COOKED CODFISH. Gibson, N. B., May 19th, 1889.

HIS FAREWELL SERMON

THE REV. A. J. SMYTH, Takes Leave of his Affection. A large congregation gathered for Paul's Presbyterian Sunday evening.

At this Monticello, which is a big fellow, turned and struck Smyth across the face, at the same time attempting to throw him from the stage.

His followers, were like the world, they relied too much upon presence and power, and sorrowfully thought the work would come to an end after His departure.

He could force that the glory He was about to enter upon would be their gain rather than their loss.

Some of the members of his congregation had thought it hard that he should have to leave them, but he knew that many a long heart beat under a disappolated breast.

Some of the members of his congregation had thought it hard that he should have to leave them, but he knew that many a long heart beat under a disappolated breast.

WS. FOREIGN NEWS.

Summary of the Press Telegrams from all Parts of the World.

Ex-Mayor Thomas Nevin, of Adrian, Mich., who seven years ago stole \$3,000,000 has been pardoned. A destitution is said to exist in Colorado, owing to lack of rain. He is dying of starvation, and is being nursed by his wife.

Trying to extinguish a fire at his dwelling at St. Louis, Mo., John Kenney resulted in his death. The fire was caused by a gas stove, and the historical battle of the fire was very ad- vanced.

Some of the meanest people in Maine can be found in Richmond, where an envelope containing a sum of money was hung on the Christmas tree at the University church for the Rev. J. H. Little, late pastor of the church. On being taken from the tree it was found to have been opened and the money taken out.

F. E. Sabat & Son, of Dublin, stock brokers, have suspended; liabilities estimated at £20,000 to £250,000. It is rumored the members of the firm are missing. The senior partner was chairman of the Dublin stock exchange. Upon the announcement of the suspension, Copland, the vice-chairman, was elected to the presidency. The exchange was demoralized by the news, but a normal feeling was soon restored.

Jacob Werner, a miner, was caught by a snow slide in the mountains near Landy, Cal. Both legs and one arm were crushed by the timber, and they were frozen almost to the body by the cold. He was sensible when found and said he thought he had been so confined for five days. During that time he had gotten hold of a hand-saw and, while trying to free himself from the fallen timber, had nearly sawed the frozen arm from his body with the feeling it. He died before he was taken to the foot of the mountain.

A Herald special from Washington says, "The President is being strongly and influentially pressed for a direct and unequivocal utterance on the silver question, either by way of speech to congress or in the guise of an authorized interview with a member of the press. The existing depression owing to the withdrawal of gold and the apprehension of wild and disastrous federal and state legislation from political subservience to the farmers alliance render necessary on the part of the President, a firm stand against any assault upon the conservative business interests of the country."

A discovery of great importance to Kansas farmers, who have been greatly troubled by the ravages of the chinch bug in their wheat fields, has been made by Prof. Snow of the university of Kansas. He finds that the bug is susceptible to a contagious disease. So his mode of operation is to make a lot of healthy bugs, sent in by farmers, associate for a time with the sick bugs. When thoroughly inoculated the bugs are returned for distribution over the fields under cultivation, and there they serve as disease carriers. In this way the chinch bugs have been slaughtered by the bushel.

According to the New York World, a watch owned by David Garrick is now owned and worn by John E. Fries, an old gentleman with white hair and snowy mustache, who may be seen on every day. The watch is a heavy silver one, open faced, with grotesque gold hands and presents a battered, weather-beaten look. It is out of repair and has been stirred a wheel for a hundred years, probably, but Mr. Fries regards it with the greatest reverence, and will not permit a watchmaker to touch the sacred relic. A paid over \$400 for it, and has documents which prove its genuineness.

During the year of 1890 the amount of lumber surveyed at the port of Bangor amounted to 170,000 feet. Although all the surveys have not yet been handed in, it is thought the amount this year will be about 10,000,000 feet in excess of that of last year. This increase is owing principally to the fact that band saws have been placed in most of the mills in this section, thus adding to the facilities for sawing. Also, the corporation mills at Frazier's have been running full blast during the past season, having saved 15,000,000. The year before they were doing little in the matter of manufacturing.

About 150 English railroad hands arrived at Glasgow and will be put to work on the Caledonian road. It is announced the South Western is reuniting work. The miners of Kilmarnock are joining the strikers. The North British railroad company have opened the Aberfoyle, Clyde Bank and Sterling routes, hitherto closed on account of the strike. The secretary of the English railway men's union threatens to bring out 80,000 English railroad men in case the Scotch railroads do not soon come to terms with the employes. This alleged threat may lead to a wholesale strike along the lines of all English railroads.

A despatch from a staff correspondent of the Omaha Bee gives details of Tuesday's fight at Wounded Knee creek. The work of searching the tepees for arms was going on the warriors held an incantation pow wow. Then an order was given to search the warriors. About a dozen had been searched when the rest jerked guns from under their blankets and began pouring bullets into the ranks of the soldiers who had approached within gun length and those Indians who had no guns rushed upon the soldiers with tomahawks in one hand and knives in the other. The Indians first volley was almost as one man and they must have fired a hundred shots before the soldiers fired one. When the soldiers recovered from their surprise the slaughter of the Indians began and at the time of writing the correspondent says was still continued, only a few Indians escaping over the hills. Capt. Wallace was tomahawked to death. Father Crafts, Catholic priest, was mortally wounded in the lungs and about 35 soldiers wounded, a number of them fatally.

...not the Canada of to-day, but the Canada of the future. It is for us to realize the most out of the present. We cannot hope to shape the destinies of those who follow us. They will have their own views of what will serve their best interests, and will act upon them. If they wish to form political alliances with other countries, they will do so, no matter how much we may harp upon loyalty and devotion to the flag. If the material interests of Canada will at some future date be promoted by the union of the dominion with the United States better than in any other way, the union will take place. THE HERALD believes that no such union is or will be necessary; but it does not concern itself much about the question. It recognizes that only through continental unity—commercial, not political—can the development of the dominion be realized. As it understands the inter-dependence of the two countries, which the continent is shared, there is no argument which ought to influence Canadians to seek close commercial relations with their neighbors for which a corresponding argument cannot be presented to the people of the United States. It advocates close commercial relations between the two countries as a partnership between equals. It regards such relations, not as a means to an end, but as themselves a most desirable end; and to those who say that this or the other politician claims that unity of commercial policy will lead inevitably to unity of political relations, it answers that no one is wise enough to speak ex cathedra upon this subject, and that those who are of most certain that unrestricted reciprocity means political annexation, are invariably those who know least about the question. Canada's alliance to the British Empire is not necessarily inconsistent with the broadest reciprocity with the United States. Thirty or forty years ago there were plenty of super-lazy people who fancied that the integrity of the British Empire depended upon the red tape of Downing street, and who saw in the extension of responsible government to the colonies the downfall of British influence. We have living amongst us numbers of men who can remember when the cry of disloyalty was raised against those who denounced the misgovernment of the English colonial office. There is one thing that all these timid patriots may make up their mind upon: The genius of the Anglo-Saxon race has not spent itself. If proved equal to the development of constitutional government—a crowned democracy in England and an association of commonwealths in America such as the political dreamers of by-gone times would never have imagined. It proved equal to the evolution of the British Empire, the most wonderful political fabric the world has ever seen, and it will prove equal to the future requirements of the race; and so, to those who tell us that this or that is inconsistent with British connection and must lead to the crisis in imperial affairs, which has been impending for the last century but always fails to materialize, we answer that they are simply repeating an oft-told tale, the falsity of which has time and again been demonstrated. Canadians may face the future without fear if they are true to their own interests.

THE CANADIAN CLIMATE.

A great country is "this Canada of ours." On New Year's day panicles were in bloom out of doors in Vancouver, and an occasional strawberry blossom could be found. Vancouver, it may be mentioned, is nearly four degrees further north than Fredericton; but there is a great "river" in the Pacific ocean, which sweeps across from Japan, corresponding to the Gulf Stream in the Atlantic, and this brings soft summer breezes upon the coast of British Columbia, when we were here are watching the mercury trying to hide down in the bulb of our thermometer. It is not this current that keeps the temperature east of the Rockies so much higher than our winter weather here. This is due to another cause. Let young HERALD readers take their geographies and look at the map of the world. Let them note where the equator crosses the Pacific ocean, and they will see what a vast expanse of water is spread out there. Down upon this shines the sun of a perennial summer, and the warm air from it flows towards the north-east. If it were not for the mountains of South America and Mexico it would sweep across into the Gulf of Mexico and the Gulf of Mexico; but these turn it to the north and it pours in a mighty flood up the coast line. When it reaches the gulf of California it finds the first break in the mountains, made by the Colorado river, and up this valley it finds its way. Meanwhile a great body of air has been warmed over the Gulf of Mexico and this also sets on its northward course, and there is a constant circulation between the poles and the equator. It moves up over Texas and Arkansas, kept from coming further east by the return current from the north, and joining the winds from the Colorado Valley sweeps away to the north, carrying a warm winter temperature and a semi-torrid summer temperature with it, whereby it is made possible for flowers and fruit to grow in the Mackenzie Valley at a latitude which in Labrador produces only a few lichens and stunted evergreens. The Herald advises its young readers, and perhaps the advice would not be out of place to some of the older ones, to study Canada. It is a country of surprises. There is perhaps not the air of romance about it that there is about "Darkest Africa," but it is our own land, the land which the school-boys of to-day will govern, when like a "giant-child of the nations" it girds itself for its magnificent career.

THE BELLEDEUNE MATTER.

As appears by an item elsewhere, an arrest has been made of one of the parties charged with the alleged murder at Belledeune, Restigouche county. A great deal of unnecessary criticism has been launched against the attorney general for his action in this matter, which has been represented as dilatory in the extreme. As a matter of fact, he has dealt with it in as prompt a manner as possible. The case was brought to his notice some time ago by a very vague letter, from which no one could draw any definite conclusion. It was to the effect that a rumor was afloat that the body of somebody was concealed somewhere. The attorney general asked for additional particulars, for something definite, but no reply was received from that correspondent. Later, another gentleman wrote in the same indefinite manner. As soon as he was able to arrive at any basis from which to institute an inquiry, the attorney general set about obtaining a detective and one was employed and put on the case at the earliest possible moment. This was not advertised abroad. To run into the papers at every stage in an investigation of this nature would be the surest way to defeat the inquiry; but that the best course was taken under the circumstances is evident from the result. It is to be borne in mind that to proceed against a person on a charge of murder is the most serious step a law officer can take. He is not in the position of a newspaper correspondent, who naturally has a keen scent for a sensation. The law is very strict in regard to the proof of murder, and it was long ago settled in the courts that there never ought to be a conviction for this crime unless the body of the murdered man was found, or indubitable evidence given that the body had been made with. So long as there is a possibility that the person alleged to be murdered is yet alive, no man may be put on trial on the charge of having killed him. The crown officer must proceed therefore with "most care and never take a step without being provided that there is no possibility of error."

CAN WOMAN KEEP A SECRET?

Every woman is not trusty any more than is every man; but quite as many women as men are so. In truth it may be doubted if there are not more trusty women than there are men. Secrets are seldom imparted to persons who do not inspire confidence; they who tell what they call secrets to dozens of persons, without forming any positive opinion of their discrimination or reticence, are not apt to have any secrets from the entire circle of their acquaintances. They are more babblers, gossips, tattlers who try to bestow more importance on their communications by declaring them to be secrets. Such communications are usually commonplace, or of so little consequence as to make no distinct impression on the mind; needing to be labelled private, lest they be thought to belong to the public. Beside, the communicators are prone to the habit of repeating their stories to everyone they can persuade to listen to them, and then pronouncing them confidential. To many to whom they are thus disclosed, the stories are already familiar, and politeness alone prevents the recipient from immediately saying as much. Candor and delicacy compel them when informed of their confidential character, to acknowledge that they are by no means new. But the babblers—men for the most part—take no notice of this. They go on babbling round, and when they hear their current tale, they like to assume an injured air and to assert that some confounded woman has betrayed their confidence; that woman never can keep a secret. That woman should, in any measure, their false reputation to such a degree, is that the best evidence of its falsity.

It seems not unlikely that the British government may appoint a Canadian to the judicial committee of the privy council. This will be a wise move. The appeal to the privy council is one of the few remaining links between the colonies and their land. It will be strengthened by the proposed appointment.

THE CONSTITUTIONS OF J. J. CURRAN, M. P.

For Montreal west, have given him \$7,000. If we may believe what we read these donations usually go for other ways. If the tide has turned look out for an increase in the crop of candidates.

THE CARPENTERS HAVE CHARGE OF THE McADAM RAILWAY STATION OFFICE FOR FREIGHT

has been laid out at the western end of the building. When completed the present offices will be vacated, and the partition between them and what is known as the gentlemen's waiting room will be moved back several feet so as to enlarge the waiting room space. A new hardwood floor will be laid in the waiting room, and its appearance generally improved. The ladies' waiting room will also be fixed up. The ticket office between the two waiting rooms will be maintained as at present. Some other changes are contemplated.

THE CONSTITUTIONS OF J. J. CURRAN, M. P.

A few days ago two little boys—son of Forman Hatfield, M. P., and Adolphus Woods, son of Evelyn Woods, were skating on the river in the vicinity of J. Lyons Hatfield's wharf at Tucker, N. S. Young Woods supposed that Hatfield, N. S. Young Woods was also skating there, and in attempting to go ashore he also fell through the ice, but was rescued. On being taken ashore he enquired about his companion, and as the latter had not been seen, a search was instituted and it was ascertained that he had also fallen in and was drowned. His body was recovered about 2 hours afterwards. Deceased was 9 years of age.

DETAILS HAVE BEEN RECEIVED AT TORONTO OF THE KEMP-McLEAN SCULLING MATCH ON THE PARRAMATTA RIVER AT SYDNEY.

The weather was fine and the water smooth. A good start was effected, and a capital race was witnessed for a mile, when McLean, who was favorite at the start, gradually forged ahead, and when a mile and a half had been completed held a clear lead. This advantage he gradually increased to ten lengths, and although Kemp afterwards slightly reduced the gap McLean ultimately won by six lengths in time, 22 mins. 15 secs. McLean foiled Kemp when nearing the mile post, but the umpire disallowed the claim.

A \$50,000 FIRE OCCURRED AT HALIFAX, N. S., WEDNESDAY.

It originated in the basement of the Globe Hotel, occupied by J. W. Sallero as a clothing store and Doves & Co., brewers. Within a few minutes the flames had possession of the three-story building, and the inmates barely escaped with their lives. The domestics were rescued from the upper windows. The Globe Hotel was owned by Steaton & Mitchell. Among other burnt out was Arthur Monaghan, saloon; Sharp & Co., victuallers; Simon Fraser; Charles W. Vitchell, commission merchant. A. & W. Smith, big brick wholesale grocery warehouse were only saved by strenuous exertions of the firemen. The thermometer was down to zero.
