leipuie to diara, pop. 1t,2ik in leitl, exclusive of a garrison of di3l. Keitz is walled, is divided into, un "川mer and hower town, aml has a cathedral, and several other churedow, varions hospitala, two ciastles, bue of which was formerly the residence of its prinees, but now serves for a house of corroction, a grimasimm, with a pablic libary of $1 ., 000$ vols., int mantifactures of catton gools, earthemware, leathor, and slones; with eottom-printige emtablilshuments, brewerios, and distillortes. It is the seat of the ordinary circle courts, of an evelesiastical hoard, and of a Calvinist college. The mardens and gromals in its vidinity are celebrated for their neathess, and the attention bestowel on them.

ZBLLL, or CLILLEA, a town of I'russia, distr. Jincharg, on the Nher, where it receives the Fuse, mid on the railway betwen Ihanower and
 1xis. The town is well buidt and praved, and has lathornn, Calvinist, and Li. Catholic churehes, an old castle once the residenee of the dukes of Libnebrar, a large penitentiars, a medical colloge, Latint sehoul, society of arricilture, and a finmous riyal breeding stid. Its indabs, mamufacture linen cloths, hosiery, flamel, and hats, and have a brisk transit trade both by the Aller and by land. Celle was long the seat of the high court of appeal for the former king dom of lamover.
Zell was the residence during the later years of her life, of the unfortunate Matilda (queen of Deumark, and sister of George I, of Vingland; and a momment to her memory stands in the palace farden.

ZFRBS'l, a town of N. Germany, territory of Anhalt-Dessan, on a small tribntary of the lilloe, $17 \frac{1}{2}$. SL: Magdeburg, on the railway from Magdeharg to leipsic. Pop. 10,489 in 18til. The town is walled, and entered by 6 gates; has an old castle, several charches, one of which is among the tinest structures of its class in Germany, two well-enduwed charitable institutions, an orphan asylun, a hense of correction, and a large scheol termed the Franciscemm. It is the seat of the high court of appeal for the duhalt and Sehwartzburg priucipalities; and till near the end of last century it was the residence of the clucal family of Anhalt. It has mamufactures $a^{3}$ jewellery and earthenware. The limpress Catherine il. of Liussia was a princess of Zerbst.

ZITTAU, a town of the kingdom of Saxony, eirc. Bautzen, on the Mandan, a tributary of the Neisse, 50 m . ESE. Dresden, on the railway from Dresten to Viema, Fop, $1,1,090$ in 1861 . The town is tolerably well built, and has numerons churches, n gymnasium, publie library of 18,000 vols., honse of correction, and varions charitable institutions. It is the centre of the linen mantfactures of Lusatia; and most of its inhalss. are occupied in the weaving of damasks, tieks, and otherlinen fabries, or of cutton and woollen eluths; and in bleaching, printing, carding, and other auxiliary oceupations. Zittan has atso porcelain factories, paper-mills, and breweries, and a large trade in flax. It was the birthplace of the great orientalist, 13. Michaelis.

ZOMBOR, a royal free town of IInngary, co K K 2

Hass, of which it in the cape, th an extensive plain near the Franels camal, unitling the Damule and the Theiss, 118 m , S. by E., D'estl. J'op, 21 , ise 0 II 18:7, Yomber has aeveral fime buildiugs, int chuting a co. hatl, town-honse, severnl churehes, harracks, min the goverment ofltes. Here, also, is a tireek ecelesinutienl seminary, mad a liommi Couth, high school, with some silk mmufactures, and a considerable trate in corn, wine, and cattle.
$\%$ Líi, a ceanton, lake, and town of switzerlnud, in the central part of the Conned. The canton, which is the sumallent in Switzerland, is anclosed betwern the ter. of \%urich on the N., Selhwy yon the Lis, mill S., and a small part of Toncerne anil Aargni on the W.; from which last it is semarated by the lifuss. drea, 85 mp . m ; a consilerable pirt of which is oceupied hy the Lakes of Kug mul Liguri.
 N. of \%as, the surfare is wholly momintinous, but die menntains do not rise to mive great clevation; the highest, the lansherg, on the S. burber, being little mure than b,imo fo alowe the sen. I'rincipal rivers, lemss. Silh, which forms the NE, bemulary aud lartz, which bringes the waters of the Eigeri lake inte thint of \%ug, mal forms also the outlet of He hater towarls the henss. The Sake of \%us, prineipally comprised in this emuton, but purtly in lhat of schwyta, and intermelinte in situation, as in character, between the Lakes of Karich and lanerne, is nbont $8 \frac{1}{2} \mathrm{~m}$. in length, N. to s., by 3 m. in its greatest lireadtl. Its area has been estimatel at about $10 \mathrm{sq} . \mathrm{m}$., and the height of its surfince ulove the level of the sea, at $1,18 \%$ Eng. l't. Its waters are of a very dark blue colour ; mul though near the town of Zug, its depth appears to be only alout 200 ft ; at its S. extremity it is snid to exceed $1,200 \mathrm{ft}$.
The hanks of the Lake of Zug are well cultivated, richly wooded, and in general sloping, exrept on the S. and SW. sides, where the Righi and liossherg rise nbruptly from the water's elge. The lake alomuls with fish, the taking of which forms an important necupation of the inhabs, of its vicinity. Some indifferent wine, with cider, are made, und considerable quantities of aplles and other fruits are grown for exportation: but the prineipal empheyment of the popp, is eattle breeding. A few silk and eotton frobics are woven, cotton yarn is spme, ame at Zug, Cham, aud Batar are some tamneries and paper-mills; but the manufictures of the canton are comparatively insifuiticant. The govermment is strictly denocratic. The cantonal comeil is composed of 54 deputies, cleted for two years by all the male citizens of the cauton above the age of 19 years, who are not bankrupt, pauper, or mader peinal condemmation. This conncil exereises all the orlinary administative functions. The legishtive power is exercised by the triple council, composed of the cantonal comucil and two alditional mems, for enela deputy, chesen, like the deputies, triemially by the communes. The general assembly meets ammally in May: its landamman or president being taken allermately from the two circles into which the canton is dividel. The deputies are paid for their sorvices, at such rates as can be aflorded by the communes which send them. The chief eriminal tribunal consists of 25 mems., and the oriliniry civil tribunal of 6 assessors and the statshalle: the latter becomes a final eourt of appeal by the addition of ti mems. chosen ammally by the cantomal comeil. Civil causes below the amount of 12 franes, mistememours, and other matters of minor importance, are deeidel by the commmal assemblies and tribunals. There is no tax of any kind in the canton. The public expemditure of the cantom amounted to 160,000 francs, or 4,6101 .
in 1862. Rug furninhes a contingent of 250 men to the army of the Swisn Comfed.
$\% \mathrm{ng}$, the cap., on the NL:, side of the lake of the aame nume, li, m. s. \%urich, on the rallway from
 The town is pheasmitly sithated, and has several groed churehos, to one of which is attuched a curions gulyotht, comtaining many lomdrels of skulls, eneli labelled with the name of its origimen ронменяог.
The people of this cantom are of a German stock, nod for the most part similar to those of Schwytz, though hess hamemt and superstitions. They are all Roman Catholies.
ZUHAClI (CDNTON OF), a canton of Switzerland, ramking second in the Contenderation, and being sulperior nlaso in pop. nud importance to most of the other cantons. It extemins hetween Int. $47^{\circ} 10^{\prime}$ and $17^{\circ}$ '110 N., and long. $88^{\circ} 20^{\prime}$ and :10 L., having E., Thurgan mul St. Gall, s. the Lake of Zariell und the eant, \%ug, W. Aargan, and N. Schallinusen mal laten, from which it is partly sepurated ly the Whine, langth, N. and S., abont 311 m ; preatest breadth, 25 m . Area, (ix.)
 all Protestauts. Surface geucrally umdulating; aud, though pirturesque, it presents none of those grand hatural features whichi arrest the traveller's attention in the emontons further S . Several mountain, or rather hill rmpers, enter \%urich, but the highest summit, the Iforuli, near the E. border, scarcely rises to 8,8100 ft. above the sen. After the Whine, the princibal rivers are its tributaries, the Limmat, which drains the lake of Zurich, 'Thur, Toss, and Sihl, with the lienss forming a part of the $W$. border. Of these, however, only tho limmat is navigalle. The (ireiffen, famous for its fine cels, and several smaller lakes, are in this canton. Climate mild; the mean amunl tempio a i Zlirich is about $4 x_{3}^{\circ}$ Fall. Nowhere in the canton is the gromid perpetually eovered with snow; and the soil is in general proluctive. Agriculture is perhapsbetter conducted in this than in most other parts of Switzerland; manuring is well understool; and irrigation is suecesslilly practised. An English traveller says 'Anywhere in the neighbourhood of Zlirich, one is struek witl the extraordinary indhastry of the inhubs, ; and if we learn that a proprietor here has a return of 10 per cent., we are inclined to say, " he deserves it." It is impossible to look at a lield, a garden, a hedge, searcely even a tree, a tlower, or a vegetable, without perceiving proofs of the extreme care nud industry that are bestowed uipon the cultivation of the soil. If, fur example, a puth leads through, or by the sile of a field of grain, the corn is not, as in England, permitted to hang over the patls; Int is everywhere bomded by a fence. It you look into a field towards evening, where there are large beds of caulitlower or cablage you will find that every single plant has been watered. In the fardeus, which, around Ziirich, are extremely large, the most punctilious eare is evinced in regard to the culture of every prowluct.'
The labouring elasses in this canton are almost universally proprietors of the small farms and cottages which they eultivate and inhabit. The corn grown is insufficient for the pop., but great quantities of fruit and garden vegetables are raisel. The vine is fenerally eultivatel. But though improved the wine is still very inferior. The pasture lauds are not extensive; and no great quantities of farm stock are reared: a very large breed of cattle is lowever prodneed by a eross between those of this canton and those of Sclowyt\%. Some iron, conl, and salt, are met with but mining industry is not of much consequence.

Zarich is one of the prlacipal mannfacturing cuntons of Switzerland; its inhabitants generally dividing their attention between the hatorers of ugrinithure atul those of" the loom. "I haveseldomin entered,' mays I)r. liowring (Commosercind Reyorts), 'a rural itwelling without timeling one or more looms in it, employad in the weaving of silk or cotton. If the latoors of the held demand the lunds of the peamant, his wife or chilitren are oeeupied in manufacturing industry. W'lien lighter toils suthee for the arrienltural jart of the family exertions, the females mid the young people renign the loon to the father er the brothers. The intorstices of agriculturat labour nre inled up lay mannfacturing employment: and in more than hati of the operathons of Zirich the farmer and the wenver are united.' Cotton anil silk fabrics are those primepmily promtued. The silk fabries ronsist of florentines, gros de Fuples, mareelines, tathetas, levantines, handkerchiefs, crapes, shawls, and velvets. larly in the prosent century abont b,, 000 lowas were employerl upon these formets; hat since the pace they lave rapibly increased. The disturbances at ligons, in 1 eili, were the canse of many Lyous' workmen settling in Zirich, The anmunl vatie of the total prosthee of the silklomes has been estinated at bion,000). sterlitis. 'The cotton mannfactures of \%irich had their urigin i! the oth century, their two principal sents being then, as now, Z/irich mat Wintertlur. Thero are sad to be noont 12,000 eotton weavers in the canton, and 1,000 persons engaged in other trades connected with the cotton manafieture, producing anmully 800,000 pieces of cotton, Cotton spinning is also extensively carrical on ; but the other mamafactures are not of very great insportatee. The woollen trade does not employ :100 hands, and the linen manufacture is now alunust wholly extinguished. The imports of Zllrieh mainly consist of cotton and cotton yarn, woollen cloths, colonial products, bark, straw hats, linens, furs, glass, stationery; wheat, principally from Swabia; wine, lemely, fruits, tobneco, firwood, raw silk, lonter and cheese, and minerals. The expurts are cotton cloths, barticularly Turkey reds; silk goods, eliedly plain; machinery, tameel leather, kirschwasser, and sometimes an excess of agrientural prodice to the neighbouring clistricts.

The constitution of Zurich muderwent a great change in 1831 . The cantonal assembly, or greater council, still cunsists, as furmerly, of the mems. fint instead of 130 being elected by the grand council itself, only 33 are now so mominatel, the remainder beimi chosen ly the ditterent gnides, and the pop, at large, livery male above the age of 19, not a domestic, a lankrupt, a recipient of public relief, or maler penal condemmation, has a right to vote in the election of representatives: citizens must, however, be 30 years of age to sit in the chamber. The mems. ot the greater comtil are elected for four vears; but half their mumber groes ont liemially: Ily the new constitution, the executive and judicial powers, formerly mited in the same individuals, are separated; the functions of the former are exercised by a body of 19 mems. chosen by the preater comocil, atad those of the latter by a liteh court of appal composed of 11 mems., a criminal court of primary jurisdiction in Ziirich and distriet conrls. The procoedings of the council and of the law courts are public; frecdom of trade and of the press is gumanteed; and each individual contributes to the exigeneies of the state in proportion to his ineome. The emitomal governmont eonpels a fromal system ul insuramee atianst fire, lecing
 in 186:. Ziirich has no public debt. The canton
contributes $8,85 \mathrm{~m}$ men to the army, and $77,15: 1 \mathrm{fr}$. a year to tho trensury of the Swiss confederation.
Zunsen (anl. Thricum), a town of siwitzorhand, eap. of the ntove canton, on the lammat, at its pllinx from the NiV. extremity of the lake of Villich, 68.113 . Nh:. Wern, on the railway from
 is beantifilly situated, the river diviling it into 2 parts, which are comected by 3 bridreas and consideralilo improvements are going on in the town. It has some the publle walks, but fow puthic buildiugs are worth notice. Tho principal are the cathedral, a massive editlee of the loth or 11th century, in which Zwinglius denombed, thongh in comparatively mild and measured terms, the errors of the climech of Lome. and enfored the prinelples of the lioformatlon; St. I'eter's ehureh, of whlel havater was the minister; the town hall, a myare edilice, in which the diet macts; the oh? apemal, the town library, a spacions editice, contalning about bo,000 volnmes, with purtrnits of Zwinglins mod many of the burgomasters of \%irich, a bist of lavater by Wannecker, a bisw-reliof model of agreat part of siwitzerland, and theollection of fossils. In the midlle of the Limmat stamls the tower of Wellenherg, formerly a state prison.

The principal mannfuctures are those of silk and cotton goods, and mmmerons factories and comintry honses stud tha banlis of the lake in the cuviroms. 'In Zarich,' says an Euglish travelher, 'it is all work and no play; there are no ammements of any kind, nor jprobably do the inhabs. feel the want of then. There is no theatre; there are no public concerts; balls, in a canton where leave to danee must be asked, are out of the question. The great ohject of the Zariehers is to fret money: distinction in wenlth is the ehief distinction of rank known in Zarich. Literature, lowever, lias kept its phace liere; and nowhere, perhaps, in larope is the study of the classies more general than in this eity. Itere are an acalemy for theology and varions other branches of philosophy; anotier acmemy preparatory to the former; an institution for medicine und surgery; another for the echucation of merchanis; an institution for the instraction of the deaf and dimb, and for the blind, the molel of which was consilered so exeellent, that upon it Napuleon formed that of Paris; acialemics of artists and music; a society of public utility; and many schools for instruction in languages and for the elacation of the poor.' Zitrich was ono of the carliest cities that joined theswiss Confederation; and here the Reformation in Switzerland commenced, moler Zwinglins, in 1519. Among its distinguished natives have been the two Gessners, Fimmermann, linseli, Lavater, Bodmer, and l'estalozzi.
ZULICII (LAKE OF), one of the principal lakes of Switzerlamb, in the E., part of which it is sitnated, beine boundel hy the cantons of Zarich, Schwyta, and St. Gall. It curves in a semicircular mamner, from Sl: rombl to NW. Length, abont $3 \cdot 1 \mathrm{~m}$. ; breadth, varying to abont 3 ml ; but at laplyerselow it is contracted to less than $\frac{1}{2} \mathrm{~m}$., and is crossed there by a wooden bridge. Area, estimated at about 23 sif . m. ; height above the sea, 1,302 bugrish ft. Its lepth in sume places exeecds bot ft.; but for several humbed vards from its hank it is (near Zairich at least) sekdons more thim from 6 to 12 ft. in depth. At its SE: extremity it receives the linth canal, which lorings to it the supurthous waters of the Lake Wallenstadt; an its NW. extremity it diseharges itwelf hy the limmat. Ziirich, Dileilen, Raporselowel, and lichtenschwel, are on its banks. This lake hits

## ZUTPHEN

none of that savage sublimity which characterises most of the Swiss lakes: Its scenery is, in fact, comparatively tame. It has been called ' the Winandermere of Switzerland.' The hills around it scarcely rise to $3,000 \mathrm{ft}$. above the sea, and they descend in gentle and cultivated slopes to the water's edge; where the banks, from one end of the lake to the other, are studded with villages, country houses, and other habitations. Good carriage roads run along both sides of this lake; and it is daily traversed by steamers between Zarich and liapperschwyl.

ZU'TPHEN, a fortified town of the Netherlands, prov. Guelderland, cap. arrond., on the Yssel, crossed here by a stone bridge, where it is joined by the Birckel, 15 m . NE. Arnliem, on the railway from Arnhem to Groningen. Pop. 13,728 in 1861. The town is strong by its situation, and, though in the midst of fens, is not considered unhealthy. It is divided by the Birckel into an old and a new town. The principal church is an old and stately edifice: the town-hall, the college of denuties, and the palace of the former connts of Zutphen, are the other most conspicuous buildings. Here, also, is a Latin school, a society of physical science, a court of primary jurisdiction, mannfactures of cotton fabrics, with tanneries, paper, and glue factories, oil and flour mills.

Zutphen was one of the IIanse towns. It was taken and pilluged by the Spaniards in 1572 and 1583 , but was retaken by the troops under prince Manrice in 1591. In this siege the famous Sir Philip Sidney, the flower of the chivalry of Elizabeth's reign, received a wound of which he died on the 17 th of Oct., at the early age of 32 .
ZVORNIK or ISVORNIK, a fortified town of Bosnia, cap. sandjak, on the Drin, 72 m . WSW. Belgrade. Pop. estim. at 15,500 in 1862. The town is situated on a rocky height, and has two castles, and a large collection of mud houses, with several mosques, and Greek and Roman Catholic churches. It lias a considerable trade in timber and fuel with Belgrade and Semlin; but from its lying out of any great road, it is very seldom visited by travellers from W. Europe.
ZWICKAU, a town of the kingdom of Saxony,

## ZYTOMIERS

cap. circ. of its own name, on the Mulda, 58 m . SW. Dresden, on the railway from Dresden to Nuremberg. Pop. 22,432 in 1861. The town was formerly strongly fortified, and suffered repeatedly in the wars of last century between Austria and Prussia. Its principal buildings are St. Mary's church, with some fine paintings by Wohlgemuth, a lofty tower, which was often ascended by Luther; and an old castle, now used for a house of correction. The gymnasium has a library of 18,000 volumes; and there are also some military storehouses. Zwickau has manufactures of woollen cloths, hosiery, cotton goods, and hardware; which she owes to the coal-fields on both sides the Mulda, in her vicinity.

ZWOLLE, a fortitied town of the Netherlands, prov. Overyssel, of which it is the cap.; on the Zwarte-water, about 10 m . from the Zuyder-zce, and 50 m . ENE. Ansterdam, on the railway from Utrecht to Groningen. Pop. 19,251 in 1861. Zwolle is well built, in the style of most other Dutch towns; and has several suburbs, 8 churches, including a fine old cathedral, a house of correction, tribunals of primary jurisdiction and commerce, and some agrecable promenades in the vicinity. It was formerly one of the Hanse towns, and its trade is still considerable in cattle and other live stock, dried fish, com, wool, lides, honey, and leather. It has some salt and sugar refineries, and tanneries. It was taken by the Dutch in 1580. The famous Thomas-d-Kempis was, for 64 years, a monk of an Augustine priory in this to vn , where he died in 1471.

ZY'TOMIERS, or JITOMIR, a town of Russian Poland, government Volhynia, of which it is the capital; on a tributary of the Dniepr, 75 m . WSW. Kief. Pop. 31,275 in 1858. The town has 3 Russo-Greek, a Lutheran, and 2 R. Cath. churches, various government buildings, a gymnasium, seminary, and public library. It has increased greatly in importance since it came into the possession of the liussians; it has manufactures of hats and leather, and a considerable trade in woollen, silk and linen fabrics, honcy, wax, salt, and wines, chiefly with Galicia, Hungary, and Wallachia.
on the Mulda, 58 m vay from Dresden to 1861. The town was ad suffered repeatedly between Austria and lings are St. Mary's ings by Wohlgemuth, ascended by Luther; for a house of coras a library of 18,000 some military storeifactures of woollen und hardware; which on both sides the
of the Netherlands, is the cap.; on the om the Zuyder-zee, on the railway from p. 19,251 in 1861. style of most other suburbs, 8 churches, al, a house of corriscliction and compromenades in the of the Hanse towns, rable in cattle and corn, wool, hides, ome salt and sugar was taken by the Thomas-ì-Kempis $n$ Augustine priory 1471.
