FIGURES DO LIE.
Prices are only Relative

REGAL ENGINES are the highest priced engines, yet they are the cheapest.
They are the highest priced engines because they cost more to build.
They are the cheapest engines, because they will last twice as long as any other engine.
They are also the cheapest engines because they save your time, and "Time is money."
If you shut your eyes to this real bargain in engines, you will be the sorriest fisherman who ever signed an order.
You will lose more money than you can afford to lose, and your oil bills will be twice as large.
REGAL ENGINES use less oil, have more power, run with less trouble and give more genuine satisfaction than any other engine on the market.
We are, in the near future, going to ask all cash for REGAL ENGINES, so buy one before we make this change, as we intend to make them the "Hall Mark" engines of Newfoundland.
We ship REGAL ENGINES complete, with full book of instructions, and when once installed in your boat, any child can run one.
REGAL ENGINES are higher priced than other engines, but are the cheapest in the long run, because they run the longest.

THE AGILITY and prodigious leaping powers of the KANGAROO are famed all the world over. Its agility, however, is excelled by the ease and quickness with which Sunlight Soap

expels dirt from the clothes in the wash. SUNLIGHT SOAP enjoys well-earned and world-wide distinction as a Soap of the first quality. Its reputation is maintained by the £1000 Guarantee of Purity given with every bar, and by the good report of millions of housewives who use it daily.

WHY NOT TRY IT.

Machine Guns of Allied Armies Marvels of Kind

British and Belgians Use Lewis Weapon, Automatic Rifle—French Prefer Hotchkiss Model—Both Simple in Construction, "Fool Proof" and One Man Model.

The present war may be very aptly described as a war of mechanics rather than of men, and amongst the mechanical contrivances the prolific use of which justifies this definition, the machine-gun takes a leading part. Whilst the capability of this weapon as a man-killing device has never been in doubt, the weight and constant immobility of the existing models materially reduce their value when employed by an attacking force of infantry.

Amongst the best weapons of this type now in use may be placed the Lewis Automatic Machine-gun (which is largely used in the British and Belgian trenches, and with which the aeroplanes of these two forces are armed) and the Hotchkiss "mitrailleur portable" used by our French Allies.

Novel Mechanism. The mechanism of both these guns is operated by a portion of the propelling gas and not by the recoil, as in some other makes and, although these two models vary in detail, as will be explained later, the broad principle employed is the same, and is as follows:—

A detachable magazine loaded with a number of cartridges (forty-seven in the case of the Lewis) is attached to a suitable fixing on the barrel near its after end, the first cartridge being fed from the magazine into the firing-chamber by the first forward movement of the firing pin, which is however, arrested before the striker reaches the cartridge unless the trigger is held back. When the trigger is pressed, the striker, carried forward by the mainspring, explodes the cartridge in position in the firing-chamber. Before

the bullet leaves the barrel, under the influence of the gas-pressure, it uncovers a hole connecting the barrel with a cylinder below lying parallel with it, and a portion of the gas passes into the lower cylinder, driving back the piston, and, with it, the rod against the pressure of the mainspring. This movement of the rod recocks the gun, throws out the exploded cartridge case, and during the early stage of its return journey, under the mainspring's influence, transfers a live cartridge from the magazine to the chamber.

If the gunner lets go of the trigger the firing ceases, and the gun remains cocked until the trigger is again pressed; if, however, he keeps a continuous pressure on the trigger, the weapon continues to fire until all the cartridges in the magazine are exhausted, the rate of continuous fire being as high as 440 rounds per minute in the case of the Lewis gun, including the interval occupied by replacing empty magazines with loaded ones.

Heat Rapidly.

The dissipation of the intense heat developed by the almost continuous combustion of explosive charges in the barrel of the machine-gun presents a somewhat difficult problem, and failure to accomplish this efficiently causes the barrel to become red-hot and prematurely to explode the incoming cartridge. The barrels of the Lewis and the Hotchkiss guns are both cooled by means of ribs which radiate the heat into the atmosphere, those of the Lewis being placed longitudinally and contained in a steel casing, through which cool air is drawn by the "exhausting" effect of the powder blast in the muzzle end of the casing, in the same way that the air is drawn through the fire box of a locomotive by the blast of the exhaust steam in the chimney.

It is practice in the case of the Hotchkiss gun to carry spare barrels, so that the hot one can be detached and replaced by a cool one before it reaches a dangerous temperature; the air-blast scheme on the Lewis gun, however, keeps it so cool that this never becomes necessary.

The recoil on the Lewis gun is absorber—or rather, counter-balanced—in a very simple and ingenious manner, the gas from the discharge being directed by means of a cone attached to the muzzle of the barrel proper, on to the inner surface of the casing, so that the friction between the gas and the metal casing tends

to carry the gun forward with the stream of gas, and so counter-balances the force of the recoil acting in the opposite direction. The mainspring of the Hotchkiss gun takes the form of an ordinary coil-spring acting in compression situated in the cylinder underneath the barrel; while the same unit in the Lewis is a spring of the type used for the mainspring of a watch, but naturally of a much greater power. This spring is coiled up in a circular case attached to the gun just in front of the trigger, in a position sufficiently far from the barrel to be unaffected by the heat, and, consequently, in no danger of losing its temper from overheating. The Hotchkiss mainspring acts directly on the piston rod, which it surrounds; whilst the Lewis is coupled to its rod by a rack and pinion.

How it Works.

The magazine of the Lewis gun is circular in shape, the forty-seven cartridges with which it is loaded lying radially in two layers with their bullets pointing towards the centre. The complete cycle operations in the Lewis gun is as follows: The explosion of the cartridge in the chamber causes a gas-pressure, by way of the hole, on the piston. This pressure drives back the piston and its rod, and winds up the mainspring by means of the rack and pinion. In its backward course the piston rod carries with it the bolt, which, when in the firing position holds the cartridge in the chamber. The bolt at the moment of firing is firmly locked against the base of the cartridge, but it is caused to make a partial revolution, under the influence of the backward motion of the piston-rod, by the engagement of the post carrying the striker with a cam-slot in the bolt. This partial revolution disengages the lock on the bolt from corresponding blocks in the fixed part of the gun body, and leaves the bolt, to draw the empty cartridge, the piston rod, and, by means of the extractors fitted in the sides of the bolt to draw the empty cartridge case out of the chamber until the ejector, by striking it on the left-hand side, can throw it out through the slot in the right-hand side of the action. The ejector is a flat bar curved towards the bolt at both ends, lying alongside of the latter in such a position that the bolt, on its passage backwards, strikes the after end of the ejector, and, in doing so, throws its front end forward until it strikes the case and so ejects it.

Nearly "Fool Proof."

When the piston rod reaches its extreme backward position the bullet has left the barrel and the gas pressure on the piston is relieved; the mainspring therefore comes into action and the rod travels forward, carrying with it the bolt, the front end of which engages with the after end of a cartridge dropped from the magazine above and carries it forward into the chamber. The bolt, having arrived at its forward position in contact with the cartridge now in the chamber, the piston rod (and with it the striker and post) still travels forward, and, by the action of the cam-slot in the bolt, causes the latter to be partially revolved, and, consequently, securely locked before the striker reaches and explodes the cartridge, which it does at the forward end of its stroke, starting the cycle of operations over again.

The Lewis gun is designed in such a manner that the only tool necessary to dismantle it completely is an ordinary service cartridge, the point of whose bullet is used to disconnect every portion of the mechanism; and this operation is such a simple matter that the gun can be dismantled, and any small damaged part replaced, well inside five minutes. The weapon takes the service ammunition, and its range is similar to that of the service rifle. When used on a fixed mount, the butt stock may be removed and a "spade handle" substituted.

Aeroplane Flew Over Quebec Town.

Affidavits Were Secured by Inspector Rioux, of Enemy Alien Staff.

The first really definite confirmation of the recent reports as to the advent of aeroplanes flying at various places in the Montreal district, was brought to Montreal last week by Mr. G. H. Rioux, assistant to Mr. C. G. Ogden, K.C., Registrar of Enemy Aliens. In his report to the Registrar, Mr. Rioux presented affidavits from reputable citizens of both Rigaud and St. Andre, testifying that they had seen an aeroplane the previous Sunday. These affidavits, made by prominent citizens of both places, were so explicit and tallied so exactly that there can no longer be any doubt that Rigaud was visited by an aeroplane on Sunday night.

As soon as the reports were published in the Montreal papers that aeroplanes had been seen in the vicinity of Rigaud, Mr. Ogden sent Rioux out to investigate. The officer visited Rigaud, and followed the track of the aeroplane thence to St. Andre, which is only 28 miles from the border. He took affidavits from citizens who had seen the air craft, and in

Banish Pimples!

Pimples, Boils, and other skin eruptions are an almost infallible indication that the blood is impure. Abbey's Effervescent Salt is the simplest and most positive Blood Purifier that can be used. When we have perfect digestion we must have pure normal blood, which supplies healthful nutrition to all the organs and tissues of the body; and as a result we must have healthy functions and the absence of disease in any form. Abbey's Effervescent Salt produces this condition by ensuring healthy digestion and the elimination of all morbid matter from the system. Sold everywhere at 25c. and 60c.

Sold everywhere.

this way secured an authoritative account of its movements, and even a description of the machine itself.

In his report to Mr. Ogden, Inspector Rioux stated that the aeroplane had been seen by a number of people at Rigaud last Sunday, between nine and half-past ten in the evening. It was flying at a height of about 700 feet, and was clearly visible, carrying a strong light. The machine was described as apparently an ordinary biplane, with two men in it, the pilot and a passenger, and a number of those who made the affidavits swore they had clearly distinguished the machine and observed the two men in it. The machine hovered for some time over Rigaud, and then disappeared in the direction of St. Andre, Que.

Mr. Rioux followed the trail to this place and found numerous citizens who had also seen the biplane. These persons also made affidavits that they had seen the aeroplane, describing it in the same manner as had those at Rigaud. According to this evidence, the last seen of the air vessel, it was travelling rapidly at a height of about 700 feet in a southeasterly direction, toward the American boundary.

What adds to the significance of this aerial incursion is the fact that the powder works of the Curtis & Harvey Explosive Co., are located at Rigaud, and the aeroplane was hovering over this plant for some time. What has not been explained is the fact that the aeroplane was carrying a powerful light, an unusual thing for any aeroplane at night, since it would naturally be guided by its ground lights and a light on the craft would prevent the occupants from seeing those on the earth. In addition to this, any airship coming with hostile intent would certainly not advertise its presence with a glaring light. The whole proceeding adds to the aerial mystery, which is not only exciting the people around Montreal, but engaging the active attention of the Military and other authorities.

PAGE OF SECRET HISTORY.

"Mr. H. Wickham Steer, more than any living writer, knows the secret history of the weeks which preceded the great war," says the Mail. "He has disclosed a good deal that is not yet public property in his little pamphlet 'L'Angleterre et la Guerre' (Paris, 1914). In this he shows, inter alia, the extent of German intrigue and influence in this country. He makes some most important statements: That the Kaiser in a letter promised Austria his full support in a great war on July 14, 1914; that there is documentary evidence that one of the Kaiser's advisers saw this letter; and that on the 16th it was believed in Germany that the Austrian Emperor had signed the ultimatum to Serbia that same day."

FERROVIM The Invigorating Tonic For Sudden Exhaustion, Thin Blood, General Debility \$1.00 per bottle, Davis & Lawrence Co., Montreal

THOMAS TO SEE FOR HIMSELF.

Ottawa, July 27.—After holding several conferences with the Canadian Shell Committee and with members of the Government, D. A. Thomas, M.P., and his associates, representing Mr. Lloyd George, the British Minister of Munitions, have decided to make a tour of inspection of east-coast munition factories starting on next Friday. They will visit Montreal, where they will inspect the plants of Vandrouill, Belloni, the Ansel shops, etc., and will go thence to Nova Scotia, where the Nova Scotia Steel plant, the Dominion Iron and Steel and other firms engaged in the work of making munitions and explosives will be inspected. It is likely that further inspection will be made later on other plants in other parts of the Dominion. It is the purpose of the British representatives to ascertain at first hand the capacity of Canadian plants and their ability to make the various parts required.

THE THOUGHTS OF THEOBALD.

"THE CHILD IS FATHER TO THE MAN."

I heard a delightful story the other day about some boys, which illustrates how much can be accomplished by education rightly directed. They were taking part in a concert and were asked to sing a song very much in vogue of late months.

But to the surprise and consternation of the concert manager, they absolutely refused to sing the song, because their singing teacher had said it was bad music! "Out of the mouths of babes!"

There is the seed of the future, there the Hope of Religion and the Hope of all we call Good. And yet knowing this, how slack are we in letting education proceed along lines that do not raise it above the ordinary activities of life. The boys of to-day are the men of to-morrow, and even so, they are to a great extent, what we make them. The child is a great imitator. It learns our language from our speech and to a certain degree thinks with us, and learns the difference between good and evil from us. Should not Education then be the First Object in any country?

If these boys had been taught to sing everything and anything, they would not have known any difference between good and bad music, and if all children were taught as these evidently have been, there would be less market for bad music in the world and people would not rest satisfied as they do with every jingle that pleases the ear, and there would not be the thousands of trashy songs turned out as they are by the bushel to-day—especially in the U. S. A.

But we cannot understand why a song that we like should be bad, and in this we are little better than children who do not understand why their parents cannot let them do as they like sometimes. When they get older, they realize that their parents were right, and in the case of music, it is simply a case of education for the most part.

To most of us it is easier and pleasanter to yield to a sense-tickling inclination, and goodness knows the ways are many and wide for us.

EDUCATION.

Of course we cannot manufacture children to our hearts' desires, though much of our so-called education leads that way. The child's powers and intellect are fired at birth and we can only co-operate in helping the child to a knowledge of his powers and to find through them the occupation in life for which he is best suited.

Therefore it is absurd to have any hard and fast curriculum for no two children are wholly adapted for the same system of instruction on the same end in life. The child's nature must expand. It must become conscious of its own powers and the line of life for which these powers shall best find development. Not by comparative examination by any means—there should be no violent or strained effort—no envious or arduous effort—

in any exercise of body or mind. Let him will to work for the work's sake, and not to surpass his schoolfellows. The aim of the teaching ought to prove to him, and to strengthen in him his own separate gift, not to puff him into swollen rivalry, maybe with these who are greater than he.

The child's mental rank must be found—it cannot be manufactured. Therefore how needful it is that there should be schools where boys and girls would learn exactly what they are fitted for in life.

Do our schools fulfil these conditions in any way? After all I think it is just as well to let the C. H. E. die and pass away with other mistakes of our day. There are those in its body who, I have no doubt, will rejoice in its demise as much as any of us, though to say this will doubtless put me in Dr. Curt's bad books and I shall be classed among these of "crass ignorance" or "unmitigated prejudice."

Let us evolve a better scheme and elect the proper Government to see it through.

Our scholars are taught by the score and the same things are taught day in and day out whether the knowledge will be of use to them later or not. Our schools make cultivated machines—walking dictionaries. If the boy's parents have money he goes to a University and happily may get his degree and eventually become a doctor or a lawyer. The poor boy, whose latent talents are all undiscovered, goes to a Water Street office!

ONE CAUSE.

This matter lies largely at the door of bad blind Government. Governments are too much wrapped up in their game of petty politics to trouble about the greatest asset of any land—the child.

The illiteracy of our City and our Outports is a shame to us—it is a shame to the churches, which do not use their collective power to force recognition of the greatest hindrance of human progress—ill-educated or uneducated man.

I look to the day when a Government of warm, pulsating sensibility will attack such problems as Education, whose Head and whose officials will not hold their positions by reason of their political faith, but by reason of their tried ability as Educationalists, in the highest, deepest, and broadest sense of that comprehensive term.

DUST.

The Council has been laying the dust, with a great deal of success, of the use of a tar oil.

I have been requested to ask the Council whether it is part of a plan or by chance, that the streets which have been treated happen to be in the best residential localities. Is it only by chance, too, that Waterford Bridge Road, which has perhaps fewer

houses than most streets, and which is blessed by good country air, has been further blessed by this dust preventing oil?

I wonder if the Public Health Officer ever tries to get at the bottom of the cause of any disease—say diphtheria—that appears in the city at intervals. There is a cause somewhere waiting to be rooted out—in our case it is fortunate that nature seems to root it out after a short while.

In this time of war, a good many writers are dissecting Germany and her ways. Many actions of hers, her evident, whole-hearted preparedness for war, we do not want to copy, but it is forced upon us that with our haphazard unpreparedness for war, there are some things which belong to health and progress in which we have fallen behind Germany.

A gentleman who complained of flies in Canada because his office was near a slum, wished it was in Germany where the Government would simply order that there should be no flies and see to it that the order was carried out. A visitor to Berlin told how her hostess called her little boy to the window to see a fly on the glass—a new sight to him. There is practically no typhoid in Germany. When it appeared in a certain village, a neighbouring professor was detailed to hunt it in the hills. He found a pellucid pool near where a case had been, and by colouring the water and watching day and night, he found the colour appearing at the source of the village water supply. Here is a thoroughness in our community life which would not go astray.

WASTE.

In many a shop window on Monday mornings one will see fruit that has spoiled. It seems such a waste when there are so many that would be so glad to eat it, but whose purses cannot afford the high prices that are asked for fruit. I am told that there are barrels and barrels of fruit that have gone bad in the stores, thrown into the harbour every week. Would it not be better if the shopkeepers watched this sort of thing and made a point of giving the fruit away or even selling it for a nominal figure.

WHAT A LEMON WILL DO.

What can't a lemon do! Lemonade made from the juice of a lemon is one of the best and safest drinks for any person, whether in health or not. It is suitable for all stomach diseases, excellent in sickness, in cases of jaundice, gravel, liver complaint, inflammation of the bowels, and fevers. It is a specific against worms and skin complaints. The pippin crushed make a good drink, with sugar. Lemon juice is the best antiseptic remedy known. It not only cures the disease but prevents it. Sailors make daily use of it for this purpose. Everyone should rub their gums with lemon juice to keep them in a healthy condition. The hands and nails are also kept clean and white and supple by the daily use of lemon. It also prevents chilblains. Lemon is used in intermittent fevers, mixed with hot, strong, black coffee, without sugar. Neuralgia, warts and dandruff give way to a lemon. It cures coughs, colds and diseased lungs when taken hot before bedtime. The more we employ it internally the better we are.

There is a list for you—it seems to rival Stafford's Liniment! Pass the lemons, please!

\$1,000,000 Reward Forfeited If Remedy Fails

We hope this notice will reach the eyes of people who are troubled with constipation and bowel trouble. Dr. Hamilton's Pills have been guaranteed to cure any case within three days, and the above reward will be paid for any case resisting this greatest of all remedies.

No prescription ever written could surpass Dr. Hamilton's Pills of Man-drake and Butternut. For years they have been curing the most obstinate cases of constipation, biliousness, headaches and sour stomach. Here is your chance to test Dr. Hamilton's Pills. If they fail—your money back for the asking. Be sure you get the yellow box, and insist on being supplied with only Dr. Hamilton's Pills of Mandrake and Butternut, 25c. at all dealers.

EXPENSIVE TRIP.

Salmon fishing is a rather expensive proposition, particularly to Jas. J. Hill, who makes an annual trip to Labrador, and then distributes his catches among his friends. It is estimated that the month's trip costs \$108,000. It is explained that Mr. Hill virtually owns a large part of the St. Lawrence River Valley, in which the fishing is done, entailing a large investment. Mr. Hill also maintains an expensive yacht, the Wacoona, the year round, for no other purpose than his fishing trip, which takes less than a month each summer. Mr. Hill always entertains a large party of friends on his annual cruise.—N.Y. Fishing Gazette.

"HAZARDS OF HELEN"—See Helen in this thrilling railroad series.
FORBES LAW DUGUID, CANADA'S FOREMOST BARITONE.
THE USUAL BIG BUMPER MATINEE ON SATURDAY FOR THE LITTLE ONES.

When Will the German Fleet Come Out

One year has passed since Germany's battle ships abandoned the sea and withdrew into the seclusion of their country's inner harbors. Unconfirmed reports state that British submarines have sought them even to the entrance of the Kiel Canal only to find that the ships of the High Sea fleet had found a refuge inside the canal itself, the entrance of which was effectively blocked.

In the meantime the Allies have reaped every advantage that an overwhelming victory could have yielded. While German colonies have disappeared and German commerce has been swept from the ocean, the Allies continue to transport their troops and supplies and carry on their over-sea commerce almost as in peace. The guerilla warfare practised by German submarines has as yet yielded no military results of value.

The complete failure of their naval aspirations can be nothing less than a crushing disappointment to the German people, and particularly to one million members of the German Navy League. The Navy law of 1907 had announced the policy that German sea power would be so strong that the greatest navy would not dare meet it without imperilling its own supremacy. Pan-German lecturers had extolled the superiority of the Krupp guns, which would make their fleet superior to the British fleet when the day arrived to engage in battle.

Will the twenty-six dreadnoughts lie in the Kiel Canal throughout this greatest of wars without firing a gun?

It seems incredible. But it is clear that German naval policy has for the first year accepted the principle that a "fleet in being" is more valuable than a fleet at the bottom of the sea, while Germany, besieged clings to her submarine campaign with desperation in a futile struggle to escape strangulation.

The safety of the British Empire rests as ever with its navy. Somewhere in the North Sea the Grand Fleet of Admiral Jellicoe keeps its ceaseless watch, content with the knowledge that each day is a new disaster for the beleaguered enemy and another victory for the Allies. The submarines are helpless to restore the German flag to the seas; the British dreadnoughts remain the final arbiters of the war. In this fact lies the greatest lesson of the war. If this lesson is heeded the resources of the United Kingdom will insure our safety.—New York Herald.

ROYAL VICTORIA COLLEGE

MONTREAL
THE RESIDENTIAL COLLEGE FOR WOMEN STUDENTS OF MCGILL UNIVERSITY

MUST REMOVE THE PLATE FROM THE COFFIN.

New York, August 2.—The police, it is announced, have removed from the coffin of Charles Becker a silver plate placed there by his widow, bearing the inscription, "Charles Becker, murdered July 30th, 1915, by Governor Whitman." After a police conference, attended by representatives of the district attorney's office, Inspector Faurot, the announcement said, went to the Becker's home and informed Mrs. Becker that the inscription was a criminal libel on the governor, and prevailed upon her to permit its removal.

DR. DE VAN'S FEMALE PILLS

Restores the Vitality of Nerve and Brain; Increases "grey matter"; Tonic for all the organs of the body. Sold at drug stores, or by mail on receipt of price from SCOTT'S DISPENSARY, 1200 Chestnut Street, Philadelphia, Pa.
