

The Observer.

SAINT JOHN, JUNE 15, 1852.

Seven Days Later from England.

The Royal Mail steamship America arrived at Halifax at 2 o'clock on Tuesday, bringing Liverpool dates to the 29th of May, and 88 passengers, 37 of whom landed at Halifax.

Among the latter are the Hon. Messrs. Hincks and Chandler, the Railway delegates. The Liverpool cotton market was brisk, with a slight advance for the better qualities.

Flour inactive. Indian corn in demand at an advance of 1s. to 1s. 6d. for best yellow.

In the Manufacturing districts a good deal of activity prevailed, with a large consumption of cotton.

Sir Edmund Head had an interview with Sir John Lubbock at the Colonial Office, on the 28th ult. Despatches were sent on the same day to the Governors of the North American Provinces.

No appointment had yet been made to the Lieutenant-Governorship of Nova Scotia.

In the House of Commons on the 24th, in reply to a question from Mr. McCallagh, Sir John Lubbock stated that negotiation between Her Majesty's Government and the Members of the Executive Council of Canada and New Brunswick had come to this country relative to the formation of a Railway from Halifax to Quebec.

The subject, the Government has with much regret, come to the decision that they were unable to recommend Parliament to give the security of the Imperial revenue for the sum required to construct the proposed work, by the only line to which the department were enabled to give their consent.

A Committee of the Commons is appointed to inquire into the cause of the late frequent explosions in coal mines.

The Militia Bill is ordered to be read a third time on Monday week.

The Patent Law Amendment Bill has passed a second reading—This Bill proposes to reduce the expense of patents from £260 to £35, and to make one registration serve for England, Ireland and Scotland.

A Committee of the Commons has been appointed to enquire into the causes of the recent explosion in the Great Eastern Railway.

Lord Stanley states officially that Britain lays no claim to the Lobos Guano Islands, but the Admiral on the Station has sent a ship there to protect British interests.

The Mauritius Bill has been passed and granted has been once more debated and adjourned.

Gold continues abundant from the Australian placers. Two vessels from Port Phillip bring 41,000 ounces, valued at £140,000.

The British Consul at Anconia has been instructed to use every means for the pardon of Murray, a British subject, under sentence of death for political offences.

Iron Rangoon, and 150 pieces of cannon. The loss on the side of the English is said to be over 150 men.

THE RAILROAD.—The following article from the Halifax British North American, which has been translated with respect to the Halifax Railway prospects, since the return of the Hon. Messrs. Chandler and Hincks from England.

The British Ministry having rejected the proposition of a Government guarantee for the Halifax and Quebec route, via the Valley of the St. John, the delegates it appears received offers from Messrs. Brassy, and associates, for the construction of the line from St. John to Miramichi, and for a line from Quebec to Hamilton.

THE RAILWAY! THE European Line Triumphant! Among the Passengers by the Steamer America were the Hon. Messrs. Hincks and Chandler, and Messrs. Brassy, Hincks and Chandler, who were in excellent spirits with regard to the prospects of a great line of Railway.

THE LATE MURRAY DECEASED.—It is our painful duty to announce in our columns today the sudden and unexpected death, by casualty, of the Rev. EDWARD D. MURRAY, Editor of the Halifax British North American.

ACADIA COLLEGE, JUNE 8, 1852. I sent a brief message this morning to Brother Dear by telegraph. He has doubtless communicated to you the particulars of the funeral.

THE PUBLISHER OF THE CHRISTIAN VISITOR.—After I despatched the letter to Brother Robinson, which I presume will be found in the issue of the 11th inst., I saw the postman.

STATE OF THE COUNTRY.—It is really dismal to walk round the principal square of the city—the Province Building—and notice the stagnation of business.

RECEIVED.—We have intelligence by the last Steamer from England, that a company was in course of formation in London.

RETURN OF KOSUTH TO NEW YORK.—The Hungarian hero and statesman, the indefatigable and eloquent Kosuth, after six months of wandering.

STATE OF THE COUNTRY.—It is really dismal to walk round the principal square of the city—the Province Building—and notice the stagnation of business.

RECEIVED.—We have intelligence by the last Steamer from England, that a company was in course of formation in London.

customers that she continues at the old stand,
and that the house has been and will be greatly
improved for the accommodation of Travellers and
Lodgers.
Ladies and Children will find her house a deli-
cious and comfortable residence, with fine sea bath-
ing close at hand. The best Oysters always
ready for serving, and good Stabling has been
provided, with an excellent Groom.

MYLES & HOWARD,
Merchant Tailors,
North Side King Street,
ST. JOHN, N. B.
ENCOURAGED by a steadily increasing busi-
ness, we are determined in our Campaign
for 1852, to defy all competition of the most choice
and durable Goods that are produced in the Euro-
pean markets; in the mechanical skill, superior
style, taste and finish of each garment, which has
given the establishment the extensive patronage
it now enjoys. Our patrons and the public are in-
vited to call and examine for themselves a stock
which is entirely new, selected with great care
in London and the different manufacturing towns in
England by one of the firm. We would call par-
ticular attention to our stock of
Cape finished, Venetian and West of England
CLOTHS.
Rare and elegant designs of
DOFSKINS AND VESTINGS.
In a word, a stock which for freshness, richness,
new and original designs, is not sur-
passed, if equalled, by any
similar house in the
Province.
[?] To Wholesale Buyers.
We would call their attention to our stock of
Woolen Goods, which we have received per
Harry Smith, *Alceiope*, *Cambria*, *Devon*, *Hants-
port*, *Cuba*, and *Mary Jane*, which will be sold low for cash
or approved paper.

BOOT and SHOES.**
DAVID PATERSON has much pleasure
in announcing to his friends and the
public, that he has just received per the ship *Alceiope*,
from Liverpool, and steamer *Admiral*, from
Boston, a large supply of Ladies, Misses, Boys,
Children's, and Infant BOOTS and SHOES, in
almost every style, too numerous to name in
an advertisement, the greater part having been man-
ufactured by his order.
As the purchasers of imported Boots and Shoes
incur considerable expense in having the ribs sewed
in the above class of work, those purchasing at

HASTY WORDS.
Full of a word that lightly leaves the tongue.
Another's breast unconsciously has wrong;
And were the wound but on the eye,
We'd numb the pain that solace might defy.

Was it a taunt—perhaps a thoughtless jest?
An idle ripple of the vacant breast?
But tiny shafts may yield a venomous death,
What need, to speed them, but a little breath?

The Bushman that secures inglorious prey;
And words can men, as death the ostrich, slay;
Strange! that the birds providing nature lends,
In man alone to work of ruin tend.

We toy with hearts, as if the thousand cords
That vibrate to the touch of lacy words,
Could jar out discord all the long day,
Nor any tension cause to give way.

Oh, strike them gently! every human breast
Is by a secret load of grief oppress'd;
Foster to add a note of timeless woe,
Where discords ever are so prone to flow.

FARMER'S FAMILIES.

Major Patrick, in an address before the Jefferson County (N. Y.) Agricultural Society, gave the following advice in reference to the improvement of farmers' families. Speaking of the practice, which prevails in some families of keeping a portion of the dwelling almost wholly closed, he said—

First: Let the front part of the house be thrown open, and the most convenient, agreeable and pleasant room in it be selected as the family room. Let its doors be ever open; and when the work of the kitchen is completed, let the mother and daughters be found there with their appropriate work. Let it be the room where the family altar is erected, on which the father offers the morning and the evening sacrifice. Let it be consecrated to neatness, and purity, and truth. Let no hat ever be seen in that room on the head of its owner; let no coatless individual be permitted to enter it. If father's head is bald, and some there are in that predicament, let his daughter will be proud to see his temples covered by the neat and graceful silken cap that her own hands have fashioned for him. If the coat he wears by day is too heavy for the evening, calicoes are cheap, and so is cotton wadding. A few shillings placed in that daughter's hands insure him the most comfortable wrapper in the world; and if his boots are hard, and the nails cut mother's carpet, a bushel of wheat once in three years will keep him in slippers of the easiest kind. Let that table which has always stood under the looking-glass, against the wall, be wheeled into the room, its leaves raised, and plenty of useful books, periodicals, and family and agricultural journals be laid upon it. When the evening comes, bring on the lights—for sons and daughters—all who can read, will be most willing students. They will learn, they will learn, they will discuss the subjects of their studies with each other; and parents will often be quite as much instructed as their children.

This is not only keeps the family together—the sons at home—but in a few years it will show itself in the intelligence of all—and from the very start, in that harmony and happy contentedness, which should pervade every family.

How Friend Hacker Raises Calves.

The Maine Farmer of last week contains an article from a correspondent, about raising calves, in which two methods are spoken of: one is to let the calf run with the cow four months; and the other is to take it from the cow when a few days old, and bring it up by hand. If the milk is not worth much, it is probably the best way in which a calf can be raised, but near a market where milk will sell, or butter and cheese will fetch a good price, the calf would cost three or four times as much as he would sell for when four months old.

But the plan of taking the calf from the cow when only a few days old, is a bad one. I never saw a good calf that was so raised. I once raised a calf as follows:
Let it have as much milk as it would suck twice a day—placed within its reach, a smooth wooden trough in which a cup full of milk was put each morning. The trough being daily washed and kept it sweet. In a few days the calf learned to drink without further trouble. Then the quantity of milk put into the trough was gradually increased, and that drawn immediately from the cow gradually diminished. As soon as the calf would drink well, a handful of Indian meal was given in each mess of milk. The meal was to the bottom, but the calf soon learned to eat it. Shortly, where they can be had, would probably be better. Then a handful of green grass was cut daily, and placed within its reach, also, a little fine hay, and two or three raw potatoes cut up, were daily given it. Before the calf was three weeks old it would feed on all these articles as heartily as the cow. Water was then kept within its reach. It was, by that time, entirely weaned from the cow, and after three weeks of age, the quantity of milk given in the trough was gradually decreased, until at six weeks of age it was turned into a pasture, and would feed and drink just as though it knew how, and grew on without striking through the summer, its coat of hair continuing bright and glossy when weaned.

I have seen hundreds of calves raised or kept alive as follows: Give them "two teats," or let them drink from the cow, place no water nor food of any kind within their reach—when six weeks of age turn them into a poor pasture—in a few days they will look as though they had been scalded through a brush fence—if they don't die in the winter nor the lice kill them in the spring, you will be sure to have miserable cows, and can not prevent it. Before the calf was three weeks old it would feed on all these articles as heartily as the cow. Water was then kept within its reach. It was, by that time, entirely weaned from the cow, and after three weeks of age, the quantity of milk given in the trough was gradually decreased, until at six weeks of age it was turned into a pasture, and would feed and drink just as though it knew how, and grew on without striking through the summer, its coat of hair continuing bright and glossy when weaned.

How to convert Salt Water into Fresh.

The following simple process to procure fresh water at sea, was published in the newspapers many years ago. The experiment can be easily made—and knowing how easy it is to obtain fresh water, by digging in the sand, near the sea shore, we see no reason why it should not be successful, in which case it might prove in certain cases of great advantage. A common hoghead is provided with a false bottom, about three or four inches above the lower head. This false bottom is perforated with a number of holes, and over them is fitted with the finest sand, beat down very hard; a tube communicating with the space between the two bottoms, is extended to a convenient height above the top of the barrel. The sea water is poured into this tube, and pressing every way according to its altitude, it endeavors to force its way through the sand to the top of the barrel, from whence, by this mode of filtration, it is drawn off fresh and fit for use. Any other filter will do as well as fannel, which will stop the sand and admit the water. The saline particles being heavier, and perhaps differently formed, meet with obstructions from the sand, and are left behind.

Modern Inventions.
Horace Mann, who sums up a few of the advantages of modern inventions: "One boy, with a Fourdrinier machine, will make more paper in a twelve month than all Egypt could have made in a hundred years during the reign of the Ptolemies. One girl, with a power-press, will strike off books faster than a million scribes could copy them before the invention of printing. One man, with an iron foundry, will turn out more utensils than Tubal Cain could have forged had he worked diligently till this time."

Worth knowing.
A young lady, while in the country some years ago, stepped on a rusty nail which ran through her shoe and into her foot. The inflammation and pain was of course very great and lockjaw apprehended. A friend of the family, however, recommended the application of a beet, taken fresh from the garden and pounded fine, to the wound. It was done, and the effect was beneficial. Soon the inflammation began to subside, and by keeping on the crushed beet, clamorous, without cessation, as its virtue seemed to become impaired, a speedy cure was effected. Simple but effective remedies like this should be known to every one.

Thinning out Vegetables.
There is a greater loss in suffering vegetables to stand too thick, than most cultivators are aware of. It does require considerable nerve to commit indiscriminate slaughter upon fine growing plants. For instance here are ten beautiful melon vines, just beginning to run, with fruit blossoms forming. Now, who has the bold bloodiness to draw them all out but three or four, and throw them whirling away? Who can take the bees just as their tops give evidence of roots below, and separate them to ten inches? It is a hard matter, we must confess, and is not properly done one time in twenty; but to have bulbs, top-roots, melons, cucumbers or squashes, it must now be done, and the increased vigor of the remaining plants will repay the trouble. Then fall to and spare not, no top-roots upon these growing plants. For instance here are ten beautiful melon vines, just beginning to run, with fruit blossoms forming. Now, who has the bold bloodiness to draw them all out but three or four, and throw them whirling away? Who can take the bees just as their tops give evidence of roots below, and separate them to ten inches? It is a hard matter, we must confess, and is not properly done one time in twenty; but to have bulbs, top-roots, melons, cucumbers or squashes, it must now be done, and the increased vigor of the remaining plants will repay the trouble.

Counterfeit Proof Paper.—A patent has been granted in England to William Stone, for an improvement in the fabrication of safety paper. The object has been to manufacture a paper which indicates by a change of color any attempt to dissolve the ink of written characters by chemical agents. The mixture to add with the pulp of a ream of first quality paper is 1 oz. iodine of potassium; 1 lb. starch. One of the salts will be dissolved in an attempt to absorb ink-marks, and will produce a brown or a Prussian-blue color.

An Artesian Well.—There is an Artesian well at a cotton factory in Dallas county, Alabama, which is 70 feet 10 inches in diameter, and discharges 600 gallons of water per minute, or 364,000 gallons in twenty-four hours—exceeding any well in America. The water flows out with such force that if pieces of stone as large as an egg, or a half dollar, are thrown in, they are immediately ejected. The sand, gravel, &c., made by the auger, are also forced out by the water, which is perfectly clear, limpid, and pleasant to the taste. The diameter of the well is a little over six inches.

Hiccough and Sneezing.—To cure the hiccough let the person affected hold in his breath as long as possible—the nonoxygenation of the blood decreases the irritability of the nervous system so much, that in most cases a single trial will stop it; obstinate cases may require three or four repetitions. To prevent sneezing, let the upper lip be pressed severely; it intercepts the nervous communication, so that the proper muscles cannot be called into requisition for the act. Pressure will break the circuit of nervous communication, as a broken wire will stop the telegraph. It is best to press near the nose. I can confidently recommend both plans from seven years experience.

Damp Bed-Rooms.—No person should go to sleep in a damp bed-room. Many people, by overlooking this caution during house-cleaning season, catch severe colds and make their beds with the clouds of the valley before the subsequent Christmas.

Bay State Mills Manufactures.
The Subscriber has just received per Steamer Admiral, from Boston—
A FEW sample Packages of Fancy CASSIMERE—A new and superior style of Cassimere—The Manufacturer of the Bay State Mills, Massachusetts.

To Stop Bleeding.—M. C. Heald, Dentist, after using the following remedy for preventing the loss of blood which sometimes follows the extracting of teeth, for eight years, recommends it as a sure cure. "Dissolve alum in alcohol; saturate cotton, or lint which is better, and pack the cavity from which the tooth has been extracted, and bleeding will cease instantly. The packing may be retained for a day or two without becoming offensive, which is not the case with the alum dissolved in water."—Scientific American.

Cure for Poison.—Samuel Gardner, a correspondent of the Massachusetts Ploughman, writes as follows: "I saw a statement in your paper last spring, recommending spirit of turpentine for the cure of poison. No ris turpentine can be very good. I poison easily myself up, and leaning upon his spade, answered, 'Some one planted trees for me before I was born, and I have eaten the fruit. I now plant for others, to show my gratitude, when I am dead and gone.' Thus should we think and act for the welfare of others."—Exchange.

A. GILMOUR,

Tailor and Draper,
Bragg's Building, South Side King Street.
WOULD respectfully inform his friends and the public that he is now selling off the whole of his STOCK OF WINTER CLOTHING, at greatly reduced prices. Wholesale and Retail. The Stock of OVER COATS is large and varied—got up in the very best style, and at such very low prices that they only want to be seen to secure a sale. Those in want of new Coats, would do well to give a call before purchasing elsewhere. He has on hand a large stock of West of England BROAD CLOTHS, in Black, Blue, Invisible Green and Brown, double milled Cloths different colors, suitable for Over Coats. Also Beaver and Pilot Cloths in great variety, with a large quantity of Trouser Stuffs, suitable for the present season; Black and Fancy DOESKINS, CASSIMERE, &c., &c. A splendid assortment of JESTINGS, Silk, Satin, Barthele, Marcellise, Cashmeres, &c., which he will sell at a great reduction in order to close up his present importation and make room for Spring supply.
December 23.

Astonishing Efficacy
of
HOLLOWAY'S PILLS
And OINTMENT.

EXTRAORDINARY CURES BY
Holloway's Ointment.
CURE OF A DEEPERATE CASE OF ERYSIPELAS.
Copy of a Letter from Mr. Joseph Gildon, Jun., a Farmer, East Keel, near Spilby, Lincolnshire, 5th April, 1848.

To PROFESSOR HOLLOWAY.
Sir,—I have the gratification to announce to you a most wonderful cure wrought upon myself, by the use of your Ointment and Pills. I had a severe attack of Erysipelas in my right foot, which extended along my ankle, and was attended with swelling and inflammation to an alarming degree, inasmuch that
