© 1994

Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>									

The copy filmed here has been reproduced thanks to the generosity of:

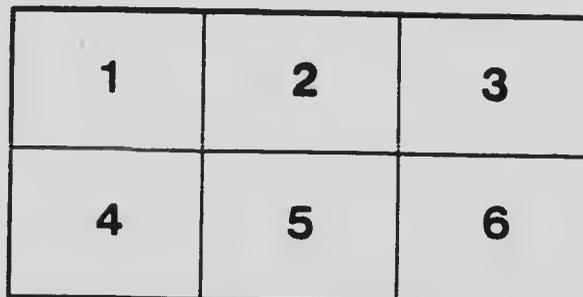

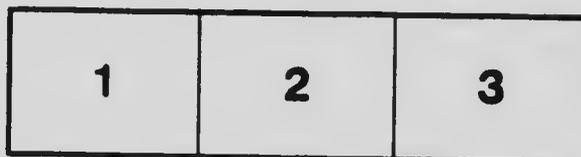

University of Calgary

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

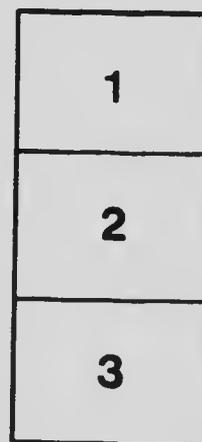

University of Calgary

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par la première page et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

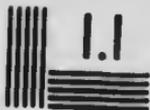

Un des symboles suivants apparaît sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

DIRECTIONS FOR ORDERING

Customers should observe the following rules when ordering goods:

Always specify **WIDTH** first then **LENGTH** or **HEIGHT** second, then **THICKNESS**.

Measurements given in inches are understood to be **GLASS** sizes.

Measurements given in feet and inches are understood to be **OUTSIDE** sizes.

The term **SASH** implies only one piece to fill opening.

The term **WINDOW** implies two pieces (upper and lower Sash).

Orders for Windows should state the number of lights in the window (glass size of same, thickness of sash and whether **check** or **plain** rail. All windows are glazed with single strength glass unless specified to the contrary. If double strength glass is required, same should be specified. Windows or sash not listed, extra price. Special orders should specify size of opening to be filled. Weights shown in this catalogue are for shipping purposes, and include crating.

Orders for Doors should state width, height, thickness, number of panels and kind of wood. Refer to designs by numbers. If design is taken from any other catalogue, state from whose book, and the date of issue.

Orders for Frames. All frames listed in this catalogue are shipped K.D. Orders for **special** frame should be specified as follows:

Window Frames. State whether for frame or brick building, with or without pulleys, together with width of jamb required.

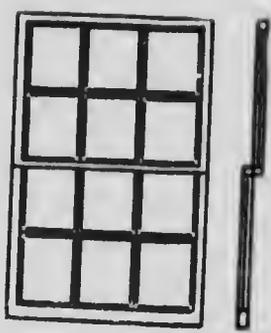

Outside Door Frames. State whether for frame or brick building, width and thickness of jamb, also thickness of doors to be used.

Inside Door Frames. State width and thickness of jambs, thickness of doors to be used, and whether made with rabbet or stop.

Orders for Mouldings should give plainly the number of the moulding. If special moulding, give exact detail or sketch.

CARE OF VENEERED DOORS

Veneered Doors being made of thoroughly kiln-dried material will, if exposed to the weather, absorb any moisture in the atmosphere, as doors are shipped as a rule in the white. If shipped local freight, we cover the doors with paper and crate them (see note on page 31). This is sufficient to protect them under ordinary conditions until they reach destination. If, before you take delivery of the doors, you find that they have been damaged by exposure or rough handling, have your local freight agent make notation of such damage on the expense bill, which you will require in order to secure claim from railway.

When taken from crate, a coat of filler or stain should be applied at once. Oak, which is a porous wood, should have a coat of filler, but birch should be given a coat of shellac unless it is to be stained, in which case apply stain first.

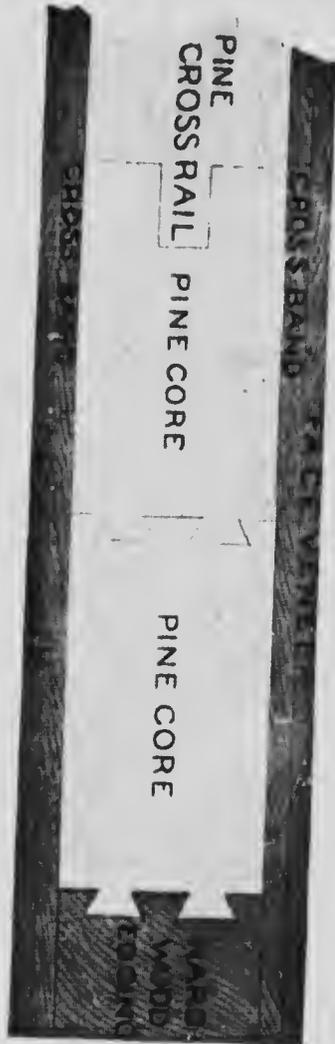

Do not put veneered doors in building until the walls and plaster are thoroughly dry.

Veneered doors as outside doors will last for years if they have been properly treated by the finisher, but should further be protected by porch or verandah. The top and bottom should be painted with at least one coat of thick paint.

Construction of Our XLCR Five-Ply Perfect Frame Veneer Doors

A section cut of our Slab Door
Showing dovetail joints, double veneers and
hardwood edgestrips

Crating Veneered Doors

Veneered Panel Doors, when shipped local freight, are wrapped with heavy paper and crated, three doors to a crate. This guards against damage in transit, and for which we charge per crate fifty cents.

We manufacture Mirrors from the best polished plate glass.

FLOORING

We stock the popular "Beaver" Brand in Maple, Plain and Quartered Oak.

Prices on request.

CUSHING BROS. LIMITED

BUILDERS' SUPPLIES

We carry a full line of Builders' Supplies, and can make prompt shipment on any of the following:

BUILDING PAPER

Plain and Tarred.

ROOFING

"The Standard of Quality."

"Outlasts tin and iron."
Carried in one, two and three ply.

FEDERAL ELASTIC CEMENT

Weather-proof. Water-proof. Wear-proof

Produces an absolutely permanent, indestructible patch. Used for repairing old and leaky roofs, sealing cracks in cistern and basement walls, repairing skylights, and a dozen and one other uses.

Put up and sold in 25 pound pails.

NATIONAL CEMENT FILLER

Makes ordinary cement floors water-proof and dust proof. Is not affected by oils and acids.

Write us for prices and descriptive matter on the above lines.

CEMENT, LIME AND PLASTER

Get our prices for mixed cars and local shipments.

Our estimating department is at your service. Submit architects' plans and specifications for complete quotations.

CUSHING BROS. LIMITED

BEAVER BOARD

Builds beautiful interiors at moderate cost.
Send for Booklets describing advantages.

The following table of sizes carried in stock will be found convenient:

48-inches Widths

Length in feet	6 in.	7 in.	8 in.	9 in.	10 in.	12 in.
Sq. ft. in panel	21	28	32	36	40	48
Panels in bundle	12	11	10	10	10	10
Sq. ft. in bundle	288	308	320	360	400	480
Weight per bble. in lbs.	111	154	160	180	200	240

Special prices on orders of 5,000 feet and over.

BEAVER BOARD STRIP

$\frac{3}{8}$ x 1 $\frac{3}{4}$ Fir	\$2.00 per 100 lineal ft.
$\frac{3}{8}$ x 2 $\frac{1}{4}$ Fir	3.00 per 100 lineal ft.

Approximately 600 lineal feet of strip required for each 1,000 square feet of Beaver Board.

Get your Beveling and Silvering done by expert workmen.
See Pages 16 and 17.

VALUABLE POINTERS FOR BUILDERS

This table gives you the amount of lumber required, figuring ordinary percentage for waste and allowing for loss in matching.

TO FIND QUANTITIES OF LUMBER REQUIRED

Studding, when laid on 16-inch centres. Estimate one to the lineal foot. This allows for doubling at openings and at corners.

Joists and Rafters, when laid on 16-inch centres. To three-quarters of the length of the building add 1. Thus: for a building 22 x 36, take three-quarters of the 36 = 27—add it to this amount, making 28. This extra joist or rafter being required for one side. For each bearing partition add one or two pieces.

Roof Sheathing Laid Solid—To full area of roof add 10 per cent. for waste. If laid 2 inches apart, three-quarters of above will be required.

ARTICLE	Count	Face Width	Loss in Matching	To area to be covered, add
Shiplap	12 inch	11 1/4	7 %	1-12
Shiplap	10 inch	9 1/4	8 1-3%	1-10
Shiplap	8 inch	7 1/4	11 %	1- 8
Flooring and Siding, 6 inch	6 inch	5 1/4	12 1/2 %	1- 5
Flooring Partition, Ceiling	4 inch	5 1/4	12 1/2 %	1- 5
Flooring	3 inch	3 1/4	19 %	1- 4
		2 1/4	25 %	1- 3

ARTICLE	Size	Exposed	To area to be covered, add
Siding, bevelled	1/2 x 4	3 1/4 inch	1- 4
Siding, bevelled	1/2 x 4	3 inch	1- 3
Siding, bevelled	1/2 x 6	2 3/4 inch	1- 2
Siding, bevelled	3/4 x 6	5 inch	9-40
Siding, bevelled	3/4 x 6	4 3/4 inch	1- 4

Shingles—

When exposed 4 inches to the weather, require 9 to the sq. ft. Add 1-10 for waste.
 When exposed 4 1/2 inches to the weather, require 8 to the sq. ft. Add 1-10 for waste.
 When exposed 5 inches to the weather, require 7 1-15 to the sq. ft. Add 1-10 for waste.

Cornices—Multiply the total lineal feet by the combined width of planceer, frieze and fascia. Thus: if the planceer is 12 inches, the frieze 8 inches, and the fascia 4 inches, the combined width is 24 inches, or 2 feet h.m to the lineal foot of cornice.

Corner Boards and Outside Base—Estimate on same plan as cornice and then add a quarter if of 1 1/4, or half if of 1 1/2 material.

Bridging—Multiply the total lineal feet, measuring each string in a straight line, by the following:

For 2 x 6, 2 x 8, or 2 x 10 on 16 inch centres by 2	" 16 "	" "	" 2 1/4
" 2 x 12	" 12 "	" "	" 2 1/2
" 2 x 14	" 12 "	" "	" 2
" 2 x 6 and 2 x 8	" 12 "	" "	" 2 1/4
" 2 x 10 and 2 x 12	" 12 "	" "	" 2 2/3
" 2 x 14	" 12 "	" "	" "

Length of Rafters to be used on the roof elevation: 1/4 pitch, take 7-12 of the width of the building

1-3	"	"	3- 5	"	"	"
3/4	"	"	5- 8	"	"	"

1/4	"	"	4- 5	"	"	"
Full	"	"	1%	"	"	"

CUSHING BROS. LIMITED

VALUABLE POINTERS FOR BUILDERS

(Continued)

To the above lengths must be added the amount of projection at the eaves. You will find that a third and a half pitch are most commonly used.

Add also to make stock lengths. For length of rafter on one-way roofs, take the rafter given for double the width. Thus: the rafter for a one-way roof on a building 10 feet wide, 4th pitch, is that given for 20 feet wide, or 11 feet 2 inches. In area of gable above given no allowance is made for waste or laps. To verify above or obtain length of rafters for buildings of other widths than above given, multiply the width of building by .559 for 4th pitch; 6 for 3rd pitch, and by .71 for half pitch.

Capacity, in bushels, of cribs or bins, each 8 feet high in the clear:

3	Width					Length	Width				
	8	10	12	14	16		18	22	26	30

617	1646	2057	2468	2880	3291	32	3703	4525	5348	6171	

How large a bin shall I build to hold 800 bushels? This is a very common question, and to answer it and similar ones instantly is the object of above table. Thus: how long a bin 8 feet wide and 8 feet high is required to hold 800 bushels of wheat?

Run down the 8-foot column until 823 (the nearest amount to 800 bushels) is reached, and opposite, in the centre column, headed "length" is 16, the length required.

NAILS REQUIRED

Nails (wire) to the 1,000 feet.

1,000 ft.	B.M. framing	.. 10	lbs. 20D.	No. in. 15.	35.	Length	3 5/8 in.

For cut nails add one-third

PAINT REQUIRED

Paint required to cover 100 square yards.

- Priming, 20 lbs. white lead and 4 gallons linseed oil.
- Two Coat Work—40 lbs. white lead and 8 gallons linseed oil.
- Three Coat Work—50 lbs. white lead and 12 gallons linseed oil.
- Three Coat Work { 1/2 pint shellac for knotting.
- { 1 lb. putty.
- { 3 or 4 lbs. color pigment.
- { 4 1/2 gallons mixed paint.

VALUABLE POINTERS FOR BUILDERS

(Continued)

BRICK REQUIRED

In Chimneys to the Foot in Height		In Walls to the Surface Foot		
Size of Chimney	Size of Flue	No. of Brick Ft. in height	Thickness of Walls	No. Brick to Surface Ft.
16 x 16	8 x 8	30	4	7 1/2
20 x 20	12 x 12	40	8	15
16 x 24	8 x 16	40	12	22 1/2
20 x 24	12 x 16	45	16	30
20 x 28	} two flues, each } } 8x8, brick lined }	} 75	20	37 1/2
24 x 10				

Brick run from 20 to 22 to the cubic foot.

One bushel of cement and 2 bushels of sand will cover 3 1/2 square yards 1 inch thick, 4 1/2 square yards 3/4 inch thick, and 6 1/2 square yards 1/2 inch thick.

One bushel of cement and 1 bushel of sand will cover 2 1/4 square yards 1 inch thick, 3 square yards 3/4 inch thick, and 4 1/4 square yards 1/2 inch thick.

One thousand lath will cover 70 yards of surface, and 11 pounds of lath nails will nail them on; 8 bushels of good lime, 16 bushels of sand and 1 bushel of hair will make enough good mortar to plaster 100 square yards.

A cord of stone, 3 bushels of lime, and a cubic yard of sand will lay 100 cubic feet of wall.

FINISH OF HARDWOOD DOORS

Filling—Open grain woods require a paste filler, and this should be applied after the staining, if a stain is desired. The filler should be rubbed into the pores of the wood thoroughly and allowed twenty-four hours at least to dry after which the surface should be thoroughly sandpapered. It is then ready for the first coat of varnish. When stain is used in connection with filler, the shade of filler is usually the same as the stain, unless a contrast is desired for special effect.

Exterior Finishing—For outside doors a high grade of exterior varnish should always be used; two coats will give good results. Do not use shellac as a priming coat, but apply the varnish directly to the surface of the wood, and when thoroughly dry, sandpaper with 000 flint paper, the second or final coat should be left in the gloss.

A varnished surface should not be exposed directly to the weather as water will ruin the surface.

Interior Finish—For interior doors apply a coat of thin shellac to the natural or stained surface of the door and when dry, sand with 00 flint paper. Apply first coat of interior gloss varnish, allow to dry thoroughly, then sand with 000 flint paper. Apply second coat of same varnish and let dry. If third coat of varnish is desired, sand first with 000 flint paper.

Rubbed Finish—For rubbed finish on interior doors, use interior rubbing varnish. Proceed the same as for gloss finish, rubbing the last coat when thoroughly dry with pumice stone and rubbing oil to an egg shell gloss.

For rubbed finish on exterior doors, proceed the same as for interior doors, but use a good grade of exterior varnish.
