Smart Caps at Swift's

Corticelli fingering yarns, all shades stock.—A. Brown & Co.

If you do not enjoy your daily work you cannot do justice to it.

Perhaps the high cost of sugar is preventing Europe from preserving the peace.

The summer residents at the lake-side have all returned home much refreshed by their outing.

"Say, pop, what is gravity?"
"Gravity, my boy, is a force that
brings down everything in this world
except prices." Now that it has been demonstrated

that cows thrive one sawdust diet, there should be a big drop in the price of milk. Prest-O-Lite Battery is second to none in quality and you save duty, as it is Canadian made.—R. Morn-

The Drury Government will collect \$805,000 from the eight tracks licensed to hold race meetings in Ontario during this season.

The pastor, Rev. T. DeCourcy Rayner, will conduct both services in the Congregational church on Sunday.

A cordial invitation to all.

Buy your Overalls now. Large stock, \$2.75, \$3.00, \$3.50.—Swift's.

The head master of a large school in England gives it as his experience that the school children who attend the film shows are mentally the most backward. backward.

Ladies' Coats for early fall. Smart styles at popular prices.—A. Brown

The reason some ladies keep their household help is because they call their lady assistant a "maid" instead of the modern term, "domestic secretary.'

Harvest thanksgiving services will be held in Trinity church on Sunday, Sept. 26th, when Rev. J. M. Horton, rector of Kingsville, will be the spec-

"A Penny for your Thoughts" is somewhat of a has-been expression. Pre-war prices like this are obsolete. Nothing less than a dollar cuts any figure these days.

The attendance at the Western Fair from this district was fully as large if not larger than usual. The railway carried several hundred peo-ple and many traveled by autos.

The cement foundation for the additional building being erected by the Andrews' Wire Works is pleted and the brick work will be pushed forward without delay

When you get a Ford car you not only get a better car but a more comfortable car—backed with Ford service.—R. Morningstar. tf

Mrs. Elizabeth L. McCormick, Watford, announces the engagement her daughter, Roberta Elizabeth. to Frank Bateman Freele, of Forest, the marriage to take place quietly the last of September.

An interesting list of special prizes offered at the Fair will be found else-where in this issue. Read it over and see if there is not something that you can compete for. Every extra exhibit helps to make the fair a success.

The Kansas City Star makes the assertion, unanimously approved by the married women of the land, that a man hunting a clean pair of socks
can create more disturbance in a
four-drawer bureau than a depth

The Fair Board has engaged Coupland's Hall for their Fair Night concert and the following artists will provide the program:—Alice Dunbar, comedienne; Miss Edna Bray, soprano soloist; Mr. Oliver Sinclair, tenor soloist.

An exchange says:-We saw woung man visiting the city tip one of those high-mightiness waiters two bits at an eating joint, who in his home town would squirm himself into a corkscrew if asked to contribute a dime towards building a skating rink.

Advertising pays No capa is say

Advertising pays. No one is surprised at such an assertion by a newspaper, but the Ottawa government, recognizing this, has inuagurated a publicity department. Like other institutions, governments canother institutions, governments can-not afford to hide their light under a

It may be all foolishness to compel auto owners to have a light burning on their cars when parked in a bril-liantly lighted street, but that is the law, and until it is changed car owners will be acting in their own interests by complying with it. The new Tweed and Felt Hats at Swift's.

Thanksgiving Day this year will be on Monday, October 18th.

All sizes and colors in boys' V-neck all-wool jerseys—just right forschool
—A. Brown & Co. Fair prize lists are now ready. Copies can be had from the Secre-tary or at this office.

Services in the Baptist church next Sunday, Sept. 19th, at 7 p.m. Rev. A. A. Barnes will preach.

The ladies of the Presbyterian church will serve meals on Fair Day in Silverwood's warehouse. Silk Hose in grey, brown, tancordivan, regular \$1.50 and \$1.65—Sale Price \$1.38.—Swift's.

Mrs. John Shannon, Watford, received the sad news on Tuesday of the death of her sister, Mrs. Eliza Browne, who passed away at her home on Sept. 4th, in Dundalk, Ire-land. Mrs. Shannon is now the only surviving member of the family.

The reports of the Labor Department of the Dominion Government show that the cost of living dropped three percent. in August, and that signs indicate that the high price tide has turned. The decrease is due chiefly to lower levels in fruit and vegetables.

All the scholars of the Watford Presbyterian Sunday School are ask-ed to bring flowers for the Rally Day service next Sunday morning. Persons will be in the church Saturday afternoon to receive these and put them in place. Let every scholar be present at this Rally Day service.

Men, a 20th Century Suit made to our measure and ready in ten days. A. Brown & Co., sole agents.

One fashion writer says the bustle is coming back, but we don't believe it, remarks the Toledo Blade, which adds: It would be too inconvenient for auto riding. But think what a shock absorber it would be. And what a grand place to smuggle a flask of booze. of booze.

A mass meeting of Liberal Conservatives of East Lambton will be held in the Lyceum, Watford, on Monday, October 11th, at 2 o'clock, p.m., for the purpose of selecting delegates to attend the monster rally of Conservatives to be held in Toronto on Oct. 27th and 28th, and for other business. All Liberal Conservatives are invited. All Liberal Conservatives are invited. Prominent speakers will address the

Tire users who figure cost per mile and freedom from trouble insist on Dominion Tires—our specialty. R. Morningstar.

There is a certain long-suffering There is a certain long-suffering father, whose nerves sometimes give way under the constant fire of questions from his talkative eight-year-old son. "Dad," asked the youngster, just as his father had settled down one evening for a perusal of the paper, "dad, am I made of dust?" "I think not," responded the unhappy parent, "otherwise, you'd dry up now and then."

Anyone who handed a fifteen-year-old girl a loaded revolver and told her to wave it in a crowd would be regarded as viciously and criminally reckless of human life. Yet parents will permit a boy or girl to drive a motor car upon a public highway and think nothing of the fact that they are risking lives right and left and incidentally violations and left and incidentally, violating a law designed to afford protection to users of the public streets.

Polarine Oil bought at last year's prices enables us to sell any quantity at exceptional prices. Polarine needs no recommend .- R. Morningstar. tf

All births, marriages and deaths All DITES, marriages and deads which take place throughout the province of Ontario are required to be registered with the Clerk of the municipality in which the occurrences take place. Refusal or neglect to make these reports within the specified time will subject the person or persons so neglecting or refusing, to a penalty of \$20 and costs. Officers administering the Act have been instructed to strictly enforce its requirements on all who fail to comply with its provisions. The publishing of such notices is not sufficient. Clerk of the municipality must also

Possibly the best clothing in Ontario at Swift's.

The members and adherents of the Watford Baptist church at their regular week night prayer meeting Tuesday, Sept. 14th, read Rev. A. A. Barnes an address of appreciation of his work and presented him with a well-filled purse, it being the eve of his return to McMaster University to resume his studies. Mr. Barnes, though taken by surprise, replied very feelingly, thanking them for their kindness and generosity, after which adjournment was made to the home of Mrs. Clark, where ice cream and cake was served by the ladies and a pleasant evening spent together.

Early showing of ladies' smart ready to wears in the millinery dept.

In Watford, on Saturday, Sept. 11th, 1920, Robert O. Spalding, aged 43 years, 9 months, 15 days.

In Strathroy Hospital, on Saturday, Sept. 4th, Angus McGugan, of Caradoc, in his 71st year.

TO WOMEN OF MIDDLE AGE

This Woman's Letter Tells You How To Pass The Crisis Safely.

Lascelles, P.Q.—"During the Change of Life I felt so weak and run down I could hardly do my work. The perspiration would pour over my face so that I couldn't see what I was doing. We live on a farm, so there is lots to do, but many who felt as I did would have been in bed. I took Lydia E. Pinkham's Vegetable Compound and it did me a world of good. I tried other remedies but I put Vegetable Compound ahead of them all, and I tell every one I know how much good it has done me."—Mrs. Duncan Brown, Lascelles, Prov. Quebec.

Quebec.
Such warning symptoms as sense of suffocation, hot flashes, headaches, backaches, dread of impending evil, timidity, sounds in the ear, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and dizziness should be heeded by middle-aged women, and let Lydia E. Pinkham's Vegetable Compound carry them safely through this crisis as it did Mrs. Brown.

You are invited to write for free advice No other medicine has been so suc cessful in relieving woman's suffering as has Lydia E. Pinkham's Vegetable Compound. Women may receive free and helvful advice by writing the Lydia E. Pinkham' dicine Co., Lynn, Mass.

WATFORD, SEPT. 17, 1920.

VALUE OF FALL FAIRS

HAVE DONE GOOD WORK IN CANADA

rop Growers and Stock Breeders Pick Up Hints From Exhibits and the Show Ring Brings Stock to the Notice of Possible Buyers-No Better Advertising Medium

Probably the institution that deserves most credit for the improvement in our crops and live stock within the past fifty years is the agricultural exhibition, including all shows from the C.N.E. to the smallest Fall Fair. Farmers, as a rule, admit the value of the Fall Fair as an incentive to better agricultural practice, and recognize its importance to the comparation of the comparation practice, and recognize its importance to the commercial avancement of the country as a whole, but these facts are likely to be lost sight of by townspeople, who fail to see benefit to any but the prize-winners in donations of trophies or hard cash to owners of superior crop samples or specimens of cattle, sheep or other live stock breeds that are of superior excellence.

Agricultural shows, small and great, are credited with having brought about the advance of the British live stock industry to its leading position, and there is no questions.

ing position, and there is no questioning the fact that the fame of British breeds of live stock has done much in adding to the wealth of the country. The shows, several of them now known as world events, beside encouraging the breeders to increased effort at improvement of their ed effort at improvement of their stock, have done more than anything else to advertise the high quality of the horses, cattle, sheep and swine produced in he British Isles, In fact, so closely is the show related to the commercial side of live stock raising in Britain that it is most usual for shows to be followed directly by sales, at which the prize-winning stock is, in many cases, sold to for-

eign buyers.

In Canada, fault is sometimes found with the fact that few breeders, outside those who operate on a large scale, or showmen who acquire animals merely for show purposes, are able to stand the expense of taking their stock to the big exhibitions. This is regretable, to some extent, but it must be allowed that the breeder who has stock fit to win at such shows will not be long in making money to stand the expenses of the money to stand the expenses of the show circuit. In any business, a man must crawl before he can walk, and for those who cannot tackle the big shows there is always the chance to bring good animals before the public at the lesser fairs. Moreover, one of the chief benefits of the big shows is the example in the way of good animals, that they bring before stockmen who have not yet advanced any great way in breeding high-class animals on their own farms. The expression "the educational side of our agricultural exhibitions" is about worn threadbare, but it must be allowed that the display of live stock made annually at such shows as Toronto, London, Ottawa, Brandon, Calgary and Edmonton are a liberal education for live stock breeders, who are not so far advanced in the art as are the exhibitors. show circuit. In any business, a man are the exhibitors.

Not only in the live stock section do our agricultural shows provide displays that go to encourage improved production. Samples of high qual-ity from crops, as found especially in the displays of sheaf grain, roots, vegetables and fruits, are often the vegetables and fruits, are often the first intimation received by new 'armers, of what can be done in the way of crop production by the more experienced farmers. Other sections of the show, such as those reserved for machinery, barn equipment, etc., bring hints of labor-saving possibilities to the farmer show visitors that are likely to result in greatly increased production if taken and followed on the home farm.

Accounts of broken attendance re-

Accounts of broken attendance recanada are an indication of the importance attached to agriculture by all classes of the population, and it is to be hoped that the exhibition season in the East, where other in large inco than agricultive play a more important part than in the Western provinces, may see the townsmen showing their recognition of the importance of food production to the well-being of the whole population, by antecribing freely to the Fall Fain. by subscribing freely to the Fall Fair prize lists and attending both the lo-cal and central.

"Culling" Poultry.

Poultry culling demonstrations are being conducted throughout the pro-vince by the Extension Department of the Ontario Agricultural College. It is impossible for officials in charge of this work to cover all farm flocks, or even a fraction of them, therefore they are confining themselves to pri-vate exhibitions here and there and vate exhibitions here and there and to the breeding stations situated in every county. "Culling" has now been proven nearly a necessity in poultry husbandry. This method of selection, when compared with trap nest records, has showed itself almost infallible in distinguishing boarders from layers. Contrary to general opinion, anyone with but a slight understanding of poultry work can become an expert culler after can become an expert culler after closely watching a demonstration conducted by the college authorities. Forty per cent. of the birds in Ontario do not produce enough eggs to pay for their keep. Were these fowl removed, egg production would scarce be affected, while feed bills would be cut almost in half.

Wealth In Strawberries.

"Twenty-five thousand dollars' worth of strawberries were harvested from a 20-acre field on the outskirts of Simcoe this season," claims W. L. Innes of the Dominion Canners. A seven-acre patch in the lot realized \$10,000. Some of the peds were old and rather neglected, which reduced the average. "It should be remembered," added Mr. Innes, "that these figures represent wholesale prices, 14 the per quart."

REQUIENTING RE-QUEENING.

Examine Bee Colonies at Intervals In Search of Brood.

The extent to which attention is paid to the frequently necessary operation of re-queening is a good measure of the efficiency of the management of an apiary.

We find, for instance, in the neglected apiary, that no attempt at requeening is made and the colony or swarm that chances to lose its queen —an accident which frequently happens to colonies that have swarmed or to after-swarms—is simply left to die out.

Then there is the fairly well kept apiary in which the absence of eggs in a colony after the young queen should have started laying is recog-nized as an indication that she has been lost and a frame of brood in all stages is given to the colony in order that it may raise a queen, which frequently does not begin to lay until the colony is much reduced in population.

Finally, we have the well managed

Finally, we have the well managed apiary, in which the colonies are ex-amined at regular intervals, and worker brood in all stages in patches of full size for the season is looked for. If this, or a young virgin queen, not present, or if the brood consists wholly or largely of drones, known by the strongly convex cap-pings over the pupae, a fertile queen pings over the pupae, a fertile queen is supplied at once from a nucleus kept for the purpose, or a ripe queer-cell is given. The best bee-keepers go further and follow a regular system of re-queening each colony yearly, thus replacing all, except perhaps the best one-year-old queens. The young queens are more prolific and profitable not only in the fall but also in the spring and are less likely to swarm than the older queens.

to swarm than the older queens.

The best time to raise queens in Canada is during the clover honey flow. Do not delay until the flow is declining, when robbing is easily in-

A simple and good way for the beginner to obtain fertile queens is to save the queen-cells in a colony that save the queen-cells in a colony that has thrown a prime swarm. Five or six days after the swarm has left, the colony should be divided into nuclei, each consisting of a comb or two of brood containing a queen cell or two and honey with the adhering bees.

A frequent object is as a consist.

A frequent object in re-queening is to change the race of the colony from black bees to Italians, which resist European foul-brood better, and are generally more prolific and better foragers in the interior of Canada where the summers are warm ada, where the summers are warm. In purchasing Italian queens, untest-ed fertile queens should be specified. They are less liable to be injured in

They are less liable to be injured in the mails than tested queens.

A good way to introduce a queen to a colony is in the "Miller" cage. The queen is imprisoned by a plug of soft candy which the bees eat away in the course of a few hours, and in so doing liberate the queen. Of course, one should make quite sure that the colony to which the queen is introduced is without a queen, and it is advisable to introduce her to a colony from which the queen has been removed the previous day.

Thousands of mothers can testify to the virtue of Mother Graves' Worm Exterminator, because they know from experience how useful it is.

THE STERLING BANK

OF CANADA

A Bank Account For Your Wife

More and more, are the wives of today running their homes on a business basissystematically and efficiently.

Many wives have a monthly allowance for household expenses.

This, they deposit in a Savings Account in The Merchants Bank—settle bills by cheque -and thus have an accurate record of bills paid.

Such a business-like method also gives a woman the feeling of happy independence in having a bank account of her own.

Established 1864.

Head Office: Montreal. OF CANADA WATFORD BRANCH,

F. A. MacLEAN, Manager. G. H. C. NORSWORTHY, Manager. ALVINSTON BRANCH,

To Prevent Garne Pravor. Dairymen and creamery men in many places are troubled every spring by garlic or onion flavor in the milk. This is due to the cows feeding on plants to wild onion, one of the first plants to start in the pasture in the spring. The trouble from garlic is not likely to last very long, as this weed is soon cropped off and the grass becomes plentiful enough for the cattle to feed on it in preference

to the onion.

Garlic flavor in milk can be removed by heating the milk to 145 de-grees F. and forcing air through it at this temperature for 30 to 60 minutes. As this method requires a cer-tain amount of equipment, it is much more satisfactory for the average dairyman to keep the odor out of milk by a few simple precautions in herd management.

There are two ways of protecting the milk from garlic flavor

Minimum by Removing Cows to Some Other Pasture Three or Four Hours Before Each Milking.

prevent the cows from obtaining garlic; and second, manage the herd on the least possible chance of getting garlic pasture, so that there will be

garlic pasture, so that there will be the flavor in the milk.

Often the garlic is found only in one patch in the pasture, and this can be temporarily fenced off and pastured with other animals not produc-

Where garlic is scattered all over the field it will be impossible to keep the cows away from it, but by removing them to some other field three ing them to some other field three or four hours before each milking the flavor will be reduced to a minimum. The odor in milk is strongest from sows which have just eaten garlic, and the odor is reduced as the time between the eating of garlic and milking is increased.

between the eating of garlic and milking is increased.

In case no garlic-free pasture is available, it would be advisable to drive she cattle to the barnyard three or four hours before milking and feed them on hay and silage. As the season for garlic trouble is short, this should not cause much inconvenience.

............ Prof. Ballantyne **New Moderator**

F Prof. James Ballantyne, the new moderator of the General Assembly of the Presbyterian Church in Canada, had followed in the footsteps of his father, the late Hon. Thomas Ballantyne, his life's vocation would have been connected with the dairy industry and not with the church. And it would have been a natural thing for him to have done, for the particular Ballantyne clan to which he belongs takes as readily to the making of butter and cheese as the Cecil family of England to politics. He might also, as a side line, have taken to provincial politics, as did his father, and like him eventually graced the Speaker's chair in the Legislature.

But if Prof. James Ballantyne had the blood of a dairyman in his veins it was the lure of the church that decided the vocation he should follow. And when that lure came upon him he set himself to the task of ac-quiring all the mental equipment that quiring all the mental equipment that it was possible for him to command. He had obtained a good educational foundation at Dr. Tassie's famous school at St. Mary's. But just as Oliver Twist wanted more food he wanted more education. He accordingly entered the University of Toronto, specialized in modern languages, English and history, and in 1880, at the age of 23. graduated 1880, at the age of 23, graduated with first-class honors. Still unsatisfied he took a course at Leipzig,

Germany.

Then he took up the more serious study of theology, in the course of which he entered in turn Knox College, the Princeton Theological Seminary, and the Edinburgh University. In 1885, five years after graduating from the University of Toronto, he was ordained into the ministry, and became pastor of Knox Church, London. Where he remained nine London, where he remained nine years, leaving to accept the pastorate

of Knox Church, Ottawa.

When in 1896 Knox College wanted a professor of church history, the
lot fell upon Rev. James Ballantyne. Whatever it might have been to others. it was unexpected by himself.

but after due consideration no necessed. Twenty-four years have since chapsed, but he is still lecturine to Knox students on church history, church government, and a few odd

subjects.

Although Prof. Ballantyne had not not not to his appointment to the stoff of Knox College in 1896 specialized particularly in church history, his education that been so broad and deep that he had become a recognized atthough the subject hance his

authority on the subject, hence his unexpected call to the professorate. As to his qualification for teaching the subjects he does at Knox College, no one apparently has any doubts. He is an indefatigable worker, and as a student he is just as keen as he ever was. That naturally keeps hismind fresh and up to date. As a lenturer he never attempts flights of oratory. What he has to say, having been well thought out, is lucid, concise, logical, full of meat and such as the average student can readily as the average student can readily grasp and digest. But while his lectures do not savor of oratory they are made interesting both by the fund of information they contain and the spice of dry humor with which they are punctuated. As one, now a minister, but once a student of his, recently remarked: "Prof. Ballantyne seems to cover completely the whole of church history during the course of his lectures."

That Prof. Ballantyne is eminently fitted to perform the duties of moderator of the Presbyterian Church in Canada there can be no doubt. There is nothing of the theorectic pedagogue about him. He is a plain, practical man, fortified with sound judgment, happy in taetfulness, and as a presiding officer always cool and collected.

The proof of Prof. Ballantyne's soundness of judgment and tactfulness is to be found in the fact that the Toronto Presbytery from time to time appoints him as a commissioner to bring about peace in churches in which disturbing factors exist. One of his most recent tasks in this particular was in a Toronto church in which there was an open rupture between pastor and officials which threatened to bring about a criticular threatened to bring about a serious split in the congregation. But the professor accomplished that which many thought to be the impossible. He brought about peace and harmony, with the result that this parmony, with the result that this particular church, instead of being handicapped by a split in the congregation, is to-day more united and prosperous that at any time in its history, while Prof. Ballantyne carries a watch and chain of solid gold which the congregation presented to him as a token of their appreciation. Prof. Ballantyne is a doctor of divinity, having had the degree conferred upon him by both the Manitoba and Queen's Universities.

Must Vote In Montreal.

Compulsory voting is the latest project introduced by the Montreal City Council in connection with the approaching revision of the city charter. This was introduced with a reso lution at the council meeting to the effect that the charter commission be asked to insert in the new charter a clause enacting compulsory voting, with a penalty for any citizen who wilfully refrains from marking his

"A little-a little; just to kill time," he replied.
"Why?" asked the lady. "Have you no patients?"

WANT MORE MINISTERS

Crop of Young Men Who Desire to Preach the Gospel Appears to Be

CANADIAN CHURCHES FACE SER-IOUS PROBLEM.

on the Wane as the Salaries Are Too Low for Them to Keep Families Under Present Conditions. AN a minister of the gospel live

as cheaply as a teamster or a window cleaner? The great inter-church Forward Movement financial drive is

over, The millions of dollars have been raised. That the churches have the money has been demonstrated. But so far, the average wage paid

to the servants of the church in the different denominations is about equal to that paid to the driver of a bread wagon.

Is religion suffering a relapse that will carry the world back five hundred years to a time when ministers will perforce become penniless friars again, to wander the earth teaching the gospel and calling a barracks their home?

The Forward Movement, while amassing fifteen millions of dollars out of the churches of Canada, has not as yet brought new life into the theological colleges, nor has it stayed the resignation of young ministers who find they cannot honestly remain in the Christian ministry while har-

nessed with poverty.

The five great theological colleges in Toronto have graduated young

Victoria College (Methodist)... Knox College (Presbyterian)... Wycliffe College (C. of E.)... Trinity College (C. of E.)... McMaster University (Baptist).

Total Other colleges this spring have produced young men for other professions as follows:

Other colleges whose exams are not yet over have candidates as follows for graduation:

Medical College (doctors).... 91

Faculty of Education (teachers) 286

Normal School (teachers).... 245

The Ontario Veterinary College is just in a period of transition from a three to a four year course of study; but last year and this, 53 veterinary surgeons have been graduates.

That is, Ontario is producing eight times as many school teachers as ministers, twice as many lawyers and

isters, twice as many lawyers and dentists. The care of animals is getting almost as much production of professional men as the spiritual care of humanity in the province.

Osgoode Hall has another large summer class in session to be graduated into the profession in September, probably making the production of lawyers three times as great as of ministers of all denomgreat as of ministers of all denominations.

Meanwhile, ministers are resign-

ing. Dr. S. D. Chown, general super-visor of the Methodist Church, says that from Western Canada the resig-

nations continue to be received. "These," said Dr. Chown, "are mostly young Englishmen whom we hostly young Englishmen whom we have brought out from the Old Country for the missions and the ministry in the West. It is undoubtedly the pressure of the high cost of living that is forcing such resignations. Then again in some of the wide mission districts an entopophile to ever sion districts, an automobile is practically a necessity for getting around.

And that, of course, is out of the question for the young ministers on their incomes. Also there is the temptation of money making, which is renewing itself in the West." Rev. J. H. Edmison, secretary for

Home Missions in the Presbyterian

Church, says:

"There is no alarming condition in regard to resignations. The east is practically free of that problem. But from Western Canada, we have a certain percentage each year. The small salaries and the great invested. small salaries and the great increase in living costs has undoubtedly in-tensified the problem in the past two or three years. There are always a few young men who find they have chosen the wrong profession. But there has been no unusual number of resignations from our ministry in the past year."

The Baptist Church, which has also brought many young missionaries and ministers from the Old Country is feeling the pinch of small production of ministers from its University, and there have been the expected number of resignations from the younger missionaries.

The Church of England with its elaborate system of government, one ordinarily expects to be free of such troubles as resignations. While its ministers are known to be as thor-oughly underpaid as any of the other denominations, it is forbidden. through that very system of govern-ment, through archbishops, bishops and so on, to discuss such problems publicly as is done by the more demo-cratic denominations. There have, however, been resignations from the ministry of the Church of England in the past year owing to the impossibility of living on the stipends allowed.

One young minister who served overseas as a padre has gone into business. He had a family of five to provide for. The bishop could only offer a living of \$1,200. That is \$23 a week. Street car conductors, brakemen, taxi drivers, gardeners, make much more than that. The predicament of the older min-

ister, the man too old to change his profession, is worse. No matter how harrassed, how disillusioned or how bitter he may become, he has to wreath his face in Christian smiles and carry on.

Relieves Asthma at Little Expense.—Thousands of dollars have been vainly spent upon remedies for asthma and seldom, if ever, with any relief. Dr.J.D.Kellogg's Asthma Remedy, despite its assurance of benefit, costs so little that it is within the reach of all. It is the national remedy for asthma, far removed from the class of doubtful and experimental preparations. Your dealer can supply it. can supply it.

If you have any visitors or are going away visiting, let the Guide-Advocate have the information. Your friends will

Relief For the Depressed.—Physical and mental depression usually have their origin in a disordered state of the stomach and liver, as when these organs are deranged in their action the whole system is affected. Try Parmelee's Vegetable Pills. They revive the digestive processes, act beneficially on the nerves and restore the spirits as no other pills will. They are cheap, simple and sure, and the effects are lasting.

INTERESTING VIEWS AND **OPINIONS**

Toronto kicks about milk at 16c a

quart, but schemes night and day to get whiskey at \$3 a quart. Miss Ida Aaron, 40 years old, of

Topeka, Kansas, sued John Bunck for \$5,000 damages for three hugs and the consequent pain and mental anguish. The jury gave her \$200 for each hug.

Idleness never won distinction in the world, and never will. The world does not owe us a living, but every man owes the world work. God made man for employment and we cannot dodge the issue.

The employees of a Philadelphia hosiery factory have accepted a ten per cent, cut in wages rather than have the mill close down. Over-production is causing the shutting down of many small mills.

In the state of Maine stories are in circulation to the effect that Canadian troops are to be dispatched to Poland by authority of the League of Nations. Of course there is no truth in the assertion but nevertheless it is a high compliment that Candians should be the first thought o

The United Farmers do not yet see their way clear to commence the publication of a daily newspaper. They will lead up to it gradually At the annual meeting of the United Farmers' Publishing Company in Toronto, Col. J. Z. Fraser, the President, announced that though the rising cost of everything connected with a newspaper made a daily practically impossible, before the end of the year The Farmers' Sun, the U.F. O. official organ, would likely be published three times instead of twice a

The Minister of Education is proposing to encourage trustee boards to engage returned soldiers by offering a special grant to sections employing such teachers. This move on the part of the Minister is a commendable one. The record of Ontario teachers in the Great War constitutes a splendid page in the history of the profession. The total number of teachers who served was 573 and of this number 85 were killed and 148 wounded. There were 35 decorations granted fofr conspicthous bravery and five others were recommended for decoration.

The American Chemical Society of the Chicago University claims that milk cows will thrive on sawdust chemically prepared. White sawdust, finely ground, is treated under steam pressure with diluted sulphuric acid in a large boiler, known as a

which form it is fed to dairy cows On this feed it has been proved that cows not only give more milk but increase in weight.

METHODIST NATIONAL CAMPAIGN

The Strathroy District make the following report of amount subscribed and amount paid on the different circuits. The terms of the subscription were 20 percent down last February, 20 percent due each of the following dates—June 15th, Sept. 15th, December 15th and March 15, 1921. The figures below show the amount reported at headquarters on August 26th, and this includes the first two payments only.

				Per
	Si	abscribed	Paid	cent.
	Strathroy \$	4250.00	\$1700.00	140.
	Petrolia	2988.00	1496.00	50.
9	Cairngorm	1538.00	565.02	236.7
12		1130.00	714.50	63.
	Watford	3829.35	1970.00	51.5
	Warwick	2007.00	1370.00	68.2
젢	Arkona	2315.00.	. 817.96	5 29.
3	Brooke	2399.00.	.1050.00	143.7
	Appin	916.00.	. 263.50	0 28.7

THE TREASURE

OF GOOD HEALTH Easily Maintained Through the Use of Dr. Williams Pink Pills.

There is not a nook or corner in Canada, in the cities, the towns, the viliages, on the farms, and in the mines and lumber camps, where Dr. Williams' Fink Pills have not been used, and from one end of the country to the other they have brought back to bread-winners, their wives and families the splendid treasure of new health and strength.

You have only to ask your neighbors, and they can tell you of some rheumatic or nerve-shattered man, some suffering woman, ailing youth or anaemic girl who owes present health and strength to Dr. Williams' Pink Pills. For more than a quarter of a century these pills have been known not only in Canada, but throughout all the world, as a reliable tonic, blood-making medicine.

The wonderful success of Dr. Williams' Pink Pills is due to the fact that they go right to the root of the disease in the blood, and by making the vital fluid rich and red, strengthen

that they go right to the root of the disease in the blood, and by making the vital fluid rich and red, strengthen every organ and every nerve, thus driving out disease and pain, and making weak, despondent people bright, active and strong. Mr. W. T. Johnson, one of the best known and most highly esteemed men in Lunenburg County, N.S., says:—"I am a Provincial Land Surveyor, and am exposed for the greater part of the year to very hard work, travelling through the forests by day and camping out bynight, and I find the only thing that will keep me up to the mark is Dr. Williams' Pink Pills. When I leave home for a trip in the woods I am as interested in having my supply of pills as provisions, and on such occasions I take them regularly. The result is I am always fit. I never take cold, and can digest all arly. The result is I am always fit. I never take cold, and can digest all kinds of food such as we have to put up with hastily cooked in the woods. Having proved the value of Dr. Williams' Pink Pills as a tonic and health builder, I am never without them, and I lose no opportunity in recommending them to weak people whom I meet."

Dr. Williams' Pink Pills should be kept in every home, and their occa-

br. Williams' Pink Pills should be kept in every home, and their occasional use will keep the blood pure and ward off illness. You may get these pills through any medicine dealer or by mail at 30 cents a box or six boxes for \$5.50 from The Dr. Williams' Medicine Co. Brockville, Ont.

KERWOOD

Stanley and Clayton Johnson are attending business college in Petrolia. Mr. J. Carruthers, of Seattle, is visiting his sister, Mrs. Gilbert Dowd-

Rev. Thomas, of Cairngorm, will preach in the Methodist church next Sabbath.

Mr. Tom McMahon, of Brooke, and Mr. Harvey McMahon, of May-ville, called on friends here recently. Mrs. John Morgan, who has been

very ill for some time, was taken to the Strathroy hospital. Her son, Dr. Walter Morgan, of Arden, Ont., is here at present. The Kerwood Women's Institute

met at the home of Mrs. Will Thompson on Wednesday, Sept. 8th, with twenty-three members and three visitors present. A splendid paper was given by Mrs. Robt. Galbraith on cheerfulness inthe home, or the subject might be put, "The Hygiene of Cheerfulness." It was excellent advice to home-makers. The disposition of the mother in the home is reflected by the disposition of the children, and one can judge home met at the home of Mrs. Will Tho renected by the disposition of the children, and one can judge home life by the child. We should take time to see that our children are happy in the home. Miss Wheatly entertained by a well-chosen violin solo, followed by a guessing contest that taxed the brains of one and all the remember and rightly place the to remember and rightly place the names of our common trees. A dainty lunch was then served. All dainty lunch was then served. An enjoyed a very pleasant afternoon. The next meeting will be held at the home of Mrs. Frank Hull. The speaker for the afternoon will be D. C. Ross, M.P.P., Strathroy, subject, "Laws concerning women and child-ren."

The Kerwood School Fair proved a decided success. Early in the morning the buggies and autos started to ing the buggies and autos started to swarm in and at noon it certainly looked as though everyone far and near were interested in the "Children's Fair." About two o'clock the various teachers formed their pupils in readiness for parade, and headed by the Citizens' Band they marched from the centre of Main st. down to the fair grounds and surely were a pretty sight with their fruits, grains, flowers, flags and banners floating. the fair grounds and surely were a pretty sight with their fruits, grains, flowers, flags and banners floating. S.S. 7, Adelaide (Kerwood school) received 1st prize. They represented the strikers. The idea was original and took well. The 2nd prize was taken by S.S. No. 1, Metcalfe. They represented farmers and farmerettes. All schools represented were certainly worthy of mention. The pupils and teachers deserving great credit as the time for training was very limited. The exhibits were of the best. The children, teachers and trustees entered into the sports with good spirit and the large crowd of spectators enjoyed the day to the limit. The Women's Institute, who always so kindly give their time and money to the boosting of the school fair, conducted a booth and did a rushing business. The Fair certainly could be called the best yet. larket price,

Harper Bros.

Adornment of Hair Is Important, French Modistes Believe.

Makers of Gowns Take Into Consider ation What Is to Be Worn on the Head.

Headdresses are receiving more and more attention from the greatest French dressmakers. In the past, writes a Paris fashion authority, the woman who wanted to complete her evening tollette by a headdress was compelled to search through the shops for a suitable one, but this was not always easy to find. Often the only reward for such a shopping trip was the finding of a hair ornament that did not in the least carry out the idea of the costume.

Now the maker of the evening gown designs a headdress to accompany it, so that it is no longer a matter of wearing anything that one may happen to pick up in a shop. As a result, the headdress is becoming more and more important.

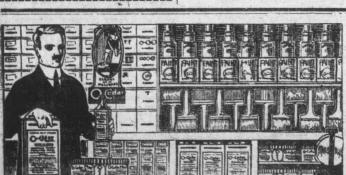

Poiret shows great art in these. M. Worth makes beautiful draped turbans without crowns to complete his evening dresses. He uses the chin chain as well as dangling earrings on his turbans, the whole adding a note of

great brilliancy to the costume. We may expect to see quantities of tulle and silks used in hats for some time to come, due largely to the ruined condition of the straw industry. Reboux combines tulle and lace with remarkable skill. A pretty example of

Reboux evening hat of black tulle and Chantilly lace. High Greek coiffure supported by a headdress consisting of embroidered bands done in jewels and gold threads.

her method is seen in an evening hat which has the crown tulle draped over the hair like a cap and allowed to fall in two soft loops at the back. To this is set a delicately plaited lace zim.

Hints from Our Home Brightening Department

It's wonderful what a new coat of paint or varnish will do in brightening up the house. When you decide to freshen up the bath-room or kitchen with a coat of paint, or surprise that scratched chair and table with a sparkling coat of varnish, come in and see us. We have a complete line of paints, varnishes, brushes and everything for brightening up the home.

To keep the floors and furniture bright and glistening, we know of nothing better than the O-Cedar Polish Mop and

Pullets Having Tuberculosis Are Common in Ontario.

The Disease Chronic Rather Than Acute - Symptoms Described-The Birds Should Be Killed Off and Destroyed.

(Contributed by Ontario Department of

UBERCULOSIS in chickens is very common in Ontario. There is not a county in the Province from which we have not received for examination hens either dead of, or suffering rom, this disease. Almost invariably a letter accompanies such birds stating that deaths are occurring in the lock at irregular intervals, the birds usually getting thin and lame before death. The following is a sample let-

"Jan. 12, 1920. "Dear Sir,-Will you kindly invesbear Sir,—Will you kindly lives-tigate this fowl and let me know what is the matter and how to treat them. Out of 150 birds I have lately lost over a dozen. Some of them went lame on the start, some in right foot and some in left, and some just moped around without being lame. I have sold all my old hens and have now 120 pullets and thirty last year's pullets. They started this in early fall. Thanking you in advance, Yours respectfully,

Examination of this pullet showed to have been suffering from advanced tuberculosis. The liver. spleen and intestines were all badly tubercular. The immediate cause of death had been the rupture of a large blood vessel in the liver due to the development of tubercles.

Tuberculosis results in considerable financial losses to the poultry-man, due to decrease in egg produc-tion and heavy mortality in the flocks

where it is present.

The disease is chronic rather than acute. That is, it does not cause death suddenly, but takes time to develop, usually causing the bird to gradually lose flesh, turn pale around head, become listless, mopy, and frequently lame, while egg-lay-ing is reduced to a minimum.

To be sure, however, that such a condition of birds in a flock is due to tuberculosis it is necessary to hold a post-mortem examination on one of hem. The bird should be killed and pened up. If tuberculosis is present, he liver and spleen will be spotted with white or cream-colored spots varying in size from a small pin head to a pea or bean, and in number from a few to thousands. These are the sohalled tubercles, each one a mass of dead tissue that has been killed by the action of the poison secreted by the tuberculosis bacteria which have leveloped there. These tubercles are requently found on the intestines and in the lungs and bones as well as in the liver and spleen. A microscopic examination of a portion of one of these tubercles will show large numbers of tubercle bacteria present.

These tubercle bacteria present.

These tubercle bacteria are the cause of the disease. They are so small as to be altogether invisible without the use of a high power microscope. They are not the same variety as those which cause tuber-

culosis in human beings.

Birds suffering from the disease give off large numbers of the bacteria in their droppings. Other birds in the flock scratching around and feeding with such birds pick up the bac-teria with their feed and grit and so get infected. The bacteria are ab-sorbed into the system with the food and get circulated in the blood and lymph streams until they get located in the tissues, more particularly the liver and spleen, where they rapidly multiply and secrete their poison. This acts on the tissue immediately around them, causing it to die and turn white and thus become a char-

acteristic tubercle.

When this disease is found in a flock it is advisable to kill off all the birds. Then those birds which on examination do not show evidence of the disease may be used as food. Those that show the disease should be destroyed by burning or by bury-

be destroyed by burning or by burying deeply in quicklime.

The entire premises in which the birds have been kept should then be well scraped, cleaned and thoroughly disinfected by the application of a disinfectant wash or spray, as quicklime, zenoleum, cresol, etc. The runs should be well covered with quicklime and then ploughed in deeply. Even after such treatment it would be prefemable to establish new runs on fresh ground and then re-stock from flocks that are known to be healthy. healthy.

Anyone suspecting the disease in a flock and wishing to have the case determined, should send a suspected determined, should send a suspected bird, either alive or dead, express prepaid, to the Bacteriological Department, O. A. C., Guelph, when an examination and report will be made at once. An illustrated bulletin dealing with this disease may be had on application to the Department of Agriculture, Toronto.—Prof. D. H. Jones, O. A. College, Guelph

Wallop the Weeds.

Do not neglect to cut weeds on coadsides, in fence corners and waste roadsides, in fence corners and waste places. And do not allow weeds to go to seed in hoed crops. A well-cared-for hoed crop will rid the field of many weeds, but a neglected hoed crop is a nursery for weeds and a source of contamination for every field on the farm.

Early after harvest cultivation will destroy many annual and winter annual weeds, such as False Flax, Corn Cockle and Wormseed Mustard. Plough shallow immediately after harvest and harrow and cultivate frequently. By shallow ploughing the

frequently. By shallow ploughing the weed seeds are kept near the surface and by the frequent stirring of the soil they are made to sproute, and having sprouted they are easily de-stroyed by further cultivation.

Fertilized Crops.

Should we apply fertilizers carrying quantities of plant food constituents exactly the same as the plant takes up? Suppose a common fertilizer for mula is 2-8-3. When we analyze the crop we find the ratio of the plant food taken out by the crop is approximately 4-2-3. Now why the discrepancy between fertilizer amalysis and actual crop conlizer apalysis and actual crop con-sumption of plant food? First— Because much nitrogen is formed in the soil both by the bacteria on the roots of legumes and by the free nitrogen gathering bacteria of the soil. There is, therefore, no need of adding all the nitrogen that the crop takes up, since nature in her labora-tory — the soil — is manufacturing much plant food. Second—When it omes to phosphoric acid, immensely

Is an Example of Well Fertilized Crop.

more phosphoric acid is necessary to be added than is found in the soil, because in the process of reversion much phosphoric acid is held by the soil and is not taken up by the growing crop. Third—Potash usually responds in quantity closely allied to that taken out by the crop; under certain circumstances potash may form insoluble compounds, as may phosphoric acid, in the soil, especially in soils where there is a lack of lime, but where iron and aluminum are present. Hence the necessity of keeping up the lime, otherwise we have a locking-up process which de-ters the soil from doing its best.

The plant needs a balanced ration.

Study the special needs of the crop. If the crop is grown for bulk and top, such as grass and hay crops, nitrogen is the plant food to empha-size; on the other hand, if ripened grain is the product desired, emphagrain is the product desired, empha-size phosphoric acid; for root crops, nitrogen and potash are the plant foods necessary to emphasize.—Prof. H. O. Buckman, Cornell University.

FOR SPLINT LAMENESS

How to Deal With This Trouble in Young Horses.

A Bone Affection — Young Animals Most Commonly Affected-Symptoms Described and Treatment Offered.

(Contributed by Ontario Department of Agriculture, Toronto.)

PLINT lameness is a common complaint in young horses, and occasionally seen in horses of any age. It is rarely noticed in the hand limbs.

In order to understand and appreciate the trouble it is necessary to have an intelligent idea of the bony anatomy of the horse from the knee to the fetlock. This part is usually called the cannon. It consists of three bones: one large cannon bone extending the whole distance, from the knee in the fore limb, and from the hock in the hind limb to their respective fetlock joints. This bone has a broad and somewhat flat posterior surface, To each edge of this surface is attached (by ligamentous attachment) a small somewhat triangular-shaped bone, of considerable size above, where it articulates with the bones of the knee joint, and gradually de-creases in size as it extends downwards, becoming quite small, and terminating in a small somewhat pea-shaped nodule, a little more than two-thirds down the large bone. These nodules can be readily felt, one on each side of the posterior aspect of the large bone, a few inches above the fellock

A splint consists in a bony union between the large and small bones. Inflammation is set up, usually by concussion during travelling, especially on hard roads. As a result of this inflammation an exudate is thrown out, and the ligamentous attachment is destroyed. The exudate is, of course, soft at first, but soon become converted into bone and unites the large and small bones by bony union. An enlargement of greater or less size can usually be seen, which, in most cases, gradually disappears, by absorption until nothing can be noticed, and is many cases cannot be detected even by manipulation; at the same time the ossific (bony) union between the this inflammation an exudate is ossific (bony) union between the hones is permanent. Hence a horse that once has a splint will always have it, although all visible symp-

toms may have disappeared.

We often hear people say that "A horse over seven years old never has splints." This arises from the fact that the visible enlargement has usually disappeared, but the union of the bones remains. This absorption does not always occur. It is not un-common to observe well marked splints in horses of any age. In some cases the splint is double—that is, an enlargement is noticable on each side of the limb. In such cases there is usually a bony deposit extending across the posterior surface of the large bone, from one splint to the other. This often causes an irritation to th esuspensory ligament (which passes down this surface) and causes permanent lameness. Splints seldom cause persistent or permanent lame-

Symptoms.—In many cases no lameness is caused. The first intimation of the presence of splint is the appearance of the enlargement, which usually gradually disappears. In other cases lamer.ess is well marked, and is usually characteristic. A horse lame from splint will usually. stand and walk sound, but if asked to jog or trot will show well marked lameness, the head dropping decided-ly when the foot of the sound leg by when the foot of the sound leg touches the ground. The lameness is often noticed before there is any vis-ible enlargement. The lameness is more marked when the horse trots down grade, and the intensity of the lameness usually increases as exercise is continued. Manipulation will usually reveal the seat of the trouble. By pressing between the thumb and finger the line of attachment between the large and small bones from the knee downwards, the seat can be located by the horse flinching when the seat of the trouble is pressed. And, if severe pressure be applied he will often rear on his hind legs. The usual seat of splint is on the inner surface of the fore cannen, or it may be on the outer surface, or both, and s usually one to three inches below

the knee, but may be either higher or lower. The hind limb is seldom affected, but when it is the seat is usually on the outer surface. Treatment .- Lameness is usually present only during the inflammatory stage. When the exudate becomes ossified (converted into bone) the infiammatory action ceases and lameness disappears, except the enlargement be of sufficient size, or so situated that it irritates the suspensory ligament or involves the joint. Hence treatment should be directed to allay infammation as promptly as possible. Splint lameness usually appears very suddenly. A horse may go perfectly sound and after a rest of a variable duration when taken out to drive again, may show the characteristic symptoms noted.

symptoms noted.

The patient should be given perfest rest, and the seat of the s. int

frequently, or pounded ice kept to it for a few days. This will often be all that is necessary. In other cases lameness is more persistent, and it is necessary to apply a blister. A blister made of one dram each of biniodide of mercury and cantharides mixed with one oz. vaseline, and applied in the ordinary way will usually effect a cure. In some cases it is necessary to blister the second time (in about a month). In rare cases an operation

to blister the second time (in about a month). In rare cases an operation by a veterinarian is necessary.

When lameness is not shown it is seldom considered necessary to treat splint, as the enlargement usually, gradually disappears without treatment.—J. H. Reeq, V.S., O. A. Col-lege Guelph.

They Should be Nursed at Least Four Months.

ABOUT WEANING FOALS

A Sudden Change of Diet Not Good for the Young Colt-Wean Him. Gradually - General Hints on Rationing and Handling.

(Contributed by Ontario Department of Agriculture, Toronto.)

THE age at which foals should be weaned is to a great degree governed by circumstances. Under ordinary conditions it is well to allow the mare to nurse her foal for four months or longer. If, when the foal is this age, the mare is required to do regular work, both will do better if the foal be weaned. On the other hand, if the mare be in fair condition, not required for regular work, and still yielding a reasonable quantity of milk, the foal will do better if not weaned for a month or two longer, and the dam, having no labor to perform, will not suffer.

The ordinary process of weaning, which consists in separating mare and foal, and allowing no further in ercourse for several weeks, or until the mare has ceased to secrete milk, and the foal to look for it, is in our opinion, irrational, wasteful and uncalled for.

It is probably unnecessary to state that the colt should be taught to eat chopped or rolled oats, bran, etc.; before the process of weaning com-mences, otherwise he will surely suf-fer and grow thin. Experience has taught all breeders and feeders of stock that sudden or violent changes of diet or usage with any class of stock is dangerous, and often expensive. When this is the case with adult animals, it is reasonable to expect it to be more marked in the young. Hence, in order to avoid danger of digestive diseases in the young, and trouble with the mammary glands, and possibly digestive trouble also, in the dam, we should exertise with the market be satisfied. ise good judgement, and be satisfied to take considerable trouble when weaning the colt.

In most cases the mammary apparatus is still quite active, and a considerable quantity of milk is be-ing secreted when the owner decides that it is time to "wean the colt." The colt, in addition to the grass and grain that it has been consuming, has thus far been accustomed to milk also. In fact, milk has been his principal diet, and, if suddenly deprived of it he cannot avoid fretting, and failing in condition. Then again, the secretion of milk in the mare will not cease all at once, and, unless the glands be relieved of it, mammitis will be the result. Instead of milking the mare by had and of milking the mare by hand, and, of course, making no use of it, as is usually done, the colt should get the benefit. Our idea of the proper method of weaning is as follows: When it is decided that the colt shall be weaned be should be placed in a be weaned, he should be placed in a comfortable box stall, by himself, or with other colts that are being wean-ed. There should be no mangers or boxes into which he can rear or jump, and probably injure himself, and the door and walls should be so high that he cannot jump over them or get his fore feet over. The dam should be tied, in a stall, or better, if convenient tent in a box stall not pecesrenient, kent in a box stall, not neces sarily far removed from her foal. In fact, the writer has made a practice of having the stalls adjoining, so that the dam and foal can see and hear each other, but cannot get to-gether. Whether or not the mare be required for work, she should be taken to the colt's stall, or better, the colt lead to the dam's stall, and allowed to remain for 15 to 20 minutes three times daily for a week or longer. Leading the colt to the dam's stall, is a good system of giving him his first lessons in training for future usefulness. During the second week, twice daily will be sufficient to leave them together, and after this once daily, gradually shortening the length of the visit until the mammal pecomes practically inactive. In this way each gradually becomes accustomed to be separated from the other. The change of diet for the colt is gradual, and he receives the bene-fit of the milk that otherwise would be wasted. It also largely obviates danger of mammitis in the mare, and the glands gradually become inactive. In the meantime the colt should -

THE WONDERFIIL FRUIT MEDICINE

Every Home In Canada Needs "FRUIT-A-TIVES"

To those suffering with Indigestion, Torpid Liver, Constipation, Sick or Nervous Headaches, Neuralgia, Kidney Trouble, Rheumatism, Pain in the Back, Eczema and other skin affections, "Fruit-a-tives" gives prompt relief and assures a speedy recovery when the treatment is faithfully followed.

TIOL" A ADOUT BIL DIE WELL-SAVED COM er, hay and chopped or rolled oats, that he will consume. A satisfactory and palatable mixture is made by putting a little cut hay and the ra-tion of oats in a pail in the evening, pouring some boiling water on it. covering with a rubber sheet and allowing it to stand until morning, then preparing another feed for the evening. This, with a ration of whole oats, with a carrot or two at noon, in addition to the amount of whole hay he will require, usually gives excellent results. Of course, this re-quires some time and trouble, and wifen this is not convenient the colt will do very well without the prepar-tion of food noted. When practicable, the addition of cow's milk gives excellent results, but this is often not easily obtainable.

After the colt has ceased looking for his dam, he should be allowed to take daily exercise in a yard or pad-dock, and his feet should be trimmed dock, and his feet should be trimmed at least monthly. Usually under these conditions, the wear is not equal to the growth, and if not attended to, the feet will become abnormal in size and shape, which may permanently injure him. Hence they should be trimmed to the natural size and shape, as conditions demand.—Prof. J. H. Reed, V.S., O. A. College, Guelph.

ISSUER OF MARRIAGE LICENSES

RANKIN-THOMPSON

Miss Illa Marie Thompson, of Port Miss his Marie Inompson, of Porti-Huron, formerly of Arkona, and Mr. Clifford E. Rankin, of Uttoxeter, were quietly married in Sarnia on Wednesday evening at six o'clock at the First M.E. Parsonage, Rev. Dr. Manning officiating. The bride is the daughter of Mr. and Mrs. Jerem-ish Thompson of Arkona and the the daughter of Mr. and Mrs. Jeremiah Thompson, of Arkona, and the groom a son of Mr. and Mrs. J. Rankin, of Uttoxeter. After a wedding supper served at the home of the bride's aunt, Mrs. Harry Stimpson, Poplar st., Mr. and Mrs. Rankin left for points east. They will make their home on the groom's farm near Uttoxeter.

FOSTER—CRAWFORD

A very pretty wedding took place Labor Day at 2 o'clock at the home of Mr. and Mrs. Wm. Crawford, Carof Mr. and Mrs. Wm. Crawford, Caradoc st., Strathroy, when their second daughter, Eva Irene, was untied in marriage to Mr. Richard Inch Foster, second son of Mr. and Mrs. W. H. Foster, of Kerwood. Rev. Dr. I. A. Brown, of Melbourne, formerly of Kerwood, officiated, in the presence of only immediate relatives. The bride, who was given away by her father, wore her travelling suit of navy blue tricotine. The bride was the 1cc pient of many beautiful presents, among them being one from the Methodist church choir and from the Methodist church choir and from the Sunday School class. The groom's gift to the bride was a substantial cheque. The happy couple left by motor for London, taking the evening train to Hamilton, Toronto and Niagara Falls. On their return they will reside on the groom's farm, Kerwood.

BROWNE-BAIRD

A quiet but pretty wedding took place at the home of Mr. and Mrs. Wm. Baird, Parkhill, on Monday, Sept. 6th, when Myrel, their youngest daughter, became the bride of Mr, Clarence E. Browne.

The ceremony was performed by Rev. J. H. Johnston, in the presence of the two families. The bride, who was given away by

The bride, who was given away by her father, wore her travelling suit of navy blue garbardine with black velvet hat, carrying pink roses, and standing in front of a bower of ferns

and asters.

The presents were beautiful and The presents were beautiful and numerous, showing the esteem in which the young couple are held.

Miss Aity Zapfe, neice of the bride, played the wedding march and little Patricia Racey acted as flower girl.

A dainty luncheon was served, after which the bride and groom left by motor for a trip to Hamilton, Niagara and other places.

WHEN BABY IS CROSS

Mothers, when your baby is cross-when he cries a great deal and no amount of attention or petting cheers him—something is the matter. It is not the nature of little ones to be cross and peevish—the well child is a happy child. Give him a dose of Baby's Own Tablets and he will soon be well again. The Tablets are a mild but thorough laxative which regulate the bowels and stomach; banish constipation and indigestion; break up colds and simple fevers and relieve the other minor ills of little ones. Concerning them Mrs. Oscar, Bedard, Ste. Sophie, Que., writes:—"Baby's Own Tablets are an excellent remedy for constipation. They relieved my little one when nothing else would, and I can strongly recommend them to all mothers." The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont. Mothers, when your baby is cros

HANGED HIMSELF IN HIS OWN BARN

Isaac Reville, a farmer, aged 66 years, residing on lot 22, con. 10, Euphemia, committed suicide by hanging inhis own barn on Friday of last week. From particulars which we have been able to obtain, the deceased had been despondent and acting queerly for a while, but he was not thought to be so bad as to endanger his life. However, when his son went tothe barn on Friday he found him hanging from a beam in the barn by a rope around his neck, dead. He had climbed up to the beam by means of a ladder and jumped off. Dr. Martyn, coroner, was called on Dr. Martyn, coroner, was called on Saturday and after an examination of the remains, decided that it was a clear case of suicide and that no inquest was necessary. He leaves three sons and one daughter, all grown up.—Alvinston Free Press.

In Parkhill, on Monday, Sept. 6th, by Rev. J. H. Johnston, Myrel Fidelia, youngest daughter of Mr. and Mrs. William Baird, to Clarence W. Browne, all of Parkhill.

Big Cash From Bulls.

Since prominence has been given to the matter of the purchase by a Wellington County breeder, of a Shorthorn bull at the extraordinary price of \$34,000, many people, stockmen and others, have expressed doubt as to the possibility of the owner ever securing adequate returns on his investment. An idea of the possibilities in this direction may be gained from the fact that another Wellington County breeder, whose Shorthorn bull cost nothing like \$34,000, but yet is an outstanding, fine animal and a great stock-getter, receives a fee of \$500 for the service of his animal, and finds lots of business at the price charged. business at the price charged.

THAT MYSTERIOUS WORM.

How Insect Gets Into a Hazel

Nut. Where did the worm in the hazel nut come from? That question has puzzled many a boy. He knows that the nuts he gathered were carefully culled and that none were stored that gave any evidence of being uncounted and yet a few months later. sound. And yet, a few months later, when he begins to crack the nuts, he finds that a surprisingly large num-

ber are wormy.

Where did the little fat white worm come from?

worm come from?

The worm is the larva of a strange-looking insect known as the hazelnut weevil, an insect that belongs to the same family as the much-dreaded boil-weevil, which is periodically so destructive to the farmer's grain.

farmer's grain.
The insect is provided with a long, slender proboscis, or snout, at the extremity of which is a peculiar hooklike appendage. The proboscis is a modification of the mouth parts, and but for this snout the worm and but for this snout the worm would never find its way into the nut. In the late summer, while the nut is still green and tender, the mother weevil goes in search of a place to lay her egg. The egg must be kept safe from harm during the larva hatches, it is highly important, from the weevil's point of view, that there be food close at hand so that the baby weevil will not die a prematurely

weevil will not die a prematurely weever with not die a prematurely early death.

Instinct has taught the mother weevil that no better place could be found for her egg than the inside of a hazelnut, for there lies safety for her egg and food for her offspring. So the mother weevil begins to peck away with her queer-looking snout, and in due time she has made a tiny tunnel to the centre of the nut. Then she lays an egg, poking it well down into the tunnel with her snout.

his way out of the hazelnut that has sheltered him and is ready for the second step in his development, that all-important step which will transform him into a weevil exactly like his mother.

Deer Startled Winnipeg.

Vigor Rho, a contractor living in Winnipeg, is minus a pair of trousers and about two square feet of cuticle, as a result of two thrilling hand-to-hand battles with Maggie, a wild deer, which strayed into that city a few weeks ago.

Maggie crowded enough experiences into one afternoon to last her for the rest of her life, even if she lives to be 600 years old.

Here is a list of Maggie's thrills, arranged in chronological order:

Chased by dogs east of city.

Wandered into town through St. Vigor Rho, a contractor living in

Strolled down Main street.
Dodged autos, street cars and oth-

Jumped over a "flivver."

Chased by small boys.
Seized by tail by would-be hero.
Hurled said hero into City Haming corner at William avenue on

"high."
Chased by two motorcycle cops. Cornered on Bannatyne avenue be

Mr. Rho.
Tore off Rho's trousers.

Bit him on neck. Tied up with rope, put in cellar.
Attacked by big dog.
Staged second battle with Rho. Tied up again. Enjoyed auto sight-seeing tour of

Chased tame deer in new hom

City Park.
All known rules of the ring and mat were suspended when Mr. Rho chased Maggie into a corner of his yard, after she had outdistanced motorcycle police in a chase on William avenue.

"It was catch-if-catch rules," said

"It was catch-if-catch rules," said
Mr. Rho, relating experiences.
"I made a jump for the door, and
we had a great old wrestling match,
I got my arms around her neck, but
she kicked with her hind feet and
her sharp hoofs fore my trousers off.
Then she rewed my hands and

Then sharp noots fore my trousers of the sharp noots for my hands and arms and tried to bite my neck."

A large crowd had gathered to watch the battle, but no one offered to help Rho. Blood was streaming from his arms as he fought for a toe-hold. toe-hold.

"Weeeeeeee," a woman spectator, screamed. "That deer is eating the man." Maggie was trying to get her teeth in the back of Rho's neck.

Maggie shook herself loose from

Rho and leaped over his head, in an effort to escape. Rho, however, made a flying tackle and grabbed the animal's hind feet as they sailed aloft, and deer and man came down in a heap. Rho applied a half-Nelson, and his wife got a piece of rope and tied up the deer's feet.

Noise and Birds.

One thinks of birds as shy and delicate creatures easily frightened by a sudden sound. That's error. A bird is disturbed by noise only so long as the noise is associated with danger. The moment noise ceases to threaten them birds seem to wind it not associated. them, birds seem to mind it not at all. The gentle, lisping phebe chooses to nest under bridges across which wagons and trucks pass frequently with a deafening roar. If the bridge is under railroad tracks, where the racket is much greater, it's all one to phæbe. The gravel roof of some high office building in the noisy centre of the city is often the chosen nesting place of Mrs. Night Hawk. The creature more harrier by nerves and noise is the one that makes the most noise of all. That's man!

Change Name of Nushka.

The Postmaster-General has issued the order that the name of Nushka village will be changed to Val Gagne. The change is in honor of a gallant priest who died in the bush fires of
