The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

Explanation of the Articles in the Calendar.

The pages are calculated for Toronto, Quebec, Fredericton and Halifax, and for ordinary purposes will serve with sufficient accuracy for every city in the Dominion of Canada.

The times of the SUN'S RISING AND SETTING are given for the upper limb, and are corrected for refraction for Toronto, Quebec, Fredericton, Halifax and Fort Garry.

The civil times both for the rising and setting of the Moon's centre are given for every day for Toronto, Quebec, Fredericton, Halifax and Fort Garry.

The column, SUN ON MERIDIAN, gives the time that a watch should show when the shadow of a sun dial is on the noon mark.

Moon's AGE.—This column shows to the nearest tenth of a day the Moon's age at Toronto, noon.

The column, MOON ON THE MERIDIAN, gives the mean time at which the Moon's centre passes the meridian of longitude 4h. 46m. W. When in the column headed Moon's rising or setting, or Moon on meridian, the letters A.M. occur, unaccompanied by any number, they denote that the numbers given for the succeeding days relate to the morning, and those for the preceding days to the afternoon, and that the Moon does not rise or set or cross the meridian (as the case may be) on that day.

The MOON'S MERIDIAN ZENITH DISTANCES are given to the nearest tenth of a degree for a point in latitude 45° and longitude 4h. 46m. W. They are not corrected for parallax or refraction.

The column, UPPER TRANSIT OF POLE STAR, shows for every day the mean time at which the Pole Star makes its upper transit across the meridian of longitude 4h. 46m. W. It passes the meridian in the morning from April 10 to October 10. It passes the meridian twice on October 10; and in the afternoon during the rest of the year.

The time at which the lower transit of the Pole Star occurs may be found by adding 11h. 58m. 2s. to the time of the preceding upper transit.

The six last columns will serve with sufficient accuracy for the whole of Canada.

From the time of the upper transit of the Pole Star may be found the time of its greatest western or eastern elongation, by adding or subtracting the constants given in the annexed Table.

Moon's PHASES.—This Table gives the times for the four meridians when the Moon passes the geocentric longitudes of 0°, 90°, 180°, and 270° east of the sun. It gives also the times of her greatest and least distance from the earth.

TWILIGHT.—In this Table are given the times at which twilight begins in the morning and ends in the evening, *i.e.*, the times when the Sun's centre is 18° below the horizon.

GREATEST ELONGATION OF THE POLE STAR.—This column gives the greatest azimuth of the Pole Star east or west from the meridian as observed at a place in latitude 43°. When the greatest elongation corresponding to any other latitude is required, the number given in the column should be corrected by means of the following Table.

Latitude	42°	43°	44°	45°	46°	47°	48°	49°	50°
1st Correction for Degrees.....	-5' 38"	-3' 51"	-1' 50"	0' 00"	+ 2' 4"	+ 4' 16"	+ 6' 35"	+ 9' 2"	+ 11' 37"
2nd Correction for each minute of latitude	+ 1".8	+ 1".9	+ 2".0	+ 2".1	+ 2".2	+ 2".3	+ 2".4	+ 2".6	+ 2".7

The 1st correction for the degrees of latitude is to be subtracted from the greatest elongation given in the calendar or added to it, according as the degrees of latitude are less or greater than 45°.

The 2nd correction, which is always additive, is found by multiplying the number given in the third line of the Table by the number of minutes in the latitude.

Thus for latitude 43° 20'... 1st correction	-3' 51"	2nd correction	+1.9 × 20 = + 0' 38"
" " 47° 40'... "	-4' 16"	" "	+2.3 × 40 = + 1' 32"
" " 45° 10'... "	+0' 0"	" "	+2.1 × 10 = + 0' 21"

THE PLANETS.—The times of rising and setting of the five chief planets are calculated for Toronto, and are corrected for refraction. The times of culmination, although computed for the meridian of Toronto, will serve approximately for the whole of Canada. The meridian zenith distances, being designed merely to aid in finding the planets, have been given only to the nearest tenth of a degree, as seen from the latitude of 45°.

Star Table.

From the times of the upper transit of the Pole Star may be derived, with the aid of the following Table, the times of culmination, and of the rising and setting of the principal fixed stars, as seen from the parallel of 45° north latitude.

To ascertain when any star found in the following Table will be on the meridian, add the number in the left-hand column of figures to the preceding meridian transit of the pole star given in the calendar. To find the time of rising of a star, subtract the number opposite to it in the right-hand column of figures from the time of its meridian passage. For the setting of a star, add the same number to the time of its meridian passage. Those stars marked (....) revolve in a circle of perpetual apparition, and do not rise or set at places in an 1 to the north of latitude 45°.

THE YEAR.

The length of the year is strictly expressed by the space of time required for the revolution of the earth round the sun—namely, 365 days, 5 hours, 48 minutes, 49 seconds, and 7 tenths of a second, for to such a nicety has this time been ascertained. But for convenience in reckoning, it has been found necessary to make the year terminate with a day instead of a fraction of one, lumping the fractions together so as to make up a day among themselves. About forty-five years before Christ, Julius Cæsar, having, by the help of Sosigenes, an Alexandrian philosopher, come to a tolerably clear understanding of the length of the year, decreed that every fourth year should be held to consist of 366 days, for the purpose of absorbing the odd hours. The arrangement he dictated was a rather clumsy one. A day in February, the sixth before the calends of March (*sextilis*), was to be repeated in that fourth year; and each fourth year was thus to be *bissextile*. It was as if we were to reckon the 23rd of February twice over. Seeing that, in reality, a day every fourth year is too much by 11 minutes, 10 seconds, and 8 tenths of a second, it inevitably followed that the beginning of the year moved onward ahead of the point at which it was in the days of Cæsar; in other words, the natural time fell behind the reckoning. From the time of the Council of Nice, in 325, when the vernal equinox fell correctly on the 21st of March, Pope Gregory found in 1582 that there had been an over-reckoning to the extent of ten days, and

now the vernal equinox fell on the 11th of March. To correct the past error, he decreed that the 5th of October that year should be reckoned as the 15th, and to keep the year right in future, the overplus being 18 hours, 37 minutes, and 10 seconds in a century, he ordered that every centennial year that could not be divided by 4 (1700, 1800, 1900, 2100, 2200, &c.) should not be bissextile, as it otherwise would be; thus, in short, dropping the extra day three times every four hundred years. The Gregorian style, as it was called, readily obtained sway in Catholic, but not in Protestant countries. It was not adopted in Britain till the year 1752, by which time the discrepancy between the Julian and Gregorian periods amounted to eleven days. An Act of Parliament was passed, dictating that the 3rd of September that year should be reckoned the 14th, and that three of every four of the centennial years should, as in Pope Gregory's arrangement, not be bissextile or leap-years. It has consequently arisen—1800 not having been a leap year—that the new and old styles now differ by twelve days, our first of January being equivalent to the 13th of old style. In Russia alone, of all Christian countries, is the old style still retained; wherefore it becomes necessary for one writing in that country to any foreign correspondent, to set down his date thus: 1st 1st 1st

March, or 26th September 28th December, 1876
7th October ; or, it may be, 9th January, 1877.

POST OFFICE SAVINGS BANK, CANADA.

Post Office Savings Banks in Ontario and Quebec are open daily for the receipt and repayment of deposits, during the ordinary hours of Post Office business.

The direct security of the Dominion is given by the Statute for all deposits made.

Any person may have a deposit account, and may deposit yearly any number of dollars, from \$1 up to \$300, or more with the permission of the Postmaster-General. Deposits may be made by married women, and deposits may be made by women who shall afterwards marry, will be repaid to any such woman.

Deposits for children under 10 yrs of age may be made—Firstly—By a parent or friend as trustee for the child, in which case the deposits can be withdrawn by the trustee until the child shall attain the age of ten years, after which time repayment will be made only on the joint receipts of both trustee and child.

Secondly—In the child's own name—and, if so deposited, repayment will not be made until the child shall attain the age of ten years.

A depositor in any of the Savings Bank Post Offices may continue his deposits at any other of such offices, without notice or change of Pass Book, and can withdraw money at that Savings Bank Office which is most convenient to him.

Each depositor is supplied with a Pass Book, which is to be produced to the Postmaster every time the depositor pays in or withdraws money, and the sums

paid in or withdrawn are entered therein by the Postmaster receiving or paying the same.

Each depositor's account is kept in the Postmaster-General's office, in Ottawa, and in addition to the Postmaster's receipt in the Pass Book, a direct acknowledgment from the Postmaster-General for each sum paid in is sent to the depositor. If this acknowledgment does not reach the depositor within ten days from the date of his deposit, he must apply immediately to the Postmaster-General, by letter, being careful to give his address, and, if necessary, write again, because the Postmaster's receipt or entry in the Pass Book is not sufficient without the further receipt for the money from Ottawa.

Every depositor must send his book once a year, viz., on the anniversary of his first deposit, for comparison with the books of the Department, and for insertion of interest. The book will be returned to him by first mail. At no other time should a depositor suffer his book to be out of his own possession.

When a depositor wishes to withdraw money, he can do so by applying to the Postmaster-General, who will send him by return mail a cheque for the amount, payable at whatever Savings Bank Post Office the depositor may have named in his application.

Interest at the rate of 4 per cent. per annum is allowed on deposits, and the interest is added to the principal on the 30th June in each year.

COLLEGIATE INSTITUTES AND HIGH SCHOOLS.—Each of the High Schools (which form the intermediate link between the Public Schools and the Universities) is managed by a Board of Trustees appointed jointly by the County and Town Councils. In cities the Trustees are all appointed by the City Council, except where there is only one school in the county. The head master must be a graduate of a British or Colonial University unless certified and appointed before 18th September 1865. Besides fees, local rates to the extent of half the government grant must be raised for the master's salary. The grant is payable to those schools only which attain a certain standard, and is based on the average attendance of pupils in the prescribed studies. High Schools which have an average attendance of 80 male class-pupils may be made Collegiate Institutes, and receive \$750 additional grant. An extra grant is provided for masters taking certain meteorological observations and giving scientific knowledge preparatory to military instruction. Pupils attending these Schools are prepared for matriculation in the Universities. There were 10 High Schools and 9 Collegiate Institutes, with 82 pupils, in Ontario in 1877. James A. The Maritime Court is a Superior Court of Record, having with some exceptions mentioned in the Act, the like rights and remedies in all matters, including cases of Contract and Tort, and proceedings *in rem* and *in personam*, arising out of or connected with navigation, shipping, trade or commerce, on any river, lake, canal, or inland water, of which the whole or part is in the Province of Ontario, as any existing Vice-Admiralty Court would have if its power extended to the Province of Ontario. In the case of death or illness of a Judge so chosen, the Court of which he is a member meet and elect another Judge. At trial

The Courts of Assize and Nisi Prius may, in the discretion of the Judges, be held separate and apart from the Courts of Oyer and Terminer and General Gaol Delivery, and the Assizes for any County are not put an end to by the commencement of Term, but may continue and be holden during Term, subject to special rules in such case for moving against the verdict or for new trials. There are eight Circuits, as follows, viz:—

COMMISSIONERS FOR TAKING AFFIDAVITS.—These Commissioners may be classed under three headings. **First:** Commissioners in Ontario for taking affidavits to be used in Ontario under Consolidated Statutes of Upper Canada, 22 Vic. cap. 30. **Second:** Commissioners in Ontario for taking affidavits to be used in Quebec, and Commissioners in Quebec for taking affidavits to be used in Ontario under Consolidated Statutes of Canada, 22 Vic. cap. 21. **Third:** Commissioners in England, or any Colony or Dependency thereof, for taking affidavits to be used in Ontario, under 34 Vic. cap. 14. WHEELER & WILSON'S
 NEW STRAIGHT NEEDLE, LOCK-STITCH
Sewing Machines,
 THE FOREMOST IN THE MARKET.

Their claims to Notice are the following :—

1. The Machines are the result of more than a quarter of a century's manufacturing experience.

2. The rotary hook (in combination with the bobbin), runs more quietly and more rapidly than the shuttle, and is, consequently, more durable.

3. A finer needle can be used in these Machines, with a thread coarser than it is possible to use in any other; a thread large enough to entirely fill the hole of the needle can be used, and thus a firmer and more beautiful stitch can be secured.

4. The needle is self-adjusting, and requires only to be placed in position.

5. Heavy seams can be crossed with them without trouble or delay.

6. As the bobbin is larger than the shuttle, it requires filling less frequently, and the under thread is more easily arranged than it can be on machines on which a shuttle is used.

7. The WHEELER & WILSON Machines have the needle-bars packed in felt, and thus prevents the oil soiling the work.

8. The bobbins do not need the application of oil; a source of annoyance is thus avoided which *they* will appreciate who have been accustomed to soil their thread and work with oily shuttles, &c.

9. The great speed and durability of the WHEELER & WILSON Machines reduce the cost of production to MANUFACTURERS, and necessarily increase the earnings of OPERATIVES.

SPECIAL MEDICINAL PREPARATIONS, &c.

PANCREATIC EMULSION.—MEDICINAL FOOD FOR CONSUMPTIVES.—

For persons suffering from CONSUMPTION and WASTING DISEASES, it takes precedence of Cod Liver Oil, and all Oily Emulsions. It is not only the necessary food for the Consumptive, but also the most reliable form of nutriment for counteracting the tendency to Phthisis, and other wasting diseases. It is agreeable to the taste, improves the appetite, and increases strength and weight.

PANCREATINE contributes essentially to the digestion and assimilation of food, while its peculiar agency in the digestion of fats and oils renders it specially valuable as an adjunct to Cod Liver Oil in preventing Nausea, &c. **PANCREATINE WINE.**—An excellent vehicle for taking Cod Liver Oil and promoting its digestion.

PEPTODYN—For INDIGESTION.—A combination of the whole of the digestive secretions—PEPSINE, PANCREATINE, DIASTASE, &c., and is an invaluable remedy in all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Taken after eating it prevents the discomfort which often follows the partaking of a full meal, even in persons in good health.

THE BEST FOOD FOR INFANTS.—The **ROYAL NURSERIES** of England and Russia are supplied with this Food, which has received the approval of the Medical Profession in all parts of the world, who recommend it for its highly nutritive and digestive qualities.

DATURA TATULA.—In **ASTHMA**, **CHRONIC BRONCHITIS**, and other diseases of the respiratory organs, the use of "Datura Tatula" gives instant relief. "The smoke causes no nausea. I have never known an instance in which relief was not obtained." General Alexander.—*India*. Prepared as Cigars, Cigarettes, Pastilles for inhalation, and in tins for use by means of a pipe.

JEREMIE'S SEDATIVE AND ANTI-SPASMODIC.—This celebrated preparation has been for many years largely employed in India as a remedy for Cholera, Diarrhoea, Dysentery, &c. &c. Originated by Captain Jeremie, Opium Department, India, &c. Sold in bottles.

MEDICINE CHESTS.—Prize Medal 1862, and Silver Medal, Paris, 1867. "For Excellence of Manufacture of Medicine Chests, and for an ingenious method of fitting Fanniers for Military Service."

143, NEW BOND STREET, LONDON.

THE ABOVE PREPARATIONS ARE
