

THE OBSERVER

Vol. 3

HARTLAND, N. B., May 16, 1912.

No. 48.

Wall Paper

Our assortment is still complete, ranging in all values and patterns, the daintiest designs of this season's productions.

We want to sell paper and we want to sell lots of it, too. Therefore buying here you buy from a person anxious to sell and that is the time to look for liberal concessions in the matter of prices.

It is better to buy from our large stock than to send to mail order, for you can see the goods. It is better to buy from us than from agents, for you know the vexation of having your supply fall short. Then a dead loss if you have any over.

We will take back full rolls if you order too much; but we recommend that cash purchasers bring the dimension of the room to be papered, height of ceiling and number of windows and doors. We then can give you the exact number of rolls.

Ready-to-Wear Hats

These are in every way as stylish and classy as those made to order. The price is a little less and the assortment sufficiently varied to suit everybody. Many of the prettiest hats you see came from this store.

THE DAYLIGHT

INFORMATION ON THE ROADS.

Coun. Morgan Gives General Outline on Expenditure.

EDITOR OF OBSERVER:

In your issue of May 2nd your editorial states that it would be of interest to your readers to have some information regarding the road expenditure of the parish of Brighton. You make reference to grant of \$1700.00. I presume you refer to the government grant of \$1776.44 as reported by Public Works department.

The amount was expended as follows:

| | |
|---|------------|
| By Commissioners for roads | \$1140.11. |
| Cement block Co. Hartland | 411.05. |
| Balmain Bros. and Clark & Co. (machinery) | 127.00. |
| Com. to Commissioners | 98.28. |
| | 1776.44. |

The Commissioners of last year have all been reappointed for 1912.

District No. 1 George Tedlie;
" " 2 Clyde Rideout;
" " 3 W. C. Craig;
" " 4 Wm. Orser;
" " 5 J. W. Lawson.

One not familiar with the work would gather from correspondent that the whole amount of grant was placed with the Highway Board to be expended at their discretion. This is incorrect.

The way the money is received is briefly this: The Secy. of Highway Board is notified in June or July; that the parish of Brighton has been apportioned a certain amount of money. The Board is notified and the amount divided among the Commissioners, each one is notified that he will have a certain amount to expend in his district. Statute labour having been performed he expends the grant where in his judgment it is most needed.

When this is completed to his satisfaction he makes a sworn return, which is certified to by chairman and Secy. of Highway Board.

The return is forwarded to

the Public Works department, audited, and the cheque, when received, is placed in the Bank of Montreal to the credit of Highway Board.

Usually the Commissioners draw out the full amount of his return and pay the different persons returns, and get vouchers signed by them as having received the sum due. Occasionally the Commissioners will authorize the Secretary to pay the different persons the amount due them, taking the receipt direct.

The Board is much pleased with its Commissioners and a great improvement is seen in the roads during the past two years which shows that an honest effort has been put forward by Commissioners, road masters and rate payers as a whole, to better the condition of one of not the greatest asset of our Parish—good roads.

The Public works department has, we believe been very generous with us, having repeatedly given us special grants. We also consider ourselves fortunate in having as a resident of this parish a representative of the government, and who knowing the needs of the parish has assisted very materially in our receiving such liberal treatment.

I trust the reply is not too lengthy and that it contains the information your correspondent desired.

Respectfully Yours,

E. C. MORGAN,
Chairman Highway Board.
Brighton.

Don't forget that while J. T. G. Chase is handling British Columbia properties he is also sales agent for Tisdale Place and Bay View Lots Courtney Bay, St John where the big harbor development is to take place, if you prefer to invest nearer home. Any of these are good money makers. Lots are selling fast. Don't get left.

For sale at a bargain: one set rubber tired wheels, good as new. R. B. Owens.

Here's an Easy Puzzle!

Find the POINT!

IN February last I bought out the general store of I. M. Tompkins of East Florenceville and have been doing a large and rapidly increasing business since. I have put in a

Complete Stock of New and Up-to-date Goods

in all general lines—Dry Goods, Clothing, Footwear, Furnishings, Ladies' Suits, Rain Coats, Blouses, Skirts and Underskirts; also Groceries, Hardware, Jewelry, Paints (the famous Sherwin-Williams); Oils, Patent Medicines, etc.

My Mount Pleasant Store

is replete with all these lines, as usual—my trade there steadily increasing all the time.

Now Watch for the Point!

By having TWO STORES to buy for I buy in much larger quantities than my competitors and therefore sell much CHEAPER than they can.

Do You Get It?

Buying cheaper I can Sell Cheaper. That is where YOU WIN, Mr. Buyer. See the Point? Don't forget it!

When in need of Anything give us a call at either The Bridge Store at East Florenceville or the "Old Reliable" at Mount Pleasant. Space will not permit me to give details his week. But now you have found the Point, don't forget it when reading my future ads.

S. W. SMITH

General Merchant--Two Stores
Mount Pleasant - East Florenceville.

SOIL FERTILITY.

Principles by Means of Which It is Restored or Maintained.

Soil fertility can be restored and maintained in any agricultural region by the persistent practice of simple systems of farming. The growing of leguminous crops, the turning under of green manures to make humus and the systematic rotation of crops are absolutely essential. In most attempts to rebuild soils the use of the element phosphorus is equally important. With the exception of swamp or peaty types, all soils are adequately provided with potassium. Nitrogen can be secured through clover, alfalfa, cowpeas, soy beans, vetch and the like. No farmer should buy commercial nitrogen for ordinary field use. Truck farmers and gardeners require it in this form for quick action in small areas, but farmers can obtain an abundance of the element practically without cost by growing legumes.

In order to make these restorative crops attain proper growth most soils east and many types west of the Mississippi river must be limed. Failures with the clovers are due almost altogether to an excess of acid in the soil. Ground limestone applied at the rate of from 1,000 to 30,000 pounds per acre neutralizes the acid and increases the supply of available calcium, thus rendering the soil more hospitable to legumes. Inoculation to insure the presence of bacteria is also sometimes necessary. Legumes that do not form tubercles on their roots do not fix nitrogen. Each legume has its own special bacteria. Soil taken from a spot in which sweet clover is established can be used in inoculating for alfalfa, these legumes having a common organism to serve them in deriving nitrogen from the air. About 100 pounds of soil per acre is sufficient. It should be obtained from a successful field or plot of the particular legume which it is desired to grow.—Breeder's Gazette.

Business methods in buying and selling receive too little attention among farmers. The way and manner of using the income from the farm is quite as important as a large yield and a good profit.

Homestead Land Roller.

A friend of mine writes that he has lived sixty years, but has just found out how to make a land roller that actually does the business, says a correspondent of the Iowa Homestead. He gets a section of round galvanized iron culvert material. He prefers to have it at least two feet in diameter and corrugated. The section is as long as you wish to make the roller. It is turned on end, and an iron axle or rod of axle size is placed exactly in the center. The inside is then ready to be filled with cement mortar. Let it cure for two weeks before using, setting occasionally during that time. A frame is bolted to the axle, of course.

Potato Fertilizer Formula.

One that is used by many large potato growers in the vicinity of New York city is made up as follows: Nitrate of soda, 127 pounds; high grade dried blood, 440 pounds; acid phosphate, 400 pounds; land plaster, 33 pounds. The greatest profit resulted when these fertilizers were mixed and applied at the rate of 1,000 pounds per acre in some tests at the New York experiment station.

To Learn Feed Does Not Pay.

Knowing the value of cooking feed for live stock, extensive trials were made at the North Dakota experiment station in feeding boys and cattle raw feed and cooked feed. It was found that more pounds of grain were made from a given amount of feed when fed raw. Potatoes were an exception, as they gave the best returns when cooked.

Let every farmer give his farm the degree of L.L.D.—lime, legumes and drains.—Rural New Yorker.

Dairy Doings.

It takes two-thirds of all the good cow milk to keep her alive and without loss of flesh and the other third of ordinary good rations to enable her to give milk. The expense of two-thirds of the money earning rations has to be incurred when the cow is earning nothing.

Timothy hay is better than nothing as a feed for dairy cows, but it is worth more to sell on the market.

A good supply of alfalfa will cut down the bean bills. If the cow's teats are made sore from exposure to cold or wet weather an application of carbolyzed vasoline after each milking will remedy the trouble if used when it first appears. The best hay feeds for dairy cows are clover, alfalfa, cowpeas and soy beans. They contain a large percentage of protein, which is a great milk producing element.

The world's champion milk cow produced nearly nine tons of milk last year, and advocates of dairying in preference to beef production call attention to the fact that this cow is prepared to repeat such performances for many years, while the beef animal goes to the block to produce cash for its owner.

The secret of dairy success in Holland is easily understood and may be stated in a few words—efficient cows, excellent care, co-operation and superior quality of butter and cheese.

Farm and Garden

FIGHTING BEE DISEASES.

Work of Department of Agriculture in Keeping Down Pests.

The honeybee annually produces a crop of honey worth at least \$20,000,000, and there are vast opportunities for increasing this output. The most serious handicap to beekeeping in the United States is the fact that there are contagious diseases which attack the brood of the honeybee. There are now recognized two such diseases, known as American foul brood and European foul brood. From data recently obtained by the United States department of agriculture it is known that American foul brood exists in 282 counties in thirty-seven states and European foul brood in 180 counties in twenty-four states, and it is estimated conservatively that these diseases are causing a loss to the beekeepers of the United States of at least \$1,000,000 annually. This estimate is based on the probable value of the colonies which die and the approximate loss of crop due to the weakened condition of diseased colonies. The distribution of these diseases is by no means fully known, and they are constantly spreading.

The cause of American foul brood has been found by the department to be a specific bacterium, and enough is known of the cause and nature of European foul brood, which is also a bacterial disease, to make it possible to issue reliable recommendations concerning treatment for both diseases. Both attack the developing brood, and

Photograph by C. M. Barnes. AMONG THE HIVES.

is the adult bees die from old age or other causes the colony becomes depleted, since there are not enough young bees emerging to keep up the numbers. When the colony becomes weak bees from other colonies enter to rob the honey, and the infection is spread.

Both of these diseases can be controlled with comparative ease by the progressive beekeeper, but the chief difficulty encountered in combating these diseases is the fact that the majority of beekeepers are unaware that any such diseases exist. They therefore often attribute their losses to other sources and nothing is done to prevent the spread of the infection. It is therefore necessary in most cases to point out the existence and nature of the diseases as well as to spread information concerning the best methods of treatment. Several states have passed laws providing for the inspection of apiaries for disease, and the beekeepers in other states are asking for the same protection, so that careless or ignorant beekeepers can be prevented from endangering their neighbor's bees. This inspection is a benefit in the spread of information concerning disease in so far as the inspection can cover the territory. The department of agriculture is helping in this work by sending out publications to the beekeepers in infected regions by examining samples of brood suspected of disease and by sending out information concerning the presence of disease, so that beekeepers will be informed that their apiaries are in danger, the co-operation of agricultural colleges, state beekeepers' associations and other similar agencies being urged. Every person interested in beekeeping should find out as soon as possible how to recognize and treat these maladies and be on the lookout for them. A publication containing a discussion of the matter will be sent on request by the department of agriculture.

Watch Your Alfalfa Seed.

Many farmers are willing to take risks in buying cheap alfalfa seed, which frequently contains enough weed seeds to affect the stand very seriously. Russian thistle can hardly be detected in alfalfa seed, nor can it be blown out or removed by screening, and it is the same way with the dodder.

MORE CROPS ON LESS LAND.

The problem is not how much land you have, but how well you cultivate it. Make the hay land produce nine tons per acre, and four or five acres of hay will be enough. Make the corn land produce 200 bushels per acre and cut down the area to one-fourth. Do the same with other crops, and you will soon find that you have much more land than you can possibly cultivate.

The SLATER SHOE

A Shoe without a reputation may not be useless but is ten times more difficult to sell than a Slater Shoe (born A. D. 1869). Every sale of a Slater Shoe means a Satisfied Customer and a Living Advertisement for

NIXON'S Shoe Store

And here are other Good Shoes:

WHY the "Gold Bond Shoe" is a long-wearing investment—Expert shoe-making and choicest material.

Smiles of Satisfaction

will chase themselves across your face when you see how smart and swaggar this cool and comfortable Gold Bond Oxford looks on your foot. It's a sturdy wear-repeller, too.

A Safe Shoe

The Gold Bond Shoe is a safe shoe to buy. You can rely on it to give you long and satisfactory service, because expert skill and trustworthy leathers were used in the making.

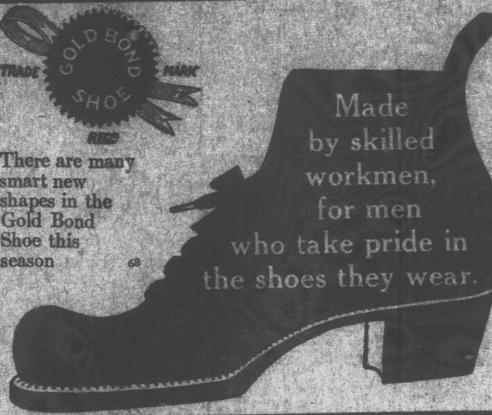

A Smart one

A dressy patent leather shoe of very high-grade stock. Shapely and graceful, with little style touches in design, to give it individuality. A handsome shoe, certainly.

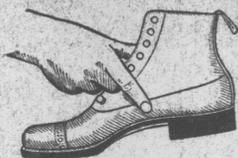

There are many smart new shapes in the Gold Bond Shoe this season.

Made by skilled workmen, for men who take pride in the shoes they wear.

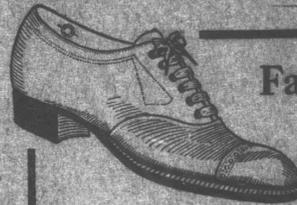

Gold Bond Natur-Arch

Side View—Showing Raised Shank, which snugly fits the arch, does away with the steel shank and assures flexibility.

THE Gold Bond Natur-Arch fills a long-felt want. It is a "true-to-Nature" sl. e. designed to

correct foot-weaknesses and strengthen the muscles. Throw away your plates, arch supports, etc. Wear this wonderfully flexible and comfortable shoe.

Fashion and Comfort go hand in hand in the

Gold Bond Shoe. Added to these there is a lasting durability. What more could you or any man want?

It pays to buy a "fine" shoe, like The Gold Bond, both for the sake of true economy and the satisfaction there is in wearing a high-grade article.

Ladies!

Our Women's shoes have long been looked up to as the standard of good wearing quality. We have achieved the reputation of Handling a shoe which typifies perfect protection of the woman's foot. But We do more. We have women's shoes in styles which are irresistible to the feminine taste—styles which adorn and beautify the small shape—which looks so attractive on the foot.

VOL. 3 MAY, 16. No. 48

WHERE THE MONEY WENT.

The Observer thanks Councilor Morgan for some information as to what became of the road grant for the Parish of Brighton. It will be read with much interest. The largest item, more than eleven hundred dollars, it is shown, goes to the road commissioners, who, presumably, paid it to "various persons" whose names are not given. Nor yet are we told where or how this money was spent.

We happen to know expensive repairs and a new sewer was required at Maple street, Hartland, and it is said that the Rockland road has been greatly improved. We believe about \$400, was the cost of the sewer and about \$175, the cost of the other work.

Councillor Morgan does not say if the road tax receipts formed a part of the grant. We should judge by his letter it did not, for the amount of taxes "worked out" was not deducted.

On the whole the roads of the parish should show the result of the judicious application each year of the statute labor, the road tax and the grant, which in a few years should put the roads in fine condition; the result should be very apparent today.

The Observer gives Coun. Morgan the privilege of "saying a good word" for his friend Premier Flemming. We should, however, have done that gentleman a favor to have expunged the allusion. What our representative in the government has done in this parish is nothing compared to what he has done for other parishes, notably the one wherein dwells James K. Pinder, M.P.P. and railway magnate.

For the parish of Southhampton—or its reigning King—Mr. Flemming provided a railway with the peoples' money. The people of Brighton asked him for similar aid—and they have not forgotten it.

"LANDRY, HUBBARD AND CO."

The present issue of "Maritime Farmer" reports how a large and representative number of Nova Scotia fruit growers met on April 12th to hear the Report of the Delegates to the Fruit Conference at Ottawa.

It will probably be a cool day sometime about next July when our own three delegates, Horticulturist Turney, Manager Parker of Hubbard, Slipp and Co. at Burton, and Brown-tail Moth Chaser, C. N. Vroom, of St. Stephen, make their report, for if we may believe account published by Mr. Adney, these three persons on reaching Ottawa and finding that they would have to take sides, either with the fruit growers of Canada in their demands, or with the government which did not want to grant said demands, they acted the part of discretion and before the questions came to vote they packed up silently in the night, hat, shoes and hymn-book, and came home. Mr. Adney who went to Ottawa at his own expense to support the fruit growers, seems to have been the only real representative we had at a Conference of just this much importance that it will result in changes in the law on the subject of fruit packing. Mr. Adney has further shown that said "delegates" did not even represent our Provincial Association, as was intended they should, but quietly met and appointed themselves and kept the whole thing quiet from the hungry odd "members" of the As-

sociation, who are induced to chip in a dollar for membership for apparently the mere privilege of entering a few apples at the show in St. John.

It begins to look as if the Fruit Growers Association, like everything else, is regarded merely as an adjunct of the department of Agriculture. We are commencing to realize that the Department of Agriculture has been sold to Landry, Hubbard and Co. We cannot otherwise understand how our two Tory representatives, Flemming and Munro, can quietly stand by, with abundant and timely warning of everything going on, and let the pie be carved unless they have traded their share of the pie for "cake".

They have sold out the county, all right, and the only question is what they got from Landry, Hubbard and the rest of the "agriculturists", for the right to exploit the Department of Agriculture in the interest of their friends and political heelers.

Miss Katie E. Shaw Goes West to Wed.

Miss Katie E. Shaw, daughter of Mr. and Mrs. Stephen Shaw of Windsor went two or three weeks ago to Holbrook, Mass., to visit relatives. An interesting event follows the visit as the following clipped from a Boston paper will show:

Miss Katie E. Shaw of Holbrook left this morning on a trip which will take her to Manitoba, where she will be married to David M. McKenzie, a wealthy contractor in Brandon. Miss Shaw and her intended husband first met at her birthplace in New Brunswick. She is to visit relatives in Auburn, Me., for a few days before she makes her long journey.

Last Saturday evening a large number of her friends in town called on her at her home on Pleasant St. and gave her a linen shower. Upon her arrival in Manitoba the wedding will take place, and she will make her home there in a new residence which her husband has erected.

Successful Somerville Farmers.

G. B. Nixon has purchased the McGee farm of 200 acres at Somerville. This adjoins the Boyer farm which he bought last year and the combination makes upwards of 400 acres of as fine farm land as there is in the world. The buildings are new and right up to the minute in conveniences. The location is ideal, being half a mile from the station on a down-hill road. If there is any money in a Carleton county farm this one should sell out.

Miles Rideout is another Somerville farmer who is making the said bring forth something. His original farm was the homestead of his father-in-law, the late Samuel Sipprell, and consists of about 160 acres. Less than four years ago he acquired 50 acres of the farm then owned by Charles Stevens, and a short time ago bought from George Beckwith about 100 acres more. He also has the J. W. Stevens farm under lease and works altogether something over 300 acres. Besides he has a quartette of rugged boys not all of them in their teens yet, who are enthusiastic in the independence of farming.

All the Somerville farmers are prosperous; and they all voted for reciprocity. They follow mixed farming and find much profit in such lines as butter, milk, cream, eggs and poultry; but swine, horses, potatoes and grain yield them the greater part of their revenue. These farmers do not sell so great quantities of hay as others who live farther from market—a strange fact, as one would think if there is any profit in hay it would be with those who can load at least a car a day.

G. B. Nixon is getting together a fine herd of Ayrshire cattle.

There never was a time when people appreciated the real merits of Chamberlain's Cough Remedy more than now. This is shown by the increase in sales and voluntary testimonials from persons who have been cured by it. If you or your children are troubled with a cough or cold give it a trial and be acquainted with its good qualities. For sale by all dealers.

Little Presque Isle Rifle Club.

The Little Presque Isle Rifle Club had their annual meeting on May 6th, elected officers and attended to other business. S. G. Barter who has been captain for a number of years resign-

ed his office and William Lawrence was elected.

Other officers were elected as follows:

1st Lieut. Bert. Rockwell; 2nd Lieut. Chas. Delong; Secy Arthur DeGrass; Committeemen: L. L. Estabrooks; John McLinnis; Jno. Jones.

The shoot days chosen to compete for the Dominion silver salvar: May 24, June 1, 3, and 15. The silver salvar, which was won by Henry Galivan of Deerville, in 1911, has been received. This salvar is a beautiful trophy and well worth winning.

"Who will win in the L.P.I.C.R.A. in 1912?"

It would surprise you to know of the great good that is being done by Chamberlain's Tablets. Darius Downey, of Newburg Junction, N. B., writes, "My wife has been using Chamberlain's Tablets and finds them very effectual and doing her lots of good." If you have any trouble with your stomach or bowels give them a trial. For sale by all dealers.

New Brunswickers in the West.

A letter recently received from Gideon Phillips, who for years represented Pool parish at the Council board, states that he is well and happy at Central Park, B. C.

Mrs. C. B. Colwell who went from Hartland a year ago says the scenery and climate in Edmonds, B. C., is delightful. The wildflowers have appeared and crocuses bloomed in January.

Chas. H. Gayton, formerly of Knowlesville, writing from Summerland on April 23 says "Peaches, apricots, cherries and other small fruits are in full bloom."

Buy at Home.

We believe in trading with home merchants. You can see what you buy, get what you want, and cause a larger circulation of your money at home. One of the most striking and pointed illustrations of the advantage of buying at home is given in the following:—which might easily be depicted in Hartland when a man went to buy a saw. He saw the kind he wanted and asked the price. It was \$1.65 the dealer said.

"Good gracious," said the man, "I can buy the same thing at the T. Eaton Co., Toronto, for \$1.35."

"That's less than it cost me," said the dealer, "but I'll sell it on the same terms as the mail order house just the same."

"All right," said the customer, "You can send it along and I charge it up to my account."

"Not on your life," the dealer said. "No charge accounts. You can't do business with the mail order house that way. Fork over the cash."

The customer complied.

"Now two cents postage and five cents for a money order."

"What?"

"Certainly, you have to send a letter and a money order to a mail order house, you know."

The customer, inwardly raving, kept to his agreement and paid the nickel.

"Now, twenty-five cents for expressage."

"Well, I'll be—," he said, but paid it, saying, "Now hand me that saw and I'll take it home myself and be rid of this foolery."

"Hand it to you? Where do you think you are? You're in Hartland and I'm in Toronto, and you will have to wait two weeks for that saw."

Whereupon the dealer hugged the saw on a peg and put the money in his drawer.

"That makes \$1.67," he said. "It has cost you two cents more and taken you two weeks longer to get it than if you had paid my price in the first place."

Humor and Philosophy

By DUNCAN N. SMITH

PERT PARAGRAPHS.

SOMETIMES the worst thing a man has against his mother-in-law is that she gave his wife her instructions in cooking.

Defined.

"What is a lie?"

"A lie."

"If it is what your rival says about you it is the language of inability."

The Real Test.

"There goes an honest man."

"How do you know?"

"He told me so."

"Have you tried loaning him a book?"

Title-Clear.

"Is he a veterinary surgeon?"

"No."

"Then why do you call him 'Doc'?"

"Because he docks horses' tails."

Had His Reasons.

"He claims that he doesn't understand a thing about women."

"Ever been married?"

"Only five times."

Better That Way.

"If love is blind, as some are sure; if in its sight there's a restriction, you need not offer it a cure. It glories in the grand affliction."

They Are Rarities There.

I went to breezy Gotham, and I visited the zoo. I wished to see the nimble bat. The zebra, and the gnu. And there I found a mighty mob. And cried, "What is it now?" And butted through the gaping crowd—And saw a Jersey cow!

Cleveland Plain Dealer.

Chance For Imagination.

"It must be lots of fun being a reporter."

"It is."

"What part of it do you find most interesting?"

"Making out my expense account."

Domesticated.

"He beats the record for staying at home."

"And that isn't all he beats."

"Not his wife?"

"No; just the rug."

When a woman gets furious at her husband her best wish is that she might pick out his second wife.

The man who can't afford to go south tells his friends how he enjoys the bracing cold.

Local News and Personal Items

A. R. Rigby visited Woodstock on Tuesday.

C. T. Boyer of Florenceville was at the Exchange on Monday.

W. T. Hatfield of St. John was at the Commercial this week.

H. H. Smalley was in Woodstock on Monday and Tuesday.

The C.P.R. is inaugurating a system of observation cars through the Austrian Tyrol.

A. J. Martin of Grand Falls and Rankin Smith of Woodstock were in Hartland by auto on Monday.

In spite of a cold and backward spring grass is coming in fine shape and many farmers will be able to turn their cattle to pasture on the 20th.

The summer timetable of the C.P.R. will go into effect on June 2. The people are expressing the hope that the early and late express service will be resumed.

TO LET—the store on Main street recently occupied by Reed Chase. Apply at once to F. T. Atkinson, district manager N. B. Tel. Co. East Florenceville.

S. W. Smith still has a small quantity of timothy and clover seed at both stores. Anyone requiring either should purchase now as stocks throughout the county are almost exhausted.

D. F. Pidgeon, manager of the Eastern Terminal Realty Co. of St. John was here last week and in conjunction with their agent, J. T. G. Carr, succeeded in selling several building lots at Courtney Bay to some of the shrewdest business men of the village.

United Baptist services next Sunday: At Upper Brighton, 3 o'clock, when the right-hand of fellowship will be given to one person; usual service at Hartland at 7.30. It is expected there will be baptism at this service. The young men's Baracca class, held at 2.30, is flourishing.

Mrs. J. Sterling King of Halifax arrived here on Tuesday and is the guest of her parents, Mr. and Mrs. D. E. Morgan. She was here to look after the welfare of some children located in Carleton county by the Middlemore Homes, of which her husband is superintendent at Halifax.

William Goss, who recently came from Leeds, England, has been appointed lay-reader to assist Rev. A. S. Hazel, rector of Woodstock. Mr. Goss was in Hartland yesterday and will hold service in Burt's hall next Sunday at an hour to be announced later. Services will be resumed at Hartland regularly every second Sunday.

The C.P.R. is installing on the railways in Switzerland, Austria and Italy a line of their famous observation cars, for the accommodation of the tourist traffic. The cars, although built in Austria, are modelled after those in use in Canada, which are the finest in the world. Canadians who visit the Continent will now have an opportunity to see the beauties of the Alps never so good.

Mrs. George McCollom was in Woodstock on Saturday.

Arthur S. Estabrooks has pickles in bulk and bottles.

Chas. K. Palmer of Fredericton was here on Tuesday.

W. Burton Morgan returned last week from Trinity College, Toronto.

Flour, feed, fertilizer, garden and field seeds, course salt, brick, etc., at Carr's.

Sunday last was the first warm day of the season, the thermometer registering 76 degrees.

Mrs. H. M. Stevens returned on Saturday to her home at Somerville for the summer.

John E. Sayre and C. E. Leonard, St. John, were at the Exchange on Monday and Tuesday.

Young Pigs for Sale: Good stock, ready for delivery May 16. Henry Ginson, Somerville.

W. H. Dobbie of the Bank of Montreal staff has been transferred to Peterborough, Ont., and left on Monday for that city.

J. T. G. Carr does not have as large a stock of boots and shoes as his competitors but he can beat their prices on what he has as he is closing out this line.

LOST: Between Waterville Corner and Rosedale a sum of money. Finder will be rewarded by returning it to—Henry J. Seely, Waterville.

C. J. Smalley and H. H. Smalley intend going west next Monday to remain a few months. They will go first to Saskatoon but will also visit the coast.

John Barnett, Esq., went to Fredericton yesterday to attend the encenia of the U.N.B. His son, Josiah H. Barnett, graduates in arts and stands fourth in the large class of 42.

J. W. Adams & Son are doing a business in lines outside of the undertaking business. They are making special prices on a dandy kitchen cabinet, sell a bang-up cream separator, have a fine line of carriages and something extra good in scales.

Large shoals of gaspereaux are in the river. During the past week Carey and T. C. Baker of Victoria have been doing a rushing business netting them at the mouth of the Little Presque Isle. They brought 30 cents a dozen and found a ready sale.

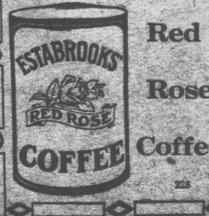

All the stores in Hartland and vicinity, and in Bristol will be closed all day on May 24. The merchants of Bristol have also agreed to close their stores on Monday, Wednesday and Friday evenings commencing the first Monday in June.

Keith & Plummer have just received an extensive line of house furniture suited to all needs: Parlor suits, bedroom suits, buffets, chiffoniers, brass beds, cotton goods, carpet squares, linoleums and oil cloths. They offer better value than mail order houses.

The Bitter Chaff Removed

The men who blend, prepare and pack Red Rose Coffee know well what will please good judges of coffee. They crush—not grind—the fresh-roasted bean into small, even grains which brew readily and settle quickly to pour bright and clear. The chaff is removed, and with it the bitter essence you have disliked in other coffees. You will surely like

Farmers have cropping well in hand and the weather is all they could desire.

A. R. Rigby and C. J. Smalley left for Saskatoon yesterday. Mr. Smalley going a week sooner than he expected.

Be sure and read the new ad. of S. W. Smith on the first page and if you "find the point" don't forget it.

Now is the time for garden seeds. A. S. Estabrooks has Steele-Briggs' best quality in bulk and packages; also alfalfa seed.

Rev. S. W. Schurman has been appointed chaplain to the 67th Regiment and will go into camp at Sussex with them.

This is a good year to buy your wire fencing as it is much cheaper than last year. H. N. Boyer sells the fence that wears.

Chas. J. Laskey of Avondale was here yesterday, expecting to meet his daughter, Mrs. F. E. Watson, of Topsfield, Mass., whom he had not seen for five years.

M. B. Cox has moved into one of Hagerman's tenements over "The Daylight" store and Alfred A. Moore has moved into the tenement over the hardware store.

H. N. Boyer has a few second hand stoves suitable for summer kitchens for sale cheap, also usual stock of ranges and heaters. June 3rd, the King's birthday, will be observed as a holiday in all the schools in the province. The schools will close for the summer vacation on June 23 and reopen on Aug. 26. The normal school will close on June 7.

That over \$13,000,000.00 of Life Insurance was written by The Manufacturers Life Insurance Co. last year, shows the popularity of its policies with the Canadian people.

"To the splendid business ability of Hon. Mr. Fleming can justly be attributed the position which the province now holds in the financial world" says the Fredericton Gleaner. It is credited to the Premier's business sagacity that while he guaranteed to keep the expenditures of the province within the income, he last year went behind \$56,000 and the province had the largest income it ever had.

A SPANISH ROBINSON CRUSOE Lived on a Little Island for Three Years.

In the quaint "Commentaries on the Incas," written three hundred years ago by Garcilaso de la Vega, he was himself half-Spanish and half-Peruvian, occurs the story of a Spaniard, a man whose adventures might well have served for as the basis for Robinson Crusoe.

Serrano was a sailor on a ship sailing from Cartagena to the Isthmus of Panama, was wrecked in the Caribbean Sea. Serrano, the survivor, was cast upon the shore of a little island about half-way between Jamaica and the Isthmus.

Serrano soon discovered that the island contained no water, or timber, or anything, apparently, on which to sustain life. He passed the night bewailing his misfortune.

The next day he explored the island. He caught some crabs, oysters, and other things which he ate for he had no fire. Then he saw turtles coming from the sea.

One, he carried in on his shoulders, where, with his sailor's knife, he cut off its head and drank blood to quench his thirst. This he repeated on succeeding days with other turtles as he was able to procure.

The flesh of the turtles he cut up and dried, the shells he caught the rain when it fell. He was able to provide himself enough to eat and drink.

He gathered some pebbles, using his knife as a "steel," and much labor got a spark that he took from his shirt. He could driftwood from along the shore, built fires at night, and preserved his "coals" from being extinguished by rains in the time.

As he lived for three years, as he said that he still kept his reason. He suffered much from the heat and since he had no clothes, could get relief from its burnings only by plunging into the sea.

With the long exposure to the elements, the hair all over his body grew excessively long; his beard extended to his waist.

One afternoon Serrano was awakened to find a man on the island. He had landed with others in a passing vessel, but had got among the sand-hills and been lost by his comrades.

When he was alone, he was the more surprised. He perceived that Serrano was "all one himself," for his body was shaven from head to foot with coarse hair.

He stared at the other, and the other cried out, "Jesus deliver me, have mercy!"

Then Peter began in a loud voice to repeat the creed. On hearing that, the stranger came forward, and crying out, "We are now Christians," embraced him in tears.

After this the two lived together, divided their labors, and worked on the hours by day and during which each should care for his fires, that they might not die. They quarreled, of course, almost came to blows; but rather than fight, they became reconciled, and lived together amicably for four years.

At the end of that time a Spanish ship passed quite close to them, and seeing their fire burning, sent a boat to their rescue.

When Peter Serrano and his companions, who now looked as wild and hairy as he, came down to the shore, the men refused to take them on board, for they believed them to be devils. So repeating the creed, and calling on the Saviour for deliverance, they plunged into the water after the boat.

Thereupon the sailors lifted them into their boat, and brought them to the ship.

Serrano's companion died on the voyage, but Serrano himself reached Spain, and went over to France, where the king then was. There he told the sufferings through which he had passed, and pointed to his beard, which he wore as it was, in proof of his story.

His imperial majesty awarded him a pension payable in Peru. He died later in Panama.

HUMORS OF COAL STRIKE.
High Price Paid by Thief—Boarding School Girls Hire a Bus.

The British coal strike has its humorous as well as its tragic side. A woman in Kirkcaldy, Scotland, had her entire stock of coal stolen, a wee bit to be sure, but precious. She felt that the joke was on the thief when she found a woman's purse, evidently dropped by the thief, and containing four shillings and sixpence.

At this rate of compensation coal in Kirkcaldy would cost \$45 a ton.

Then the girls of a fashionable boarding school at Brighton have managed to overcome difficulties due to the strike in a way that has turned woe into enjoyment. Like the pupils in nearly all the boarding schools of the country, they were confronted by the prospect that owing to the curtailed railroad service they would be unable to take their trunks with them when they went home for the Easter holidays.

Thirty of the girls made a contract with a London omnibus company to place an extra large motor bus at their disposal for \$60, which included sending the bus to Brighton and bringing the girls to London. Their trunks were put inside, and the girls sat on top of the bus.

On the Farm

FRESH vs. ROTTED MANURE.

Most people have an idea that rotted manure is a much more valuable fertilizer than manure fresh from the barn or yards. This idea prevails because of the heavy, compact nature of the rotted manure. The value of manure is determined by the amount of various elements of fertility contained therein. These elements are mainly nitrogen, phosphoric acid and potash. They are usually figured at fifteen cents, six cents and five cents per pound respectively. On this basis a ton of fresh barnyard manure is worth \$1.95. A ton of rotted manure is worth \$2.04, or only six cents more. When the fact is considered that it takes nearly two tons of fresh barnyard manure

MR. J. L. HUGHES,
School Inspector of Toronto.

to make one ton of rotted manure, owing to the loss from evaporation and leaching, it can be seen that much of the fertilizing matter originally contained is lost in the rotting process.

A report gives some interesting observations on the experimental use of fresh and rotted manure. Both were used on the corn and wheat crops, in comparison with unmanured land. The yield of corn on unmanured land was 33.1 bushels per acre. On land dressed with rotted manure, a yield of 65.1 bushels was secured; and where fresh manure was applied, the yield was 70.7 bushels per acre. The increased yield of corn from the use of rotted manure was 27.6 bushels, and from the use of fresh manure 32.6 bushels, an increase of five bushels per acre in favor of the fresh manure.

On the wheat crop the effect was similar, though not so marked. On the unmanured land, the wheat yielded 16.7 bushels per acre; where rotted manure was used, 19.1 bushels; and on the land dressed with fresh manure, 19.7 bushels per acre were secured. The increase in favor of the fresh manure was only six-tenths bushel per acre on the wheat crop.

While the increased returns are comparatively small in both cases, it illustrates clearly the fact that fresh manure is at least as good as the rotted manure, and for some crops even better. The prevention of loss by leaching and in the rotting process should be kept in mind, and the saving in labor by applying manure fresh from the barn is worthy of consideration. It should not be understood that the coarse, fresh barnyard manure is adapted to all crops. It would not be suitable for certain forms of garden and vegetable crops; and even for the small grains, on light soil, it probably would not give as good results as the rotted manure. Where manure is applied as it should be, however, on the grass land or just ahead of the corn crop in rotation, the coarse, fresh manure is better adapted to the succeeding crop than the rotted manure. The heat, and the effect of the acids developed in the process of decomposition, aid greatly in liberating plant food and result in greater crop yields.

Some objections may be made on the score that weed seeds or possibly plant diseases are spread with the unrotted manure. Where applied as suggested above, however, at the proper place in rotation, neither the weeds nor the plant diseases resulting therefrom will be a serious consideration.

The late winter and early spring offer many opportunities for getting manure on the land. These should be taken advantage of; though one should avoid driving over the land when it is very wet from melting snows or from heavy rains. The good effect of the manure may be entirely offset by bad handling of the land.

What the world needs is less good advice and more good example.

HELD UP RESTAURANT.

Masked Robbers Murder Four and Rob Many in Russian Town.

A dramatic story comes from Rostov-on-Don, Russia. A band of ten robbers killed the proprietor of a restaurant there, the cashier and two waiters, robbed the place and escaped.

The restaurant is situated in the business section of the town, and it was rather crowded with dinner customers at the time of the raid. The robbers, who wore masks, rushed into the place, and while three covered the cashier and the owner with their guns the other seven told the customers that they would be killed if they offered any resistance.

The cashier and proprietor attempted to knock down the men who had covered them and were shot dead. The robbers then rifled the safe and relieved the customers of their valuables.

Two waiters who had been previously covered by guns made an attempt to disarm some of the men and they too were killed. The robbers, after they had taken every-

UNBREAKABLE GLASS.

Unbreakable glass, for which there might be a demand just now, was invented nearly 2,000 years ago, according to Petronius and Dion Cassius, though Pliny casts doubts on the story, says the London Chronicle. An artist appeared before Tiberius with a cup of glass which he dashed violently on the ground. It was neither broken nor cracked, but merely dented, like a piece of metal. Then the man produced a mallet and hammered the cup back into its proper shape. Tiberius, however, asked whether anybody else knew the secret, and when the artist, proudly answered, "No," had him instantly beheaded. The emperor feared that such glass would terribly depreciate the value of the precious metal.

He—Madam, you promised to obey me. Do you do it. She—Sir, you promised me your worldly goods. Do I get 'em?

THE BERKSHIRE HOG.

One of the Most Popular of the Lard Type of Swine.

Berkshire hogs have good dispositions, are good looking animals and are first class feeders, says a South Dakota swine raiser in the Orange Judd Farmer. The sows are good mothers, good milkers and raise large, even litters of pigs. They are better rustlers than some other breeds and can be fattened almost at any age. There is always a demand for them on the eastern market, and they seem to me to be one of the best bacon hogs. I also prefer the Berkshire breed because they seem to be more healthy.

Another hog grower has the following to say of the management of the sow at farrowing time:

The first day after farrowing give the sow nothing but a little water. For several days feed her sparingly, and the little pigs will clean out her

Photo by United States department of agriculture.

The Berkshires breed is one of the old and well established lard type of hogs. In form they are long, broad, deep and well muscled. They are shorter on the legs and have a better developed ham than the bacon type. In color the breed is black, with white points in the face, on the tip of the tail and on the feet. Sometimes a splash of white is seen on the fore leg. The nose is short, the face dished, and the ears stand erect, without a droop at the tip. The illustration shows a Berkshire sow in fair show condition.

udder and prevent its caking. We do not feed corn or cornmeal to sows suckling litters. It has a tendency to dry up the milk and give the pigs the scours. The best of all food is separator milk. After the pigs are two weeks old feed the sow milk and wheat middlings or ground oats or ground barley, making a thin slop. Let them suckle the sow until two months, or ten weeks old, for the best part of their nourishment comes through her. When the pigs are three or four weeks old fix a place out of reach of the sow where they can have access to a low, flat trough and feed milk. As soon as they eat it eagerly add the following ration: Five pounds of oatmeal, ten pounds wheat middlings, fifteen pounds cornmeal mixed. Add milk and give them all they will eat up clean within twenty minutes. We feed the pigs three times a day until they are suckling and five times a day after they are weaned. After a month drop to three times daily. For fattening hogs increase the corn after they weigh 125 pounds, but for breeding purposes omit the corn. If you haven't milk hot water and feed it warm and sweet.

Petit Suisse or Cream Cheese.

Petit Suisse cheese is essentially the same as Neuchâtel, but differs slightly in shape. According to bulletin 106 of the United States department of agriculture it is made as follows:

The milk, preferably fresh, is set at 85 degrees F. with only so much rennet as is necessary to secure the desired coagulation in twenty-four hours in summer and from thirty-six to forty-eight hours in winter. The curd is then inclosed in cheesecloth and drained for twelve hours, after which it is subjected to pressure after another period of twelve hours, after which it is thoroughly kneaded by hand or in the larger factories by means of a curd mill and pressed into tin cylinders about two inches in diameter and three inches high. The cheeses are removed from the molds, salted and replaced. After draining for twenty-four hours they are transferred to the so called drying room, where they become covered with white and later with blue molds. They are then taken to the curing cellar, where the ripening process is continued for three to four weeks. The appearance of red spots on the surface is taken as an indication that the ripening has progressed far enough. The cheeses are then wrapped in tin foil and marketed.

FEEDING THE FARM HORSE.

The horse should receive some water the first thing in the morning. After watering the horse is fed a small amount of hay and then given grain after all the hay has been eaten. By this plan the feed which is the most difficult to digest is left in the stomach and therefore receives proper digestion. The noon feed should be given after the horse is cooled and has been allowed to rest for fifteen minutes or half an hour. A small quantity of water may be given soon after the horse is brought to the barn. Feed hay and when the animal is thoroughly cooled give all the water he desires, after which feed the grain. At night feed the same as at noon, only give more hay. In fact, feed as much hay at night as is given at both morning and noon meals. When a horse is working hard and is fed large quantities of grain it is found advisable once a week to give a bran mash for the evening meal. The bran acts as a laxative and prevents indigestion and possibly a case of colic.

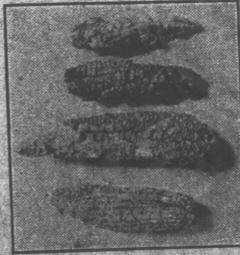

STAGGERS INVESTIGATED.

Moldy Corn Believed to Be the Cause of the Deaths of Many Horses.

According to a bulletin issued by the Kansas State Agricultural college experiment station, blind staggers, sleepy staggers, mad staggers or meningio-encephalitis has occurred in outbreaks of greater or less severity in many sections of the United States. In addition, there seems to be a continual loss of horses from staggers in any locality in which much corn of an inferior grade is fed. A certain green corn mold, known scientifically as *Aspergillus glaucus*, is blamed.

The contents of the bulletin may be briefly summarized as follows:

Feeding horses upon immature corn badly infected with molds and worms

CORN DAMAGED BY MOLD.

(From bulletin of Kansas State Agricultural college experiment station.)

dirt with its accompanying bacteria, produces typical cases of staggers.

The extract of such corn is rapidly fatal to rabbits.

Aspergillus flavus, *Aspergillus niger* and *Rhizopus nigricans* (molds) have been found abundantly on the corn only in localities which lose horses from staggers.

Corn containing any molds should be thoroughly cleaned or "hotted" before feeding.

Mixing corn with bran and oats seems to lessen the danger.

Treatment to be effective must be begun early.

During the course of investigations it was found that in some localities cases which were reported as staggers were in reality typical cases of parasitism produced in horses by the parasite worm in the intestines and blood vessels, the error arising from the similarity of some of the symptoms of the two diseases.

The observations have not been sufficiently extensive to determine the relation between staggers and the so-called cornstalk disease. The latter is the name popularly applied to many disorders of the digestive tract in cattle and horses, some of which are clearly not the result of any poison or toxin. It seems that neither the seasons nor the localities in which many cattle have died in the stalk fields coincide with those in which severe outbreaks of staggers in horses have occurred.

For Digging Post Holes.

Any farmer can easily make one of the tools shown in the illustration, says a correspondent of the Orange Judd Farmer. It is very simple and requires no outlay of money for material. An old ax or a broad piece of steel with one sharp edge is bolted to a handle in the manner shown. Two holes must be drilled through the end opposite the sharp edge. The handle enables the worker to use the tool with ease in cutting off small roots while digging holes for fenceposts.

POST HOLE DIGGERS.

One great reason why some men win on the farm is because they keep the ends tucked in. If you want to freeze on a cold winter night let the bedclothes get pulled out at the foot. Farming is just that way. Don't let the bedclothes get pulled out at the foot.

Live Stock Notes.

The first cross animal in swine breeding makes a good feeder. It is also well known that if crossbreeding is carried further than the first cross one rapidly runs into inferior stock.

Try how the frosted bridle bits feel in your own mouth some of these crisp mornings and you'll warm them up the next time before putting them in the dumb, helpless horse's mouth.

Good bedding is not only comfortable and beneficial to the stock, but it absorbs many juices and liquids which otherwise would be lost, retaining them to be deposited on the fields as valuable fertilizers.

In winter as much variety should be furnished the pigs and cows as possible. They need some roughage. They will eat clover hay and cornstalks.

Pigs intended for market should weigh between 250 and 300 pounds at ten months of age or less. To make this weight they must be pushed from birth to market day.

Sheep are the greatest fertilizers of all the farm stock. The old saying that the hoof of the sheep is golden is true enough. Sheep return to the soil 80 per cent of fertility from the food eaten.

DAIRY SHORTHORNS AS MILK PRODUCERS

The ideal cow is one that will produce a large flow of rich milk and a calf that goes to make a fit animal, writes a Minnesota dairyman in American Agriculturist.

The Durhams we know years back possessed these qualities, and many of the Shorthorns of today are good milkers, but to make a success of dual purpose cattle we must give them the attention that is necessary to develop good milkers. It is not advisable to pick out certain good cows of the herd and give them special care in order to secure a big milk record, for such work is misleading. What we need are more practical work and the record of every animal, so that we may know whether or not the herd is profitable.

My herd numbers about 100 head, young and old stock, and has always been kept for the two purposes, milk and beef. Our steers have for the past twenty-seven or thirty years brought us more money than steers raised lacking the proper breeding, and our cows are not equaled by any herd of any breed in the northwestern part of the state.

Thirty-one cows produced an average per cow of 6,474.6 pounds of milk; average per cow, 313 pounds of butter fat; total value of butter fat, \$2,103.40; average per cow, \$69.72. Sold to butchers cattle to the amount of \$1,536, and a few for breeding purposes were sold, making an income of over \$4,000.

Mr. N. Arthur Simpson, writing of milking Shorthorns in Hoard's Dairyman, says:

Here in this country some good records have been made, especially within a year or two as breeders have become awakened to the merits of these cattle.

Rose of Glenside in a semi-official yearly test completed March 9 of last year made 18,075 pounds milk, her best day's record being 62.5 pounds milk

Dairy Shorthorns are the result of breeding. They have been developed from the old milking stock of this country and England, identifying dairy merit through many generations. In England they are the leading dairy breed, winning the milk and butter tests at the leading shows against all breeds and making good records in yearly production. There they have records showing 14,000 pounds of milk in one year. The illustration shows Snowflake, a registered Dairy Shorthorn cow owned by N. Arthur Simpson of Vermont.

and her average for the entire year 49.5 pounds milk per day.

It is interesting to know that the champion Ayrshire record is 18,072 pounds milk in one year, the champion Jersey record less than 18,000 pounds, while but one Guernsey has exceeded Rose's milk record.

Panama Lady made 13,754 pounds milk in one year, and Lolla 12,341 pounds at the University of Missouri, while the two-year-old Juliet has recently completed a record of 10,395 pounds milk in one year with first calf. Twenty American Shorthorn cows have made yearly records that average 11,486 pounds milk each.

Ration For Growing Pigs.

It is impossible for any one to say what is the best ration for growing pigs. The feeding capacity of one differs from another. We have been feeding for years, yet are all the time looking and anticipating some way to produce better results, writes an Ohio farmer in the National Stockman. Sometimes we think we are feeding more grain than necessary; then again we think we are not feeding enough. As a rule, more pigs are underfed than overfed. We find a good ration for developing youngsters is five pounds of O. F. oatmeal, ten pounds of wheat bran or middlings, fifteen pounds of cornmeal and one pound of salt well mixed in a barrel with milk and warm water. Feeding all they will eat up clean morning and night. If you have apples, cabbage or roots, feed them at noon. After they have eaten their evening slop feed them one pound of corn to each pound of live weight of pigs. Ground wheat, barley or oats can be substituted for a portion of the bran and middlings if desired.

Feeding the Calf.

No farmer can afford to start his calf off in any other way but well. The calf should have a sufficient quantity of whole milk until its ration can be made partly skim milk or whole skim milk without danger of stunting. The calf has no use for more than three-fourths of a gallon of whole milk per day for the period of a week. At the end of a week begin the substitution of skim milk slowly, increasing the quantity of skim milk and increasing the total quantity of milk fed until three weeks old, and at the end of this time, if pains have been taken in teaching the calf to eat, he will then be able to go on to a skim milk ration entirely with the addition of a feed night and morning of Indian corn or Kaffir corn, whole or ground, and with what roughage he will eat will thrive and continue thrifty. The calf is worth too much at this time to slight it in any way.

BROWN SWISS BREED OF DAIRY CATTLE

It is sometimes claimed that the dairy quality of the Brown Swiss breed has been improved and the breed "refined" by the American breeders who have cultivated this breed for the last thirty years, writes E. M. Barton in Hoard's Dairyman. The method of "refining" has consisted in feeding the calves less liberally, while they are growing and in breeding the heifers about a year earlier than is the Swiss practice, thus making them lighter and leaner than they would be if they had had the usual care that is given to young cattle in Switzerland. By following this practice for two or three generations the normal weight of the cows is reduced two or three hundred pounds, and this is done without spoiling the cows for milking purposes.

Whether this practice takes off something from the milk and butter quality and whether it takes off something from the useful life of the cow is hard to prove one way or the other, but I hold to the theory that the breed being of the highest dairy quality and at the same time of considerable weight, as it has been bred for hundreds of generations in Switzerland, the chances are that the "refining" process, so called, which has gone on in this country is in reality a stunting process and that by liberal feeding of the calves, as is practiced in Switzerland, and comparatively late breeding of the heifers we shall keep to the true Swiss type and have better milk and butter yields and longer life.

There were at the national dairy show in Chicago last fall two cows, Lorna Lassie and Mornie, that represent five generations of American breeding. The former was selected by the judge as the champion cow of the breed, and the latter had made a fine record for amount and economy of production at the Wisconsin experiment station. These cows have finer bone, the hind legs are less straight, their weight under 1,200 pounds, and in the view of many experts showed the highest dairy quality. They are good milkers and good cows, but to my mind they are not as typical representatives of the breed as the big headed, strong legged, square buttocked 1,500 pound cows that are imported and occasionally raised in this country and such as you find represented in large numbers in the stables of their own country.

The normal weight of Lorna Lassie, the champion cow, is 1,130 pounds. With her second calf she gave within

The Brown Swiss is one of the standard breeds from Switzerland. It has become generally distributed throughout Europe and was first imported into the United States in 1823. Brown Swiss cattle are well adapted to conditions where a combination of dairy and beef production is sought. The size is medium. Cows weigh 1,200 to 1,500 pounds. The quantity of milk is moderately large and the fat content good. According to the American light brown or some seasons of the year gray. The cow here shown was bred in New York and made a record of 4,403 pounds of milk in 120 days.

a year 10,000 pounds of milk testing 43 pounds of butter fat and dropped her third calf about thirteen months after her second, constituting a dairy record of which one need not be ashamed. She is now making a record with her third calf which will probably surpass the former one.

Naegeli, that was exhibited at the same show, has a normal weight of 1,550 pounds. After dropping her second calf she gave within twelve months 12,016 pounds of milk testing 323 pounds of butter fat.

Treatment For Scratches.

The first thing to do in a case of scratches is to see that the horse stands in a clean stall, where no mud, dung or urine can come in contact with his heels, writes David Buffum in Farm and Fireside. Failure to attend to this is often the cause of scratches, though they also appear without any external cause, owing to some condition of the system.

Scratches are sometimes very obstinate about healing. The best external remedy that I know of is white lead. Have the sore places perfectly clean and dry and then see that they are completely covered with white lead. Bind it on with a bandage if it will not stick without one and renew the application twice a day. Meanwhile feed the animal generously, keep salt in his manger and give him enough bran every day to keep his bowels open. This treatment, if faithfully followed up, should make an improvement in him very soon, though if the case is a bad one it is impossible to say how long it may take to effect a cure.

The Hog House.

Hog houses should be located on well drained land, and any type of permanent house should be situated so as to be as convenient as possible to pasture containing shade. The land should be sloping and have no surface hollows or low places to collect water and become filthy wallows.

Our Neighbours

News of Bristol.

Mrs. Small has moved from Mrs. Daniel Jones back to the village into Mrs. Delong's house.

Henry Curtis is on the sick list again.

Miss Lila McQuade is visiting her aunt, Mrs. George Curtis.

Miss Annie Kelly drove to Gilmor's mill and got her brother, James, who has been working there.

George Britton is making a new fence around his lawn.

Russell Lockhart is very sick, Dr. Somerville is attending him.

L. Noble, our enterprising barber, is doing a rushing business barbering and selling machinery.

We are pleased to see the smiling face of John Staten back from the drive.

Miss Bernice Curtis is home after spending the winter with Mrs. Ernest Dyer.

Mrs. Foss has moved into Mrs. McLean's house, and C. Rolley has moved into the W. McIntosh house.

Mr. and Mrs. James Broad of Holmesville were visiting their cousin Mrs. George Curtis.

Mrs. Rachel Devenport has purchased a new driving horse.

Stanley Elkins and David Fulton are working on the river for George Curtis.

Mrs. Charles Boyer was calling on her sisters the Misses Jones last Sunday.

George Curtis and son, were calling on Walter Wilkinson of Lower Bloomfield who is very sick.

Mrs. Mansford Lovely is very sick. Lorne Curtis is on the sick list.

Now is the time to get rid of your rheumatism. You can do it by applying Chamberlain's Liniment and massaging the parts freely at each application. For sale by all dealers.

BATH

Mr. Seth Jones of Sussex was the guest of his daughter, who is milliner for Bohan & Co., over Sunday.

Rankine Smith and family are moving to-day to Woodstock. Mr. Smith has a position with the Massey-Harris Co.

Mr. Banks has rented Mr. Parlee's blacksmith shop for the summer.

A normal training class has been organized, and Mr. McLellan, the pastor of the U. B. church, is to be the teacher.

Miss Maud Stanlake who teaches at Maplehurst spent Sunday at her home here.

Mrs. Wm. Stapleford and Mrs. Tompkins left on Friday for Millville where they will visit Harry Tompkins, C.P.R. agent.

Poor appetite is a sure sign of impaired digestion. A few doses of Chamberlain's Stomach and Liver Tablets will strengthen your digestion and improve your appetite. Thousands have been benefited by taking these Tablets. Sold by all dealers.

The Control of Insect Pests in Canada.

The Division of Entomology of the Experimental Farms Branch of the Dominion Department of Agriculture, Ottawa, has recently issued a bulletin by Dr. C. Gordon Hewitt, Dominion Entomologist, on "The Control of Insect Pests in Canada."

An account is given of the history of the war against insect pests in Canada and of the manner in which insect pests have invaded the country as it has been gradually opened up and cultivated. The manner in which the Dominion and Provincial governments are endeavouring by legislation and other means to prevent the introduction of insect pests into Canada and the increase and spread of those pests already here is described. An interesting summary of the various lines of work undertaken and carried on by the Division of Entomology at Ottawa is given and the general public will no doubt be surprised at the many problems which come within the scope of the Entomologists who are called upon to deal with insects in their relations to all the varied activities of man insects affecting farm crops, fruit growing, forest and shade trees; insects attacking man's possessions and infesting houses, attacking domestic animals and finally affecting the health of man. All insects, however, are not injurious and the work of the Entomologist includes bees and bee-keeping and the study of parasitic and other enemies which may be of assistance in obtaining control of insect pests.

Copies of this publication, Bulletin No. 9 (Second Series) Experimental Farms, may be obtained from the Publications Branch, Department of Agriculture, Ottawa.

"My little son had a very severe cold. I was recommended to try Chamberlain's Cough Remedy, and before a small bottle was finished he was as well as ever," writes Mrs. H. Silke, 29 Dowling Street, Sydney, Australia. This remedy is for sale by all dealers.

Richard Morgan.

Richard H. Morgan died at his home in Cloverdale on April 2, 1912, of paralysis. He was in his 68th year and was born at Runjarrish. He came to Caverhill with his parents when a youth.

He leaves a widow, who was Miss Mary Duncan of Prince William.

Six children survive: two sons and four daughters, Mrs. Murray Shaw of Mount Pleasant, Mrs. Robert Harten and Mrs. Charles Crabb of Cloverdale, and Mrs. Radd Craig of Rockland.

George and Robert of Cloverdale and Mrs. Jones of Old Town, also seventeen grandchildren. The funeral took place on Thursday afternoon and was largely attended. Rev. G. A. Giberson conducting the religious services.

The burial was at the Upper Caverhill cemetery.

Lame back is usually caused by rheumatism of the muscles of the back, for which you will find nothing better than Chamberlain's Liniment. For sale by all dealers.

This is Good Advice.

The Hartland Observer bewails the exodus of Carleton Co. farmers to the west, attributing it to the discouragement that the farmers feel over the defeat of reciprocity. Undoubtedly the defeat of reciprocity was a great blow to the agricultural interests of the maritime provinces, but there is no reason why the farmers in the best agricultural section of the province should hike to the westward. Western farmers have their troubles just as much as the farmers of the east, and unless the eastern men intend to go into the real estate business our advice to them would be to swallow their disappointment, stay at home and fight out the battle here. Some of these days the tables will be turned, and the farmers want to be on the spot to take advantage of the turn. As prices of produce go, there would seem to be no immediate danger of the farmer suffering for lack of the necessities of life.—St. Andrews Beacon.
