AGAINST A PAPER COMBINE

ATTORNEY-GENERAL ACTING

How the Price of News Print Was Increased About 50 Per Cent. in the U. S.

St. Paul, Minn., Dec. 27.—Attorney-General Moody late to-day began a suit by petition in the United States district court here on behalf of the United States against the General Paper Company and other paper and pulp companies, comprising what is known as the "paper trust."

The petition alleges that the defendants entered into an agreement to combine and control the sale of the product of the different companies thru the General Paper Company, in that the General Paper Company regulated prices, sales and shipments and territory for the sale of the same, and after deducting the operating expenses of the company, divided the surplus among the members of the corporation.

The petition recites that the General Paper Company was organized with a capital stock of \$100,000, and that it became the exclusive selling agent for the defendants, with absolute power to control the output of the various mills, fix the prices of all paper sold, and to whom and upon what terms and conditions the paper should be sold, and in what states and places it shall be shipped, and what publishers and other consumers it shall supply.

The petition alleges that, in consequence of the combination, all competition in the manufacture, sale and distribution of paper had been completely destroyed, and the price of all paper products greatly increased, particularly that of news print paper, which has been increased about 50 per cent. It further states that no dealers or newspapers or other consumers in this country, with the exception of certain newspaper publishers in St. Louis and Chicago, can purchase any paper except directly thru the General Paper Company, and then only upon terms dictated by the latter.

The court is asked to declare the alleged combination and agreement null and void, and to enjoin the defendants from doing any act in pursuance of the same; that the General Paper Company be dissolved, and its assets be sold for the benefit of the other defendants, and that the latter be enjoined from continuing their arrangement with the General Paper Company. The court is also asked to direct the defendants to come into court and answer all questions relating to the allegations of the petition as may be necessary.

IRISH-GROWN TOBACCO.

Success of a Government-Aided Experiment.

A new era has just opened for Ireland. Not only will she be a manufacturer of tobacco, but she appears likely, after many experiments that have not proved altogether successful, to be able to grow a good leaf of her own.

The department of agriculture agreed to assist anyone who would experiment with tobacco culture to the extent of ten acres by bearing the cost of the drying and curing plant. Col. Everard, agreed to lay down twenty acres, the best procurable in the county, in the spring, and plant the process of curing, sorting and drying has given employment to a number of local hands.

The twenty acres have yielded about 14,000 pounds weight of leaf. This is a remarkable result for what is practically an initial experiment; it is estimated, however, that the average yield per acre will be about 100,000 pounds of tobacco. Dublin manufacturers and exporters have valued the supplies already grown at high as 75 and 80 per cent for the best leaves.

The government has removed the prohibition against tobacco culture, and undertakes to refund to the grower one-third of the duty levied. The concession, however, is limited to five years, and it is impossible to expect farmers to undertake the heavy initial cost for this limited period.

ONE \$10,000 FINE.

Bellefonte, Dec. 27.—The general store of W. R. Carnegie at Roblin's Mills, in Sandusky Township, was burned on Sunday night. The loss will be \$10,000.

100 King Street East, Toronto

YORK COUNTY AND SUBURBS THEIR PLANS, IF ELECTED

Candidates for Toronto Junction Council Address the Electors and Present Their Platforms.

Toronto Junction, Dec. 27.—At the police court this morning, when the case against James Mathers of Lambton Mills, charged with assaulting his wife, was called, it appeared that matters had been amicably arranged between them. "He should have been here," said the magistrate, and adjourned the case for one week, when, if the costs (\$6.50) are paid, all will be well. Henry Beach, 78 Uxbridge-avenue, was charged with assaulting George Williamson, a 15-year-old boy, and was fined \$10 and costs, or 15 days.

A public meeting will be held in Kilmuir Hall to-morrow evening on the annexation question.

There was a rather slim attendance at the adjourned nomination meeting in Kilmuir Hall to-night. The chair was occupied by Dr. G. W. Clendenan, Dr. J. H. Perfect and Jesse C. Smith; for councillors—Ward 2, R. Armstrong, J. W. Ditchburn and J. G. Wright; Ward 5, J. A. Ellis, S. Ryding and A. M. Wilson. The following were elected by acclamation: Ward 1, Thomas Chapman and Alex. Hain; Ward 2, J. R. Bull and W. H. Ford; Ward 4, J. A. Towell and Frank Whistler.

J. Wadsworth were re-elected public school trustees of Wards 1, 2 and 5, respectively. In Ward 5, the candidates are: W. J. Dods and Bert Large; Ward 4, Dr. H. E. Tremayne and T. H. Carter.

Keeping a Common Nuisance.

In the sessions yesterday, Jeremiah Nelson faced a charge of maintaining a common nuisance, in conducting a night-school manufactory in the Don Valley, about opposite the Dundas-avenue. Dr. Hodette, provincial health officer, testified that while not directly traversing the street, a canal that had a recent outbreak of typhoid at Todmorden was at least partly due to cow manure running around in the enclosure. Dr. Esge,

Toronto Township, was also a witness. The case continues this morning.

Markham.

Samuel Horner, farmer, of Markham died intestate, leaving a farm worth \$3200 and leaving \$200 in cash, divided equally between his widow and daughter, Mary.

Trees Stopped Trolley.

A broken limb from a tree fell across the trolley wires of the Metropolitan Bell yesterday morning, and the power was off for an hour.

Toronto Township.

The council is constituted as follows for the year 1905: Reeve, John J. Stewart; Retrainable councillors, Thomas W. Goldthorpe, Fort Credit; Francis J. Jackson, Meadowdale; William A. Russell, Hurlton; Joseph Burton, Churchville.

York Mills.

The Sunday school of St. John's Church, York Mills, propose holding their Christmas tree entertainment in the public school on Thursday evening at 8 o'clock.

Schomberg.

The annual meeting of the Conservative Association of the Township of King was held at Schomberg on Friday. There was a large attendance of the electors of the township. The following were elected as

MUNICIPAL ELECTIONS.

MAYORALTY MEETING

A public meeting in the interests of

GEO. H. GOODERHAM

will be held this (Wednesday) evening, Dec. 28th, in BROADWAY HALL commencing at 8 o'clock.

The candidate will speak and addresses will be delivered by several well-known citizens.

Urquhart FOR MAYOR

Meetings will be held as follows: O'Neill's Hall—Wednesday, Dec. 28th. St. Paul's Hall—Thursday, Dec. 29th. Wardell's Hall—Friday, Dec. 30th. West End Y.M.C.A.—Saturday, Dec. 31st.

Addresses will be given by Mayor Urquhart and others.

Men, Women, Here IS HEALTH AND STRENGTH.

Dr. McLaughlin's Electric Belt advertisement with image of a man and text: 'Sick and weak people. I can cure you with Electricity, as I have cured thousands of others. I can make the blood circulate in your veins, the nerves tingle with vigorous life, the spirit of energy show itself in every move of your body.'

WOOL STILL SOARING.

How much it is to prosper unless you know was never better illustrated than by the condition of affairs prevailing in all wool-consuming centres at the present time. In 1899 merino wools of best quality sold at London prices of 34d. In June of 1900 they were 26d. at the close of the year's sales the price was 25d. The high price of the merino caused the Yorkshire manufacturers to introduce cloths made of cross-bred wools. The 'fish and touch' of these cloths are the fashionable products of the ingenious manufacturer. In the middle of 1902 cross-bred wools sold at 75d. In 1903 they rose to 115d. since October last they have held firm at 16. When the manufacturers in the worsted trade began to make use of cross-breds, because of the shortage of merinos, there was no thought of wool prices. Orders for blankets and sweaters came to hand from Russia and Japan, necessitating the working of overtime in all the mills in the Dewsbury district; the extra trade is computed to end of the year to amount to \$1,500,000.

The greatest competition at the world's wool mart in London is for the wools of New Zealand. The bulk of the wool is cross-bred, but there is a strain of the merino in all the New Zealand sheep, which naturally affects the value of the wool. The manufacturers also assert that sheep that are able to obtain a good bite of grass furnish the most profitable quality of wool. The perplexing thought that haunts the wool merchants dealing in New Zealand wools is the serious drop of \$3,000 a bale of cross-breds in 1904. The American buyers for the Boston wool merchants are heavy buyers; the imports of wool into the United States in the last two years amounted to 375,000,000 lbs. annually. The price has gradually increased until the fine medium territory wool ready for use in mills is \$2.00 per lb. It is known and admitted that stocks of wool in the various centres at the close of the year are very low. The consumptive demand for wool continued unabated to the end of the year. The Ontario farmers who have kept their flocks thru the lean years that are now past, will reap a merited reward in the full years of the sheep industry that are now opening before them.

FARM ECONOMIES.

In nearly all great industries there are by-products that pay handsome profits. The great packing houses utilize all the waste of country butchers as by-products, and realize a remunerative revenue from these commercial goods. Glue, fertilizers and bone meal are all valuable products that, under the prodigal system of country butchers, were wasted, but now add to the value of every animal slaughtered for food consumption. The same is true with many neglected economies on the farm. One of the important revenues on the farm is ignoring the luxury and pretentiousness of fruit growing as a side enterprise, both for home consumption and the market. Every farmer should, if possible, be interested with a variety of small fruits. The raising of a supply of family fruit interferes but little with the ordinary operations of the farm, while as a side product it is immensely profitable. The farm that is featured with a diversity of fruit is admirably equipped to supply the table with appreciative and sanitary luxuries in their season. A well-assorted collection of fruit is often the turning point in selling the farm if the owner wishes to dispose of his homestead.

Nearly every farm is equipped with an orchard, which in the majority of cases, is sadly neglected. Much could be accomplished by prudent pruning and grafting with improved varieties. To supply the family with plenty of apples of standard quality is most desirable, and to have a good surplus for market is very profitable by-product on the farm. Small fruit takes more time relatively to cultivate and harvest, but it is esteemed more of a luxury and commands proportionately higher prices. The farmer who raises his own fruit consumes it more liberally, and, considering the expense, he could not duplicate the investment to promote the comfort and health of his family. If the farmer does not raise his own fruit, he discovers every year that fruit is high and too expensive for daily consumption. Peaches, pears, plums, cherries, strawberries and brush fruit should be cultivated on every farm as a luxury and a profitable by-product to increase the earning ability of the property.

Dipping Lambs in Winter.

A correspondent wants to know if it will be a good plan at this season of the year to dip lambs for ticks. The answer to such a question depends largely upon the position that the owner is in to take care of sheep after they have been put thru the dipping trough. Work that has been done at the Wisconsin station along this line has tended to show that if sheep or lambs can be dipped and then provided with warm shelter until they are thoroughly dried out again, no bad effects follow the dipping. Obviously there are comparative the necessary quarters, and if they are, it is hardly wise to attempt to tick lambs in this way.

Good Strong, Victorious Lamb to Undergo the Ordeal without any Serious Inconvenience.

There is a general impression that the sheep that are afflicted with ticks are liable to suffer from the effects of a cold water dip in the winter and the long period of drying out that would follow. It is well recognized among sheepmen that the best way to keep the ticks is to keep it free from a cold. Few things will work greater havoc among the younger and the middle-aged sheep than a severe chills. All dipping should have been done in the early part of the season, so that a close observer should have been able to tell if his lambs were sufficiently ticky to warrant dipping.

Locked Up Split Weavers.

Whispering all sorts of stories of splitting, Doukhobors, four in number, who have been hovering around the immigration sheds, were locked up this morning to prevent a chance of mishap to them in the severe weather. They were charged with vagrancy and will be given long sentences to remove them from being a nuisance.

UNDERTAKING WEEK THE LOCAL HORSE MARKET

Prices Fairly Well Sustained, While Future Inquiries Promise Well - Horses for the Gov. Gen.

Between the holiday season and the miserable break in the weather, it was hardly to be expected that there would be an extra attendance of buyers at the Repository yesterday, when some forty fair class horses were offered for sale. It cannot be said that the prices realized the top notch, although considering the circumstances they were not at all the lot, consisting of an assortment of breakers and drivers, the former being in the majority. Altogether spring prices have not recently been reached, the average so far for the winter has been well sustained, while the quantity of offerings has been just about the same as in any previous year, and perhaps a trifle better. The new proprietors desire their utmost satisfaction, and are greatly encouraged by both experience and prospects. While, as has been said, there was a little quietness about the sale on Tuesday, the sale held on the previous day turned out unexpectedly well. Of some seventy or eighty first and second class workers put up for sale, only two were not sold, and for which just now there is hardly any demand, being returned unsold. Prices were well sustained, and a gentleman taking a carload for shipment, on which he anticipated making a fair profit and which he had been offered well satisfied. Some enquiries are coming in for contract work, but C. A. Burns, the buyer and agent for the great special sale on Jan. 5, which is held at the Repository on Jan. 5, when he is expected to sell a large number of heavy draughts and general purpose horses will be on sale that has been put up at only. The catalogue is now being arranged, so that it is advisable that enquiries be made for the sale as early a date as possible.

Among the Christmas visitors to town was George Pepper, who announces that he is going to the States and that he has ever known. After the National Horse Show in New York, he had a very successful season, and he has had a good one, and more with them. Mr. Pepper says that Canadian horses are in demand in the States, and that he is doing all he can to push the trade, which is undoubtedly true. A week or two ago he was in the States, and he is back for more. His recent purchases have been made principally around Chicago, and he is confident of a good season. He is confident of a good season. He is confident of a good season.

WINTER MANURING

Saves Time at the Most Valuable Period of the Year.

During the winter time the farmer should make every attempt possible to move all the manure into the fields that is to be hauled. When spring opens there is a rush of farm work and if at any season of the year the time is money it is during the spring, pushing the manure into the fields, always the opportunity of hauling out manure as fast as it is made. We are aware that investigators tell us that there is considerable loss incurred in leaving manure lie upon the surface of the field, and it is also true that this is equal, or greater, loss incurred when the manure is left in the yard and allowed to steam and leach until the coming spring. Highest price paid for manure is the manure upon the land, where the leaching occurs, as it doubtless will be of a more satisfactory nature. Some men have recommended the manure shed, where experiment stations have proved that the manure shed, if left in the open yard, the results have been very satisfactory. There is an advantage to be derived from the use of the manure shed, even if the manure is not to be used for manure piles well in hand by regularly hauling the product to the fields as fast as it is made. If the manure is not left under a shed more than a fortnight, there is an advantage in hauling it to the fields, and particularly the drenching rains. Added to this is the fact that the manure shed, if left in the open yard, the results have been very satisfactory. This is one of the greatest impediments that the farmer hauling manure in the winter, and the most satisfactory outside the well sheltered from the melting snow and rain would be reasonably dry at the time of hauling.

As a convenience in spreading manure during the winter the manure spreader has come into considerable popularity in the past few years. These machines have been reduced to such a degree of perfection that many farmers regard them as one of the most important farm implements. One of the hardest things about handling manure is the fact that it is so heavy and bulky that a considerable measure of the manure spreader obviates a portion of this by hauling it without the manure spreader can be loaded without effort, but it is possible to so regulate the work that the minimum of labor is done. This can only be done in the fullest extent by loading the wagon or the spreader direct from the stable, thus getting the load ready for the field with the single handling. This is one of the great advantages that favor the manure spreader, and it is the reason why it gives the most decisive results in winter manuring. Because the late manuring does not show up as well as the early manuring, unless the manure is in the spring as desired, the manure spreader is the best thing for the farmer, where it will later make its presence known.

Good Farm Horses.

If a farmer has a few good reliable horses to work on the farm, he should not part with the animals before he has had a chance to see if he can replace the pair for more than he would receive for them. It would probably be better to keep them until they are satisfied of knowing that he has taken them, and then to sell them. The farmer who has a few good horses to work on the farm, and who is not satisfied of knowing that he has taken them, should not part with them until he is satisfied of knowing that he has taken them. The farmer who has a few good horses to work on the farm, and who is not satisfied of knowing that he has taken them, should not part with them until he is satisfied of knowing that he has taken them.

BRITISH CATTLE MARKET.

London, Dec. 27.—Live cattle are quoted as follows:
Receipts of live stock were 17 cars, 280 cattle, 35 hogs, 517 sheep and lambs, and 1000 pigs.
Trade was light, owing to the smallness of deliveries.
Prices were much the same as our last week's, but there were some slight variations in all the different classes.
The market for calves was very quiet, and prices were 10 to 15c per lb. for light and fat.

TORONTO LIVE STOCK.

IN NEW ONTARIO.

Interesting Particulars About the Great Clay Belt.

J. E. Kenny of Gananoque writes the following interesting letter to the Gananoque Reporter concerning New Ontario:
I have recently returned from a trip thru the southern portion of this great clay belt, of which comparatively little had been known until within the last few years. This great wheat belt, wide by nearly eight hundred miles long, contains over 16,000,000 of acres of nearly agricultural land in the world, and all in our own province of Ontario. Nearly four millions of acres on the southern slope of this belt have, during the last few years, been surveyed and the greater portion of it located by actual settlers, who are now on their claims performing their settlement duties, which consist of clearing fifteen acres, building a house 16x20, and residence of six months in the year for a period of three years. They then get a clear deed from the crown.

TESTING DAIRY HERDS

What the Danes Have Done—An Object Lesson for Canada.

A paper issued by the department of agriculture, Ottawa, says:
In the little kingdom of Denmark occupies an almost unrivaled position as a producer of first-class bacon and butter, as Canadian exporters of these products fully realize. This pre-eminence has been brought about chiefly by the general diffusion of agricultural information, and the hearty co-operation of the farmers along every line that will be to their mutual advantage. There are many directions in which Canadians might profitably imitate these successful rivals of ours, not the least important, being in the improvement of dairy herds. The aim of intelligent dairymen in Canada as well as in Denmark is to produce the largest amount of first-class milk, butter or cheese at the least cost. Let us see, then, what co-operative testing has done for the Danish dairy herds in the way of cheapening the cost of production.
