AND
ASTRONOMICAL NOTICES FOR THE YEAR 1887.

Bibles, Testaments and Prayer Books at the DIAMOND BOOKSTORE.

On the left hand page of each month are given the rising and setting of the sun, with the length of the day; also the data required for Solar observations for Time, namely:—The Equation of Time (Sun fast or slow of clock) which is given for the instant of apparent Noon, and the Sun's Declination at Mean Noon, both Greenwich time, with these exceptions, all the calculations are reduced to the nearest minute of Local Mean Time, Charlottetown Latitude $46^{\circ} 13' 55''$ N. Longitude $63^{\circ} 7' 23''$ W.

If required, (as in meridian observations for Latitude) the Sun's Declination at Greenwich Apparent Noon may be obtained from the data here given by multiplying the hourly variation of Declination by the Equation of Time for the same day reduced to the decimal of an hour, and applying the result according to the conditions as under:

DECLINATION INCREASING		DECLINATION DECREASING.	
Sun slow of clock	Sun fast of clock	Sun slow of clock	Sun fast of clock

Example.—To find the Sun's Declination at Apparent Noon, Greenwich Time, on February 11th, 1887.

From the Sun's Apparent Semi-diameter, which is given to the nearest tenth of a second for each day of the year, may be found the Sun's Horizontal Parallax (which equals the apparent semi-diameter of the Earth, as it would be seen from the distance of the Sun) by dividing by the constant quantity, 107.44, which is the proportion the Sun's actual diameter bears to that of the earth. Thus, for July 1st, when the Sun is at its greatest distance, the apparent semi-diameter is $15' 46'' = 946''$, this divided by 107.44 gives 8.805 for the Sun's Horizontal Parallax at that time. So also on the 31st December the Sun is in Perigee, with the apparent semi-diameter of $16' 18.3'' = 978.3''$ gives $\frac{978.30}{107.44} = 9.1055$ for Sun's Horizontal Parallax.

The Parallax in altitude may be obtained by multiplying the Horizontal Parallax thus found by the cosine of the altitude.

On the right hand page of each month are given the Phases of the Moon, its Rising, Southing and Setting, and the time of High Water at Charlottetown, and also the bearing of the Moon at the time of full and change, the Perigee and Apogee, and the time of crossing the Equinoctial and reaching its greatest North and South Declination.

It being generally found that these Lunar Equinoctials are marked by atmospheric disturbances, the greater the more nearly their times agree with those of the Moon's changes and Perigee. * * or * * * are added where two or three of these influences concur within the space of 48 hours.

ECLIPSES.

There will be four Eclipses during the year 1887, two of the Sun and two of the Moon, of which only one will be visible at Charlottetown.

I. A Partial Eclipse of the Moon, February 7th, Greenwich Mean Time of Opposition, 22h. 40m. 26.6 sec., visible at Charlottetown, commencing Feb. 8th, 3h. 50 m., a. m., ending 8h. 19m. 13 sec., about 20 minutes after the moon sets. The first contact with the Earth's shadow will be 52° from the north point of the Moon's limb towards the east; the last contact will be 27° towards the west, a little less than the northern half of the Moon's diameter eclipsed.

III. A Partial Eclipse of the Moon August 3rd, Greenwich Mean Time of Opposition, 9h. 4m. 58.7 sec., duration from 1h. 59m., p. m., to 7h. 13m., p. m., Charlottetown time mean below horizon.

IV. A Total Eclipse of the Sun, August 18th, Greenwich Mean Time of Conjunction, 17h. 15m. 30.6 sec., line of central Eclipse passing from centre of Germany across Russia, Asia, middle of Japan to half way across the Ocean, towards Sandwich Islands.

PLANETS.

MERCURY.—Mercury will be at his greatest apparent angular distance from the Sun, west as a morning star, east as an evening star, at the following dates: March 4th, $18^{\circ} 9'$ E., April 18th, $27^{\circ} 20'$ W., June 30th, $25^{\circ} 51'$ E., August 16th, $18^{\circ} 56'$ W., October 26th, $23^{\circ} 48'$ E., December 4th, $20^{\circ} 32'$ W., between these dates his apparent motion will be alternately direct and retrograde, passing the Sun in inferior or superior conjunction.

VENUS.—Venus will commence the year as an Evening Star, with direct motion till August 29th, retrograde till October 10th, passing the Sun in inferior conjunction September 21st, and re-appearing as a Morning Star, after which her motion will be direct to the end of the year.

MARS.—His motion will be direct throughout the year. He will be in conjunction with the Sun April 24th, afterwards re-appearing as a Morning Star. He will be occulted by the Moon November 10th, 4 o'clock p. m., but will be below our horizon at the time.

JUPITER.—Jupiter will be a Morning Star, with direct motion until February 20th, retrograde till June 23rd, and direct to the end of the year. On April 20th he will be in opposition to the Sun, coming to the meridian at midnight, at his greatest apparent magnitude and least distance from the Earth.

SATURN.—Saturn will commence the year with retrograde motion, and so continue till March 17th, after which he will be direct till November 18th, and retrograde to the end of the year. He will be in opposition to the Sun January 9th, in conjunction July 18th. He will be occulted by the Moon twice, viz: November 7th, at 8h. 5m. p. m., but below the horizon, and December 5th, at 1h. 10m. a. m., only seen in northern latitudes as a near approach, the planet being about a Moon's diameter to the north of the Moon. The Earth's Orbit is now to the south of the plane of Saturn's Ring, the south side of which is now visible. It will be at its greatest expansion at the beginning of the year, being then in excess of the diameter of the planet.

Maximum expansion of Saturn's Ring February and March, 1887.

SOUTH.

URANUS.—At the beginning of the year his motion will be direct till January 17th, retrograde till June 14th, afterward direct till the end of the year. He will be in conjunction with the Sun October 5th.

NEPTUNE.—Neptune will be retrograde till March 14th, direct till September 2nd, and again retrograde till the end of the year. He will be in conjunction with the Sun May 18th, in opposition November 20th.

OCCULTATIONS.

There will be four occultations of planets by the Moon, one of Mercury, April 20; one of Mars, November 10; and two of Saturn, November 7th and December 3rd, as has been already noticed, in addition to which, two conspicuous stars of the first magnitude, Aldebaran, in the head of the Bull, and Regulus, in the head of the Lion, will be occulted, the former twelve, the latter eleven times; but of these the only cases favorable for observation will be, of Aldebaran, January 6th, 9h. 9m. p. m., March 29th, 7h. 50m. p. m., October 6th, 11h. 30m. p. m., November 3rd, 5h. 18m. a. m., and December 27th, 7h. 10m. p. m., (five times); of Regulus, February 8th, 8h. 28m. p. m., May 2nd, 2h. 12m. a. m., and October 13th, 1h. 52m. a. m.; all the others will occur either in the day time or when the Moon is below the horizon. The occultation of Regulus on Feb. 8th and May 2nd will only appear in the latitude of P. E. Island as near approach, the Moon passing about half its diameter to the south of the Star.

The importance and interest attached to these occultations is due to the bearing they have upon the question of whether or not the Moon has an atmosphere.

And GOLD MEDAL for Cotton Goods at the Dominion Exhibition at Montreal; and FIRST PRIZES at Toronto, Hamilton and London Exhibitions of 1880 and 1881; and FIRST PRIZE MEDALS at Toronto, Montreal and Kingston Exhibitions of 1882, and St. John Exhibition of 1883; and the only GOLD MEDAL given for Cotton Goods at Toronto Exhibition of 1885.

COTTON YARNS,

No. 5s. to 10s.

WHITE, BLUE, ORANGE, GREEN AND RED.

Made of good American Cotton, with great care, correctly numbered, and warranted full length and weight.

We find it necessary to call the attention of those who USE COTTON YARN or WARP to the fact that the Yarn made by us is the ONLY REAL

WATER-TWIST YARN

made in the Dominion—no other mill having the machinery on which to make it.

Our Yarn is consequently very much superior for weaving purposes to any other in the market—a fact which is well known to those who have used it for the past TWENTY YEARS.

COTTON CARPET WARP,

Made of No. 9s Yarn Twisted,

WHITE, RED, GREEN, BLUE, BROWN & ORANGE.

Each 5 lb. Bundle contains 9,000 yards in length, and will make a length of Carpet in proportion to the number of ends in width.

BALL KNITTING COTTON,

Better spun, Twisted, Bleached and Dyed, than any other in the market, in all numbers and colors, made from the finest long staple Cotton especially selected for the purpose. Particular care is taken to have the dyeing and bleaching perfectly done. Full weight in every Ball.

COTTON HOISERY YARNS,

Suitable for Manufactures of Hoisery. Better than any other made, and so acknowledged by all who have used them. These goods are supplied to all the first-class Manufacturers in the Dominion.
