This item is filmed at the reduction ratio checked below/ Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

Le Bibliothèque de le Ville de Montréel

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol  $\longrightarrow$  (meaning "CON-TINUED"), or the symbol  $\nabla$  (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exempleire filmé fut reproduit grâce à la générosité de:

La Bibliothèque de la Ville de Montréel

Les images suiventes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmée en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmée en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole —> signifie "A SUIVRE", le symbole V signifie "FIN".

Les cartes, planches, tablesux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

Santos Sans po

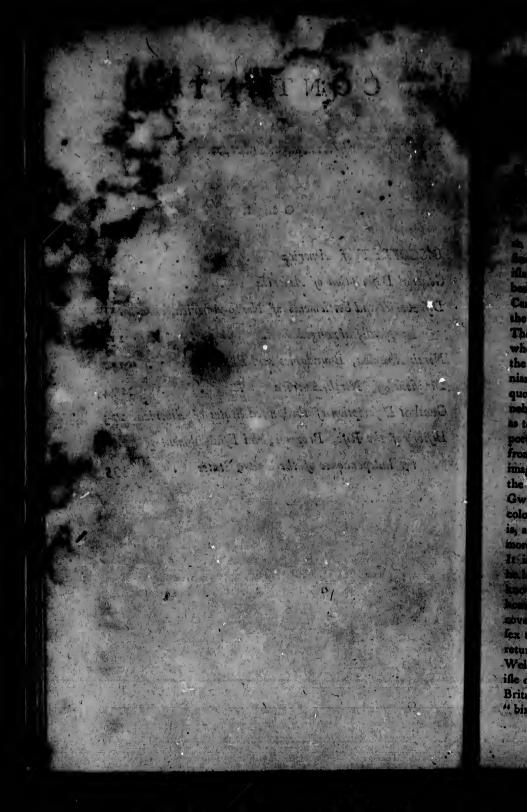

in France or England have there found an afflum, where their lives, property and liberty are fecure; where they may shook iny, the wicked ceafe from troubling, and the weary are it was Nor can any doubt be entertained, but in short period the of feience, as well as the contemplative and experimental partofopher, will find the fhores of Columbis equally propinted to their wifter. Education is fanding forth its illuminating rays, and its influence on the rifing generation will aid the Americana in all their other purfuits.

The inhabitants of Europe are not increases of their facenceble circumstances. The charms of civil and religious liberty, the edvantages of an extensive and fertile, but uncultivated country, of an increasing commerce, unshackled and unencumbered by heavy and impolitic duties and imposts, have already invited numbers to leave its bolom---numbers, which the itor hand of perfecution and the awful profpets of intestine division or abject flavery, will continue to increase.

The attention of Europe in general, and of Great-Britain in particular, being thus drawn make new world, the Editor, at the requeft of fome particular friends, undertook the mik, which he hopes he has in fome degree accomplifhed in the following volumes, of affording his countrymen an opportunity of becoming better acquainted with its fettlement by Europeans-the events that led to the eftablifhment and independence of the United States-the nature of their government-their prefent fituation and advantages, together with their future prospects in commerce, manufactures and agriculture. This formed the principal defign of the work ; but he farther wilhed with this to connect a general view of the fituation of the remaining European possibilitions in America and the West-India islands; this has been therefore attempted, and nearly a volume is dedicated alone to this fubject.

id by many, that the a f a new world; and feveral : frintion of this opinion. In a h Geniload Ariftotle, we are told that the iginians dif illand far beyond the pillars of H large, fertile, watered with navigable river ninhabited, Th was diftant a few days failing the continent ; ty induced the difcoverers to fettle but the Carthage diflodged the colony, and had rohibi the fubjects of the flate not to attempt ne eft This account is allo confirmed by an h who relates, that the Tyrians would the new-difcovered ifland, but were niana ior fate reafons. Senece, = quoted in support of this belief. But nebody over believed the existence of this contrained to go in quest of, it; at least there are no account ported that America received any part of its first inh from Europe prior to the 15th century. The Well imagine, that their country contributed, in 1170, 10 the New World, by the adventure of Madoe, for of O Gwynedd, who, on the death of his father, failed there, colonized part of the country. All that is advanced in prois, a question from one of the British Poets, which proves and more than that he had diffinguished himself by ica and has It is postended that he made two voyages; that filling We of Irsland to far to the North, that he came to a land timthows, where he faw many ftrange things; that he returned and, making a report of the fruitfulnels of the new diff novered sountry, prevailed on numbers of the Weith of les to accompany him on a fecond voyage, from which he pe seturned. The favourers of this opinion effert, that fer Welfh words, fuch as gwrando, "to hearken or liften ;" ille of Creefo, or " welcome ;" Cape Breton, from the name Britain; gwynndwr, or, "the white water;" and pengwin, or " the " bird with a white head;" are to be found in the American

ge. But there is of found in a few words will not a fufficient to establish the fact; especially if the me been evidently perverted: for example, the whole pen have unfortunately not only black heads, but are n abitants of the Northern hemisphere; the name was all

towed on them by the Dutch; a pinguedine, from their flive fatnefs: but the inventer of this, thinking to do induct to his country, inconfiderately caught at a word of intoken origin, and unheard of in the New World. It may be ded, that the Welth were never a naval people; that the age in which Madoe lived was peculiarly ignorant in navigation; and the most which they could have attempted muft have been a mere confider voyage.

The Norwegians pet in for a fhare of the glory, on grounds ther better than the Wellh. By their fettlements in Iceland meenland, they had arrived within to finall a diffance of a New World, that there is at leaft a poffibility of its having ten and a by a people to veried in maritime affairs, and ancient Normans were. The proofs are tan those produced by the Britifit wery is mentioned in feveral of the The period was about the year 10000

when it willted by one Biorn; and the difcovery purfied Freter effect by Leif, the fon of Exic, the discoverer of Greenand. It does not appear that they reached farther than Librard of which coaft they met with the Elquimáux, on they bestowed the name of Skralingues, or dwarfish scople, from their fmall flature. They were armed with bows d arrows, and had leathern canoes, fuch as they have at prefents All this is probable; nor flowed the tale of the German, called Tuckil one of the crew, invalidate the account. He was one day milling; but foon returned, kaping and finging with all the extravagant marks of joy a bon vivant could show, on discovering the inebriating fruit of his country, the grape: Torfault even fays, that he returned in a state of intoxication. To convince his commander, he brought feveral bunches, who from that circumftance named that country Vinland. It is not to be denied, that North America produces the true vine ; but it is found in far lower latitudes than our adventures could reach in the time employed in their voyages, which was comprehended in a very fmall fpace. There appears no reafon

If the reader, however, wilhes to examine this curious queltion flif farther, he will meet with all that can be faid upon the fubject, in WILLIAWS's Enquire into the truth of the tradition, concerning the Difeoers of America by Prince Madog. Brow -See also IMLAY'S Account of Kenenchy, page 277, ad Edit. doubt of the difcovery; but as the land was never on conized nor any advantages made of it, it may fairly conjectured, that they reached no farther than the barren country of Labrador. In short, it is from a much later eriod that we must date the real discovery of America\*? Towards the close of the 14th century, the navigation of Europe was fearcely extended beyond the limits of the Mediterranean. The mariner's compais had been invented and in common use for more than a century; yet with the help of this fure guide, prompted by the most ardent spirit of discovery, ind encouraged by the patronage of princes, the mariners of those days rarely ventured from the fight of land. They acquired great applaule by failing along the coaft of Africa and difcovering fome of the neighbouring islands; and after pufning their refearches with the greatest industry and perleverance for more than half a century, the Portuguese, who were the most fortunate and enterprising, extended their difcoveries Southward no farther than the equator. The rich commodities of the Eaft, had for leveral ages been brought into Europe by the way of the Red Sea and the Mediterranean; and it had now become the object of the Portuguese to find a passage to latter by the Southern extremity of Africa and then

tern courfe. This great object engaged the general extention of mankind, and drew into the Portuguele lervice adventurers from every maritime nation in Europe. Every year added to their experience in navigation, and feemed to promise a reward to their industry. The prospect, however, of arriving at the Indies was extremely diftant; fifty years perfeverance in the fame track, had brought them only to the equator, and it was probable that as many more would elaple before they could accomplish their purpose, had not COLUMBUS, by an uncommon exertion of genius, formed a defign no less aftonishing to the age in which he lived, than beneficial to pofterity,

Among the foreigners whom the fame of the discoveries made by the Portuguele had allured into their fervice, was Christopher Colon or Columbus, a subject of the tepublic of Genoa. Neither the time nor place of his birth are known with certainty; but he was defcended of an

. In the ad Vol. of the Transactions of the Philosophical Society at Philadelphia, Mr. OTTO, in a Memoir en the Difcovery of America, firenuoufly contends, that one BEREM, a German, difcovered the American Continent prior to its being differered by Columnus. For the ingenious arguments in support of this opinion, the reader is referred to the Memoir.

### BCOVERY OF MERICA.

chourable family, though reduced to indigence by various misfortunes. His anceftors having betaken themfelves for fublistance to a fea-faring life, Columbus discovered, in his early youth, the peculiar character and talents which mark out a man for that profession. His parents, instead of thwarting this original propenfity of his mind, feem to have encouraged and confirmed it, by the education which they gave him. After acquiring fome knowledge of the Latin tongue, the only language in which fcience was taught at that time, he was instructed in geometry, colmography, al tronomy, and the art of drawing. To these he applied with fuch ardour and predilection, on account of their connection with navigation, his favourite object, that he advanced with rapid proficiency in the fludy of them. Thus qualified, in the year 1461, he went to lea at the age of fourteen, and began his career on that element which conducted him to fo much glory. His early voyages were to those ports in the Mediterranean which his countrymen the Gencele frequented. This being a fphere too narrow for his aftive mind, he made an excursion to the northern feas, and evines the coafts of Iceland, to which the Englisher other nations had begun to refort on account of its munery, As pavigation, in every direction, was now become enterprising, he proceeded beyond that island, the Thule of the ancients, and advanced feveral degrees within the polar circle. Having fatisfied his curiofity by a voyage which tended more to enlarge his knowledge of naval affairs, than to improve his fortune, he entered into the fervice of a famous fea-captain, of his own name and family. This man commanded a small squadron, fitted out at his own expence, and by cruifing fometimes against the Mahometans, fometimes against the Venetians, the rivals of his country in trade, had acquired both wealth and reputation. With him Columbus continued for feveral years, no lefs diftinguished for his courage, than for his experience as a failor. At length, in an obstinate engagement, off the coaft of Portugal, with fome Venetian Caravels, recurning richly laden from the Low Countries, the veffel on board which he ferved took fire, together with one of the enemy's fhips, to which it was fast grappled. In this dreadful extremity his intrepidity and prefence of mind did not forfake him. He threw himfelf into the fea, laid hold of a floating ear, and by the fupport of it, and his dexterity in fwimming, he reached the shore, though above two leagues distant, and faved a life referved for great undertakings,

ngs,

As foortas he recovered ftrength for the journey, he repaired to Lifbon, where many of his countrymen were fettled." They foon conceived fuch a favourable opinion of his merit, as well is talents, that they warmly folicited him to remain in that kingdom, where his naval skill and experience could not fail of rendering him conspicuous, To every adventurer, animated either with curiofity to vifit new countries, or with ambition to diftinguish himself, the Portuguese service was at that time extremely inviting. Columbus liftened with a favorable ear to the advice of his friends, and having gained the efteem of a Portuguele lady, whom he married, fixed his refidence in Lilbon. This alliance, inflead of detaching him from a feafaring life, contributed to enlarge the fphere of his naval knowledge, and to excite a defire of extending it still farther. His wife was a daughter of Bartholomew Perestrello, one of the captains employed by Prince Henry in his carly navigations, and who, under his protection, had difco-1 vered and planted the islands of Porto Santo and Madeira. Columbus got poffession of the journals and charts of this experienced navigator, and from them he learned the course which the Portuguese had held in making their discoveries as well as the various circumftances which guided or encour raged them in their attempts. The fludy of these soothed and inflamed his favourite paffion; and while he contem plated the maps, and read the descriptions of the new countries which Perestrello had feen, his impatience to visit them became irrefistible. In order to indulge it, he made a voyage to Madeira, and continued during feveral years to trade with that island, with the Canaries, the Azores, the fettlements in Guinea, and all the other places which the Portuguese had discovered on the continent of Africa.

By the experience which Columbus acquired, during fut variety of voyages, to almost every part of the globe with which, at that time, any intercourfe was carried on by fea, he was now become one of the most skilful navigators in Europe. But, not fatisfied with that praife, his ambition, aimed at forme thing more. The fuccessful progress of the Portuguese navigators had awakened a spirit of curiosity and emulation, which set every man of science upon examining all the circumstances that led to the discoveries which they had made, or that afforded a prospect of succeeding in any new and bolder undertaking. The mind of Columbus, naturally inquisitive, capable of deep reflection, and turned to speculations of this kind, as so often employed in revolving the principles upon which the Portuguese had founded their schemes of discovery, and the

mode in which they had carried them on, that he gradually began to form an idea of improving upon their plan, and of accomplianing difcoveries which hitherto they had attempted in vain.

To find out a passage by sea to the East Indics, was the great object in view at that period. From the time that the Portu-guele doubled Cape de Verd, this was the point at which they aimed in all their navigations, and in comparison with it, all their discoveries in Africa appeared inconfiderable. The fertility and riches of India had been known for many ages ; its fpices and other valuable commodities were in high request throughout Europe, and the vaft wealth of the Venetians arifing from their having engroffed this trade, had raifed the envy of all nations. But how intent foever the Portuguele were. upon difcovering a new route to those defirable regions, they fearched for it only by feering towards the fouth, in hopes of arriving at India, by turning to the eaft, after they had failed round the farther extremity of Africa. This course was still unknown, and, even if discovered, was of fuch immense length, that a voyage from Europe to India must have appeared, at that period, an undertaking extremely arduous, and of very uncertain More than helf a century had been employed in advaniffue. cing from Cape Mon to the equator ; a much longer space of time might, elapse before the more extensive navigation from that to India could be accomplifhed. Thele reflections upon the uncertainty, the danger and tediousness of the course which the Portuguele were purfuing, naturally led Columbus to confider, whether a fhorter and more direct passage to the East Indies might not be found out. After revolving long and feriously every circumstance suggested by his superior knowledge in the theory as well as practice of navigation, after comparing attentively the observations of modern pilots with the hints and conjectures of ancient authors, he at last concluded, that by failing directly towards the weft, across the Atlantic ocean, new countries, which probably formed a part of the great continent of India, must infallibly be discovered.

Principles and arguments of various kinds, and derived from different fources, induced him to adopt this opinion, feemingly as chimerical as it was new and extraordinary. The fpherical figure of the earth was known, and its magnitude afcertained with fome degree of accuracy. From this it was evident, that the continents of Europe, Afia, and Africa, as far as they were known at that time, formed but a fmall portion of the terraqueous globe. It was a fuitable idea concerning the wildom and beneficience of the Author of Nature, to believe that the vaft fpace, ftill unexplored, was not covered entirely by wafte

unprofitable ocean, but occupied by countries fit for the bast bitation of man. It appeared likewife extremely probable; that the continent, on this fide of the globe, was balanced by a proportional quantity of land in the other hemilphere. There conches fions concerning the existence of another continent, drawn from the figure and ftructure of the globe, were confirmed by the observations and conjectures of modern mavigators. A Portuguele pilot, having fretched farther to the welt than way uffuil at that time, took up a piece of timber artificially carved, floating upon the fea; and as it was driven towards him by a welterly wind, he concluded that it came from fothe unknown lund, Rtusten in that quarter. Columbus's brother-in-law had found to the welt of the Madeira illes, a piece of timber fallhioned in the fame manner, and brought by the fame wind ; and had feen likewile canes of an enormous fize floating upon the waves, which refembled those defcribed by Ptolemy, as productions peculiar to the East Indies. After a courie of wefterly winds, trees, torn up by the roots, were often driven upon the courts of the Azores, and at one time the dead boddes of two men, with fingular features, relembing neither the inhabitants of Europe South States nor of Africa, were cast alhore there.

As the force of this united evidence, ariting from theoretical principles and practical obfervations, led Columbus to expect the discovery of new countries in the Weltern Ocean, other realons induced him to believe that there must be connected with the continent of India. Though the ancients had hardly Ever penetrated into India farther than the banks of the Ganges, yet fome Greek authors had ventured to defcribe the provinces beyond that river. As men are prone, and at liberty, to magnify what is remote or unknown, they represented them as regions of an immenie extent. Cteffas affirmed that India was as large as all the reft of Afia. Oneficritus, whom Pliny the naturalist follows, contended that it was equal to a third part of the inhabitable earth. Nearchus afferted, that it would take four months to march in a ftraight line from one extremity of India to the other. The journal of Marco Polo, who had proceeded towards the East far beyond the limits to which any European had ever advanced, seemed to confirm these exaggerated accounts of the incients. By his magnificent description of the kingdoms of Cathay and Cipango, and of many other countries the names of which were unknown in Europe, India appeared . to be a region of vaft extent. From these accounts, which, however defective, were the most accurate that the people of Europe had received at that period, with refpect to the remote parts of He Eaft, Columbis drew a juil conclusion. He contended,

began mplifhn. e great Portuch they. it, all The ferges ; its requelt ians arifthe envy cle were, ons, they, hopes of had failed was still fe length, d, at that uncertain in advanr fpace of from that on the unwhich the o confider Last Indies d ferioully dge in the ring attenand conby failing new counntinent of

that, in proportion as the continent of India. firetched out towards the Eaft, it must in consequence of the spherical figure of the earth approach nearer to the illands which had lately been discovered to the west of Africa ; that the diftance from the one to the other was probably not very confiderable ; and that the most direct, as well as shortest course, to the remote regions of the East, was to be found by failing due weft. This notion concerning the vicinity of India to the western parts of our continent, was countenanced by some eminent writers among the ancients, the fanction of whole authority was necessary, in that age, to procure a favourable reception to any tenet. Aristotle thought it probable, that the Columns of Hercules, or Straits of Gibraltar, were, not far removed from the East Indies, and that there might be a communication by sea between them. Seneca, in terms still more explicit, affirms, that, with a fair wind, one might fail from Spain to India in a few days. The famous Atlantic island deferibed by Plate, and supposed by many to be a real country, beyond which an unknown continent was fituated, is represented by him as lying at no great distance from Spain, After weighing all these particulars, Columbus, in whole character the modelty' and diffidence of true genius was united with the ardent enthusialm of a projector, did not reft with such absolute affurance either upon his own arguments, or upon the authority of the ancients, as not to confult fuch of his contemporaries as were capable of comprehending the nature of the evidence which he produced in support of his opinion. As early as the year one thousand four hundred and feventy-four, he communicated his ideas concerning the probability of difcovering new countries, by failing westwards, to Paul, a physician of Florence, eminent for his knowledge of colmography, and who, from the learning as well as candour which he discovers in his reply, appears to have been well intitled to the confidence which Columbus placed in him-He warmly approved of the plan, fuggested several facts in confirmation of it, and encouraged Columbus to perfevere in an undertaking fo laudable, and which must redound fo much to the honour of his country, and the benefit of Europe.

To a mind lefs capable of forming and of executing great defigns than that of Columbus, all those reasonings, and obfervations, and authorities, would have ferved only as the foundation of fome plausible and fruitless theory, which might have furnished matter for ingenious discourse, or fanciful con-

jecture. But with his fanguine and enterprising temper fpeculation led directly to action. Fully fatisfied himfelf with refpect to. the truth of his fystem, he was impatient to bring it to the telt of . experiment, and to fet out upon a voyage of difcovery. The first ftep towards this was to fecure the patronage of fome of the confi-. derable powers in Europe, capable of undertaking fuch an enterprife. As long absence had not extinguished the affection which he bore to his native country, he wished that it should reap the fruits of his labours and invention. With this view, he laid his scheme before the fenate of Genoa; and making his country the first tender of his fervice offered to fail under the banners of the republic, in queft of the new regions which he expected to difcover. But Columbus. had refided for fo many years in foreign parts, that his countrymen were unacquainted with his abilities and character; and, though a maritime people, were to little accustomed to distant voyages; that they could form no just idea of the principles on which he founded his hopes of fuccels. They inconfiderately rejected his propofal; as the dream of a chimerical projector, and loft for ever the opportunity of reftoring their commonwealth to its ancient fplendour.

Having performed what was due to his country, Columbus was fo little difcouraged by the repulse which he had received, that, instead of relinquishing his undertaking; he pursued it with fresh ardour. He made his next overtuge to John II. king of Portugal, in whole dominions he had been long effablished; and whom he confidered, on that account, as having the fecond claim to his fervice. Here every circumstance seemed to promise him a more favourable reception. He applied to a monarch of an enterprising. genius, no incompetent judge in naval affairs, and proud of patrohiling every attempt to difcover new countries. His fubjects were the most experienced navigators in Europe, and the least apt to be intimidated either by the novelty or boldness of any maritime expedition. In Portugal, the professional skill of Columbus, as well as his perfonal good qualities; were thoroughly known ; and as the former rendered it probable that his scheme was not altogether visionary; the latter exempted him from the fuspicion of any finister intention in proposing it. Accordingly, the king liftened to him in the most gracious manner, and referred the confideration of his plan to Diego Ortiz, bishop of Ceuta, and two Jewish physicians, eminent cofmographers, whom he was accustomed to confult in matters of this kind. As in Genoa, ignorance had opposed and difappointed Columbus; in Lifbon, he had to combat with pre. judice; an enemy no lefs formidable. The perfons, according to whole decision his scheme was to be adopted or rejected, had been the chief directors of the Portuguele navigations, and had advised to

left the

fearch for a paffage to India, by ffeering a courfe directly opposite. to that which Columbus recommended as fhorter and more certain, They could not, therefore, approve of his propolal, without fubmitting to the double mortification, of condemning their own theory, and of asknowledging his superior fagacity. After tealing kim with captious queftions, and flarting innumerable objections. with a view of betraying him into fuch a particular explanation of him lyftem, as might draw from him a full differery of its nature, they deferred paffing a final judgment with respect to it. In the mean time, they compired to rob him of the honour and advantages which he expected from the fuecels of his feheme, advifing the king to dispatch a veffel, fecretly, in order to attempt the proposed difcovery, by following exactly the courfe which Columbus feemed to point out. John, forgetting on this occasion the fentiments becoming a monarch, meanly adopted this perfidious counfel. Bus the pilot, chofen to execute Columbus's plan, had neither the genius, nor the fortitude of its author." Conservy winds arefe, no light of approaching land appeared, his course failed, and he resurned to Lifbon, execrating the project is equally extravagant and dangerous. company

Upon diffeovering this diffionourable transaction, Columbus felt the indignation natural to an ingenuous mind, and in the warmth of his refentment determined to break off all intercourse with a nation capable of fuch flagrant treachery. He inftantly quitted the kingdom, and kinded in Spain towards the close of the year one thousand four hundred and eighty-four. As he was now at liberty to court the protection of any patron, whom he could engage to approve of his plan, and to carry it into execution, he refolved to propofe it in perfon to Ferdinand and Habella, who at that time governed the united kingdoms of Castile and Arragon. But as he had already experienced the uncertain iffue of applications to kings and minifiers, he took the presaution of fending into England his brother Bartholomew, to whom he had fully communicated his ideas, in order that he might negociate, at the fame time, with Henry VII. who was reputed one of the most fagacious as well as opulent princes in Europe.

It was not without reafon that Cohumbus entertained doubts and fears with respect to the reception of his proposals in the Spanish court. Spain was, at that juncture, engaged in a dangerous war with Granada, the last of the Moorish kingdoms in that country. The wary and sufpicious temper of Ferdinand was not formed to relish bold or uncommon designs. Itabella, though more generous and enterprising, was under the influence of her husband in all her actions. The Spaniards had hitherto made no efforts to extend navigation beyond its ancient limits, and had beheld the amazing

progress of difcovery mong their neighbours the Portuguele, without one attempt to imitate or to rival them. The war with the Infidels afforded an ample field to the national activity and love of glory. Under circumstances soundavourable, it was impossible for Columbus to make rapid progress with a nation, naturally flow and dilatory in forming all its refolutions. His character, however, was admirably adapted to that of the people, whole confidence and prorection he folicited. He was grave, though courteous in his deportment; circumfped in his words and aftions; irreproachable in his morals; and exemplary in his attention to all the duties and functions of religion. By qualities to respectable, he not only gained many private friends; but acquired fuch general effecm, that, notwith landing the plainnels of his appearance, fuitable to the mediocrity of his fortune, he was not confidered as a mere adventurer, to whom indigence had fuggefted a visionary project, but was received as a perfon to whole propositions ferious attention was due.

Ferdinand and Ifabella, though fully occupied by their operations against the Moors, paid to much regard to Columbus, as to remit the confideration of his plan to the queen's confessor, Ferdinand de Talayera. He confulted fuch of his countrymen as were supposed best qualified to decide with respect to a subject of this kind. But true (cience had, hitherto, made fo little progrefs in Spain, that. the pretended philosophers, selected to judge in a matter of such moment, did not comprehend the first principles upon which Columbus founded his conjectures and hopes. Some of them, from miltaken notions concerning the dimensions of the globe, contended that a voyage to those remote parts of the east, which Columbus expected to discover, could not be performed in lefs than three years. Others concluded, that either he would find the ocean to. he of infinite extent, according to the opinion of fome ancient phitolophers; or, if he should persist in steering towards the west beyond a certain point, that the convex figure of the globe would prevent his return, and that he must inevitably perish, in the vain attempt to open a communication between the two opposite hemifpheres, which nature had for ever disjoined. Even without, deigning to enter into any particular difcuffion, many rejected the. scheme in general, upon the credit of a maxim, under which the ignorant and unenterprising shelter themselves in every age, "That it is prefumptuous in any perfon, to suppose that he alone. poffeffes knowledge fuperior to all the reft of mankind united." They maintained, that if there were really any fuch countries as Columbus pretended, they could not have remained to long conscaled, nor would the wildom and fagacity of former ages have. left the glory of this invention to an obscure Genoese pilot.

It required all Columbus's patience and address to negociate with men capable of advancing such strange propositions. He had to contend not only with the obstinacy of ignorance, but with what is still more intractable, the pride of falls knowledge. After innumerable conferences, and washing five years in fruitles endeayours to inform and to fatisfy judges to little capable of deciding with propriety, Talayers, at last, made such an unfavourable report to Ferdinand and Ifabella, as induced them to acquaint Columbus, that until the war with the Moors should be brought to a period, it would be imprudent to engage in any new and expensive enterprife.

Whatever care was taken to foften the harfhnels of this declaration, Columbus confidered it as a final rejection of his propofals. But happily for mankind, the superiority of genius, which is capable of forming great and uncommon deligns, is usually accompanied with an ardent enthuliaim, which can neither be cooled by delays, nor damped by difappointment. Columbus was of this fanguine temper. Though he felt deeply the cruel blow given to his hopes, and retired immediately from a court, where he had been amufed fo long with vain expectations, his confidence in the juffnels of his own fystem did not diminish, and his impatience to demonstrate the truth of it by an actual experiment became greater than ever. Having courted the protection of fovereign flates without fuccefs, he applied, next, to perfons of inferior rank, and addreffed fucceffively the dukes of Medina Sidonia, and Medina Celi, who, though fubjects, were poffeffed of power and opulence more than equal to the enterprife which he projected. His negociations with them proved as fruitlefs, as those in which he had been hitherto engaged ; for these noblemen were either as little convinced by Columbus's arguments as their fuperiors, or they were afraid of alarming the jealouly, and offending the pride of Ferdinand, by countenancing a scheme which he had rejected.

Amid the painful fenfations occasioned by such a succession of disappointments, Columbus had to suffain the additional distress, of having received no accounts from his brother, whom he had fent to the court of England. In his voyage to that country, Bartholomew had been to unfortunate as to fall into the hands of pirates, who having stripped him of every thing, detained him a prisoner for feveral years. At length, he made his escape, and arrived in London, but in such extreme indigence, that he was obliged to employ himself, during a confiderable time, in drawing and felling maps, in order to pick up as much money as would purchase a decent dress, in which he might venture to appear at court. He then laid before the king the proposals, with which he had been entrusted by his brother, and notwith standing Henry's excessive cau-

tio une bati 1 fate folv wit pre of h of t edu time with war grity by c tion neig know refpe od h whic from toth Ifabe atten M Ifabel Fé, i ded a ant fu vitatio fent o now a ly be which taking lumbu pear w The c nances aftical this gr hiftory interes

tion and parfimony, which rendered him averfe to new or expensive undertakings, he received Columbus's overtures, with more approbation, than any monarch to whom they had hitherto been prefented.

Meanwhile, Columbus being unacquainted with his brother's fate, and having now no prospect of encouragement in Spain, refolved to visit the court of England in person, in hopes of meeting with a more favourable reception there." He had already made preparations for this purpole, and taken measures for the disposal of his children during his absence, when Juan Perez, the guardian of the monastery of Rabida, near Palos, in which they had been educated, earnestly folicited him to defer his journey for a short time. Perez was a man of confiderable learning, and of fome credit with Queen Isabella, to whom he was known perfonally. He was warmly attached to Columbus, with whole abilities as well as integrity he had many opportunities of being acquainted. Prompted by curiofity or by friendship, he entered upon an accurate examination of his fystem, in conjunction with a physician fettled in the neighbouthood, who was a confiderable proficient in mathematical knowledge. This investigation fatisfied them fo thoroughly, with respect to the folidity of the principies on which Columbus founded his opinion, and the probability of fuccels in executing the plan which he proposed, that Perez, in order to prevent his country from being deprived of the glory and benefit, which must accrue to the patrons of fuch a grand enterprife, ventured to write to Isabella, conjuring her to confider the matter anew, with the attention which it merited,

Moved by the representations of a perion whom the respected, Ifabella defired Perez to repair immediately to the village of Santa Fé, in which, on account of the fiege of Granada, the court refided at that time, that the might cenfer with him upon this important fubjed. The first effect of their interview was a gracious invitation of Columbus back to court, accompanied with the prefent of a small fum to equip him for the journey. As there was now a certain prospect, that the war with the Moors would speedily be brought to an happy iffue by the reduction of Granada, which would leave the nation at liberty to engage in new undertakings; this, as well as the mark of royal favour, with which Columbus had been lately honoured, encouraged his friends to appear with greater confidence than formerly in support of his scheme. The chief of these, Alonso de Quintanilla, comptroller of the finances in Castile, and Luis de Santangel, receiver of the ecclesiaffical revenues in Arragon, whole meritorious zeal in promoting this great defign entitles their names to an honourable place in history, introduced Columbus to many perfons of high rank, and interested them warmly in his behalf.

But it was not an eafy matter to infpire Ferdinand with favoury able fontiments. He fill regarded Columbus's project as extravsmant and chimerical ; and in order to render the efforts of his partisans ineffectual, he had the address to employ in this new negociation with him, fome of the perfons who had formerly pronounced his scheme to be impracticable. To their astonishment, Columbus appeared before them with the fame confident hopes of fuccels as formenty, and infilled upon the fame high recompence. He propoled that a frain flest fould be fitted out, under his command, to stempt the difcovery, and demanded to be appointed hereditary admiral and viceroy of all the feas and lands which he fhould difcover, and to have the tenth of the profits arising from them, fetslad irrevocably upon himfelf and his difcendants. At the fame, time, be offered to advance the eighth part of the fum neceffary. for accomplishing his delign, on condition that he should be entitled to a proportional thare of benefit from the adventure. If the enterprife thould sotally milcarry, he made no ftipulation for any. reward or emplument whatever, Inflead of viewing this conduct as the clearest evidence of his full perfusion with respect to the truth of his own fyftem, or being truck with that magnanimity which, after to many delays and repulles, would floop to nothing inferior to its original claims, the parfons with whom Columbus twested, began meanly to calculate the expence of the expedition. and the value of the reward which he domanded, The expense, moderate as it was, they represented to be too great for Spain, in the prefent exhausted flate of its finances. They contended, that the honours and ampluments claimed by Columbus, were exorbisant, even if he should perform the utmost of what he had promifed ; and if all his fanguine hopes thould prove illufive, fuch vaft concellions to an adventurer would be deemed not only inconfiderate, but sidiculous. In this imposing garb of caution and prudence, their opinion appeared to plaufible, and was to warmly fupported by Fardinand, that Habella declined giving any countenance to Columbus, and abruptly broke off the negociation with him which the had begun. - it will and the of the of the state

This was more mortifying to Columbus than all the difappointments which he had hitherto met with. The invitation to court from Ifabella, like an unexpected ray of light had opened fuch profpects of fuccefs, as encouraged him to hope that his labours were at an end; but not darknefs and uncertainty returned, and his mind, firm as it was, could hardly support the shock of fuch an unforefeet reverse. He withdrew in deep anguith from court, with an intention of profecuting his voyage to England, as his last refource.

Although the format

About that time Granida furrendered, and Ferdinand and Paters le, in triumphal pomp, took polieffion of a city, the reduction of which extirpated a foreign power from the heart of their dominions, and rendered them mafters of all the provinces; extending from the bottom of the Pyrences to the frontiers of Portugal, As the flow of fpirits which accompanies fuccels elevates the mind." and renders it enterprifing; Quintanilla and Santangel, the vigilant and difeerning patrons of Columbus, took advantage of this favourable lituation, in order to make one effort more in behalf of their friend. They addreffed themfelves to Ifabella; and after exprelling fome furprife, that the who had always been the munifcent petronels of generous undertakings, thould hefitate to long to countenance the most splendid scheme that had ever been propoled to any monarch ; they represented to her, that Columbus was a man of a found understanding and virtuous character, well qualified, by his experience in navigation, as well as his knowledge of geometry, to form just ideas with respect to the structure of the globe and the fituation of its various regions ; that, by offering to rifk his own life and fortune in the execution of his feheme, he save the most fatisfying evidence both of his integrity and hope of fuecels; that the fum requisite for equipping fuch an armament av he demanded was inconfiderable, and the advantages which might accrue from his undertaking were immenfe ; that he domended no. recompence for his invention and labour, but what was to arife from the countries which he fould differer; that, as it was worthy of her magnamimity to make this noble attempt to extend the fphere of human knowledge, and to open an intercourfe with regions hitherto unknown, fo it would afford the highest fatisfaction to her piety and zeal, after re-establishing the Christian faith in those provinces of Spain from which it had been long benished, to discover a new world, to which the might communicate the light and bleffings of divine truth; that if now the did not decide infantly, the opportunity would be irretrievably loft : that Columbus was on his way to foreign countries, where fome prince, m to fortunate or adventurous, would close with his proposale, and Stand would for ever bewail the fatal timidity which had excluded her from the glory and advantages that the had once in her power to. have enjoyed; the star market of the prove

These forcible arguments, urged by perfore of fuch authority, and at a juncture fo well chosen, produced the defired effect. They dispelled all Ifabella's doubts and fears; the ordered Columbus to be inftantly recalled, declared her resolution of employing him on his own terms, and regretting the low state of her finances, generously offered to pledge her own jewels, in order to raise as much money as might be needed in making preparations for the

voyage. Santangel, in a transport of gratitude killed the Queen's hand, and in order to fave her from having secourfe to fuch a mortifying expedient for procuring money, engaged to advance immediately the fum that was requisite.

Columbus had proceeded fome leagues on his journey, when the meffenger from Ifabella overtook him. Upon receiving an account of the unexpected revolution in his favour, he returned directly to Santo Fé, though some remainder of diffidence still mingled itfelf with his joy. But the cordial reception which he met with from Ifabella, together with the near profpect of fetting out upon that voyage which had to long been the object of his thoughts and withes; foor effaced the remembrance of all that he had fuffered in Spain, during eight tedious years of folicitation and fuspence. The negociation now went forward with facility and difpatch, and a treaty of capitulation with Columbus was figned on the feventeenth of April, one thousand four hundred and ninety-two. The chief articles of it were, r. Ferdinand and Ifabella, as fovereigns of the ocean, conflituted Columbus their high admiral in all the feas, iflands, and continents which flould be discovered by his industry; and stipulated, that he and his heirs for ever should enjoy this office, with the fame powers and prerogatives which belonged to the high admiral of Caffile, within the limits of his jurifdiction. 2. They appointed Columbus their viceroy in all the islands and continents which he should discover; but if, for the better adrainistration of affairs, it should hereafter be necessary to establish a separate governor in any of those countries, they authorifed Columbus to name three perfons, of whom they would chuse one for that office; and the dignity of viceroy, with all its immunities, was likewife to be hereditary in the family of Columbus." 3. They granted to Columbus and his heirs for ever the tenth of the free profits accruing from the productions and commerce of the countries which he shall discover. 4. They declared, that if any controverly or law-fuit shall arife with respect to any mercantile transaction in the countries which should be discovered, it should be determined by the fole authority of Columbus, or of judges to be appointed by him. 5. They permitted Columbus to advance one-eighth part of what should be expended in preparing for the expedition, and in carrying on commerce with the countries' which he should discover, and intitled him, in' return, to an' eighth part of the profit.

Though the name of Ferdinand appears conjoined with that of Ifabella in this transaction, his diftrust of Columbus was still fo viclent that he refused to take any part in the enterprise as King of Arragon. As the whole expense of the expedition was to be defrayed by the crown of Castile, Ifabella referved for her subjects

of that kingdom an inclusive right to all the benefits which might redound from its neces.

As foon as the treaty was figned, Ifabella, by her attention and activity in forwarding the preparations for the voyage, endeavoured to make fome reparation to Columbus for the time which he had loft in fruitless folicitation. By the twelfth of May, all that depended upon her was adjusted; and Columbus waited on the king and queen, in order to receive their final inftructions. Every thing respecting the destination and conduct of the voyage, they committed implicitly to the dlipofal of his prudence: But, that they might avoid giving any just cause of offence to the king of Portugal, they firicily enjoined him not to approach near to the Portuguele lettlements on the coaft of Guinea; or in any of the other countries to which the Portuguele claimed right as discoverers. Ifabella had ordered the fhips, of which Columbus was to take the command, to be fitted out in the Port of Palos, a fmall maritime town in the province of Andalufia. As the guardian Juan Perez, to whom Columbus had already been fo much indebted, refided in the neighbourhood of this place, he, by the influence of that good ecclefiaftic, as well as by his own connection with the inhabitants, not only raifed among them what he wanted of the fum that he was bound by treaty to advance; but engaged feveral of them to accompany him in the voyage. The chief of these affociates were three brothers of the name of Pinzon, of confiderable wealth, and of great experience in naval affairs, who were willing to hazard their lives and fortunes in the expedition.

But, after all the efforts of Ifabella and Columbus, the armament was not fuitable, either to the dignity of the nation by which it was equiped, or to the importance of the fervice for which it was destined. It confisted of three vessels. The largest, a ship of no ' confiderable burden, was commanded by Columbus, as admiral, who gave it the name of Santa Maria, out of respect for the Blessed Virgin, whom he honoured with fingular devotion. Of the fecond, called the Pinta, Martin Pinzon was captain, and his brother Francis pilot. The third, named the Nigna, was under the command of Vincent Yanez Pinzon. These two were light vessels, hardly Superior in burden or force to large boats. This squadron, if it iderits that name, was victualled for twelve months, and had on board ninety men, mostly failors, together with a few adventurers, who followed the fortune of Columbus, and fome gentlemen of Ifabella's court, whom the appointed to accompany him. Though the expence of the undertaking was one of the circumstances which chiefly alarmed the court of Spain, and retarded to long the negoclation with Columbus, the fum employed in fitting out this fquadron did not exceed four thousand pounds.

1,0,

As the art of thip-building in the fifteenth century was extremely rude, and the bulk of veffels was accommodated to the fhort and eafy voyages along the coaft which they were accustomed to perform, it is a proof of the courage as well as enterprising genius of Columbus, that he ventured, with a fleet fo unfit for a diftant navigation, to explore unknown feas, where he had no chart to guide him, no knowledge of the tides and eurrents, and no experience! of the dangers to which he might be exposed. His eagerness to accomplish the great defign which had to long engroffed his thoughts, made him overlook or difregard every circumstance that would have intimidated a mind lefs adventurous. Ile pushed forward the preparations with fuch ardour, and was feconded to effectually. by the perfons to whom Ifabelia committed the fuperintendence of this bufinels, that every thing was foon in readinels for the voyage. But as Columbus was deeply imprefied with fentiments of religion. he would not fet out upon an expedition fo ardnous, and of which one great object was to extend the knowledge of the Christian faith, without imploring publicly the guidance and protection of Heaven. With this view, he, together with all the perfons under his command, marched in folemin proceffion to the monaftery of Rabida. After confelling their fins, and obtaining absolution, they received the holy facrament from the hands of the guardian, who joined his prayers to theirs for the fuccels of an enterprife which he had fo zealoufly patronized.

Nexomorning, being Friday the third day of August, in the year one thousand four hundred and ninety-two, Columbus set fail, a little before fun-rife, in prefence of a vaft crowd of fpectators, who fent up their supplications to Heaven for the prosperous iffue of the voyage, which they wilhed, rather than expected. Columbus fteered directly for the Canary Islands, and arrived there, August 13, 1492, without any occurrence that would have deferved notice on any other occasion. But, in a voyage of fuch expectation and importance; every circumstance was the object of attention. The rudder of the Pinta broke loofe, the day after the left the harbour, and that accident alarmed the crew, no lefs fuperstitious than unskilful, as a certain omen of the unfortunate deftiny of the expedition. Even in the fhort run to the Canaries, the fhips were found to be fo crazy and ill'appointed, as to be very improper for a navigation which was expected to be both long and dangerous. Columbus refitted them, however, to the best of his power, and having fupplied himfelf with fresh provisions he took his departure from Gomera, one of the most westerly of the Canary Islands, on the fixth day of September.

Here the voyage of discovery may properly be faid to begin; for Columbus holding his course due weft, left immediately the usual

410

track of navigation, and ftretched into unfrequented and unknown deas. The first day, as it was very calm, he made but little way; but on the fecond, he loft fight of the Canaries ; and many of the failors, dejected already and difmayed, when they contemplated the boldness of the undertaking, began to beat their breafts, and to shed terrs, as if they were never more to behold land. . Columbus comforted them with affurances of fuccess, and the prospect of waft wealth, in those opulent regions whither he was conducting them. This early of covery of the fpirit of his followers taught Columbus, that he must prepare to struggle, not only with the unavoidable difficulties which might be expected from the nature of his undertaking, but with fuch as were likely to arife from the ignorance and timidity of the people under his command; and he perceived that the art of governing the minds of men would be no lefs requifite for accomplishing the discoveries which he had in view, than naval skill and undaunted courage. Happily for himfelf, and for the country by which he was employed, he joined to the ardent temper and inventive genius of a projector, virtues of another fpecies, which are rarely united with them. He polleffed a thorough knowledge of mankind, an infinuating address, a patient perfeverance in executing any plan, the perfect government of his paffions, and the talent of acquiring an afcendant over those of other men. All these qualities, which formed him for command, were accompanied with that superior knowledge of his profession, which begets confidence in times of difficulty and danger. " To unfkilful Spanish failors, accustomed only to coaffing voyages in the Mediterranean, the maritime science of Columbus, the fruit of thirty years experience, improved by an acquaintance with all the inventions of the Portuguele, appeared immense. As foon as they put to fea, he regulated every thing by his fole authority; he fuperintended the execution of every order; and allowing himfelf only a few hours for fleep, he was at all other times upon deck. As his courfe lay through feas which had not formerly been vifited the foundingline, or inftruments for observation, were continually in his hands. After the example of the Portuguele discoverers, he attended to the motion of tides and currents, watched the flight of birds, the appearance of fishes, of fea-weeds and of every thing that floated on the waves, and entered every occurrence, with a minute exactnefs, in the journal which he kept, As the length of the voyage could not fail of alarming failors habituated only to fhort excursions, Columbus endeavoured to conceal from them the real progress which they made. With this view, though they run eighteen leagues on ' the fecond day after they left Gomera, he gave out that they had advanced only fifteen, and he uniformly employed the ame artifice

of reckoning fhort during the whole voyage. By the fourteenth of September, the fleet was above two hundred leagues to the weft of the Canary Ifles, at a greater diffance from line than any Spaniard had been before that time. There they was firuck with an appearance no lefs aftonifhing than new. They was reveal the magnetic needle, in their compafies did not point exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly polar ftar, but varied towards the weft; the as a more exactly though it ftill remains one of the mythics of a start of which the fagacity of man hath net been the teled the companions of Columbus with terror. a boundlefs unknown ocean, far from the ufual contion; nature itfelf feemed to be altered, and the easy they had left was about to fail them. Columbus an quicknefs than ingenuity, invented a reafor for the which, though it did not fatisfy himself, feemid to play them, that it difpelled their fears or filenced their announce

He still continued to steer due west, nearly in the fame l with the Canary Isles. In this course he came within the of the trade wind, which blows invariably from east to well tween the tropics and a few degrees beyond them, - He advant before this fleady gale with fuch uniform rapidity, that is sure fel dom necessary to shift a fail. When about four hundred to the weft of the Canaries, he found the fea fo covered with that it relembled a meadow of vaft extent; and in fome places they were fo thick, as to retard the motion of the weffels. This ftrange appearance occasioned new alarm and disquier. The failors imagined that they were now arrived at the usmost boundary of the navigable ocean; that these floating weeds would obstruct their farther progrefs, and concealed dangerous rocks, or lome large tract of land, which had funk, they knew not how, in that Co. ought rather to have encouraged them, and was to be confidented a fign of approaching land. At the fame time a brick g and carried them forward. Several birds we seen how the fhip\*, and directed their flight towards the well, The o ponding crew refumed fome degree of fpirit, and began to enter tain fresh hopes,

\* As the Portuguele, in making their difcoveries, did not depart far from the poalt of Africa, they concluded that birds, whole flight they observed with great attention, did pot venture to any confiderable diffance from land. In the infancy of navigation, it was not known, that birds often firetch their flight to an immensediffance from any fhore. In failing towards the Weft-Indian iflands, birds are often feen at the diffance of two hundred leagues from the neareft coaft. Sloane's Nat. Hift. of Jamaica, vol. i. p. 30. . Upon the first of October they were, according to the admiral's fired and feventy leagues to the weft of the reckoning, feven h men should be intimidated by the prodigious Canaries ; but ] length of, n he gave out that they had proceeded only -four leagues ; and, fortunately for Columnor those of the other ships, had skill or, and difcover the deceit. They had at fea; they had proceeded far beyond have stempted or deemed possible; all their driven from the flight of birds and other red allacious; the appearances of land, own creduley or the artifice of their commander time mattered and amufed them, had been altotheir prospect of fuccess feemed now to be as dif-

These reflections occurred often to men, who had on occupation, than to reafon and difcourfe concernon and circumftances of their expedition. They gellion, at furft, upon the ignorant and timid, and extenddegrees, 10 fuch as were better informed or more refolute, contagion foread at length from thip to thip. From fecret visions or murmurings, they proceeded to open cabals and public inter They taxed their fovereign with inconfiderate cre-

paying such regard to the vain promifes and rafh conof an indigent foreigner, as to hazard the lives of fo many of her own fubjects, in profecuting a chimerical fcheme. They affirmed that they have fully performed their duty, by venturing fo far in an unknown and hopeless course, and could incur no blame, for refuting to follow, any longer, a defperate adventurer to certain destruction. They contended, that it was necessary to think of returning to Spain, while their crazy veffels were still in a condition to keep the fea, but expressed their fears that the attempt would prove vain, as the wind, which had hitherto been fo favourable to their courfe, must render it impossible to fail in the opposite ion. All agreed that Columbus fhould be compelled by to adopt a methe on which their common fafety depended. me of the more addacious propoled, as the most expeditious and risin method for getting rid at once of his remonstrances, to him into the fea, being perfuaded that, upon their return

p. J. Hift. Naturelle de M. Buffon, tom. xvi. p. 32. From which it appears, that this indication of land, on which Columbus feems to have relied with fome confidence, was extremely uncertain. This observation is confirmed by Captain Cook, the most extensive and experienced navigator of any, age or ination; " No one yet knows (fays he) to what diffance any of the oceanic birds go to fea; for my own part, I do not believe that there is one in the whole tribe that can be relied on in pointing out the vicinity of land." Voyage towards the South Pole; vol. i. p. 275.

to Spain, the death of an unfuccelsful projector would acite little concern, and be inquired into with no suriofity.

Columbus was fully fensible of his perilous fituation. He had observed, with great uncafinels, the fatal operation of ignorance, and of fear in producing dilaffection among his crew, and faw that it was now ready to burk out into open much the remainder however, perfect prefence of mind. He affected to feem ignorate

of their machinations. Notwithstanding the agitation and falicitude of his own mind, he appeared with a cheerful countenance, like a man fatisfied with the progrefs which he had made, and confident of fuccels. Sometimes he employed all the arts of infinuation to foothe his men. Sometimes he endeavoured to work upon their ambition or avarice, by magnificent descriptions of the fame and wealth which they were about to acquire. On other occasions, he allumed a tone of authority, and threatened them, with vengeance from their fovereign, if, by their daftardly behaviour, they should defeat this noble effort to promote the glory of God, and to exalt the Spanish name above that of every other nation. Even with feditious failors, the words of a man whom they had been accustomed to reverence, were weighty and perfusfive, and not only reitrained them from those violent excelles, which they meditated, but prevailed with them to accompany their admiral for fome time longer.

As they proceeded, the indications of approaching land feemed to be more certain, and excited hope in proportion. The birds began to appear in flocks, making towards the fouth-weft. Columbus, in imitation of the Portuguese navigators, who had been guided, in feveral of their difcoveries, by the motion of birds, altered his course from due west towards that quarter whither they pointed their flight. But, after holding on for feveral days in this new direction, without any better fuccels than formerly, having feen no object, during thirty days, but the fea and the fky, the hopes of his companions subfided faster than they had rifen; their fears revived with additional force; impatience, rage, and despair; appeared in every countenance. All fense of fubordination was loft; the officers, who had hitherto concurred with Columbus in opinion, and supported his authority, now took part with the private men; they affembled tumultuoufly on the deck, exportulated with their commander, mingled threats with their expostulations, and required him inftantly to tack about and to return to Europe. Columbus perceived that it would be of no avail to have recourse, to any of his former arts, which having been tried to often, had loft their effect; and that it was impossible to rekindle any zeal for the fuccels of the expedition among men, in whole breafts fear. had extinguished every generous sentiment. He faw that it was

no lefs vain to think of employing either gentle or fevere masfures, to quell a mutiny fo general and fo violent. It was neceffary, on all these accounts, to foothe paffions which he could no longer, command, and to give way to a torrent too impetuous to be checked. He promifed folemnly to his men that he would comply with their request, provided they would accompany him, and obey his comp mands for three days longer, and if, during that time, land were not discovered, he would then abandon the enterprise, and direct his courfe towards Spain.

Enraged as the failors were, and impatient to turn their faces again towards their native country, this propolition did not appear. to them unreafonable. Nor did Columbus hazard much in confin ing himfelf to a term fo fhort. The prefages of difcovering land, were now to numerous and promiting, that he deemed them infallie ble. For fome days the founding line reached the bottom, and ' the foil which it brought up indicated land to be at no great diftance. The flocks of birds increased, and were composed not only of fea fowl, but of fuch land birds as could not be supposed to fly far from the fhore. The crew of the Pinta observed a cane floating which feemed to have been newly cut, and likewife a piece of timber artificially carved. The failors aboard the Nigna took up the branch of a tree with red berries, perfectly fresh. The clouds, around the fetting fun affumed a new appearance : the air was more mild and warm, and, during night, the wind became unequal and variable. From all these symptoms, Columbus was so confident of being near land, that on the evening of the eleventh of October, after public prayers for fuccefs, he ordered the fails to be furled, and the thips to lie to, keeping ftrict watch, left they thould be driven alhore in the night, During this interval of fuspence and expectation, no man thut his eyes, all kept upon deck, gazing intently towards that quarter where they expected to discover the hand, which had been fo long the object of their wifnes.

About two hours before midnight, Columbus flanding on the fore-caftle, obferved a light at a diftance, and privately pointed it out to Pedro Guttierez, a page of the Queen's wardrobe. Guttierez perceived it, and calling to Salcedo, comptroller of the fleet, all three faw it in motion as if it were carried from place to place. A little after midnight, the joyful found of *land*, *land*, was heard from the Pinta, which kept always ahead of the other fhips. But, having been fo often deceived by fallacious appearances, evey man was now hecome flow of belief, and waited, in all the anguifh of uncertainty and impatience, for the return of day. As foon as morning dawned, Friday, October 32, all doubts and fears were difpelled. Erom every fhip an ifland was feen about two leagues to the

north, whole flat and verdant fields, well flored with wood, and watered with many rivulets, prefented the afpect of a delightful country. The crew of the Pinta inftantly began the Te Deum, as a hymn of thank fgiving to God, and were joined by those of the other thips with tears of joy and transports of congratulation. This office of gratitude to Heaven was followed by an act of juffice to their commander. They threw themfelves at the feet of Columbus, with feelings of felf-condemnation mingled with reverence, They implored him to pardon their ignorance, incredulity, and infolence, which had created him for much unnecessary disquiet, and had for aften obstructed the profecution of his well-concerted plan: and paffing, in the warmth of their admiration, from one extreme to another, they new pronounced the man, whom they had fo lately reviled and threatened, to be a perfon infpired by Heaven with fagacity and fortitude more than human, in order to accomplish a defign, so far beyond the ideas and conception of all former ages.

As foon as the fun arole, all their boats were manned and armed. They rowed towards the island with their colours displayed, with warlike mulic, and other martial pomp. As they approached the coaft, they faw it covered with a multitude of people, whom the novelty of the spectacle had drawn together, whole attitudes and gestures expressed wonder and aftonishment at the strange objects which prefented themfelves to their view. Columbus was the first European who fet foot in the New World which he had discovered. He landed in a rich drefs, and with a naked fword in his hand. His men followed and kneeling down, they all killed the ground which they had to long defired to fee. They next crefted a crucifix, and prostrating themselves before it, returned thanks to God for conducting their voyage to fuch an happy iffue. They then took folemn possession of the country for the Crown of Castile and Leon, with all the formalities which the Portuguele were accultomed to observe in acts of this kind, in their new discoveries.

The Spaniards, while thus employed, were furrounded by many of the natives, who gazed, in filent admiration, upon actions which they could not comprehend, and of which they did not forefee the confequences. The drefs of the Spaniards, the whitenefs of their fkins, their beards, their arms appeared ftrange and furprifing. The vaft machines in which they had traverfed the ocean, that feemed to move upon the waters with wings, and uttered a dreadful found refembling thunder, accompanied with lightning and fmoke, ftruck them with fuch terror, that they began to refpect their new guefts as a fuperior order of beings, and concluded that they were children of the Sun, who had defcended to vifit the earth.

#### DISCOVERY OF AMERICA

The Europeans were hardly lefs amazed at the fcene new be fore them.' Every herb, and thrub, and tree, was different from those which flourished in Europe. The foil seemed to be rich, by bore few marks of cultivation. The climate, even to Spaniarda, felt warm, though extremely delightful. The inhabitants appeared in the fimple innocence of nature, entirely naked. Their black hair, long and uncurled, floated upon their fhoulders, or was bound in treffes around their heads. They had no beards, and every part of their bodies was perfectly fmooth. Their complexion was a dufky copper colour, their features fingular, rather than difagreeable, their afpect gentle and timid. Though not tall, they were well shaped, and active. Their faces, and several parts of their body, were fantaftically painted with glaring colours. They were fly at first through fear, but foon become familiar with the Spaniards, and with transports of joy received from them hawks-bells, glass beads, or other baubles, in return for which they gave fuch provisions as they had, and fome cotton yarn, the only commodity of value that they could produce. Towards evening, Columbus returned to his ships, accompanied by many of the islanders in their boats, which they called canoes, and though rudely formed out of the trunk of a fingle tree, they rowed them with furprifing dexterity. Thus, in the first interview between the inhabitants of the old and new worlds, every thing was conducted amicably, and to their mutual fatisfaction. The former, enlightened and ambitious, formed already valt ideas with respect to the advantages which they might derive from the regions that began to open to their view. The latter, fimple and undifcerning, had no forefight of the calamities and defolation which were approaching their country.

Columbus, who now affumed the title and authority of admiral and viceroy, called the island which he had difcovered San Salvador. It is better known by the name of Guanahani, which the natives gave to it, and is one of that large cluster of islands called the Lucaya or Bahama isles. It is fituated above three thousand miles to the west of Gomera, from which the squadron took its departure, and only four degrees to the south of it; so little had Columbus deviated from the westerly course, which he had chosen as the most proper.

Columbus employed the next day in vifiting the coafts of the ifland; and from the universal poverty of the inhabitants, he perceived that this was not the rich country for which he sought. But, conformably to his theory concerning the discovery of those regions of Asia which firetched towards the east, he concluded that San Salvador was one of the isles which geographers describ-

ed as fituated in the great ocean adjacent to Indis. Having observed that most of the people whom he had seen wore small plate of gold, by way of ornament, in their nostrils, he eagerly inquired where they got that precious metal. They pointed towards the south, and made him comprehend by figns, that gold abounded in countries fituated in that quarter. Thither he immediately determined to direct his course, in full confidence of finding there those opulent regions which had been the object of his voyage, and would be a recompence for all his toils and dangers. He took along with him seven of the natives of San Salvador, that, by acquiring the Spanish language, they might serve as guides and interpreters; and those innocent people confidered it as a mark of distinction when they were felected to accompany him.

He faw feveral iflands, and touched at three of the largest, on which he bestowed the names of St. Mary of the Conception, Fernandina, and Ifabella. But as their foil, productions, and inhabitants, nearly refembled those of San Salvador, he made no flav in any of them. He inquired every where for gold, and the figns that were uniformly made by way of answer, confirmed him in the opinion that it was brought from the fouth. He followed that courfe, and foon difcovered a country which appeared very-extensive, not perfectly level, like those which he had already visited, but fo diverfified with rifing grounds, hills, rivers, woods and plains, that he was uncertain whether it might provisen illand, or part of the continent. The natives of San Salvador whom he had on board, called it Cuba ; Columbus gave it the name of Juanna. He entered the mouth of a large river with his fourdron, and all the inhabitants fled to the mountains as he approached the fhore. But as he refolved to careen his fhips in that place, he fent fome Spaniards, together with one of the people of San Salvador, to view the interior parts of the country. They, having advanced above fixty miles from the fhore, reported upon their return, that the foil was richer and more cultivated than any they had hitherto difcovered ; that, befides many feattered cottages, they had found one village, containing above a thousand inhabitants; that the people though naked, feemed to be more intelligent than those of San Salvador, but had treated them with the fame respectful attention, killing their feet, and honouring them as facred beings allied to Heaven; that they had given them to eat a certain root, the tafte of which refembled roasted cheinuts, and likewise a fingular species of corn called maize, which, either when roafted whole or ground in meal, was abundantly palatable; that there feemed to be no four-footed animals in the country, but a species of dogs, which could not bark, and a creature refembling a rabbit, but of a much fmaller fize; that they had observed fome ornaments of gold among the people, but of no great value.

#### DISCOVERY OF AMERICA.

These mellingers had prevailed with fome of the natives to accompany them, who informed Columbus, that the gold of which chey made their ornaments was found in Cubanacan. By this word they meant the middle or inland part of Cuba; but Colum-Bus, being ignorant of their language, as well as unaccustomed to their pronunciation, and his thoughts running continually upon his own theory concerning the difcovery of the East Indies, he was led, by the refemblance of found, to suppose that they ipoke of the Great Khan, and imagined that the opulent kingdom of Cathay, described by Marco Polo, was not very remote. This induced him to employ fome time in viewing the country. He vifited almost every harbour, from Porto del Principe, on the north coaft of Cuba, to the eastern extremity of the ifland ; but though delighted with the beauty of the frenes, which overy where prelented themselves, and amazed at the luxuriant fertility of the foil, both which, from their novelty, made a more lively. impression upon his imagination\*, he did not find gold in such quantity as was fufficient to fatisfy either the avarice of his followers, or the expectations of the court to which he was to return. The people of the country, as much aftonished at his eagernels in quest of gold, as the Europeans were at their ignorance and fimplicity, pointed towards the caft, where an illand which they called Hayti was fituated, in which that metal was more abundant than among them, "Columbus ordered his fquadron to bend its course thither; but Martin Alonso Pinzon, impatient to be the first who should take possession of the treasures which this country was supposed to contain, quitted his companions, regardless of all the admiral's fignals to flacken fail until they flould come up with him,

Columbus, retarded by contrary winds, did not reach Hayti sill the fixth of December. He called the port where he first touched St. Nicholas, and the island itself Espagnola, in honour of

\* In a letter of the Admiral's to Ferdinand and Ifabella, he deferibes one of the harbours in Guba, with all the enthuliaftic admiration of a difcoverer. — "I difcovered a river which a galley might cally enter; the beauty of it induced me to found, and I found from five to eight fathoms of water. Having proceeded a confiderable way up the river, every thing invited me to fettle there. The beauty of the river, the clearnefs of the water, through which I could fee the fandy bottom, the multitude of palm-trees of different kinds, the talleft and finefi I had feen, and an infinite number of other large and flourithing trees, the bisds, and the verdure of the plains, are fo wonderfully beautiful, that this country excels all others as far as the day furpaffes the night in brightnefs and fplendour, fo that I often faid, that it would be in vain for me to attempt to give your highneffes a full account of it, for neither my tongue nor my pen could come up to the truth, and indeed I am fo much amaged at the fight of fuch beauty, that I know not how to defcribe it. If Coumb, c. 30.

the kingdom by which he was employed; and it is the only country, of those he had yet discovered, which has retained the name that he gave it. As he could neither meet with the Pints, nor have any intercourfe with the inhabitants, who fied in great consternation towards the woods, he soon quitted St. Nicholas, and failing along the northern coast of the island, he entered another harbour, which he called the Conception. Here he was more fortunate; his people overtook a woman who was flying from them, and after treating her with great gentlenefs, difmiffed her with a prefent of fuch toys as they knew were most valued in those regions. The defcription which the gave to her countrymen of the humanity and wonderful qualities of the ftrangers; their admiration of the trinkets, which the thewed with exultation; and their eagernels to participate of the fame favours; removed all their fears, and induced many of them to repair to the harbour. The ftrange objects which they beheld, and the baubles which Columbus bestowed upon them, amply gratified their curiofity and their wifnes. They nearly refembled the people of Guanahani and Cuba, They were naked like them, ignorant, and fimple; and feemed to be equally unacquainted with all the arts which appear most necessary in polished focieties; but they were gentle, credulous and timid, to a degree which rendered it eafy. to acquire the afcendant over them, especially as their excessive admiration led them into the fame error with the people of the other islands, in believing the Spaniards to be more than mortals, and descended immediately from Heaven. They possessed gold in greater abundance than their neighbours, which they readily. exchanged for bells, beads, and pins; and in this unequal traffic both parties were highly pleafed, each confidering themfelves as gainers by the transaction. Here Columbus was visited by a prince or cazique of the country. He appeared with all the pomp known among a fimple people, being carried in a fort of palanquin upon the shoulders of four men, and attended by many of his subjects, who served him with great respect. His deportment was grave and flately, very referved towards his own people, but with Columbus and the Spaniards extremely. courteous. He gave the admiral fome thin plates of gold, and a girdle of curious workmanship, receiving in return prefents, of fmall value, but highly acceptable to him.

Columbus, ftill intent on difcovering the mines which yielded gold, continued to interrogate all the natives with whom he had any intercourfe concerning their fituation. They concurred in pointing out a mountainous country, which they called *Ciboa*, at fome diffance from the fea, and farther towards the eaft. Struck with this found, which appeared to him the fame

with Cisange, the name by which Marco Polo, and other travellers to the caft, diftinguished the islands of Japan, he no longer doubted with respect to the vicinity of the countries which he had discovered to the remote parts of Afia; and, in full expectation of reaching foon those regions which had been the object of his voyage, he directed his course towards the caft. He put into a commodious harbour, which he called St. Thomas, and found that district to be under the government of a powerful cazique, named Guacanahari, who, as he afterwards learned, was one of the five fovereigns among whom the whole island was divided. He immediately fent meffengers to Columbus, who, in his name, delivered to him the prefeat of a malk. curiously fashioned, with the ears, note, and mouth of beaten gold, and invited him to the place of his relidence, near the harbour now called Cape Francois, fome leagues towards the caft. Columbus dispatched some of his officers to visit this prince, who, as he behaved himfelf with greater dignity, feemed to claim more attention. They returned, with fuch favourable accounts both of the country and of the people, as made Columbus impatient for that interview with Guacanahari to . which he had been invited,

. He failed for this purpole from St. Thomas, on the twentyfourth of December with a fair wind, and the fea perfectly calm ; and as, amidit the multiplicity of his occupations, he had not thut his eyes for two days, he retired at midnight in order to take fome repole, having committed the helm to the pilot, with Ari& injunctions not to gut it for a moment. The pilot, dreading no danger. carelefsly left the helm to an unexperienced cabin boy, and the ship, carried away by a current, was dashed against a rock. The violence of the shock awakened Columbus. He ran up to the deck. There, all was confusion and despair. He alone retained prefence of mind. He ordered fome of the failors to take a bost. and carry out an anchor aftern; but, inftead of obeying, they made off towards the Nigna, which was about half a league diftant. He then commanded the masts to be cut down, in order to lighten the fhip; but all his endeavours were too late; the vefiel opened near the keel, and filled to fast with water that its lofs was inevitable. The fmoothness of the fea, and the timely affistance of boats from the Nigna, enabled the crew to fave their lives. As foon as the illanders heard of this difafter, they crowded to the shore, with their prince Guacanahari at their head. Inftead of taking advantage of the diftres in which they beheld the Spaniards, to attempt any thing to their detriment, they lamented their misfortune with tears of fincere condolence. Not fatisfied with this unavailing expression of their sympathy,

they put to fea a number of canoes, and, under the direction of the Spaniards, affifted in faving whatever could be got out of the wreck; and by the united labour of fo many hands, almoft every thing of value was carried affore. As faft as the goods were landed, Guacanahari in perfor took charge of them. By his orders they were all deposited in one place, and more centinels were posted, who kept the multitude at a diffance, in order to prevent them not only from embezzling, but from infacting too curioufly what belonged to their guests. Next thering this prince visited Columbus, who was now on board the Nigna, and endeavoured to confole him for his loss, by offering all that he possefield to repair it\*.

The condition of Columbus was fuch, that he flood in need of confolation. He had hitherto procured no intelligence of the Pints, and no longer doubted but that his treacherous affociate had fet fail for Europe, in order to have the merit of carrying the first tidings of the extraordinary diffeoveries which had been made, and to pre-occupy fo far the car of their fovereign, an to rob him of the glory and reward to which he was justly entitled. There remained but one veffel, and that the finalleft and most crazy of the fquadron, to traverie fuch a valt occur, and carry to many men back to Europe. Each of those circumflances was alamning, and filled the mind of Columbus with the utmost folinitude. The defire of overtaking Pinzon, and of effacing the unfavourable impressions which his milteprefentations might

\* The account which Columbus gives of the humanity and orderly behaviour of the natives on this occasion is very striking. " The king (fays he, in a letter to Perdimanil and Ifabella) having been informed of our misfortune, expressed great will for out lofs, and immediately fent aboard all the people in the place in many arge canoes ; we foon unloaded the fhip of every thing that was upon deck, as th king gave us great allistance : he himfelf, with his brothers and relations, took all poffible care that every thing thousd be properly done both aboard and on thore, And, from time to time, he fent fome of his relations weeping, to beg of me not to be dejected, for he would give me all that he had. I can allure your highneffer, that fo much care would not have been taken in fecuring our effects in any part of Spain, as all our property was put together in one place near his palace, until the houses which he wanted to prepare for the cuftody of it, were emptied. He immediately placed a guard of armed men, who watched during the whole night, and those on shore lamented as if they had been much interested in our loss. The people are to affectionate, fo tractable, and to peaceable, that I fwear to your Bighnellet, that there is not a better race of men, nor a better country in the world, They love their neighbour as themfelves; their conversation is the fweetest and mildeft in the world, cheerful, and always accompanied with a fmile. And although it is true that they go naked, yet your highneffes may be allured that they have many very commendable cuftoms; the king is ferved with great flate, and his behaviour is fo decent, that it is pleafant to fee him, as it is likewife to observe the wonderful memory which these people have, and their defire of knowing every thing, which leads them to inquire into its caufes and effects." Life of Columbus, c. 3z. It is probable that the Spaniards were indebted for this officious attention, so the opinion which the Indiana entertained of them as a fuperior order of beings,

imake in Spain, made it necessary to return thither without delay. The difficulty of taking fuch a number of perfons aboard the Nigna, confirmed him in an opinion, which the fertility of the country, and the gentle temper of the people, had already induced him to form. He refolved to leave a part of his crew in the ifland, that, by refiding there, they might learn the language of the natives, fludy their disposition, examine the nature of the country, fearch for mines, prepare for the commodious fettlement of the colony, with which he purposed to return, and thus secure and facilitate the acquisition of those advantages which he expected from his difcoveries. When he mentioned this to his men, all approved of the defign; and from impatience under the fasigue of a long voyage, from the levity natural to failors, or from the hopes of amaffing wealth in a country which afforded fuch promiting specimens of its riches, many offered voluntarily to be among the number of those who fhould remain. #

Nothing was now wanting towards the execution of this fcheme, but to obtain the confent of Guacanahari; and his unfufpicious fimplicity foon prefented to the admiral a favourable Columbus having, in the best opportunity of propoling it. manner he could, by broken words and figns, expressed some surjofity to know the caufe which had moved the illanders to fly with fuch precipitation upon the approach of his thips, the cazique informed him that the country was much infelted by the incursions of certain people, whom he called Carribeans, who inhabited feveral islands to the fouth-east. These he described as a fierce and war-like race of men, who delighted in blood, and devoured the flesh of the prifoners who were fo unhappy as to fall into their hands ; and as the Spaniards, at their first appearance, were supposed to be Carribeans, whom the patives, however numerous, durst not face in battle, they had recourse to their usual method of fecuring their fafety, by flying into the thickeft and most impenetrable woods. Guacanahari, while speaking of those dreadful invaders, discovered such symptoms of terror, as well as fuch confcioufness of the inability of his own people to refift them, as led Columbus to conclude that he would not be alarmed at the proposition of any scheme which afforded him the prospect of an additional security against their attacks. He instantly offered him the affistance of the Spanjards to repel his enemies; he engaged to take him and his people under the protection of the powerful monarch whom he ferved, and offered to leave in the illand fuch a number of his men as should be sufficient, not only to defend the inhabitants from future incursions, but to avenge their past wrongs.

The credulous prince clofed eagerly with the propolal, and thought himfelf already fafe under the patronage of beings fprung from Heaven, and superior in power to mortal man. The ground was marked out for a small fort, which Columbus called Newidad, because he had landed there on Christmas day. A deep ditch was drawn around it. The ramparts were fortified with pallifades, and the great guns, faved out of the admiral's thip, were planted upon them. In ten days the work was finished; that fimple race of men labouring with meonfiderate affiduity in crefting this first monument of their own fervitude. During this time Columbus, by his carefies and liberality, laboured to increase the high opinion which the nitives entertained of the Spaniards." But while he endeavoured to impire them with confidence in their difpolition to do good, he wished likewise to give them some striking idea, of their power to punish and destroy such as were the objects of their indignation. With this view, in prefence of a vaft affembly, he. drew up his men in order of battle, and made an oftentatious but innocent difplay of the tharpness of the Spanish swords, of the force of their spears, and the operation of their cross-bows. These rude people, firangers to the use of iron, and unacquainted with any holtile weapons, but arrows of reeds pointed with the bones of fifnes, wooden fwords, and javelins hardened, in the fire, wondered and trembled. Before this furprife or fear had time to abate, he ordered the great guns to be fired. The fudden explosion ftruck them with fuch' terror, that they fell flat to the ground, covering their faces with their hands ; and when they beheld the aftonishing effect of the bullets among the trees, towards which the cannon had been pointed, they concluded that it was impossible to refift men, who had the command of fuch destructive instruments, and who came armed with thunder and lightning against their enemies • • · ... " they want to den at a X

After giving fuch impressions both of the beneficence and power of the Spaniards, as might have rendered it easy to preserve an ascendant over the minds of the natives, Columbus appointed thirtyeight of his people to remain in the island. He entrusted the command of these to Diego de Arada, a gentleman of Cordova, investing him with the same powers which he himself had received from Ferdinand and Isbella ; and furnished him with every thing requisite for the sublissence or defence of this infant colony. He strictly enjoined them to maintain concord among themselves, to yield an unreferved of dience to their commander, to avoid giving offence to the natives by any violence or exaction, to cultivate the friendship of Guacanahari, but not to put themselves in his power by straggling in small parties, or marching too far from the fort. He promised to revisit them soon, with such a reinforcement of

frength as might enable them to take full posseficient of the country, and to reap all the fruits of their discoveries. In the mean time, he engaged to mention their names to the King and Queen and to place their merit and fervices in the most advantageous light.

forcement of

Having thus taken every precaution for the fecurity of the Colony, he left Navidad on the fourth of January, one thouland four hundred and ninety-three, and fteering towards the caft, difcovered, and gave names to most of the harbours on the northern coast of the illand. On the fixth, he defended the Pinta, and foon came up with her, after a feparation of more than fix weeks. Pinzon endeavoured to justify his conduct, by pretending that he had been driven from his courfe by firefs of weather, and prevented from returning by contrary winds. The admiral, though he still suspected his perfidious intentions, and knew well what he urged in his own defence to be frivolous as well as falle, was fo fensible that it was not a proper time for venturing upon any high strain of authority, and felt such fatisfaction in this junction with his confort, which delivered him from many difquieting apprehentions, that, lame as Pinzon's apology was, he admitted of it without difficulty, and reftored him to favour. During his absence from the admiral, Pinzon had visited several harbours in the island, and acquired some gold by trafficking with the natives, but had made no difcovery of any importance.

From the condition of his flips, as well as the temper of his men, Columbus now found, it necessary to haften his return to Europe: The former, having fuffered much during a voyage of fuch an unufual length, were extremely leaky. The latter expressed the utmost impatience to revisit their native country, from which they had been to long abfent; and where they had things to wonderful and un-heard of to relate. Accordingly, on the fixteenth of January, he directed his course towards the north-east; and foon loft fight of land. He had on board fome of the natives; whom he had taken from the different illands which he difcovered ; and befides the gold, which was the chief objects of refearch, he had collected specimens of all the productions which were likely to become fubjects of commerce in the feveral countries, as well as many unknown birds, and other natural curiofities, which might attract the attention of the learned, or excite the wonder of the people. The voyage was prosperous to the fourteenth of February, and he had addinced near five hundred leagues across the Atlantic Ocean, when the wind began to rife, and continue to blow with increasing mge, which terminated in a furious hurricane. Every expedient that the naval

34

fkill and experience of Columbus could devife was employed, in order to fave the fhips. But it was impoffible to with ftand the violence of the florm, and as they were ftill far from any land, destruction leemed inevitable. The failors had recourse to prayers to Almighty God, to the invocation of faints, to vows and charms, to every thing that religion dictates, or superstition suggefts, to the affrighted mind of man, No prospect of deliverance appearing, they abandoned themfelves to defpair, and expected every moment to be fwallowed up in the waves. Befides the paffions which naturally agitate and alarm the human mind in fuch awful fituations, when certain death, in one, of his most terrible forms, is before it, Columbus had to endure feelings of diftrefs peculiar to himfelf. He dreaded that all knowledge of the amazing discoveries which he had made was now to perish; mankind were to be deprived of every benefit that might have been derived from the happy fuccess of his schemes, and his own name would descend to posterity as that of a rash deluded adventurer, inflead of being transmitted with the honor due to the author and conductor of the most noble enterprife that had ever been undertaken. These reflections extinguished all fense of his own perfonal danger. Lefs affected with the lofs of life, than folicitous to preferve the memory of what he had attempted and achieved, he retired to his cabin, and wrote, upon parchment, a fhort account of the voyage which he had made, of the course which he had taken, of the fituation and riches of the countries which he had discovered, and of the colony that he had left there. Having wrapt up this in an oiled cloth, which he inclosed in a cake of wax, he put it into a cafk carefully stopped up, and threw it into the fea, in hopes that fome fortunate accident might preferve a deposit of fo much importance to the world.\*

\* Every monument of fuch a man as Columbus is valuable. A letter which he wrote to Ferdinand and Ifabella, defcribing what paffed on this occasion, exhibits a most striking picture of his intrepidity, his humanity, his prudence, his public fpirit, and courtly address. " I would have been lefs concerned for this misfortune; had I alone been in danger, both becaufe my life is a debt that I owe to the Supreme Creator, and becaufe I have at other times been exposed to the most imminent hazard. But what gave me infinite grief and vexation was, that after it had pleafed our Lord to give me faith to undertake this enterprize, in which I had now been to fuccefsful, that my opponents would have been convinced; and the glory of your highneffes, and the extent of your territory increased by me; it should pleafe the Divine Majefty to ftop all by my death. All this would have been more tolerable, had it not been attended with the lofs of those men whom I had carried with me, upon promife of the greatest prosperity, who seeing themselves in such diffrefs, curfed not only their coming along with me, but that fear and awe of me, which prevented them from returning as they had often refolved to have done. But befides all this, my forrow was greatly increased, by recollecting that I had

At length Providence interposed, to fave a life referved for other fervices. The wind abated, the fea became calm, and on the evening of the fiftcenth, Columbus and his companions difcovered land; and though uncertain what it was, they made towards it. They foon knew it to be St. Mary, one of the Azores or western ifes, fubject to the crown of Portugal. There, after a violent contest with the governor, in which Columbus difplayed no lefs fpirit than prudence, he obtained a fupply of fresh provisions, and whatever elfe he needed. One circumstance, however, greatly disquieted him. The Pinta, of which he had loft fight on the first day of the hurricane, did not appear; he dreaded for some time that she had foundered at sea, and that all her crew had perished : afterwards, his former fufpicions recurred, and he became apprehenfive that Pinzon had borne away for Spain, that he might reach it' before him, and, by giving the first account of his discoveries, might obtain some share of his fame.

In order to prevent this, he left the Azores on the twentyfourth of February, as foon as the weather would permit. At no great diftance from the coaft of Spain, when near the end of his voyage, and feemingly beyond the reach of any difafter, another florm arofe, little inferior to the former in violence; and after driving before it during two days and two nights, he was forced to take fhelter in the river Tagus. Upon application

left my two fons at fchool at Cordova, defitute of friends, in a foreign country. when it could not in all probability be known that I had done fuch fervices as might induce your highneffes to remember them. And though I comforted myfelf with the faith that our Lord would not permit that, which tended fo much to the glory of his church, and which I had brought about with fo much trouble, to remain imperfect, yet I confidered, that on account of my fins, it was his will to deprive me of that glory, which I might have attained in this world. While in this confused flate, I thought on the good fortune which accompanies your highneffes, and imagined, that although I fhould perifh, and the veffel be loft, it wascoffible that you might fomehow come to the knowledge of my voyage, and the fuccels with which it was attended. For that reason I wrote upon parchment with the brevity which the fituation required, that I had discovered the lands which I promifed, in how many days I had done it, and what courfe I had fol-: lowed. I mentioned the goodneis of the country, the character of the inhabitants, and that your highneffes fubjects were left in poffellion of all that I had difcovered. Having fealed this writing, I addreffed it to your highpeffes, and promifed a thouland ducats to any perfon who should deliver it fealed, to that if any foreigners found it, the promifed reward might prevail on them not to give the information. to another. I then caufed a great cafk to be brought to me, and wrapping up the parchment in an oiled cloth, and afterwards in a cake of wax, I put it into the alk, and having ftopt it well, I caft it into the fea. All the men believed that it was fome act of devotion. Imagining that this might never chance to be taken up, a the fhips approached nearer to Spain, I made another packet like the first, and placed it at the top of the poop, fo that if the fhip funk, the cafk remaining above vater might be committed to the guidance of Tortune.".

36

to the King of Portugal, on the fourth of March, one thouland four hundred and ninety-three he was allowed to come up to. Lisbon; and, notwithstanding the envy which it was natural for the Portuguese to feel, when they beheld another nation entering upon that province of discovery which they had hitherto deemed peculiarly their own, and in its first effay, not only rivalling but eclipfing their fame, Columbus was received with all the marks of distinction due to a man who had performed. things fo extraordinary and unexpected. The King admitted him into his prefence, treated him with the highest respect, and liftened to the account which he gave of his voyage with admiration mingled with regret. While Columbus, on his part, enjoyed the fatisfaction of describing the importance of his discoveries, and of being now able to prove the folidity of his fchemes to those very perfons, who with an ignorance difgraceful to themselves, and faval to their country, had lately rejected them as the projects of a visionary or defigning adventurer.

Columbus was fo impatient to return to Spain, that he remained only five days in Lisbon. On the fifteenth of March he arrived in the port of Palos, feven months and eleven days from the time when he fet out thence upon his voyage. As foon as his fhip was discovered approaching the port, all the inhabitants of Palos. ran eagerly to the shore, in order to welcome their relations and . fellow-citizens, and to hear tidings of their voyage. When the prosperous issue of it was known, when they beheld the strange people, the unknown animals, and fingular productions brought from the countries which had been discovered, the effusion of joy was general and unbounded. The bells were rung, the cannon fired; Columbus was received at landing with royal honours, and all the people, in folemn proceffion, accompanied him and his crew to the church, where they returned thanks to Hea-: yen, which had to wonderfully conducted and crowned with fuccels, a voyage of greater length and of more importance, than had On the evening of the fame been attempted in any former age. day, he' had the fatisfaction of feeing the Pinta, which the violence of the tempest had driven far to the north, enter the harbour.

The first care of Columbus was to inform the King and Queen, who were then at Barcelona, of his arrival and fuccefs. Ferdinand and Ijabella, no lefs aftonifhed than delighted with this unexpected event, defired Columbus, in terms the most respectful and flattering to repair immediately to court, that from his own mouth they might receive a full detail of his extraordinary fervices and difcoveries. During his journey to Barcelona, the people crowded from the adjacent country, following him every

and Queen, efs. Ferdid with this ft respectful om his own ordinary ferrcelona, the g him every where with admiration and applause. His entrance into the city was conducted, by order of Ferdinand and Ifabella, with pomp fuitable to the great event, which added fuch diftinguished luftre to their reign. The people whom he brought along with him from the countries which he had discovered, marched first, and by their fingular complexion, the wild peculiarity of their features, and uncouth finery, appeared like men of another species. Next to them were carried the ornaments of gold, fashioned by the rude art of the natives, the grains of gold found in the mountains, and dust of the fame metal gathered in the rivers." After these appeared the various commodities of the new difcovered countries, together with their curious productions." Columbus himfelf closed the procession, and attracted the eyes of all the spectators, who gazed with admiration on the extraordinary man, whole superior fagacity and fortitude had conducted their countrymen, by a route concealed from past ages, to the knowledge of a new world. Ferdinand and Ifabella received him clad in their royal robes, and feated upon a throne, under a magnificent canopy. When he approached they flood. up, and raifing him as he kneeled to kils their hands, commanded him to take his feat upon a chair prepared for him, and to give a circumstantial account of his voyage. He delivered it with a gravity and composure no less suitable to the disposition of the Spanifh nation, than to the dignity of the audience in which he fpoke, and with that modest simplicity which characterises men of superior minds; who, fatisfied with having performed great actions, court not vain applause by an oftentatious display of their exploits. When he had finished his narration, the King and Queen, kneeling down, offered up folemn thanks to Almighty God for the difcovery of those new regions, from which they expected fo many advantages to flow in upon the kingdoms fubject to their government. 'Every mark of honour that gratitude or admiration could' luggest was conferred upon Columbus. Letters patent were iffued, confirming to him and to his heirs all the privileges contained in the capitulation concluded at Santa Fé; his family was' ennobled; the King and Queen, and, after their example, the courtiers, treated him, on every occasion, with all the ceremonious respect paid to perfons of the highest rank. But what pleased him most, as it gratified his active mind, bent continually upon great objects, was, an order to equip, without delay, an armament of fuch force, as might enable him not only to take possession of he countries which he had already discovered, but to go in search of those more opulent regions, which he still confidently expectd to find.

While preparations were making for this expedition, the fame of Columbus's fuccefsful voyage ipread over Europe, and excited general attention. The multitude, ftruck with amazement when they heard that a new world had been found, could hardly believe an event fo much above their conception. Men of fcience. capable of comprehending the nature, and of difcerning the effects of this great discovery, received the account of it with admiration and joy. They spoke of his voyage with rapture, and congratulated one another upon their felicity, in having lived in the period when, by this extraordinary event, the boundaries of human knowledge were fo much extended, and fuch a new field of inquiry and observation opened, as would lead mankind to a perfect acquaintance with the ftructure and productions of the habitable globe. Various opinions and conjectures were formed concerning the new-found countries, and what division of the earth they belonged to. Columbus adhered tenacioufly to his original opinion, that they should be reckoned a part of those vaft regions in Afia, comprehended under the general name of India. This fentiment was confirmed by the observations which he made concerning the productions of the countries he had discovered. Gold was known to abound in India, and he had met with fuch promifing famples of it in the illands which he vifited, as led him to believe that rich mines of it might be found. Cotton, another production of the East Indies, was common there. The pimento of the Islands he imagined to be a species of the East-India pepper. He mistook a root, somewhat refembling rhubarb, for that valuable drug, which was then supposed to be a plant peculiar to the East-Indies. The birds brought home by him were adorned with the fame rich plumage which diffinguishes those of India. The alligator of the one. country appeared to be the fame with the crocodile of the other. After weighing all these circumstances, not only the Spaniards, but the other 'nations of Europe, feem to have adopted the opinion of Columbus. The countries which he had discovered were confidered as a part of India. In confequence of this notion, the name of Indies is given to them by Ferdinand and Ifabella, in a ratification of their former agreement, which was granted to Columbus upon his return. Even after the error. which gave rife to this opinion was detected, and the true. polition of the New World was afcertained, the name has remained, and the appellation of West Indies is given by all the people of Europe to the country, and that of Indians to its inhabitants.

The name by which Columbus diffinguished the countries which he had discovered was fo inviting, the specimens of their riches and fertility, which he produced, were to confiderable, and the reports of his companions, delivered frequently with the exaggeration natural to travellers favourable, as to excite a wonderful spirit of enterprise among the Spaniards. Though little accuftomed to naval expeditions, they were impatient to fet out upon the voyage. Volunteers of every rank folicited to be employed. Allured by the inviting prospects which opened to their ambition and avarice, neither the length nor danger of the navigation intimidated them. Cautious as Ferdinand was, and averie to every thing new and adventurous, he feems to have catched the fame spirit with his subjects. Under its influence, preparations for a fecond expedition were carried on with a rapidity unufual in Spain, and to an extent that would be deemed not inconfiderable in the prefent age. The fleet confifted of seventeen thips, some of which were of good burden. It had on board fifteen hundred perfons, among whom were many of noble families, who had ferved in honorable flations. The greater part of these being destined to remain in the country, were furnished with every thing requisite for conquest or, settlement, with all kinds of European domestic animals, with such feeds and plants as were most likely to thrive in the climate of the Weft Indies, with utenfils and inftruments of every fort, and with fuch artificers as might be most useful in an infant colony.

But, formidable and well provided as this fleet was, Ferdinand and Ifabella did not reft their title to the pofferfion of the newlydiscovered countries upon its operations alone. The example of the Portuguele, as well as, the superstition, of the age, made it neceffary to obtain from the Roman pontiff a grant of those territories which they wished to occupy. The Pope, as the vicar and representative of Jesus Christ, was supposed to have a right of dominion over all the kingdoms of the earth. Alexander VJ. a pontiff infamous for every crime which difgraces humanity, filled the papal throne at that time. As he was born Ferdinand's fubject, and very folicitous to fecure the protection of Spain, in order to facilitate the execution of his ambitious fchemes in favour of his own family, he was extremely willing to gratify the Spanish monarchs. By an act of liberality which cost him nothing, and that ferved to establish the jurifdiction and pretenfions of the papal fee, he granted in full right to Ferdinand and Isabella all the countries inhabited by Infidels, which they had discovered, or should discover ; and, in virtue of that power which he derived from Jefus Chrift, he conferred on the crown of Castile vast regions, to the possession of which he himself ans.

46

fo far from having any title, that he was unacquainted with their fituation, and ignorant even of their existence. As it was necellary to prevent this grant from interfering with that formerly made to the crown of Portugal, he appointed that a line, fuppoled to be drawn from pole to pole, a hundred leagues to the westward of the Azores, should serve as the limit between them; and in the plenitude of his power, bestowed all to the east of this imaginary line upon the Portuguele, and all to the weft of it upon the Spaniards. Zeal for propagating the Christian faith was the confideration employed by Ferdinand in foliciting this bull, and is mentioned by Alexander as his chief motive for iffuing it. In order to manifest fome concern for this laudable object, feveral friars, under the direction of Father Boyl, a Catalonian monk of great reputation, as spoftolical vicar, were appointed to accompany Columbus, and so pevote themselves to the instruction of the natives. The Indians whom Columbus had brought along with him, having received fome tindure of Christian knowledge, were baptized; with much folemnity, the king himfelf, the prince his fon, and the chief perfons of his court, standing as their godfathers. Those first fruits of the New World have not been followed by fuch an increase as pious men withed, and had reason to expect.

Ferdinand and Ifabella, having thus acquired a title, which was then deemed completely valid, to extend their difcoveries, and to establish their dominion over such a considerable portion of the globe, nothing now retarded the departure of the fleet. Columbus was extremely impatient to revisit the colony which he had left, and to purfue the career of glory upon which he had entered. He fet fail from the bay of Cadiz on the twentyfifth of September, and touching again at the island of Gomera, he steered farther towards the fouth than in his former voyage, By holding this courfe, he enjoyed more fleadily the benefit of the regular winds, which reign within the tropics, and was carried towards a large cluster of islands, fituated confiderably to the east of those which he had already discovered. On the twenty-fixth day, Nov. 2, after his departure from Gomera, he made land. "It was one of the Caribbee or Leeward illands, to which " he gave the name of Defeada, on account of the impatience of his crew to difcover fome part of the New World. After this he visited successively Dominica, Marigalante, Antigua, San Juan de Puerto Rico, and feveral other iflands, feattered in his way as he advanced towards the north-welt. All these he found to be inhabited by that fierce race of people whom Guacanahari had paint ed in fuch frightful colours. His descriptions appeared not to have been exaggerated. The Spaniards never attempted

to land without meeting with fuch a reception, as different the martial and daring pirit of the natives; and in their habitations were found relies of those horrid feasts which they had inade upon the bodies of their enemies taken in war.

But as Columbus was eager to know the flate of the colony which he had planted, and to fupply it with the necessaries of which he supposed it to be in want, he made no stay in any of those islands, and proceeded directly to Hispaniols. When he arrived off Navidad, the flation in which he had left the thirty-eight men ander the command of Arada, he was aftonished. that none of them appeared, and expected every moment to fee them running with transports of joy to welcome their country." men. Full of folicitude about their fafety, and foreboding in his mind what had befallen them, he rowed inftantly to land, All the natives from whom he might have received information had fled. But the fort which he had built was entirely demolifhed," and the tattered garments, the broken arms and utenfils feattered about it, left no room to doubt concerning the unhappy fite of the garrifon. While the Spaniards were fliedding tears over those fad memorials of their fellow-citizens, a brother of the casique Guecanahari arrived. From him Columbus received' a particular detail of what had happened after his departure from the island. The familiar intercourse of the Indians with the Spaniards tended gradually to diminish the superfitious veneration with which their fift apparance had infpired that fimple people. By their own indifferention and ill conduct, the? Spaniards speedily effaced those favourable impressions, and soon convinced the natives, that they had all the wants, and weakneffes, and pallions of men. As foon as the powerful restraint which the prefence and authority of Columbus impoled was ! withdrawn, the garrifon threw off all regard for the officer whom he had invefted with command: Regardless of the prudent instructions which he had given them; every man became independent, and gratified his defires without controul. The gold, the women, the provisions of the natives, were all the prey of those licentious oppressors, They roamed in small parties over the illand, extending their rapacity and infolence to every corner of it. Gentle and timid as the people were, those unprovoked injuries at length exhausted their patience, and rouzed their courage. The cazique of Cibao, whole country the Spaniards chiefly infefted on account of the gold which it contained; furprifed and cut off feveral of them, while they ftraggled in as perfect fecurity as if their conduct had been altogether inoffenfive. He then affembled his subjects, and furrounded the fort, let it on

fire. Some of the Spaniards were killed in defending it, the roll perified in attempting to make their cleape by croffing an arm of the fea. Guacanahari, whom all their exactions had not alienated from the Spaniards, took arms in their behalf, and, in endeavouring to protect them, had received a wound, by which he was full confined.

Though this account was fat from removing the sufpicions which the Spaniards entertained with refpect to the fidelity of Guacanshari; Columbus perceived fo clearly that this was not a proper juncture for inquiring into his conduct with ferupulous accuracy, that he rejected the advice of feveral of his officers, who urged him to feize the perfon of that prince, and to revenge the death of their countrymen by attaching his fubjects. He reprefented to them the necessity of feeuring the friendship of some potentate of the country, in order to facilitate the fettlement which they intended, and the danger of driving the natives to unite in fome desperate attempt against them, by such an illtimed and unavailing exercise of rigour. Inflead of wafting. his time in punishing past wrongs, he took precaution for preventing any future injury. With this view, he made choice of a lituation more healthy and commodious than that of Navidad. He traced out the plan of a town in a large plain near a spacious, bay, and obliging every perfon to put his hand to a work on which their common fafety depended, the houfes and ramparts. were foon fo far advanced by their united labour, as to afford them shelter and security. This rising sity, the first that the Europeans, founded in the New World, he named Ifabella, in: honour of his patronels the Queen of Caftile.

In carrying on this necessary work, Columbus had not only to fultain all the hardships, and to encounter all the difficulties, to which infant colonies are exposed when they fettle in an uncultivated country, but he had to contend with what was more insuperable, the lazines, the impatience, and mutinous disposition of his followers. By the enervating influence of a hot climate, the natural inactivity of the Spaniards feemed to increase. Many of them were gentlemen, unaccustomed to the fatigue of bodily labour, and all had engaged in the enterprife with the fanguine hopes excited by the fplendid and exaggerated deferiptions of their countrymen who returned from the first voyage, or by the mistaken opinion of Columbus, that the country which. he had discovery was either the Cipango of Marco Polo, or the Ophir, from which Solomon imported those precious commodities which fuddenly diffused such extraordinary riches through his kingdom. But when, inflead of that golden harvest which shey had expected to reap without toil or pains, the Spaniards

faw their prospect of wealth was remote as well as uncertain, and that it could not be attained but by the flow and perfevering efforts of industry, the disappointment of those chimerical hopes occasioned fuch dejection of mind as bordered on despair, and led to general discontent. In vain did Columbus endeavour to revive their spirits by pointing out the fertility of the foil, and exhibiting the specimens of gold daily brought in from different parts of the illand. "They had not patience to wait for the gradual returns which the former might yield, and the latter they despiled as scanty and inconfiderable. The spirit of disffection fpread, and a confpiracy was formed, which might have been fatal to Columbus and the colony. Happily he discovered it, and feizing the ring-leaders, punished some of them, sent others prifoners' into Spain whither he difpatched twelve of the thips which had ferved as transports, with an earnest request for a reinforcement of men and a large fupply of provisions.

Meanwhile, in order to banish that idleness which, by stlowing his people leifure to brood over their difappointment, nourished the spirit of discontent, Columbus planned several expeditions into the interior part of the country. He fent a detachment, under the command of Alonfo de Ojeda, a vigilant and enterprising officer, to visit the district of Cibao, which was faid to yield the greatest quantity of gold, and followed him in perfon with the main body of his troops. In this expedition, March 12, 1494, he displayed all the pomp of military magnificence that he could exhibit, in order to ftrike the imagination of the natives. He marched with colours flying, with martial mufic, and with a fmall body of cavalry that paraded fometimes in the front and fometimes in the rear. As those were the first horfes which appeared in the New World, they were objects of terror no leis than of admiration to the Indians, who having no tame animals themfelves, were unacquainted with that vast accession of power, which man hath acquired by subjecting them to his dominion. They supposed them to be rational creatures. They imagined that the horse and rider formed one animal, with whole speed they were aftonished, and whole impetuofity and ftrength they confidered as irrefiftible." But while Columbus endeavoured to infpire the natives with a dread of his power, he did not neglect the arts of gaining their love and confidence." He adhered fcrupuloufly to the principles of integrity and justice in all his transactions with them, and treated them, on every occasion, not only with humanity, but with indulgence. The district of Cibao answered the defription given of it by the natives. It was mountainous and

uncultivated, but in every river, and brook, gold was gathered either in dust or in grains, some of which were of considerable fize. The Indians had never opened any mines in fearch of gold. To penetrate into the bowels of the earth, and to refine the rude ore, were operations too complicated and laborious for their talents and industry, and they had no fuch high value for gold as to put their ingenuity and invention upon the firetch in order to obtain it. The small quantity of that precious metal which they polleffed, was either picked up in the beds of the rivers, or walked from the mountains by the heavy rains that fall within the tropics. But, from those indications, the Spaniards could no longer doubt that the country contained rich treasures in its bowels, of which they hoped foon to be masters. In order to secure the command of this valuable province, Columbus crected a small fort, to which he gave the name of St. Thomas, by way of ridicule upon fome of his incredulous followers, who would not believe that the country produced gold, until they faw it with their own eyes, and touched it with their hands.

The account of those promising appearances of wealth in the country of Cibao, came very feafonably to comfort the defponding colony, which was effected with diftreffes of various kinds. The flock of provisions which had been brought from Europe was mostly confumed; what remained was to much corrupted by the heat and moisture of the climate, as to be almost unfit for ule; the natives cultivated to fmall a portion of ground, and with fo little skill, that it hardly yielded what was fufficient for their own lubfiftence: the Spaniards at Ifabella had hitherto. meither time nor leifure to clear the foil, fo as to reap any confiderable fruits of their own industry. On all these accounts, they became afraid of perifhing with hunger, and were reduced already to a fcanty allowance.' At the fame time the difeafes predominant in the torrid zone, and which rage chiefly in those uncultivated countries, where the hand of industry has not opened the woods, drained the marshes, and confined the rivers. within a certain channel, began to fpread among them. Alarmed. at the violence and unufual fymptoms of those maladies, they exclaimed against Columbus and his companions in the former voyage, who by their fplendid but deceitful descriptions of Hispaniola, had allured them to quit Spain for a barbarous uncultivated land, where they must either be cut off by famine, or die of unknown distempers. Several of the officers and perfons of note, inflead of checking, joined in those feditious complaints. Father Boyl, the apostolical vicar, was one of the. most turbulent and outrageous. and address of Columbus to reactfablish subordination and tranquility in the colony. Threats and promises were alternately employed for this purpose; but nothing contributed more to foothe the malcontents than the prospect of finding, in the mines of Cibso, such a rich flore of treasure as would be a recompense for all their sufferings, and efface the memory of former disappointments.

When, by his unwearied endeavours, concord and order were to far reftored, that he could venture to leave the island, Columbus refolved to purfue his discoveries, that he might be able to afcertain whether those new countries with which he had opened a communication were connected with any region of the earth already known, or whether they were to be confidered as a separate portion of the globe hitherto unvisited: He appointed his brother Don Diego, with the affiftance of a council of officers, to govern the illand in his ablence; and gave the command of w body of foldiers to Don Pedro Margarita, with which he was to visit the different parts of the island, and endeavour to establish the authority of the Spaniards, among the inhabitants. Having left them very particular instructions with refpect to their conduct, he weighed anchor on the twenty-fourth of April, with one thip and two finall barks under his command, During a tedious voyage of full five months; he had a trial of almost all the numerous hardthips to which perfons of his profellion are expoled, without making any difeovery of importance, except the island of Jamaica. As he ranged along the fouthern coaft of Cuba, he was entangled in a labyrinth formed by an incredible number of final iflands, to which he gave the name of the Queen's-Garden. In this unknown courfe, among rocks and shelves, he was retared by contrary winds, affaulted with furious' forms, and alarmed with the terrible thunder and lightning which is often almost inceffant between the tropics. At length his provisions fell fort; his crew, exhausted with fatigue, as well as hunger, murmured and threatened, and were ready to proceed to the most desperate extremities against him. Beset with danger in fuch various forms, he was obliged to keep continual watch, to observe every occurrence with his own eyes, to illue every order, and to superintend the execution of it. On no occasion, was the extent of his skill and experience as a navigator fo much tried. To these the squadron owed its fafety. But this unremitted fatigues of body, and intense application of mind, overpowering his 'conflictution, though naturally vigorous and robult, brought on a feverifb diforder, which terminated in a lethargy, that deprived him of fenfe and memory and had almost proved fatal to his life,

· min

But, on his return, Sept. 27th, to Hifpaniola, the fudden emotion of joy which he felt upon meeting with his brother Bartholomew at Mabella, occassoned fuch a flow of spirite as contributed greatly to his recovery. It was now thirteen years fince the two brothers, whom similarity of talents united in close friendthip, had feparated from each other, and during that long period there had been no intercourfe between them. Bartholomew, after Enifying his negociation at the court of England, had fet out for Spain by the way of France. At Paris he received an acccount of the extraordinary discoveries which his brother had made in his first voyage, and that he was then preparing to embark on a fecond expedition. Though this naturally induced him to purfue his journey with the utmost dispatch, the admiral had failed for Hispaniola before he reached Spain. Ferdinand and Isabella received him with the respect due to the nearest kinsman of a person whole merit and fervices rendered him fo confpicuous; and as they knew what confolation his prefence would afford to his brother, they perfusded him to take the command of three thips, which they had appointed to carry provisions to the colony of Ifabella. He could not have arrived at any juncture when Columbus flood more in need of a friend capable of affifting him with his counfels or of dividing with him the cares and burden of government. For although the provisions now brought from Europe, afforded a temporary relief to the Spaniards from the calamities of famine; the supply was not in such quantity as to support them long, and the island did not hitherto yield what was fufficient for their fustenance. They were threatened with another danger, still more formidable than the return of fcarcity, and which demanded more immediate attention. No fooner did Columbus leave the island on his voyage of discovery, than the foldiers under Margarita, as if they had been fet free from difcipline and fubordination, fcorned all reftraint. Instead of conforming to the prudent instructions of Columbus, they dispersed. in ftraggling parties over the ifland, lived at diferction upon the natives, wasted their provisions, seized their women, and treated that inoffenfive race with all the infolence of military oppression.

As long as the Indians had any profpect that their fufferings might come to a period by the voluntary departure of the invaders, they fubmitted in filence, and diffembled their forrow; but they now perceived that the yoke would be as permanent as it was intolerable. The Spaniards had built a town, and furrounded it with ramparts. They had crefted forts in different places. They had enclosed and fown feveral fields. It was apparent that they came not to vifit the country but to feitle in it. Though the number of those ftrangers was inconfiderable, the flate of cultiva-

the Europ

tion among this rude people was fo imperfect, and in fuch exact proportion to their own confumption, that it was with difficulty they could afford fubfishence to their new guests. Their own mode of life was to indolent and inactive, the warmth of the climate to enervating, the constitution of their bodies naturally fo feeble, and fo unaccustomed to the laborious exertions of industry, that they were fatisfied with a proportion of food amezingly fmall. A handful of maize, or a little of the infipid bread made of a caffada-root, was fufficient to fupport men, whole ftrength and foirits were not exhausted by any vigorous efforts either of body or mind. The Spaniards, though the most abstentious of all the European nations, appeared to them exceffively voracious. One Spaniard confumed as much as feveral Indiana. This keennels of appetite furprized them fo much, and feemed to them to be fo infatiable, that they supposed the Spaniards had left their own country. becaufe it did not produce as much as was requisite to gratify their immoderate defire of food, and had come among them in quelt of nourishment. Self-prefervation prompted them to wish for the departure of guests who wasted to fast their flender flock of pro-The injuries which they fuffered, added to their impativifions. ence for the wint. They had long expected that the Spaniards would retire or their own accord. They now perceived that, in order to avert the destruction with which they were threatened, either by the flow confumption of famine, on by the violence of their oppressors, it was necessary to assume courage, to attack those formidable invaders with united force, and drive them from the fottlements of which they had violently taken poffession.

Such were the fentiments which univerfally prevailed among the Indians, when Columbus returned to Habella. Inflamed by the unprovoked outrages of the Spaniards, with a degree of rage of which their gentle natures, formed to fuffer and fubmit, feemed highly fusceptible, they waited only for a fignal from their leaders to fall upon the colony. Some of the caziques had already furprifed and cut off feveral ftragglers. The dread of this impending danger united the Spaniards, and re-established the authority of Columbus, as they faw no profpect of fafety but in committing themfelves to his prudent guidance. It was new necessary to have recourse to arms, the employing of which against the Indians, Columbus had hitherto avoided with the grateft folicitude. Unequal as the conflict may feem, between the naked inhabitants of the New World, armed with clubs, flicks hardened in the fire, wooden fwords, and arrows pointed with bones or flints; and troops accustomed to the discipline, and provided with the instruments of destruction known in the European art of war, the fituation of the Spaniards was

for from being exempt from danger. The vaft superiority of the natives in number, compensated many defects. An handful of men was about to encounter a whold ration. One adverie event, or oven any adverte delay in determining the fate of the war, might prove fatel; to the Spaniarda . Confcious that fuscels depended on the vigour and rapidity of his operations, Columbus inftantly affembled his forces They were reduced to a very finall number. Difesfes, engendered by the warmth and humidity of the country, or occasioned by their own licentiouinels, had reged among them with much violence ; experience had not yet taught them the art either of curing. thele, or the presentions requilite for guarding them; two-thirds of the original adventurers were dead, and many of those who furvived were interpable of lervice. The body which took the field on March 24, 1495, confilted only of two hundred foot, twenty, horfe, and twenty large dogs; and how ftrange foever it may feem to mention the laft as composing part of a military force, they were not, perhaps the leaft formidable and defiructive of the whole, when employed against naked and timed Indians. All the caziques of the ifland. Guacanahari excepted, who retained an inviolable attachment to the Spania is, were in arms to oppele Columbus, with forces amounting, if we may believe the Spanish historians, to an hundred thousand men. Inficad of attempting to draw the Spaniards into the fallneffes of the woods and mountains, they were to imprudent as to take their station in Vega Rest, the most open plain in the country. Columbus did not allow them time to perceive their error, or to alter their polition. He attacked them during the night, when undifciplined troops are leaft capable of acting with union and concert, and obtained an eafy and bloodlefs victory. The confternation with which the Indians were filled by the noife and havoc made by the fire-arms, by the impetuous force of the cavalry, and the first onfet of the dogs, was fo great, that they threw down their weapons, and fled without attempting reliftance. Many were flain ; more were taken priloners; and reduced to fervitude ; and fo thoroughly were the reft intimidated, that from that moment they abandoned themfelves to defpair; relinquishing all thoughts of contending with aggreffors whom they deemed 

Columbus employed feveral months in marching through the ifland, and in fubjecting it to the Spanifh government, without meeting with any oppolition. He imposed a tribute upon all the inhabitants above the age of fourteen. Each perfor who lived in those diffricts where gold was found, was obliged to pay quarterly as much gold duft as filled a hawk's hell; from those in

other parts of the country, twenty-five pounds of cotton were del manded. This was the first regular taxation of the Indians, and ferved as a precedent for exactions fill more intolerable. Such an impolition was extremely contrary to thole maxims which Columbus had hitherto inculcated with respect to the mode of treating them. But intrigues were carrying on in the court of Spain at this juncture, in order to undermine his power and difcredit his operations, which constrained him to depart from his own fystem of administration. Several unfavourable accounts of his conduct, as well as of the countries difcovered by him, had been transmitted to Spain. Margaritta and Father Boyl were now at court; and in order to justify their own conduct, or to gratify their refentment, watched with malevolent attention for every . opportunity of spreading infinuations to his detriment. Many of the courtiers viewed his growing reputation and power with envious eyes. Fonfeca, archdeacon of Seville, who was intrusted with the chief direction of Indian affairs, had conceived fuch an unfavourable opinion of Columbus, for some reason which the contemporary writers have not mentioned, that he liftened with partiality to every invective against him. It was not eafy for an unfriended ftranger, unpractifed in courtly arts, to counteract the machinations of fo many enemies. Columbus faw that there was but one method of supporting his own credit, and of filencing all his adverfaries. He must produce such a quantity of gold as would not only justify what he had reported with respect to the richnels of the country, but encourage Ferdinand and Ifabella to perfevere in profecuting his plans. The neceflity of obtaining it, forced him not only to impose this heavy tax upon the Indians, but to exact payment of it with extreme rigour; and may be pleaded in excuse for his deviating on this occasion from the mildnels and humanity with which he uniformly treated that unhappy people:

The labour, attention, and forelight which the Indians were obliged to employ in procuring the tribute demanded of them, appeared the most intolerable of all evils, to men accustomed to pals their days in a careles, improvident indolence. They were incapable of such a regular and perfevering exertion of industry, and felt it fuch a grievous restraint upon their liberty, that they had recourse to an expedient for obtaining deliverance from this yoke, which demonstrates the excess of their impatience and defpair. They formed a scheme of starving those oppressions whom they durft not attempt to expel; and from the opinion which they entertained with respect to the voracious appetite of the Spaniards, they concluded the execution of it to be very practicable.

50

With this view they fuspended all the operations of agriculture; they fowed no maise, they pulled up the roots of the manioc or caffada which were planted, and retiring to the most inacceffible parts of the mountains, left the uncultivated plains to their enemies. This desperate resolution produced in some degree the effects which they expected; The Spaniards were reduced to extreme want; but they received fuch feafonable fupplies of provifions from Europe, and found fo many refources in their own. ingenuity and industry, that they fuffered no great loss of men. The wretched Indians were the victims of their own ill-concerted policy. A great multitude of people, that up in the mountainous part of the country, without any food but the fpontaneous productions of the earth, foon felt the utmost diffrestes of famine. This brought on contagious difeafes; and, in the course of a few months, more than a third part of the inhabitants of the island perifhed, after experiencing milery in all its various forms.

But while Columbus was establishing the foundations of the Spanifh grandeur in the New World; his enemies laboured with unwearied affiduity to deprive him of the glory and rewards, which by his fervices and fufferings he was intitled to enjoy. The hardfhips unavoidable in a new fettlement, the calamitics occasioned by an unhealthy climate, the difasters attending a voyage in unknown feas, were all represented as the effects of his reftless and inconfiderate ambition. His prudent attention to preferve difcipline and fubordination was denominated excels of rigour; the punifaments which he inflicted upon the mutinous and diforderly were imputed to crucity. These acculations gained fuch credit in a jealous court, that a commissioner was appointed to repair to Hispaniola, and to inspect into the conduct of Columbus. By the recommendation of his enemies, Aguado, a groom of the bed-chamber, was the perfon to whom this important truft was committed. But in this choice they feem to have been more influenced by the oblequious attachment of the man to their interest, than by his capacity for the ftation. Puffed up with fuch fudden elevation, Aguado difplayed in the exercise of this office; all the frivolous felf-importance, and acted with all the difgusting, infolence, which are natural to little minds, when raifed to unexpected dignity, on employed in functions to which they are not equal. By liftening with eagerness to every acculation against Columbus; and encouraging not only the malcontent Spaniards, but even the Indians, to produce their grievances, real or imaginary, he fomented the spirit of diffention in the island, without establishing any regulation of public utility, or that tended to redrefs the many wrongs, with the odium of which he wished to load the admiral's administration. ### DISCOVERY OF AMERICA

remain in that country while fuch a partial infpector obferved his motions, and controuled his jurifdiction, he took the refolution of returning to Spain, in order to lay a full account of all his tranfactions, particularly with refpect to the points in difpute between him and his adverfaries, before Ferdinand and Ifabella, from whole justice and discernment he expected an equal and a favourable decifion. He committed the administration of affairs, during his abience, in one thousand four hundred and ninety-fix, to Don Bartholomew his brother, with the title of Adelantado, or Licutenant Governori By a choice its fortunate, and which proved the fource of many calables to colony, he appointed Francis Roldan chief justice, with very extensive powers.

In returning to Europe, Columbus held a courfe different from that which he had taken in his former voyage. He fleered almost due east from Hispaniola, in the parallel of twenty-two degrees of latitude; as experience had not yet discovered the more certain and expeditious method of ftretching to the north, in order to fall in with the fouth-west winds. By this ill-advised choice, which, in the infancy of navigation between the New and the Old Worlds, can hardly be imputed to the admiral as a defect in naval skill, he was exposed to infinite fatigue and danger, in a perpetual ftruggle with the trade-winds, which blow, without variation from the east between the tropics. Notwithstanding the almost insuperable difficulties of such a navigation, he persisted in his course with his usual patience and firmness, but made to little way, that he was three months without feeing land. At length his provisions began to fail, the crew was reduced to the feanty allowance of fix ounces of bread a-day for each perfor. The admiral fared no better than the meanest failor. But even in this extreme diftrefs, he retained the humanity which diftinguishes his character, and refused to comply with the earnest solicitations of his crew, fome of whom proposed to feed upon the Indian prison. ers whom they were carrying over, and others infifted to throw! them over-board, in order to leffen the confumption of their fmall. flock. He represented that they were human beings; reduced by a common calamity to the fame condition with themfelves, and intitled to thare an equal fate. His authority and remonstrances diffipated those wild ideas suggested by despair. Nor had they ime to recur, as they came foon within fight of the coaft of Spain, when all their fears and fufferings ended.

Columbus appeared at court with the modest but determined onfidence of a man conficious not only of integrity, but of having erformed great services. Ferdinand and Isabella, assured of heir own facility in lending too favourable an ear to frivolous or

ill-founded acculations, received him with fuch diftinguished marks of respect, as covered his enemies with shame. Their cenfurcs and calumnies were no more heard of at that juncture. The gold, the pearls, the cotton, and other commodities of value which Columbus produced, feemed fully to refute what the mal-contents had propogated with respect to the poverty of the country. Bÿ reducing the Indians to obedience, and imposing a regular tax upon them, he had lecured to Spain a large accession of new fubjects, and the establishment of a revenue that promised to be confiderable. By the mines which he had found out and examined. a fource of wealth still more copious was opened. Great and unexpected as those advantages were, Columbus represented them only as preludes to future acquisitions, and as the earnest of more important discoveries, which he still meditated, and to which those he had already made would conduct him with ease and certainty. The attentive confideration of all these circumstances made such impreffion, not only upon Ifabella, who was flattered with the idea of being the patronels of all Columbus's enterprifes, but even upon Ferdinand, who having originally expressed his disapprobation of his schemes, was still apt to doubt of their success, that they refolved to supply the colony in Hispaniola with every thing which could render it a permanent establishment, and to furnish Columbus with fuch a fleet, that he might proceed to fearch for those new countries, of whole existence he scemed to be confident. The measures most proper for accomplishing both these designs were concerted with Columbus. Dilcovery had been the fole object of the first voyage to the New World; and though in the fecond, fettlement had been propoled, the precautions taken for that purpole had either been infufficient, or were rendered ineffectual by the mutinous spirit of the Spaniards, and the unforeseen calamities arising from various causes. Now a plan was to be formed of a regular colony, that might ferve as a model to all future establishments, Every particular was confidered with attention, and the whole arranged with a fcrupulous accuracy. The precife number of adventurers who fhould be permitted to embark They were to be of different ranks and professions; was fixed: and the proportion of each was established, according to their ulefulnels and the wants of the colony. A fuitable number of women was to be chosen to accompany these new settlers. As it was the first object to raile provisions in a country where scarcity of food had been the occasion of to much diffress, a confiderable body of hufbandmen was to be carried over. As the Spaniards had then no conception of deriving any benefit from those productions of the New World which have fince yielded fuch large returns of wealth to Europe, but had formed magnificent ideas, and entertained mines the va metals and fu Thu

tained fanguine hopes with respect to the riches contained in the mines which had been discovered, a band of workmen, skilled in the various arts employed in digging and refining the precious metals, was provided. All these emigrants were to receive pay and sublistence for some years, at the public expense,

Thus far the regulations were prudent, and well adapted to the end in view. But as it was forefeen that few would engage vor luntarily to fettle in a country, whole noxious climate had been fatal to fo many of their countrymen, Columbus proposed to tranfport to Hispaniola such malefactors as had been convicted of crimes. which, though capital, were of a lefs attrocious nature ; and that for the future a certain proportion of the offenders usually fent to the gallies, should be condemned to labour in the mines which were to be opened. This advice, given without due reflection, was as inconfiderately adopted. The prisons of Spain, were drianed, in order to collect members for the intended colony; and the judges empowered to try criminals, were instructed to recruit it by their future featences. It is not, however, with fuch materials, that the foundations of a lociety, deftined to be permanent, fhould be laid. Industry, fobriety, patience, and mutual confidence are indifpenfably requifite in an infant lettlement, where purity of morals must contribute more towards establishing order, than the operation or authority of laws. But when luch a mixture of what is corrupt is admitted into the original conftitution of the political body, the vices of those unfound and incurable members will probably infect the whole, and must certainly be productive of violent and unhappy effects. This the Spaniards fatally experienced; and the other European nations having fucceffively imitated the practice of Spain in this particular, pernicious confeguences have followed in their lettlements, which can be imputed to no other cause.

Though Columbus obtained, with great facility and difpatch, the royal approbation of every measure and regulation that he propoed, his endeavours to carry them into execution were fo long retarded, as muft have tired out the patience of any man, lefs accuftomed to encounter and to furmount difficulties. Those delays were occasioned partly by that tedious formality and spirit of procrassing of the spaniards conduct busines; and partly by the exhausted state of the treasury, which was drained by the expence of celebrating the marriage of Ferdinand and Ifabella's only fon with Margaret of Austria, and that of Joanna, their fecond daughter, with Philip archduke of Austria; but must be chiefly imputed to the malicious arts of Columbus's enemies. Astonished at the reception which he met with upon his return, and overawed by his prefence, they gave way, for some time, to a tide of favour

too firong for them to oppole. Their enmity, however, was too inveterate to remain long inactive. They refumed their opperations, and by the affiftance of Fonleca, the minister for Indian affairs, who was now promoted to the bishopric of Bajados, they threw in fo many obstacles to protract the preparations for Columbus's expedition, that a year elapsed before he could procure two ships to carry over a part of the supplies defined for the colony, and almost two years were spent before the small squadron was equipped of which he himself was to take the command.

This squadron confisted of fix ships only, of no great burden, and but indifferently provided for a long or dangerous navigation, This voyage which he now meditated was in a course different. from any he had undertaken. As he was fully purfuaded that the fertile regions of India lay to the fouth-west of those countries which he had discovered, he proposed, as the most certain method of finding out these, to fland directly fouth from the Canary or Cape de Verd islands, until he came under the equinoctial line, and then to stretch to the west before the favourable wind for fuch a courfe, which blows invariably between the tropics. With this idea he fet fail, on May the thirtieth, one thousand four hundred and ninety-eight, and touched first at the Canary, and then at the Cape de Verd islands, on July the fourth. From the former he dispatched three of his ships with a supply of provisions for the colony in Hilpaniola: with the other three, he continued his voyage towards the fouth. No remarkable occurrence happened till July the nineteenth, when they arrived within five degrees of the line, There they were becalmed, and at the fame time the heat became fo exceflive, that many of their wine cafks burft, the liquor in others foured, and their provisions corrupted. The Spaniards, who had never ventured fo far to the fouth, were afraid that the ships would take fire, and began to apprehend the reality of what the ancients had taught concerning the destructive qualities of that torrid region of the globe. They were relieved, in some measure, from their fears by a seasonable fall of rain, This, however, though fo heavy and unintermitting that the men could hardly keep the deck, did not greatly mitigate the intenfenefs of the heat. The admiral, who with his usual vigilance had in perfon directed every operation, from the beginning of the voyage, was to much exhausted by fatigue and want of sleep, that it brought on a violent fit of the gout, accompanied with a fever, All these circumstances constrained him to yield to the importunities of his crew, and to alter his course to the north-west, in order to reach fome of the Carribee illands, where he might refit, and be supplied with provisions."

# DISCOVERY OF AMERICA.

On the first of August, the man stationed in the round top fur-. priled them with the joyful cry of land. They flood towards it, and discovered a confiderable island, which the admiral called Trinidad, a name it fill regains. It lies on the coaft of Guiana, near the mouth of the Orinoco. This, though a river only of the third or fourth magnitude in the New World, far furpaffes, any of the ftreams in our hemisphere. It rolls towards the ocean fuch a vaft body of water, and rushes into it with fuch impetuous force, that when it meets the tide, which on that scaft rifes to an uncommon height, their collision occasions a fwell and agitation of the waves no lefs furprifing than formidable. In this conflict, the irreliftible torrent of the river fo far prevails, that it freshens the occan many leagues with its flood. Columbus, before he could, perceive the danger, was entangled among those adverse currents and tempeftuous waves, and it was with the utmost difficulty that. he escaped through a narrow strait, which appeared fo tremendous, that he called it La Boca del Drago. As foon as the confernation which this occasioned, permitted him to reflect upon the nature. of an appearance fo extraordinary, he differned in it a fource of comfort and hope. He justly concluded, that fuch a valt body of water as this river contained, could not be supplied by any islandy but must flow through a country of immense extent, and of confequence that he was now arrived at that continent which it had long been the object of his wifnes to discover. Full of this idea, he flood to the west along the coast of those provinces which are." now known by the names of Paria and Cumana. He landed in feveral places, and had fome intercourfe with the people, who refembled those of Hispaniola in their appearance and manner of life. They wore, as ornaments, fmall plates of gold, and pearls. of confiderable value, which they willingly exchanged for European toys. They feemed to possels a better understanding, and greater courage, than the inhabitants of the iflands. The country produced four-footed animals of feveral kinds, as well as a great variety of fowls and fruits. The admiral was fo much delighted with its beauty and fertility, that with the warm enthulialm of a liscoverer, he imagined it to be the paradife described in Scripure, which the Almighty shole for the refidence of man, while he retained innocence that rendered him worthy of fuch a habitaion. Thus Columbus had the glory not only of difeovering to mankind the existence of a New World, but made considerable rogress towards a perfect knowledge of it; and was the first man who conducted the Spaniards to that wast continent which has cen the chief feat of their empire, and the fource of their treaares in this quarter of the globe. The shattered condition of his hips, fearcity of provisions, his own infirmities, together with

the impatience of his crew, prevented him from purfuing his difcoveries any farther, and made it necellary to bear away for Hifpaniola. In his way thither he difcovered the islands of Cubagua and Margarits, which afterwards became remarkable for their pearl-fifthery. When he arrived at Hifpaniola, on the thirtieth of August, he was vasited to an extreme degree with fatigue and fickness; but found the affairs of the colony in fuch a fituation, as afforded him no prospect of enjoying that repose of which he flood for much in need.

Many revolutions had happened in that country during his abfence. His brother the adelantado, in confequence of the advice which the admiral gave before his departure; had removed the colony from Ifabella to a more commodious station, on the oppofite fide of the island, and laid the foundation of St. Domingo. which was long the most confiderable European town in the New World; and the feat of the supreme courts in the Spanish domimons there. As foon as the Spaniards were cltablished in this new fettlement, the adelantado, that they might neither languish' in inactivity, nor have leifure to form new cabals, marched into those parts of the island which his brother had not yet visited or reduced to obedience. As the people were unable to relift, they fubmitted every where to the tribute which he imposed. But they foon found the burden to be fo intolerable, that, overawed as they were by the superior power of their oppressors, they took arms against them. Those infurrections, however, were not formidable. A conflict with timid and naked Indians was neither dangerous nor of doubtful iffue."

But while the adelantado was employed against them in the field, a mutiny, of an afpect far more alarming, broke out among the Speniards. The ringleader of it was Francis Roldan, whom Columbus had placed in a station which, required him to be the guardian of order and tranquility in the colony. A turbulent and inconfiderate ambition precipitated him into this desperate meafure, fo unbecoming his rank. The arguments which he employed to' feduce his countrymen were frivolous and ill-founded. He accufed Columbus and his two brothers of arrogance and feverity; he pretended that they aimed at establishing an independent dominion in the country; he taxed them with an intention of cutting off part of the Spaniards by hunger and fatigue, that they might more eafily reduce the remainder to fubjection ; he represented it . as unworthy of Caffilians, to remain the tame and paffive flaves, of three Geonele adventurers. As men have always a propenfity to impute the hardships of which they feel the preffure, to the misconduct of their rulers; as every nation views with a jealous eye the power and exaltation of foreigners, Roldan's infinuations made

A confiderable number of the Spanlardt made choice of him as their leader, and taking arms against the adelantado and his brother, feised the King's magazine of provisions, and endeavoured to surprise the fort at St. Domingo: This was preferved by the vigilance and courage of Don Diego Columbus. The mutineers were obliged to retire to the province of Xaragua; where they continued not only to difclaim the adelantado's authotity themfelves, but excited the Indians to throw off the yoke:

Such was the distracted state of the colony when Columbus landed at St. Domingo: . He was allonished to find that the three fhips which he had dispatched from the Canaries were not yet arrived. By the unskilfulness of the pilots, and the violence of cutrents; they had been carried a hundred and fixty miles to the welt of St. Domingo, and forced to take shelter in a harbour of the province of Xaragua, where Roldan and his feditions followers were cantoned. , Roldan carefully concealed from the commanders of the fhips his infurrection against the adelantado, and employing his utmost address to gain their confidence, perfuaded them to fet on fhore a confiderable part of the new fettiers whom they brought over, that they might proceed by land to St: Domingo: It require ed but few arguments to prevail with those men to espouse his caule. They were the refule of the jals of Spain, to whom idlenefs, licentioufnefs, and deeds of violence were familiar; and they returned eagerly to a course of life nearly refembling that to which they had been accustomed. The commanders of the ships perceiving, when it was too late, their imprudence in difembarking to many of their men; ftood away for St. Domingo, and got fafe into the port a few days after the admiral; but their flock of provisions was to walted during a voyage of fuch long continuance, that they brought little relief to the colony:"

By this junction with a band of fuch bold and desperate affociates, Roldan became extremely formidable, and no lefs extravagant in his demands. Columbus; though filled with refertment at his ingratitude; and highly exasperated by the inicience of his followers, made no hafte to take the field; He trembled at the thoughts of kindling the flames of *t* civil war, in which, whatever party prevailed; the power and ftrength of both must be fo much walted; as might encourage the common themy to unite and complete their destruction: At the fame time, he observed, that the prejudices and paffions which incited the rebels to take arms, had fo far infected those who fill adhered to him, that many of them were adverse; and all cold to the fervice. From fuch fentiments with respect to the public intereft, as well as from this view of his

68

own fituation, he chofe to negociate rather than to fight. By a feafonable proclamation, offering free pardon to fuch as thould metit it by returning to their duty, he made impression upon some of the malcontents. By engaging to grant such as should defire it the liberty of returning to Spain, he allured all those unfortunate adventurers, who, from sickness and disappointment, were disgusted with the country. By promising to re-establish Roldar in his former office, he southed his pride; and by complying with most of his demands in behalf of his followers; he fatisfied their avarice. Thus, gradually and without bloodshed, but after many tedious negociations, he diffolved this dangerous combination which threatened the colony with rulu; and reflored the appearance of order, regular government, and tranquillity.

In confequence of this agreement with the mutineers, lands were alloted them in different parts of the island, and the Indians, fettled in each diffriet were appointed to cultivate a certain portion, of ground for the use of those new masters". The performance of this work was substituted in place of the tribute formerly impofed; and how neceffary foever fuch a regulation might be in a fickly and feeble colony, it introduced among the Spaniards the Repartimientos, or diffributions of Indians established by them in all their fettlements, which brought numberless calamities upon that unhappy people, and fubjected them to the most grievous oppression. This was not the only bad effect of the infurrection in Hilpaniola; it prevented Columbus from profecuting his difcoveries on the continent, as felf-prefervation obliged him to keep near his perfon his brother the adelantado, and the failors whom he intended to have employed in that fervice. As foon as his affairs would permit, he lent fome of his fhips to Spain with a journal of the voyage which he had made, a description of the new countries which he had discovered, a chart of the coast along which he had failed, and specimens of the gold, the pearls, and other curious or valuable productions which he had acquired by trafficking with the natives. At the fame time he transmitted an account of the infurrection in Hispaniola; he accused the mutineers not only of having thrown the colony into fuch violent convultions as threatened its diffolution, but of having obstructed every attempt towards discovery and improvement, by their unprovoked rebellion against their superiors, and propoled leveral regulations for the better government of the island, as well as the extinction of that mutinous spirit, which, though suppressed at present, might soon burst out with additional rage. Roldan and his affociates did not neglect to convey to Spain, by the fame fhips, an apology for their own conduct, together with their recriminations upon the admiral and his brothers, Unfortu-

nately for the honour of Spain, and the happinels of Columbus, the latter gained most credit in the court of Ferdinand and Isabella, and produced unexpected effects.

But previous to the relating of thele, it is proper to take a view of fome events, which merit attention, both on account of their own importance, and their connection with the hiftory of the New World. While Columbus was engaged in his fucceflive voyages to the weft, the spirit of discovery did not languish in Portugal, the kingdom where it first acquired vigour, and became enterpriling, Self-con lemnation and regret were not the only fentiments to which the fuccess of Columbus, and reflection upon their own imprudence in rejecting his propolals, gave rile among the Portuguele, They excited a general emulation to furpals his performances, and an ardent defire to make fome reparation to their country for their own error. With this view, Emmanuel, who inherited the enterprifing genius of his predeceffors, pertified in their grand fcheme of opening a passage to the East Indies by the Cape of Good Hope; and foon after his accession to the throne, equipped a squadron for that important voyage, He gave the command of it to Vafco de Gama, a man of noble birth, possessed of virtue, prudence and courage, equal to the flation, The fquadron, like all those fitted aut for discovery in the infancy of navigation, was extremely feeble, confifting only of three veffels, of neither burden nor force adequate to the fervice. As the Europeans were at that time little acquainted with the course of the trade winds and periodical monfoons which render navigation in the Atlantic ocean, as well as in the lea that feparates Africa from India, at fome featons eafy, and at others not only dangerous, but almost impracticable, the time cholen for Gama's departure was the most improper during the whole year. He fet fail from Lifbon on the ninth of July, 1497, and ftanding towards the fouth, had to ftruggle for four months with contrary winds, before he could reach the Cape of Good Hope. On November 20, their violence began to abate; and during an interval of calm weather, Gama doubled that formidable promontory, which had fo long been the boundary of navigation, and directed his courfe towards the north-east, along the African coaft. He touched at feveral ports; and after various adventures, which the Portuguese historians relate with high but just encomiums upon his conduct and intrepidity, he came to anchor before the city of Melinda. Throughout all the vaft countries which extend along the coaft of Africa, from the river Senegal to the confines of Zanguebar, the Portuguele had found a race of men rude and uncultivated, ftrangers to letters, to arts and commerce, and differing from the inhabitants of Europe no lefs in their fea-

H

tures and complexion, than in their manners and inflitutions, Aq. they advanced from this, they observed, to their inexpressible joy. that the human form gradually altered and improved, the Afiatic features began to predominate, marks of civilization appeared, letters were known, the Mahometan religion was established, and a commerce, far from being inconfiderable, was carried on. At that time feveral veffels from India were in the port of Melinda. Gama now purfued his voyage with almost absolute certainty of fucces, and, under the conduct of a Mahometan pilot, arrived at Calecut, upon the coaft of Malabar, on the twenty-fecond of May, one thouland four hundred and ninety-eight. What he beheld of the wealth, the populousnels, the cultivation, the industry and arts of this highly civilized country, far furpaffed any idea that he had formed, from the imperfect accounts which the Europeans had hitherto received of it. But as he possessed neither fufficient force to attempt a fettlement, nor proper commodities with which he could carry on commerce of any confequence, he haftened back to Portugal, with an account of his fuccels in performing a voyage the longest, as well as most difficult, that had ever been made fince the first invention of navigation. He landed at Lifbon on the fourteenth of September, one thousand four hundred and ninety nine, two years two months and five days from the time he left that port.

Thus, during the course of the fifteenth century, mankind made greater progress in exploring the state of the habitable globe, than in all the ages which had clapfed previous to that period. The spirit of discovery, feebly at first and cautious, moved within a very narrow iphere, and made its efforts with hefitation and timidity. Encouraged by fuccels, it became adventurous, and boldly extended its operations. In the course of its progression, it continued to acquire vigour, and advanced at length with a rapidity and force which burft through all the limits within which ignorance and fear had hitherto circumferibed the activity of the human race. Almost fifty years were employed by the Portuguese in creeping along the coast of Africa from Cape Non to Cape de Verd, the latter of which lies only twelve degrees to the fouth of the former. In lefs than thirty years they venture I beyond the equinoctial line into another hemisphere, and penetrated to the southern extremity of Africa, at the diftance of forty-nine degrees from Cape de Verd. During the laft feven years of the century, a New World was difcovered in the west, not inferior in extent to all the parts of the earth with which mankind were at that time acquainted. In the east, unknown feas and countries were found out, and a communication, long defired, but hitherto concealed, was opened between Europe and the opulent regions of India. In comparison with events fo wonderful and unexpected, all that had hitherto been

deemed jefts no intereft and exe This

covery Columb private gave of mens of drons a The Sp charge opened return burden portuni prejecto to the p One of Ojeda, bus in fuch cr equip thorifin Badajos Withou diction four hu the Ner municat charts d out inte route w He trad as far as coaft b thus alc a part o Hilpani with li expedit Ame in this

deemed great or splendid, faded away and disappeared. Vast objects now presented themselves. The human mind, roused and interested by the prospect, engaged with ardour in pursuit of them, and exerted its affive powers in a new direction.

This luirie of enterprife, though but newly awakened in Spain, began foon to operate extensively. All the attempts towards difcovery made in that kingdom, had hitherto been carried on by Columbus alone, and at the expence of the fovereign. But now private adventurers, allured by the magnificent descriptions he gave of the regions which he had vifited, as well as by the specimens of their wealth which he produced, offered to fit out Iquadrons at their own rifk, and to go in queft of new countries.----The Spanish court, whole scanty revenues, were exhausted by the charge of its expeditions to the New World, which, though they opened alluring prolpects of future benefit, yielded a very liparing return of preient profit, was extremely willing to devolve the burden of discovery upon its subjects. It feized with joy an opportunity of rendering the avarice, the ingenuity, and efforts of prejectors, inftrumental in promoting defigns of certain advantage to the public, though of doubtful fuccess with respect to themselves. One of the first propositions of this kind was made by Alonio de Ojeda, a gallant and active officer, who had accompanied Columbus in his fecond voyage. His rank and character procured him fuch credit with the merchants of Seville, that they undertook to equip four thips, provided he could obtain the royal licence, authoriging the voyage. The powerful patronage of the bifhop of Badajos cafily fecured fuccess in a fuit so agreeable to the court." Without confulting Columbus, or regarding the rights and jurifdiction which he had acquired by the capitulation in one thousand four hundred and ninety-two, Ojeda was permitted to let out for the New World. In order to direct his course, the bishop communicated to him the admiral's journal of his last voyage, and his charts of the countries which he had discovered. Ojeda struck out into no new path of navigation, but adhering fervilely to the route which Columbus hed taken, arrived on the coast of Paria. He traded with the natives, and fanding to the weft, proceeded as far as Cape de Vela, and ranged along a confiderable extent of coaft beyond that on which Columbus had touched. Having thus afcertained the opinion of Columbus, that this country was a part of the continent, Ojeda returned in October, by way of Hilpaniola to Spain, with fome reputation as a discoverer, but with little benefit to those who had raised the funds for the expedition.

Amerigo Velpucci, a Florentine gentleman, accompanied Ojeda in this voyage. In what station he served, is uncertain; but as

he was an experienced failor, and eminently fkilled in all the fciences fubfervient to mivigation, he must have sequired fome authority among his companions, that they willingly allowed him to have a chief thare in directing their operations during the voyage. Soon after his return, he transmitted an account of his adventures and difcoveries to one of his countrymen; and labouring with the vanity of a traveller to magnify his own exploits, he had the addreis and confidence to frame his narrative, fo as to make it. appear that he had the glory of having first discovered the continent in the New World. Amerigo's account was drawn up not only with art, but with fome elegance. It contained an amufing hiftory of his voyage, and judicious observations upon the natur." productions; the inhabitants, and the cuftoms of the countries which he had vifited. As it was the first description of any part of the New World that was published, a performance fo well calculated to gratify the pation of mankind for what is new and marvellous, circulated rapidly, and was read with admiration. The country, of which Amerigo was supposed to be the discoverer, came gradually to be called by his name. The caprice of mankind, often as unaccountable as unjust, has perpetuated this error, By the universal confent of nations, AMERICA is the name beflowed on this new quarter of the globe. The bold pretentions of a fortunate impostor have robbed the discoverer of the New World of a diffinction which belonged to him. The name of Americo has fupplanted that of Columbus; and mankind may regret an act of injustice, which, having received the fanction of time, it is now too late to redrofs, and of hill the server and haven

During the fame year, another voyage of difcovery was undertaken. Columbus not only introduced the fpirit of naval enterprife into Spain, but all the first adventurers who diftinguished themfelves in this new career, were formed by his instructions, and acquired in his voyages the skill and information which qualified them to imitate his example. Alongo Nigno, who had ferved under the admiral in his last expedition, fitted out a fingle ship, in conjunction with Christopher Guerra, a merchant of Seville, and failed to the coast of Paria. This voyage feems to have been conducted with greater attention to private emolument, than to any general or national object. Nigno and Guerra made no difcoveries of any importance; but they brought home such a return of gold and pearls; as inflamed their countrymen with the defire of engaging in fimilar adventures.

Soon after, Vincent Yanez Pinzon, one of the admiral's companions in his first voyage, failed from Palos with four ships. He shood boldly towards the fouth, and was the first Spaniard who ventured to crofs the equinoctial line; but he feems to have land.

ed on no part of the coast beyond the mouth of the Maragaon, or river of the Amazons. All these navigators adopted the erroneous theory of Columbus, and believed that the countries which they had diffeovered were part of the valt continent of India.

9

During the last year of the fifteenth century, that fertile district of America, on the confines of which Pinon had flopt fhort, was more fully discovered. The successful voyage of Gama to the East Indies having encouraged the King of Bonugal to fit out a fleet fo powerful, as not only to carry on trade, but to attempt conqueft, he gave the commad of it to Pedro Alvarez Gabral. In order to avoid the coast of Africa, where he was certain of meeting with variable Breezes, or frequent calms, which might retard his voyage, Cabral ftood out to fea, and hept to far to the welt, that, to his furprife; he found himfelf upon the flore of an unknown country, in the tenth degree beyond the line, He imagined, at first, that it was fome island in the Atlantic Ocean hitherto unobserved ; but, proceeding along its coaft for feveral days, he was led gradually to believe, that a country to extensive formed a part of fome great continent. This latter opinion was well founded. The country with which he fell in belongs to that province in South America, now known by the name of Brafil. He landed; and having formed a very high idea of the fertility of the foil; and agreeableness of the climate, he took polleffion of it for the crown of Portugal, and dispatched a thip to Lifbon with an account of this event, which appeared to be no lefs important than it was unexpected. Columbus's difeovery of the New World was the effort of an active genius, enlightened by feience, guided by experience, and acting upon a regular plan, executed with no lefs courage than perfeverance, But from this adventure of the Portuguele, it appears that chance might have accomplished that great defign which it is now the pride of human reason to have formed and perfected. If the fagacity of Columbus had not conducted mankind to America, Cabral, by a fortunate accident, might have led them, a few years later, to the knowledge of that extensive continent.

While the Spaniards and Portuguele, by thole fucceffive voyages, were daily acquiring more enlarged ideas of the extent and opulence of that quarter of the globe which Columbus had made known to them, he himfelf, far from enjoying the tranquillity and honours with which his fervices fhould have been recompended, was ftruggling with every diftrefs in which the envy and malevolence of the people under his command, or the ingratitude of the court which he ferved, could involve him. Though the pacification with Roldan broke the union and weakened the force of the mutineers, it did not extirpate the feeds of differed out of the island. Several of the malcontents continued in arms, refuging to fubmit to the admirtal.

He and his brothers were obliged to take the field alternately, in order to check their incurfions, or to punish their crimes. The perpetuel occupation and difquiet which this created, prevented him from giving due attention to the dangerous machinations of his enemies in the court of Spain. A good number of fuch as were most diffatisfied with his administration, had embraced the opportunity of returning to Europe with the fhips which he difpatched from St. Domingo. The final difappointment of all their hopes inflamed the rage of thele unfortunate adventurers against Columbus to the utmost pitch. Their poverty and diffres, by exciting compassion; rendered their accusations tredible; and their complaints interesting. They teazed Ferdinand and Isabella inceffantly with memorials, containing the detail of their own grievances, and the articles of their charge against Columbus. Whenever either the King or Queen appeared in public, they furrounded them in a tumultuary manner, infifting with importunate clamours for payment of the arrears de to them, and demanding vengeance upon the author of their fufferings. They infulted the admiral's fons wherever they met them, reproaching them as the offspring of the projector, whole fatal curiofity had difcovered thole pernicious regions which drained Spain of its wealth, and would prove the grave of its people: These avowed endeavours of the malcontents from America to ruin Columbus, were feconded by the fecret, but more dangerous infinuations of that party among the courtiers, which had always thwarted his schemes, and envied his fuccefs and credit.

Ferdinand was disposed to liften, not only with z willing, but with a partial ear, to these accusations. Notwithstanding the flattering accounts which Columbus had given of the riches of America, the remittances from it had hitherto been fo fcanty, that they fell fat short of the expence of the armaments fitted out. The glory of the discovery, together with the prospect of remote commercial advantages; was all that Spain had yet received in return for the efforts which the had made. But time had already diminished the first fensations of joy which the discovery of a New World occasioned, and fame alone was not an object to fatisfy the cold interefted mind of Ferdinand. The nature of commerce was then fo little understood, that, where immediate gain was not acquired, the hope of diftant benefit, or of flow and moderate returns, was totally difregarded. Ferdinand confidered Spain, on this account, as having loft by the enterprife of Columbus, and imputed it to his mifconduct and incapacity for government; that a country abounding in gold had yielded nothing of value to its conquerors. Even Ifabella, who from the favourable opinion which the entertained of Columbus, had uniformly protected him, was shaked at length

by the number and boldness of his accusers, and began to suspect that a disaffection to general must have been occasioned by real prievances; which called for redress. The Bishop of Bajados; with his usual animolity against Columbus; encouraged these sufpicions, and confirmed them:

As foon as the queen began to give way to the torrent of calumfry, a refolution fatal to Columbus was taken. Francis de Bovadilla, a knight of Calatrava, was appointed to repair to Hilpaniola; with full powers to enquire into the conduct of Columbus; and, if he should find the charge of mal-administration proved, to superfede him and affume the goverment of the island: It was impossible to escape condemnation, when this preposterous commission made it the interest of the judge to pronounce the person; whom he was fent to try, guilty: Though Columbus had now composed all the diffentions in the ifland; though he had brought both Spaniards and Indians to fubmit peaceably to his government; though he had made fuch effectual provision for working the mines, and cultivating the country, as would have fecured a confiderable revenue to the king, as well as large profits to individuals, Bovadilla, without deigning to attend to the nature or merit of those fervices, difcovered from the moment that he landed in Hilpaniola, a determined purpole of treating him as a criminal! He took ponefion of the admiral's houfe in St. Domingo, from which its mafter happened at that time to be ablent, and feized his effects, as if his guilt had been already fully proved; he rendered himfelf mafter of the fort and of the king's ftores by violence; he required all perions to acknowledge him as supreme governor; he fet at liberty the prisoners confined by the admiral, and fummoned him to appear before his tribunal, in order to answer for his conduct; transmitting to him, together with the fummons, a copy of the royal mandate, by which Columbus was enjoined to yield implicit obedience to his commands.

Columbus, though deeply affected with the ingratitude and injuffice of Ferdinand and Habella, did not hefitate a moment about his own conduct. He fubmitted to the will of his fovereigns with a respectful filence, and repaired directly to the court of that violent and partial judge whom they had authorifed to try him. Bovadilla, without admitting him into his prefence, ordered him inftantly to be arrefted, to be loaded with chains, and hurried on board a fhip. Even under this humiliating reverse of fortune, the firmnels of mind which diffinguishes the character of Columb.s, did not forfake him. Confcious of his own integrity, and folacing himself with reflecting upon the great things which he had achieved, he endured this infult offered to his character, not only with

composure, but with dignity. Nor had he the consolation of fympathy to mitigate his fufferings. Bovadilla had already rendered himfelf to extremely popular, by granting various immunitics to the colony, by liberal donations of Indians to all who applied for them, and by relaxing the reins of discipline and government, that the Spaniards, who were mostly adventurers, whom their indigence or crimes had impelled to abandon their native country; expressed the most indecent fatisfaction with the difgrace and imprisonment of Columbus. They flattered themselves, thatnow they should enjoy an uncontrouled liberty, more fuitable to their difpolition and former habits of life. Among perions thus prepared to centure the proceedings, and to coerfe the character of Columbus, Bovadilla collected materials or a charge against him. All accusations, the most improbable, as well as inconfistent, were received. No informer, however infamous, was rejected. The refult of this inquest, no less indecent than partial, he transmitted to Spain. At the same time, he ordered Columbus, with his two brothers, to be carried thither in fetters; and, adding cruelty to infult, he confined them in different thips, and excluded them from the comfort of that friendly intercourfe which might have foothed their common diffres. But while the Spaniards in Hifpaniola viewed the arbitrary and infolent proceedings of Bovadilla with a general approbation, which reflects difhonour upon their name and country, one man still retained a proper sense of the great actions which Columbus had performed, and was touched with the fentiments of veneration and pity due to his rank, his age, and his merit. Alonfo de Vallejo, the captain of the veffel on board which the admiral was confined, as foon as he was clear of the illand, approached the prifoner with great respect, and offered to release him from the fetters with which he was unjuftly loaded. " No replied Columbus, with a generous indignation, " I wear these irons in consequence of an order from my fovereigns. They shall find me as obedient to this as to their other injunctions. By their command I have been confined; and their command alone shall fet me at liberty."

. Fortunately, the voyage to Spain was extremely fhort. As foon as Ferdinand and Ifabella were informed that Columbus was brought home a prifoner, and in chains, they perceived at once what univerfal aftonifhment this event muft occasion, and what an imprefiion to their difadvantage it muft make. All Europe, they forefaw, would be filled with indignation at this ungenerous requital of a man who had performed actions worthy of the higheft recompence, and would exclaim against the injuffice of the natien, to which he had been fuch an eminent benefactor, as well as against the ingratitude of the princes whole reign he had rendered

illustrious. Ashamed of their own conduct, and enger not only; to make fome reparation for this injury, but to efface the flain which it might fix upon their character, they inftantly iffued orders to fet Columbus at liberty, on December the feventeenth, invited him to court, and remitted money to enable him to appear there in a manner fuitable to his rank. When he entered the royal prefence, Columbus threw himfelf at the feet of his fovereigns. 'He remained for fome time filent; the various paffix ons which agitated his mind fupprefling his power of utterance, At length he recovered himfelf, and vindicated his conduct in a long discourse, producing the most fatisfying proofs of his own integrity as well as good intention, and evidence, no lefs clear, of the malevolence of his enemies, who, not fatisfied with having ruined his fortune, laboured to deprive him of what alone was now left, his honour, and his fame. Ferdinand received him with decent civility, and Ifabella with tendernels and refpect, They both expressed their forrow for what had happened, difavowed their knowledge of it, and joined in promising him protection and future favour. But though they instantly degraded Bovadilla, in order to remove from themfelves any fufpicion of having authorifed his violent proceedings, they did not reftore to Columbus his jurifdiction and privileges as viceroy of those countries which he had discovered. Though willing to appear the avengers of Columbus's wrongs, that illiberal jealoufy which prompted them to inveft Bovadilla with fuch authority as put it in his power to treat the admiral with indignity still sublished. They were afraid to truft a man to whom they had been to highly indebted, and retaining him at court under various pretexts, they appointed Nicholas de Ovando, a knight of the military order of Alcantara, governor of Hispaniola. 154 F.

Columbus was deeply affected with this new injury, which came from hands that feemed to be employed in making reparation for his paft fufferings. The fenfibility with which great minds feel every thing that implies any fufpicion of their integrity, or that wears the afpect of an affront, is exquifite. Columbus had expeienced both from the Spaniards; and their ungenerous conduct exafperated him to fuch a degree, that he could no longer conceal the fentiments which it excited. Wherever he went, he carried about with him, as a memorial of their ingratitude, those fetters with which he had been loaded. They were constantly hung up in his chamber, and he gave orders that when he died they should be buried in his grave.

Meanwhile, in the year one thousand five hundred and one the spirit of discovery, notwithstanding the spore check which

it received by the ungenerous treatment of the man, who first encited it in Spain, continued active and vigorous. Roderigo de Bastidas, a perfon of distinction, fitted out two ships, in lanuary, scopartnery with John de la Cofa, who having ferved undet the admiral in two of his voyages, was deemed the maft skilful pilot in Spain. They fleered directly towards the continents prived on the coaft of Paria, and proceeding to the weft, difcos yered all the coaft of the province now known by the name of Tierra Firmè, from Cape de Vela to the gulf of Darion. Not long after Ojeda, with his former affociato Amerigo Vepucei, fet out upon a fecond voyage, and being unacquainted with the deftinat tion of Bastidas, held the same course, and touched at the same places. The voyage of Baffidas was profucious and lucrative, that of Qjeda unfortunate. But both tended to increase the ardour of difcovery; for in proportion as the Spaniarda acquired. a more extensive knowledge of the American continent, their idea of its opulence and fertility increased.

Before theie adventurers returned from their voyages, a fleet was equipped at the public expence, for carrying over Ovando. the new governor to Hispaniola. His presence there was extreme. by requisite, in order to stop the inconsiderate career of Boyadilla, whole imprudent adminitr tion threatened the fettlement with Confcious of the violence and iniquity of his proceedings ruin. against Columbus, he continued to make it his fole object to gain the favour and support of his countrymen, by accommodating himfelf to their paffions and prejudices. With this yiew, he effablished regulations, in every point the reverse of those which Columbus deemed effential to the prosperity of the colony. Instead of the levere discipline, necessary in order to habituate the dissolute and corrupted members of which the fociety was compoled to the rostraints of law and subordination, he suffered them to enjoy fuch uncontrouled licence, as encouraged the wildest excesses. Instead of protecting the Indians, he gave a legal fanction to the appression of that unhappy people. He took the exact number of fuch as furvived their past calamities, divided them into distinct elasses, distributed them in property among his adherents, and reduced all the people of the illand to a flate of complete fervitude. As the avarice of the Spaniards was too rapacious and impatient to try any method of acquiring wealth but that of fearching for gold, this fervitude became as grievous as it was unjust. The Indians were driven in crowds to the mountains, and compelled to work in the mines, by masters, who imposed their tasks without mercy or difcretion. Labour, fo disproportioned to their firength and former habits of life, walted that feeble race of men

with fuch rapid confumption, as must have foon terminated in the utter extinction of the ancient inhabitants of the country.

The necellity of applying a fpeedy remedy to those diforders hastened Ovando's departure. He had the command of the most respectable armament hitherto fitted out for the New World. It confifted of thirty-two fhips, on board of which two thouland five hundred perions embarked, with an intention of fettling in the country. Upon the arrival of the new governor with this powerful reinforcement to the colony, in the year one thouland five hundred and two, Bovadilla refigned his charge, and was commanded to return infantly to Spain, in order 'o aniwer for his conduct. Roldan, and the other ringleaders of the mutincers, who had been most active in opposing Columbus, were required to leave the island at the same time. A proclamation was iffued, declaring the natives to be free fubjects of Spain, of whom no fervice was to be exacted contrary to their own inclination, and without paying them an adequate price for their labour. With respect to the Spaniards themfelves, various regulations, were made, tending to Suppress the licentious spirit which had been to fatal to the colony. ' and to establish that reverence for law and order on which society is founded, and to which it is indebted for its increase and ftability. In order to limit the exhorbitant gain which private perfons were fuppoled to make by working the mines, an ordinance was published, directing all the gold to be brougt to a public smelting-house, a declaring one half of it to be the property of the crown.

While these steps were taking for securing the tranquillity and welfare of U- colony which Columbus had planted, he himfelf was engaged in the unpleafant employment of foliciting the favour of an ungrateful court, and, notwithflanding all his merits and fervices, he folicited in vain. He demanded, in terms of the original capitulation in one thousand four hundred and ninety-two, to be reinflated in his office of viceroy over the countries which he had diffeovered. By a ftrange fatility, the circumftance which he urged in support of his claim, determined a jealous monarch to reject it. The greatness of his discoveries, and the prospect of their increasing value, made Ferdinand confider the concessions in the capitulation as extravagant and impolitic. He was afraid of entrusting a subject with the exercise of a jurisdiction that now appeared to be fo truly extensive, and might grow no lefs formidable. He inspired Isabella with the same suspicions; and under various pretexts, equally frivolous and unjust, they cluded all Columbus's requisitions to perform that which a folemn compact bound them to accomplish. After attending the court of Spain for nearly two years, as an humble fuitor, he found it impossible to remove Ferdinand's prejudices and apprehensions; and perceived,

at length, that he laboured in vain, when he urged a class of juf-

But even this ungenerous return did not discourage him from purfuing the great object which first called forth his inventive genius, and excited him to attempt dilcovery. To open a new palfage to the East Indies was his original and favourite fcheme." This ftill engroffed his thoughts ; and either from his own obfervations in his voyage to Paria, or from fome obfcure hint of the natives, or from the accounts given by Bassidas and de la Cofa, of their expedition, he conceived an opinion that, beyond the continent of America, there was a fea which extended to the East Indies, and hoped to find fome narrow firsit or narrow neck of land by which a communication might be opened with it and the part of the occan already known. By a very fortunate conjecture, he fuppoled this firait or ifthmus to be fituated near the gulph of Darien. Full of this idea, though he was now of an advanced age, worn out with fatigue, and broken with infirmities, the offered, with the alacrity of a youthful adventurer, to undertake a voyage which would afcertain this important point, and perfect the grand fcheme which from the beginning he proposed to accomplish. Several circumstances concurred in disposing Ferdinand and Isabella to lend a favourable car to this propolal, . They were glad. to have the pretext of an honourable employment for removing, from court a man with whole demands they deemed it impolitic to. comply, and whole fervices it was indecent to neglect. Though unwilling to reward Columbus, they were not infenfible of his merit, and from their experience of his skill and conduct,' had reason to' give credit to his conjectures, and to confide in his fuccels. To these confiderations, a third must be added of still more powerful. influence, About this time the Portuguele fleet, under Cabral, arrived from the Indies; and, by the richnels of its cargo, gave the people of Europe a more perfect idea, than they had hitherto been able to form, of the opulence and fertility of the Eaft. The Portuguese had been more fortunate in their discoveries than the Spaniards: They had opened a communication with countries where industry, arts, and elegence flourished; and where commerce had been longer established, and carried to greater extent, than in any region of the earth. Their first voyages thither yielded immediate, as well as vaft returns of profit, in commodities extremely precious and in great requeft. Lifbon became immediately the feat of commerce' and of wealth; while Spain had only the expectation of remote bencht, and of future gain; from the western world. Nothing, then, could be more acceptable to the Spaniards than Columbus's offer to conduct them to the east, by route which he expected to be fhorter, as well as less dangerous,

than that which the Portuguese had taken. Even Ferdinand was roused by such a prospect, and warmly approved of the undertaking.

But, interesting as the object of his voyage was to the nation, Columbus could procure only four small barks, the largest of which did not exceed seventy tons in burden, for performingit. Apcuftomed to brave danger, and to engage in arduous undertakings with inadequate force, he did not hefitate to accept the, command of this pitiful fquadron. His brother Bartholomew, and his fecond fon Ferdinand, the historian of his actions, accompanied him. He failed from Cadiz on the ninth of May, and touched, as ufual, at the Canary iflands; from thence he purposed to have flood directly for the continent; but his largest vessel was fo clumfy and unfit for fervice, as constrained him to bear away for Hispaniola, in hopes of exchanging her for fome thip of the fleet that had carried out Ovando. ' When he arrived off St. Domingo, on June the twenty-ninth, he found eighteen of these ships ready loaded, and on the point of departing for Spain. Columbus immediately acquainted the governor with the defination of his voyage, and the accident which had obliged him to alter his route. He requested permission to enter the harbour, not only that he might negociate the exchange of his fhip, but that he might take shelter during a violent hurricane, of which he differned the approach from various prognoftics, which his experience and fagacity had taught him to obferve; on that account, he advifed him likewife to put off for fome days the departure of the fleet bound to Spain. But Ovando refuted his request, and despited his counfel. Under circumstances in which humanity would have afforded refuge to a ftranger, Columbus was denied admittance into a country of which he had discovered the existence and acquired the possession. His falutary warning, which merited the greatest attention, was regarded as the dream of a vinonary prophet, who arrogantly pretended to predict an event beyond the reach of human fore-fight. The fleet fet fail for Spain. Next night the hurricane came on with dreadful impetuofity. Columbus aware of the danger, took, precautions against it, and faved his little squadron; The fleet deftined for Spain met with the fate which the rafhnefs and obkinacy of its commanders deferved. Of eighteen ships two or three only escaped. In this general wreck perished Bovadilla; Roldan, and the greater part of those who had been the most active in perfecuting Columbus, and oppreffing the Indians. Together with themfelves, all the wealth which they had acquired by their injustice and crucity was swallowed up. It exceeded in value two hundred thousand pefos; an immense sum at that period, and fufficient not only to have fereened them from any fevere ferutiny

7.5

into their conduct, but to have focured them a gracious recept tion at the Spanish court. Among the ships that escaped, one had on board all the effects of Columbus which had been recovered from the ruins of his fortune. Historians, ftruck with the exact diferimination of characters, as well as the just diffribution of rewards and punifhments, confpicuous in those events, universally attribute them to an immediate interposition of divine Providence, in order to avenge the wrongs of an injured man, and to punish the oppreffors of an innocent people. Upon the ignorant and fuperfititious race of men, who were witnelles of this occurrence, it made a different impression. From an opinion, which vulgar admiration is apt to entertain with respect to persons who have diftinguished themselves by their fagacity and inventions, they believed Columbus to be poffeffed of fuperfizitural powers, and imagined that he had conjured up this dreadful ftorm by magical art, and incantations; in order to be avenged of his enemies:

Columbus foon left Hispaniola; July 14, where he met with fuch an inhospitable reception, and stood toward the continent. After a tedious and dangerous voyage, he discovered Guanaia, an' iffund not far diftant from the coast of Honduras. There he had an interview with fome inhabitants of the continent, who arrived in a large canoe: They appeared to be a people more eivilized, and who had made greater progress in the knowledge of uleful arts, than any whom he had hitherto difcovered. In return to the inquiries which the Spaniards made, with their usual eagernels concerning the places where the Indians got the gold which they wore by way of ornament, they directed them to countries lituated to the west, in which gold was found in fuch profusion, that it was applied to the most common ules. Instead of steering in quest of a country to inviting, which would have conducted him along the coaft of Yucatan to the neh empire of Mexico, Columbus was fo bent upon his favourite fehrme of finding out the first which he supposed to communicate with the Indian ocean, that he bore away to the east towards the gulf of Darien ... In this mavigation he discovered all the coast of the continent, from Cape Gracias a Dios, to a harbour, which, on account of its beauty and fecurity, he called Porto Bello. He fearched, in vain, for the imaginary ftrait, through which he expected to make his way into an unknown fea; and though he went on those feveral times, and advanced into the country, he did not penetrate fo far as to crofs' the narrow ifthmus which feparates the gulf of Mexico from the great fouthern ocean. He was fo much delighted, however, with the fertility of the country, and conceived fuch an idea of its wealth, from the fpecimens of gold produced by the natives, that he refolved to leave a imall colony upon the river Belem, in the

that the province of Veragua, under the command of his brother, and to return himfelf to Spain, in order to procure what was requifite for rendering the establishment permanent. But the ungovernable spirit of the people under his command, deprived Columbus of the glory of planting the sirfl colony on the continent of America. Their infolence and rapacious for provoked the natives to take arms, and as these were a more hardy and warlike race of men than the inhibitants of the islands, they cut off part of the Spaniards, and obliged the reft to abandon a station which was found to be untenable.

This repulse, the first that the Spaniards met with from any of the American nations, was not the only misfortune that befel Columbus; it was followed by a fuccession of all the difasters to which navigation is exposed. ' Furious hurricanes, with violent ftorms of thunder and lightning, threatened his leaky veffels with destruction ; while his discontented crew, exhausted with fatigue, and deftitute of provisions, was unwilling or unable to execute his commands. One of his thips perifhed; he was obliged to. , as unfit for fervice; and with the two which abandon another remained, he quitted that parts of the continent which in his anguish he named the Coast of Vexation, and bore away for Hispaniola. New diffrestes awaited him in this voyage. He was driven back by a violent tempest from the coast of Cuba, his ships fell. foul of one another, and were fo much shattered by the shock, that with the utmost difficulty they reached Jamaica, on June 24, where he was obliged to run them aground, to prevent them from finking. The measure of his calamities seemed now to be full, He was caft ashore upon an island at a considerable distance from the only fettlement of the Spaniards in America. His ships were ruined beyond the poffibility of being repaired. To convey an account of his fituation to Hifpaniola, appeared impracticable; and without this it was vain to expect relief. His genius, fertile in refources, and most vigorous in those perilous extremities when feeble minds abandon themfelves to defpair, discovered the only expedient which afforded any prospect of deliverance. He had recourse to the hospitable kindness of the natives who confidered the Spaniards as beings of a superior nature, were eager, on every occasion, to minister to their wants. From them he obtained two of their canoca, each formed out of the trunk of a fingle tree hollowed with fire, and fo mif-fhapen and aukward as hardly to merit the name of boats. In these, which were fit only for creeping along the coaft, or coffing from one fide of a bay to another, Mendez, a Spaniard, and Fieschi, a Genoese, two gentlemen particularly attached to Columbus, gallantly offered to fet out for His

spaniola, upon a voyage of above thirty leagues. This they accomplifted in ten days, after furmounting incredible dangers, and enduring fuch fatigue, that feveral of the Indians who accompanied them funk under it, and died. The attention paid to them by the governor of Hilpaniola was neither fuch as their courage merited, nor the diffrefs of the perfons from whom they came required Ovando, from a mean jealoufy of Columbus was afraid of allowing him to fet foot in the ifland under his government. This ungenerous paffion hardened his heart against every tender fentiment, which reflection upon the fervices and misfortunes of that great man, or compatition for his own fellow-citizens' involved in the fame calamities, mult have excited. Mendez and Fielchi fpent eight months in foliciting relief for their commander and affociates, without any prospect of obtaining it.

During this period, various paffions agitated the mind of Columbus, and his companions in adverfity. At first the expectation of speedy deliverance, from the success of Mendez and Fieschi's voyage, cheered the spirits of the most desponding. After some time the more timorous began to suspect that they had miscarried in their daring attempt, At length, eyen the most fanguine concluded that they had perished. The ray of hope which had broke in upon them, made their condition appear now more difmal." Despair, heightened by disappointment, settled in every breaft. Their taft refource had failed, and nothing remained but the profpett of ending their miferable days among naked favages, far from their country and their friends. The feamen in a transport of rage, role in open mutiny, threatened the life of Columbus, whom they reproached as the author of all their calamities, feized ten canoes, which he had purchased from the Indians, and delpising his remonstrances and entreaties, made off with them to a distant part of the illand. At the fame' time the natives murmured at the long 'refidence of the Spaniards in their country. As their industry was not greater than that of their neighbours in Hispaniola, like them they found the burden of supporting fo many ftrangers to be altogether intolerable. They began to bring in provisions with reluctance, they furnished them with a sparing hand, and threatened to withdraw those supplies altogether. Such a refolution must have been quickly fatal to the Spaniards, Their fafety depended upon the good-will of the Indians; and unless they could revive the admiration and reverence with which that fimple people had at first beheld them, destruction was unavoidable. Though the licentious proceedings of the mutineers had,'in a great measure effaced those impressions which had been to favourable to the Spaniards, the ingenuity of Columbus fuggested a happy artifice, that not only restored but heightened the

he

high opinion which the Indians had originally entertained of them. By his skill in astronomy he knew that there was shortly to be a total eclipfe of the moon. He affembled all the principal perfons of the diffrict around him on the day before it happened, and, after reproaching them for their ficklenefs in withdrawing their affection and affistance from men whom they had lately revered, he told them, that the Spaniards were fervants of the Great Spirit who dwells in heaven; who made and governs the world; that he, offended at their refuling to support men who were the objects of his peculiar favour, was preparing to punish this crime with exemplary feverity, and that very night the moon fhould withhold her light, and appear of a bloody hue; as a fign of the divine-wrath, and an emblem of the vengeance ready to fall upon them. To this marvellous prediction fome of them liftened with the carcles indifference peculiar to the people of America others, with the credulous aftonishment natural to barbarians; But when the moon began gradually to be darkened, and at length appeared of a red colour, all were ftruck with terror. They can with confernation to their houses, and returning instantly to Columbus loaded with provisions, threw them at his feet, conjuring him to intercede with the Great Spirit to avert the deftruction with which they were threatened. Columbus, feeming to be moyed by their entreaties, promifed to comply with their defire. The eclipfe went off, the moon recovered her spleudour; and from that day the Spaniards were not only furnished profusely with provisions, but the natives, with superflitious attention, avoided every thing that could give them offence.

During those transactions; the mutiqueers had made repeated attempts to pais over to Hilpaniola in the cances which they had feized. But, from their own milconduct, or the violence of the winds and currents, their efforts were all unfucceisful. Enraged at this disappointment; they marched towards that part of the ifland where Columbus remained, threatening him with new infults and danger. While they were advancing, an event, happened, more cruel and afflicting than any calamity which he dreaded The governor of Hifpaniola, whole mind was still from them. filled with fome dark fuspicions of Columbus, fent a fmall bark to Jamaica, not to deliver his diftreffed countrymen, but to fpy out their condition. Left the fympathy of those whom he employed fhould afford them relief, contrary to his intention, he gave the command of this veffel to Escobar, an inveterate enemy of Columbus, who adhering to his inftructions with maligant accuracy caft anchorat some distance from the island, approached the shore in a fmall boat, observed the wretched plight of the Spaniards, deliver-

75

K 2

ed a letter of empty compliments to the admiral, received his an-Iwer and departed. When the Spaniards first descried the veffet ftanding towards the illand, every heart exulted, as if the long expected hour of their deliverance had at length arrived; but when it disappeared to fuddenly, they funk into the deepest dejection, and all their hopes died away. Columbus alone, though he felt most fensibly this wanton infult which Ovando added to his past neglect, retained fuch composure of mind, as to be able to cheer his followers. He affured, them, that Mendez and Fieschi had reached Hifpaniola in fafety; that they would fpeedily procure thips to carry them off; but as Efcobar's veilel could not take them all on board, he had refused to go with her, because he was determined never to abandon the faithful companions of his diftrefs. Soothed with the expectation of fpeedy deliverance, and delighted with his apparent generofity in attending more to their. prefervation than to his own fafety, their spirits revived, and he toge to setting the regained their confidence.

Without this confidence, he could not have relifted the mutineers, who were now at hand.' All his endeavours to reclaim those desperate men had no effect but to increase their frenzy. Their demands became every day more extravagant, and their intentions more violent and bloody. The common fafety rendered it necessary to oppose them with open force. Columbus which ad been long afflicted with the gout, could not take the field. On the twentieth of May his brother, the Adelantado, marched against them. "They quickly met." The mutineers rejected with form terms of accommodation, which were once more offered them, and rushed on boldly to the attack. They fell not upon an enemy unprepared to receive them. In the first flock, feveral of their most daring leaders were flain. The Adelantado, whole ftrength was equal to his courage, closed with their captain, wounded, difarmed, and took him prifoner. At fight of this, the reft fled with a dastardly fear, fuitable to their former infolence. Soon after, they fubmitted in a body to Columbus, and bound themfelves by the most folemn oaths to obey all his commands. Hardly was tranquility re-eftablished, when the ships appeared, whose arrival Columbus had promifed with great address, though he could forefee it with little certainty. With transports of joy, the Spaniards quitted an itland in which the unfeeling jealoufy of Ovando had fuffered them to languish above a year, exposed to mifery in all its various forms.

When they arrived at St. Domingo, on the thirteenth of August; the governor, with the mean artifice of a vulgar mind, that labours to atone for infolence by fervility, fawned on the man

whom he envied, and had attempted to ruin. He received Columbus with the most studied respect, lodged him in his own houle, and diftinguilhed him with every mark of honor. "But amidit these overacted demonstrations of regard, he could not conceal the hatred and malignity latent in his heart. He fet at liberty the captain of the mutineers, whom Columbus had brought over in chains, to be tried for his crimes, and threatened fuch as had adhered to the admiral with proceeding to a judicial enquiry into their conduct. Columbus fubmitted in filence to what he could not redrefs; but discovered an extreme impatience to quit a country which was under the jurildiction of a man who had treated him, on every occasion, with inhumanity and injustice. His preparations were foon finished, and he set fail for Spain with two fhips, on September the twelfth 1504. Difasters fimilar to those which had accompanied him through life continued to purfue him to the end of his career. One of his veffels being difabled, was foon forced back to St. Domingo; the other, Ihattered by violent ftorms, failed feven hundred leagues with jury masts, and reached with difficulty the port of St. Lucar in the month of December.

There he received the account of an event the most fatal that could have befallen him, and which completed his misfortunes. This was the death, on the ninth of November, 1504, of his patroneis Queen Ifabella, in whofe justice, humanity, and favour, he confided as his last refource. None now remained to redrefs his wrongs, or to reward him for his fervices and fufferings, but Ferdinand, who had fo long opposed and fo often injured him. To folicit a prince thus prejudiced against him, was an occupation no lefs irkfome than hopelefs. In this, however, was Columbus doomed to employ the cloie of his days. As foon as his health was in fome degree re-eltablished, he repaired to court; and though he was received there with civility barely decent, he plied Ferdinand with petition after petition, demanding the punishment of his oppreffors, and the restitution of all the privileges bestowed upon him by the capitulation of one thousand four hundred and ninety-two. Ferdinand amused him with fair words and unmeaning promifes. Inflead of granting his claims, he proposed expedients in order to elude them, and fpun out the affair with fuch apparent art, as plainly discovered his intention that it should never be terminated. The declining health of Columbus flattered Ferdinand with the hopes of being foon delivered from an importunate fuitor, and encouraged him to perfevere in this illiberal plan. Nor was he deceived in his expectations. Difgusted with the ingratitude of a monarch whom he had ferved with fuch fidelity

77

78

and fuccels, exhausted with the fatigues and hardships which he had endured, and broken with the infirmitics which these brought tipon him, Columbus ended his life at Valladolid on the twentieth of May, one thousand five hundred and fix, in the fifty-ninth year of his age. He died with a composure of mind fuitable to the magnimimity which diftinguished his character, and with fentiments of piety becoming that supreme respect for religion, which he manifested in every occurrence of his life. af a sin es astant of has det sector fait . HIS vaft country extends from the Soth degree of north, to the 56th degree of fouth latitude; and, where its breath is known, from the 35th to the 136th degree weft longitude from London; firetching between 8000 and 9000 miles in length, and in its greateft breadth 3690. It fees both hemifpheres, has two fummers and a double winter, and enjoys all the variety of climates which the earth affords. It is wafted by the two great oceans. To the eaftward it has the Atlantic, which divides it from Europe and Africa; to the weft it has the Pacific or Great South Sea, by which it is feparated from Afia. By these feas it may, and does, carry on a direct commerce with the other three parts of the world;

NORTH AND SOUTH CONTINENT. America is not of equal breadth throughout its whole extent; but is divided into two great continents, called North and South America, by an ifthmus i 500 miles long, and which at Darien, about Lat. 9° N. is only 60 miles over. This ifthmus forms, with the northern and fouthern continents, a vaft gulph, in which lie a great number of iflands, called the West Indies, in contradifinition to the eastern parts of Afia which are called the East Indies.

CLIMATE. Between the New World and the Old, there are feveral very firiking differences; but the most remarkable is the general predominance of cold throughout the whole extent of America. Though we cannot, in any country, determine the precife degree of heat merely by the diffance of the equator, because the elevation above the fea, the nature of the foil, Ac. affect the climate; yet, in the ancient continent, the heat is much more in proportion to the vicinity to the equator than in any part of America. Here the rigour of the frigid zone extends over half that which should be temperate by its position. Even in these

#### GENERAL DESCRIPTION.

80

latitudes where the winter is fcarcely felt on the Old continent, it reigns with great feverity in America, though during a fhort period. Nor does this cold, prevalent in the New World, confine itfelf to the temperate zones; but extends its influence to the torrid zone, alfo, confiderably mitigating the excefs of its heat. Along the offern coaft, the climate, though more fimilar to that of the torrid zone in other parts of the earth, is neverthelefs confiderably milder than in those countries of Afia and Africa which lie in the fame latitude. From the fouthern tropic to the extremity of the American continent, the cold is faid to be much greater than in parallel northern latitudes even of America itfelf.

For this fo remarkable difference between the climate of the New continent and the Old, various caufes have been affigned by different authors. The following is the opinion of the learned Dr. Robertion on this fubject, " Though the utmost extent of America towards the north be not yet difcovered, we know that it advances nearer to the pole than either Europe or Afia. The latter have large feas to the north, which are open during part of the year; and, even when covered with ice, the wind that blows over them is lefs intenfely cold than that which blows over land in the same latitudes. But, in America, the land ftretches from the river St. Laurence towards the pole, and fpreads out immenfely to the weft. A chain of enormous mountains, covered with fnow and ice, runs through all this dreary region. The wind paffing over fuch an extent of high and frozen land, becomes fo impregnated with cold, that it acquires a piercing keennefs, which it retains in its progrefs through warmer climates; and is not entirely mitigated until it reaches the gulph of Mexico. Over all the continent of North America, a north-westerly wind and exceffive cold are fynonymous terms. Even in the most fultry weather, the moment that the wind veers to that quarter, its penetrating influence is felt in a transition from heat to cold no lefs. violent than fudden. To this powerful caufe we may afcribe the extraordinary dominion of cold, and its violent in-roads into the louthern provinces in that part of the globe.

"Other caufes, no lefs remarkable, diminifh the active power of heat in those parts of the American continent which lie between the tropics. In all that portion of the globe, the wind blows in an invariable direction from east to weft. As this wind helds its courfe across the ancient continent, it arrives at the countries which firetch along the weftern flore of Africa, inflamed with all the fiery particles which it hath collected from the fultry plains of Afia, and the burning fands in the African defarts. The coaft of Africa is accordingly the region of the

mof torri fion gala the . dy o Braf warn lie c cour impe ftagn heat. to fo vated great to w vince empi the e traor fcatte zone by re . 1 66 7 mits in a 1 conti lay b pole. degre ed in adjac nent, tione fion appea imagi been to oc muft mate, count

#### OF AMERICA.

most fervent heat, and is exposed to the unmitigated ardour of the torrid zone. But this fame wind, which brings fuch an acceffion of warmth to the countries lying between the river of Senegal and Cafraria, traverfes the Atlantic ocean before it reaches the American fhore. It is cooled in its passage over this vaft body of water; and is felt as a refreshing gale along the coasts of Brafil and Guiana, rendering those countries, though amongst the warmest in America, temperate, when compared with those which lie opposite to them in Africa. As this wind advances in its course across America, it meets with immense plains covered with impenetrable forefts; or occupied by large rivers, marfhes, and ftagnating waters, where it can recover no confiderable degree of At length it arrives at the Andes, which ru i from north heat. to fouth through the whole continent. In passing wer their elevated and frozen fummits, it is to thoroughly cool I, that the greater part of the countries beyond them hardly seel threadour to which they feem exposed by their fituation. In the other provinces of America, from Terra Firma weftward to the Mexican. empire, the heat of the climate is tempered, in fome places, by the elevation of the land above the fea; in others, by their extraordinary humidity; and in all, by the enormous mountains fcattered over this tract. The islands of America in the torrid zone are either small or mountainous, and are fanned alternately by refreshing sea and land breezes.

"The caules of the extraordinary cold towards the fouthern limits of America, and in the feas beyond it, cannot be afcertained in a manner equally fatisfying. It was long fuppoled, that a vaft continent, diffinguished by the name of Terra Australis Incognita, lay between the fouthern extremity of America and the antarctic pole. The fame principles which account for the extraordinary degree of cold in the northern regions of America, were employed in order to explain that which is felt at Cape Horn and the adjacent countries. The immense extent of the southern continent, and the rivers which it poured into the ocean, were mentioned and admitted by philosophers as causes sufficient to occafion the unufual fentation of cold, and the still more uncommon appearances of frozen feas in that region of the globe. But the imaginary continent to which fuch influence was afcribed having been fearched for in vain, and the space which it was suppoled to occupy having been found to be an open fea, new conjectures must be formed with respect to the causes of a temperature of climate, fo extremely different from that which we experience in countries removed at the fame diftance from the opposite pole.

L

#### GENERAL DESCRIPTION

84

""The most obvious and probable cause of this superior degree of cold towards the fouthern extremity of America, feems to be the form of the continent there. Its breadth gradually decreases as it firetches from St. Antonio fouthwards, and from the bay of St. Julian to the ftraits of Magellan its dimensions are much contrafted. On the caft and west fides, it is washed by the Atlantic and Pacific oceans. From its fouthern point, it is probable that an open fea flretches to the antarctic pole. In whichever of these directions the wind blows, it is cooled before it approaches the Magellanie regions, by paffing over a valt body of water 1 nor is the land there of fuch extent, that it can recover any confiderable degree of heat in its progrefs over it. Thefe circumfrances concur in rendering the temperature of the air in this diftrift of America more fimilar to that of an infular, than to that of a continental climate; and hinder it from acquiring the fame degree of fummer-heat with places in Europe and Afia, in a correfponding northern latitude. The north wind is the only one that reaches this part of America, after blowing over a great continent. But, from an attentive furvey of its polition, this will be found to have a tendency rather to diminish than augment the degree of heat? The fouthern extremity of America is properly the termination of the immension it is of the Andes, which ftretches nearly in a direct line from north to fouth, through the whole extent of the continent. The most fultry regions in South Amerita, Guiana, Brafil, Paraguay, and Tucuman, lie many degrees to the saft of the Magellanic regions. The level country of Peru, which enjoys the tropical heats, is fituated confiderably to the west of them. The north wind, then, though it blows over land, does not bring to the fouthern extremity of America an increase of heat collected in its passage over torrid regions ; but, before it arrives there, it must have fwept along the fummit of the Andes, and come impregnated with the cold of that frozen region."

Another particularity in the climate of America, is its exceffive moifture in general. In fome places, indeed, on the weftern coaft, rain is not known; but; in all other parts, the moiftnefs of the climate is as remarkable as the cold.—The forefts wherewith it is every where covered, no 20ubt, partly occasion the moifture of its climate; but the most prevalent caule is the vaft quantity of water in the Atlantic and Pacific oceans, with which America is environed on all fides. Hence those places where the continent is narroweft are deluged with almost perpetual rains, accompanied with violent thunder and lightning, by which fome of them, particularly Porto Bello, are rendered in a manner uninhabitable.

#### OF AMERICA,

This extreme moisture of the American climate is productive of much larger rivers there than in any other part of the world. The Danube, the Nile, the Indus, or the Ganges, are not comparable to the Missifippi, the river St. Laurence, or that of the Amazons; nor are fuch large lakes to be found any where 28 those which North America affords. To the same cause we are alfo partly to afcribe the exceffive luxuriance of all kinds of ivegetables in almost all parts of this country.' In the fouthern provinces, where the moisture of the climate is aided by the warmth of the fun, the woods are almost impervious, and the furface of the ground is hid from the eye, under a thick covering of shrubs, herbs, and weeds .- In the northern provinces, the forefts are not encumbered with the fair luxuriance of vegetager of their kind tion; neverthelels, they afford trees much than what are to be found any where elic.

From the coldness and the moissure of America, an extense malignity of climate has been inferred, and afferted by M. de Pau, in his *Recherches Philosophiques*. Hence, according to his hypothelis, the smallness and irregularity of the nobler animals, and the fize and enormous multiplication of reptiles and infects.

But the supposed smallness and less ferocity of the American animals, the Abbé Clavigero observes, instead of the malignity, demonstrates the mildness and bounty of the clime, if, we give credit to Buffon, at whole fountain M. de Paw has drank, and of whole testimony he has availed himself against Don Pernetty. Buffon who in many places of his Natural Hiftory produces the imalineis of the American animals as a certain argument of the malignity, of the climate of America, in treating afterwards of favage ani, mals, in Tom. II. fpeaks thus; "As all things, even the most free creatures, are subject to natural laws, and animals as well as men are subjected to the influence of climate and foil, it appears that the fame causes which have civilized and polished the human fpecies in our climates, may have likewife produced fimilar effects. upon other species, The wolf, which is perhaps the fiercest of. all the guadrupeds of the temperate zone, is however incomparably lefs terrible than the tyger, the lion, and the panther, of the torrid zone; and the white bear and hyena of the frigid zone. In America, where the air and the earth are more mild than those of Africa, the tyger, the lion, and the panther, are not terrible but in the name. They have degenerated, if fiercenels, joined to cruelty, made their nature; or, to fpeak more properly, they have only fuffered the influence of the climate: under a milder fky, their nature also has become more mild. From climes which are immo." derate in their temperature, are obtained drugs, perfumes, poifons,

83

#### GENERAL DESCRIPTION

and all those plants whole qualities are ftrong. The temperate earth, on the contrary, produces only things which are temperate; the mildeft herbs, the most wholefome pulle, the fweeteft fruits;' the most quiet animals, and the most humane men, are the natives of this happy clime, As the earth makes the plants, the earth and plants make animals; the earth, the plants, and the animals, make man. The physical qualities of man, and the animals which feed on other animals, depend, though more remotely, on the fame caufes which influence their dispositions and customs. This is the greateft proof and demonstration; that in temperate climes every thing becomes temperate, and that in intemperate climes every thing is exceflive; and that fize and form, which appear fixed and determinate qualities, depend, notwithstanding, like that relative qualities, on the influence of climate. The fize of our quadrupped crannet be compared with that of an elephant, the rhinoceness of fer horfe. The largeft of our birds are but fmall, if compared with the offrich, the condore, and cafeare." So far M. Buton, whole text we have copied, becaufe it is contrary to what all of Paw writes against the climate of America, and to

Buffer minfelf in many other places,

The large and fierce animals are natives of intemperate climes and imall and tranquil animals of temperate climes, as M, Buffon has here established; if mildness of climate influences the dispofition and cuftoms of animals, M. de Paw does not well deduce the malignity of the climate of America from the fmaller fize and lessfiercenefs of its animals ; he ought rather to have deduced the centlenels and fweetnels of its climate from this antecedent. If, on the contrary, the fmaller fize and lefs fiercenels of the American animals, with respect to those of the old continent, are a proof of their degeneracy, arifing from the malignity of the clime, as M: de Paw would have it, we ought in like manner to argue the malignity of the climate of Europe from the fmaller fize and lefs fiercencis of its animals, compared with these of Africa. If a philosopher of the country of Guinea should undertake a work in imitation of M. de Paw, with this title, Recherches Philosophiques fur les Europeens, he might avail himfelf of the fame argument which M. de Paw ules, to demonstrate the malignity of the climate of Europe, and the advantages of that of Africa. The climate of Europe, he would fay, is very unfavorable to the production of quadrupeds, which are found incomparably fmaller, and more cowardly than ours. What are the horfe and the ox, the largest of its animals, compared with our elephants, our rhinocerofes, our fea-horfes, and our camels? What are its lizards, either in fize or intrepidity, compared with our crocodiles? Its wolves, its bears, the most dreadful of its wild beasts, when belide our lions or

As to the enormous fize and prodigious multiplication of the infects and other little noxious animals, "The furface of the earth (fays M. de Paw, infected by putrefaction, was over-run with lizards, ferpents, reptiles, and infects monftrous for fize, and the activity of their poifon, which they drew from the copious juices of this uncultivated foil, that was corrupted and abandoned to itfelf, where the nutritive juice became therp, like the milk in the breaft of animals which do not exercise the virtue of propagation. Caterpillars, crabs, butterflies, beetles, fpiders, frogs, and toads, were for the most part of an enormous corpulence in their foccies, and multiplied beyond what can be imagined. Panama is infefted with lerpents, Carthagona with clouds of enormous bate. Portobello with toads, Surinam with kakerlacas, or eucarachas, Guadaloupe, and the other colonies of the illands, with beetles, Quito with niguas or chegoes, and Lima with lice and bugs. The ancient Kings of Mexico, and the emperors of Peru, found means of ridding their fubjects of those infects which fed up them, than the imposition of an annual tribute of a certain quantity. of lice. Ferdinand Cortes found bags full of them in the palace of Montezuma." But this argument exaggerated as it is, proves nothing against the climate of America, in general, much lefs against that of Mexico. There being fome lands in America, in which, on account of their heat, humidity, or want of inhabitants, large infects are found, and exceffively multiplied, will prove at moft, that in fome places the furface of the earth is infected, as he fays, with putrefaction; but not that the foil of Mexico, or that of all America, is ftinking, uncultivated, vitiated, and abandoned to itfelf. If fuch a deduction were juft, M. de Paw might alfo fay, that the foil of the old continent is borren, and flinks ; as in many countries of it there are prodigious multitudes of monftrous inlects, noxious reptiles, and vile animals, as in the Philippine ifles, in many of those of the Indian Archipelago, in several countries of the fouth of Afiz, in many of Africa, and even in fome of Eu-The Philippine illes are infelted with enormous ants and rope. monitrous butterflies, Japan with fcorpions, fouth of Afia and Africa with ferpents, Egypt with afps, Guinea and Ethiopia with armics of ants, Holland with field-rats, Ukrania with toads, as M. de Paw himielf affirms. In Italy, the Campagna di Roma (although peopled for fo many ages,) with vipers; Calabria with farantulas; the fhores of the Adriatic fea, with clouds of gnats; and even in France, the population of which is fo great and fo ancient, whole lands are to well cultivated, and whole climate is to celebrated by the French, there appeared, a few years ago, ac-

#### GENERAL DESCRIPTION

86

cording to M, Buffon; a new species of field-mice, larger than the common kind, called by him Surmulots, which have multiplied exceedingly, to the great damage of the fields. M. Bazin, in his Compendium of the Hiftory of Infects, numbers 77 species of bugs, which are all found in Paris and its neighbourhood. That large capital, as Mr. Bomare fays, fwarms with those difgustful infects. It is true, that there are places in America, where the multitude of infects, and filthy vermin, make life irkfome ;/ but we do not know that they have arrived at fuch excels of multiplication as to depopulate any place, at least there cannot be for many examples produced of this caufe of depopulation in the new as in the old continent, which are attefted by Theophrastus; Varro, Pliny, and other authors. The frogs depopulated one place in a Gaul, and the locufts another in Africa. One of the Cyclades was depopulated by mice; Amiclas, near to Taracina, by ferpeats; another place, near to Ethiopia, by fcorpions and poifonous ants; and another by fcolopendras; and not to diftant from our own times, the Mauritius was going to have been abandoned on account of the extraordinary multiplication of rats, as we can remember to have read in a French author.

With respect to the fize of the infects, reptiles, and fuch animals, M. de Paw makes use of the testimony of Mr. Dumont, who, in his Memoirs on Louisiana, fays, that the frogs are fo large there that they weigh 37 French pounds, and their horrid croaking imitates the bellowing of cows. But M. de Paw himfelf fays (in his answer to Don Pernetty, cap. 17.) that all those who have written about Louifiana from Henepin, Le Clerc, and Cav. Tonti, to Dumont, have contradicted each other, fometimes on one and fometimes on another fubject. In fact, neither in the old or the new continent are there frogs of 37 pounds in weight; but there are in Afia and Africa, ferpents, butterflies, ants, and other animals of fuch monstrous fize, that they exceed all those which have been discovered in the new world. We know very well, that fome American historian fays, that a certain gigantic species of serpents is to be found in the woods, which attract men with their breath, and fwallow them up; but we know also, that feveral historians, both ancient and modern, report the fame thing of the ferpents of Afia, and even fomething more. Magasthenes, cited by Pliny, faid, that there were ferpents found in Afia, fo large, that they fwallowed entire ftags and bulls. Metrodorus cited by the fame author, affirms, that in Afia there were ferpents which, by their breath, attracted birds, however high they were or quick their: flight. Among the moderns, Gemelli, in Vol. V. of his Tour of the world, when he treats of the animals of the Philippine illes; fpeaks thus : "There are ferpents in these islands of immoderate

fize ; felf b alfo m vour very a Fui M. de Julum, finger in An Philip of Am by Bu La roz the ron wings, and ac fix pal Afiatic Gemel that th with th the dif " it cas pents la Africa. fearch 1 be com feet in fame au Afia and gument fects is and scar or rath things o With in Mex his ridic in, the m that Mo however of the e affirms, his fubje

Further, it may be asked, In what country of America could M. de Pave find ants to equal those of the Philippine illands, called fulum, respecting which Hernandez affirms, that they were fix fingers broad in length and one in breadth? Who has ever feen in America butterflies fo large as those of Bourbon, Ternate, the Philippine ifles, and all the Indian archipelago ?. The largest bat of America (native to hot fhady countries), which is that called by Buffon varipiro, is, according to him, of the fize of a pigcon. La rougette, one of the species of Afia, is as large as a raven; and the roufette, another species of Asia, is as big as a large hen. Its wings, when extended, measure from tip to tip three Parifian feet, and according to Gemelli, who measured it in the Philippine ifles, fix palms. M. Buffon acknowledges the excels in fize of the Afiatic bat over the American species, but denies it as to number. Gemelli fays, that those of the island of Luzon were fo numerous that they darkened the air, and that the noise which they made with their teeth, in eating the fruits of the woods, was heard at the diffance of two miles. M. de Paw fays, in talking of ferpents, " it cannot be affirmed that the New World has shown any ferpents larger than those which Mr. Adanfon faw in the deferts of Africa." The greatest serpent found in Mexico, after a diligent fearch made by Hernandez, was 18 feet long : but this is not to be compared with that of the Moluccas, which Bomare fays is 33 feet in length; nor with the anocanjada of Ceylon, which the fame author fays is more than 33 feet long; nor with others of Afia and Africa, mentioned by the fame author. Laftly, the argument drawn from the multitude and fize of the American infects is fully as weighty as the argument drawn from the imallneis and fearcity of quadrupeds, and both detect the fame ignorance, or rather the fame voluntary and fludied forgetfulnefs, of the things of the old continent,

With respect to what M. de Paw has faid of the tribute of lice in Mexico, in that as well as in many other things he discovers his ridiculous credulity. It is true that Cortes found bags of lice in the magazines of the palace of king Axajacatl. It is also true that Montezuma imposed fuch a tribute, not on all his fubjects, however, but only on those who were beggars; not on account of the extraordinary multitude of those infects, as M. de Paw affirms, but because Montezuma, who could not fuffer idleness in his fubjects, resolved that that miserable fet of people, who could

#### GENERAL DESCRIPTION

sot isbour, fhould at leaft be occupied in loufing themfelves. This was the true reafon of fuch an extravagant tribute, as Torquemada, Betancourt, and other hiftorians relate; and nobody ever before shought of that which M. de Paw affirms, merely becaufe it fuited his prepofterous fystem. Those difgusting infects possibly abound as much in the hair and cloaths of American beggars; as of any poor and uncleanly low people in the world : but there is not a doubt, that if any fovereign of Europe was to exact fuch a tribute from the poor in his dominions, not only bags, but great vessels might be falled with them.

ABORIGENES. At the time America was discovered, it was found inhabited by a race of men no lefs different from those in the other parts of the world, than the climate and natural productions of this continent are different from those of Europe, Afia, or Africa. One great peculiarity in the native Americans is their colour, and the identity of it throughout the whole extent of the continent. In Europe and Afia, the people who inhabit the northern countries are of a fairer complexion than those who dwell more to the fouthward. In the torrid zone; both in Africaand Afia, the natives are entirely black, or the next thing to it. This, however, must be understood with fome limitation. The people of Lapland, who inhabit the most northerly part of Europe, are by no means to fair as the inhabitants of Britain; nor are the Tantars fo fair as the inhabitants of Europe who lie under the fame parallels of latitude. Neverthelefs, a Laplander is fair when compared with an Abyffinian, and a Taxtar if compared with a native of the Molucca illands .- In America, this diffinetion of colour was not to be found. In the torrid zone there were no negroes, and in the temperate and frigid zones there were no white people. All of them were of a kind of red copper colour, which Mr. Forfter obferved, in the Pefferays of Terra del-Fuego, to have foracthing of a glois refembling that metal. It doth not appear, however, that this matter bath ever been inquired into with fufficient accuracy. The inhabitants of the inland parts of South America, where the continent is wideft, and confequently the influence of the fun the mole powerful, have never been compared with those of Canada, or more northerly parts, at least by any perfon of credit. Yet this ought to have been done, and that in many infrances too, before it could be afferted to politively as most authors do, that there is not the least difference of complexion among the natives of America. Indeed, fo many fystems have been formed concerning them, that it is very difficult to obtain a true knowledge of the most simple facts. If we may believe the Abbé Raynal, the Californians are fwarthier than

the Mexicans; and fo politive is he in this opinion, that he gives a reason for it. "" This difference of colour," fays he, " proves, that the civilized life of fociety fubverts, or totally changes, the order and laws of nature, fince we find, under the temperate zone, a favage people that are blacker than the civilized nations of the torrid zone." On the other hand, Dr. Robertion classes all the inhabitants of Spanish America together with regard to colour, whether they are civilized or uncivilized; and when he speaks of California, takes no notice of any peculiarity in their colour more than others. The general appearance of the indigenous Americans in various districts is thus described by the Chevalier Pinto : " They are all of a copper colour, with fome diversity of shade, not in proportion to their diftance from the equator, but according to the degree of elevation of the territory in which they relide. Those who live in a high country are fairer than those in the marshy low. lands on the coaft. Their face is round; farther removed, perhaps, than that of any people from an oval shape. Their forchead is fmall; the extremity of their cars far from the face; their lips thick ; their nole flat; their eyes black, or of a chefnut colour, fmall, but capable of difcerning objects at a great diftance. Their hair is always thick and fleek, and without any tendency to curl. At the first afpect, a South American appears to be mild and innocent, but, on a more attentive view, one discovers in his countenance fomething wild, distrustful and fullen."

The following account of the native Americans & given by Don Antonio Ullos, in a work intitled Memoires philosophicues, historiques et physiques, concernant, la decouverte de l'Amerique lately published.

The American Indians are naturally of a colour bordering upon red. Their frequent exposure to the fun and wind changes it to their ordinary duftey hue. The temperature of the air appears to have little or no influence in this respect. There is no perceptible difference in complexion between the inhabitants of the high and those of the low parts of Peru; yet the climates are of an extreme difference. Nay, the Indians who live as far as 40 degrees and upwards fouth or north of the equator, are not to be diffinguished, in point of colour, from those immediately under it.

There is also a general conformation of features and perfon, which, more or lefs, characterifeth them all. Their chief diffinctions in these respects are a small forchead, partly covered with hair to the eye-brows, little eyes, the nose thin, pointed, and bent towards the upper lip; a broad face, large ears, black, thick, and lank hair; the legs well formed, the feet small, the body thick and muscular; little or no beard on the face, and that little never extend-

# GENERAL DESCRIPTION

ing beyond a small part of the chin and upper lip. It may easily be supposed that this general description cannot apply, in all its parts, to every individual; but all of them partake so much of it, that they may easily be distinguished even from the mulattocs, who come nearest to them in point of colour.

The refemblance among all the American tribes is not lefs remarkable in refpect to their genius, character, manners, and particular cultoms. The most distant tribes are, in these respects, as similar as though they formed but one nation.

All the Indian nations have a peculiar pleafure in painting their bodies of a red colour, with a certain fpecies of earth. The mine of Guancavelica was formerly of no other use than to supply them, with this material for dyeing their bodies; and the tinnabar extracted from it was applied entirely to this purpose. The tribes in Louissan and Canada have the same passion; hence minium is the commodity most in demand there.

It may feem fingular that thefe nations, whole natural colour is red, fhould affect the fame colour as an artificial ornament. But it may be obferved, that they do nothing in this respect but what corresponds to the practice of Europeans, who also study to heighten and display to advantage the natural red and white of their complexions.' The Indians of Peru have now indeed abandoned the suftom of painting their bodies: but it was common among them before they were conquered by the Spaniards; and it still remains the custom of all those tribes who have preferved their liberty. The nothern nations of America, befindes the red colour which is predominant, employ also black, white, blue, and green, in painting their bodies.

The adjustment of these colours is a matter of as great confideration with the Indians of Louiliana and the walt regions extending to the north, as the ornaments of drefs among the most polifhed nations. The business itself they call Mactacher, and they do not fail to apply all their talents and affiduity to accomplish it in the most finished manner. No hady of the greatest fashion ever confulted her mirror with more anxiety; than the Indians do while painting their bodies. The colours are applied with the utmost accuracy and address. Upon the cyc-lids, precifely at the root of the eyc-lashes, they draw two lines as fine as the smallest thread ; the fame upon the lips, the openings of the nostrils, the cyc-brows, and the cars; of which laft they even follow all the inflexions and infinuofities. As to the reft of the face, they distribute various figures, in all which the red predominates, and the other colours are afforted fo as to throw it out to the best advantage. The neck alfo receives its proper ornaments: a thick coat of vermilion commonly diftinguishes the cheeks. Five or fix hours are requisite for accomplishing all this with the nicety which they affect. As

their first attempts do not always fucced to their with, they efface shem, and begin a-new upon a better plan. No coquette is more fastidious in her choice of ornament, none more vain when the important adjustment is finished. Their delight and felf-fatisfaction are then fo great, that the mirror is hardly ever laid down. An Indian Mactaked to his mind is the vainest of all the human species. The other parts of the body are left in their natural state, and, excepting what is called a cachecul, they go entirely naked.

Such of them as have made themfelves eminent for bravery, or other qualifications, are diftinguished by figures painted on their bodies. They introduce the colours by making punctures on their fkins, and the extent of furface which this ornament covers is proportioned to the exploits they have performed. Some paint only their arms, others both their arms and legs; others again their thighs, while those who have attained the fummit of warlike renown, have their bodies painted from the waist upwards. This is the heraldry of the Indians; the devices of which are probably more exactly adjusted to the merits of the perfors who bear them than those of more civilized countries.

Befides these ornaments, the warriors also carry plumes of feathers on their heads, their arms, and ancles. These likewise are tokens of valour, and none but such as have been thus distinguished may wear them.

The propensity to indolence is equal among all the tribes of Indians, civilised or favage. The only employment of those who have preferved their independence is hunting and fifting. In fome diffricts the women exercise a little agriculture in raising Indian cern and pompions, of which they form a species of aliment, by bruising them together : they also prepare the ordenary beverage in use among them, taking care, at the same time, of the children, of whom the fathers take no charge,

The female Indians of all the conquered regions of South America practice what is called the area (a word which among them fignifies elevation.) It confilts in throwing forward the hair from the crown of the head upon the brow, and cutting it round from the cars to above the eye; fo that the forehead and eye-brows are entirely covered. The fame cultom takes place in the Nothern countries. The female inhabitants of both regions tie the reft of their hair behind, fo exactly on the fame fathion, that it might be fuppofed the effect of mutual imitation. This however being impofible, from the vaft diffance that feparates them, is thought to countenance the fuppofition of the whole of America being originally planted with one race of people.

#### GENERAL DESCRIPTION.

This cuftom does not take place among the males. Those of the higher parts of Peru wear long, and flowing hair, which they reckon a great ornament. In the lower parts of the fame country they cut it flort, on account of the heat of the climate; a circumflance in which they imitate the Spaniards. The inhabitants of Louifiana pluck out their hair by the root, from the crown of the head forwards, in order to obtain a large forehead, otherwife denied them by nature. The reft of their hair they cut as flort as possible, to prevent their enemies from feizing them by it in battle, and alfo to prevent them from easily getting their fcalp, fhould they fall into their hands as prisoners.

The whole race of American Indians is diftinguished by thick, nels of fkin and hardnels of fibres; circumstances which prohably contribute to that infenfibility to bodily pain, for which they are remarkable. An inftance of this infenfibility occurred in an Indian who was under the necessity of fubmitting to be cut for the ftone. This operation, in ordinary cafes, feldom lafts above four or five minutes. Unfavourable circumstances in his cafe prolonged it to the uncommon period of an minates; Yet all this time the patient gave no tokens of the extreme pain commonly attending this operation ; he complained only as a perfon does who feels fome flight uneafinefs. At laft the ftone was extracted. Two days after, he expressed a defire for food, and on the eighth day from the operation he quitted his bed, free from pain, although the wound was not yet thoroughly closed. The fame want of fenfibility is obferved in cafes of fractures, wounds, and other accidents of a fimilar nature. In all these cases their cure is easily effected, and they feem to fuffer, leis prefent pain than any other race of men. The skulls that have been taken up in their ancient burying-grounds are of a greater thickness than that bone is commonly found, being from fix to feven lines from the outer to the inner superficies. The fame is remarked as to the thickness of their skins.

It is natural to infer from hence, that their comparative infenfibility to pain is owing to a coarfer and fironger organization than that of other nations. The cafe with which they endure the feverities of climate is another proof of this. The inhabitants of the higher parts of Peru live amidit perpetual froft and fnow. Although their clothing is very flight, they fupport this inclement temperature without the least inconvenience. Habit, it is to be confelled, may contribute a good deal to this, but much allo is to be aferibed to the compact texture of their fixins, which defend them from this imprefition of cold through their pores.

The northern Indians refemble them in this refpect. The utmost rigours of the winter feason do not prevent them from

following the chace almost maked. It is true, they wear a kind of woolen cloak, or fometimes the fkin of a wild beaft, upon their fhoulders; but belides that it covers only a fmall part of their body, it would appear that they use it rather for ornament than warmth. In fact, they wear it indiferiminately, in the feverities of winter, and in the fultriest heats of fummer, when neither Europeans nor Negroes can fuffer any but the flightest cloathing. They even frequently throw aside this cloak when they go a-hunting, that it may not embarrass them in traversing their forests, where they fay the thorns and undergrowth would take hold of it; while, on the contrary, they flide smoothly over the fufface of their naked bodies. At all times they go with their heads uncovered, without suffering the least inconvenience, either from the cold, or from those coups de foleit, which in Louisiana are fo often fatal to the inhabitants of other climates.

DRESS. The Indians of South America diffinguish themselves by modern dreffes, in which they affect various taftes, Thofe of the high country, and of the valleys in Peru, drefs partly in the Spanish fashion. Instead of hats they wear bonnets of coarse dou. ble cloth, the weight of which neither feems to incommode them when they go to warmer climates, nor does the accidental want of them feem to be felt in fituations where the most piercing cold reigns. Their legs and feet are always bare, if we except a fort of fandals made of the fkins of oxen. The inhabitants of South America, compared with those of North America, are described as generally more feeble in their frame ; les vigorous in the efforts of their mind; of gentler dispositions, more addicted to pleasure, and funk in indolence.-This, however, is not univerfally the cafe. Many of their nations are as intrepid and enterprising as any others on the whole continent. Among the tribes on the banks of Oroonoko, if a warrior afpires to the polt of captain, his probation begins with a long fait, more rigid than any ever observed by the most abstemious hermit. At the close of this the chiefs affemble; and each gives him three lashes with a large whip, applied to vigoroufly, that his body is almost sayed. If he betrays the least fymptom of impatience, or even of fensibility, he is difgraced forever, and rejected as unworthy of the honour. After fome interval, his conftancy is proved by a more excruciating trial. He is laid in his hammock with his hands bound fast; and an innumerable multitude of venomous ants, whole bite occasions a violent pain and inflammation, are thrown upon him. The judges of his merit fland around the hammock; and whilft these cruel infects fasten upon the most lenfible parts of his body, a figh, a groan, or an involuntary motion expressive of what he suffers, would exclude him from the

dignity of which he is ambitious. Even after this evidence, his fortitude is not deemed to be fufficiently afcertained, till he has flood another test more severe, if possible, than the former. He is again fulpended in his hammock, and covered with the leaves of the palmetto, A fire of flinking herbs is kindled underneath, to as he may feel its heat, and be involved in imoke. Though forched and almost fuffocated, he must continue to endure this with the fame patient infensibility. Many perish in this effay of their firmnels and courage; but fuch as go through it with applaufe, receive the enfigns of their new dignity with much folemnity, and are ever after regarded as leaders of approved ' refolution, whole behaviour, in the most trying fituations, will do honor to their country. In North America, the previous trial of a warrior is neither fo formal nor fo fevere: Though, even there, before a youth is permitted to bear arms, his patience and fortitude are proved by blows, by fire, and by infults, more intolerable to a haughty. spirit than either. to provide a stand

MANNERS AND CUSTORS. Of the manners and cuftoms of the North Americans more particularly, the following is the most confistent account that can be collected from the best informed and most impartial writers.

When the Europeans first arrived in America, they found the Indians quite naked, except those parts which even the most uncultivated people usually conces). Since that time, however, they generally use a coarse blanket, which they buy of the neighbouring planters.

Their huts or cabins are made of ftakes of wood driven into the ground, and covered with branchés of trees or reeds. They lie on the floor either on mats or on the fkins of wild beafts. Their diffies are of timber; but their fpoons are made of the fkulls of wild oxen, and their knives of flint. A kettle and a large plate conflitute almost all the whole utenfils of the family. Their diet confifts chiefly in what they procure by hunting; and fagamite, or pottage, is likewife one of their most common kinds of food. The most honourable furniture amongst them is the fealps of their enemics; with those they ornament their huts, which are efficemed in proportion to the number of this fort of fpoils.

The character of the Indians is altogether founded upon their circumstances and way of life. A people who are constantly employed in procuring the means of a precarious substituting the wild animals, and who are generally engaged in war with their neighbours, cannot be supposed to enjoy much gaiety of temper, or a high flow of spirits. The Indians therefore are in general grave even to fadness; they have nothing of that giddy vivacity peculiar to some nations of Europe, and they def-

pife ind of f neve and mean ually tance with dear of th to on find are th crit ti comp ture, whon fmail defer boun Go **fpecie** rica 1 whole fimila inftru no mo comp mind diffin much the pr under the w from o oftwi they in militar every: the ch clines monar which

ly pree

pife it. Their behaviour to those about them is regular, modely, and respectful. Ignorant of the arts of amulement, of which that of faying trifles agreeably is one of the most confiderable, they never fpeak but when they have fomething important to obferve; and all their actions, words, and even looks, are attended with fome meaning. This is extremely natural to men who are almost continually engaged in purfuits which to them are of the highest importance. Their fubfiltence depends entirely on what they procure with their hands ; and their lives, their honour, and every thing dear to them, may be loft by the imalieft inattention to the defigne of their enemies. As they have no particular object to attach them? to one place rather than another, they fly wherever they expect to find the necessaries of life in greatest abundance, Cities, which are the effects of agriculture and arts, they have none. The different tribes or nations are for the fame reafon extremely fmall, when compared with civilized focieties, in which indukry, arts, agriculture, and commerce, have united a vaft number of individuals, whom a complicated luxury renders uleful to one another. These fmall tribes live at an immense distance; they are separated by a defert frontier, and hid in the bolom of impenetrable and almost boundless forests. 2. . . . . . . . . . . . .

GOVERNMENT. There is clublished in each fociety a certain fpecies of government, which over the whole continent of Ames rica prevails with exceeding little variation; becaufe over the whole of this continent the manners and way of life are nearly fimilar and uniform. Without arts, riches, or luxury, the great instruments of fubjection in polished focieties, an American has no method by which he can render himfelf confiderable among his companions, but by superiority in personal qualities of body or mind. But as Nature has not been very lavish in her personaldiffinctions, where all enjoy the fame education, all are pretty much equal, and will defire to remain for Liberty, therefore, is the prevailing paffion of the Americans; and their government under the influence of this fentiment, is better fecured than by the wifeft political regulations. They are very far, however, from despising all fort of authority; they are attentive to the voice of wildom, which experience has conferred on the aged, and they inlift under the banners of the chief in whofe valour and military address they have learned to repose their confidence. In every fociety, therefore, there is to be confidered the power of the chief and of the elders; and according as the government inclines more to the one or to the other, it may be regarded as monarchical, or as a species of aristocracy. Among those tribes which are most engaged in war, the power of the chief is naturally predominant ; betaufe the idea of having a military leader wat

the first fource of his superiority, and the continual exigencies of the fate mouthing fuch a leader, will continue to fupport, and even to enhance it. His power, however, is rather perfusive than coercive; he is reverenced as a fathor; rather than feared as a d monarch. He has no guards, no prifons, no offices of juffice, and one act of ill-judged violence would pull him from the throne. The elders, in the other form of government, which may be confidered as an aristoeracy, have no more power. In fome tribes, indeed, there are a kind of hereditary nobility, whole influence being constantly augmented by time, is more confiderable. But this fource of power, which depends chiefly on the imagination, by which we annex to the merit, of our contemporaries that of their forefathers, is too refined to be very common among the natives of America. In most countries, therefore, age alone is fufficient for acquiring respect, influence, and authority. It is age which teaches experience, and experience is the only fource of knowledge among a barbarous people. Among these perfons bufinefs is conducted with the utmost fimplicity, and which may recal to those who are acquainted with antiquity a picture of the most early ages. The heads of families meet together in a house or cabin appointed for the purpole. Here the bufinels is difcuffed ; and here those of the nation, distinguished for their eloquence or wildom, have an opportunity of difplaying those talents. Their orators, like those of Homer, express themselves in a belo figurative flyle, ftronger than refined, or rather foftened, nations can well bear, and with gestures equally violent, but often extremely natural and expressive. When the business is over, and they happen to be well provided with food, they appoint a feast upon the occasion, of which almost the whole nation partakes. The feast is accompanied with a fong, in which the real or fabulous exploits of their forefathers are celebrated. They have dances too, though, like those of the Greeks and Romans, chiefly of the military kind and their mufic and daucing accompany every feaft.

To affift their memory, they have belts of finall fhells, or beads, of different colours, each reprefenting a particular object, which is marked by their colour and arrangement. At the conclution of every fubject on which they diffeourfe, when they treat with a foreign flate, they deliver one of those belts; for if this ceremony fhould be omitted, all that they have faid paffes for nothing. Those belts are carefully deposited in each town, as the public records of the nation; and to them they occasionally have recourfe, when any public contest happens with a neighbouring tribe. Of pate, as the materials of which those belts are made have become fcarce, they often give fome fkin in place of the wampum (the name of the beads,) and receive in return prefents of a more va-

luable kind from our commissioners; for they never confider a, treaty as of any weight, unless every article in it be ratified by fuch a gratification.

It often happens, that those different tribes or nations, feattered as they are at an immense distance from one another, meet, in their excursions after prey. If there sublishes no animolity between them, which feldom is the case, they behave in the mostfriendly and courteous manner; but if, they happen to be in a, flate of war, or if there has been no previous intercourse between them, all who are not friends are deemed enemics, and they fight with the most favage fury.

War, if we except hunting, is the only employment of the men; as to every other, concern, and even the little agriculture they enjoy, it is left to the women. Their most common motive, for entering into war, when it does not arile from an accidental. rencounter or interference, is either to revenge themselves for the death of fome loft friends, or to acquire prifoners, who may affift them in their hunting, and whom they adopt into their. fociety. These wars are either undertaken by some private adventurers, or at the inftance of the whole community. In the latter cale, all the young men who are dispoled to go out to battle (for no one is compelled contrary to his inclination), give a bit of wood to the chief, as a token of their defign to accompany. him; for every thing among those people is transacted with a great deal of ceremony and many forms. The chief who is to conduct them faits feveral days, during which he converfee with no one, and is particularly careful to observe his dreams; which the profumption natural to favages generally renders as favourable as he could defire. A variety of other superflutions and ceremonies are observed. One of the most hideous is fetting the war-kettle on the fire, as an emblem that they are going out to devour their enemies ; which among fome nations must formerly. have been the cafe, fince they fill continue to express it in clear terms, and use an emblem fignificant of the ancient usage. Then they dispatch a porcelane, or large shell, to their allies, inviting them to come along, and drink the blood of their enemies. They think that those in their alliance must not only adopt their enmities, but have their refertment wound up to the fame pitch with themselves. And indeed no people carry their friendship or their refentment to far as they do; and this is what fhould be expected from their peculiar circumftances : that principle in human nature which is the foring of the focial affections, acts with fo much the greater force the more it is reftrained. The Americans, who live in fmall focieties, who fee few objects and few perfons, become woderfully. attached to those objects and perfons, and cannot be deprived of them

without feeling themfelves miferable. Their ideas are too confined to enable them to entertain juft fentiments of humanity, or univerfal benevolence. But this very circumstance, while it makes them eruel and favage to an incredible degree towards those with whom they are at war, adds a new force to their particular friendships, and to the common tie which unites the members of the fame tribe, or of those different tribes which are in alliance with one another. Without attending to this reflection, fome facts we are going to relate would excite our wonder without informing our reason, and we should be bewildered in a number of particulars, feemingly opposite to one another, without being fensible of the general cause from which they proceed.

Having finished all the ceremonies previous to the war, and the day appointed for their fetting out on the expedition being arrived, they take leave of their friends, and exchange their clothes, or whatever moveables they have, in token of mutual friendship; after which they proceed from the town, their wives and female relations walking before, and attending them to fome distance. The warriors murch all dreffed in their fineff apparel and most showy ornaments, without any order. The chief walks flowly before them, finging the war-fong, while the rest observe the most profound filence. When they come up to their women, they deliver them all their finery, and putting on their worst clothes; proceed on their expeditions.

Every nation has its peculiar enfign or flandard, which is generally fome beaft, bird, or fifh. Those among the Five Nations are the bear, otter, wolf, tortoile, and eagle; and by these names the tribes are ufually diftinguished. They have the figures of those animals pricked and painted on feveral parts of their bodies ; and when they march through the woods, they commonly, at every encampment, cut the representation of their enfign on trees, efpecially after a fuccelsful campaign : marking at the fame time the number of scalps or priloners they have taken. Their military drefs is extremely ingular. They cut off or pull out all their hair, except a fpot about the breadth of two English crown-pieces, near the top of their heads, and entirely deftroy their eye-brows, The lock left upon their heads is divided into feveral parcels, each of which is fliffened and adorned with wampum, beads, and feathers of various kinds, the whole being twifted into a form much refembling the modern pompoon. Their heads are painted red down to the eye-brows, and fprinkled over with white down. The griftles of their ears are split almost quite round, and distended with wires or fplinters fo as to meet and tie together on the nape of the neck. These are also hung with ornaments, and generally bear the representation of fonie bird or beaft. Their nofes are

are likewife bored and hung with trinckets of beads, and their faces painted with various colours fo as to make an awful appearance. Their breafts are adorned with a gorget or medal, of brafs, copper, or fome other metal; and that dreadful weapon the fealping-knife hangs by a firing from their neck.

The great qualities in an Indian war are vigilance and attention, to give and to avoid a furprife; and indeed in these they are fuperior to all nations in the world. Accustomed to continual wandering in the forefts, having their perceptions fharpened by keen neceffity, and living in every respect according to nature, their external fenfes have a degree of acutencis which at first view appears incredible. They can trace out their enemics at an immenfe distance by the imoke of their fires, which they imell, and by the tracks of their feet on the ground, imperceptible to an European eye, but which they can count and diftinguish with the utmost facility. They can even distinguish the different nations with whom they are acquainted, and can determine the precife time when they passed, where an European could not, with all his glasses, diffinguish footseps at all. These circumstances, however, are of fmall importance, because their enemies are no lefs acquainted with them. When they go out, therefore, they take care to avoid making use of any thing by which they might run the danger of a difcovery. They light no fire to warm themfelves or to prepare their victuals; they lie close to the ground all the day, and travel only in the night; and marching along in files, he that closes the rear diligently covers with leaves. the tracts of his own feet and of theirs who preceded him. When they halt to refresh themselves, scouts are sent out to reconnoitre the country and beat up every place where they fufpect an enemy to lie concealed. In this manner they enter unawares the villages of their foes; and while the flower . the nation are engaged in hunting, maffacre all the children, we way, and helpleis old men, or make priloners of as many as they can manage, or have krength enough to be uteful to their nation. But when the enemy is apprifed of their defign, and coming on in arms against them, they throw themselves flat on the ground among the withered herbs and leaves, which their faces are painted to refemble. Then they allow a part to pais unmolefted, when all at once with a tremendous fhout, rising up from their ambush, they pour a ftorm of musket bullets on their foes. The party attacked returns the fame cry. Every one fhelters himfelf with a tree, and returns the fire of the adverse party, as soon as they raife themfelves from the ground to give a fecond fire. Thus does the battle continue until the one party is so much weakened as NO

to be incapable of further refistance; But if the force on each fide continues nearly equal, the fierce fpirits of the favages, infamed by the lofs of their friends, can no longer be reftrained, They abandon their diftant war, they rufh upon one another with clubs and hatchets in their hands, magnifying their own courage, and infulting their enemies with the bittereft reproaches. A cruel combat chfues, ideath appears in a thouland hideous forms, which would congeal the blood of civilized nations to behold, but which roule the fury of lavages. They trample, they infult over the dead bodies, tearing the fcalp from the head, wallowing in their wood like wild beafts, and fometimes devouring their fleth. The flame rages on till it meets with no refistance ; then & the prifoners are fecured, those unhappy men, whole fate is a thousand times more dreadful than theirs who have died in the field. The conquerers fet up a hideous howling to lament the friends they have loft. They approach in a melancholy and fevere gloom to their own village; a meffenger is fent to announce their arrival, and the women, with frightful farieks, come out to mourn their dead brothers or their hufbands. When they are arrived, the chief relates in a low voice to the elders, a circumftantial account of every particular of the expedition. The orator proclaims aloud this account to the people; and as he mentions the names of those who have fallen, the thricks of the women are redoubled, The men too join in these cries, according as each is most connected with the deceased by blood or friendship. The laft ceremony is the proclamation of the victory: each individual then forgets his private misfortunes, and joins in the triumph of the nation; all tears are wiped from their eyes, and by an unaccountable transition, they pais in a moment from the bitternels of forrow to an extravagance of joy. But the treatment of the prifoncrs, whole fate all this time remains undecided, is what chiefly characterifes the favages.

We have already mentioned the firength of their affections or refentments. United as they are in Imall focieties, connected within themfelves by the firmeft ties, their friendly affections, which glow with the most intenfe warmth within the walls of their own village, feldom extend beyond them. They feel nothing for the enemies of their nation; and their refentment is eafily extended from the individual who has injured them to all others of the fame tribe. The prifoners, who have themfelves the fame feelings, know the intentions of their conquerors, and are prepared for them. The perfon who has taken the captive attends him to the cottage, where, according to the diffribution made by the elders, he is to be delivered to fupply the lofs of a citizen. If those who receive him have their family weakened by

war or other accidents, they adopt the captive into the family, of which he becomes a member. But if they have no occasion for him, or their refentment for the lofs of their friends be too high to endure the fight of any connected with those who were concerned in it, they fentence him to death. All those who have met with the fame fevere fentence being collected, the whole nation is affembled at the execution, as for fome great folemnity. A fcaffold is crected, and the prifoners are tied to the ftake, where they commence their death-fong, and prepare for the enfuing feene of cruelty with the most undaunted courage. Their enemies, on the other fide, are determined to put it to the proof, by the most refined and exquisite tortures. They begin at the extremity of his body, and gradually approach the more vital parts. One plucks out his nails by the roots, one by one; another takes a finger into his mouth, and tears off the flesh with his teeth; a third thrusts the finger, mangled as it is, into the bowl of a pipe made red hot, which he fmokes like tobacco; then they pound his toes and fingers to pieces between two ftones; they cut circles about his joints, and gashes in the fleshy parts of his limbs, which they fear immediately with red-hot irons, cutting, burning, and pinching them alternately; they pull off this flesh, thus manyled and roasted bit by bit, devouring it with greedinels, and finearing their faces with the blood in an enthusialm of horror and fury. When they have thus torn off the flefh, they twift the bare nerves and tendons about an iron, tearing and inapping them, whilst others are employed in pulling and extending their limbs in every way. that can increase the torment. This continues often five or fix hours; and fometimes fuch is the ftrength of the favage, days together. Then they frequently unbind him, to give a breathing to their fury, and to think what new torments they shall inflict, and to refresh the strength of the sufferer, who, wearied out with such a variety of unheard-of tortures, often falls into fo profound a fleep, that they are obliged to apply the fire to awake him, and renew his fufferings. He is again fastened to the fiske, and again they renew their cruelty; they flick him all over with small matches of wood that eafily takes fire, but burns flowly; they continually run tharp reeds into every part of his body; they drag out his teeth with pinchers, and thruft out his eyes; and laftly, after having burned his flesh from the bones with flow fires; after having to mangled the body that it is all but one wound; after having mutilated his face in fuch a manner as to carry nothing human in it; after having peeled the fkin from the head, and poured a heap of red-hot coals or boiling water on the naked skull -they once more unbind the wretch; who, blind, and ftaggering with psin and weakness, affaulted and pelted upon every fide with

101

109

chubs and ftones, now up, now down, falling into their fires at y Rep, runs hither and thither, until one of the chiefs, when pout of compatition, or eveny of crucky, puts an end to his 1 life with a club or dagger. The body is then put into a kettle, and this barbarous employment is fucceeded by a feast as barbarous, The women, forgetting the human as well as the female nature, and transformed into fomething worfe than furies, even outdo themen in this scene of horror; while the principal persons of the puntry fit round the fake, fmoaking and looking on without the least emotion. What is most extraordinary, the fufferer himfelf, in the little intervals of bis torments, imokes too, appears unconcerned, and converses with his torturers about indifferent matters. Indeed, during the whole time of his execution, there feems a contest which shall exceed, they in inflicting the most horrid pains, or he in enduring them with a firmnels and conftancy almost above human : not a grean, not a figh, not a differtion of countenance escapes him; he possesses his mind entirely in the midit of his torments ; he recounts his own exploits ; he informs them what cruelties he has inflicted upon their countrymen, and threatens them with the revenge that will attend his death ; and, though his reproaches exaporate them to a perfect madnels of rage and fury, be continues his injuits even of their ignorance of the art of tormenting, pointing out himfelf more exquisite methods, and more fentible parts of the body to be afflicted. The women have this part of courage as well as the men ; and it is as rare for an Indian to behave otherwife as it would be for any European to fuffer as an Indian, Such is the wonderful power of an early influction, and a ferocious thirft of glory. "I am brave and intrepin (exclaims the favage in the face of his tormentors); I do not fear death, nor any kind of tortures ; those who fear them are cowards ; they are less than women ; life is nothing to those that have courage; May my enemies be confounded with delpair and rage ! On ! that I could devour them, and drink their blood to the laft drop.".

But neither the intrepidity on one fide, nor the inflexibility on the other, are among themfelves matter of aftonifhment: for vengeance, and fortitude in the midft of torment, are duties which they confider as facred ; they are the effects of their carlieft education, and depend upon principles inflilled into them from their infancy. On all other occidions they are humane and compafionate. Nothing can exceed the warmth of their affection towards their friends, who confift of all those who live in the fame village, or are in alliance with it : among these all things are common and this, though it may in part arise from their not possible and very difficient notions of separate property, is chiefly to

be attri ry thin ready t their y one of or is hi than th lence a the end ed, the appear opport is fuffi enough he pier deous l incleme tremes hopes flockir tremes fuch in vated n But picture. princip one of this oc moft li till all The bo lament which tors. village their m funct at most in the jou every o the rela a confid fome w the rem the fun

1200

be attributed to the firength of their attachment ; because in ever ry thing elfe, with their lives as well as their fortunes; they are ready to ferve their friends. Their houfes, their provisions, their their young women, are not enough to oblige a gueft. His any one of these fucceeded ill in his hunting?" Has his harvest failed ? or is his horfe burned? He feels no other effect of his misfortunes than that it gives him an opportunity, to experience the benevo lence and regard of his fellow-citizens. On the other hand, to the enemies of his country, or to those who have privately offender ed, the American is implacable. He conceals his fentiments, he appears reconciled, until by fome treachery or furprife he has an opportunity of executing an horrible revenge. No length of time is fufficient to allay his refentment; no diftance of place great enough to protect the object; he croffes the fleepest mountains, he pierces the most impracticable forest, and traverfes the most hideous bogs and deferts for feveral hundreds of miles; bearing the inclemency of the featons, the fatigue of the expedition, the extremes of hunger and thirft, with patience and cheerfulnels, in hopes of furpriling his enemy, on whom he exercises the most fnocking barbarities, even to the cating of his flefh. To fuch extremes do the Indians push their friendship or their enmity; and fuch indeed, in general, is the character of all firong and uncultivated minds.

But what we have faid respecting the Indians would be a faint picture, did we omit observing the force of their friendship, which principally appears by the treatment of their dead. When any one of the fociety is cut off, he is lamented by the whole : on this occasion a thousand ceremonies are practifed, denoting the most lively forrow. No business is transacted, however prefling, till all the pious ceremonies, due to the dead are performed. The body is washed, anointed, and painted. Then the women lament the lois with hideous howlings, intermixed with fongs which celebrate the great actions of the decealed and his anceltors. The men mourn in a lefs extravagant manner. The whole village is prefent at the interment, and the corple. is habited in their most sumptuous ornaments. Close to the body of the defunct are placed his bows and arrows, with whatever he valued most in his life, and a quantity of provision for his sublittence on the journey which he is supposed to take. This folemnity, like every other, is attended with feafting. The funeral being ended, the relations of the deceased confine themselves to their huts for a confiderable time to indulge their grief. After an interval of fome weeks they vifit the grave, repeat their forrow, new clothe the remains of the body, and act over again all the folenmities of the funeral.

Among the various tokens of their regard for their descated friends, the most remarkable is what they call the *feast of the dead*, or the *feast of feals*. The day for this ceremony is appointed in the council of their chiefs, who give orders for every thing which may emake them to celebrate it with pomp and magnificents 3 and the neighbouring nations are invited to partake of the entertainment. At this time, all who have died fines the preceding fault of the hind are taken out of their graves. Even thole which exhibits a feene of horror beyond the power of defcription. When the feast is concluded, the bodies are dreffed in the finesh fkins which can be procured, and after being expoled for fome time in this pomp, are again committed to the earth with grant folemnity, which is fucceeded by funeral games.

Their taffe for war, which forms the chief ingredient in their charafter, gives a firong bias to their religion. Arefkoui, or the god of batale, is reversed as the great god of the Indians. Him they invoke before they go into the field; and according as his diffection is more or left favourable to them, they conclude they will be more or left favourable to them, they conclude they will be more or left favourable to them, they conclude they will be more or left favourable to them, they conclude they will be more or left favourable to them, they conclude they will be more or left favourable to them, they conclude they will be more or left favourable to them, they conclude they difference of the second of the world and the hiftery of the gods; traditions which refeatible the Greener fables, has whiste are full more default and inconfiftent. Her whigh is not the prevailing.

character of the Lediene, and encount when they have found terms diace exclusion for the adiffusion of them gots, they may them an form af worthip. Like all sude various, however, they are firongly addiffed to fuperfittee. They believe in the existence of a number of good and had may're S frits, who interfere in the affairs of mostals, and produce all our happing or mility. It is from the evil genii, in particular, that our defeates proceed ; and if is to the good same we are infinited for a cure. The miniffere of the sould genii we are infinited for a cure. The miniffere of the sould genii, more infinited for a cure. The miniffere of the sould genii, more are infinited for a cure. The miniffere of the sould genii, more infinited for a cure. The miniffere of the sould genii, more and produces are also the only phylicians, among fines much in mole commonly in their dreams, with the superficiency formed the first sould be infinited.

likewife the ufe of fome specifics of wonderful efficacy; and all the favages are dexterous in curing wounds by the application of herbs. " But the power of these remedies is straiguted to the magical ceremonics with which they are administered. Though the women generally bear the innovious part of a tic economy, their condition is far from being to dayill a pears. On the contrary, the greatest respect is paid by the man to the female fex. The women even hold their councils, and have their thare in all deliberations which concern the fatte. Polygan is practiled by some nations, out is not general. In most, they ex tent themfelves with one wife; but a divorce is idmitted in ca of adultery. No nation of the Americans is without a regular marriage in which there are many caremonies; the principal of while is, the bride's prefenting the buildegroom with a plate of their every. The women, though before incontinent, are remarkable for shalltity after marriage. Liberty, in its full-extent, being the galling pallion of the In-diana, their education is directed in this is summer as to cherify this disposition to the atmost. Hence shifting a set never upon any account disflifed with blows, and they are foldom symmer-primanded. Regim, they fay, will pathermiser children where they consiste the new of it, and before they sees that further where they experiment and they fay, will pathermiser children where they consiste the new of it, and before they sees that further symme-tage of a flavific matter to the set of the set of the set of the set of a flavific matter of a flavific matter the set of the set of the set of a flavific matter to the set of the set of the set of the set of a flavific matter to the set of the set is the set of a flavific matter to the set of the set is the set of a flavific matter of the set of the set is the set of a flavific matter of the set of the set is the set of a flavific matter of the set of the set is the set of a flavific matter of the set of the set is the set of the set of the set of the set of the set is the set of the set when any criminal faster is the set of the set but in ordinary cales, the criment set of the set of the set of the set but in ordinary cales, the criment set of the set of the set of the set of the set but in ordinary cales, the criment set of the set of the set of the set of the set but in ordinary cales, the criment set of the set of the set of the set of the set but is the set of tity after marriage.

by the parties conformed. If a stunder be controlled, the family which has loft a relation prepares to retainste as the offender. They often full the murderer; and when this happens, the kindred of the laft perfor flain look upon themfelves to be as much injured, and to have the fame right to congenere is the other party. In general, however, the offender abfents himfelf; the friender and compliments of conditiones to thole of the perfor that has been murdered. The head of the family at length appears with a number of prefents, the delivery of which he accompanies with a formal forect. The whole ends as ufual, in mutual Vol. I.

Let us now attend to other pictures which have been given of the aboriginal inhabitants of the New World. The vices and defects of the American Indians have by fevent writers be most unaccountably aggravated, and every virtue and go d quality denied them. Their crucitics have been slready described and accounted for. The following aneodote of m Algonguin scores we find adduced as a remarkable proof of their senate thirl of blood. That nation being at war with the Iroquon, the happened to be made priloner, and was carried to one of the villages be-longing to them. Here the was firipped naked, and her hands and feet bound with ropes in one of their cabins. In this condition fie romainet ten drys, the favages fleeping roun d her

was then diffeovered by a party whom the knew to be Hurons, a nation in alliance with the Algonquins. She then fquatted down behind a bufh, calling out to them that the was not in a condition to be feen, because the was naked. They immediately threw her a blanket, and then conducted her to the fort, where the recounted her flory.

Perional courage has been denied them. In proof of their pufillanimity, the following incidents are quoted from Charlevoix by Lord Kames, in the fletches of the Hiftory of Man, "The fort de Vercheres in Canada, belonging to the French, was, in the year 1690, attacked by fome Iroquois. They approached filently, preparing to feale the pallfade, when fome mufket fhot made them retire. Advancing a fecond time, they were again repulfed, wondering they could diffeover none but a woman, who was feen avery where. This was Madame de Vercheres, who appeared as refolute as if fupported by a numerous garrifon. The hopes of florming a place without men to defend it occafioned reiterated attacks. After two days flage, they retired, fearing to be intercepted in their retreat. Two years after, a party of the fame nation appeared before the fort fo unexpetitedly, that a girl of fourteen, daugater of the proprietor, had but time as thut the gate. With the young roman there was not a feel aut one raw foldier. She thowed bestilf with her allfitant, founetimes in one place and fometimes in a substance of a partities and theys fired opportunely. The inter-merced Lucasois documped without furcefs "

fucces:" There is no inflance, it is all of fingle indiae facing an individual of any other their, jointly venturing to the of battle with an equil number of any focs. Even hers, they date not meet an this want of courage, they known, that a finall produce they furpriled them in the structure of their one fuch difcharge they immediately retreat, without leaving the finalled trace of their route. Itemay eafily be fuppoles, that an onlet of this kind mult produce confution even among the fleadies troops, when they can mither know the number of their enemice, nor perceive the place where they lie in ambufh.

Perfidy combined with cruelty has been also made a part of their character. Don Ulloa relates, That the Indians of the country

The

called Netches, in Louifiana, laid a plot of maffacreing in one night every individual belonging to the French colony established there. This plot they schually executed, notwithflanding the feeming good understanding that fublified between them and thefe European neighbours; Such was the featurey which they oblerved, that no perion had the least supprised of their defini until the blow was Aruck. One Frenchman alone elerged, by favour of the darkness, to relate the dilaster of his countrymen. The compassion of a female Indian contributed also in fome measure to his exemption from the general maffacre. The tribe of Natches had invised the Indians of other countries, even to a confiderable distance, to join in the same conspiracy. The day, or rather the night, was fixed, on which they were to make an united attack on the French colonists. It was intimated by fending a parcel of rods. more or leis numerous according to the local diffance of each tribe, with an injunction to abkres one rod daily; the day on which the last fell to be taken away bing that fixed for the execution of their plan. The women were partners of the bloody secret. The parcels of rods being thus distributed, that belonging to the tribe of Natches happened to remain in the cuftody of a female. This of Natches imprend to remain in the cultody of a female. This woman, either moved by her own feelings of compation, or by the committential expressed by her female sequentances in the view of the propision feere of bloadfact sequences on day three or four of the socia, and thus anticipated viewers of her tribe's proceeding on the eventstan of the general events income of her tribe's proceeding on the eventstan of the general events income of her tribe's proceeding on the eventstan of the general events income of her tribe's proceeding on the eventstan of the general events income of her tribe's proceeding of the eventstan of the general events income of her tribe's proceeding of the eventstan of the general events income of her tribe's features for their defents. The two proceedings a more extensive exe-gution of the defents.

cution of the delign. It was by configuration in the train to this that the Indians of the province of Miscas, in the training of Quite, deftroyed the opulent city of Logrogno, the colony of Constitutions, and its capital Sevilla del Oro, and that to completely that it is no longer known in what place that following which the last mentioned sity took the addipold was found from which the last mentioned sity took the addipole to its name. Like ravages have been committed upon Mismittale in Chill, the colonies of the Miffions of Chunces, those of Darien in Term Firms, and many other places, which have storded formes of this barbarous ferocity. These confpiracies are always carried on in the fame manner. The ferret is inviolably kept, the actors affemble at the precife hour appointed, and every individual is animisted with the fame fanguinary purpofes. The males that fall into their hands are put to death with every

thocking circumflance that can be fuggested by a cool and determined cruelty. The females are carried off, and preferved as monuments of their victory, to be employed as their occasions require.

Nor can this odious crucity and treachery, it is faid, be justly afcribed to their fubjection to a foreign yoke, feeing the fame character, belongs equally to all the original inhabitants of this vac continent, even thole who have preferved their independence nost completely. Certain it is, continues he, that these people, with the most limited capacities for every thing elfe, display an aftenishing degree of penetration and fubtlety with respect to every object that involves treachery, bloodshed, and rapine. As to these, they feem to have been all educated at one school; and a feeret, refering to any fuch plan, no confideration on earth can extort from them.

Their understandings also have been represented as not less contemptible than their manners are gross and brutal. Many nations are neither capable of forming an arrangement for futurity; nor did their folicitude or fonefight extend to far. They fet novalue upon these things of which they were not in some immediate want. In the evening when a Carib is going to reft, no confideration will tempt him to fell his hammock ; but in the morning he will part with it for the flightest trifle. At the close of winter, a North American, mindful of what he has fuffered from the cold, fets himfelf with vigeur to prepare materials for creeting a comfortable hut to pretod him egainst the inclusioncy of the fucceeding fealon : but as foon as the weather becomes mild, he abandons his work, and never thinks of it more till the return of the cold compels him to refume it. In thort to be free from labour feems to be the utmost wish of an American. They will continue whole days firetched in their hammorks, or feated on the earth, without changing their posture, raising their eyes, or uttering a single word, They cannot compute the fucceffior of days nor of weeks. The different aspects of the moon alone engage their attention as a meafure of time. Of the year they have no other conception than what is fuggested to them by the alternate heat of fummer and cold of winter; nor have they the least idea of applying to this period the obvious computation of the months which it contains. When it is afked of any old man in Peru, even the most civilized, what age he is of ? the only answer he can give is the number of ciciques he has feen. It often happens, too, that they only recollect the most distant of these princes in whose time certain circumstances had happened peculiarly memorable, while of those that lived in a more recent period they have loft all remembrance.

The fame gross stupidity is alledged to be observable in those Indians who have retained their original liberty. They are never

known to fix the dates of any events in their minds, or to trace the fucceffion of circumstances that have arisen from such events. Their imagination takes in only the prefent, and in that only what intimately concerns themfelves, Nor can discipline or instruction overcome this natural defect of apprehension. In fact, the fubjected Indians in Peru, who have a continual intercourse with the Spaniards, who are furnished with curates perpetually occupied in giving them leffon's of religion and morality, and who mix with all ranks of the civilized fociety established among them, are almost as stupid and barbarous as their countrymen who have had no fuch advantages. The Peruvians, while they lived under the government of their Incas, preferved the records of certain remarkable events. They had also a kind of regular government, defcribed by the historians of the conquest of Peru. This go. verninent originated entirely from the attention and abilities of their princes, and from the regulations enacted by them for directing the conduct of their subjects. This ancient degree of civi. lization among them gives ground to prefume, that their legiflators fprung from fome race more enlightened than the other tribes of Indians; a race of which no individual feems to remain in the prefent times.

Vanity and conceit are faid to be blended with their ignorance and treachery. Notwithflanding all they fuffer from Europeans. they still, it is faid, confider themselves as a race of men far supe-" rior to their conquerors. This proud belief, ariling from their perverted ideas of excellence, is univerfal over the whole known continent of America. They do not think it possible that any people can be fo intelligent as themfelves. When they are detected in any of their plots, it is their common obfervation, that the Spaniards, or Veriacochas, want to be as knowing as they are. Thole of Louisiana, and the countries adjacent, are equally vain of their superior understanding, confounding that quality with the cunning which they themisives conftantly practife. The whole object of their transactions is to over-reach those with whom they deal. Yet though faithless themselves, they never forgive the breach of promife on the art of others. While the Europeans feek their amity by prefents, they give themfeves no concern to fecure a reciprocal friendhip. Hence, probably, arifes shelf idea, that they must be a superior race of men, in ability ind intelligence, to those who are at fuch pains to court their lliance and avert their enmity.

Their natural eloquence has also been decried. The free tribes of favages who enter into conventions with the Europeans, it is observed, are accustomed to make long, ponapous, and, according to their own notions, sublime harangues, but without any method

deteras morequire. e justly mc chahis vaft endence. people, fplay an t to eve-As to ; and a arth can lefs connations ity; nor no'value te want. deration he will inter, a the cold, a comfucceedbandons the cold ur feema ie whole without le word, s. The as a meaion than and cold s period When cd, what r of cicirecollect cumftanhat lived

in thate renever

or connection. The whole is a collection of disjointed metaphors and comparisons. The light, heat and course of the fun, form the principal topic of their discourse ; and these unintelligible reasonings are always accompanied with violent and ridiculous gestures. Numberist, meetitions prolong the oration, which, if not interrupted, would last whale days: At the same time, they meditate very accurately beforehand, in order to avoid mentioning any thing but what they are defined to obtain. This pompous faculty of making speeches is also one of the grounds on which they conceive themselves to be superior to the nations of Europe : They imagine it is their cloquence that procures them the favours they as they and tedious, they never know when to stop; so that, excepting by the difference in language, it would be impossible, in this respect, to distinguish a civilized Peruvian from an inhabitant of the most favage districts to the northward.

But fuch partial and detached views as the above, were they even free from milrepretentation, are not the just ground upon which to form an estimate of their character. Their qualities, good and bad (for they certainly possible both,) their way of life, the flate of fociety among them, with all the circumstances of their condition, ought to be confidered in connection, and in regard to their mutual influence. Such a view has been given in the preceding part of this entities, from which, it is hoped, their real tharacter, may be eatily deduced.

Many of the difagreeable traits exhibited in the incodotes juft quoted, are indeed extracted from Don Ulloa can author of credit and reputation; but a Spiniard, and evidently biaffed in fome degree by a defire to palliate the enormities of his countrymen in that quarter of the globe. And with regard to the worft and leaft equivocal parts of the American character, cruelty and revenge, it may be fairly quefficient, whether the inflances of thefe, either in refpect of their caufe or their atrocity, be at all comparable to those exhibited in European history, and fraining the annals of Chriftendom and those for inflance, of the Spaniards themfelves, at their first discovery of America; to those indicated by the engines found on board their mighty Armada; to those which in cold blood, were perpetrated by the Dutch at Amboyna; to the dragoonings of the French; to their religious malfacres; or even to the tender mercies of the Inquifition !

Still harfher, however, are the descriptions given by Buffon and de Paw of the natives of this whole continent, in which the mole mortifying degeneracy of the human sace, as well as of all the inferior animals, is afferted to be configurous. Against those philosophers, or rather theorists, the Americans have found an

able advocate in the Abbé *Clavigero*; an historian whole fituation and long refidence in America afforded him the best means of information, and who, though himself a subject of Spain, appears superior to prejudice, and disclaims in his description the glosses of policy.

Concerning the stature of the Americans, M. de Paw fays, in general, that although it is not equal to the flature of the Caftiliand, there is but little difference between them. But the Abbé Clavigero evinces, that the Indians who inhabit thole countries lying between 9 and 40 degrees of north latitude, which are the limits of the discoveries of the Spaniards, are more than five Parifian feet in height, and that thole that do not reach that ftature are as few in number amongst the Indians as they, are amongst the Spaniards." It is belides certain, that many of those nations, as the Apaches, the Hiaquese, the Pimese, and Cochimies, are at leaft as tall as the talleft Europeans; and that, in all the vaft extent of the New World, no race of people has been found, except the Esquimaux, so diminutive in stature as the Laplanders, the Samojeds, and Tartars, in the north of the Old Continent. In this respect, therefore, the inhabitants of the two continents are upon an equality.

Of the shape and character of the Mexican Indians, the Abbé gives a most advantageous description; which he afferts no one who reads it in America will contradict, unless he views them with the eye of a prejudiced mind. It is true, that Ulloa fays, in speaking of the Indians of Quito, he had observed, " that imperfect people abounded among them; that they were either irregularly diminutive, or monstrous in some other respect; that they became either infenfible, dumb, or blind, or wanted fome limb of their body." Having therefore made fome inquiry; respecting this singularity of the Quitans, the Abbe found, that fuch defects were neither cauled by bad humours, nor by the climate, but by the mistaken and blind humanity of their parents, who, in order to free their children from the hardships and toils to which the healthy Indians are subjected by the Spaniards, fix fome deformity or weakness upon them that they may become uselefs : a circumstance of misery which does not happen in other countries of America, nor in those places of the fame kingdom of Quito, where the Indians are under no fuch oppression. M. de Paw, and in agreement with him Dr. Robertson, fays, that no deformed perfons are to be found among the favages of America; because, like the ancient Lacedemonians, they put to death those children which are born hunch-backed, blind, or defective in any limb; but that in those countries where they are formed into

etaphors form the s reafongeftures. ot intermeditate iny. Thing culty of ey cona: They urs they ne ftyle, that, exfible, in a inhabi-

focieties, and the vigilance of their rulers prevent the murder of fuch infants, the number of their deformed individuals is greater than it is in any other country of Europe. This would make an exceeding good folution of the difficulty if it were true: but if, poffibly, there has been in America a tribe of favages who have initisted the barbarous example of the celebrated Lacedemonians, it is certain that those authors have no grounds to impute fuch inhumanity to the reft of the Americans; for that it has not been the practice, at least with the far greater part of those nations, is to be demonstrated from the attestations of the authors the beft acquainted with their customs.

No argument against the New World can be drawn from the colour of the Americans : for their colour is lefs diftant from the white of the Europeans than it is from the black of the Africans. and a great part of the Afistics. The hair of the Mexicans, and of the greater part of the Indians, is, as we have already faid. coarfe and thick; on their face they appear to have little, and in general none on their arms and legs : but it is an error to fay, as, M. de Paw does, that they are entirely defititute of hair in all the other parts of the body. This is one of the many passages of the Philosophical Refearches, at which the Mexicans, and all the other nations, must finile to find an European philosopher fo eager to divest them of the drefs they had from nature. Don Ulloa, indeed in the description which he gives of the Indians of Quito, fays, that hair neither grows upon the men nor upon the women when they arrive at puberty, as it does on the reft of mankind; but whatever, fingularity may attend the Quitans, or occasion this circumftance, there is no doubt, that among the Americans in general, the period of puberty is accompanied with the fame fymptoms as it is among other nations of the world. In fact, with the North Americans, it is difgraceful to be hairy on the body. They fay it likens them to hogs. They therefore pluck the hair as faft as it appears. But the traders who marry their women and prevail on them to discontinue this practice, fay, that nature is the fame with them as with the whites. As to the beards of the men, had Buffon or de Paw known the pains and trouble it cofts them to pluck out by the roots the hair that grows on their faces, they would have feen that nature had not been deficient in that respect. Every nation has its customs. " I have seen an Indian beau, with a looking-glafs in his hand (fays Mr. Jefferfon); examining his face for hours together, and plucking out by the roots every hair he could discover, with a kind of tweezer made of a piece of fine brais wire, that had been twifted round a flick, and which he used with great dexterity."

flick,

The very afpect of an Angolan, Mandigan, or Congan, would have shocked M. de Paw, and made him recal that censure which he paffes on the colour, the make, and the hair of the Americans. What can be imagined more contrary to the idea we have of beauty, and the perfection of the human frame, than a man whole body emits a rank fmell, whole fkin is as black as ink, whole head and face are covered with black wool inftead of hair, whole eyes are yellow and bloody, whole lips are thick and blackish, and whole nole is flat? Such are the inhabitants of a very large portion of Africa, and of many illands of Afia. What men can be more imperfect than those who measure no more than four fect in ftature, whole faces are long and flat, the nole compressed, the irides yellowish black, the eye-lids turned back towards the temples, the cheeks extraordinarily elevated, their mouths monftroully large, their lips thick and prominent, and the lower part of their vilages extremely narrow? Such according to Count de Buffon, are the Laplanders, the Zemblans, the Borandines, the Samojeds, and Tartars in the East. What objects more deformed than men whole faces are too long and wrinkled even in their youth, their noies thick and compressed, their eyes small and funk, their cheeks very much raifed, their upper jaw low, their teeth long and difunited, eye-brows fo thick that they shade their eyes; the eye-lids thick, fome briftles on their faces inftead of beard, large thighs and fmall legs? Such is the picture Count de-Buffon gives of the Tartars; that is, of those people who, as he fays, inhabit a tract of land in Afia 1200 leagues long and upwards, and more than 750 broad. Amongst these the Calmucks are the most remarkable for their deformity; which is fo great, that, according to Tavernier, they are the most brutal men of all the universe. Their faces are to broad that there is a space of five or fix inches between their eyes, according as Count de Buffon himfelf affirms. In Calicut, in Ceylon, and other countries of India, there is, fay Pyrard and other writers on those regions, a race of men who have one or both of their legs as thick as the body of a man; and that this deformity among them is almost hereditary. The Hottentots, besides other gross imperfections, have that monftrous irregularity attending them, of a callous appendage extending from the os pubis downwards, according to the testimony of the hillorians of the Cape of Good Hope." Strays, Gemelli, and other travellers affirm, that in the kingdom of Lambry, in the illands of Formofa, and of Mindoro, men have been found with tails. Bomare fays, that a thing of this kind in men is nothing elfe than an elongation of the os coccygis; but what is a tail in quadrupeds but the elongation of that bone, though divided into diftinct articulations? However it may be, it is certain that that elongation renders those Afiatics fully as irregular as if it was a real tail.

If we were, in like manner, to go through the nations of Afia and Africa, we fhould hardly find any extensive country, where the colour of men is not darker, where there are not ftonger irregularities observed, and groffer defects to be found in them, than M. de Paw finds fault with in the Americans. The colour of the latter is a good deal clearer than that of almost all the Africans and the Inhabitants of Southern Afia. Even their alledged fcantiness of beard is common to the inhabitants of the Philippine Islands, and of all the Indian Archipelago, to the famous Chinese, Japanese, Tartars, and many other nations of the Old Continent. The imperfections of the Americans, however great they may have been represented, are certainly not comparable with the defects of that immense people, whose character we have sketched, and others whom we omit.

M. de Paw represents the Americans to be a feeble and difealed fet of nations; and, in order to demonstrate the weakness and diforder of their physical constitution, adduces feveral proofs equally ridiculous and ill founded, and which it will not be expected we should enumerate. He alleges, among other particulars, that they were overcome in wreftling by all the Europeans, and that they. funk under a moderate burden; that by a computation made, 200,000 Americans were found to have perished in one year fre a carrying of baggage. With respect to the first point, the Abbé Clavigero observes, it would be necessary that the experiment of wrestling was made between many individuals of each continent, and that the victory should be attested by the Americans as well as the Europeans. It is not, however, meant to infift, that the Americans are ftronger than the Europeans. They may be lefs ftrong, without the human species having degenerated in them. The Swifs are stronger than the Italians; and still we do not believe the Italians are degenerated, nor do we tax the climate of Italy. The inftance of 200,000 Americans having died in one year, under the weight of baggage, were it true, would not convince us to much of the weakness of the Americans, at of the inhumanity of the Europeans. In the fame manner that those 200,000 Americans perifhed, 200,000 Pruffian's would also have perished, had they been obliged to make a journey of between 300 and 400 miles, with 100 pounds of burden upon their backs; if they had collars of iron about their necks, and were obliged to carry that load over rocks and mountains; if those who became exhausted with fatigue, or wounded their feet so as to impede their progress, had their heads cut off that they might not retard

the pace of the reft; and if they were not allowed but a fmall morfel of bread to enable them to fupport fo fevere a toil. Les Cafas, from whom M. de Paw got the account of the 300,000 Americans who died under the fatigue of carrying baggage, relates alfo all the above-mentioned circumftances. If the author therefore is to be credited in the laft, he is alfo to be credited in the firft. But a philosopher who vaunts the physical and moral qualities of Europeans over those of the Americans, would have done better, we think, to have suppressed facts so opprobrious to the Europeans themselves.

Nothing in fact demonstrates fo clearly the robustness of the Americans as those various and lasting fatigues in which they are continually engaged. M. de Paw fays, that when the New World was discovered, nothing was to be seen but thick woods; that at prefent there are fome lands uncultivated, not by the Americans, however, but by the Africans and Europeans; and that the foil in cultivation is to the foil which is uncultivated as 2000 to 2,000,000. These three affertions the Abbé demonstrates to be precifely as many errors. Since the conquest, the Americans alone have been the people who have supported all the fatigues of agriculture in all the vaft countries of the continent of South America, and in the greater part of those of South America fubjeft to the crown of Spain. No European is ever to be feen employed in the labours of the field. The Moors who, in comparison of the Americans, are very few in number in the kingdom of New Spain, are charged with the culture of the fugar/ cane and tobacco, and the making of fugar; but the foil deftined for the cultivation of those plants is not with respect to all the cultivated land of that country in the proportion of one to two thousand. The Americans are the people who labour on the foil. They are the tillers, the fowers, the weeders, and the reapers of the wheat, of the maize, of the rice, of the beans, and other kinds of grain and pulle, of the cacoa, of the vanilla, of the cotton, of the indigo, and all other plants useful to the fuftenance, the cloathing, and commerce of those provinces; and without them fo little can be done, that in the year 1762, the harvest of wheat was abandoned in many places on account of a fickness which prevailed and prevented the Indians from reaping it. But this is not all; the Americans are they who cut and transport all the necesfary timber from the woods; who cut, transport, and work the ftones; who make lime, plaster, and tiles; who construct all the buildings of that kingdom, except a few places where none of them inhabit; who open and repair all the roads, who make the canals and fluices, and elean the cities. They work in many mines of gold, of filver, of copper, &c. they are the shepherds,

herdimen, weavers, potters, baiket-makers, bakers, couriers, daylabourers, &c. in a word, they are the perfons who bear all the burden of public labours. Thefe, fays our juftly indignant author, are the employments of the weak, daftardly, and ufelefs Americans; while the vigorous M. de Paw, and other indefatigable Europeans, are occupied in writing invectives against them.

These labours, in which the Indian's are continually employed, certainly atteft their healthiness and ftrength; for if they are able to undergo fuch fatigues, they cannot be difeafed, nor have an exhausted stream of blood in their veins, as M. de Paw infinuates. In order to make it believed that their conflictutions are vitiated, he copies whatever he finds written by hiftorians of America, whether true or falle, respecting the difeases which reign in some particular countries of that great continent. It is not to be denied, that in fome countries in the wide compais of America, men are expoled more than elfewhere to the diftempers which are occafioned by the intemperature of the air, or the pernicious quality of the aliments; but it is certain, according to the affertion of many respectable authors acquainted with the New World, that the American countries are, for the most part, healthy; and if the Americans were disposed to retaliate on M. de Paw, and other European authors who write as he does, they would have abundant subject of materials to throw discredit on the clime of the Old Continent, and the conftitution of its inhabitants in the 'endemic distempers which prevail there:

Laftly. The fuppoied feebleneis and unfound bodily habit of the Americans do not correspond with the length of their lives. Among those Americans whose great fatigues and exceflive toils do not anticipate their death, there are not a few who reach the age of 80, 90, and 100 or more years, as formerly mentioned; and what is more, without there being observed in them that decay which time commonly produces in the hair, in the teeth, in the fkin, and in the muscles of the human body. This phenomenon, fo much admired by the Spaniards who refide in Mexico, cannot be afcribed to any other cause than the vigour of their conflitutions, the temperance of their diet, and the falubrity of their clime. Historians, and other perfons who have fojourned there for many years, report the fame thing of other countries of the New World.

As to the mental qualities of the Americans, M. de Paw has not been able to difcover any other characters than a memory fo feeble, that to day they do not remember what they did yesterday; a capacity fo blunt, that they are incapable of thinking, or putting their ideas in order; a disposition fo cold, that they feel no excitement of love; a dastardly spirit, and a genius that is

> Paw has emory fo d yefterking, or they feel s that is

torpid and indolent. Many other Europeans, indeed, and what is still more wonderful, many of those children or descendants of Europeans who are born in America, think as M. de Paw does ; fome from ignorance, fome from want of reflection, and others from hereditary prejudice and prepoffeffion. But all this and more would not be fufficient to invalidate the testimonies of other Europeans, whole authority have a great deal more weight, both because they were men of great judgment, learning, and knowledge of these countries, and because they gave their testimony in favour of ftrangers against their own countrymen. In . particular, Acofta, whole natural and moral history even de Paw, commends as an excellent work, employs the whole fixth book in demonstrating the good sense of the Americans by an explanation of their ancient government, their laws, their histories in paintings and knots, calendars, &c. M. de Paw thinks the Americans are beftial; Acofta; on the other hand, reputes those perfons weak and prefumptuous who think them fo. M. de Paw fays, that the most acute Americans were inferior in industry and fagacity to the rudeft nations of the Old Continent; Acofta extols the civil government of the Mexicans above many republics of Europe. M. de Paw finds, in the moral and political conduct of the Americans, nothing but barbarity, extravagance, and brutality; and Acofta finds there, laws that are admirable and worthy of being preferved for ever.

M. de Paw denies them courage, and alleges the conquest of Mexico as a proof of their cowardice. " Cortes (he fays,) conquered the empire of Mexico with 450 vagabonds and 15 horfes, badly armed; his miferable artillery confifted of fix falconets, which would not at the prefent day be capable of exciting the fears of a fortrefs defended by invalids. During his abfence the capital was held in awe by the half of his troops. What men ! what events !-- It is confirmed by the depositions of all historians, that the Spaniards entered the first time into Mexico without making one fingle discharge of their artillery. If the title of hero is applicable to him who has the difgrace to occasion the death of a great number of rational animals, Ferdinand Cortes might pretend to it; otherwife I do not fee what true glory he has acquired by the overthrow of a tottering monarchy, which might have been deftroyed in the fame manner by any other affailin of our continent." These passages indicate either M. de Paw's ignorance of the hiftory of the conquest of Mexico, or a wilful fuppreffion of what would openly contradict his fystem : fince all who have read that hiftory know well, that the conquest of Mexico was not made with 450 men, but with more than 200,000. Cortes himfelf, to whom it was of more importance

than to M. de-Paw to make his bravery confpicuous, and his conqueft appear glorious, confesses the excessive number of the allies who were under his command at the fiege of the capital, and combated with more fury against the Mexicans than the Spaniards themselves. According to the account which Cortes gave to the emperor Chales V. the fiege of Mexico began with 87 horfes, 848 Spanish infantry, armed with guns, cross-bows, swords, and lances, and upwards of 75,000 allies, of Tlafcala, Huexotzinco, Cholula, and Chalco, equipped with various forts of arms; with three large pieces of cannon of iron, 1 fmall of copper, and 19 brigantines. In the course of the fiege were affembled the numerous nations of the Otomies, the Cohuixcas, and Matlazincas, and the troops of the populous cities of the lakes; fo that the army of the beliegers not only exceeded 200,000, but amounted to 4,000,000, according to the letter from Cortes ; and befides thefe good boats and canoes came to their affiftance. Did it betray cowardice to have fustained, for full 74 days, the fiege of an open city, engaging daily with an army fo large, and in part provided with arms fo fuperior, and at the fame time having to withstand the ravages of famine ? Can they merit the charge of cowardice, who, after having loft feven of the eight parts of their city, and about 50,000 citizens, part cut off by the fword, part by famine and fickness, continued to defend themselves until they were furioufly affaulted in the last hold which was left them?

According to M. de Paw, "the Americans at first were not believed to be men, but rather fatyrs, or large apes, which might be murdered without remorfe or reproach. At last, in order to add infult to the oppression of those times, a pope made an original bull, in which he declared, that being desirous of founding bishoprics in the richest countries of American, it pleased him and the Holy Spirit, to acknowledge the Americans to be true men : in fo far, that without this decision of an Italian, the inhabitants of the New World would have appeared, even at this day, to the eyes of the faithful, a race of equivocal men. There is no example of such a decision fince this globe has been inhabited by men and apes." Upon this passage the Abbé animadverts, as being a fingular inftance of calumny and milrepresentation; and gives the following history of the decision alluded to.

"Some of the first Europeans who established themselves in America, not less powerful than avaricious, desirous of enriching themselves to the detriment of the Americans, kept them continually employed, and made use of them as flaves: and in order to avoid the reproaches which were made them by the bishops and missionaries who inculcated humanity, and the giving liberty to those people to get themselves instructed in religion, that they

might do their duties towards the church and their families, alledged, that the Indians were by nature flaves and incapable of being instructed; and many other falschoods of which the Chronicler Herrera makes mention against them. Those zealous ecclesiastics being unable, either by their authority or preaching to free those unhappy converts from the tyranny of fuch mifers, had recourse. to the Catholic Kings, and at last obtained from their justice and clemency, those laws as favourable to the Americans as honourable to the court of Spain, that compose the Indian code, which were chiefly due to the indefatigable zeal of the bilhop de las Cafas. On, another fide, Garces bishop of Tlascala, knowing that these Spani-. ards bore, notwithstanding their perversity, a great respect to the decilions of the vicar of Jefus Chrift, made application in the year 1586 to pope Paul III, by that famous letter of which we have made mention ; representing to him the evils which the Indians fuffered from the wicked Christians, and praying him to interpole his authority in their behalf. The pope, moved by fuch heavy remonstrances, dispatched the next year the original bull, which was not made, as is manifeft, to declare the Americans true men ; for fuch a piece of weakness was very distant from that, or any other pope; but folely to support the natural rights of the Americans against the attempts of their oppressors, and to condemn the injustice and inhumanity of those, who, under the pretence of fuppoling those people idolatrous, or incapable of being instructed, took from them their property and their liberty, and treated them as flaves and beafts, If at first the Americans were esteemed latyrs, nobody can better prove it than Christopher Columbus their discoverer. Let us:

hear, therefore, how that celebrated admiral fpeaks, in his account to the Catholic King Ferdinand and Ifabella, of the first fatyrs he faw in the island of Haiti, or Hispaniola. "I fwear," he fays, " your majeflies, that there is not a better people in the world than thefe, more affectionate, affable, or mild." They love their neighbours as themfelves : their language is the fweeteft, the fostest, and the most cheerful; for they always speak similing; and although they go naked, let your majeflies believe me, their customs are very becoming; and their King, who is ferved with great majefty, has such engaging manners, that it gives great pleasure to fee him, and also to confider the great retentive faculty of that people, and their defire of knowledge, which incites them to ask the causes and the effects of things."

"We have had intimate commerce with the Americans (continues the Abbé); have lived for fome years in a feminary defined for their inftruction; faw the erection and progress of the royal

Q toy to prove sty

college of Gaudaloupe; founded in Mexico, by a Mexican Jefuit, for the education of Indian children; had afterwards fome Indiane amongst our pupits ; had particular knowledge of many American rectors, many nobles, and numerous artifts ; attentively obferved their character, their genfus, their disposition, and manner of thinking; and have examined belides, with the utmoR diligence, their mercut hiftory, their religion, their government, their laws and their cuffons. After fuch long experience and fludy of them, from which we imagine our felves enabled to decide without danger of erring, we declare to M. de Pesy, and to all Europe, that the mental quilities of the Americans are not in the leaft inferior to their of the Europeans; that they are capable of all, even the molt abfired feienes; and that if equal care was taken of their education, if they were brought up from childhood in leminaries under good malters, were protected and fimulated by rewards, we should fee vile among the Americans, philosophers, mathematicians, and divines, who would rival the first in Europe."

But although we should suppose, that, in the torrid climates of the New World, as well as in those of the Old, especially under the additional depression of flavery, these was an inferiority of the mental powers, the Chilese and the North Americans have difeowered higher sudiments of human excellence and ingenuity than have ever been known anong tribes in a similar flate of fociety in any part of the world.

M. de Parv affirms, that the Americans were unequainted with the ufe of money, and quotes the following well-known paffage from Montesquieu: "Imagine to yourfelf, that, by iome accident, you are placed in an unknown country; if you find money there, do not doubt that you are arived among a polifhed people." But if by money are are to underfland a piece of metal with the famp of the prince or the public, the want of it is a nation is no token of barbarity. The Athenians employed oven for money, as the Romans did sheep. The Romans had no coined money till the time of Servius Tullius, nor the Perfians until the reign of Darius Hylfafpes. But if by money is underflood a fign reprefenting the value of merchandife, the Mexicans, and other nations of Anahuac, employed money in their commence. The caese, of which they made conflant use in the market to purchafe whatever they wanted, was employed for this purpofe, as falt is in "Abyfinia.

It has been affirmed, that flone-bridges were unknown in America when it was first discovered; and that the natives did not know how to form arches. But these affertions are erroneous. The remains of the ancient palaces of Tezcuco, and still more their vapour-baths, show the ancient use of arches and vaults among the Mexicans. But the ignorance of this art would have been no proof of barbanity. Neisher, the Egyptians nor Bebylomians one derkeed the confirmation of erches

M. de Pave affirms, that the palace of Montesuma was positing elfe than a hut. But it is certain, from the affirmation of all the hiftorians of Mexico; that the army under Costas, confiding af 6,400 men, were all lodged in the palace 7 and there remained this fufficient room for Montesuma and his strendents.

The advances which the Menitons had mide in the fludy of aftenomy is perhaps the most furprising prior of their such for and fagacity; for it appears from the Abbs Christic's Hiftory; that they not only counted 369 days to the pent, but all's friew of the excels of about fix hours in the follow over the civil year, had remedied the difference by means of intercative days.

"Of American morality, the following exhortation of a Mexican to his foir may ferve as a spearment. 4 Lfy Ion who art come into the light from the wome of thy mother like a chicken from the egg, and like it are preparing to fly through the world, we know not how long Heaven will grant to us the enjoyment of that precious gem which we pollais in theas but however More the period? endeavour to live exactly, praying God continually to affilt theet He created that ; those att his property. He is thy father, shill loves thee fill more, than I do : repole in him thy thoughts and day and night direct thy lighs to him. Reverence and like the clders, and hold no one in contempt. To the poor and differented be not dumb, but rather uld words of constort. Honour all peri fons, particularly thy parents to whom they oweft obedience. frech, and fervice. Guard against imitating the example of those wicked fone, who, like brutes who are deprived of reafon, neither reverence their parents, liften to their influction, nor fubmit to their correction ; because wheever follows their steps will be wear unhappy end, will die in a desperate or fudden manner, or will be killed and devoured by wild beaffs, and Sys. Raider, my ....

"Mock not, my fon, the aged or the imperfect. Scorn not him whom ye fee fall into fome folly or tranfgreffice, sor make his reproaches; but refligin thyfelf, and beware left thou fall into the fame error which offends there in another. Go not were thou are not called, nor interfere in that which does not concern thee. Endeavour to manifelt thy good breeding in all thy words and actions. In convertation, do not lay thy hands upon another, nor fpeak too much, nor interrupt or diffurb another's diffeourfe; When any one difcourfes with thee, hear him attentively, and hold thyfelf in an eafly attitude, neither playing with thy feet, nor putting thy mantle to thy mouth, nor fpisting 'oo öften, nor looking about you here and there, nor rifing up frequently, if thou art

fitting; for fuch actions are indications of levity and low-breeding." -He proceeds to mention feveral particular vices which are to be avoided, and concludes, \_"Steal not, nor give thyfelf to gaming ; otherwise thou wilt be a disgrace to thy parents, whom thou oughteft rather to honour for the education they have given thee. If thou wilt be virtuous, thy example will put the wicked to fhame. No more, my fon; enough has been faid in difcharge of the duties of a father. With these councils I wish to fortify thy mind. Refule them not; nor set in contradiction to them; for on them thy life and all thy happiness depend." A sugges is sold with the ANIMALS. As ranging on the fame fide with the Abbé Clavigero, the ingenious Mr. Jefferion deferves particular attention. This: gentleman, in his notes on the State of Virginia, &c. has taken-oc-: cafion to combat the opinions of Buffon ; and feems to have fully refuted them both by argument and facts. The French phile forpher afferts, "That living nature is lefs active, lefs energetic, in: the New. World than in the Old." Heiaffirms, an That the animals common to both continents are imaller in America. 2. That those peculiar to the New are on an inferior fcale. 9. That those which have been domesticated in both have degenerated in America. And 4. That it exhibits fewer species of living creatures. The caule of this he alcribes to the diminution of heat in America, and to the prevalence of humidity from the extension of its lakes and waters over a prodigious furface. In other words, he affirms, that heat is friendly and moissure adverse to the production and developement of the large quadrupeds. The strugg will which the The hypothesis, that moisture is unfriendly to animal growth, Mr. Jefferson shows to be contradicted by observation and experience. It is by the affiftance of heat and moifture that vegatables are elaborated from the elements. Accordingly we find, that the more humid climates produce plants in greater profusion than the dry. Vegetables are immediately or remotely the food of every animal ; and from the uniform operation of Nature's laws we dilcern, that, in proportion to the quantity of food, animals are not only multiplied in their numbers, but improved in their fize Of this last opinion is the Count de Buffon himself, in another part of his work : " En general, il paroit que les pays un peu froide convienment mieux à nos bœufs que les pays chauds, et qu'ils font d'autant plus gros et plus grands que le climat est plus humide et plus abondans en paturages. Les bœufs de Danemarck, de la Podolie, de l'Ukraine, et de la Tartarie qu'habitent les Calmouques, font les plus grands te tous." Here, then, a race of animals, and one of the largest too, has been increased in its dimensions by cold and moisture, in direct opposition to the hypothesis, which suppofes that these two circumstances diminish animal bulk, and that

## SUTTOF AMERICA.

it is their contraries, heat and dryneis, which enlarge it. But to try the queftion on more general ground," let us take two portions of the earth, Europe and America for inftance, fufficiently extenfive to give operation to general caufes; let us confider the circumftances peculiar to each, and observe their effect on animal nature. America, running through the torrid as well as temperate zone, has more heat, collectively taken, than Europe. But Europe, according to our hypothefis, is the drieft. They are equally adapted then to animal productions; each being endowed with one of those causes which befriend animal growth, and with one which oppofes it. Let us, then, take a comparative view of the quadrupeds of Europe and America, prefenting them to the eye in three different tables; in one of which shall be enumerated those found in both countries; in a fecond, those found in one only; in a third, thole which have been domesticated in both. To facilitate the comparison, let those of each table be arranged in gradation, according to their fizes, from the greatest to the imaliest, Io far as their fizes can be conjectured. The weights of the large animals shall be expressed in the English avoirdupoife pound and its decimals; those of the smaller in the ounce and its decimals. Thofe which are marked thus\*, are actual weights of particular subjects, deemed amongst the largest of their species. Those marked thust are furnished by judicious persons, well acquainted with the species, and laying, from conjecture only, what the largest individual they had feen would probably have weighed. - The other weights are taken from Meffrs. Buffon and D'Aubenton, and are of fuch fubjects as came cafually to their hands for diffection.

"The refult of this view is, that of 26 quadrupeds common to both countries, feven are faid to be larger in America, feven of equal fize; and is not fufficiently examined. So that the first table impeaches the first member of the affertion, that of the Animals common to both countries the American are fmallest, "Et cela fans aucune exception." It shows it not just, in all the latitude in which its author has advanced it, and probably not to fuch a degree as to found a difficient between the two countries.

"Proceeding to the fecond table, which arranges the animals found in one of the two countries only, M. de Buffon observes, that the taphir, the elephant of America, is but of the fize of a fmall cow. To preferve our comparison, Mr. Jefferson states the wild boar, the elephant of Europe as little more than half that fize. He has made an elk with round or cylindrical horns, an animal of America, and peculiar to it; because he has seen many of them himfelf, and more of their horns; and becule, from the best information, it is certain that in Virginia this kind of elk has abounded much, and still exists in smaller numbers. He makes the American hare or rabbit peculiar, believing it to be different from both the. European animals of those denominations, and calling it therefore by its Algonouin name Whahus, to keep it diffind from thefe. Kalm is of the fame opinion. The fquirrels are denominated from a knowledge derived from daily fight of them, because with that the European appellations and descriptions seem irreconcileable. These are the only inflances in which Mr. Jefferson departs from the authority of M. de Buffon in the conftruction of this table ; whom he takes for his ground-work, because he thinks him the beit informed of any naturalist who has ever written. The refult is, that there are 18 quadrupeds peculiar to Europe; more than four times as many, to wit 74, peculiar to America ; that the first of these 74, the taphir, the largest of the animals peculiar to America weight more than the whole column of Europeans; and confequently this fecond table disproyes the second member of the affertion, that the animals peculiar to the New World are on a smaller feale, fo far as that affertion relied on European animals for fupport : and it is in full oppolition to the theory which makes the animal volume to depend on the circumstances of heat and moisture.

"The third table comprehends those quadrupeds only which are domefic in both countries. That fome of these, in fome parts of America, have become less than their original flock, is doubtless true, and the reason is very obvious. In a thinly peopled country, the spontaneous productions of the forests and waste fields are sufficient to support indifferently the domestic animals of the farmer, with a very little aid from him in the severest and

scarcest scalon. He therefore finds it more convenient to receive them from the hand of Nature in that indifferent state, than to keep up their fize by a care and nourishment which would cost him much labour. If, on this low fare, these animals dwindle, it is no more than they do in those parts of Europe where the poverty of the foil, or poverty of the owner, reduces them to the fame fcanty fublistence. It is the uniform effect of one and the fame cause, whether acting on this or that fide of the globe. It would be erring, therefore, against that rule of philosophy, which teaches us to ascribe like effects to like causes, should we impute this diminution of fize in America to any imbecility or want of uniformity in the operations of nature. It may be affirmed with truth, that in those countries, and with those individuals of America, where necessity or curiofity has produced equal attention asin Europe to the nourifhment of animals, the horfes, cattle, fheep, and hogs of the one continent are as large as those of the other. There are particular inftances, well attefted, where individuals of America have imported good breeders from England, and have improved their fize by care in the course of some years. And the weights actually known and stated in the third table, will fuffice to show, that we may conclude, on probable grounds, that, with equal food and care, the climate of America will preferve the races of domestic animals as large as the European stock from which they are derived; and confequently that the third member of Monf. de Buffon's affertion, that the domestic animals are subject to degeneration from the climate of America, is as probably wrong as the first and second were certainly so.

That the laft part of it is erroneous, which affirms, that the fpecies of American quadrupeds are comparatively few, is evident from the tables taken altogether; to which may be added the proof adduced by the Abbé Clavigero. According to Buffon's lateft calculation, in his *Epoches de la Nature*, there are goo fpecies of quadrupeds; and America, though it does not make more than a third part of the globe, contains, according to Clavigero, almost one half of the different fpecies of its animals.

. Of the human inhabitants of America, to whom the fame hypothefis of degeneracy is extended, M. Buffon gives the following defcription: "Though' the American favage be nearly of the fame flature with men in polifhed focieties: yet this is not a fufficient exception to the general contraction of animated Nature throughout the whole continent. In the favage, the organs of generation are finall and feeble. He has no hair, no beard, no ardour for the female. Though nimbler than the European, becaufe more accuftomed to running, his ftrength is not fo great.

His fehlations are lefs acute : and yet he is more timid and cowardly. He has no vivacity, no activity of mind. The activity of his body is not fo much an exercise of spontaneous motion, as a neceffary action produced by want. Deftroy his appetite for victuals and drink, and you will at once annihilate the active principle of all his movements: He remains in flupid repole, on his limbs or couch, for whole days. It is eafy to-difcover the caufe of the feattered life of favages, and of their estrangement from fociety. They have been refused the most precious spark of Nature's fire: They have no ardour for women, and, of course, no love to mankind. Unacquainted with the most lively and most tender of Il attachments, their other fensations of this nature are cold and languid. Their love to parents and children are extreme ly weak. The bonds of the most intimate of all focieties, that of the fame family, are feeble; and one family has no attachment to another. Hence no union, no republic, no focial flate, can take place among them. The physical cause love gives rife to the morality of their manners. Their heart is frozen, their fociety cold, and their empire cruel. They regard their females as. fervants defined to labour, or as beafts of burden, whom they load unmercifully with the produce of their hunting, and oblige, without pity or gratitude, to perform labours which often exceed their strength. They have few children, and pay little attention to them. Every thing must be referred to the first cause : They are indifferent, because they are weak; and this indifference to the fex is the original stain which difgraces Nature, prevents her from expanding, and, by deftroying the germs of life, cuts the root of fociety. Hence man makes no exception to what has been advanced. Nature by denying him the faculty of love, has abused and contracted him more than any other animal." " The start will be

A humilating picture indeed! but than which, Mr. Jefferion affures us, never was one more unlike the original. M. Buffon grants, that their flature is the fame as that of the men of Europog and he might have admitted, that the Iroquois were larger, and the Lenopi or Delawares taller, than people in Europe generally are: But he fays their organs of generation are smaller and weaker than those of Europeans; which is not a fact. And as to their want of beard, this error has been already noticed.

"They have no ardour for their female."—It is true, that they do not indulge those excesses, nor discover that fondness, which are customary in Europe; but this is not owing to a defect in nature, but to manners. Their foul is wholly bent upon war. This is what procures them glory among the men, and makes them the admiration of the women. To this they are educated from their carliest youth. When they pursue game with ardour, when they

bear the fatigues of the chace, when they fustain and fuster patiently hunger and cold, it is not fo much for the fake of the game they purfue, as to convince their parents and the council of the nation, that they are fit to be inrolled in the number of the warriors. The longs of the women, the dance of the warriors, the fage counfel of the chiefs, the tales of the old, the triumphal entry of the warriors returning with fuccels from battle, and the respect paid to those who diftinguish themselves in battle, and in subduing their enemics, in fhort, every thing they fee or hear, tends to infpire them with an ardent defire for military fame. If a young man were to difcover a fondness for women before he has been to wir, he would become the contempt of the men, and the fourn and ridicule of the women; or were he to indulge himfelf with a captive taken in war, and much more were he to offer violence in order to gratify his luft, he would incur indelible difgrace. The feeming frigidity of the men, therefore, is the effect of manners, and not a dealer of nature. They are neither more defective in ardour, nor more impotent with the female, than are the whites reduced to the same diet and exercise,

"They raife few children."-They indeed raife fewer children than we do; the causes of which are to be found, not in a difference of nature, but of circumftance. The women very frequently attending the men in their parties of war and of hunting, childbearing becomes extremely inconvenient to them, It is faid, therefore, that they have learned the practice of procuring abortion by the use of some vegetable; and that it even extends to prevent conception for a confiderable time after. During these parties they are expoled to numerous hazards, to excellive exertions, to the greatest extremities of hunger. Even at their homes, the nation depends for food, through a certain part of every year, on the gleanings of the forest; that is, they experience a famine once in every year. With all animals, if the female be badly fed, or not fed at all, her young perifh ; and if both male and female be reduced to like want, generation becomes lefs aftive, lefs productive, To the obstacles, then, of want and hazard, which Nature has opposed to the multiplication of wild animals, for the purpole of reftraining their numbers within certain bounds, those of labour and voluntary abortion are added with the Indian. No wonder, then, if they multiply lefs than we do. Where food is regularly supplied, a single farm will show more of cattle than a whole country of forefts can of buffaloes. The fame Indian women, when married to white traders, who feed them and their children plentifully and regularly, who exempt them from excelfive drudgery, who keep them flationary and unexposed to acci-...

R 2

dent, produce end raife as many children as the white women. Inftances are known, under these circumstances, of their rearing a dozen children.

Neither do they feem to be "deficient in natural affection." On the contrary, their feufibility is keen, even the warriors weeping most bitterly on the loss of their children; though in general they endeavour to appear fuperior to human events.

Their friendships are strong, and faithful to the uttermost extremity. A remarkable inftance of this appeared in the cafe of the late Col. Byrd, who was fent to the Cherokee nation to tranfact fome bufinefs with them. It happened that fome of our diforderly people had just killed one or two of that nation. It was therefore propoled in the council of the Cherokees, that Colonel Byrd fhould be put to death, in revenge for the loss of their countrymen. Among them was a chief, called Silouce, who, on fome former occasion, had contracted an acquaintance and friendship with Col. Byrd. He came to him events with in his tent, and told him not to be afraid, they fhould not kill him. After many days deliberation, however, the determination was, contrary to Silouce's expectation, that Byrd should be put to death, and some warriors were difpatched as executioners. Silouce attended them ; and when they entered the tent, he threw himfelf between them and Byrd, and faid to the warriors, " This man is my friend : before you get at him, you must kill me." On which they returned; and the council respected the principle fo much as to rothe site and a trainers. cede from their determination."

That "they are timorous and cowardly," is a character with which there is little reafon to charge them, when we recollect the manner in which the Iroquois met Monf. \_\_\_\_\_, who marched into their country; in which the old men, who fcorned to fly, or to furvive the capture of their town, brayed death like the old Romans in the time of the Gauls, and in which they foon after revenged themselves by facking and destroying Montreal. In fhort, the Indian is brave, when an enterprife depends upon bravery; education with him making the point of honour confift in the destruction of an enemy by stratagem, and in the prefervation of his own perfon free from injury : or perhaps this is nature, while it is education which teaches us to honour force rather than fineffe. He will defend himfelf against an host of enemies, always choosing to be killed rather than to furrender, though it be to the whites, who he knows will treat him well. In other fituations, alfo, he meets death with more deliberation, and endures tortures with a firmnels unknown almost to religious enthusialin. among us, :

In ds upon er confift preferva\_ s nature, her than s, always it be to her fituaendures. thusialin

Much less are they to be characterifed as a people of no vivacity, and who are excited to action or motion only by the calls of hunger and thirst. Their dances in which they fo much delight, and which to a European wor". we the most fevere exercise, fully contradict this; not to mention their fatiguing marches, and the toil they voluntarily and cheerfully undergo in their military expeditions. It is true, that when at home they do not employ themfelves in labour or the culture of the foil: but this, again, is the effect of customs and manners which have assigned that to the province of the women. But it is faid, "they are averfe to fociety and focial life." Can any thing be more inapplicable than this to a people who always live in cowns or in clans? "Or can they be faid to have no republique, who conduct all their affairs in national councils; who pride themselves in their national character; who confider an infult or injury done to an individual by a ftranger as done to the whole, and refent it accordingly?

To form a just dimate of their genius and mental powers, Mr. Jefferion objerves, more facts are wanting, and great allowance is to be made for those circumstances of their fituation which call for a difplay of particular talents only. This done, we shall probably find that the Americans are formed, in mind as well, as in body, on the fame model with the homo fapiens Europaus. The principles of their fociety forbidding all compulsion, they are to be led to duty and to enterprife by perional influence and persuafion. Hence eloquence in council, bravery and address in war, become the foundations of all confequence with them. To these acquirements all their faculties are directed. Of their bravery and address in war we have multiplied proofs, becsuse we have been the fubjects on which they were exercised. Of their eminence in oratory we have fewer examples, because it is displayed chiefly in their own councils. Some, however, we have of very fuperior luftre. We may challenge the whole orations of Demosthenes and Cicero, and of any more eminent orator, if Europe has furnished more eminent, to produce a fingle paffage fuperior to the speech of Logan, a Mingo chief, to Lord Dunmore when governor of this ftate. The ftory is as follows; of which, and of the speech, the authenticy is unquestionable. In the fpring of the year 1774, a robbery and murder were committed on an inhabitant of the frontiers of Virginia by two Indians of the Shawanee tribe. The neighbouring whites, according to their cuftom, undertook to punish this outrage in'a fummary way. Colonel Crefap, a man infamous for the many murders he had committed on those much-injured people, collected a party, and proceeded down the Kanhaway in queft of vengeance. Unfortunately a canoe of women and children, with

one man only, was feen coming from the opposite fhore, unarmed, and unfuspecting any hoftile attack from the whites. Crefap and his party concealed themfelves on the bank of the river; and the moment the canoe reached the fhore, fingled out their objects. and at one fire killed every perfon in it. This happened to be the family of Logan, who had long been diftinguished as a friend of the whites. This unworthy return provoked his vengeance. He accordingly fignalized himfelf in the war which enfued. In the autumn of the fame year a decifive batthe was fought at the mouth of the Great Kanhaway, between the collected forces of the Shawanees, Mingoes, and Delawares, and a detachment of the Virginia militia. The Indians were defeated, and fued for peace. Logan, however, difdained to be feen among the supplicants ; but, left the fincerity of a treaty thould be distructed from which to distinguished a chief absented himfelf, he fent by a mellenger the following speech, to be delivered to Lord Dunmore :--- " I appeal to any white man to fay if ever he entered Logan's cabin hungry, and he gave him not meat; if ever he came cold and naked, and he cloathed him not. During the course of the last long and bloody war. Logan remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed as they paffed, and faid Logan is the friend of white men. I had even shought to have lived with you, but for the injuries of one man. Colonel Crefap, the last spring, in cold blood, and unprovoked, murdered all the relations of Logan, not sparing even my women and children. There runs not a drop of my blood in the veine of any living creature. This called on me for revenge. I have fought it; I have killed many; I have fully glutted my vongeance. For my country, I rejoice at the beams of peace; but do not harbour a thought that mine is the joy of. fear. Logan never felt fear. He will not turn on his heel to fave his life. Who is there to mourn for Logan ?-Not one." To the preceding energies in favour of the American character, may be added the following by Dr. Benjamin Franklin, The Indian mon, when young, are hunters and warriors : when old, counfellors; for all their government is by the counfel or advice of the fages. Hence they generally fludy oratory ; the best speaker having the most influence. The Indian women till the ground, drefs the food, nurfe and bring up the children, and preferve and hand down to posterity the memory of public transactions. These employments of men and women are accounted natural and honourable. Having few artificial wants, they have abundance of leifure for improvement by conversation .----Our laborious manner of life, compared with theirs, they effecm

18

flavish and base; and the learning on which we value ourselves, they regard as frivolous and useless.

Having frequent occasions to hold public councils, they have acquired great order and decency in conducting them. The old men fit in the foremost ranks, the warriors in the next, and the women and children in the hindmost. The business of the women is to take exact notice of what paffes; imprint it in their memories, for they have no writing, and communicate it to their children. They are the records of the council, and they preferve. tradition of the flipulations in treaties a hundred years back; which, when we compare with our writings, we always find ex-He that would speak rifes. The rest observe a profound fiact. lence. When he has finished, and fits down, they leave him five or fix minutes to recolled, that if he has omitted any thing he intended to fay, or has any thing to add, he may rife again and deliver it. To interrupt another, even in common conversation, is reckoned highly indecent.

The politeness of these favages in conversation is, indeed, carried to excess; fince it does not permit them to contradict or deny the truth of what is afferted in their presence. By this means they indeed woid disputes; but then it becomes difficult to know their minds, or what impression you make upon them. The missionaries who have attempted to convert them to Christianity, all complain of this as one of the greatest difficulties of their misfion. The Indians hear with patience the truths of the gospel explained to them, and give their usual tokens of affent and approbation but this by no means implies conviction; it is mere civility.

When any of them came into our towns, our people are apt to crowd round them, gaze upon them, and incommode them where they defire to be private; this they effect great rudenels, and the effect of the want of inftruction in the rules of civility and good manners. "We have," fay they, "as much curiofity as you; and when you come into our towns, we with for opportunities of looking at you; but for this purpofe we hide ourfelves behind bufnes where you are to pais, and never intrude ourfelves into your copmany."

Their manner of entering one another's villages has likewife its rules. It is reckoned uncivil in travelling firangers to enter a village abruptly, without giving notice of their approach. Therefore, as foon as they arrive within hearing, they ftop and hollow, remaining there till invited to enter. Two old men ufually come out to them and lead them in. There is in every village a vacant dwelling, called the *ftrangers houfe*. Here they are placed, while the old men go round from hut to hut, acquaint-

eftecm

ing the inhabitants that ftrangers are arrived, who are probably hungry and weary; and every one fends them what he can fpare of victuals, and fkins to repole on. When the ftrangers are refreshed, pipes and tobacco are brought; and then, but not before, conversation begins, with inquiries who they are, whither bound, what news, &c. and it usually ends with offers of fervice—if the ftrangers have occasion for guides, or any necessaries for continuing their journey; and nothing is exacted for the entertainment.

The fame hospitality, effcemed among them as a principal virtue, is practifed by private perfons; of which Conrad Weifer, the interpreter, gave Dr. Franklin the following inftance: He had been naturalized among the Six Nations, and fpoke well the Mohawk language. In going through the Indian country to carry a meffage from our governor to the council at Onondaga, he called at the habitation of Canaffetego, an old acquaintance, who embraced him, fpread furs for him to fit on, placed before him fome boiled beans and venifon, and mixed fome rum and water for his drink. When he was well refreshed, and had lit his pipe, Canaffetego, began to converse with him : asked how he had fared the many years fince they had feen each other, whence he then came, what had occasioned the journey, &c. Conrad answered all his questions; and when the discourse began to flag, the Indian, to continue it, faid, "Conrad, you have lived long among the white "people, and know fomething of their cuftoms; I have been "fometimes at Albany, and have observed, that once in seven "days they that up their thops, and affemble all in the great "house; tell me what it is for ?---What do they do there?" "They "meet there," fays Conrad, "to hear and learn good things." "I "do not doubt (fays the Indian) that they tell you fo; they have "told me the fame: but I doubt the truth of what they fay, and "I will tell you my reasons. I went lately to Albany to fell my " fkins, and buy blankets, knives, powder, rum, &c. You know "I generally used to deal with Hans Hanson; but I was a little "inclined this time to try fome other merchants. However I cal-"led first upon Hans, and asked him what he would give for bea-"ver. He faid he could not give more than 4s. a pound; but "(fays he) I cannot talk on bufiness now; this is the day when "we meet together to learn good things, and I am going to the "meeting. So I thought to myfelf, fince I cannot do any bufi-, "nefs to day, I may as well go to the meeting too; and I went "with him.-There stood up a man in black, and began to talk "to the people very angrily. I did not understand what he faid; "but perceiving that he looked much at me and at Hanfon, I ima-"gined he was angry at feeing me there : fo I went out, fat down "near the houfe, ftruck fire, and lit my pipe, waiting till the

# OF AMERICA.

" niccting fhould break up. I thought too, that the man had men-" tioned fomething of beaver, and I fuspected that it might be the "fubject of their meeting. So when they came out, I accolled " my merchant .--- Well Hans (fays I) I hope you have agreed to "give more than 4s. a-pound?" No (fays he;) I cannot give fo " much I cannot give more than 35. 6d.". I then fpoke to feveral " other dealers, but they all fung the fame fong, three and fix-" pence; three and fix-pence: This made it clear to me that my " fulpicion was right; and that whatever they pretended of meet-" ing to learn good things, the real purpole was; to confult how to " cheat Indians in the price of beavers. Confider but a little; " Conrad, and you must be of my opinion: If they met fo often " to learn good things, they certainly would have learned fome be-" fore this time. But they are still ignorant: You know out " practice. If a white man, in travelling through our country, " enters one of our cabins, we all treat him as I treat you ; we " dry him if he is wet, we warm him if he is cold, and give him " meat and drink; that he may allay his thirft and hunger; and " we spread soft furs for him to rest and sleep on ; we demand "nothing in return: But if I go into a white man's house at "Albany, and alk for victuals and drink; they fay, Where is " your money ? And if I have none, they fay, get out, you In-" dian dog: You fee they have not yet learned those little good " things that we need no meeting to be inftructed in; because our "mothers taught them to us when we were children ; and there-" fore it is impossible their meetings should be; as they fay, for " any fuch purpole, or have any fuch effect; they are only to " contrive the cheating of Indians in the price of beater."

The next question that occurs is, Whether the peculiarities of the Americans, or the disparity between them and the inhabitants of Europe, afford fufficient grounds for determining them, as fome have done, to be a race of men radically different from all others?

In this queftion; to avoid being tedious, we fhall confine ourfelves to what has been advanced by Lord Kames; who is of opinion, that there are many different fpecies of men; as well as of other animals; and gives an hypothefis, whereby he pretends his opinion may be maintained in a confiftency with Revelation. "If (fays he) the only rule afforded by nature to claffing animals can be depended on, there are different races of men as well as of dogs : a maftiff differs not more from a fpaniel, than a white man from a negro, or a Laplander from a Dane. And, if we have any faith in Providence, it ought to be fo. Plants were treated of different kinds, to fit them for different climates; and fo were brute animals. Certain

it is that all men are not fitted equally for every climite. There is fcarice (a) climate but what is natural to fome men, where they brologrand flourish ; and there is not a chimate but where fome men degenerate, Doth hot then analogy lead us to conclude, that, at there are different climates on the face of this plobe, fo that are different sices of men' fitted for these different climates ? . .... "M. Buffon, from the rule, That animals which can procreate together, and whole progeny can allo procreate, are of one species; concludes, that all men are of one race of fpecies; and endeavours to support that favourite opinion, by aferibing to the climate, to food or other accidental causes, all the varieties that are found mong men; But is he feriously of opinion, that any operation of chimate, or of other workental capie, can account for the copper colour and finboth thin universal among the Americans; the pro. minence of the pudenda universal among the Hottentot women's or the blick nipple no lefs universal among the female Samolettes? -It is in vain to afer the to the elimate the low flature of the Efguingung the finalitiefs of their feet, or the overgrown fize of their heads. It is equally in valu to afaibe to chimate the low flature of the Laplanders, for their new vilare. The black colour of new groes, their lips, flat nose, crifped woolly hair, and rank fmell, difftinguish them from every other race of men. The Abyfinians, onthe contrary, are tall and well made, their complexion a brown olive, features well proportioned, eyes, large and of a fparkling black, thin lips, a nois rather high than flat. There is no fuch difference of climate between Abyllinia and Negro-land as to produce these striking differences.

"Nor fhall our author's ingenious hypothelis concerning the extremities of heat and cold, purchase him impunity with respect to the fallow complexion of the Samoiedes, Laplanders, and Greenlanders. The Finlanders, and northern Norwegians, live in a chimate not lefs cold than that of the people mentioned ; and yet are fair beyond other Europeans. I fay more, therefare many inftances of races of people preferving their original colour, in climates very different from their own; but not a fingle instance of the contrary as far as I can learn. There have been four complete generations of negroes in Pennfylvania, without any visible change of colour; they continue jet black, as originally. Those who alcribe all to the fun, ought to confider how little probable it is, that the colour it imprefies on the parents should be communicated to their infant children, who never law the fun : I frould be-as loon induced to believe with a German naturalist, whole name has escaped me, that the negro colour is owing to an ancient custom in Africa, of dycing the fkin black. Let a European for years, expole himself to the fun in a hot chimate, till he be quite brown ; his

children will neverthelefs have the fame complexion, with these, in Europe. From the action of the fun, is it possible to explains, why a negro, like a European, is born with a ruddy skin, which turns jet black the eighth or ninth day ?"

Our author next proceeds to draw lome arguments for the etiftance of different races of men, from the various tempers and dispositions of different nations ; which he reckons to be Beile ; differences, as well as those of colour, flature, &c, and having fum .: med up his evidence, he concludes thus : " Upon furming up the whole particulars mentioned above, would one hefitate a moment; to adopt the following opinion, were there no counterbalancing a evidence, viz, "That God created many pairs of the human rece," differing from each other, both externally, and internally; that he fitted thole pairs for different climates, and placed each point in ite. proper climate; and the peculiarities of the original pains were preferved entire in their descendants; who, having no affidance. but their natural talents, were left to gathen knowledge from es 74 perience; and, in particular, were left (each tribe) to form a language for itfelf; that figns were fufficient for the original pairs. without any language but what nature fuggefts ; and that a language was formed gradually as a tribe increased in numbers, and in different occupations, to make fpeech necessary ?" But this opinion, however plaufible, we are not permitted to adopt ; being taught a different leffon by Revelation, viz, That God created but, a lingle pair of the human species. Though we cannot doubt the authority of Moles, yet his account of the creation of man is not a little puzzling, as it feems to contradid every one of the facts mentioned above, According to that account, different races of menwere not formed, nor were men formed originally for different climates, All men must have spoken the same language, viz. That: of our first parents. And what of all feens the most contradictory: to that account, is the favage fate ; Adam - se Mofes informs us, was endued by his Maker with an eminent degree of knowledge ; and he certainly was an excellent preceptor to his children and their progeny, among whom he lived many generations. Whence then the degeneracy of all men unto the favage flate ? To account for that difinal cataftrophe, mankind must have fuffered fome terrible convultion. That terrible convultion is revealed to us in the hiftory of the tower of Babel, contained in the 11th chapter of Genefis, which is, 'That, for many centuries after the deluge, the whole earth was of one language, and of one speech ; that they united to build a city on a plain in the land of Shinar, with a tower, whole top might reach unto heaven; that the Lord, beholding the people to be one, and to have all one language, and that nothing would be refirained from them which they imagined to do,

confounded their language that they might not underftand one another, and feattered them abroad upon the face of all the earth.<sup>4</sup> Here light breaks forth in the midft of darknefs. By confounding the language of men, and feattering them abroad upon the face of all the earth, they were rendered favages. And to harden them for their new habitations, it was necessfary that they fhould be divided into different kinds, fitted for different climates. Without an immediate change of conflictution, the builders of Babel could net poffibly have subfitted in the burning region of Guinea, nor in the frozen region of Lapland; houses not being prepared, nor any other convenience to protect them against a defiruftive climate.<sup>44</sup>

We may first remark, on his Lordship's hypothesis, that it is evidently incomplete; for, allowing the human race to have been divided into different fpecies at the confusion of languages, and that cach species was adapted to a particular climate; by what means were they to get to the climates proper for them, or how were they to know that fuch climates existed ? How was an American, for inftance, when languishing in an improper climate at Babel, to get to the land of the Amazons, or the banks of the Oroonoko, in his own country? or how was he to know these places were more proper for him than others ?-If, indeed, we take the feripture phrase, "The Lord featiered them abroad upon the face of all the earth," in a certain lenfe, we may account for it. If we suppose that the different fpecies were immediately carried off by a whirlwind, or other supernatural means, to their proper countries, the difficulty will vanish ; but if this is his Lordship's interpretation, it is certainly a very fingular one,

Before entering upon a confideration of the particular arguments used by our author for proving the diversity of species in the human race, it will be proper to lay down the following general principles, which may ferve as axioms, (1.) When we affert a multiplicity of fpecies in the human race; we bring in a fupernatural caule to folve a natural phenomenon : for these species are supposed to be the immediate work of the Deity. (2.) No perfor has a right to call any thing the immediate effect of omnipotence, unless by express revelation from the Deity, or from a certainty that no natural cause is sufficient to produce the effect. The reafon is plain.' The Deity is invisible, and so are many natural causes : when we see an effect therefore, of which the cause does not manifest itself, we cannot know whether the immediate cause. is the Deity, or an invisible natural power. An example of this we have in the phenomena of thunder and earthquakes, which were often afcribed immediately to the Deity, but are now difcovered to be the effects of electricity. '(3.) No perion can affert

natural caufes to be infufficient to produce fuch and fuch effects, unlefs he perfectly knows all these caufes and the limits of their power in all poffible cafes; and this no man has ever known, or can know,

By keeping in view these principles, which we hope are felf-evident, we will eafily fee Lord Kames's arguments to confift entirely in a *petitio principii*,—In fubftance they are all reduced to this fingle fentence : "Natural philosophers have been hitherto unfuccessful in their endeavours to account for the differences observed among mankind, therefore these differences cannot be accounted for from natural causes."

His Lordship, however, tells us in the passage already quoted, that "a mathiff differs not more from a spaniel, than a Laplander "from a Dane;" that "it is vain to ascribe to climate the low "ature of the Laplanders, or their ugly visage."—Yet, in a note on the word Laplanders, he subjoins, that "by late accounts it appears, that the Laplanders are only degenerated Tartars; and that they and the Hungarians originally sprung from the same breed of men, and the share country."—The Hungarians are generally hand include the same country."—The Hungarians are generally hand include the same country. The Hungarians are generally hand include the same country is a mass same stiff from a spaniel. Natural causes, therefore, according to Lord Kames himself, may cause two individuals of the same species of mankind to differ from each other as much as a mass same stiff a spaniel,

While we are treating this subject of colour, it may not be amils to oblerve, that a very remarkable difference of colour may accidently happen to individuals of the fame fpecies. In the Ilhmus of Darien, a fingular race of men have been discovered. They are of low flature, of a feeble make, and incapable of enduring fatigue. Their colour is a dead milk white ; not refembling that of fair people among Europeans, but without any blufh or fanguine complexion. Their skin is covered with a fine hairy down of a chalky white; the hair of their heads, their eye-brows, and eye-lashes, are of the same hue. Their eyes are of a singular form, and fo weak, that they can hardly bear the light of the fun; but they fee clearly by moon-light, and are most active and gay in the night. Among the negroes of Africa, as well as the natives of the Indian illands, a small number of these people are produced. They are called Albinos by the Portuguele, and Kuckerlakes, by the Dutch.

This race of men is not indeed permanent; but it is fufficient to flow, that mere *colour* is by no means the characteristic of a certain species of mankind. The difference of colour in these individuals is undoubtedly owing to a natural cause. To consti-

earth.' unding face of h them l be di-Vithout l could uea, nor cd, nor ive cli-

142

tute, then, a race of men of this colour, it would only be neceffacy that this caufe, which at prefent is merchy aucidental, fhould become permanent, and we cannot know but it may be fo in fome parts of the world.

If a difference in colour is no charafteriftic of a different fpecies of mankind, much lefs can a difference in flature he thought for...In the fouthern parts of America, there are faid to be a race of men exceeding the common fize in height and firength. This account, however, is doubted of by fome: but be that as it will, it is certain that the Efquimaux are as much under the common fize, as the Patagonians are faid to be above it. Neverthelefs we are not to imagine, that either of thefe are fpecific differences; feeing the Laplanders and Hungarians are both of the fame fpecies, and yet the former are generally almost a foot fhorter than the latter; and if a difference of climate, or other accidental caufes, can make the people of one country a foot fhorter than the common fize of mankind, undoubtedly accidental caufes of a contrary nature may make those of another country a foot taller than other men.

Though the fun has undoubtedly a fhare in the production of the fwarthy colour of those nations which are most exposed to his influence; yet the manner of living to which people are accuftomed, their victuals, their employment, &c. must contribute very much to a difference of complexion. There are fome kinds of colouring roots, which, if mixed with the food of certain animals, will tinge even their bones of a yellow colour. It cannot be thought any great degree of credulity to infer from this, that if these roots were mixed with the food of a white man, they might, without a miracle, tinge his fkin of a yellow colour. If a man and woman were both to use food of this kind for a length of time, till they became as it were radically dyed, it is impossible, without the intervention of Divine power, or of fome extraordinary natural cause, but their children must be of the same colour; and was the fame kind of food to be continued for leveral generations, it is more than probable that this colour might which the continued ufe of any kind of food whatever.

Of this indeed we have no examples, but we have an example of changes much more wonderful. It is allowed on all hands, that it is more eafy to work a change upon the body of a man, or any other animal, than upon his mind. A man that is naturally choleric may indeed learn to prevent the bad effects of his paffion by reafon, but the paffion itfelf will remain as immutable as his colour. But to reafon in a manner fimilar to Lord Kames; though a man fhould be naturally choleric, or fubject to any other paffion, why fhould his children be fo?—This way of reafoning.

however plaufible, is by no means conclusive, as will appear from the following passage in Mr. Forfler's Voyage.

June 1th. " The officers who could not yet relifh their falt provisions after the refreshments of New Zealand, had ordered their black dog, mentioned p. 185, to be killed : this day, therefore, we dined for the first time on a leg of it roafted ; which tafted to exactly like mutton, that it was abfolutely undiftinguifhable. In our old countries, where animal food is fo much ufed. and where to be cornivorous perhaps lies in the nature of men, or is indifpenfably necessary to the prefervation of their health and ftrength, it is ftrange that there should exist a Jewish aversion to dogs flefh, when hogs the most uncleanly of all animals, are esten without fcruple. Nature feems expressly to have intended them for this use, by making their offspring to very numerous, and their increase to quick and frequent. It may be objected, that the exalted degree of inflinet which we observe in our dogs, infoires us with great unwillingness to kill and eat them. But it is owing to the time we spend on the education of dogs, that they acquire those eminent qualities which attach them fo much to us. The natural qualities of our dogs may receive a wonderful limprovement; but education must give its affistance, without which the human mind itfelf, though capable of an immenfe expansion, remains in a very contracted flate. In New Zicaland, and (according to former accounts of voyages) in the tropical illes of the South Sea, the dogs are the most flupid, dull animals imaginable, and do not feem to have the leaft advantage in point of fagacity over our theop, which are commonly made the emblems of fillinefs. In the former country they are fed upon fifh, in the latter on vegetables, and both their diets may have ferved to alter their disposition. Education may perhaps likewife graft new inflinces ; the New Zealand dogs are fed on the remains of their mafter's meals ; they cat the bones of other dogs ; and the puppies become true cannibals from their birth. We had a young New Zestind puppy on board, which had certainly had no opportunity of tailing any thing but the mother's milk before we putchased it : however, it engerly devoured a portion of the fieth and bones of the dog on which we dined to-day; while feveral others of the European breed taken on hoard at the Cape, turned from it without touching it. R & roll?

"On the fourth of August, a young bitch, of the terrier breed, taken on board at the Cape of Good Hope, and covered by a spaniel, brought ren young ones, one of which was dead. The New Zeahnd dog associated above, which devoured the bones of the rouffed dog, now fell upon the dead puppy, and eat of it with a ravenous appetite. This is a proof how far education may go

in producing and propagating new inftincts in animals. Europearl dogs are never fed on the meas of their own fpecies; but rather feen to ablior it. The New Zealand dogs, in all likelihood, are trained up from their earlieft age to eat the remains of their mafter's meals : they are therefore ufed to feed upon fifth, their own fpecies; and perhaps human flefh; and what was only owing to habit at first, may become inftinct by length of time. This was remarkable in our cannibal dog; for he came on board fo young; that he could not have been weaned long enough to have acquired a habit of devouring his own fpecies; and much lefs of eating human flefh; however, one of our feamen having cut his finger; held it out to the dog; who fell to greedily, licked it, and then began to bite it."

From this account it appears, that ever the infinits of animals are not unchangeable by natural caufes; and if these caufes are powerful enough to change the dispositions of succeeding generations, much more may we suppose them capable of making any possible alteration in the external appearance.

... We are not here necellitated to confine ourfelves to observations made on brute animals. The Franks are an example of the production of one general character, formed by fome natural caufe from a mixture of many different nations .-. They were a motly multitude, confishing of various German nations dwelling beyond the Rhine; who, uniting in defence of their common liberty, took thence the name of Franks; the word frank fignifying in their language, as it ftill does in ours; free. Among them the following nations were mentioned, viz. the Actuarii, Chamavi, Bruckeri, Salii, Frifii, Chaufi, Amfwarii, and Catti, We cannot fuppole one characties to belong to fo many different nations ; yet it is certain that the Franks were nationally characterized as treacherous; and fo deeply feems this quality to have been rooted in their natures that their descendants have not got quite free of it in 1500 years. It is in vain, then, to talk of different races of men, either from their colour, fize, or prevailing difpolitions, feeing we have undeniable proofs that all these may be changed, in the most remarkable manner, by natural caufes, without any miraculous interpolition of the deity. Souther stiller state no to the that the most for the still for

THE FERST FEOFLING OF AMERICA. The next question, then, which prefents itself is, From what part of the Old World America has most probably been peopled?

Discoveries long ago made inform us, that an intercourse between the Old Continent and America might be carried on with facility from the north-west extremities of Europe and the northeast boundaries of Asia. In the minth century the Norwegians

discovered Greenland, and planted a colony there. The communication with that country was renewed in the last century by Moravian millionaries, in order to propagate their doctrine in that bleak and uncultivated region. By them we are informed that the north-west coast of Greenland is separated from America by a very narrow firaits that at the bottom of the bay it is highly probable that they are united; that the Elquimaux of America perfectly refemble the Greenlanders in their afpect, drefs, and mode of living; and that a Moravian millionary, well acquainted with the language of Gi and, having vifited the country of the Efquimaux, found, to he aftonishment, that y spoke the fame language with the Greenlanders, and were in every respect the fame people. The fame species of animals, too, are found in the contiguous regions. The bear, the wolf, the fox, the hare, the deer, the roebuck, the elk, frequent the forests of North America, as well as those in the north of Europe.

Other discoveries have proved, that if the two continents of Afia and America be feparated at all, it is only by a narrow firait. From this part of the Old Continent, also, inhabitants may have paffed into the New; and the refemblance between the Indians of America and the eastern inhabitants of Afia, would induce us to conjecture that they have a common origin. This is the opinion adopted by Dr. Robertion in his Hiftory of America, where we find it accompanied with the following narrative.

"While those immense regions which stretched eastward from the river Oby to the fea of Kamtichatka were unknown, or imperfectly explored, the north-east extremities of our hemisphere were supposed to be so far diftant from any part of the New World, that it was not easy to conceive how any communication fhould have been carried on between them. But the Ruffians, having subjected the western part of Siberia to their empire, gradually extended their knowledge of that vaft country, by advancing towards the east into unknown provinces. These were discovered by hunters in their excursions after game, or by foldiers employed in levying the taxes; and the court of Molcow estimated the importance of those countries only by the small addition which they made to its revenue. At length, Peter the Great afcended the Ruffian throne : His enlightened comprehenfive mind, intent upon every circumstance that could aggrandize his empire, or render his reign illustrious, difeerned confequences of those discoveries, which had escaped the observation of his ignorant predeceffors. He perceived, that, in proportion as the regions of Afia extended towards the eaft, they must approdch nearer to America; that the communication between the

T

146

two continents, which had long been fearched for in vain, would probably be found in this quarter; and that, by opening this intercourfe, fone part of the wealth and commerce of the weftern world might be made to flow into his dominions by a new channel. Such an object fuiled a genius that delighted in grand fehenes: Peter drew up inftructions with his own hand for profecuting this defign, and gave orders for carrying it into execution.

"" His fucceffors-adopted his idea, and purfued his plan. The officers whom the Ruffian court employed in this fervice, had to ftruggie with to many difficulties, that their progress was extremely flow. Encouraged by fome faint traditions among the people of Siberia concerning a fuccelsful voyage in the year 1648 round the north-caft promontory of Alia, they attempted to follow the fame courfe. Veffels were fitted out, with this view, at different times, from the rivers Lena and Kolyma; but in a frozen ocean; which pature feems not to have deftined for navigation, they were expoled to many difafters, without being able to accomplish their purpole. No vellel fitted out by the Ruffian court ever doubled this formidable cape ; we are indebted for what is known of those extreme regions of Alia, to the difeoveries made in excursions by land. In all those provinces, an opinion prevails, that countries of great extent and fertility lie at no confiderable diftance from their own coafts. Theie the Ruffians imagined to be part of America; and feveral circumfances concurred not only in confirming them in this belief, but in perfuading them that fome portion of that continent could not be very remote. Trees of various kinds, unknown in those naked regions of Afia, are driven upon the coast by an easterly wind. By the fame wind floating ice is brought thither in a few days; flights of birds arrive annually from the fame quarter; and a tradition obtains among the inhabitants, of an intercourse formerly carried on with fome countries fituated to the eaft.

"After weighing all these particulars, and comparing the position of the countries in Afia which they had discovered, with fuch parts in the north-west of America as were already known; the Russian court formed a plan, which would have hardly occurred to any nation less accustomed to engage in arduous undertakings and to contend with great difficulties. Orders were issued to build two vessels at Ochotz, in the sea of Kamtichatka, to fail on a voyage of discovery. Though that dreary uncultivated region furnished nothing that could be of use in constructing them but some larch-trees; though not only the iron, the cordage, the fails, and all the numerous articles requisite for their equipment, but the provisions for victualling them, were to be carried

#### OF AMERTCA

through the immense deferts of Siberia, along, rivers of difficult pavigation, and roads almost impassable, the mandate of the fovereign, and the perfeverance of the people; at hill furmounted every obstacle. Two vessels were finished; and, under the command of the captains Behring and Tichirikow, failed from Kamtichatka in quest of the New World, in a quarter where it had never been approached. They ihaped their course towards the caft; and though a florm toop feparated the velich, which never rejoined, and many difafters befel them, the expectations from the voyage were not altogether fruftrated, Each of the commanders difcor vered land, which to them appeared to be part of the American . continent ; and, according to their oblervations, it feems to be fitusted within a few degrees of the north-well cost of California, Each fent fome of his people afhore : but in the place the inhabisants fled as the Ruffians approached ; in mother, they carried off thole who landed, and deftroyed their boats. The violence of the weather, and the diffress of their crews, obliged both to quit this inhospitable cost win In their return they touched at leveral iflands, which ftreatch in a phain from caft to weft between the country which they had diffeovered and the coast of Afiz. They had fome intercourse with the natives, who feened to them to refemble the North Americans, They prefented to the Ruffians the calumet, or pipe of peace, which is a fymbol of friendship universal among the people of North America, and an utage of arbitrary inftitution peculiar to them."

The more recent and accurate difcoveries of the illustrious navigator Cooke, and his fucceffor Clerke, have brought the matter still nearer to certainty. The fea, from the fouth of Behring's Straits to the crelcent of illes between Afia and Americe, is very shallow, It deepens from these straits (as the Britifh feas do from those. of Dover) till foundings are loft in the Pacific Ocean; but that does not take place but to the fouth of the illes. Between them and the ftraits is an increase from 12 to 54 fathom, except only off St. Thaddeus Nois, where there is a channel of greater depth. From the volcanic disposition, it has been judged probable, not only that there was a feparation of the continents at the Straits of Behring, but that the whole fpace from the ifles to that small opening had once been occupied by land; and that the fury of the waterly element, actuated by that of fire, had in most remote times, subverted and overwhelmed the tract, and left the islands monumental fragments.

Without adopting all the fancies of Buffon, there can be no doubt, as the Abbé Clavigero observes, that our planet has been T 2

fubject to great vicifitudes fince the deluge. Ancient and modern histories confirm the truth which Ovid has fung in the name of Pythagoras;

#### Nideo ego quod fuerat quondam folidiffima tellus, ... Effe fretum ; vidi factas ex aquore terras.

THE BUSIESS MENTER S. SAME SAME

At prefent they plough those lands over which thips formerly failed, and now they fail over lands which were formerly cultivated ; earthquakes had fwallowed fome lands, and fubterraneous fires have thrown up others : the rivers have formed new foil with their mud ; the few retreating from the fhores has lengthened the land in-tome piece, and advancing in others has diminifhed it; it has defined time territories which were formerly united, and former new firsits and gulphs. We have examples of all these revolutions in the past century. Sicily was united to the continent of Naples, as Euber, now the Black Sea, to Boetias Diodortis, Strabo, and other ancient authors, fay the fame thing of Spain and Africa, and affirm, that by a violent cruption of the ocean upon the land between the mountains Abyla and Calpe, that communication was broken, and the Mediterranean Sea was formed. Among the people of Ceylon there is a tradition that a fimilar cruption of the fea feparated their island from the peninfula of India. The fame thing is believed by those of Malabar with respect to the isles of Maldivia, and with the Malayans with respect to Sumatra. It is certain, fays the Count de Buffon, that in Ceylon the earth has loft 30 or 40 leagues, which the fea has taken from it; on the contrary, Tongres, a place of the low countries, has gained 30 leagues of land from the fea. The nothern part of Egypt owes its existence to inundations of the Nile. The earth which this river has brought from the inland countries of Africa, and deposited in its inundations, has formed a foil of more than 25 cubits of depth. In like manner, adds the above author, the province of the Yellow River in China, and that of Louisiana, have only been formed of the mud of rivers. Pliny, Seneca, Diodorus, and Strabo, report innumerable examples of fimilar revolutions, which we omit, that our differtation may not become too prolix; as alfo many modern revolutions, which are related in the theory of the earth of the Count de Buffon and other authors. In South America, all those who have observed with philosophic eyes the peninfula of Yucatan, do not doubt that that country has once been the bed of the fea; and, on the contrary, in the channel of Bahama many indications shew the island of Cuba to have been once united to the continent of Florida. In the ftrait which feparates America from Afia

many islands are found, which probably were the mountains helonging to that tract of land which we suppose to have been swallowed up by carthquakes; which is made more probable by the multitude of volcanoes which we know of in the peninfula of Kamtichatka. It is imagined, however, that the finking of that land, and the feparation of the two continents, has been occasioned by those great and extraordinary earthquakes mentioned in the historics of the Americans, which formed an era almost as memorable as that of the deluge. The histories of the Toltecas an fuch carthquakes in the year I Tecpatl; but as we know not to what century that belonged, we can form no conjecture of the time that great calamity happened. If a great earthquake fould overwhelm the ifthmus of Suez, and there fould by with fime time as great a fearcity of hiftorians as there were and first ages after the deluge, it would be doubted, in 300 or 100 reprafter, whether Afia had ever been united by that part to Africa; and many would firmly deny it. a start at the start of the start

Whether that great event, the feparation of the continents, took place before or after the population of America, is as impoffible as it is of little moment for us to know; but we are indebted to the above-mentioned navigators for fettling the long dispute about the point from which it was effected. Their obfervations prove, that in one place the diftance between continent and continent is only 39 miles, not (as the author of the Recherches Philosophiques fur les Americains would have it) 800 leagues. This narrow ftrait has also in the middle two islands. which would greatly facilitate the migration of the Afiatics into the New World, fuppoing that it took place in canoes after the convultion which rent the two continents afunder. Befides, it may be added, that these straits are, even in the summer, often filled with ice; in winter often frozen. In either cafe mankind might find an cafy paffage; in the laft, the way was extremelyready for quadrupeds to crofs and flock the continent of America. But where, from the waft expanse of the north-eastern world, to fix on the first tribes who contributed to people the New Continent, now inhabited almost from end to end, is a matter that baffles human reason. The learned may make bold and ingenious conjectures, but plain good fense cannot always accede to them, a statist see a statist set of the statist

As mankind increased in numbers, they naturally protruded one another forward. Wars might be another caufe of migrations. There appears no reason why the Asiatic north might not be an officinia virorum, as well as the European. The overteeming country, to the east of the Ripheean mountains, mult find it necessary to discharge its inhabitants: the first great wave

of people was forced forward by the next to it, mons. tumid and more powerful than itfelf: fucceffive and new impulses continually arriving, thore rolt was given to that which fpread over a more caftern traft; diffurbed again and again, it covered frefh regions; at length, reaching the fartheft limits of the Old World, found a new one, with ample fpace to occupy unmoleffed for ages; till Columbus curfed them by a differency, which brought again new fins and new deaths to both worlds.

"The inhabitants of the New World (Mr. Pennant observes,) do not conflict of the offspring of a lingle nation; different people, at feveral periods, arrived there; and it is impossible to fay, that any one is now to be found on the original spot of its colonization. It is impossible, with the lights which we have fo recently receive it to identit that America could receive its inhabitants (at least the bulk of them) from any other place than eastern Afia. A few proofs may be added, taken from customs or dreffes common to the inhabitants of both worlds; fome have been long extinct in the Old, others remain in both in full force.

"The cuftom of fealping was a barbarifm in use with the Seythians, who carried about them at all times this favage mark of triumph; they cut a circle round the neck, and ftripped off the skin as they would that of an ox. A little image found among the Calmucs, of a Tartarian Deity, mounted on a horfe, and fitting on a human fkin, with fealps pendent from the breaft; fully illuf. trates the cuftom of the Scythian progenitors, as defcribed by the Greek hiftorian. This usage, as the Europeans know by horrid experience, is continued to this day in America. The ferocity of the Scythians to their prifoners extended to the remoteft part of Afia. The Kamtichatkans, even at the time of their difcovery by the Ruffians, put their priloners to death by the most lingering and excruciating inventions; a practice in full force to this very day among the aboriginal Americans. A race of the Scythians were fliled Anthropophagi, from their feeding on human flefh, The people of Nootka Sound ftill make a repart on their fellow creatures : but what is more wonderful; the favage allies of the British army have been known to throw the mangled limbs of the French prifoners into the horrible cauldron, and devour them with the fame relifh as those of a quadruped.

"The Scythians were faid, for a certain time, annually to tranfform themfelves into wolves, and again to refume the human shape. The new difcovered Americans about Nootka Sound, at this time difguife themfelves in dreffes made of the fkins of wolves and other wild beafts, and wear even the heads fitted to their own. These habits they use in the chace, to circumvent the ani, mals of the field. But would not ignorance or superfitition ascribe

150

to a supernatives menimorpolie thele temporary expedients to de.

"In their marches, the Kamtichatkins never went abreaft, but followed one another in the feme traft. The fame cuftom is exactly observed by the Americant,

"The Tunguli, the most numerous nation refident in Siberia, prick their faces with small punctures, with a needle, in various fhapes; then rub into them charcoal, fo that the marks become indelible. This cultom is still observed in feveral parts of America. The Indiana in the back of Hudson's Bay, to this day, perform the operation exactly in the same manner, and puncture the skin into various figures; as the natives of New Zealand do at prefent, and as the ancient Britons did with the herb glastum, or wood; and the Virginians, on the first discovery of that country by the English.

"The Tunguli use cances made of birch-bark, differed over ribs of wood, and nicely fewed together. The Canadian, and many other American nations, use no other fort of boats. The paddles of the Tunguli are bread at each end; those of the people near Cook's river, and of Oonalasthe, are of the same form.

"In burying of the dead, many of the American nations, place the corpfe at full length, after preparing it according to their cuftoms; others place it in a fitting pofture, and lay by it the most valuable cloathing, wampum, and other matters. The Tartars did the fame : and both people agree in covering, the whole with earth, fo as to form a tumulus, barrow, or carnedd.

" Some of the American nations hang their dead in trees." Certain of the Tungufi observe a fimilar custom.

"We can draw fome analogy from drefs: conveniency in that article muft have been confulted on both continents, and originally the materials muft have been the fame, the fkins of birds and beafts. It is fingular, that the conic bonnet of the Chinefe fhould be found among the people of Nootka. I cannot give into the notion, that the Chinefe contributed to the population of the New World; but we can readily admit, that a fhipwreck. might furnish those Americans with a pattern for that part of the drefs.

"In refpect to the features and form of the human body, almost every tribe found along the western coast has fome similitude to the Tartar nations, and still retain the little eyes, small nofes, high checks, and broad faces. They vary in fize, from the lufty Calmucs to the little Nogaians. The internal Americans, fuch as the Five Indian nations, who are tall of body, robust in make, and of oblong faces, are derived from a variety among the Tartars themselves. The fine race of Tschutski feen

#### GENERAL DESCR

to be the flock from which those American Tichutiki, again, from that fine race of the or inhabitants of Kabarda.

152

"But about Prince . William's Sound begins a race chiefly diftinguished by their dreis, their cances, and their inftruments of the chace, from the tribes to the fouth of them. Here commences the Efquimaux people, or the race known by that name in the high latitudes of the eastern fide of the continent. They may be divided into two varieties. At this provide they are of the largest fize. As they advance northward the secretaries in height, till they dwindle into the dwarfish tribus, a secretaries up fome of he they are of the till they dwindle into the dwarfifth tribes, successfully fome of the coafts of the Icy Sea, and the maritime parts of Hudfon's Bay, of Greenland, and Terra de Labrador. The famore appanele map places fome islands feemingly within the Streits of Behring, on which is bestowed the title of Ya Zue, or the Kingdom of the Dwarfs. Does not this in fome manner authenticate the chart, and give us reason to suppose that America was not unknown to the Japanele; and that they had (as is mentioned by Kæmpfer and Charlevoix) imade voyages of difcovery, and according to the laft, actually wintered on the continent? That they might have met with the Elquimaux is very probable; whom, in comparison. of themselves, they mightjustly distinguish by the name of dwarfs, The reason of their low stature is very obvious; these dwell ina most fevere climate, amidst penury of food; the former in one much more favourable, abundant in provisions; circumstances. that tend to prevent the degeneracy of the human frame, At the island of Oonalascha, a dialect of the Esquimaux is in use, which was continued along the whole coaft, from thence northward."

The continent which flocked America with the human race poured in the brute creation through the fame paffage. Very few quadrupeds continued in the peninfula of Kamtfchatka; Mr. Pennant enumerates only 25 which are inhabitants of land : all the reft perfifted in their migration, and fixed their refidence in the New World. Seventeen of the Kamtichatkan quadrupeds are found in America: others are common only to Siberia or Tartary, having, for unknown caufes, entirely evacuated Kamtschatka, and divided themselves between America and the parts of Afia above cited. Multitudes again have deferted the Old World even to an individual, and fixed their feats at diffances most remote from the fpot from which they took their departure; from mount Ararat, the refting place of the ark, in a central part of the Old World, and excellently adapted for the difpersion of the animal creation to all its parts. We need not be ftartled (fays Mr. Penmant) at the vaft journeys many of the quadrupeds took to arrive

of points beyond the human ability to undernable: the facts are indifputables are concealed: In fuch cafes, faith notwith relief. It would containly be the height must be called of folly to deny to the Being who broke open the great fountains. of the deep to effect the deluge-and afterwards, to compel the difpersion of mankind to people the globe, directed the confusion of languages powers inferior in their nature to thefe. After these wondrous proofs of Omnipotency, it will be absurd to deny the possibility of infusing inftinct into the brute creation. Deus eft anima brutorum ; " God himfelf is the foul of brutes :" His pleafure must have determined their will, and directed feveral species, and even the whole genera, by impulse irrefistible, to move by flow progression to their deftined regions. But for that, the Lama and the Pacos might still have inhabited the heights of Armenia and fome more neighbouring Alps, inflead of labouring to gain. the diftant Peruvian Andes; the whole genus of armadillos, flow of foot, would never have quitted the torrid zone of the Old World for that of the New; and the whole tribe of monkeys would have gamboled together in the foreits of India, initead of dividing their refidence between the fhades of Indoftan and the deep forefts of the Brafils. Lions and tigers might have infelted the hot parts of the New World, as the first do the defarts of Africa, and the last the provinces of Afia; or the pantherine animals of South America might have remained additional fcourges with the favage beafts of those ancient continents. The Old World would have been overftocked with animals; the New remained an unanimated wafte! or both have contained an equal portion of every beaft of the earth. Let it not be objected, that animals bred in a fouthern climate, after the defcent of their parents from the ark, would be unable to bear the frost and snow of the rigorous north, before they reached South America, the place of thier final deftination. It must be confidered, that the migration must have been the work of ages ; that in the course of their pronorth to four Part of the multitudes of the beneath the line, in the bur ther hons or tigers ever migra of the first are found in India and numbers only in Africa. The tiger e Tartary, in lat. 4d. 5d, but never has In fine, the conjectures of the le of the Old and New, are now, vigators, loft in conviction; and v hyp theses, the real place of migration is unc ted out Some (from a paffage in Plato) have, ext ΗĈ. from the straits of Gibraltar to the costs of merica, an illand equal in fize to the continent of the stor, and Africa i over which had paffed, as over a bridge, from the latter, men and animals; wool-headed negroes, and lions and tigers, none of whichever existed in the New World. A mighty sca arole, and in one day and night engulphed this flupendous tract, and with it every being which had not completed its migration into America. The whole negro race, and almost every quadruped, now inhabitants. of Africa, perished in this critical day. Five only are to be found at prefent in America; and of these only one, the bear in South America: Not a fingle cuftom, common to the natives of Africa and America, to evince a common origin. Of the quadrupeds, the bear, ftag, wolf, fox, and weefel, are the only animals which we can pronounce with certainty to be found on each continent. The stag, fox, and weefel, have made also no farther progress in Africa than the north; but on the fame continent the wolf is spread over every part, yet is unknown in South America, as are the fox and weefel. In Africa and South America the bear is very local, being met with only in the north of the first, and on the Andes in the laft. Some caufe unknown arrefted its progrefs in Africa, and impelled the migration of a few into the Chilian Alps, and induced them to leave unoccupied the vaft tract from North America, to the lofty Cordilleras.

accuftomed i

Allusions have often been made to fome remains on the continent of America, of a more polished and cultivated people, when compared with the tribes which possesses on the first discovery by Europeans. Mr. Barton, in his Observations on fome parts of Natural History, Part I. has collected the feattered hints of Kalm, Carver, and fome others, and has added a plan of a regular work, which has

ice junction walls, large ds with the ne places the plainly feen; in-

with hers blaz

en ploughed.

o kinds: they are artificial tuor the dead : or they are of a greatetending, the adjacent country; and cially conftructed, or advantage is ta-

155

to raife them into a fortification. the Muskingum, are fituated: ton of that river with the Ohio tt. They confift of a number of walls tches, &c. altogether occupying a space in length, and from about 150 to 25 wn, as it has been called, is a large level, nearly in the form of a fquare, the fides of which are them of to 86 perches in length, Thefe wills are, in general, about 19 feet in height above the level on which they fland, and about so feet in diameter at the bale, but at the top they are much narrower ; they are at prefent overgrown with vcgetables of different kinds, and, among others, with trees of feveral feet diameter. The chaims, or opening in the walls, were probably intended for gate-ways; they are three in number at each fide, befides the fmaller openings in the angles, Within the walls there are three elevations, each about fix feet in height, with regu. lar afcents to them : these elevations confiderably resemble fome of the eminences already mentioned, which have been difcovered near the river Milliflippi. This author's opinion is, That the Tolticas, or fome other Mexican nation, were the people to whom the mounts and fortifications, which he has described, owe their existence; and that those people were probably the descendants of the Danes. The former part of this conjecture is thought probable, from the fimilarity of the Mexican mounts and fortifications defcribed by the Abbé Clavigero, and other authors, to those described by our author; and from the tradition of the Mexicans, that they came from the north-weft; for, if we can rely on the teftimony of late travellers, fortifications fimilar to those mentioned by Mr. Barton . have been discovered as far to the north as Lake Pepin; and we find them, as we approach to the fouth, even as low as the coafts of Florida. The fecond part of our author's conjecture appears not fo well fupported.

TOF

IN CHRONOLOGICAL ORDER,

The fame which Columbus had acquired by his first discoveries or this western continent, spread through Europe and in-1496 spired many with the spirit of enterprize. As early as 1496, four years only after the first discovery of America, John Cabot, a Venetian, obtained a commission from Henry VII. to discover unknown lands and annex them to the crown.

In the fpring he failed from England with two fhips, carrying with him his three fons. In this voyage, which was intended for China, he fell in with the north fide of Terra Labrador, and coafted northerly as far as the 67th degree of latitude.

<sup>1497.</sup>—The next year he made a fecond voyage to America with his fon Sebaftian, who afterwards proceeded in the difcoveries which his father had begun. On the 24th of June he difcovered Bonayifta, on the north-east fide of Newfoundland. Before his return he trayerfed the coaft from Davis's Straits to Cape Florida

1502.—Sebastian Cabot was this year at Newfoundland; and on his return carried three of the natives of that island to Henry VII.

1525—The next year Stephen Gomez, the first Spaniard who came upon the American coast for discovery, failed from Groya in Spain, to Cuba and Florida; thence northward to Cape Razo; in latitude 46° north, in fearch of a north-west passage to the East Indies.

1534.—In the fpring of 1534, by the direction of Frances I. a fleet was fitted out at St. Malo's in France, with defign to make diffeoveries in America. The command of this fleet was given to James Cartier. He arrived at Newfoundland in May of this year Thence he failed northerly; and on the day of the feftival of St. Lawrence, he found 'himfelf in about latitude 48° 30' north in the midff of a broad gulf, which he named St. Lawrence. He gave the fame name to the river which emties into it. In this voyage, he failed as far north as latitude 51°, expecting in vain to find a paflage to China.

1535.—The next year he failed up the river St; Lawrence 300 leagues to the great and fwift *Fall*. He called the country New France; built a fort in which he fpent the winter, and returned in the following fpring to France.

1542.—In 1542, Francis la Roche, Lord of Robewell, was fent to Canada, by the French king, with three fhips and 200 men, women and children. They wintered here in a fort which they had built, and returned in the fpring. About the year 1550, a large number of adventurers failed for Canada, but were never after heard of. In 1598, the king of France commissioned the Marquis de la Roche to conquer Canada, and other countries not possefield by any Christian prince. We do not learn however,

#### OF NORTH AMERICA.

a Bache over attempted to execute his committee hat any further attempts were made to fettle Canal cutury.

1539.—On the 1sth of May, 1539. Ferdinand de Seror o men, befides feamen, failed from Cuba, having for the conquelt of Florida. On the 30th of May, he arrived to Santo, from whence he travelled northward 450 leagues rom

the fea. Here he difcovered a river a quarter of a mile 1543 wide and 19 fathoms deep. on the bank of which he died 1543 and was buried, May 1542, aged 42 years. Alverdo his fucceffor built feven brigantines, and the year following embarked upon the river. In 17 day he proceeded down the river 400 leagues, where he judged it to be 15 leagues wide. From the largeness of the river at that place of his embarkation,

concluded its fource must have been at least 400 leagues above, to that the whole length of the river in his opinion must have been more than 800 leagues. As he passed down the River, he found it opened by two mouths into the gulph of Mexico. These sircumstances led us to conclude, that this river, fo early discovered, was the one which we now call the Missinger.

Jan. 6, 1549. This year King Henry VII. granted a penfion for life to Schaftian Cabet, in confideration of the important fervices he had rendered to the kingdom by his difeoveries in America.

1562 .- The admiral of France, Chattillon, early in this year fent out a fleet under the command of John Ribalt. He arrived at Cape Francis on the coaft of Florida, near which, on the first of May, he discovered and entered a river which he called May river. It is more than probable that river is the fame which we now call St. Mary's, which forms a part of the fouthern boundary of the United States. As he coafted northward he discovered. eight other rivers, one of which he called Port Royal, and failed up it feveral leagues. On one of the rivers he built a fort and called it Charles, in which he left a colony under the direction of Captain Albert. The feverity of Albert's measures excited a mutiny, in which, to the ruin of the colony, he was flain. Two. years after, Chatillon fent Rene Laudonier, with three ships, to Florida. In June he arrived at the River. May, on which he built a fort, and, in honour to his King, Charles IX, he called it. Carolina.

In August, this year, Capt. Ribalt arrived at Florida the fecond. time, with a fleet of feven veffels to recruit the colony, which, two years before, he had left under the direction of the unfortunate Capt. Albert.

Ribilt up the river on which he had fettled, and him in numbers, cruelly maffacred him and him Melandes, having in this way taken poffeffio y, built three forts, and left them gafrifoned with rs. Laudonier and his colony on May River, receiving information of the fate of Ribalt, took the alarm and elcaped

1567.—A fleet of three fluid was this year fent from France to Florida, under the command of Dominique de Gourges. The object of this expedition was to dispose for the Spaniards of that part of Florida which they had cruelly and unjustifiat Weized three 1568 years before. He arrived on the coast of Provide, April

to France.

. 1568, and foon after made a fuccelsful attack upon the forts. The recent crucity of Melandes and his company excited revenge in the breaft of Gourges, and rouled the unjuffifiable principle of retaliation. He took the forts , put molt of the Spaniards to the fivords and having hurned and demolifhed all their fortreffes, returned to France. During the fifty years next after this event, the French enterprized no fettlements in America.

1576.—Captain Frobisher was fent this year to find out a northwest passage to the East-Indies. 'The first land which he made on the coast was a Cape, which, in honour to the Queen, he called *Queen Elizabetics Foreland*. In coasting northerly he discovered the straits which bear his name. He prosecuted his fearch for a pafage into the western ocean till he was prevented by the ice, and then returned to England.

1579.—In 1579, Sir Humphrey Gilbert obtained a patent from queen Elizabeth, for lands not yet possefue by any Christian prince,

provided he would take possession within fix years. With 1583. this encouragement he failed for America, on the first of August, 1583, anchored in Conception Bay. Afterward he discovered and took possession of St. John's Harbour, and the country fouth. In pursuing his discoveries he lost one of his ships on the shoals of Sablon, and on his return home, a storm overtook him, in which he was unfortunately lost, and the intended settlement was prevented.

1584.—This year two paten's were granted by queen Elizabeth, one to Adrian Gilbert, (Feb. 6.) the other to Sir Walter Raleigh, for lands not poffeifed by any Christian prince. By the direction of Sir Walter, two thips were fitted and fent out, under the command of Philip Amidas, and Arthur Barlow. In July they arrived on the coaft, and anchored in a harbour feven leagues weft of the Roanoke. On the 13th of July, they, in a formal manner, took poffeffion of the country, and, in honour of their virgin

wanner, virgin The colony under Capi. Lane endbred extreme hardthips, and must have perifhed, had not Sir Francis Drake fortunately returned to Virginia, and carried them to England, after having made feveral conquests for the queen in the West Indice and other places:

A fortnight after, Sir Richard Greenville arrived with new recruits; and; although he did not find the colony which he had before left, and knew not but they had perifhed; he had the rafhnefs to leave 50 men at the fame place.

1587.—The year following, Sir Walter fent another company to Virginia, under Governor White, with a charter and twelve affiftants. In July he arrived at Roanoke. Not one of the fecond company remained. He determined, however, to rifque a third colony. Accordingly he left 115 people at the old fettlement, and returned to England.

This year (Aug. 13) Manteo was baptized in Virginiz. He was the first native Indian who received that ordinance in that part of America. On the 18th of August, Mrs. Dare was delivered of a daughter, whom she called VIRGINIA. She was the first English child that was born in North America.

1590.—In the year 1590, Governor White came over to Virginia with fupplies and recruits for his colony; but, to his great grief, not a man was to be found. They had all miferably famished with hunger, or were massacred by the Indians.

1602.—In the fpring of this year, Bartholomew Göfnold, with 32 perfons, made a voyage to North Virginia, and difcovered and gave names to Cape Cod, Martha's Vineyard, and Elizabeth Illands, and to Dover Cliff. Elizabeth Illand was the place which they fixed for their first textement. But the courage of those who were to have tarried, failing, they all went on board and returned to England. All the attempts to fettle this continent which were made by the Dutch, French and English, from its diffeovery to the prefent time, a period of \$10 years, proved ineffectual. The Spaniards only, of all the European nations, had been fuccelsful. There is no account of there hav-

Martin Pring and William Brown were this year fent by Watter Kaleigh, with two fmall veifels, to make difeoveries Morth Virginia. They came upon the coaft, which was broken with a multitude of iflands, in latitude 43° 30' north. They coafted fouthward to Cape Cod Bay's thence round the Cape into a commodious harbour in latitude 41° 25', where they went afhore and tarried feven weeks, during which time they loaded one of their veikels with faffafras, and returned to England.

Bartholomew Gilbert, in a Voyage to South Virginia, in fearch of the third colony which had been left there by Governor White in 1587, having touched at feveral of the Weft-India Itlands, landed near Chefapeck Bay, where, in a fkirmift with the Indians, he and four of his men were unfortunately flain. The reft, without any further fearch for the colony, returned to England.

France, being at this time in a flate of tranquility in confequence of the edict of Nantz in favour of the Protestants, palled by Henry IV. (April 1598) and of the peace with Philip king of Spain and Portugal, was induced to purfue her discoveries in America. Accordingly the king figned a patent in favour of De Mons. (1603) of all the country from the 40th to the 46th degrees of north latitude under the name of Acadia.

1604 The next year Dc Mons ranged the coaft from St. Lawrence to Cape Sable, and fo round to Cape Cod.

1605.—In May 1605, George's Island and Pentecoft Harbour wore difcovered by Capt. George Weymouth. In May he entered a large river in latitude 43° 20' (variation 11° 15' weft) which Mr. Prince, in his Chronology, fuppoles must have been Sagadahok; but from the latitude; it was more probably the Pifcataqua. Capt. Weymouth carried with him to England five of the natives.

1606.—In the Spring of this year, James I. by patent, divided Virginia into two colonies. The *fouthern* included all lands between the 34th and 41ft degrees of north latitude. This was ftyled the *firft colony*, under the name of South Virginia, and was granted to the London Company. The *northern*, called the fecond colony, and known by the general name of North Virginia, included all lands between the 38th and 45th degrees north latitude, and was granted to the Plymouth Company. Each of thefe colonies had a council of thirteen men to govern them. To prevent difputes about territory, the colonies were prohibited to plant within an hundred miles of each other. There appears

, divided lands be-This was , and was d the fe-Virginia, orth lati-Each of in them. rohibited e appears to be an inconfistency in these grants, as the lands lying between the 38th and 4ift degrees, are covered by both patents.

Both the London and Plymouth companies enterprized fettlements within the limits of their respective grants. With what fuccess will now be mentioned,

Mr, Piercy, brother of the Earl of Northumberland, in the fervice of the London Company, went over with a colony to Virginia, and difcovered Powhatan, now James River. In the mean time the Plymouth Company fent Capt. Henry Challons in a veffel of fifty-five tons to plant a colony in North Virginia; but in his voyage he was taken by a Spanish fleet and carried to Spain. 1607.—The London Company this fpring, fent Capt. Christo-April a6. pher Newport with three vessels to South Virginia. On the 26th of April he entered Cheiapeek Bay, and landed,

and foon after gave to the most fouthern point, the May 13, name of Cape Henry, which it still retains, Having elefted Mr. Edward Wingfield, president for the year, they next day landed all their men, and began a settlement on James river, at a place which they called James-

June 22. Town. This is the first town that was fettled by the English in North America. The June following Capt, Newport failed for England, leaving with the president one hundred and four persons.

August 22.—In August died Captain Bartholomew Gosnold, the hrst projector of the settlement, and one of the council, The following winter James-Town was burnt.

During this time the Plymouth company fitted out two fhips under the command of Admiral Rawley Gilbert. They failed for North Virginia on the 31ft of May, with one hundred planters, and Capt. George Popham for their prefident. They arrived in August, and fettled about nine or ten leagues to the fouthward of the mouth of Sagadahok river. A great part of the colony, however, difficartened by the feverity of the winter, returned to England in December, leaving their prefident, Capt. Popham, with only forty-five men.

It was in the fall of this year that the famous Mr. Robinfon, with part of his congregation, who afterwards fettled at Plymouth in New-England, removed from the North of England to Holland, to avoid, the cruelties of perfecution, and for the fake of enjoying "purity of worfhip and liberty of confeience."

This year a fmall company of merchants at Dieppe and St. Malo's, founded Quebec, or rather the colony which they fent, built a few huts there, which did not take the form of a town until the reign of Lewis XIV,

# 164 DISCOVERIES AND SETTLEMENUS.

**1608.**—The Sagadahok colony fuffered incredible Fardinipa after the departure of their friends in December. In the depth of winter, which was extremely cold, their flore-house caught fire and was confumed, with most of their provisions and lodgings. Their misfortunes were increased, foon after, by the death of their prefident. Rawley Gilbert was appointed to fucceed him.

Lord Chief Juffice Popham made every exertion to keep this colony alive by repeatedly fending them fupplies. But the circumftance of his death, which happened this year, together with that of prefident Gilbert's being called to England to fettle his affairs, broke up the colony, and they all returned with him to England.

The unfavourable reports which these first unfortunate adventurers propagated respecting the country, prevented any further attempts to settle North Virginia for several years after.

1609.—The London company, last year, fent Capt. Nelfon, with two hips, and one hundred and twenty perfons, to James-Town; and this year Capt. John Smith, afterwards prefident, arrived on the cosft of South Virginia, and by failing up a number of the rivers, discovered the interior country. In September, Capt. Newport arrived with feventy perfons, which increased the colony to two hundred fouls.

Mr. Robinson and his congregation who had fettled at Amsterdam, removed this year to Leyden, where they remained more than eleven years, till a part of them came over to New-England.

The council for South Virginia having refigned their old commiflion, requested and obtained a new one; in consequence of which they appointed Sir Thomas West, Lord de la War, general of the colony; Sir Thomas Gates, his lieutenant; Sir George Somers, admiral; Sir Thomas Dale, high marshal; Sir Ferdinand Wainman, general of the horse, and Capt. Newport, vice admiral.

June 8.—In June, Sir T. Gates, admiral Newport, and Sir George Somers, with feven thips and a ketch and pinnace, having

five hundred fouls on board, men, women, and children, July 24. failed from Falmouth for South Virginia, In croffing the Bahama Gulph, on the 24th of July, the fleet was overtaken by a violent florm and feparated. Four days after Sir George Somers ran his veffel afhore on one of the Bermuda Iflands, which, from this circumftance, have been called the Somer Iflands. The people on board, one hundred and fifty in number, all got fafe on fhore, and there remained until the following May. The remainder of the fleet arrived at Virginia in August. The colony was now increased to five hundred men. Capt. Smith, then prefident, a little before the arrival of the fleet, had been very badly burnt by means of fome powder, which had

#### OF NORTH AMERICA.

accidentally caught fire. This unfortunate circumflance, together with the opposition he met with from those who had lately arrived, induced him to leave the colony and return to England, which he accordingly did on the last of September. Francis West, his fucceffor in office, foon followed him, and George Piercy was elected president.

1610.—The year following, the South Virginia or London company fealed a patent to Lord De la War, conftituting him Governor and Captain General of South Virginia. He foon after embarked for America with Capt. Argal and one hundred and fifty men, in three fhips.

The unfortunate people, who, the year before, had been fhipwrecked on the Bermudas Iflands, had employed themfelves during the winter and fpring, under the direction of Sir Thomas Gates, Sir George Somers, and admiral Newport, in building a floop to transport themfelves to the continent. They embarked for Virginia on the 10th of May, with about one hundred and fifty perfons on board, leaving two of their men behind who chofe to ftay, and landed at James-Town on the 23d of the fame month. Finding the colony, which at the time of Capt. Smith's departure, confifted of five hundred fouls, now reduced to fixty, and thole few in a diffressed and wretched fituation, they with one voice refolved to return to England; and for this purpose, on the 7th of June, the whole colony repaired on board their vessels, broke up their fettlement, and failed down the river on their way to their native country.

Fortunately, Lord De la War, who had embarked for Jamea-Town the March before, met them the day after they failed, and perfuaded them to return with him to James-Town, where they arrived and landed the 10th of June. The government of the colony of right devolved upon Lord De la War. From this time we may date the effectual fettlement of Virginia. Its hiftory, from this period, will be given in its proper place.

As early as the year 1608, or 1609, Henry Hudíon, an Englifhman, under a commilion from the King his mafter, difcovered Long Ifland, New-York, and the river which ftill bears his name, and afterwards fold the country, or rather his right, to the Dutch. Their writers, however, contend that Hudíon was fent out by the Eaft-India company in 1609, to difcover a north-weft paffage to China; and that having first difcovered Delaware Bay, he came and penetrated Hudíon's river as far as latitude 43°. It is faid however that there was a fale, and that the English objected to it, though for fome time they neglected to oppose the Dutch fettlement of the country.

#### DISCOVERIES AND SETTLEMENTS 136

1610,-In 1610, Hudson failed again to this country, then called by the Dutch New Netherlands, and four years after, the States-General granted a patent to fundry merchants for an exclufive trade on the North river, who the fame year, (1614) built a fort on the west fide near Albany. From 1614 this time we may date the fettlement of New-York, the history of which will be annexed to a description of the State."

Conception Bay, on the Island of Newfoundland, was fettled in the year 1610, by about forty planters under governor John Guy, to whom King James had given a patent of incorporation.

Champlain, a Frenchman, had begun a settlement at Quebec, 1608, St Croix, Mount Manfel, and Port Royal were fettled about the fame time. These settlements remained undisturbed till 1619, when the Virginians, hearing that the French had fettled within their limits, fent Captain Argal to diflodge them. For this purpole he failed to Sagadahok, took their forts at Mount Mansel, St. Croix, and Port Royal, with their veffels, ordnance, cattle, and provisions, and carried them to James-Town in Virginia, Quebec was left in possession of the French.

1614 .--- This year Capt, John Smith, with two fhips and fortyfive men and boys, made a voyage to North Virginia, to make experiments upon a gold and copper mine. His orders were, to fish and trade with the natives, if he should fail in his expectations with regard to the mine. To facilitate this bufinels, he took with him Tantum, an Indian, perhaps one that Capt. Weymouth carried to England in 1605. In April he reached the Island Monahigan in latitude 43° 30'. Here Capt. Smith was directed to flay and keep polleflion, with ten men, for the purpole of making a trial of the whaling bulinels, but being difappointed in this he built feven boats, in which thirty-feven men made a very fuccelsful fifthing voyage. In the mean time the captain himfelf, with eight men only, in a small boat, coasted from Penobscot to Sagadahok, Acocisco, Passataquack, Tragabizanda, now called Cape Ann, thence to Acomak, where he skirmished with fome Indians; thence to Cape Cod where he fet his Indian, Tantum, afhore and left him, and returned to Monahigan. In this voyage he found two French ships in the Bay of Massachufetts, who had come there fix weeks before, and during that time, had been trading very advantageoufly with the Indians. It was conjectured that there was, at this time, three thousand Indians upon the Maffachufetts Islands.

In July, Capt. Smith embarked for England in one of the velfels, leaving the other under the command of Capt. Thomas Hunt, to equip for a voyage to Spain. After Capt. Smith's departure, Hunt perfidioully allured twenty Indians (one of whom

was Squanto, afterwards fo ferviceable to the English) to come on board his ship at Petuxit, and feven more at Nausit, and carried them to the Island of Malaga, where he fold them for twenty pounds each, to be flaves for life. This conduct, which fixes an indelible stigma upon the character of Hunt, excited in the breasts of the Indians such an inveterate hatred of the English, as that, for many years after, all commercial intercours with them was rendered exceedingly dangerous.

Capt. Smith arrived at London the last of August, where he drew a map of the country, and called it New-England. From this time North-Virginia assumed the name of *New-England*, and the name *Virginia* was confined to the fouthern colony.

Between the years 1614 and 1620, feveral attempts were made by the Plymouth Company to fettle New-England, but by various means they were all rendered ineffectual. During this time however, an advantageous trade was carried on with the natives.

1617.—In the year 1617, Mr. Robinson and his congregation influenced by feveral weighty reasons, meditated a removal to

America. Various difficulties intervened to prevent 1620. the fuccels of their defigns, until the year 1620, when

a part of Mr. Robinfon's congregation came over and fettled at Plymouth. At this time commenced the fettlement of New-England.

The particulars relating to the first emigrations to this northern part of America; the progress of its settlement, &c. will be given in the history of New-England, to which the reader is referred. In order to preferve the chronological order in which the several colonies, not grown into independent states, were first set-

tled, it will be neceffary that I fhould just mention, 1621 that the next year after the fettlement of Plymouth, Captain John Mason, obtained of the Plymouth council a grant of a part of the present state of New-Hamp-1623 shire. Two years after, under the authority of this

1623 fhire. Two years after, under the authority of this grant, a fmall colony fixed down near the mouth of Pifcataqua river. From this period we may date the fettlement of New-Hampfhire.

1627.—In 1627, a colony of Swedes and Fins came over and landed at Cape Henlopen; and afterwards purchased of the Indians the land from Cape Henlopen to the Falls of Delaware on both fices the river, which they called New Swedeland Stream, On this river they Luilt several forts, and made settlements.

1628. On the 19th of March, 1628, the council for New-England fold to Sir Henry Rofwell, and five others, a large tract of land, lying round Maffachufetts Bay. The June following, Capt. John Endicot, with his wife and company, came over and fettled

# 58 DISCOVERIES AND SETTLEMENTS

at Naumkeag, now called Salem. This was the first fettlement which was made in Massachusetts Bay. Plymouth, indeed, which is now included in the Commonwealth of Massachusetts, was fettled eight years before, but at this time it was a feparate colony, under a distinct government, and continued fo until the fecond charter of Massachusetts was granted by William and Mary in 1691; by which Plymouth, the Province of Maine and Sagadahok were annexed to Massachusetts.

June 13, 1633.—In the reign of Charles the First, Lord Baltimore, a Roman Catholic, applied for and obtained a grant of a tract of land upon Chefapeek Bay, about one hundred and forty miles long, and one hundred and thirty broad. Soon after this, in confequence of the rigour of the laws of England against the Roman Catholies, Lord Baltimore, with a number of his perfecuted brethren, came over and fettled it, and in honour of queen Henrietta Maria, they called it Maryland.

The first grant of Connecticut was made by Robert, Earl of Warwick, prefident of the council of Plymouth, to Lord

1631 Say and Seal, to Lord Brook and others, in the year 1631.
 In confequence of feveral smaller grants made afterwards by the patentees to particular persons, Mr. Fenwick made a settlement at the mouth of Connecticut river, and called
 1635 it Saybrook. Four years after a number of people from

Maffachusetts Bay came and began settlements at Hartford, Wethersfield, and Windsor, on Connecticut river. Thus commenced the English settlement of Connecticut.

Rhode Island was first fettled in confequence of religious perfecution. Mr. Roger Williams, who was among those who early came over to Massachusetts, not agreeing with some of his

brethren in fentiment, was very unjustifiably banished the 1635 colony, and went with twelve others, his adherents, and fettled at Providence in 1635. From this beginning arole

the colony, now flate of Rhode-Ifland. 1664.—On the 20th of March, 1664, Charles the Second granted to the Duke of York, what is now called New-Jerfey,

then a part of a large traff of country by the name of New Netherland. Some parts of New-Jerfey were fettled by the Dutch as early as about 1615.

1662.—In the year 1662, Charles the Second granted to Edward Earl of Clarendon, and feven others, almost the whole ter-

ritory of the three Southern states, North and South Ca-1664 rolinas and Georgia. Two years after he granted a second charter, enlarging their boundaries. The proprietors, by virtue of authority vested in them by their charter, engaged Mir. Locke to frame a system of laws for the government of their ini73 hone the r

I to Edtole teruth Caa fecond stors, by ged Mr. heir intended colony. Notwithstanding these preparations, no 1669 effectual settlement was made until the year 1669, (though one was attempted in 1667) when Governor Sayle came over with a colony, and fixed on a neck of land between Ashley and Göoper Rivers. Thus commenced the settlement of Carolina, which then included the whole territory between the 29th and 36th 30' degrees, north latitude, together with the Bahama Islands, lying between latitude 22° and 27° north.

1681.-The Royal charter for Pennfylvania was granted to Wil-

liam Penn on the 4th of March, 1681. The first colony 1682 came over the next year, and fettled under the proprietor,

William Penn, who acted as governor from October 1682 to August 1684. The first assembly in the province of Pennsylvania was held at Chefter, on the 4th of December, 1682. Thus William Penn, a Quaker, justly celebrated as a great and good man, had the honour of laying the foundation of the prefent populous and very flourishing State of Pennsylvania:

The proprietory government in Carolina, was attended with fo many inconveniences, and occafioned fuch violent differitions among the fettlers, that the Parliament of Great-Britain was induced to take the province under their immediate care: The proprietors (except Lord Granville) accepted of  $f_{.22,500}$  fterling;

from the crown for the property and jurifdiction. This i729 agreement was ratified by act of Parliament in 1729. A claufe in this act referved to Lord Granville his eighth fhare of the property, and arrears of quit-rents, which continued legally vefted in his family till the revolution in 1776. Lord Granville's fhare made a part of the prefent flate of North-Carolina: About the year 1729; the extensive territory belonging to the preprietors, was divided into North and South Carolina: They remained feparate royal governments until they became independent flates.

For the relief of poor indigent people of Great-Britain and Ircland, and for the fecurity of Carolina, a project was formed for planting a colony between the rivers Savannah and Alatamaha.

Accordingly application being made to king George the 1732 Second, he iffued letters patent; bearing date June oth, 1732,

for legally carrying into execution the benevolent plan. In honor of the king, who greatly encouraged the plan, they called the new province Georgia. Twenty-one truftees were appointed to tonduct the affairs relating to the fettlement of the province. The November following, one hundred and fifteen perfons, one of whom was General Oglethorpe; embarked for Georgia, where they arrived, and landed at Yamacraw. In exploring the country, they found an elevated pleafant fpot of ground on the Vol. I.

## 170 DISCOVERIES AND SETTLEMENTS.

bank of a navigable river, upon which they marked out a town, and from the Indian name of the river which paffed by it, called it Savannah. From this period we may date the fettlement of Georgia.

The country now called Kentucky, was well known to the Indian traders many years before its fettlement. They gave a def-

cription of it to Lewis Evans, who published his hift map 1752 of it as early as the year 1752. James Macbride, with some 1754 others, explored this country in 1754. Ool. Daniel Boon visited it in 1760.

1773.—Four years after Col. Boon and his family, with five other families, who were joined by forty men from Powle's valley, began the fettlement of Kentucky<sup>\*</sup>, which is now one of the moft growing colonies, perhaps, in the world, and was erected into an independent flate, by an aft of Congress, December 6th, 1790, and received into the Union, June 18, 1792.

The track of country called Vermont, before the late war, was claimed by both New-York and New-Hampfhire. When hoftilities commenced between Great-Britain and her Colonies, the inhabitants confidering themfelves as in a flate of nature, as to civil government, and not within any legal jurifdiction, affociated and formed for themfelves a conflictution of government. Under this conflictution, they have ever fince continued to exercife all the powers of an independent flate. Vermont was not admitted into union with the other flates till March 4, 1791, yet we may venture to date her political existence as a feparate government, 1777 from the year 1777, becaufe, fince that time, Vermont hes to all intents and purpofes, been a fovereign and independent State. The first fettlement in this flate was made at Bennington as early as about 1764.

The extensive tract of country lying north-weft of the Ohio River, within the limits of the United States, was erected into a feparate *temporary* government by an Ordinance of Congress 1787 paffed the 13th of July, 1787.

Thus we have given a fummary view of the first discoveries and progreffive settlement of North America in their chronological order. The following recapitulation will comprehend the whole in one view.

\* This fettlement was made in violation of the Treaty, in 1768, at Fort Stanwix, which expressly flipulates, that this track of country flould be referved for the weftern nations to hunt upon, until they and the crown of England flould otherwife agree. This has been one-great caufe of the enmity of those Indian nations to the Virginians. Ke Ve Te

#### BOUNDARIES AND EXTENT.

**LN** ORTH AMERICA comprehends all that part of the weftern continent which lies north of the Ifthmus of Darien, extending north and fouth from about the 10th degree north latitude to the north pole; and eaft and weft from the Atlantic to the Pacific Ocean, between the 45th and 165th degrees weft longitude from London. Beyond the 70th degree N. Lat. few difcoveries have been made. In July 1779, Capt. Cook proceeded as far as lat. 91°, when he came to a folid body of ice extending from continent to continent.

BAYS, SOUNDS, STRAITS, AND ISLANDS .- Of these (except those in the United States, which we shall describe under that head) we know little more than their names. Baffin's Bay, lying between the 70th and 80th degrees N. Lat. is the largest and most nothern, that has yet been discovered in North America. It opens into the Atlantic ocean through Baffin's and Davis's Straits. between Cape Chidley, on the Labrador coaft, and Cape Farewell. It communicates with Hudson's Bay to the fouth, through, a clufter of islands. In this capacious bay or gulph is James Island, the fouth point of which is called Cape Bedford; and the fmaller islands of Waygate and Disko. Davis's Straits feparate Greenland from the American continent, and are between Cape Walfingham, on James Ifland, and South Bay in Greenland, where they are about 60 leagues broad, and extend from the 67th to the 71ft degrees of latitude above Difko ifland. The most fouthern point of Greenland is called Cape Farewell.

Hudfon's Bay took its name from Henry Hudfon, who difcovered it in 1610. It lies between 51 and 69 degrees of north latitude. The eaftern boundary of the Bay is Terra de Labrador i the northern part has a ftraight coaft, facing the bay, guarded with a line of ifles innumerable. A vaft bay, called the Archiwinnipy. Sea, lies within it, and opens into Hudfon's Bay, by means of gulph Hazard, through which the Beluga whales pais in great numbers. The entrance of the bay, from the Atlantic ocean, after leaving, to the north, Cape Farewell and Davis's Straits, is between Refolution ifles on the north, and Button's ifles, on the Labrador coaft, to the fouth, forming the eaftern extremity of Hudfon's Straits.

#### NORTH AMERICA.

The coafts are very high, rocky and rugged at top; in fome places precipitous, but fometimes exhibit extensive beaches. The illands of Salifbury, Nottingham, and Digges are very loft and paked. The depth of water in the middle of the bay is 140 fathoms. From Cape Churchill to the fouth end of the bay are regular foundings; near the flore, fhallow, with muddy or fandy bottom. To the northward of Churchill, the foundings are irregular, the bottom rocky, and in fome parts the rocks appear above the furface at low water,

James's Bay lies at the bottom, or most fouthern part of Hudfon's Bay, with which it communicates, and divides New Britain from South Wales. To the northwestward of Hudson's Bay is an extensive chain of lakes, among which is Lake Menichlich, lat. 61°, long. 105° W. North of this is Lake Dobount, to the northward of which lies the extensive country of the northern Indians. Weft of these lakes, between the latitudes of 60 and 66 degrees, after paffing a large cluster of unnamed lakes, lies the lake or fea Arathapescow, whose southern fhores are inhabited by the Arathapescow Indians. North of this, and near the Arctic circle, is Lake Edlande, around which live the Dog ribbed Indians. Further north is Buffaloe lake, near which is Copper Mine river, in lat. 72° N. and long. 119° W. of Greenwich. The Copper Mine Indians Inhabit this country.

Between Copper Mine river, which, according to Mr. Herne, empties into the Northern fea, where the tide rifes 12-or 14 feet, and which in its whole courfe is encumbered with fhoals and falls, and the north-weft coaft of America, is an extensive tract of unexplored country. As you descend from north to south on the weftern coaft of America, just south of the Arctic circle, you come to Cape Prince of Wales, opposite East Cape on the eastern continent; and here the two continents approach nearess to each other. Proceeding southward you pass Norton Sound, Cape Stephen's, Shoalness, Bristol Bay, Prince William's Sound, Cook's River, Admiralty Bay, and Port Mulgrave, Nootka Sound, &c. From Nootka Sound proceeding south, you pass the unexplored country of New Albion, thence to California, and New Mexico.

# DIVISIONS OF NORTH AMERICA.

THE valt tract of country, bounded west by the Pacific Ocean, fouth and east by California, New Mexico, and Louisiana-the United States, Canada and the Atlantic Ocean; and extending as far north as the country is habitable (a few scattered English, French, and fome other European fettlements excepted) is inhabited wholly by various nations and tribes of Indians; The Indians alfo poffels large tracts of country within the Spanish, American, and British dominions. Thole parts of North America not inhabited by Indians, belong, if we include Greenland, to Denmark," Great-Britain, the American States, and Spain. Spain claims East and Weft Florida, and all weft of the Miffiffippi, and fouth of the northern boundaries of Louisiana, New Mexico and California, Great Britain claims all the country inhabited by Europeans, lying north and east of the United States, except Greenland, which belongs to Denmark. The remaining part is the territory of the Fifteen United States. The particular Provinces and States, are exhibited in the following table :

#### BOUNDARIES.

DOUNDED north and east by British America, or the provinces of Upper and Lower Canada, and New Brunswick; southcat, by the Atlantic Ocean; south, by east and west Florie; west, by the river Mississippi.

In the treaty of peace, concluded in 1783, the limits of the Ametican United States are more particularly defined in the words following: "And that all difputes which might arife in future on the subject of the boundaries of the faid United States may be prevented, it is hereby agreed and declared, that the following are and shall be their boundaries, viz. From the north-west angle of Nova-Scotia, viz. That angle which is formed by a line drawn duc. north from the fource of St. Croix River to the Highlands, along the faid Highlands, which divide those rivers that empty themfelves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the north-westernmost head of Connecticut river; thence down along the middle of that river to the fortyfifth degree of north latitude; from thence by a line due welt on the faid latitude, until it ftrikes the river Iroquois or Cataraquy; thence along the middle of the faid river into Lake Ontario, through the middle of the faid Lake, until it ftrikes the communication by water between that Lake and Lake Erie ; thence slong the middle of the faid communication into Lake Eric, through the middle of the faid lake, until it arrives at the water communication between that lake and Lake Huron ; thence through the middle of the faid lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward of the Ifles Royal and Philipeaux to the Long Lake; thence through the middle of the faid Long Lake, and the water communication between it and the Lake of the Woods to the faid Lake of the Woods ; thence through the faid lake to the most northwestern . point thereof, and from thence, on a due west course, to the River Miffiffippi ; thence by a line to be drawn along the middle of the faid River Mississippi, until it shall interfect the northernmost part of the thirty-first degree of north latitude. South, by a line to be drawn due east from the determination of the line last mentioned, in the latitude of thirty-one degrees north of the equator,

Ocean, na-the iding as English, inhabit-Indians herican, ot inhaenmark, ims Eaft of the lifornia. is, lying hich beof the ites, are

to the middle of the River Apalachicola, or Catahouche ; thence along the middle thereof to its junction with the Flint River ; thence strait to the head of St. Mary's River ; and thence down along the middle of St. Mary's River to the Atlantic Ocean ; eaft, by a line to be drawn along the middle of the River St. Croix; from its mouth in the Bay of Fundy, to its fource; and from its fource directly north, to the aforefaid Highlands, which divide the rivers that fall into the Atlantic Ocean, from those which fall into the River St. Lawrence, comprehending all islands within twenty leagues of any part of the fhores of the United States, and lying between lines to be drawn due east from the points where the aforefaid boundaries between Nova-Scotia on the one part, and East-Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean, excepting fuch islands as now are, or heretofore have been, within the limits of the faid province of Nova-Scotia.

The following calculations were made from actual measurement of the best maps by THOMAS HUTCHINS, geographer to the United States.

The territory of the United States, contains by computation z million of fquare miles, in which are 640,000,000 of acres

Deduct for water

Acres of land in the United States.

That part of the United States comprehended between the weft boundary line of Pennfylvania on the east, the boundary line between Great Britain and the United States, extending from the river St. Croix to the north-west extremity of the Lake of the Woods on the north, the river Miffiffippi, to the mouth of the Ohio, on the west, and the river Ohio, on the south, to the aforementioned bounds of Pennfylvania, contains by computation about four hundred and eleven thousand square miles, in which 263,040,000 acres

of some of the original thirteen states, and by the treaty of peace, transferred to the federal government, and are pledged as a fund for finking the debt of the United States. Of this territory the Indians now pollefs a very large proportion. Mr. Jefferfon, in his report to Congress, Nov. 8, 1791, describes the boundary line between us and the Indians, as follows : "Beginning at the mouth of the Cayahogana, which falls into the fouthernmost part of Lake Erie, and running up the river to the portsge, between that and the Tuscaroro or N. E. branch of Muskingum : then down the faid branch to the forks, at the croffing place above Fort Lawrence; then westwardly, towards the portage of the Great Miami, to the main branch of that fer, then down the Miami, to the fork of that river, next below and old fort, which was taken by the French in 1752; thence due west to the river De la Panfe, a branch of the Wabash, and down that river to the Wabash. So far the line is precisely determined, and cleared of the claims of the Indians. The tract comprehending the whole country within the above defcribed line, the Wabash, the Ohio, and the western limits of Pennsylvania, contains about 55,000 fquare miles. How far on the western fide of the Wabash, the southern boundary of the Indians has been defined, we know not. It is only understood, in general, that their title to the lower country, between that river and the Illinois, was formerly extinguished by the French, while in their possellion.

#### LAKES AND RIVERS.

1 1 11

It may in truth be faid, that no part of the world is fo well watered with springs, rivulets, rivers and lakes, as the territory of the United States. By means of these various streams and collections of water, the whole country is chequered into islands and peninfulas. The United States, and indeed all parts of North America, feem to have been formed by nature for the most intimate union. The facilities of navigation render the communication between the ports of Georgia and New-Hampshire, far more expeditious and practicable, than between those of Provence and Picardy in France; Cornwall and Caithnels, in Great-Britain; or Gallicia and Catalonia, in Spain. The canals proposed between Sufquehannah, and Delaware, between Pafquetank and Elizabeth rivers, in Virginia, and between the Schuylkill and Sufquehannah, will open a communication from the Carolinas to the western countries of Pennsylvania and New-York. The improvements of the Potomak, will give a passage from the fouthern States, to the western parts of Virginia, Maryland, Pennsylvania, and even to the lakes. From Detroit, to Alexandria, on the Potomak, fix hundred and feven miles, are but two carrying places, which together do not exceed the diftance of forty miles. The canals of Delaware and Chefapeek will open the communication from South-Carolina to New-Jerley, Delaware, the most popu-

lous parts of Pennfylvania, and the midland countries of New-York. Were thefe and the proposed canal between Ashley and Coopers river in South Carolina, the canals in the northern parts of the state of New-York, and those of Massachusetts and New Hampshire all opened, North America would thereby be converted into a cluster of large and fertile islands, communicating with each other with ease and little expense, and in many instances without the uncertainty or danger of the bas,

There is nothing in other parts of the globe which refembles the prodigious chain of lakes in this part of the World. They may properly be termed inland feas of frefh water; and even, thole of the fecond or third clais in magnitude, are of larger circuit than the greatest lake in the eastern continent. Some of the most northern lakes belonging to the United States, have never been furveyed, or even visited by the white people; of course we have no description of them which can be relied on as accurates. Others have been partially furveyed, and their relative fituation: determined.—The best account of them which we have been able to procure is as follows:

THE LARE OF THE WOODS, the most northern in the United States, is to called from the large quantities of wood growing on its banks; fuch as oaks, pines, firs, fpruce, &c. This lake lies. nearly east of the fouth end of Lake Winnepeck, and is supposed to be the fource or conductor of one branch of the river Bourbon, if there be such a river. Its length from east to west is faid to be about seventy miles, and in some places it is forty miles wide. The Killistinoe Indians encamp on its borders to fish and hunt. This lake is the communication between the Lakes Winnepeck and Bourbon, and Lake Superior.

RAINY ON LONG LARE lies eaft of the Lake of the Woods, and is faid to be nearly an hundred miles long, and in no part more than twenty miles wide.

Eaftward of this lake, lie feveral fmall ones, which extend in a ftring to the great carrying place, and from thence into Lake Superior. Between these little lakes are feveral carrying places, which render the trade to the north-west difficult, and exceedingly tedious, as it takes two years to make one voyage from Michillimakkinak to these parts.

LAKE SUPERIOR, formerly termed the Upper Lake, from its northern fituation, is fo called from its magnitude, it being the largest on the continent. It may justly be termed the Caspian of America, and is supposed to be the largest body of fresh water on the globe. According to the French charts it is fifteen hundred miles in circumference. A great part of the coast is bounded by

180

rocks and uneven ground. The water is pure and transparent, and appears, generally, throughout the lake, to lie upon a bed of huge rocks. It has been remarked, in regard to the waters of this lake, with how much truth I pretend not to fay, that although their furface, during the heat of fummer, is impregnated with no small degree of warmth, yet on letting down a cup to the depth of about a fathom, the water drawn from thence is cool and refreshing,

The fituation of this lake, from the most accurate observations which have yet been made, lies between forty-fix and fifty degrees of north latitude, and between nine and eighteen degrees of west longitude, from the meridian of Phila-lelphia.

There are many iflands in this lake, two of them have each land enough if proper for cultivation, to form a confiderable province effectially life Royal, which is not lefs than an hundred miles long, and in many places forty broad. The natives fuppole thefe iflands are the refidence of the Great Spirit. P barth if

Two very large rivers empty themfelves into this lake, on the north and north-ceft fide; one is called the Nipegon, which leads to a tribe of the Chipeways, who inhabit the borders of a lake of the fame name, and the other is the Michipicooton river, the fource of which is towards James's Bay, from whence there is but a fhort portage to another river, which empties itfelf into that bay.

Not far from the Nipegon is a small river, that just before it enters the lake, has a perpendicular fall from the top of a mountain, of more than one hundred feet. It is very narrow, and appears at a diftance like a white garter fufpended in the air. There are upwards of thirty other rivers, which empty themfelves into this lake, fome of which are of a confiderable fize. On the fouth fide of it is a remarkable point or cape of about fixty miles in length, called Point Chegomegan. About a hundred miles weft of this cape, a confiderable river falls into the lake, the head of which is composed of a great assemblage of small ftreams. This river is remarkable for the abundance of virgin copper that is found on and near its banks. Many fmall islands, particularly on the eaftern fhores, abound with copper ore, lying in beds, with the appearance of copperas. This metal might be cafily made a very advantageous article of commerce. This lake abounds with fish, particularly trout and sturgeon; the former weigh from twelve to fifty pounds, and are caught almost any feafon in the year in great plenty. Storms affect this lake as much as they do the Atlantic Ocean; the waves run as high, and the navigation is equally dangerous. It discharges its waters from the fouth-east corner through the Straits of St. Marie, which are

about forty miles long. Near the upper end of these ftraits is a rapid, which though it is impossible for cances to alcend, yet, when conducted by careful pilots, may be descended without danger.

Though Lake Superior is fupplied by near forty rivers, many of which are large, yet it does not appear that one tenth part of the waters which are conveyed into it by these rivers, is discharged by the above-mentioned firait. Such a superabundance of water can be disposed of only by evaporation<sup>4</sup>. The entrance into this lake from the firaits of St. Marie, affords one of the most pleasing prospects in the world. On the left may be seen many beautiful little islands, that extend a confiderable way before you; and on the right an agreeable fusceffion of small points of land, that project a little way into the water, and contribute with the islands, to render this delightful base case, and fecure from those tempestions winds, by which the adjoining lake is frequently troubled.

LAKE HURON, into which you enter through the firaits of St. Marie is next in magnitude to Lake Superior. It lies between 43° 30 and 46° 30° of north latitude, and between fix and eight degrees welt longitude. Its circumference is about one thouland miles. On the north fide of this lake is an ifland one hundred miles in length, and no more than eight miles broad. It is called Monataulin, fignifying a place of fpirits, and is confidered as facred by the Indians. On the fouthweft part of this lake is Saganaum Bay, about eighty miles in length, and about eighteen or

That fuch a fuperabundance of water fhould be disposed of by evaporation is no fingular circumftance. There are fome feas in which there is a pretty just balance between the waters received from rivers, brooks, &c. and the walte by evaporation. Of this the Cafpian Sea, in Afia, affords an inftance; which, though it receives feveral large rivers, has no outlet. There are others, to speak in borrowed language, whole expence exceeds their income; and thele would foon become bankrupt, were it not for the fupplies which they conftantly receive from, larger collections of water, with which they are connected ; fuch are the Black and Mediterranean Seas; into the former of which there is a conftant current from the Mediterranean, through the Bolphorus of Thrace; and into the latter from the Atlantic, through the Straits of Gibraltar. Others again derive more from their tributary fireams than they lofe by evaporation. These give rife to large rivers. Of this kind are the Dambea- in Africa, the Winipiseogee in New-Hampshire, Lake Superior, and other waters in North America; and the quantity they difcharge, is only the difference between the influx and the evaporation. It is observable, that on the shores the evaporation is much greater than at a distance from them on the ocean. The remarkable clufter of lakes in the middle of North America, of which Lake Superior is one, was doubtless defigned by a divine Providence, to furnish the interior parts of the country with that supply of vapours, without which, like the interior parts of Africa, they must have been a mere defert. It may be thought equally furprizing that there should be any water at all difcharged from them, as that the quantity fhould bear fo fmall a proportion to what they receive.

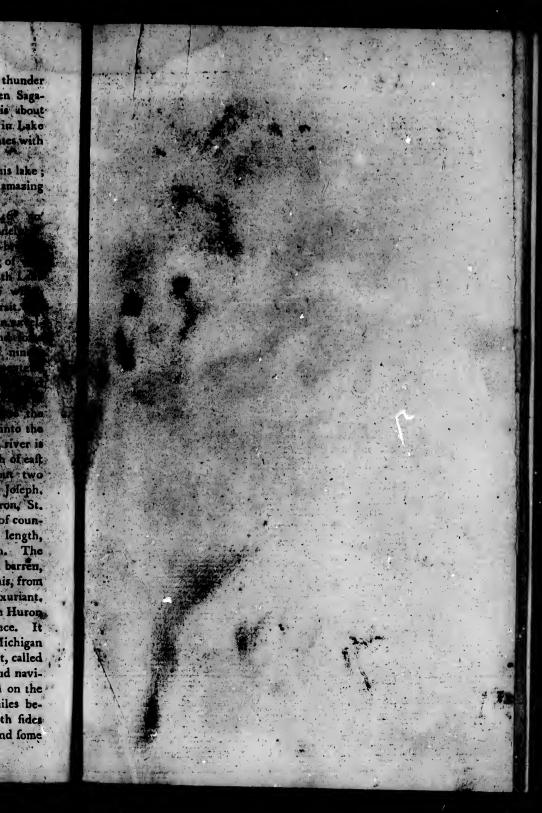

twenty miles broad. Thunder Bay fo called from the thunder that is frequently heard there, lies about half way between Saganaum Bay and the north-weft corner of the take. It is about nine miles across either way. The fifth are the time as in Lake Superior. At the north-weft corner, this lake constanticates with Lake Michigan by the firmits of Michilimathemat.

Many of the Chipeway Indiana live for a sround shis lake ; particularly near Sagaparas Bay. On its banks are found amazing quantities of fand cherries.

MICHIGAN LAKE, fies between latitude 41" to and AG north; and between re and 1 9° weft long, from Philad Its computed length is allo miles from north to fouth ; its be from fixty to feventy miles. It is navigable for fhipping of burthen; and at the north-common part communicate with Huron, by a first figurates broud, on the fourth 10.799 ftands fort Michillimakkinsk, which is the name Trait. this lake are feveral kinds of fifth, particularly trout TR.P. lent quality, weighing from twenty to fixty pounds? and of nini have been taken in the Straits of Michillimakkinak pounds. Westward of this lake are large meaderys, fal to the Miffiffippi. It receives a number of rivers caft, among which it the river St. Joleph, very tes Islands; it fprings from a number of fmall large, a north-weft of the Miami village, and runs north-west into the fouth-caft part of the lake. On the north fide of this river is fort St. Joseph, from which there is a road, bearing north of east; to Detroit. The Powtewatamie Indians, who have about two hundred fighting men, inhabit this river opposite fort St. Joleph, Between Lake Michigan on the weft, and Lakes Huron, St. Clair, and the west end of Erie on the east, is a fine tract of country, peninfulated, more than two hundred and fifty miles in length, and from one hundred and fifty to two hundred in breadth. The

banks of the lakes, for a few miles inland, are fandy and barren, producing a few pines, fhrub oaks, and cedars. Back of this, from either lake, the timber is heavy and good, and the foil luxuriant.

LAKE ST. CLAIR, lies about half way between Lake Huron, and Lake Erie, and is about ninety miles in circumference. It receives the waters of the three great lakes, Superior, Michigan and Huron, and difcharges them through the river of firait, called Detroit, into Lake Erie. This lake is of an oval form, and navigable for large vefiels. The fort of Detroit is fituated on the weftern bank of the river of the fame name, about nine miles below lake St. Clair. The fettlements are extended on both fides of the firait or river for many miles towards Lake Erie, and fome few above the fort.

LAKE ERIE, is fituated between forty-one and forty-three degrees of north latitude, and between 3° 40' and 8° degrees weft longitude. / It is nearly three hundred miles long, from east to weft, and about forty in its broadest part. A point of land projects from the north fide into this lake, feveral miles, towards the fouth-east, called Long Point. The islands and banks towards the west end of the lake are so infested with rattle-fnakes, as to render it dangerous to land on them. The lake is covered near the banks of the islands with the large pond-lily; the leaves of which lie on the furface of the water fo thick, as to cover it entirely for many acres together; on these, in the summer season, lye myriads of water-inakes basking in the fun. Of the venomous ferpents which infeft this lake, the hiffing inake is the most remarkable. It is about eighteen inches long, fmall and fpeckled. When you approach it, it flattens itfelf in a moment, and its spots, which are of various colours, become visibly brighter through rage; at the fame time it blows from its mouth, with great force, a fubtile wind, faid to be of a naufeous fmell; and if drawn in with the breath of the unwary traveller, will infallibly bring on a decline, that in a few months must prove mortal. No remedy has yet been found to counteract its baneful influence. This lake is of a more dangerous navigation than any of the others, on account of the craggy rocks which project into the water, in a perpendicular direction, many miles together from the northern fhore, affording no Inciter from ftorms.

Prefque Ifie is on the fouth-east fhore of this lake, about lat. 42° 10°. From this to Fort Le Beuf, on French Creek, is a portage of fifty-one miles and a half. About twenty miles north-east of this is another portage of nine miles and a quarter, between Chatoughque Creek, emptying into Lake Eric, and Chatoughque Lake, a water of Allegany river.

1

The Falls of St. ANT

Fort Eric flands on the northern fhore of Lake Eric, and the weft bank of Niagara river, in Upper Canada. This lake at its north-caft end, communicates with lake Ontario by the river Niagara, which runs from fouth to north, about thirty miles, including its windings, embracing in its 'courfe Grand Ifland and receiving Tonewanto Creek, from the eaft. About the middle of this river are the celebrated falls of Niagara, which are reckoned one of the greateft natural curiofities in the world. The waters which fupply the river Niagara rife near two thousand miles to the north-weft, and paffing through the lakes Superior, Michigan, Huron, and Eric, receiving in their courfe, conflant accumulations; at length, with aftonifhing grandeur, rufh down a flupendous precipice of one hundred and fifty feet perpendicular; and in a ftrong rapid, that extends to the diffance of eight or nine miles

below, fall near as much more: the river then lokes itlelf in Lake. Ontario. The noife of these falls, in a clear day and fair wind, may be heard between forty and fifty miles. When the water firikes the bottom, its spray rifes a great height in the air, occafioning a thick cloud of vapours, on which the fun when it shines, paints a beautiful rainbow. Fort Niagara is fituated on the cass lide of Niagara river, it its entrance into Lake Ontario. This fort, and that at Detroit, contrary to the treaty of 1783; are yet in possession of the British Government.

LARE ONTARIO, is lituated between forty-three and forty-five degrees north latitude, and between one and five welt longitude. Its form is nearly oval. Its greateft length is from fouth-welt to north-eaft, and in circumference about fix hundred miles. It abounds with fifth of an excellent flavour, among which are the Ofwego bais, weighing three or four pounds. It receives the waters of the Cheneffee river from the fouth, and of Onondago, at Fort Ofwego, from the fouth-saft, by which it communicates, through Lake Oneids and Wood Creek, with Mohawk river. On the north-eaft, this lake dicharges itfelf through the river Cataraqui, which at Montreal, takes the name of the Lawrence, into the Atlantic Ocean.

About eight miles from the weft end of Lake Ontario, is a curious cavern, which the Meffifugas Indians call Manito ah wigwam, of houfe of the Devil. The mountains which border on the lake, at this place, break off abruptly, and form a precipice of two hundred feet perpendicular defent : at the border of which the cavern begins. The first opening is large enables for three men conveniently to walk abreaft. It continues of this bigmels for feventy yards in a horizontal direction. Then is falls almost perpendicularly fifty yards, which may be deteended by irregular fteps from one to four feet diffant from each other. It then continues forty yards horizontally, at the end of which is another perpendicular defeent, down which there are no fteps. The cold here is intenfe. In fpring and autumn, there are, once in about a week, explosions from this cavern, which flake the ground for fixteen miles round.

LARE CHAMPLAIN, is next in fize to Lake Ontario, and lies nearly call from it, forming a part of the dividing line between the flate of New-York, and the flate of Vermont. It took its name from a French governor, whole name was Champlain, who was drowned in it. It was before called Corlier's Lake. It is about eighty miles in length from north to fouth, and in its broadeft part, fourteen. It is well flored with fifth, and the land on its borders and on the banks of its rivers, is good. Crown Point and Ticonderoga are fituated on the banks of this lake, near the fouthern part of it.

s lake,

Vol. I.

LAKE GEORGE, lies to the fouthward of Champlain, and is a most clear, beautiful collection of water, about thirty-fix miles long, and from one to feven miles wide. It emboloms more than two hundred islands, some fay three hundred and fixty-five; very few of which are sny thing more than barren rock, covered with heath, and a few cedar, ipruce, and hemlock trees, and thrubs, that harbour abundance of rattle-fnakes. On each fide it is fkirted by prodigious mountains, from which large quantities of red cedar are every year carried to New-York for fhip-timber. The lake is full of fifnes, and fome of the beft kind; among which are the black Ofwego bals and large freckled trouts. The water of this lake is about one hundred feet above the level of Lake Champlain. The portage between the two lakes is one mile and a half; but with a small expence might be reduced to fixty yards; and with one or two locks might be made navigable through for betteaux. This lake, in the French charts, is called Lake St. Sacrament; and it is faid that the Roman Catholics, in former times, were at the pains to procure this water for facramental uses in all their Churches in Canada: hence probably it derived its name.

The Mississippi Riven, is the great refervoir of the waters of the Ohio and Illinois, and their numerous branches from the caft; and of the Missouri and other rivers from the west. These mighty ftreams united; are borne down with increasing impetuofity. through vaft forefts and meadows, and discharged into the Gulph of Mexico. The great length and uncommon depth of this river. and the exceffive muddinels and falubrious quality of its waters, after its junction with the Missouri, are very fingular\*. The direction of the channel is fo crooked, that from New Orleans to the mouth of the Ohio, a distance which does not exceed four hundred and fixy miles in a strait line, is about eight hundred and fifty-fix by water. It may be shortened at least two hundred and fifty miles, by eutting acrols eight or ten necks of land, fome of which are not thirty yards wide. Charlevoix relates that in the year 1722, at Point Coupée, or Cut Point; the river made a great turn, and fome Canadians, by deepening the channel of a fmall brook, diverted the waters of the river into it. The impetuofity of the ftream was fo violent, and the foil of fo rich and loofe a quality, that, in a fhort time, the point was entirely cut through.

\* In a half pint tumbler of this water has been found a fediment of one inch. It is, notwithflanding, extremely wholefome and well taffed, and very cool in the hotteft feafons of the year; the rowers, who are there employed, drink of it when they are in the firongeft perfpiration, and never receive any bad effects from h. The inhabitants of New Orleans use no other water than that of this river, which, by being keps in jars, becomes perfectly clear.

and travellers faved fourteen leagues of their voyage. The old bed has no water in it, the times of the periodical overflowings only excepted. The new channel has been fince founded with a line of thirty fathons, without finding a bottom. Several other points, of great extent, have in like manner, been fince cut off, and the river diverted into new channels.

. In the foring floods the Mallillippi is very high, and the current fo Krong, that it is with difficulty it can be afconded; but this diladvaatage is in part compensated by eddies of counter-currents, which are found in the bends close to the banks of the river, which runs with nearly equal velocity against the fiream, and allift the according boats. The eurrent at this featon defeends at the rate of about five miles an hour? In susunn, when the waters are low, it does not run fafter than two mites, but it is rapid in fuch parts of the river as have clufters of illands, fhouls, and fand-banks. The circumference of many of these meals being leveral miles, the voyage is longer, and in fome parts more dangerous than in the fpring The merchandize neeeffary for the commerce of the upper fettlements on or near the Milli Sppi, it conveyed in the foring and autumn in batteaus, rowed by eighteen or twenty men, and cartying about forty tons. From New Orleans to the Illinois, the voyage is commonly performed in eight or fon weeks. A prodigious number of iflands, fome of which are of great extent, inthefperfe this mighty river. Its depth increases as you sloend it. Its waters, after overflowing its banks below: the river. Ibberville on the caff, and the river Rouge on the well, never return within them spain, there being many outlets or freams, by which they are conducted into the bay of Mexico, more especially on the west fide of the Miffflippi, dividing the country into numerous iflands. These tingularities diffinguish it from every other known river in the world. Below the Ibberville, the hand begins to be very low on both fides of the river across the country, and gradually declines as it approaches nearer to the fea. The iffind of New Orleans, and the lands oppolite, are to all appearance of no long date; for in digging over to little bolow the furface, you find water and great quantities of trees. The many beaches and breakors, 28 well inlets, which have arilen out of the channel within the laft half century, at the feveral mouths of the river, are convincing proofs that this peninfula was wholly formed in the fame manner. And it is certain that when La Salle failed down the Millilippi to the fea, the opening of that river was very different from what it is at prefent.

The nearer you approach to the fea, this truth becomes more firiking. The bars that crofs most of these finall channels opened by the current, have been multiplied by means of the trees

remried down with the freams; one of which flopped by its route or branches in a fhallow part, is fufficient to obfruct the paffage of thoulands more, and to fix them at the fame place. Aftonifuing collections of trees are daily feen in paffing between the Balise and the Miffouri. No human force being fufficient for removing them, the mud carried down by the river ferves to bind and cement them together. They are gradually covered, and every inundation not only extends their length and breadth, but adds another layer to their height. In lefs than ten years time, canes, fhrubs, and aquatic timber grow/on them, and form points and iflands, which foreibly fhift the bed of the river.

Nothing can be afferted with certainty, respecting the length of this river. Its fource is not known, but fuppoled to be up. awards of three thouland miles, from the features the river runs. We only know, that from St. Anthony's falls, in lat. 45°, it glides with a pleafant, clear current, and receives many large and very extensive tributary ftreams before its junction with the Missouri, without greatly increasing the breadth of the Miffiffippi, though they, do its depth and rapidity, ... The muddy waters of the. Miffouri difcolour the lower part of the river, till it empties itfelf into the bay of Mexico, The Miffouri is a longer, broader, and deeper river than the Milliflippi, and affords a more extensive navigation ; it is, in fact, the principal river, contributing more to the common ftream than does the Miffiffippi, It has been affended by French traders about twelve or thirteen hundred miles, and from the depth of water, and breadth of the river at that diffance, it appeared to be navigable many miles. further.

From the Miffouri river, to nearly opposite the Ohio, the western bank of the Miffiffippi, is, some few places excepted, higher, than the eastern. From Mine au fer, to the Ibberville, the eastern bank is higher than the western, on which there is not a fingle differnible rising or eminence for the distance of feven hundred and fifty miles. From the Ibberville to the fea there are no eminences on either fide, though the eastern bank appears rather the highest of the two, as far as the English turn. Thence the banks gradually diminish in height to the mouths of the river, where they are not more than two or three feet higher than the common furface of the water.

The flime which the annual floods of the river Miffifippileaves on the furface of the adjacent floores, may be compared with that of the Nile, which depolits a fimilar manure, and for many centuries paft has infured the fertility of Egypt. When its banks fhall have been cultivated as the excellency of its

foil and temperature of the climate deferve, its population will equal that of any other part of the world. The trade, wealth, and power of America, may, at fome future period, depend, and perhaps centre, upon the Miffiffippi. This alfo refembles the Nile in the number of its mouths, all iffuing into a fea, that may be compared to the Mediterranean, which is bounded on the north and fouth by the two continents of Europe and Africa, as the Mexican Bay is by North and South America. The fmaller mouths of this river might be eafily flopped up, by means of those floating trees with which the river, during the floods, is always covered. The whole force of the channel being united, the only opening then left would probably grow deep, and the bar be removed.

Whoever for a moment will caft his eye over a map of the town of New Orleans, and the immenfe country around it, and view its advantageous fituation, must be convinced that it, or fome place near it, must, in process of time, become one of the greatest marts in the world,

The falls of St. Anthony, in about latitude 45°, received their name from Father Lewis Hennipin, a French millionary, who travelled into these parts about the year one thousand fix hundred and eighty, and was the first European ever feen by the natives. The whole river, which is more than two hundred and fifty yards wide, falls perpendicularly about thirty feet, and forms a moit pleasing cataract. The rapids below, in the space of three hundred yards, render the defcent confiderably greater; fo that when viewed at a diftance, they appear to be much higher then they really are. In the middle of the falls is a fmall ifland, about forty feet broad, and fomewhat longer, on which grow a few cragged hemlock and fpruce trees; and about half way between this island and the eastern shore is a rock, lying at the very edge of the fall, in an oblique polition, five or fix feet broad, and thirty or forty long. These falls are peculiarly fituated, as they are approachable without the least obstruction from any intervening hill or precipice, which cannot be faid of any other confiderable fall, perhaps, in the world. The country around is exceedingly. beautiful. It is not an uninterrupted plain where the eye finds no relief, but composed of many gentle ascents, which in the fpring and fummer are covered with verdure, and interspersed with little groves, that give a pleafing variety to the profpect.

A little diftance below the falls, is a finall island of about an acre and an half, on which grow a great number of oak trees, almost all the branches of which, able to bear the weight, are, in the proper feason of the year, loaded with eagles nefts. Their in-

189

stinctive wildom has taught them to choose this place, as it is fecure, on account of the rapids above from the attacks either of man or beast.

From the best accounts that can be obtained from the Indians, we learn that the four most capital rivers on the continent of North America, viz. the St. Lawrence, the Missifissippi, the river Bourbon, and the Oregon, or the river of the West, have their sources in the same neighbourhood. The waters of the three former, are faid to be within thirty miles of each other; the latter is rather farther west:

This fnews that these parts are the highest lands in North America; and it is an inftance not to be paralleled in the other three quarters of the globe, that four rivers of fuch magnitude should take their rife together, and each, after running separate courses, discharge their waters into different oceans, at the distance of more than two thousand miles from their sources. For in their passage from this spot to the bay of St. Lawrence; east; to the bay of Mexico, south ; to Hudson's Bay, north ; and to the bay at the straits of Annian, west ; where the river Oregon is supposed to empty itself, each of them traverses upwards of two thousand miles.

The Ohio is the moft beautiful river on earth : its current gentle, waters clear, and bofom fmooth and /unbroken by rocks and rapids, a fingle inftance only excepted. It is one quarter of a mile wide at Fort Pitt : five hundred yards at the mouth of the Great Kanhaway : twelve hundred yards at Louifville ; and the rapids, half a mile, in fome few places below Louifville : but its general breadth does not exceed fix hundred yards. In fome places its width is not four hundred, and in one place particularly, far below the rapids, it is lefs than three hundred. Its breadth in no one place exceeds twelve hundred yards, and at its junction with the Miffiffippi, neither river is more than nine hundred yards wide.

Its length, as measured according to its meanders by Captain Hutchins, is as follows;

1 From Fort Pitt	Miles.	Milcs.
2 To Log's Town	18 <u>I</u> 9	Muskingum 25' 1
3 Big Beaver Creek	10 1 . / 10	Little Kanhaway 12 ‡

In common winter and fpring floods, it affords thirty or forty feet water to Louisville, twenty-five or thirty foet to ha. Tartes's rapids, forty miles above the mouth of the Great Kursewey, and a fufficiency at all times for light batteaux and canoes to Fort Pitt, The rapids are in latitude ale 8'. The inundations of the liver begin about the laft of March, and fublide in July, alterna h they frequently happen in other months, fo that hoats which carry three in or Youhi hundred barrrels of flour, from the Monor shove Pittfburgy have feldom long to wait water only. 14 ing these floods a first rate man of war may be cargied from lious ifville to New Orleans, if the fudden turns of the river and the firength of its current will admit a fafe ficerage interit is the opinion of Col. Morgan, who has had all the means of afgrmation; that a vefiel properly built for the fea, to draw as feet water, when loaded, and carrying from twelve to fixteen hundred bar rels of flour, may be more, eafily, cheaply, and fafoly mavigated from Pittiburgh to the fea, than those now in use; and that this matter only requires one man of capacity and enterprize to afcertain it, He observes that a vessel intended to be rigged as a brigg antine, fnew, or thip, thould be double decked, take her mails on deck, and be rowed to the Ibberville, below which are no iflands. or to New Orleans, with twenty men, fo as to afford reliefs of tert and ten in the night .- Such a veffel, without the use of oars, he fays, would float to New Orleans, from Pittfburg, in twenty times twenty-four hours. If this be fo, what agreeable profpects are prefented to those who have fixed their refidence in the western country.

The rapids at Louisville descend about ten feet in a length of a mile and a half. The bed of the river there is a folid rock, and is divided by an island into two branches, the fouthern of which is about two hundred yards wide, but impassible in dry feasions, about four months in the year. The bed of the northern branch is worn into channels by the constant course of the water, and atirition of the pebble stones carried on with it, fo as to be passible for batteaux through the greater part of the year. Yet it is thought

that the fouthern arm may be the most easily opened for constant navigation. The rife of the waters in these rapids does not exceed twenty or twenty five feet. The Americans have a fort, fituated at the head of the falls. The ground on the fouth fide rifes very gradually.

At Fort Pitt the river Ohio loles its name, branching into the Monogahela and Allegany.

The Monongahela is four hundred yards wide at its mouth. From thence is twelve or fifteen miles to the mouth of Yshogany, where it is three hundred yards wide. Thence to Redftone by water is fifty miles, by land thirty. Then to the mouth of Chest. river by water forty miles, by land twenty-eight, the width continuing a three hundred yards, and the navigation good for bosts. Thence the width is about two hundred yards to the welkers fork, fifty miles higher, and the navigation frequently. interrupted by rapids; which however with a fwell of two or three feet, become very patible for boats. It then admits light in second in the feating only fome finall rapids and falls of one or two feet perpendicular, and leffening in its width to twen-19 yards. The weftern fork is navigable in the winter ten or fifteen mine and the northern of the Little Kanhaway, and will admit to the fiver. It paffes through the Laurel mountain, about thirty miles from its mouth ; is fo far, from three hundredto one hundred and fifty yards wide, and the navigation much obstructed in dry weather by rapids and froals. In its passage through the mountain it makes very great falls, admitting no na-Vigation for ten miles to the Turkey foot. Thence to the great croffing, about twenty miles, it is again navigable, except in dry feations, and at this place is two hundred yards wide. The surces of this river are divided from those of the Potomak L, he Allegany mountains. From the falls, where it interfects the Laurel moutain, to Fort Cumberland, the head of the navigation on the Potomak, is forty miles of very mountainous road. Will's creek, at the mouth of which was Fort Cumberland, is thirty or forty yards wide, but affords no navigation as yet. Cheat river, another confiderable branch of the Monongahela, is two hundred yards wide at its mouth, and one hundred yards at the Dunkard's fettlement, fifty miles higher. It is navigable for boats, except in dry scalons. The boundary between Virginia and Pennsylvania croffes it about three or four miles above its mouth.

The Allegany river, with a flight fwell, affords navigation for light batteaux to Venango, at the mouth of French creek, where it is two hundred yards wide; and it is practifed even to Le Bœufi

from whence there is a portage of fifteen miles and a half to Presque Isle on Lake Erie.

The country watered by the Miffifippi and its eaftern branches, conftitutes five-eights of the United States; two of which fiveeights are occupied by the Ohio and its waters; the refiduary freams, which run into the Gulf of Mexico, the Atlantic, and the St. Lawrence, water the remaining three-eights.

Before we quit the fubject of the western waters, we will take a view of their principal connections with the Atlantic. These are four, the Hudson's river, the Potomak, St. Lawrence, and the Miffiffippi, Down the last will pass all the heavy commodities. But the navigation through the Gulf of Mexico is fo dangerous. and that up the Milliffippi fo difficult and tedious, that it is thought probable that European merchandize will not be conveyed through that channel. It is most likely that flour, timber, and other heavy articles will be floated on rafts, which will themfelves be an article for fale as well as their loading, the navigal tors returning by land, as at prefent. There will therefore be a competition between the Hudson, the Potomak, and the Sta Lawrence rivers for the relidue of the commerce of all the country westward of Lake Erie, on the waters of the lakes, of the Ohio, and upper parts of Miffiffippi. To go to New-York, that part of the trade which comes from the lakes or their waters must first be brought into Lake Erie. Between Lake Superior and its waters and Huron are the rapids of St. Marie, which will permit boats to pais, but not larger veffels. Lakes Huron and Michigan afford communication with Lake Eric, by veffels of eight feet draught, That part of the trade which comes from the waters of the Miffiffippi must pais from them through fome portage into the waters of the lakes. The portage from the Illinois river into a water of Michigan is of one mile only. From the Wabash, Miami, Muskingum or Allegany are portages into the waters of Lake Eric, of from one to fifteen miles. When the commodities are brought into, and have passed through Lake Eric, there is between that and Ontario. an interruption by the falls of Niagara, where the portage is of eight miles; and between Ontario and the Hudson's river are portages of the falls of Onondago, a little above Ofwego, of a quarter of a mile; from Wood creek to the Mohawk river two miles; at the little falls of the Mohawk river half a mile, and from Schenectady to Albany fixteen miles. Befides the increase of expence occasioned by frequent change of carriage, there is an encreafed rifk of pillage produced by committing merchandize to a greater number of hands fucceflively. The Potomak offers itfelf under the following circumftance. For the trade of the lakes and their waters westward of Lake Erie, when it shall have intered

alf to

ranchh fiveiduary nd the

ll take Thefe ind the odities. gerous, at it is onveytimber, 1 themnaviga2 ore be a the St. e coun-, of the ork, that ers muft r and its I permit nigan afdraught iffiffippt s of the. Michingum or rom one nto, and Ontario. age is of iver are go, of 2 ver two ile, and increase re is an dize to a ers itfelf kes and Intered that lake, it must could along its fouthern shore, on account of the number and excellence of its harbours, the northern, though the Inorteft, having few harbours, and their unfafe. Having reached Gayahoga, to proceed on to New-York it will have eight hundred and twenty-five miles, and five portages: whereas it is but four hundred and twenty-five miles to Alexandria, its emporium on the Potomak, if it turns into the Cayahoga, and paffes through that, Big Beaver, Ohio, Yahogany, or Monongalia and Cheat, and Potomak, and there are but two portages; the first of which between Cayahoga and Beaver may be removed by uniting the fources of these waters, which are lakes in the neighbourhood of each other, and in a champaign country; the other from the waters of Ohio; to the Potomak will be from fifteen to forty miles, according to the trouble which shall be taken to approach the two navigations." For the trade of the Ohioi or that which shall come into it from its own waters or the Milliflippi, it is nearer through the Potomak to Alexendria than to New-York, by five hundred and eighty miles, and it is interrupted by one portage only. There is anothe ther circumstance of difference too, The lakes themfelves never freeze, but the communications between them freeze, and the Hudion's river is itself that up by the ice three months in the year: whereas the channel to the Chefapeek leads directly into a warmer climate. The fouthern parts of it very rarely freeze at all, and whenever the northern do, it is fo near the fources of the rivers, that the frequent floods to which they are there liable break up the ice immediately, fo that veffels may pais through the whole winter, subject only to accidental and mort delays, Add to all this, that in case of a war with their neighbours of Canada, or the Indians, the route to New-York becomes a frontier through almost its whole length, and all commerce through it, ceases from that moment, But the channel to New-York is already known to practice; whereas the upper waters of the Ohio and the Potomak, and the great falls of the latter, are yet to be cleared of their fixed obfiructions. " the a partition . all

The route by St. Lawrence is well known to be attended with many advantages, and fome difadvantages. But there is a fifth route, which the enlightened and enterprizing Pennfylvanians contemplate, which, if effected, will be the easieft, cheapest, and furest passage from the lakes, and the Ohio river; by means of the Sufquehannah, and a canal from thence to Philadelphia. The latter part of this plan, viz. the canal between Sulguehannah and the Schuylkill rivers, is now actually in execution. Should they accomplish their whole scheme, and they appear confident of fuccess, Philadelphia in all probability will become, in fome future period, the largest city that has ever yet existed. Vol. I.

194

Particular deforiptions of the other rivers in the United States, are referved to be given in the geographical account of the flates, through which they respectively flow. One general observation respecting the rivers, will, however, be naturally introduced here, and that is, that the entrances into almost all the rivers, inlets and bays, from New-Hampshire to Georgia, are from south-cash to north-welt. The coaft of the United States is indented with numerous bays, fome of which are equal in fize to any in the known world." Beginning at the north cafterly part of the continent, and proceeding fouth-westerly, you first find the bay or gulph of St. Lawrence, which receives the waters of the river of the fame name. Next are Chedabukto and Chebukto Bays, in Nova-Scotia, the latter diftinguished by the loss of a French fleet in a former war between France and Great Britain, The bay of Fundy, between Nova-Scotia and New-Brunfwick, is remarkable for its tides, which rife to the height of fifty or fixty feet, and flow to rapidly as to overtake animals which feed upon the faore. Pallamaquody, Penobicot, Broad and Calco Bays, he along the coaft of the diffrict of Maine. Maffachufetts-Bay spreads caftward of Boston, and is comprehended between Cape Ann on the north, and Cape Cod on the fouth ... The points of Bofton harbour are Nahant and Alderton points. Palling by Narraganiet and other bays in the flate of Rhode-Ifland, you enter Long-Ifland Sound, between Montaukpoint and the Maine. This Sound, as it is called, is a kind of inland fear from three to twenty-five miles broad, and about one hundred and forty miles long, extending the whole length of the island, and dividing it from Connecticut. It communicates with the ocean at both ends of Long-Ifland, and affords a very fafe and convenient inland navigation. er migete an ? utarfiel prove nor ett

The celebrated Arait, called Hell-Gate, is near the west end of this found, about eight miles caftward of New-York city, and is remarkable for its whirlpools, which make a tremendous roaring at certain times of tide. These whirlpools are occasioned by the narrownels and crookednels of the pals, and a bed of rocks which extend quite across it; and not by the meeting of the tides from east to weft, as has been conjectured, becaule they meet at Frogspoint, feveral miles above. A fkilful pilot may with fafety conduct a ship of any burden through this strait with the tide, or at ・それに ときかり いちにった still water with a fair wind\*.

\* The following ingenious geological remarks of Dr. Mitchell's, on certain maritime parts of the flate of New-York, deferve a place in this connection :

17:15 . E.S.

Delaware Bay is fixty miles long, from the Cape to the entrance of the river Delaware to Bombay-hook; and fo wide in fome parts, as that a fhip, in the middle of it, cannot be feen from the land. It opens into the Atlantic north-well and fouth-eaft, between Cape Henlopen on the right, and Cape May on the left. These Capes are eighteen or twenty miles apart.

The Chelapeck is one of the large k bays in the known world. Its entrance is nearly E. N. E. and S. S. W. between Cape Charles, lat.  $37^\circ$  12', and Cape Henry, lat.  $37^\circ$ , in Virginia; it is twelve miles wide, and extends two hundred and feventy miles to the northward, dividing Virginia and Maryland. It is from feven to eighteen miles broad, and generally as much as nine fathoms deep; affording many commodious harbours, and a fafe and eafy navigation. It receives the waters of the Sufquehannah, Potomak, Rappahannok, York and James river, which are all large and navigable.

"From the furvey of she follils in these parts of the American coalt one becomes convinced, that the principal thare of them is ORANITICAL, competed of the fame forts of materials with the highest Alps; Pyrences, Caucafus, and Andes, and like them definite of metals and petrefactions.

The occurrence of me horizontal firsts, and the frequency of vertical layers, lead the further to suppose that these are not secondary collections of minerals, but are certainly in a flate of primeval arrangement.

The Steatites, Amianthus, Shoeri, Feldfraih, Mica, Garnet, Jafpar, Shiftus, Aftefles, and Quartz, must all be confidered as primitive fafils, and by no means of an alluvial nature.

What inference remains now to be drawn from this flatement of facts, but that the fashionable opinion of confidering these maritime parts of our country as flats, hove up from the deeps by the sea, or brought down from the heights by the riyers, flands unsupported by reason, and contradicted by experience?

A more probable opinion is, that Long Ifland, and the adjacent continent, were in former days contiguous, or only feparated by a fmall river, and that the firait which now divides them, was formed by fuccesfive inroads of the fea from the eaftward and weftward in the courfe of ages. This conjecture is supported by the facts which follow, is wit ; s. The fault bodies on both thores have a near re-femblance. s. The rocks and iflands lying between are formed of fimilar mate-rials. 3. In feveral places, particularly at White-Stone and Hell-Gate, the diftance from land to land is very fmall. : 4. Wherever the flore is not compoled of folid rock, there the water continues to make great encroachments, and to caufe the high banks to tumble down, not only here, but at Moncton, Newton, and clfewhere, at this very day. g. The rocky piles in the Sound, called Execution, and Stepping-Stones, and thole named Hurtleberry Island, Pea Island, Heart Illand, and many more that lie up and down; are frong circumstances in favour of this opinion, for from feveral of them all the earthy matter, as far as the higheft tides can reach, has long fince been carried away, and from the reft, the fand and gravel continue to be removed by daily attrition ; as is the cafe with the Brothera. Ryker's, Blackwell's, and other islands. 6. There is a tradition among that race of men, who, previous to the Europeans, posselled this track of country ; shat at fome diftant period, in former times, their anceftors could ftep from rock. to rock, and crofs this arm of the fea on foot at Hell-Gate."

#### SORTHERS 'S UN FACE OF THE COUNTRY, ... THE ALS

\$96

3

The traft of country belonging to the United States, is happily variegated with plaine and mountains, hills and vallies. Some parts are rocky, particularly New-England, the north parts of New-York, and New-Jerfey, and a broad fpace, including the feveral ridges of the long range of mountains which run fouthwestward through Ponnfylvanis, Virginia, North-Carolina, and part of Georgie, dividing the waters which flow into the Atlantic from those which fall into the Miffiffippi. In the parts, east of . the Allegany mountaine, in the fouthern flates, the country for foveral hundred miles in length, and fixty or feventy, and fometimes more in breadth, is level and intirely free of ftone, It has been a queftion agitated by the curious, whether the extensive tract of low, flat country, which fronts the feveral flates fouth of New-York, and extends back to the hills, has remained in its prefent form and fituation ever fince the flood : or whether it has been made by the particles of earth which have been washed down from the adjacent mountains, and by the accumulation of foil from the decay of vegetable substances; or by earth washed out of the bay of Mexico by the gulf ftream, and lodged on the coaft; or by the receis of the ocean, occasioned by a change in fome other part of the earth. Several phenomena deferve confideration in forming an opinion on this question.

1. It is a faft, well known to every perfon of obfervation who has lived in, of travelled through the fouthern flates, that marine fhells and other fubflances which are peculiar to the fea flore, are almost invariably found by digging eighteen or twenty feet below the furface of the earth. A gentleman of veracity has afferted ; that in finking a well many miles from the fea, he found/ at the depth of twenty feet, every appearance of a falt marsh; that is, marsh grass, marsh mud, and brackish water. In all this flat country until you come to the hilly land, wherever you dig a well, you find the water, at a certain depth, fresh and tolerably good ; but if you exceed that depth two or three feet, you come to a faltish or brackish water that is fcarcely drinkable, and the earth dug up, refembles, in appearance and smell, that which is dug up on the edges of the falt marshes.

2. On and near the margin of the rivers are frequently found fand hills, which appear to have been drifted into ridges by the force of water. At the bottom of fome of the banks in the rivers, fifteen or twenty feet below the furface of the earth, are walhed out from the folid ground, logs, branches, and leaves of trees; and the whole bank, from bottom to top, appears ftreaked with layers of logs, leaves and fand. These appearances are seen far up the rivers, from eighty to one hundred miles from the fea,

is happi-

om the fea,

, east of

where, when the rivers are low, the banks are from fifteen to twenty feet high. As you proceed down the rivers towards the fea, the banks decrease in height, but still are formed of layers of fand, leaves and logs, fome of which are entirely found, and appear to have been fuddenly covered to a confiderable depth.

3. It has been observed, that the rivers in the southern States frequently vary their channels; that the swamps and low grounds are constantly filling up; and that the land in many places annually infringes upon the ocean. It is an authenticated fast, that no longer ago than 1771, at Cape Look-out on the coast of North-Carolina, in about latitude 34° 50', there was an excellent harbour, capacious entry h to receive an hundred fail of shipping at a time, in a good depth of water: it is now entirely filled up, and is folid ground. Instances of this kind are frequent along the coast.

It is observable, likewise, that there is a gradual descent of about eight hundred feet, by measurement, from the foot of the mountains to the sea board. This descent continues, as is demonstrated by soundings, far into the sea.

4. It is worthy of observation, that the foil on the banks of the rivers is proportionably coarse or fine according to its distance from the mountains. When you first leave the mountains, and for a confiderable diftance, it is observable, that the foil is coarse, with a large mixture of fand and fhining heavy particles. As you proceed toward the fea, the foil is lefs coarfe, and fo on; in proportion as you advance, the foil is finer and finer, until, finally, is deposited a foil to fine, that it confolidates' into perfect clay; but a clay of a peculiar quality, for a great part of it, has intermixed with it reddifh ftreaks and veins, like a species of ochre; brought probably from the red-lands which lie up towards the mountains. This clay, when dug up and exposed to the weather, will diffolve into a fine mould, without the leaft mixture of fand or any gritty substance whatever. Now we know that running waters, when turbid, will deposit, first, the coarlest and heaviest particles, mediately, those of the several intermediate degrees of fineness, and ultimately, those which are the most light and fubtle; and fuch in fact is the general quality of the foil on the banks of the fouthern rivers.

5. It is a well-known fact, that on the banks of Savannah river, about ninety miles from the fea in a direct line, and one hundred and fifty or two hundred, as the river runs, there is a very remarkable collection of oyfter fhells of an uncommon fize. They run in a north-eaft and fouth-weft direction, nearly parallel to the fea coaft, in three diffinct ridges, which together occupy a space of feven miles in breadth. The ridges commence at Savan-

mah river, and have been traced as far fouth as the northern branches of the Alatamaha river. They are found in fuch quancities, as that the indigo planters carry them away in large boat loads, for the purpose of making lime water, to be used in the manufacture of indigo. There are thousands and thousands of sons still remaining. The question is, how came they here? It cannot be supposed that they were carried by land, Neither' is it probable that they were conveyed in cances, or boats, to fuch a diftance from the place where oysters are now found. The uncivilized natives, agreeable to their roving manner of living, would rather have removed to the fea fhore, than have been at fuch immense labour in procuring oysters. Belides, the difficulties of conveying them would have been infurmountable. They would not only have had a ftrong current in the river sgainft them, an obstacle which would not have been easily overcome by the Indians, who have ever had a great aversion to labour ; but could they have furmounted this difficulty, oysters conveyed such a distance, either by land or water, in fo warm a climate, would have spoiled on the passage, and have become useles. The circumfance of these shelfs being found in such quantities, at so great a diftance from the fea, can be rationally accounted for in no other way, than by supposing that the sea shore was formerly near this bed of shells, and that the ocean has fince; by the operation of certain caules not yet fully investigated, receded, Thefe phenomena, it is prefumed, will authorize this conclusion, that a great part of the flat country which fpreads eafterly of the Allegany mountains, had, in some past period, a superinquimbent sea; or rather, that the constant accretion of foil from the various caufes before hinted at, has forced it to retire.

" " On the Georgia fide of the river, about 15 miles below Silver Bluff, the high road croffes a ridge of high fwelling hills of uncommon elevation, and perhaps 70 feet higher than the furface of the river. These hills are from three feet below the common vegetative furface, to the depth of so or 30 feet, compoled entirely of foffil oyfter fhells, internally of the colour and confiftency of clear white. mapple; they are of an incredible magnitude, generally is or so inches in length; from 6 to 8 wide, and from a to 4 in thickness, and their hollows fufficient to receive an ordinary man's foot. They appear all to have been opened before the period of petrefaction ; a transmutation they feem evidently to have suffered. They are undoubtedly very ancient, and perhaps antideluvian. The adjacent inhabitants bars them to lime, for building, for which purpole they ferve well; and will undoubtedly afford an excellent manure, when their lands require it, these hills now being remarkably fertile. The heaps of thells lie upon a fratum of yellowith fand mould, of feveral fect in depth, upon a foundation of fost white rocks, that has the outward appearance of free ftone, but on ftrict examination is really a telfaceous concrete, or composition of fand and pulverifed fea shells. In short, this teffaceous rock approaches near in quality and appearance to the Bahama or Ber. mudian White Rock." 2 3 232 Bartram's Travels, poge 318.

#### 2 . MOUNTAINS, trade Style after des

The tract of country east of Hudson's river, comprehending part of the State of New-York, the four New England States, and Vermont, is rough, hilly, and in fome parts mountainous, These mountains will be more particularly described under New England, In all parts of the world, and particularly on this western continent, it is observable, that as you depart from the occan, or from a river, the land gradually rifes; and the height of land, in common, is about equally diftant from the water on either fide. The Andes, in South America, form the height of land between the Atlantic and Pacific oceans. The high lands between the district of Maine and the province of Lower Canada, divide the rivers which fall into the St. Lawrence, north, and into the Atlantic, fouth. The Green Mountains, in Vermont, divide the waters which flow easterly into Connecticut river. from those which fall westerly into Lake Champlain, Lake George, and Hudson's River.

Between the Atlantic, the Miffifippi, and the lakes, runs a long range of mountains, made up of a great number of ridges. These mountains extend north-easterly and south-westerly, nearly parallel to the fea soaft, about nine hundred miles in length, and from fixty to one hundred and fifty and two hundred miles in breadth. Mr. Evans observes, with respect to that part of these mountains which he travelled over, viz. in the back part of Pennfylvania, that fearcely one acre in ten is capable of culture. This, however, is not the case in all parts of this range. Numerous tracts of fine arable and grazing land intervene between the ridges. The different ridges which compose this immense range of mountains, have different names in different flates.

As you advance from the Atlantic, the first ridge in Pennfylvania, Virginia, and North-Carolina, is the Blue Ridge, or South Mountain, which is from one hundred and thirty to two hundred miles from the fea. Between this and the North Mountain spreads a large fertile vale; next lies the Allegany ridge; next beyond this is the Long Ridge, called the Laurel Mountains, in a spur of which, about latitude 36°, is a spring of water fifty feet deep, very cold, and it is faid, to be as blue as indigo. From these feveral ridges proceed innumerable nameless branches or spurs. The Kittatinny mountains run through the northern parts of New Jerley and Pennfylvania. All these ridges, except the Allegany, are sparated by rivers, which appear to have forced their passes through folid rocks.

The principal ridge is the Allegany, which has been defcriptively called the back-bone of the United States. The general

name for thefe mountains, taken collectively, feems not yet to have been determined. Mr. Evana calls them the Endless Mountains s others have called them the Appalachian Mountains, from a tribe of Indians who live on a river which proceeds from this mountain, called the Appalachicola. But the most common name is the Allegany Mountains, to called, either from the principal ridge of the range, or from their running acarly parallel to the Allegany or Ohio river; which, from its head waters, till it emites into the Miffiffippi, is known and called by the name of Allegany River, by the Seneca and other tribes of the Sin Nations, who once inhabited it. Thefe mountains are not considely feattered and broken, rifing here and there into biost range. Isarely half a mile high. They fpread as you proceed thath, and fome of them terminate in high perpendicular bluffs. Chars gradually fublide into a level country, giving rife to the rivers which run foutherly into the Gulf of Mexico.

They afford many curious phenomens, from which naturalifts have deduced many theories of the earth. Some of them have been whimfical enough; Mr. Evans supposes that the most obvious of the theories which have been formed of the earth is, that it was originally made out of the ruins of another. "" Bones and shells which escaped the fate of softer animal substances, we find mixed with the old materials, and elegantly preferved in the loofe ftones and rocky bales of the highest of these hills," With deference, however, to Mr. Evans's opinion, these appearances have been much more rationally accounted for by fuppoling the reality of the flood, of which Moles has given us an account. Mr. Evans thinks this too great a miracle to obtain belief. But whether is it a greater miracle for the Creator to alter a globe of earth by a deluge, when made, or to create one new from the ruins of another? The former certainly is not left credible than the latter. " These mountains," fays our author, " exifted in their prefent elevated height before the deluge, but not fo bare of foil as now." How Mr. Evans came to be fo circumfantially acquainted with these pretended facts, is difficult to determine, unlefs we suppose him to have been an Antediluvien, and to have furveyed them accurately before the convultions of the deluge ; and until we can be fully affured of this, we must be exculed in not affenting to his opinion, and in adhering to the old philolophy of Moles and his advocates. We have every reafon to believe that the primitive flate of the earth was totally metamorpholed by the first convulsion of nature at the time of scluge; that the fountains of the great deep were indeed broken

w, and that the various frate of the earth were diffevered, and thrown into every possible degree of confusion and difordere Hence those valt piles of mountains which lift their craggy cliffs to the clouds, were probably thrown together from the floating ruins of the earth : and this conjecture is remarkably confirmed by the waft number of foffils and other marine music which are found aded on the tops of mountains, in the interior parts of continents im temote from the fea, in all parts of the world hitherto explored. The various circumfances attending thefe marine bodies leave us to conclude, they were setually generated, lived and died in the very beds waereln, they are found, and therefore these beds must have originally been at the bottom of the ocean, though now in many inflances elevated feveral miles above its furface. Hence it appears that mound is and continents were not primary productions of nature, but of a very diftant period of time from the creation of the world; a time long enough for the frate to have acquired their greatest degree of cohesion and hardness; and for the testaccous matter of marine shells to become changed to a stony fubflance; for in the fiffures of the lime-ftone and other ftrata, fragments of the fame shell have been frequently found adhering to each fide of the cleft, in the very flate in which they were originally broken ; fo that if the feveral parts were brought together, they would apparently tally with each other exactly. A very confiderable time therefore must have elapfed between the chaotic state of the earth and the deluge, which agrees with the account of Moles, who makes it a little upwards of fixteen hundred years. These observations are intended to shew, in one instance out of many, others, the agreement between revelation and reason, between the account which Moles gives us of the creation and deluge, and the prefent appearances of nature.

#### SOIL AND VEGETABLE PRODUCTIONS.

In the United States are to be found every species of foil that the earth affords. In one part of them or another, they produce all the various kinds of fruits, grain, pulse, and hortuline plants and roots, which are found in Europe, and have been thence transplanted to America, and besides these, a great variety of native vegetable productions.

The natural hiftory of the American States, particularly of New-England, is yet in its infancy. Several ingenious foreigners, fkilled in botany, have visited the southern, and some of the middle states, and Canada; and these states have also had ingenious botanilts of their own, who have made confiderable progress in describing the productions of those parts of America which they

‡ th

have visited; but New-England feems not to have engaged the attention either of foreign or American botanists. There never was an attempt to deferibe botanically, the vegetable productions of the eastern flates, till the Rev. Dr. Cutler, of Ipswich, turned his attention to the subject. The result of his first enquiries has been published in the first volume of the "Memoirs of the American Academy of Arts and Sciences." Since that period, the Doctor has paid very particular attention to this, his favourite fludy; and the public may shortly expect to be gratified and improved by his botanical descriptions and discoveries.

The productions of the fouthern states are likewise far from being well described, by any one author, in a work professedly for that purpole; but are mostly intermixed with the productions of other parts of the world; in the large works of European botanists. This renders it difficult to felect and to give an accurate and connected account of them. To remedy this inconvenience, and to refcue the republic from the reproach of not having any authentic and scientific account of its natural history, Dr. Cutler, who has already examined nearly all the vegetables of New-England, intends, as foon as his leifure will admit, to publish a botanical work, of confiderable magnitude, confined principally to the productions of the New-England states. Dr. Barton, of Philadelphia, I am informed, is collecting materials for a work of a fimihar nature, to comprehend the middle and fouthern flates; fo that both together will form a complete natural history of the American flates.' As far as possible to take advantage of these, as well as of other works of a fimilar kind, the natural hiftory of the vegetables, animals, birds, reptiles, infects, fishes, &c. peculiar to the American continent, will be feparately confidered in the laft volume of this work ; to which the reader is referred.

#### POPULATION.

According to the cenfus, taken by order of Congress, in 1799, the number of inhabitants in the United States of America, was three millions nine hundred and thirty thousand, nearly. In this number, none of the inhabitants of the territory N. W. of the river Ohio, are included. These added, would undoubtedly have increased the number to three millions nine hundred and fifty thousand, at the period the cenfus was taken. The increase fince, on supposition that the inhabitants of the United States double once in twenty years, has been about four hundred thousand : fo that now, 1794, they are increased to four millions three hundred and fifty thousand. To these mult be added, the vast influx of inhabitants into the States, from the different countries of Europe; with their natural increase; which taken at a moderate calgulation will make the number at least five millions of fouls.

The American republic is compoled of almost all nations, languages, characters, and religions, which Europe can furnish; the greater part, however, are descended from the English; and all may, perhaps with propriety, he distinguishingly denominated Federal Americans.

It has generally been confidered as a faft, that, of the human race, more males than females are born into the world. The proportion commonly fixed on, is as thirteen to twelve. Hence an argument has been derived against Polygamy. The larger number of males has been believed to be a wife appointment of Providence, to balance the defiruction of the males in war, by fea, and by other occupations more hazardous to life than the domeftic employment of the female fex. The following table, formed from the census of the United States, in which the males and females are numbered in different columns, furnishes a new proof of the truth of the common opinion, as it respects the United States<sup>\*</sup>:

#### TABLE,

	Males.	Females.	Excefs.	Sex.
Vermont	44,768	40,505	4,258+	Males.
New-Hampfhire	70,937	70,160	777	der
Diffrict of Mainet	per la	1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1		
Maffachufetts ?	181,741	190,588	7,840	Females.
Rhode Ifland	31,818	: 4- 31,651 ·····	834	do. do.
Connecticut -	114,916	117,448	2,522	de
New-York	161,822	159,320	9.50\$	Males.
New-Jerfey +	86,667	83,187	3,380	do.
Pennfylvania -	817,736	206,263	11,373	do.
Delaware	23,926	. 99,384	1,540	do.
Maryland + +	107,854	4 101,395	5,859	do.
Virginia	227,071	\$15,046	12,025	dor
Kentucky	39,911	\$8,922	3,289	do.
North Carolina -	147,494	140,710	6,784	do.
South Carolina -	73,998	66,880	6,418	do.
Georgia	\$7,147	\$ \$5,739	1,408	do,
Territory S. of Ohio	1 16,548	15,365	1,183	do.

It is remarkable, that the excess in all the States is on the fide of males, except in Maffachusetts, Rhode Island, and Connecticut.

\* Mr. Bruce, in his Travels, affirms, that in that tract of country from the Ifth, mus of Sues to the Straits of Babelmandel, which contains the three Arabias, the proportion is full four women to one man.

+ In the columns of the cenfus, in which are noted all other free perfors and flares, the males and females are not diffinguished, and are therefore not regarded in this table.

‡ the males and females are not diffinguished in the diffrict of Maine, in the late sensus,

In these States the females are confiderably the most numerous, This difference is obvioully to be ascribed to the large migrations from all these States to Vermont, the northern and western parts of New-York, the territory N. W. of Ohio, Kentucky, and Pennfylvania, and some to almost all the southern States. A great proportion of these migrants were males; and while they have ferved to increase the proportion of males in the States where they have settled, as is strikingly the case in Vermont and Kentucky, to which the migrations have been most numerous, and where the males are to the senarly as ten to nine, they have ferved to leffen the proportion of males in the States from whence they emigrated.

The number of flaves, in 1790, in all the States, was fix hundred nivety-feven thousand fix hundred and ninety-feven. The increase of this number fince, owing to falutary laws, in feveral of the States, and the humane exertions of the government in favour of their emancipation and the prevention of any further importation, has happily been finall, and will be lefs in future.

#### CHARACTER AND MANNERS,

FEDERAL AMERICANS, collected together from various countries, of different habits, formed under different govenments, have yet to form their national character, or we may rather fay, it is in a forming flate. They have not yet existed as a nation long enough for us to form an idea of what will be; in its maturity, its prominent features. Judging, however, from its prefent promising infancy, we are encouraged to hope, that, at fome, future period, not far diffant, it will, in every point of view, be respectable.

Until the revolution, which was accomplified in 1723, Euroropeans were firangely ignorant of America and its inhabitants, They concluded that the new world muff be inferior to the old, The count de Buffon fuppofed, that even the animals in that country were uniformly lefsthan in Europe, and thence concluded that, "on that fide the Atlantic there is a tendency in nature to belittle her productions." The Abbé Raynal, in a former edition of his works, fuppofed this belittling tendency, or influence, had its effects on the race of whites transplanted from Europe, and thence had the prefumption to affert, that "America had not yet produced one good poet, one able mathematician, nor one man of genius, in a fingle art or fcience." Had the Abbé been juftly informed refpecting the Americans, we prefume he would not-have made an affertion fo ungenerous and injurious to their genius and literary character. This affertion drew from Mr. Jefferson the following reply:

"When we shall have existed as a people as long as the Greeks did before they produced a Homer, the Romans a Virgil, the French a Racine and Voltaire, the English a Shakespeare and Milton, should this reproach be still true, we will inquire from what unfriendly caufes it has proceeded, that the other countries of Europe and quarters of the earth, shall not have inscribed any name in the roll of poets. In war we have produced a Washington, whole memory will be adored while liberty shall have votaries, whole name will triumph over time, and will, in future ages affume its just station among the most celebrated worthies of the world, when that wretched philosophy shall be forgotten, which would arrange him among the degeneracies of nature. In phyfics we have produced a Franklin, than whom no one of the prefent age has made more important discoveries, nor has enriched philofophy with more, or more ingenious folutions of the phænomena of nature, We have supposed Mr. Rittenhouse second to no aftronomer living: that in genius he must be the first, because he is felf-taught. As an artift, he has exhibited as great proofs of mechanical genius as the world has ever produced .--- He has not not indeed made a world; but he has, by imitation, approached nearer its Maker than any man man who has lived from the crestion to this day. As in philosophy and war, fo in government, in oratory, in painting, in the plastic art, we might shew that America, though but a child of yesterday, has already given hopeful proofs of genius, as well of the nobler kinds, which aroufe the best feelings of man, which call him into action, which fubstantiate his freedom, and conduct him to happines, as of the subordinate. which ferve to amufe him only. We therefore fuppofe, that this reproach is as unjust as it is unkind; and that, of the geniuses which adorn the prefent age, America contributes its full share. For comparing it with those countries, where genius is most cultivated, where are the most excellent models for art, and scaffoldings for the attainment of science, as France and England, for instance, we calculate thus: the United States contain three millions of inhabitants, France twenty millions, and the British islands ten. We produce a Washington, a Franklin, a Rittenhouse. France then should have half a dozen in each of these lines, and Great Britain half that number equally eminent. It may be true that France has; we are but just becoming acquainted with her, and our acquaintance fo far gives us high ideas of the genius of her inhabitants. It would be injuring too many of them to name particularly a Voltaire, a Buffon, the constellation of Encyclope-

grations rn parts ad Pennreat protwe fervere they ad Kenous, and tey have whence

fix hunn. The everal of int in father imre,

us counanments, er fay, it tion long maturity, efent prone, future e refpect.

3, Eurohabitants, b the old, hat counuded that, to belittle ion of his and its efnd thence et produtan of gejuftly innot-have genius and

difts, the Abbé Raynal, himfelf, &c. &c. We therefore have reafon to believe fhe can produce her full quota of genius."

The two late important revolutions in America, which have been fcarcely exceeded fince the memory of man, I mean that of the declaration and eftablishment of independence, and that of the adoption of a new form of government without bloodined, have called to historic fame many noble and diffinguished characters who might otherwise have flept in oblivion.

But while we exhibit the fair fide of the character of the FE-DERAL AMERICANS, we would not be thought blind to their faults.

" If there be an object truly ridiculous in nature, it is an American patrlot, figning refolutions of independency with one hand, and with the other brandifhing a whip over his affrighted flaves."

Much has been written to fhew the injuffice and iniquity of enflaving the Africans; fo much, as to render it unneceffary here to fay any thing on that part of the fubject. We cannot, however, forbear introducing a few observations respecting the influence of flavery upon policy, morals, and manners. From calculations on the fubject, it has been found, that the expence of maintaining a flave, efpecially if the purchase money be included, is much greater than that of maintaining a free man ; this, however, is difputed by fome; but suppose the expense in both cases be equal, it is certain that the labour of the free man; influenced by the powerful motive of gain, is, at least, twice as profitable to the employer as that of the flave. Befides, flavery is the bane of industry. It renders labour among the whites, not only unfailtionable, but difreputable. Industry is the offspring of necessity rather than of choice, Slavery precludes this neceffity; and indolence, which firikes at the root of all focial and political happinels, is the unhappy confequence. These observations, without adding any thing upon the injustice of the practice, shew that flavery is impolitic,

Its influence on manners and morals is equally pernicious. The negro wenches, in many inflances, are nurles to their miltreffes children. The infant babe, as foon as it is born, is delivered to its black nurfe, and perhaps feldom or never taftes a drop of its mother's milk. The children, by being brought up, and conftantly affociating with the negroes, too often imbibe their low ideas, and vitiated manners and morals, and contract a *negroifk* kind of accent and dialect, which they often carry with them through life.

To these I shall add the observations of a native\* of a state which contains a greater number of slaves than any of the others, Although his observations upon the influence of slavery were in-

tended for a particular flate, they will apply equally well to all places where this pernicious practice in any confiderable drgree prevails.

" There must doubtles," he observes, " be an unhappy influence on the manners of our people, produced by the existence of flavery among us. The whole commerce between mafter and flave is a perpetual exercise of the most boisterous passions, the most unremitting despotism on the one part, and degrading submissions on the other. Our children fee this, and learn to imitate it; for man is an imitative animal. This quality is the germ of all education in him. From his cradle to his grave, he is learning to do what he fees others do. If sparent could find no motive either in his philanthropy or his felf-love; for reftraining the intemperance of a paffion towards his flave, it should always be a fufficient one, that his child is prefent. But generally it is not fufficient. The parent florms, the child looks on, catches the lineaments of wrath, puts on the fame airs in the circle of fmaller flaves, gives a loofe to his worft of paffions, and thus nurfed, educated, and daily exercifed in tyranny, cannot but be ftamped by it with odious peculiarities. The man must be a prodigy who can retain his manners and morals undepraved by fuch circumstances. And with what execration should the statesman be loaded, who, permitting one half of the citizens thus to trample on the rights of the other, transforms those into despots, and these into enemies; destroys the morals of the one part, and the amor patrie of the other. For if a flave can have a country in this world, it must be any other in preference to that in which he is born to live and labour for another; in which he must lock up the faculties of his nature, contribute, as far as depends on his individual endeavour, to the evanishment of the human race, or entail his own milerable con-. dition on the endless generations proceeding from him. With the morals of the people, their industry also is destroyed. For in a warm climate, no man will labour for himfelf who can make another labour for him. This is fo true, that of the proprietors of flaves a very small proportion indeed are ever seen to labour. And can the liberties of a nation be thought fecure when we have removed their only firm balis, a conviction in the minds of the people that these liberties are the gift of God? That they are not to be violated but with his wrath? Indeed I tremble for my country when I reflect that God is just : that his justice cannot fleep for ever: that confidering numbers, nature, and natural means only, a revolution of the wheel of fortune, an exchange of lituation, is among possible events : that it may become probable by fupernatural inference !- The Almighty has no attribute which can take fide with us in fuch a contest. But it is impossi-

ble to be temperate and to purfue this fubject through the various, confiderations of policy, of morals, of hiftory, natural and civil, We must be contented to hope they will force their way into every one's mind. I think a change already perceptible, fince the origin of the prefent revolution. The fpirit of the master is abating, that of the flave rifing from the dust, his condition mollifying, the way I hope preparing, under the auspices of Heaven, for a total emancipation, and that this is disposed, in the order of events, to be with the content of their masters, rather than by their extirpation."

Under the Federal government, from the measures already adopted, we have reason to believen that all flaves in the United States, will in time be emancipated, in a manner most confistent with their own happines, and the true interest of their proprietors. Whether this will be effected by transporting them back to Africa; or by colonizing them in some part of the American territory, and extending to them their alliance and protection, until they shall have acquired strength sufficient for their own defence ; or by incorporation with the whites; or in some other way, remains to be determined.

In the middle and northern flates, there are comparatively but few flaves; and of courie there is lefs difficulty in giving them their freedom. In Maffachufetts alone, and we mention it to their diftinguished honor, there are NONE. Societies for the manumifion of flaves have been inftituted in Philadelphia, New-York, and other places, and laws have been enacted, and other measures taken, in the New-England States, to accomplish the fame purpole. The FRIENDS, commonly called Quakers, have evinced the propriety of their name, by their goodness in originating, and their vigorous exertions in executing this truly humane and benevolent defign.

The English Language is universally spoken in the United States, and in it business is transacted, and the records are kept. It is spoken with great purity, and pronounced with propriety in New England, by perfons of education; and, excepting some few. corruptions in pronunciation, by all ranks of people. In the middle and southern States, where they have had a great influx of foreigners, the language, in many instances, is corrupted especially in pronunciation. Attempts are making to introduce an uniformity of pronunciation throughout the States, which for political, as well as other reasons, it is hoped will meet the approbation and encouragement of all literary and influential characters.

Intermingled with the Americans, are the Dutch, Scotch, Irifh, French, Germans, Sweeds, and Jews; all thefe, except the

Scotch and Irish, retain in a greater or less degree, their native language, in which they perform their public worship, converse and transact their business with each other.

The time, however, is anticipated, when all improper diffinctions shall be abolished; and when the language, manners, customs, political and religious fentiments of the mixed mais of people who inhabit the United States, shall become fo affimilated, as that all nominal diffingtion thall be loft in the general and honourable name of AMERICANS.

### GOVERNMENT

UNTIL the fourth of July, 1776, the prefent United States were British colonies. On that memorable day, the Representatives of the United States of America, in Congress allembled. made a folemn declaration, in which they affigned their reafons for withdrawing their allegiance from the King of Great Britain. Appealing to the Supreme Judge of the world for the rectitude of their intentions, they did, in the name and by the authority. of the good people of the colonies, 'folemnly publish and declare, That these United Colonies were, and of right ought to be; Free and Independent States; that they were abfolved from all allegiance to the British crown, and that all political connection between them and Great Britain, was, and ought to be, totally diffolved; and that as Free and Independent States, they had full power to levy war, conclude peace, contract alliances, establish commerce, and do all other acts and things, which Independent States may of right do. For the support of this declaration, with a firm reliance on the protection of Divine Providence, the delegates then in Congress, fifty-five in number, mutually pledged to each other their lives, their fortunes, and their facred honour. At the fame time they published articles of Confederation and Perpetual Union between the States, in which they took the titleof " The United States of America," and agreed, that each State should retain its fovereignty, freedom, and independence, and every power, jurifdiction, and right, not expressly delegated to Congress by the confederation. By these articles, the Thirteen United States feverally entered into a firm league of friendship with each other for their common defence; the fecurity of their liberties, and their mutual and general welfare, and bound them-

olitical. robation felves to affift each other, against all force, offered to, or attacks that might be made upon all, or any of them, on account of h, Irifh, religion, fovercignty, commerce, or any other pretence whatever. ept the

But for the more convenient management of the general interefis of the United States, it was determined, that Delegates should be annually appointed, in fuch manner as the Legislature of each State should direct, to meet in Congress the first Monday in November of every year; with a power referved to each State to recall its delegates, or any of them, at any time within the year, and to fend others in their flead for the remainder of the year. No State was to be reprefented in Congress Ly less than two, or more than feven members; and no perion could be a delegate for more than three years, in any term of fix years, nor was any perfon, being a delegate, capable of holding any office under the United States, for which he, or any other for his benefit, fhould receive any falary, fees, or emolument of any kind. In determining queftions in Congress, each State was to have one vote. Every State was bound to abide by the determinations of Congress in all questions which were submitted to them by the confederation. The articles of confederation were to be invariably observed by every State, and the Union to be perpetual : nor was any alteration at any time afterwards to be made in any of the articles," unless fuch alterations were agreed to in Congress, and afterwards confirmed by the legislatures of every State. The articles of confederation were ratified by Congress, July, 9th, 1778. 14.115

These articles of confederation being found inadequate to the purposes of a federal government, for reasons hereafter mentioned, delegates were chosen in each of the United States, to meet and fix upon the necessfary amendments. They accordingly met in convention at Philadelphia, in the fummer of 1787, and agreed to propose the following constitution for the consideration of their constituents:

#### CONSTITUTION.

WE, the people of the United States, in order to form a more perfect union, cftablifh juftice, infure domeftic tranquility, provide for the common defence, promote the general welfare, and fecure the bleffings of liberty to ourfelves and our pofterity, do ordain and eftablifh, this Conftitution for the United States of America.

#### ARTICLE I.

SECT. 1. ALL legislative powers herein granted shall be vessed in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECT. 11. The Houfe of Representatives shall be composed of members choien every fecond year by the people of the fev ral frates, and the electors in each frate shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

No perfon shall be a representative who shall not have attained to the age of twenty-five years, and been feven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that flate in which he shall be cholon; .....

Reprefentatives and direct taxes, shall be apportioned among the feveral flates which may be included within this Union, according to their refpective numbers, which shall be determined by adding to the whole number of free perform, included those bound to fervice for a term of years, and excluding Indians not. taxed, three-fifths of all other perions. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in fuch manner as they shall by law direct. The number of reprefentatives shall not exceed one for every thirty thousand, but each state shall have at least one representative ; and until fuch enumeration shall be made, the state of New-Hampshire shall be entitled to choose three, Massachuletts eight, Rhode-Island and Providence Plantations one, Connecticut five, New-York fix, New-Jersey four, Pennfylvania eight, Delaware one, Maryland fix, Virginia ten, North-Carolina five, South-Carolina five, and Georgia three.

When vacancies happen in the representation of any flate, the executive authority thereof, shall issue writs of election to fill fuch yacancies.

The House of Representatives shall choose their Speaker and other officers; and shall have the fole power of impeachment.

SECT. 111. The Senate of the United States shall be composed of two fenators from each state, chosen by the legislature thereof for fix years; and each fenator shall have one vote.

Immediately after they shall be allembled, in confequence of the first election, they shall be divided as equally as may be into three classes. The feats of the fenators of the first class shall be vacated at the expiration of the fecond year; of the fecond clafs at the expiration of the fourth year; and of the third class at the expiration of the fixth year, fo that one third may be cholen every fecond year; and if vacancies happen by refignation, or otherwife, during the receis of the legislature of any state, the executive power thereof may make temporary appointments until the next meeting of the legislature, which shall then fill fuch vacancies.

No perfon shall be a fenator who shall not have attained to the age of thirty years, and been nine years a citizen of the United. States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

The vice-prefident of the United States shall be prefident of the fenate, but shall have no vote, unless they be equally divided.

The fenate shall choose their other officers, and also a prefident pro tempore, in the absence of the vice-prefident, or when he shall exercise the office of prefident of the United States.

The fense shall have the fole power to try all impeachments. When fitting for that purpole, they shall be on oath or affirmation. When the president of the United States is tried the chief justice shall preside: And no perfon shall be convicted, without the concurrence of two-thirds of the members present.

Judgment in cafes of impeachment, fhall not extend furtherthan to removal from office, and disqualification to hold and enjoy any office of honour, truft, or profit under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment according to law.

SECT. 1V. The times, places, and manner of holding elections for fenators and representatives, shall be subscribed in each state by the legislature thereof; but the Congress may at any time by law, make or alter such regulations, except as to the places of choosing fenators.

The Congress shall affemble at least once in every year, and, fuch meeting shall be on the first Monday in December, unless, they shall by law appoint a different day.

SECT. v. Each houfe shall be the judge of the elections, returns and qualifications of its own members, and a majority of, each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorised to compel the attendance of absent members, in such manner, and under such penalties as each house may provide.

Each house may determine the rules of its proceedings, punish its members for diforderly behaviour, and, with the concurrence of two thirds, expel a member.

Each house shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either house, on any question, shall at the desire of one sifth of those present, be entered on the journal.

Neither house, during the selfion of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be fitting.

SECT. VI. The Senators and Reprefentatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall, in all cases, except treason, folony, and breach of the peace, be priviledged from arrest during their attendance at the session of their respective houses, and in going to and returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place.

No fenator or representative shall during the time for which he was elected, he appointed to any civil office under the suthority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no perfon holding any office under the United States, shall be a member of either House during his continuance in office.

SECT. VII. All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments, as on other bills.

Every bill which shall have passed the House of Representatives and the Senate, shall, before it becomes a law, be prefented to the Prefident of the United States; if he approve, he shall fign it, but if not, he shall return it, with his objections, to that house in which it originated, who shall enter the objections at large on their journal, and proceed to re-confider it. If, after fuch reconfideration, two thirds of that house shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewife be re-confidered, and if approved by two thirds of that house, it shall become a law. But in all such cafes the votes of both houses shall be determined by yeas and nays, and the names of the perfons voting for and against the bill shall be entered on the journal of each house respectively. If any bill shall not be returned by the President within ten days, Sundays excepted, after it shall have been prefented to him, the fame shall be a law, in like manner as if he had figned it, unless the Congress, by their adjournment, prevent its return, in which . cafe it shall not be a law.

Every order, refolution, or vote, to which the concurrence of the Senate and Houfe of Reprefentatives may be neceffary (except on a queftion of adjournment) fhall be prefented to the Prefident of the United States; and before the fame fhall take effect, fhall be approved by him, or, being difapproved by him, fhall be repaffed by two thirds of the Senate and Houfe of Reprefentatives, according to the rules and limitations preferibed in the cafe of a bill.

To lay and collect taxes, duties, imposts, and excises; to pay the debts and provide for the common defence and general welfare of the United States; but all duties, impost, and excises shall be uniform throughout the United States;

To borrow money on the credit of the United States;

To regulate commerce with foreign nations, and among the feveral States, and with the Indian tribes;

To establish an uniform rule of naturalization, and uniform laws on the fubject of bankruptcles throughout the United States ;

To coin money, regulate the value thereof, and of foreign coin, and fix the flandard of weights and measures :

To provide for the punifiment of counterfeiting the fecurities and current coin of the United States;

To establish post offices and post roads ;

To promote the progress of feience and useful arts, by fecuring for limited times, to authors and inventors, the exclusive right to their respective writings and discoveries;

To conflitute tribunals inferior to the fupreme court;

To define and punish piracies and felonies committed on the high feas, and offences against the law of nations;

To declare war, grant letters of marque and reprifal, and make rules concerning captures on land and water;

To raife and support armies, but no appropriation of money to that use shall be for a longer term than two years;

To provide and maintain a navy;

To make rules for the government and regulation of the land and naval forces;

To provide for calling forth the militia to execute the laws of the union, suppress infurrections, and repel invasions;

To provide for organizing, arming, and difciplining the militia, and for governing luch part of them as may be employed in the fervice of the United States, referving to the States respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress;

To exercife exclusive legislation in all cafes whatloever, over fuch district, not exceeding ten miles square, as may by cellion of particular States, and the acceptance of Congress, become the scat of government of the United States; and to exercise like authority over all places purchased by the confent of the legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings:-And

To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this constitution in the government of the United States, or in any department or officer thereof.

SECT. 1X. The migration or importation of fuch perfons, as any of the States now exifting fhall think proper to admit, shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on fuch importation, not exceeding ten dollars for each perfon.

The privilege of the writ of habeas corpus shall not be suspended, unless when, in cases of rebellion or invasion, the public fafety may require it.

No bill of attainder or ex post facto law shall be passed.

No capitation, or other direct tax, shall be laid, unless in proportion to the census, or enumeration, herein before directed to be taken.

No tax or duty shall be laid on articles exported from any State.—No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another: nor shall vessels bound to or from one State, be obliged to enter, clear, or pay duties in another.

No money shall be drawn from the treasury, but in confequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

No title of nobility shall be granted by the United States.— And no perfon holding any office of profit or trust under them, shall, without the confent of Congress, accept of any present, emolument, office, or title of any kind whatever, from any king, prince, or foreign state.

SECT. x. No flate fhall enter into any treaty, alliance, or confederation; grant letters of marque and reprifal; coin money; emit bills of credit; make any thing but gold and filver coin a sender in payment of debts; pafs any bill of attainder, ex poft facto law, or law imparing the obligation of contracts, or grant any title of nobility.

No State shall, without the confent of the Congress, lay any imposts or duties on imports or exports, except what may be abfolutely necessary for executing its inspection laws; and the net produce of all duties and imposts, laid by any State on imports or exports, shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and controul of the Congress. No State shall, without the confent of Congress, lay any duty of tonnage, keep troops, or ships of war, in time of peace, enter into any engagement or compact with

another State, or with a foreign power, or engage in war, unlefs actually invaded, or in fuch imminent danger as will not admit of delay.

### ARTICLE H.

SECT. 1. The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the State may be entitled in the Congress; but no senator or representative, or perfon holding an office of trust or profit under the United States, shall be appointed an elector.

The electors shall meet in their respective States, and vote by ballot for two perfons, of whom one at leaft shall not be an inhabitant of the fame State with themselves. And they shall make a lift of all the perfons voted for, and of the number of votes for each; which lift they shall fign, certify and transmit, sealed, to the feat of the government of the United States, directed to The Prefident of the Senate fhall, the Prefident of the Senate. in the prefence of the Senate and Houfe of Reprefentatives, open all the certificates, and the votes shall then be counted. The perfon having the greatest number of votes shall be the President. if fuch number be a majority of the whole number of electors appointed; and if there be more than one who have fuch majority and have an equal number of votes, then the House of Represen. tatives shall immediately choose, by ballot, one of them for President; and if no perfon have a majority, then from the five higheft on the lift, the faid house shall in like manner choose the Prefident. But in choosing the President, the votes shall be taken by States, the reprefentations from each State having one vote; a quorum for this purpole shall confist of a member or members from two thirds of the States, and a majority of all the States shall be necessary to a choice. In every cale, after the choice of the Prefident, the perion having the greatest number of votes. of the electors shall be the Vice-President. But if there should remain two or more who have equal votes, the Senate fliall choose, from them by ballot the Vice-Prefident.

The Congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States. P or in B fe Co

No perfon, except a natural-born citizen, or a citizen of the United States' at the time of the adoption of this conflictution, shall be eligible to the office of Prefident; neither shall any per-

fon be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the faid office, the same shall devolve on the Vice-President, and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice-President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected.

The President shall, at stated times, receive for his services, a compensation, which shall neither be increased or diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

Before he enters on the execution of his office, he fhall take the following oath or affirmation :

"I do folemnly fwear (or affirm,) that I will faithfully execute "the office of Prefident of the United States, and will, to the beft "of my ability, preferve, protect, and defend the conflictution of "the United States,"

SECT. 2. The Prefident shall be commander in chief of the army and navy of the United States, and of the militia of the feveral States, when called into the actual fervice of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States, except in cafes of impeachment.

He fhall have power, by and with the advice and confent of the Senate, to make treaties, provided two thirds of the fenators prefent concur; and he fhall nominate, and by and with the advice and confent of the Senate fhall appoint ambaffadors, other public ministers and confuls, judges of the supreme court, and all other officers of the United States, whole appointments are not herein otherwise provided for, and which shall be established by law. But the Congress may by law welf the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

The prefident shall have power to fill up all vacancies that may happen during the recess of the senate, by granting commissions which shall expire at the end of their next session.

He shall from time to time give to the Congress information of the state of the union, and recommend to their confideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them, and in case of disgreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

SECT. 4. The Prefident, Vice-Prefident, and all eivil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and mildemeanors,

## ARTICLE III.

SECT. 1. The judicial power of the United States shall be vested in one supreme court, and in such inferior courts, as the Congress may from time to time ordain and establish. The judges, both of the supreme and inferior courts, shall hold their offices during good behaviour, and shall, at stated times, receive for their fervices, a compensation, which shall not be diminished during their continuance in office.

SECT. 2. The judicial power shall extend to all cafes, in law and equity, a rifing under this confliction, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cafes affecting ambaffadors, other public ministers, and confuls; to all cafes of admiralty and maritime jurifdiction : to controversies to which the United States shall be a party; to controversies between two or more States, between a State and citizens of another State, between citizens of different States, between citizens of the fame State chaiming lands under grants of different States, and between a State, or the citizens thereof, and foreign States, citizens, or subjects.

SECT. 3. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason, unless on the testimony of two witnesses to the same overt act, or on confession in open court.

The Congress shall have power to declarathe punishment of treason, but no attainder of treason shall work corruption of blood, ... or forfeiture, except during the life of the person attained.

1988 2 21

#### ARTICLE IV,

¥: 6

SECT. 1. Full faith and credit shall be given in each State to the public acts, records, and judicial proceedings of every other State. And the Congress may by general laws preferibe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

SECT. 2. The citizers of each State shall be entitled to all privileges and immunities of citizens in the feveral States.

A perfon charged in any State with treafon, felony, or other crime, who shall flee from juffice, and be found in another State, shall, on demand of the executive authority of the State from which he fled, be delivered up, to be removed to the State having jurifdiction of the crime,

No perfon held to fervice or labour in one State, under the laws thereof, efcaping into another, fhall, in confequence of any law or regulation therein, be difcharged from fuch fervice or labour, but fhall be delivered up on claim of the party to whom fuch fervice or labour may be due.

SECT. 3. New States may be admitted by the Congress into this union, but no new State shall be formed or crefied within the jurisdiction of any other State; nor any State be formed by the junction of two or more States, or parts of States, without the confent of the legislatures of the States concerned as well as of the Congres,

The Congreis shall have power to dispose of and make all need, ful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this constitution shall be so construed as to prejudice any claims of the United States, or of any particular State,

SECT, 4. The United States shall guarantee to every State in this union a republican form of government, and shall protect each of them against invasion; and on application of the legislature, or of the executive, when the legislature cannot be convened, against domestic violence.

### my vinor ft is all is an ARTICLE V. . " It

The Congress, whenever two thirds of both houses shall deem it necessary, shall propose amendments to this constitution, or, on the application of the legislatures of two thirds of the feveral States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this constitution, when ratified by the legislatures of three fourths of the several States, or by conventions in three fourths thereof, as the one or the other mode of ratification may be proposed by the Congress: provided, that no amendment which may be made prior to the year one thousand eight hundred and eight, shall in any manner affect the first and fourth clauses in the ninth fection of the first article; and that no State, without its consent, shall be deprived of its equal fuffrage in the Senate.

#### ARTICLE VI.

All debts contracted, and engagements entered into before the adoption of this conflictution, shall be as valid against the United States under this conflictution, as under the confederation.

This conflitution, and the laws of the United States, which fhall be made in purluance thereof; and all treaties made, or which fhall be made, under the authority of the United States, shall be the fupreme law of the land; and the judges in every State shall be bound thereby, any thing in the constitution or laws of any State to the contrary notwithstanding.

The Senators and Reprefentatives before mentioned, and the Members of the feveral State Legiflatures, and all Executive and Judicial Officers, both of the United States and of the feveral States, fhall be bound by oath or affirmation to support this conflictution; but no religious test shall ever be required as a qualification to any office or public trust under the United States,

#### ARTICLE VII.

The ratification of the conventions of nine States shall be fufficient for the establishment of this constitution, between the States fo ratifying the same.

DONE in Convention, by the unanimous confent of the States prefent, the feventeenth day of September, in the year of our Lord One thousand Seven Hundred and Eighty-feven, and of the Independence of the United States of America the Twelfib. In Witness whereof, we have hereunto fubferibed our names.

GEORGE WASHINGTON, Prefident. Signed alfo by all the Delegates which were prefent from twelve States. Atteft. WILLIAM JACKSON, Secretary.

#### In CONVENTION, Monday, September 17, 1787.

PRESENT,

The States of New Hamp/bire, Maffachufetts, Connedicut, Mr. Hamilton from New York, New Jerfey, Pennfylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia.

RESOLVED, The the preceding conflitution be laid before the United States in Congress allembled, and that it is the opinion of this Convention, that it fhould afterwards be submitted to a Convention of Delegates, chosen in each State by the people thereof, under the recommendation of its legislature, for their affent and ratification; and that each Convention affenting to, and ratifying the same, should give notice thereof to the United States, in Congress affembled.

RESOLVED, That it is the opinion of this Convention, that as foon as the conventions of nine States shall have ratified this constitution, the United States in Congress assembled should fix a day on which electors fhould be appointed by the States which fhall have ratified the fame, and a day on which the electors fhould affemble to vote for the Prefident, and the time and place for commencing proceedings under this Conftitution. That after fuch publication, the electors should be appointed, and the fenators and reprefentatives elected; that the electors should meet on the day fixed for the election of the prefident, and fhould tranfmit their votes certified, figned, fealed, and directed, as the constitution requires, to the Secretary of the United States in Congreis affembled ; that the fenators and reprefentatives should convene at the time and place affigned; that the fenators should appoint a prefident of the fenate, for the fole purpose of receiving, opening, and counting the votes for prefident; and that after he thall be chosen, the Congress, together with the president, should, without delay, proceed to execute this conftitution.

.By the unanimous order of the Convention, .

GEORGE WASHINGTON, Prefident WILLIAM JACKSON, Secretary.

#### In CONVENTION, September 17, 1787.

WE have now the honour to fubmit to the confideration of the United States in Congress assembled, that conflictution which has appeared to us the most adviseable.

The friends of our country have long feen and defired, that the power of making war, peace, and treaties, that of levying money and regulating commerce, and the correspondent executive and judicial authorities, should be fully and effectually vested in the

It is obvioully impracticable, in the federal government of these States, to fecure all rights of independent fovereignty to each, and yet provide for the interest and fafety of all. Individuals entering into fociety must give up a thare of liberty to preferve the reft. The magnitude of the facrifice must depend as well on fituation and circumstances, as on the object to be attained. It is at all times difficult to draw with precision the line between those rights which must be furrendered, and those which may be referved; and on the prefent occasion this difficulty was increased by a difference among the feveral States as to their fituation, extent, habits, and particular interests.

In all our deliberations on this fubject, we kept fleadily in our view, that which appears to us the greatell intereft of every true American, the coalolidation of our union, in which is involved our properity, felicity, fafety, perhaps our national existence. This important confideration, feriously and decoly imprefied on our minds, led each State in the convention to be lefs rigid on points of inferior magnitude, than might have been otherwise expected; and thus the confiduation, which we now prefent, is the refult of a fpirit of amity, and of that mutual deference and conceffion which the peculiarity of our political fituation rendered indifpentable.

That it will meet the full and entire approbation of every State is not perhaps to be expected : but each will doubtless confider, that had her interests been alone confulted, the confequences might have been particularly difagreeable or injurious to others : that it is liable to as few exceptions as could reasonably have been expected, we hope and believe : that it may promote the lasting welfare of that country fo dear to us all, and fecure her freedom and happines, which is our most ardent with.

With great respect, we have the honour to be, Sir, your Excellency's most obedient, and humble fervants,

GEORGE WASHINGTON, Prefident,

By unanimous order of the Convention. His Excellency the Prefident of the Congress,

The conventions of a number of the States, having at the time of their adopting the conftitution expressed a defire, in order to prevent misconstruction or abuse of its powers, that further declaratory and restrictive clauses should be added: and as extending the ground of public confidence in the government will best ensure the beneficent ends of its institution, it was

RESOLVED by the Senate and Houfe of Representatives of the United States of America in Congress affembled; two-thirds of both houses concurring, That the following articles be propoled to the legislatures of the feveral States, as amendments to the confliction of the United States, all or my of which articles, when restlied by three-fourths of the faid legislatures, to be valid to all interest and purposes, as part of the faid conflictution : viz.

Ann. I. After the first enumeration required by the first article of the conflictution, there shall be one representative for every thirty thousand, until the number shall amount to one undired; after which the propertion shall be for regulated by Congress, the there shall be not less than one hundred representatives, nor luss the one representatives for every forty thousand performs until the number of representatives shall amount to two hundred; after which the proportion shall be foregulated by Congress, that there shall not be less than two hundred representatives; nor more than one representative for every fifty thousand performs.

ART. H. No law varying the compensation for the fervices of the fenators and representatives shall take effect, until an election of representatives shall have intervened.

ART. III. Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of people peaceably to assemble, and to petition the government for a redress of grievances.

ART. IV. A well-regulated militia being neceffary to the fecurity of a free ftate, the right of the people to keep and bear arms fhall not be infringed.

ART. V. No foldier shall in time of peace be quartered in any house without the confent of the owner, nor in time of war, but in a manner to be prescribed by law.

ART. VI. The right of the people to be fecure in their perfons, houses, papers, and effects, against unreasonable fearches and feizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly, describing the place to be fearched, and the perfons or things to be feized.

Ant. VII. No perfon fhail be held to anfiver for a capital, or otherwife infamous crime, unleft on a prefentment or indictment of a grand jury, exception cafes arising in the land or naval forces, or in the militia when in school fervice, in time of war or public danger; nor fhall be compelled in any oriminal cafe to be a witnefs sgainft himfelf, nor be deprived of life, liberty, or property, without dne process of law; nor fhall private property be taken for public of without; juft compendation;

324

ART. VIII. In all criminal profecutions the accufed shall enjoy the right to a speedy and public trial, by an impartial Jury of the State and district wherein the crime shall, have been committed, which district shall have been previously alcostained by law, and to be informed of the nature and cause of the seculation 1 to be, confronted with the witnesses sgainst him; to have compliancy process for obtaining witnesses in his favour 1, and to have the afsistance in counsel for his defence.

ART. IX. In fuits at common law, where the value in exercovery fhall exceed twenty dollars, the sight of trial by jury fhall be preferved, and no fact, tried by a pury, fhall be cherwife reextinited in any court of the United States, then according to the rules of the common law.

An T. C. Exceffive bail Phall nos be required, nor exceffive fines imposed, nor cruel and unufuil punifiments inflicted,

Asr. XI. The construction in the conflictation, of vertein rights, fhall not be confirued to deny or disparage others retained. by the people.

ART. XII, The powers not delegated to the United States by the confliction, nor prohibited by it to the States, are referved to the States refpectively, or to the people.

The following States have ratified all the foregoing articles of amendment to the confliction of the United States, viz. Maryland, North Carolina, South Carolina, New-York, Virginia, and Vermont. New Hampshire, New Jersey, and Pennsylvania reject the second article; and Delaware rejects the first article. No official returns, to our knowledge, have been made from the other States.

AGAINST this conflictution, thus ratified, organized and effablifhed, objections may no doubt be urged, and defects pointed out; it may be faid that it contains no declaration of rights, and that the laws of the general government being paramount to the laws and conflictutions of the feveral States, the declarations of rights in the feveral flate conflictutions are no fecurity—nor are the people fecured even in the enjoyment of the benefits of the common law.

Owing to the fmall number of members in the house of reprefentatives, there is not the fubstance, but the shadow only of representation, which can never produce proper information in the, legislature, or infpire confidence in the people—the laws will therefore be generally made by men little concerned in, and unacquainted with, their effects and confequences.

The President of the United States has the unrestrained power of granting pardon for treasons, which may be sometimes exercifed to fereen from punifhment, those whom he had fecretly infligated to commit the crime, and thereby prevent the difcovery. of his own guilt.

By declaring all treaties fupreme have of the line tive and fenate have, in many cafes, an exclusion power of the tion, which might have been avoided by respect to treaties, and requiring the diant of the House of Re-presentatives, where it could be done with the ty.

Under their own construction of the spectral plause at the end of the summarted powers, the Courses my court monopolities in trade and commerce constitute new crimes mind unusual and fevere punifhments, and extend their power as far as they fhail think proper-to that the State Legislatures have no lecurity for the powers now prefumed to remain to them, or the people for their rights.

There is no declaration for preferving the liberty of the ones, the trial by jury in civil causes, nor against the danger of funding armies in time of peace.

Wr admit thele objections in part to be just, and view them as unanswerable: but we confider them as deducting but little from the beauty and order of the whole fystem; they may all be corrected by the application of the fame principles on which the Conflitution is founded, and if all circumftances are confidered we shall, perhaps, rather be aftonished that its defects are so few and of fo little importance.

To form a good fystem of government, for a fingle city or state, however limited as to territory, or inconfiderable as to numbers, has been thought to require the firongest efforts of human genius. With what confcious diffidence, then, must the members of the convention have revolved in their minds, the immense undertaking which was before them. Their views could not be confined to a fmall or a fingle community, but were expanded to a great number of flates; feveral of which contain an extent of territory, and refources of population, equal to those of fome of the most respectable kingdoms on this fide of the Atlantic. Nor were even these the only objects to be comprehended within their deliberations. Numerous states yet unformed : Myriads of the human race, who will inhabit regions hitherto uncultivated, were to be affected by the refult of their proceedings. It was neceffary, therefore, to form their calculations, on a scale commenfurate to fo large a portion of the globe.

Thus a very important difficulty arole from comparing the extent of the country to be governed, with the kind of govern-

power

It was

le com-

the ex-

govern-

ment which it would be proper to establish in it. It has been an opinion, countenanced by high authority, " that the natural property of small flates is to be governed as a republic; of midling ones, to be fubject to a monarch; and of large empires, to be fwayed by a defpotic prince; and that the confequence is that, in order to preferve the principles of the eftablished government, the fate must be supported in the extent it has acquired ; and that the fpirit of the flate will alter in proportion as it extends or contracts its limits." This opinion feems to be fupported rather than contradicat, by the history of the governments in the old world. Here then the difficulty appeared in full view. On one find, the United States containing an immenfe extent of seritory, according to the foregoing opinion, a delpotic government was belt adapted to that extent. On the other hand, it was well known, that however the citizens of the United States might, with pleasure submit to the legitimate reftraints of a republican conflitution, they would reject with indignation, the fetters of defpotifm, What then was to be done? The idea of a confederate republic prefented itfelf. A kind of constitution which has been thought to have " all the internal advantages of a republican, together with the external force of a monarchial government."

Its defcription is, " a convention, by which feveral flates agree to become members of a larger one, which they intend to effablifh. It is a kind of affemblage of focietics, that conflitute a new one, capable of increasing by means of farther affociation t." The explanding quality of fuch a government is 'peculiarly fitted for the United States, the greatest part of whole territory is yet uncultivated.

But while this form of government enabled them to furmount the difficulty laft mentioned, it conducted them to another. It left them almost without precedent or guide; and confequently without the benefit of that instruction, which, in many cales may be derived from the constitution, history and experience of other nations. Several affociations have frequently been called by the name of confederate states, which have not, in propriety of language, deferved it. The Swifs Cantons are connected only by alliances. The United Netherlands are indeed an affemblage of focieties; but this affemblage constitutes no new one; and therefore, it does not correspond with the full definition of a confederate republic. The Germanic body is composed of fuch difproportionate and difcordant materials, and its structure is fo in-

tricate and complex, that little uleful knowledge could be drawn Ancient hiftory difclofes, and barely difclofes, to our from it. view, fome confederate republics-the Achien league-the Lycian confederacy, and the Amphictionic council. But the facts recorded concerning their conflictutions are fo few and general, and their hiftories are fo unmarked and defective, that no fatisfactory information can be collected from them concerning meny particular circumftances ; from an accurate difernment and comparifon of which alone, legitimate and practical inferences can be made from one conflicution to another. Befides, the fituation and dimensions of those confederacies, and the flate of fociety, manners and habits in them, were to different from those of the United States, that the most correct descriptions could have supplied but a very, fmall fund of applicable remarks. Thus, in forming this fystem, they were deprived of many dvantages, which the hiftory and experience of other ages and other countries would, in other cafes, have afforded then.

We may add, in this place, that the fcience of government itfelf, feems yet to be alutoft in its flate of infancy. Governments, in general, have been the refult of force, of fraud, and of accident. After a period of fix thousand years has elapled, fince the creation, the United States exhibit to the world, the first inflance, as far as we can learn, of a nation, unattacked by external force, unconvulled by domefic infurrections, affembling voluntarily, deliberating fully, and deciding calmly, concerning that fyftem of government, under which they would wish that they and their posterity should live. The ancients, fo enlightened on other fubjects, were very uninformed with regard to this. They feem fcarcely to have had any idea of any other kind of governments, than the three fimple forms, defigned by the epithets, monarchial, ariftocratical and democratical. Much and pleafing ingenuity has been exerted, in modern times, in drawing entertaining parallels between fome of the ancient conftitutions and fome of the mixed governments, that have fince existed in Europe. But on firid examination, the inftances of refemblance will be found to be few and weak; to be fuggested by the improvements, which, in subfequent ages, have been made in government, and not to be drawn immediately from the ancient conflictutions themfelves, as they were intended and underftood by those who framed them. One thing is very certain, that the doctrine of representation in government was altogether unknown to the ancients. The knowledge and practice of which, is effential to every fystem, that can poffefs the qualities of freedom, wifdom and energy.

Reprefentation is the chain of communication between the people, and these, to whom they have committed the exercise of the powers of government. This chain may consist of one or more links: but in all cases it should be fufficiently firong and difcernable.

To be left without guide or precedent was not the only difficulty, in which the convention were involved, by proposing to their conflituents a plan of a confederate republic. They found shemfelves embarrafied with another, of peculiar delicacy and importance; I mean that of drawing a proper line betwee a the nasional government, and the governments of the feveral lines. It was caly to difcover a proper and fatisfactory principle on the fubject. Whatever object of government is confined in its operation and effects within the bounds of a particut new, mould be confidered as belonging to the government of that that whatever object of government extends, in its operation or effects, be-yend the bounds of a particular flate, fimuld be confidered as belonging to the government of the United States ; but though this principle is found and fatisfactory, its application to persicular cafes would be accompanied with much difficulty; because in its application, room must be allowed for great diferetionary latitude of construction of the principle. In order to lester, of remove the difficulty, ariling from diferetionary construction on the jed, an enumeration of particular inftances, in which the option Intici tion of the principle ought to take place, has been attempt with much industry and care. It is only in mathematical science that a line can be defcribed with mathematical precision. But upon the fridest investigation, the enumeration will be for det to be lafe and unexceptionable; and accurate too in as great a degree accuracy can be expected, in a fubject of this nature.

After all, it was neceffary, that, on a fubject fo peculiarly delicate as this, much prudence, much candour, much moderation and much liberality, fhould be exercised and displayed, both by the federal government and by the governments of the several flates-And it is to be hoped, that these virtues will continue to be exercised and displayed, when we confider, that the powers of the federal government and those of the flate governments are drawn from fources equally pure. If a difference can be discovered between them, it is in favor of the federal government, because that government is founded on the representation of the whole union; whereas the government of any particular flate is founded only on the representation of a part, inconfiderable when compared with the whole. It is not more reasonable to suppose, that the counfels of the whole will embrace the interest of every part;

230

Having enumerated fome of the difficulties, which the convention were obliged to encounter in the courfe of their proceedings, let us view the end, which they proposed to accomplish.

In forming this fystem, it was proper to give minute attention to the interest of all the parts; but there was a duty of still higher import—to feel and to shew a predominating regard to the fuperior interests of the whole. If this great principle had not prevailed, the plan before us would never have made its appearance.

The sim of the convention, was to form a fystem of good and efficient government on the more extensive scale of the United States. In this, and in every other instance, the work should be judged with the same spirit, with which it was performed. A principle of duty as well as candour demands this.

It has been remarked, that civil government is neceffary to the perfection of fociety: We remark that civil liberty is neceffary to the perfection of civil government, Civil liberty is natural liberty itfelf, divefted only of that part, which, placed in the government, produces more good and happiness to the community, than if it had remained in the individual. Hence it follows, that civil liberty, while it refigns a part of natural liberty, retains the free and generous exercise of all the human faculties, so far as it is compatible with the public welfare.

In confidering and developing the nature and end of the fyf. tem before us, it is neceffary to mention another kind of liberty. which may be diffinguished by the appellation of federal liberty, When a fingle government is inftituted, the individuals, of which it is composed, furrender to it a part of their natural independence, which they before enjoyed as men. When a confederate republic is inftituted, the communities, of which it is compoled, furrender to it a part of their political independence, which they before enjoyed as States. The principles, which directed, in the former cafe, what part of the natural liberty of the man ought to be given up, and what part ought to be retained, will give fimilar directions in the latter cafe. The flates should refign, to the national government, that part, and that part only, of their political liberty, which placed in that government, will produce more good to the whole, than if it had remained in the feveral states. While they refign this part of their political liberty, they retain the free and generous exercise of all their other faculties as states, so far as it is compatible with the welfare of the general and fuperintending confederacy.

terests of

cccdings,

attention Itill highto the fue had not s appear-

ary to the neceffary is natural in the goommunity, lows, that retains the fo far as it

of the fyf. of liberty. ral liberty, of which independ. onfederate composed, hich they ed, in the h ought to give fimign, to the their poli-1 produce he feveral al liberty, ther faculof the geSince *flates* as well as *citizens* are reprefented in the conftitution before us, and form the objects on which that conftitution is proposed to operate, it was neceffary to notice and define *federal* as well as *civil* liberty.

We now fee the great end which they propoled to accomplifh. It use to frame, for their conflituents, one federal and national conflictution—a conflictution, that would produce the advantages of good, and prevent the inconveniences of bad government—a conflictution, whole beneficence and energy would pervade the whole union ; and bind and embrace the interests of every part —a conflictution, that would enfure peace, freedom and happines, to the flates and people of America.

We are now naturally led to examine the means, by which they proposed to accomplish this end. But previously to our entering upon it, it will not be improper to state fome general and leading principles of government, which will receive particular application in the course of our investigations.

There neceffarily exifts in every government, a power from which there is no appeal ; and which, for that reafon, may be termed fupreme, abfolute and uncontroulable. Where does this power refide ? To this queftion, writers on different governments will give different answers. According to Blackstone, in this country, this power is lodged in the British parliament, and the parliament may alter the from of government; and its power is abfolute without control. The idea of a conflictution, limiting and fuperintending the operations of legislative authority, feems not to have been accurately understood in this kingdom. There are, at least no traces of practice, conformable to fuch a principle. The controul the power and conduct of the legislature by an over-railing conflictution, was all improvement in the feience and practice of government, referved to the American flates.

As the fuperior to their confidence, is much greater; for the people are fuperior to their confitutions. Indeed the duperiority, in this laft inftance, is much greater; for the people policies, over their confitutions.

The confequence is, that the people may change the conflitutions whenever, and however they pleafe. This is a right, of which no politive inflitution can ever deprive them.

"Thefe important truths, are far from being merely speculative : To their operation, we are to afcribe the fcene, hitherto unparalleled, which America now exhibits to the world-a gentle, a peaceful, a voluntary and a deliberate transition from one conftitution of government to another. In other parts of the world, the idea of revolutions in government is, by a mournful and indiffoluble affociation, connected with the idea of wars, and all the calamities attendant on wars. But happy experience teaches us to view fach revolutions in a very different light-to confider them only as progressive steps in improving the knowledge of government, and increasing the happinels of fociety and mankind, With filent pleasure and admiration we view the force and prevalence, of this fentiment throughout the United States, that the fupreme power relides in the people; and that they never can part with it. It may be called the Panacea in politics. There can be no diforder in the community but may here receive radical cure. If the error be in the legislature, it may be corrected by the conftitution : If in the conftitution, it may be corrected by the people. There is a remedy, therefore, for every diftemper in government, if the people are not wanting to themfelves. For a people wanting to themfelves, there is no minedy : From their power, there is no appeal : To their error, there is no superior principle of correction.

The leading principle in politics, and that which vervades the American constitutions, is, that the supreme power refides in the people; their conftitution opens with a folema and practical recognition of this principle, "WE, THE PEOPLE OF THE UNI-TED STATES, in order to form a more perfect union, chablin justice, &c. DO ORDAIN AND ESTABLISH this condition, for the United States of America." It is announced in shair name, it receives its political existence from their authorityordain and establish : What is the necessary confequence ?.... ho ordain and establish, have the power, if they the er, to repeal and annul.-A proper attention to this principle may fatisfy the minds of fome; who contend for the necessary of and h rights.

Its establishment, I apprehend, has more force, this a solume written on the subject—it renders this truth evident, that the people have a right to do what they please, with regard to the government.

Therefore, even in a fingle government, if the powers of the people reft on the fame establishment, as is expressed in this conflictuition, a bill of rights is by no means a necessary measure. In a government posselled of cnumerated powers, such a measure would be not only unnecessary, but preposterous and dangerous:

清潔林花

whence come this notion, that in the United States there is no fecurity wihout a bill of rights ? Have the citizens of South Carolina no fecurity for their liberties? they have no bill of rights. Are the citizens on the eaftern fide of the Delaware lefs free, or lefs fecured in their liberties, than those on the western fide ? The State of New-Jerley has no bill of rights,-The State of New-York has no bill of rights .- The flates of Connecticut and Rhodo-Island have no bill of rights, I know not whether I have exactly enumerated the States who have thought it unnecessary to add a bill of rights to their conftitutions; but this enumeration will ferve to fhew by experience, as well as principle, that even in fingle governments, a bill of rights is not an effential or necessary measure .-- But in a government, confisting of enumerated powers, fuch as is adopted by the United States, a bill of rights would not only be unneceffary, but, in my humble judgment, highly imprudent. In all focieties, there are many powers and rights, which cannot be particularly enumerated. A bill of rights annexed to a "out itution, is an enumeration of the powers referved. If we atte." wenumeration, every thing that is not enumerated is prefusied to be given. The confequence is, that an imperfect enumeration would throw all implied power into the scale of the government-; and the rights of the people would be rendered incomplete. On the other hand, an imperfect enumeration of the powers of government, referves all implied power to the people ; and by that means the conflictution becomes incomplete; but of the two, it is much fafer to run the rifk on the fide of the conflitution ; for an omifion in the enumeration of the powers of government, is neither fo dangerous nor important, as an omifiion in the enumeration of the rights of the people.

In this constitution, the citizens of the United States appear dilpenting a part of their original power, in what manner and in what proportion they think fit. They never part with the whole ; and they retain the right of re-calling what they part with. When therefore, they poffels the fee-fimple of authority, why fhould they have recourse to the minute and subordinate remedies, which can be neceffary only to those, who pass the fee, and referve only a rent charge?

To every suggestion concerning a bill of rights, the citizens of the United States may always fay, WE RESERVE THE RIGHT TO DO WHAT WE FLEASE.

This observation naturally leads to a more particular confider. ation of the government before us. In order to give permanency, stability and fecurity to any government, it is of effential importance, that its legislature should be restrained; that there should

ALL A HIH STATES

not only be, what we call a *paffive*, but an *adioe* power over it s for of all kinds of defpotifm, this is the most dreadful, and the most difficult to be corrected.

It is therefore proper to have efficient reftraints upon the legiflative body. These reftraints arise from different sources: In the American confliction they are produced in a very confiderable degree, by a division of the power in the legislative body itfelf. Under this fystem, they may arise likewise from the interference of those officers, who are introduced into the executive and judicial departments. They may spring also from another fource; the election by the people; and finally, under this conflitution, they may proceed from the great and last refort—from the PEOPLE themselves.

In order to fecure the prefident from any dependence upon the legiflature, as to his falary, it is provided, that he fhall, at flated times, neceive for his fervices, a compensation that fhall neither be increased nor diminished, during the period for which he shall have been elected, and that he shall not receive, within that period, any other emolument from the United States, or any of them individually.

To fecure to the judges independence, it is ordered that they fhall receive for their fervices, a compensation which shall not be diminished during their continuance in office. The Congress may be restrained, by the election of its constituent parts. If a legislature should make a law contrary to the constitution, or eppressive to the people, they have in it their power, every second year, in one branch, and every fixth year in the other, to displace the men, who act thus inconsistent with their duty; and if this is not sufficient, they have still a farther power; they may assume into their own hands, the alteration of the constitution itselfthey may revoke the lease, when the conditions are broken by the tenant.

There is fill a further reftraint upon the legiflature—the qualified negative of the prefident. This will be attended with very important advantages, for the fecurity and happinels of the people of the United States. The prefident will notbe a ftranger to the country, to its laws, or its wiftes. He will, under this conflitution, be placed in office as the prefident of the whole union, and be cholen in fuch a manner, that he may juftly be ftiled THS MAN OF THE PROFIX; being elected by the different parts of the United States, he will confider himfelf as not particularly intereffed for any one of them, but will watch over the whole with paternal care and affection. This will be his natural conduct, to recommend himfelf to those who placed him in that high chair, and it is a very important advantage, that fuch a man must have every law prefented to him, before it can become binding upon the

29

and the

the legif. ces: In confiderbody ithe interxecutive another is conftifrom the

upon the at flated neither he fhall hat periof them

hat they ill not be grefs may a. If a h, or opy fecond difplace if this is y affume itfelfen by the

he quali. ith very we people ter to the conftitunion, and THE MAN is of the intereftwith pa\_ ict, to rehair, and ve every upon the United States. He will have before him the fulleft information of their fituation, he will avail himfelf not only of records and official communications, foreign and domeftic, but he will have also the advice of the executive officers in the different departments of the general government.

235

If in confequence of this information and advice, he exercise the authority given to him, the effect will not be loft-he returns his objections, together with the bill, and unless two thirds of both branches of the legiflature are now found to approve it, it does not become a law. But even if his objections do not prevent its paf fing into a law, they will not be useles; they will be kept toge. ther with the law, and, in the archieves of congress, will be valuable and practical materials, to form the minds of posterity for legislation-if it is found that the law operates inconveniently, or oppreflively, the people may discover in the prefident's objections, the fource of that inconvenience or oppression. Further, when objections fhall have been made, it is provided, in order to fecure the greateft degree of caution and responsibility, that the votes of both houses shall be determined by yeas and nays, and the names of the perfons, voting for and against the bill, shall be entered in the journal of each house respectively. Thus much with regard to the Constitution itself, the distribution of the legislative authority, and the restraints under which it is exercised.

On the whole, though there are fome parts of the constitution which we cannot approve ; and which, no doubt, by the powers vefted in congress, and the legislatures of the different states, for that purpose, will in due time be altered or corrected, as prudence shall dictate ; yet there is much, that entitles it to the respect of every friend to the freedom and happiness of mankind :---the peo. ple retain the supreme power, and exercise it by representation :--the legiflative, executive and judicial powers, are kept independent and diftinct from each other ;- the executive power, is fo fettled as to fecure vIGOUR and ENERGY with ACTUAL RESPONSIBI-LITY, in the perfon of the Prefident, who fo far from being abovethe laws, is amenable to them, in his private character, of a citizen. The line is drawn with accuracy between the powers of the general government, and the government of the particular states, fo that no diffrust can arise to diffurb the harmony of their union while the powers of both DERIVED BY REPRESENTATION FROM THE PEOPLE, must effectually prevent any difageement or difcontent from taking place.-Thus a principle of democracy being carried into every part of the constitution, and representation, and direct taxation, going hand in hand, the prosperity of the country and the stability of its government, will keep pace with cach other. HH B

We cannot take leave of this fubject, better than in the energetie and elegant language of Dr. Ramfey, with whole fentiments we agree, and with whole wifnes we unite.

" Citizens of the United States ! you have a well-balanced conflitution established by general confent, which is an improvement on all republican forms of government heretofore established. It posses the freedom and independence of a popular assembly. acquainted with the wants and wifnes of the people, but without the capacity of doing those mischiefs which refult from uncon. trouled power in one affembly. The end and object of it is public good. If you are not happy it will be your own fault. No knave or fool can plead an hereditary right to fport with your property or your liberties. Your laws and your law givers must all proceed from yourfelves. You have the experience of nearly fix thoufand years, to point out the rocks on which former republics have been dashed to pieces. Learn wildom from their misfortunes, Cultivate justice both public and private, No government will or can endure, which does not protect the rights of its fubjects. Unless such efficient regulations are adopted, as will secure property as well as liberty, one revolution will follow another. Anarchy, monarchy, or despotism, will be the confequence. By just laws and the faithful execution of them, public and private credit will be reftored, and the reftoration of credit will be a mine of wealth to this young country. It will make a fund for agriculture, commerce, and manufactures, which will foon enable the United States to claim an exalted rank among the nations of the. earth. Such are the refources of your country, and fo trifling are your debts, compared with your refources, that proper fystems, wifely planned and faithfully executed, will foon fill you; extenfive territory with inhabitants, and give you the command of fuch ample capitals, as will enable you to run the career of national greatnels, with advantages equal to the oldeft kingdoms of Europe, What they have been flowly growing to, in the course of near two thousand years, you may hope to equal within one century, If you continue under one government, built on the folid founda. tions of public juffice, and public virtue, there is no point of national greatness to which you may not aspire with a well-founded hope of speedily attaining it. Cherish and support a reverence for government, and cultivate an union between the East and South, the Atlant and the Miffiffippi, Let the greateft good of the greatest number, be the pole-star of your public and private deliberations. Shun wars, they beget debt, add to the common vices of mankind, and produce others, which are almost peculiar to themselves. Agriculture, manufactures, and commerce, are your proper bulinels, Seek not to enlarge your territory by conqueft; it is already fufficiently extensive. You have ample scope

for the employment of your most active minds, in promoting your own domestic happines. Maintain your own rights, and let all others remain in quiet possession of theirs. Avoid discord, faction, luxury, and the other vices which have been the bane of commonwealths. Cherish and reward the philosophers, the statesemen, and the patriots, who devote their talents and time, at the expence of their private interests, to the toils of enlightening and directing their fellow citizens, and thereby refcue citizens and rulers of republics from the comment, and too often merited, charge of ingratitude, Practi indu. frugality, temper moderation, and the whole lovely train or republican virtues. Banish from your borders the liquid fire of the West-Indies, which, while it entails poverty and difeafe, prevents industry, and foments private quarrels. Venerate the plough, the hoe, and all the implements of agriculture. Honour the men, who with their own hands maintain their families, and raife up children who are inured to toil, and capable of defending their country. Reckon the necessity of labour not among the curfes, but the bleffings of life. Your towns will probably ere long be engulphed in luxury and effeminacy. If your liberties and future prospects depended on them, your career of liberty would probably be fhort; but a great majority of your country, must, and will be yeomanry, who have no other dependence than on Almighty God for his usual bleffing on their daily labour. From the great excess of the number of fuch independent farmers in these States, over and above all other classes of inhabitants, the long continuance of your liberties may be reafonably prefumed,"

"Let the haples African fleep undisturbed on his native shore and give over wifhing for the extermination of the ancient proprietors of this land, Universal justice is universal interest. The most enlarged happiness of one people, by no means requires the degradation or destruction of another. It would be more glorious to civilife one tribe of favages, than to exterminate or expel a fcore There is territory enough for them and for you. Instead of invading their rights, promote their happiness, and give them no reason to curse the folly of their fathers, who suffered your's to fit down on a foil which the common Parent of us both had previoufly affigned to them: but above all, be particularly careful that your own descendents do not degenerate into favages. Diffuse the means of education, and particularly of religious instruction, through your remotest settlements. To this end, support and strengthen the hands of your public teachers. Let your voluntary contributions confute the difhonourable polition, that religion cannot be supported but by compulsory establishments. Remember that there can be no political happiness without liberty; that there

\$37

can be no liberty a hout morality : and that there can be no morelity without religion."

"It is now your turn to figure on the face of the earth, and in the annals of the world. You posses a country which in lefs than a century will probably contain fifty millions of inhabitants. You have, with a great expense of blood and treasure, refcued your. felves and your posterity from the dominion of Europe. Perfect the good work you have begun, by forming such arrangements and institutions, as bid fair for ensuring, to the prefent and future generations, the blefsings for which you have successfully contended."

"May the Almighty Ruler of the Universe, who has raised you to independence, and given you a place among the nations of the earth, make the American Revolution an era in the history of the world, remarkable for the progeflive increase of human happiness!"

Having confidered the Conftitution in its theory, it now remains ' to contemplate it as reduced to practice; or rather the government arifing out of it : and here the United States prefent to our view, a picture very different, from any we behold in the various countries of Europe.

In the United States we fee the people raifed to their due importance, reforting to first principles, afferting their own independance and forming a government for themselves; and when eleven years experience had convinced them of its infufficiency to fecure the important ends for which they defigned it, we again behold them laying it alide, and discarding the contemptible arguments that would render innovation formidable, railing a new and more perfect fystem in its place, publishing it in their own name and giving it energy and effect, by their own willing fubmillion to the laws and regulations it enjoins-here then we contemplate the government fpringing from its right fource; originating with the people, and exercised under the guidance of a constitution formed agreeable to their fovereign will, On the contrary, if we carefully examine the Conftitutions, or what are fo called, in Europe, we shall find that they have had their origin in governments, prior formed by conquest and usurpation; and that what appearance of order they have affumed, what portion the people poffers in them, or what provision they make for the fecurity of their liberties or property, have all been gradually procured by the people, ftruggling against the severity and oppression of the feudal system. Such was the origin of our Magna Charta, Habeas Corpus Act, and Bill of Rights, and fuch has been the origin of the fmall portion of liberty, which the other European nations posses. It is to America we must look for the first and bright example, of a nation

fitting down in peace, caufing a defective government to pass away without a groan, and crefting another in its stead more benechial, and more congenial with its wishes.

The goodness of a government, must be estimated by the share which the people at large have in it, the benefits they derive from it, and the small portion of individual liberty and property furrendered for its support. If we apply this criterion to the go. vernment of the American empire, we shall find that it has a strong claim to our approbation, the whole of it may justly be confidered as in the hands of the people. Its beneficial influence, may be fairly concluded from the rising importance, and rapid improvements of the United States; and the small portion of property furrendered for its support will appear evident, if we confider the following estimates laid before the House of Representatives.

#### EXPENDITURE.

Estimate of the Expenditure for the CIVIL LIST of the United States, together with the Incidental and Contingent Expences of the Several Dopartments and Offices, for the Year 1794.

#### PRESIDENTS.

For compensation to the President of the United States 25,000 Ditto to the Vice-Prefident 5,000 30,000 JUDGES. Compensation to the Chief Justice 4,000 Ditto, to five affociate Judges, at 3,500 dollars per annum each 17,500 Ditto, to the Judges of the following districts, viz. remaining quarters is not computed as high as the of the two firft, becaufe circumflances and information render it probable, that it will be lefs, and that the drawbacks payable within the laft, will be more confiderable than those payable within the firft half year. The afcertained product of 1792, the rates of duty being the fame, is deemed the fafeft guide. Some favings upon the fum appropriated for different purpofes may render this effimated furplus more confiderable than is flated: but while the extent of these favings cannot be deemed very great, their amount (these purposes not being yet fully fatisfied) cannot be pronounced. If the product of the year 1794, fhould equal that of the prefent year, the fund will be more than fufficient for the appropriation proposed to be charged upon it. If this cannot entirely be counted upon, it is hoped that a reliance may be entertained of its proving at leaft adequate.

Abstract of the New Amount of Duties on Imports and Tonnage, which have accrued in the United States during the first and fecond Quarters of the Year 1793.

counts between the United and individual States, in favour of certain ftates. The annual fum of intereft upon those balances, is 1 28,978 dollars and 8 cents, computed according to the proportions by which intereft is adjusted on the assumed debt. If Congress shall think proper to make the requifite provision out of the duties on imports and tonnage, it will be necessary to its efficacy, that a priority be fecured to it r an object which will require attention in making the appropriations above contemplated. It is confidered, that there will be still no hazard of deficiency; and if there should be any, it would feem most proper, that it should fall on the appropriation for the current fervice, to be supplied, till further provision can be made, by a loan, b plant I tradition

A provision for paying, during the year 1794, interest on such part of the domestic debt, as may remain unfubscribed, will come under a like confideration.

It appears proper, likewife, to notice, that no provision has yet been made, for paying the yearly intereft, on the two million loan had of the bank of the United States. The bank has hitherto difcounted the amount of that interest out of its dividends on the flock belonging to the United States, but for want of an approbation the business cannot receive a regular adjustment at the treasury. An appropriation of fo much of the dividends as may be necessary towards the payment of the interest will obviate the difficulty .- The fecond instalment of that loan has been comprised in the foregoing view; because it is imagined that Congress may judge it expedient to provide for its paymentout of the foreign fund, as they did with regard to the first instalment. The statement herewith also communicated, exhibits the prefent fituation of that fund, fhewing a balance unexpended of five hundred and feventy-feven thousand, two hundred and eighty-four dollars, and fifty-fix cents, liable to the observation at the bottom thereof.

000

But in judging of the expediency of making the provision intimated, it is necessary to take into confideration, that on the first of June 1794, a fecond instalment of 1,000,000 of florins, of the capital of the Dutch debt, became payable; for which, by the last advices, it appeared problematical, owing to the situation of the affairs of Europe, whether provision could be made by a further loan. This circumstance is an obstacle, to the immediate application of the refidue of the foreign fund according to its deftination-that being the only refource yet provided, out of which the instalment of the Dutch debt can be paid, if a farther loan cannot be procured in time. More decifive information on the point may every day be expected,

कि में कि मार्ट के मा

In the maan time, no inconvenience can enfue from applying a portion of that refidue to the payment of the instalment of the two million loan-the degree in which it will intrench upon the means in possession for fatisfying the enfuing instalment of the Dutch debt, being cafily fusceptible of a substitute. And there will be time enough for providing one, if a loan fhould not be obtained.

By an arrangement made with the bank, the interest of the first 'instalment cealed the last of December 1792, though the payment could not legally be confummated till July following.

A provision for payment on the fecond instalment at the end of the prefent year will continue this defirable courfe, and work a public faving; though, owing to the long credits given for the duties, anticipations of their proceeds, by temporary loans, may be necessary to the being prepared for the exigences of the current fervice.

Thus the prefent eligible fituation of the United States, compared to that of Great Britain, or Europe at large, as it respects taxes or contributions, for the payment of all public charges, appears manifeft.

\* The precife account of fums thus paid for intereft, cannot be definitively pronounced till the completion of the fettlement of foreign accounts, now going on at the treafury.

260

1 41 2

67

In the United States, the average proportion of his earnings, which each citizen pays per annum, for the fupport of the civil, military, and naval eftablishments, and for the discharge of the interest of the public debts of his country, &c. is about one dollar and a quarter. In Great Britain, the taxes of these objects, on an average, amount to above two guineas per annum to each perion. Hence it appears, that in the United States they enjoy the bleffings of a free government and mild laws, of personal ligerty, and protection of property, for nearly one tenth part of the fum which is paid in England for the purchase of fimilar benefits, too generally without the attainment of them. The American citizen likewise has the prospect of the taxes, which he pays, small as they are; being letsened, while the subjects of all the old European governments can have no expectation but of their burdens being increased.

#### SOCIETY OF THE CINCINNATI.

1 1. 13 1 1 1 1 1 MA

THIS Society, inflituted immediately on the close of the war, in 1783, has made to much noile both in Europe and America, and has derived fuch dignity and importance from the characters who compose it, that it is thought proper to infert the inflitution at large, for the information of the uninformed, and for the gratification of the respectable members of the Cincinnati, who with to have their friendly and charitable intentions fully understood by all classes of their fellow citizens.

It originated with General Knox, who, with the good intention of reconciling the minds of his military brethren to the private life on which they were foon to enter, projected the plan. Knox imparted his proposals to certain officers. They were afterward communicated to the feveral regiments of the respective lines, and an officer from each was appointed, who, with the generals, flould take the fame into confideration at a meeting to be held on the 10th of May, at which Baron Stuben, the fenior officer prefent, prefided. At their next meeting on the 13th, the plan, having been revifed, was accepted. The fubftance of it was -" The officers of the American' army do hereby, in the most folemn manner, affociate, constitute, and combine themselves, into one Society of Friends, to endure as long as they shall endure, or ANY OF THEIR ELDEST MALE POSTERITY; and in failure thereof, THE COLLATERAL BRANCHES, WHO MAY BE JUDGED WOR-THY OF BECOMING ITS SUPPORTERS AND MEMBERS .- The officers of the American Army, having generally been taken from the citizens of America, poffel's high veneration for the character of that Illustrious Roman, LUCIUS QUINTIUS CINCINNATUS, and

being refolved to follow his example, by returning to their citizenfhip, they think they may with propriety denominate themfelves. The Society of the Cincinnati. The following principles shall be immutable-an inceffant attention to preferve inviolate the exalted rights and liberties of human nature, for which they have fought and bled-An unalterable determination to promote and cherifh between the respective flates, union and national honour-To render permanent, cordial affection, and the spirit of brotherly kindness among the officers-and to extend acts of beneficence toward those officers and their families, who may unfortunately be under the necessity of receiving it. The general fociety will, for the fake of frequent communications, be divided into flate focieties; and those again into fuch diffricts as shall be directed by the flate focieties. The flate focieties shall meet on the fourth of July annually, and the general fociety on the first Monday in May annually, fo long as they shal! deem it necessary, and afterward at least once in every three years. The state focicties to have a prefident, vice-prefident, fecretary, treafurer, and affiftant-treasurer. The meeting of the general fociety shall confift of its officers, and a reprefentation from each flate fociety, in number not exceeding five, whole expences shall be borne by their respective state societies. In the general meeting, the prefident, vice-prefident, fecretary, affiftant-fecretary, treafurer, and affiftant-treasurers-general; shall be chosen to serve until the next meeting. Those officers who are foreigners, are to be confidered as members in the focietics of any of the flates in which they may happen to be. As there are and will at all times be mer in the respective flates eminent for their abilities and patriotifm, whole views may be directed to the fame laudable objects with those of the Cincinnati, it shall be a rule to admit fuch characters, as honorary members of the fociety for their own lives only : provided that the number of the honorary members do not exceed a ratio of one to four of the officers and their defeendants. The lociety shall have an order, by which its members shall be known and diftinguished, which shall be a medal of gold of a proper fize to receive the proposed emblems, and to be suspended by a deep blue ribbon, two inches wide, edged with white, deferiptive of the union of America and France."

The fociety at the faid meeting directed, that the prefident-general fhould transmit, as foon as might be, to each of the following characters, a medal containing the order of the fociety, viz, the chevalier de la Luzerne, the Sieur Gerard, the count d'Eftaing, the count de Graffe, the count de Barras, the chevalier d'Eftouches, the count de Rochambeau, and the generals and colonels in the army; and fhould acquaint them, that "the fociety

nings, civil, of the ne dolbjects, o each enjoy nal libart of lar bé-Ameich he all the f their

262

do themfelves the honor to confider them as members." They alfo refolved, that the members of the feveral flate focieties should affemble as foon as might be for the choice of their officers; "that general Heath, baron Steuben, and general Knox, be a committee to wait on the commander in chief, with a copy of the inftitution, and request him to honor the fociety by placing his name at the head of it," They likewife defired general Heath, to transmit copies of the institution with the proceedings thereon, to the commanding officer of the fouthern army, the fenior officer in each state, from Pennsylvania to Georgia inclusive, and to the commanding officer of the Rhode-Island line, requesting them to take fuch measures as may appear to them necessary for expediting the eftablishment of their state focieties, Circular letters were accordingly written; and the plan of the Cincinnati carried into execution, without the leaft opposition being given to it by any one state, or body of men in any.

A pamphlet was at length published, figned Cassius, dated Charleston, October 10, 1783, entitled, Confiderations on the Society or order of Cincinnati; with this motto,"" Blow ye the trumpet in Zion." It was thought to have been written by Ædanus Burke, Elq. one of the chief justices of South Carolina; and is well executed. The author undertook to prove that the Cincinnati crefted two difting orders among the Americans-1ft, a race of hereditary nobles, founded on the military, together with the powerful families, and first-rate leading men in the flate, whole view it would ever be, to rule: and adly, The people or plebians, whole only view was, not to be opprefied; but whole fate it would be to fuffer oppression under the inflitu-Remarking upon the reason for the members being called tion. the Cincinnati, he exclaims-""As they were taken from the citizens, why in the name of God not be contented to return to citizenship, without usurping an hereditary order? or with what propriety can they denominate themselves from Cincinnatus, with an ambition fo rank as to aim at nothing lefs, than Otium cum Dignitate, retirement and a peerage? Did that virtuous Roman, having fubdued the enemies of his country, and returned home to tend his vineyards and plant his cabbages, confer an hereditary order of peerage on himfelf and his fellow foldiers? I answer No; it was more than he dared to do. When near the end he fays,-With regard to myfelf, I will be candid to own, that although I am morally certain the inflitution will entail upon us the evils I have mentioned ; yet I have not the most distant idea. that it will come to a diffolution." The first class, or leading gentry in the flate [of South Carolina] and who will always hold the government, will find their intereft in supporting a diffinction that

ding genhold the ftion that will gratify their ambition, by removing them far above their fellow citizens. The middling order of our gentry, and fubftantial landholders, may fee its tendency; but they can take no ftep to oppose it, having little to do with government. And the lower class, with the city populace, will never reason on it till they feel the smart, and then they will have neither the power nor capacity for a reformation."

The alarm became general, the extreme jealoufy of the new republics, fulpefted danger from the union of the leaders of their late army, and effectially from a part of the inflitution which held out to their pofterity the honor of being admitted members of the fame fociety. To obviate all grounds of jealoufy and fear, the general meeting of the fociety recommended an alteration of their inflitution to the flate focieties, which had been adopted. By this recommendation it was propoled to expunge EVERY THING THAT WAS DEREDITARY, and to retain little elfe than their original name, and a focial charitable inflitution for perpetuating their perfonal friendfhip, and relieving the wants of their indigent brethren.

# The INSTITUTION of the Society, as altered and amended at their. first General Meeting at PHILADELPHIA, May, 1784.

"IT having pleafed the fupreme governor of the univerfe to give fuccefs to the arms of our country, and to establish the United States free and independent: Therefore, gratefully to commemorate this event—to inculcate to the latest ages the duty of laying down in peace, arms affumed for public defence, by forming an inflitution which recognizes that most important principle—to continue the mutual friendships which commenced under the pressure of common danger, and to effectuate the acts of beneficence, distated by the spirit of brotherly kindnels, towards those officers and their families, who unfortunately may be under the necessity of receiving them; the officers of the American army do hereby constitute themselves into A fociety of Friends: and, possessing the highest veneration for the character of that illustrious Roman, Lucius Quintius Cincinnatus, denominate themselves THE SOCIETY OF THE CINCINNATI.

-SECT. I. 'The perfons who conflitute this focies, are all the commissioned and brevet officers of the army and savy of the United States, who have ferved three years, and who left the fervice with reputation; all officers who were in actual fervice at the conclusion of the war; all the principal staff-officers of the continental army; and the officers who have been deranged by

164

the feveral refolutions of Congress, upon the different reforms of the army. Szer. 11. There the alfo admitted into this fociety, the late and prefent miniffers of this most christian majely to the United States; all the generals and colonels of regiments and legions of the land forces; all the admirals and captains of the navy, ranking as colonels, who have co-operated with the armics of the United States in their exerctions for liberty; and fuch other perfons as have been admitted by the respective flate-meetings. Szer. IV. The fociety fhall have a prefident, vice-prefident, fecretary, and affiftant fecretary.

once in three years, on the first Monday in May, at fuch place as the prefident shall appoint. It is the aforefaid officers, whose "The faid meeting shall confist of the aforefaid officers, whose expenses shall be equally borne by the state funds; and a reprefentation from each state. It is a meeting shall be to regulate the distribution of furplus funds; to appoint officers for the ensuing term—and to conform the bye-laws of state meetings to the general objects of the institution;

SECT. V. The fociety fhall be divided into flate-meetings: sch meeting fhall have a prefident, vice-prefident, fecretary and treasurer, respectively to be chosen by a majority of votes annually.

SECT. VI. 'The flate meetings shall be on the anniversary of independence. They shall concert such measures as may conduce to the benevolent purposes of the society; and the several state meetings shall, at suitable periods, make application to their respective legislatures for grants of charters.

SECT. VII. 'Any member removing from one flate to another, is to be confidered, in all refpects, as belonging to the meeting of the flate in which he fhall actually refide.

SECT. VIII. The flate-meeting fhall judge of the qualification of its members, admonth, and, if necessary, expel any one who may conduct himfelf unworthily.

SECT. IX. 'The fecretary of each flate-meeting fhall register the names of the members refident in each flate, and transmit a copy there to the fecretary of the fociety.

SECT. X. ' In order to form funds for the relief of unfortunate members, their widows and orphans, each officer shall deliver to the treasurer of the state-meeting, one month's pay. SECT. XI. 'No donation shall be received but from the citizens of the United States.

SECT. XII. The funds of each flate-meeting fhall be loaned to the flate, by permiffion of the legiflature, and the interest only; annually be applied for the purposes of the fociety; and if, in process of time, difficulties flould occur in executing the intentions of this fociety, the legiflatures of the feveral flates fhall be entitled to make fuch equitable disposition as may be most correspondent with the original design of the constitution.

SECT. XIII. The fubjects of his most Christian majefty; members of this fociety; may hold meetings at their pleasure, and form regulations for their police, conformable to the objects of the inflitution, and to the spirit of their government.

SECT. XIV. 'The fociety thall have an order; which thall be an eagle of gold; fulpended by a deep blue ribbon, edged with white, defcriptive of the union of America and France; bearing on its breaft the emblems defcribed, as follows.

<sup>4</sup> The principal figure to be CINCINNATUS, three fenators prefenting him with a fword and other military enfigns; On a field in the back ground his wife ftanding at the door of the cottage; near it a plough; and other inftruments of hufbandry. Round the whole, omnia reliquit fervare rempublicant. On the reverfe; the fun tifing; a city with open gates, and veffels entering the port; Fame crowning Cincinnatus with a wreath, inferibed, virtuits pramium. Below, hands joining, fupporting a heart, with the motto, if perpetua. Round the whole, Societas Cincinnatorum, inflituta A. D. 1783.

### AGRICULTURE.

THE three important objects of attention in the United States tre agriculture, commerce, and manufactures. The richnefs of the foil, which amply rewards the industrious husbandman: the temperature of the climate, which admits of fleady labour; the cheapnefs of land, which tempts the foreigner from his native home, lead us to confider agriculture as the prefent great leading interest of that country. This furnishes outward cargoes, not only for all their own ships, but for those also which foreign nations send to their ports; or in other words, it pays for all their importations; it specifies a great part of the clothing of the inhabitants, and food for them and their cattle. What is confumed at home, including the materials, for manufacturing, is four or five times the value of what is exported.

The number of people employed in agriculture, is at leaft three parts in four of the inhabitants of the United States; fome fay

more. It follows of courfe that they form the body of the miliatia, who are the bulwark of the nation. The value of their property occupied by agriculture, is many times greater than the property employed in every other way. The fettlement of wafte lands, the fubdivition of farms, and the numerous improvements in hufbandry, annually increase the pre-eminence of the agricultural intereft. The refources they derive from it, are at all times certain and indifpenfably necessary: befides, the rural life promotes health, by its active nature; and morality, by keeping the people from the luxuries and vices of the populous towns. In fhort, agriculture is the fpring of their commerce, and the parent of manufactures.

#### COMMERCE

THE valt extent of fea-coaft, which fpreads before the confederated ftates; the number of excellent harbours and fea-port towns they poffels; the numerous creeks and immense bays, which indent the coaft : and the rivers, lakes, and canals, which peninicilate the whole country; added to its agricultural advantages and improvements, give this part of America superior advantages for trade. Their commerce, including their exports, imports, shipping, manufactures, and fisheries, may properly be considered as forming one interest. This has been considered as the great object, and the most important interest of the New England States.

Since commerce has ever been confidered as the handmaid of agriculture, particularly in America, where the agricultural intereff fo greatly predominates; and fince neither can flourish without the other, policy and interest point out the necessfity of such a system of commercial and agricultural regulations, as will originate and effectually preferve a proper connection and balance between them.

The confumption of fifh, oil, whale-bone, and other articles obtained through the fifheries, in the towns and countries that are convenient for navigation, has become much greater than is generally fuppofed. It is computed that no lefs than five thousand barrels of mackarel, falmon, and pickled codfifh, are vended annually in the city of Philadelphia: add to them the dried fifh, oil, spertnaceti candles, whale-bone, &c. and it will be found that a little fleet of floops and schooners are employed in the business.

The demand for the forementioned articles is proportionably great in the other parts of the union, especially in Boston and the

267

large commercial towns that lie along the coaft north-eaftward, which enter largely into the fifting trade, and the veffels employed in transporting them proportionably numerous. The increase of their towns and manufactures will increase the demand for these articles, and of course the number of coasting vessels. In the present state of their navigation, they can be in no doubt of procuring these supplies by means of their own vessels. This will afford encouragement to the business of ship-building, and increase the number of their feamen, who must hereafter form an important part of the defence of their country. Add to thefe, their prospects from the fur trade of Canada. The vast fettlements which are making at Pittfburgh, Genetic, and in other parts in the neighbourhood of Canada; the advanages of their inland navigation, by means of the lakes, the northern branches of the Ohio, the Potomak, the Sufquehannah and the Hudson, with many other circumstances depending not only on the fituation, but likewife on the climate, proximity, &c, must, in a few years, put a large fhare of the fur trade into their hands, and procure them, at leaft, a proportionable fhare of the large profits thence arifing, which Canada, fince the year 1769, has enjoyed almost exclusively. These advantages, however, are still but in prospect; and must remain so until the British, agreeable to the treaty of peace, shall have evacuated the forts at Niagara, the large fettlements of the Heights, and that of Michillimakinak. Although the British, by the treaty of peace, are to enjoy with the Americans the portages of the navigation of the lakes, yet, fhould a difpute arife, it will not be convenient for the former to conteft it; for the northern and north-eftern parts of the continent included in the British limits, are much colder, more mountainous and poorer than the United States, and have no rivers, but fuch as are full of rapids and falls : confequently, this trade cannot be carried on by the Canadians with the fame facility nor advantage as by the Americans. Still England will have left the exclusive right to the communication from Montreal with the High-lands, through the large river of the Ottowas, which flows into the river St. Lawrence at the lake of the Two Mountains, nine miles from that city; but its rapids and falls render this way, if not impracticable, at least always very expensive and precarious.

The quantity of furs, deer and elk fkins, annually imported from the northern parts of America to England, is prodigious. In 1784, the amount of fales for furs was more than two hundred and forty-five thousand pounds. It has not equalled this sum svery year fince, but has feldom varied more than from ten to

twenty thousand pounds.—When we confider the number of animals destroyed to furnish such extensive products, the mind feels itself lost in contemplating the vast tract of country that could afford an habitation for them.

The following is a Correct flatement of the number of furs, &c. exposed to fale in London, in the present year, 1794, and which may be taken as a fair average of the annual importations. for ten years past.

191,452	raccoon	-01 -00	10,580	fox '	0
23,354				wolverin	
27,670		* *	30,600	mulquash	-
145,720	beaver.		7,798	rabbit and	white h
25,890	otter		10,785	kidd	
6,700	fifher		161,371	deer	
11,760	cat		470	clk	
32,540	mink		720	feals	
9,790	wolf	· · ·	983	lamb.	

To these must be added a small quantity of furs, and about fix or eight thousand deer not yet fold, the vessel having been delayed on her passing. In this enumeration, the quantity imported by the Hudlon's Bay Company is not noticed. Of these we shall speak when treating of that part of the British fettlements.—The chief of these furs are paid for in English manufactures.—Not more than a fourth part of them, beaver and deer skins excepted, if so much, are done any thing more to in England than beat, forted, and re-packed; a great portion are re-shiped to Germany, and disperied through the various parts of the Empire, France, &c.—Some are shipped from London direct for France, and some to Russia, China, &c. at immente profits.

This valuable trade, which is carried on through Quebec, will a great part of it fall into the hands of the Americans, as foon as the fortifications, which the British possible in their northern territories, shall be reftored. To this confideration, rather than to the pretended compassion for the Royalists, may be attributed the delay of that reflicution. The period when this reflicution muss be made, is however arrived: a period which the British government have long anticiprted with forrow. Such are fome of the commercial resources and prospects of the United States.

But for various reasons, the advantages for trade which nature has fo liberally given the Americans, have never, till fince the establishment of the present government, been properly improved. Before the revolution, Great Britain claimed an exclusive right to the trade of her American colonies. This right, which she inflexibly maintained, enabled her to fill or own price, as well on

The carrying: trade, too, was preferved almost exclusively in her own hands, which afforded a temptation to the carriers, that was often too powerful to be withstood, to exact exorbitant commissions and freights. Although we will not even hazard a conjecture how much Great Britain enriched herfelf by this exclusive trade with her colonies, yet this we may fay, that by denying them the privilege of carrying their own produce to foreign markets, she deprived them of the opportunity of realizing, in their full extent, the advantages for trade which nature has given them.

The late war, which brought about the ic ration from Great Britain, threw the commercial affairs of A ica into great confusion. The powers of the old confederation were unequal to the complete execution of any measures, calculated effectually to ... recover them from their deranged fituation. Through want of power in the old Congress to collect a revenue for the discharge of their foreign and domestic debt, their credit was destroyed, and trade of confequence greatly embarrassed. Each state, in her defultory regulations of trade, regarded her own interest, while that of the union was neglected. And fo different were the interests of the feveral states, that their laws respecting trade often clashed with each other, and were productive of unhappy confequences. The large commercial States had it in their power to opprefs their neighbours; and in fome inftances this power was directly or indirectly exercised. These impolitic and unjustifiable regulations, formed on the impression of the moment, and proceeding from no uniform or permanent principles, excited unhappy jealoufies between the clashing States, and occasioned frequent stagnations in their trade, and in fome inftances, a fecrecy in their commercial policy. But the wife measures which have been adopted by Congreis, under the prefent efficient government of the United States, have extricated them almost entirely from these embarraffments, and put a new and pleafing face upon their public affairs. Invested with the adequate powers, Congress have formed a fystem of commercial regulations, which enable them to meet the oppofers of their trade upon their own ground; a fystem which has placed their commerce on a respectable, uniform, and intelligible footing, adapted to promote the general interefts of the union, with the fmallest injury to the individual States.

The countries with which the United States have had their chief commercial intercourfe are Spain, Portugal, France, Great Britain, the United Nethherlands, Denmark, and Sweden, and their American poffeifions, Ruffia, &c. &c. &c. and the articles

#### OF THE UNITED STATES,

The exports of the year ending 30th September 1792, amounted in value to twenty-one millions, five thousand five hundred and fixty-eight pounds, from which time they have been gradually on the increase.

The exports of the year ending 30th September 1793, amounted to 26,000,000 of dollars, being an excels of 5,000,000 shove the preceding year.

The exports of the year ending 30th September 1794, exceeded 30,000,000 of dollars,

Mr. Tench Coxe in his View of the United States, fays, that "Lefs than half the fhips and veffels belonging to the United States, are fufficient to transport all the commodities they confume or import."

The imports of America, confift moftly of articles on which European induftry has been exhaufted, an idea of their extent, as well as of that of the American navigation, depending on their commerce, will appear by the following tables, containing abftracts of duties on the imports, and on the tonnage of velfels ensered into the different ports of the United States, in the year

Exports, which will give an addition to the Tonnage for 1792 of more than 70,000 tons, and which we have reafon to believe has incr and will annually increase in a like proportion. 

1-

180

It may be neceffary here to notice the principal refiritions; impositions; and prohibitions suffained by the United States in their trade with the different European kingdoms, in contrast with those suffained by them in their trade with the British Dominions:

Of their commercial objects, SPAIN receives favorably, their bread, fluff, falted fifh; wood; fhips, tar, pitch, and turpentine. On their meals, however, as well as on those of other foreign countries, when re-exported on their colonies, they have lately imposed duties, of from half a dollar to two dollars the barrel; the duties being fo proportioned to the current price of their own flour, as that both together are to make the constant fum of nine dollars per barrel.

They do not difcourage the rice, pot and pearl afh, falted provifions, or whale oil of the United States; but thefe articles being in fmall demand at their markets, are carried thither but in a fmall degree. Their demand for rice, however, is increasing. Neither tobacco, nor indigo are received there. American commerce is permitted with their Canary Iflands, under the fame conditions.

The Spaniards, and their colonies, are the actual confumers of what they receive from the United States.

The navigation of the United States is free with the kingdom of Spain; foreign goods being received there in their fhips; on the fame conditions as if carried in their own, or in the veffels of the country of which fuch goods are the manufacture or produce,

PORTUGAL receives favourably American grain, bread, falted fifh, and other falted provisions, wood, tar, pitch and turpentine,

For flax-feed, pot and pearl-ash, though not discouraged there is little demand.

American ships pay 20 per cent. on being fold to Portuguese subjects, and are then free bottoms.

Foreign goods, except those of the East Indics, are received on the fame footing in American veffels, as in their own, or any others; that is to fay, on general duties of from twenty to twentyeight per cent. and confequently their navigation is unobstructed by them. Tobacco, rice and meals are prohibited.

The Portuguese and their colonies confume what they receive from the American States.

These regulations extend to the Azores, Madeira, and the Cape de Verd islands, except that in these, meals and rice are received freely.

FRANCE receives favourably American bread stuff, rice, wood, pot and pearl ashes.

A duty of five fous the kental, or nearly four an half cents is

paid on American tar, pitch, and turpentine. Whale oils pay fix livres the kental, and are the only foreign whale oils admitteds Of the flates, indigo pays five livres on the kental; their own two and an half: but a difference of quality, fill more than a difference of duty, prevents its feeking that market.

Salted beef is received freely for re-exportation, but if for home confumption, it pays five livres the kental. Other falted provisions pay that duty in all cafes, and falted fifth is made lately to pay the prohibitory one of twenty livres in the kental.

American fhips are free to carry to France all foreign goeds which may be carried in their own or any other veffels, except tobaccoes not the growth of the flates; and they participate with the French fhips in the exclusive carriage of whale oils and tobaccoes.

During their former government, the tobacco was under a monopoly; but paid no duties, and American fhips were freely fold in their ports; and converted into national bottoms. The firft national affembly took from American fhips this privilege 2 they emancipated tobacco from its monopoly, but fubjected it to duties of eighteen livres fifteen fous the kental, carried in their own, and twenty-five livres if carried in American veffcls, a difference more than equal to the freight of the article;

The French nation have however offered to enter into a new treaty of commerce with the United States on more liberal terms and in the mean time have relaxed fome of the above reftraints and feverities:

Gazar Bairrain receives from the flates pot and pearl after free; while those of other nations pay a duty of two fhillings and three-pence the kental. There is an equal diffinction in favour of their bar iron, of which article; however; they do not produce enough for their own use: Woods are free from America, whilk they pay fome small duty from other countries. Their tar and pitch pay isd, sterling the barrel; from other alien countries they pay about a penny and a third more.

Their tobacco, for British confumption, pay 18. gd. sterling the pound, custom and excise, befides heavy expences of collection. And rice, in the same case, pays 75. 4d. Rerling the hundred weight; which, rendering it too dear as an article of common food, it is confequently used in very small quantity.

The falted fifth, and other falted provisions of the United States, except bacon, are prohibited. Bacon and while oil are under prohibitory duties; fo are the grains; meals; and bread, as to our internal confumptions unlefs in times of fuch fearcity as may raife

. Od : :

the price of wheat to 50s. sterling the quarter, and other grains and meals in proportion.

American fhips, though purchased and navigated by Britifu fubjects, are not permitted to be used, even in our own trade with them.

While the veffels of other nations are fecured by flanding laws, which cannot be altered, but by the concurrent will of the three branches of the British legislature, in bringing hither any produce or manufacture of the country to which they belong, which may be lawfully carried in any veffels, American thips with the fame prohibition of what is foreign, are further prohibited by a fanding law (12 Car. H. 28. 6. 3.) from bringing hither all and any of their own domestic productions and manufactures. A fubfequent act, indeed, has authorifed the executive power to permit the carriage of their productions in their own bottoms, at its fole defertion; and the permission has been given from year to year by proclamation, but fubject every moment to be withdrawn on its fingle will, in which event, American veffels having any thing of the kind on board, fland interdicted from the entry of all British ports. The difadvantage of a tenure which may be fo fuddenly discontinued was experienced by the American merchants on a late occasion, when an official notification that this law would be firstly enforced, gave them just apprehentions for the fate of their veffels and cargoes which they had dispatched or deftined to the ports of Great Britain. The minister indeed, frankly expressed his personal conviction that the words of the order went farther than was intended, and fo he afterwards officially informed them; but the embarrafiments of the moment were real and great, and the possibility of their renewal lays their commerce to this country under the fame fpecies of difeouragement as to other countries, where it is regulated by a fingle legiflator; and the diffinction is too remarkable not to be noticed, that the navigation of the American States is excluded from the fecurity of fixed laws, while that fecurity is given to the navigation of others.

American veffels pay in our ports 1s. gd. sterling per ton, light and trinity dues, more than is paid by our own ships, except in the port of London, where they pay the same as British.

The greater part of what we receive from them is re-exported to other countries, under the uicle's charges of an intermediate deposit and double voyage. From tables published in London, and composed from the books of our custom-houses, it appears that of the indigo imported here in the year \$778-4-5, one third was re-exported; and from a document of authority, we learn fourporta than their and c Th comm States necef of a t count tinft

### F THE UNITED STATES,

learn that of the rice and tobacco imported here before the war, four-fiths were re-exported. The quantities fent here for re-exportation fince the war, are confiderably diminished, yet less fo than reason and national interest would distate. The whole of their grain is re-exported when wheat is below 50s, the quarter, and other grains in proportion.

The principal facts, relative to the queftion of reciprocity of commercial regulations, between Great Britain and the United States of America, have, by a gentleman who had accels to every necellary information for the purpole, been thrown into the form of a table, which we will infert, in order that the citizens of one country, and the fubjects of the other, may have a clear and diftinct view of the fubject.

## THE WNITED STATES.

#### GREAT BRITAIN

It is underftood that by treaty fhe grants fome favours, which are not extended to the United States.

She prohibits the importation of fome American articles, in American fhips, or any but British fhips, into her European dominions.

She does not permit an American citizen to import goods into fome of her dominions, and to fell them there, even in Britifh veffels. In other parts of her dominions, fhe lays an extra tax on him, or his fales.

She impofes heavy duties on certain articles of the produce of the American fifheries, and infupportable duties on others, in fome parts of her dominions; and in other parts, fhe prohibits their importation.

She prohibits the confumption of fome American articles, of which the permits the importation.

She prohibits the importation of American articles from foreign countries into the British dominions, even in her own lhips. THE UNITED STATES

They treat Great Britain as favourable as any nation whatever, as to fhips, imports, and exports, and in all other refpects.

They do not prohibit the importation of any British article in British veffels, or any but American veffels,

They permit a British subject to import goods into all their ports, in any vessels, and to sell them there without any extra tax on him, or his sales.

They impole only five per cent. on the produce of the British fisheries, which duty is drawn back on exportation and admit every article derived from them.

They do not prohibit the confumption of any British article whatever.

They do not prohibit the importation of British articles from reign countries in any ships.

Befides these advantages, which Great Britain derives from the commerce of America, there is no country that contributes so much to the support of her navy as the United States, by the employment they give to her ships. From August 1789, to August 1790, no less than 330,000 tons of British vessels cleared from these States; which much exceeds the quantity of vessels the employed the same year in the Russian trade.—The whole Baltic trade of Great Britsin, with all the countries of the various powers that lie within the Sound, important as it is to her, does not fill more. Her trade with Holland, France, Spain, and Portugal, does not altogether employ as many vessels.—Her whole fisheries American colonial trade, and West India trade, do not employ

and load more. And how, it may be afked, are the United States requited for thus firengthening the acknowledged bulwark of Great Britain, by annually giving a complete lading to the unequalled quantity of 230,000 tons of her private veffels? Their fhips are feized, and detained, in the regular courfe of her trade; and their feamen are imprefied from their fervice, in order to fight against their friends and allies!

THE UNITED NETHERLANDS prohibit the pickled beef, pork, meals and bread of all forts, coming from the United States, and lay prohibitory duty on their fpirits distilled from grain.

All other of their productions are received on varied duties, which may be reckoned on a medium at about three per cent.

The United Netherlands confume but a fmall proportion of what they receive from America ; the refidue is partly forwarded for confumption to the inland parts of Europe, and partly refhipped to the other maritime countries. On the latter portion they intercept between the Americans and the confumer, fo muchof the value as is abforbed by the charges attending an intermediate deposit.

Foreign goods, except fome East India articles, are received by them in veficles of any nation.

American ships may be fold and naturalized there with exceptions of one or two privileges, which somewhat lessen their value.

DENMARK lays confiderable duties on the tobacco and rice of the United States, even if carried in their own veffels, and half as much more if carried in theirs, but the exact amount of these duties is not perfectly known here. They lay such as amount to prohibitions on American indigo and corn.

SWEDEN receives favourably grains and meals, falted provifions, indigo, and whale oil, from the United States.

They fubject their rice to duties of fixteen mills the pound weight, carried in their own vetfels, and of forty per cents additional on that, or \$2,410 mills, carried in American or any others. Being thus rendered too dear as an article of common food, little of it is confumed with them. They confume more of their tobaccoes, which they take circuitoufly through Great Britain, levying heavy duties on them alfo; their duties of entry, town duties, and excife, being four dollars, thirty-four cents the hundred weight, if carried in their own vetfels, and of forty per cent. on that additional, if carried in American or any other vetfels.

They prohibit altogether, American bread, fifh, pot and pearl afhes, flax-feed, tar, pitch, and turpentine, wood, except oak timber and maft, and all foreign manufactures. Un Amer W harde Spa they felves, their n

## OF THE UNITED STATES.

Under to many refittations and prohibitions, the navigation of America with them, is reduced almost to nothing.

With the neighbours of the States, an order of things much harder prefents itfelf.

SPAIN and PONTOGAL refue to those parts of America which they govern, all direct intercourfe with any people but themfelves. The commodities in mutual demand between them and their neighbours must be carried to be exchanged in fome port of the dominant country, and the transportation between that and the fubject flate, must be in a domestic bottom.

FRANCE, by a flanding law, permitted her Weft India poffefions, prior to the war, to receive directly, vegetables, live provisions, horfes, wood, tar, pitch, turpentine, rice and maize, from the States, and prohibited their other bread fluff; but a fuspenfion of this prohibition having been left to the colonial legislatures in times of fearcity, it was sufpended occafionally, but latterly without interruption.

American fresh and falted provisions, except pork, was received in their islands under a duty of three colonial livres the kental, and their vessels were as free as their own to carry their commodities thither, and to bring away sum and molasses.

GREAT BRITAIN admits in her islands, American vegetables, live provisions, horfes, wood, tar, pitch, turpentine, rice, and bread fluff, by a proclamation of the executive power, limited always to the term of a year. She prohibits their falted fish, and other falted provisions: the does not permit their vessels to earry thither their own produce. Her vessels alone may take it, from them, and bring in exchange, rum, molasses, fugar, costee, cocoa-nuts, ginger, and pimento. There are, indeed, fome freedoms in the island of Dominica, but under such circumstances as to be little used by the Americans. In the British continental colonies, and in Newsfoundland, all their productions are prohibited, and their vessels forbidden to enter the ports; the governors however, in times of distress, have power to permit a temporary importation of certain articles in their own bottoms, but not in those of the Americans.

American citizens cannot refide as merchants or factors within any of the British plantations, this being expressly prohibited by the fame statute of 12 Car. II. c. 18, commonly called the Navigation act.

In the Danish-American possession, a duty of five per cent. is levied on the corn, corn-meal, rice, tobacco, wood, falted fish, indigo, horfes, mules, and live stock of the United States, and of ten per cent, on their slour, falted pork, and beef, tar, pitch, and turpentine.

In the American illands of the UNITED NETHERLANDS and SWEDEN, their veffels and produce are received, fubject to duties, not fo heavy as to have been complained of; but they are heavier in the Dutch possession on the continent.

To fum up these Restrictions, fo far as they are important :"

### IN EUROPE.

American bread fluff is at most times under prohibitory duties in England, and confiderably dutied on exportation from Spain to her colonics.

Their tobaccoes are heavily dutied in England, Sweden, and France, and prohibited in Spain and Portugat.

Their rice is heavily dutied in England and Sweden, and pro-

Their fifh and falted provisions are prohibited in England, and under prohibitory duties in France.

Their whale-oils are prohibited in England and Portugal.

And thein veficis are denied naturalization in England, and of hate in France.

#### In THE WEST INDIES.

All intercourfe is prohibited with the poffeilions of Spain and Portugal.

Their falted provisions and fifh are prohibited by England.

Their falted pork, and bread ftuff, except maize, are received under temporary laws only, in the dominions of France, and their falted fifth pays there a weighty duty.

#### IN THE ARTICLE OF NAVIGATION.

The carriage of their own tobacco is heavily dutied in Sweden, and lately in France.

They can carry no article, not of their own production, to the British ports in Europe.

Nor even their own produce to her American polleffions.

Such being the reftrictions on the commerce and navigation of the United States, the question is, in what way they may best be removed, modified, or counteracted?

As to commerce, two methods occur, By friendly arrangements with the feveral nations with whom these restrictions exist: or, By the separate act of their own legislatures for countervailing their effects.

There can be no doubt, but that of these two, friendly arranged ment is the most eligible. Instead of embarrassing commerce

pade be re ever beft othe ble v huma woul AL W fyfter that to all dient dom lent r So might them them recipi fating nature to fay either venier manu induit pect w too, w muft any na habit c - But better duties, their ( and re be give likely The branch Its . dence it mult

### THE UNITED STATES.

nuder piles of regulating laws, duties and prohibitions, could it be relieved from all its (hackles in all parts of the world—could every country be employed in producing that which nature has beft fitted it to produce, and each be free to exchange with others mutual furpluffes for mutual wants, the greateft mafs poffible would then be produced of those things which contribute to human life and human happines; the numbers of mankind would be increased, and their condition bettered.

Would even a fingle nation begin with the United States this fyftem of free commerce, it would be adviseable to begin it with that nation; fince, it is one by one only that it can be extended to all. Where the circumftances of either party render it expedient to levy a revenue, by way of impost, on commerce, its freedom might be modified, in that particular, by mutual and equivalent measures; preferving it entire in all others.

Some nations, not yet ripe for free commerce, in all its extent, might still be willing to mollify its restrictions and regulations for them in proportion to the advantages which an intercourse with them might offer. Particularly they might concur with them in reciprocating the duties to be levied on each fide, or in compenfating any excels of duty, by equivalent advantages of another nature. Their commerce is certainly of a character to entitle it to favour in most countries. The commodities they offer, are either necessaries of life, or materials for munufacture ; or convenient subjects of revenue; and they take in exchange, either manufactures, when they have received the last finish of art and industry, or mere luxuries. Such customers may reasonably expect welcome, and friendly treatment at every market ; cufomers too, whole demands, increasing with their wealth and population, must very shortly give full employment to the whole industry of any nation whatever, in any line of fupply they may get into the habit of calling for, from it.

But fhould any nation, contrary to their wifnes, fuppofe it may better find its advantage by continuing its fystem of prohibitions; duties, and regulations, it behoves them to protect their citizens, their commerce and navigation, by counter-prohibitions, duties, and regulations also. Free commerce and navigation are not to be given in exchange for restrictions and vexations; nor are they likely to produce a relaxation of them.

Their navigation involves fill higher confiderations. As a branch of industry, it is valuable; but, as a resource, effential. Its value, as a branch of industry, is enhanced by the dependence of fo many other branches on it. In times of general peace it multiplies competitors for employment in transportation, and

y: arrangeions exift : puntervail-

eommerce

fo keeps that at its proper level; and in times of war, first is to fay, when those nations who may be their principal carriers, shall be at war with each other, if they have not within themselves the means of transportation, their produce must be exported in belligerent vessels, at the increased expense of war-freight and infurance, and the articles which will not bear that, must perish on their hands.

But it is as a refource for defence that their navigation will admit neither neglect nor forbearance. The polition and circumftances of the United States leave them nothing to fear on their land, and nothing to defire beyond their prefent rights. But on the fea they are open to injury, and they have there, too, a commerce which must be protected. This can only be done by pollefling a respectable body of CITIZEN-SEAMEN, and of artifts and establishments in readiness for ship-building.

Were the ocean, which is the common property of all, open to the industry of all, fo that every perfon and veffel should be free to take employment wherever it could be found, the United States would certainly not fet the example of appropriating to themfelves, exclusively, any portion of the common flock of occupation. They would rely on the enterprize and activity of their citizens for a due participation of the benefits of the feafaring business, and for keeping the marine class of citizens equal to their object. But if particular nations grafp at undue shares, and more efpecially if they feize on the means of the United States to convert them into aliment for their own ftrength, and withdraw them entirely from the support of those to whom they belong defensive and protecting measures become necessary on the part of the nation whole marine refources are thus invaded, or it will be difarmed of its defence; its productions will lie at the mercy of the nation which has poffeffed itfelf exclusively of the means of carrying them, and its politics may be influenced by those who command its commerce. The carriage of their own commodities, if once established in another channel, cannot be refumed in the moment they may defire. If they lofe the feamen and artifts whom it now occupies, they lofe the prefent means, of marine defence, and time will be requisite to raife up others, when difgrace or loffes shall bring home to their feelings the error of having abandoned them. The materials for maintaining their due share of navigation are theirs in abundance; and as to the mode of using them, they have only to adopt the principles of those who thus put them on the defensive, or others equivalent and better fitted to their circumstances,

The following principles being founded in reciprocity, appear perfectly juft, and offer no caufe of complaint to any nation.

The Where a nation imposes high duties on their productions, or prohibits them altogether, it may be pupper for them to do the fame by theirs, first burthening or excluding those productions which they carry there in competition with their own of the fame kind; felecting next fuch manufactures as they take from them in greatest quantity, and which at the fame time they could the foonest furnish to themselves, or obtain from other countries ; imposing on them duties lighter at first, but heavier and heavier afterwards, as other channels of fupply open. Such duties having the affect of indirect encouragement to domestic manufactures of the same kind, may induce the manufacturer, to come himself into these States; where cheaper sublistence, equal laws, and a vent of his wares, free of duty, may enfure him the highest profits " from his skill and industry, And here it would be in the power of the flate governments to co-operate effentially, by opening the refources of encouragement which are under their controul, extending them liberally to artifts in those particular branches of manufacture, for which their foil, climate, population, and other circumftances have matured them, and fostering the precious efforts and progress of household manufacture by some patronage fuited to the nature of its objects, guided by the local informations they poffefs, and guarded against abuse by their prefence and attentions. The oppressions on their agriculture in foreign ports would thus be made the occasion of relieving it from a dependence on the councils and conduct of others, and of promoting arts, manufactures, and population among themfelves.

2d. Where a nation refufes permission to their merchants and factors to refide within certain parts of their dominions, they may if it should be thought expedient, refuse refidence to theirs, in any and every part of the states, or modify their transactions.

3d. Where a nation refules to receive in their veffels any productions but their own, they may refule to receive, in theirs, any but their own productions.

4th. Where a nation refufes to confider any veffel as belonging to the United States, which has not been built within their territories, they fhould refufe to confider as belonging to them any veffel not built within their territories.

5th. Where a nation refufes to their veffels the carriage even of their own productions to certain countries under their domination, they might refufe to theirs, of every defcription, the carriage of the fame productions to the fame countries. But as juftice and good neighbourhood would dictate, that those who have no part in imposing the reftriction on them, should not be the vice. P P 2

Ist and the state of the

manan reissient the in. co. mitten

igi

tims of the measures adopted to defeat its effect, it may be proper to confine the refiricions to veffels owned or navigated by any subjects of the same dominant power, other than the inhabitants of the country to which the faid productions are to be carried.— And to prevent all inconvenience to the faid inhabitants, and to their own, by too fudden a check on the means of transportation, they may continue to admit the veffels marked for future exclufion, on an advanced tonnage, and for fuch length of time only, as may be supposed necessary to provide against that inconvenience.

The eftablifhment of fome of these principles by Great Britain alone, has already lost the Americans, in their commerce with that country and its possession, between eight and nine hundred vesses of near 40,000 tons burthen, according to statements from official materials. This involves a proportional loss of feamen, shipwrights, and ship building, and is too serious a loss to admit forbearance of some effectual remedy.

It is true they must expect some inconvenience in practice, from the establishment of discriminating duties. But in this, as in fo many other cafes, they are left to chufe between two evils. Thefe inconveniences are nothing when weighed against the loss of wealth and loss of force, which will follow their perfeverance in the plan of indifcrimination .- When once it shall be perceived that they are either in the fystem or the habit of giving equal advantages to those who extinguish their commerce and navigation, by dutics and prohibitions as to those who treat both with liberality and justice, liberality and justice will be converted by all into duties and prohibitions. It is not to the moderation and justice of others that they are to truft for fair and equal access to market with their productions, or for their due fhare in the transportation of them; but to their means of independence, and the firm will to use them. Nor do the inconveniences of diferimination merit confideration. Not one of the nations beforementioned, perhaps, not a commercial nation on earth, is without them. In their cafe, one diffinction alone will fuffice; that is to fay, between nations who favour their productions and navigation, and those who do not favour them. One fet of moderate duties, fay the prefent duties, for the first, and a fixed advance on these as to some artiele, and prohibitions as to others, for the laft.

Still muft it be repeated, that friendly arrangements are preferable with all who will come into them; and that they fhould carry into fuch arrangements, all the liberality and fpirit of accommodation, which the nature of the cafe will admit.

France has, of her own accord, proposed negociations for improving, by a new treaty, on fair and equal principles, the commercial relations of the two countries. But her internal diffurbences though the dify Prop of the U Britain, in fact, covered We h be decli mercial while, i there as on the whatever

Proposals of friendly arrangement have been made on the part of the United States, by the prefent government, to that of Great Britain, but being already on as good a footing in law, and a better in fact, than the most favoured nation, they have not as yet difcovered any difposition to attend to those overtures.

We have no reafon to conclude that friendly arrangements will be declined by the other nations, with whom they have fuch commercial intercourfe as may render them important. In the mean while, it will reft with the wifdom of Congress to determine whether, as to those nations, they will not surcease exparts regulations, on the reasonable prefumption that they will concur in doing whatever justice and moderation dictate should be done.

### MANUFACTURES.

W.E now come to the subject of manufactures, the expediency of encouraging of which in the United States, was not long fince deemed very questionable, but the advantages of which, appear at this time to be generally admitted. The embarrafiments which have obstructed the progress of their external trade with European nations, have led them to ferious reflections on the neceffity of enlarging the sphere of their domestic commerce: the restrictive regulations which in foreign markets have abridged the vent of the increasing furplus of their agricultural produce; have ferved to beget in them an earnest defire, that a more extenfive demand for that furplus may be created at home : And the complete fuccels which has rewarded manufacturing enterprife, in fome valuable branches, conspiring with the promising symptoms which attend fome lefs mature effays in others, justify a hope, that the obstacles to the growth of this species of industry are less formidable than they were apprehended to be; and that it is not difficult to find, in its further extension, a full indemnification for any external difadvantages, which are or may be experienced, as well as an accession of resources, favourable to national independence and fafety.

There fill are, neverthelefs, among the Americans, many refpectable patrons of opinions unfriendly to the encouragement of manufactures.—The following are, fubftantially, the arguments by which these opinions are defended:

"In every country, fay those who entertain them, agriculture is the most beneficial and *productive* object of human industry. This position, generally, if not universally true, applies with peculiar emphasis to the United States, on account of their im-

\$93

menfe tracks of fertile territory, uninhabited and unimproved. Nothing can afford fo advantageous an employment for capital and labour, as the conversion of this extensive wilderness into cultivated farms. Nothing, equally with this, can contribute to the population, ftrength, and real riches of the country."

<sup>44</sup> To endeavour by the extraordinary patronage of government, to accelerate the growth of manufactures, is, in fact, to endeavour, by force and art, to transfer the natural eurrent of industry, from a more to a lefa beneficial channel. Whatever has fuch a tendency must neceffarily be unwife; Indeed it can hardly ever be wife in a government to attempt to give a direction to the industry of its citizens. This, under the quick-fighted guidance of private interest, will, if left to itfelf, infallibly find its own way to the most profitable employment; and it is by fuch employment that the public prosperity will be most effectually promoted. To leave industry to itfelf, therefore, is, in almost every cafe, the foundest as well as the fimplest policy."

"This policy is not only recommended to the United States, by confiderations which affect all nations; it is in a manner dictated to them by the imperious force of a very peculiar fituation. The fmallness of their population, compared with their territory, the conftant allurements to emigration from the fettled to the unfettled parts of the country; the facility with which the lefs independen't condition of an artifan can be exchanged for the more independent condition of a farmer; thefe, and fimilar caufes, confpire to produce, and for a length of time must continue to occasion a fcarcity of hands for manufacturing occupation, and dearnefs of labour generally. To these disadvantages for the prosecution of manufactures, a deficiency of pecuniary capital being added, the prospect of a successful competition with the manufactures of Europe must be regarded as little less than desperate. Extensive manufactures can only be the offspring of a redundant, at least of a full population. Till the latter shall characterise the situation of this country, 'tis vain to hope for the former."

"If, contrary to the natural course of things, an unseasonable and premature spring can be given to certain fabrics, by heavy duties, prohibitions, bounties, or by other forced expedients, this will only be to facrifice the interests of the community to those of particular classes. Besides the misdirection of labour, a virtual monopoly will be given to the persons employed on such fabrics; and an enhancement of price, the inevitable consequence of every monopoly, must be defrayed at the expence of the other parts of the fociety. It is far preferable that those persons should be engaged in the cultivation of the earth, and that we should procure, in exchange for its productions, the commodities with which upon be

This which I the come room to perity a maxima admit of political with the

### THE UNITED STATES.

which foreigners are able to supply us in greater perfection, and upon better terms."

This mode of restoring is founded upon facts and principles, which have certainly respectable pretensions. If it had governed the conduct of nations more generally than it has done, there is room to suppose, that it might have carried them faster to profperity and greatness than they have stained by the pursuit of maxims too widely opposite. Most general theories, however, admit of numerous exceptions, and there are few, if any, of the political kind, which do not blend a confiderable portion of error with the truths they inculcate.

In order to form an accurate judgment, how far that which has been just flated ought to be deemed liable to a fimilar imputation, it is necessary to advert carefully to the confiderations which plead in favour of manufactures, and which appear to recommend the special and positive encouragement of them, in certain cases, and under certain reasonable limitations.

It ought readily to be conceded, that the cultivation of the earth, as the primary and most certain fource of national fupply; is the immediate and chief fource of fubfistence to man; as the principal fource of those materials which conflitute the nutriment of other kinds of labour; as including a flate most favourable to the freedom and independence of the human mind; one, perhaps, most conducive to the multiplication of the human species; has intrinsically a flrong claim to pre-eminence over every other kind of industry.

But that it has a title to any thing like an exclusive predilection in any country, ought to be admitted with great caution. That it is even more productive than every other branch of induftry, requires more evidence than has yet been given in support of the position. That its real interests, precious and important as, without the help of exaggeration, they truly are, will be advanced, rather than injured, by the due encouragement of manufactures, may be fatisfactorily demonstrated. And the expediency of fuch encouragement, in a general view, may be shewn to be recommended by the most cogent and persuasive motives of national policy.

It has been maintained, that agriculture is not only the moft productive, but the only productive fpecies of industry. The reality of this affertion, in either respect, has, however, not been verified by any accurate d-tail of facts and talculations; and the general arguments, which are adduced to prove it, are rather subtle and paradoxical, than folid or convincing.

Those which maintain its exclusive productivenels are to this effect:-Labour bestowed upon the cultivation of land produces

apital into

ment, ndeauftry, uch a e ever de indance own uploynoted. e, the

es, by fated The y, the fettled depenindenspire asion a els of ion of d, the res of enfive caft of uation

296

enough, not only to replace all the necessary expences incurred in the bufinefs, and to maintain the perfons who are employed in it; but to afford, together with the ordinary profit on the flock or capital of the farmer, a nett furplus, or rent for the landlord or proprietor of the foil. But the labour of artificers does nothing more than replace the flock which employs them, or which furnifhes materials, tools and wages, and yield the ordinary profit upon that flock. It yields nothing equivalent to the rent of land; neither does it add any thing to the total value of the whole annual produce of the land and labour of the country. The additional value given to those parts of the produce of land, which are wrought into manufactures, is counterbalanced by the value of those other parts of that produce which are confumed by the manufacturers. It can therefore only be by faving, or parfimony, not by the politive productiveness of their labour, that the classes of artificers can in any degree augment the revenue of fociety.

To this it has been answered, that inasmuch as it is acknowledged that manufacturing labour re-produces a value equal to that which is expended or confumed in carrying it on, and continues in existence the original stock or capital employed, it ought on that account alone to escape being confidered as wholly unproductive: that though it should be admitted, as alledged, that the confumption of the produce of the foil, by the claffes of artificers or manufacturers is exactly equal to the value added by their labour to the materials upon which it is exerted; yet it would not thence follow, that it added nothing to the revenue of the fociety, or the aggregate value of the annual produce of its land and labour. If the confumption for any given period amounted to a given fum, and the increased value of the produce manufactured in the fame period to a like fum, the total amount of the confumption and production during that period would be equal to the two fums, and confequently double the value of the agricultural produce confumed. And though the increment of value produced by the classes of artificers should at no time exceed the value of the produce of the land confumed by them, yet there would be at every moment, in confequence of their labour, a greater value of goods in the market than would exift independent of it.

The position, that artificers can augment the revenue of a fociety only by parfimony, is true in no other fense than in one, which is equally applicable to husbandmen or cultivators. It may be alike affirmed of all these classes, that the fund acquired by their labour, and destined for their support, is not, in an ordinary way, more than equal to it. And hence it will follow,

th ex ca: òf on pre in wit of cul of froi mac in t enga of a tire whi venu time any B has b tiven fion maxi are w O be pr that i and t of th TH very work be me comb jects; nature auxili has be It labour

curred in yed in it; ftock or dlord or nothing hich furrofit upon and; neiole annual additional vhich are value of d by the parfimony; the claffes fociety. s acknowequal to and cond, it ought rholly unedged, that les of artiadded by et it would ue of the of its land amounted e manufacof the cone equal to agricultuvalue proexceed the , yet there r labour, a ft indepen-

ue of a fohan in one, ivators. It acquired by in an ordiwill follow, that augmentations of the wealth or capital of the community, except in the inftance of fome extraordinary dexterity or fkill, can only proceed, with respect to any of them, from the favings of the more thrifty and parfimonious.

The annual produce of the land and labour of a country can only be encreased in two ways-by some improvement in the productive powers of the uleful labour, which actually exifts within it, or by some increase in the quantity of such labour: that with regard to the first; the labour of artificers being capable of greater fubdivision and fimplicity of operation than that of cultivators; it is fusceptible, in a proportionably greater degree; of improvement in its productive powers, whether to be derived from an accellion of skill, or from the application of ingenious machinery; in which particular, therefore, the labour employed in the culture of land can pretend to no advantage over that engaged in manufactures: that with regard to an augmentation of the quantity of useful labour; this, excluding adventitious circumftances; must depend effentially upon an increase of capital, which again must depend upon the favings made out of the revenues of those who furnish or manage that; which is at any time employed; whether in agriculture; or in manufactures, or in any other waya

But while the exclusive productiveness of agricultural labour has been thus denied and refuted, the superiority of its productiveness has been conceded without hesitation. As this concesfion involves a point of confiderable magnitude, in relation to maxims of public administration, the grounds on which it refts are worthy of a diffinct and particular examination:

One of the arguments made use of, in support of the idea, may be pronounced both quaint and fuperficial: it amounts to thisthat in the productions of the foil, nature co-operates with man; and that the effect of their joint labour must be greater than that of the labour of man alone.

This, however, is far from being a necessary inference. It is very conceivable, that the labour of man alone laid out upon a work requiring great skill and art to bring it to perfection; may be more productive in value, than the labour of nature and man combined, when directed towards more fimple operations and objects; and when it is recollected to what an extent the agency of nature, in the application of the mechanical powers, is made auxiliary to the profecution of manufactures, the fuggestion which has been noticed lofes even the appearance of-plaufibility.

It might also be observed, with a contrary view, that the labour employed in agriculture is in a great measure periodical Vol. I.

802

and occasional, depending on seasons, liable to various and long intermissions; while that occupied in many manufactures is conftant and regular, extending through the year, embracing in fome inftances, night as well as day. It is also probable that there are among the cultivators of land more examples of remillnels than among artificers. The farmer, from the peculiar fertility of his land, or some other favourable circumstances, may frequently obtain a livelihood, even with a confiderable degree of carelessness in the mode of cultivation; but the artifan can with great difficulty effect the fame object, without exerting himfelf pretty equally with all those who are engaged in the fame pursuit. And if it may likewise be assumed as a fact, that manufactures open a wider field to exertions of ingenuity than agriculture, it would not be a strained conjecture, that the labour employed in the former; being at once more constant, more uniform, and more ingenious, than that which is employed in the latter, will be found at the fame time more productive.

But it is not meant to lay ftrefs on observations of this nature; they ought only to serve as a counterbalance to those of a similar complexion. Circumstances fo vague and general, as well as so abstract, can afford little instruction in a matter of this kind.

Another, and that which feems to be the principal argument offered for the fuperior productivenels of agricultural labour, turns upon the allegation, that labour employed on manufactures yields nothing equivalent to the rent of land; or to that nett furplus, as it is called, which accrues to the proprietor of the foil.

But this diffinction, important as it has been deemed, appears rather verbal than fubftantial.

It is eafily difcernible, that what in the firft inftance is divided into two parts under the denomination of the ordinary profit of the flock of the farmer and rent to the landlord, is in the fecond inftance united under the general appellation of the ordinary profit on the flock of the undertaker; and that this formal or verbal diffribution conflitutes the whole difference in the two cafes. It feems to have been overlooked, that the land is itfelf a flock or capital, advanced or lent by its owner to the occupier or tenant, and that the rent he receives is only the ordinary profit of a certain flock in land, not managed by the proprietor himfelf, but by another to whom he lends or lets it, and who, on his part, advances a fecond capital to flock and improve the land, upon which he alfo receives the ufual profit. The rent of the landlord and the profit of the farmer are therefore nothing more than the ordinary profits of two capitals belonging to two different

299

perfons, and united in the cultivation of a farm: as in the other cafe, the furplus which arifes upon any manufactory, after replacing the expences of carrying it on, answers to the ordinary profits of one or more capitals engaged in the profecution of fuch manufactory. It is faid one or more capitals; because in fact, the fame thing which is contemplated in the cafe of the farm, fometimes happens in that of a manufactory. There is one who furnishes part of the capital, or lends a part of the money, by which it is carried on, and another who carries it on with the addition of his own capital. Out of the furplus which remains, after defraying expences, an interest is paid to the money-lender for the portion of the capital furnished by him, which exactly agrees with the rent paid to the landlord; and the refidue of that furplus constitutes the profit of the undertaker or manufacturer, and agrees with what is denominated the ordinary profits of the flock of the farmer. Both together make the ordinary profits of two capitals employed in a manufactory; as . in the other cafe the rent of the landlord and the revenue of the farmer compose the ordinary profits of two capitals, employed in the cultivation of a farm.

The rent therefore accruing to the proprietor of the land, far from being a criterion of exclusive productivenels, as has been argued, is no criterion even of fuperior productivenels. The question must still be, whether the surplus, after defraying expences of a given capital, employed in the purchase and improvement of a piece of land, is greater or lefs than that of a like capital employed in the profecution of a manufactory; or whether the whole value produced from a given capital and a given quantity of labour, employed in one way, be greater or less than the whole value produced from an equal capital and an equal quantity of labour employed in the other way; or rather, perhaps, whether the business of agriculture or that of manufactures will yield the greatest product, according to a compound ratio of the quantity of the capital and the quantity of labour which are employed in the one or in the other.

The folution of either of these questions is not easy; it involves numerous and complicated details, depending on an accurate knowledge of the objects to be compared. It is not known that the comparison has ever yet been made upon sufficient data properly ascertained and analysed. To be able to make it with fatisfactory precision would demand much previous inquiry and close investigation.

Some effays, however, have been made towards acquiring the requisite information, which have rather ferved to throw doubt

upon, than to confirm the hypothesis under examination. But it ought to be acknowledged, that they have been too little dir. versified, and are too imperfect to authorise a definitive conclusion cither way, leading rather to probable conjecture than to certain deduction. They render it probable that there are various branches of manufactures in which a given capital will yield a greater total product, and a confiderably greater nett product than an equal capital invested in the purchase and improvement of lands; and that there are also some branches, in which both the groce and the nett produce will exceed that of agricultural induftry, according to a compound ratio of capital and labour, But it is on this last point that there appears to be the greatest room for doubt. It is far lefs difficult to infer generally that the nett produce of capital engaged in manufacturing enterprifes. is greater than that of capital engaged in agriculture.

The foregoing fuggestions are not defigned to inculcate an opinion that manufacturing industry is more productive than that of agriculture. They are intended rather to shew that the reverse of this proposition is not afcertained; that the general arguments which are brought to establish it are not fatisfactory; and, confequently, that a supposition of the superior productiveness of tillage ought to be no obstacle to listening to any substantial inducement to the encouragement of manufactures, which may be otherwise perceived to exist, through an apprehension that they may have a tendency to divert labour from a more to a lefs profitable employment.

It is extremely probable, that on a full and accurate developement of the matter, on the ground of fact and calculation, it would be difcovered that there is no material difference between the aggregate productivenels of the one, and of the other kind of industry; and that the propriety of the encouragements, which may in any cale be proposed to be given to either, ought to be determined upon confiderations irrelative to any comparison of that nature.

But without contending for the fuperior productivenels of manufacturing industry, it may conduce to a better judgment of the policy, which ought to be purfued by the United States refpecting its encouragement, to contemplate the fubject under fome additional afpects, tending not only to confirm the idea, that this kind of industry has been improperly represented as unproductive in itself; but to evince in addition, that the effabliftment and diffusion of manufactures will have the effect of rendering the total mais of useful and productive labour, in a community, greater than it would otherwise be. In profecuting this difcussion, it may be necessary briefly to refume and review fome of the topics which have been already touched. beca valu four mer, tive, Each the duce tenan two the If he

he w to th proce and c tivati lefs F thing tainly ced is artific Ag

ter w of his woul obfer and n The a tion only fions nifh t for h value fumpt other. Ifi be tw his lal cation both provi

entire

To affirm that the labour of the manufacturer is unproductive, because he confumes as much of the produce of land as he adds value to the raw materials which he manufactures, is not better founded, than it would be to affirm, that the labour of the farmer, which furnishes materials to the manufacturer, is unproductive, because he consumes an equal value of manufactured articles. Each furnishes a certain portion of the produce of his labour to the other, and each destroys a correspondent portion of the produce of the labour of the other. In the mean time the maintenance of two citizens, instead of one, is going on; the state has two members instead of one: and they together consume twice the value of what is produced from the land.

If inftead of a farmer and artificer, there was a farmer only, he would be under the neceffity of devoting a part of his labour to the fabrication of cloathing and other articles, which he would procure of the artificer, in the cafe of there being fuch a perfon; and of courfe, he would be able to devote lefs labour to the cultivation of his farm, and would draw from it a proportionably lefs product. The whole quantity of production, in this flate of things, in provisions, raw materials and manufactures, would certainly not exceed in value the amount of what would be produced in provisions and raw materials only, if there were an artificer as well as a farmer.

Again—If there were both an artificer and a farmer, the latter would be left at liberty to purfue exclusively the cultivation of his farm. A greater quantity of provisions and raw materials would of courfe be produced, equal, at leaft, as has been already obferved, to the whole amount of the provisions, raw materials, and manufactures, which would exist on a contrary fupposition. The artificer, at the fame time, would be going on in the production of manufactured commodities, to an amount fufficient not only to repay the farmer, in those commodities, for the provisions and materials which were procured from him, but to furnish the artificer himfelf with a supply of fimilar commodities for his own use. Thus, then, there would be two quantities or values in existence instead of one; and the revenue and confumption would be double in one case, what it would be in the other.

If in place of both these suppositions, there were supposed to be two farmers and no artificer, each of whom applied a part of his labour to the culture of land, and another part to the fabrication of manufactures; in this case, the portion of the labour of both bestowed upon land would produce the same quantity of provisions and raw materials only, as would be produced by the entire sum of the labour of one applied in the same manner, and

the portion of the labour of both beftowed upon manufactures, would produce the fame quantity of manufactures, only, as would be produced by the entire fum of the labour of one applied in the fame manner. Hence the produce of the labour of tho two farmers would not be greater than the produce of the labour of the farmer and the artificer; and hence it refults, that the labour of the artificer is as positively productive as that of the farmer, and, as positively, augments the revenue of the fociety,

The labour of the artificer replaces to the farmer that portion of his labour with which he provides the materials of exchange with the artificer, and which he would otherwife have been compelled to apply to manufactures; and while the artificers thus enables the farmer to enlarge his flock of agricultural industry, a portion of which he purchases for his own use, he also supplies himfelf with the manufactured articles of which he stands in need. He does still more-Besides this equivalent which he gives for the portion of agricultural labour confumed by him, and this fupply of manufactured commodities for his own confumption, he furnishes still a surplus, which compensates for the use of the capital advanced either by himfelf or fome other perfon, for carrying on the bulinels. This is the ordinary profit of the Rock employed in the manufactory, and is, in every fenfe, as effective an addition to the income of the fociety as the rent of land. man and the second the second second

The produce of the labour of the artificer, confequently, may be regarded as composed of three parts; one by which the provisions for his subfittence and the materials for his work are purchased of the farmer; one by which he supplies himself with manufactured necessaries: and a third which constitutes the profit on the stock employed. The two last portions seem to have been overlooked in this system, which represents manufacturing industry a- barren and unproductive.

In the courfe of the preceding illustrations, the products of equal quantities of the labour of the farmer and artificer have been treated as if equal to each other. But this is not to be underftood as intending to affert any fuch precife equality. It is merely a manner of expression adopted for the fake of fimplicity and perspicuity. Whether the value of the produce of the labour of the farmer be somewhat more or less than that of the artificer, is not material to the main scope of the argument, which hitherto has aimed at shewing, that the one, as well as the other, occasions a positive augmentation of the total produce and revenue of the fociety.

It is now proper to proceed a ftep farther, and to enumerate the principal circumftances, from which it may be inferred, That

they, could ftance . .. 1 J. 8. 3. 4. 5. 6. 7. Each ( total .r add te concei which tance.

enumerate rred, That manufacturing establishments, not only occasion a politive suginentation of the produce and revenue of the fociety, but that they contribute effentially to rendering them greater than they could possibly be, without such establishments. These circumfances are,

The division of labour.

2. An extension of the use of machinery.

3. Additional employment to claffes of the community not ordinarily engaged in the business.

4. The promoting of emigration from foreign countries.

5. The furnishing greater scope for the diversity of talents and dispositions which discriminate men from each other,

6. The affording a more ample and various field for enterprize.

7. The creating, in some instances, a new, and securing in all,

a more certain and fleady demand for the furplus produce of the foil.

Each of these circumstances has a confiderable influence upon the total mass of industrious effort in a community: together, they add to it a degree of energy and effect, which are not easily conceived. Some comments upon each of them, in the order in which they have been stated, may serve to explain their importance.

1. As to the division of labour.

It has justly been observed, that there is fearcely any thing of greater moment in the economy of a nation, than the proper division of labour—The separation of occupations causes each to be catried to a much greater perfection than it could possibly acquire, if they were blended. This arises principally from three circumstances.

1ft. The greater skill and dexterity naturally refulting from a constant and undivided application to a single object—It is evident, that these properties must increase in proportion to the separation and simplification of objects, and the steadiness of the attention devoted to each; and must be less, in proportion to the complication of objects, and the number among which the attention is distracted.

ad. The economy of time, by avoiding the loss of it, incident to a frequent transition from one operation to another of a different nature.—This depends on various circumftances; the transition itself, the orderly disposition of the implements, machines, and materials employed in the operation to be relinquished, the preparatory steps to the commencement of a new one, the interruption of the impulse, which the mind of the workmen acquires, from being engaged in a particular operation; the distractions,

hefitations; and feluctances, which attend the passage from one kind of business to another.

gd. An extension of the use of machinery.—A man occupied on a fingle object, will have it more in his power, and will be more naturally led to exert his imagination in devising methods to facilitate and abridge labour; than if he were perplexed by a variety of independent and diffimilar operations. Befrdes this, the fabrication of machines; in numerous inflances, becoming itfelf a diffinct trade, the artift who follows it, has all the advantages which have been enumerated, for improvement in his particular art; and in both ways the invention and application of machinery are extended.

And from these causes united, the mere separation of the occupation of the cultivator, from that of the artificer, has the effect of augmenting the productive powers of labour, and with them the total mass of the produce or revenue of a country. In this single view of the subject, therefore, the utility of artificers of manufactures, towards promoting an increase of productive industry, is apparent.

11. As to an extension of the use of machinery, a point which, though partly anticipated, requires to be placed in one or two additional lights.

The employment of machinery forms an item of great imporportance in the general mais of national industry. 'Tis an artificial force brought in aid of the natural force of man; and, to all the purpoles of labour, is an increase of hands; an accellion of ftrength, unincumbered too by the expence of mointaining the labourer. May it not therefore be fairly inferred, that those occupations, which give greatest fcope to the use of this auxiliary, contribute most to the general stock of industrious effort, and, in confequence, to the general product of industry?

It will be taken for granted, and the truth of the polition referred to obfervation, that manufacturing purfuits are fusceptible in a greater degree of the application of machinery, than those of agriculture. If so, all the difference is lost to a community, which, instead of manufacturing for itself, procures the fabrics requisite to its supply from other countries. The substitution of foreign for domestic manufactures, is a transfer to foreign nations of the advantages accruing from the employment of machinery, in the modes in which it is capable of being employed, with most utility and to the greatest extent.

The cotton mill invented in England, within the last twenty years, is a fingle illustration of the general proposition which we have advanced. In confequence of it, all the different process for spinning cotton are performed by means of machines, which

from one

occupied d will be methods exed by a fides this, oming itadvantahis partication of

eat imporis an artin; and, to acceffion aining the t those ocauxiliary, rt, and, in

ofition refusceptible in those of ommunity, the fabrics ubstitution oreign naent of maemployed,

aft twenty which we t proceffes hes, whichare put in motion by water, and attended chiefly by women and children; and by a fmaller number of perfons, in the whole, than are requifite in the ordinary node of fpinning. And it is an advantage of great moment that the operations of this mill continue with convenience, during the night, as well as through the day. The prodigious effect of fuch a machine is safily conceived. To this invention is to be attributed effectively, the immenfe progrefs which has been fo fuddenly made in this country in the various fabrics of cotton.

III. As to the additional employment of classes of the community, not ordinarily engaged in the particular business:

This is not smong the leaft valuable of the means, by which manufacturing inflitutions contribute to augment the general flock of induftry and production. In places where those inflitutions prevail, besides the perfons regularly engaged in them, they afford occasional and extra employment to industrious individuals and families, who are willing to devote the leifure refulting from the intermissions of their ordinary pursuits to collateral labours, as a resource for multiplying their acquisitions or their enjoyments. The husbandman himself experiences a new fource of profit and fupport from the increased industry of his wife and daughters; invited and ftimulated by the demands of the neighbouring manufactories.

Befide this advantage of occasional employment to claffes having different occupations, there is another of a nature allied to it, and of a fimilar tendency.—This is the employment of perfons who would otherwise be idle, and in many cases a burthen on the community, either from the bias of temper, habit, infirmity, of body, or fome other cause, indisposing or disqualifying them for the toils of the country. It is worthy of particular remark, that, in general, women and children are rendered more useful, and the latter more early useful, by manufacturing establishments, than they would otherwise be. Of the number of perfons employed in the cotton manufactories of Great Britain, it is computed that four sevenths nearly are women and children; of whom the greatest proportion are children, and many of them of a tender age.

Thus it appears to be one of the attributues of manufactures, and one of no fmall confequence, to give occasion to the exertion of a greater quantity of industry, even by the fame number of perfons, where they happen to prevail, than would exist if there were no such establishments.

IV. As to the promoting of emigration from forcign countries. Men reluctantly quit one courfe of occupation and livelihood R a

for another, unless invited to it by very apparent and proximate . advantages. Many, who would go from one country to snother, if they had a prospect of continuing, with more benefit, the callings to which they have been educated, will often not be tempted to change their fituation by the hope of doing better in fome other way. Manufacturers who, liftening to the powerful invitetions of a better price for their fabrics, or their labour; of greater cheapnels of provisions and raw materials; of an exemption from the chief part of the taxes, buithens and restraints, which they endure in Europe; of greater perfonal independence and confequence, under the operation of a more equal government ; and of what is far more precious than mere religious toleration, a perfect equality of religious privileges; will probably flock from Europe to the United States to purfue their own trades or profeffions, if they are once made fenfible of the advantages they will enjoy, and are infpired with an affurance of encouragement and employment.

If it be true then, that it is the interest of the United States to open every possible avenue to emigration from abroad, it affords a weighty argument for their encouragement of manufactures; which, for the reasons just affigned, will have the strongest tendency to multiply the inducements to it.

Here is perceived an important refource, 'not only for extending the population, and with it the ufeful and productive labour of the country, but likewife for the profecution of manufactures, without deducting from the number of hands, which might otherwife be drawn to tillage; and even for the indemnification of agriculture for fuch as may happen to be diverted from it. Many whom manufacturing views may induce to emigrate, will afterwards yield to the temptations, which the particular fituation of the United States hold out to agricultural purfuits. And while agriculture will in other refpects derive many fignal and unmingled advantages from the growth of manufactures, it is a problem whether it will gain or lofe, as to the article of the number of perfons employed in carrying it on.

V. As to the furnishing greater scope for the diversity of talents and dispositions, which diferminate men from each other.

This, is a much more powerful mean of augmenting the fund of national industry, than may at first fight appear. It is a just observation, that minds of the strongest and most active powers for their proper objects fall below mediocrity, and labour without effect if confined to uncongenial pursuits : and it is thence to be inferred, that the results of human exertion may be immensely increased by diversifying its objects. When all the different kinds of industry obtain in a community, each individual can find his

If there be any thing in a remark of the pope of America, a peculiar aptitude for mechanical improvements, it will operate as a forcible reason for giving opportunities to the exercise of that species of talent by the propagation of manufactures.

### VI. As to the affording a more ample and various field for enterprize.

This also is of greater confequence in the general feale of national exertion, than might, perhaps, on a fuperficial view be fupposed, and has effects not altogether diffimilar from those of the circumstances last noticed. To cheristh and ftimulate the activity of the human mind, by multiplying the objects of enterprise, is not among the least confiderable of the expedients by which the wealth of a nation may be promoted.—Even things in themselves, not positively advantageous, fometimes become for by their tendency to provoke exertion. Every new scene which is opened to the busy nature of man to rouss and exert itself, is the addition of a new energy to the general stock of effort.

The fpirit of enterprife, uleful and prolific as it is, must neceffarily be contracted or expanded in proportion to the fimplicity or variety of the occupations and productions which are to be found in a fociety. It must be lefs in a nation of mere cultivators, than in a nation of cultivators and merchants; lefs in a nation of cultivators, and merchants, than in a nation of cultivators, artificers, and merchants.

VII. As to the creating, in fome inflances, a new, and fecuring in all, a more certain and fleady demand for the furplus produce of the foil.

This is among the most important of the circumstances which have been indicated. It is a principal mean by which the establishment of manufactures contributes to an augmentation of the produce or revenue of a country, and has an immediate and direct relation to the prosperity of agriculture.

It is evident that the exertions of the hufbandman will be fteady or fluctuating, vigorous or feeble, in proportion to the fteadiness or fluctuation, adequateness, or inadequateness of the markets, on which he must depend, for the vent of the furplus, which may be produced by his labour; and that fuch furplus in the ordinary course of things will be greater or less in the fame proportion.

For the purpole of this vent, a domestic market is greatly to be preferred to a foreign one; because it is in the nature of things far more to be relied upon.

Ra 2

It is a primary object of the policy of nations to be able to furply themfelves with fublistence from their own foil ; and manufacturing nations, as far as circumftances permit, endeavour to procure from the fame fource, the raw materials necessary for their own fabrics. This disposition, urged by the spirit of monopoly. is fometimes even carried to an injudicious extreme. It feems not always to be recollected, that nations who have neither mines nor manufactures, can only obtain the manufactured articles, of which they fland in need, by an exchange of the products of their foils; and that if those who can best furnish them with such articles are unwilling to give a due course to this exchange, they must of necellity make every pollible effort to manufacture for themfelves; the effect of which is, that the manufacturing nations abridge the natural advantages of their fituation, through an unwillingness to permit the agricultural countries to enjoy the advantages of theirs, and facrifice the interests of a mutually beneficial intercourse to the vain project of selling every thing and buy. ing nothing,

But it is also a confequence of the policy, which has been noted, that the foreign demand for the products of agricultural countrics, is, in a great degree, rather cafual and occafional, than certain or conflant. To what extent injurious interruptions of the demand for fome of the ftaple commodities of the United States, may have been experienced from that caufe, muft be referred to the judgment of those who are engaged in carrying on the commerce of the country; but it may be fafely affirmed, that fuch interruption are at times very inconveniently felt, and that cafes not unfrequently occur, in which markets are fo confined and reftricted, as to render the demand very unequal to the fupply.

Independent likewife of the artificial impediments, which are created by the policy in queftion, there are natural caufes tending to render the external demand for the furplus of agricultural nations a precarious reliance. The differences of feafons in the countries which are the confumers, make immenfe differences in the produce of their own foils, in different years, and confequently in the degrees of their neceffity for foreign fupply. Plentiful harvefts with them, efpecially if fimilar ones occur at the fame time in the countries which are the furnifhers, occasion of courfe a glut in the markets of the latter,

Confidering how fast and how much the progress of new fettlements in the United States must increase the furplus produce of the foil, and weighing feriously the tendency of the fystem which prevails among most of the commercial nations of Europe, whatever dependence may be placed on the force of natural circumstances to counteract the effects of an artificial policy, there as too u extenfi

oduce yftem irope, al cirthere appear frong reasons to regard the foreign demand for the furplus as too uncertain a reliance, and to defire a fubilitute for it, in an extensive domestic market.

To fecure fuch a market, there is no other expedient than for the United States to promote manufacturing establishments. Manufacturers, who constitute the most numerous class, after the cultivators of land, are for that reason the principal confumers of the furplus of their labour.

This idea of an extensive domestic market for the furplus produce of the foil, is of the first confequence to the United States. It is of all things that which most effectually conduces to a flourishing flate of agriculture. If the effect of manufactories were to be the detaching a portion of the hands which would be otherwise engaged in tillage, it might possibly cause a smaller quantity of lands to be under cultivation: but by their tendency to procure a more certain demand for the furplus produce of the foil, they at the fame time, cause the lands which are in cultivation to be better improved, and more productive. And while, by their influence, the condition of each individual farmer is meliorated, the total mass of agricultural production will probably be increased: for this must evidently depend as much, if not more, upon the degree of improvement, than upon the number of acres under culture.

It merits particular observation, that the multiplication of manufactories not only furnishes a market for those articles which have been accustomed to be produced in abundance in a country, but it likewise creates a demand for such as were either unknown, or produced in inconsiderable quantities. The bowels, as well as the surface of the earth. are ransacked for articles which were before neglected. Animals, plants, and minerals acquire a utility and value, which were before unexplored.

The foregoing confiderations feem fufficient to eftablish, as general propositions, that it is the interest of nations, and particularly of the United States, to diversify the industrious pursuits of the individuals who compose them—that the establishment of manufactures is calculated not only to increase the general stock of useful and productive labour, but even to improve the state of agriculture in particular; certainly to advance the interest of those who are engaged in it. There are other views, that we shall hereaster take of the subject, which, it is conceived, will ferve to confirm these inferences.

Previous to a further discussion of the objections to the encouragement of manufactures, which have been stated, it will be of use to see what can be said in reference to the particular situation

of the United States against the conclusions appearing to result from what has been already offered.

It may be observed, and the idea is of no inconfiderable weight, that however true it may be, that a flate, which possefiles large tracts of vacant and fertile territory, and at the fame time feeluded from foreign commerce, would find its interest, and the interest of agriculture, in diverting a part of its population from tillage to manufactures; yet it will not follow that the fame is true of a state, which, having such vacant and fertile territory, has at the fame time ample opportunities of procuring from abroad, on good terms, all the fabrics of which it ftands in need for the fupply of its inhabitants. The power of doing this at leaft fecures the great advantage of a division of labour, leaving the farmer free to purfue exclusively the culture of his land, and enabling him to procure with its products the manufactured supplies requisite either to his wants or to his enjoyments. And though it fhould be true, that in fettled countries the diversification of industry is conducive to an increase in the productive powers of labour, and to an augmentation of revenue and capital, yet it is fcarcely conceivable that there can be any thing of to folid and permanent advantage to an uncultivated and unpeopled country, as to convert its waftes into cultivated and inhabited districts. If the revenue, in the mean time, should be lefs, the capital, in the event, must be greater. To these observations, the following appears to be a fatisfactory answer, at least so far as they concern the American States.

If the fystem of perfect liberty to industry and commerce were the prevailing fystem of nations, the arguments which diffuade a country in the predicament of the United States, from the zealous pursuit of manufactures, would doubtless have great force. It will not be affirmed, that they might not be permitted, with few exceptions, to ferve as a rule of national conduct. In fuch a flate of things, each country would have the full benefit of its peculiar advantages to compensate for its deficiencies or disadvantages. If one nation were in condition to supply manufactured articles on better terms than another, that other might find an abundant indemnification in a superior capacity to furnish the produce of the foil. And a free exchange, mutually beneficial, of the commodities which each was able to fupply, on the best terms, might be carried on between them, supporting in full vigour the industry of each. And though the circumstances which have been mentioned, and others which will be unfolded hereafter, render it probable, that nations merely agricultural, would not enjoy the fame degree of opulence, in proportion to their numbers, as those which united manufactures with agriculture; yet the progressive improvement of the lands of the former might, in the end, atone for

But the fyftem which has been mentioned is far from characterizing the general policy of nations. The prevalent one has been regulated by an opposite spirit. The confequence of it is, that the United States are to a certain extent in the fituation of a country precluded from foreign commerce. They can indeed, without difficulty, obtain from abroad the manufactured supplies of which they are in want; but they experience numerous and very injurious impediments to the emission and vent of their own commodities. Nor is this the case in reference to a single foreign nation only. The regulations of several countries, with which they have the most extensive intercourse, throw serious obstructions in the way of the principal staples of the United States.

In fuch a position of things, the United States cannot exchange with Europe on equal terms; and the want of reciprocity would render them the victim of a fystem, which would induce them to confine their views to agriculture, and refrain from manufactures. A constant and increasing necessity, on their part, for the commodities of Europe, and only a partial and occasional demand for their own, in return, could not but expose them to a state of impoverishment, compared with the opulence to which their political and natural advantages authorife them to aspire.

Remarks of this kind are not made in the fpirit of complaint. Tis for the nations, whofe regulations are alluded to, to judge for themfelves, whether by aiming at too much, they do not lofe more than they gain. 'Tis for the United States to confider by what means they can render themfelves leaft dependent on the combinations, right or wrong, of European policy.

It can be no finall confolation to them, that already the meafures which have embarraffed their trade have accelerated their internal improvements, which, upon the whole, have bettered their affairs. To diverfify and extend these improvements is the furest and safest method of indemnifying themselves for any inconveniencies which those or similar measures have a tendency to beget. If Europe will not take from them the products of their foil, upon terms confistent with their interest, the natural remedy is for them to contract as fast as possible their wants of her.

The conversion of their waste into cultivated land is certainly a point of great moment in the political calculations of the United States. But the degree in which this may possibly be retarded by the encouragement of munufactories, does not appear to countervail the powerful inducements to affording that encouragement.

An observation made in another place is of a nature to have great influence upon this question—If it cannot be denied that the interests even of agriculture may be advanced more by having such of the lands of a state as are occupied under good cultivation, than by having a greater quantity occupied under a much inferior cultivation; and if manufactories, for the reasons affigned, must be admitted to have a tendency to promote a more steady and vigorous cultivation of the lands occupied, than would happen without them, then it will follow, that they are capable of indemnifying a country for a diminution of the progress of new fettlements; and may ferve to increase both the capital value and the income of its lands, even though they should abridge the number of acres under tillage.

But it does by no means follow, that the progress of new fettlements will be retarded by the extension of manufactures. The defire of being an independent proprietor of land is founded on fuch firong principles in the human breaft, that where the opportunity of becoming fo is as great as it is in the United States, the proportion will be fmall of those, whose fituations would otherwise lead to it, who will be diverted from it towards manufactures. And it is highly probable, as already intimated, that the acceffion of foreigners, who originally drawn over by manufacturing views, will afterwards abandon them for agricultural, will be more than equivalent for those of her own citizens, who may happen to be detached from them.

The remaining objections to a *particular* encouragement of manufactures in the United States now require to be examined.

One of these turns on the position, that industry, if left to itfeli, will naturally find its way to the most useful and profitable employment: whence it is inferred, that manufactures, without the aid of government, will grow up as foon and as fast, as the natural state of things, and the intetest of the community may require.

Against the folidity of this hypothesis, in the full latitude of the terms, very cogent reasons may be offered. These have relation to the firong influence of habit and the spirit of imitation, the fear of want of success in untried enterprises, the intrinsic difficulties incident to first essays towards a competition with those who have previously attained to perfection in the business to be attempted, the bounties, premiums, and other artificial encouragements, with which European nations second the exertions of their own subjects in the branches in which they are to be rivalled.

\* Experience teaches, that men are often fo much governed by what they are accuftomed to fee and practife, that the fimpleft

are to have denied that s by having od cultivader a ,much flons affignmore fteady would hapcapable of grefs of new al value and abridge the

nent of manunined.

if left to itnd profitable ures, without d as faft, as nmunity may

I latitude of hefe have reof imitation, the intrinfic on with thole ufinefs to be ficial encouexertions of y are to be

governed by the fimpleft and most obvious improvements, in the most ordinary occupations, are adopted with belitation, reluctance, and by flow gradations. The spontaneous transition to new pursuits, in a community long habituated to different ones, may be expected to be attended with proportionably greater difficulty. When former occupations ceale to yield a profit adequate to the fublistence of their followers, or when there is an absolute deficiency of employment in them, owing to the fuperabundance of hands, changes will enfue; but these changes will be likely to be more tardy than may confift with the interest either of individuals, or of the fociety. In many cafes they will not happen, while a bare fupport can be enfured by an adherence to ancient courfes; though a refort to a more profitable employment might be prace. ticable. To produce the defirable changes, as early as may be expedient, may therefore require the incitement and patronage of STIN TELS CALLER STO ST WITH . government.

The apprehension of failing in new attempts is perhaps a more ferious impediment. There are dispositions apt to be attracted by the mere novelty of an undertaking; but thele are not always the best calculated to give it fuccess. To this it is of importance that the confidence of cautious, fagacious capitalists, both citizens and foreigners, should be excited. And to inspire this description of perfors with confidence, it is effential that they should be made to see in any project, which is new, and for that reason alone, if for no other, precarious, the prospect of such a degree of countenance and support from government, as may be capable of overcoming the obstacles inseparable from first experiments.

The fuperiority antecedently enjoined by nations, who have preoccupied and perfected a branch of industry, conftitutes a more formidable obstacle, than either of those which have been mentioned, to the introduction of the fame branch into a country in which it did not before exist. To maintain between the recent establishments of one country, and the long-matured establishments of another country, a competition upon equal terms, both as to quality and price, is in most cases impracticable. The disparity in the one or in the other, or in both, must necessarily be fo confiderable as to forbid a fuccessful rivalship, without the extraordinary aid and protection of government.

But the greateft obffacle of all to the fuccefsful profecution of a new branch of industry in a country in which it was before unknown, confist, as far as the instances apply, in the bounties, premiums, and other aids which are granted, in a variety of cafes, by the nations in which the establishments to be imitated are previously introduced. It is well known, that certain nations

Ss

grant bounties on the exportation of particular commodities, to enable their own workmen to underfell and fupplant all competitors, in the countries to which those commodities are fent. Hence the undertakers of a new manufacture have to contend not only with the natural difadvantages of a new undertaking, but with the gratuities and remunerations which other governments beflow. To be enabled to contend with fuccefs, it is evident that the interference and aid of their own government are indifpentible.

Combinations by those engaged in a particular branch of businefs in one country to frustrate the first efforts to introduce it into another, by temporary facifices, recompensed perhaps by extraordinary indemnifications of the government of fuch country, are believed to have existed, and are not to be regarded as defititute of probability. The existence or affurance of aid from the government of the country in which the business is to be introduced, may be effential to fortify adventurers against the dread of fuch combinations to defeat their effects, if formed, and to prevent their being formed, by demonstrating that they must in the end prove fruitles.

Whatever room there may be for an expectation that the industry of a people, under the direction of private interest, will upon equal terms find out the mess beneficial employment for it(elf, there is none for a reliance that it will struggle against the force of unequal terms, or will of it(elf furmount all the advensitious barriers to a fuccessful competition, which may have been erected either by the advantages naturally acquired from practice and previous possession of the ground, or by those which may have forung from positive regulations and an artificial policy. This general reflection might alone suffice as an answer to the objection under examination, exclusively of the weighty considerations which have been particularly urged.

The objections to the purfuit of manufactures in the United States, which next prefent themfelves to discussion, represent an impracticability of fuccels, arising from three causes—fcarcity of hands, dearness of labour, want of capital.

The two first circumstances are to a certain extent real, and, within due limits, ought to be admitted as obstacles to the fuccels of manufacturing enterprife in the United States. But there are various confiderations which lessen their force, and tend to afford an affurance that they are not sufficient to prevent the advantageous profecution of many very useful and extensive manufactories.

With regard to fcarcity of hands, the fast itfelf must be applied with no fmall qualification to certain parts of the United States. There are large districts which may be confidered as

ing par den be blif wit of a wh ver ext chi digi mer the to t ber as h culs the care tov hibi diff imp wea exp Led mar that mer wil defi and add ol on for

pre

dra

rift

rea

not

pretty fully peopled, and which, notwithstanding a continual j drain for distant fettlements, are thickly interspected with flourishing and increasing towns. If these districts have not already reached the point at which the fearcity of hands ceases, they are, not remote from it, and are approaching fast towards it : and having, perhaps, fewer attractions to agriculture than fome other parts of the union, they exhibit a proportionably stronger tendency towards other kinds of industry. In these districts may, be different no inconfiderable maturity for manufacturing establishments.

But there are circumstances, which have been already noticed with another view, that materially diminish every where the effect of a fearcity of hands. These circumstances are-the great use which can be made of women and children; on which point a very pregnant and instructive fact has been mentioned; the vast extension given by late improvements to the employment of machines, which, fubfituting the agency of fire and water, has prodigioufly tellened the necellity for manual labour; the employment of perfons ordinarily engaged in other occupations, during the featons, or hours of leifure; which, befides giving occasion to the exertion of a greater quantity of labour by the fame number of perfons, and thereby increasing the general Rock of labour, as has been cliewhere remarked, may also be taken into the calculation, as a refource for obvisting the fearcity of hands-laftly, the attraction of foreign emigrants. Whoever infpects with a careful eye the composition of their towns, will be made fenfible to what an extent this refource may be relied upon. These exhibit a large proportion of ingenious and valuable workmen, in different arts and trades, who, by expatriating from Europe, have improved their own condition, and added to the industry and wealth of the United States. It is a natural inference from the experience they have already had, that in proportion as the United States shall prefent the countenance of a ferious profecution of manufactures, in proportion as foreign artifts shall be made sensible that the flate of things there affords a moral certainty of employment and encouragement competent numbers of European workmen will transplant themselves, effectually to ensure the success of the defign. How indeed can it otherwise happen, confidering the various and powerful inducements which the fituation of America offers, addreffing themfelves to fo many ftrong paffions and feelings, to fo many general and particular interests?

It may be affirmed, therefore, in respect to hands for carrying on manufactures, that they will in a great measure trade upon a foreign stock; referving their own for the cultivation of their

competi-Hence ot only ut with beflow. the infible, in of bufioduce it haps by h counarded as id from is to be inft the formed. hat they Starting . the ineft, will nent for

United efent an rcity of al, and, fuccels

here are o afford idvantananufac-

e appli-United lered as 3152

lands and the manning of their fhips, as far as charefter and circumstances shall incline. It is not unworthy of remark, that the objection to the fuccels of manufactures, deduced from the fearcity of hands, is alike applicable to trade and navigation, and yet these are perceived to flourish, without any fensible impediment from that cause.

As to the dearness of labour, another of the obstacles alledged, this has relation principally to two circumstances; one, that which has been just discussed, the scarcity of hands; the other, the greatness of profits.

As far as it is a confequence of the fearcity of hands, it is mitigated by all the confiderations which have been adduced as leffening that deficiency. It is certain too, that the difparity in this refpect between fome of the most manufacturing parts of Europe and a large proportion of the United States, is not nearly fo great as is commonly imagined. It is also much lefs in regard to artificers and manufacturers than in regard to country labourers; and while a careful comparison thews that there is, in this particular, much exaggeration, it is also evident, that the effect of the degree of difparity which does traly exift, is diminished in proportion to the use which can be made of machinery.

To illustrate this last idea—Let it be supposed, that the difference of price, in two countries, of a given quantity of manual labour requisite to the fabrication of a given article is as ten, and that some MECHANIC FOWER is introduced into both countries, which performing half the necessary labour, leaves only half to be done by hand, it is evident, that the difference in the cost of the fabrications of the article in question, in the two countries, as far as it is connected with the price of labour, will be reduced from ten to five, in consequence of the introduction of that FOWER.

This circumstance is worthy of the most particular attention. It diminishes immensely one of the objections, most strenuously urged, against the success of manufactures in the United States.

For the United States to procure all fuch machines as are known in any part of Europe can only require a proper provifion and due pains. The knowledge of feveral of the molt important of them they already poffels. The preparation of them there is in most cafes practicable on nearly equal terms. As far as they depend on water, fome fuperiority of advantages may be claimed, from the uncommon variety and greater cheapnels of fituations adapted to mill feats, with which different parts of the United States abound.

So fe greatne its fuce Ther tures in the wor Europe United the dor lawing taxes, i the ex wages d on the purchal to the U charges are paid office w As to

ntion. uoufly ates. as are provift imthem As far nay be cefs of of the "So for as the dearnefs of labour may be a confequence of the greatnels of profits in any branch of business, it is no obstacle to its fuccels." The undertaker can afford to pay the price.

There are grounds to conclude, that undertakers of manufact tures in America; can at this time afford to pay higher wages to the workmen they employ than are paid to fimilar workmen in Europes The price of foreign fabries in the markets of "the United States, which will for a long time regulate the prices of the domestic ones, may be confidered as compounded of the foltowing ingredients :--- The first coft of materials, including the taxes, if any, which are paid upon them where they are made; the expence of grounds, buildings, machinery, and tools; the wages of the perfons employed in the manufactory; the profits on the capital or flock employed; the commissions of agents to purchase them where they are made ; the expence of transportation to the United States, including "infurance and other incidental charges; the taxes or duties, if any, and fees of office which are paid on their exportation; the taxes or duties, and fees of office which are paid on their importation. 3. 2 1 1 L LA

As to the first of these items, the cost of materials, the advantage, upon the whole, is at present on the fide of the United States, and the difference in their favour must increase, in proportion as a certain and extensive domestic demand shall induce the proprietors of land to devote more of their attention to the production of those materials. It ought not to escape observation, in a comparison on this point, that some of the principal manufacturing countries of Europe are much more dependent on foreign supply for the materials of their manufactures, than the United States, who are capable of supplying themselves with a greater abundance, as well as a greater variety, of the requisite materials.

As to the fecond item, the expence of grounds, buildings, machinery, and tools, an equality at leaft may be affumed; fince advantages in fome particulars will counterbalance temporary difadvantages in others.

As to the third item, or the article of wages, the comparison certainly turns against the United States; though, as before obferved, not in fo great a degree as is commonly supposed.

The fourth item is alike applicable to the foreign and to the domeftic manufacture. It is indeed more properly a refult than a particular to be compared.

But with refpect to all the remaining items, they are alone applicable to the foreign manufacture, and in the frictest fense, extraordinaries; constituting a sum of extra charge on the foreign fabric, which cannot be eftimated at lefs than from 18 to 30 per cent. on the coft of it at the nanufactory.

The fum of extra charge may confidently be regarded as more than a counterpoile for the real difference in the price of labour, and is a fatisfactory proof that manufactures may profper in defiance of it in the United States.

To the general allegation, connected with the circumftances of fcarcity of hands and the dearners of labour, that extensive manufactures can only grow out of a redundant or full population, it will be fufficient to answer generally, that the fact has been otherwise.—That the fituation alledged to be an effential condition of fucces, has not been that of feveral nations, at periods when they had already attained to maturity in a variety of manufactures.

The supposed want of capital for the profecution of manufactures in the United States is the most indefinite of the objections which are usually opposed to it.

It is very difficult to pronounce any thing precife concerning the real extent of the monied capital of a country, and ftill more concerning the proportion which it bears to the objects that invite the employment of capital. It is not lefs difficult to pronounce, how far the effect of any given money, as capital, or, in other words, as a medium for circulating the industry, and property of a nation, may be increased by the very circumstance of the additional motion which is given to it by new objects of employment. That effect, like the momentum of deteending bodies, may not improperly be reprefented, as in a compound ratio to mass and velocity. It seems pretty certain, that a given sum of money, in a fituation in which the quick impulses of commercial activity are little felt, will appear inadequate to the circulation of as great a quantity of industry and property as in one in which their full influence is experienced.

It is not obvious why the fame objection might not as well be made to external commerce as to manufactures, fince it is manifest that the immenie tracks of land, occupied and unoccupied, are capable of giving employment to more capital than is actually beflowed upon them. It is CERTAIN THAT THE UNITED STATES OFFER A VAST FIELD FOR THE ADVANTAGEOUS EMPLOYMENT OT CAFITAL, but it does not follow that there will not be found, in one way or another, a fufficient fund for the fuccefsful profecution of any fpecies of industry which is likely to prove truly beneficial.

The following confiderations are of a nature to remove all inquietude on the fcore of want of capital. The fion, h countr plying be effi where they w The latitud long et to be their animati to thei It is

have m Hence. to fore other 1 States. ducem lefs pr gain, ye of emp thefe ca United out ad where; are ent more an of prof ened by vantage tivate o . It is with a were ai of the reasona to be c

ve all in-

The introduction of banks, as has been shown on another occasion, has a powerful tendency to extend the active capital of a country. Experience of the utility of these institutions is multiplying there in the United States. It is probable that they will be estal made wherever they can exist with advantage; and wherever they can be supported, if administered with prudence, they will add new energies to all pecuniary operations.

The aid of foreign capital may fafely, and with confiderable latitude, be taken into calculation. Its inftrumentality has been long experienced in their external commerce; and it has begun to be felt in various other modes. Not only their funds, but their agriculture and other internal improvements have been animated by it. It has already, in a few inftances, extended even to their manufactures.

It is a well known fact, that there are parts of Europe, which have more capital than profitable domeffic objects of employment. Hence, among other proofs, the large loans continually furnished to foreign fates. And it is equally certain, that the capital of other parts may find more profitable employment in the United States, than at home. And notwithstanding there are weighty inducements to prefer the employment of capital at home, even at lefs profit, to an investment of it abroad, though with greater gain, yet these inducements are over-ruled, either by a deficiency of employment, or by a very material difference in profit. Both these causes operate to produce a transfer of foreign capital to the United States, It is certain, that various objects in America hold out advantages, which are with difficulty to be equalled elfewhere; and under the increasingly favourable impressions, which are entertained of its government, the attractions will become more and more ftrong. These impressions will prove a rich mine of prosperity to the country, if they are confirmed and strengthened by the progress of their affairs. And to secure this advantage, little more is necessary, than to foster industry, and cultivate order and tranquility at home and abroad.

It is not impoffible, that there may be perfons difpoled to look with a jestous eye on the introduction of foreign capital, as if it were an inftrument to deprive their own citizens of the profits of their induftry: but perhaps there never could be a more unreafonable jealoufy. Inftead of being viewed as a rival, it ought to be confidered as a most valuable auxiliary; conducing to put in motion a greater quantity of productive labour, and a greater portion of useful enterprife, than could exift without it. It is at leaft evident, that in a country fituated like the United States, with an infisite fund of refources, yet to be unfolded, every farthing of foreign

sapital, which is laid out in internal ameliorations, and in induftrious chablishments of a permanent nature, is a precious sequifition: a croppet for each the galant offent point from the

And whatever be the objects which originally attract foreign capital, when once introduced, it may be directed towards any purpole of beneficial exertion, which is defired. And to detain it in the United States, there can be no expedient fo effectual as to enlarge the there, within which it may be ulefully employed; though introduced merely with views to Tpeculations in the funds, it may alterwards be rendered fubfervient to the interefts of agriculture, commerce, and manufactures.

But the attraction of forcign capital for the direct purpole of manufactures ought not to be deemed a chimerical expectation. There are already examples of it, as remarked in another place. And the examples, if the difpolition be cultivated, can hardly fail to multiply. There are also inftances of another kind, which ferve to firengthen the expectation; enterprifes for improving the public communications, by potting canals, opening the obfiructions in rivers, and crefting bridges, have received very material aid from the fame fource.

When the manufacturing expitallify of Europe thalt advert to the many important advantages which have been intimated in the courfe of these remarks, he cannot but perceive very powerful inducements to a transfer of himself and his capital to the United States. Among the reflections which a most interesting peculiarity of fituation is calculated to fugges, it cannot escape his observation, as a circumstance of moment in the calculation, that the progressive population and improvement of the United States, ensure a continually increasing domestic demand for the fabrics which he shall produce, not to be affected by any external calculties or vicissified.

But while there are circumstances sufficiently strong to authorife a confiderable degree of reliance on the aid of foreign capital, towards the attainment of the object in view, it is fatisfactory to have good grounds of assurance, that there are domestic resources of themselves adequate to it. It happens, that there is a species of capital, actually existing within the United States, which relieves from all inquietude on the score of want of capital.—This is the funded debt.

The effect of a funded debt, as a species of capital, has been noticed upon a former occasion; but a more particular elucidation of the point feems to be required by the firefs which is laid upon it.

Public funds answer the purpose of capital, from the estimation in which they are usually held by monied men; and confe-

in indufous acqui-

W. 17 12-1

quently from the cale and diffatch with which they can be turned into money. This capacity of prompt controvertibility into money, cautes a transfer of flock to be in a great number of cales, equivalent to a rayment in coin.—And where it does not happen to fuit the party who is to receive, to accept a transfer of flock, the party who is to pay, is never at a loss to find elfewhere a purchaler of his flock, who will furnish him in lieu of it, with the coin of which he flands in need.

Hence in a found and fettled flate of the public funds, a man possessed of a sum in them can embrace any scheme of business which offers with as much confidence as if he were possessed of an equal sum in confidence as if he were possessed of an

This operation of public funds, as capital, is too obvious to be denied; but it is objected to the idea of their operating as an augmentation of the capital of the community, that they ferve to occafion the deftruction of fome other capital to an equal amount.

The capital which alone they can be supposed to destroy, must coulist of The annual revenue, which is applied to the payment of interest on the debt, and to the gradual redemption of the principal The amount of the coin, which is employed in circulating, the funds, or in other words, in effecting the different then, ations which they undergo. But the following appears to be the true and accurate view of the inster-

As a determinate proportion will tend to perfoculty in the reaforing, let it be fuppoled, that the annual revenue to be applied, corresponding with the modification of the 6 per cent. flock of the United States, is in the ratio, of eight upon the hundred; that is, in the first inflance, fix on account of interest, and two on account of principal.

Thus far it is evident, that the capital deftroyed to the capital created, would bear no greater proportion than 8 to 1.50. There would be withdrawn from the total mais of other capitals a fum of cight dollars to be paid to the public creditor; while he would be pollened of a fum of one hundred dollars, ready to be applied to any purpole, to be embarked in any enterprife, which might appear to hun eligible—Here then the augmentation of capital, or the excels of that which is produced, beyond that which is deftroyed, is equal to hinety-two dollars.

The Cold Victor 27 All

322

P. Com

To this conclusion it may be objected, that the fum of eight dollars is to be withdrawn annually, until the whole hundred is extinguished, and it may be inferred, that in process of time a capital will be destroyed equal to that which is at first created.

But it is nevertheless true, that during the whole of the interval, between the creation of the capital of 100 dollars, and its reduction to a fum not greater than that of the annual revenue appropriated to its redemption-there will be a greater active. capital in existence than if no debt had been contracted. 'The fum drawn from other capitals in any one year will not exceed eight dollars; but there will be at every inftant of time during the whole period in question, a fum corresponding with so, much of the principal as remains unredeemed in the hands of fome perfon or other, employed, or ready to be employed in fome profitable undertaking. There will therefore constantly be more capital in capacity to be employed, than capital taken from employments The excels for the first year has been stated to be ninety two dollars; it will diminish yearly; but there will always be an excels; until the principal of the debt is brought to a level with the redeeming annuity, that is, in the cafe which has been affumed by way of example, to eight dollars. The reality of this excels becomes palpable, if it be supposed, as often happens, that the citizen of a foreign country imports into the United States teo dollars for the purchase of an equal sum of public debt-shere is an absolute augmentation of the mais of circulating coin to the extent of socidollars. At the end of a year, the foreigner is prefumed to draw back eight dollars on actount of his principal and interest; but he still leaves nincty-two of his original deposit in circulation, as he in like manner leaves eighty-four at the end of the fecond year, drawing back then also the annuity of eight dollars: And thus the matter proceeds; the capital left in circulation diminifuing each year, and coming nearer to the level of the annuity drawn, back. There are; however, fome differences in the ultimate opes. ration of the part of the debt, which is purchased by foreigners, and that which remains in the hands of citizens. But the general effect in each cale, though in different degrees, is to add to the active capital of the country.

Hitherto the reasoning has proceeded on a concession of the position, that there is a destruction of some other capital, to the extent of the annuity appropriated to the payment of the interest and the redemption of the principal of the debt; but in this too much has been conceded. There is at most a temporary transfer of some other capital, to the amount of the annuity, from those who pay to the creditor who receives; which he again restores to the circulation to refume the offices of a capital. This he does

alther immediately by employing the money in fome branch of induitry, or mediately by lending it to fome other perfon who does fo employ it, or by fpending it on his own maintenance. In either fuppofition, there is no deftruction of capital : there is nothing more than a fufpension of its motion for a time, that is, while it is passing from the hands of those who pay into the public coffers, and thence through the public creditor into fome other channel of circulation. When the payments of interest are periodical and quick, and made by the inftrumentality of bank. The diverfion or fuspension of capital may almost be des minated momentary. Hence the deduction on this account is far less than it at first fight appears to be.

There is evidently, as far as regards the annuity, no defruction nor transfer of any other capital, than that portion of the income of each individual, which goes to make up the annuity. The land which furnifhes the farmer with the fum which he is to contribute remains the fame; and the like may be obferved of other capitals. Indeed, as far as the tax, which is the object of contribution (as frequently happens when it does not opprefs by its weight) may have been a motive to greater exertion in any occupation; it may even ferve to increase the contributory capital. This idea is not without importance in the general view of the fubject.

It remains to fee, what further deduction ought to be made from the capital which is created, by the existence of the debt, on account of the coin which is employed in its circulation. This is fusceptible of much less precise calculation than the article which has been just discussed. It is impossible to fay, what proportion of coin is necessary to carry on the alienations which any species of property usually undergoes. The quantity, indeed, varies according to circumftances. But it may ftill without hefitation be pronounced, from the quickness of the rotation, or rather of the transitions, that the medium of circulation always bears but a small proportion to the amount of the property circulated. And it is thence fatisfactorily deducible, that the coin employed in the nepociations of the funds, and which ferves to give them activity as is incomparably lefs than the fum of the debt negociated urpole of bufinels. for the

It ought not, however, to be omitted, that the negociation of the funds becomes itfelf a diffinct bulinefs, which employs, and by employing, diverts a portion of the circulating coin from other purfuits. But making due allowance for this circumftance, there is no reason to conclude, that, the effect of the diversion of coin in the whole operation bears any confiderable proportion to the

TT 2

amount of the capital to which it gives activity. The fum of the debt in circulation is continually at the command of any uteful enterprife; the coin itfelf, which circulates it, is never more than momentarily fulpended from its ordinary functions. It experiences an inceffant and rapid flux and reflux to and from the channels of induftry to those of speculations in the funds.

There are ftrong circumftances in confirmation of this theory. The force of monied capital which has been difplayed in Great Britain, and the height to which every species of industry has grown up under it, defy a folution from the quantity of coin which that kingdom has ever posseffed. Accordingly it has been co-evil with its funding fystem, the prevailing opinion of the men of business, and of the generality of the most fagacious theorists of that country, that the operation of the public funds as capital has contributed to the effect in question. Among the Americans appearances thus far favour the fame conclution. Industry in general feems to have been re-animated. There are fymptoms indicating an extention of their commerce. Their navigation has certainly of late had a confiderable fpring, and there appears to be in many parts of the Union a command of capital, which, till lately fince the revolution at leaft, was unknown. But it is at the fame time to be acknowledged, that other circumstances have concurred, and in a great degree, in producing the prefent flate of things, and that the appearances are not yet fufficiently decifive to be entirely relied upon.

In the queftion under discussion, it is important to diffinguish between an absolute increase of capital, or an accession of real wealth and an artificial increase of capital, as an engine of business, or as an inftrument of industry and commerce. In the first fence, a funded debt has no pretensions to being deemed an increase of capital; in the last, it has pretentions which are not easy to be controverted. Of a fimilar nature is bank credit, and, in an inferior degree, every species of private credit.

But though a funded debt is not in the first instance, an absolute increase of capital, or an augmentation of real wealth; yet, by ferving as a new power in the operation of industry, it has within certain bounds a tendency to increase the real wealth of a community; in like manner as money borrowed by a thrifty farmer, to be laid out in the improvement of his farm, may, in the end, add to his stock of real riches.

There are refpectable individuals, who, from a juft averfion to an accumulation of public debt, are unwilling to concede to it any kind of utility, who can difern no good to alleviate the ill with which they fuppofe it pregnant: who cannot be perfuaded, that it ought in any fenfe to be viewed as an increase of capital, left it fhould be info more d llefings But truly i fated b unmix But becaufe be a p

ft fenfe, reafe of fy to be n an inabfolute

yet, by within organun, to be add to on to an ny kind which t ought fhould be inferred, as it has erroncoully been in Great Britain, that the more debt the more capital, the greater the burbens the greater the Uleffings of the community.

But it interefts the public to have estimated every object as it truly is; to appreciate how far the good is any measure is compenfated by the ill; or the ill by the good; either of them is feldom unmixed.

But it will not follow, that an accumulation of debt is defirable, hecaule a certain degree; of it operates as a capital. There may be a plethora in the political, as in the natural body; there may he a flate of things in which any fuch artificial capital is unneceffary. The debt too may be fwelled to fuch a fize, as that the greateft part of it may ceafe to be ufeful as a capital, ferving, only as it does in England, to burden the labouring mechanic, and pemper the diffipation of idle and diffolute individuals; as that, the iums required to pay the intereft upon it may become opprefive, and beyond the means which a government can employ, confiftently with its tranquility, to raile them—as that the refources of taxation to face the debt may have been ftrained too far to admit of extensions adequate to exigencies, which regard the public fafety.

Where this critical point is, we cannot pronounce with precifion, but it is impossible to believe, that there is not fuch a point, and almost equally difficult to doubt, but that most of the old governments of Europe are nearly arrived at it.

And as the vicifitudes of nations beget a perpetual tendency to the accumulation of debt, there ought to be in every government a perpetual, anxious, and unceasing effort to reduce that, which at any time exists, as fast as shall be practicable, consistently with integrity and good faith.

Reafonings on a fubject comprehending ideas fo abstract and complex, fo little reducible to precife calculation as those which enter into the question just discussed, are always attended with a danger of running into fallacies. Due allowance ought therefore to be made for this possibility—But as far as the nature of the subject admits of, it there appears to be fatisfactory ground for a belief, that the public funds operate as a resource of capital to the citizens of the United States, and if they are a resource at all, it is an extensive one.

To all the arguments which are brought to evince the impracticability of fuccefs in manufacturing establishments in the United States, it might have been a fufficient answer to have referred to the experience of what has been already done—It is certain that feveral important branches have grown up and flourished with a rapidity and succefs which surprises not only us, but the Ameri-

cans themselves; affording an encouraging affurance of success in future attempts; of these it may not be improper to enumerate the most confiderable,

I. Tanned and tawed leather, dreffed fkins, fhoes, boots and flippers, harnefs, and fadlery of all kinds, portmanteaus and trunks, leather breeches, gloves, muffs and tippets, parchment and glue.

II. Bar and fheet iron, fteel, nail rods, and nails, implements of hufbandry, ftoves, pots, and other household utenfils, the fteel and iron work for carriages, and fhip-building, anchors, scalebeams and weights, various tools of artificers, arms of different kinds, the manufacture of these last has of late diminished for want of demand.

III. Ships, cabinet wares and turnery, wool and cotton cards, and other machinery for manufactures and hufbandry, mathematical inftruments, cooper's wares of every kind.

IV. Cables, fail-cloth, cordage, twine and pack-thread.

V. Bricks and coarfe tiles, and potters wares,

VI. Ardent spirits and malt liquors,

VII. Writing and printing paper, fheathing and wrapping pater, pafte-boards, fullers or prefs papers, paper hange ga

VIII. Hats of fur and wool, and of mixtures of occu.-Wemens fluff and filk floes.

IX. Refined fugars.

X. Oils of animals and feeds, foap, fpermaceti and tallow candles,

XI. Copper and brais wares, particularly utenfils for diftillers, fugar refiners and brewers, and irons and other articles for household use-philosophical apparatus, &c.

XII. Tin wares for most purposes of ordinary use.

XIII. Carriages of all kinds.

XIV. Snuff, chewing and fmoaking tobacco,

XV. Starch and hair powder.

XVI. Lampblack and other painters colours,

XVII. Gunpowder.

Befides manufactories of these articles which are carried on as regular trades, and have attained to a confiderable degree of maturity, there is a vaft fcene of household manufacturing, which contributes more largely to the fupply of the community than could be imagined, without having made it an object of particular inquiry. This observation is the pleasing refult of the investigation to which the subject has led, and is applicable as well to the fouthern as to the middle and northern states; great quantities of coarse cloths, coatings, ferges, and flannels, linfey-woolfeys, hosiery of wool, cotton, and thread, coarse fustians, jeans and muslins, checked and striped cotton and linen goods, bedticks, coverlets and con and tab cotton many is of the in forme diftricts all the importa family r tical vice

# OF THE UNITED STATES.

and counterpanes, tow linens, coarfe fhirtings, fheetings, towsling and table linen, and various mixtures of wool and cotton, and of totton and flax, are made in the houfehold way, and, inmany inflances to an extent not only fufficient for the fupply; of the families in which they are made, but for fale, and even in fome cafes for exportation. It is computed in a number of diffricts, that two thirds, three fourths, and even four-fifths, of all the clothing of the inhabitants are made by themfelves. The importance of fo great a progrefs, as appears to have been made in family manufactures within a few years, both in a moral and political view, renders the fact highly interefting.

Neither does the above enumeration comprehend all the articles that are manufactured as regular trades; many others occur which are equally well established, but which not being of equal importance have been omitted; and there are many attempts still in their infancy, which though attended with very favourable appearances, could not have been properly comprised in an enumeration of manufactories already established. There are other articles also of great importance, which, though strictly speaking; manufactures, are omitted, as being immediately connected with husbandry, such are flour, pot and pearl ash, pitch, tar, turpentine, and the like.

There remains to be noticed in objection to the encouragement of manufactures, of a nature different from those which question the probability of success.—This is derived from its supposed tentency to give a monopoly of advantages to particular classes at the expence of the rest of the community, who, it is affirmed, would be able to procure the requisite supplies of manufactured articles on better terms from foreigners than from their own citizens, and who it is alledged, are reduced to the neteflity of paying an enhanced price for whatever they want, by every measure which obstructs the free competition of foreign commodities.

It is not an unreasonable supposition; that measures which ferve to abridge the free competition of foreign articles have a tendency to occasion an enhancement of prices, and it is not to be denied that such is the effect in a number of cases; but the fact does not uniformly correspond with the theory. A reduction of prices has, in feveral instances, immediately succeeded the establishment of a domestic manufacture. Whether it be that foreign manufactures endeavour to supplant, by underselling their own, or whatever elfe be the cause, the effect has been such as is stated, and the reverse of what might have been expected.

But though it were true, that the immediate and certain effect of regulations controuling the competition of foreign with domeftic fabrics was an increase of price, it is universally true, that the

contrary is the ultimate effect with every fuecelsful manufacture. When a domeflic manufacture has attained to perfection, and has engaged in the profecution of it a competent number of perfons, it invariably becomes cheaper.<sup>113</sup> Being free from the heavy charges which attend the importation of foreign commodities, it can be afforded, and accordingly feldom or never fails to be fold cheaper, in process of time, than was the foreign article for which it is a fublitute. The internal competition which takes place, foon does away every thing like monopoly, and by degrees reduces the price of the article to the minimum of a reafonable profit on the capital employed. This accords with the reafon of the thing and with experience; its conduct non-neuron of the thing and with

Hence it follows, that it is the intereft of the United States, with a view to eventual and permanent economy, to encourage the growth of manufactures. Vin a national view, a temporary enhancement of price must always be well compensated by a permanent reduction of it. and better not when a must over the blood second

It is a reflection which may with propriety be indulged here, that this eventual diminution of the prices of manufactured articles, which is the refult of internal manufacturing effablifuments, has a direct and very important tendency: to benefit aggiculture. It enables the farmer to procure, with a fmaller quantity of his labour, the manufactured produce of which he flands in need, and confequently increases the value of his income and property.

The objections which are commonly made to the expediency of encouraging, and to the probability of fucceeding in manufacturing purfuits in the United States, having now been difcuffed, the confiderations which have appeared in the courfe of the difcuffion, recommending that fpecies of industry to the patronage of the American government, will be materially fitnengthened by a few general and fome particular topics, which have been naturally referved for fubfequent notice.

I. There feems to be a moral certainty, that the trade of a country, which is both manufacturing and agricultural, will be more lucrative and profperous than that of a country, which is merely agricultural.

One reafon for this is found in that general effort of nations, to procure from their own foils the articles of prime neceffity requifite to their own confumption and ufe; and which ferves to render their demand for a foreign fupply of fuch articles in a great degree occasional and contingent. Hence, while the neceffities of nations exclusively devoted to agriculture, for the fabrics of manufacturing flates, are conflant and regular, the wants of the latter for the products of the former are liable to very confiderable fluctuation and interruptions. The great inequalities refulting from

anufathere; on, and has perfons, it avy charges s, it can be ld cheaper; which it is a s; foon does es the price the capital ag and with

roperty pediency of manufacturiscussed, the the discusatronage of thened by 2 en naturally List elis alley de of a counill be more ch is merely f nations, to neceffity reerves to renes in a great necessities of brics of maof the latter derable flucfulting from,

difference of feafons have been elsewhere remarked : this uniformity of demand on one fide, and unfteadinefs of it on the other, muft neceffarily have a tendency to caufe the general course of the exchange of commodities between the parties to turn to the difadvantage of the merely agricultural flates. Peculiarity of fituation, a climate and foil adapted to the production of peculiar commodities, may fometimes contradict the rule; but there is every reafon to believe that it will be found in the main a just one.

Another circumstance which gives a fuperiority of commercial advantages to states, that manufacture, as well as cultivate, confists in the more numerous attractions which a more diversified market offers to foreign customers, and in the greater scope which it affords to mercantile enterprife. It is a position of indisputable truth in commerce, depending too on very obvious reasons, that the greatest refort will ever be to those marts, where commodities, while equally abundant, are most various. Each difference of kind holds out an additional inducement, and it is a position not lefs clear, that the field of enterprise must be enlarged to the merchants of a country, in proportion to the variety as well as the abundance of commodities which they find at home for exportation to foreign markets.

A third circumstance, perhaps not inferior to either of the other two, conferring the superiority which has been stated, has relation to the flagnations of demand for certain commodities," which at fome time or other interfere more or lefs with the fale? of all .- The nation which can bring to market but few articles, is likely to be more quickly and fenfibly affected by fuch stagnations, than one which is always poffelled of a great variety of commodities : the former frequently finds too great a portion of its flock of materials, for fale or exchange, lying on hand-or is obliged to make injurious facrifices to fupply its wants of foreign/ articles, which are numerous and urgent; in proportion to the imallneis of the number of its own. The latter commonly finds itfelf indemnified by the high prices of fome articles for the low? prices of others-and the prompt and advantageous fale of those articles which are in demand enables its merchants the better to? wait for a favourable change, in respect to those which are not." There is ground to believe, that a difference of fituation, in this particular, has immenfely different effects upon the wealth and prosperity of nations.

From these circumstances collectively, two important inferences are to be drawn; one, that there is always a higher probability of a favourable balance of trade, in regard to countries in which ma-

Vol. I.

nufactures, founded on the basis of a thriving agriculture, flourish, than in regard to those which are confined wholly, or almost wholly, to agriculture; the other, which is a consequence of the first, that countries of the former description are likely to possible more peruniary wealth, or money, than those of the latter.

Facts appear to correspond with this conclusion. The importations of manufactured supplies seem invariably to drain the merely agricultural people of their wealth. Let the fituation of the manufacturing countries of Europe be compared in this particular with that of those countries which only cultivate, and the difparity will be firiking. Other causes, it is true, help to account for this disparity between some of them; and among these causes, the relative flate of agriculture; but between others of them, the most prominent circumfance of diffimilitude arises from the comparative flate of manufactures. In corroboration of the fame idea, it ought not to cleape remark, that the West India islands, the square for which are the most fertile, and the nation, which in the greatest degree supplies the reft of the world, with the precious metals, exchange to a los with almost every other country.

As far as experience in America may guide, it will lead to the fame conclution. Previous to the revolution, the quantity of coin pollefied by the colonies, which now compose the United States, appeared to be inadequate to their circulation, and their debt to Great Britain was progreflive. Since the revolution, the states, in which manufactures have most increased, have recovered fastes from the injuries of the late war, and abound most in pecuniary resources.

It ought to be admitted, however, in this as in the preceding cafe, that causes irrelative to the state of manufactures account, in a degree, for the phenomena remarked. The continual progrefs of new lettlements, has a natural tendency to occasion an unfavourable balance of trade, though it indemnifies for the inconvenience, by that increase of the national capital which flows from the conversion of waste into improved lands : and the different degrees of external commerce which are carried on by the different flates, may make/material differences in the comparative flate of their wealth. The first circumstance has reference to the deficiency of coin, and the increase of debt previous to the revolution; the laft, to the advantages which the most manufacturing flates, appear to have enjoyed over the others, fince the termina-tion of the late war. . .

But the uniform appearance of an abundance of specie, as the concomitant of a flourishing state of manufactures, and of the re-

werfe where they do not prevail, afford a ftrong prelumption of their favourable operation upon the wealth of a country.

Not only the wealth, but the independence and fecurity of a country, appear to be materially connected with the profperity of manufactures. Every nation, with a view to those great objects, ought to endeavour to posses within itself all the effentials of national fupply. These comprise the means of fublistence, habitation, cloathing, and defence.

The polleflion of these is necessary to the perfection of the bo-

olitic, to the fafet, well as to the welfare of the fociety; the ant of either is the want of an important organ of political life and motion; and in the various critical events which await a ftate, it muft leverely feel the effects of any fuch deficiency. The extreme embarrafiments of the United States during the late war, from an incapacity of fupplying themfelves, are full matter of keen recollection: a future war might be expected again to exemplify the michiefs and dangers of a fituation, to which that incapacity is ftill in too great a degree applicable, unlefs changed by timely and vigorous exertions. To effect this change, as faft as fhall be prudent, merits all the attention and all the zeal of their public councils : it is the next great work to be accomplified.

The want of a navy to protect the external commerce of the United States, as long as it shall continue, must render it a peculiarly precarious reliance for the supply of effential articles, and must serve to strengthen prodigiously the arguments in favour of manufactures.

To these general confiderations are added some of a more particular nature.

Their diftance from Europe, the great fountain of manufactured fupply, fubjects them, in the existing state of things, to inconvenience and loss in two ways,

The bulkiness of those commodities which are the chief productions of the foil, necessarily imposes very heavy charges on their transportation to distant markets. These charges, in the cales in which the nations, to whom their products are sent, maintain a competion in the supply of their own markets, principally fall upon them, and form material deductions from the primitive value of the articles furnished. The charges on manufactured supplies carried from Europe are greatly enhanced by the same circumstance of distance. These charges, again, in the cases in which their own industry maintains no competition in their own markets, also principally fall upon them, and are an additional cause of extraordinary deduction from the primitive value of their own products, these being the materials of exchange for the foreign fabrics which they confume. The quality and moderation of individual property, and the growing fettlements of new diftricts, occasioned in the United States an unufual demand for coarse manufactures, the charges of which being greater in proportion to their greater bulk, augment the difadvantage which has been just described.

As in most countries domestic supplies maintain a very considerable competition with such foreign productions of the soil as are imported for sale; if the extensive establishment of manufactories in the United States does not create a similar competition in respect to manufactured articles, it appears to be clearly deducible, from the confiderations which have been mentioned, that they must suffain a double loss in their exchanges with foreign nations, ftrongly conducive to an unfavourable balance of trade, and very prejudicial to their interests.

These disadvantages press with no small weight on the landed interest of the country; in feasons of peace they cause a serious deduction from the intrinsic value of the products of the foil: and in case of war, which should either involve themselves, or any other nation, possessing a considerable share of their carrying trade, the charges on the transportation of their commodities, bulky as most of them are, under such circumstances, could hardly fail to prove a grievous burthen to the farmer, while obliged to depend in so great a degree as he now does upon foreign markets for the vent of the furplus of his labour.

As far as the profperity of the fiftheries of the United States is impeded by the want of an adequate market, there arifes another fpecial reafon for defiring the extension of manufactures. Befides the fifth, which in many places would be likely to make a part of the fublistence of the perfons employed, it is known that the oila, bones, and skins of marine animals, are of extensive use in various manufactures; hence the prospect of an additional demand for the produce of the fisheries.

One more point of view only remains, in which to confider the expediency of the utmost encouragement being given to manufactures in the United States.

It is not uncommon to meet with an opinion, that though the promoting of manufactures may be the intereft of a part of the Union, it is contrary to that of another part; the northern and fouthern regions are fometimes reprefented as having adverfe interefts in this refpect; those are called manufacturing, these agricultural flates, and a fpecies of opposition is imagined to fublist between the manufacturing and agricultural interefts.

This idea of an opposition between those two interests has been the common error of the early periods of every country, but experience gradually diffipates it; indeed, they are perceived so often te length frequen rageme fice the is neve rally as that the profper of this ccd op fteading duce of Ideas

as been out exved fo often to fuccour and to befriend 'each other, that they come at length to be confidered as one; a fuppofition which has been frequently abufed, and is not univerfally true. Particular encouragements of particular manufactures may be of a nature to facrifice the interefts of landholders to those of manufacturers; but it is nevertheles a maxim well established by experience, and generally acknowledged, where there has been fufficient experience, that the aggregate prosperity of manufactures; and the aggregate prosperity of agriculture are intimately connected. In the courfe of this discussion, various weighty confiderations have been adduced operating in support of this opinion. Perhaps the fuperior steadines of the demand of a domestic market for the furplus preduce of the foil is alone a convincing argument of its truth.

Ideas of a contrariety of interefts between the northern and fouthern regions of the United States, are in the main as unfounded as they are mifchievous; the diverfity of circumftances, on which fuch contrariety is ufually predicated, authorifes a direct contrary conclusion; mutual wants confitute one of the ftrongeft links of political connection, and the extent of these bears a natural proportion to the diverfity in the means of mutual fupply.

Suggestions of an opposite complexion are ever to be deplored, as unfriendly to the steady pursuit of one great common cause, and to the perfect harmony of all the parts.

In proportion as the mind is accuftomed to trace the intimate connection of interests which subsift between all the parts of a society, united under the same government; and the infinite variety of channels, which ferve to circulate the prosperity of each to and through the rest, in that proportion it will be little apt to be disturbed by folicitudes and apprehensions which originate in local discriminations. It is a truth as important as it is agreeable, and one to which it is not easy to imagine exceptions, that every thing tending to establish substantial and permanent order in the affairs of a country, to increase the total mass of industry and opulence, is ultimately beneficial to every part of it. On the credit of this great truth an acquiescence may fastely be accorded from every quarter to all institutions and arrangements, which promise a confirmation of public order, and an augmentation of hational resource.

But there are more particular confiderations which ferve to fortify the idea, that the encouragement of manufactures is the intereft of all parts of the American Union. If the northern and middle ftates fhould be the principal feenes of fuch eftablifhments, they would immediately benefit the more fouthern by creating a demand for productions, fome of which they have in common with the other ftates, and others of which are either peculiar to

topological and the second and the second and the

them, or more abundant, or of better quality, than elfewhere. These productions principally are timber, flax, hemp, cotton, wool, raw filk, indigo, iron, lead, furs, hides, fkins, and coals; of these articles cotton and indigo are peculiar to the fouthern flates; as are hitherto LEAD and COAL, flax and hemp are, or may be raifed in greater abundance there than in the more northern flates; and the wool of. Virginia is faid to be of better quality than that of any other flate; a circumflance rendered the more probable by the reflection, that Virginia embraces the fame latitudes with the finest wool countries of Europe, and their pafture is fimilar. The climate of the fouth is also better adapted to the production of filk.

The extensive cultivation of cotton can, perhaps, hardly be expected, without the previous establishment of domestic manufactories of the article; these in some of the States have been established, and have already arrived at a degree of perfection and respectability hardly to have been expected in the time; and the surface encouragement and vent for the others, will result from similar establishments in respect to them.

If then it fatisfactorily appears, that it is the intereft of the United States generally to encourage manufactures, it merits particular attention, that there are circumstances which render the present a critical moment for entering with zeal upon the important busines; the effort cannot fail to be materially seconded by a confiderable and increasing influx of money, arising from the numbers who have, and which fill continue to transfer themselves and capitals from the Old World to the different States; in confequence of foreign speculations in their funds—and by the diforders and oppressions which exist in different parts of Europe.

The first circumstance not only facilitates the execution of manufacturing enterprifes, but it indicates them as a necessary mean to turn their increasing population and capital, to advantage, and to prevent their being eventually an evil. If useful employment be not found for the money of foreigners who are daily taking up their refidence in the United States, and for that which is carried to the country to be invested in purchases of the public debt, it will quickly be re-exported to defray the expence of an extraordinary confumption of foreign luxuries ; and distress of the interest and redeem the principal of the purchased debt.

This uleful employment too ought to be of a nature to produce folid and permanent improvements. If the money merely ferves to give a temporary fpring to foreign commerce, as it cannot procure new and lafting outlets for the products of the country, there will be no real or durable advantage gained; as far as it fhall find its way in agricultural ameliorations, in opening canals, and in utility ; it is lik many of of this analogy (pirit g To o a better populat Ther a certain ly direct which, effects.

to produce ercly ferves annot prone country, as far as it ing canals, and in fimiliar improvements, it will be productive of fubftantial utility; but there is reafon to doubt, whether in fuch channels it is likely to find fufficient employment, and ftill more, whether many of those who posses it will be as readily attracted to objects of this nature as to manufacturing purfuits; which bear greater analogy to those to which they have been accustomed, and to the spirit generated by them.

To open the one field, as well as the other, will at least fecure a better profpect of useful employment, for whatever accession of population and money there has been or may be.

There is at the prefent juncture a certain fermentation of mind, a certain activity of fpeculation and enterprife, which, if properly directed, may be made fubfervient to ufeful purpofes; but which, if left entirely to itfelf, may be attended with pernicious effects.

The diffurbed flate of Europe inclining its citizens to emigration, the requifite workmen will be more eafily acquired for different manufactures than at another time; and the effect of multiplying the opportunities of employment to those who emigrate, may be an increase of the number and extent of valuable acquifitions to the population, arts, and industry of the United States.

To find pleafure in the calamitics of other nations would be criminal, but for the Americans to benefit themfelves by opening an afylum to those who fuffer in confequence of them, is as justifiable as it is politic.

A full view having now been taken of the inducements to the promotion of manufactures in the United States, accompanied with an examination of the principal objections which are urged in opposition thereto by fome of their own citizens, it is proper, in the next place, to confider the means by which the promotion of them may be effected, as introductory to a fpecification of the objects, which, in the prefent flate of things, appear the most fit to be encouraged, and of the particular measures which it would be advisable for them to adopt in respect to each.

In order to a better judgment of the means proper to be reforted to by the United States, it will be of use to advert to those which have been employed with fuccess in other countries.

The principal of these are- the state with the state

I. Protecting duties—or duties on those foreign articles which are the rivals of the domestic ones intended to be encouraged.

Duties of this nature evidently amount to a virtual bounty on the domeftic fabrics, fince by enhancing the charges on foreign articles, they enable the national manufacturers to underfell all their foreign competitors. The propriety of this fpecies of encouragement need not be dwelt upon, as it is not only a clear re-

330

fult from the numerous topics which have been fuggefted, but is fanctioned by the laws of the United States in a variety of inftances; it has the additional recommendation of being a refource of revenue.—Indeed all the dutics imposed on imported articles, though with an exclusive view to revenue, have the effect in contemplation, and, except where they fall on raw materials, wear a beneficent alpect towards the manufactures of the country.

II. Prohibitions of rival articles, or duties equivalent to prohibitions. This is another, and an efficacious mean of encouraging their national manufactures, but in general it is only fit to be employed when a manufacture has made fuch a progrefs, and is in fo many hands as to enfure a due competition, and an adequate fupply on reafonable terms. Of duties equivalent to prohibitions, there are examples in the laws of the United States, and there are other cafes to which the principle may be advantageoufly extended, but they are not numerous.

Confidering a monopoly of the domeffice market to its own manufactures as the reigning policy of manufacturing nations, a fimilar policy on the part of the United States in every proper inflance is dictated, it might almost be faid, by the principles of distributive justice; certainly by the duty of endeavouring to fecure to their own citizens a reciprocity of advantages.

III. Prohibitions of the exportation of the materials of manufactures. The defire of fecuring a cheap and plentiful fupply for the national workmen, where the article is either peculiar to the country, or of peculiar quality there, --- the jealoufy of enabling foreign workmen to rival those of the nation with its own materials, are the leading motives to this species of restraint. It ought not to be affirmed that this regulation is in no inftance proper; but it is certainly one which ought to be adopted with great circumfpection, and only in very plain cafes. It is feen at once, that its immediate operation is to abridge the demand, and keep down the price of the produce of fome other branch of industry generally speaking, of agriculture, to the prejudice of those who carry it on; and though, if it be really effential to the prosperity of any very important national manufacture, it may happen that those who are injured in the first instance, may be eventually indemnified by the superior steadiness of an extensive domestic market depending on that prosperity; yet, in a matter in which there is fo much room for nice and difficult combinations, in which fuch opposite confiderations combat each other, prudence feems to dictate, that the expedient in queftion ought to be indulged with a fparing hand. mathematica , 1 th offers all a the store of

This has been found one of the most efficacious means of encouraging manufactures, and it is, in fome views, the best. Though it has not yet been much practifed upon by the government of the United States, unless the allowance on the exportation of dried and pickled fish and falted meat could be confidered as a bounty, this method of encouraging manufactures, though less favoured by public opinion than fome other modes, has its advantages.

1. It is a fpecies of encouragement more politive and direct than any other, and, for that very reason, has an immediate tendency to ftimulate and uphold new enterprises, increasing the chances of profit, and diminishing the risks of loss, in the first attempts.

2. It avoids the inconvenience of a temporary augmentation of price; which is incident to fome other modes, or it produces it to a lefs degree; either by making no addition to the charges on the rival foreign article, as in the cafe of protection duties, or by making a smaller addition. The first happens when the fund for the bounty is derived from a different object, which may or may not increase the price of fome other atticle; according to the nature of • that object; the second, when the fund is derived from the fame or a fimilar object of foreign manufacture. One per cent, duty on the foreign article converted into a bounty on the domestic, willhave an equal effect with a duty of two per cent, exclusive of fuch bounty; as the price of the foreign commodity is liable to be railed, in the one cale; in the proportion of one per cent; in the other, in that of two per cent. But the bounty when drawn from another fource is calculated to promote a reduction of price; because, without laying any new charge on the foreign article, it ferves to introduce a competition with it, and to increase the total quantity of the article in the market. 7.17

3. Bounties have not, like high protecting duties, a tendency to produce fearcity: An increase of price is not always the immediate, though, where the progress of a domestic manufacture does not counterast a rife, it is commonly the ultimate effect of an additional duty. In the interval between the laying of the duty; and a proportional increase of price, it may discourage importation, by interfering with the profits to be expected from the fale of the article.

4. Bounties are fometimes not only the beft, but the only proper expedient, for uniting the encouragement of a new object of agriculture with that of a new object of manufacture. It is the interest of the farmer to have the production of the raw material promoted, by counteracting the interference of the foreign mate-

338

rial of the fame kind—It is the intercft of the manufacturer to have the material abundant and cheap. If, prior to the domeftic production of the material in fufficient quantity to fupply the manufacturer on good terms, a duty be laid upon the importation of its from abroad, with a view to promote the railing of it at home, the intereft both of the farmer and manufacturer will be differved —by either deftroying the requisite fupply, or railing the price of the article beyond what can be afforded to be given for it by the conductor of an infant manufacture, it is abandoned, or fails, and there being no domeftic manufactories to create a d-mand for the raw material which is raifed by the farmer, it is in vain, that the competition of the like foreign article may have been deftroyed.

It cannot escape notice, that a duty upon the importation of an article can no otherwise aid the domestic production of it, than by giving the latter greater advantages in the home market. It can have no influence upon the advantageous fale of the article produced in foreign markets, no tendency, therefore, to promote its exportation.

The true way to conciliate these two interests, is therefore to lay a duty on foreign manufactures of the material, the growth of which is defined to be encouraged, and to apply the produce of that duty by way of bounty, either upon the production of the material itfelf, or upon its manufacture at home, or upon both. If this is done the manufacturer of the United States will commense his enterprife under every advantage which is attainable, as to quantity or price of the raw material ; and the farmer, if the bounty be immediately to him, is enabled by it to enter into a fuccessful competition with the foreign material; if the bounty be to the manufacturer on fo much of the domestic material as he confumes; the operation is nearly the fame; he has a motive of interest to prefer the domestic commodity, if of equal quality, even at a higher price than the foreign, fo long as the difference of price is any thing fhort of the bounty which is allowed upon theiarticle, is its stand AT STRAT

Except the fimple and ordinary kinds of household manufacture, or those for which there are very commanding local advantages, pecuniary bounties are in most cases indiffeentable to the introduction of a new branch. A ftimulus and a support not less powerful and direct is, generally speaking, effential to the overcoming of the obstacles which arise from the competitions of superior skill and maturity elsewhere. Bounties are especially effential in regard to articles upon which those foreigners, who have been accustomed to supply a country, are in the practice of granting them.

The continuance of bounties on manufactures long eftablished, must almost always be of questionable policy; because a presumption would arise in every such case, that there were natural and inherent impediments to success. But in new undertakings they are as justifiable, as they are oftentimes necessary.

There is a degree of prejudice against bounties, from an appearance of giving away the public money, without an immediate confideration, and from a supposition that they ferve to enrich particular classes at the expense of the community.

But neither of these sources of diflike will bear a serious examination when applied to an infant state. There is no purpose to which public money can be more beneficially applied, than to the acquisition of a new and useful branch of industry; no confideration more valuable than a permanent addition to the general stock of productive labour.

As to the fecond fource of objection, it equally lies againft other modes of encouragement which are admitted to be eligible. As often as a duty upon a foreign article makes an addition to its price, it caufes an extra expence to the community, for the benefit of the domeftic manufacturer. A bounty does no more. But it is the intereft of the fociety in each cafe to fubmit to a temporary expence, which is more than compenfated by an increase of induftry and wealth, by an augmentation of refources and independence; and by the circumftance of eventual cheapnels, which has been noticed in another place.

It would deferve attention, however, in the employment of this species of encouragement in the United States, as a reason for moderating the degree of it in the instances in which it might be deemed eligible, that the great distance of the United States from Europe imposes very heavy charges on all the fabrics which are brought from thence, amounting from 15 to 30 per cent. on their value, according to their bulk.

V. Premiums.

These are of a nature allied to bounties, though distinguishable from them in some important features.

Bounties are applicable to the whole quantity of an article produced or manufactured, or exported, and involve a correspondent expence.—Premiums ferve to reward some particular excellence or superiority, some extraordinary exertion or skill, and are difpensed only in a small number of cases; but their effect is to flimulate general effort—contrived so as to be both honorary and lucrative, they address themselves to different passions, touching the chords as well of emulation as of interest.—They are accordingly a very economical mean of exciting the enterprise of a whole community.

840

-0

Erer 3

There are various focieties in different countries, whole object is the difpenfation of premiums for the encouragement of agriculture, arts, manufactures, and commerce; and though they are for the most part voluntary affociations, with comparatively flender funds, their utility has been immenfe. Much has been done by this mean in Great Britain; Scotland in particular owes materially to it a prodigious amelioration of condition. From a fimilar establishment in the United States, fupplied and fupported by the Government of the Union, wast benefits might reasonably be expected.

#### VI. The exemption of the materials of manufultures from duty.

The policy of that exemption as a general rule, particularly in relation to new effablifhments, is obvious, It can hardly ever be adviseable to add the obstructions of fiscal burthens to the difficulties which naturally embarrass a new manufacture; and where it is matured and in condition to become an object of revenue, it is, generally speaking, better that the fabric, than the material, should be the subject of taxation.—Ideas of proportion between the quantum of the tax and the value of the article can be more easily adjusted in the former than in the latter case. An argument for exemptions of this kind in the United States is to be d rived from the practice, as far as their necessities have permitted, of those nations whom they are to meet as competitors in their own and in foreign markets.

There are, however, exceptions to it; of which fome examples will be given under the next head.

The laws of the Union afford inftances of the observance of the policy here recommended, but it will probably be found adviseable to extend it to some other cases.—Of a nature, bearing some affinity to that policy, is the regulation which exempts from duty the tools and implements, as well as the books, clothes, and household furniture of foreign artists who come to reside in the United States; an advantage already secured to them by the laws of the Union, and which it is in every view, proper to continue.

VII. Drowbacks of the duties which are imposed on the materials of manufactures.

It has already been observed, as a general rule, that duties on these materials ought, with certain exceptions, to be foreborne. Of these exceptions, three cases occur, which may ferve as examples—one, where the material is itself an object of general or extensive confumption, and a fit and productive source of revenue another where a manufacture of a simpler kind, the competition of which with a like domessic article is desired to be restrained, partakes of the nature of a raw material, from being capable, by a further process, to be converted into a manufacture of a different kind, the introduction or growth of which is desired to be enplentif Und not on the con fugar. > ties on eborne, s examor exenueition of ed, part, by a fferent be en

couraged—a third, where the material itself is a production of the country, and in fufficient abundance to furnish a cheap and plentiful fupply to the national manufacturers.

Under the first description comes the article of molasses. It is not only a fair object of revenue, but being a sweet, it is just that the confumers of it should pay a duty as well as the confumers of sugar.

Cottons and linen in their white ftate fall under the fecond defcription—a duty upon fuch as are imported is proper to promote the domeftic manufacture of fimilar articles in the fame ftate—a drawback of that duty is proper to encourage the painting and ftaining at home of those which are brought from abroad. When the first of these manufactures has attained sufficient maturity in a country to furnish a full supply for the fecond, the utility of the drawback ceases.

The article of hemp either now does or may be expected foon to exemplify the third cafe in the United States.

Where duties on the materials of manufactures are not laid for the purpole of preventing a competition with fome domefic production, the fame reafons which recommend, as a general rule, the exemptions of those materials from duties, would recommend, as a like general rule, the allowance of drawbacks, in favour of the manufacturer : accordingly fuch drawbacks are familiar in countries which fystematically pursue the business of manufactures; which furnishes an argument for the observance of a fimilar policy in the United States; and the idea has been adopted by the laws of the Union, in the instances of falt and molasses. And it will be found advantageous to extend it to fome other articles.

VIII. The encouragement of new inventions and difcoveries, and of the introduction into the United States of fuch as have been made in other countries, particularly those which relate to machinery.

This is among the most useful and unexceptionable of the aids which can be given to manufactures. The usual means of that encouragement are pecuniary rewards, and, for a time, exclusive privileges. The first must be employed according to the occasion, and the utility of the invention or discovery. For the last, fo far as respects "authors and inventors," provision has been made by law. But it is defireable, in regard to improvements and fecrets of extraordinary value to be able to extend the same benefits to introducers, as well as authors and inventors; a policy which has been practifed with advantage in other countries. Here, however, as in fome other cases, there is cause to regret, that the competency of the authority of the National Government to the good which might be done, is not without a question. Many aids might be given to industry; many internal improvements of primary magnitude might be promoted, by an authority operating throughout the Union which cannot be effected by an authority confined within the limits of a fingle flate.

But if the Legiflature of the Union cannot do all the good that might be wifned, it is at leaft defirable, that all may be done which is practicable.

It is cuftomary with manufacturing nations to prohibit, under fevere penalties, the exportation of implements and machines, which they have either invented or improved. There are already objects for a fimilar regulation in the United States; and others may be expected to occur from time to time. The adoption of this line of conduct feems to be dictated by a principle of reciprocity. Greater liberality in fuch refpects might better comport with the general fpirit of the country; but a felfish and exclusive policy in Europe will not always permit the free indulgence of a spirit, which would place America upon an unequal footing. As far as prohibitions tend to prevent foreign competitors from deriving the benefit of the improvements made in the United States, they tend to increase the advantages of those by whom they may have been introduced, and operate as an encouragement to exertion,

IX. Judicious regulations for the infpection of manufactured commodities.

This is not among the leaft important of the means by which the profperity of manufactures may be promoted. It is, indeed, in many cafes, one of the most effential—contributing to prevent frauds upon confumers at home, and exporters to foreign countrics—to improve the quality and preferve the character of the national manufactures; it cannot fail to aid the expeditious and advantageous fale of them, and to ferve as a guard against fuccefs, ful competition from other quarters, The reputation of the flour and lumber of fome states, and the pot-ash of others, has been established by an attention to this point. And the like good name might be procured for those articles, whereforever produced, by a judicious and uniform system of inspection throughout the ports of the United States. A like system might also be extended with advantage to other commodities.

X. The facilitating of pecuniary remittances from place to place-This is a point of confiderable moment to trade in general, and to manufacture in particular; by rendering more easy the purchafe of raw materials and provisions, and the payment for manufactured fupplies. A general circulation of bank paper, which is to be expected from the inftitution lately established in the United States, will be a most valuable mean to this end. XI. e to place---eneral, and iy the pursyment for ank paper, eftablished this end. XI. The facilitating of the transportation of commodities. Improvements favouring this object intimately concern all the domeftic interests of a community: but they may, without impropriety, be mentioned as having an important relation to manufactures. There is, perhaps, fearcely any thing which has been better calculated to affist the manufactures of Great Britain than the amelioration of the public roads, and the great progress which has been of late made in opening canals. Of the former, most parts of the United States stand much in need; for the latter they prefent uncommon facilities.

The fyinptoms of attention to the improvement of inland navigation, which have lately appeared in fome of the United States, muft fill with pleafure every breaft warmed with a true zeal for the profperity of that country. Thefe examples, it is to be hoped, will ftimulate the exertions of the government and citizens of every flate. There can certainly be no object more worthy of the cares of the local administrations; and it were to be wifhed, that there was no doubt of the power of the national government to lend its direct aid on a comprehensive plan.—This is one of those improvements which could be profecuted with more efficacy by the whole, than by any part or parts of the union. There are cafes in which the general intereft will be in danger of being facificed to the collision of fome fuppofed local interefts. Jealousies, in matters of this kind, are as apt to exist as they are apt to be erroneous.

The following remarks are fufficiently judicious and pertinent. to deferve a literal quotation : "Good roads, canals, and navigable rivers, by diminishing the expence of carriage, put the remote parts of a country more nearly upon a level with those in the neighbourhood of the town. They are, upon that account, the greatest of all improvements; they encourage the cultivation of the remote, which must always be the most extensive circle of the country; they are advantageous to the town, by breaking down the monopoly of the country in its neighbourhood; they are advantageous even to that part of the country. Though theyintroduce fome rival commodities into the old 'market,' they open many new markets to its produce. Monopoly, belides, is a great enemy to good management, which can never be univerfally eftablifhed, but in confequence of that free and universal competition which forces every body to have recourse to it for the fake of felf-defence. It is not more than fifty years ago that fome of the countries in the neighbourhood of London petitioned the parliament against the extension of turnpike roads into the remoter Those remoter counties, they pretended, from the countics. cheapnels of labour, would be able to fell their grafs and corn

cheaper in the London market than themselves, and they would thereby reduce their rents, and ruin their cultivation. Their rents, however, have arisen, and their cultivation has been improved fince that time."

Specimens of a spirit, fimilar to that which governed the counties here spoken of, present themselves too frequently to the eye of an impartial observer, and render it a wish of patriotism that the body in America, in whose councils a local or partial spirit is least likely to predominate, were at liberty to pursue and promote the general interest in those instances in which there might be danger of the interference of such a spirit.

The foregoing are the principal of the means by which the growth of manufactures is ordinarily promoted. It is, however, not merely neceffary that the measures of government, which have a direct view to manufactures, should be calculated to affilt and protect them, but that those which only collaterally affect them in the general course of the administration, should be guarded from any peculiar tendency to injure them.

There are certain fpecies of taxes which are apt to be oppreflive to different parts of the community, and, among other ill effects, have a very unfriendly afpect towards manufactures:

Such are all taxes on occupations—which proceed according to the amount of capital fuppoled to be employed in a bulinels, or of profits fuppoled to be made in it : these are unavoidably hurtful to industry. It is in vain that the evil may be endeavoured to be mitigated by leaving it, in the first instance, in the option of the party to be taxed to declare the amount of his capital or profits

Men engaged in any trade or bufinefs have commonly weighty reafons to avoid difclofures which would expose, with any thinglike accuracy, the real flate of their affairs. They most frequently find it better to rifque oppression than to avail themselves of so inconvenient a refuge : and the confequence is, that they often fuffer oppression.

When the difclofure too, if made, is not definitive, but controulable by the difcretion, or, in other words, by the paffions' and prejudices of the revenue officers, it is not only an ineffectual protection, but the poffibility of its being to is an additional reafon for not reforting to it.

Allowing to the public officers the most equitable dispositions, yet where they are to exercise a discretion, without certain data, they cannot fail to be often misled by appearances. The quantity of business which seems to be going on, is in a vast number of cases, a very deceitful criterion of the profits which are made, yet it is perhaps the best they can have, and it is the one on which they will most naturally rely; a business, therefore, which may

difpofitions, certain data, The quantity E number of ce made, yet te on which which may father require aid from the government, than be in a capacity to be contributory to it; may find itfelf crushed by the mistaken conjectures of the affestiors of taxes.

Arbitrary taxes, under which denomination are comprised all those that leave the quantum of the tax to be raifed on each perfon to the difference of certain officers, are as contrary to the genius of liberty as to the maxims of industry. In this light they have been viewed by the most judicious observers on government, who have bestowed upon them the severest epithets of reprobation, as constituting one of the worst features usually to be met with in the practice of despotic governments.

It is certain iteaft, that fuch taxes are particularly inimical to the fuccefs of manufacturing industry, and ought carefully to be avoided by a government which defires to promote it.

The great copioufness of this fubject has infensibly led to a longer preliminary discussion than was originally contemplated; or intended. It appeared proper to investigate principles, to consider the objections which have been brought forward against the establishment of manufactures in the United States, and to endeavour to establish their utility on general principles, which have long experience for their basis: It now remains to specify fome of the objects which appear particularly to merit, and which will require the encouragement of the government of the United States to bring them to perfection.

In the felection of objects, feveral circumstances feem entitled to particular attention: The capacity of the country to furnish the raw material—the degree in which the nature of the manufacture admits of a substitute for manual labour in machinery the facility of execution—the extensiveness of the uses to which the article can be applied—its subserviency to other interests, particularly the great one of national defence. There are, however, objects to which these circumstances are little applicable, which, for some special reasons, may have a claim to encouragement.

A defignation of the principal raw material of which each manufacture is composed, will ferve to introduce the remarks upon it.—As, in the first place,

#### IRON.

The manufacturers of this article are entitled to pre-eminent rank—None are more effential in their kinds, nor fo extensive in their uses. They constitute in whole or in part the implements or the materials, or both, of almost every useful occupation. Their instrumentality is every where confpicuous.

846

It is fortunate for the United States that they have peculiar advantages for deriving the full benefit of this most valuable material, and they have every motive to improve it with fyftematic care. It is to be found in various parts of the United States, in great abundance and of almost every quality; and fuel, the chief inftrument in manufasturing it, is both cheap and plenty.—This particularly applies to charcoal; but there are productive coal mines already in operation, and strong indications that the material is to be found in abundance in a variety of other places.

The kinds of iron manufactures, in which the greateft progrefs has been made, have berenentioned in another place, and need not be repeated; but there is little doubt that every other kind, with due cultivation, will rapidly fucceed. It is worthy of remark, that feveral of the particular trades, of which iron is the bafis, are capable of being carried on without the aid of large capitals.

Iron works have very greatly increased in the United States, and are profecuted with much more advantage than formerly. The average price before the revolution was about fixty-four dollars per ton, at present it is about eighty; a rife which is chiefly to be attributed to the increase of the manufactures of the material.

The still further extension and multiplication of such manufactures will have the double effect of promoting the extraction of the metal itself, and of converting it to a greater number of profitable purposes.

. Those manufactures, too, unite in a greater degree than almost any others, the several requisites which have been mentioned, as proper to be consulted in the selection of objects.

The only further encouragement of manufactories of this article, the propriety of which may be confidered as unquestionable, seems to be an increase of the duties on foreign rival commodities

Steel is a branch which has already made a confiderable progrefs in the United States, and fome new enterprifes, on a more extensive scale, have been lately set on soot. The facility of carrying it to an extent, which will supply all internal demands, and furniss a confiderable surplus for exportation, cannot be doubted. The duty upon the importation of this article into the United States, which is at present seventy-five cents. per cwt may, it is conceived, be fasfely and advantageously extended to a loo cents. It is defirable, by decisive arrangements, to second the efforts which are making in so very valuable a branch.

peculiar valuable vith fyf-United nd fuel, nd plenare prolications of other

n almost oned, as

of this ucftionval com-

ble proa more cility of lemands, nnot be into the per cwt ended to o fecond b. The United States slready in a great measure supply themfelves with nails and spikes; they are able, and ought certainly to do it entirely. The first and most laborious operation in this manufacture is performed by water-mills; and of the perfons afterwards employed a great proportion are boys, whole early habits of industry are of importance to the community, to the present support of their families, and to their own future comfort. It is not less curious than true, that in certain parts of the United States, the making of nails is an occasional family manufacture.

The expediency of an additional duty on the importation of these articles is indicated by an important fast. About one million eight hundred thousand pounds of them were imported into the United States in the course of one year, ending the 30th of September, 1790. A duty of two cents, per pound would, it is prefumeable, speedily put an end to so considerable an importation. And it is in every view advantageous to the States that an end should be put to it.

The implements of hufbandry are made in feveral states in great abundance. In many places it is done by the common blackstates in a state of the state of the state of the state of the whole country can with great case be procured among themfelves.

Various kinds of edged tools for the use of mechanics are also made, and a confiderable quantity of hollow wares; though the bufiness of casting has not yet attained the perfection which might be wished. It is however improving, and as there are respectable capitals in good hands, embarked in the profecution of those branches of iron manufactories, which are yet in their infancy, they may all be contemplated as objects not difficult to be acquired.

To infure the end, it feems equally fafe and prudent for the government of the American States to extend the duty, ad valorem, upon all imported manufactures of iron, or of which iron is the article of chief value, to ten per cent,

Fire arms and other military weapons may, it is conceived, be placed, without inconvenience, in the class of articles rated at fifteen per cent. There exift already in the American States manufactories of these articles which only require the flimulus of a certain demand to render them adequate to the supply neceffary.

It would also be a material aid to manufactories of this nature, as well as a mean of public fecurity, if provision was made for an annual purchase of military weapons, of their own manufacture, to a certain determinate extent, in order to the formation of arfenals; and to replace from time to time fuch as fhould be withdrawn for use, so as always to have in flore the quantity of each kind, which should be deemed a competent supply.

Imported manufactures of fteel generally, or of which fteel is the article of chief value, may with advantage, be placed in the clais of goods rated at feven and an half per cent. As manufactures of this kind have not yet made any confiderable progrefs in the United States, it is a reafon for not rating them as high as those of iron; but as this material is the basis of them, and as their extension is not less practicable than important, it is desirable to promote it by a fomewhat higher duty than the prefent.

### The manufactures of which this article is fufceptible are allo of great extent and utility. Under this defcription, those of brass, of which it is the principal ingredient, are intended to be included.

COPPER.

The material is a natural production of the country. In many parts of the United States, mines of copper have actually been wrought, and with profit to the undertakers. And nothing is easier than the introduction of it from other countries, on moderate terms, and in great plenty.

Copper-finiths and brafs-founders, particularly the former are numerous in the United States; fome of whom carry on bufinefs to a respectable extent.

To multiply and extend manufactories of the materials in queftion, is worthy of the attention and efforts of the federal overnment. In order to this, it is defirable for them to facilitate a plentiful fupply of the materials; and a proper mean to this end is to place them in the clafs of free articles. Copper in plates and brafs are already in this predicament; but copper in plates and bars is not; neither is lapis calaminaris, which, together with copper and charcoal, conflitute the component ingredients of brafs. The exemption from duty, by parity of reafon, ought to embrace all fuch of thefe articles as are objects of importation.

An additional duty on brafs wares will tend to the general end in view. These now stand at five per cent. while those of tin, pewter, and copper, are rated at seven and an half. There appears to be a propriety in every view in placing brass wares upon the same level with them; and it merits their confideration whether the duty upon all of them ought not to be raised to ten per cent. The United than even long b a public able fur viduals ed man The either is cifive derable raifed, occurs

### The state of LEAD.

There are numerous proofs, that this material abounds in the United States, and requires little to unfold it to an extent, more than equal to every domestic occasion. A prolific mine of it has long been open in the fouth-western parts of Virginia, and under a public administration, during the late war, yielded a confiderable supply for military use. This is now in the hands of individuals, who not only carry it on with spirit, but have established manufactories of it at Richmond in the same state.

The duties already laid upon the importation of this article, either in its unmanufactured or manufactured flate, infure it a decifive advantage in the home market—which amounts to confiderable encouragement. If the duty on pewter wares flould be raifed, it would afford a further encouragement. Nothing elfe occurs as proper to be added.

#### 

This, as an important inftrument of manufactures, may, without impropriety, be mentioned among the subjects of the present remarks.

A copious supply of it would be of great confequence to the iron branch: As an article of household fuel also it is an interesting production; the utility of which must increase in proportion to the decrease of wood, by the progress of fettlement and cultivation. And its importance to navigation, as an immense article of transportation coast-wife, it signally exemplified in Great Britain.

It is known, that there are feveral coal mines in Virginia, now worked, and appearances of their existence are familiar in a number of places.

The expediency of a bounty on all this fpecies of coal of home production, and of premiums, on the opening of new mines, under certain qualifications, appears to be worthy of the particular attention of the American government. The great importance of the article will amply justify a reasonable expense in this way, if it shall appear to be necessary to, and shall be thought likely to answer the end.

#### WOOD.

Several manufactures of this article flourish in the United States. Ships are now here built in greater perfection, and cabinet wares, generally, are made little, if at all inferior to those of Europe. Their extent is such as to have admitted of considerable exportation.

An exemption from duty of the feveral kinds of wood ordi-

The second second

narily used in these manufactures seems to be all that is requisite by way of encouragement. It is recommended by the confideration of a similar policy being purfued in other countries, and by the expediency of giving equal advantages to their own workmen in wood. The abundance of timber proper for ship-building in the United States does not appear to be any objection to it. The increasing fearcity and the growing importance of that article, in the European countries, admonish the United States te commence, and systematically to pursue measures for the prefervation of their stock. Whatever may promote the regular establishment of magazines of ship-timber is in various views defireable,

#### SKINS.

There are fearcely any manufactories of greater importance to the United States than of this article. Their direct and very happy influence upon agriculture, by promoting the raifing of cattle of different kinds, is a very material recommendation.

It is pleafing, too, to obferve the extensive progress they have made in their principal branches; which are so far matured as almost to defy foreign competition. Tanneries in particular are not only carried on as a regular business in numerous instances, and in various parts of the country, but they constitute in some places a valuable item of incidental family manufactures.

Reprefentations however have been made to the government, importing the expediency of further encouragement to the leather branch in two ways; one by increasing the duty on the manufactures of it, which are imported; the other by prohibiting the exportation of bark. In support of the latter, it is alledged, that the price of bark, chiefly in confequence of large exportations, has rilen within a few years from about three dollars to four dollars and a half per cord. The exportation of this article will however be checked by the improvements made in this article of manufacture in Europe, and by the extension of them to the States,

These improvements are,—1ft, A more judicious use of the bark itself, by extracting more of its qualities by boiling it after it has been taken out of the pits in the hitherto common method of using it. This method, if attended to properly, will render two thirds of the quantity heretofore used unnecessary.— 2dly, The superceding the use of bark in tanning altogether by the introduction of articles of less expence in its stead, for which a patent has been obtained by an inhabitant of England.

It is however, perhaps an additional reafon for the prohibition, that one fpecies of the bark ufually exported from the United States is in fome fort peculiar to the country, and the material of a very which t

the United material of a very valuable dye, of great use in some other manufactures, in which the United States have begun a competition.

There may also be this argument in favour of an increase of duty. The object is of importance enough to claim decifive encouragement, and the progress which has been made, leaves no room to apprehend any inconvenience on the fcore of fupply from such an increase.

It would be of benefit to this branch, if glue, which is now rated at five per cent. were made the object of an excluding duty. It is already made in large quantities at various tanneries; and, like paper, is an entire economy of materials, which, if not manufactured, would be left to perifh. It may be placed with advantage in the clafs of articles paying fifteen per cent. on importation.

#### GRAIN.

Manufactures of the feveral species of this article have a title to peculiar favour, not only because they are most of them immediately connected with the sublissence of the citizens, but because they enlarge the demand for the most precious products of the foil.

Though flour may with propriety be noticed as a manufacture of grain, it were useless to do it but for the purpose of submitting the expendency of a general system of inspection throughout the ports of the United States, which, if established upon proper principles, would be likely to improve the quality of their flour every where, and would rife its reputation in foreign markets. There are, however, confiderations, which stand in the way of such an arrangement.

Ardent fpirits and malt liquors, are next to flour, the two principal manufactures of grain : the first has made a very extensive, the last a confiderable progress in the United States : in respect to, both, an exclusive possession of the home market ought to be fecured to the domestic manufactures as fast as circumstances will admit. Nothing is more practicable, and nothing more defirable.

An augmentation of the duties on fpirits imported into the States would favour as well the diffillation of fpirits from molaffes as that from grain; and to fecure to a nation the benefit of a manufacture, even of foreign materials, is always of great, though, perhaps, of fecondary importance.

It would therefore be advantageous to the States that an addition of two cents per gallon be made to the duty on imported fpirits of the first class of proof, with a proportionable increase

on those of higher proof; and that a reduction of one per cent, per gallon be made from the duty on spirits distilled within the United States, beginning with the first class of proof, and a proportionable deduction from the duty on those of higher proof.

It is afcertained, that by far the greateft part of the malt liquors confumed in the United States are the produce of their domeftic breweries. It is defirable, and in all liklihood attainable, that the whole confumption fhould be fupplied by themfelves.

The malt liquors made in the States, though inferior to the beft, are equal to a great part of those which have been usually imported; the progress already made is an earnest of what may be accomplished; the growing competition is an affurance of improvement; this should be accelerated by measures tending to invite a greater capital into this channel of employment.

To render the encouragement of domeftic breweries decifive, it may be advifeable for the government to fubftitute to the prefent rates of duty eight cents per gallon generally; and it will deferve to be confidered by them as a guard againft invafions, whether there ought not to be a prohibition of their importation, except in cafks of confiderable capacity. Such a duty would banish from their markets foreign malt liquors of inferior quality, and the beft kind only would continue to be imported until fupplanted by the efforts of equal fkill or care in the States.

Till that period, the importation fo qualified would be an uleful flimulus to improvement; and in the mean time, the payment of the increased price, for the enjoyment of a luxury, in order to the encouragement of a most useful branch of domestic industry, could not reasonably be deemed a hardship.

As a further aid to the manufactures of grain, though upon a fmaller (cale, the articles of ftarch, hair powder, and wafers, may with great propriety be placed among those which are rated at fifteen per cent. No manufactures are more fimple, nor more completely within the reach of a full fupply from their domestic fources; and it is a policy, as common as it is obvious, to make the importation of them the objects either of prohibitory duties, or of express prohibition.

#### FLAX AND HEMP.

Manufactures of these articles have fo much affinity to each other, and they are fo often blended, that they may with advantage be confidered in conjunction. The importance of the linea branch to agriculture—its happy effects upon household industry —the ease with which its materials can be produced in the United States to any requisite extent—the great advances which have beer fami of t T the adva ties F A rica, enco wou great them occu oper parts grcat Se compe To the o pears Th necte manu fever It gove cent. boun upon kinge It raife ticles rolls, the p yard. on t enco a fuc Tł factu V

ity to each with advanof the linea old industry the United which have

been already made in the coarfer fabrics of them, especially in the family way, conftitute claims of peculiar force to the patronage of the American government.

This patronage may be afforded in various ways; by promoting the growth of the materials; by increasing the impediments to an advantageous competition of rival foreign articles; by direct bound ties or premiums upon the home manufacture.

First. As promoting the growth of the materials.

A ftrong with naturally fuggests itself to the friends of Ame. rica, that fome method could be devifed of affording a more direct encouragement to the growth both of flax and hemp, fuch as would be effectual, and at the fame time not attended with too great inconveniencies. To this end, bounties and premiums offer themselves to confideration ; but no modification of them has yet occurred; which would not either hazard too much expence, or operate unequally in reference to the circumstances of different parts of the Union, and which would not be attended with very great difficulties in the execution.

Secondly. As to increasing the impediments to an advantageous competition of rival foreign articles.

To this purpole, an augmentation of the duties on importation is the obvious expedient; which, in regard to certain articles, appears to be recommended by fufficient reafons.

The principal of these articles is fail-cloth, one intimately connected with navigation and defence; and of which a flourishing manufactory is established at Boston, and very promising ones at feveral other places.

It is prefumed to be both fafe and advifeable for the American government to place this in the class of articles rated at ten per cent. A ftrong reason for it results from the confideration, that a bounty of two pence sterling per ell, is allowed in Great Britain upon the exportation of the fail-cloth manufactured in that kingdom.

It would likewife appear to be good policy for the States to raife the duty to feven and an half per cent, on the following articles : drillings, ofnaburghs, ticklenburghs, dowlas, canvas, brown rolls, bagging, and upon all other linens, the first cost of which, at the place of exportation, does not exceed thirty-five cents. per yard. A bounty of twelve and a half per cent. upon an average, on the exportation of fuch or fimilar linens from Great Britain, encourages the manufacture of them, and increases the obstacles to a fuccelsful competition in the countries to which they are fent.

The quantities of tow and other household linens manu-

factured in different parts of the United States, and the expec-Vol. I.

354

tations which are derived from fome late experiments, of being able to extend the ufe of labour-faving machines in the coarfer fabrics of linen, obviate the danger of in ... nvenience from an increase of the duty upon fuch articles, and authorife the expectation of a fpeedy and complete fuccefs to the endeavours which may be used for procuring an internal fupply.

Thirdly. As to direct bounties, or premiums upon the manufactured articles.

To afford more effectual encouragement to the manufacture, and at the fame time to promote the cheapnels of the article for the benefit of navigation, it would be of great use for the American government to allow a bounty of two cents per yard on all failcloth which is made in the United States from materials of their own growth; this would also affift the culture of those materials. An encouragement of this kind, if adopted, ought to be established for a moderate term of years, to invite to new undertakings and to an extension of the old. This is an article of importance enough to warrant the employment of extraordinary means in its favour,

#### COTTON.

There is fomething in the texture of this material, which adapts it in a peculiar degree to the application of machines. The fignal utility of the mill for fpinning of cotton, not long fince invented in England, has been noticed in another place; but there are other machines fearcely inferior in utility, which, in the different manufactories of this article, are employed either exclusively, or with more than ordinary effect. This very important circumfance recommends the fabrics of cotton, in a more particular manner, to a country in which a defect of hands conftitutes the greateft obstacles to fuccefs.

The variety and extent of the uses to which the manufactures of this article are applicable, is another powerful argument in their favour.

And the faculty of the United States to produce the raw material in abundance, and of a quality which, though alledged to be inferior to fome that is produced in other quarters, is neverthelefs capable of being ufed with advantage in many fabrics, and is probably fufceptible of being carried, by a more experienced culture, to much greater perfection, fuggefts an additional and a very cogent inducement to the vigorous purfuit of the cotton branch in its feveral fubdivisions.

How much has been already done has been stated in a preceding part of these remarks.

In a ca milli train cotto TI gove to th and o prop Co coun but t ed co that of fo that the d rinam differ W care to app more that v which can b it wil factur terms is pro men wafte differ To tage, penía AI tion, States on th

preceding

In addition it may be announced, that a fociety is formed with a capital, which is expected to be extended to at leaft half a million of dollars; on behalf of which measures are already in train for profecuting on a large scale the making and printing of cotton goods.

These circumftances confpire to indicate the expediency of the government removing any obstructions which may happen to exist to the advantageous prosecution of the manufactories in question, and of adding such encouragements as may appear necessary and proper,

Cotton not being, like hemp, an universal production of the country, it affords less affurance of an adequate internal supply; but the chief objection arises from the doubts which are entertained concerning the quality of the national cotton. It is alledged that the fibre of it is confiderably florter and weaker than that of fome other places; and it has been observed as a general rule, that the nearer the place of growth to the equator, the better the quality of the cotton; that which comes from Cayenne, Surinam, and Demarara, is faid to be preferable, eyen at material difference of price, to the cotton of the islands.

While an expectation may reafonably be indulged, that with due care and attention the cotton in the United States may be made to approach nearer than it now does to that of regions fomewhat more favoured by climate; and while facts authorife an opinion, that very great use may be made of it, and that it is a refource which gives greater fecurity to the cotton fabrics of America than can be enjoyed by any which depends wholly on external fupply, it will certainly be wife, in every view, to let their infant manufacturers have the full benefit of the beft materials on the cheapeft terms. It is obvious, that the neceffity of having fuch materials is proportioned to the unikilfulnefs and inexperience of the workmen employed, who, if inexpert, will net fail to commit great wafte, where the materials they are to work with are of an indifferent kind.

To fecure to the national manufacturers fo effential an advantage, a repeal of the present duty on imported cotton is indifpensable.

A fubfitute for this, far more encouraging to domefic production, will be to grant a bounty on the cotton grown in the United States, when wrought at a home manufactory, to which a bounty on the exportation of it may be added. Either, or both, would do much more towards promoting the growth of the article than the merely nominal encouragement which it is proposed to abolifh. The first would also have a direct influence in encouraging the manufacture. The bounty, which has been mentioned as existing in Great Britain, upon the exportation of coarse linens not exceeding a certain value applies also to certain descriptions of cotton goods of fimilar value.

This furnishes an additional argument for allowing to the manusacturers the species of encouragement just suggested, and indeed for adding some other sid.

One cent per yard, not less than of a given width, on all goods of cotton, or of cotton and linen mixed, which are manufactured in the United States, with the addition of one cent per lb. weight of the material, if made of national cotton, would amount to an aid of confiderable importance, both to the production and to the manufacture of that valuable article. And the expence would be well juftified by the magnitude of the object.

The printing and ftaining of cotton goods is known to be a diftinct busine's from the fabrication of them. It is one eafily accomplified, and which, as it adds materially to the value of the article in its white ftate, and prepares it for a variety of new uses, is of importance to be promoted.

As imported cottons, equally with those which are made at home, may be the objects of this manufacture, it is worthy of confideration, whether it would not be for the advantage of the States that the whole, or part of the duty, on the white goods, ought not to be allowed to be drawn back in favour of those who print or flain them. This measure would certainly operate as a powerful encouragement to the business; and though it may in a degree counteract the original fabrication of the articles, it would probably more than compensate for this disdvantage in the rapid growth of a collateral branch, which is of a nature fooner to attain to maturity. When a fufficient progress fhall have been made the drawback may be abrogated, and by that time the domessic fupply of the articles to be printed or flained will have been extended.

If the duty of  $7\frac{1}{2}$  per cent. on certain kinds of cotton goods were extended to all goods of cotton, or of which it is the principal material, it would probably more than counterbalance the effect of the drawback proposed, in relation to the fabrication of the article; and no material objection occurs to fuch an extension. The duty then, confidering all the circumstances which attend goods of this description, could not be deemed inconveniently high; and it may be inferred, from various causes, that the prices of them would ftill continue moderate.

Manufactories of cotton goods, not long fince established at Beverly, in Massacufetts and at Providence, in the state of Rhode Island, and at New-York, and conducted with a perfeverance correfpor have roys, qualit Manc in int which but fo Oth have cut, h Some goods dy on

hed at Beof Rhode erance correfponding with the patriotic motives which begun them, feem to have overcome the first obstacles to success, producing corduroys, velverets, fustians, jeans, and other similar articles, of a quality which will bear a comparison with the like articles from Manchester. The one at Providence has the merit of being the first in introducing into the United States the celebrated cotton mill, which not only furnishes the materials for that manufactory itfelf, but for the supply of private families for household manufacture.

Other manufactories of the fame material, as regular bufineffes, have also been begun at different places in the State of Connecticut, but all upon a smaller scale than those above mentioned. Some essays are also making in the printing and staining of cotton goods. There are several small establishments of this kind already on foot.

In a country, the climate of which partakes of fo confiderable a proportion of winter, as that of a great part of the United States, the woollen branch cannot be regarded as inferior to any which relates to the cloathing of the inhabitants.

Household manufactures of this material are carried on, in different parts of the United States, to a very interesting extent; but there is only one branch, which as a regular busines, can be faid to have acquired maturity; this is the making of hats.

Hats of wool and of wool mixed with fur, are made in large quantities in different states, and nothing seems wanting, but an adequate supply of materials to render the manufacture commensurate with the demand.

A promifing effay towards the fabrication of cloaths, caffimeres, and other woolen goods, is likewife going on at Hartford, in Connecticut. Specimens of the different kinds which are made, evince, that these fabrics have attained a very confiderable degree of perfection. Their quality certainly surpasses any thing that could have been looked for, in so short a time and under so great difadvantages, and configures with the scantines of the means, which have been at the command of the directors, to form the eulogium of that public spirit, perfeverance and judgment, which have been able to accomplish for much.

Meafures, which tend to promote an abundant fupply of wool of good quality, would probably afford the most efficacious aid that prefent circumstances permit to this and fimilar manufactures.

To encourage the raifing and improving the breed of theep in the United States would certainly be the most defirable expedient for that purpose; but it may not be alone fufficient, especially as

it is yet a problem, whether their wool is capable of fuch a degree of improvement as to render it fit for the finer fabrics.

Premiums would probably be found the heft means of promoting the domeftic, and bounties the foreign fupply; and they ought of course to be adjusted with an eye to quality as well as quantity.

A fund for this purpole may be derived from the addition of  $z_1^2$  per cent. to the prefent rate of duty on carpets and carpeting imported into the flates; an increase to which the nature of the articles fuggefts no objection, and which may at the fame time furnish a motive the more to the fabrication of them at home, towards which fome beginnings have been made,

### INS THE STLK.

The production of this article is attended with great facility in most parts of the United States. Some pleasing effays are making in Connecticut, as well towards that as towards the manufacture of what is produced. Stockings, handkerchiefs, ribbons, and buttons, are made, though as yet but in fmall quantities.

A manufactory of lace, upon a feale not very extensive, has been long memorable at Ipswich in the State of Massachulets.

An exemption of the material from the duty which it now pays on importation, and premiums upon the production, feem to be the only species of encouragement advisable as so early a stage.

#### GLASS.

The materials for making glafs are found every where; in the United States there is no deficiency of them. The fands and ftones called Tarfo, which include flinty and cluyftalline fubftances generally, and the falts of various plants, particularly the fea-weed kali, or kelp, conflitute the effential ingredients. An extraordinary abundance of fuel is a particular advantage enjoyed by America for fuch manufactures; they, however, require large capitals, and involve much manual labour.

Different manufactories of glass are now on foot in the United States. The prefent duty of 12<sup>1</sup>/<sub>2</sub> per cent. laid by the states on all imported articles of glass amount to a confiderable encouragement to those manufactories; if any thing in addition is judged eligible, the most proper would appear to be a direct bounty on window glass and black bottles.

The first recommends itself as an object of general convenience, the last adds to that character the circumstance of being an important item in breweries. A complaint is made of great deficiency in this respect. No this ir eftabli very The per c petre, from c dient, article States, the bo in the of the

al convenic of being de of great

### AL GUN POWDER.

No fmall progrefs has been of late made in the manufacture of this important article; it may, indeed, be confidered as already established, but its high importance renders its farther extension. very defireable.

The encouragements which it already enjoys, are a duty of ten per cent. on the foreign rival article, and an exemption of faltpetre, one of the principal ingredients of which it is composed, from duty. A like exemption of fulphur, another chief ingredient, would appear to be equally proper. No quantity of this article has yet been produced from any internal fources of the States. This confideration, and the use made of it, in finishing the bottoms of fhips, is an additional inducement to placing it in the clais of free goods. Regulations for the careful infpection of the article would have a favourable tendency.

#### PAPER. 13

Manufactories of paper are among those which are arrived at the greatest maturity in the United States, and are almost adequate to national supply. That of paper hangings is a branch in which respectable progress has been made.

Nothing material feems wanting to the farther fuccefs of this valuable branch, which is already protected by a competent duty on fimilar important articles.

In the enumeration of the feveral kinds made fubject to duty on importation into the States, fheathing and cartridge paper have been omitted; these being the most simple manufactures of the fort, and neceffary to military supply as well as ship-building, recommend themselves equally with those of other descriptions to encouragement, and appear to be as fully within the compass of domestic exertions.

#### PRINTED BOOKS.

The great number of preffes diffeminated throughout the Union feem to afford an affurance, that there is no need of being indebted to foreign countries for the printing of the books which are used in the United States. A duty of ten per cent, on the importation, which is now charged upon the article, will have a tendency to aid the bufines internally.

It occurs, as an objection to this, that it may have an unfavourable afpect towards literature, by raifing the prices of books in univerfal ufe, in private families, fchools, and other feminaries of learning; but the difference, it is conceived, will be without effect.

As to books which usually fill the libraries of the wealthier classes, and of professional men, such an augmentation of prices

as might be occasioned by an additional duty of five per cent. would be too little felt to be an impediment to the acquisition.

360

And with regard to books which may be fpecially imported for the use of particular seminaries of learning, and of public libraries, a total exemption from all duty would be advised le, which would go far towards obviating the objection just mentioned.

As to the books in most general family use, the confuncy and universality of the demand would ensure exertions to furnish them in the different flates, and the means are completely adequate. It may also be expected ultimately, in this and in other cases, that the extension of the domestic manufacture would conduce to the cheapness of the article.

It ought not to pass unarbarked, that to encourage the printing of books is to encourage the manufacture of paper.

### REFINED SUGARS AND CHOCOLATE

Are among the number of extensive and prosperous domestic manufactures, in the United States.

Drawbacks of the duties upon the materials of which they are refpectively made, in cafes of exportation, would have a beneficial influence upon the manufacture, and would conform to a precedent which has been already furnished in the instance of molasses, on the exportation of diffilled spirits.

Cocoa, the raw material, now pays a duty of one cent per lb. while chocolate, which is a prevailing and very fimple manufacture, is comprised in the mass of articles, rated at no more than five per cent.

There would appear to be a propriety in encouraging the manufacture by a fomewhat higher duty on its foreign rival, than is paid on the raw material. Two cents per lb. on imported chocolate would, it is prefumed, be without inconvenience.

#### WINES.

The manufacture of wines, is an object worthy of legislative attention and encouragement in the United States. Successful experiments have already been made, by fome new fettlers of French people, on the river Ohio, which evince the practibility of the manufacture of wines of excellent quality; and as grapes are the fpontaneous production of all the United States, and, by culture, might be raifed in any defirable quantity, and in great perfection, this manufacture, with proper legislative encouragement, might be carried on to fuch an extent, as greatly to diminish, and in time, perhaps, wholly to preclude foreign importations.

361

The manufacture of maple fugar, though it has for many years been carried on, in the fmall way, in the caftern States, has but The lately pecome an object of public attention.-The caftern and middle States furnish a sufficient number of maple trees to supply the United States with the article of sugar; and, it is alferted, of a quality "equal, in the opinion of competent judges, to the best sugars imported from the West India Islands." A perfon, whole judgment on this fubject is much to be relied on, as well from his experience in the bufinels, as his established character for candor and conservity, has given it as his opinion. "That four active and induh yous men, well provided with ma-terials and conveniencies proper for carrying on the bulinefs, may make, in a common feafon, which lasts from four to fix weeks, 4000lbs. of fugar, that is 1000lbs, to each man." If fuch be the amazing product of fix weeks labour of an individual, what may be expected from the labours of the many thousands of people who now inhabit, and may hereafter inhabit, the extensive tracts of country which abound with the fugar maple tree? This manufacture is fo important and interesting, that it respects the wealth and prosperity of their country, and the caufe of humanity, that it deferves the countenance of every good citizen, and even national encouragement. No less than eighteen millions of pounds of West India sugars, manufactured by the hands of flaves, is annually imported into and confumed in the United States. In proportion as this quantity can be leffened by their own manufacturers, by the hands of freemen, the wealth of the United States will be increased, and the cause of humanity promoted.

The foregoing heads comprife the most important of the feveral kinds of manufactures which have occurred as requiring, and, at the fame time, as most proper for public encouragement in the United States; and offer fuch measures for affording it, as have appeared best calculated to answer the end proposed.

The measures, which have been submitted, though some of them may have a tendency to insure the revenue, yet when taken aggregately, they will, for a long time to come, rather augment than decrease it.

There is little room to expect that the progress of manufactures will so equally keep pace with the progress of population as to prevent even a gradual augmentation of the product of the duties on imported articles.

As, neverthele's, an abolition in fome inftances, and a reduc-Vol. I. g A

365

tion in others of duties which have been pledged for the public debt is propoled, it is effential that it fhould be accompanied with a competent subfitute. In order to this, it is requisite that all the additional duties which shall be laid be appropriated, in the first instance, to replace all defalcations which may record from any such abolition or diminution. It is evident as artiglance, that they will not only be adequate to this, but with the a confiderable furplus.

There is reafon to believe that the progress of particular mapufactures in the United States has been much retarded by the want of skilful workmen; and it often happens that the capital employed are not equal to the purposes of engaging workmen of a superior kind from Europe. Here, in cases worthy of it, the auxiliary agency of government would in all probability be useful. There are also valuable workmen in every branch who are prevented from emigrating folely by the want of means. Occafional aids to such perfons, properly administered, might be a fource of valuable acquisition to the States.

The propriety of ftimulating by rewards the invention and introduction of uleful improvements is admitted without difficulty. But the fuccels of attempts in this way must evidently depend much on the manner of conducting them. It is probable that the placing of the dispensation of those rewards under fome proper discretionary direction, where they may be accompanied by collateral expedients, will ferve to give them the furest efficacy. It seems impracticable to apportion by general rules specific compensations for discoveries of unknown and disproportionate utility.

The great use which any country may make of a fund of this nature to procure and import foreign improvements, is particularly obvious. Among these, the article of machines form a most important item.

The operation and utility of preiniums have been adverted to, together with the advantages which have refulted from their difpenfation under the direction of certain public and private focieties. Of this, fome experience has been had in the inflance of the Pennfylvania fociety for the promotion of manufactures and ufeful arts; but the funds of that affociation have been too contracted to produce more than a very fmall portion of the good to which the principles of it would have led. It may confidently be affirmed, that there is fearcely any thing which has been devifed better calculated to excite a general fpirit of improvement than the inflitutions of this nature. They are truly invaluable.

In countries where there is great private wealth much may be effected by the voluntary contributions of patriotic individuals; but in a community fituated like that of the United States, the public purfs much fupply the dediciancy of private refource. In that can it be fo ufeful as in promoting and improving the efforts of induftry?

Connected with the agriculture, commerce, and manufactures. is the bank of the United States, the happy effects, and benefits, of which, have been experienced to a very confiderable degree. This bank was ine morated by act of congreis, February s5th, 1791, by the nam d flile of The Prefdont, Directors, and Com-1 pany of the Bank of the United States. The amount of the capital flock is ten million dollars, one fourth of which is in gold and filver; the other three fourths in that part of the public debt of the United States, which, at the time of payment, bears and accruing interest of fix per cent. per annum. "Two millions of: this capital flock of ten millions, is fubscribed by the Prefident in behalf of the United States. The flockholders are to continue a corporant body by the act, until the 4th day of March 1811; and are capable, in law, of holding property to an amount not ex-: ceeding, in the whole, fifteen million dollars, including the aforefaid ten million dollars, capital flock. The corporation may not: at any time owe, whether by bond, bill or note, or other contract, more than ten million dollars, over and above the monies then actually deposited in the bank for fafe keeping, unless the contracting of any greater debt shall have been previously authorifed by a law of the United States. The corporation is not at liberty to receive more than fix per cent. per annum for or upon its loans or difcounts, nor to purchase any public debt whatever, or to deal or trade, directly or indirectly, in any thing except bills of exchange, gold or filver bullion, or in the fale of goods really and truly pledged for money lent, and not redeemed in due time, or of goods which shall be the produce of its bonds; they may fell any part of the public debt of which its flock shall be composed. Loans, not exceeding 100,000 dollars, may be made to the United States, and to particular flates,

Officers for the purposes of discount and deposit only, may be established within the United States, upon the same terms, and in the same manner, as shall be practised at the bank. Four of these offices, called BRANCH BANKS, have been already esta-

of a fum not exceeding 50,000 dollars.

3642

excules plaufible, monutes alve been artfully encouragnational prop by thele, have been brought to any ed, and the peopla quicide in the february and a governors, in creating a prese which being entire present difpolal of the latter, has often been uled equinit the just rights of these whole property is exhaulted for its support. But if the policy of keeping ftanding armies was fully inveffigated, it would be found to have its origin, not in the jealousies of one nation with respect to another, but in the symmutic principles and fears of different governments, with respect to their inbjects at some. The fact is notorious, that the origin of most of the old governments, has been in conquest originated where they ought, (thom the people) the confequence of which has been, that princes, anxioully concerned for the prefervation of their own power, and dreading that their fubjects thould recover their just rights, have found it necessary to detach a linge part of them from the general mais, and by miltand rewards, to blind them to their own interefts, tary galant and to waste them more intimately to themfelves. Standing armiss are therefore unneceffary, and inconfistent in a republican government America of course has none. Their military ftrength lies in a well-disciplined militia, According to the late cenfus, there were in the United Staces, eight hundred and fourseen thousand men of clixteen years old and upwards, whites and these have fince repidly increased. Suppose that the fuperannusted, the officers of government, and the other claffes of people who are exculed from military duty, amount to one hundred and fourteen thousand, there, will remain a militia of more than feven hundred thousand men. Of these a great proportion are well-difciplined, veteran troops. Scarcely any nation or kingdom in Europe can bring into the field an army of equal, numbers or more formidable than can be raifed in the United States.

A BNOTH

for the most part, though the

such other, agree in house

196

Five thousand regular troops have, however, been enlifted for three goars, and an attempt has been made by the fenate, on account of the prefent polture of affairs, to increase that number in fifteen thousand, but the House of Representatives have refuted to comply, rather chusing, in case of a war, to trust to the energy and exertions of the militia, than thus to risk the, introduction of a military flanding force.

Marine firength, in a firit fenfe, the United States have none, many of their merchants veffels might, however, foon be converted into thips of war of confiderable force, and their fituation and refources will enable them to establish and report a navy equal to that or any that they will define it necessary to determine on to doing, and that they will define it necessary to be little doubt. a navy equal to that of any nation in the world, thould they thatifh and fupport a navel power, these was be little doubt. The aqual habits of their citizens attach them to reducite. They will exercise it for themselves, Wars then we fun mult fometimes be their lot; and all the wife can do, will be to avoid that half of them which would be produced by their own follies, and their acts of injuffice; and to make for the other half and han preparations they can. Of what nature, it may be alked, while a there be? A land army would be useles for offence, and not the best nor fafest instrument of defence. For either of these purpoles, the fea is the field on which they should meet an European enemy. On that element it is necessary they should therefore polieis fome power. To aim at fuch a navy as the greater nations of Europe poffeis, would be a foolifh and wicked wafte of the energies of their citizens. It would be to pull on their own heads that load of military expence, which makes the Eu-AOPEAN LABOURER CO SUPPERLESS TO BED, AND MOISTENS HIS BREAD WITH THE SWEAT OF HIS BROW. It will be enough if they enable themfelves to prevent infults from those nations of Europe which are weak on the fea, becaufe circumfances exift, which render even the ftronger ones weak as to them. Providence has placed the richeft and most defenceles European poffessions at their door; has obliged their molt precious commerce to pais as it were in review before the United States. To protect this, or to affail them, a fmall part only of their naval force; will ever be rifked across the Atlantic. ... The dangers to which the elements expose them there are too well known, and the greater dangers to which they would be expoled at home, were any general calamity to involve their whole fleet.

I see is a list again the set of all a second and a second and a second and a second and a second as a second as

They can attack them by detachment only; and it will fuffice for the United States to make themfelves equal to what they may detach, Even's imaller force than any of the nations of Europe may detach, will be rendered equal or fuperior by the quickness with which any check may be repaired with the Americans. while loffes with European powers will be irreparable till too late. A fmall naval force then is fufficient for the States, and a fmall one is necessary. What this should be, we will not undertake to fay, it fould, however, by no means be fo great as they are able to make it. Mr. Jefferion oblerves, that Virginia alone, can annually spare without distress, a million of dollars, or three hundred thousand pounds; suppose this sum to be applied to the creating a navy, a fingle year's contribution would build, equip, man, and lend to fee, a force which would carry three hundred. guns. The referst the confederacy, exerting themfelves in the famelproportion, would equip in the fame time fifteen hundred sur more a Soulist one year's contributions would fet up a may en hundred guns. British ships of the line average feventy-fix guns, and their frigates thirty-eight, Eighteen hundred guns then would form a fleet of thirty fhips, eighteen of which might be of the line, and twelve frigates, Allowing eight men the British average for every gun, their annual expence, including fublistence, cloathing, pay, and ordinary repairs, would be about twelve hundred and eighty dollars for every gun, or two million three hundred and four thousand dollars for the whole, This is only flated as one year's possible exertion, without deciding whether more or lefs than a year's exertion should be thus applied, or would be neceffary, P send form

RELIGION.

W. Seen it

The conflitution of the United States difcovers in no one inflance more excellence than in providing against the making of any law respecting an *stablishment* of religion, or prohibiting the free exercise of it. And the conflitutions of the respective States are equally entitled to praise in this respect, in them religious liberty is a fundamental principle. And in this important article, the American government is distinguished from that of every other nation, if we Excert FRANCE. Religion in the United States is placed on its proper basis; without the feeble and unwarranted aid of the civil power, it is left to be supported by its own evidence, the lives of its professions, and the Almighty care of its Divine Author.

All being thus left at liberty to choole their own religion, the people, as might eafily be supposed, have varied in their choice. The bulk of the people denominate themselves Chrif

It is difficult to fay what is the prefent ecclefiaftical conflitution of the Congregational churches. Formerly their ecclefiaftical proceedings were regulated, in Maffachufetts, by the Cambridge Platform of church discipline, established by the synod in 1648; and in Connecticut, by the Saybrook Platform of discipline; but fince the revolution, lefs regard has been paid to thefe conftitutions, and in many inftances they are wholly difused. Congregationalists are pretty generally agreed in this opinion, that, "Every church or particular congregation of visible faints, in gospel order, being furnished with a Pastor or Bishop, and walking together in truth and peace; has received from the Lord Jeins full power and authority ecclefiaftical within itfelf, regularly to administer all the ordinances of Christ, and is not under any other ecclefiaftical jurifdiction whatever." Their churches, with lome exceptions, disclaim the term Independent, as applicable to them, and claim a fifterly relation to each other.

....

From the sufferer of the elders, and other metiongers of the churches affembled at Bofton, in the year 1662, to the quotions proposed to them by order of the General Court, it appears that the churches, at that period, profailed to hold communion with each other in the following acts, viz.

" In hearty care and prayer one for another. In affording selief, by communicating of their gifts in temporal or spiritual necellities. In maintaining unity and peace, by giving account one to another of their public actions, when it is properly defired; to firengthen one another in their regular administrations; in particular by a concurrent tellimony again it perfons juffly cenfured. To feek and accept help from, and afford help to each other, in cafe of divisions and contentions, whereby the peace of any church is diffurbed; in matters of more than ordinary importance, as the ordination, installation, removal, and deposition of paftots or bishops; in doubtful and difficult questions and controversies, doctrinal or practical, that may arise; and for the rectifying of mal-administration, and healing of errors and scandals that are not healed among themfelves. In taking notice, with a fpirit of love and faithfulnefs, of the troubles and difficulties, errors and fcandals of another church, and to administer help, when the cafe manifestly calls for it, though they should to neglect their own good and duty, as not to feek it. In admonishing one another, when there is caufe for it; and after a due courfe of means, patiently to withdraw from a church, or peccant party therein, obstinately perfisting in error or scandal."

A confociation of churches was, at the period mentioned, confidered by them as neceffary to a communion of churches, the former being but an agreement to maintain the latter, and therefore a duty.—The confociation of churches they defined to be, Their mutual and folemn agreement to exercise communion in the afts above recited, amongst themselves, with special reference to those churches which, by Providence, were planted in a convenient vicinity, though with liberty referved without offence, to make use of others, as the nature of the cale, or the advantage of the opportunity might lead thereunto.

The ministers of the Congregational order are pretty generally affociated for the purposes of licensing candidates for the ministry, and friendly intercourse and improvement; but there are few congregational churches that are consociated on the above principles; and the practice has very generally gone into difuse, and with it the communion of churches in most of the acts before recited. In Connecticut and the western parts of Massachusets, the churches have deviated less from their original constitution. The degeneracy of the Congregational churches ind i forms inany instituprinciheftly Contrines The b what fome a who h tion of

from that order, fellowship, and harmony, in difeipline, definites, and friendly advice and affiftance in occlefisifical matters, which formerly fublifted between them is matter of deep rogret to many, not to fay to most people of the denomination. A reforination, or a return to a predice conformable to the original principles of the Congregational churches, is an event more earnessity defired, than confidently expected by them.

Congregationalifts are divided in opinion refpecting the doctrines of the gofpel, and the proper fubjects of its ordinances. The body of them are Calvinilts; a refpectable proportion are what may be denominated Hopkenfian Calvinifts; befides thefe, fome are Arminiana, fome Arians, a few Socinians, and a number who have adopted Dector Chauncey's feheme of the final falvation of all men.

#### PRESBYTERIAN

Next to the Congregationalifts, Prefbyteriant are the most numerous denomination of Christians in the United States. They have a conftitution by which they regulate all their ceclefiaftical proceedings, and a confession of faith, which all church officers and church members are required to subscribe. Hence, they have preferved a singular uniformity in their religious sentiments, and have conducted their ecclessifical affairs with a great degree of order and harmony.

The body of the Prefbyterians inhabit the middle and fouthern States, and are united under the fame conflictution. By this constitution, the Presbyterians who are governed by it, are divided into Synods and leventeen Prefbyteries; viz .- SYNOD OF NEW YORK five prefbyteries, ninety-four congregations and fixty-one fettled ministers .- SYNOD OF PHILADELPHIA, five presbyteries, ninetytwo congregations, and fixty fettled ministers, befides the ministers and congregations belonging to Baltamore prefbytery .- Sr-NOD OF VIRGINIA, four prefbyteries, feventy congregations, and forty fettled ministers, exclusive of the congregations and ministers of Transylvania presbytery .- SYNOD OF THE CAROLI. NAS, three prefbyteries, eighty-two congregations, and forty-two fettled ministers, the ministers and congregations in Abington prefbytery not included. If we suppose the number of congregations in the prefbyteries which made no returns to their, fynods, to be one hundred, and the number of fettled ministers in the fame to be forty, the whole number of prefbyterian congregations in this connection will be four hundred and thirty-eight which are supplied by two hundred and twenty-three settled ministers, and between seventy and eighty candidates, befides

The standing a 8 B. experies and and

a number of ordained ministers who have no particular charges. Each of the fynods meet sinually, befides which they have a joint meeting, by their commissioners, once a year, in general assembly, at Philadelphia.

The Prefbyterian churches are governed by congregational, prefbyterial, and fynodical affemblies: these affemblies, possible no civil jurifdiction. Their power is wholly moral or spiritual, and that only ministerial or declarative. They pesses by their constitution the right of requiring obedience to the rules of their focieties, and of excluding the disobedient from the privileges of the church; and the powers requisite for obtaining evidence and infidding censure; but the highest punishment, to which their authority extends, is to exclude the contumecious and impenitent from the congregation to which they belong.

The CRUTCH SESSION, which is the congregational affembly of judicatory, confilts of the minifter or minifters and elders of a particular congregation. This body is invefted with the fpiritual government of the congregation; and have power to enquire into the knowledge and Christian conduct of all its members; to call before them offenders and witneffes, of their own denomination; to admonifh, fulfpend, or exclude from church fellowship fuch as deferve these censures; to concert measures for promoting the spiritual interest of the congregation, and to appoint delegates to the higher judicatories of the church.

A PRESEXTERY, confifts of sell the ministers, and one ruling elder from each congregation, within a certain district. Three minifters and three elders, conftitutionally convened, are competent to do bulinefs. This body have cognizance of all things that regard the welfare of the particular churches within their bounds, which are not cognizable by the feffion. Alfo, they have a power of receiving and iffuing appeals from the feffions; of examining and licenfing candidates for the ministry; of ordaining, fettling, removing, or judging ministers; of refolving queftions of doctrine or discipline; of condemning erroneous opinions, that injure the purity or peace of the church; of vifiting particular churches, to enquire into their flate, and redrefs the evils that may have arifen in them; of uniting or dividing congregations, at the requeft of the people, and whatever elfe pertains to the fpiritual concerns of the churches under their Care. Mar . It's . A ...

A SYNOD, is a convention of feveral prefbyteries. The fynod have power to admit and judge of appeals, regularly brought up from the perfbyteries—to give their judgement on all references made to them of an ecclefiaftical kind; to correct and regulate the proceedings of prefbyteries; to take effectual care that prefbyteries obferve the conflitution of the church, &c.

The highest judicatory of the Preibyterian church is filles, THE GENERAL AMEMBLY OF THE PRESETTERIAN CREECH IN THE UNITED STATE OF AMERICA. This grand Allembly confifts of, an equal delegation of bishops and elders from each prefbytery within their jurifdiction, by the title of Commillioners, to the General Assembly. Fourteen commissioners make a quesum. The General Affembly constitute the bond of union, peace, corsipondence, and mutual confidence among all their churches. nd have power to receive and iffue all appeals and references which may regularly be brought before them from inferior judicatories; to regulate and correct the proceedings of the lyneds, ecc. To the General Aliembly also belongs the power of con ulting, ressoning, and judging in controversies respecting dodrine and discipline; of reproving, warning, or bearing teltimony against error in doctrine, or immorality in practice in any church, prefbytery, or fynod; of corresponding with foreign churches; of putting a ftop to schilmatical contentions and disputations; of recommending and attempting a reformation of manners; of promoting charity, truth, and holinels, in all the churches ; and allo of creeting new fynods when they judge it necessary.

The confession of faith adopted by the prefbyterian church, embraces what are called the Calvinistic doctrines; and none who difbelieve these doctrines are admitted into fellowship with their churches. The General Affembly of the Prefbyterian church, hold a friendly correspondence with the General Afforiation in Connecticut, by letter, and by admitting delegates from their respective bodies to fit in each other's general meetings,

Unconnected with the churches of which we have been fpeaking, there are four small prefbyterics in New-England, who have a similar form of ecclesiastical government and discipline, and profess the same doctrines.

Befides thefe, there is the ASSOCIATE PRESETTERY OF PENN-STLVANIA, having a feparate ecclefiaftical jurifdiction in America, and belonging to the Affociate Synod of Edinburgh, which they declare is the only ecclefiaftical body, either in Britain or America, with which they are agreed concerning the doctrine and order of the church of Chrift, and concerning the duty of confeffing the truth, and bearing witnefs to it by a public teftimony againft the errors of the times. This connection is not to be underflood as indicating fubjection to a foreign jurifdiction; but is preferved for the fake of maintaining unity with their brethren in the profeffion of the Chriftian faith, and fuch an intercourfe as might be of fervice to the interefts of religion. This fect of Prefbyteri-

and the occurrently known by the name of Secuders, on account of their having foceded from the national church of Scotland, in 1736.

#### DUTCH REFORMED CHURCH

The Dutch reformed Churches in the United States, who maintain the doctrine of the fynod of Dort, held in 1618, are between feventy and eighty in number, conftituting fix classes, which form one fynod, filed, The DUTCH ARIOAMED SYNOD OF New York and New Jerley. The classes consist of ministers and ruling elders ; each clais delegates two ministers and an elder sfent them in fynod. From the first planting of the to ren burches in New York and New Jerley, they have, Dutch ?! under the direction of the classes of Amsterdam, been formed exactly upon the plan of the established church of Holland as far is that is ecclefiaffical, A ftrict correspondence is maintained between the Dutch Reformed Synod of New York and New Jerfey, and the fynod of North Holland and the claffes of Am. sterdam. The acts of their fynods are mutually exchanged every year, and mutual advice is given and received in disputes respecting doctrinal points and church discipline.

#### PROTESTANT EPISCORAL CHURCH.

The Proteftant Episcopal Church in the United States, the churches of that denomination in New England excepted, met in Convention at Philadelphia, in Oftober 1785, and revised the book of Common Prayer, and administration of the facrements, and other rites and ceremonies, with a view to render the liturgy confistent with the American Revolution. But this revised form was adopted by none of the churches, except one or two in Philadelphia.

In Oftober 1789, at another meeting of their convention, a plan of union among all the Proteftant Epifcopal churches in the United States of America was agreed upon and fettled: and an adequate reprefentation from the feveral States being prefent, they again revifed the book of common prayer, which is now publifhed and generally adopted by their churches. They also agreed upon and publifhed feventeen canons for the government of their church, the first of which declares, that "there shall, in this church, be three orders in the ministry, viz. BISHOPS, PRIESTS, and DEACONS."

At the fame time they agreed upon a Conflictution, which provides that there shall be a general convention of the Protestant Episcopal Church in the United States, on the second Tuesday in September, of every third year from 1789—That each state is

entitled f them. choien b church, convent propose poled of paffed b of the ot of his c fhall be and two have fut Holy Sci of God. **lotem**nly Protestan They those con ber of th New En louthern NIZ. of C been elec have been Scotch C church. cration of ryland.

mitled to a representation of both the clergy and hity .... f them, and may fend deputies, not exceeding four of choien by the convention of the State-That the bill church, when three or more are prefent, shall, in their general conventions, form a leperate house, with a right to origina propole sets for the concurrence of the house of depu poled of clergy and laity; and with a power to negative acts passed by the house of deputies, unless adhered to be four-fifths of the other house-That every bishop shall confine the exercise of his episcopal office to his proper diocele-That no perlon shall be admitted to holy orders, until examined by the hop and two prefbyters and mall not be ordained until he mall have fubicribed the following declaration-" I do believe the Holy Scriptures of the Old and New Teltament to be the Word of God, and to contain all things netellary to falvation; and I do. temply engage to conform to the dollarines and worthip of the seftant Episcopal Church in the United States."

They have not yet adopted any articles of religion other than those contained in the Apostles and Nicene Creeds. The number of their churches in the United States is not alcertained; in New England there are between forty and fifty; but in the fouthern flates, they are much more numerous. Four Bishops, wis. of Connecticut, New York, Pennsylvania, and Virginia, have been elected by the conventions of their respective States, and have been duly confectated. The former by the Bishops of the Scotch Church, the three latter, by the Bishops of the English church. And these, in September 1792, united in the confecration of a fifth, elected by the convention of the flate of Maryland.

#### APTISTS.

The Baptifts, with fome exceptions, are upon the Calviniftic plan, as to doftrines, and independents as to church government and difcipline. Except thole who are flyled "open communion baptifts," of whom there is but one affociation, they refue to communicate in the ordinance of the Lord's Supper with other denominations; because they hold that immersion only is the true baptism, and that baptism is necessary to communion; it is, therefore inconfistent, in their opinion, to admit unbaptized perfons to join with them in this ordinance; though they allow ministers of other denominations to preach to their congregations, and to affish in ordaining their ministers.

They have regular colleged eftablishments, and maintain a gonstant communication with each other by means of annual and

Since

Since the above period, accounts of fix other affociations have reached England, and, accounding to an account taken by Mr. John Mestund, a minister of the baptifi denomination, who has travelled through the United States, to afformin their number and Raty. The flatement of their churches, ministers and church members, it as follows.

STATES.	CHURCHES ON	MINISTERS.
in New Hampshire Massachusetts	32	42. 17 1782 5. 17 1782 7146
Rhode Ifland Connecticut	and a second second	37
Vermont New York		15 1610
New Jerley Pennfylvania	The second se	80 9 2279
Delaware	· 9	26. 7 1231 9

Kentucky Weitern Territor		40 21 3105 30' '
North Carolina Deceded Territor	y 18	Br 76 742 15 6 885
South Carolina Georgia	Carlin and the second	18 28 4012 33 9 3184
Ta		10 422 64975

To this account, it is prefumed, that about two thouland five hundred members, and forty-five churches, ought to be added-making the whole number of churches about nine hundred and ten, and the members about fixty-feven thousand. But at leaft three times as many attend their meetings for public worfhip as have joined their churches, which, we may suppose, are in principle Baptists, these will make the whole number of that denomination in the United States two hundred and one thousand, or a twenty-fifth part of the inhabitants.

The leading principles of the regular or particular Baptifts are —The imputation of Adam's fin to his pofterity; the inability of man to recover himfelf; effectual calling by fovereign grace; juftification by the imputed righteoufnefs of Chrift; baptifm by immerfion, and that on profession of faith and repentance; congregational churches, their independency, and reception into them upon evidence of found conversion.

ALDE TOTAL SALLES

The Unitarians, or as they are denominated, though not with ftrict propriety, Socinians, are far from being numerous in the United States, they have, however, received confiderable, additions of late from different parts of Great Britain ; the generous attachment of the long of Ghriffians, to the caufe of civil and re-ligious liberty, hes marked them out as objects of the dread and ligious liberry, "he marked them out as objects of the dread and usagenace of the Privit government, every manceuvre has been tried, and every inference exerted to fink them in the effect of their country was, the confequence of which has been, that many of shem have found it necellary to feek a relidence in a country more congenial with their fentiments and views of the rights of mankind, and where they can enjoy their religious principles without political degradation. Among the characters which are ornament to this clais of Christians, and whom the ungrateful nd unrelenting hand of perfecution has driven to the sofpitable pores of the United States, the names of PALESTLENE RUSSEL, and COOPLA, deferve particular notice; the former of thefe characters has long been celebrated as a philosopher, and the avowed champion of the Unitarian Faith. In both thele lituations, however we may differ from him in opinion, his candour, zcal, and perfeverance; entitle him to our admiration; but as the FRIEND OF MANKIND, he claims more than admiration-HE COMMANDS OUR BETERM-the direction of his philosophical purfuits to the benefit of his fellow creatures-the warmth and ability with which he has espouled and defended the cause of civil and religious liberty, the patience, fortitude, and relignation with which he has endured the most cruel and unjust perfecutions-the difcovery of the most amiable disposition to those who differed with, and even perfecuted him, will endear his memory to posterity, and awaken the utmost abhorrence and indignation at that spirit of bigotry and party rage, which forced him from his country and friends, and obliged him, at an advanced period of life, to feek an afylum across the Atlantic: America will, however, value what Britain despiled, and will no doubt amply reward him for all his past fufferings-his name will live in the affections of fucceeding ages, while those of his perfecutors will be configned to the infamy they merit. .

It will be unnecessary here to fay any thing on the peculiar tenets of the Unitarians, as they have been of late fo amply and ably dicuffed, and in a variety of forms, adapted to every clafs of.

readers, • we shall therefore pass to a consideration of the people called Quakers.

## QUAKERS.

the st deale the matter watter for the line of the a series

This denomination of Christians arole about the year 1648; and were first collected into religious focieties by their highly respeced elder, Groscz Fox. They emigrated to America as early as 1656. The first fettlers of Pennfylvania were all of this denomination; and the number of their meetings in the United States, at prefent, is about three hundred and twenty.

Their doctrinal tenets may be concifely expressed as follows-In common with other Chriffians, they believe in One Eternal God, and in Jelus Chrift the Melliah and Mediator of the new covenant. To Chrift alone, in whole divinity they believe, they give the title of the Word of God, and not to the fcriptures; yet they profels a high efteem for the facred writings, in fubordination to the Spirit who indited them, and believe that they are able, through faith, to make men wife to falvation-They reverence the excellent precepts of Scripture, and believe them practicable and binding on every Chriftian; and that in the life to come, every man will be rewarded according to his works. " In order to enable mankind to put in practice these precepts, they believe, that every man coming into the world is endued with a measure of the Light, Grace, or Good Spirit of Christ; by which he is enabled to diffinguish good from evil, and correct the diforderly paffions and corrupt propenfities of his nature, which mere reafon is altogether infufficient to overcome-that this divine grace is, to thole who fincerely feck it, an all-fufficient and prefent help in time of need-and that by it the fnares of the enemy are detected, his allurements avoided, and deliverance experienced, through faith in its effectual operation, and the foul translated out of the kingdom of darkness into the marvellous light and kingdom of the Son of God-Thus perfuaded, they think this divine influence efpecially necessary to the performance of the highest act of which the human mind is capable, the worship of God in spirit and in truth; and therefore confider, as obstruction to pure worship, all forms which divert the mind from the fecret influence of this unction of the Holy One-Though true worship is not confined to time or place, they believe it is incumbent on churches to mect often together, but dare not depend for acceptance on a formal repetition of the words and experience of others-They think it their duty to wait in filence to have a true fight of their

condition befowed on them; and believe even a fingle figh, arifing from a fenfe of their infirmities and need of divine help to be more acceptable to God, than any performances which originate in the will of man.

10

They believe the renewed affiftance of the light and power of Chrift, which is not at command, nor attainable by fludy, but the free gift of God, to be indifpenfably necessary to a true gofpel ministry—Hence Arifes their testimony against preaching for hire, and conficientious refusal to support any such ministry by tythes or other means. As they dare not encourage any ministry, but such as they believe to spring from the influence of the Holy Spirit; so neither dare they attempt to restrain this influence to perfons of any condition in life, or to the male fex—but allow such of the female fex as appear to be qualified, to exercise their gifts for the general edification of the church.

They hold that as there is one Lord and one faith, so his baptism is one in nature and operation, and that nothing short of it can make us living members of his mystical body; and that baptism with water belonged to a dispensation inferior to the prefent. With respect to the Lord's Supper, they believe that communication between Christ and his church is not maintained by that nor any other external ordinance, but only by a real participation of his divine nature, through faith; that this is the fupper alluded to in Rev. iii. 20-mand that where the fubstance is attained, it is unnecessary to attend to the shadow.

Believing that the grace of God is alone fufficient for falvation, they can neither admit that it is conferred on a few only, while others are left without it; nor, thus afferting its univerfality, can they limit its operation to a partial cleanfing of the foul from fin, even in this life--On the contrary they believe that God doth vouchfafe to affift the ob-dient to fubmit to the guidance of his pure fpirit, through whole affiftance they are enabled to bring forth fruits unto holinefs, and to ftand *perfect* in their prefent rank.

As to oaths, they abide literally by Chrift's positive injunction, "SWEAR NOT AT ALL." They believe that "WARS AND FIGHTINGS" are, in their origin and effects, utterly repugnant to the Gospel, which breathes peace and good-will to men\*. They also are firmly perfuaded, that if the benevolence of the Gospel were generally prevalent in the minds of men, it would effectu-

\* During the late war, fome of their number, contrary to this article of their faith thought it their duty to take up arms in defence of their couutry. This laid the foundation of a fecetion from their brethren, and they now form a feparate congregation in Philadelphia, by the name of the "Refulting or fighting Qua kers,"

3Ca

ally prevent them from oppielling much more from enflaving. their brethren, of whatever complexion ; and would even influchee their treatment of the brute creation, which would no longer groan the victims of their avarice, or of their falle ideas of pleifure .- They profes that their principles, which inculcate fubmission to the laws in all cafes wherein confcience is not violated, are a fecurity to the falutary purpoles of government, But they hold that the civil magistrate has no right to interfere in matters of religion, and think perfecution, in any degree unwarrantable, They reject the ule of thole mames of the months and days, which, having been given in henour of the heroes or gods of the heathen, originated in their flattery or superstition ; and the cultom of fpeaking to a fingle perfon in the plural number, as having arisen also from motives of soulation, Compliments, superfluity of apparel or furniture, outward thews of rejoicing or mourning, and obfervations of days and times, they deem incompatible with the fimplicity and fincerity of a Christian life-4 and they condemn public diversions, gaiming and other vain amufements of the world, They require no formal fubfcription to any articles, either as the condition of membership, or to qualify for the fervice of the church, and a select minante in the To effect the falutary purpoles of difcipline, MONTHEY, QUARTERLY, and YFARLY meetings are eftablished. A monthly meeting is compoled of loveral neighbouring congregations. Its bufinels is to provide for the sublistence of the poor; and for the education of their offspring-to judge of the furcerity and fitnels of perfons appearing to be convinced of the religious principles of the fociety, and defiring to be admitted to memberfhip; to excite due attention to the discharge of religious and moral dutics; to deal with diforderly members-to appoint overfeers to fee that the rules of their discipline are put in practice-to the test and states of the - Benefit High one water will be allow of marriages, &c.+ total and a start was a start of the second

\* In the prefent ftruggle of liberality and humanity, against avarice and cruelty, in defence of the Blacks, the QUAKERS have had the figual honour of having first fet the illustrious example of aiming at a total emancipation.

+ Their mode of marrying is as follows—Thole who intend to marry, appear together, and propole their intention to the monthly meeting, and if not attended by their parents or guardians, produce a written certificate of their confent, figned in the prefence of witneffes. The meeting then appoints a committee to inquire whether they are clear of other engagements refpecting marriage; and if at a fubfequent meeting, to which the parties also come and declare the continuance of their intention, no objections are reported, they have the meeting's confent to folemnize their intended marriage. This is done in a public meeting for worthip, towards the clofe of which the parties fland up and folemnly take each other for huthand and wife. A certificate of the proceedings is then publicly read, and figned by the parties, and afterwards by the relations and others as witheffer which clofes the folemnity.

A quarterly meeting is composed of feveral monthly meetings, At this meeting are produced written answers from monthly meetings, to certain questions respecting the conduct of their members and the meeting's care over them. The accounts thus received, are digested and sent by representatives to the yearly meeting. Appeals from the judgment of monthly meetings are brought to the quarterly meetings.

The yearly meeting has the general fuperintendance of the fociety in the country in which it is effablished.\* The businoss of this meeting is to give forth its advice—make fuch regulations as appear to be requisite, or excite to the observance of those already made, &c. Appeals from the judgment of quarterly meetings are here finally determined , and a brotherly correspondence, by epiftles, is maintained with other yearly meetings. As they believe women may be rightly called to the work of the ministry, they also think they may flare in the Christian difcipline. Accordingly they have monthly, quarterly, and yearly meetings of their own fex; held at the fame time, and in the fame place with those of the men; but separately and without the power of making rules.

Their elders and minifters have meetings peculiar to themelves. Their elders and minifters have meetings peculiar to themelves. Their meetings, called meetings of minifters and elders, are generally held in the compais of each monthly, quarterly, and yearly meeting—for the purpole of exciting each other to the difcharge of their feveral duties—of extending advice to thole who may appear weak, &c. They also, in the intervals of the yearly meetings, give certificates to thole minifters who travel abroad in the work of the miniftry,

The yearly meeting, held in London, in 1675, appointed a meeting to be held in that city, for the purpole of advising or allifting in cales of fuffering for conficience fake, called a meeting for fufferings, which is yet continued. It is composed of Friends under the name of correspondents, chosen by the feveral quarterly meetings, who refide in and near the city. This meeting is entrulled with the care of printing and diffributing books, and with the management of its flock, and confidered as a flanding committee of the yearly meeting. In none of their meetings have they a Prefident, as they believe Divine wildom alone ought to prefide; nor has any member a right to claim preeminence over the refl.

<sup>6</sup> The Quakers have, in all, four yearly meetings. One in London, to which come repreferitatives from Ireland. The other fix are in the United States. 1. New-England, s. New-York, 3. New Jerley, and Pennfylvania, 4. Maryland, 5. Yirginia, 6. The Carolinas and Georgia.

### ahriisena ylävalta insivelti tari pietimenen präserin oli era ind. Tarinime angli provideta MARKOPIIII.

The Methodift denomination of Christians arole in England in 1739; and made their first appearance in America about twenty-four years fince. Their general flyle is, "The United Societies of the Methodist Episcopal Church." They profes themfelves to be " A company of men having the form and fceking the power of godlinefs, united in order to pray together, to receive the word of exhortation, and to watch over one another in love, that they may help each other to work out their falvation." Each fociety is divided into classes of twelve, perfons; one of whom is fliled the Leader, whole bulinels it is to fee each perfon in his clafs once a week, in order to enquire how their fouls prosper, to advise, reprove, comfort, or exhort as occasion may require; and to receive contributions for the relief of Church and Poor. In order to admission into their focieties they require only one condition, viz. "A defire to flee from the wrath to come, i. e. a defire to be faved from their fins." It is expected of all who continue in their focieties, that they fhould evidence their defire of falvation, by doing no harm, by avoiding all manner of evil, by doing all manner of good, as they have ability and opportunity, especially to the houlehold of faith; employing them preferably to others, buying of one another, unless they can be ferved better elfewhere, and helping cach other in bufinels. And allo by attending upon all the ordinan-. ces of God; fuch as public worthip, the fupper of the Lord, family, and private prayer, fearching the feriptures, and fafting or abstinence. The late Mr. John Wesley is confidered as the father of this clais of Methodifts, who, as they deny fome of the leading Calviniftie doctrines, and hold fome of the peculiar tenets of Arminius, may be called ASMINIAN METHODISTS-The late Mr. Whitefield was the leader of the CALVINISTIC METHODISTS, who are not very numerous in the United States, the greater part being now formed into independent Calvinift churches, or mixed with Congregationalifts and Prefbyterians,

In 1788, the number of Wesleian Methodists in the United States stood as follows:

#### ROMAN CATHOLICS

The whole number of ROMAN CATHOLICS in the United States is estimated at about fifty thousand; one half of which are in the State of Maryland. Their peculiar and leading doctrines and tenets are too generally known to need a recital here. They have a Bishor, who refides in Baltimore, and many of their congregations are large and respectable.

### GERMAN LUTHERANS AND CALVINISTS.

The German inhabitants in these states, who principally belong to Pennsylvania and New York, are divided into a variety of sets; the principal of which are LUTHERANS, CARVENISTS, MORAVIANS, TURERES, and MENNIORISTS. Of these the German Lutherans are the most numerous. Of this denomination, and the German Calvinists, who are next to them in numbers, there are upwards of fixty ministers in Pennsylvania—and the former have twelve, and the latter fix churches in the state of New York. Many of their churches are large and splendid, and in some instances furnished with organs. These two denominations live together in the greatest harmony, often preaching in each other's churches, and sometimes uniting in the erection of a church, in which they alternately worship.

#### MORAVIANS.

he track there at the

The MORAVIANS are a refpectable body of Christians in these States. Of this denomination, there were, in 1788, about one thousand three hundred fouls in Pennfylvania; viz. at Bethlehem, between five and fix hundred, which number has fince increased —at Natareth, four hundred and fifty—at Litiz, upwards of three hundred. Their other fettlements, in the United States, are at Hope, in New Jersey, about one hundred fouls; at Wachovia, on Yadkin river, North Carolina, containing fix churches. Befides these regular fettlements, formed by fuch only as are members of the brethren's church, and live together in good order and harmony, there are in different parts of Pennfylvania, Ma-

ryland, and New Jerfey, and in the citide of Newport, (Rhode Hand) New York; Philadelphis, Lancaster, Workstown ofter congregations of the brechten, who have their own chirches and miniftens, and Rold the fame principles, and doctrinal tracts, and church vites and coremonics as the former, though their local fituition doct not edmit of fuch particular regulations; as are peculiar to the regular fettlements.

They call themfelves "The UNITED BRETHREN OF THE PROTESTANT EPISCOPAL' CHURCH." They are called Moravians, because the first settlers in the English dominions, were chiefly emigrants from Moravia. These were the remnant and genuine descendants of the antient United Brethren, chablished in Bohemia and Moravia, as early as the year \$456. About the middle of the last century, they left their native country to avoid perfecution, and to enjoy liberty of confcience, and the true exercise of the religion of their forefathers. They were received in Saxony, and other Protestant dominions, and were encouraged to fettle among them, and were joined by many feriout people of other dominions, "They adhere to the Augustine mof Faith, which, was drawn up by the Protestant Di-Con vince a the time of the reformation in Germany, sit the year 1530; and prefented at the diet of the empire at Aughurg ; and which, it that time, contained the doctrinal fyftem of all the effablifhed Protestant churches. "They retain the discipline of sheir ancient church, and make ule of Epilcopal ordination, Which has been handed down to them in a direct line of fuccellion for more than three hundred years, and to benand - durit we het the

They profess to live in first obedience to the ordinances of Chrift, fuch as the observation of the Saboath, INFANT Baptism, and the Lord's Supper; and in addition to these, they practice the foot washing, the kifs of love, and the use of the lot.

They were introduced into America by count Zinzendorf, and fettled at Bethlehem, which is their principal fettlement in America as early as 1741. Regularity, induftry, ingenuity, and economy, are characteriftics of this people.

Entre strate an de disself to 3 I als bragebe of the track will be a strate of the track will be a strate of the second strate in the s

The TUNKERS are fo called in derifion, from the word TUNK-BN, to put a morfel in fauce. The English word that conveys the proper meaning of Tunkers is Sops or Dippers. They have been alfo called Tumblers from the manner in which they perform baptilm, which is by putting the perfon, while kneeling, head first under water, fo as to refemble the motion of the body in the action of tumbling. The Germans found the letters t and b like dand p; hence the words Tunkers and Tumblers, have been corruptly written Dunkers and Dumplers.

The first appearing of these people in America was in the year 1719, when about twenty families landed in Philadelphia, and dispersed themselves in various parts of Pennsylvania. They are what are called General Baptifts, and hold the doctrine of general redemption and general falvation. They use great plainness of drefs and language, and will neither fwear nor fight, nor go to law, nor take interest for the money they lend. They commonly wear their beards-keep the first day Sabbath, except one congregation-have the Lord's Supper with its ancient attendants of Love-feafts, with washing of feet, kils of charity, and right hand of fellowship. They anoint the fick with oil for their recovery, and use the trine immertion, with laying on of hands and prayer. even while the perfon baptiled is in the water. Their church government and discipline are for the most part similar with those of the English Baptists, except that every brother is allowed to fpeak in the congregation ; and their best speaker is ufually ordained to be their minister. They have deacons, and deaconciles, from among their ancient widows, and exhorters. who are all licenfed to use their gifts flatedly. On the whole, notwithstanding their peculiarities, they appear to be HUMBLE, WELL-MEANING CHRISTIANS, and have acquired the character of the harmlefs\* Tunkers,

Their principal fettlement is a Ephrata, fometimes called Tunkers Town, in Lancaster county, fixty miles westward of Philadelphia. It confists of about forty buildings, of which three are places of worship ; one is called Sharon, and adjoins the fister's apartment as a chapel; another, belonging to the brother's apartment, is called Bethany. To these the brethren and fisters, refort, separately to worship morning and evening, and sometimes in the night. The third is a common church, called Zion, where all in the settlement meet once a week for public worship. \* It would be exceedingly happy for mankind, if this epithet could be heflowed on the professed followers of every other religious persuasion.

386

The brethren have adopted the White Frier's drefs, with fome alterations; the fifters that of the nuns; and many of both like them have taken the vow of celibacy. All, however, do not keep the vow. When they marry, they leave their cells and go among the married people. They fubfift by cultivating their lands, by attending a printing office, a grift mill, a paper mill, an oil mill, &c. and the fifters by fpinning, weaving, fewing, &c. They at first flept on board couches, but now on beds, and have otherwife abated much of their former feverity. This congregation keep the feventh day Sabbath. Their finging is charming. owing to the pleafantnefs of their voices, the variety of parts, and the devout, manner of performance, Belides this congregation at Ephrats, there were, in 1770, fourteen others in various other parts of Pennfylvania, and fome in Maryland. The whole, exclusive of those in Maryland, amounted to upwards of two thousand fouls.

#### MENNONISTS.

The MERNORIETS derive their name from Menno Simon, a native of Witmars in Germany, a man of learning, born in the year 1505, in the time of the reformation by Luther and Calvin. He was a famous Roman Catholic, preacher, till about the year 1531, when he became a Baptift. Some of his followers came into Pennfylvania from New-York and fettled at German-town, as early as 1692. This is at prefent their principal congregation, and the mother of the reft. Their whole number, in 1770, in Pennfylvania, was upwards of four thouland, divided into thirteen churches, and forty-two congregations, under the care of fifteen ordained minifters, and fifty-three licenfed preachers.

The Mennohifts do not, like the Tunkers, hold the doctrine of general falvation ; yet like them, they will neither fwear nor fight, nor bear any civil office, nor go to law, nor take interest for the money they lend ; many, however, break this laft rule. Some of them wear their beards; wash each others feet, dic. and all use plainnels of speech and drefs. Some have been expelled their society for wearing buckles in their floes, and having pocket-holes in their coats. Their church government is democratical. They call themfelves the HARMLESS CHRISTIANS, REVENGELESS CHRISTIANS, and WEAPONLESS CHRISTIANS. They are Baptifts rather in name than in fact; for they do not use immersion, Their common mode of baptism is this; the person to be baptiled kneels; the minister holds his hands over him, into which the deacon pours water, which runs through upon the head of the perfon kneeling. After this, follows imposition of hands and prayer.

#### UNIVERSALISTS.

The denomination filled UNIVEREALISTS, though their fchemes are very various, may properly enough be divided into two clafics, vis. Thole who embrace the fcheme of Dr. Chauncey, exhibited in his book entitled "The Selvation of all Men;" and the difciples of Mr. Winchefter and Mr. John Murray:

A judicious lummary of Dr's Chauncey's fentiments, has been given in H. Adam's View of Religions, as follows:

" That the scheme of revelation has the happiness of all mankind lying at bottom, as its great and ultimate end; that it gradually tends to this end; and will not fail of its accomplishment, when fully completed. Some, in confequence of its operation, as conducted by the Son of God, will be disposed and enabled, in this prefent fate, to make fuch improvements in virtue, the only rational preparative for happines, as that they shall enter upon the enjoyment of it in the mext state. Others who have proved incurable under the means which have been used with them in this flate, inflead of being happy in the next, will be awfully miferable; not to continue fo finally, but that they may be convinced of their folly, and recovered to a virtuous frame of mind : and this will be the effect of the future torments upon many; the confequence whereof will be their falvation, they being thus fitted for it. And there may be yet other flates, before the scheme of God may be perfected, and mankind univerfally cured of their moral diforders, and in this way qualified for, and finally, inflated in, cternal happinels. But however many flates fome of the individuals of the human species may pais through, and of however long continuance they may be, the whole is intended to subserve the grand design of universal happinefs, and will finally terminate in it; infomuch, that the Son of God and Saviour of men will not deliver up his truft into the hands of his Father, who committed it to him, till he has difcharged his obligations in virtue of it; having finally fixed all men in heaven, when God will be All in All."

The number of this denomination is not known. The open advocates of this scheme are few; though the number is larger who embrace the doctrine of the falvation of all men, upon principles somewhat similar, but variously differing from those on which the above-mentioned scheme is grounded.

Article Univerfailifs, where the reader may find also a fummary of the arguments for and against his fcheme.

3. D 2

The latter clais of Universalists have a new scheme, differing effentially from that of the former, which they reject as incomfistent and absurd: and they cannot conceive how they who embrace it, can, " with any degree of propriety, be called UNIVERSALISTS, on Apostolic principles, as it does not appear that they have any idea of being faved by, or is the Lord, with an everlatting, or with any falvation." Hence they call them " PHARISATCAL UNIVERSALISTS, who are willing to justify themsfelves.

It is difficult to fay what is the prefent fcheme of the denomination of which we are now speaking; for they differ not only from all other Universitists, and from each other, but even from themselves at different periods. The reader, however, may form an idea of some of their tenets from what follows, collected from the letter referred to in the note. This letter, written by a man of first rate talents, and the head of the denomination, and profelling to reftify mistakes respecting doctrines propagated under the Christian name—to give the character of a CONSISTENT UNIVERSALIST—and to acquaint the world with their REAL fentiments, we have reason to conclude, gives as true an account of their feheme as can be obtained.

From this letter it appears, that they believe " that Religion of fome fort or other, is a public benefit ;" and that every perfon is at liberty, and is bound to support what he conceives to be the true Religion-That public worthip on every first day of the week, is an incumbent duty on all real lovers of divine truththat prayer, as it indicates truft in, and dependence on God, is part of his worfhip-They believe that the Deceiver, who beguiled Eve, and not out first parents themselves, did the deed which brought ruin and death on all the human race-That there are two classes of fallen finners-the ANGELS who kept not their first estate, and the HUMAN NATURE, deceived by the former, and apparently destroyed confequent thereon ;- that a just God, in the law given by Moles, has denounced death and the curic on every one who continueth not in all things, written in the book of the law to do them-but that the fame God was manifested in the flesh as the head of every man, made under the law, to redeem them that are under the law, being made a curfe for themthat he tafted death for every man, being a Saviour, not of a few only, but of all men-and that the declaration of this is the Gofpet. They believe that when God denounces on the human race, woes, wrath, tribulation, death, damnation, &c. in the Seriptures, he speaks in his legislative capacity, as the just God who will by

no means clear, the guilty—that when he fpeaks of mercy, grace; peace, of life as the gift of God, and falvation in whole or in part; he fpeaks in the character of the just God and Saviour,—that the former is the language of the law; the latter is the language of the Gofpel.

They believe that the Prince of Peace came to fave the Amman mature from the power and dominion of the Devil, and his works-that he came to defirey the latter, that he might fave the former-That." Sin is the work of the Devil-that he is the Worker and Doer of whatever gives offence"-That Jefus, as the Saviour of the world, fhall feparate from his kingdom, both tho worker and his evil works; the coil Worker in the character of goats-the coil works in the character of tares. They fuppofe that what is wicked in mankind, is represented by the coil feed fown by the coil one in human mature; and that " when the Sower of the evil feed, and all the evil feed fown; fhall be fepaitated from the feed which God fowed; then the feed which is properly God's feed; will be like him who fowed it, fure and holy."

They confider all ordinances as merely fadows ; yet they celebrate the Lord's Supper, by cating and drinking wine-and fome of them suppose that every time they eat bread and drink wine, they comply with our Lord's injunction, " Do this in remembrance of me." Various other opinions prevail among them respecting this ordinance, and that of baptism. They " admit of but one baptilm, the baptizer Jefus Chrift; the elements made use of, the Holy Gost and fire"-yet they are willing, in order to avoid contention, " to become all things to all men," and to baptize INFANTS BY SPRINKLING; OF ADULTS BY IMMERSION-or to omit these figns altogether; according as the opinions of parents may vary upon this subject-Some think it. proper to dedicate their children to the Lord, by putting them into the arms of the minister, to be by him prefented to Christ, to be baptized with his baptilm, in the name of the Trinity, the minister at the same time to bless them in the words in which God commanded Aaron and his fons to blefs the children of Ifrael-" The Lord blefs thee, &c." It appears in fhort, that. their notions respecting their ordinances are various, and with many, vague and unfettled.

They believe in a judgment paft and a judgment to come-that the paft judgment is either that in which the world was judged in the fecond Adam, according to the word of the Saviour, "Now is the judgment of this world-now is the Prince of this world caft out and judgment executed on them and on the whole human mature, according to the righteous judgment of God-or that

390

which every man is to exercise upon himself, according to the words " judge yourfelves and ye shall not be judged"\_" The judge ment to come is that in which all who have not judged them. felves-all unbelievers of the human race, and all the fallen angels, shall be judged by the Saviour-but these two characters; viz. unbelievers' of the human race, and the fallen angels, shall be placed, the former on the right, the latter on the left hand of their Judge; the one under the denomination of fheep, for whole fall vation the Saviour laid down his life-the other under the denomination of gosts, who are the accurfed, whole nature he paffed by .... "The human nature," i. ei the fittep or unbelievers of the human race, " as the offspring of the everlafting Father, and the ranfomed of the Lord-fiall be brought, by divine power, into the kingdom prepared for them, before the foundation of the world the other nature, i. c. the goats, or fallen angels, " will be fent into the fire prepared for them."" From which it appears; that it is their opinion; that unbelievers of the human race, or fheep, and the fallen angels, or goats, will be the only claffes of creatures concerned in the awards of the laft judgment-and that the righteous, or believers in Chrift, will not then be judged. having previously judged themselvest-" But the reft of mankind," fay they, "will be the fubjects of this judgment, when our Saviour shall be revealed from heaven in flaming fire, taking vengeance on them that know not God, and obey not the gofpel; and they shall then be punished with everlasting destruction from the prefence of the Lord and the glory of his power." Their inferences from, and exposition of this passage, are peculiar, and will ferve to give the reader an idea of their manner of explaining other parallel paffages of Scripture. From this awful revelation of the Saviour, to take vengeance on them that know not God, and obey not the gospel, they infer this consequence, they shall then' be made to know God, and obey the golpel. The everlafting destruction, from the prefence of the Lord and the glory of his

\* The reader will doubtlefs notice that the plural pronoun them, is feveral times used to express the singular noun human nature. and Prince of this world, as the human nature, &cc. shall be brought into the kingdom prepared for them; the other nature will be fent into the fire prepared for them; the Prince of this world shall be cash out, and judgment be executed on them. This is a phraseology apparently peculiar to this denomination.

+ In the following paffage, the contrary feems to be afferted. Speaking of the laft judgment it is faid,... Here, inftead of head and members being judged together, by the *head*. Chrift, the divine nature, the members are confidered in their diffinct characters, as good and evil, or believer and unbeliever, as children of light, and children of darknefs, and judged by their own head...

Ą

### OF THE UNITED STATES.

power, with which they 'fall be punished, they suppose is fuffered by unbelievers, in confequence of the revelation of the everlasting destruction, previous to this awful period-and that they will fuffer no punishment after it-for " it is not faid," they fay, " that they shall be everlastingly punished with destruction." They explain their idea of everlasting punishment and fuffering the pain of eternal fire, thus, "Were it possible to find a culinary fire that never would be extinguished, but remain in the strictest sense of the word, everlasting or eternal-should any member of the body pals through that burning flame, though but a moment of time had been thus spent in passing through; yet even in that moment, it would suffer the pain of eternal fire." But whether they believe it possible that there should be such a fire, or that unbelievers shall be doomed to suffer the punishment of eternal fire by thus passing through it, I do not find expressly afferted, but it is highly probable that they do.

They do not fuppofe that "all mankind will be on a level in the article of death, but that they who die in unbelief, will *lie down in forrow*, and rife to the refurrection of damnation, or condemnation; and when the books shall be opened, and the dead, both small and great, shall be judged out of the things written in the books—every mouth shall be ftopped, and all the world become guilty before God; and while confcious of guilt, but *ignorant* of a Saviour—they shall call on the rocks and mountains to fall on them to hide them from the wrath of the Lamb—But that in *this judgment* the *judge* is the Saviour—they will be judged by *their own head*;" and as the head of every man is Christ—all of course must be acquitted and faved.

Although they believe that the Devil is the *doer* or *worker* of every thing that gives offence; yet they affert that "all men at all times are finners, and come fhort of the glory of God"—but they believe that what Chrift fuffered, "was confidered by the *Great Lawgiver*, as done and fuffered by every man in his own perfor; and that every man is as much interefted in what Chrift, the fecond Adam did, as they were in what the firft Adam did" —This idea appears to be incongruous with any future judgment of any kind. The *Confiftent Univerlalifts*, therefore "does not confider himfelf under the law any more than a woman confiders herfelf under the direction or dominion of a hufband that is dead and buried—nor is he afraid of death, being affured that Jefus hath abolifhed death, and left nothing of it but the *fhadow*."

The Universalists of this denomination, in common with other Christians, profess themselves to be the advocates of *piety*, religion, and morality, — They affert the duty of doing right as men-

as members of eivil fociety—and as Christians. As mere men," they hold, that " they must follow nature, or they will fink beneath the level of the beafts of the field,"—and yet they affert that " all the righteourne's found in the best of mere human nature is but a filthy rag"—That as members of civil fociety they must fubmit to the laws, or if thought too fevere, they may avoid them by a removal from the flate."—That as Christians they must be under the direction of Christ, and do what fower he commands them : and these are his commandments, " that we believe in him, and love one another."

This denomination of Universalists, are not very numerous in the United States, fome are in Pennsylvania—fome in different parts of New-York, Connecticut, Rhode-Island, and New-Hampfhire; but the body of them are in Boston, and Gloucester, in Massachusetts. They have several constituted churches, which are governed by an ecclesiastical constitution, formed in 1789, by a convention of their ministers at Philadelphia.

### This is a fmall and fingular fect of Christians, which have fprung up in America as lately as 1774; when a few of this fect went from England to New-York, and there being joined by a few others, they fettled at Nisqueunia, above Albany, which is their principal fettlement : a few others are scattered in different parts of the country.

SHAKERS.

The head of this party, while the lived,\* was Anna Leefe, flyled the Elect Lady. Her followers afferted, that the was the woman fpoken of in the twelfth chapter of the Revelations, and that the fpoke feventy-two tongues : and although these tongues were unintelligible to the living, the conversed with the dead who understood her language. They alledged also that the was the mother of all the *Elect*; that the travalled for the whole world—that no bleffing could defeend to any perfor but only by and through her, and that in the way of her being possible of their fins, by their confessing and repenting of them, one by one, according to her direction.

Their leading doctrinal tenets, as given by one of their own denomination, are, "That the first refurrection is already come, and now is the time to judge themselves. That they have power to heal the fick; to raise the dead, and cast out devils. That they

have a correspondence with angels, the spirits of the faints and their departed friends. That they fpeak with divers, kind of tongues in their public affemblies. That it is lawful to practife, vocal mufic with dancing in the Christian churches, if it be practiled in praising the Lord. That their church is come out of the order of natural generation, to be as Chrift was; and that. those who have wives are as though they had mone. That by these means heaven begins upon earth, and they thereby lose their earthly and fenfual relation to Adam the first, and come to be transparent in their ideas, in the bright and heavenly visions of God. That fome of their people are of the number of the. . hundred and forty-four thousand, who were redeemed from the earth, and were not defiled with women. That the word everlafting, when applied to the punifiment of the wicked, means only a limited period, except in the cufe of those who fall from their church ; and that for such there is no forgiveness, neither in this world nor that which is to come. That it is unlawful to fwear, game, or use compliments-and that water baptifm and the Lord's Supper are abolished. That Adam's fin is not imputed to his polterity-and that the doctrines of election and reprobation are to be rejected mal mont niquord dema se or biss

The discipline of this denomination is founded on the supposed perfection of their feaders. The Mother, or the Elect Lady, it is faid, obeys God through Chrift. European elders obey her. American labourers, and common people obey them : while con. feffion is made of every fecret thing; from the oldeft to the youngeft. The people are made to believe that they are feen! through and through in the golpel glass of perfection, by their teachers, who behold the fate of the dead, and innumerable: . Ite Streets, City . worlds of fpirits good and bad.

. These people are generally instructed to be very industrious, and to bring in according to their ability, to keep up the meeting. They vary in their exercises. Their heavy dancing, as it is called, is performed by a perpetual fpringing from the house floor, about four inches up and down, both in the mens and womens apartment, moving about with extraordinary transport, finging fometimes one at a time, fometimes more.

This elevation affects the nerves, so that they have intervals of fuddering, as if they were in a ftrong fit of the ague, they: fometimes clap hands and leap fo as to ftrike the joifts above their heads. They throw off their outfide garments in these exercises, and spend their strength very cheerfully this way. Their chief speaker often calls for attention; when they all ftop and hear some harangue, and then fall to dancing again. They affert that their dancing is the token of the great joy and happinels Vol. I.

1.4

IN addition to what we have already written of the difcovery and fettlement of North America, we fhall give a brief hiftory of the late war with Great Britain, with a fixetch of the events which preceded and prepared the way for the revolution. This general view of the hiftory of the United States will ferve as a fuitable introduction to the particular hiftories of the feveral flates, which will be given in their proper places.

America was originally peopled by uncivilized nations, which lived moftly by hunting and fifting. The Europeans, who first vifited these shores, treating the natives as wild beafts of the fores, which have no property in the woods where they roam, planted the standard of their respective massers where they first landed, and in their names claimed the country by right of difcovery.

Henry the Seventh of England granted to John Cabot and his three fons a commiffion, "to navigate all parts of the ocean for the purpole of difcovering iflands, countries, regions, or provinces, either of Gentiles or Infidels, which have been hitherto unknown to all Christian people, with power to fet up his ftandard, and to take posseful of the fame as valials of the grown of England," By virtue of this commission, in 1498,

### HISTORY OF THE

Sebaltian Cabot explored and took pofferfion of a great part of the North American continent, in the name and on behalf of the King of England.

The country thus discovered by Cabot, was possessed by numerous tribes or nations of people. As their had been till then unknown to all other princes or flates, they could not poffibly have owed their allegiance or fubjection to any foreign power on earth; they must have therefore been independent communities. and as fuch, capable of acquiring territorial property, in the fame manner as other nations. Of the various principles on which a right to foil has been founded, there is none fuperior to immemorial occupancy. From what time the Aborigines of America had refided therein, or from what place they migrated thither, were questions of doubtful folution, but it was certain that they had long been fole occupants of the country. In this flate no European prince could derive a title to the foil from difcovery, becaufe that can give a right only to lands and things which either have never been owned or polleffed, or which, after being owned or poffeffed, have been voluntarily deferted. The right of the Indian nations to the foil in their possession was founded in nature. It was the free and liberal gift of heaven to them, and fuch as no foreigner could rightfully annul. , The blinded superstition of the times regarded the Deity as the partial God of Chriftians, and not as the common father of faints and favages. The pervading influence of philosophy, reason, and truth, has, fince that period, given us better notions of the rights of mankind, and of the obligations of morality. These unquestionably are not confined to particular modes of faith, but extended univerfally to Jews and Gentiles, to Chriftians and Infidels.

Unfounded, however, as the claims of European Sovereigns to American territories were, they feverally proceeded to act upon them. By tacit confent they adopted as a new law of nations, that the countries which each explored fhould be the abfolute property of the difcoverer. While they thus fported with the rights of unoffending nations, they could not agree in their refpective fhares of the common fpoil. The Portuguefe and Spaniards, inflamed by the fame fpirit of national aggrandizement, contended for the exclusive fovereignty of what Columis had explored. Animated by the rancour of commercial aloufy, the Dutch and Portuguefe fought for the Brazils. Contrary to her genuine interefts, England commenced a war in order that her contraband traders on the Mexican coaft claimed by the King of Spain, might no longer be fearched. No farther back than the middle of the prefent century, a conteft concern-

governm turies fo refult to When w have flo industry manufact manners us to ran man race extirpatio no more The flave temptation occasioned prehenfior

# AMERICAN REVOLUTION.

ing boundaries of American territory belonging to neither, occationed a long and bloody war between France and England. Though Queen Elizabeth and James the First denied the authority of the Pope of Rome to give away the country of infidels, yet they to far adopted the fanciful diffinction between the rights of Heathens and the rights of Christians, as to make it the foundation of their respective grants. They freely gave away what did not belong to them with no other proviso, than that "the territories and districts fo granted, be not previously occupied and poffeffed by the fubjects of any other Christian prince or flate." The first English patent which was given for the purpole of colonizing the country discovered by the Cabots, was granted by Queen Elizabeth to Sir Humphry Gilbert, in 1578, but this proved abortive. In 1584, the licenced Walter Raleigh, "to fearch for Heathen lands not inhabited by Christian people," and granted to him in fee all the foil "within two hundred leagues of the places where his people should make their dwellings and abidings." Under his aufpices an inconfiderable colony took polleflion of a part of the American coaft, which now forms North-Carolina. In honour of the Virgin Queen his fovereign, he gave to the whole country the name of Virginia. These first fettlers, and feveral others who followed them, were either destroyed by the natives, removed by fucceeding navigators, or . died without leaving any behind to tell their melancholy ftory. for they were never more heard of. No permanent fettlement was effected till the reign of James the First.

In the course of little more than a century, was the English North American continent peopled and parcelled out into diffinct governments. Little did the wifdom of the two preceding centuries forefee the confequences both good and evil, that were to refult to the old world from difcovering and colonizing the new. When we confider the immense floods of gold and filver which have flowed from it into Europe, the fublequent increase of industry and population, the prodigious extension of commerce, manufactures, and navigation, and the influence of the whole on manners and arts, we fee fuch an accumulation of good, as leads us to rank Columbus among the greatest benefactors of the human race: but when we view the injustice done the natives, the extirpation of many of their numerous nations, whole names are no more heard :- The havoc made among the first fettlers;--The flavery of the Africans, to which America has furnished the temptation; and the many long and bloody wars which it has occasioned, we behold such a crowd of woes; as excites an apprehension, that the cvil has outweighed the good. , WE LESS 2 181 34 18 1.1

## HISTORY OF THE

In vain do we look among ancient nations for examples of colonies established on principles of policy, similar to those of the colonies of Great-Britain. England did not, like the republics of Greece, oblige her fons to form distant communities in the wiles of the earth, Like Rome fhe did not give lands as a gratuity to foldiers, who became a military force for the defence of her frontiers. She did not, like Carthage, fubdue the neighbouring flates, in order to acquire an exclusive right to their commerce. No conquest was ever attempted over the Aborigines of America, ... Their right to the foil was difregarded, and their country looked upon as wafte, which was open to the occupancy and use of other nations. It was confidered that settlements might be there formed for the advantage of those who should migrate thither, as well as of the Mother Country. The rights and interests of the native proprietors were, all this time, deemed of no account.

What was the extent of obligations by which colonies planted under these circumstances were bound to the Mother Country, is a fubject of nice discussion. Whether these arose from nature and the conftitution, or from compact, is a question necessarily connected with many others. While the friends of Union contended that the king of England had a property in the foil of America, by virtue of a right derived from prior discovery; and that his fubjects, by migrating from one part of his dominions to another, did not leffen their obligations to obey the fupreme power of the nation, it was inferred, that the emigrants to English America continued to 'owe the same obedience to the king and parliament, as if they had never quitted the land of But if as others contended, the Indians were. their nativity, the only lawful proprietors of the country in which their Creator had placed them, and they fold their right to emigrants who, as men, had a right to leave their native country, and as subjects, had ordained chartered permission to do fo, it follows from these premises, that the obligations of the colonists to their parent state must have refulted more from compact, and the prospect of reciprocal advantage, than from natural obligation. The latter opinions feem to have been adopted by feveral of the colonists, particularly in New-England. Sundry perfons of influence in that country always held, that birth was no necessary cause of subjection, for that the subject of any prince or state had a natural natural right to remove to any other flate or quarter of the globe, especially if deprived of liberty of confcience, and that, upon fuch removal, his subjection ceased.

The validity of charters about which the emigrants to America were univerfally anxious, refts upon the fame foundation, If

## AMERICAN REVOLUTION.

the right of the fovereigns of England to the foil of America was ideal, and contrary to natural juffice, and if no one can give what is not his own, their charters were on feveral accounts a nullity. In the eye of reafon and philofophy, they could give no right to American territory. The only validity which fuch grants could have, was, that the grantees had from their fovereign a permission to depart from their native country, and negociate with the proprietors for the purchase of the soil, and thereupon to acquire a power of jurifdiction subject to his crown, These were the opinions of many of the settlers in New-England. They looked upon their charters as a voluntary compact between their fovereign and themfelves, by which they were bound neither to be fubject to, nor feek protection from any other prince, nor to make any laws repugnant to those of England : but . did not confider them as inferring an obligation of obedience to a parliament, in which they were unrepresented. The prospects of advantage which the emigrants to America expected from the protection of their native fovereign, and the prospect of aggrandifement which their native fovereign expected from the extenfion of his empire, made the former very folicitous for charters, and the latter very ready to grant them. Neither reasoned clearly on their nature, nor well underflood their extent. In lefs than eight years one thousand five hundred miles of the fea coast were granted away, and fo little did they who gave, or they who accepted of charters, understand their own transactions, that in feveral cafes the fame ground was covered by contradictory grants, and with an abfurdity that can only be palliated by the ignotance of the parties, fome of the grants extended to the South Sea, over a country whole breadth is yet unknown, and which to this day is unexplored.

Ideal as these charters were, they answered a temporary purpole. The Colonists reposed confidence in them, and were excited to industry on their credit. They also deterred European powers from diffurbing them, because, agreeable to the late law of nations, relative to their appropriation of newly difeovered Heathen countries, they inferred the protection of the sovereign who gave them. They also opposed a barrier to open and gross encroachments of the mother country on the rights of the colonists; a particular detail of these is not now necessary. Some general remarks may, nevertheles, be made on the early periods of colonial history, as they cast light on the late revolulution. Long before the declaration of independance, feveral of the colonies on different occasions declared, that they ought not. to be taxed hut by their own provincial affemblies, and that they confidered subjection to acts of a British Parliament, in which

### MISTORY OF THE

they had no reprefentation, as a grievance. It is also worthy of being noted, that of the thirteen colonies, formed into flates at the end of the war; no one (Georgia excepted) was fettled at the expence of government. Towards the fettlement of that fouthern frontier, confiderable fums had at different times been granted by parliament, but the twelve more northern provinces had been wholly fettled by private adventurers, without any advances from the national treafury. It does not appear, from exifting records, that any compensation for their lands was ever made to the Aborigines of America by the crown or parliament of England; but policy, as well as juffice, led the colonifts to purchafe and pay for what they occupied. This was done in almoft every fettlement, and they profpered moft, who, by juftice and kindnefs took the greatest pains to conciliate the goodwill of the nativest

It is in vain to look for well-balanced conflictutions in the early periods of colonial hiftory. Till the revolution in the year 1688, a period fublequent to the fettlement of the colonies, England herfelf can fearcely be faid to have had a fixed conflitution. At this eventful are the line was first drawn between the privileges of fubjects, and the prerogatives of fovereigna. The legal and conflictutional hiftory of the colonies, in their early periods, therefore, affords but little influction. It is fufficient in general to obferve, that in lefs than eighty years from the first permanent English fettlement in North-America; the two original patents granted to the Plymouth and London Companies were divided, and fubdivided, into twelve difficit and unconnected provinces, and in fifty years more a thirteenth, by the name of Georgia, was added to the fouthern extreme of previous eftablishments.

To each of these, after various changes, there was ultimately granted a form of government refembling, in its most effential parts, as far as local circumstances would permit, that which was established in the parent state. A minute description of constitutions, which no longer exist, would be both tedious and unprostable. In general, it may be observed, that agreeably to the spirit of the British constitution, ample provision was made for the liberties of the inhabitants. The prerogatives of royalty and dependance on the mother country, were but feebly impressed on the colonial forms of government. In some of the provinces the inhabitants chose their governors, and all other public officers, and their legislatures were under little or no controul. In others, the crown delegated most of its power to particular persons, who were also invested with the property of the foil. In those which were most immediately dependent on the king, he

## AMERICAN REVOLUTION.

exercifed no higher prerogatives over the colonifts than over their fellow, fubjects in England, and his power over the provincial legiflative affemblics was not greater than what he was conftitutionally vested with, over the House of Commons in the mother country. From the acquiescence of the parent flate, the spirit of her constitution, and daily experience, the colonists grew up in a belief, that their local affemblies flood in the fame relation to them, as the parliament of Great-Britain to the inhabitants of that illand. The benefits of legiflation were conferred en both, only through these constitutional channels.

Le is remarkable, that though the English possessions in Amer rica were far inferior in natural riches to those which fell to the lot of other Europeans, yet the fecurity of property and of lie. berty, derived from the English constitution, gave them a consequence to which the colonies of other powers, though settled at an earlier day, have not yet attained. The wife and liberal policy of England towards her colonics, during the first century and half, after their fettlement, had a confiderable influence in exalting them to this pre-eminence. She gave them full liberty. to govern themfelves by fuch laws as the local legiflatures thought . necellary, and left their trade open to every individual in her dominions. She also gave them the amplest permission to purfue their respective interests in such manner as they thought proper, and referved little for herfelf, but the benefit of their trade, and that of a political union under the fame head. The colonics, founded by other powers, experienced no fuch indulgencies." Portugal and Spain burdened theirs with many vexatious regulations, gave encouragement only to what was for their own interest, and punished whatever had a contrary tendency. France and Hulland did not adopt fuch oppreflive maxims, but were, in fact, not much lefs rigorous and coercive. They parted, as it were, with the propriety of their colonies to mercantile affociations, which fold to the colonifts the commodities of Europe, at an enormous advance, and took the produce of their lands at a low price, and, at the fame time, discouraged the growth of any more than they could dispose of, at excessive profits. These oppressive regulations were followed with their natural confequence : the feulements thus restricted advanced but flowly in population and in wealth."

The English Colonies participated in that excellent form of government with which their parent ifle was bleffed, and which has railed it to an admirable height of agriculture, commerce, and manufactures. After many struggles, it had been acknowledged to be effential to the confritution of Great-Britain, that 3 F - 1 3 5 +

the people could not be compelled to pay any taxes, nor be bound by any laws, but fuch as had been granted or enacted with the confent of themfelves, or of their representatives. It was also one of their privileges, that they could not be affected either in their property, their liberties, or their perfons, but by the unanimous confent of twelve of their peers.

From the operation of these general principles of liberty, and the wife policy of Great-Britain, her American fettlements increated in number, wealth and refources, with a rapidity which furpassed all previous calculations. Neither meient nor modern hiftory can produce an example of Colonics governed with equal wildom, or flourishing with equal rapidity. In the fort fpace of one hundred and fifty years their numbers increased to three millions, and their commerce to fuch a degree, as to be more, than a third of that of Great-Britain. They also extended their fetthements fifteen hundred miles on the fea cost, and three hundred to the weftward. Their rapid population, though partly accelerated by the influx of ftrangers, was principally owing to internal causes. In confequence of the equality of fortune and Amplicity of manners, which prevailed among them, their inhabitants multiplied far beyond the proportion of old nations, corrupted and weakened by the vices of wealth, and above all, of vanity, than which, perhaps, there is no greater enemy to the increafe of the human species. " . I died braze a or arge or

The good effects of a wife policy and equal government were not only differentiate in raifing the Colonies of England to a preeminence over, those of other European powers, but in raifing fome among themfelves to greater importance than others. Their relative population and wealth were by no means correspondent to their respective advantages of foil and climate. From the common disproportion between the natural and artificial wealth of different countries, it forms to be a general rule, that the more nature does for any body of men, the lefs they are disposed to do for themfelves.

The New-England provinces, though posselies of comparatively a barren country, were improved much faster than others, which were bleffed with a fuperior foil and milder climate. Their first fattlers were animated with a high degree of that religious fervor which excites to great undertakings: they also fettled their vacant lands on principles of the wifest policy. Instead of granting large tracks to individuals, they fold the foil in small farms, to those who perforally cultivated the fame. Instead of differinating their inhabitants over an extensive country, they formed fucceffive fettlements, in townships of fix miles square. They also made such arrangements, in these townships, as co-extended the bleffings of education and of religious instruction with their

### AMERICAN REVOLUTION.

fettlements. By thefe means industry and morality were propagated, and knowledge, was generally diffuled, maine that at to In proportion to their respective numbers, it is probable that no other country in the world contained more fober orderly citie zene, and fewer who were profligate and abandoned. Those high crimes which are ufually punished with death, were fo mre in. New-England, that many years have clapfed, in large populous fettlements, without a fingle execution. Their lefs fertile foil disposed them to a spirit of adventure, and their victorious induly try role superior to every obstacle. In carrying on the whale fifhery, they not only penetrated the deepest frozen recesses of Hudson's Bay, and Davis' Straits; but pierced into the opposite regions of polar cold. While fome of them were firking the harpoon on the coast of Africa, others purfued their gigantic game near the fhores of Brazil. While they were yet in their infancy as a political fociety, they carried on this perilous bufinefs to an extent exceeding all that the perfeverance of Holland, the activity of France, or the vigour of English enterprize, had ever accomplished. A spirit of liberty prompted their industry, and a free constitution guarded their civil rights. The country was fettled with yemonry, who were both proprietors, and cultivators, of the foil, Luxury was oftranged from their borders. Enervating wealth and pinching pover 'y were both equally rate, Early marriages and a numerous offspring, were common-thence, population was rapid, and the inhabitants generally poffeffed that happy flate of mediocrity, which favours the improvement both of mind and body,

New-York joined New-England, but did not increase with equal rapidity. A few, by monopolizing large tracts of lands reduced many to the neceffity of being tenants, or of removing to other provinces, where land could be obtained on more favourable terms. The increase of population, in this province; was nevertheless great, when compared with that of old countries. This appears from the following flatement of their numhers at different periods. In 1756, the province of New-York contained eighty-three thousand two hundred and thirty-three whites, and in 1771, one hundred and forty-eight thousand one hundred and twenty-four, an increase of nearly two for one, in the space of fifteen years,

Pennfylvania was at first fettled under the auspices of the celebrated William Penn, who introduced a number of industrious inhabitants, chiefly of the fect of Quakers. The population of this country advanced equally with that of the New-\_\_\_gland provinces. Among the inducements operating on foreigners to fettle in Pennfylvania was a most excellent form of provincial

### HISTORY OF THE

government, which fecured the religious as well as the civil rights of its inhabitants. While the Mother Country laboured under an oppreffive ecclesiaftical establishment, and while partialities of the fame kind were fanchioned by law, in some of the American provinces, perfect liberty of confeience, and an exact equality of all fects, was in every period, a part of the constitution of Pennfylvania,

Quaker fimplicity, industry, and frugality, contributed, in like manner, to the flourishing of that province. The habits of that plain people correspond, admirably, with a new country, and with republican conflictutions. Opposed to idleness and extravagance, they combined the whole force of religion, with customs and laws, to exile these vices from their fociety. The first quaker settlers were soon followed by Germans, whose industry was not inferior to their own. The emigrants from other countries who settled in Pennsylvania, followed these good examples, and industry and frugality became predominant virtues over the whole province,

The policy of a Loan-Office was also eminently beneficial. The proprietaries of Pennfylvania fold their lands in finall tracks, and on long credit. The purchasers were indulged with the liberty of borrowing, on interest, paper bills of credit, out of the Loan-Office, on the mortgage of their lands. Perhaps there never was an inflitution which contributed more to the happinels of the people, or to the flourishing of a new country, than this land Loan-Office scheme. The province being enriched by the clear interest of its loaned paper, was thereby enabled to defray the expences of government with moderate taxes. The industrious farmer was furnished with the means of cultivating and stocking his farm. These improvements, by increasing the value of the land, not only established the credit of the paper, but enabled the borrower, in a few years, to pay off the original loan with the productions of the foil, The progressive improvement of Pennfylvania may be estimated from the increase of its trade. In the year 1704, that province imported goods from the Mother Country, amounting in value only to eleven thouland four hundred. and ninety-nine pounds sterling, but in 1772, to the value of five hundred and seven thousand nine hundred and nine pounds, an increase of nearly fifty for one, in little more than half a century.

In Maryland and Virginia, a policy lefs favourable to population and fomewhat different from that of Pennfylvania, took place. The church of England was incorporated with the first fettlement of Virginia, and in the lapfe of time, it also became the established religion of Maryland. In both these provinces, long

before the American revolution, that church poffessed a legal preeminence, and was maintained at the expence, not only of its own members, but of all other denominations. This deterred great numbers, especially of the Prefbyterian denomination, who had emigrated from Ireland, from settling within the limits of these governments, and somented a spirit of discord between those who belonged to, and those who diffented from the established church.

The first emigrants from England for colonifing America, left the Mother Country at a time when the dread of arbitrary power was the predominant paffion of the nation, Except the very modern charter of Georgia, in the year 1732, all the English Colonies obtained their charters and their greatest number of European settlers, between the years 1603 and 1688. In this period a remarkable struggle between prerogative and privilege commenced, and was carried on till it terminated in a revolution highly favourable to the liberties of the people. In the year 1621, when the English House of Commons claimed freedom of fpeech, " as their ancient and undoubted right, and an inheritance transmitted to them from their ancestors;" King James the First replied, "that he could not allow of their ftyle, in mentioning their ancient and undoubted rights, but would rather have wished they had faid, that their privileges were derived from the grace and permiffion of their fovereign," . This was the opening of a dispute which occupied the tongues, pens, and swords, of the most active men in the nation, for a period of leventy years. It is remarkable that the fame period is exactly co-incident with the fettlement of the English Colonies, James, educated in the arbitrary sentiments of the divine right of Kings, conceived his fubjects to be his property, and that their privileges were matters of grace and favour flowing from his generofity. This high claim of prerogative excited opposition in support of the rights of the people. In the progress of the dispute, Charles the First, ion of King James, in attempting to levy thip-money, and other revenues without confent of Parliament, involved himfelf in a war with his fubjects, in which, after various conflicts, he was brought to the block and fuffered death as an enemy to the conlitution of his country. Though the monarchy was reftored under Charles the Second, and transmitted to James the Second, yet the fame arbitrary maxims being purfued, the nation, tenacious of its rights, invited the Prince of Orange to the lovereignty of the illand, and expelled the reigning family from the throne. While these spirited exertions were made, in support of the liberties of the parent ille, the English Colonies, were settled, and chiefly with inhabitants of that class of people, which was most

hoftile to the claims of prerogative. Every transaction in that period of English history, supported the position that the people have a right to result their sovereign, when he invades their liberties, and to transfer the crown from one to another, when the good of the community requires it. The English Colonists were from their first fettlement in America, devoted to liberty, on English ideas, and English principles. They not only conceived themselves to inherit the privileges of Englishmen, but though in a colonial situation, actually posselied them.

After a long war between King and Parliament, and a Revolution—thefe privileges were fettled on the following fundamental principles: "That it was the undoubted right of English fubjects, being freemen or frecholders, to give their property, only by their own confent." That the Houfe of Commons exercifed the fole right of granting the money of the people of England, because that Houfe alone, represented them. The taxes were the free gifts of the people to their rulers. That the authorisy of fovereigns was to be exercised only for the good of their fubjects. That it was the right of the people to meet together, and peaceably to consider of their grievances—to petition for a redress of them, and finally, when intolerable grievances were unredressed, to feek relief, on the failure of petitions and remonfirances, by forcible means,"

Opinions of this kind generally prevailing, produced, among the Colonists, a more determined spirit of opposition to all encroachments on their rights, than would probably have taken place, had they emigrated from the Mother Country in the preceding century, when the doctrines of paffive obedience, nonrefistance, and the divine right of kings, were generally received, That attachment to their fovereign, which was diminished in the first emigrants to America, by being removed to a great diftance from his influence, was ftill farther diminished in their descendants." When the American revolution commenced, the inhabitants of the Colonies were for the most part, the third and fourth, and fometimes the fifth or fixth generation, from the original emigrants. In the fame degree as they were removed from the parent flock, they were weaned from that partial attach. ment, which bound their forefathers to the place of their nati-The affection for the Mother Country, as far as it was a vity. natural paffion, wore away in fucceflive generations, till at laft it had fcarcely any existence.

The mercantile intercourfe, which connects different countries, was, in the early periods of the English Colonies, far short of that degree, which is necessary to perpetuate a friendly union.

dly union.

Had the first great colonial establishments been made in the Southern Provinces, where the fultableness of native commodities would have maintained a brisk and direct trade with England—the constant exchange of good offices between the two countries would have been more likely to perpetuate their friendship. But as the Eastern Provinces were the first, which were thickly fettled, and they did not for a long time cultivate an extensive trade with England, their descendants speedily lost the fond attachment, which their forefathers felt to their Parent State. The bulk of the people in New-England knew little of the Mother Country, having only heard of her as a diffant kingdom, the rulers of which had, in the preceding century, perfecuted and banished their ancessors to the woods of America.

The diffance of America from Great-Britain generated ideas in the minds of the Colonifts favourable to liberty. Three thouland miles of ocean leparated them from the Mother Country. Seas rolled, and months paffed, between orders and their execution. In large governments the circulation of power is enfectied at the extremities. This refults from the nature of things, and is the eternal law of extensive or detached empire. Colonifts, growing up to maturity, at fuch an immenfe diffance from the feat of government, perceived the obligation of dependence much more feebly, than the inhabitants of the parent ille, who not only faw, but daily felt, the fangs of power. The wide extent and nature of the country contributed to the fame effect. The natural feat of freedom is among high mountains and pathlefs deferts, fuch as abound in the wilds of America.

The religion of the Colonists also nurtured a love for liberty. They were chiefly Protestants, and all Protestantism is founded on a ftrong claim to natural liberty, and the right of private judgment. A majority of them were of that clais of men, who, in England, are called Diffenters. Their tenets being the Protestantilin of the Protestant religion, are bostile to all interference of authority in matters of opinion, and predifpole to a jealoufy for civil liberty. They who belonged to the Church of England were for the most part independents, as far as church government and hierarchy were concerned. They uled the liturgy of that church, but were without bishops, and were strangers to those fystems, which make religion an engine of state. That policy, which unites the lowest curate with the greatest metropolitan, and connects both with the fovereign, was unknown among the Colonifts. Their religion was their own, and neither impoled by authority nor made subservient to political purposes. Though there was a varicty of fects, they all agreed in the communion of liberty, and all reprobated the courtly doctrines of paffive obedience, and non-

refiftance. The fame, dispositions were fostered by the usual modes of education in the Colonies. The study of law was common and fashionable. The infinity of disputes, in a new and free country, made it lucrative, and multiplied its followers. No order of men has, in all ages, been more favourable to liberty, than lawyers. Where they are not won over to the fervice of government, they are formidable adversaries to it. Professionally taught the rights of human nature, they keenly and quickly perceive every attack made on them. While others judge of bad principles by the actual grievances they occasion, lawyers discover them at a distance, and trace future mischiefs from gilded innovations-

The reading of those Colonies who were inclined to books, generally favoured the caufe of liberty. Large libraries were uncommon in the New World. Disquifitions on abstruct subjects and curious refearches into antiquity, did not accord with the genius of a people, fettled in an uncultivated country, where every furrounding object impelled to action, and little leisure was left for speculation. Their books were generally small in fize, and few in number: a great part of them confissed of those fallionable authors, who have defended the caufe of liberty. Cato's letters, the Independent Whig, and such productions, were common in one extreme of the Colonies, while in the other, histories of the Puritans kept alive the remembrance of the fufferings of their forefathers, and inspired a warm attachment, both to the civil and religions rights of human nature.

In the Southern Colonies, flavery nurtured a fpirit of liberty among the free inhabitants. All mafters of flaves who enjoy perfonal liberty will be both proud and jealous of their freedom. It is, in their opinion, not only an enjoyment, but a kind of rank and privilege. In them, the haughtinefs of domination combines with the fpirit of liberty. Nothing could more effectually animate the opposition of a planter to the claims of Great-Britain, than a conviction that those claims in their extent degraded him to a degree of dependence on his fellow fubjects, equally humiliating with that which existed between his flaves and himfelf.

The flate of fociety in the Colonies favoured a spirit of liberty and independence. Their inhabitants were all of one rank. Kings, nobles, and bishops, were unknown among them. From their first fettlements, the English provinces received impressions favourable to democratic forms of government. Their dependent fituation forbad any inordinate ambition, among their native fons, and the humility of their fociety, abstracted as they were from the splendour and amusements of the Old World, held forth few allurements to invite the refidence of such from the Mother Country as aspired to hereditary honours. In modern Europe, the

f ſ 'n T th W no rij há Cu th per up fro Th ftar equ and Tha the tical dize who they whic posfe In Colo of hi nece and with old d tiono rica. the re count mind of a 11 ufelefs is ftre fubje& The fterial Vol

femains of the feudal lystem have occasioned an order of men. fuperior to that of the commonality, but; ad few of that clais migrated to the Colonics; they were fettled with the yeomanry. Their inhabitants, unaccustomed to that distinction of ranks; which the policy of Europe has established, were frongly impressed with an opinion, that all men are by nature equal. They could not eafily be perfused that their grants of land; or their civil rights, flowed from the munificence of Princes: Many of them had never heard of Magna Charta; and thole who knew the circumstances of the remarkable period of English history, when that was obtained; did not reft their claims to liberty and property on the transactions of that important day. They looked up to Heaven as the fource of their rights, and claimed, not from the promises of kings, but from the parent of the universe, The political creed of an American Colonift was short but substantial. He believed that God made all mankind originally equal: that he endowed them with the rights of life, property; and as much liberty as was confistent with the rights of others, That he had bestowed on his wast family of the human race, the earth for their support, and that all government was a political institution between men naturally equal; not for the aggrandizement of one, or a few, but for the general happiness of the whole community. Impressed with sentiments of this kind, they grew up, from their earlieft infancy, with that confidence which is well calculated to infpire a love for liberty, and a prepossession in favor of independence.

In confequence of the valt extent of vacant country, every Colonift was, of eafily might be, a freeholder. Settled on lands of his own, he was both farmer and landlord-producing all the necessaries of life from his own grounds, he felt himself both free and independent. Each individual might hunt, fifh, or fowl without injury to his neighbours. These immunities which, in old countries, are guarded by the fanction of penal laws, and monopolized by a few, are the common privileges of all in America. Coloniffs, growing up in the enjoyment of fuch rights, felt the reftraint of law more feebly than they, who are educated in countries, where long habits have made submission familiar. The mind of man naturally relifies liberty-wherever from the extent of a new and unfettled country, fome abridgements thereof are uscless, and others impracticable, this natural defire of freedom is ftrengthened, and the independent mind revolts at the idea of fubjection.

The Colonifts were also preferved from the contagion of minifterial influence by their diffance from the metropolis. Remote Vol. L.

from the feat of power and corruption, they were not over-awed by the one, nor debauched by the other. Few were the means of detaching individuals from the intereft of the public. High offices were neither fufficiently numerous nor lucrative to purchafe many adherents, and the most valuable of thefe were conferred on natives of Britain. Every man occupied that rank only, which his own industry, or that of his near anceftors, had procured him. Each individual being cut off from all means of tiling to importance, but by his perfonal talents, was encouraged to make the most of those with which he was endowed. Profpects of this kind excited emulation, and produced an enterprifing laborious fet of men, not eafily overcome by difficulties, and full of projects for bettering their condition.

The enervating opulence of Europe had not yet reached the colonifts. They were defitute of gold and filver, but abounded in the riches of nature. A famenefs of circumftances and occupations created a great fenfe of equality, and disposed them to union in any common cause, from the fuccess of which, they might expect to partake of equal advantages.

The Colonies were communities of feparate independent individuals, under no general influence, but that of their perfonal feelings and opinions. They were not led by powerful families, nor by great officers in church or flate. Refiding chiefly on lands of their own, and employed in the wholefome labours of the field, they were in a great measure firangers to luxury.— Their wants were few, and among the great bulk of the people, for the most part, fupplied from their own grounds. Their enjoyments were neither far-fetched, nor dearly purchafed, and were fo moderate in their kind, as to leave both mind and body unimpaired. Inured from their early years to the toils of a country life, they dwelled in the midst of rural plenty. Unacquainted with ideal wants, they delighted in perfonal independence. Removed from the preffures of indigence, and the indulgence of affluence, their bodies were ftrong, and their minds vigorous.

The great bulk of the British colonifts were farmers, or planters, who were also proprietors of the foil. The merchants, mechanics, and manufacturers, taken collectively, did not amount to one fifteenth of the whole number of the inhabitants. While the cultivators of the foil depend on nothing but Heaven and their own industry, other classes of men contract more or lefs of fervility, from depending on the caprice of their customers. The excess of the farmers over the collective numbers of all the other inhabitants, gave a cast of independence to the manners of the people, and diffused the exalting fentiments, which have always predominated among those who are cultivators of their

own grounds: these were farther promoted by their moderate circumstances, which deprived them of all superfluity for idlenels, or effeminate indulgence.

The provincial conftitutions of the English colonies nurtured a spirit of liberty. The king and government of Great Britain held no patronage in America, which could create a portion of attachment and influence, sufficient to countered, that spirit in popular affemblies, which, when left to itself, ill brooks any authority that interferes with its own.

The inhabitants of the colonics from the beginning, effectivity in New England, enjoyed a government which was but little fhort of being independent. They had not only the image, but the fubflance of the Englifh conflictution. They shale most of their magifirates, and paid them all. They had in effect the fole direction of their internal government. The chief mark of their fubordination confided in their making no laws repugnant to the laws of their mother country; in their fubmitting to have fuch laws as they made to be repealed by the king; and their obeying fuch refinitions as were laid on their trade by Parliament. The latter were often evaded, and with impunity. The other fmall checks were fearcely felt, and for a long time were in no refpects injurious to their interefts.

in the favourable circumstances, colonies in the new world had advanced nearly to the magnitude of a nation, while the greatest part of Europe was almost wholly ignorant of their progrefs. Some arbitrary proceedings of governors, proprietary partialities, or democratical jealoufies, now and then interrupted the political calm which generally prevailed among them, but these and other occasional impediments of their prosperity, for the most part, foon subsided. The circumstances of the country afforded but little fcope for the intrigues of politicians, or the turbulence of demagogues. The colonide being but remotely affected by the buftlings of the old world, and having but few objects of ambition or contention among themfelves, were abforbed in the ordinary cares of domestic life, and for a long time exempted from a great proportion of those evils, which the governed too often experience from the paffions and follies of fatelmen. But all this time they were rifing higher, and though not fensible of it, growing to a greater degree of political conlequence.

One of the first events which, as an evidence of their increasing importance, drew on the colonies a share of public attention, was the taking of Louisbourgh, in the year 1745, from France, while that country was at war with Great Britain. This

T. M. M. 1. 3 G & M.

enterprife was projected by Governor Shirley, of Maffachuletts, and undertaken by the fole authority of the legislature of that colony. It was carried by only a fingle vote to make the attempt, but after the adoption of the measure, there was an immediate union of all parties, and all were equally zealous in carrying it into execution. The expedition was committed to General Pepperell, and upwards of five thousand men were speedily railed for the fervice, and put under his command. This force arrived at Canfo on the 4th of April: a British marine force from the Wolt-Indies, commanded by Commodore Warren, which arrived in the fame month, afted in concert with these land forces. Their combined operations were carried on with fo much judgment, that on the 17th of June the fortrefs capitulated. The war in which Louisbourgh was taken, was scarcely ended when another began, in which the colonies were diftinguished parties. The reduction of that fortrefs, by colonial troops, muft have given both to France and England, enlarged ideas of the value of American territory, and might have given rife to that eagernels for extending the boundaries of their respective colonies which foon after, by a collision of claims to the fame ground, laid the foundation of a bloody war between the two nations. It is neither peffible nor necessary to decide on the rights of either to the lands about which this contest began. It is certain that the prospects of convenience and future advantage had much more influence on both, than the confiderations of equity. As the contending powers confidered the rights of the native inhabitants of no account, it is not wonderful that they should not agree in fettling their own. The war was brought on in the following manner: about the year 1749, a grant of fix hundred thousand acres of land in the neighbourhood of the Ohio, was made out in fayour of certain perfons in Westminster, London, and Virginia, who had affociated under the title of the Ohio Company. At this time France was in possession of the country, on both fides of the mouth of the Miffiflippi, as well as of Canada, and wished to form a communication between these two extremities of her territories in North America. She was, therefore, alarmed at the scheme in agitation by the Ohio Company inafmuch as the land granted to them lay between her northern and fouthern fettlements. Remonstrances against British encroachments as they were called, having been made in vain by the Governor of Canada, the French, at length, in 1753, feized fome British subjects who were trading among the Twightwees, a nation of Indians near the Ohlo, as intruders on the land of his Most Christian Majefty, and fent them to a fort on the fouth fide of Lake Eric, The Twightwees, by way of retaliation for capturing Britifh tra-

ders, whom they deemed their allies, feized three French traders, and fent them to Pennfylvania, " The French perfifting in their claims to the country on the Ohio, as part of Canada, ftrengthened themfelves by crefting new forts ' its vicinity, and at length began to feize and plunder every, pritifh trader found on any part of that river, Repeated complaints of these violences being made to the Governor of Virginia, it was at length determined to fend a fuitable perfon to the French commandant near the Ohio, to demand the reason of his hostile proceedings, nd to infift on his evacuating a fort he had lately built, Major Washington, being then but little more than twenty-one years of age, offered his fervice, which was thankfully accepted. The diftance to the French fettlement was more than four hundred miles, and one half of the rout led through a wildernels, inhabited only by Indians. He nevertheless fet out in an uncommonly fevere feafon, attended only by one companion. From Winchefter, he proceeded on foot, with this provisions on his back. When he arrived and delivered his mellage, the French commandant refused to comply, and claimed the country as belonging to the King his mafter, and declared that he should continue to feize and fend as prifoners to Canada, every Englishman that should attempt to trade on the Ohio, or any of its branches. Before Major Washington returned, the Virginians had sent out. workmen and materials, to creft a fort at the conflux of the Ohio, and the Manongahela, While they were engaged in this work the French came upon them, drove them out of the country, and creeted a regular fortification on the fame fpot. Thele fpirited proceedings overfet the fchemes of the Ohio Company, but its members both in England and America were too powerful to brook the difappointment. It was therefore refolved to instruct the Colonies to oppose with arms the encroachments of the French on the British territories, as these western lands were called. In obedience to these instructions, Virginia raised three hundred men, put them under the command of Colonel Waihington, and fent them on towards the Ohio. May 28, 1754, an engagement between them and a party of French took place, in which the latter were defeated. On this Mr. de Villier, the French commandant, marched down with nine hundred men, belides Indians, and attacked the Virginians. Colonel Washington made a brave defence, behind a small unfinished intrenchment, called Fort Necessity; but at length accepted of honourable terms of capitulation. d, f i a war e a

From the eagerne's difcovered by both nations for these lands, it occurred to all, that a rupture between France and England gould not be far diftant. It was also evident to the rulers of the

latter, that the Colonies would be the most convenient centre of operation for repressing French encroachments. To draw forth their Colonial refources, in an uniform fystem of operations. then, for the first time, became an object of public attention. To digest a plan for this purpose, a general meeting of the Governors. and most influential members of the Provincial Assemblies, was held at Albany in 1754. The commissioners, at this congress, were unenimoully of opinion, that an union of the Colonies was necessary, and they proposed a plan to the following effect, "that a grand council thould be formed of members, to be choicn by the Provincial Affemblics, which council, together, with a Go, vernor, to be appointed by the Crown, fhould be suthorifed to make general laws, and alfo to raife money from all the Colonies for their common defence," The leading members of the Provincial Affemblics were of opinion, that if this plan was adopted, they could defend themfelves from the French, without any affistance from Great Britain, This plan, when fent to England, was not acceptable to the Ministry, and in lieu thereof, they proposed, "that the Governors of all the Colonies attended by one or two members of their respective councils," which were for the most part of Royal appointment, " should from time to time concert measures for the whole of the Colonies ; credi forts, and ralle troops with a power to draw upon the British treasury in the first instance; but to be ultimately re-imburied by a tax to be laid on the Colonies by an act of Parliament," This was as much diffelished by the Colonists, as the former plan had been by the British Ministry, The principle of fome general power, operation on the whole of the Colonics, was full kept in mind, though dropped for the prefent, dida Dist if a longitude and the

The ministerial plan laid down above was transmitted to Governor Shirley, and by him communicated to Dr. Franklin, and his opinion thereon requested. That fagacious patriot sent to the Governor an answer in writing, with remarks upon the propoled plan, in which, by his strong reasoning powers, on the first view of the new subject, he anticipated the substance of a controversy, which for twenty years employed the tongues, pens, and swords of both count ries,

The policy of repressing the enchroachments of the French on the British Colonics was generally approved both in England and America. It was therefore refolved to take effectual meafures for driving them from the Ohio, and also for reducing Niagara, Crown-Point, and the other posts, which they held within the limits claimed by the King of Great Britain.

To effect the first purpose, General Braddock was fent from / Ireland to Virginia, with two regiments, and was there joined

by a two other the / gular the V to go who y fuled. ed on Indias June were more 1 They ( ton, an being e Not

by as many more, as amounted in the whole, to two thousand two hundred men. He was a brave men, but defitute of the other qualifications of a great officer. His haughtinels difgulled the Americans, and his feverity made him difagreeable to the regular troops. He particularly flighted the country militia, and the Virginia officers. Colonel Washington begged his permission to go before him, and fcour the woods with his provincial troops, who were well acquainted with that fervice, but this was refused. The General with one thousand four hundred men pushed on incautioufly, till he fell into an ambufcade of French and Indians, by whom he was defeated, and mortally wounded, June 9, 1755. The regulars, as the British troops at that time were called, were thrown into confusion, but the provincials more used to Indian fighting, were not fo much disconcerted. They continued in an unbroken body under Colonel Washington, and by covering the retreat of the regulars, prevented their being cut off entirely. . your the michain . ye around shite and

Notwithstanding these hostilities, war had not yet been formally declared. Previous to the adoption of that measure, Great-Britain, contrary to the ulages of nations, made prisoners of eight thousand French failors. This heavy blow for a long time crippled the naval operations of France, but at the fame time infpired her with a defire to retaliate, whenever a proper opportunity should present itself. For two or three years after Braddock's defeat, the war was carried on against France without vigour or fucces: but when Mr. Pitt was placed at the head of the ministry, public affairs assumed a new aspect. Victory every where, crowned the British arms, and, in a short time, the French were disposses of an only of all the British territo ties on which they had encroached, but also of Quebec, the capital of their ancient province, Canada.

In the courfe of this war, fome of the colonies made exertions fo far beyond their reafonable quota, to merit a re-imburfement from the national treafury, but this was not univerfally the cafe. In confequence of internal difputes, together with their greater domeftic fecurity, the neceffary fupplies had not been raifed in due time by others of the Provincial Affemblies. That a Britifh Minifter fhould depend on colony legislatures, for the execution of his plans, did not well accord with the vigorous and decifive genius of Mr. Pitt; but it was not prudent, by any innovation, to irritate the Colonies, during a war, in which, from local circumflances, their exertions were peculiarly beneficial. The advantages that would refult from an ability to draw forth the refources of the Colonies, by the fame authority, which commanded the wealth of the Mother Country, might in thele circumflances

have fuggefted the idea of taxing the Colonies by authority of the British parliament. Mr. Pitt is faid to have told Mr. Franklin, " that when the war closed, if he fhould be in the ministry, he would take measures to prevent the Colonies from having a power to refuse or delay the supplies that might be wanted for national purposes," but did not mention what those measures should be. As often as money or men were wanted from the Colonies, a requisition was made to their legislatures. These were generally and cheerfully complied with. Their exertions with a few exceptions were great, and manifested a ferious define to carry into effect the plans of Great-Britain for reducing the power of France.

.... In the profecution of this war, the advantages, which Great-Britain derived from the Colonies were feverely felt by her enemiesil Upwards of four hundred privateers, which were fitted out of the ports of the British Colonies successfully cruized on French property. These not only ravaged the West-India iflands belonging, to his most Christian Majesty, but made many captures on the coaft of France. Bendes diftreffing the French nation by privateering, the Colonies furnished twenty-three thousand eight hundred men, to co-operate with the British regular forces in North-America. They also fent powerful aids, both in men and provisions, out of their own limits which facilitated the reduction of Martinique, and of the Havannah. The fuccels of their privateers the co-operation of their land forcesthe convenience of their harbours, and their contiguity to their West-India islands, made the Colonies great acquisitions to Britain, and formidable adverfaries to France. From their growing importance the latter had much to fear. Their continued union with Great-Britain threatened the fubversion of the commerce and American poffessions of France. We was much a set

After hoftifities had raged nearly eight years, in 1763 a general peace was concluded, on terms, by which France ceded Canada to Great-Britain. The Spaniards having alfo taken parr in the war, were, at the termination of it, induced to relinquift to the fame power, both Eaft and Weft Florida. This peace gave Great-Britain pofferfior of an extent of country equal in dimensions to feveral kingdoms of Europe. The pofferfior of Canada in the North, and of the two Floridas in the South, made her almost fole mittrefs of the North-American continent.

This laid the foundation of future greatness, which excited the envy and the fears of Europe. Her navy, her commerce, and her manufactures, had greatly increased, when the held but a part of the continent, and when the was bounded by the formidable powers of France and Spain. Her probable future great-

nefs, when without a rival, and with a growing vent for her manufactures, and increasing employment for her marine, threetened to deftroy that balance of power, which European lovereigns have for a long time endeavoured to preferve. "Kings ere republicans with respect to each other, and behold with democratic jealouly, any one of their order towering above the reft. The aggrandizement of one, tends to excite the combination, or, at least, the wishes of many, to reduce him to the common level. From motives of this kind, a great part of Europe not long fince combined against Venice; and foon after against Louis XIVth of France. With the same suspicious eye was the naval superiority of Great-Britain viewed by her neighbours. They were, in general, disposed to favour any convulsion which promifed a diminution of her overgrown power.

The addition to the British empire of new provinces, equal in extent to old kingdoms, not only excited the jealoufy of European powers, but occasioned doubts in the minds of enlightened British politicians, whether or not such immense acquisitions of territory would contribute to the felicity of the Parent State. They faw, or thought they faw, the feeds of difunion planted in the too widely extended empire. Power, like all things human, has its limits, and there is a point beyond which the longest and fharpeft fword fails of doing execution. To combine in one uniform fystem of government, the extensive territory then subjected to the British sway, appeared, to men of reflection; a work of doubtful practicability: nor were they miltaken in their conjectures. 230 20 31 C- 1625

The feeds of difcord were foon planted, and speedily grew up to the rending of the empire. The high notions of liberty and independence, which were nurtured in the Colonies, by their local fituation, and the flate of fociety in the new world, were increased by the removal of hoffile neighbours. The events of the war had alfo given them fome experience in military operations, and some confidence in their own ability. Foreleeing their future importance, from the rapid increase of their numbers, and extension of their commerce, and being extremely jealous of their rights, they readily admitted, and with pleasure indulged, ideas and fentiments which were favourable to independence. While combustible materials were daily collecting in the new world, a fpark to kindle the whole was produced in the old. Nor were there wanting those who, from a jealousy of Great-Britain, helped to fan the flame. 1 277 

From the first settlement of English America, till the close of the war of 1755, the conduct of Great-Britain towards her Co-Vol. I. 5 1257 11 1: 50

- . . t

3 H

lonies affords an uleful lefton to those who are disposed to colda nization. From that zra, it is equally worthy of the attention of thole who wish for the reduction of great empires to imall ones, In the first period, Great, Britain regarded the provinces as instruments of commerce, Without charging herfelf with the care of their internal police, or feeking a revenue from them, the contented herfelf with a monopoly of their trade. She treated them as a judicious mother does, her dutiful children. They fhared in every privilege belonging to her mative fons, and butflightly felt the inconveniences of fubordination. Small was the catalogue of grievances with which even democratical jealoufy charged the Parent State, antecedent to the period before men-The following appear to have been the chief. An act tioned of the British Parliament for prohibiting the cutting down pitch and tar trees, not being within a fence or enclosure, and fundry facts which operated against colonial manufactures. By one of thele, it was made illegal after the 24th of June, 1750, to ereft in the Colonies, any mill or other engine for flitting or rolling of iron, or any plating forge to work with a till hammer, or any furnace for making fleel, By another, hatters were reftrained from taking more than two apprentices at a time, or any for lefs than feven years, and from employing negroes in the bufinefs. The Colonists were also prohibited from transporting hats, and home manufactured woollens, from one province to another. These regulations were, for the most part evaded, but if carried into execution, would have been flightly inconvenient, and only to a few. The articles, the manufacturing of which were thus prohibited, could be purchased at a cheaper rate from England, and the hands who made them, could be as well employed in agriculture: w. m. ori

Though these restrictions were a species of affront, by their implying, that the Colonists had not fense enough to discover their own interest, and though they seemed calculated to crush their native talents, and to keep them in a constant state of inferiority, without any hope of arriving at those advantages, to which, by the native, riches of their country, they were prompted to aspire; yet if no other grievances had been superaded to what existed in 1763, these would have been soon forgotten, for their pressure was neither great, nor universal. The good resulting to the colonies, from their connection with Great-Britain, infinitely outweighed the evil.

Till the year 1764, the colonial regulations feemed to have no other object but the common good of the whole empire; exceptions to the contrary were few, and had no appearance of fystem. When the approach of the Colonies to manhood inade them

more capable of refifting impositions, Great-Britain changed the ancient system, under which her Colonies had long flowished. When policy would rather have dictated relaxation of authority the role in her demand, and multiplied her refraints. I more in

From the conqueit of Canada, in 1759, fome have fuppoled; that France began fecretly to lay fehemes for wrefting thoid Colo? nics from Great-Britain which the was not able to conquer. Others alledge, that from that period the Colonits, releated from all fears of dangerous neighbours, fixed their eyes on independence, and took fundry fleps preparatory to the adoption of that measure! Without recurring, to either of thele opintons, the known felfithnets of human nature is inflicient to account for that demand on the one fide, and that refutal on the other, which occalioned the revolution. It was natural for Great-Britsin to wifh for the extension of her authority over the Colonies, and equally fo for them, on their approach to maturity, to be more impatient of fubordination, and to refult every innovation, for increating the degree of their dependence.

The fad ftory of Colonial opprefiion commenced in the year 1764. Great-Britain then adopted new regulations refpecting her Colonies, which after diffurbing the ancient harmony of the two countries for about twelve years, terminated in the diffuentberment of the empire.

These confissed in restricting their former commerce, but more especially in subjecting them to taxation, by the British Parliament. By adhering to the spirit of the navigation act, in the course of a century, the trade of Great-Britain had increased far beyond the expectation of her most sanguine fons, but by rigidly enforcing the first letter of the same, in a different situation of public affairs, effects directly the reverse were produced.

From the enterprising commercial spirit of the colonists, the trade of America, after filling all its proper channels, swelled out on every fide, and overflowed its proper banks with a rich redundance. In the cure of evils, which are closely connected with the causes of national prosperity, vulgar precaution ought not to be employed. In severely checking a contraband trade, which was only the overflowing of an extensive fair trade, the romedy was worfe than the discase.

For fome time before and after the termination of the war of 4755, a confiderable intercourfe had been carried on between the Britifh and Spanish Colonies, confisting of the manufactures of Great-Britain, imported by the former, and fold by the latter; by which the British Colonies acquired gold and filver, and wero enabled to make remittances to the Mother Country. This trade, though it did not clash with the spirit of the British navigation

1 angasta

laws, was forbidden by their letter. On account of the advantages which all parties, and particularly Great-Britain, reaped from this intercourfe, it had long been winked at by perfons in power; but at the period before-mentioned; fome new regulations were adopted, by which it was almost destroyed. This was effected by armed cutters, whole commanders were enjoined to take the usual cultom-houle oaths, and to act in the capacity of revenue officers, So fudden a stoppage of an accustomed and beneficial commerce, by an unufually rigid, execution of old laws, was a feriousblow to the Northern Colonies. It was their misfortune, that though they fload in need of yast quantities of British manufactures, their country produced very little that afforded a direct remittance to pay for them. They were, therefore, under a necellity of feeking elfewhere, a market for their produce, and by a circuitous route, acquiring the means of supporting their credit with the Mother Country. This they found by trading with the Spanish and French Colonies in their neighbourhood, From them they acguired gold, filver, and valuable commodities, the ultimate profits of which centered in Great-Britain. This intercourfe gave life to bulinels of every denomination, and established a reciprocal circulation of money and merchandize, to the benefit of all parties concerned. Why a trade effential to the Colonies, and which, fo far from being detrimental, was indirectly advantageous to Great-Britain, should be fo parrowly watched and fo feverely restrained, could not be accounted for by the Americans, without supposing that the rulers of Great-Britain were jealous of their adventurous commercial spirit, and of their increasing number of seamen. Their actual fufferings were great, but their apprehenfions were greater. Instead of viewing the Parent State as they had long done, in the light of an affectionate mother, they conceived her, as beginning to be influenced by the narrow views of an illiberal ftep-dame.

After the 29th of September, 1764, the trade between the Britifh, and the French, and Spanish Colonies, was in some degree Jegalifed, but under circumstances, that brought no relief to the Colonists, for it was loaded with such enormous duties, as were equivalent to a prohibition. The preamble to the aft for this purpose was alarming, "Whereas it is just and necessary, that a revenue be railed in America, for defraying the expences of defending, protecting, and fecuring the same, We, the Commons, &c. towards raising the same, give and grant unto your Majessy, the sum of" (here followed a specification of duties upon foreign clayed sugar, indigo, and costee, of foreign produce, upon all wines, except French, upon all wrought filk, and all calicoes, and upon every gallon of molasses and syrups, being the produce of a colony not under the dominion of his Majesty). It was also gnafted, that the monies arising from the importation of these

articles into the Colonies, should be paid into the receipt of his Majefty's exchequer, there to be entered feparate, 'and referved' to be dispoled of by Parliament towards defraying the necessary expences of defending, protecting, and fecuring America. Till that act passed, no act avowedly for the purpole of rever nue, and with the ordinary title and recital of fuch, was to be found in the parliamentary flatute book. The wording of it made the Colonists fear, that the Parliament would go on, in charging them with fuch taxes as they pleafed, and for the fupport of fuch military force as they fhould think proper. The act was the more difgusting, because the monies arising from it were ordered to be paid in specie, and regulations were adopted, against colonial paper money. To obstruct the avenues of acquiring gold and filver, and at the fame time to interdict the use of paper moneys appeared to the Colonifts as a farther evidence that their interefts were either milunderstood or difregarded. The imposition of duties, for the purpole of raifing a revenue in America, was confidered as a dangerous innovation, but the methods adopted for fecuring their lieftion, were refented as arbitrary and unconftitutional. . was enacted by Parliament, that whenever offences should be committed against the acts, which imposed them, the profecutor might bring his action for the penalty in the courts of admiralty, by which means the defendant loft the advantage of being tried by a jury, and was subjected to the necessity of having his cafe decided upon by a fingle man, a creature of of the Crown, whole falary was to be paid out of forfeitures adjudged by himfelf; and flfo according to a course of law, which exempted the profecutor from the trouble of proving his accufation, and obliged the defendant, either to evince his innocence, or to fuffer. By these regulations, the guards which the constitution had placed round property, and the fences which the anceftors of both countries had crected against arbitrary power, were thrown down, as far as they concerned the Colonists, charged with violating the laws, for raifing a revenue in America,

They who directed public affairs in Great Britain feared, that if the collection of these duties was enforced only in the customary way, payment would be often eluded. To obviate that dispofition which the Colonist discovered to fercen one another, in disobeying offensive acts of Parliament, regulations were adopted, bearing hard on their constitutional rights. Unwilling as the Colonists were to be excluded by the imposition of enormous duties, from an accustomed and beneficial line of business, it is not wonderful that they were disposed to represent the innovations of the mother country in the most unfavourable point of view. The heavy loss to which many individuals were subjected, and the general distress of the mercantile interest in fe-

versi of the oldest Colonies, soured the minds, of many, That the Mother Country thould infringe her, own confliction, to cramp, the commerce of her, Colonics, was a fruitful fubject of declamation , but these murmurings would have evaporated in words, had, Great, Britain proceeded to no farther innovations. Instend of this, the adopted the novel idea of raising from the Colonies an efficient revenne, by direct internal taxes, laid by authority of her Parliament.

Though all the Colonifts difrelifhed, and many, from the pref. furo of actual fufferings, complained of the British restrictions on their, menufactures and commerce, yet a great majority was difpoled to fubmit to both. Most of them acknowledged that the exercise of these powers was incident to the fovereignty of the Mother Country, especially when guarded by an implied contract, that they were to be only used for the common benefit of the empire. It was generally allowed, that as the planting of colonies was not defigned to erect an independent government, but to extend an old one, the Parent State, had a right to reftrain their trade in every way, which conduced to the common emolument.

They for the most part considered the Mother Country, as authorifed to name ports and nations, to which alone their merchan. dize should be carried, and with which alone they should trade: but the novel claim of taxing them without their confent, was univerfally reproduced, as contrary to their natural, chartered, and constitutional rights. In opposition to it, they not only alledged the general principles of liberty, but ancient utage. During the first hundred and fifty years of their existence, they had been left to tax themselves, and in their own way. If there were any exceptions to this general rule, they were too inconfiderable to merit notice. In the war of 1755, the events of which were freih in the recollection of every one, the Parliament had in no inflance attempted to raife either men or money in the Colonics by its own authority. As the claim of taxation on one fide, and the refusal of it on the other, was the very hinge on which the revolution turned, it merits a particular difcufficn.

Colonics were formerly planted by warlike nations, to keep their enemies in awc, to give vont to a furplus of inhabitants, or to discharge a number of discontented and troublesome citizens, But in modern ages, the spirit of violence, being in some meafure fheathed in commerce, colonies have been fettled, by the nations of Europe, for the purpoles of trade. These were to be attained by their raifing, for the Mother Country, fuch commodities as the did not produce, and supplying themselves from her with fuch things as they wanted. In fubferviency to these views, Great Britain planted Colonies, and made laws, obliging them to. and tot tale all me.

and the past to

carry to her all their products which me wanted, and all their raw materials which the chole to work up.""Belides this refirietion, the forbad them to procure manufacturers from any other part of the globe, or even the products of European countries, which could rival her, without being first brought to her, ports. By a variety of laws fhe regulated their trade, lin fuch a manner as was thought most conducive to their mutual advantage, and her own particular welfare. This principle of commercial monopoly run through no leis than twenty-nine acts of Parliament, from 1660 to 1764. In all thefe acts the fystem of commerce was eftablifted, as that from which alone, their contributions to the firength of the empire were expected. During this whole period. a parliamentary revenue was no part of the object of colonization. Accordingly, in all the laws which regarded them, the technical words of revenue laws were avoided dis Such have ufually a sitle purporting their being "grants," and the words "give and grant," ufually precede their chacting claufes, Although duties were impoled on America by previous acts of Parliament, no one title of "giving an aid to his Majelty, or any other of the usual titles to the revenue acts; was to be found in any of them. They were intended as regulations of trade, and not as fources of national Supplies. Till the year 1764, all flood on commercial regulation and reftmint in the anti-how this sheet, a cold another the miser of While Great Britain attended to this first fystem of colonization, her American fettlements, though expoled in unknown tlimates. and unexplored wilderneffes, grew and flourished, and in the lame proportion the trade and riches of the Mother Country in-"created." Some estimate may be made of this increase, from the following flatement; the whole export trade of England, including that to the Colonies, in the year 1704, amounted to f 6,509,000 ferling: but fo immenfely had the Colonies increased, that the

exports to them alone in the year 1772, amounted to £6.022,132 fterling, and they were yearly increasing. In the fhort space of fixty-eight years, the Colonies added nearly as much to the export commerce of Great Britain, as she had grown to by a progressive increase of improvement in 1700 years. And this increase of colonial trade was not at the expense of the general trade of the kingdom, for that increased in the same time from fix millions to fixteen millions.

In this aufpicious period, the Mother Country contented herfelf with exercifing her fupremacy in fuperintending the general concerns of the Colonies, and in harmonifing the commercial intereft of the whole empire. To this the most of them bowed down with fuch a filial fubmiffion as demonstrated that they, though

not subjected to parliamentary taxes, could be kept in due subordination, and in perfect subserviency to the grand views of colo-

mintion. anti- alfentite prese of. Paris, 1763; a new forne was opened. The national debt of Great Britsin then amounted to one hundred and forty-eight millions, for which in interest of nearly five millions was annually paid. While the British Minis: ter was digefting plans for diminishing this amasing load of debt. he conceived the idea of raifing a fubftantial revenue in the British Colonies, from taxes laid by the Parliament of the Parent State, On the one hand it was urged, that the late was originated on account of the Colonies that it was resionable, more especially as it had terminated in a manner to favourable to their intereft, that they fhould contribute to the defraying the expences it had occasioned. Thus far both parties were agreed ; but Great Britain contended, that her Parliament, as the fupreme power, was conflitutionally vefted with an authority to lay them on every part of the empire. This doctrine, plaufible in itfelf, and conformable to the letter of the British constitution, when the whole dominions were represented in one affembly, was reprobated in the Colonies, as contrary to the fpirit of the fame government, when the empire became to far extended, as to have many diffinct reprefentative affemblies. The colonifts believed that the chief excellence of the British constitution consisted in the right of the subjects to grant; or withold taxes, and in their having a share in enacting the laws by which they were to be bound they i show have but

They conceived, that the fuperiority of the British constitution, to other forms of government was, not because their supreme council was called a Parliament, but because the people had a share in it by appointing members, who conflituted one of its conflituent branches, and without whole concurrence, no law, binding on them, could be enacted. In the Mother Country, it was afferted to be effential to the unity of the empire, that the British Parliament should have a right of taxation over every part of the royal dominions. In the Colonics, it was believed, that taxation and reprefantation were infeperable, and that they could neither be free nor happy if their property could be taken from them without their confent. The common people in America reasoned on this fubject in a fummary way : "If a British Parliament," faid they, ""in which we are unrepresented, and over which we have no controul, can take from us any part of our property, by direct taxation, they may take as much as they pleafe, and we have no fecurity for any thing that remains, but a forbearance on their part, lefs likely to be exercifed in our favour, as they lighten themfelves of the burthens of government, in the fame proportion

that they impose them on us." They well knew, that communities of mankind, as well as individuals, have a ftrong propenfity to impole on others, when they can do it with impunity, and, efpecially, when there is a prospect, that the imposition will be at tended with advantage to themselves. The Americans, from that jealoufy of their liberties which their local fituation nurtured, and which they inherited from their forefathers, viewed the exclufive right of laying taxes on themfelves, free from extraneous influence, in the light as the Bran Parliament views its peculiar privilege of raifing mon , inc. Parent State appeared to the Colonitts to ftand in the fame relation to their local legislatures, as the monarch of Great-Britain to the British Parliament. His prerogative is limited by that palladium of the peoples' liberty; the exclusive privilege of granting their own money." While this right refts in the hands of the people their liberties are fecured. In the fame manner reafoned the Colonifts, " in order to be fliled freemen, our local affemblies, elected by ourfelves, must enjoy the exclusive privilege of imposing taxes upon us." They contended, that men fettled in foreign parts to better their condition, and not to fubmit their libertiesto continue the equals, not to become the flaves of their lefs-adventurous fellow-citizens, and that by the novel doctrine of parliamentary power, they were degraded from being the subjects of a king, to the low condition of being fubjects of fubjects. They argued, that it was effentially involved in the idea of property, that the poffesfor had fuch a right therein, that it was a contradiction to suppose any other man, or body of men, possessed a right to take it from him without his confent. Precedents, in the Hiftory of England, justified this mode of reasoning. The love of property ftrengthened it, and it had a peculiar force on the minds of Colonists, three thousand miles removed from the feat of government, and growing up to maturity, in a new world, where, from the extent of country, and the flate of fociety, even the neceffary reftraints of civil government were impatiently borne. On the other hand, the people of Great-Britain revolted against the claims of the Colonists. Educated in habits of submiffion to parliamentary taxation, they conceived it to be the height of contumacy for their Colonists to refuse obedience to the power, which they had been taught to revere. Not adverting to the common interest. which existed between the people of Great-Britain and their representatives, they believed, that the fame right existed, although the same community of interests was wanting. The pride of an opulent, conquering nation, aided this mode of reafoning. "What," faid they, " fhall we, who have fo lately humbled France and Spain, be dictated to by our Colos

niffs ? Shall our fubjects, educated by our care, and defended by our arms, prefume to queftion the rights of Parliament, to which we are obliged to fubinit?" Reflections of this kind, congenial to the natural vanity of the human heart, operated fo extensively, that the people of Great-Britain spoke of their Colonies and of their Colonists, as a kind of possession annexed to their persons. The love of power and of property on the one fide of the Atlantic were opposed by the same powerful passions on the other.

The disposition to tax the Colonies was also ftrengthened by exaggerated accounts of their wealth. It was faid, " that the American planters lived in affluence, and with inconfiderable taxes while the inhabitants of Great-Britain were borne down by fuch oppreflive burdens as to make a bare fublistence a matter of extreme difficulty." The officers who had ferved in America. during the late war, contributed to this delution. Their obfervations were founded on what they had feen in cities, and at a time, when large fums were fpent by government, in support of fleets and armies, and when American commodities were in great demand. To treat with attention thole who came to fight for them, and also to gratify their own pride, the Colonists had made a parade of their riches, by frequently and fumptuoully entertaining the gentlemen of the British army. These, judging from what they faw, without confidering the general flate of the country, concurred in representing the Colonists as very able to contribute largely towards defraying the common expences of the empire."

. The charters, which were fuppofed to contain the principles on which the Colonics were founded, became the fubject of ferious investigation on both fides. One clause was found to run through the whole of them, except that which had been granted to Mr. Penn; this was a declaration, " that the emigrants to America should enjoy the same privileges, as if they had remained, or had been born within the realm ;" but fuch was the fubtility of disputants, that both parties construed this general principle fo as to favour their respective opinions. The American patriots contended, that as English freeholders could not be taxed but by representatives, in chufing whom they had a vote, neither could the Colonists : but it was replied, that if the Conolists had remained in England, they must have been bound to pay the taxes impoled by Parliament. It was therefore inferred, that though taxed by that authority, they loft none of the rights of native Englishmen reliding at home. The partilans of the Mother Country could fee nothing in charters, but fecurity against taxes by royal authority. The Americans, adhering to the fpirit more than to the letter, viewed their charters as a fhield against all taxes, not imposed by representatives of their own choice. This

construction they contended to be expressly recognized by the charter of Maryland. In that, King Charles bound both himfelf: and his fucceffors, not to affent to any bill, fubjecting the inhabi-: cants to internal taxation by external legiflation. the self months The nature and extent of the connection between Great-Britain and America was a great conflitutional queftion, involving many interests, and the general principles of civil liberty. To decide this, recourse was in vain had to parchment authorities, made at a distant time, when neither the grantors nor grantces of American territory had in contemplation any thing like the pre-Great and flourishing Colonies, daily increasing in numbers, and already grown to the magnitude of a nation, planted at an immenie distance, and governed by constitutions refembling that of the country from which they fprung, were novelties in the hiftory of the world. To combine Colonies, fo circumstanced, in one uniform fystem of government with the Parent State, required a great knowledge of mankind, and an extensive comprehenfion of things, II It was an arduous bufinefs, far beyond the grafp of ordinary flatefmen, whole minds were narrowed by the formalitics of laws, or the trammels of office. An original genius, unfettered with precedents, and exalted with just ideas of the rights of human nature, and the obligations of universal benevolence, might have ftruck out a middle line, which would have fecured as much liberty to the Colonies, and as great a degree of fupre. macy to the Parent State, as their common good required : But the helm of Great-Britain was not in fuch hands. The fpirit of the British constitution on the one hand revolted at the idea, that the British Parliament should exercise the same unlimited authority over the unrepresented Colonies, which it exercised over the inhabitants of Great Britain. The Colonists on the other hand did not claim'a total exemption from its authority. They in general allowed the Mother Country a certain undefined prerogative over them, and acquiesced in the right of Parliament to make many acts, binding them in many fubjects of internal policy, and regulating their trade. Where parliamentary fupremacy ended, and at what point colonial independency began, was not ascertained. Happy would it have been had the question never been agitated, but much more fo, had it been compromifed by an amicable compact, without the horrors of a civil war, The English Colonies were originally established, not for the fake of revenue, but on the principles of a commercial monopoly. While England purfued trade and forgot revenue, her commerce

increased at least fourfold. The Colonies took off the manufac-3 I 2

tures of Great-Britain, and paid for them with provisions or raw materials. They united their arms in war, their commerce and A perfect calm in the political world is not long to be expected. "The reciprocal happines, both of Great-Britain and of the Colonies, was too great to be of long duration. The calamities of the war of 1755 had fearcely ended, when the germ of another war was planted, which foon grew up and produced deadly fruit. At that time (1764) fundry relolutions paffed the British Parliament relative to the imposition of a stamp duty in America, which gave a general alarm. By them the right, the equity, the policy, and even the necessity of taxing the Colonies was formally avowed. These resolutions being confidered as the preface of a system of American revenue, were deemed an introduction to evils of much greater magnitude, They opened a prospect of oppreffion, boundlels in extent, and endless in duration. They were nevertheles not immediately followed by any legislative act. Time and an invitation were given to the Americans to fuggelt any other mode of taxation that might be equivalent in its produce to the ftamp act : but they objected, not only to the mode, but the principle, and feveral of their affemblies, though in vain, petitioned against it. An American revenue was in England ia. very popular measure. The cry in fayour of it was fo ftrong, as to confound and filence the voice of petitions to the contrary. The equity of compelling the Americans to contribute to the common expences of the empire fatisfied many, who, without enquiring into the policy or justice of taxing their unrepresented fellow-fubjects, readily affented to the measures adopted by the Parliament for this purpole, The prospect of eating their own burdens, at the expence of the Colonists, dazzled, the eyes of gentlemen of landed interest, so as to keep out of their view the probable confequences of the innovation. It is the said 1 . 2"

The omnipotence of Parliament was to familiar a phrafe on both fides of the Atlantic, that few in America, and ftill fewer in Great-Britain, were imprefied in the first instance, with any idea of the illegality of taxing the Colonies.

The illumination on that subject was gradual. The resolutions in favour of an American stamp act, which passed in March 1764, met with no opposition. In the course of the year which intervened between these resolutions, and the passing of a law grounded upon them, the subject was better understood, and constitutional objections against the measure were urged by several both in Great-Britain and America. This associated and chagrined the British ministry; but as the principle of taxing

Am will ed lon 176 cnal amo wen duty . 1 clud "An nour of ft grud weig Barro fions then them liable fubtle pleup Engli thofe that f indulg you b perfor perhap fent to to pre has can -Mei knowl being They j in you laborio was dr little fa this day that pe bids me time fp

America had been for fome time determined upon, they were unwilling to give it up. Impelled by a partiality for a long cherifhed idea, Mr. Grenville brought into the Houfe of Commons his long expected bill, for laying a ftamp duty in America, March, 1765. By this, after paffing through the ufual forms, it was enacted, that the inftruments of writing which are in daily ute among a commercial people, fhould be null and void, unlets they were executed on ftamped paper or parchment, charged with a duty impofed by the British Parliament.

When the bill was brought in, Mr. Charles Townfend concluded a speech in its favour, with words to the following effect, "And now will these Americans, children planted by our care, nourished up by our indulgence, till they are grown to a degree of ftrength and opulence, and protected by our arms, will they grudge to contribute their mite to relieve us from the heavy weight of that burden which we lie under ?" To which Colonel Barré replied, "They planted by your care P No, your oppreffions planted them in America. They fled from tyranny to a then uncultivated and inholpitable country, where they expoled themfelves to almost all the hardships to which human nature is liable; and, among others, to the cruelty of a favage foe the most fubtle, and I will take upon me to fay, the most formidable of any peopleupon the face of the earth; and yet, actuated by principles of true English liberty, they met all hardships with pleasure compared with those they fuffered in their own country, from the hands of those that should have been their friends-They nourished up by your indulgence? They grew up by your neglect of them. As foon as you began to care about them, that care was exercised in fending perfons to rule them in one department and another, who were, perhaps, the deputies of deputies to fome members of this Houfe, fent to fpy out their libertics, to mifrepresent their actions, and to prey upon them. Men whole behaviour on many occasions, has cauled the blood of these fons of liberty to recoil within them. -Men promoted to the highest feats of justice, some, who to my knowledge, were glad, by going to a foreign country, to escape being brought to the bar of a court of justice in their own.-They protected by your arms? They have nobly taken up arms in your defence, have exerted a valour, amidit their constant and laborious industry, for the defence of a country whole frontier was drenched in blood, while its interior parts yielded all its little favings to your emolument. And believe me, remember I this day told you fo, that fame spirit of freedom which actuated that people at first will accompany them still: but prudence forbids me to explain myself farther. God knows, I co not at this time speak from any motives of party heat; what I deliver are

W nd on St sta :Athe ties her uit. Parics, the forface tion fpett **Chey** s act. ggeit pronode, vain; ind ia. ng, 25 trary. o the thout ented y the own res of r tho . 1 e on fewer h any 3. 17. tions **larch** which a law , and feveand axing

the genuine fentiments of my heart. However fuperior to me in general knowledge and experience the refpectable body of this Houfe may be, yet I claim to know more of America than moft of you, having feen and been converfant in that country. The people, I believe, are as truly loyal as any fubjects the King has, but a people jealous of their liberties, and who will vindicate them, if ever they fhould be violated : but the fubject is too delicate—I will fay no more."

During the debate on the bill, the fupporters of it infifted much on the Colonies being virtually reprefented in the fame manner as Leeds, Halifax, and fome other towns were. A recurrence to this plea was a virtual acknowledgement, that there ought not to be taxation without reprefentation. It was replied, that the connexion between the electors and non-electors, of Parliament in Great Britain was fo interwoven, from both being equally liable to pay the fame common tax, as to give fome fecurity of property to the latter; but with refpect to taxes laid by the British Parliament, and paid by the Americans, the fituation of the parties was reverfed. Inftead of both parties bearing a proportionable share of the fame common burden, what was laid on the one, was exactly fo much taken off from the other.

The bill met with no opposition in the House of Lords, and on the 22d of March, 1765, it received the royal affent. The night after it passed, Dr. Franklin wrote to Mr. Charles Thomfon, "The fun of liberty is fet, you must light up the candles of industry and economy." Mr. Thomson answered, "He was apprehenfive that other lights would be the confequence," and foretold the opposition that shortly took place. On its being fuggested from authority, that the stamp officers would not be fent from Great Britain; but felected from among the Americans, the Colony agents were defired to point out proper perfons for the purpole. They generally nominated their friends, which affords a prefumptive proof, that they supposed the act would have gone down. In this opinion they were far from being fingular. That the Colonifts would be ultimately obliged to fubmit to the ftamp act, was at first commonly believed both in England and America. The framers of it, in particular, flattered themfelves that the confusion which would arise upon the difuse of writings, and the infecurity of property, which would refult from using any other than that required by law, would compel the Colonies, however reluctant, to use the stamp paper, and confequently to pay the taxes imposed thereon; they therefore boafted that it was a law which would execute itfelf. By the terms of the flamp act, it was not to take effect till the first day of November, a period of more than feven months after its pailing.

Th the firf file fue, the brow

them a out, "

This gave the Colonifts an opportunity for leifurely canvalling the new fubject, and examining it fully on every fide. In the first part of this interval, ftruck with astonishment, they lay in filent consternation, and could not determine what course to purfue. By degrees they recovered their recollection. Virginia led the way in opposition to the stamp act. Mr. Patrick Henry brought into the House of Burgesses of that Colony, the following rosolutions, which were substantially adopted :

Refolved, That the first adventurers, fettlers of this his Majefty's Colony and dominion of Virginia, brought with them and transmitted to their posterity, and all other his Majefty's subjects, fince inhabiting in this his Majefty's faid Colony, all the liberies, privileges, and immunities that have at any time been held, enjoyed, and possessed by the people of Great Britain.

Refolved, That by two royal charters, granted by King James the Frift, the Colonies aforefaid are declared, and entitled to all liberties, privileges, and immunities of denizens, and natural fubjects, to all intents and purposes as if they had been abiding, and born within the realm of England.

Refolved, That his Majefty's liege people, of this his ancient colony, have enjoyed the rights of being thus governed by their own affembly, in the article of taxes, and internal police, and that the fame have never been forfeited, or yielded up, but have been conftantly recognized by the king and people of Britain.

Refolved, therefore, That the general affembly of this Colony, together with his Majefty, or his fubflitutes, have, in their reprefentative capacity, the only exclusive right and power, to lay taxes and impost upon the inhabitants of this Colony, and that every attempt to veft fuch power in any other perfon or perfons whatfoever, than the general affembly aforefaid, is illegil, and unconflitutional, and unjuft, and hath a manifest tendency to deftroy Britifh, as well as American liberty.

Refolved, That his Majefty's liege people, the inhabitants of this Colony, are not bound to yield obedience to any law or ordinance whatever, defigned to impose any taxation whatever upon them, other than the laws or ordinances of the general affembly aforefaid.

Refolved, That any perfon, who shall, by speaking or writing, affert or maintain, that any perfon or perfons, other than the general affembly of this Colony, have any right or power to impose, or lay any taxation on the people here, shall be deemed an enemy to this his Majesty's Colony.

Upon reading these resolutions, the boldness and novelty of them affected one of the members to such a degree, that he cried out, "Treason! Treason!" They were nevertheless, well-re-

ceived by the people; and immediately forwarded to the other provinces. They circulated extensively, and gave a spring to all the difcontented. Till they appeared, most were of opinion, that the act would be quictly adopted. Murmurs, indeed, were common, but they feemed to be fuch, as would foon die away. The countenance of fo refpectable a Colony as Virginia, confirmed the wavering and emboldened the timid. Opposition to the flamp act, from that period affumed a bolder face. The fire of liberty blazed forth from the preis; fome well-judged publications fet the rights of the Colonifts in a plain, but ftrong point of view, The tongues and the pens of the well-informed citizens laboured in kindling, the latent fparks of patriotifint. The flame fpread from breaft to breaft, till the conflagration became general. In this bulinets. New-England had a principal fhare. The inhabitants of that part of America, in particular, confidered their obligations to the mother country for past favours, to be very inconfiderable. They were fully informed, that their forefathers were driven by perfecution to the woods of America, and had there, without any expence to the parent flate, effected a feitlement amidft rude creation. Their refertment for the invalion of their accustomed right of taxation was not fo much mitigated by the recollection of late favours, as it was heightened by the tradition of grievous fufferings, to which their anceftors, by the rulers of England, had been subjected. The descendants of the exiled, perfecuted, Puritans, of the laft century, opposed the flamp act with the fame spirit with which their forefathers were actuated, when they fet themfelves against the arbitrary impositions of the house of Stuart.

The heavy burdens, which the operation of the flamp aft would have impofed on the Colonifts, together with the precedent it would establish of future exactions, furnished the American patriots with arguments, calculated as well to move the passions, as to convince the judgments of their Fellow Colonists. In great warmth they exclaimed, "if the Parliament has a right to levy the flamp duties, they may, by the same authority, lay on us imposes, excises, and other taxes, without end, till their rapacity is fatisfied, or our abilities are exhausted. We cannot at future elections, displace these men, who so lawishly grant away our property. Their feats and their power are independent of us, and it will reft with their generosity where to stop, in transferning the expences of government from their own to our shoulders."

It was fortunate for the liberties of America, that news-papers were the fubject of a heavy flamp duty. Printers, when uninfluenced by government, have generally arranged themselves on

the fide of liberty, nor are they lefs remarkable for attention to the profits of their profession. A stamp duty, which openly invaded the first, and threatened a great diminution of the last, prowoked their united zealous opposition. They daily prefented to the public, original differtations, tending to prove, that if the stamp set was fuffered to operate, the liberties of America were at an end, and their property virtually transferred to their Trans-Atlantic fellow-fubjects. The writers among the Americans, feriously a rmed for the fate of their country, came forward, with effays, to prove, that agreeable to the British Constitution. taxation and reprefentation were infeparable, that the only conflitutional mode of raising money from the Colonists was by acts of their own legislatures, that the Crown posselled no farther power than that of requilition, and that the parliamentary right of taxation was confined to the Mother Country, and there originated, from the natural right of man, to do what he pleafed with his own, transferred by confent from the electors of Great-Britain to those whom they chose to represent them in parliament. They also infisted much on the milapplication of public money by the British ministry. Great pains were taken to inform the Colonists of the large fums annually bestowed on pensioned favourites, and for the various purpoles of bribery. Their paffions were enflamed by high-coloured representations of the hardship of being obliged to pay the carnings of their industry into a British treasury, well known to be a fund for corruption.

The writers on the American fide were opposed by arguments, drawn from the unity of the Empire; the necessity of one fupreme head, the unlimited power of parliament, and the great numbers in the Mother Country, who, though legally difqualified from voting at elections, were, neverthelefs, bound to pay the taxes imposed by the representatives of the nation. To these objections it was replied, that the very idea of fubordination of parts excluded the notion of fimple, undivided unity. That as England was the head, fhe could not be the head and the members too-that in all extensive empires, where the dead uniformity of fervitude did not prevent, the fubordinate parts had many local privileges and immunities-that between these privileges and the supreme common authority, the line was extremely nice; but nevertheless, the supremacy of the head had an ample field of exercise, without arrogating to itself the disposal of the property of the unrepresented subordinate parts. To the affertion, that the power of parliament was unlimited, the Colonifts replied, that before it could conftitutionally exercise that power, it must be constitutionally formed, and that, therefore, it must at

leaft, in one of its branches, be confituted by the people over whom it exercised unlimited power. That with respect to Great-Britain, it was to confituted—with respect to America it was not. They therefore inferred, that its power ought not to be the fame over both countries. They argued allo, that the delegation of the people was the fource of power in regard to taxation, and as that delegation was wanting in America, they concluded, the right of parliament to grant away their property could not exist. That the defective reprefentation in Great-Britain should be urged as an argument for taxing the Americans, without any reprefentation at all, proved the incroaching nature of power. Instead of convincing the Colonists of the propriety of their fubmission, it demonstrated the wisdom of their resistance ; for, faid they, "one invasion of natural right is made the justification of another, much more injurious and oppreflive."

The advocates for parliamentary taxation laid great firefs on the rights, supposed to accrue to Great-Britain, on the fcore of her having reared up and protected the English fettlements in America at great expence. It was, on the other hand, contended by the Colonists, that in all the wars which were common to both countries, they had taken their full thare, but in all their own dangers, in all the difficulties belonging feparately to their fituation, which did not immediately concern Great-Britain, they were left to themfelves, and had to ftruggle through a hard infancy; and in particular, to defend themfelves, without any aid from the Parent State, against the numerous favages in their vicinity. That when France had made war upon them, it was not on their own account, but as appendages to Great-Britain. That confining their trade for the exclusive benefit of the Parent State, was an ample compensation for her protection, and a sufficient equivalent for their exemption from parliamentary taxation. That the taxes imposed on the inhabitants of Great-Britain were incorporated with their manufactures, and ultimately fell on the Colonifts, who were the confumers,

The advocates for the ftamp act also centended, that as the Parliament was charged with the defence of the Colonies, it ought to possel be argument had been used by King Charles the thereby. The fame argument had been used by King Charles the First, in support of ship money; and it was now answered in the fame manner, as it was by the patriots of that day. "That the people who were defended or protected were the fittess to judge of and to provide the means of defraying the expences incurred on that account." In the mean time, the minds of the Americans underwent a total transformation. Instead of their late peaceable and steady attachment to the British nation, they were

daily advancing to the opposite extreme. A new mode of dif-, playing refentment against the friends of the stamp act began in Maffachufetts, and was followed by the other Colonies. A few gentlemen hung out, early in the morning, August 14, on the limb of a large tree, towards the entrance of Boston, two effigies. one defigned for the flamp mafter, the other for a jack boot, with a head and horns peeping out at the top. Great numbers both from town and country came to fee them. A spirit of enthusias was diffused among the spectators. In the evening the whole was cut down and carried in procession by the populace shouting "liberty and property for ever; no ftamps." They next pulled down a new building, lately crefted by Mr. Oliver the stamp master. They then went to his house, before which they beheaded his effigy, and at the fame time broke his windows. Eleven days after, fimilar violences were repeated. The mob attacked the house of Mr. William Storey, deputy register of the court of admiralty-broke his windows-forced into his dwelling house, and destroyed the books and files belonging to the faid court, and ruined a great part of his furniture. They next proceeded to the houfe of Benjamin Hallowel, Comptroller of the cuftoms, and repeated fimilar exceffes, and drank and deftroyed his liquors. They afterwards proceeded to the house of Mr. Hutchinson, and soon demolished it. They carried off his plate, furniture, and apparel, and feattered or deftroyed manufcripts and other curious and useful papers which for thirty years he had been collecting. About half a dozen of the meanest of the mob were foon after taken up and committed, but they either broke jail, or otherwise escaped all punishment. The town of Boston condemned the whole proceeding, and for fome time, private gentlemen kept watch at night, to prevent further violence.

Similar diffurbances broke out in the adjacent Colonics, nearly about the fame time. On the 27th August, 1765, the people in New-Port in Rhode-Island, exhibited three effigies intended for Messer Howard, Mossatt, and Johnson, in a cart with halters about their necks, and after hanging them on a gallows for some time, cut them down and burnt them, amidst the acclamations of thousands. On the day following, the people collected at the heuse of Mr. Martin Howard, a lawyer, who had written in defence of the right of parliament to tax the Americans, and demoliss who, in conversation, had supported the same right, and made a similar devastation of his property.

In Connecticut they exhibited effigies in fundry places, and afterwards committed them to the flames,

In New-York, the ftamp mafter having refigned, the ftamp papers were taken into Fort George, by Lieutenant Governor Colden, Nov. 1. The people, difliking his political fentiments, broke open his ftable, took out his coach, and carried it in triumph through the principal ftreets to the gallows. On one end of this they fufpended the effigy of the Lieut. Governor, having in his right hand a ftamped bill of lading, and in the other a figure of the devil. After fome time, they carried the apparatus to the gate of the fort, and from thence to the bowling-green, under the muzzles of the guns, and burned the whole amid the acclamations of many thoufands. They went thence to Mayor James's houfe, ftripped it of every article, and confumed the whole, becaufe he was a friend to the ftamp aft.

The next evening the mob re-affembled, and infifted upon the Lieutenant Governor delivering the ftamped papers into their hands, and threatened, in cafe of a refufal, to take them by force. After fome negociation, it was agreed that they fhould be delivered to the corporation, and they were deposited in the city hall. Ten boxes of the fame, which came by another conveyance, were burned.

The stamp act was not less odious to many of the inhabitants of the British West-India islands, than to those on the continent of North America. The people of St. Kitts obliged the stamp officer and his deputy to resign. Barbadoes, Canada, and Halifax, submitted to the act.

But when the fhip which brought the ftamp papers to Phila, delphia, first appeared round Gloucester Point, all the vessels in the harbour holited their colours half mass high. The bells were rung muffled till evening, and every countenance added to the appearance of fincere mourning. A large number of people afsembled, and endeavoured to procure the resignation of Mr. Hughes, the stamp distributor. He held out long, but at length found it necessary to comply.

As opportunities offered, the affemblies generally paffed refolutions, afferting their exclusive right to lay taxes on their conflituents. The people, in their town meetings, inftructed their reprefentatives, to oppose the ftamp act. As a specimen of these, the inftructions given to Thomas Forster, their representative, by the freeholders and other inhabitants of the town of Plymouth, are subjoined. In these the yeomanry of the country spoke the determined language of freedom. After expressing the highest efteem for the British constitution, and settling forth their gricvances, they proceeded as follows :

"You, Sir, represent a poople, who are not only descended from the first settlers of this country, but inhabit the very spot they first possessed. Here was first laid the soundation of the Br

British empire, in this part of America, which, from a very small beginning, has increased and spread in a manner very surprising, and almost incredible, especially, when we consider, that all this has been effected without the aid or affiftance of any power on earth; that we have defended, protected, and fecured ourfelves against the invations and cruelties of favages, and the fubtlety and inhumanity of our inveterate and natural enemies, the French; and all this without the appropriation of any tax by ftamps, or stamp acts, laid upon our fellow fubjects, in any part of the King's dominions, for defraying the expence thereof. This place, Sir, was at first the afylum of liberty, and we hope, will ever be preferved facred to it, though it was then no more than a barren wildernefs, inhabited only by favage men and beafts. To this place our fathers, (whole memories be revered) possessed of the principles of liberty in their purity, difdained flavery, fled to enjoy those privileges, which they had an undoubted right to, but were deprived of, by the hands of violence and oppression, in their native country. We, Sir, their posterity, the freeholders and other inhabitants of this town, legally affembled for that pur. pole; possessed of the fame fentiments, and retaining the fame ardour for liberty, think it our indifpenfable duty, on this occasion, to express to you these our fentiments of the ftamp act, and its fatal confequences to this country, and to enjoin upon you, as you regard not only the welfare, but the very being of this people, that you (confistent with our allegiance to the King, and relation to the government of Great Britain) difre\_ garding all proposals for that purpose, exert all your power and influence in opposition to the stamp act, at least till we hear the fuccels of our petitions for relief. We likewife, to avoid difgracing the memories of our ancestors, as well as the reproaches of our own confciences, and the curfes of posterity, recommend it to you, to obtain if poffible, in the honourable house of reprefentatives of this province, a full and explicit affertion of our rights, and to have the fame entered on their public records, that all generations yet to come may be convinced, that we have not only a just fense of our rights and liberties, but that we never with fubmiffion to Divine providence, will be flaves to any power on earth."

The expediency of calling a continental Congress to be composed ed of deputies from each of the provinces, had early occurred to the people of Maffachuletts. The affembly of that province paffed a resolution in favour of that measure, and fixed on New-York as the place, and the second Tuesday of October, 1765, as the time for holding the same, Soon after, they sent circular letters to the speakers of the several affembles, requesting their concurrence.

This first advance towards continental union was feconded in South-Carolina, before it had been agreed to by any Colony to the fouthward of New-England. The example of this province had a confiderable influence in recommending the measure to others; who were divided in their opinions, on the propriety of it.

The affemblies of Virginia, North-Carolina, and Georgia, were prevented by their Governors, from fending a deputation to this Congress. Twenty-eight deputies from Maffachuletts, Rhode-Afland, Connecticut, New-York, New-Jerley, Pennsylvania, Delaware, Maryland, and South-Carolina, met at New-York; and after mature deliberation agreed on a declaration of their rights, and on a flatement of their grievances. They afferted in ftrong terms, their exemption from all taxes, not imposed by their own reprefentatives. They also concurred in a petition to the King, and memorial to the House of Lords, and a petition to the House of Commons. The Colonies that were prevented from fending their representatives to this Congress, forwarded petitions, fimilar to those which were adopted by the deputies which attended.

While a variety of legal and illegal methods were adopted to oppose the ftamp act, the first of November on which it was to commence its operation, approached. This in Boston was ushered in by a funcral tolling of bells. Many shops and stores were thut. The effigies of the planners and friends of the stamp act were carried about the ftreets in public derision, and then torn in pieces by the enraged populace. It was remarkable that though a large crowd was affembled, there was not the least violence or diforder.

At Portfmouth in New-Hampfhire, the morning of Nov. 1, was ufhered in with tolling all the bells in town. In the course of the day, notice was given to the friends of liberty to attend her funeral. A coffin neatly ornamented, inferibed with the word Liberty in large letters, was carried to the grave. The funeral proceffion began from the flate house, attended with two unbraced drums. While the inhabitants who followed the coffin were in motion, minute guns were fired, and continued till the corpfe arrived at the place of interment, Then an oration in favour of the deceased was pronounced. It was scarely ended before the corple was taken up, it having been perceived that fome remains of life were left, at which the infcription was immeniately altered to "Liberty revived." The bells immediately exchanged their melancholy for a more joyful found, and fatisfaction appeared in every countenance. The whole was conducted with decency, and without injury or infult to any man's perfon or property.

In Maryland, the effigy of the ftamp mafter, on one fide of

After fuffering many indignities, it was first hanged, and then burnt. The general aversion to the ftamp act was, by fimilar methods.

in a variety of places demonstrated. It is remarkable, that the preceedings of the populace on these occasions, were carried on with decorum and regularity. They were not ebullitions of a thoughtlefs mob, but for the most part planned by leading men of character and influence, who were friends to peare and order. These, knowing well that the bulk of mankind are more led by their fenses than by their reason, conducted the public exhibitions on that principle, with a view of making the stamp act and its friends both ridiculous and odious.

Though the ftamp act was to have operated from the first of November, yet legal proceedings in the court were carried on as before. Veffels entered and departed without stamped papers, The printers boldly printed and circulated their newspapers; and found a fufficient number of readers, though they uled commonpaper, in defiance of the act of parliament. In most departments, by common confent, bufinefs was carried on as though no ftamp act had existed. This was accompanied by spirited resolutions to rifque all confequences, rather than fubmit to use the paper required by law. While these matters were in agitation, the Colonifts entered into affociations against importing British manufactures till the ftamp'act fhould be repealed. In this manner British liberty was made to operate against British tyranny. Agreeably to the free conftitution of Great Britain, the fubject was at liberty to buy, or not to buy, as he pleafed. By fuspending their future purchases till the repeat of the stamp act; the Colonists made it the interest of merchants and manufacturers to folicit for that repeal. They had usually taken off fo great a proportion of British manufactures, that the sudden stoppage of all their orders amounting annually to feveral millions sterling, threw some thoufands in the Mother Country out of employment, and induced them from a regard to their own interest, to advocate the measures wished for by America. The petitions from the Colonies were feconded by petitions from the merchants and manufacturers of Great Britain. What the former prayed for as a matter of right, and connected with their liberties, the latter alfo folicited from motives of immediate advantage. In order to remedy the deficiency of British goods, the Colonists betook themselves to a variety of neceffary domestic manufactures. In a little time, large quantites of coarfe and common cloaths were brought to market, and thele

though dearer, and of a worfe quality, were cheerfully preferred to fimilar articles imported from Britain. That wool might not be wanting, they entered into refolutions to abitain from eating lambs. Foreign elegancies were generally laid afide. The women were as exemplary as the men in various inftances of felf-denial, With great readincis, they refused every article of decoration for their perfons, and of luxury for their tables. These restrictions, which the Colonists had voluntarily imposed on themselves, were fo well observed, that multitudes of artificers in England were reduced to great diftrefs, and fome of their molt flourishing man 3factories were, in a great measure at a stand. An affociation was entered into by many of the fons of liberty, the nam 'ven to those who were opposed to the stamp aft, by which they agreed "to march with the utmost expedition, at their own proper cost and expence, with their whole force, to the relief of those that should be in danger from the famp act, or its promoters and abettors, or any thing relative to it, on account of any thing that may have been done in opposition to its obtaining." This was fubscribed by so many in New York and New England, that nothing but a repeal could have prevented the immediate commencement of a civil war.

From the decided opposition to the flamp act, which had been adopted by the Colonies, it became neceffary for Great Britain to enforce or repeal it. Both methods of proceeding had fupporters. The opposers of a repeal urged arguments, drawn from the dignity of the nation, the danger of giving way to the elamours of the Americans, and the confequences of weakening parliamentary authority over the Colonies. On the other hand, it was evident, from the determined opposition of the Colonies, that it could not be enforced without a civil war, by which, in every event, the nation must be a losser. In the course of these discussions, Dr. Franklin was examined at the bar of the House of Commons, and gave extensive information on the flate of American affairs, and the impolicy of the flamp act, which contributed much to remove prejudices, and to produce a disposition that was friendly to a repeal. Some fpeakers of great weight, in both Houfes of Parliament, denied their right of taxing the Colonies. The most diftinguished fupporters of this opinion were Lord Camden in the Houfe of Peers, and Mr. Pitt in the Houfe of Commons. The former, in ftrong language faid, "My position is this, I repeat it, I will maintain it to my last hour. Taxation and representation are infeparable. This position is founded on the laws of nature. It is more, it is itself an eternal law of nature. For whatever is a man's own is absolutely his own. No man has a right to take it

from him without his confent. Whoever attempts to do it. attempts an injury; whoever does it, commits a robbery." Mr. Pitt, with an original boldness of expression, justified the Colonifts in oppoling the ftamp act. "You have no right," faid he, "to tax America. I rejoice that America has relified. Three millions of our fellow fubjects to loft to every fenle of virtue, as tamely to give up their liberties, would be fit inftruments to make flaves of the reft." He concluded with giving his advice, that the ftamp act be repealed abfolutely, totally, and immediately,that the reason for the repeal be affigned, that it was founded on an erroneous principle. "At the fame time." faid he, " let the fovereign authority of this country over the Colonies, be allerted in as strong terms as can be devised, and be made to extend to every point of legislation whatsoever; that we may bind their trade, confine their manufactures, and exercise every power, except that of taking their money out of their pockets without their confent." . The approbation of this illustrious statesman, whole diftinguished abilities had railed Great-Britain to the highest pitch of renown, inspired the Americans with additional confidence, in the rectitude of their claims of exemption from parliamentary taxation, and emboldened them to farther oppolition, when at a future day, as thall be hereafter related, the project of an American revenue was refumed. After much debating, and two protefts in the Houfe of Lords, and palling an act " for fecuring the dependence of America on Great-Britain," the repeal of the ftamp act was finally carried March 18, 1766. This event gave great joy in London. Ships in the river Thames difplayed their colours, and houses were illuminated all over the city. It was no fooner known in America, than the Colonists refeinded their relolutions, and recommenced their mercantile intercourse with the Mother Country. They prefented their homespun cloaths to the poor, and imported more largely than ever. The churches refounded with thankigivings, and their public and private rejoicings knew no bounds. By letters, addreffes, and other means, almost all the Colonies stewed unequivocal marks of acknowledgement and gratitude. So fudden a calm recovered after fo violent a ftorm, is without a parallel in history. By the judicious facrifice of one law; the parliament of Great-Britain procured an acquiescence in all that remained.

There were enlightened patriots, fully impressed with an idea, that the immoderate joy of the Colonists was disproportioned to the advantage they had gained.

The ftamp act, though repealed, was not repealed on American principles. The preamble affigned as the reafon thereof, " That Vol. I.

the collecting the feveral duties and revenues, as by the faid at was directed, would be attended with many inconveniences, and productive of confequences dangerous to the commercial interefts of these kingdoms." Though this reason was a good one in England, it was by no means fatisfactory in America. At the fame time that the stamp act was repealed, the absolute, unlimited supremacy of parliament was, in words, afferted. The oppolers of the repeal contended for this as effential; the friends of that measure acquiesced in it to ftrengthen their party, and make fure of their object. Many of both fides thought, that the dignity of Great-Britain required fomething of the kind to counterbalance the lofs of authority, that might refult from her yielding to the clamours of the Colonifis. The aft for this purpole was called the Declaratory. Act, and was in principal more hostile to American rights than the ftamp act; for it annulled those refolutions and acts of the Provincial Assemblies, in which they had afferted their right to exemption from all taxes, not imposed by their own representatives; and also enacted, " That the parliament had, and of right ought to have, power to bind the Colonies, in all cafes whatfoever."

The bulk of the Americans, intoxicated with the advantage they had gained, overlooked this flatute, which, in one comprehenfive fentence, not only deprived them of liberty and property, but of every right incident to humanity. They confidered it as a falvo for the honour of parliament, in repealing an aft, which had fo lately received their fanction, and flattered themfelves it would remain a dead letter, and that although the right of taxation was in words retained, it would never be exercised. Unwilling to contend about paper claims of ideal fupremacy, they returned to their habits of good humour with the Parent State.

The repeal of the ftamp act, in a relative connection with all its circumftances and confequences, was the first direct flep to American independency. The claims of the two countries were not only left undecided, but a foundation was laid for their extending at a future period, to the impossibility of a compromife.— Though for the prefent Great-Britain receded from enforcing her claim of American revenue, a numerous party, adhering to that system, referved themfelves for more favourable circumftances to enforce it; and at the fame time the Colonists, more enlightened on the fubject, and more fully convinced of the rectitude of their claims, were encouraged to oppose it, under whatfoever form it spear, or under whatfoever disguise it should cover itself.

Elevated with the advantage they had gained, from that day forward, instead of feeling themselves dependent on Great-Bri-

tain, they conceived that, in respect to commerce, the was dependent on them. It inspired them with such high ideas of the importance of their trade, that they confidered the Mother Country to be brought under greater obligations to them, for purchasing her manufactures, than they were to her for protection and the administration of civil government. The Freemen of British America, impressed with the exalting fentiments of patriotism and of liberty, conceived it to be within their power, by future combinations, at any time to convulse, if not to bankrupt, the nation from which they forung.

Opinions of this kind were ftrengthened by their local fituation, favouring ideas, as extensive as the unexplored continent of which they were inhabitants. While the pride of Britons revolted at the thought of their Colonics refusing subjection to that Parliament which they obeyed, the Americans with equal haughtines exclaimed " shall the petty island of Great-Britain, scarce a speck on the map of the world, controul the free citizens of the great continent of America ?"

These high sounding pretensions would have been harmles, or at most, spent themselves in words, had not a ruinous policy, untaught by recent experience, called them into ferious action. Though the stamp act was repealed, an American revenue was still a favourite object with many in Great-Britain. The equity and the advantage of taxing the Colonists by parliamentary authority were very apparent to their understandings, but the mode of effecting it, without hazarding the public tranquility, was not fo obvious, Mr. Charles Townsend, afterwards Chancellor of the Exchequer, pawned his credit to accomplish what many fo earnestly defired. He accordingly brought into parliament, in 1767, a bill for granting duties in the British Colonies on glass, paper, painters colours, and tea, which was afterwards enacted into a law, If the small duties imposed on these articles had preceded the flamp aft, they might have paffed unobserved : but the late discussions occasioned by that act, had produced amongst the Colonists, not only an animated conviction of their exemption from parliamentary taxation, but a jealoufy of the defigns of Great-Britain, The fentiments of the Americans on this subject bore a great refemblance to those of their British countrymen of the preceding century, in the cafe of fhip money. The amount of that tax was very moderate, little exceeding twenty thousand pounds. It was distributed upon the people with equality, and expended for the honour and advantage of the kingdom, yet all these circumstances could not reconcile the people of England to the impolition. It was entirely arbitrary, " By the fame right,"

> > -18

faid they, " any other tax may be imposed." In like manual the Americans confidered these small duties in the nature of an entering wedge, defigned to make way for others, which would be greater and heavier. In a relative connection with late acts of Parliament, respecting domestic manufactures and foreign commerce, laws for imposing taxes on British commodities exported to the Colonics, formed a complete circle of oppression, from which there was no pollibility of elcaping. The Colonifts had been, previoully, restrained from manufacturing certain articles for their own confumption. Other acts confined them to the exclusive use of British merchandize. The addition of duties put them wholly in the power and diferction of Great-Britain; "We are not," faid they, " permitted to import from any nation, other than our own Parent State, and have been fome in cales by her reftrained from manufacturing for ourfelves, and the claims a right to do fo in every inftance which is incompatible with her interest. To these restrictions we have hitherto submitted, but fhe now rifes in her demands, and impofes duties on thole commodies, the purchasing of which, elicwhere than at her market, her law forbids, and the manufacturing of which for our own use, she may, any moment she pleases, restrain. If her right is valid to lay a finall tax, it is equally fo to lay a large one, for from the nature of the cafe, fhe must be guided exclusively by her own opinions of our ability, and of the propriety of the duties fhe may impose. Nothing is left for us but to complain and pay." They contended that there was no real difference between the principle of these new duties and the ftamp act, they were both deligned to raife a revenue in America, and in the fame manner. The payment of the duties imposed by the ftamp act, might have been eluded by the total difuse of stamped paper, and fo might the payment of these duties, by the total difuse of those articles on which they were laid, but in neither cafe, without great difficulty. The Colonists' were therefore reduced to the hard alternative of being obliged totally to difuse articles of the greatest necessity in human life, or to pay a tax without their confent. The fire of opposition, which had been imothered by the repeal of the ftamp act, burned afresh against the same principle of taxation, exhibited in its new form. Mr. Dickenfon, of Pennfylvania, on this occasion prefented to the public a feries of letters figned the Farmer, proving the extreme danger which threatened the liberties of America, from their acquiefcence in a precedent which might citablish the claim of parliamentary taxation. They were written with great animation, and were read with uncommon avidity. Their reafoning was

to convincing, that many of the candid and difinterefted citizens of Great Britain acknowledged that the American opposition to parliamentary taxation was justifiable. The enormous fums which the ftamp set would have collected, had thoroughly alarmed the Colonists for their property. It was now demonstrated by feveral writers, efpecially by the Pennfylvania Farmer, that a small tax, though more specious, was equally dangerous, as it established a precedent which eventually annihilated American property. The declaratory act, which at first was the subject of but a few comments, was now dilated upon as a foundation for every species of oppression: and the small duties lately imposed were considered as the beginning of a train of much greater evils.

Had the Colonifts admitted the propriety of raising a parliamentary revenue among them, the crefition of an American board of commissioners for managing it, which was about this time infituted at Boston, would have been a convenience rather than an injury; but united as they were in fentiments, of the contrariety of that measure to their natural and constitutional rights, they ill brooked the innovation. As it was coeval with the new duties, they considered it as a certain evidence that the project of an extensive American revenue, notwithstanding the repeal of the stamp aft, was still in contemplation. A diflike to Britis the taxation naturally produced a diflike to a board which was to be instrumental in that business, and occasioned many insults to its commissioners.

The revenue act of 1767 produced refolves, petitions, addreffes, and remonstrances, similar to those with which the Colonifts opposed the ftamp act. It also gave rife to a fecond affociation for suspending farther importations of British manufactures, till these offensive duties should be taken off. Uniformity, in these measures, was promoted by a circular letter from the Allembly of Mallachuletts to the speakers of other Allemblies. This stated the petitions and representations, which they had forwarded against the late duties, and strongly pointed out the great difficulties, that must arife to themselves and their constituents; from the operation of acts of parliament impoling duties on the unrepresented American Colonies, and requested a reciprocal free communication on public affairs. Most of the Provincial affemblies, as they had opportunities of deliberating on the fubject, approved of the proceedings of the Maffachufetts Affembly, and harmonized with them in the measures which they had adopted. In refolves, they flated their rights in firm but decent language; and in petitions, they prayed for a repeal of the late acts, which they confidered as infringements on their liberties, alar , in this is the inter

446

It is not unreasonable to suppose, that the Minister who planned these duties, hoped that they would be regarded as regulations of trade. He might also presume, that as they amounted. only to an inconfiderable fum, they would not give any alarm. The circular letter of the Mallachusetts Assembly, which laid the foundation for united petitions against them, gave, therefore, great offence. Lord Hillsborough, who had lately been appointed Secretary of State for the American department, wrote letters to the governors of the respective provinces, urging them to exert their influence, to prevent the affemblics from taken any notice of it, and he called on the Maffachufetts Affembly to refcind their proceedings on that subject. This measure was both injudicious and irritating. To require a public body to refeind a refolution, for fending a letter which was already fent, answered, and acted upon, was a bad fpecimen of the wifdom of the new minister. To call a vote, for sending a circular letter to invite the affemblies of the neighbouring colonies to communicate together in the pursuit of legal measures to obtain a redress of grievances, "a flagitious attempt to disturb the public peace," appeared to the Colonists a very injudicious application of harsh epithets to their conflitutional right of petitioning. To threaten a new house of allembly with diffolution, in case of their not agreeing to refeind an act of a former affembly which was not executory, but executed, clashed no lefs with the dictates of common sense, than the constitutional rights of British Colonists. The proposition for refeinding was negatived, by a majority of ninety-two to feventeen. The affembly was immediately diffolved, as had been threatened. This procedure of the new Secretary was confidered by the Colonifts as an attempt to suppress all communication of fentiment between them, and to prevent their united supplications from reaching the royal ear. It answered no one valuable purpose, but naturally tended to mischief.

The bad humour, which from fucceffive irritation already too much prevailed, was about this time, June 10, 1768, wrought up to a high pitch of refertment and violence, on occafion of the feizure of Mr. Hancock's floop Liberty, for not having entered all the wines fhe had brought from Madeira. The popularity of her owner, the name of the floop, and the general averfion to the board of commiffioners and parliamentary taxation, concurred to inflame the minds of the people. They referted the removal of the floop from the wharf, as implying an apprehension of a refcue. They used every means in their power to interrupt the officers in the execution of their busines; and numbers fwore that they would be revenged. Mr. Harrison the collector, Mr. Hallowell the comptroller, and Mr. Irwine the ia-

spector of imports and exports, were so roughly handled, as to bring their lives in danger. The windows of fome of their houfes were broken, and the boat of the collector was dragged through the town, and burned on the common. Such was the temper and disposition of many of the inhabitants, that the commissioners of the cuftoms thought proper to retire on board the Romney man of war; and afterwards to Caftle William. The commiffioners, from the first moment of their institution, had been an eye-fore to the people of Boston. This, though partly owing to their active zeal in detecting fmugglers, principally arole from the affociation which existed in the minds of the inhabitants. between the board and an American revenue. The declaratory act of 1766, that revenue act of 1767; together with the pomp and expence of this board, fo difproportionate to the fmall income of the prefent duties, confpired to convince not only the few who were benefited by fmuggling, but the great body of enlightened freemen, that farther and greater impolitions of parliamentary taxes were intended. In proportion, as this opinion gained ground, the inhabitants became more difrespectful to the executive officers of the revenue, and more disposed, in the frenzy of patriotism, to commit outrages on their persons and property. The conftant bickering that existed between them and the inhabitants, together with the fleady opposition given by the latter to the discharge of the official duties of the former, induced the commissioners and friends of the American revenue, to folicit, the protection of a regular force, to be stationed at Boston. In compliance with their wifhes, his Majefty ordered two regiments and fome armed veffels to repair thither, for fupporting and affifting the officers of the cuftoms in the execution of their duty. This restrained the active exertion of that turbulent spirit, which fince the paffing the late revenue laws had revived, but it added to the pre-exifting causes thercof.

When it was reported in Bofton, that one or more regiments were ordered there, a meeting of the inhabitants was called, and a committee appointed to requeft the Governor to ifue precepts for convening a general affembly. He replied, "that he could not comply with their requeft, till he had received his Majefty's commands for that purpole." The anfwer being reported, September 13, fome fpirited refolutions were adopted. In particular, it was voted, that the felect men of Bofton fhould write to the felect men of other towns, to propofe, that a convention be held, of deputies from each, to meet at Faneuil-hall, in Bofton, on the and inftant. It was afterwards voted, "That as there is apprehenfion, in the minds of many, of an approaching war with

who planl as regulaamounted any alarm. ich laid the , therefore, en appointrote letters ng them to taken any mbly to refire was both to refcind a ent, answerifdom of the ular letter to to communitain a redrefs ic peace,"apof harsh epito threaten a of their not hich was not he dictates of tish Colonists. a majority of liatcly diffolvhe new Secreto suppress all prevent their It answered

France, those inhabitants, who are not provided, be requested to furnish themselves forthwith with arms."

Ninety-fix towns, and eight diffricts, agreed to the proposal made by the inhabitants of Boston, and appointed deputies to attend a convention, but the town of Hatfield refused its concurrence. When the Deputies met, they conducted themselves with moderation, difclaimed all legislative authority, advised the people to pay the greatest deference to government, and to wait patiently for a redress of their grievances from his Majesty's wildom and moderation. After stating to the world the causes of their meeting, and an account of their proceedings, they diffolved themfelves, after a short fellion, and went home.

Within a day after the convention broke up, the expected regiments arrived, and were peaceably received. Hints had been thrown out by fome idle people that they fhould not be permitted to come on fhore. Preparations were made by the captains' of the men of war in the harbour, to fire on the town, in cafe opposition had been made to their landing, but the crifis for an appeal to arms was not yet arrived. It was hoped by fome that the folly and rage of the Boftonians would have led them to this rafh measure, and thereby have afforded an opportunity for giving them fome naval and military correction, but both prudence and policy induced them to adopt a more temperate line of conduct.

While the contention was kept alive by the fucceffive irritations, which have been mentioned, there was, particularly in Maffachufetts, a fpecies of warfare carried on between the royal governors, and the provincial affemblies. Each watched the other with all the jealoufy, which ftrong diftruft could infpire. The latter regarded the former as inftruments of power, wifhing to pay their court to the Mother Country, by curbing the fpirit of American freedom, and the former kept a ftrift eye on the latter, left they might fmooth the way to independence, at which they were charged with aiming. Lieutenant Governor Hutchinfon, of Maffachufetts, virtually challenged the affembly to a difpute, on the ground of the controverfy between the two countries. This was accepted by the latter, and the fubject difcuffed with all the fubtility of argument, which the ingenuity of either party could fuggeft.

The war of words was not confined to the Colonies. While the American affemblies paffed refolutions, afferting their exclufive right to tax their conftituents, the Parliament by refolves afferted their unlimited fupremacy in and over the Colonies. While the former, in their public acts, difclaimed all views of independence, they were fucceffively reprefented in parliamentary n

refolves, royal speeches, and addresses from Lords and Commons, as being in a flate of difobedience to law and government, and as having proceeded to measures subversive of the constitution. and manifesting a dispesition to throw off all subordination to Great-Britain:

In February, 1769, both Houses of Parliament went one ftep beyond all that had preceded. They then concurred in a joint address to his Majesty, in which they expressed their satisfaction in the measures his Majesty had pursued-gave the Grongest affurances, that they would effectually support him in such farther measures as might be found necessary to maintain the clisit magiftrates in a due execution of the laws; in Maffachulett's Bay, and befeeched him " to direct the governor to take the most effectual methods for procuring the fulleft information; touching all treafons or milprifions of treasons committed within the government; fince the 30th day of December, 1767 ; and to transmit the same; together with the names of the perfons who were most active in the commission of such offences; to one of the fecretaries of state, in order that his Majesty might issue a special commission for enquiring of, hearing, and determining, the faid offences, within the realm of Great-Britain; purfuant to the provisions of the flatute of the 35th of King Henry the 8th." The latter part of this address, which proposed the bringing of delinquents from Malfachuletts, to be tried at a tribunal in Great-Britain; for crimes committed in America; underwent many fevere animaliverfions.

. It was afferted to be totally inconfistent with the fpirit of the conflitution, for in England a man charged with a crime, had a right to be tried in the country in which his offence was fappofed to have been committed. "Juffice is regularly and impartially. administered in our court," faid the Colonists, " and yet by direction of Parliament, offenders are to be taken by force, together with all fuch perfons as may be pointed out as witneffes, and carried to England, there to be tried in a diftant land, by a jury of ftrangers, and fubject to all the difadvantages which refult from want of friends, want of witneffes, and want of money."

The Houfe of Burgeffes of Virginia met foon after official accounts of the joint addreffes of Lords and Commons on this fubjeft reached America ; and in a few days after their meeting, paffed refolutions expressing "their exclusive right to tax their conftituents, and their right to petition their Sovereign for redrefs of grievances, and the lawfulness of procuring the concurrence of the other Colonies in praying for the royal interpolition in favour of the violated rights of America; and that all trials for treason, or for any crime whatfoever, committed in that Colony, Vol. I.

150

ought to be before his Majefty's courts within the faid Colony ; and that the feizing any perfon refiding in the faid Colony, fufpected of any crime whatfoever committed therein, and fending fuch perfon to places beyond the fea to be tried, was highly derogatory of the rights of British fubjects." The next day Lord Botetourt, the governor of Virginia; fent for the Houfe of Burgeffes and addreffed them as follows : "Mr. Speaker and gentlemen of the Houfe of Burgeffes, I have heard of your refolves, and augur th of their effects. You have made it my duty to diffolve you, and you are diffolved accordingly."

The Alembly of North-Garolina adopted refolutions, fimilar to thole of Virginia, for which Tyron their governor diffolved them. The members of the House of Burgesses in Virginia, and of the Affembly of North-Carolina, after their diffolution, met as private gentlemen, chole their late speakers moderators, and adopted refolutions against importing British goods. The non-importation agreement was in this manner forwarded by the very measures which were intended to curb the fpirit of American freedom, from which it fprung. Meetings of the affociators were regularly held in the various provinces. Committees were appointed to examine all veffels arriving from Britain. Cenfures were freely paffed on fuch as refused to concur in these affociations, and their names published in the newspapers as enemics to their country. The regular acts of the Provincial Affemblies were not fo muchrespected and obeyed as the decrees of these committees, the affociations were in general, as well observed as could be expected, notwithstanding there were fome collusions. The fear of mobs, of public refentment and contempt, co-operating with patriotifm, preponderated over private interest and convenience. One of the importing merchants of Bofton, who hefitated in his compliance with the determination of the inhabitants, was waited upon by a committe of tradelmen, with an axeman and carpenter at their head, who informed him, "that one thousand men were waiting for his answer, and that if he refused to comply, they could not tell what might be the confequence." He complied, and the newspapers foon after published, that he did it voluntarily.

In Bofton, Lieut. Governor Hutchinfon endeavoured to promote a counter-affociation, but without effect. The friends of importation objected, that till Parliament made provision for the punifhment of the confederacies against importation, a counteraffociation would answer no other purpose, than to expose the affociators to popular rage. h

p

fa

th

CO

1214

The Bostonians, about this time, went one step farther. They re-shipped goods to Great-Britain, instead of storing them as formerly. This was refolved upon in a town meeting, on the infor-

mation of an inhabitant, who communicated a letter that he had lately received from a Member of Parliament, in which it was faid, " that fhipping back ten thoufand pounds worth of goods would do more than floring a hundred thoufand." This turned the fcale, and procured a majority of votes for re-fhipping. Not only in this, but in many other inflances, the violences of the Colonifts were foffered by individuals in Great-Britain. A number of these were in principle with the Americans, in denying the right of Parliament to tax them, but others were more influenced by a fpirit of opposition to the ministerial majority, than by a regard to the conflitutional liberties of either country.

The non-importation agreement had now lafted forme time, and by degrees had become general. Several of the colonial affemblies had been diffolved, or prorogued, for afferting the rights of their conftituents. The royal governors, and other friends to au American revenue, were chagrined. The Colonifts were irritated. Good men, both in England and America, deplored theie untoward events, and beheld with concern an increating ill humour between those, who were bound by interest and affection to be friends to each other.

In confequence of the American non-importation agreement, founded in opposition to the duties in 1767, the manufacturers of Great-Britain experienced a renewal of the diftreffes, which followed the adoption of fimilar resolutions in the year 1765, the repeal of these duties was therefore folicited by the fame influence, which had procured the repeal of the famp act. The rulers of Great-Britain acted without decision. Instead of perfevering in their own fystem of coercion, or indeed in any one uniform fystem of colonial government, they flruck out a middle line, embarraffed with the confequences, both of feverity and of lenity, and which was without the complete benefits of either, Soon after the spirited address to his Majesty, last mentioned, had passed both Houses of Parliament, affurances were given for repealing all the duties imposed in 1767, excepting that of threepence per pound on tea,

Anxious on the one haud to establish parliamentary supremacy, and on the other, associated to show the torrent of opposition, they conceded enough to awaken the former, and yet not enough to fatisfy the latter. Had Great-Britain generously repealed the whole, and for ever relinquished all claim to the right, or even the exercise of the right of taxation, the union of the two countries might have lasted for ages. Had the feriously determined to compel the fubmission of the Colonies, nothing could have been more unfriendly to this defign, than her repeated concessions to

nportation measures 1 freedom; were reguappointed were freely , and their is country. ot fo much ees, the afe expected, ar of mobs, patriotifm, e. One of his complivaited upon arpenter at men were mply, they omplied, and luntarily. ared to profriends of ifion for the a countero expose the

their reiterated affociations. " The declaratory act, and the refervation of the duty on tea, left the caufe of contention between the two countries in full force; but the former was only a claim on paper, and the latter might be evaded, by refuting to purchase any tea on which the parliamentary tax was impoled. The Colonists, therefore, conceiving that their commerce might be renewed, without effablishing any precedent injurious to their liberties, relaxed in their affociations, in every particular, except remediately recommenced the importation of all other ter, and rehandife. A political calm once more took place. rticles. The Parent State might now have closed the difpute for ever. and honourably receded, without a formal relinquishment of her claime. Neither the refervation of the duty on tea, by the Britilh Parliament, nor the exceptions made by the Colonifts, of importing no tea, on which a duty was imposed, would, if they had been left to their own operation, have diffurbed the returning harmony of the two countries. Without fresh irritation, their wounds might have healed, and not a fcar been left behind.

Thele two abortive attempts to raife a parliamentary revenue in America, icaufed a formentation in the minds of the Colonifts, and gave birth to many inquiries respecting their natural rights. Reflections and reasonings on this subject produced a high fense of liberty, and a general conviction that there could be no fecurity for their property, if they were to be taxed at the differention of a British Parliament, in which they were unrepresented, and overwhich they had no controul. A determination not only to oppose this new claim of taxation, but to keep a strict watch, left it might be established in some disguised form, took possession of their minds.

It commonly happens in the discussion of doubtful claims between flates, that the ground of the original dispute infenfibly. changes. When the mind is employed in investigating one fub. ject, others affociated with it, naturally prefent themfelves. In the course of inquiries on the subject of parliamentary 'taxation' the reftriction on the trade of the Colonifis-the necessity that was imposed on them to purchase British and other manufactures, loaded with their full proportion of all taxes paid by those who made or fold them, became more generally known. While Ame rican writers were vindicating their country from the charge of contributing nothing to the common expences of the empire, they, were led to fet off to their credit, the difadvantage of their being confined exclusively to purchase such manufactures in Britain. They instituted calculations, by which they demonstrated that the monopoly of their trade, drew from them greater fums for the support of government, than were usually paid by an equal num.

ber of their fellow citizens of Grest Britsin; and that taxation, fuperadded to fuch a monopoly, would leave them in a fate of perfect uncompensated flavery. The investigation of these fubjects brought matters into view which the friends of union ought to have kept out of fight. These circumflances, together with the extensive population of the Eastern States, and their adventurous fpirit of commerce, fuggested to fome bold spirits, that not cally British taxation, but British navigation laws, were the interests of America. Speculations of this magnetic well with the extensive views of fome capital merchanics ver would have roused the bulk of the people, had not brought the dispute between the two countries to a town which every individual was interested.

On reviewing the conduct of the British ministry respecting the Colonies, much weakness as well as folly appears. For a fucces, fion of years there was a steady pursuit of American revenue, but great inconfistence in the projects for obtaining it. In one moment the Parliament was for enforcing their laws, the next for repealing them. Doing and undoing, menacing and submitting, straining and relaxing, followed each other in alternate fuccession. The object of administration, though twice relinquished as to prefent efficiency, was invariably pursued, but without any unity of system,

On the 9th of May, 1769, the King in his speech to Parlia. ment highly applauded their hearty concurrence, in maintaining the execution of the laws in every part of his dominions, Five days after this ipeech, Lord Hillfborough, Secretary of State for the Colonies, wrote to Lord Botetourt, governor of Virginia: "I can take upon me to affure you, notwithstanding informations to the contrary, from men with factious and feditious views, that his Majefty's prefent administration have at no time entertained a defign to propole to Parliament to lay any farther taxes upon America, for the purpole of raising a revenue, and that it is at prefent their intention to propole the next fellion of Parlian ment, to take off the duties upon glafs, paper, and colours upon confideration of fuch duties having been laid contrary to the true principles of commerce." The governor was also informed, that "his Majefty relied upon his prudence and fidelity, to make fuch an explanation of his Majefty's measures as would tend to remove prejudices, and to re-eftablish mutual confidence and affection between the Mother Country and the Colonies," In the exact spirit of his instructions, Lord Botetourt addressed the Virginia Affembly as follows: "It may poffibly be objected, that as his Majefty's prefent administration are not immortal, their succeffors may be inclined to attempt to undo what the prefent

minifters shall have attempted to perform, and to that objection I can give but this answer, that it is my firm opinion that the plan I have flated to you will certainly take place, that it will never be departed from; and fo determined am I for ever to abide by it, that I will be content to be declared infamous, if I do not to the last hour of my life, at all times, in all places, and upon all accessions, extert every power, with which I either am, or ever half be legally invested, in order to obtain and maintain for the continues of America, that fatisfaction which I have been autho. The transfer this day, by the confidential fervants of our graduat Sovereign, who to my certain knowledge, rates his henour to high, that he would rather part with his Crown, than preferve it by deceit."

These affurances were received with transports of joy by the Virginians.' They viewed them as pledging his Majefty for fecurity, that the late defign for raiting a revenue in America was abandoned, and never more to be refumed. The Affembly of Virginia, in answer to Lord Botetourt, expressed themselves thus: "We are fure our most gracious fovereign, under whatever changes may happen in his confidential fervants, will remain immutable in the ways of truth and justice, and that he is incapable of deceiving his faithful subjects; and we esteem your Lordship's information not only as warranted, but even fanctified by the royal word."

How far these folemn engagements with the Americans were observed, subsequent events will demonstrate. In a perfect reliance on them, most of the Colonists returned to their ancient habits of good humour, and flattered themselves that no future Parliament would undertake to give or grant away their property.

From the royal and ministerial affurances given in favour of America in the year 1769, and the fublequent repeal in 1770, of five fixths of the duties which had been imposed in 1767, together with the confequent renewal of the mercantile intercourfe between Great Britain and the Colonics, many hoped that the contention between the two countries was finally closed. In all the provinces, excepting Maffachufetts, appearances feemed to favour that opinion. Many incidents operated there to the prejudice of that harmony, which had begun elfewhere to return. The flationing a military force among them was a fruitful fource of uncafinels. The royal army had been brought thither, with the avowed defign of enforcing fubmiffion to the Mother Country. Speeches from the throne, and addreffes from both Houles of Parliament, had taught them to look upon the inhabitants as a factious, turbulent people, who aimed at throwing off all fubor-

They, on the other hand, were accultomed to look upon the foldiery as inftruments of tyranny, fent on purpose to dragoon them out of their liberties.

Reciprocal infults foured the tempers, and mutual injuries embittered the paffions, of the opposite parties: belides, fome fiery fpirits who thought it an indignity to have troops quartered among them were, constantly exciting the towns-people to quartelwith the foldiers.

On the 2d of March, a fray took place near Mr. Gray's ro walk, between a private folder of the 29th regiment and ga in bitant. The former was supported by his comrades, the latter I the ropemakers, till feveral on both fides were involved in a confequences. On the 5th a more dreadful fcene was pro-The foldiers, when under arms, were preffed upon, infulted, and pelted, by a mob armed with clubs, flicks, and fnowballs covering ftones; they were also dared to fire. In this fituation, one of the foldiers who had received a blow, in refentment fired at the supposed aggressor. This was followed by a single discharge from fix others. Three of the inhabitants were killed, and five were dangeroufly wounded. The town was immediately in commotion. Such was the temper, force, and number of the inhabitants, that nothing but an engagement to remove the troops out of the town, together with the advice of moderate men, prevented the townfmen from falling on the foldiers. The killed were buried in one vault, and in a most respectful manner, to express the indignation of the inhabitants at the flaughter of their brethren by foldiers quartered among them, in violation of their civil liberties. Prefton the captain who commanded, and the party which fired on the inhabitants, were committed to jail, and afterwards tried. The captain and fix of the men were acquitted. Two were brought in guilty of manflaughter. "It appeared on the trial, that the foldiers were abused, infulted, threatened, and pelted, before they fired. It was also proved, that only feven guns were fired by the eight prisoners. These circumstances induced the jury to make a favourable verdict. The refult of the trial reflected great honour on John Adams and Joliah Quincy, the council for the priloners and also on the integrity of the Jury, who ventured to give an upright verdict, in defiance of popular opinions.

The events of this tragical night funk deep in the minds of the people, and were made fubfervient to important purpofes. The anniverfary of it was obferved with great folemnity. Eloquent orators were fucceffively employed to deliver an annual oration, to preferve the remembrance of it fresh in their minds. On these eccasions the blessings of liberty—the horrors of flavery—the dangers of a flanding army—the rights of the Colonies, and a

variety of fuch topics were prefented to the public view, under their most pleasing and alarming forms. These annual orations administered fuel to the fire of liberty, and kept it burning with an incessant flame.

The obftacles to returning harmony, which have already been mentioned, were increased, by making the povernor and judges in Hallachuletts independent of the province. Formerly, they bene paid by yearly grants from the Affembly, but about this provision was made for paying their falaries by the crown, spelented as a dangerous innovation, as an infraction of and as deftroying that balance of power which is free governments. That the Crown flould pay the the chief juffice, was represented by the Affembly, as a fpecies of bribery, tending to blas his judicial determinations. They made it the foundation for impeaching Mr. Juffice Oliver, before the Governor, but he excepted to their proceedings as unconstitutional. The Assembly, neverthelels, gained two points; they rendered the governor more odious to the inhabitants, and increased the public respect for themselves, as the counterpart of the British House of Commons; and as guardians of the rights of the people.

A perfonal animolity between Lieut, Governor Hutchinfon and fome diffinguished patriots in Maffachusetts, contributed to perpetuate a flame of difcontent in that province after it had elfewhere visibly abated. ' This was worked up, in the year 1773, to a high pitch, by a fingular combination of circumstances. Some letters had been written in the course of the dispute; by Gover. nor Hutchinson, Lieut: Governor Oliver; and others; in Boston, to perfons in power and office in England, which contained a very unfavourable representation of the flate of public affairs, and tended to flew the necessity of coercive measures, and of changing the chartered fystem of government, to secure the obedience of the province. These letters fell into the hands of Dr Franklin, agent of the province, who transmitted them to Boston. The indignation and animolity which was excited on the receipt of this, knew no bounds. The Haule of Affembly agreed on a petition and remonstrance to his Majesty, in which they charged their Governor and Lieut. Governor with being betroyers of their trufts and of the people they governed, and of giving private, partial, and falle information. They allo, Jan. 29, 1774. declared them enemies to the Colonics, and prayed for juffice against them, and for their speedy removal from their places, These charges were carried through by a majority of eighty-two to twelve.

"This petition and remonstrance being transmitted to England, the merits of it were discussed before his Majesty's privy-council. After an hearing before that board, in which Dr. Franklin represented the province of Massachusetts, the Governor and Lieut: Governor were sequitted. Mr. Wedderburne, who defended the accured royal fervants, in the course of his pleadings, inveighed against Dr. Franklin in the severest lange fomenter of the disputes between the two countries. - It protection to this venerable fage, that being the gent of chusetts, he conceived it his duty to inform his constitut letters written on public affairs, calculated to overturn their tered constitution. The age, respectability, and h. rafter of the fubject of Mr. Wedderburne's philip

attention of the public on the transaction, " The infult offered to one of their public agents, and especially to 'one who was both the idol and ornament of his native country, funk deep in the minds of the Americans. That a faithful fervant, whom they loved and almost adored, should be insulted for discharging his official duty, rankled in their hearts. Dr. Franklin was also immediately difmissed from the office of deputy post-master general, which he held under the crown. It was not only by his tranfmillion of these letters that he had given offence to the British ministry, but by his popular writings in favour of America. Two pieces of his, in particular, had lately attracted a large fhare of public attention, and had an extensive influence on both fides the Atlantic. The one purported to be an edict from the king of Pruffia, for taxing the inhabitants of Great-Britain, as descendants of emigrants from his dominions. The other was entitled, "Rules for reducing a great empire to a small one." . In both these he had exposed the claims of the Mother-Country, and the proceedings of the British ministry, with the severity of poignant fatire.

For ten years there had now been but little intermission to the disputes between Great-Britain and her colonies. Their respective claims had never been compromifed on middle ground. The calm which followed the repeal of the ftamp act, was in a few months difturbed by the revenue act of the year 1767. The tranquillity which followed the repeal of five fixths of that act in the year 1770, was nothing more than a truce. The refervation of the duty on tea, made as an avowed evidence of the claims of Great-Britain to tax her colonies, kept alive the jealoufy of the colonifts, while at the fame time the flationing of a flanding army in Massachusetts-the continuance of a board of commissioners in Bolton-the conftituting the governors and judges of that province independent of the people, were constant sources of irritation. The altercations which, at this period, were common be-Vol.ºI.

tween the royal governors and the principal affemblies, together with numerous vindications of the claims of America, made the fubject familiar to the colonifts. The ground of the controverfy was canvafied in every company. The more the Americans read, reafoned, and converfed on the fubject, the more were they convinced of their right to the exclusive difpolal wheir property were by a determination to refift all encroachments of British liberty. They were as firongly cont to refule and refift parliamentary taxation, as of Great-Britain, of their right to demand and

to it,

be two countries being thus incconcileably openter, the partial calm which followed the concelint in 1770, was liable to diffurbance from every incident. Under fuch circumftances, nothing lefs than the moft uarded conduct on both fides could prevent a renewal of the controverfy. Inflead of following those prudential measures which would have kept the ground of the diffute out of fight an impolitic fcheme was concerted between the British ministry and the East-India Company, which placed the claims of Great-Britain and of her colonies in hoftile array against each other.

Matters were now ripe for the utmost extremities on the part of the Americans; and they were brought on in the following, manner : Though the colonifts had entered into a non-importation ont against tea, as well as all other commodities from Bri-2 22 6 eventheless found its way into America, though in tain. fmaller quantings than before. This was fenfibly felt by the East-India Company, who had now agreed to pay a large fum annually to government ; in recompence for which compliance, and to make up their loffes in other respects, they were empowered to export their tea from any duty payable in Britain ; and in confequence of this permission, feveral ships freighted with the commodity were fent to North-America, and proper agents appointed for disposing of it. The Americans now perceiving that the tax was thus likely to be enforced whether they would or not. determined to take every poffible method to prevent the tea from being landed, as well knowing that it would be impoffible to hinder the fale, should the commodity once be brought on shore. For this purpole the people affembled in great numbers, forcing those to whom the tea was configned to refign their offices, and to promife folemnly never to refume them ; and committees were appointed to examine the accounts of merchants, and make public tefts, declaring fuch as would not take them enemies to their country. Nor was this behaviour confined to the colony of Maffachuffet's Bay; the reft of the provinces entered into the conteft

with the fame warmth, and manifested the fame refolution to oppose the mother-country.

In the midft of this confusion three ships laden with tea arrived at Bofton ; but fo much were the captains alarmed at the difpolition which feemed to prevail among the people, that they offered, providing they buld obtain the proper discharges for confignces, cuftom-houfe, and governor, to ret without landing their cargoes. The parties c **New** wh they durft not order the tes to be at the discharges required. The fhips, the en obliged to remain in the harbour; but lenfive that if they remained there the tea fmall quantities, and disposed of in spite of prevent it, refolved to deftroy it at once, executed with equal fpeed and fecrecy, The very she above-mentioned discharges had been refused, a number of people dreffed like Mohawk Indians, boarded the fhips, and threw into the fea their whole cargoes, confifting of three hun. dred and forty-two chefts of tea; after which they retired with. and making any further difturbance, or doing any more damage. No tes was destroyed in other places, though the fame fpirit was every where manifested, At Philadelphia the pilots were enjoined not to conduct the veffels up the river ; and at New-York, though the governor cauled fome tea to be landed under the protection of a man of war, he was obliged to deliver it up to the cuftody of the people, to prevent its being fold.

The destruction of the tea at Boston, which happened in November 1773, was the immediate prelude to the difasters attending civil difcord. Government finding themfelves every where infulted and despiled, resolved to enforce their authority by all point fible means; and as Boston had been the principal scene of the riots and outrages, it was determined to punish that city in an exemplary manner, Parliament was acquainted by a meffage from his Majefty with the undutiful behaviour of the city of Bofton. as well as of all the colonies, recommending at the fame time the most vigorous and spirited exertions to reduce them to obedience. The parliament in its address promised a ready compliance ; and indeed the Americans, by their fpirited behaviour, had now loft many of their partifans, ... It was proposed to lay a fine on the town of Boston equal to the price of the tea which had been destroyed, and to shut up its port by armed vessels until the refractory spirit of the inhabitants should be subdued; which it was thought must quickly yield, as a total stop would thus be put to their trade. The bill was strongly opposed on the same grounds

together made the introverly ana read, hey conproperty achments mgly conxation, at mand and

the contest

that the other had been; and it was predicted, that inftead of having any tendency to reconcile or fubdue the Americans, it would infallibly exaferate them beyond any poffibility of reconciliation. The petitions against it, prefented by the colony agent, pointed out the fame confequences in the stronged grms, and make most positive manner declared that Americans ne-

it to it; but fush was the infituation, strending degree of men, that it never wis imagined the are to refift the parent flats openly, the implicitly to her commands. In this was propoled for the impartial administration rions as might be employed in the imparte tumults in the province of Maffachuletts Bes provided, that fhould any perfons affing in that for murder, and not able to obtain a fair at in the province, they might be fent by the governor to

England, or to fome other colony, if necessary, to be tried for the fuppoled crime.

These three bills having paffed to easily, the ministry proposed a fourth, relative to the government of Canada; which, it was faid, had not been fettled on any proper plan. By this bill the extent of that province was greatly enlarged; its affairs were put under the direction of a council, in which Roman Catholics were to be admitted; the Roman Catholic clergy were fecured in their possible of their own profession. The council above mentioned were to be appointed by the crown, to be removeable at its pleasure; and to be invested with every legislative power, excepting that of taxation.

No fooner were thefe laws made known in America, than they cemented the union of the colonies beyond any pollibility of diffolving it. The affembly of Maffachufetts Bay had paffed a vote against the judges accepting falaries from the crown; and put the question, Whether they would accept them as usual from the general affembly? Four answered in the affirmative; but Peter Oliver the chief-justice refused. A petition against him, and an accusation, were brought before the governor; but the latter refused the accusation, and declined to interfere in the matter; but as they still infisted for what they called justice against Mr. Oliver, the governor thought proper to put an end to the matter by diffolving the affembly.

In this fituation of affairs a new slarm was occasioned by the news of the port-bill. This had been totally unexpected, and was received with the most extravagant expressions of displeasure among the populace; and while these continued, the new governor, General Gage, arrived from England. He had been chosen

to this office on account of his being well acquainted in Americs, and generally agreeable to the people; but human wifdom could not now point out a method by which the finne could be allayed. The first act of his office as governor was to remove the affembly to Salem, a town feventeen miles di fequence of the late set. When this was intimated bly, they replied by requesting him to appair humiliation for deprecating the wrath of he a refulal. When met at Salem, they paffed ing the necessity of a general congress com all the provinces, in order to take the affair large into confideration; and five gentle their opposition to the British measures, were that of Maffachuletts Bay. They then proce dition to drew up a declaration, containing a detail of ances they laboured under, and the necessity of exerting then felves against lawless power; they set forth the difregard hown to their petitions, and the attempts of Great-Britain to destroy their ancient constitution; and concluded with exhorting the inhabitants of the colony to obstruct, by every method in their power, fuch evil defigns, recommending at the fame time a total renunciation of every thing imported from Great-Britain till a redrefs of grievances could be procured.

Intelligence of this declaration was carried to the governor on the very day that it was completed; on which he diffulved the affembly. This was followed by an addrefs from the inhabitants of Salem in favour of those of Boston, and concluding with these remarkable words: "By shutting up the port of Boston, some imagine that the course of trade might be turned hither, and to our benefit; but nature, in the formation of our harbour, forbids our becoming rivals in commerce with that convenient mart 3 and were it otherwise, we muss be dead to every idea of justice, lost to all feelings of humanity, could we indulge one thought to feize on wealth, and raise our fortunes on the ruin of our suffering neighbours."

It had been fondly hoped by the ministerial party at home, that the advantages which other towns of the colony might derive from the annihilation of the trade of Boston would make them readily acquiesce in the measure of shutting up that port, and rather rejoice in it than otherwise; but the words of the address abovementioned seemed to preclude all hope of this kind; and subsequent transactions foon manifested it to be totally vain. No fooner did intelligence arrive of the remaining bills passed in the selfion of 1774, than the cause of Boston became the cause of all the colonies. The port-bill had already occasioned violent com-

motions throughout them all. It had been reprobated in provincial meetings, and refutance even to the laft had been recommends ed againft fuch opprefiion. In Virginia, the 1ft of June, the day or which the port of Bofton was to be flut up, was held as a day of burniliation, and a public interceffion in favour of Ameoined. The ftyle of the prayer enjoined at this time would give the people one heart and one mind, overy invation of the American rights. The r, did not content themfelves with afts of commended in the ftrongeff manner a general polonics, as fully perfuaded that an attempt to an arbitrary manner was in reality an attack and muft ultimately end in the ruin of them

The provinces of New-York and Pennfylvanis, however, were lefs fanguine than the reft, being fo closely connected in the way of trade with Great-Britain, that the giving it up entirely appeared a matter of the most ferious magnitude, and not to be thought of but after every other method had failed. The intelligence of the remaining bills respecting Boston, however, fpread a fresh slarm throughout the continent, and fixed thole who had feemed to be the most wavering. The proposal of giving up all commerical intercourfe with Britain was again proposed a contributions for the inhabitants of Boston were raifed in every quarter; and they every day received addreffes commending them for the heroic courage with which they fustained their calamity.

The Boftonians on their part were not wanting in their endeavours to promote the general caule. An agreement was framed, which, in imitation of former times, they called a Solemn League and Covenant, By this the fubscribers most religiously bound themfelves to break off all communication with Britain after the month of August enfuing, until the obnoxious acts were repealed; at the fame time they engaged neither to purchase nor use any goods imported after that time, and to renounce all connexion with those who did, or who refused to subscribe to this covenant; threatening to publish the names of the refractory, which at this time was a punishment by no means to be despiled. M'Agreements of a fimilar kind were almost instantaneously entered into through. out all America, General Gage indeed attempted to counterad the covenant by a proclamation, wherein it was declared an illegal and traiterous combination, threatening with the pains of law fuch as fubscribed or countenanced it. But matters were too far gone for his proclamation to have any effect. The Americans retorted the charge of illegality on his own proclamation; and in-

filled that the law allowed fubjects to meet in order to confider of their grievances, and affociate for relief from opprefilion.

Preparations were now made for holding the general congrefs fo often propoled. Philadelphis, as being the moft centrical and confiderable town, was pitched upon for the place of ing. The delegates of whom it was to be comby the reprefentatives of each province, from two to feven for each colony, the more than one vote. The first congrefs phis, in the beginning of September s7 one delegates. The novelty and importacited an universal attention; and their test could not but tend to render them refpectable

The first act of congress was an approbation Maffischusetts Bay, and an exhortation to continue fpirit with which they had begun. Supplies for the faileness inhabitants, whom indeed the operation of the port-bill had reduced to great distress, were strongly recommended; and it was declared, that in case of attempts to enforce the obnoxious acts by arms, all America should join to affist the town of Boston; and should the inhabitants be obliged, during the course of hostilities, to remove farther up the country, the loss they might suftain should be repaired at the public expense.

They next addressed General Gage by letter; in which, having flated the grievances of the people of Massachuletts colony, they informed him of the fixed and unalterable determination of all the other provinces to support their brethern, and to oppose the British acts of parliament; that they themselves were appointed to watch over the liberties of America; and intreated him to dissift from military operations, left such hostilities might be brought on as would frustrate all hopes of reconciliation with the parent flate.

The next flep was to publish the following declaration of their rights.

#### DECLARATION OF RIGHTS.

THE good people of the feveral Colonies of New-Hamfhire, Maffachufetts-Bay, Rhode-Ifland, and Providence Plantations, Connecticut, New-York New-Jerfey, Pennfylvania, Newcaftle, Kent, and Suffex on Delaware, Maryland, Virginia, North Carolina, and South Carolina, alarmed at the arbitrary proceedings of the Britifh Parliament and Administration, having feverally elected deputies to meet and fit in General Congress in the city of Philadelphia, and those deputies fo chosen being affembled on the 5th day of September, after fettling feveral necessary preli-

A copy of a letter to General Gage wash, agreeable to order, figned by the Priors :

### Philadelphia, Oct. 10, 1774.

#### " SIR,

"The inhabitants of the town of Bolton have informed us the Representatives of his Majesty's faithful subjects in all the Colonies from Nova-Scotia to Georgia, that the fortifications crefting within that town, the frequent invasions of private property, and the repeated infults they receive from the foldiery, hath given them great reason to suspect a plan is formed very distructive to them, and tending to overthrow the liberties of America,

"Your Exellency cannot be a ftranger to the fentiments of America with refpect to the late Acts of Parliament, under the execution of which those unhappy people are oppressed; the approbation universally expressed of their conduct, and the determined resolution of the Colonics, for the preservation of their Common Rights, to unite in their opposition to those Acts. In confequence of these fentiments, they have appointed us the guardians of their rights and liberties, and we are under the decpess concern, that, whill we are pursuing every dutiful and peaceable measure, to procure a cordial and effectual reconciliation between Great Biltain and the Colonies, your Excellency should proceed in a manner that bears so hostile an appearance, and which even those oppressive Acts do not warrant.

We entreat your Excellency to confider, what tendency this conduct must have to irritate and force a people, however well disposed to peaceable measures, into hostilities, which may prevent the endeavours of this Congress to restore a good understanding with a Parent State, and may involve us in the horrors of a civil war.

468

laffes,

"In order therefore to quiet the minds, and remove the reafonable jealoufies of the people, that they may not be driven to a flate of "desperation, being fully perfuaded of their pacific disposition, powards the King's troops, could they be affured of their own fafter two to a Sir, you will discontinue the fortifications in and any further invations of private property, foldiers, and give orders that the town and country may be open,

# behalf of the General Congress, PEYTON RANDOLPH, Prefident."

goods until the acts were repealed by pools upon tea, coffee, wine, fugar, and mo-America, as well as the Bofton port-act, and

the three others passed in the preceding fession of parliament. The new regulations against the importation and confumption of British commodities were then drawn up with great folemnity; and they concluded with returning the warmest thanks to those members of parliament who had with so much zeal, though without any success, opposed the obnexious acts of parliament.

Their next proceedings where to frame a petition to the King, an addrefs to the Britifh nation, and another to the colonies; all of which where fo much in the ufual first of American language for fome time paft, that it is needlefs to enter into any particular account of them. It is fufficient to fay that they were all drawn up in a mafterly manner, and ought to have imprefied the people of this country with a more favourable idea of the Americans, than they could at that time be induced to entertain.

All this time the difpolition of the people had corresponded with the warmeft wishes of Congress. The first of June had been kept as a fast, not only throughout Virginia, where it was first propoled, but through the whole continent. Contributions for the distresses of Boston had been raised throughout America, and people of all ranks seemed to be particularly touched with them: Even those who seemed to be most likely to derive advantages from them took no opportunity, as has been already instanced in the case of Salem. The inhabitants of Marble-head also shewed a noble example of magnanimity in the present case. Though fituated in the neighbourhood of Boston, and most likely to derive benefit from their distresses, they did not attempt to take any advantage, but generously offered the use of their harbour to the Bostonians, as well as their wharfs and warehouses, free of all expence. In the mean time the British forces at Boston werg

ca, and h them: rantages need in ewed z sh fitu. derive ke any to the of all a werg continually increasing in number, which greatly sugmented the general jealoufy and diaffection; the country were ready to rise at a moment's warning; and the experiment was made by giving a falfe alarm that the communication between try was to be cut off, in order to reduce the a compliance with the afts of Parliance the country people affembled in great a fatisfied till they had tent meffengers the truth of the report. Thele form the town's people, that if they as to make a furrender of their libes not think itfelf bound by fuch examp breaking their original charter, had fifting between them, and left them

The people in every other refpect manifestion of the second determination to adhere to the plan they had to be a second. The new counfellors and judges were obliged to second their offices, in order to preferve their lives and properties from the fury of the multitude. In fome places they flut up the avenues to the court-houfes; and when required to make way for the judges, replied, that they knew of none but fuch as were appointed by the ancient ufage and cuftom of the province. Every where they manifelted the most ardent defire of learning the art of war; and every individual who could bear arms, was most affiduous in procuring them, and learning their exercise.

Matters at haft proceeded to fuch an height, that General Gage thought proper to fortify the neck of land, which joins the town of Boston to the continent, This, though undoubtedly a prudent measure in his fituation, was exclaimed against by the Americans in the most vehement manner; but the General, instead of giving car to their remonstrances, deprived them of all power of acting against himself, by seizing the provincial powder, amunition, and military flores, at Cambridge and Charlestown. This excited fuch indignation, that it was with the utmost difficulty the people could be reftrained from marching to Bofton and attacking the troops. Even in the town itfelf, the company of cadets that used to attend him disbanded themselves and returned the standard, he had as usual presented them with on his acceffion to the government. This was occasioned by his having deprived the celebrated John Hançock, afterwards prefident of the congress, of his commission as colonel of the cadets. A fimilar instance happened of a provincial colonel having accepted a feat in the new council; upon which twenty-four officers of his regiment refigned their commissions in one day.

In the mean time, thereting was held of the principal inhabitants of the towns adjacent to Bofton. The purport of this was publicly to renounce all obedience to the late acts of parliament, form an engagement to indemnify fuch as fhould be prount; the members of the new council were rights of their country; all ranks and deirn the use of arms; and the receivers ordered not to deliver it into the their own hands till the conflictution rovincial congress dispose of it other-

But the contract of a still post and

the fortifications on Bofton Neck was , however, they still pretended their d to any hoftile measures; afferting only entermination not to submit to the acts of parready to much complained of. The Goverquility, if possible, called a general assembly; nor, but to may of the council had refigned their feats, that he was induced to countermand its fitting by proclamation. This meafure, however, was deemed illegal ; the affembly met at Salem ; and after waiting a day for the Governor, voted themfelves into a provovincial congress, of which Mr. Hancock was chosen Prefident. A committee was inftantly appointed, who waited on the governor with a remonstrance concerning the fortifications on Bofton Neck ; but nothing of confequence took place, both par, ties mutually criminating each other. The winter was now coming on, and the Governor, to avoid quartering the foldiers upon the inhabitants, proposed to erect barracks for them; but the select men of Boston compelled the workmen to defist. Carpenters were feat for to New-York, but they were refused; and it was with the utmost difficulty that he could procure winter lodgings for his troops, Nor was the difficulty lefs in procuring clothes; , as the merchants of New-York told him, that "they would never fupply any article for the benefit of men fent as enemies to their country,"

This difpolition, known to be almost universal throughout the continent, was in the highest degree fatisfactory to congress. Every one faw that the enfuing fpring was to be the feston for commencing hostilities, and the most indefatigable diligence was used for the colonies to be well provided against fuch a formidable enemy. A list of the fencible men in each colony was made out, and especially of those who had ferved in the former war; of whom they had the fatisfaction to find that two-thirds were still alive and fit to bear arms. Magazines of arms were collected, and money was provided for the payment of troops. The governors in vain attempted to put a ftop to these proceedings by

proclamations : the fatal period was now arrived; and the more the fervants of government attempted to repuels the spirit of the Americans, the more violent it appeared.

The beginning of firife between the Farent State lonies was like the letting out of waters. caufes love was changed into fufpicion that ill will, and foon ended in hoftility. Proprocal intereft, urged the expediency falfe honour, and mifconceived dignity reftion. Undecided claims and doubth influence of wifdom and humility mipromifed, imperceptibly widened into an Hatred at length took the place of kind at ties of war were fubfituted in lieu of the From the year 2768, in which a military

oned in Boston, there was a constant succession looks, and gestures. The inhabitants were the foldiers, and they against the inhabitants. The former looked on the latter as the inftruments of tyranny, and the latter on the former as feditious rioters, or fraudulent fmugglers. In this irritable state, every incident, however, trisling, made a sensible impreffion. The citizens apprehended constant danger from an armed force, in whole power they were; the foldiers, on the other hand, confidered themselves as in the midst of their ene. mies, and exposed to attacks from within and without. In proportion as the breach between Great-Britain and her colonies widened, the diffrust and animofity between the people and the army increased. From the latter end of 1774, hostile appearances daily threatened that the flames of war would be kindled from the collifion of fuch inflammable materials. Whatfoever was done by either party by way of precaution, for the purpoles of felf-defence, was confirued by the other as preparatory to an intended attack. Each disclaimed all intentions of commencing hostilities, but reciprocally manifested fuspicion of the other's, fincerity. As far as was practicable without an open rupture, the plans of one were respectively thwarted by the other. From every appearance it became daily more evident that arms must ultimately decide the contest. To fuffer an army that was foon expected to be an enemy, quietly to fortify themselves; when the inhabitants were both able and willing to cut them off, appeared to fome warm fpirits the height of folly; but the prudence and moderation of others, and efpecially the advice and recommen\_ dation of Congress, restrained their impetuosity. It was a for. tunate circumftance for the colonies that the royal army was poft." ed in New-England. The people of that nothern country have

his doing any thing for his royal mafter, while by patience and moderation they fkreened themfelves from centure. Though refolved to bear as long as prudence and policy dictated, they were all the time preparing for the last extremity. They were furnifhing themfelves with arms and ammunition, and training their militia.

Provisions were also collected and flored in different places. particularly at Concord, about twenty miles from Bofton. General Gage, though zealous for his royal mafter's interest, difcovered a prevailing defire after a peaceable accommodation. He wished to prevent hostilities by depriving the inhabitants of the means neceffary for carrying them on. With this view he determined to deftroy the ftores which he knew were collected for the support of a provincial army. Wishing to accomplish. this without bloodfhed, he took every precaution to effect it by furprife, and without alarming the country. At eleven o'clock at night on April 18, eight hundred grenadiers and light infantry, the flower of the royal army, embarked at the Common, landed at Phipps's farm, and marched for Concord, under the command of Lieutenant-Colonel Smith. Neither the feercey with which this expedition was planned, the privacy with which the troops marched out, nor an order that no one inhabitant should leave Boston, were sufficient to prevent intelligence from being fent to the country militia, of what was going on. Th on which he advanced nearer dife his foldiers to fire. This was done of the militia was the confequence, was neverthelefs continued. Individ upon, though difperfing, returned the ste. militia were killed on the green ; a few had begun to difperfe. The royal d Concord, and executed their committion sill into twenty-four pounders threw five hundred rivers and wells, and broke in pieces about fixty barrels of flour. Mr. John Butterick of Concord, major of a minute regiment, not knowing what had paffed at Lexington, otdered his men not to give the first fire, that they might not be the sggressors. Upon his approaching near the regulars, they fired, and killed Captain Ifaac Davis, and one private of the provincial minute men. The fire was returned, and a fkirmish enfued, The King's troops having done their bufinefs, began their retreat towards Bofton, This was conducted with expedition, for the adjacent inhabitants had allembled in arms, and began to attack them in every direction. In their return to Lexington they were exceedingly annoyed, both by those who pressed on their rear, and others who pouring in on all fides, fired from behind ftone walls, and the like coverts, which supplied the place of lines and redoubts, Lexington the regulars were joined by a detachment of nine hundred men, under Lord Piercy, which had been fent out by General Gage to fupport Lieutenant-colonel Smith. This reinforcement having two pieces of cannon awed the provincials, and kept them at a greater diftance, but they continued a conftant, though irregular and feattering fire, which did great execution, The close firing from behind the walls by good markimen, put the regular troops in no fmall confusion, but they nevertheless kept up a brick retreating fire on the militia and minute men. A little after funfet the regulars reached Bunker's Hill, worn down with excellive fatigue, having marched that day between thirty and

forty miles. On the next day they, erolied Charlestown ferry

ide the controverfy, it was fortunate for if blood was drawn in New-England: antry are fo connected with each other son, politics, and a general equality, that is individual intereft the whole; and made a a a common caufe. The blood of those who Lexington and Concord proved the firm cement of

were killed at Lexington and Concord proved the firm cement of an extensive union. To prevent the people within Bofton from co-operating with their

them

countrymen without, in cafe of an affault, which was now daily expected, General Gage, April 22, agreed with a committee of the town, that upon the inhabitants lodging their arms in Fancuilhall, or any other convenient place, under the care of the felect men, all fuch inhabitants as were inclined, might depart from the town, with their families and effects. In five days after the ratification of this agreement, the inhabitants had lodged one thoufand feven hundred and feventy-eight fire arms, fix hundred and thirty-four piftols, two hundred and feventy-three bayonets, and thirty-eight blunderbuffes. The agreement was well obferved in the beginning, but after a fhort time obstructions were thrown in the way of its final completion, on the plea that perfons who went from Bofton to bring in the goods of those who chose to continue within the town, were not properly treated. Congress remonftrated on the infraction of the agreement, but without effect. The General, on a farther confideration of the confequences of moving the whigs out of Boston, evaded it in a manner not confistent with good faith. He was in fome measure compelled to adopt this diffonourable measure, from the clamour of the tories, who alledged, that none but enemies to the British government were disposed to remove, and that when they were all fafe with their families and effects, the town would be fet on fire. To prevent the provincials from obtaining supplies which they much wanted, a quibble was made on the meaning of the word effects,

475

Contrary to good faith he dee fairly entitled by agreement to go out, and when he mitted the

departure of others he would not allow them to move their families and effects.

The Provincial Congress of Massachusetts, which was in fession at the time of the Lexington battle, dispatched an account of it to Great-Britain, accompanied with many depositions, to prove that the British troops were the aggressors. They also made an address to the inhabitants of Great-Britain, in which, after complaining of their sufferings, they fay, "these have not detached us from our royal Sovereign; we profess to be his loyal and dutiful subjects, and though hardly dealt with, as we have been, are still ready with our lives and fortunes, to defend his person, crown, and dignity; nevertheless, to the perfecution and tyranny of his evil Ministry, we will not tamely submit. Appealing to Heaven for the justice of our cause, we determine to die or be free." From the commencement of hostilities, the dispute between Great-Britain and the Colonies took a new direction.

Intelligence that the British troops had marched out of Boston into the country on some hostile purpose, being forwarded by expresses from one committee to another, great bodies of the militia, not only from Maffachusetts but the adjacent Colonics, grafped their arms and marched to oppose them. The Colonics were in such a state of irritability, that the least shock in any part was; by a powerful and sympathetic affection, instantaneously felt throughout the whole. The Americans who scale were revered by their countrymen, as martyrs who had died in the caule of

Immediately of the t after the lexing on battle, these were for the most part taken possellion of throughout the Colonies, by parties of the provincial milicia, Ticonderoga, in which was a fmall royal garrifon, was furprifed and taken by adventures from different flates. Public money which had been collected in confequence of previous grants, was also feized for common fervices. Before the commencement of hostilities these measures would have been condemned by the moderate even among the Americans, but that event justified a bolder line of opposition than had been adopted .----Sundry citizens having been put to death by British troops, felf-prefervation dictated measures which, if adopted under other circumstances, would have difunited the Colonists, One of the most important of this kind was the raising an army. Men of warm tempers, whole courage exceeded their prudence, had for months urged the necessity of raising troops; but they were reftrained by the more moderate, who wished that the Colonies might avoid extremitics, or at leaft that they might not lead in bringing them on, The Provincial Congress of Massachuletts being in fellion' at the time the battle of Lexington was fought, voted that " an army of thirty thousand men be immediately raifed. that thirteen thousand fix hundred be of their own province, and that a letter and delegate be fent to the feveral Colonies of New-Hampshire, Connecticut, and Rhode-Island. In consequence of this vote, the business of recruiting was begun, and in a short time a provincial army was paraded in the vicinity of Bofton, which, though far below what had been voted by the Provincial

Congress was much superior in numbers to the royal army. The putuning of this force was given to General Ward. Had the British troops confined themselves the fore the a8th of April, the affembling an only for the purpole of oblervation and appeared in the nature of a chall many lefs willing to support the pe menced boft ter the British had . com adopted, without subjecting the aut without giving offence or have battle not only furnished the sy for raising an army, but infpi prowels. Amidit the most anima fortune, and rifquing life itfelf rights, a fecret figh would frequently her most determined friends, for fear before the bravery and discipline of would shake their heads and fay, wilk you fuccels, but I fear that your undifcip a plan muft be overcome in the unequal contest. After a few thoulands of you have fallen, the Provinces must ultimately bow to that power which has fo repeatedly humbled France and Spain," dent were, the British of their superiority in arms that they feemed defirous that the contest might be brought to a military decision. Some of the diftinguished speakers in Parliment had publicly afferted that the natives of America had nothing of the foldier in them, and that they were in no respect qualified to face a British army. European philosophers had published the ries, fetting forth that not only vegetables and beans, but that even men degenerated in the western hemilphere. Departing from the fpirit of true philosophy, they overlooked the flate of fociety in the new world, and charged a comparative inferiority on every production that was American. The Colonifts themfelves had imbibed opinions from their-forefathers, that no people on earth were equal to those with whom they were about to contend. Impreffed with high ideas of British Superiority, and diffident of themselves, their best informed citizens, though willing to run all rifques, feared the confequence of an appeal to arms. The fuccels, that attended their first military enterprize in fome degree banished these suggestions. Perhaps in no subfequent battle did the Americans appear to greater advantage than in their first effay at Lexington. It is almost without parallel in military hiftory, for the yeomanry of the country to come forward in a fingle disjointed manner, without order, and for the most part without officers, and by an irregular fire put to

of circumfances the Americans had good realon From clude that hoftilities would foon be carried on vigoroufly to co in Menachulent, and also to apprchend that, fooner or later, each province would be the theatre of war. "The more fpeedily, thereform, find they, we are prepared for that event, the better chance we have for defending ourfelves." Previous to this period, or rather to the 19th of April, 1775, the difpute had been carried on by the pen, or at most by affociations and legislative afts; but from this time forward it was conducted by the fword. The orifis was arrived when the Colonies had no alternative, but either to fubmit to the mercy, or to relift the power of Great-Britain. An unconquerable lave of liberty could not brook the idea of fubmiffion, while resion, more temperate in her decisions fuggefted to the people their infufficiency to make effectual oppolition. They were fully apprized of the power of Britainthey knew that her fleets covered the ocean, and that her flag had waved in triumph through the four quarters of the globe; but the animated language of the time was, " It is better to die freemen than to live flaves." Though the justice of their caule, and the infpiration of liberty gave, in the opinion of difinterefied judges, a superiority to the writings of Americans, yet in the latter mode of conducting their oppolition, the candid among themfelves acknowledged an inferiority. Their form of government was deficient in that decision, dispatch, and coercion, which are neceffary in military operations.

In the year 1775, a martial spirit pervaded all ranks of men in th Colonies. They believed their liberties to be in danger, and

expedient, for fuch was the enthulialm of the day, that the Cos lonifts gave up both their perional fervices and their property to the bullio, on the vague promifes that they should at a future Without enquiring into the folidity of the period of payment, the refources of the on general affurances," that all expences tely be equalifed. The Parent State d flatefmen and officers, but the deat exercised in the Colonies, precluded that prectical knowledge which is ad of public departments. There daics who understood the bufinels of d full' fewer who had experience and perations. The disposition of the finanthe most effectual mode of drawing forth a with which fcarce any of the inhabiacquainted. Arms and appmunition were almost wholly deficient; and though the country abounded with the materials of which they are manufactured, yet there was neither time nor artifts enough to supply an army with the means of defence. The country was deftitute both of fortifications and engineers. Amldft fo many difcoursgements there were fome flattering circumstances. The war could not be carried on by Great-Britain, but to a great difadvantage, and at an immenfe expence. It was eafy for Minifters at St. James's to plan campaigns, but hard was the fate of the officer from whom the exccution of them in the woods of America was expected. The country was fo extensive, and abounded 'fo much with defiles, that by evacuating and retreating, the Americans, though they could not waquer, yet might fave themfelves from being conquered. The authors of the acts of parliament for reftraining the trade of the Colonies were most excellent recruiting officers for the Congress. They imposed a necessary on thousands to become foldiers. All other bulinels being fulpended, the whole refources of the country were applied in supporting an army. Though the Colonifts were without discipline, they poffeffed native valour. Though they had neither gold nor filver, they poffeffed a mine in the enthulialin of their people. Paper for upwards of two years produced to them more folid advantages than Spain derived from her fuperabounding precious metals. Though they had no fhips to protect their trade or their towns, they had fimplicity enough to live without the former, and enthuliafm enough to rifque the latter, rather than fubmit to the power of Britain. They believed their caufe to be juft, and that Heaven approved their exertions in defence of their rights. Zeal originating from

condign punifhment." He also proclaimed,

that new enty the perfons above named and excepted, but alfo all their adherents, affociates, and correspondents, fould be deemed muilty of treason and rebellion, and treated accordingly. By this proclamation it was also declared, 4 that as the courts of judicature were fhut, marshal 'law should take place, till a due course of juffice should be re-established." It was supposed that this proclamation was a prelude to hostilities, and preparations were accordingly made by the Americans. A confiderable height; known by the name of Bunker's-Hill, just at the entrance of the peninfula of Charleftown; was fo fituated as to make the poffellion of it a matter of great confequence to either of the contending parties. Orders were therefore, June 16, iffued by the provincial commanders, that a detachment of a thousand men fhould entrench upon this height. By fome mistake Breed's Hill, high and large like the other, but fituated near Bofton. was marked out for the entrenchments; inftead of Bunker's Hill, "The provincials proceeded to Breed's Hill, and worked with fo much diligence, that between midnight and the dawn of the morning, they had thrown up a fmall redoubt about eight rods fquare. They kept fuch a profound filence, that they were not heard by the British, on board their veffcls, though very near.". These having derived their first information of what was going on from the fight of the work near completion, began an inceffant firing upon them. The provincials bore this with firmnels, and though they were only young foldiers, continued to labour till they had thrown up a fmall breaftwork, extending from the east fide of the breakwork to the bottom of the hill.

As this eminence overlooked Bofton, General Gage theu neceffary to drive the provincials from it. About noon, therea fore, he detached Major General Howe, and Brigadier General Pigot, with the flower of the army, confiding of four listtalions, ten companies of the grenadiers, and ten of a proportion of field artillery, to effect troops landed at Moreton's Point, a landing, but remained in that polits by a fecond detachment of light in nies, a battalion of land forces, and ing in the whole near three thousa who first landed were waiting for the vincials, for their farther fecurity, p and rail fences, and fet them down and fmall distance from each other, and a with hay, which having been lately adjacent ground, 11 4 2 2

The king's troops formed in two lines, and advance locally, to give their artillery time to demolifh the American works. While the Britifh were advancing to the attack, they received orders to burn Charleftown. This was not done, becaufe they were fired upon from the houfes in that town, but from the military policy of depriving enemies of a cover in their approaches. In a fhort time this ancient town, confifting of about five hundred buildings, chiefly of wood; was in one great blaze. The lofty fleeple of the meeting-houfe formed a pyramid of fire above the reft, and flruck the aftonifhed eyes of numerous beholders with a magnificent but awful [peflacle: In Bofton, the heights of every kind were covered with the citizens, and fuch of the king's troops as were not on duty. The hills around the adjacent country which afforded a fafe and difinft view, were occupied by the inhabitants of the country.

Thousands, both within and without Boston, were anxious spectators of the bloody scene. The honour of British troops beat high in the breasts of many, while others, with a scener fensibility, felt for the liberties of a great and growing country. The British moved on but slowly, which gave the provincials a better opportunity for taking aim. The latter, in general, referved themselves till their adversaries were within ten or twelve rods, but then began a furious discharge of small arms. The stream of the American fire was so incessant, and did so great execution, that the king's troops retreated i... disorder and precipitation. Their officers rallied them, and pushed them forward with their fwords, but they returned to the attack with great

reluctance. The Americans again referved, their fire till their adverfaries were near, and then put them a fecond time to flight, General Howe and the officers redoubled their exertions, and were at laft, fuccelsful, though the foldiers diffeovered a great averfien to going on. By this time the powder of the Americans began to as to fail, that they were not able to keep up the finite brift file an active. The British alfo brought fome cannon to bear, minute the infide of the breaftwork from end to ender the transmission and the infide of the breaftwork from end to ender the transmission and the failes, batteries, and field artillery was reproduced the infide of the rear were goaded on by their the transmission of a retreat from it was ordered, but the province of the year and made refiftance with their difcharged multees as it they and here clubs, fo long that the king's troops, while cally managed the works, had half filled the redoubt before it was diven up to them,

While these operations were going on at the breastwork and redoubt, the British light infantry were attempting to force the left point of the former, that they might take the American line in flank. A Though they exhibited the molt undaunted courage, they met with an opposition which called for its greatest exertions. The provincials here, in like manner, referved their fire till their advertaries were near, and then poured it upon the light infantry, with fuch an inceffant ftream, and in fo true a direction, as mowed down their ranks. The engagement was kept up on both fides with great refolution. The perfevering exertions of the King's troops could not compel the Americans to retreat, till they observed that their main body had left the hill. This, when begun, exposed them to new danger, for it could not be effected but by marching over Charleftown Neck, every part of which was 'raked by the fhot of the Glafgow man of war, and of two floating batteries. The inceffant fire kept up acrofs this Neck prevented any confiderable re-inforcement from joining their countrymen who were engaged ; but the few who fell on their retreat over the fame ground proved, that the ap. prehensions of those provincial officers who declined passing over to fuccour their companions, were without any folid foundation.

The number of Americans engaged amounted only to one thoufand five hundred. It was apprehended that the conquerors would pufh the advantages they had gained, and march immediately to American head quarters at Cambridge, but they advanced no farther than Bunker's Hill; there they threw up works for their own fecurity. The provincials did the fame on Profpet

Hill in front of them. Both were guarding against an attack, and both were in a bad condition to receive one. The loss of the peninfula depreffed the fpirits of the Americans, and their great loss of men produced the same effect on the British. There have been few battles in modern wars, in which, all circumftances confidered, there was a greater destruction of men than in this fort engagement. The lofs of the British, as acknow neral Gage, amounted to one thousand and fiftycommissioned officers were killed, and seve wounded, The battle of Quebec in 1759, w Britain the Province of Canada, was not to defin officers as this affair of a flight entrenchment, t a few hours. That the officers fuffered fo much. ted to their being aimed at, None of the provincials gagement were riflemen, but they were all good mark ine The whole of their previous military knowledge had been derived from hunting, and the ordinary amufements of fportimen. The dexterity which by long habit they had acquired in hitting beafts. birds, and marks, was fatally applied to the deftruction of British officers. From their fall much confusion was expected; they were therefore particularly fingled out. Most of those who were near the perfon of General Howe were either killed or wounded, but the General, though he greatly exposed himfelf, was unhurt, The light infantry and grenadiers loft three-fourths of their men. Of one company not more than five, and of another, not more than fourteen escaped. The unexpected reliftance of the Americans was fuch as wiped away the reprocees of cowardice, which had been cast on them by their enemies in Britain. The spirited conduct of the British officers merited and obtained great applause, but the provincials were justly entitled to a large portion of the fame, for having made the utmost exertions of their adversaries neceffary to diflodge them from lines, which were the work only of a fingle night, The Americans loft five pieces of cannon, Their killed amounted to one hundred and thirty-nine. Their wounded and miffing to three hundred and fourteen. Thirty of the former fell into the hands of the conquerors. They particu. larly regretted the death of General Warren. To the pureft patriotifm and most undaunted bravery, he added the virtues of domeftic life, the cloquence of an acccomplifhed orator, and the wildom of an able flatefman. Nothing but a regard to the liberty of his country induced him to oppose the measures of Govern. ment. He aimed not at a feparation from, but a coalition with the Mother Country. spirit, but because he was, in the best sense of the word, a real patriot. Having no interested or personal views to answer, the friends of liberty confided in his integrity. The foundnels of his judgment, and his abilities as a public speaker, enabled him to make a diftinguished figure in public councils, but his intrepidity and active zeal induced his countrymen to place him in the Within four days after he was appointed a Major noble facrifice to a caufe which he had espoufed principles. Like Hampden he lived and like dit univerfally beloved and univerfally regretted. re celebrated in an elegant eulogium written language equal to the illustrious subject. The rleftown, though a place of great trade, did not the provincials. It excited refentment and execution, any disposition to fubmit. Such was the high-toned flate but B of the public mind, and fo great the indifference for property, when put in competition with liberty, that military conflagrations, though they diffrefied and impoverished, had no tendency to fubdue the Colonifts. They might answer in the old world, but were not calculated for the new, where the war was undertaken, not for a change of masters, but for feuring effential rights. The action at Breed's Hill, or Bunker's Hill, as it has been commonly called, produced many and very important confequences. It taught the British fo much respect for Americans intrenched behind works, that their fublequent operation were retarded with a caution that walled away a whole campaign to very little purpole. It added to the confidence the Americans began to have in their own abilities; but inferences, very injurious to the future interefts of America, were drawn from the good conduct of the new troops on that memorable day, It infpired fome of the leading members of Congress with such high ideas of what might be done by militia, or men engaged for a fhort term of enliftment, that it was long before they affented to the eftablishment of a permanent army. Not diffinguifhing the continued exertions of an army through a feries of years, from the gallant efforts of yeomanry of the country, led directly to action, they were flow in admitting the neceffity of permanent troops. They conceived the country might be defended by the occasional exertions of her fons, without the expence and danger of an army engaged for the war, In the progress of hostilities, as will appear in the sequel, the militia loft much of their first ardour, while leading men in the councils of America, trufting to its continuance, neglected the proper time of recruiting for a feries of years. From the want of perfeverance in the militia, and the want of a difciplined ftanding army, the

caule for which arms were at first taken up, was more than once brought to the brink of destruction.

In other places the same determined spirit of resistance appeared. on the part of the Americans. Lord North's conciliatory scheme was utterly rejected by the affemblies of Pennfylvania and New-Jerley, and afterwards in every other colony. The commencement of hostilities at Lexington determined the colony of New-York, which had hitherto continued to waver, to unite ye reft ; and as the fituation of New-York renders is unfile an attack from the fea, it was refolved, before the British fleet, to fecure the military stores, fend of and children, and to fet fire to the city if it, was full found ince. pable of defence. The exportation of provisions was every where prohibited, particularly to the British fishery on the banks of Newfoundland, or to fuch colonies of America as fhould adhere to the British interest. Congress resolved on the establishment of an army, and of a large paper currency in order to support it. In. the inland northern colonics, Colonels Eastan and Ethan Allen. without receiving any orders from Congress, or communicating their defign to any body, with a party of only two hundred and fifty men, furprifed the forts of Crown Point, Ticonderoga, and the reft that form a communication betwixt the Colonies and Canada. On this occasion two hundred pieces of cannon fell into their hands, befides mortars, and a large quantity of military ftores, together with two armed veffels, and materials for the conftruction of others.

After the battle of Bunker's Hill, the provincials erected fortifications on the heights, which commanded Charleftown, and frengthened the reft in fuch a manner that there was no hope of driving them from thence, .t the fame time that their activity and boldnefs aftonifhed the British officers, who had been accustomed to entertain too mean an opinion of their courage.

The troops, thus flut up in Bofton, were foon reduced to diftrefs. Their neceffities obliged them to attempt the carrying off the American cattle on the iflands before Bofton, which produced frequent fkirmifhes; but the provincials, better acquainted with the navigation of thefe fhores, landed on the iflands, deftroyed or carryed off whatever was of any ufe, burned the light houfe at the entrance of the harbour, and took prifoners the workmen fent to repair, it, as well as a party of marines who guarded them. Thus the garrifon were reduced to the neceffity of fending out armed veffels to make, prizes indiferiminately of all that came in their way, and of landing in different places to plunder for fubfiftence as well as they could.

ord, a real nfwer, the undnels of nabled him his intrepihim in the ted a Major ad espoused ed and like ly regretted. gium written ubject. The Congress, in the mean time, continued to act with all the vigour which its confituents had expected. Articles of confederation and perpetual union were drawn up and folemnly agreed upon, by which they bound themselves.

After the action of Bunker's Hill, however, when the power of Great-Entricin appeared lefs formidable in the eyes of America Congress proceeded formally to justify their proceedtion drawn up in terms more expressive, and well the attention:

> the divine Author of our existence intended a race to hold an absolute property in and uner others, marked out by His infinite goodness

us. th

and some as the objects of a legal domination, never rightfully refitteds, however fevere and oppreflive; the inhabitants of these Colonies might at least require from the parliament of Great-Britain fome evidence that this dreadful authority over them had been granted to that body; but a reverence for our Great Creator, principles of humanity, and the dictates of common fense must convince all those who reflect upon the subject, that government was inflituted to promote the welfare of mankind, and ought to be administered for the attainment of that end.

"The legiflature of Great Britain, however, flimulated by an inordinate paffion for power, not only unjuftifiable, but which they know to be peculiarly reprobated by the very conffitution of that kingdom; and defpairing of fuccefs in any mode of conteft, where regard fhould be had to law, truth, or right; have at length deferting thofe, attempted to effect their cruel and impolitie purpole of enflaving these Colonies by violence, and have thereby rendered it neceffary for us to close with their last appeal from reason to arms. Yet, however blinded that affembly may be, by their intemperate rage for unlimited domination, fo to flight juffice in the opinion of mankind, we effect nourfelves bound by obligations to the reft of the world to make known the justice of our caufe."

After taking notice of the manner in which their anceftors left Britain, the happinels attending the mutual friendly commerce betwixt that country and her Colonies, and the remarkable fuccefs of the late war, they proceed as follows : " The new minifiry finding the brave foes of Britain, though frequently defeated, yet ftill contending, took up the unfortunate idea of granting them a hafty peace, and of then fubduing her faithful friends.

489

"These devoted colonies were judged to be in such a state as to prefent victories without bloodshed, and all the cafy emoluments of flatutable plunder. The uninterrupted tenor of their peaceable and respectful behaviour from the beginning of their colonization; their dutiful, zealous, and uleful services during the war, though so recently and amply acknowledged in the most honorable manner by his Majefty, by the late king, and by parliament, could not fave them from the interact interactions. Parliament was influenced to adopt the permissions provent ; and affuming a new power over them, has in the course of eleven years given such decisive specifies of the pine and confequences attending this power, as to leave no doubt of the effect of acquies feare under it.

" They have undertaken to give and grant our money without our confent, though we have ever exercised an exclusive right to dispole of our own property. Statutes have been passed for extending the jurifdiction of the courts of admiralty, and viceadmiralty, beyond their ancient limits; for depriving us of the accustomed and inestimable rights of trial by jury, in cales affecting both life and property; for fuspending the legislature of one of our colonies; for interdicting all commerce to the capital of another; and for altering fundamentally the form of government" eftablished by charter, and secured by acts of its own legislature; and folemnly confirmed by the crown ; for exempting the murderers of colonists from legal trial, and in effect from punishment; for crecting in a neighbouring province, acquired by the joint arms of Great-Britain and America, a delpotilm dangerous to our very existence; and for quartering foldiers upon the colonists in time of a profound peace. It has also been refolved in parlia-" ment, that colonifts charged with committing certain offences, fhall be transported to England to be tried.

"But why fhould we enumerate our injuries in detail? By one ftatute it was declared, that parliament can of right make laws to bind us in all cafes whatever. What is to defend us against fo enormous, fo unlimited a power? Not a fingle perfon who affumes it is chosen by us, or is fubject to our controul or influence; but on the contrary, they are all of them exempt from the operation of fuch laws; and an American revenue, if not diverted from the oftenfible purposes from which it is raised, would actually lighten their own burdens in porportion as it increases ours.

"We faw the mifery to which fuch defpotifm would reduce us. We for ten years inceffantly and ineffectually befieged the throne as fupplicants; we reafoned, we remonstrated with parlia-

ment in the most mild and decent language; but administration, fensible that we should regard these measures as freemen ought to do, sent over sleets and armies to enforce them.

"We have purfued every temperate, every respectful measure ; we have even proceeded to break off all commercial intercourse with our fellow-subjects as our last peaceable admonition, that our attachment to no nation on earth would supplant our attachment to liberty: this we stattered ourselves was the ultimate step of the generowersy; but subsequent events have shown how vain was this the performing moderation in our enemies ! "The lastered and Bommons, in their address in the month of

The lights and Commons, in their address in the month of February, and that a rebellion at that time actually existed in the province of Malachusett's Bay; and that those concerned in it had been countenanced and encouraged by unlawful combinations and engagements entered into by his Majesty's subjects in feveral of the colonies; and therefore they befought his Majesty that he would take the most effectual measures to enforce due obedience to the laws and authority of the supreme legislature. Soon after the commercial intercourse of whole colonies with foreign countries was cut off by an act of parliament; by another, several of them were entirely prohibited from the fisheries in the feas near their coafts, on which they always depended for their subsisteence; and large reinforcements of ships and troops were immediately fent over to General Gage."

"Fruitlefs were all the intreaties, arguments, and eloquence of an illuftrious band of the most diftinguished peers and commoners, who nobly and strenuously afferted the justice of our cause, to ftay, or even to mitigate, the heedless fury, with which these accumulated outrages were hurried on. Equally fruitless was the interference of the city of London, of Bristol, and many other respectable towns in our favour."

After having reproached parliament, General Gage, and the Britifh government in general, they proceeded thus: "We are reduced to the alternative of choofing an unconditional fubmiffion to tyranny or refiftance by force. The latter is our choice. We have counted the coft of this conteft, and find nothing fo dreadful as voluntary flavery. Honor, juffice, and humanity, forbid us tamely to furrender that freedom which we received from our gallant anceftors, and which our innocent pofterity have a right to receive from us. Our caufe is juft; our union is perfect; our internal refources are great; and, if neceffary, foreign affiftance is undoubtedly attainable. We fight not for glory or conqueft; we exhibit to mankind the remarkable fpectacle of a people attacked by unprovoked enemics. They boaft of their privileges and civilization, and yet proffer no milder con-

tł

491

ditions than fervitude or death. In our own native land, in defence of the freedom that is our birthright, for the protection of our property acquired by the honeft industry of our forefathers and our own, against violence actually offered, we have taken up arms; we shall lay them down when hostilities shall cease on the part of our aggressors, and all danger of their being renewed shall be removed—and not before."

These are some of the most striking passages in the declaration of congress on taking up arms against Great-Britain, and dated July 6th, 1775. The determined spirit which it thews, ought to have convinced England, that the conquest of America was an event fearce ever to be expected. In every other respect an equal fpirit was shewn; and the rulers of the British nation had the mortification to fee those whom they ftyled rebels and traitors, fucceed in negociations in which they themfelves were utterly foiled. In the passing of the Quebec bill, ministry had flattered themselves that the Canadians would be fo much attached to them, on account of reftoring the French laws, that they would very readily join in any attempt against the colonists who had reprobated that bill in fuch ftrong terms : but in this, as in every thing else indeed, they found themselves mistaken. The Canadians having been fubject to Britain for a period of fifteen years, and being thus rendered fenfible of the fuperior advantages of British government, received the bill itfelf with evident marks of difapprobation; nay, reprobated it as tyrannical and oppreffive. A scheme had been formed for General Carleton, governor of the province, to raife an army of Canadians wherewith to act against the Americans; and so fanguine were the hopes of administration in this respect, that they had sent twenty thousand stand of arms, and a great quantity of military ftores, to Quebec for the purpofe. But the people, though they did not join the Americans, yet were found immoveable in their purpose to stand neuter. Application was made to the bifhop; but he declined to interpole his influence, as contrary to the rules of the Popifh clergy : fo that the utmost efforts of government in this province were found to answer little or no purpose,

The British administration next tried to engage the Indians in their cause. But though agents were dispersed among them with large presents to the chiefs, they universally replied, that they did not understand the nature of the quarrel, nor could they distinguish whether those who dwelt in America or on the other fide of the ocean were in fault : but they were surprised to see Englishmen ask their affistance against one another ; and advised them to be reconciled, and not to think of shedding the blood of

their brethren. To the reprefentations of Congress they paid more respect. These set forth, that the English on the other side of the ocean had taken up arms to enflave, not only their countrymen in America, but the Indians also; and if the latter should enable them to overcome the colonist, they themselves would foon be reduced to a flate of flavery also. By arguments of this kind these lavages were engaged to remain neuter; and thus the colonists were freed from a most dangerous enemy. On this occation the Congress thought proper to hold a softem conference with the different tribes of Indians. The speech made by them on the occasion is curious, but too long to be fully inferted.— The following is a specimen of the European mode of addressing these people:

" Brothers, Sachems, and Warriors !

492

"We, the delegates from the Twelve United Provinces, now fitting in general Congress at Philadelphia, sent their talk to you our brothers.

" Brothers and Friends now attend !

"When our fathers croffed the great water, and came over to this land, the King of England gave them a talk, affuring them that they and their children fhould be his children; and that if they would leave their native country, and make fettlements, and live here, and buy and fell, and trade with their brethren beyond the water, they fhould ftill keep hold of the fame covenant-chain, and enjoy peace; and it was convenanted, that the fields, houles, goods, and poffeffions, which our fathers fhould acquire, fhould remain to them as their own, and be their childrens for ever, and at their fole difpofal.

" Brothers and Friends open a kind ear !

"We will now tell you of the quarrel betwixt the counfellors of King George and the inhabitants and colonies of America.

"Many of his counfellors have perfuaded him to break the covenant-chain, and not to fend us any more good talks. They have prevailed upon him to enter into a covenant againft us : and have torn afunder, and caft behind their backs, the good old covenant which their anceftors and ours entered into, and took ftrong hold of. They now tell us they will put their hands into our pocket without afking, as though it were their own; and at their pleafure they will take from us our charters, or written civil conflitution, which we love as our lives; alfo our plantations, or houfes, and goods, whenever they pleafe, without afking our leave. They tell us, that our veffels may go to that or this ifland in the fea, but to this or that particular ifland we fhall not trade any more; and in cafe of our non-compliance with thefe new orders, they fult up our harbours.

"Brothers, we live on the fame ground with you; the famland is our common birth-place. We defire to fit down uno, the fame tree of peace with you; let us water its roots, and cherifh the growth, till the large leaves and flourifhing branches fhall extend to the fetting fun, and reach the fikies. If any thing difagreeable fhould ever fall out between us, the Twelve United Colonies, and you, the Six Nations, to wound our peace, let us immediately feek measures for healing the breach. From the prefent fituation of our affairs, we judge it expedient to kindle up a small fire at Albany, where we may hear each other's voice, and difclose our minds fully to one another."

The other remarkable transactions of this Congreis were the ultimate refulal of the conciliatory propolal made by Lord North, of which fuch fanguine expectations had been formed by the English ministry; and appointing a generalissimo to command their armies, which were now very numerous. The perfon cholen for this purpole was George Walhington: a man fo univerfally beloved, that he was raifed to fuch an high flation by the unanimous voice of Congress: and his subsequent conduct showed him every way worthy of it. Horace Gates and Charles Lee. two English officers of confiderable reputation, were also chosen; the former an adjutant-general, the fecond a major-general. Artemus Ward, Philip Schuyler, and Ifrael Putnam, were likewife nominated major-generals. Seth Pomeroy, Richard Montgomery, David Woofter, William Heath, Joseph Spencer, John Thomas, John Sullivan, and Nathaniel Green, were chosen brigadier-generals at the fame time.

Congress had now also the fatisfaction to receive deputies from the colony of Georgia, expressing a defire to join the confederacy. The reasons they gave for renouncing their allegiance to Britain were, that the conduct of parliament towards the other colonies had been oppressive; that though the obnoxious acts had not been extended to them, they could view this only as an omifion, because of the seeming little confequence of their colony: and therefore looked upon it rather to be a slight than a favour. At the same time they framed a petition to the King, similar to that fent by the other colonies, and which met with a similar reception.

The fuccefs which had hitherto attended the Americans in all their measures, now emboldened them to think not only of defending themfelves, but likewife of acting offentively againft Great Britain. The conquest of Canada appeared an object within their reach, and that one would be attended with many advantages; and as an invasion of that province was lately facilitated by the taking of Crown point and Ticonderago, it was re-

y prid ner fide r counfhould of this hus the this ocference by them erted. dreffing

folved if possible, to penetrate that way into Canada, and reduce Quebec during the winter, before the fleets and armies, which they were well affured would fail thither from Britain, should arrive. By order of Congress, therefore, three thousand men were put under the command of Generals Montgomery and Schuywith orders to proceed to Lake Champlain, from whence L Se tro to be conveyed in flat-bottomed boats to the mouth of Sorul, a branch of the great river St. Laurence, and on a fort of the fame name with the river. On they were opposed by General Carleton, governor of Ca is man of great activity and experience in war; when wery few troops, had hitherto been able to keep in awe the difaffected people of Canada, notwithstanding all the representations of the Colonists. He had now augmented his army by a confiderable number of Indians, and premifed even in his prefent lituation to make a very formidable refistance.

As foon as General Montgomery arrived at Crown Point, he received information that feveral armed veffels were flationed at St. John's, a firong fort on the Sorel, with a view to prevent his croffing the lake; on which he took poffeffion of the ifland which commands the mouth of the Sorel, and by which he could prevent them from entering the lake. In conjunction with General Schuyler, he next proceeded to St. John's: but finding that place too firong, he landed on a part of the country confiderably diftant and full of woods ond fivamps. From thence, however, they were driven by a party of Indians whom General Carleton had employed.

The provincial army was now obliged to retreat to the island of which they had at first taken possible of a state of the island of which they had at first taken possible of the command alone. His first state is the state of the island of the state of the island of the state of

But while General Carleton was on his march with these new levies, he was attacked by a superior force of provincials, and utterly defeated; which being made known to another body of Canadians who had joined Colonel Maclean, they abandoned

> these new ncials, and er body of abandoned

him without firiking a blow, and he was obliged to retreat to Quebec.

The defeat of General Carleton was a fufficient recompence to the Americans for that of Colonel Ethan Allen, which had happened fome time before. The fuccefs which had attended this gentleman againft Crown Point and Ticonderago had him to make a fimilar attempt on Montreal; but being the militia of the place, fupported by a detachment he was entirely defeated and taken prifoner.

As the defeat of General Carleton and the clean's forces left no room for the garrifon of St. for any relief, they now confented to furrender foners of war; but were in other respects treated with the manity. They were in number five hundred regulars and two hundred Canadians, among whom were many of the French nobility, who had been very active in promoting the caufe of Britain, among their countrymen.

General Montgomery next took measures to prevent the British shipping from passing down the river from Montreal to Quebec. This he accomplished to effectually, that the whole were taken. The town itself was obliged to furrender at differentiation; and it was with the utmost difficulty that General Carleton cscaped in an open boat by the favour of a dark night.

No further obstacle now remained in the way of the Americans to the capital, except what arole from the nature of the country ; and these indeed were very confiderable. Nothing, however, could damp the ardour of the provincials. Notwithstanding in was now the middle of November, and the depth of winter was at hand, Colonel Arnold formed a defign of penetrating through woods, moraffes, and the most frightful folitudes, from New-England to Canada, by a nearer way than that which Montgomery had chosen; and this he accomplished in spite of every difficulty, to the aftonishment of all who faw or heard of the attempt. This desperate march, however, cannot be looked upon as conducive to any good purpole. A third part of his men under another Colonel had abandoned him by the way, under pretence of want of provisions; the total want of artillery rendered his prefence infignificant before a place ftrongly fortified; and the smallness of his army rendered it even doubtful whether he could have taken the town by furprife. The Canadians indeed were amazed at the exploit, and their inclination to revoit from Britain was fomewhat augmented; but none of them as yet took up arms in behalf of America.' The confternation into which the town of Quebec was thrown, proved detrimental rather than otherwife to the expedition; as it doubled the vigilance

and activity of the inhabitants to prevent any furprife; and the appearance of common danger united all parties, who, before the arrival of Arnold, were contending most violently with one another. He was therefore obliged to content himself with blocking up the avenues to the town, in order to diftrefs the garrifon for provisions; and even this he was unable to do effectuof the fmall number of his men,

> The force he had with him, even when united roold, was too infignificant to attempt the rece fo ftrongly fortified, especially with the affia few mortars and field-pieces. After the fiege had

through the month of December, General Montgomery, confcious that he could accomplish his end no other way than by furprife, refolved to make an attempt on the last day of the year 1775. The method he took at this time was perhaps the best that human wildom could devile. He advanced by break of day, in the midft of an heavy fall of fnow, which covered his men" from the fight of the enemy. Two real attacks were made by himfelf and Colonel Arnold, at the fame time that two feigned attacks were made on two other places, thus to diffract the garrifon, and make them divide their forces. One of the real attacks was made by the people of New-York, and the other by those of New-England, under Arnold. Their hopes of furprifing the place, however, were defeated by the fignal for the attack being, through fome mistake, given too foon. General Montgomery himfelf had the most dangerous place, being obliged to pais between the river and fome high rocks on which the Upper Town stands; fo that he was forced to make what haste he could to close with the enemy. His fate, however, was now decided. Having forced the first barrier, a violent discharge of musketry and grape-fhot from the fecond killed him, his principal officers, and the most of the party he commanded; on which those who remained immediately retreated. Colonel Arnold in the mean time made a desperate attack on the Lower Town, and carried one of the barriers after an obftinate refistance of an hour; but" in the action he himfelf received a wound, which obliged him to withdraw. The attack, however, was continued by the officers whom he had left, and another barrier forced: but the garrifon, now perceiving that nothing was to be feared except from that quarter, collected their whole force against it; and after a defperate engagement of three hours, overpowered the provincials, and obliged them to furrender.

s could not be maining of the eccomplifhment of their purpole, is General Arnold could now frarce number eight hundred effective men under his command. He did not, however, abandon the province, or even remove to a greater diffance than three miles from Quebec; and here he fill found means to annoy the garrifon very confiderably by intercepting their provisions. The Canadians, not ing the bad fusters of the American arms, fill continue and and thus he was enabled to fuffain the hardfhi compment in that moft fevere climete. The paffing any centure on him for his mine a brigadier-general.

While hostilities were thus carried on north, the flame of contention was gradually f in the fouth. Lord Dunmore, the governor of involved in diffutes fimilar to those which had taken place in other colonies. These had proceeded fo far that the allembly was diffolved; which in this province was attended with a confequence unknown to the reft. As Virginia contained a great number of flaves, it was necessary that a militia should be kept conflantly on foot to keep them in awe. During the diffolution of the affembly the militia-law expired; and the people, after complaining of the danger they were in from the negroes, form -. ed a convention, which macted, that each country should raise a quota for the defence of the province. Dunmore, on this, removed the powder from Williamfburg ; which created fuch difcontents, that an immediate guarrel would probably have enfued, had not the merchants of the town undertaken to obtain fatisfaction for the injury supposed to be done to the community. This tranquillity, however, was foon interrupted ; the people, alarmed by a report that an armed party on their way from the man of war where the powder had been depolited, affembled in arms, and determined to oppose by force any farther removals. In fome of the conferences which passed at this time, the Governor let fall fome unguarded expressions, such as threatening them with fetting up the royal flandard, proclaiming liberty to the negroes, deftroying the town of Williamsburg; &c. which were afterwards made public, and exaggerated in fuch a manner as greatly to increase the public ferment.

The people now held frequent affemblies. Some of them took up arms with a defign to force the governor to reftore the powder, and to take the public money into their own poffession: but on their way to Williamsburg for this purpose, they were met by the receiver-general, who became fecurity the payment for

Vol. I. The man g. Sta terting

the gunpowder, and the inhabitants promifed to take care of the magazine and public revenue.

By this infurrection the governor was fo much intimidated, that he fent his family on board a man of war. He himfelf, however, iffued a proclamation, in which he declared the behaviour of the perfon who promoted the tumult treafonable, accufed the people of difaffection, &c. On their part they were by no means deficient in recriminating; and fome letters of his to Britan being about the fame time difcovered, confequences enfued extremely limitar to thole which had been occafioned by thole of Mr. Hinchinfon at Bofton.

In this flate of confusion the Governor thought it necessary to fortify his palace with artillery, and procure a party of marines to grand it. Lord North's conciliatory propofal arriving alfo about the fame time, he used his utmost endeavours to cause the people to comply with it. The arguments he used were such as must do him honour; and had not matters already gone to fuch a pitch, it is highly probable that fome attention would have been paid to them. " The view, he faid, in which the colonies ought to behold this conciliatory propofal was no more than an earnest admonition from Great-Britain to relieve her wants : that the utmost condescendence had been used in the mode of application ; no determinate fum having been fixed, as it was thought most worthy of British generofity to take what they thought could be conveniently spared, and likewise to leave the mode of raifing it to themfelves," &c. But the clamour and dislatisfaction were now fo universal, that nothing else could be attended to. The Governor had called an affembly for the purpole of laying this conciliatory propofal before them; but it had been little attended to. The affembly began their feffion by inquiries into the flate of the magazine. It had been broken into by fome of the townsmen; for which reason spring-guns had been placed there by the Governor, which discharged themselves upon the offenders at their entrance : these circumstances, with others of a fimilar kind, raifed such a violent uproar, that as foon as the preliminary buliness of the fession was over, the Governor retired on board a man of war, informing the affembly that he durft no longer truft himfelf on fhore. This produced a long course of disputation, which ended in a politive refusal of the Governor to trust himself again in Williamsburg, even to give his affent to the bills, which could not be paffed without it, and though the affembly offered to bind themfelves for his perfonal fafety. In his turn he requefled them to meet him on board the man of war, where he then was; but this propolal was rejected, and all further

correspondence containing the least appearance of friendship was discontinued.

Lord Dunmore, thus deprived of his government, attempted to reduce by force those whom he could no longer govern. Some of the most strenuous adherents to the British cause, whom their zeal had rendered obnoxious at home, now repaired to him. He was also joined by numbers of black flaves. With these, and the the enabled affistance of the British shipping, he was for fine to carry on a kind of predatory war, fufficient to burt and exafperate, but not to fubdue. After fome incon derable attempts on land, proclaiming liberty to the flaves, and fetting up the royal fandard, he took up his relidence at Norfolk, a maritime town of fome confequence, where the people were better affected to Britain than in most other places. A confiderable force, however, was collected against him; and the natural impetuosity of his temper prompting him to act against them with more courage than caution, he was entirely defeated, and obliged to retire to his fhipping, which was now crowded by the number of those who had incurred the refentment of the Provincials,

In the mean time a scheme of the utmost magnitude and importance was formed by one Mr. Conolly, a Pennfylvanian, of an intrepid and afpiring disposition, and attached to the cause of The first step, of this plan was to enter into a league Britain, with the Ohio Indians, This he communicated to Lord Dunmore, and it received his approbation : Upon which Conolly fet out, and actually fucceeded in his defign. On his return he was difpatched to General Gage, from whom he received a colonel's commission, and set out in order to accomplish the remainder of his scheme. The plan in general was, that he should return to the Ohio, where, by the affiftance of the British and Indians in these parts, he was to penetrate through the back settlements into Virginia, and join Lord Dunmore at Alexandria. But by an accident very naturally to be expected, he was discovered, taken prifoner, and thrown into a dungeon,

In the fouthern colonies of Carolina the governors were expelled and obliged to take refuge on board of men of war, as Lord Dunmore had been and Mr. Martin, governor of North-Carolina, on a charge of attempting to raife the back-fettlers, confifting chiefly of Scots Highlanders, against the colony. Having fecured themselves against any attempts from these enemies, however, they proceeded to regulate their internal concerns in the fame manner as the rest of the colonies; and by the end of the year 1775, Britain beheld the whole of America united against her in the most determined opposition. Her vast possessions

8 S 2

that tract of land were now reduced to the lingle town of Bofton; in which her forces were belieged by an enemy with whom they were apparently not able to cope, and by whom they must of courfe expect in a very fhort time to be expelled. The fituation of the inhabitants of Bofton; indeed, was peculiarly unhappy. After having failed in their attempts to leave the town, General intented to allow them to retire with their effects; Gage ha but after what reafon does not well appear, he refuied to fulfil fe. When he refigned his place to General Howe in Stand 1775, the latter, apprehenfive that they might give intelligence of the situation of the British troops, firicily. prohibited any perion from leaving the place under pain of military execution. Thus matters continued till the month of March. 1776, when the town was evacuated.

On the sd of that month, General Washington opened a battery on the west fide of the town, from whence it was bombarded with a heavy fire of cannon at the fame time ; and three days after, it was attacked by another battery from the eastern shore. This terrible attack continued for fourteen days without intermission; when General Howe, finding the place no longer tenable, determined if poffible to drive the enemy from their works. Preparations were therefore made for a most vigorous attack on an hill called Dorchefter Neck, which the Americans had fortified in fuch a manner as would in all probability have rendered theenterprife next to desperate. No difficulties, however, were sufficient to daunt the fpirit of the general ; and every thing was in readiness, when a ftorm prevented this intended exertion of Britifh valour. Next day, upon a more close inspection of the works they were to attack, it was thought adviseable to defift from the enterprife altogether. The fortifications were very ftrong, and extremely well provided with artillery; and befides other implements of destruction, upwards of one hundred hogfheads of ftones were provided to roll down upon the enemy as they came up; which, as the afcent was extremely fleep, muft have done prodigious execution.

Nothing therefore now remained but to think of a retreat; and even this was attended with the utmost difficulty and danger. The Americans, however, knowing that it was in the power of British general to reduce the town to ashes, which could not have been repaired in many years, did not think proper to give the least molestation; and for the space of a fortnight the troops were employed in the evacuation of the place; from whence they carried along with them two thousand of the inhabitants, who durft not ftay on account of their attachment to the British cause. From Boston they failed to Halifax; but all their vigilance could

not prevent a number of valuable fhips from falling into the hands of the enemy. A confiderable quantity of cannon and ammupition had allo been left at Bunker's Hill and Bofton Neck; and in the town, an immenfe variety of goods, principally woollen and linen, of which the provincials flood very much in need. The effates of thole who fled to Halifax were confifcated; as also thole who were attached to government, and had remained in the town. As an attack was expected as foon as the British formation arrive, every method was employed to render the formations already very firong, impregnable. For this purpole form foreign engineers were employed, who had before arrived at Bohtons and to cager were people of all ranks to accomplifh this bufines, that every able-bodied man in the place, without diffinction of rank fet apart two days in the week, to complete it the fooner.

The Americans about this time began to be influenced by new views. The military arrangements of the preceding year—their unexpected union, and prevailing enthuliafm, expanded the minds of their leaders, and elevated the fentiments of the great body of their people. Decisive measures which would have been lately reprobated, now met with approbation.

The favourers of fubordination under the former conftitution, urged the advantages of a fupreme head, to controul the difputes of interfering colonies, and also the benefits which flowed from union; and that independence was untried ground, and should not be entered upon but in the last extrimety.

They flattered themfelves that Great Britain was fo fully convinced of the determined spirit of America, that if the present controverfy was compromifed, the would not at any future period refume an injurious exercise of her supremacy. They were therefore for proceeding no farther than to defend themfelves in the character of fubjects, trufting that ere long the prefent hoftile measures would be relinquished, and the harmony of the two countries re-ele blished. The favourers of this system were embarraffed, and all their arguments weakened by the perfeverance of Great-Britain in her schemes of coercion. A probable hope of a speedy repeal of a few acts of Parliament would have greatly increafed the number of those who were advocates for reconciliation. But the certainty of intelligence to the contrary gave additional force to the arguments of the opposite party. Though new weight was daily thrown into the fcale, in which the advantages of independence were weighed, yet it did not. preponderate till about that time in 1776, when intelligence reached the Colonifts of the act of Parliament passed in December 1775, for throwing them out of British protection, and of hiring foreign troops to affift in effecting their conqueft.' Respecting the first it was faid,

502

"that protection and allegiance were reciprocal, and that the refusal of the first was a legal ground of justification for withhold. ing the laft." They confidered themfelves to be thereby dif. charged from their allegiance, and that to declare themfelves independent was no more, than to announce to the world the real political state in which Great Britain had placed them. This act proved that the Colonifts might conftitutionally declare them. Independent, but the hiring of foreign troops to make war demonstrated the necessity of their doing it immedi ately. They reasoned that if Great-Britain called in the aid of frangers to crush them, they must feek fimilar relief for their own prefervation. But they well knew this could not be expecked, while they were in arms against their acknowledged Sovereign. They had therefore only a choice of difficulties, and must either seek foreign aid as independent states, or coutinue in the aukward and hazardous fituation of fubjects, carrying on war from their own refources, both against the King, and fuch mer. cenaries as he chofe to employ for their fubjugation. Necessity not choice, forced them on the decision. Submission, without obtaining a redrefs of their grievances, was advocated by none who poffeffed the public confidence. Some of the popular leaders may have fecretly wished for independence from the beginning of the controverly, but their number was fmall and their fentiments were not generally known.

While the public mind was balancing on this eventful subject, feveral writers placed the advantages of independence in various points of view. Among these Thomas Paine in a pamphlet, under the fignature of Common Senfe, held the most diftinguished rank. The ftile, manner, and language of this performance was calculated to interest the passions, and to rouse all the active powers of human nature. With a view of operating on the fentiments of a religious people, Scripture was preffed into his fervice, and the powers, and even the name of a king was rendered odious in the cyes of the numerous Colonists who had read and studied the hiltory of the Jews, as recorded in the Old Testament. The folly of that people in revolting from a government, inflituted by Heaven itfelf, and the oppreffions to which they were fubjected in confequence of their lufting after kings to rule over them, afford. ed an excellent handle for pre-poffelling the Colonists in favour of republican inftitutions, and prejudicing them against kingly government. Hereditary fucceffion was turned into ridicule. The abfurdity of fubjecting a great continent to a finall ifland on the other fide of the globe, was reprefented in fuch ftriking language, as to interest the honour and pride of the Colonists in renouncing the government of Great-Britain. The necessity, the

advantage, and practicability of independence were forcibly demonstrated. Nothing could be better timed than this performance; it was addressed to freemen, who had just received convincing proof, that Great-Britain had thrown them out of her protection, had engaged foreign mercenaries to make war upon them, and ferioufly defigned to compel their unconditional fubmiffion to her unlimited power. It found the Colonists most thoroughly alarmed for their liberties, and disposed to do and suffer any thing that promifed their eftablishment. In union with the feelings and fentiments of the people, it produced furprifing effects. Many thousands were convinced, and were led to approve and long for a feparation from the Mother Country. Though that measure, a few months before, was not only foreign from their wilhes, but the object of their abhorrence, the current fuddenly became fo frong in its favour, that it bore down all opposition. The multitude was hurried down the ftream, but fome worthy men could not cafily reconcile themfelves to the idea of an eternal feparation from a country to which they had been long bound by the most endearing ties. They faw the fword drawn, but could not tell when it would be fheathed; they feared that the difperfed individuals of the feveral Colonies would not be brought to coalefce under an efficient government, and that after much anarchy, fome future Cæfar would grafp their liberties, and confirm himfelf on a throne of despotism. They doubted the perfeverance of their countrymen in effecting their independence, and were also apprehenfive that in case of fucces, their future condition would be less happy than their past. Some respectable individuals whose principles were pure, but whole fouls were not of that firm texture which revolutions require, fhrunk back from the bold mea. fures propoled by their more adventurous countrymen. To fub. mit without an appeal to Heaven, though fecretly wished for by some, was not the avowed fentiment of any; but to perfevere in petitioning and refifting, was the fystem of some misguided honest men. The favourers of this opinion were generally wanting in that decision which grasps at great objects, and influenced by that timid policy which does its work by halves. Most of them dreaded the power of Britain. A few, on the score of interest, or an spectancy of favours from royal government, refused to concur with the general voice. Some of the natives of the Parent State, who having lately fettled in the Colonics, had not yet exchanged Suropean for American ideas, together with a few others, conkientioully opposed the measures of Congress; but the great bulk of the people, and especially of the spirited and independent part of the community, came with furprifing unanimity into the proet of independence.

No.

The Americans, thus exafperated to the utmost by the proceedings of parliament, now formally renounced all connection with Britain, and declared themselves independent. This celebrated declaration was published on the 4th of July, 1776, and is as follows:

"When, in the course of human events, it becomes necessary for one people to diffolve the political bands which have connected them with another, and to affume among the powers of the each the separate and equal station to which the laws of nature and of nature. God entitle them, a decent respect to the opinions of manhind requires that they should declare the causes which impel them to the separation.

"We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with cer. tain unalies able rights; that among these are life, liberty, and the purfuit of happines; that to fecure these rights governments are instituted among men, deriving their just powers from the con. fent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on fuch principles, and organizing its powers in fuch form, as to them shall feem most likely to effect their fafety and happiness. Prudence, indeed, will dictate, that governments long established should not be changed for light and tranfient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer while evils are sufferable, than to right themfelves by abolifhing the forms to which they are accustomed. But when a long train of abuses and usurpations, purfuing invariably the fame object, evinces a defign to reduce them under absolute despotism, it is their right, it is their duty, to throw off fuch government, and to provide new guards for their future fecurity. Such has been the patient fufferance of these Colonies; and fuch is now the necessity which constrains them to alter their former fystems of government. The history of the prefent king of Great-Britain is a hiftory of repeated injuries and usurpations, all having in direct object the citablishment of an abfolute tyranny over these States. To prove this, let facts be fubmitted to a candid world.

"He has refused his affent to laws the most wholefome and neceffary for the public good.

"He has forbidden his governors to pais laws of immediate and prefling importance, unlefs fulpended in their operation till his affent thould be obtained; and when fo fulpended, he has utterly neglected to attend to them,

"He has plundered our fess, ravaged our coaffs, burnt our towns, and destroyed the lives of our people.

"He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, defolation, and tyranny, ~ already begun with circumflances of cruelty and perfidy fearcely parallefed in the most barbarous ages, and totally unworthy the head of a civilized nation.

"He has confirmined our fellow-citizens, taken captive on the high feas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

"He has excited domeftic infurrections amongit us, and has endeavoured to bring on the inhabitants of our frontiers, the mercile's Indian favages, whole known rule of warfare, is an undiftinguished deftraction of all ages, fexes, and conditions.

"In every flage of these oppressions we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

"We, therefore, the Reprefentatives of the United States of America, in General Congress affembled, appealing to the Supreme

Judge of the world for the reftitude of our intentions, do, in the name and by the authority of the good people of these colonies, folemaly publish and declare, That these United Colonies are, and of right qught to be, Far and INDEPENDENT STATES; that they are absolved from all allegiance to the British crown, and that all political connection between them and the State of Great-Britain is, and ought to be, totally dissolved; and that as Free and Independent States, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which Independent States may of right do. And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our facred honour,"

Previous to this a circular letter had been fent through each colony, fitting the reafons for it; and fuch was the animolity now every where prevailing againft Great-Britain, that it met with univerfal approbation, except in the province of Maryland alone. It was not long, however, before the people of that colony, finding themfelves left in a very dangerous minority, thought proper to accede to the measures of the reft. The manifesto itfelf was much in the usual flyle, stating a long lift of grievances, for which redrefs had been often applied for in vain; and for these reasons they determined on a final separation; to hold the people of Britain as the reft of mankind, "enemics in war, in peace friends."

After thus publicly throwing off all allegiance and hope of reconciliation, the colonifts foon found that an exertion of all their firength was required in order to fupport their pretentions. Their arms, indeed, had not, during this feafon, been attended with fuccels in Canada. Reinforcements had been promifed to Colonel Arnold, who ftill continued the blockade of Quebec 5 but they did not arrive in time to fecond his operations. Being fentible, however, that he must either defish from the enterprife, or finish it fuccelsfully, he recommenced in form; attempting to burn the thipping, and even to from the town itfelf. They were unfuccelsful, however, by reafon of the fmallnels of their number, though they fucceeded to far as to burn a number of houles in the fuburbs; and the garrifon were obliged to pull down the remainder, in order to prevent the fire from ipreading,

As the provincials, though unable to reduce the town, kept the garrilon in continual alarms, and in a very difagreeable fituation, fome of the nobility collected themfelves, into a hody under the command of one Mr. Beaujeau, in order to relieve their capital; but they were met on their march by the provincials, and fo en-

tirely defeated, that they were never afterwards able to attempt. any thing. The Americans, however, had but little reafon to plume themfelves on this fuccefs. Their want of artiflery at laft convinced them, that it was impracticable in their fituation to reduce a place to ftrongly fortified : the fmall-pox at the fame time made its appearance in their camp, and carried off great numbers; intimidating the reft to fuch a degree, that they deferted in crowds. To add to their misfortunes, the British reinforcements unexpectedly appeared, and the thips made their way through the ice with fuch colerity, that the one part of their army was leparated from the other; and General Carleton fallying out as foon as the reinforcement was landed, obliged them to fly with the utmost precipitation, leaving behind them all their cannon and military ftores ; at the fame time that their fhipping was entirely captured by veffels fent up the river for that purpole. On this occasion the provincials fled with fuch precipitation that they could not be overtaken; fo that none fell into the hands of the British excepting the fick and wounded. General Carleton now gave a fignal inftance of his humanity: Being well appriled that many of the provincials had not been able to accompany the reft in their retreat, and that they were concealed in woods; &c; in a very de, plorable fituation, he generoufly iffued a proclamation, ordering proper perfons to feek them out, and give them relief at the public expense ; at the fame time, left, through fear of being made prisonres, they should refuse these offers of humanity, he promised, that, as foon as their fituation enabled them, they fould be at liberty to depart to their respectives homes, a bet and and but a ."The British general, now freed from any danger of an attack was foon enabled to act offentively against the provincials, by the arrival of the forces deftined for that purpole from Britain. By thefe he was put at the head of twelve thouland regular troops, mong whom were those of Brunswick. With this force he inflantly fet out to the Three Rivers, where he expected that Arnold would have made a fland; but he had fled to Sorel, a place one hundred and fifty miles diftant from Quebec, where he was at laft met by the reinforcements ordered by Congress Here though the preceding events were by no means calculated to inspire much military ardour, a very daring enterprife was under. taken," and this was to furprife the British troops posted here under Generals Frafer and Nefbit'; of ; whom the former commanded those on land, the latter such as were on board of transports, and were but a little way diftant. The enterprife was undoubtedly very hazardous, both on account of the firength of the parties against whom they were to act, and as the main body of the Britifh forces were advanced within fifty miles of the place; befides

that a number of armed veffels and transports with troops lay between them and the Three Rivers. .. Two: thousand chosen mena however, under General Thomson, engaged in this enterprife, Their fuccefs was by no means aniwerable to their fpirit and valour. Though they paffed the fhipping without being obferva ed, General Frater had notice of their landing; and thus being prepared to receive them, they were foon thrown into diforder; at the fame time that General Nefbit, having landed his forces, prepared to attack them in the rear. | On this occasion fome field pieces did prodigious execution, and a retreat was found to be unavoidable." General Nefbit, however, had got between them and their boats; fo that they were obliged to take a circuit through a deep fwamp, while they were closely purfued by both parties at the fame time, who marched for fome miles on each fide of the fwamp, till at last the milerable provincials were sheltered from further danger by a wood at the end of the fwamp. Their General, however, was taken," with two hundred of his men. " and " By this difaster the provincials loft all hopes of accomplishing any thing in Canada. " They demolished their works, and carried off their avillery with the utmost expedition. They were purfued however, by General Burgoyne; against whom it was expected that they would collected all their force, and made a reforlute ftand," But they were new too much dispirited by misfortune to make any further exertions of valour. On the 18th of June the British general arrived at Fort St. John's, which he found abandoned and burnt. Chamblee had fhared the fame fate, as well as all the veffels that were not capable of being dragged up against the current of the river." It was thought that they would have made fome' refistance at Nut Island, the entrance to Lake Champlain's but this also they had abandoned, and retreated across the lake to Crown Point, whither they could not be immediately followed. Thus was the province of Canada entirely evacuated by the Americans; whole lofs in their retreat from Quebec was not calculated at lefs than one thousand men, of whom four hundred fell at once into the hands of the enemy at a place called the Cedars, about fifty miles above Montreal, & General Sullivan, however, who conducted this retreat after the affair of General Thomson, was acknowledged to have had great merit in what he did, and received the thanks of Congress accordingly. I be here allo's not

This bad fuccefs in the north, however, was fomewhat compenfated by what happened in the fouthern colonies.—We have formerly taken notice that Mr. Martin, governor of North Carolina, had been obliged to leave his province and take refuge on board a man of war. Notwithflanding this, he did not defpair of reducing it again to obedience. For this purpole he applied

to the Regulators, a daring fet of banditti, who lived in a kind of independent flate; and though 'confidered by government as rebels, yet had never been molefted, on account of their numbers and known skill in the use of fire-arms. To the chiefs of these people commissions were sent, in order to raise some regiments; and Colonel Macdonald, a brave and enterprising officer, was appointed to command them. In the month of February he erected the king's flandard, issued proclamations, &c, and collected fome forces, expecting to be foon joined by a body of regular troops, who were known to be shipped from Britain to act against the southern colonies. The Americans, sensible of their danger, dispatched immediately what forces they, had to act against the royalifts, at the fame time that they diligently exerted themfelves to support these with suitable reinforcements, Their prefent force was commanded by a General Moore, whole numbers were inferior to Macdonald; for which reason the latter fummoned him to join the king's flandard under pain of being treated as a rebel. But Moore, being well provided with cannon, and confcious that nothing could be attempted against him, returned the compliment, by acquainting Colonel Macdonald, that if he and his party would lay down their arms, and fubscribe an oath of fidelity to Congress, they should be treated as friends; but if they perfifted in an undertaking for which it was evident they had not fufficient firength, they could not but expect the feverest treatment, In a few days General Moore found himself at the head of eight thousand men, by reason of the continual fupplies which daily arrived from all parts. The royal party amounted only to two thousand, and they were defiitute of artillery, which prevented them from attacking the enemy while they had the advantage of numbers. They were now therefore obliged to have refource to a defperate exertion of perfonal valour; by dint of which they effected a retreat for eighty miles to Moore's Creek, within fixteen miles of Wilmington. Could they have gained this place, they expected to have been joined by Governor Martin and General Clinton, who had lately arrived with a confiderable detachment, But Moore with his army purfued them fo clofe, that they were obliged to attempt the pailage of the creek itfelf, though a confiderable body of the enemy, under the command of Colonel Cofwell, with fortifications well planted with cannon, was posted on the other fide. On attempting the creek, however, it was found not to be fordable. They were obliged therefore to crofs over a wooden bridge, which the provincials had not time to deftroy entirely. They had, however, by pulling up part of the planks, and greating the remainder in order to render them flippery, made the paffage fo difficult, that

the royalists could not attempt it. In this fituation they were, on the 27th of February, attacked by Moore, with his superior army, and totally defeated with the loss of their general and most of their leaders, as well as the best and bravest of their men.

Thus was the power of the Provincials established in North-Carolina. Nor were they less fuccessful in the province of Virginia: where Lord Dunmore, having long continued an useless predatory war, was at last driven from every creek and road in the province. The people he had on board were distressed to the highest degree by confinement in small vessels. The heat of the featon, and the numbers crowded together, produced a pestilential fever, which made great havock, especially smong the blacks. At last, finding themselves in the utmost hazard of perishing by famine as well as disease, they fet fire to the least valuable of their vessels, referving only about fifty for themselves, in which they bid a final adieu to Virginia, fome failing to Florida, fome to Bermuda, and the reft to the West Indies.

In South Carolina the Provincials had a more formidable enemy to deal with. A fquadron, whole object was the reduction of Charlestown, had been fittest out in December 1775; but by reafon of unfavourable weather did not reach Cape Fear, in North-Carolina, till the month of May 1776; and here it met with further obstacles till the end of the month. Thus the Americans, always noted for their alertness in raising fortifications, had time to ftrengthen those of Charlestown in such a manner as rendered it extremely difficult to be attacked. The British squadron confilted of two fifty gun ships, four of thirty guns, two of twenty, an armed schooner, and bomb-ketch; all under the command of Sir Peter Parker. The land forces were commanded by Lord Cornwallis, with Generals Clinton and Vaughan. As they had yet no intelligence of the evacuation of Bofton, General Howe dispatched a vessel to Cape Fear, with some instructions; but it was too late; and in the beginning of June the fquadron anchored off Charlestown bar. Here they met with some difficulty in croffing, being obliged to take out the guns from the two large fhips, which were, notwithstanding, feveral times in danger of flicking fast. The next obstacle was a strong fort on Sullivan's Island, fix miles caft from Charleftown ; which though not completely finished, was very ftrong. However, the Britifh generals refolved without hefitation to attack it; but though an attack was easy from the fea, it was very difficult to obtain a co-operation of the land forces. This was attempted by landing them on Long-Itland, adjacent to Sullivan's Ifland on the east, from which it is feparated by a narrow creek, faid not to be above -

ed in a kind vernment as f their numthe chiefs of ife fome regiriling officer, f February he &c, and col. a body of re-Britain to act hible of their d to aft against exerted thements, Their , whole numfon the latter pain of being ded with caned against him, el Macdonald, , and fubfcribe ted as friends ; it was evident but expect the found himfelf the continual he royal party estitute of artilemy while they crefore obliged nal valour; by iles to Moore's ould they have d by Governor arrived with a army purfued t the pailage of enemy, under ns well planted attempting the c. They were which the prohad, however,. ne remainder in o difficult, that

## MOMISTORY OF THE

two feet deep at low water. Opposite to this ford the Provincials had posted a firing body of troops, with cannon and entrenchments; while General Lee was posted on the main land, with a bridge of boats betwixt that and Sullivan's Island, fo that he could at pleasure fend reinforcements to the troops in the fort on Sullivan's Island, at interval

On the part of the British, so many delays occured, that it was the a8th of June before matters were in readiness for an attack : and by this time the provincials had abundantly provided for their reception. On the morning of that day the bomb ketch began to throw shells into Fort Sullivan, and about mid-day the two fifty gun ships and thirty gun frigates came up and began a fevere fire. Three other frigates were ordered to take their station between Charlesson and the fort, in order to enfulade the batteries, and cut off the communication with the main land; but through the ignorance of the pilots they all stuck fast; and though two of them were differtangled, they were found to be totally unfit for fervice: the third was burnt, that the might not fall into the hands of the enemy.

my The attack was therefore confined to the five armed thips and bomb-ketch, between whom and the fort a dreadful fire enfued, The Briftol fuffered exceffively. The fprings on her cable being shot away, the was for fome time entirely exposed to the enemy's fire. As the enemy poured in great quantities of red-hot balls, the was twice in flames. The captain (Mr. Morris), after receiving five wounds, was obliged to go below deck in order to have his arm amputated. After undergoing this operation he returned to his place, where he received another wound, but still refused to quit his station : at last he received a red-hot ball in his belly which instantly put an end to his life. Of all the officers and formen who flood on the quarter-deck of this veffel, not one escaped without a wound excepting Sir Peter Parker alone; whole intrepidity and prefence of mind on this oceasion was very remarkable. The engagement lasted till darkness put an end to its Little damage was done by the British, as the works of the enc. my lay fo low that many of the fhot flew over ; and the fortifications, being compoled of palm-trees mixed with earth, were extremely well calculated to refift the impreffion of cannon. During the height of the attack, the provincial batteries remained for fome time filent, fo that it was concluded that they had been abandoned; but this was found to proceed only from want of powder; for as foon as a fupply of this necessary article was obtained, the firing was refumed as brifk as before. During the whole of this defperate engagement it was found impossible for the land forces to give the leaft affiftance to the fleet. The

Dures remained for they had been from want of rticle was ob-During the impoffible for c fleet. The enemy's works were found to be much fironger than they had been imagined, and the depth of water effectually prevented them from making any attempt. In this unfuccefsful attack the killed and wounded on the part of the British amounted to about two hundired. The Bristol and Experiment were fo much damaged, that it was thought they could not have been got over the bar; however, this was at last accomplished by a very great exertion of naval skill, to the surprize of the provincials, who had expected to make them both prizes. On the American side the loss was judged to have been very considerable, as most of their guns were dismounted, and reinforcements had poured into the fort during the whole time of the action.

This year alfo, the Americans, having fo frequently made trial of their valour by land, became defirous of trying it by fes, and of forming a navy that might in fome measure be able to protect their trade, and do effential hurt to the enemy. In the beginning of Match commodore Hopkins was dispatched with five frigates to the Bahama Islands, where he made himfelf mafter of the ordnance and military flores; but the gunpowder, which had been the principal object, was removed. On his return he captured feveral veffels; but was foiled in his attempt on the Glafgow frigate, which found means to escape nothwithstanding the efforts of his whole fquadron.

The time, however, was now come when the fortitude and patience of the Americans were to undergo a fevere trial. Hithereo they had been on the whole fuccessful in their operations : but now they were doomed to experience misfortune, and mi-Tery; the enemy overrunning their country, and their own armies not able to face them in the field. The province of New-York, as being the most central colony, and most accessibly by fea, was pitched upon for the object of the main attack. - The force fent against it confisted of fix thips of the line, thirty frigates, belides other armed velicis, and a vaft number of tranfports. The fleet was commanded by lord Howe, and the land forces by his brother general Howe, who was now at Halifax. The latter, however, a confiderable time before his brother arrived, had fet fail from Halifax, and lay before New-York, but without attempting to commence hostilities until he should be joined by his brother. The Americans had, according to cuftom, fortified New-York and the adjacent iflands in an extraordinary manher. However, general Howe, was fuffered to land his troops on Staten Island, where he was foon joined by a number of the inhabitants. About the middle of July, Lord Howe arrived with the grand armament; and being one of the commissioners appointed

to rechive the fubmiffion of the colonifts, he published a circular letter to this purpole to the feveral governors who had lately been expelled from their provinces, defiring them to make the extent of his commiffion, and the powers he was inveffed with by parliament, as public as poffible. Here, however, congrefs faved him the trouble, by ordering his letter and declaration to be published in all the newspapers, that every one might fee the infidiounnels of the British ministry, and that they had nothing to truft an befides the exercision of their own valuer.

a Lord Howe next fent a letter to General Walhington ; but as it was directed ; "To George Washington, Elq." the general refufed to accept of it, as not being directed in the fiyle fuitable to his flation. To obviate this objection, Adjutant-ganeral Paterfon was fent with another letter, directed "To George Washington, &c. &c.) &c." But though a very polite reception was given to the bearer, General Washington utterly refuled the letter; nor could any explanation of the Adjudant induce him to accept of it. The only interesting part of the conversation was that relating to the powers of the commissioners, of which Lord Howe was one. The adjutant told him, that these powers were very extensive; that the commissioners were determined to exert themfelves to the utmolt, in order to bring about a reconciliation ; and that he hoped the general would confider this vifit as a ftep towards it. General Washington replied, that it did not appear that these powers confisted in any thing elfe than granting pardons ; and as America had committed no offence, the affed no forgivenels, and was only defending her unquestionable rights.

The decision of every thing being now by confent of both parties left to the fword, no time was loft; but hoftilities commenced as foon as the British troops could be collected. This, however, was not done before the month of August ; when they landed without any opposition on Long Island, opposite to the thore of Staten Ifland. General Putnam, with a large body of troops, lay encamped and ftrongly fortified on a peninfula on the opposite shore, with a range of hills between the armies, the principal pais of which was near a place called Flat-bufh. Here the centre of the British army, confisting of Hellians, took post; the left wing, under General Grant, lying near the fhore; and the right, confifting of the greater part of the British forces, lay under Lord Percy, Cornwallis, and General Clinton. Putnam had ordered the paffes to be fecured by large detachments, which was executed as to those at hand; but one of the utmost importance, that lay at a diftance, was entirely neglected. This gave an opportunity to a large body of troops under Lord Percy and Clinton to pais the mountains and attack the Americans in the rear, while

510

shey were engaged with the Heffians in front. Through this place of negligence their defeat became inevitable. Those who were engaged with the Hellians first perceived their miltake; and began a retreat towards the camp; but the paffage was inscreepted by the British troops, who drove them back into the woods, Here they were met by the Heffians; and thus were they for many hours flaughtered between the two parties no way of cleape remaining but by breaking through the British troops, and thus regaining their camp. In this attempt many perified; and the right wing, engaged with General Grant, Mared the fame fate. The victory was complete ; and the Americans loft on this fatal day (August 27th) between three and four thoufand men, of whom two thousand were killed in the battle or purfuit. Among these a regiment, confisting of young gentlemen of fortune and family in Maryland, was almost entirely cut in pieces, and of the furvivors not one cleaped without a wound.

The ardour of the British troops was now to great, that they you I fearce be referained from attacking the lines of the provincial of the there was now no occasion, as it was certain they add not be defended. Of the British only fixty-one were killed in this engagement, and two hundred and fifty-feven wounded. Eleven hundred of the enemy, among whom were three generals, were taken priloners,

As none of the American commanders thought it proper to rifk another attack, it was refolved to abandon their camp as foon as poffible. Accordingly on the night of the 29th of August, the whole of the continental troops were ferried over with the utmost fecrecy and filence; fo that in the morning the British had nothing to do but take possession of the camp and artillery which they had abandoned.

This victory, though complete, was very far from being to decifive as was at first imagined. Lord Howe, supposing that it would be sufficient to intimidate the Congress into some terms, fent General Sullivan, who had been taken prisoner in the late action, to congress, with a message, importing, that though he could not confistently treat with them as a legal assembly, yet he would be very glad to confer with any of the members in their private capacity; fetting forth at the same time the nature and extent of his powers as a commissioner. But the Congress were not to be intimidated to derogate in the least from the dignity of character they had assumed. They replied, that the congress of the free and independent states of America could not confissently fend any of its members. in another capacity than that which they had publicly assumed; but as they were extremely desirous of restor $a \cdot U =$

ing peace to their sountry upon equitable conditions, they would appoint a committee of their hody to wait upon him, and learn what proposals he had to make;

This produced a new conference. The committee appointed by congreis was compoled of Dr. Franklin, Mr. Adams, and Mr. Rutledge, They were very politely received by his Lordthip ; but the conference proved as fruitlels as before indepency had been declared; and the final answer of the deputies was, that they were extremely willing to lenter into any treaty with Great-Britain that might conduce to the good of both nations, but that they would not treat in any other character than that of independent flates. This politive declaration inftantly put an end to all hopes of reconciliation; and it was refolved to profecute the war with the utmost vigour, Lord Howe, after publishing a manifesto, in which he declared the refutal of congress, and that he himfelf was willing to confer with all well dispoted perfons. about the means of reftoring public tranquillity, fet about the most proper methods for reducing the city of New-York. Here the provincial troops were posted, and from a great number of batteries kept continually annoying the British shipping. The East River lay between them, of about twelve hundred yards in breadth, which the British troops were extremely defirous of paffing. At laft the thips having, after an incollant cannonade of feveral days, filenced the most troublefome batteries, a body of troops was fent up the river to a bay, about three miles diftant, where the fortifications were lefs ftrong than in other places, Here having driven off the provincials by the cannon of the fleet, they marched directly towards the city; but the enemy finding that they fhould now be attacked on all fides, abandoned the city, and retired to the porth of the ifland, where their principal force was collected. In their paffage thither they fkirmifhed with the British, but carefully avoided a general engagement ; and it was observed that they did not behave with that ardour and impetuous valour which had hitherto marked their character, The British and provincial, armies were not now above two miles diftant from each other. The former lay encamped from fhore to fhore for an extent of two miles, being the breadth of. the island, which though fiftcen miles long, exceeds not two in any part in breadth. The provincials, who lay directly oppofite;

had firengthened their camp with many fortifications; at the fame time, being mafters of all the paffes and defiles betwixt the two camps, they were enabled to defend themfelves againft an army, much more numerous than their own; and they had alfo firongly fortified a pafs called *King's Bridge*, whence they could fecure a paffage to the continent in cafe of any misfortune; Here

General Washington, in order to inure the provincials to actual fervice, and at the fame time to annoy the enemy as much as possible, employed his troops in continual skirmisses; by which it was observed that they soon recovered their spirits, and behaved with their usual boldness.

As the fituation of the two armies was now highly inconvenient for the Britilh generals, it was refolved to make fuch movement<sup>3</sup> as might oblige General Washington to relinquish his strong fituation. The possession of New-York had been left beneficial than was expected. It had been concerted among the Provincials, that the city should be burnt at the time of evacuation; but as they were forced to depart with precipitation, they were prevented from putting this scheme in execution. In a few days, however, it was attempted by some who had been left behind for that purpole. Taking advantage of a high wind and dry weather, the town was set on fire in several places at once, by means of combustibles properly placed for that purpose; and notwithstanding the most aftive exertions of the foldiery and failors, a fourth part of the city was confumed.

On this occasion the British were irritated to the highest degree and many perfons, faid to be incendiaries, were without mercy thrown into the flames. It was determined to force the provincial army to a greater distance, that they might have it less in their power, by any emillaries, to engage others in a fimilar attempt. For this purpole, Gen. Howe having left Lord Percy with fufficient force to garrilon New-York, he embarked his army in flat-bottom boats, by which they were conveyed through the dangerous paffage called Hell Gate, and landed near the town of West Chefter, lying on the continent towards Connecticut. Here having received a supply of men and provisions, they moved to New-Rochelle, fituated on the found which feparates Long Ifland from the continent. After this, receiving still fresh reinforcements, they made fuch movements as threatened to diffreis the provincials very much, by cutting off their convoys of provisions from Connecticut, and thus force them to an engagement. This, however, General Washington determined at all events to avoid. He therefore extended his forces into a long line opposite to the way in which the enemy marched, keeping the Bruna, a river of confiderable magnitude, between the two armies, with the North River on his rear. 'Here again the provincials continued for fome time to annoy and skirmish with the Royal army, until at last, by lome other manœuvres, the British general found means to attack them advantageoufly at a place called the White Plains, and drove them from fome of their pofts. The victory on this occasion was much lefs complete than the former : however it obliged the pro-

vincials once more to fhift their ground, and to retreat farther up the country. General Hows purfued for fome time; but at laft finding all his endeavours vain to bring the Americans to a pitch. ed battle, he determined to give over fuch an ufelefs chace, and employ himfelf in reducing the forts which the provincials still retained in the neighbourhood of New-York. In this he met with the most complete fuccess. The Americans, on the approach of the British forces, retreated from King's Bridge into Fort Washington; and this, as well as Fort Lee, which lay in the neighbourhood, was quickly reduced, though the garrifon made their escape, Thus the Jerfeys' were laid entirely open to the incursions of the British troops; and fo fully were these provinces taken poffeffion of by the Royal army, that its winter-quarters extended from New-Brunswick to the river Delaware, Had any number of boats been at hand, it is probable that Philadelphia would now have fallen into their hands, All thefe, however, had been carefully removed by the Americans. In lieu of this enterprife, Sir Henry Clinton undertook an expedition to Rhode-Ifland, and became mafter of it without lofing a man, His expe. dition was also attended with this further advantage, that the Ame, rican fleet under Commodore Hopkins was obliged to fail as far as poffible up the river Providence, and thus remained entirely ufelefs.

The fame ill fuccess continued to attend the Americans in other parts. After their expulsion from Canada, they had croffed the lake Champlain, and taken up their quarters at Crown Point, as we have already mentioned, Here they remained for fome time in fafety, as the British had no veffels on the lake, and confequently General Burgoyne could not purius them. To remedy this deficiency, there was no pollible method, but either to conftrust veffels on the fpot, or to take to pieces fome veffels already constructed, and drag them up the river into the lake. This, however, was effected in no longer a fpace than three months; and the British general, after incredible toil and difficulty, faw himfelf in poffeilion of a great number of veffels, by which means he was enabled to purfue his enemies, and invade them in his turn. The labour undergone at this time by the fea and land forces must indeed have been prodigious; fince there were conveyed over land, and dragged up the rapids of St. Laurence, no few, er than thirty large long boats, four hundred batteaux, belides a waft number of flat bottomed boats, and a gondola of thirty tons, The intent of the expedition was to push forward before winter to Albany, where the army would take up its winter-quarters, and next fpring effect a junction with that under General Howe when it' was not doubted that the united force and skill of these two commanders would speedily put a termination to the war.

farther un but at laft to a pitchchice, and incials still his he met he approach e into Fort lay in the rrifon made open to the le provinces ter-quarters Had any Philadelphia ic, however, lieu of this on to Rhode-His expehat the Ame, fail as far as entirely ule-

By reason of the difficulties with which the equipment of this deet had been attended, it was the beginning of October before he expedition could be undertaken. It was now, however, by every judge allowed to be completely able to answer the purpose for which it was intended. It confifted of one large veffel with three mafts; carrying eighteen twelve pounders; two ichooners, the one carrying fourteen, the other twelve fix-pounders; a large flat-hottomed radeau with lix twenty-four and fix twelve-pounders ; and a gondola with eight nine-pounders. Befides thefe there were twenty fiel, 'a fmaller fize, calk a a-boats, cartying each a piece brat. ordance from nine to twenty-four pounders or howitzers. Several long-boats were fitted out in the fame manner; and belides all theic, there were a valt number of boats and tenders of various fizes, to be used as transports for the troops and baggage. It was manned by a number of felcet feamen, and the guns were to be ferved by a detachment from the corps of artillery; the officers and foldiers appointed for this expedition were allo chofen out of the whole army,

To oppole this formidable armament the Americans had only a very inconfiderable force, commanded by General Arnold; who after engaging part of the Britifh fleet for a whole day, took advantage of the darknefs of the night to fet fail without being perceived, and next morning was out of fight; but he was fo clofely purfued by the Britifh, that on the fecond day after he was over, taken, and forced to a fecond engagement. In this he behaved with great gallantry; but his force being inferior to that of the enemy, he was obliged to run his fhips aftore and fet them on fire. A few only eleaped to Lake George; and the garrifon of Crown Point having deftroyed or carried off every thing of value, retired to Ticonderago. Thither General Carleton intended to have purfued them; but the difficulties he had to encounter appeared fo many and fo great, that it was thought proper to march back into Canada, and defift from any further operations till next fpring.

Thus the affairs of the Americans feemed every where going to wreck: even thole who had been molt fanguine in their caufe began to waver. The time, allo, for which the foldiers had enlifted themfelves was now expired; and the bad fuccefs of the preceding campaign had been to very difcouraging, that no perfon was willing to engage himfelf during the continuance of a war, of which the event feemed to be to doubtful. In confequence of this, therefore, General Washington found his army decreasing in ftrength; to that from thirty-thousand men, of whom it confifted, when General Howe landed on Staten Island, fearce a tenth part could now be mustered. To affift the chief comman, der as much as possible, General Lee had collected a body of forces

in the north; but on his way fouthward, having improducing taken up his lodging at fome diffance from his treops, information was given to Colonel Harcourt, who happened at that time to be in the neighbourhood, and Lee was made prifoner. The loss this general was much regretted, the more effectally as he was of fuperior quality to any prifoner in the poffellion of the colonifay and could not therefore be exchanged. Six field officers was offered in exchange, for him and refuted; and the Congret the highly irritated as its being reported that he was so be treated as a deferter; having been a half-pay officer in the British ferrice at the commencement of the war. In confequence of this hey fixed a proclamation, threatening to retaliste on the prifoners in their poffellion whatever punishment fhould be inflicted on any of those taken by the British, and especially that their conduct fhould be regulated by the treatment of General Lee.

In the mean time they proceeded with the most indefatigable diligence to recruit their army, and bound their foldiers to ferve for a term of three years, or during the continuance of the war; The army defigned for the enfuing campaign was to confift of eighty-eight battalions; of which each province was to contribute its quota; and twenty dollars were offered as a bounty to each foldier, befides an allotment of lands at the end of the war. In this allotment was flipulated, that each foldier should have one hundred acres; an enfign one hundred and fifty; a lieutenant two hundred; a captain three hundred; a major four hundreds a lieutenant-colonel four hundred and fifty; and a colonel five hundred. No lands were promifed to those who inlisted only for three years. All officers or foldiers difabled through wounds received in the fervice to enjoy half-pay during life. To defray, the expence, congrefs borrowed five millions of dollars at five per cent; for payment of which the United States became furety, At the fame time in order to animate the people to vigorous exertions, a declaration was published, in which they let forth the necessity there was for taking proper methods to infure fucces in their caufe : they endeavoured to palliate as much as possible the misfortunes which had already happened; and reprefented the true caule of the prefent diffress to be the flort term of enliftment.

This declaration, together with the imminent danger of Philadelphia, determined the Americans to exert themfelves to the utmoft in order to reinforce General Washington's army. They foon received farther encouragement, however, by an exploit of that general against the Hessians. As the Royal army extended in different cantonments for a great way, Gen. Washington, perceiving the imminent danger to which Philadelphia was

521

d releived to make fome attempt on those divisions of the which lay nearest that city. These happened to be the ins, who lay in three divisions, the laft only twenty miles allant from Philadelphia. On the sgth of December, having milected as confiderable a force as he could, he fet out with an intent to furprise that body of the enemy who lay at Trenton my was divided into three bodies pone of which he ordered Forond at a grout different felow, the start the town ; nd at a goot distance below, it's place called Berdentown, the the fecond divilion of Hellians was placed ; while he minwith the third, directing his course to a ferry some miles bove Trenton, intended to have palfed it at midnight, and attick the Heffians at break of day. But by realon of various impediments, it was eight of the morning before he could reach the place of his deflination. The enemy, however, did not perceive his approach till they were fuddenly attacked. Colonel Ralle, who commanded them, did all that could be expected from a brave and experienced officer ; but every thing was in fuch confulion, that no efforts of valour or fkill could now retrieve matters, The colonel himles was mortally wounded, his troops were entirely broken, their artiflery feized, and about one thousand taken to a real of the second degringer for a strato priloners.

This action, though feemingly of no very decifive nature, was fufficient at that time to turn the fortune of war in favour of America. It tended greatly to leffen the fear which the provincials had of the Hellians, at the fame time it equally abated the confidence which the Britilh had till now put in them. Reinforcements came into General Wathington's army from all quarters : fo that he was foon in a condition to leave Philadelphia, and take up fils quarters at Trenton. Emboldened by his success, he dctermined to make an attempt on a division of the British forces flationed at Maidenhead, a town fituated half way between Trenton and Princeton. This confifted of three regiments under the command of Colonel Mawhood, an officer of great merit. The troops were furpriled on their march; but though they were feparately furrounded and attacked by a force to waftly fuperior. they charged the enemy to refolutely with their bayonets, that they effected a retreat. These attempts of the Americans however, with the hoftile difpolition of the people, showed the impoffibility of maintaining pofts to far advanced in the encmy's country; fo that it was refolved to retreat towards Brunfwick, in order to prevent it, with the troops and magazines it contained, from falling into the hands of the provincials. General Washington lost no opportunity of recovering what had been

indefatigable diers to ferve e of the war; to confift of to contribute unty to each the war. In uld have one a lieutenant our hundreds colonel five ifted only for ugh wounds . To defray lollars at five ecame furety, vigorous exfet forth the are fuccels in s possible the prefented the erm of enlift-

nger of Philaves to the utarmy. They an exploit of rmy extended Washington, adelphia was

loft; and by dividing his army into fmall parties, which could be reunited on a few hours warning, he in a manner entirely covered the country with it, and repetieffed himself of all the important places.

Thus ended the compaign of 1776, with fearce any real advantage other than the acquisition of the sity of New-York, and a few fortress in its neighbourhood; where the troops were obligen to all with as much circumspection as if they had been belieged by a vistorious army, instead of being themselves the consucrors.

The army at New-York began in sygg to exercise a kind of predatory war, by fending out parties to deftroy magazines, make incursions, and take or deftroy fuch forts as lay on the banks of rivers, to which their great command of fhipping gave them access. In this they were generally successful : the provincial magazines at Peck's-Hill, a place, of about fifty miles diftant from New-York, were destroyed, the town of Dunbury in Connecticut burnt, and that of Ridgefield in the fame province was taken poffellion of. In returning from the laft expedition, however, the British were greatly harraffed by the enemy under Generals Arnold, Woofter, and Sullivan ; but they made good their retreat in fpite of all oppolition, with the lofs of only one hundred and feventy killed and wounded. On the American fide the lofs was much greater; General Woofter was killed, and Arnold in the most imminent danger. On the other hand, the Americans deftroyed the stores at Sagg-harbour, on Long-Ifland, and made prifoners of all who defended the place.

As this method of making war, however, could answer but little purpole, and favoured more of the barbarous incursions of lavages than of a war carried on by a civilized people, it was refolved to make an attempt on Philadelphia. At first it was thought that this could be done through the Jerfeys ; but General Wafhington had received fuch large reinforcements, and posted himself fo strongly, that it was found to be impracticable. Many stratagems were used to draw him from this ftrong fituation, but without fuccefs; fo that it was found necessary to make the attempt on Philadelphia by fea. While the preparations necessary for this expedition were going forward, the Americans found means to make amends for the capture of General Lee by that of General Prescot, who was seized in his quarters with his aid-de-camp, in much the fame manner as General Lee had been. This was exceedingly mortifying to the General himfelf, as he had not long before fet a price upon General Arnold, by offering a fum of money to any one that apprehended him ; which the latter anfwered by fetting a lower price upon General Prefeot."

The month of July was far advanced before the preparations for the expedition against Philadelphia were completed; and it was the 29d before the fleet was able to fail from Sandy-Hook.

The force employed in this expedition confilted of thirty-fix batclions of British and Hellians, a regiment of light horfo, and a body of loydlifts raifed at New-York. The remainder of thele. with feventeen battalions, and another body of light horfe, were stioned at New-York under Sir Henry Clinton. Seven battaions were flationed at Rhode-Ifland. After a week's failing they prived at the mouth of the Delaware ; but there, received certain telligence, that the navigation of the river was to effectually. obstructed, that no pollibility of forcing a pallage remained. Upon this is was refolved to proceed farther fouthward to Chefspesk Bey in Maryland, from whence the diftance to Philadelphia was not very great, and where the provincial army would find lefs advantage from the nature of the country than in the Jericys (1993) The navigation from Delaware to Chefapeak took up the beft part of the month of August, and that up the bay itfelf was extremely difficult and tedious, At laft, having failed up the river Elk as far as was practicable, the troops were landed without oppolition, and let forward on their intended expedition. On the news of their arrival in Chefapeak, General Walhington left the Jerfeys, and haftened to the relief of Philadelphis ; and in the beginning of September met the Royal army at Brandy-wine Creek about mid-day, between the head of the Elk and Philadel: phis. Here he adhered to his former method of fkirmishing and haraffing the Royal army on its march; but as this proved infufficient to Rop its progrefs, he retired to that fide of the Greek nex" to Philadelphia with an intent to dispute the passage. " This brought on a general engagement on the 11th of September; in which the Americans were worked through the superior difcipline of the British troops; and it was only through the approach of night that they were faved from being entirely destroyed. On this occasion the provincials loft about one thousand in killed and wounded, belides four hundred taken prifoners,

The lois of this battle proved alfo the lois of Fhiladelphia.— General Walhington retired towards Lancaster, an inland town at a confiderable distance from Philadelphia. Here, however, the British general took such measures as must have forced the provincials to a fecond engagement; but a violent rain which lasted a day and a night prevented his defign. General Washington though he could not prevent the loss of Philadelphia, still adhered to his original plan of distressing the Royal party, by laying ambushes and cutting off detached parties : but in this he was less fuccessful than formerly; and one of his own detachments, which lay in ambush in a wood, were themselves surprised and entirely defeated, with the loss of three hundred killed and wounded, befides a great number taken, and all their arms and baggage,

## MULISTORY OF THE JAKE

"General Howe now perceiving that the Americans would not venture another battle even for the fake of their sapital, te pesceable poffellion of it on the a6th of September. His firft ch Weil then to cut off, by means of ftrong brateries, the communice between the upper and lower parts of the river ; which was end suted notwithftanding the opposition of some American armed vellels t one of which, carrying thirty-fix mus, was taken. His next talk was to open a communication with it by feer and was a work of no fmall difficulty. A vaft number of batteries an forts had been created, and immenfe machines formed like cheve de frize, from whence they took their name, funk in the river to prevent its negivation. As the fleet was fent round to the mouth of the river in order to co-operate with the army, this work, how? ever difficult, was accomplithed ; nor did the provincials give much oppoficion, as well knowing that all places of this kind were now untenable. General Washington, however, took the advantage of the royal army being divided, to attack the camp of the princical division of it that ley at German-town, in the neighbourhood of Philadelphia, In this he met with very little fuccels ; for though he reached the place of defination by three o'clock in the morning, the patroles had time to call the troops to arms. The Americans, notwithflanding, made a very refolute attack : but they were received with fuch bravery, that they were compelled to abandon the attempt, and retreat in great diforder ; with the advantage, however, of carrying off their cannon, though purfued for a confiderable way, after having three hundred killed, fix hundred wounded, and upwards of four hundred taken prifoners, among whom were fifty-four officers. On the British fide, the lofs amounted to four hundred and thirty wounded and priloners and feventy killed ; but among the laft were General Agnew and Colonel Bird, with fome other excellent officers,

There fill remained two firong forts on the Delaware to be teduced. These were Mud Island and Red Bank. The various obstructions which the Americans had thrown in the way render, ed it necessary to bring up the Augusta, a ship of the line, and the Merlin frigate, to the attack of Mud Island; but during the heat of the action both were grounded. Upon this, the Americans sent down four fire-ships, and directed the whole fire from their galleys against them. The former were rendered ineffectual by the courage and skill of the British feamen; but during the engagement both the Augusta and Merlin took fire and were burnt to asses, and the other ships obliged to withdraw. The Americans encouraged by this unfuccedsful attempt, proceeded to throw new obstructions in the way; but the British general having found means to convey a number of cannon, and

The expedition in that quarter and been projected by the Britifh miniflery as the most en that me thod that could be taken to cruft the released at once. The four provinces of New-England had originally degun the or fe deracy against Britain, and were full considered as the more ge-10 OF .... tive in the continuation of it; and it was thought, that any imprefiion made upon them would contribute in an effectual manner to the reduction of all the reft. For this purpose, an army of four thouland choien British troops and three thousand Germana were put under the command of General Burgoyne; General Curleton was directed to use his interest with the Indians to perfuede them to join in this expedition; and the province of Quebec was to furnish large parties to join in the same. The officers who commanded under General Burgoyne were General Philips of the artillery, Generals Fraler, Powell, and Hamiltor, with the German officers Generals Reidefel and Speecht. The foldiers, as has already been observed, were all excellently disciplined, and had been kept in their winter-quarters with all imaginable care, in order to prepare them for the expedition on which they were going. To aid the principal expedition, another was projected on the Mohawk River under Colonel St, Leger, who was to be affisted by Sir John Johnson, Ion to the famous Sir William Johnson, who had so greatly diffinguished himself in the war of 1755 of gring To . dates . \_ by firm it . That has foring

On the 21ft of June 1777, the army encamped on the weftern fide of the Lake Champlain; where being joined by a confiderable body of Indians, General Burgoyne made a speech, in which be exorted these new allies to by aside their ferocious and barbarous manner of making war; to kill only such as opposed them in arms; and to spare prisoners, with such women and children is should fall into their hands. After issuing a proclamation, in

which the force of Britain and that which he companded was et forth in very oftentatious terms, the campsign open the fiege of Ticonderoga. The place was very from foned by fix thousand men under General Sinclair ; pewertheled the works were fo extensive that even this number was fearce furficient to defend them properly. They had therefore omitted to fortify a rugged eminence called Sugar Mill; the top of which overlooked and effectually commanded the whole works; vainly magining that the difficulty of the afcent would be sufficient to prevent the enemy from taking pollollion of it. On the approach of the first division of the army, the provincials abandoned and ict fire to their outworks; and fo expeditious were the British proops, that by the 5th of July every post was secured that was judged necellary for investing it completely. A road was foon after made to the very fummit of that eminence which the Americans had with fuch confidence supposed could not be ascended, and so much were they now disheartened, that they instantly abandoned the fort entirely, taking the road to Skenefborough, a place to the South of Lake George t' while their baggage, with what artillery and military flores they could carry off, were fent to the fame place by water. But the British generals were determined not to let them pais to cafily. Both were purfued and both overtaken. Their armed veffels confifted only of five galleys; two of which were taken, and three blown up; on which they fet fire to their boats and fortification at Skenesborough. On this occasion the provincials loft two hundred boats, one hundred and thirty pieces of cannon, with all their provisions and baggage. Their land-forces under Colonel Francis made a brave defence against General Fraser: and being greatly superior in number, had almost overpowered him, when General Reidesel with a large body of Germans came to his affiftance. The Americans were now overpowered in their turn; and their commander being killed, they fled on all fides with great precipitation. In this action two hundred Americans were killed as many taken prifoners, and above fix hundred wounded, many of whom perifhed in the woods for want of affistance.

During the engagement General Sinclair was at Cafileton, about fix miles from the place; but inftead of going forward to Fort Anne, the next place of ftrength, he repaired to the woods which lie between that fortrefs and New-England. General Burgoyne, however, detached Colonel Hill with the ninth regiment, in order to intercept fuch as fhould attempt to retrest towards Fort Anne. On his way he met with a body of the eneiny, faid to be fix times as numerous as his own; but after an engagement of three hours, they were obliged to retire with

But on the approach of the royal army, they retired from thence also, and formed their head quarters at Saratoga. Notwithstanding the great successes of the British General, they showed not the least disposition to submit, but seemed only to confider how they might make the most effectual relistance. For this purpole, the militia was every where railed and draughted to join the army at Saratoga; and fuch numbers of volunteers were daily added, that they foon began to recover from the terror into which they had been thrown. That they might have a commander whole abilities could be relied on, General Arnold was appointed, who repaired to Saratoga with a confiderable train of artillery; but receiving intelligence that Colonel St. Leger was proceeding with great rapidity in his expedition on the Mohawk River, he removed to Still-water, a place about half-way between Saratoga and the junction of the Mohawk and Hudson's River. The Colonel, in the mean time, had advanced as far as Fort Stanwix; the fiege of which he prefied with great vigour. On the 6th of August, understanding that a supply of provisions, efcorted by eight or nine hundred men, was on the way to the fort, he dispatched Sir John Johnson with a strong detachment to intercept it. This he did fo effectually, that befides intercepting the provisions, four hundred of its guards were flain, two hundred taken, and the reft escaped with great difficulty. The garrifon, however, were not to be intimidated by this difafter, nor by the threats or representations of the Colonel: on the contrary, they made feveral fuccessful fallies under Colonel Willet, the second

difficulties he had already fultrined, found that he must still encounter more, The roads he had made with fo much labour and pains were deftroyed either by the wetness of the featon, or by the enemy; fo that the provisions he brought from Fort George could not arrive at his camp without the most prodigious toil. On hearing of the flege of Fort Stanwix, by Colonel St. Leger, he determined to move forward in hopes of inclosing the enemy betwist his own army and that of St. Leger, or of obtaining the command of all the country between Fort Stanwix and Albany; or at any rate, a junction with Colonel St. Leger would be effected, which could not but be attended with the most happy confequences. The only difficulty was the want of provisions; and this it was proposed to remedy by reducing the provincial magazines at Bennington. For this purpole, Colonel Baum, a German officer of great bravery, was cholen with a body of five hundred men." The place was about twenty miles from Hudfon's River; and to fupport Colonel Baum's party, the whole army marched up the river's Lank, and encamped almost opposite to Saratoga, with the river betwixt it and that place. An advanced party was posted at Batten Kill, between the camp and Ben. nington, in order to support Colonel Baum. In their way the British feized a large supply of cattle and provisions, which were immediately fent to the camp; but the badness of the roads retarded their march fo much, that intelligence of their defign was fent to Bennington. Understanding now that the American force was greatly superior to his own, the Colonel acquainted the General, who immediately difpatched Colonel Breyman with a party to his affiftance; but through the fame caufes that had retarded the march of Colonel Baum, this affiftance could not arrive

MARANA engagement, had through the darkness of the might could not have done, WIN sathis men bad expended , being forty rounds With the second state of t to each. General Burgoyne, thus difappointed in his attempt, on Bentington, applied himfelf with indefatigable diligence to, procure provisions from Fort George , and having at length amaffed a fufficient quantity to laft, for a month, he threw, a bridge of boats over, the river Hudion, which he croffed about the middle of September, encamping on the hills and plains near Saratoga. As foon as he approached the provincial army, at this time encamped at Stillwater under General Gates, he determined to make an attack ; for which purpole has put himfels at the head of the central division of his army, having General Frafer and Colonel Breyman on the right, with Generals Reidefel and Philips on the left. In this polition he advanced towards the enemy on the 19th of September, But the Americans did not now wait to be attacked : on the contrary, they attacked the central division with the utmost bravery; and it was not until General Philips with the artillery came up that they could be repulled. On this occasion, though the British troops loft only three hundred and thirty in killed and wounded, and the enemy no fewer

than fifteen hundred, the former were very much alarmed at the obstinate resolution shown by the Americans. This did not, however, prevent them from dvancing towards the enemy, and polling themselves the next day within cannon-shot of their lines. But their allies the Indians began to defert in great numbers; and at the same time the general was in the highest degree mortified by having no intelligance of any affiftance from Sir Henry Clinton, as had been stipulated. He now received a letter from him, by which he was informed that Sir Henry intended to make a diversion on the North River in his favour, This afforded but little comfort: however, he returned an anfwer by feveral trufty perfons whom he difpatched different ways.

stating his prefent distressed situation, and mentioning that the provisions and other necessaries he had would only enable him to hold out till the 12th of October.

diers allowances On the sth determined to move towards the currany. For this purp of he fent a body of fifteen hundred men to meon noitre their left wing ; intending if possible, to break through it in order to effect a retreat. The detachment, however, had not proceeded far when a dreadful attack was made upon the left wing of the British army, which was with great difficulty preferved from being entirely broken by a reinforcement brought up by General Fraler, who was killed in the attack, After the troops had with the most desperate efforts regained their camp, it was most furiously affaulted by General Arnold; who, notwithftanding all oppolition, would have forced the elitrenchments, he not received a dangerous wound, which obliged him to retire. Thus the attack failed on the left, but on the right the samp shares German referve was forced. Colonel Breyman killed, and his countrymen defeated with great flaughter and the tols of all their artillery and baggage. Their and it is

in This was by far the heaviest loss the British army had fustained fince the action at Bunker's Hill. The lift of killed and wounded amounted to near twelve hundred, exclusive of the Germans ; but the greatest misfortune was, that the enemy had now an opening on the right and rear of the British forces, fo that the army was threatened with entire destruction. This obliged General Burgoyne once more to shift his polition, that the enemy might alfo be obliged to alter theirs. This was accomplished on the night of the 7th, without any loss, and all the next day he continued to offer the enemy battle ; but they were now too well affured of obtaining a complete victory, by cutting off all fupplics from the British, to risk a pitched battle. Wherefore they advanced on the right fide, in order to inclose him entirely ; which obliged the General to direct a retreat towards Saratoga, But the enemy had now flationed a great force on the ford at Hudfon's River, fo that the only possibility of retreat was by fecuring a paffage to Lake George; and to effect this, a body of workmen were detached, with a ftrong guard, to repair the roads and bridges that led to Fort Edward. As foon as they were gone, however, the enemy feemed ao prepare for an attack ; which rendered it necessary to recal the guard, and the workmen being of courfe left exposed could not proceed.

In the mean time, the bosts which conveyed provisions down Hudion's River, were expected to be construct for the American markimen, who took many of them, to thus, a became ngceffary to convey the provisions over land. In this extreme danger, it was refolved to march by night an lart Haward, forcing the paffages at the fords either above articless the places, and in order to effect this the more early, it was referred that the foldiers fhould carry their provisions on their backs, leaving behind their baggage and every other incumbrance. But before this could be executed, intelligence was received that the enemy had raifed firong entrenchments opposite to thefe fords, well provided with cannon, and that they had likewife taken possefillion of the rising ground between Fort George and Fort Edward, which in like manner was provided with cannon.

All this time the American army was increasing by the continual arrival of militia and volunteers from all parts. Their parties extended all along the opposite bank of Hudson's River, and fome had even paffed it in order to obferve the leaft movement of the Britifli army. The whole force under General Gates was computed at fixteen thousand men, while the army under General Burgoyne fcarce amounted to fix thousand; and every part of the camp was reached by the grape and rifle shot of the enemy, befides a discharge from their artillery, which was almost inceffant. In this flate of extreme diffrels and danger, the army continued with the greatest constancy and perfeverance till the evening of the s 3th of October, when an inventory of provisions being taken, it was found that no more remained than what were fufficient to ferve for three days; and a council of war being called, it was unanimoully determined that there was no method now remaining but to treat with the enemy. In confequence of this, a negociation was opened next day, which speedily terminated in a capitulation of the whole British army; the principal article of which was, that the troops were to have a free paffage to Britain, on condition of not ferving against America during the war. On this occasion, General Gates ordered his army to keep within their camp while the British foldiers went to a place appointed for them to lay down their arms, that the latter might not have the additional mortification of being made fpectacles of fo melancholy an event. The number of those who furrendered Saratoga amounted to five thousand feven hundred and fifty, according to the American accounts; the lift of fick and wounded left in the camp when the army retreated to Saratoga, to five hundred and twenty-eight; and the number of those lost by other accidents fince the taking of Ticonderoga, to near three thouland,

1. 3. 1 2 is at look with the misting for in

194

Thirty-five brafs field pieces, feven thousand fland of arms, cloth, ing for an equal number of folders, with their tents, military cheft, &c. conflicted the booty on this occation,

Sir Henry Clinton, in the mean time, had failed up the North River, and defrequel are two forts called Montgomery and Clinton, with Fort Conflictmen, and another place called Continental Village, where ware barracks for two thousand men. Seventy large common were carried away, belides a number of smaller artillery, and a great quantity of flores and ammunition; a large boom and chain reaching across the river from Fort Montgomery to a point of land called St. Anthony's Nole, and which cost not less than feventy thousand pounds flerling, were parily deftroyed and partly carried away, as was allo another boom of little less value at Fort Conflictution. The loss of the British army was but small in number, though some officers of great merit were killed in the different attacks.

Another attack was made by Sir James Wallace with fome frigates, and a body of land forces under General Vaughan. The place which new fuffered was named Elopus: the fortifications were deftroyed, and the town itfelf was reduced to aftes, as that called Continental Villarge had been before.

But these factelles, of whatever importance they might be, were now difregarded by both parties. They ferved only to irritate the Americans, flushed with their fucces; and they were utterly infufficient to raife the fpirits of the British, who were now thrown into the utmost difmay,

On the 16th of March 1778, Lord North intimated to the house of commons, that a paper had been laid before the king by the French ambassador, intimating the conclusion of an alliance between the court of France and the United States of America. The preliminaries of this treaty had been concluded in the end of the year 1777; and a copy of them sent to congress, in order to counterast any proposals that might be made in the mean time by the British ministry. On the 6th of February 1778, the articles were formally figned, to the great fatisfaction of the French nation.

They were in fubftance as follows ;

1. If Great Britain fhould, in confequence of this treaty, proceed to hoftilities against France, the two nations should mutually affist one another,

2. The main end of the treaty was in an effectual manner to maintain the independency of America.

3. Should those places of North America ftill subject to Britain be reduced by the colonies, they should be confederated with them, or subjected to their jurisdiction.

foundlar

4. Should any of the Weft India islands be reduced by Brance, shey should be deemed its property.

5. No formal treaty with Great-Britain fhould be concluded either by France or America without the confent of each other; and it was mutually engaged that they fhould not lay down their arms till the independence of the States had been formally acknowledged.

6. The contracting parties mutually agreed to invite those powers that had received injuries from Great-Britain to join the common cause.

7, The United States guaranteed to Cance all the poffessions in the West Indies which the thould conquer; and France in her turn guaranteed the absolute independency of the States, and their fupreme authority over every country they possessed, or might acquire during the war,

The notification of fuch a treaty as this could not be looked upon as a declaration of war. On its being announced to the houfe, every one agreed in an address to his Majefty, promifing to fand by him to the utmost in the prefent emergency ; but it was warmly contended by the members in opposition, that the prefent ministry ought to be removed on account of their num. berlefs blunders and mifcarriages in every inftance. Many were of opinion, that the only way to extricate the nation from its trouble was to acknowledge the independency of America at once t and thus we might ftill do with a good grace what must inevitably be done at laft, after expending much more blood and treasure than had yet been lavished in this unhappy contest. The ministerial party, however, entertained different ideas. Inftigated by ambition and folly, it was determined at once to refent the interference of France, and profecute hostilities against America with more vigour than ever, should the terms now offered be rejected. " a marting of a first

The Americans, in the mean time, affiduoufly employed their agents at the courts of Spain, Vienna, Pruffia, and Tufcany, in order, if poffible, to conclude alliances with them, or at leaft to procure an acknowledgment of their indepency. As it had been reported that Britain intended to apply for affiftance to Ruffia, the American commiffioners were enjoined to use their utmost influence with the German princes to prevent fuch auxiliaries from marching through their territories, and to endeavour to procure the recal of the German troops already fent to America. To France they offered a ceffion of fuch Weft India islands as should be taken by the united ftrength of France and America : and should Britain by their joint endeavours be disposified of Newfoundland, Cape Breton, and Nova Scotia, these territories should

be divided betwixt the two nations, and Great-Britain be totally excluded from the fifthery. The proposals to the Spanish court were, that in cale they should think proper to espouse their quarrel, the American States should affiss in reducing-Penfacola under the dominion of Spain, provided their subjects were allowed the free navigation of the Mississippi, and the use of the harbour of Penfacola; and they further offered, that if agreeable to Spain, they would declare war against Portugal, should that power expel the American ships from its ports.

In the mean time, the troops under General Burgoyne were preparing to embark for Britain accord to the convention at Saratoga; but in the interim, congress positively refused them permission to to do, having diffeovered that fome finister defigns were harboured on the part of Britain, and that they only wanted an opportunity to join the other troops at Philadelphia or New-York.

The featon for action was now approaching; and congress was indefatigable in its preparations for a new campaign which it was confidently faid would be the laft. Among other methods taken for this purpole, it was recommended to all the young gentlemen of the colonies to form themfelves into bodies of cavalry to ferve at their own expence during the war. General Washington at the fame time, in order to remove all incumbrances from his army, lightened the baggage as much as pollible, by fublituting facks and portmanteaus in place of chefts, and boxes, and using pack-horfes inftead of waggons. On the other hand, the British army, expecting to be speedily reinforced by twenty thousand men, thought of nothing but concluding the war according to their wifnes before the end of the campaign, It was with the utmost concern, as well as indignation therefore, that they received the news of Lord North's conciliatory bill. It was univerfally looked upon as a national difgrace; and fome even tore tha cockades from their hats, and trampled them under their feet as a token of their indignation. By the colonifts it was received with indifference. The British commissioners endeavoured to make it as public'as possible; and congress, as formerly, ordered it to be printed in all the newspapers." On this occasion Governor Tryon inclosed feveral copies of the bill to General Washington in a letter intreating that he would allow them to be circulated ; to which that general returned for aniwer a copy of a newspaper in which the bill was printed, with the refolutions of congress upon it, These were, that whoever prefumed to make a separate agreement with Britain flould be deemed a public eneny; that the United States could not with any propriety keep correspondence with the commissioners until their independence was acknowledged,

At the fame time, the colonies were warned not to fuffer themselves to be deceived into fecurity by any offers that might be made; but to use their utmost endeavours to fend their quotas with all diligence into the field. The individuals with whom the commisfioners conversed on the subject of the conciliatory bill, generally returned for answer that the day, of reconciliation was past; and that the haughtiness of Britain had extinguished all filial regard in the breasts of Americans.

About this time also Mr. Silas Deane arrived from France with two copies of the treaty of commerce and alliance to be figned by Congress. Advices of the most agreeable nature were also received from various parts, representing in the most favourable light the dispositions of the European powers; all of whom, it was faid, wished to see the independence of America settled upon the most firm and permanent basis. Considering the fituation of matters with the colonists at this time, therefore, it is no wonder that the commissioners found themselves unable to accomplish the errand on which they came. Their proposals were utterly rejected, themselves treated as spies, and all intercours with them interdicted.

But before any final answer could be obtained from congress, Sir Henry Clinton had taken the refolution of evacuating Phiadelphia, Accordingly, on the 10th of June, after having made all neceffary preparations, the army marched out of the city and croffed the Delaware before noon with all its baggage and other incumbrances. General Washington, apprised of this defign. had dispatched expresses into the Jerseys with orders to collect all the force that could be affembled in order to obstruct the march of the enemy. After various movements on both fides, Sir Henry Clinton, with the royal army, arrived on the 27th of June at a place called Freehold; where, judging that the enemy would attack him, he encamped in a very ftrong fituation. Here General Washington determined to make an attack as soon as the army had begun its march. The night was fpent in making the necessary preparations, and General Lee with his division was ordered to be ready by day-break. But Sir Henry Clinton, juftly apprehending that the chief object of the enemy was the baggage, committed it to the care of General Knyphausen, whom he ordered to fet out early in the morning, while he followed with the telt of the army. The attack was accordingly made; but the British general had taken such care to arrange his troops properly, and fo effectually supported his forces when engaged with the Americans, that the latter not only made no impression, but were with difficulty preferved from a total defeat by the advance

535

of General Washington with the whole army. The British troops effected their retreat with the loss of three hundred men, of whom many died through mere fatigue without any wound. In this action General Lee was charged by General Washington with dilobedience and mileonduct in retreating before the British army. He was tried by a court-martial, and fentenced to a temporary fuspension from his command. After they had arrived at Sandy Hook, a bridge of boars was by Lord Howe's directions thrown from thence over the channel which separated the island from the main land, and the troops were conveyed aboard the fleet: after which they failed to New-York. After fending fome light detachments to watch the enemy's motions, General Washington marched towards the North River, where a great force had been collected to join him, and where it was now expected that fome very capital operations would take place.

In the mean time, France had fet about her preparations for the affiftance of the Americans. On the 14th of April Count d'Eftaing had failed from Toulon with a ftrong squadron of fhips of the line and frigates, and arrived on the coaft of Virginia in the beginning of July, while the British fleet was employed in conveying the forces from Sandy Hook to New York. It confifted of one thip of ninety guns, one of eighty, fix of feventyfour, and four of fixty-four, befides feveral large frigates; and, exclusive of its compliment of failors, had fix thousand marines and foldiers on board. To oppose this the British had only fix fhips of lixty-four guns, three of fifty, and two of forty, with fome frigates and floops. Notwithstanding this inferiority, however, the British admiral posted himself fo advantageously, and showed such superior skill, that d'Estaing did not think proper to attack him. He therefore remained at anchor four miles off Sandy Hook till the 22d of July, without effecting any thing more than the capture of fome veffels, which, through ignorance of his arrival; fell into his hands.

The next attempt of the French admiral was, in conjunction with the Americans, on Rhode Ifland. It was proposed that d'Eflaing, with the fix thousand troops he had with him, fhould make a descent on the fouthern part of the island, while a body of the Americans should take and destroy all the British shipping. On the 8th of August the French admiral entered the harbour as was proposed, but found himself unable to do any material damage, Lord Howe, however, instantly set fail for Rhode-Island; and d'Estaing, confiding in his superiority, immediately came out of the harbour to attack him. A violent florm parted the two fleets, and did fo much damage that they were rendered totally unfit for action. The French however, suffered most; and feveral of

itifh troops n, of whom d. In this ington with britifh army, a temporary ed at Sandy ions thrown and from the e fleet: efter mo light de-Wafhington ree had been ed that fome

in conjunction proposed that the him, should while a body of ritish shipping. I the harbour as naterial damage, ode-Island; and ely came out of I the two fleets, totally unfit for and several of their fhips being sterwards attacked fingly by the British, very narrowly elepted being taken. On the soth of August he returned to Newport in a very flattered condition ; and, not thinking himfelf fafe there, failed two days after for Bofton." General Sullivan had linded in the mean time on the northern part of Rhode-Ifland with ten thousand men." On the 17th of August they began their operations by crefting batterics, and making their approaches to the Britifh lines. But General Pigot, who commended in Newport, had taken fuch effectual care to fecure himfelf on the land-fide, that without the affiftance of a marine force it was altogether impollible to attack him with any probability of The conduct of d'Eftaing, therefore, in abandoning fuccels, them when maker of the harbour, gave the greatest difgust to the people of New-England, and German Sullivan began to think of a retreat. On perceiving his intentions, the garrilon falled out upon him with fo much vigour, that it was not without difficulty that he effected his retreat; He had not been long gone when Sir Henry Clinton arrived with a body of four thousand men ; which, had it arrived fooner, would have enabled the British commander to have gained a decifive advantage over him, as well as to have deftroyed the town of Providence, which, by its vicinity to Rhode-Island, and the enterprises which were continually projected and carried on in that place, kept the inhabitants of Rhode-Island in continual alarms. 1-955

The first British expedition was to Buzzard's Bay, on the coast of New-England and neighbourhood of Rhode-Island. Here they deftroyed a great number of privateers and merchantmen; inagazines, with florehoufes, &c.; whence proceeding to a fertile and populous illand called Martha's Vineyard, they carried off ten thousand flicep and three hundred black cattle. Another expedition took place up the North River, under Lord Corn. wallis and General Knyphaufen ; the principal event of which, was the destruction of a regiment of American cavalry, known by the name of Washington's Light Horse, A third expedition was directed to Little Egg Harbour in New-Jerfey, a place noted for privateers, the destruction of which was its principal intentions. It was conducted by Captains Ferguion and Collins, and ended in the destruction of the enemy's vessels, as well as of the place itfelf. At the fame time part of another body of American troops, called Pulaiki's Legion, was furprized, and a great number of them put to the fword. min the N Ser

The Americans had, in the beginning of the year, projected the conquest of West-Florida; and Captain Willing, with a party of resolute men, had made a successful incursion into the country. Vol. I. 3. Z

This awakened the sttention of the British to the Jouinern con lonies, and an expedition sgainft them was refolved on. Georgia was the place of defination ; and the more effectually to enfure fuccefs.). Colonel Campbell, with a fufficient force, under convoy of fome thips of war, commanded by Commodore Hyde Parker, embarked at New-York, while General Prevoft, who commanded in East Florida, was directed to fet out with all the force he could spare. The armament from New-York arrived off the coast of Georgia in the month of December ; and though the enemy were very frongly posted in an advantageous fituation on the shore, the British troops made good their landing, and advanced towards Savannah the capital of the province. That very day they defeated the force of the provincials which opposed them ; and took poffession of the town with fuch celerity, that the Americans had not time to execute a refolution they had taken of fetting it on fire. In ten days the whole province of Georgia was reduceds Sunbury alone excepted; and this was also brought under fubjection by General Prevoit in his march north wards. Every method was taken to fecure the tranquillity of the country; and rewards were offered for apprehending committee or affembly men or fuch as they judged most inimical to the British interests. On the arrival of General Prevoft, the command of the troops naturally devolved on him as the fenior officer ; and the conquest of Carolina was next projected. at the formation to be at sh use

In this attempt there was no finall probability of fuccefs. The country contained a great number of friends to the British government, who now eagerly embraced the opportunity of declaring themfelves; many of the inhabitants of Georgia had joined the royal flandard; and there was not in the province any confiderable body of provincial forces capable of opposing the efforts of regular and well difciplined troops. On the first news of General Prevoft's approach, the loyalists affembled in a body, imagining themfelves able to fland their ground until their allies should arrive; but in this they were disposinted. The Americans attacked and defeated them with the loss of half their number. The remainder retreated into Georgia; and after undergoing many difficulties, at last effected a junction with the British forces. 4

In the mean time, General Lincoln, with a confiderable body of American troops, had encamped within twenty miles of the town of Savannah; and another ftrong party had posted themselves at a place called Briar's Creek, farther up the river of the fame name. Thus the extent of the British government was likely to be circumscribed within very narrow bounds. General Prevost therefore determined to dislodge the party at Briar's

Creek : and the latter, trufting to their ftrong fituation, and being vemifs in their guard, fuffered themfelves to be furprifed on the goth of March 1979; when they were utterly routed, with the lofs of four hundred killed, and taken, befides 's great number drowned in the river or the fwamps. The whole artillery, ftores taggage, and almost all the arms, of this unfortunate party were taken, fo that they could no more make any fland; and thus the province of Georgia was once more freed from the enemy, and a communication opened with those places in Carolina where the royalifts chiefly refided.

The victory at Briar's Creek proved of confiderable fervice to the British cause. Great numbers of the loyalists joined the army, and confiderably increased its force. Hence General Prevolt was enabled to fretch his posts farther up the river, and to guard all the principal passes; fo that General Lincoln was reduced to a state of inaction; and at last moved off towards Augusts, in order to protect the provincial affembly, which was obliged to fit in that place, the capital being now in the hands of the British.

Lincoln had no fooner quitted his post, than it was judged a proper time by the British general to put in execution the grand scheme which had been meditated against Carolina. Many difficulties indeed lay in his way, The river Savannah was fo fwelled by the excellive rains of the featon, that it feemed impaffable ; the opposite shore, for a great way, was fo full of swamps and marshes, that no army could march over it without the greatest difficulty ; and, to render the passage ftill more difficult, General Moultrie was left with a confiderable body of treops in order to oppofe the enemy's attempts, But in fpite of every opposition, the constancy and perfeverance of the British forces at last prevailed. General Moultrie was defeated, and obliged to retire towards Charlestown ; and the victorious army, after having waded through the marshes for some time, at last arrived in an open country, through which they purfued their march with great rapidity towards the capital; while General Lincoln remained in a state of fecurity at Augusta, imagining that the obstacles he had left in the way could not be furmounted,

Certain intelligence of the danger to which Charleftown was expoled, however, aroufed the Americangeneral from his lethargy. A cholen body of infantry, mounted on horfeback for the greater expedition, was difpatched before him; while Lincoln himfelf followed with all the forces he could colleft. General Moultrie too, with the troops he had brought from the Savannah, and fome others he had collected fince his retreat from thence, had taken poffeifion of all the avenues leading to Charleftown, and prepared

· PE-N' A PA- " was in

for a vigorous defence. But all opposition proved ineffectual. The Americans were defeated in every encounter; and retreating continually, allowed the British army to some within cannon shot of Charlestown on the sath of May.

The town was now fummoned to furrender, and the inhabitants would gladly have agreed to observe a neutrality during the reft of the war, and would have engaged allo for the reft of the province, But these terms not being accepted, they made preparations for a vigorous defence. It was not, however, in the power of the British commander at this time to make an attack with any prospect of fuccess. His artillery was not of fufficient weight; there were no thips to support his attack by land; and General Lincoln advancing rapidly with a superior army, threatened to inclose him between his own forse and the town; to that should he fail in his first stempt, certain destruction would be the confequence. For these reasons he withdrew his forces from before the town, and took poffession of two islands called St. James's and St. John's, lying to the fouthward ; where having waited fome time, his force was augmented by the arrival of two frigates .----With these he determined to make himself master of Port Royal, another island possessed of an excellent harbour and many other natural advantages, from its lituation also commanding all the feacoaft from Charlestown to Savannah River. The American general, however, did not allow this to be accomplished without oppolition. Perceiving that his opponent had occupied an advantageous post on St. John's island preparatory to his enterprise against Port Royal, he attempted, on the 20th of June to diflodge him from it; but after an oblinate attack, the provincials were obliged to retire with confiderable lofs. On this occasion the fuccels of the British arms was in a great measure owing to an armed float; which galled the right flank of the enemy to effectually, that they could direct their efforts only against the ftrongest past of the lines, which proved impregnable to their attacks. This difappointment was inftantly followed by the lofs of Port Royal, which General Prevoft took pofferfion of, and put his troops into proper flations, waiting for the arrival of fuch reinforcements as were necellary for the intended attack on Charleftown.

In the mean time, Count d'Effaing, who, as we have already observed, had put into Boston harbour to refit, had used his utmost efforts to ingratiate himself with the inhabitants of that city. Zealous also in the cause of his master, he had published a proclamation to be dispersed through Canada, inviting the people to return to their original friendship with France, and declaring that all who renounced their allegiance to Great-Britain should certainly find a protector in the king of France. All his endeavours,

> e already his utmoft hat city, a proclapeople to aring that ould cerdeavours,

however, proved infufficient at this time to produce any revolution, or even to form a party of any confequence among the Canadians.

As foon as the French admiral had refitted his fleet, he took the opportunity; while that of admiral Byron had been fhattered by a ftorm, of failing to the Weft Indies. During his operations there, the Americans having reprefented his conduct as totally unferviceable to them, he received orders from Europe to affist the colonies with all poffible fpeed.

In compliance with these orders, he directed his course towards Georgia, with a defign to recover that province out of the hands of the enemy, and to put it, as well as South Carolina, in fuch a posture of defence as would effectually fecure them from any future attack. This feemed to be an eafy matter, from the little force with which he knew he flould be opposed ; and the next object in contemplation was no lefs than the destruction of the British fleet and army at New-York, and their total expulfion from the continent of America. Full of these hopes, the French commander arrived off the coaft of Georgia with a fleet of twenty-two fail of the line and ten large frigates, - His arrival was fo little expected, that feveral veffels laden with provisions and military ftores fell into his hands: the Experiment alfo, a veffel of fifty guns, commanded by Sir James Wallace, was taken after a stout resistance. On the continent, the British troops were divided. General Prevolt, with an inconfiderable part, remained at Savannah; but the main force was under Colonel Maitland at Port Royal. On the first appearance of the French fleet, an express was dispatched to Colonel Maitland : but it was intercepted by the enemy; fo that before he could fet out in order to join the commander in chief, the Americans had fecured most of the passes by land, while the French fleet effectually blocked up the paffage by fea. But by taking advantage of creeks and inlets, and marching over land, he arrived just in time to relive Savannah. Not the the state of the solution

D'Eftaing, after making a gasconade of what had happened at St. Vincent's and Grenada, had allowed General Prevost twentyfour hours to deliberate whether he should capitulate or not. This time the general employed in making the best preparations he could for a defence; and during this time it was that Colonel Maitland arrived. D'Estaing's summons was now rejected; and as on this occasion the superiority of the enemy was by no means to much out of proportion as it had been at Grenada, there was every probability of success on the part of the British. The garrison now confisted of three thousand men, all of approved valour and experience, while the united force of the French and

#### TOTHISTORY OF THE MAN

Americans did not amount to ten thousand. The event was an swerable to the expectations of the British general. Having the advantage of a firong fortification and excellent engineers, the fire of the allies made to little impression, that D'Estaing refolved to bombard the town, and a battery of nine mortars was creched for the purpole. This produced a request from General Prevost, that the women and children might be allowed to retire to a place of fafety. But the allied commanders refused to comply; and they refolved to give a general assault. This was accordingly attempted on the 9th of October :: but the assaults were every where repulsed with fuch slaughter, that twelve hundred were killed and wounded; among the former were Count Polaski, and among the latter was D'Estaing himself.

Americans and French; mutual reproaches and animolities took place in the moft violent degree; and after waiting eight days longer; both parties prepared for a retreat; the French to their shipping, and the Americans into Carolina.

While the allies were thus unfuccessfully employed in the fouthern colonies, their antagonists were no less affiduous in diftreffing them in the nothern parts. Sir George Collier was fent with a fleet, carrying on board General Matthews, with a body of land forces, into the province of Virginia. Their first attempt was on the town of Portfmouth; where, though the enemy had deftroyed fome fhips of great value, the British troops arrived in time to fave a great number of others. On this occafion about one hundred and twenty veffels of different fizes were burnt, and twenty carried off; and an immense quantity of provisions defigned for the use of General Washington's army was either destroyed or carried off, together with a great variety of naval and military flores. The fleet and army returned with little or no loss to New-York.

The fuccels with which this expedition was attended, foon gave encouragement to attempt another. The Americans had for fome time been employed in the erection of two firong forts on the river; the one at Verplanks Neck on the eaft, and the other at Stoney Point on the weft fide. Thefe when completed would have been of the utmost fervice to the Americans, as commanding the principal pafs, called the King's Ferry, between the northern and fouthern colonies. At prefent however, they were not in a condition to make any effectual defence; and it was therefore determided to attack them before the work fhould be completed. The force employed on this occasion was divided into two bodies; one of which directed its courfe againft Verplanks, and the other againft Stoney Point. The former was

At Stoney Point, however, a vigorous defence was made, though the garrilon was at laft obliged to capitulate upon honourable conditions. To fecure the poffeffion of this laft, which was the more important of the two, General Clinton removed from his former fituation, and encamped in fuch a manner that General Washington could not give any affitance. The Americans, however, revenged themfelves by diftreffing, with their numerous privateers, the trade to New-York.

This occafioned a third expedition to Connedicut, where these privateers were chiefly built and harboured. The command was given to Governor Tryon and to General Garth, an officer of know valour and experience. Under convoy of a confiderable number of armed veffels they landed at Newhaven, where they demolified the batteries that had been crefted to oppole them, and deftroyed the fhipping and naval flores; but they fpared the town itfelf, as the inhabitants had abftained from firing out of their houfes upon the troops. From Newhaven they marched to Fairfield, where they proceeded as before, reducing the town alfo to afhes. Norwalk was next attacked, which in like manner was reduced to afhes; as was alfo Greenfield, a fmall feaport in the neighbourhood.

Thefe fucceffes proved very alarming as well as detrimental to the Americans; fo that General Wafhington determined at all events to drive the enemy from Stoney Point. For this purpole he fent General Wayne with a detachmert of chofen men, directing them to attempt the recovery of it by furprife. On this occasion the Americans shewed a spirit and resolution exceeding any thing they had performed during the course of the war. Though after the capture of it by the British the fortifications of this place had been completed, and were very strong, they attacked the enemy with bayonets, after passing through a heavy fire of musquetry and grape-shot; and in spite of all opposition, obliged the furviving part of the garrison, amounting to five hundred men, to surrender themselves pussioners of war.

Though the Americans did not at prefent attempt to retain poffeffion of Stoney Point, the fuccefs they had met with in the enterprife emboldened them to make a fimilar attempt on Paulus Hook, a fortified poft on the Jerfey fide oppolite to New-York; but in this they were not attended with equal fuccefs, being obliged to retire with precipitation after they had made themfelves mafters of one or two pofts.

## OHISTORY OF THE ALLA

Another expedition of greater importance was now prejects ed on the part of the Americans, This was againft a post on the river Penobicot, on the borders of Novi Scotis, of which the Britilh had lately taken pollellion, and were they had begun to creft a fort which threatened to be a very great inconvenience to the colonifts. The armament defined against it was fo foor got in readinels, that Colonel Machane, the commanding officer at Penobleot, found himfelf obliged to drop the execution of part of his icheme; and inflead of a regular fort, to content himfelf with putting the works already constructed in as good a posture of defence as possible. The Americans could not effect a landing without a great deal of difficulty, and bringing the guns of their largest vessels to bear upon the shore. As soon as this was done, however, they crefted feveral batteries, and kept up a brifk fire for the space of a fortnight; after which they propoled to give a general affault: but before this could be effected, they perceived Sir George Collier with a British fleet failing up the river to attack them. 14 On this they inftantly embarked their artillery and military flores, failing up the river as far as possible in order to avoid him. They were fo chofely purfued, however, that not a fingle veffel could efcape; fo that the whole fleet, confifting of nineteen armed veffels and twenty-four transports, was deftroyed ; most of them indeed being blown up by themselves, The foldiers and failors were obliged to wander through immenfe deferts, where they fuffered much for want of provisions; and to add to their calamities, a guarrel broke out between the foldiers and feamen concerning the caule of their difafter, which ended in a violent fray, wherein a great number were killed.

Thus the Arms of America and France being almost every where unfuccefsful, the independency of the former feemed yet to be in danger notwithstanding the affistance of fo powerful an ally, when further encouragement was given by the accession of Spain to the confederacy against Britain in the month of June 1779. The first effect of this appeared in an invation of West Florida by the Spaniards in September 1770. As the country was in no flate of defence; the enemy eafily made themfelves mafters of the whole almost without opposition. Their next enterprife was against the Bay of Hunduras, where the British logwood-cutters were fettled. These finding themseives too weak to refift, applied to the governor of Jamaica for relief; who fent them a supply of men, ammunition, and military stores, under Captain Dalrymple: Before the arrival of this detachment, the pricipal fettlement in those parts, called St. George's Key, had been taken by the Spaniards and retaken by the British. In his way Captain Dalrymple fell in with a fquadren from Admiral

Parker in fearch of fome register ships richly laden; but which retreating in the harbour of Omos, were too ftrongly protected. by the fort to be attacked with fafety. A project was then formed in conjuction with the people of Honduras, to reduce his fort. The defign was to furprife it; but the Spaniards having discovered them, they were obliged to fight. Victory quickly: declared for the British; but the fortifications were fo ftrong. that the artillery they had brought along with them were found too light to make any imptellion. It was then determined to try the fuccels of an elcalade; and this was executed with fo much spirit, that the Spaniards stood astonished without making any refistance, and, in spite of all the efforts of the officers, threw down their arms and furrendered. The fpoil was immense, heing valued at three millions of dollars. The Spaniards chiefly. lamented the lofs of two hundred and fifty quintals of quick filver; a commodity indifpenfably necessary in the working of their gold and filver mines, fo that they offered to ranfom it at any price; but this was refused, as well as the ranfom of the fort, though the governor offered three hundred thousand dollars for it. A fmall garrifon was left for the defence of the place; but it was quickly attacked by a fuperior force, and obliged to evacuate it, though not without deftroying every thing that could be of use to the enemy; spiking the guns, and even locking the gates of the fort and carrying off the keys. All this was done in the fight of the befiegers; after which the garrifon embarked without the lofs of a man.

As no operations of any confequence took place this year in the province of New-York, the Congrefs made use of the opportunity to dispatch General Sullivan with a confiderable force, in order to take vengeance on the Indians for their ravages and depredations: and the object of the expedition was, not merely the reduction of them, but if possible their utter extirpation. Of this the Indians were apprised; and collecting all their firength, resolved to come to a decisive engagement. Accordingly they took a firong post in the most woody and mountainous part of the country; erecting a breast-work in their front of large logs of wood extending half a mile in length, while their right flank was covered by a river, and the left by a hill of difficult access. This advantageous position they had taken by the advice of the refuges who were among them, and of whom two or three hundred were prefent in the battle.

Thus posted, the Indians waited the approach of the American army: but the latter having brought fome artillery along with them, played it against the breast work of the enemy with fuch fucces, that in two hours it was almost destroyed; and at the

fame time a party having reached the top of the hill, they became apprehenfive of being furrounded, on which they inftantly fled with precipitation, leaving a great number of killed and wounded behind them. The Americans after this battle met with no further reliftance of any confequence. They were fuffered to proceed without interruption, and to execute in the most ample manner the vengeance they had projected. On entering the country of the Indians, it appeared that they had been acquainted with agriculture and the arts of peace far beyond what had been fuppofed, From General Sullivan's account it was learned, that the Indian houses were large, convenient, and even elegant; their grounds were excellently cultivated, and their gardens abounded in fruit-trees and vegetables of all kinds fit for food. The whole of this fine country was now by the American general converted into a defart. Forty towns and fettlements, besides scattered habitations, were demolished; the fields of corn, the orchards, the plantations, were utterly laid wafte ; all the fruit-trees were cut down; and fo great had been the industry of the Indians, that in one orchard one thousand five hundred of thefe were deftroyed. The quantity of corn wasted on this occafion was supposed to amount to one hundred and fixty thousand bushels. In short, such was the desolation, that on the Americanarmy's leaving the country, not a houfe, not a field of corn, nor a fruit-tree, was left upon the ground, nor was an Indian to be feen throughout the whole track.

We must now take a view of the transactions in the fouthern colonies; to which the war was, in the year 1780, to effectually transferred, that the operations there became at last decisive.-The fuccels of General Prevolt in advancing to the very capital of South-Carolina has been already related, together with the obfacles which prevented him from becoming mafter of it at that Towards the ead of the year 1779, however, Sir Henry time. Clinton fet fail from New-York with a confiderable body of troops, intended for the attack of Charlestown, South-Carolina, in a fleet of thips of war and transports under the command of Vice-Admiral Arbuthnot. They had a very tedious voyage; the weather was uncommonly bad; feveral of the transports were loft, as were also the greatest part of the horses which they carried with them, intended for cavalry or other public ules; and an ordnance-fhip likewife foundered at fea. Having arrived at Savannah, where they endeavoured to repair the damages fuftained on their voyage, they proceeded from thence on the 10th of February 1780 to North Edifto, the place of debarkation which had been previously appointed. They had a favourable and speedy passage thither: and though it required time to have the

har explored and the channel marked, the transports all entered the harbour the next day; and the army took possession of John's jiland without opposition. Preparations were then made for paffing the fquadron over Charleston bar, where the high-water spring-tides were only nineteen feet deep: but an opportunity offered of going into the harbour till the aoth of March, when it was effected without any accident, though the American galleys continually attempted to prevent the English bear from founding the channel. The British troops had previously removed from John's to Jame's island; and on the sould for the fame month they effected their landing on Charlestown Neck. On the 1st of April they broke ground within eight hundred yards of the American works; and by the 8th the besiegers guns were mounted in battery.

As foon as the army began to erect their batterics against the town, Admiral Arbuthnot embraced the first favourable opportunity of passing Sullivan's Island, upon which there was a strong fort of batteries, the chief defence of the harbour. He weighed on the 9th, with the Roebuck, Richmond, and Romulus, Blonde, Virginia, Raleigh, and Sandwich armed ships, the Renown bringing up the rear; and, passing through a fevere fire, anchored in about two hours under James's Island, with the loss of twentyteven feamen killed and wounded. The Richmond's fore-topmass was shot away, and the ships in general fustained damage in their mass and rigging, though not materially in their hulls.— But the Acetus transport, having on board fome naval stores, grounded within gun-shot of Sullivan's Island, and received fo much damage that she was obliged to be abandoned and burnt.

On the 10th, Sir Henry Clinton and Admiral Arbuthnot fummoned the town to furrender to his Majefty's arms : but Major. General Lincoln, who commanded in Charlestown, returned them an answer, declaring it to be his intention to defend the place. The batteries were now opened against the town ; and from their effect the fire of the American advanced works confiderably abated. It appears that the number of troops under the command of Lincoln were by far too few for defending works of fuch extent as those of Charlestown; and that many of these were men little accustomed to military fervice, and very ill provided. with cloaths and other neceffaries, General Lincoln had been for fome time expecting reinforcements and fupplies from Virginia and other places': but they came in very flowly. East Cornwallisand Lieutenant-Colonal Tarleton under him, were allo extremely active in intercepting fuch reinforcements and fupplies as were fent to the American general. They totally defeated

fouthern ffectually ecifive.ry capital th the obit at that Bir Henry of troops, lina, in a l of Viceyage; the orts were they cariles; and arrived at es fustaine 10th of ion which rable and have the s confiderable body of cavalry and militia which was proceeding to the relief of the town; and also made themselves matters of some posts, which gave them in a great degree the command of the country, by which means great supplies of provisions fell into their hinds.

Such was the fiste of things, and Fort Sullivan had also been taken by the king's troops, when on the 18th of May General Clinton again fummoned the town to furrender; an offer being made, as had been done before, that if they furrendered, the lives and property of the inhabitants fhould be preferved to them.— Articles of capitulation were then proposed by General Lincoln; but the terms were not agreed to by General Clinton. At length, however, the town being closely invested on all fides, and the preparations to florm it in every part being in great forwardness, and the fhips ready to move to the affault, General Lincoln, who had been applied to for that purpose by the inhabitants, furrendered it on fuch articles of capitulation as General Clinton had before agreed to. This was on the 4th of May, which was one month and two days after the town had been first fummoned to-furrender.

A large quantity of ordnance, arms, and ammunition, were found in Charleftown; and, according to Sir Henry Clinton's account, the number of prifoners taken in Charleftown amounted to five thousand fix hundred and eighteen men, exclusive of near a thousand failors in arms; but according to General Lincoln's account transmitted to the Congress, the whole number of continental troops taken prifoners amounted to no more than two thousand four hundred and eighty feven. The remainder, therefore, included in General Clinton's account, must have confisted of militia and inhabitants of the town. Several American frigates were also taken or destroyed in the harbour of Charlestown.

The lofs of Charlestown evidently excited a confiderable alarm in America : and their popular writers, particularly the author of the celebrated performance intitled Common Sense, in some other pieces made use of it as a powerful argument to lead them to more vigorous exertions against Great-Britain, that they might the more effectually and certainly secure their independence.

While Sir Henry Clinton was employed in his voyage to Charleftown, and in the fiege of that place, the garrifon at New-York feem not to have been wholly free from apprehensions for their own fafety. An intenfe froft, accompanied with great falls of fnow, began about the middle of December 1779, and thut up the nagivation of the port of New-York from the fea, within a few days after the departure of Admiral Arbuthnot and General Clinton. The feverity of the weather increafed to fo great

a degree, that towards the middle of January all communications with New-York by water were entirely cut off, and as many new ones opened by the ice. The inhabitants could fearcely be faid to be in an infular flate. Horfes with heavy carriages could go over the ice into the Jerfeys from one ifland to another. The paffage in the North River, even in the reideft part from New-York to Paulus Hook, which was two thouland yards, was about the 19th of January practicable for the heavieft canaon: an event which had been unknown in the memory of map. Provisions were foon after transported upon fledges, and a datachment of cavalry marched upon the ice from New-Yo to Staten Ifland, which was a diffance of eleven miles.

The city of New-York being thus circumstanced, was confidered as much expoled to the attacks from the continental troops; and it was strongly reported that General Washington was meditating a great ftroke upon New-York with his whole force, by different attacks. Some time before this, Major General Pattifon, commandant at New-York, having received an address from many of the inhabitants, offering to put themfelves in military array, he thought the prefent a favourable opportunity of trying the fincerity of their professions. Accordingly he issued a proclamation, calling upon all the male inhabitants from fixteen to fixty to take up arms. The requisition was fo readily complied with, that in a few days, forty companies from the fix wards of the city were inrolled, officered, and under arms, to the number of two thousand fix hundred, many substantial citizens serving in the ranks of each company. Other volunteer companies were formed; and the city was put into a very ftrong posture of dcfence.

No attack, however, was made upon New-York, whatever defign might originally have been meditated : but an attempt was made upon Staten Island, where there were about eighteen hundred men, under the command of Brigadier-general Sterling, who were well intrenched. General Washington, whose army was hutted at Morris-Town, fent a detachment of two thousand feven hundred men, with fix pieces of cannon, two mortars, and fome horfes, commanded by Lord Sterling, who arrived at Staten Island early in the morning of the 15th of January. The advanced pofts of the British troops retired upon the approach of the Americans, who formed the line, and made fome movements in the course of the day; but they withdrew in the night, after having burnt one houfe, pillaged fome others, and carried off with them about two hundred head of cattle. Immediately on the arrival of the Americans on Staten Ifland, Lieutenant-general Knyphausen had embarked fix hundred men to attempt a paffage.

#### HISTORY OF THE

and to fupport General Sterling: but the floating ice compelled them to return. It is, however, imagined, that the appearance of these transports, with the British troops on board, which the Americans could see towards the close of the day, induced the latter to make so precipitate a retreat.

After Charlestown had furrendered to the king's troops, Generel Clinton iffued two proclamations, and also circulated a handbill smongst the inhabitants of South Carolina, in order to induce them to return to their allegiance, and to be ready to join the king's troops. It was faid, that the helping hand of every man was wanted to re-effablish, peace and good government : and that as the commander in chief wished not to draw the king's friends into danger, while any doubt could remain of their fucces; fo now that this was certain, he trufted that one and all would heartily join, and by a general concurrence give effect to fuch neceffary measures for that purpole as from time to time might be pointed out. Those who had families were to form a militia to remain at home, and occafionally to affemble in their own diffricts, when required, under officers of their own choosing, for the maintenance of peace and good order. Those who had no families, and who could conveniently be fpared for a time, it was prefumed, would cheerfully affift his Majefty's troops in driving their oppreffors, acting under the authority of congress, and all the mileries of war, far from that colony. For this purpole it was faid to be neceffary that the young men should be ready to , affemble when required, and to ferve with the king's troops for any fix months of the enfuing twelve that might be found re, quifite, under proper regulations. They might choose officers to each company to command them; and were to be allowed, when on fervice, pay, ammunition, and provisions, in the fame manner as the king's troops. When they joined the army, each man was to be furnished with a certificate, declaring that he was only engaged to ferve as a militia-man for the time fpecified; that he was not to be marched beyond North Carolina and Georgia; and that, when the time was out, he was freed from all claims whatever of military fervice, excepting the common and usual militiaduty where he lived. He would then, it was faid, have paid his debt to his country, and be intitled to enjoy undisturbed that peace, liberty and property, at home, which he had contributed to fecure, The proclamations and publications of General Clinton appear to have produced fome effect in South Carolina; though they probably operated chiefly upon those who were before not much inclined to the caufe of American independence, Two hundred and ten of the inhabitants of Charlestown figued pn addrefs to General Clintor | Admiral Arbuthnot, foliciting

to be readmitted to the character and condition of British subjects, the inhabitants of that city having been hitherto confidered prisoners on parole; declaring their disapprobation of the doctions of American independence; and expressing their regret, that declared

ter the repeal of those statutes which gave rife to the street in America, the overtures made by his Majefty's commission had not been regarded by the congress. Sir Henry Clinton m one of the proclamations iffued at this time, declared, that if any perfons should thenceforward appear in arms in order to prevent the establishment of his Majesty's government in that county, or should under any pretence or authority velocver attempt to compel any other perfon or perfons to do fo. who should hinder or intimidate the king's faithful and loyal tubieder inioin-l. ing his forces or otherwife performing those duties -incerance required, fuch perfons should be treated with any unoft feverity, and their estates be immediately feized in order to be confiscated.

Mean time the ravages of war did not prevent the American from paying fome attention to the arts of peace. On the 4th of May an act passed by the council and house of representatives of Maffachusett's Bay for incorporating and establishing a society for the cultivation and promotion of the arts and sciences.

Some doubts having arifen in the Congress, towards the close of the preceding year, about the propriety of their affembling in the city of Philadelphia, it was now refolved that they should continue to meet there: and a committee of three members was appointed, to report a proper place where buildings might be provided for the reception of the Congress, together with an eftimate of the expence of providing fuch buildings and the necessary offices for the feveral boards. It was also refolved by the congrefs, that a monument should be erected to the memory of their. late general Richard Montgomery, who fell at Quebec, in teftimony of his fignal and important fervices to the United States of America, with an infcription expressive of his amiable character and heroic atchievements; and that the continental treasurers fhould be directed to advance a fum not exceeding three hundred pounds to Dr. Franklin to defray the expence; that gentleman being defired to caufe the monument to be executed at Paris, or in fome part of France. It was likewife refolved by the congress. that a court fhould be established for the trial of all appeals from the court of admiralty of the United States of America, in cafes of capture: to confift of three judges, appointed and commissioned by congress, and who were to take an oath of office; and that the trials in this court should be determined by the usage of nations.

The difficulties of the Congress and of the people of America in greatly increased by the depreciation of their paper-cur-At the time when the colonies engaged in a war with Britain, they had no regular civil governments established them of fullicient energy to enforce the collection of taxes. provide funds for the redemption of fuch bills of credit as cellices obliged them to iffue. In confequence of this of things, their bills increased in quantity far beyond the seffary for the purpole of a circulating medium; and as techt the fame time specific funds to reft on for their uption, they law their paper-currency daily fink in value. precision continued, by a kind of gradual progrellion. 1977 to 1780; fo that at the latter period, the conhars were paffed, by common confent, in most parts rice, at the rate of at least 10 this below their nominal valur. The impofibility of keeping up the credit of the currency any fixed flandard, occasioned great and almost infurmountable raffments in afcertaining the value of property, or carrying on trade with any fufficient certainty. Those who fold, and those who bought, were left without a rule whereon to form a judyment of their profit or lofs; and every fpecies of commerce or exchange, whether foreign or domeftic, was expoled to nubberlefs and increasing difficulties. The confequences of the depreciation of the paper-currency were allo felt with peculiar feverity by fuch of the Americans as were engaged in their military fervices, and greatly augmented by their other hardfhips. The requisitions made by the congress to the several colonies for supplies, were also far from always being regularly complied with and their troops were not unfrequently in want of the most common necessaries; which naturally occasionod complaints and difcontent mong them. Some of these difficulties, refulting from their circumstances and situation, perhaps no wildom could have prevented; but they feem to have arisen in part from the congrefs not being fufficiently acquainted with the principles of finance, and from a defect of fystem in the departments of their government. The caufe of the Americans appears allo to have fuffered fomewhat by their depending too much on temporary enliftments. But the congress endeavoured, towards the close of the year 1780, to put their army upon a more permanent footing nd to give all the fatisfaction to their officers and foldiers which their circumstances would permit. They appointed a committee for arranging their finances, and made fome new regulations refpecting their war-offire and treasury-board, and other public depaftments.

Notwithstanding the difadvantages under which they laboured, the Americans feemed to entertain no doubts but that they should

be able to maintain their independency. The 4th of July was celebrated this year at Philadelphia with fome pomp, as the anniverlary of American independence. A commencement for conferring degrees in the arts was held the fame day, in the hall of the university there; at which the present and members of. the congress attended, and other persons in public offices. The Chevalier De la Lucerne, minister plenipotentiary from the French king to the United States, was also project on the occafion. A charge was publicly addreffed by the provolt of the univerfity to the fludents; in which he faid, that he could not but congratulate them " on that aufpicious day, which, amidit the confusions and defolations of war, beheld learning beginning to revive ; and animated them with the pleafing profped of feeing the facred lamp of fcience burning with a ftill brighter flame, and feattering its invigorating rays over the unexplored deferts of that extensive continent, until the whole world should be involved in the united blaze of knowledge, liberty, and religion; When he ftretched his views forward (he faid), and furveyed the ring glories of America, the enriching confequences of their determined ftruggle for liberty, the extensive fields of intellectual improvement and uleful invention, in fcience and arts, in agriculture and commerce, in religion and government, through which the unfettered mind would range, with increasing delight. in queft of the undifcovered treasure which yet lay concealed in the animal, vegetable, and mineral kingdoms of that new world, or in the other fertile fources of knowledge with which it abounded; his heart fwelled with the pleafing profpect, that the fons of that inftitution would diftinguish themselves, in the different walks of life, by their literary contributions to the embellishment and increase of human happines."

On the 10th of July, M. Ternay, with a fleet confifting of feven fhips of the line, befides frigates, and a large body of French troops, commanded by Count de Rochambeau, arrived at Rhode Ifland; and the following day fix thousand men were landed there. A committee from the general affembly of Rhode Ifland, was appointed to congratulate the French general on his arrival : whereupon he returned an answer, in which he informed them, that the king his mafter had fent him to the affiftance of his good and faithful allies the United States of America. At prefere, he faid he only brought over the vanguard of a much greater force defined for their aid; and the king had ordered him to affure them, that his whole power should be exerted for their support. He added, that the French troops were under the firsteft difei-Vol, I. 4 B.

Lieu

A feheme was foon formed, of making a combined attack with English ships and troops, under the command of Sir Henry Clinton and Admiral Arbuthnot, agains the French fleet and troops at Rhode-Island. Accordingly a confiderable part of the troops at New-York were embarked for that purpole. General Washington having received information of this, passed the North River, by a very rapid movement, and, with an army increased to twelve thousand men, proceeded with celerity towards King's Bridge, in order to attack New-York ; but learning that the British general had changed had intentions, and difembarked his troops on the 3sst of the month, General Washington recroifed the river and returned to his former flation. Sir Henry Clinton and the Admiral had agreed to relinquish their defign of attacking the French and Americans at Rhode-Island as impracticable for the prefent.

An unfuccefsful attempt was also made about this time in the Jerfeys, by General Knyphaufen, with feven thousand Britifh troops under his command, to furprife the advanced pofts of General Wafhington's army. They proceeded very rapidly towards Springfield, meeting with little opposition till they came to the bridge there, which was very gallantly defended by one hundred and feventy of the continental troops, for fifteen minutes, againft the Britifh army: but they were at length obliged to give up fo unequal a conteft, with the loss of thirty-feven men. After fecuring this pafs, the Britifh troops marched into the place, and fet fire to most of the houses. They also committed fome other depredations in the Jerfeys; but gained no laurels there, being obliged to return about the beginning of July without effecting any thing material.

But in South Carolina the royal arms were attended with more fuccefs, Earl Cornwallis, who commanded the British troops there, obtained a very fignal victory over General Gates on the 16th of August. The action began at break of day, in a fituation very advantageous for the British troops, but very unfavourable to the Americans. The latter were much more numerous; but the ground on which both armies flood was narrowed by fwamps on the right and left, fo that the Americans could not properly avail themfelves of their fuperior numbers. There feems to have been some want of generalship in Gates, in suffering himself to be furprifed in 'fo difadvantageous a polition : but this circumftance was partly the effect of accident; for both armies fet out with a delign of attacking each other precifely at the fame time, at ten the preceding evening, and met together before day-light at the place where the action happened. The attack was made by the British troops with great vigour, and in a few minutes the action

was general slong the whole line. It was at this time a dead calm, with a little haziness in the air, which preventing the moke from rifing, occasioned fo thick a darkness, that it was difficult to fee the effect of a very heavy and well-fupported fire on both fides, The Britifh troops either kept up a constant fire, or made use of bayonets, as opportunics offered ; and after an obstinate refistance during three quarters of an hour, threw the Americans into total confusion, and forced them to give way in all quarters. The continental troops appear to have behaved well, but the militia were foon broken, and left the former to oppofe the whole force of the British troops. General Gates did all in his power to rally the militis; but without effect : the continentals retreated in fome order, but the rout of the militia was fo great, that the British cavalry are faid to have purfued them to the diffance of twenty-two miles from the place where the action happened. The lois of the Americens was very confiderable : about one thouland prifoners were taken, and more are faid to have been killed and wounded, but the number is not accurately afcertained. Seven pieces of brake cannon, a number of colours, and all the ammunition-waggons of the Americans, were also taken. Of the British troops, the killed and wounded amounted to two hundred and thirteen .--Among the prifoners taken was Major-General Baron de Kalb. a Pruflian officer in the American fervice, who was mortally wounded, having exhibited great gallantry in the courfe of the action, and received eleven wounds. The British troops by which this great victory was atchieved, did not much exceed two thousand, while the American army is faid to have amounted to fix thousand ; of which, however, the greatest part were militia,

Lieutenant-Colonel Tarleton, who had greatly diffinguished himself in this action, was detached the following day, with some cavalry and light infantry, amounting to about three hundred and fity men, to attack a corps of Americans under General Sumpter. The suscuted this fervice with great activity and military address. The procured good information of Sumpter's movement; and by forced and concealed marches came up with and supprised him in the middle of the day on the 18th, near the Catawba fords. He totally deftroyed or dispersed his detachment, which constitued of leven hundred men, killing one hundred and fifty on the spot, and taking two pieces of brass cannon, three hundred prisoners, and forty-four waggons.

Not long after these events, means were found to detach Major-General Arnold, who had engaged to ardently in the cause of America, and who had exhibited to much bravery in the support of it, from the interests of the congress. Major Andre, Adjudant General to the British army, was a principal agent in

4 8 8

and the I without one the first of the

#### HISTORY OF THE

this transaction : or, if the overture of joining the King's troops came first from Arnold, this gentleman was the perfon employed to concert the affair with him. More must have been briginally comprehended in the scheme than the mere defertion of the American caufe by Arnold; but whatever defigns had been formed for promoting the views of the British government, they were fruftrated by the apprehending of Major Andre. He was taken in difguile, after having affumed a falle name, on the and of September, by three American foldiers; to whom he offered confiderable rewards if they would have fuffered him to efcape, but without effect. Several papers written by Arnold were found upon him; and when Arnold had learned that Major Andre was was feized, he found means to get on hoard a barge, and to efcape to one of the King's thips. General Walhington referred the cafe of Major Andre to the examination and decision of a board of general officers, confifting of Major General Green, Major General Lord Sterling, Major General the Marques de la Fayette, Major General the Baron de Steuben, two other Major Generals, and eight Brigadier Generals. Major Andre was examined before them, and the particulars of his cale inquired into ; and they reported to the American commander in chief, that Mr. Andre came on fhore from the Vulture floop of War in the night, on an interview with General Arnold, in a private and fecret manner; that he changed his drefs within the American lines; and, under a feigned name, and in a difguifed habit, paffed the American works at Stoney and Verplank's Points, on the evening of the 2ad of September; that he was taken on the morning of the 23d at Tarry-town, he being then on his way for New-York ; and that, when taken, he had in his possession feveral papers which contained intelligence for the enemy. They therefore determined, that he ought to be confidered as a fpy from the enemy; and that, agreeable to the law and usage of nations, he ought to turer death. Sir Henry Clinton, Lieutenant General Robertion, and the late American general Arnold, all wrote prefling letters to General Washington on the occasion, in order to prevent the decision of the board of general officers from being put in force : But their applications were ineffectual. Major Andre was hanged at Tappan, in the province of New-York, on the ad of October. He met his fate with great firmnels; but appeared fomewhat hurt that he was not allowed a more military death, for which he had folicited. He was a gentleman of very amiable qualities, had a tafte for literature and the fine arts, and poffeffed many accomplishments. His death, therefore, was regretted even by his enemies; and the leverity of the determination concerning him was much exclaimed against in Great-Britain. It was, however, generally acknowledged by impartial perions, that there

Arnold was made a brigadier general in the King's fervice, and published an address to the inhabitants of America, dated from New-York, October 7, in which he endeavoured to justify his defertion of their caufe. He faid that when he first engaged in it, he conceived the rights of his country to be in danger, and duty and honour called him to her defence. A redress of giveances was his only sim and object: and therefore he acquiefced unwillingly in the declaration of independence, because he thought it precipitate. But what now induced him to defert their caufe was the diffust he had conceived at the French alliance, and at the refusal of Congress to comply with the last terms offered by Great-Britain, which he thought equal to all their expectations and to all their wiftes.

The Americans, however, accounted for the conduct of Ar. pold in a different manner. They alledged that he had fo involved himfelf in debts and difficulties by his extravagant manner of living in America, that he had rendered it very inconvenient for him to continue there: that after the evacuation of Philadelphia by the British troops, General Arnold, being invefted with the command of that city, hid made the house of Mr. Penn, which was the best in the city, his head quarters. This he had furnished in an elegant and expensive manner, and lived in a ftyle far beyond his income. It was manifest, they faid, that he could at first have no great aversion to the French alliance, becaufe that when M. Gerard, minister plenipotentiary from the court of France, arrived at Philadelphia in July 1778, General Arnold early and earneftly folicited that minister, with his whole fuite, to take apartments and bed and board at his house, until a proper house could be provided by order of the Congress. This offer M. Gerard accepted, and continued with him fome weeks. The French minister relided upwards of fourteen months in Phithis; during which time General Arnold kept up the most friendly and intimate acquaintance with him, and there was a continued interchange of dinners, balls, routes, and concerts: Ro that M. Gerard must have believed, that in General Arnold he had found and left one of the warmest friends the court of France had in America. He was allo-one of the first in congratulating the Chevalier de la Luzerne, the fecond French minifter. About this time complaints and acculations were exhibited against him by the government of Philadelphia for divers malpractices; among which charges were, the appropriation of goods and merchandize to his own ule, which he had feized as British property in Philadelphia in July 1778. It was determined by

a court-martial that his conduct was highly reprehensible; but he was indulgently treated, and was therefore only reprimanded by the commander in chief General Washington. It was in these circumstances, the Americans faid, bankrupted in reputation and fortune, loaded with debts, and having a growing and expensive family, that General Arnold first turned his thoughts towards joining the royal army.

After the defeat of General Gates by Earl Cornwallis, the latter exerted himfelf to the utmost in extending the progress of the British arms, and with confiderable effect, But one enterprife which was conducted by Major Fergulon, proved unfuccefsful, That officer had taken abundant pains to discipline fome of the tory militia, as they were termed; and with a party of these and some British troops, amounting in the whole to about one thousand four hundred men, made incursions into the country. But on the 7th of October he was attacked by a superior Body of Americans at a place called King's Mountain, and totally defeated. One hundred and fifty were killed in the action, and sight hundred and ten made prifoners, of which one hundred and fifty were wounded, Fifteen hundred fland of arms alfo fell into the hands of the Americans, whole lols was inconfiderable. But the following month Lieutenant Colonel Tarleton, who continued to exert his usual aftivity and bravery, with a party of one hundred and feventy, chiefly cavalry, attacked and defeated General Sumpter, who is faid to have had one thousand men, at a place called Black Stocks. Sumpter was wounded; and about one hundred and twenty of the Americans killed, wounded, or taken. Of the British troops about fifty were killed and wounded.

On the 3d of September the Mercury, a congress packet, was taken by the Veftal, Captain Keppel near Newfoundland. On board this packet was Mr. Laurens, late Prefident of the Congress, who was bound on an embassify to Holland. He had thrown his papers overboard, but great part of them were rectivered without having received much damage. He was beought to London, and examined before the privy council; in confequence of which he was committed close prisoner to the Tower, on the 6th of October, on a charge of high treason. His papers were delivered to the ministry, and continued to facilitate a rupture with Holland, as among them was found the sketch of a treaty of amity and commerce between the republic of Holland and the United States of America,

At the beginning of the year 1781, an affair happened in America, from which expectations were formed by Sir Henry Clinton, that fome confiderable advantage might be derived to the

toyal a ties un troops éncies. royal caufe. The long continuance of the war, and the difficulties under which the Congress laboured, had prevented their troops from being properly supplied with necessaries and coveniencies. In confequence of this, on the first of January; the American troops that were hutted at Morris Town, and who formed what was called the Pennfylvania Line, turned out, being in number about one thousand three hundred, and declared, that they would ferve no longer, unless their grievances were redreffed, as they had not received their pay, or been furnished with the neceffary cloathing or provisions. It is faid that they were fomewhat inflamed with liquor, in confequence of rum having been diffributed to them more liberally than ufual, New-Year's Day being confidered as a kind of feftival. A riot enfued, In which an officer was killed, and four wounded : five or fix of the infurgents were also wounded. They then collected the artillery, ftores, provisions, and waggons, and marched out of the camp. They passed by the quarters of General Wayne, who fent a meffage to them, requesting them to defist, or the confequences would prove fatal. They refused, and proceeded on their march till the evening, when they took post on an advantageous piece of ground, and elected officers from among themfelves. On the fecond, they marched to Middlebrook, and on the third to Princetown, where they fixed their quarters. On that day a flag of truce was fent to them from the officers of the American camp, with a mellage, defiring to know what were their intentions. Some of them answered, that they had already served longer than the time for which they were enlifted, and would ferve no longer ; and others, that they would not return, unless their grievances were redreffed. But at the fame time they repeatedly, and in the ftrongest terms, denied being influenced by the least difaffection to the American caule, or having any intentions of deferting to the enemy. We statt

Intelligence of this transaction was foon conveyed to New-York. A large body of British troops were immediately ordered to hold themfelves in readiness to move on the fhortest notice, it being hoped that the American revolters might be induced to join the royal army. Meffengers were also fent to them from General Clinton, acquainting them that they should directly be taken under the protection of the British government; that they should have a free pardon for all former offences; and that the pay due to them from the Congress should be faithfully paid them, without any expectation of military fervice, unless it should be voluntary upon condition of their laying down their arms and returning to their allegiance. It was also recommended to them to move beyond the South River; and they were assured, that a

body of British trapps should be ready to protect them whenever they debred it. These propositions were rejected with difdsin ; and they even delivered up two of Sir Henry Clinten's messagers to the congress. Joseph Reed, Esq, president of the flate of Pennfylvania, afterwards repaired to them at Prince-town, and an accommodation took place: such of them as land ferved out their full terms were permitted to teture to their own homes, and others again joined the American army, upon receiving fatisfactory affurances that their grievances should be metrefied.

Lord Cornwallis now began to make very vigorous exertions, in order to penetrate into North Carolina. On the 21th of January his Lordship's army was in motion, and advancing towards that province; but was fomewhat delayed by an attempt made by the Americans, under General Morgan, to make themfelves mafters of the valuable district of Ninety-fix. In order to prevent this," Lord Cornwallis detached Lieutenant Colonel Tarleton, with three hundred cavalry, three hundred light infantry, the feventh regiment, the first battalion of the leventy-first regiment and two three-pounders, to oppole the progress of Morgan, not doubting but that he would be able to perform this fervice effectually. The British troops came up with the Americans under General Morgan on the 17th of January. The Americans were drawn up in an open wood, and having been lately joined by fome militis, were more numerous than the British troops under Lieutenant Colonel Tarleton; but the latter were fo much better difciplined, that they had the utmost confidence of obtaining a fpeedy victory. The attack was begun by the first line of infant. ry, confifting of the feventh regiment and a corps of light infantry, with a troop of cavalry placed on each flank. The first battalion of the feventy-first and the remainder of the cavalry formed the referve. The American line foon gave way, and their militia quitted the field; upon which the royal troops, fuppofing the victory already gained, engaged with ardour in the purfuit, and were thereby thrown into fome deforder: General Morgan's corps, who were supposed to have been routed, then immediately faced about and threw in a heavy fire upon the king's troops, which occalioned the utmost confusion amongst them; and they were at length totally defeated by the Americans. Four hundred of the British infantry were either killed, wounded, or taked prifoners: the lofs of the cavalry was much lefs confiderable; but the two three-pounders fell into the hands of the Americans, together with the colours of the feventh regiment ; and all the detachment of royal artillery were either killed or wounded in defence of their colours. Lieutenant-colonel Tarleton, however, made another effort; having affembled about fifty of

161

his tavalry, he charged and repulfed Colonel Washington's horse, retook his beggage; and killed the Americans who were appointed to guard it. He then retreated to Hamilton's ford; new the mouth of Bullock's creek, carrying with him part of his beggage; and destroying the remainden.

Vol. I.

This defeat of the troops under Thriston was a fevere froke to Lord Cornwallis, as the lofs of his light infantry was a great dif-"ndvantage to him." The day after that event; he employed in col. letting the remains of Tasleton's corps; and endeavouring to form a junction with General Leffie, who had been ordered to march towards film with a body of British troops from Wynnesborough. Confiderable exertions were then made by part of the army, without baggage, to retake the prifoners in the hands of the Americens, and to intercept General Morgan's corps on its retreat to the Catawba. But that American officer, after his defeat of Tarleton, had made forced marches up into the country, and croffed the Catawba the evening before a great rain, which fwelled the river to fuch a degree, as to prevent the royal army from croffing for feveral days ; during which time the British priloners were got over the Yadkin ; whence they proceeded to Dan River, which they also palled, and on the 14th of February had reached Court-houle in the province of Virginia

Lord Corriwallis employed a halt of two days in collecting forme flour, and in deftroying fuperfluous baggage and all his waggons excepting thole laden with holpital flores, falt, and ammunition, and four referved empty in readincle for fick or wounded, Being thus freed from all unneceffary incumbrances, he marched through North Carolina with great rapidity, and penetrated to the semateft extremities of that province on the banks of the Dan. His progrefs was fometimes impeded by parties of the militia, and fomo fkirmifnes enfued, but the met with no very confiderable oppolition. On the ist of February, the king's troops croffed the Catawba at M'Cowan's Ford, where General Devidion, with a party of American militiz, was posted, in order to oppose their paffage ; but he falling by the first difcharge, the royal troops made good their landing, and the militia retreated. When Lord Cornwallis arrived at Hillfborough, he crefted the king's ftandard, and invited, by proclamation, all loyal fubjedts to repair to it, and to ftend forth and take an active part in affifting his Lordship to reftore order and government. He had been taught to believe that the king's friends were numerous in that part of the country : but the event did not confirm the truth of the reprefentations that had been given. The royalifts were but few in number, and some of them too timid to join the king's standard. There

## HISTORYOTTHE

were, indeed, about two hundred who were proceeding to Hillfborough, under, Colonel Pyle, in order to avow their attachment to the royal saufe; but they were met accidentally, and furrounded by a detachment from the American army, by whom a number of them are faid to have been killed when they were begging for quarter, without making the leaft sefffance. Mean while General Green was marching with great, expedition with the troops under his command, in order to form a junction with other corps of American troops, that he might thereby be enabled to put an effectual flop to the progrefs of Lord Cornwallis.

. In other places fome confiderable advantages were obtained by the royal arms. On the 4th of January, fome thips of war with a number of transports, on board which was a large body of troops under the command of Brigadier-General Arnold, srrived at Weftover, shout one hundred andforty miles from the Capes of Virginia, where the troops immediately landed and marched to. Richmond ; which they mached without opposition, the militiz that was collected having retreated on their approach. Lieutemant-Colonel Simcoe marched from hence with a detachment of British troops to Weithin; where they deftroyed one of the fineft foundasies for sannon in America, and a large quantity of flores and cannon. General Arnold, on his arrival at Richmond, found there large quantities of falt, rum, fail-cloth, tobacco. and other merchandife ; and that part of these commodities which was public property he destroyed. The British troops afterwards attacked and difperfed fome fmall parties of the Americans, took lome flores and a few pieces of cannon, and the goth of the fame month marched into Portimouth. On the 25th, Captain Barelay, with feveral fhips of war, and a body of troops mand of Major Craig, arrived in Cape Fear river, under the com The troops landed about nine miles from Wilmington, and on the s8th entered that town. It was underflood that their having polleflion of that town, and being mafters of Cape Fear river, would be productive of very benchcial effects to Lord Cornwallis's army ? This first and off bed go that off ale survey

General Greene having effected a junction about the 10th of March with a continental regiment of what were called *eighteen months men*, and two large bodies of militia belonging to Virginia and Nosth Carolina, formed a refolution to attack the Britifh troops under the command of Lord Cornwallis. The American army marched from the High Rock Ford on the sath of the month, and on the 14th arrived at Guildford. Lord Cornwallis, from the information he had received of the motions of the American general, concluded what were his defigns: As they approached more nearly to each other, a few fkirmifhes enfued

between fome advanced parties, in which the king's troops had the advantage. On the morning of the 15th, Lord Cornwallis, marched with his troops at day-break in order to meet the Americans, or to attack them in their encampment. About four miles from Guildford, the advanced guard of the British army, commanded by Lieutenant-Colonel Tarleton, fell in with a corps. of the Americans, confifting of Lieutenant-Colonel Lee's legion, fome Back Mountain men and Virginian militia, with whom he. had a fevere fkirmish, but whom he at length obliged to retreat. The greater part of the country is which the action happened . is a wildernels, with a few cleared fields interfperfed. The American army, which was superior to the royal in point of numbers, was pofted on a rising ground about a mile and a half. from Guildford cours-houfe. It was drawn up in three lines : the front line was composed of the North Carolinian militia. under the command of the Generals Butler and Eaton ; the fecond, line of Virginian militia, commanded by the Generals Stephens. and Lawfon, forming two brigades ; the third line, confifting oftwo brigades, one of Virginia and one of Maryland continental troops, commanded by General Huger and Colonel Williams, -Lieutenant-Colonel Walhington, with the dragoons of the first and third regiments, a detachment of light infantry composed of. continental troops, and a regiment of rifemen under Colonel. Lynch, formed a corps of observation for the fecurity of their right flank. Lieutenant-Colonel Lee, with his legion, a detachment of light, infantry, and a corps of riflemen under Colonel Campbell, formed a corps of observation for the security of their left flank. The attack on the American army was directed to be, made by Lord Cornwallis in the following order .: On the right, the regiment of Bofe and the feventy-first regiment, led by Major-General. Leflic, and supported by the first battalion of guards ; on the left, the twenty-third and thirty third regiments, led by Lieutenant-Colonel Webster, and supported by the grenadiers and fecond battalion of guards commanded by Brigadier-General O'Hara; the Yagers and light infantry of the guards remained in a wood on the left of the guns, and the cavalry in the read, ready to act as circumstances might require.

About half an hour after one in the afternoon, the action commenced by a cannonade, which lafted about twenty minutes; when the British troops advanced in three columns and attacked the North Carolinian brigades with great vigour, and foon obliged part of these troops, who behaved very fil, to quit the field : but the Virginian militia gave them a warm reception, and kept up heavy fire for a long time, till being beaten back, the action, and line of the second se

5,68,

became general almost every where. The American corps under the Lieutenant-Colonels Washington and Lee were also warmly engaged, and did confiderable execution. Licutenant-Colonel Tarleton had directions to keep his cavalry compact, and not to charge without politive orders, excepting to protect any of the corps from the molt evident danger of being defeated. The exceffive, thickness of the woods rendered the British bayonets of little use, and enabled the broken corps of Americans to make frequent flands with an irregular fire. The fecond battalion of the guards first gained the clear ground near Guildford courthouse, and found a corps of continental infantry, superior in number, formed in an open field on the left of the road. Defirous of, fignalizing themfelves, they immediately, attacked and foon defeated them, taking two fix-pounders: but as they purfued the Americans into' the wood with too' much ardour, they were thrown into confusion by a heavy fire, and instantly charged and driven back into the field by Licutenant-Colonel Washington's dragoons, with the lofs of the fix-pounders they had taken. But the American cavalry were afterwards repulled, and the two fix-pounders again fell into the hands of the British troops. The fpirited exertions of Brigadier-General O'Hara and of Lieutenant-Colonel Tarleton, greatly contributed to bring the action to a termination. The British troops having at length broken the fecond Maryland regiment, and turned the left flank of the Americans, got into the rear of the Virginian brigade, and appeared to be gaining their right, which would have encircled the whole of the continental troops, when General Greene thought it prudent to order a retreat. Many of the American militia dispersed in the woods; but the continental troops retreated in good order to Reedy Fork River, and croffed at the Ford about three miles from the field of action, and there halted. When they had collected their ftragglers, they retreated to the ironworks, ten miles diffant from Guildford, where they encamped. They loft their artillery and two waggons laden with ammunition. It was a hard fought action, and lasted an hour and an half. Of the British troops, the lois, as stated by Lord Cornwallis, was five hundred and thirty-two killed, wounded, and miffing. General Greene, in his account of the action transmitted to the congress, flated the loss of the continental troops to amount to three hundred and twenty-nine killed, wounded, and miffing; but he made no estimate of the lois of the militia .---Lieutenant-Colonel Stuart was killed in the action ; and Lieutenant-Colonel Webster, and the Captains Schutz, Maynard, and Goodriche, died of the wounds that they received in it. , and

ment-Colonel Tarleton were also wounded. Of the Americans the princical officer killed was Major Anderson of the Maryland line, and the generals Stephens and Huger were wounded.

The British troops underwent great hardships in the course of this campaign; and in a letter of Lord Cornwallis's to Lord George Germain, dated March 17th, he observed, that "the foldiers had been two days without bread." His lordfhip guitted Guildford three days after the battle which was fought in that place; and on the 7th of April arrived in the neighbourhood of Wilmington. Soon after, General Greene, notwithstanding his late defeat, endeavoured to make fome vigorous attempts against the king's forces in South Carolina. Lord Rawdon had been appointed to defend the post of Camden, with about eight hundred British and provincials; and on the 19th of April General Greene appeared before that place with a large body of continentals and militia. He found it, however, impossible to attempt to ftorm the town with any prospect of fuccess ; and therefore endeavoured to take fuch a polition as should induce the British troops to fally from their works. He posted the Americans about a mile from the town, on an eminence which was covered with woods, and flanked on the left by an impaffable fwamp. But on the morning of the 25th, Lord Rawdon marched out of Camden, and with great gallantry attacked General Greene in his camp. The Americans made a vigorous reliftance, but were at last compelled to give way; and the purfuit is faid to have been continued three miles. For fome time after the action commenced, General Gates entertained great hopes of defeating the British troops; in which, as the Americans were superior in point of numbers, he would probably have fucceeded, had not fome capital military errors been committed by one or two of the officers who ferved under him. On the American fide Colonel Washington behaved extremely well in this action, having made upwards of two hundred of the English priloners, with ten or twelve officers, before he perceived that the Americans were abandoning the field of battle. The loss of the English was about one hundred killed and wounded. Upwards of one hundred of the Americans were taken prifoners; and, according to the account published by General Greene, they had one hundred and twenty-fix killed and wounded. After this action, Greene retreated to Rugeley's mills, twelve miles from Camden, in order to collect his troops and wait for reinforcements.

Notwithstanding the advantage which Lord Rawdon had obtained over General Greene at Camden, that nobleman foon after found it necessary to quit that post; and the Americans made themselves masters of several other posts that were occupied by the king's troops, and the garrifons of which were obliged to furrender themfelves prifoners of war. Thefe troops were afterwards exchanged under a cartel which took place between Lord Cornwallis and General Greene for the releafe of all prifoners of war in the fouthern diffrict. After thefe events, General Greene laid clofe fiege to Ninety-fix, which was confidered as the moft commanding and important of all the pofts in the back-country; and on the 19th of June he attempted to florm the garrifon, but was repulfed by the gallantry of the British troops, with the lofs, as it is faid, of feventy-five killed and one hundred and fifty wounded. General Greene then raifed the fiege, and retired. with his army behind the Saluda, to a ftrong fituation within fix, teen miles of Ninety-fix.

On the 18th of April a large body of British troops, under the the command of Major-General Philips and Brigadier-General Arnold, embarked at Portfmouth in Virginia, in order to proceed on an expedition for the purpole of deftroying fome of the American ftores. A part of light-infantry were fent ten or twelve miles up the Chickahomany : where they deftroyed feveral armed. ships, fundry warehouses, and the American state ship yards. At Petersburgh, the English destroyed four thousand hogsheads of tobacco, one fhip, and a number of fmall veffels on the itocks and in the river. At Chefterfield court-house, they burnt a range of barracks for two thousand men and three hundred barrels of flour. At a place called Ofborn's, they made themfelves mafters of feveral veffels loaded with cordage and flour, and deftroyed about two thousand hogsheads of tobacco, and fundry vessels were funk and burnt. At Warwick, they burnt a magazine of five hundred barrels of flour, fome fine mills belonging to Colonel Carcy, a large range of public rope-walks and ftorehouses, tan and bark houses full of hides and bark, and great quantities of tobacco. A like definition of ftores and goods was made in other parts of Virginia.

From the account already given of fome of the principal military operations of the prefent year in America, it appears, that though confiderable advantages had been gained by the royal troops, yet no event had taken place from which it could rationally be expected that the final termination of the war would be favourable to Great-Britain. It was alfo a difadvantageous circumftance that there was a mifunderstanding between Admiral Arbuthnot and Sir Henry Clinton, and a mutual disapprobation of each other's condust. This was manifest from their dispatches to government, and especially from those of General Clinton, whose expressions respecting the condust of the Admiral were by no means equivocal.

On the 16th of March 1/81, a partial action happened off the Capes of Virginia; between the fleet under Admiral Arbuthnot, confifting of feven fhips of the line and one fifty-gun fhips of the line and one forty-gun fhip. Some of the farse number of fhips of the line and one forty-gun fhip. Some of the farse number of fhips of the line and one forty-gun fhip. Some of the farse number of fhips of the line and one forty-gun fhip. Some of the farse number of fhips of the line and one forty-gun fhip. Some of the farse number of fhips of the line and one forty-gun fhip. Some of the farse number of fhips of the line and one forty-gun fhip. Some of the farse number of the second confiderable damage in the action, and the lofs of the Englifh was thirty killed, and feventy-three wounded; but ne fhip was taken on either fide. The British fleet had, however, confiderably the advantage ; as the French were obliged to retire, and were fuppofed to be prevented by this action from carrying troops up the Chefapeak, in order to attack General Arnold and impede the progrefs of Lord Cornwallis. But it was an unfortunate circumfance, that fome time before this engagement the Romulus, a fhip of forty-four guns, was captured by the French off the Capes of Virginia:

Lord Cornwallis, after his victory over General Greene at Guildford, proceeded, as we have feen, to Wilmington, where he arrived on the 7th of April. But before he reached that place, he published a proclamation, calling upon all loyal subjects to ftand forth and take an active part in reftoring good order and government; and declaring to all perfons who had engaged in the prefent rebellion against his majesty's authority, but who were now convinced of their error, and defirous of returning to their duty and allegiance, that if they would furrender themfelves with their arms and ammunition at head quarters, or to the officer commanding in the diffrict contiguous to their respective places of refidence, on or before the 20th of that month, they would be permitted to return to their homes upon giving a military parole ; they would be protected in their perfons and properties from all forts of violence from the British troops and would be reffored as foon as possible to all the privileges of legal and constitute and government. But it does not appear that any confiderable umber of the Americans were allured by these promises to give any evidences of their, attachment to the royal caufe.

On the 20th of May, his Lordfhip arrived at Peterfburgh in Virginia, where he joined a body of Britifh troops that had been under the command of Major-General Philips; but the command of which, in confequence of the death of that officer, had devolved upon Brigadier-general Arnold. Before this junction he had encountered confiderable inconveniences from the difficulty of procuring provisions and forage; fo that in a letter to Sir Henry Clinton, he informed him, that his cavalry wanted every thirg, and his infantry every thing but fhoes. He added, that he had experienced the difficults of marching hundreds of miles in a country chiefly hoftile, without one active or useful friend, without intelligence, and without communication with any part of the country.

## HISTORY OF THE

. On the soth of June, about fix miles from Williamfoutgly Lieutenant-colonel Simcoe, and three hundred and, fifty of the Queen's rangers, with eighty mounted yagers, were attacked by a much fuperior body of the Americans; but whom they repulied with great gallantry and with equal fuccels, making four officers and twenty private men prifoners. The lofs of the Americans in this action is faid to have been upwards of one hundred and twenty, and that of the British troops not more than forty: On the 6th of July an action happened near the Green Springs in Virginia, between a reconnoitering party of the Americans under General Wayne, amounting to about eight hundred, and a large part of the British army under Lord Cornwallis; in which the Americant had one hundred and twenty-feven killed and wounded, and the lofs of the royal troops is supposed to have been confiderably greater. It was an action in which no fmall degree of military skill and courage was exhibited by the Americans. In a variety of fkirmifnes, the Marquis la Fayette very much diftinguished himfelf, and displayed the atmost ardour in the American caule.

In South Carolina, an action happened on the 6th of September near Eats Springs, between a large body of British froops under the command of Lieutenant-colonel Stuart and a much superior body of Americans, faid to amount to more than sour thousand, under the command of General Greene. It was an obstimate engagement, and lasted near two hours; but the Americans were defeated, and two of their six-pounders fell into the hands of the English. The loss, however, of the royal troops was very considerable: amounting to more than four hundred killed and wounded, and upwards of two hundred missing.

In the course of the same month, General Arnold was sent on in expedition against New-London, in Connecticut, where he deftroyed a great part of the shipping, and an immense quantity of naval ftores, European manufactures, and East and West India commodities. The town itfelf was also burnt, which is faid to have been unavoidable on account of the explosions of great quantities of gunpowder which happened to be in the ftorehoufes that were let on fire. A fort, of which it was thought necellary to gain poffestion in this expedition, was not taken without confiderable lofs. This was fort Grifwold; which was defended by the Americans with great gallantry, and the affault was made by the English with equal bravery. The British troops entered the works with fixed bayonets, and were oppoled with great vigour by the garrilon with long spears. After a most obstinate defence of near forty minutes, the affailants gained policilion of the fort, in which eighty-five Americans were found dead, and fixty

wounded, most of them mortally. Of the British troops Major Montgomery was killed by a fpear in entering the American works ; and one hundred and ninty-two men were also killed and wounded in this expedition,

Notwithstanding the fignal advantages that Lord Cornwallis had obtained over the Americans, his fituation in Virginia began by degrees to be very critical : and the rather because he did not receive thole reinforcements and fupplies from Sir Henry Clinton, of which he had formed expectations, and which he conceived to be necessary to the success of his operations. Indeed, the commander in chief was prevented from lending thole reinforcements to Lord Cornwallis which he otherwife might have done. by his fears respecting New-York, against which he entertained great apprehensions that General Washington intended to make a very formidable attack. In fact, that able American general appears to have taken much pains, and to have employed great fineffe, in order to lead Sir Henry Clinton to entertain this imagination. Letters, expressive of this intention, fell into the hands of Sir Henry, which were manifestly written with a defign that they should be intercepted, and only with a view to amufe and deceive the British General. The project was successful; and by a variety of judicious military manœuvres, in which he completely out-Generalled the British commander, he increased his apprehenfions about New-York, and prevented him from fending proper affistance to Lord Cornwallis. Having for a confiderable time kept Sir Henry Clinton in perpetual alarm in New-York, though with an army much inferior to the garrilon of that city, General. Washington fuddenly quitted his camp at White Plains, croffed the Delaware, and marched towards Virginia, apparently with a defign to attack Lord Cornwallis. Sir Henry Clinton then received information that the Count de Graffe, with a large French fleet, was expected every moment in the Chefapeak, in order to co-operate with General Washington. He immediately endeavoured, both by land and water, to communicate this information to Lord Cornwallis ; and alfo fent him affurances, that he would either reinforce him by every pollible means in his power, or make the best diversions he could in his favour. In the mean time Lord Cornwallis had taken poffession of the posts of York Town and Gloucester in Virginia, where he fortified himself in the best manner hé was able.

On the 28th of August, Sir Samuel Hood, with a squadron from the West-Indies, joined the squadron under the command of Admiral Graves before New-York. It was then necessary, on account of the fituation of Lord Cornwallis, that they should im-Vol. I.

4 D

## HISTORYOFTHE

mediately proceed to the Chefapeak; but 'fome time appears to have been needlefsly loft, though Admiral Hood was extremely anxious that no delay might be made. They arrived, however, in the Chefapcak, on the 5th of September, with nineteen thips of the line; where they found the Count de Graffe, who had anchored in that bay on the goth of August with twenty-four ships of the line. The French Admiral had previously landed a large body of troops, which had been brought from Rhode Island, and who immediately marched to join the American army under General Washington. The British and French fleets came to an sction on the fame day in which the former arrived in the Chefapcak. On board the British fleet ninety were killed and two hundred and forty-fix wounded : fome of the fhips were greatly damaged in the engagement ; and the Terrible, a feventy-four gun thip, was fo much thattered, that it was afterwards found necelfary to fet fire to it. That this action had not been favourable to the English, was manifested from the event : the fleets continued in fight of each other for five days fucceflively, and fometimes were very near; but at length the French fleet all anchored within the Cape, fo as to block up the paffage. Admiral Graves, who was the commander in chief, then called a counfel of war, in which it was refolved that the fleet fhould proceed to New-York, that the ships might be there put in the best state for the service . and thus were the French left mafters of the navigation of the Chefapeak.

Before the news of this action had reached New-York, a council of war was held there, in which it was refolved, that five thoufand men fhould be embarked on board the kings fhips, in order to proceed to the affiftance of Lord Cornwallis. But when it was known that the French were abfolute mafters of the navigation of the Chefapeak, it was thought inexpedient to fend off that reinforcement immediately. In another council of war, it was refolved, that as Lord Cornwallis had provisions to laft him to the end of October, it was advisable to wait for more favourable accounts from Admiral Graves, or for the arrival of Admiral Digby, who was expected with three fhips of the line. It was not then known at New-York, that Admiral Graves had determined to return with the whole fleet to that port.

In the mean time, the most effectual measures were adopted by General Washington for furrounding the British army under Lord Cornwallis. A large body of French troops under the command of Lieutenant-General the Count de Rochambeau, with a very confiderable train of artillery, assisted in the enterprise. The Americans amounted to near eight thousand continentals, and five thousand militia. General Washington was invested with the

authority of commander in chief of these combined forces of America and France. On the 29th of September, the investment of York Town was complete, and the British army quite blocked up. The day following Sir Henry Clinton wrote a letter to Lord Cornwallis, containing assumed that he would do every thing in his power to relieve him, and some information concerning the steps that would be taken for that purpose. A duplicate of this letter was fent to his Lordship by Major Cochran, on the 3d of October. That gentlemen, who was a very gallant officer, went in a vessel to the Capes, and made his way to Lord Cornwallis, through the whole French sleet, in an open boat. He got to York Town on the 19th of the month ; and soon after his arrival had his head carried off by a cannon ball.

After the return of Admiral Graves to New-York, a council of war was held, confifting of flag and general officers, in which it was refolved, that a large body of troops fhould be embarked on board the king's fhips as foon as they were refitted, and that the exertions of both fleet and army fhould be made in order to form a junction with Lord Cornwallis. Sir Henry Clinton himfelf embarked on board the fleet, with upwards of feven thouland troops, on the 18th; they arrived off Cape Charles, at the entrance of the Chefapeak, on the 24th, where they received intelligence that Lord Cornwallis had been obliged to capitulate five days before,

It was on the 19th of October that Lord Cornwallis furrendered himfelf and his whole army, by capitulation, prifoners to the combined armies of America and France, under the command of General Wafhington. He made a defence fuitable to the character he had before acquired for courage and military fkill; but was compelled to fubmit to untoward circumftances and fuperior numbers. It was agreed by the articles of capitulation, that the Britifh troops were to be prifoners to the United States of America, and the feamen to the French king, to whole officers alfo the Britifh veffels found at York Town and Gloucefter were to be delivered up. The Britifh prifoners amounted to more than fix thoufand; but many of them, at the time of furrender, were incapable of duty. A confiderable number of cannon, and a large quantity of military flores, fell into the hands of the Americans on this occafion.

As no rational expectation now remained of a fubjugation of the colonies, the military operations that fucceeded in America were of little confequence. Some inconfiderable actions and fkirmifhes did indeed take place after that event; in which the refugees chiefly diffinguifhed themfelves, and diffeovered an inveterate animofity against the Americans. On the 5th of May 1782, Sir

4 D 3

#### HISTORY OF THE

Guy Carleton arrived at New-York, being appointed to the command of the British troops in America in the room of Sir Henry Two days after his arrival, he wrote a letter to Gene-Clinton. ral Washington, acquainting him, that Admiral Digby was joined with himfelf in a commission to treat for peace with the people of America; transmitting to him, at the same time, some papers tending to manifest the pacific disposition of the government and people of Britain towards those of America. He also defired a paffport for Mr. Morgan, who was appointed to transmit a fimilar letter of compliment to the congress. General Washington declined figning any paffport till he had taken the opinion of congress upon that measure; and by them he was directed to refuse any paffport for fuch a purpole. However, another letter was fent to General Washington, dated the 2d of August, and figned by Sir Guy Carleton and Rear Admiral Digby, in which they informed him, that they were acquainted by authority that negociations for a general peace had already commenced at Paris; that Mr. Grenville was invefted with full powers to treat with all the parties at war; and was then at Paris in the execution of his commission. They farther informed him, that his Majesty, in order to remove all obftacles to that peace which he fo ardently wished to restore, had commanded his ministers to direct Mr.-Grenville, that the independency of the thirteen provinces should be proposed by him, in the first instance, instead of making it the condition of a general treaty. But some jealousies were entertained by the Americans, that it was the defign of the British, court either to difunite them, or to bring them to treat of a peace feparately from their ally the king of France : they therefore refolved, that any man, or body of men, who should presume to make any separate or partial convention or agreement with the king of Great-Britain, or with any commissioner or commissioners under the crown of Great-Britain, ought to be confidered and treated as open and avowed enemies of the United States of America; and also that those states, could not with propriety hold any conference or treaty with any commissioners on the part of Great-Britain, unless they should, as a preliminary thereto, either withdraw their fleets and armies, or elfe, in' politive or express terms, acknowledge the independence of the faid flates. They likewife refolved, that any propositions which might be made by the court of Great-Britain, in any manner tending to violate the treaty subfifting between them and the king of France, ought to be used with every mark of indignity and contempt. 39 Set.

On the 30th of November, 1782, the provisional articles of peace and reconciliation between Great-Britain and the Ameritican chates, were figned at Paris; by which Great-Britain ac-

knowledged the independence and fovereignty of the United States of America. Thefe articles were ratified by a definitive treaty, September 3d, 1783. This peace was negociated on the part of Great-Britain by Mr. Ofwald, and the definitive treaty was figned by Mr. Hartley; and on the part of the United States by John Adams, John Jay, and Benjamin Franklin, Efquires.\*

Thus ended a long and arduous conflict, in which Great-Britain expended near an hundred millions of money, with an hundred thousand lives, and won nothing. America endured every cruelty and differess from her enemies; loss many lives and much treature; but delivered herfelf from a foreign dominion, and gained a rank among the nations of the earth.

Holland acknowledged the independence of the United States on the 19th of April, 1782; Sweden, February 5th, 1783; Denmark, the 25th of February; Spain, in March, and Ruffia, in July 1783.

No fooner was peace reftored by the difinitive treaty, and the British troops withdrawn from the country, than the United States began to experience the defects of their general government. While an enemy was in the country, fear, which had first impelled the colonies to affociate in mutual defence, continued to operate as a band of political union. It gave to the refolutions and recommendations of Congress the force of lac.s, and generally commanded a ready acquiefcence on the part of the State legislatures. Articles of confederation and perpetual union had been framed in Congress, and submitted to the confideration of the States, in the year 1778. Some of the States immediately acceded to them; but others, which had not unappropriated lands, hefitated to fubscribe a compact, which would give an advantage to the States which possessed large tracts of unlocated lands, and were thus capable of a great fuperiority in wealth and population. All objections, however, had been overcome, and by the accession of Maryland, in March 1781, the articles of confederation were ratified, as the frame of government for the United States.

These articles, however, were framed during the rage of war, when a principle of common fafety fupplied the place of a coercive power in government, by men who could have had no ex; perience in the art of governing an extensive country, and under circumstances the most critical and embarrassing. To have offered to the people, at that time, a system of government armed with the powers necessary to regulate and controul the contending interests of Thirteen States, and the possession of millions, of

\* This Treaty, with other Papers, will be found in the Appendix a Fourth Volume of this work. people, might have raifed a jealousy between the States or in the minds of the people at large, that would have weakened the operations of the war, and perhaps have rendered an union impracticable. Hence the numerous defects of the confederation.

On the conclution of pesce, these defects began to be felt. Each flate affumed the right of disputing the propriety of the refolutions of Congress, and the interest of an individual State was placed in opposition to the common interest of the union. In addition to this fource of division, a jealousy of the powers of Congress began to be excited in the minds of the people.

This jealoufy of the privileges of freemen had been rouled by the oppreflive acts of the British parliament: and no sooner had the danger from this quarter ceased, than the fears of people changed their object, and were turned against their own rulers.

In this fituation, there were not wanting men of industry and talents, who had been enemies to the revolution, and who embraced the opportunity to multiply the apprchentions of the people, and increase the popular discontents. A remarkable instance of this happened in Connecticut. As foon as the tumults of war had fublided, an attempt was made to convince the people, that the act of Congress passed in 1778, granting to the officers of the army half-pay for life, was highly unjust and tyrannical; and that it was but the first step towards the establishment of penfions, and an uncontroulable despotism. The aft of Congress, passed in 1783, commuting half-pay for life, for five years full pay, was defigned to appeale the apprehentions of the people, and to convince them that this gratuity was intended merely to indemnify the officers for their loss by the depreciating of the paper currency, and not to establish a precedent for the granting of penfions. This act, however, did not fatisfy the people, who supposed that the officers had been generally indemnified for the loss of their pay by the grants made them from time to time by the legiflitures of the feveral States. Belides, the act, while it gave five years full pay to the officers, allowed but one year's pay to the privates; a diffinction which had great influence in exciting and continuing the popular ferment, and one that turned a large fhare of the public rage against the officers themfelves,

The moment an alarm was raifed respecting this act of Congress, the encines of their independence became active in blowing up the flame, by foreading reports unfavourable to the general government, and tending to create public differsions. Newsfpapers, in fome parts of the country, were filled with inflammatory publications; while falle reports, and groundles influations were industriously circulated to the prejudice of Congress, and

t of Conin blowne general Newfpaammatory finuations prefs, and the officers of the late army. Among a people feelingly alive to every thing that could affect the rights for which they had been contending, these reports could not fail of having a powerful effect; the clamour form became general; the officers of the army, it was believed, had attempted to raise their fortunes on the diffress of their fellow-citizens, and Congress become the tyrants of their country.

Connecticut was the fest of this uncafinefs; although other States were much agitated on the occafion. But the inhabitants of that State accuftomed to order, and a due fubordination to the laws, did not proceed to outrages; they took their ufual mode of collecting the fenfs of the State—affembled in town meetings appointed committees to meet in convention, and confult what measures fhould be adopted to procure a redrefs of their grievan. ces. In this convention, which was held as Middletown; fome mugatory refolves were paffed, expreffing the difapprobation of the half-pay act, and the fubfequent commutation of the grant for five years whole pay. The fame fpirit alfo difcovered itfelf in the affembly at their October feffion, 1783. A remonftrance againft the acts in favour of the officers was framed in the Houfe of Reprefentatives, and not withflanding the Upper Houfe refufed to concur in the meafure, it was fent to Congrefs.

During this fituation of affairs, the public odium sgainst the officers was augmented by another circumstance. The officers, just before the difbanding of the army, as has already been noticed had formed a fociety, called by the name of the *Cincinnati*.

Whatever were the real views of the framers of this inflitution its defign was generally underflood to be harmlefs and honourable. The offenfible views of the fociety could not however foreen it from popular jealoufy.

Notwithstanding the discontents of the people were general, and ready to burst forth in fedition, yet men of information, viz. the officers of government, the clergy, and perfons of liberal education, were mostly opposed to the unconstitutional steps taken by the committees and convention at Middletown. They supported the propriety of the measures of Congress, both by conversation and writing, proved that such grants to the army were neceffary to keep the troops together, and that the expense would not be enormous nor opprefive. During the close of the year 1783, every possible exertion was made to enlighten the people, and fuch was the effect of the arguments uled by the minority, that in the beginning of the following year, the opposition subsided, the committees were diffinissed, and tranquillity reflored to the State. In May, the legislature were able to carry leveral measures which had before been extremely unpopular. An aft was palled granting the impose of five per cent, to Congrefs; another giving great encouragement to commerce; and (pveral towns were incorporated with extensive privileges, for the purpose of regulating the exports of the finite; and facilitating the collection of debts.

The opposition to the congressional sets in favour of the offic cers, and to the order of the Cincinneti, did not rife to the fame pitch in the other States as in Connecticut; yet is produced much diffurbance in Maffachuletts, and fome others. Jealoufy of power had been universally spread among the people of the United States. The deftruction of the old forms of governments, and the licentious of war, had, in a great measure, broken their habits of obedience; their paffions had been inflamed by the cry of despotifm; and like centinels, who have been fuddantly furprifed by the approach of an enemy, the ruftling of a leaf was fufficient to give them an alarm. This spirit of jesteusly operated with other causes to relax the energy of federal operations.

During the war, vaft fums of paper currency had been emitted by Congress, and large quantities of specie had been introduced, towards the close of the war, by the French army, and the Spanish trade. This plenty of money enabled the States to comply with the first requisitions of Congress; so that during two or three years, the federal treasury was, in some measure, fupplied. But when the danger of war had ceafed, and the vaft importations of foreign goods had leffened the quantity of circulating specie, the States began to be very remifs in furnishing their proportion of monies. The annihilation of the credit of the paper bills had totally flopped their circulation, and the fpecie was leaving the country in cargoes for remittances to Great-Britain; still the luxurious habits of the people; contracted during the war, called for new supplies of goods, and private gratification feconded the narrow policy of flate intereft in defeating the operations of the general government.

Thus the revenues of Congress were annually diminishing; fome of the States wholly neglecting to make provision for paying the interest of the national debt; others making but a partial provision, until the feanty supplies received from a few of the richest States, would hardly fatisfy the demands of the civil lift.

This weakness of the federal government, in conjunction with the flood of cirtificates or public fecurities, which Congress could neither fund nor pay, occasioned them to depreciate to a very inconfiderable value. The officers and foldiers of the late army, and those who furnished supplies for public exigencies, to Conand Dfor the

the offic the funced much loufy of a of the rnments, broken ad by the fuddanly of a leaf jestoufy al opera-

Paunifylvane indeed node a provided for paying the interest of ber dates both size and federal; siluming her supposed proportion of the continental date, and giving the creditors of her own State nodes in eachange for those of the United States. The refources of thet State, are immense, but the was not able to make punctual payments, even in a depreciated paper currency.

Maffachuletts, in her zeal to comply fully with the requisitions of Congreis, and istisfy the demands of her own creditors, laid a heavy tax upon the people. This was the immediate caule of the rebellion in that State, in 1786. Har a beavy debt lying on the State, added to burdens of the lame nature, upon simolt every corporation within it; a decline, or rather an extinction of public credit ; a relaxation and corruption of manufactures, and a free ule of foreign luxuries ; a decay of trade and manufactures, with a prevailing fearcity of money; and, abuve a dividuals involved in debt to each other. These went the real, though more remote caules of the infurrection. It was the tax which the peo-ple were required to pay, that cauled them to feel the evils. which we have enumerated-this called forth all their other gricvances; and the first act of violence committed was the burning or deftroying of the tax-bill. This fedition threw the State into a convultion which lafted about a year ; courts of juffice were violently obstructed; the collection of debts was suspended; and a body of armed troops, under the command of General Lincoln, was employed during the winter of 1786, to difperfe the infurgents. Yet fo numerous were the latter in the counties of Worcefter, Hampfhire, and Berkshire, ad fo obftinately combined to oppole the execution of law by force, that the governor and council of the State thought proper not to intruft General Lincoln with military powers, except to set on the defensive, and to repel force with force, in cale the infurgents thould attack him .: The leaders of the rebels, however, were not men of talents; they were desperate, but without fortitude; and even while they were supported with a superior force, they appeared to be impressed with that consciousness of guilt, which awes the most daring wretch, and makes him shrink from his Vol. I. with attached If A. Emplanting of 1 to - b an

purpole. This appears by the conduct of a large purpole of the magazine at Spring with a finall good, was flationed to the infurgents appeared upon the state of numbers, but few flot from the state product the state of the sta

tetreat in diforder with the loistof four pen. This fpirited con-

duct of General Shopard, with the industry, performance, and prudent firmnels of General Lincoln, disperied the rebels—drove the leaders from the State, and reftored tranquillity. An act of indemnity was passed in the legislature for all the insurgents, except a few of the leaders, on condition they should become peaceable citizens, and take the oath of allegiance. The leaders afterwards petitioned for pardon, which, from motives of policy, was granted by the legislature.\*

But the lofs of public credit, popular difturbances, and infurrections, were not the only evils which were generated by the peculiar circumftances of the times. The emiffions of bills of credit and tender laws were added to the black catalogue of political diforders.

The expedient of supplying the deficiencies of specie, by emiffions of paper bills, was adopted very early in the colonies. The expedient was obvious and produced good effects. In a new country, where population is rapid, and the value of lands increating, the farmer finds an advantage in paying legal interest for money; for if he can pay the interest by his profits, the increating value of his lands will in a few years discharge the principal.

In no colony was this advantage more fensibly experienced than in Pennfylvania. The emigrations to that province were numerous—the natural population rapid—and these circumstances combined, advanced the value of real property to an aftonishing degree. As the first fettlers there, as well as in other provinces, were poor, the purchase of a few foreign articles drained them of specie. Indeed for many years, the balance of trade must have neceffarily been greatly against the colonies.

But bills of credit, emitted by the State, and loaned to the induftrious inhabitants, fupplied the want of fpecie, and enabled the farmer to purchafe flock. Thefe bills were generally a legal tender in all colonial or private contracts, and the fums iffued did not generally exceed the quantity requifite for a medium of trade; they retained their full nominal value in the purchafe of commodities: but as they were not received by the British merchants, in payment of their goods, there was a great demand for

\* See an elegant and impartial Hiltory of this Rebellion, by George Richards Minot, Efq.

specie and bills, which occasioned the latter at various times to appreciate. Thus was introduced a difference between the **English** flessing money and the currencies of the colonies, which remains to this day.\*

The advantages the colonies had derived from bills of credit, under the British government, Juggested to Congress, in 1775, the idea of iffuing bills for the purpole of carrying on the war; and this was perhaps their only expedient. Money could not be raifed by taxation --- it could not be borrowed. The first emissions had no other effect upon the medium of commerce, than to drive the specie from circulation. But when the paper substituted for specie had, by repeated emissions, augmented the sum in circulation, much beyond the usual sum of specie, the bills began to lofe their value. The depreciation continued in proportion to the fums emitted, until feventy, and even one hundred and fifty nominal paper dollars, were hardly an equivalent for one Spanish milled dollar. Still, from the year 1775 to 1781, this depreciating paper currency was almost the only medium of trade. It fupplied the place of specie, and enabled Congress to support a numerous army; until the fum in circulation amounted to two hundred millions of dollars, But about the year 1780, specie began to be plentiful, being introduced by the French army, a private trade with the Spanish islands, and an mucit intercoule with the British garrison at New-York. This circumstance accelerated the depreciation of paper bills, until their value had funk almost to nothing. In 1781, the merchants and brokers in the fouthern States, apprehenfive of the approaching fate of the currency, pushed immense quantities of it suddenly into New-England-made vaft purchases of goods in Boston-and in. fantly the bills vanished from circulation.

The whole hiftory of this continental paper is a hiftory of public and private frauds. Old specie debts were often paid in a depreciated currency—and even new contracts for a few weeks or days were often discharged with a small part of the value received. From this plenty and fluctuating state of the medium sprung hosts of speculators and itinerant traders, who left their honest occupations for the prospect of immense gains, in a fradulent business, that depended on no fixed principles, and the profits of which could be reduced to no certain calculations.

\* A Dollar in fiterling money is 48. 6d. But the price of a Dollar role in New-England currency to 6s. in New-York to 8s. in New-Jerfey, Pennfylvania, and Maryland to 7s. 6d. in Virginia to 6s. in North-Carolina to 8s. in South-Carolina and Georgia to 4s. 8d. This difference, originating between paper and specie, or bills, continued afterwards to exift in the nominal estimation of gold and filver

To increase these evils, a project was formed to fix the price of articles, and restrain perfors from giving or receiving more for any commodity than the price flated by authority. These regulating acts were reprobated by every man acquainted with commerce and finance; as they were, intended to prevent an effect without removing the cause. To attempt to fix the value of money, while streams of pills were incessfully flowing from the treasury of the United States, was as ridiculous as an attempt to restrain the rising of water in rivers amidit showers of rain.

Notwithstanding all opposition, fome States framed and attempted to enforce these regulating acts. The effect was, a momentary apparent stand in the price of articles; innumerable acts of collution and evaluon among the disconstructions, innumerable acts done to the honess; and finally a total disregard of all such regulations, and the consequential contempt of laws and the authority of the magistrate. During these fluctuations of business, occasioned by the variable value of money, people lost fight, in some measure, of the stready principles which had before governed their intercourse with each other. Speculation followed and relaxed the rigour of commercial obligations.

Industry lidewife had fuffered by the flood of money which had deluged the States. The prices of produce had rifen in proportion to the quantity of money in circulation, and the demand for the commodities of the country. This made the acquisition of money easy, and indolence and luxary, with their train of defolating confequences, spread themselves among all descriptions of people.

But as forn as hoftilities between Great-Britain and America were fulfpended, the fcene was changed. The bills emitted by Congrefs had for fome time before ceafed to circulate; and the fpecie of the country was foon drained off to pay for foreign goods, the importations of which exceeded all calculation. Within two years from the clofe of the war, a fcarcity of money was the general cry. The merchants found it impoffible to colleft their debts, and make punctual remittances to their creditors in Great-Britain; and the confumers were driven to the neceffity of retrenching their fuperfluities in living, and of returning to their ancient habits of induftry and economy.

This change was however progreffive and flow. In many of the States which fuffered by the numerous debts they had contracted, and by the diftreffes of war, the people called aloud for emiffions of paper bills to fupply the deficiency of a medium. The depreciation of the continental bills was a recent example of the ill effects of fuch an expedient, and the impoffibility of

## AMERICAN REVOLUTION.

functions the credit of paper was urged by the oppofers of the measure as a subfrantial argument against adopting it. But nothing would filence the popular clamour; and many men of the first talents and eminence united their voices with that of the populace. Paper money had formerly maintained its credit, and been of fingular utility; and pass experience, notwith flanding a change of circumflances, was an argument in its favour that bore down all opposition.

Pennfylvania, although one of the richeft States in the union, was the first to emit bills of credit, as a substitute for specie, But the revolution had removed the necessity of it, at the same time that it had deftroyed the means by which its former credit had been supported. Lands, at the close of the war, were not rising in value—bills on London could not fo readily be purchafed, as while the province was dependent on Great-Britain—the State was split into parties, one of which attempted to defeat the measures most popular with the other—and the depreciation of continental bills, with the injuries which it had done to individuals, inspired a general distruct of all public promises.

Notwithstanding a part of the money was loaned on good landed fecurity, and the faith of that wealthy State piedged for the redemption of the whole at its nominal value, yer the dwantages of specie as a medium of commerce, specially as a specie dwantage mittance to London, soon made a difference of ten per cent. between the bills of credit and specie. This difference may be confidered rather as an appreciation of gold and filver, than a depreciation of paper; but its effects, in a commercial state, must be highly prejudicial. It opens the door to frauds of all kinds, and frauds are usually practifed on the honess and unsufpecting, especially upon all classes of labourers.

North Carolina, South Carolina, and Georgia, had recourfe to the fame wretched expedient to fupply themfelves with money; not reflecting that industry, frugality, and good commercial laws are the only means of turning the balance of trade in favour of a country, and that this balance is the only permanent fource of folid wealth and ready money. But the bills they emitted fhared a worfe fate than those of Pennfylvania; they expelled almost all the circulating cash from the States; they lost a great part of their nominal value, they impoverished the merchants, and embarrassed the planters.

The State of Virginia tolerated a bafe practice among the inhabitants of cutting dollars and fmaller pieces of filver, in order to prevent it from leaving the State. This pernicious practice prevailed alfo in Georgia.\*

\* A Dollar was usually cut in five pieces, and each paffed by toll for a quarter; fo that the man who cut it gained a quarter, or rather a fifth.

HISTORY OF THE

within fix months from the first notice, his debt should be forfeited. This aft altonifhed all honeft men ; and even the promoters of paper money-making in other flates, and other principles, reprobated this aft of Rhode Ifland, as wicked and oppreflive. But the State was governed by faction. During the cry for paper money, a number of boilterous, ignorant men were elected into the legislature, from the smaller towns in the State. Finding themfelves united with a majority in opinion, they formed and executed any plan their inclination fuggested; they opposed every measure that was agreeable to the mercantile intereft ; they not only made bad laws to fuit their own wicked purposes, but sppointed their own corrupt creatures to fill the judicial and executive departments. Their money depreciated fufficiently to anfiver all their vile purposes in the difcharge of debts-bufinefs almost totally ceased, all confidence was lost, the State was thrown into confusion at home, and was executed abroad;

Maffachufetts Bay had the good fortune, amid& her political salamities, to prevent an emiflion of bills of credit. Such is the hiftory of paper money thus far ; a miferable fubflitute for real coin, in a country where the reins of government, are too weak to compel the fulfilment of public engagements, and where all confidence in public faith is totally deftroyed.

While the States were thus endeavouring to repair the loss of fpecie by empty promifes, and to support their butinels by dadows, rather than by reality, the British ministry formed fome commercial regulations that deprived them of the profits of their trade to the Welt-Indies and Great-Britains Heavy duties were laid upon fuch articles as were remittee to the London merchants for their goods, and fuch were the duty's upon American bottoms, that the States were almost wholly deprived of the carrying trade. The untoward events which followed the re-eftablishment of peace, though evils of themicives, were or articled for great natianal good. From the failure of their expectations of an immediatc increase of political happiness, the lovers of liberty and inde-pendence began to be less fanguine in their hopes from the Ame-rican revolution, and to tear that they had built a visionary fabric of government on the failacious ideas of public virtue; but that elafticity of the human mind, which is nurtured by free conftitutions, kept them from defponding. By an exertion of those inherent principles of felf-prefervation, which republics poffels,

remainments was had to the good forfe of the people for the bilication of fundamental thomson. While the country, free remainsing force and demotile violence, sujoyed transmillity, a responsition was made by Virginia to all the other fluenes to more a convention, for the purpole of digeting a form of govern-that equal to the exigencies of the union. The first motion of this purpole was made by Mr. Maddifon, and he had the location of loging it accound to by divelve of the location the base of loning it accorded to by Mr. Maddition, and he had the please of loning it accorded to by twelve of the States, and finally is due in the elablishment of a New Conflictution, which bide have to ropey the citizens of the United States for the toils, inners, and walkes of the revolution. The fundamental dif-interest have the articles of confederation and the new con-binetice line in this; the former acted only on States, the latter mainiduals; the former could neither raife men nor mone its own authority, but by at the diferention of thirseen di farant legillatures, and without their unapimous spaces was unable to provide for the public fafety, or for the of the national debt. The experience of feveral years had the impossibility of a government answering the end of its infli-tution, which was dependent on others for the ments necellary for attaining these ends. By the new tive, executive, and judicial power pervotes the ments and pro-tive. This ensures an uniform observance of transmission. This enforces an uniform oblervance of sreating lity to the general government, which while the acts and requisitions of Congress revision of thirteen legislatures, and while , th and unconnected judiciaries had a constitution AO new fame fubject. The people of the United powers to their rulers, but made a more judicious analysement of what they had formerly ceded. They enlarged the powers of the general government, not by taking from the people, but from the State legislatures. They took from the latter a power of levying duties on the importation of merchandile from foreign countries, and transferred it to Congress for the common benefit of the union. They also invested the general government with a power to regulate trade, levy takes and internal duties on the inhabitants. That these enlarged powers might be used only with caution and deliberation, Congress, which formerly conlifted of only one body, was made to confift of two; one of which was to be chosen by the people in proportion to their. numbers, the other by the State legislatures. The execution of the acts of this compounded legislature was committed to a Supreme Magistrate, with the title of Prefident. The constitution, of which thele were the principal features, was submitted to the people for ratification. Animated debates took place on the propriety of establishing or rejecting it. Some States, who from their local fituation were benefited by receiving impost duties into their treasuries, were averie from the giving of them up to the union. Others, who were confuming but not importing

The crown of the arch was highly ornamented with imperial laurels and Sowers, and on it was displayed in large figures, December a6th s776. On the fweep of the arch, beneath was this infeription, The defender of the Mothers will also pratect their Daughters. On the north fide were ranged a number of young girls dreffed in white, with garlands of flowers on their heads, and bafkets of flowers on their arms 1 in the fecond row flood the young ladies, and behind them the married ladies of the town. The inflant he paffed the arch, the young girls began to fing the following ode;

- "Welcome, mighty chief, once more,
- "Welcome to this grateful fhore;
- " Now no mercenary foe
- " Aims again the fatal blow,
- "Aims at thee the fatal blow.
- " Virgins fair, and matrons grave,
- " These thy conquering arm did fave,
- "Build for thee triumphal bowers;
- " Strew, ye fair, his way with flowers,
- " Strew your Hero's way with flowers."

When they came within a thort diffance for the troops formed a line on both fides of the way, this way Mr. Wathington, accompanied by the Vice, Prefident, Mr. Adams, paffed into the Senate Chamber. Immediately and at accompanied by both houses, he went into the gallery Broad-ftreet; and before them, and an immenie concernie of citizens, took the oath prefcribed by the conflication, which was administered by R. R. Livingston, the Chancellor of the State of New-York. An awful filence prevailed among the fpectators during this part of the ceremony. It was a minute of the most fublime political joy. The Chanceller then prochaned him Prefident of the United States. This was universed by the dif-charge of thirteen guns, and by the effetion is shouts, from near ten thousand grateful and affectionate hearts. The Prefident bowed most respectfully to the people, and the air resounded again with their acclamations. He then retired to the Senate Chamber, where he made an animated speech to both houses; in which his language not only expressed his own feelings on this
