A. D. i83z-18e8. - The Mission of Mazzini, the Revolution:d - Young Italy.-"The RevoIntlon of 1830 . lanerectuai as it sermed to its pro. moters, was yct most signiticent. It pailed in Itaiy and Poland, in Spala and tortugal; it created a mongrel monarcly, nether Absoiute nor Constitutlonai, in Frunce; only iu Beigium difd It attain its immedinte purpose. Nevertheless, if we look benenth the surface, we see that it Was one of those epoch marking events of which We can say, 'Things cannot be again what untll fust now they were.

The latc risings in the Duchics nad Legations had brought no comfort to the consplratiors, hut had taught them, on the contrary, how inctrectuai, how hopeless was the methoil of the secret societies. Aiter more than fiftecn years they hai not gained an inch; they had only ter rndil that thelr rulers would concelle nothing, anu that Austrin, their grent adiversary, had stakeel her exlstence on maintaining thraidom in Itaif. Innumeralic smali outbursts and three revolutlons lind euded lu the dicath of han. dredis and in the imprisonmeut or proscription of thousnads of victinis.

Just when conspincy, through repeated falinres, was thus discreilted, there arose a feader so strong and nn. selash, so magnetic and patient and zenlous, that by hlm, if hy any one, conspiracy might be guilef to victory. This leader, the Great Conspirator, was Joseph Mazzini, onc of the half dozen su preme influences lut Eurojean politles during the bincteenth century, whose carcer will interest postcritr as long ne it is concerned at ali in our epoch of transition. For just as Metternich war the Iligh Priest of the Oldi Régime, so Mazzini was the Prophct of a Social Orler, more just, more free, more splritual timn any the worlh has known. IIe was aul Ilealist who would hold no parley with temporizers, an enthustast whon half concesslons could not legulle: and so he came tobe decried as a fanatic or a vislonary. Mazzini jolued the Carbonart, not withont sus. pecting that, under their conplex symbollsm and hicrarchicn! myst ries they concealed a futul lack of harmuny, decision nani falth. $\qquad$ As he hecame better acquainteci with Carbonarism, his convic. tion grew stronger that no permanent good couid be achic ved by lt. . Tlie open propagandia of his Repnlilican and V́nitarian duetrines was of course inpossible; It minst be carricd on by a seceet organizution. Meanwhile an army of oce cupation sent by the Government from Florence hat croseded the livomun frontier, ami a F'rench force had landed on the coast. Garibaidi's posl-
tion was already critical, but his resolution wa unhroken. 'The Government of Florence,' he ald, in a proclamation to the voiuntcers, 'ha Invaded the Roman teritory, aiready won by us With prectous blood from the enemies of Italy: we ought to receive our brothers in arms wlith iove, and aid them in driving out of iame the mercenary sustainers of "yranny; but if bapg deeds, the continuation of the vile convention of September, in mean consort with Jesnltisin, whall urge us to lay down our arms in obeclence to the owinr of the $2 i$ December, then will I ket the Forld anow that I alone, a Roman geneml, with fuil power, elected hy the universal suffrige of the oniy legal Government in Rome, that of the repubilic, have the right to maintaln myself in arms in this the territory subject to my jurislictlon; and then, if any of these my volunteers champlons of ilberty and Italian unity, wish to have Rome as tie capital of ltaiy, fultillag the vote of parliament and the natlon, they must not put down thelr arms until Itaiy slund have acquired liberty of conscience and worshlip, built upon the ruln of Jesuitism, and untll the soldien of tyrants shall be hanlshed from our laml.' The position taken up hy Garlhaidl is perfectly ln. teliigibie. Rome we must have, if possible, by legal process, in conjunction with the royal arms; but if they will stand aside, even if they wlli oppose, none the Icss Rome must be anaexed to Italy. Lnfortunately Garihaldl hal left out of account the French force desputeliey by Napoleon 111. to defend the Temporal domininas of the Pope, a force whlcheven at this moneve was adivancing to the attack. The two armies aut neur the little vllinge of Mentana, 111 mutched la every respect. A. D. 1850-1894-The task and bnrdens of the United Nation.- Military and colonial ambitloas. - The Triple Alliance. -"Italy now [ia 1870 ] stood lefore the worid as a nation of twenty five milifon inisabitants, her frontiers well defined, her needs very evldent. Nevertheless, if her natlonal exlstence was to be more than same, sbe must have disclpline in self. governmeat, and sbe must as quickly as possible icquire the tools and methods of the civilization prevailing smong those nations lnto wbose compaay her victories bad ralsed ber. Two thiris of her peopie lagged behind the Western world not valy ia materíal lnventions, hut In education and civle triniag. IRailroads and telegraphs, the wider application of steam to lndustries, schoois, courts the poiice, had ail to be provided, and provided quickiy. Improvements which Eng. isnd and France had added gradually and paid for graduaily, Itaiy find to organlze and pay for In s few years. Hence a levying of heavy taxes, and exorbitant forrowing from the future ln the public debt. Not only this, but ancient tradi. tinas, the memories of feuds betweeu town and towa, had to be obilterated; the peopie had to be made truiy one peopie, so that Ventilians, or Neapolitans, or Siclifans should each feel that they were first of ail Itallans. National uniformity must suppiant provincial peculiarity: there must be one language, one conie of laws, one common interest ; in a worl, the new nation must be Italiauized. The ease and raphlity with which the Italians have progressed in all these respects have no paraliel in moiern times. Though immense the undertaking, they have, in performing it, revealed an adaptability to new conditious, a power of trarsformation whleit are among the most remarkable characteristics of their rime, inul the strongest proofs that ruin will aot now engulf them. Only a race incupabie of readjusting itseif need despair. Happy had Italy been If, undistracted by temptation, she hel pursued the plain course before her; stili happy. had she resisted such temptation. But aatimus, like indlviduais, are not made ail of one piece: they, too, acknowiedge the better reason, but dulln the worse; they, too, througit pride or vanity or passion, often forfeit the winulngs from years of toll. $\qquad$ Italy was recognized as a great power by her neighlors, uni she willingly persuaded herself that it was her duty to do what they did. In this civllized age, the first requisite of a great power is a large standing arniy.

A breme standing army being the tirst cou. dition of rankiag amoug tbe great powers, Italy eet sbou: prepuring one. . . . Perhaps nore than
any other European nation she was excusable In dealring to show that her citizens could become soldiers, for she had been taunted tlme out of mind with her efteminacy, her cowardice. It $\mathrm{m} / \mathrm{ght}$ beargued, too, that she recelved a larger dividend $\ln$ Indirect compensation for her capital Invested ln the army than her nelghbors recelved from theirs. Unlform military servlce heiped to hlot out provincial lines and to Italianlze all sections; It also furnished rudlinentary educatlon to the vast body of lillterate conscrlpts. These ends might have been reached at far less cost hy direct and natural means; hut this fact should not lessen the credit due to the Itallan millitary aystem for furthering them. Tradlition, example, national sensltiveness, all conspled ln thls way to persuade Itaiy to saddle an immense army on her back. $\qquad$ One evldence of belng a 'great power,' accorling to the poiftical ptandard of the time, consists in ability to estahllsh coionles, or at least a protectorate, In distant lands; therefore Itaiian Jingoes goaded thelr government on to plant the Italian flag in Africa France was already mist ress of Aiglers: Spaln held a lien on Morocco; Itaiy couid accordingly do no less than spread ber lufluence over Thnis. For a few years Italy complacently lmagined that she was as good as her rivais in tbe possession of a foreigndependency. Tifen a sudien recrulescence of Jlngoism In France caused the French to occupy Tunis. Tbe Italluns were very angry; hut when they sommed the situatlon, tbey reailzed that lt wonfl be folly to go to war over lt.

Not warned by tifis experience, Italy, a few years later, plungel yet more deeply fnto the uncertain policy of colonization. Engiand and France having falien out over the control of Egypt, then Eugiand, harlng virthaliy made the Khedlve her vassai, suggested that it would be a very fine thing for Ituly to estabilisi a colony far down on the const of the IRed Sea, whence she conld command the trade of Abyssinia. Itailan Jingoes jumped at the suggestion, and for ten jears the red. white-and green flag has waved over Massaua. But the gool that Italy has derived from this acquisitlon has yet to appear.

Fiually slow have they been to fearn that their partuership in the Triple Ailiance [sce Tuple AthtaNCE] has entailed upon them sacri. fices out of all proportion to the benefts. To associate on appareutly even terms with Germany and Austrin was duubticss gratifylng to natioaal vanity, . . . but who can show that Italy has been more secure from attack since she cuterel that league than she was before? For the sake
of a delusive honor,- the hunor of posing as the partuer of the arbliters of Europe, - Italy has, siuce 1880, seen her army and her deht increuse, and ber resources proportlonately diminish. None of her minlsters has hul the courage to suggest quitting a ruinous policy; on the contrary, they bave songht hither and thither to find means to perpetuate it with. ont actualiy breaking the country's luck.
Fet not ou this account sball we despalr of a country which, In spite of folly, das pohleved much against great odds, asd which has shown a wonderful capacity for sloughing oft her past." -W. IR. Thayer, Lome Cansa of the Italiun C'it sis (Allantir, ipril, 1894).-See Ibredenticts

A. D. ${ }^{3655}$ - The English conquest and colonization.-In the spring of 1655, having dctermined upon an aillance with France and war with Spain, Cromwell ftted out an expedition uader nimirals Venabies and Pen, wecretly conmissiuned to attack Cuba and St. Doiningo. Frustrutel in an attempt against the latter isiand, the espedition made a dcacent on the laiand of Jamaics with better success. "This great gain was yet held lasufficient to balance the first defeat; and on the return of Pen and Venabies they were both committed to the Tower. 1 may pause for aninstant here to notice a sound cxample of Cromweil's far-seeing sagacity. Though men scouted in that day the acquisition of $\sqrt{a}$. nuica, he saw its ralue in itself, and its importasce in relation to future attempts on the contheat of Ameriea. Exerting the Inhuman power of a despot-occasionaily, as hurricanes and other horrors, necessary for the purification of the worhi - he ordered his son Ilenry to seize on 1.000 young giris in lreland and send them over to Jumaica, for the purpose of increasing population there. A year later, and white the Itallan Sugrelo was in London, he lssued an order that sil femates of disorderiy lives should be arrested snd shipped for Barbadoes for the like purpose. A. D. 1655-1796.-Deveiopment of the British colony. - The Buccaneers. - The Maroon wars. -"Cromweli set himself to maintain and develop his new conquest. He issued a proclamation encouragiag trade and settlement in the isiand by exemption from taxes. In order to 'people anil piant 'it, he ordered an equal number of young mea and women to be sent orcr from lreiand, he instructexd the Scotch government to apprehend sad transport the idle and vagrant, and inc sent ageats to the New Engiand eolonies and tic other West Indian isiands in ordier to attract set. thers. After the tirst three or four years this policy of encouraging emigration, continued in spite of the Protector's death, bore duc fruit. and Jamaica became to a singular extent a receptacle for the most varied types of settlers, for fremen as well ns for poitical offenders or crinninals from Newgate, and for lmmigrauts from the mioaies as weil as from the mother country. The death of Cromwell brouglt over adherents of the Parliamentary party, ili content witi the restorition of the Stuarts; the cvacuntion of Suriam in favour of the Dutch brought in a coutingent of planters in 16?5; the survivors of the ill fatetl Srotrh rolnay at Darleu eame over is 1699; and the Rye llouse Piot, Sedgmoor, and the risinges of 1715 and 1745 all contributed to the population of the island. Most of all,
however, the buccancers made Jamaica great and prosperous.

Situated as the lsiand was, well inside the ring of the Spanish possessions, the English occupation of I naica was a godsend to the buccancers, wha their privateering trade was exactly suited to the restless coldiers Who formed the large hulk of the early colonists. So Port Royal became ln a few years a great emporium of ill-gotten weaith, and the man who sacked Panama became Sir Henry Morgan, Lieutenant. Governor of Jamaica. . . . In 1001 Charles 1I. sanctionced the leginnings of cirii government. . . . Municipal institutions were in. troduced, juiges and inagistrates were appointed, iand grants were issned, and the isiand began to tnke the form and substance of un Eugish colony. The constitution thenceforward consisted of a Governor, a nominatei Couneii, and an eiceted As. sembly; and the first Assenibly, consisting of 80 persons, met in January, 1664.

It was not long before the rejresseutative body began to assert its Independence by opposition to the Crown, and In 16 is the 1 lone governmeut invited confict by trylog to appiy to Jumaicn the system which had been introluced into lreiand by the notorious Poynings' iaw. Under tinis system no Assembly eouid be summoned for jegrislative purposes except under speeial directions from homc, and ita functions would have beres timited to registering consent to laws which had already been put lnto approved shape iu Englani." Contiet over this nttempt to deai with inmaica ns "a conquered nul tributary dependeucy" did mot end until 1;2s, when the colonists bougit relief from it by settling on the Crown an "irre vocable revenue" of $£ 8,000$ per annum. " Alout the timic when the constitutional difflenity was settled, the Maroon question was pressing itself more and more upon the attentios: of the colonial government. The penaity which Jamaiea paid for being a iarge aud mountmous hame was, that it harboured in its forems atd . it ines a body of mea who, througho't it listury down to the present century, werc a souree of anxiety and danger. The original Maroons, or mouutainecrs, for that is the real meaning of the term, were. . . the slaves of Spuniards wion retreated into the interlor when the English took the isiand, and sailied out from time to time to harass the fuvaders and cut off straggicrs and detached parties. . . . Maroou or Maron is an abbreviation of Cimaron, and is derived from the Spanish or Portuguese 'Cima,' or mountain top. Sla at points out that the word is probabiy of Portaguese origin, the ' $\mathbf{C}$ ' having lecn pronounced as 's.' Benzinif (editeci by the Hakluyt Society). who wrote nlout $1.56{ }^{3}$, speaks of 'Cimaroui' as being the Spanish name for outiawed slaves In Ilispanioia. . . It is probabie that the danger would have beeu greater if the outlaws had been n united band, but there were divisions of race nad origin among them. The Maroons proper. the slaves of the Spauiards and their desceadants. were mainly in the east of the isiand among the Biue Mountains, whic the mountains of the central district were the refues? of runaways from English masters, including Africans of different races, ns well as Madagascars or Malars. Towaris the end of the seventeenth century the newer fugitives inad found in a negro named Cudjoc an abic and determined leader, and thenceforward the resistance to the government hecame more organised and syste umtic. . . . A similiar treaty was made with the eastern Mnroons, and the whole of these bheks, sonne 600 in number, were estahilshed in five settiements.

Lnder these conditlons the Maroons gave ilttle trouble till the end of the 18 th century. The last Maroon war occurred in 1705." The disturhances Were conflned to the district and parish of St. Thomas In the East. There were local grievances urising from a dlspute between Mr. Gorton a natlve [coloned] proprietor, and Baron Ketelhoidt, the custos of the parish. Mr. Gorton, a disuroter, und appnrently a reformer of ahnses und mupibular among his fellows, had been depriver of his place among the musistrutes, and prevented from tilling the oftice of churchwarlen to which he wiss elected. The expensers of the guits ngainst him hai been defrnyal from the publie purse. The native Baptists, the sect to whleh he helongerl, were angry with what they reguribel as at once nn act of persecutlon and a mikappropriatlon of the publle money. Indignathon uevetinges had been heht. ... Behlnd this guarrel, which would not of itself have produced much resnlt, there lny more general grievanees.

There was a real grievance in the difficulty of obtaininge ratrose through lat istministercd entlrely by landlords; and as a uatural consequence there hal grown up a strong mistrust of
the law itwelf, and a complete alienalion between the employer and the employed. To this wa alded a feeling on the part of the chass shmese the ordinary iabourer, known an the free wettlefs, that they were unduis reated, ani obliged to pay reat for land which they abould hase held Pree; and there was a very general thongh vague expectation that in some way or other the occu. plers would be freed from the payment of rent. The inaurrection broke out in October; "a smalt riot, at Arst, at Mornnt Buy, in whieh a pollie. man was beaten; then an attempt to arrest of, of the alleged rioters, a colored prearher, Patu Bogle by name, and a formidahle rewintance to the attempt by 400 of his friends. "Un the next day, when the Magiatrates and Vestry were as. semplued in the Court-Ir se at Morant Bay, erowd of insurgents made their apluyrance, the volunteers were called out, and the iliot Act read; and after a skIrmish the Court-ilouse was taken and humt, 18 of the defenders kllesl snd 30 wounded. JAPAN: Sketch of hintory to st6g, "To the eye of the critical Inveatigator, Japanewe hintory, properly so-cailed, opens onis fo the latter part of the 5 th or the begianing of the Oth century after Chriat, when the gradual aprend of Chinene culture, Altering in through Korea had sufficiently dispeiled the gloom of original barbariam to aliow of the keeplag of records. The whoie queation of the credibility of the eariy history of Japan has been carefully gone Into during the iast ten years hy Aston and others, with the reauit that the first date pronounced trustworthy is A. D. 461, and it is discovered that even the sanala of the oth century are to be received with eaution. We have ourselves no donbt of the justiee of this negative eriticism, and can only stand In amazement at the simpileity of most European writers, who have aeeppted witbout alfting them the uncritl. eal statenuents of the Japanese annalists.
Japancse art and literature eontain frequent allu. sinns to the early history (so-calietl) of he country . . as preserved in the works entitied Kojlki and Nihongl, both dating from the 8ih eentiry afur Christ.

We ineiude the mythoogy uniler the aame heasilng, for the reason that if is absoluteiy imjossilile to separate the two. Why, Inletel, attemijt to do so, witere both are equally fabulous? . . . Arrived at A. D. 600 , we stand on terra flrma.

About that time occurred the grentest event of Japanese history, the conversion of the nathon to Butillisisn (approx mately A. D. 5:32-621). So far ma can be gatuered from the accounts of the eariy Chinese Traveilers, Chilnese elvilisation had siowly - very slowiy - been gaining ground in the archipeiago ever since the 3 all century after Christ. But When the Buddhist misslonaries crossed the water, all Chincse institutions followed them and came in with a rush. Mathematical Instriments and eaiendars were Introdueed; books began to be written (the earileat that has survived, and indeed neariy the earliest of aif, is the aiready mentioned riojlki, latlng from A. D. 7is); the custom of abdleating the throne in orice to spend old age in prayer was adopted - a custom whieh, more than anything eise, leri to the effacement of the Mikado's authority diring the Mhidle Ages. Sweeping changes in polltical arrangements began to be niade in the year 645 , and before the end of the 8th centiry, the government had been entirely remoielied on the Chinese centrallsed burenucratie pian, with a regular system of ministers responsible to the soverelgn, wio, as 'Son of liesren,' was theoretleally ahsointe. In practlee this absoiutism hasted hit a ahort thine, beanse the entourage and mode of ilfe of the Mikadus were not sueb as to make of them able ruiens. Ther passed thelr time surrounded oniy hy women and priests, oseiliating between indiolence and debauehery, between poctastering and gorgeous tempie services. This was the hriliiant age of Japanese elansical literature, which ived and moved and had its boing in the atmosphere of an effeminate eourt. The Fijjwarn family engrossed the power of the state during this eariy epoch (A. D. 870-1050). While thelr sons helif ali the great posts of government, the daughters were married to puppet emprove. Thelr rule was made memorable by the repulae of the Mongol tieet sent by Kuhal Khan wlth the purpose of addling Japan to hls glgantle douninloma. Thls Was at the end of the 13 th century, slace which time Japan has never been attacked from with. out. During the 14 tic century, even the dowager. llkc calm of the Court of Kyoto was hroken by Internecine atrife. Two brunches of the Iniperial house, supported cach by different feulal chlefs, disputed the erown. One wha called the Ilokucho, or 'Northern Court,' the other the Nanclog, or 'Southern Court.' After lasting some slxty yeurs. this contost terminated in A. D. 1302 by the triumph of the Northern dynasty, whose cause the powerful Ashlkara fanily had espoused. Meanwhile Japan lad been discovered by the Portu. guese (A. 11. 1542): and the Imprudent conduct of the Portugnese and Spanish friars (bateren. as thry were called - a corruption of the woril pudre) made of the Cliristan religlon an addu. tional somrer of discord. Japan fell Into ut. ter anarcly. Each baron In hls fastness was a ?w unto lilmself. Then, In the latter half of the 16 th century, there arose muccessively three great men-Ota Nobunaga, the Talkolldecgoshi, and Tokugawa leyasu. Fortunately for Japan, the disturbed atate of affairs in China made it prudent for Perry to repair to the ports of that country, which he did as though he had consulted soleiy the dipiomatic convenlence of our country. Ife left word that he would come the ensuing apring for our answer. . . . It was the Taiping Rebellion which calied for Perry's presence in China. The American merehantu had large interests at stake there - their property lo Shanghal aione amounting, it is satd, to $11,200,000$. While in China, Commodore Perry found that the Ruselan and French aimirals, who were staying in Shang. hai, contemplated a near visit to Japan. That he might not give any advantage to them, he left Macao earlier than he had intended, and, on the 13th of February, found himself agaln in the Bay of Yedo, with a stately fleet of eight shlps. As the piace where the conference had been held at the previous visit was out of the reach of gun-shot from the anchorage, Perry ex. pressed a desire of hoiding negotlations in Yedio, a request impossible for the Japanese to comply with. After some hetitation, the suburb Kanagawa was muturily agreed upon an a sultable site, and there a temporary building was accord ingly erected for the transaction of the business. On the 8th of May, Commodore Perry, arrayed in the paraphernulia bettuing his rank, was ushered into the house. The repily of the shogun to the irreshient's letter was now given the purport of which was, decldedly in word but reluctantly in spirit, in favor of frienilly iuterconsse. Conferences were repeated in the middle and latter part of the month, and after many evasions and equivocatlons, deifibratlons ned delays, invitations to hanquets aud ex. changes of presents, at fast, on Friday, the 31st of May, the formal treaty was signed, in synopais of which is here presentedi: 1. Peace and friendship. 2. Ports of shimuia aud Hatotate open to Ameriean ships, and necessary provisions to be supplied them. 3. itelief to shipwrecked people; expenses thereof not to be refunded. 4. Ameriruns to be free as in other countries, but amenable to just laws. 5. Americaus at Slimexia and liakintate not to be subject to re. strietious; free to goalont withiu defined limits. 6. Carcful dellberatlon iu trunsacting husiness whieh affects the welfare of either party. 7. Trade in open ports sulpject to lical regnhitions. 8. Wonil, water, provisions, coal, etc., to be pro cured through Japnneac olficers oniy. D. Mostfavored natlon chause. 10. C. S. ahpar restrieted to ports of Shimenla and ifakodate, except when fureed by stress of weather. 11. L. S. Consuls or agents to reside at Shimuria. 12. Ratifications to be exchangel within eightern months. His lalons at au end. Derry bade the last fare: well to Japan and startel on his bume-bxumai voyage. This was in June, 18:\%.'. . . A. D. 1869-1890. - Conutitntional develop ment.-"In 1880 was convened the Kugisbo of Pariiament,' as Sir Marry Parkes trunslates it in his dexpatch to the Eari of Claremdon.
The Kogisho was composed mostly of the re tainers of the Daimius, for the latter, haviog no experience of the earnest business of life. Wrro not eager to devote themselves to the linhirs of ato onerous and volnotary ollice."

Tlue oljijet of the Kugisho was to enalie the gov.rument to sound pulific opinion on the various tuples of the day, and to ohtain the assistanee of the country In the work of legisiation hy ascertainiug whither the projects of the governinent were likely ti be favorably received. The Kogislo, like the Councils of Kuges and Daimios, was nothing but sa experiment, a mere germ of a dclilerative assem. biy, whlch only time and experience coulid briag to maturity

It was a quict. preaceful, obedient debating soclety. It has lefi ther reend of its abortive undertakings in tha. 'Kugisbo Niahl' or journai of 'Pariament.' The Liugisho w.is dlasolved in the year of its hirth. dul the inctiference of the pubilc nhout lis diswitution praves how smali an infinence it ravly had. But a greuter event than the dismblution of the Koglsho was pending thefore the pullic paze. This was the aboiltion of fendulisul. measure to abolish feudalism was unu. in the Kogisho before ite dissolutim. . . . in the following noted memorial, after reviewing the pollicical history of Japan during ther past few hundred years, these Duinios salid: . iow the great Qoverament has been wewly resturnl and the Emperor himself undertakes the difiction of affairs.

This memoriul wiss signed by the Daimion of Kaga, IIIzen, Sntsuma, Chemblu. Tuss, and some other Elafmes of tie west. Bu:
the realauthor of the memorial is believed to have been Kido, the brain of the Restoration. Thus were the nefs of the most powerful and most weathy $r$ - oo voluntarily offered to the Em. perur. The other Daimlos soon followed the exsmpie of thelr colleaguen. And the feudalism which had existed in Japan for over elght centuries was abolished by the following laconic lmperiai decree of Auguat, 1871: 'The clans are abolished, and prefecturea are established in their places.' . . . Whlle the government at bome was thus tearing down the old framework of state, the Iwrizur Embasay In foreign lands was gathering materials for the new. This was algnificant, inasmuch an five of the best statesmen of the time, wlth their stali of forty four abie men, came into aseoclation for over a year with western peoples, and beheld In operatiou their mocial, polltical and rellgious Institutions

In 1873, Count Itagakl with his friends had sent in a memorial to the government praying for tho estahlishment of a representative as. rembly, but they had not been heeded by the governmeut. In July, 1877, Count Itagakl with his Ri-shi-sha agaln eddressed a nemorial to the Emperor, 'praying for a elange in the form of gorernment, and setting forth the reasons which, in the opinion of the members of the coclety, renderell such a change necessary.' These rea: mons were nine $\ln$ number and were developed at grest iength. . . The elvil war belng ended, $\ln 1878$, the year whleh marks a recaile from the estabilahmernt of the new regime, the gupernment, persuaded that the time for popular lnstitutions was fast approaching, not alone through representations of the Tosa memorlalists, hut throngh many other signs of the times. decided to take a atep in the direction of establlabing a national zsembly. But the government acted cautiously. Thinkiug that to hring together hundreds of membres unaccustomed to parliamentary debate and lis exeitement, and to ailow them a hand in the admiuistration of affairs of the state, might le atteuifed with serious dangers, as a preparation for the nationul assemhly the gorerament establishet Arst locai assemblies. Certuinly this was a wise course. These local wemblliss have not only been gond training cheouls fir popuiar government, but also proved reampally successfui. . . . The qualifications for elertors (males only) are: an age of twenty rears. reyistration, and payment of a land tax of fi. Foting is hy bailiot, but the names of the voters are to he written by themseives on the roting papers. There are now 2,172 members who sit in these local assemblies.

The gulf between absolute government and popuiar government was thus wideled more and more hy the instituthon of liocal government. The popular tide raisul by these foeni assemblies was sweliing in solume year by sear. New waves were set in motion by the younger gencratlon of thinkers. Toward the ciuse o! the year $18 \% 1$ the floon rose oh high that the government thought lt wise not to rexist longer. Hls Imperiai Majesty, hcaring the futitions of the people, graclouniy conflrmed and expmuled his promise of 1868 hy the famous proclanation of October 12. 1881: We have long hat it in view to gradually estahilsh a conatitutional firm of government. . . . It was wlth this ubjiett in view that in the elghth ycar of Mejf: : 14. heventh yesr of Meljf (1878) authorized the
formation of local assemblles. . . We therefore herehy deciare that we shall, in the twenty-thind year of Meljl (1890) establlsh a parllament, in order to carry lnto full eifect the determination we have announeed."-T. JAVA. - In the tropical worll of Insullnde [Insuiar Incila]. Java is the fourth of the isiands in area, but contains more than two-thirds of the popuiation; and the relative value of its produc. tlons is still more considerahle. . . . Vlsited and colonlzed by the Ilindus. It became the seat of their Influenee In Insulinde, attached thenceforth by cuiture to the Gangetie peninsula. A durahle pre-cmlnence for the Javanese dates from that epocl.

The natives of Java do not ail belong to one nationnl sroup. The Malays, who give thele same to the raee as a whole, are rep. resentel in the islmnd oniy by iminigrants, and constitute the mafority in only one half of the provinee of Bataria.

The remainder of the Island is occupiel hy the Soendamas, the Java. nais - these iatter much the more numerous and the Madoerais. . . The Jaranais, pruperly
cailed, who represent more cailed, who represent more than two-thirds of the popuiatlon, occupy ail the central part of the island, cast of the guif of Cherllon. . . During the periol of Ilimiu Influence, aimost the whoio of Insuinde was brought twlee-in the 13th and 15th centuries - under the sway of a slngle master. But airewiy the Mosiems lisputed the domination of Java with the IIindu dynastles In 14:8 they destroyed the capitai of the empire of Moljo- P'ahit, situated not far from the existing town of Socrabaja, and, during the next two or three generations, they extinguished tho smaiier Ilimlu principaities. But these conquerors were soon overcume by others. If the Portuguese, not strong enongh to suhjugate the country, confined themselves ts, the foundlag of some factories on the coust. and to taklng part as adventurers in the intestint wars of Java. the Dutch. Who appenrel in lime, soon fett able to estahlish themselvers as masters on the soll. In 1610 they fouuleal the firt of Batavla, center of a dominatlon which has since beea, extended from point to point over the whole filland and over the Indonesian archipriago. Though local insurrectlons hnve necurred, and one war (1825-30) has even shaken the Dutch pmwer, yet we may asy that. on the whole, tine Javanewe are un. equalied for obedience and reslgastlon."-E. Re-
clus, Biourelle Giagraphie Unsierratle, 0. 14 (pp. 820-380, translated from the Fheneh). - "I Leileve that the Dutch system is the rery best that cas be mopted, whea a European natlon conyuers or otherwlse acquires posessolion of a country lahahited hy an ladustrious hut seml-barbarous people. . The mode of governmeat now aslopted in Java is to retain the whole series of native rulers, from the village chlef up to priaces, Who, under the name of hegeats, are the heads of districts about the size of a small English county. With each Regeat is placed a Duteh Kesident, or Asslstant ilesident, who is cossld. ered to be his 'elder brother' and whose 'onders' take the form of 'recommendatioss.' whleh are however Implleltly obeyed. Aloag with eich lesestaat Iemident is a Controller, a klad of 1 n spector of all the lower native rulers, who periollcally visits every village in the cistriet, examines the proccedings of the natlvecourts, hears comphalats agalnst the heal-men or other natlve ehlefs, and superinteads the Goverument plaatations. This briags us to the 'culture system,' which is the source of all the wealth the Duteh derive from Jara, and is the suhject of mueh abuse In this ecuntry, because it is the reverse of 'free trade.' To uaderstand lis uses and benefielsl effects, It is necessary first to sketch the commou results of free European trade wlth unelvilized peoples. Natives of tropleal cllmates have few wants. and, wheu these are supplled, are disineliaed to work for superthities without sume strong Ineltement.

The free competitloa of Enropean traders latroducea two powerful ladurements to exertion. Spirlts or oplum is a tumptatlon too stroug for most sar. ages to resist, and to ohtala these he will sell whatever he has, and will worl to get more. Aanther temptation he caasot resist is goods oa eredlt. . . The consecpuence is that he accumulates deht upou debt, and oftea remalns for years or for life a dehtor, and almost a slave. Thls la a state of things whleh $\qquad$ exteads trade no donbt for a tlme, hut it demoralizes the pative, eliecks true elvilization, and does aot lead to any permanent lucrease in the wenlth of the country.

The system latrof ceed liy the Dutch ras to laduce the people, through thelr chlefs, to give a portlos of thelr time to the cultivalon of coffee, sugar, asad other valuahle producta A tixed rate of wages-low ladeed. hit about equal to that of all plares where European compettion has aot artificially ralsed It - was pald to the laborers engaged In idearing the grouad and forming the plaatatoas nuder Government superintendeace. The produet is suid to the Government at a low fired price. Oit of the net protits a percentage goes to the cillefs, and the remalnder is divideal among the workmig. This surplus la goxil years is something conslderable. Os the whole, the people are well ferl and deceratly elothed, aad have arctulren hahles of steady Industry and the art of sclentific eultivation, whilel must be of service tuthent in the future. It must be rumembered thut the Giowernment expended enpital for years lupore any retura was obtalned; and if they now cherlve a harce rurenue, it is in a way whilh is far less burdensome, and far more beneflelal to the people than any tax that could be leviet. JERUSALEM: Early history.-'T The irst site of Jerusaiem wss the hill now erroneously cafied Slon, and whiefi we shall designate as Pseudo $\boldsymbol{F}^{\prime}:$, the platean of rock at the south. West, surron. ded on ali sides by ravines, viz., hy the Valley of Hinnom on the west and south, aud by the Tyropaon, or Cheesemakers' Valley, on the north and east. Paraliel to this lay the real Sion, the fers elevated eastern hili, shat in on the uest by the Trropeona Valles, whleh divileed it from Jseudo-Slon, and on the cast by the Valley of Jelinshaplut, and ending southward In a werige llke point opposite to the south-etust corner of Psemido-Slon. The town on the western. most of these two rilges was known first as Jelus, and afterwards as the High Town, or CPper Market; and the aceretlon to it on the eastern hill was anclently calied Salem, and subsequently the 1.ow Town and Aera. In the days of lawless vlolence, the first objeet was safety; and, as the eastern hill was by uiture exposed on the north, It was there protecterit artiticially by a citadel and fosse. The lligh Tuwn and Low Towt were orlgirally two distlurt eltles, occit. pledi by the Amorites and 1littites, whence the taunt of the propluct to Jerisalem: "Thy birth and thy nativity ls of the land of Canaan; thy, fathor was an Amorite and thy nother a Hittlte. flence, also, the danalistis: form of the name Jernsalein In Ilchrew, slimifylug Twin-Jerusalem: Indeed the oplaiom lins teen broached that Jerusulen ls the compound of the two namps. Whether Moriah, on Whels Abram offered hils sticritice, was the very mount on which the Temple was afterwurds built, must be loft to eonjecture. But whin the Second Book of Cbronleles was written, the Jews liad at least in tradition to that effect, for we rearl that 'sofomon began to build the house of the Lond at Jerusalem in Mount Moriali.' On the exolus of the Israclltea from Eigypt, we fiul dilstinet menthon mule of Jerusulein by that very name; for ufter Jombua's deatly. #### Abstract

Conquest and occupation by David. -" David had reigned seven years and a half in Heliron over the trile of Judah alone [see Jews: The ginodoys of laragl, and Jedab]. He was now solemoly lastalled as klng by the elders of all Israel, and made a lengue with them before Jeliovah In Ilehron.' This was equivalent to What we now call a 'coronatiou onth,' and denoted that he was a constitutional, not an arhltrary monarch. The lsraelltes hai no intention to resign thelr illertles. but in the seqnel It will appear, that, whth paid forelgn troops at hls efice. evcn a most rellglous king could be nothing but a despor. David had an army to feed, to exerelse, and to keep out of milschlef: but it is probable that the war agalist Aliner generally occuplel it sufficlently. Now however he determined to elgnallze lils new power hy a preat explott. The strength of Jerusalem had ineen suitlelently provel hy the long securs dwelling of Jebustes In It, surroundet by a Hehritzed population. Hehron was no longer a sultalbe place for the centre of Davild's adininustration: hut Jerusalem, on the fruntler of Benjamin and Judah, without sepmratiug hlun from this own tribe, gave him a ready ueceress to the plalns of Jerichio inelow. aud iherelyy to the eastern districts; and although by no nereaus a central pusition, It wins less renoote îroun Eplinalin than Hebron. Of this Jebusite town he there-

A. D. 637.-Snrrender to the Mosiems.- In the winter of 637, the Arahs, then masters of the greuter part of Syria, lahil slege to Jerusalem. After four months of rlgorons attack and defense, the Chrlstlan Patriurch of Jerusalem beh a parlcy from the walls with the Arah general, Alin Obeldah. "'Io you not know,' sald be. that this clty is holy, and that whoeser nffers riolence to it draws upon hls head the rengenbec of hearen?' 'We know lt, 'replied Abu Oledidah. Seelng there was no further hope, the parriarch consented to glve up the city, un condition that the Callph would come in prinua to take possession and sign the artleles of surrebler." This proposal being communlcated to Huat, the Caliph. he consented to make the long fourney fromi lievilna to Jerusalem, and, In due time, he eatered the IIoly Clity, not llke n conqueror, but on foot, with hils stafi in hils hand and wearing his simple, much-patched Arub garl. "' The articles of surrender were drawn up In writing by Omar, and served afterwands as a molil for the Hoslem leadera in otherconquests. Ile was lese enithuniantic than bila predeceser, had a cooler beed, and was mere reaconable; he was the man for difplomatic projects and compiete and syatemutic or. gatastion. The new omict differed In severaj mopects from any proviounly existing one, but it eatrely cormapoaded to the new ern which hed begun for the liomish Church. . . . The con. atruction of the new order was baced and carried out on a monarchical-military system. The terri. wriet of the Church were divided into provinces: st the head of each of chese was a provinclal; orer the provinclais, and chosen by them, the seneral, who commanded the solitier of Cbriat, ath whe entruated with dictatorlal power, Ifm . fiel only ly the opinions of three juigere, assis. tants of sinnonitors. The general has no supefor but the Pope, with whom he communicates directly: he appointa ani diaminses ali officiais, issues onlers as to the adminfatration of the order, and rules with undlaputed swar. The ah. wolute muuarchy which was asagnel to the Pope by the Council of Trent, was conferred by infm on the gensrai of the Jesulte. Anung the forme Vows of poverty, chastity, obedicnce, and aubjec. thon tw the Pope, obedience wat the moul of all. To lesra and practioe thls physically and men. tally, up to the point where, accoriling to the Jesuit exprension, a man becomes 'tanyuam likuum et calaver,' was the ruling princlpic of the finstitution. Entlre renunciation of the will and judgment in relation to everything com. mandinl by the superior, hlind olvedience, uncondifinal subjection, conatitute their ldeal. There Wis but one exception, hut even In this there was a reservition. It was expressiy stated that there can be no ohifgation 'al peccatum mortale vel veniale, to alnful acts of gruater of less linporturre, 'except when cojojned by the superior, In the name of Jenns Christ," vei fu virtute obelientire, - in elastle doctrine which may well be sumumerl up in the dietum that the end justifies the mesma.' Of course, ali the members of this order had to renounce alf tios of fumily, home. sal country, and it wasexpreasly enjoined. Of the row of poverty It is said, In the ' Sum. marium ' of the constitution of the onier, that it must le maintained as a 'murus religionis.' No ode slisli liave any property; every one must ley content with the nieanerst furulture and fare, and, if necessity or command requlre it, he must be realy to beg his bread from door to door ('ostiatim menilicare'). The external aspect of menabers of the order, thelr speech and silence, gestures, gait, garh, and bearing shall Indicate the prescritarl purity of soul. ... On all theme and mang other points, the new onler only laind grater stress on the precepts which were to be tound smong the rule of other orders, though in the anivernal demoraliantion of the monastie Hife they had fallen into disuse. But it dectdediy differn! from all the uthers in the manner in which it aimed at ohtaloing sway in cvery sphere sud every anject of life. Himmeif withont home or country, and not hoiding the doctrines of any pultical party, the disclple of Jesus renounced everything which might allenate him among rafy hi nationalitles, pursuing varloue political the pus. Tbe National Names. - There have been two princlpai conjectures as to the origin of the name Hehrews, hy whlch the descendants of Abminsms were originaliy known. One deriven the name from a progenfor, Eber; the other Ands its origin in a Semltic word algnifying "over," or "erometi over." In the latter view, the name was applled hy the Canaanites to people who came into thcir country from beyond the Euphrates. Ewald, who rejects this latter hy pothesls, says: " While there Is nothling to show that the name emanated from strangers, nothing is more manlfest than that the natlon called themselves by It and had done mo as long as menory conld reach; indied this is the only one of thelr anmes that appears to have been current in tife carliest tmes. rupture. The two tribes of Judah and Beaja. min, only, remained faithful to the house of David and constituted the kingdom of Juilah. The other ten tribes made Jeroboam their king and retalned the name of Israel for their klig. dom. The period of this division is fixerl at 9 is B. C. Jerusalem continued to be the capital of the kingdom of Judah. In the kingion of lspael several changes of royal residence occurred dur. ing the first half century, untll Samaria was founded hy Klng Omri and thenceforth becsme the capitsl city. "Six mlles from Shechem, in the same well-watered valley, here opening into a wide basln, rises an oblong hill, with steep set accesslhle sides, and a iong level top. This was the mountain of Samaria, or, as it is cailedi in the original, Shômeron, so named after its owner Shemer, who there lived in state, and who sold it to the Klng for the grent sum of two talents of sllver."-Dean Stanley, Lectures on the llist. of the Jevish Church, lect. 29-30 (c. 2). - For two centuries, until the overthrow of the kinglom, Sumaria contlaued to be the queen of the land, and the seat of government, often giving lis nnme to the whole state, so thnt the hings were caliet "Kings of Samaria." "Under the dynastles of Omri and Jehu [10th-8th centuries, 1. C.] the Northern Kingdom took the leadius part in Isracl; even to the Judsean Amos it was Israci "par excellence.' Judah was not only inferior In polltlcal power, hut in the share it took in the active movements of national Ilfe and thought. In tracing the hlstory of rellglon and the work of the prophets, we have been almost exchnsively occupied with the North; Amos hlmself. when chnrged with a mcssage to the whole fanily that Jehovah brought up out of Egypt, leuves his iome to preach In a Forthern smuctuary. During thls whoic period we have a much fuller knowledge of the life of Ephraim tlan of didah: the Judgean hlstory conslsts of maigre extricts from officlal recorls, except where it comes into contact with the North, through the alliance of Jehoshaphat with Ahnh; through the reaction of Jehu's revolution in the fall of Athuliah, the last sclon ci the house of Ahab, and the acrompany. log aoolition of Baal worshlp at Jerisulerin. or, finaily, through the presumptuons attenupt of A maziah to measure his strength with the prwerful monarch of Samaria. While the house of Ephralm was engaged ln the great war with Syria, Judai had seidom to deal with enemies more formidable than the Philistines or the Eiomites; and the cuarest with these fores, renewed with varylng success generition after generation, resolved itself into a succewion of forays and hloori-feuds such as lave always heen common in the lands of the Semites ( I imos 1 ), and never assumed the character of $a$ struggle for natlonal exlstence. It was the Nurthem Kingdom that had the task of upholding the standard of Israel: its whole history presents greater interest sul more heroic elemunts; its struggles, its calamitles, nud its glories were cast In a larger inould. It is a trite proverb that the natlon which has no history is happy, and perhaps the course of Juciah's existence rill more smoothly than tinat of its greater neirhbor, in splte of the raids of the glavedouter of the corst, and the lawless hordes of the tesert. But no side of national existence is likely to find full development where ther: is little political activity; if the fife of the Nurth was
more troubled, it was also larger and more inwase. Ephralm took the iead in literature and religion as weii is iu politics; it was in Ephraim far more than in Judah that the traditions of past hlstory were cherished, and new probiems of rellgioa became practicai and caifed for solution by the word of the prophets. So long as the Northern Kingdom endured Judah was content to learn from it for evii or for good. It would be easy to show in detali that every wave of iffe and thought in Ephraim was transmitted with dimlaished intensity to tho Southern Kingdom. In many respects the infuence of Ephralm upon Jadsh was simliar to that of England upon Scot isnd before the union of the crowns, but wlth the important difference that after the accession of Omri the two Hebrew kingdoms were seidom lavolved in hostifitien. $\qquad$ The internai condl. tlon of the [Judæan] state was stable, though ittle progressive; the klngs were fairly successful ln war, though not sufficlently strong to maintaia unbroken authority over Edom, the oaly vassal state of the old Davidle realm over which they stili ciaimed suzeralnty, and their clvil sidminlstration must have been generally satlsfactory aecording to the not very high standsri of the East; for they retained the affections of their penple, the justice and mercy of the throne of David are favourably spoken of in the old propheey against Moab quoted in Isaiah xv., xvi, snd Isaiah contrasts the disorders of his owa time with the ancient reputntion of Jerusalem for fidelity nnd justice (i. 21). . . . The religious conduct of the house of David foilowed the same geueral lines. Old abuses remnined untoached, but the cultus remained much as David snd Solomon had left it. Locai high places were anmerous, nnd no nttempt was made to interfere with them; but the great temple on Monnt Zion, Willeh formed part of the complex of royai buildIngserected by Solomon, malntained its prestige, sail appears to have been a special object of solicitude to the kings, who treated its service as part of their royal state. It is common to imagine that the rellgious condition of Judah was very much superior to that of the North, but there is a bsolitely no evldence to support this opinlua."-W. Robertson Smith. The Prophets of Isriei, leet. 5.-In the year B. C. 745 the throne of Assyria was seized by a soidler of great sbility, retiled Pul, or Pulu, who took the name of Tiglath-plleser III. and who promptiy entered on an ambitious career of conquest, with imperial sims and plans. "In B. C. 738 we find hlin re. criving tribute from Menahem of Samaria, Rezon of Damascus, and Hlram of Tyre. . . . The thrine of Israci was occupied at the time by Pekah, in snccessfui generai who had murdered his predecessor, but who was evidently a man of vigoar and abillty. Ile and Rezon chiceavoured to form a confederacy of the Syrian and Paiestinian states agalnst thelr common Assyrian foe. ia orider to effect their object they considered It necessary to dlsplace the reigning king of Julah. Ahaz, and substitute for hlin a creature of their own. . . . They were aidied by a party of malconteats in Judah itself (Is. vifi. 6), and the pusition of Ahaz seemed desperate. $\qquad$ this moment of perii Isaiah was instructed to meet and comfort Ahaz. He bade him 'fear not, veitler he fainthearted,' for the confedcracy sgainst the dynasty of David shouid be broken ail overthrown. . . . But Ahaz . . . had no
faith either in the prophet or in the message he was commlssioned to dellver. He saw safety in one course only - that of invoking the assistance of the Assyrian king, and bribing him by the offer of homage and trihute to mareh against his enemies. In rain Isalah denounced so suicidai and unpatriotic a poliey. In vain he foretold that when Damascus and Samaria had been crushed, the next victim of the Assyrian king would be Judah itself. The infatuated Ahaz would not ilsten. IIe 'sent messengers to Tig-iath-pileser klng of Assyria, saying. I am thy seriaut and thy son: come up and save me out of the hand of tla king of Syria, and out of the hand of the king of Isracl, which rise up ngainst me.'" The king of Assyria responded to the call (B. C. 734). He defeated Rezon in battie, lald slege to Ibariascus, swept the tribes east of the Jordan lnto captlvity, overran the territory of Israel, captured Samaria and put to death Pekah the king. In place of Pekah he set up n vassal-king IIoshea. Sla jears iater, Tigiath-pileser having alled, and the Assyrian throne having been seized by neother strong soldier, Shaimancser IV., Hoshea attempted n revolt, iooklng to Egypt for help. But before Sabako klng of Egypt couldi move to hls asslstance, "Hoshea was diefented by the Assyrian king or his satraps, and thrown Into chains. The ruting ciasses of Sumaria, however, still held o't. An Assyrian arny, accordingly, onee morc devistated the land of Isracl, nad ladid slege to the capital. For threc years Samuria remained untaken. Another revolution had meanwhilc broken out in Assyria; Shalmaneser had died or been put to death, and a fresh inilitary adventurer lad seized the erown, taking the name of Sargon, after a famous monarch of aneient Bahylonia. Sargon had hardly catablished limiself upon the throne when Samarla fell (B. C. 722). . . . He contented himself with transporting oniy 27,280 of lts inhabitants into captivity, only the upper classes, in fact, who were implleated in the revoit of Hoshea. An Assyrian satrap, or governor, Was appointed over samaria, while the bulk of the population was allowed to remain peaceabir in their old homes."-A. II. Sayce, Life and Times of Imaith, ch. 3.-"Much light is thrown upon the conditions of the national religion then and upon its subseqnent development hy the singie fact that the exiled Israciites were absorbed by the surrounding heathenism without leaving a trace hehlud them, while the popniation of Juialh, who had the benefit of a hundred years of respite, held thelr falth fast thronghout the period of the Bahylonian exile, aud by means of it were ahle to maintain thelr own individually afterwards in all the clrcumstances that arose. The fact thnt the fall of Samaria did not hinder but helped the religion of Jehovali is entireiy dine to the prophets."-J. Wellhausen, Sketch of the IIist. of Irruel and Judah, ch. 6. -" The first generation of the exlles lived to see the fail of their conquerors. $\qquad$ After this it is difficult to dlscover any distinct trace of the northern tribes. Some returned with their countrymen of the southern kingdom. ... The immense Jcwish popniation which made Babylonla n second Pulestinc was in part derived from them; and the Jewish customs that have been discovered in the Nestorian Cliristians, with the traditlons of the sect itself, may indicate at nny rate a mlxture of Jewish descent. Bitt the dellverer and his deslgns were extremely dangerous, and made Judah apprehensive of being swallowed up presentiy, when its turn came. The neighhouring countrics, - Phornicis on the north. Masib, Inimon, and the Aralian nations on the east, Philistla on the west. Egypt and Ethiopla on the south.-shared Judah's npprehensions. There were risings, and they were sternly guelied: Judah, however, remained tranquil. But the scheme of an anti-Assyrian alliance was gradu. aily becoming popuinr. Egypt was the great pillar of hope. By its size, weaith, resources, pretensions, and fame, Eigypt seemed n possibie rivai to Assyria. Tinie went on. Sargon was muribed in 705; Sennacherih succeeded hin. Then on ail sldes there was an explosion of re. poits agninst the Assyrian ruie. The first fears of sennucherib's relign were spent by hint in queiling a formhiable rislag of Merodach Baladan, king of Bubylon. The court and ministers of Hezekinh selzed this opportunity for detach. ing thelr master from Assyria, for joining in the movement of the insurgent states of Paiestine and its borders, and for allying themselves witi Egypt.

' IIs ring captured Ascaton, he next fald sicge to Etiron, whilh, atter the Egyptian army sent to lts relief had been defeated at Eltekeh, feli into the enemy's band, and was severely dealt with. Simultaneously various fortresses of Judah were orcupied, and the level country was devastated (Isa. i.). The consequence was that Ifezeklah, in a state of panic, offered to the Assyrians his submission, which was accepted on poyment of a heasy penaity, he being permitted, however, to retilin possession of Jerusaiem. He seemed to have got cheaply off from the unequai contest. The why being thus cleared, Sennach. erib pressed on southwards, for the Egyptians were coilecting their forses against him. The nearer he cmane to the enemy the more undesirahie did he find it that he shomid leave in his remr su iniportant a fortress as Jerusaiem in the hands of a doubtful rassai. Notwithstanding the recently ratified treaty, therefore, he demanded the surranifer of the city, believing ibat a policy of intimidation would be enough to secure it from ilezekhah. IBut there was nother person. aity in dernsalem of whom his pians had taken no aceount. isaliah had indeed regarded the remit from Assyria as a rebellion against Jehnvah Himself, and therefore as a perfectly bopeless undertaking, which could oniy resuit in the utmost humillathon and sterncst chastisement for Judah. But much more distinctiy than Amos and Hosea before him did he hold firm as an artlele of falth the conviction that the kingdom would not be utteriy annihilated; all his speeches of solemn

The mes. gre verse in the Book of Kings which describes this reform is both inaccurate and mispinced. There is no hint in the authentic writings of isaiah or Micnh thst any religious innovations had heen sttenpted before the Assyrinn war. Yet indirect evidence would in iline us to believe that Hezeliah's reform invoived more than the annlhitation of a single idoi; it is more probsbiy to be regarded as an attempt at a gencral abolition of images, as weli as a suppression of the new Assyrian star-worship and
of the 'Moinch' sacrifices whlch had been intro duced Into Judah in the relgn of Ahaz. Whether this materinl lconociasm betokened or genernted any wide morai reformation is more than doubt ful. . . Ilezekiah's reign extended for abont fourteen years after the deiiverance of Jerusaiem in 701. To the eariy part of tlils, its second dizlsion, the rellgious reformation niust be assigned. The book of Kings does not record a singie extermi incilent throughout his iong reign. It must have been a time of profound peace andi of comparitive prosperity. Manasseh remained the vassul of Assyria, uud the Assyrian inseriptions speak of iim is paying tribnte to the two $k$ ngs, Esarhatidon ( $681-669$ ), sennurherib's successor, and Asurbanipal ( $669-6 \div 6$ ). tlll whose death the supremacy of Assyria in Paiestine was whoily undisputed. Uneventful as linnasseh's reign was in foreign politics, it was all the more im. portant in its iuternai and retigious hlstory. In it, und in the short reign of Ainon, whomalntalued the policy of lis father, there set in a perion of strone religions renction, extending over nearly haif-a-century (686-638). Msnassel is singied out by the historian for special and repeated reprobation. In the ryes of the exilic redactor, his iniquities were the inmediste cause of the destruction of the national iife. Not even Josiah's reformation couid turn Yaliveh 'from the fierceness of his great wrath, wherewith his anger was kindled against Judah, because of aii the provocations that Munasseh had provoked ilm withai.' Jereminh had suid the same. Exiie and iispersion are to come 'berause of Minnasseh, the son of Ilezekiah, king of Jneluh, for that which ine did in Jerusaiem.'.

What were the sins of Manasseh? It hus aircady been indicated that the dssyrinns made their influence felt, not only in politics, but also in religion. It was the old Babybuian worship of the inminaries of heaven winich was introluced into Judah in the eighth century, and which, after receiving a short check during the reign of Hezeklah, became very widely prevalent under his son.
There are many tokeus in the iterature of the seventh century that the idoiatrous reaction of Himassch penetrated deep, makling many converts, . . . Manasseh would npparentiy brook no opposition to the idolatrons prociivitles of his court; fie met the indignation of lssiah's dls. cipies nud of the prophetical jarty by open snd relentless persecution. . . . The older historian of the Book of Kings spenks of ' Manasseh shedding innocent blood rery much, tili he had filied Jerusaiem from one eud to another. ${ }^{\circ}$ Thls innocent blood must have mainly fiowed from those who opposed his idioiatrous tendencies.
From the accession of Manasseh to the death of Amon ( $686-638$ ), a period of forty-eight years, thls internai conflict continued; and in it, as aiways, the bioud of msrtyrs was the seed of the Church. In 638, Amon was succeeded by hls son Josiah, then oniy elght years oid. It is possible that his accession brought about some ameioration $\ln$ the condition of the prophetlcal

But the syncretiatic and Idolatrous worshlp was stili maintained for another cighteen years, though those years are passed over without any notice in the Book of Kings. They were, howerer, years of great importance in the inistory of Asla, for they wltnessed the Lreak-up of the Assyrian empire, and the inroads of the Scythinas. The collapee of Asayria followed hard upon the death of Asurbanlpal In 626: Babyion revoited, the northern and north-vestern provinces of the empire feli into the hauds of the Medes, and the authority of sasyria over the vassal kingdoms of the west was gralualiy weakened."-C. Tyrian mnsons were hlired, and agreements made with Tyrian carpenters, to fell cedars in Lehsnon, and bring them to Joppa, for whieh Cyrus had given his permission. The foundation of the temple was latd in the second year of the return ( 536 B . $\mathbf{C}$.).

The fortunate beginning of the reatoration of the city and temple soon met with difficulties. The people of Samaria, who were a mixture of the remnant of the Israelites and the strangers whom Nargon had hrought there after the capture of Ssmarla,
and Esarhaddon at a later
dnte,
came to the exiles in a triendly spirit, and offered the in asmistance, fom which we muat conclude that in spite of the foreign almixtire the Israelitish hlmol and the worshlp of Jehovah were preponderant fu Samaria, The new temple would thus have been the common Eanctuar y of the united people of Ismel. But the ' nons of raptivity' were ton prond of the morrowa whifh they had undergone, and the adel. tiy whleh they had preserved to Jeliovah, and thelr pure descent, to accept this offer. Hence the old quarrel between Isracl and Judah broke out anew, and the exlles somn felt the result. After their repulse the Samaritans set themelves to hinder the bulliling by force; 'they terrifed the exiles that they huilt oo more, and hired connsellons to make the attenipt valn during the whole of the remalnder of the reign of Cyrus.'. - M. Ewall, Ilist, of Israel, bk. $\delta$, in. trod. -" The deeree of Cyrus, at the close of the captivity, extended unly to the rehuididng of the Temple. 'Thns suith Cyrus, king of Peraia, The Lord God of heaven. . . hath charged me to build him an house at Jerusalem.' And under this deeree Jeahua and Zerubbabal ' bullded the altar of the Ond of Israel. Hut the founda. tion of the Temple of the Loril was not yet ladd.' Afterwards they 'lald the foundation of the Temple of the Lorl,' ineluding, apparently, the outer wall, for their enemles nade a representa. tion to the king of Persla that the Jews were rehullding the walls of thelr ctty: 'The Jews Which came up from thee to us are. . hulldIng the rebelllous and the had city, and have set up the wails therenf, and joined the fonndations. And as the wall of the Temple, whleh was about tweive feet chick, gave a colour to the charge, a decree was lssued hy Artaxerxes to prohilit the further prosecution of the work. Then ceased the work of the house of God, which is at Jerusalem.' On the accession of Darins to the throne of Persia, Jealiua and Zerubbabel recommenced the restoration of the Temple, ineluding the wall of the Outer Temple, for they ' hegan to huild the house of God,' when thelr enemles again stepped forwnm, saylng. 'Who hnth commanded you to hulli this house, and to make up this wall?' And on a renewed complaint to the king of Persia, search was made for the deeree of Cyrus, and when it was found, Darins permitted ine Jews to proceed with the Temple; 'Let the governor of the Jews and the elders of the Jews build this house of God in his place:' and thereupon the strueture and the outer walls thereof (the square of 600 feet) were completed: 'Ther linfided and finished it on the third day of the month Adar, which whe in the sixth year of the reign of Darius the klng.' Thus far the rebulluling extended to the Temple only, and not to the walls of the city. By ten wives he had had many children, and had alain not a few; hut a large family survived, to quarrel over the heritage, disputing a will which Herod left. There was a heasing of the dlsputants at Rome, and also a hearing given to deputies of the Jewish people, who prayed to be deiivered from the Herodian family, all and aingly. The latter prayer, however, received smali consideratlon. The Imperiai judgment established Archelaus, eldest son of Iferod's sirth wife, Haithace, in the soverelguty of Judra, ldumas, and Samaria, with the title of Ethnarch. To ilerod Antipas, sece d son of the same motier, it gave Galifee and Peraa. Fhilip, anther son, by a seventh wife, k as made tetrarci of a small principaity. Archelaus governed so oppressively that, after some rears (A. D. 6), he was deposed hy the llomans and banished to Gaul. Judxa was then joined to the prefecture of Syria, under a succession of Roman governors, the fifth of whom was Pon. tius Piate. "Judaca thus became in the fear 6 A. D. a foman province of the second rank, and, apart from the ephemerai restoration of the kingdom of Jerusaiem under Claudius in the years $41-4 t$, the bceforth remained a Koman prosince. Instead of the previous native princes hoiling office for life and, under reservation of their being confirnied hy the Homan government, he reditary, came an official of the equestrian orifer, nominated and liahle to recali hy the emperor. The port of Caesarea rehullt br Herod after a iltllenic model became, probahly at once, the seat of Roman administration. The exemption of the land from Roman garrison, as a matter of course, ceased, hut. as throughout in provinees of secund rank, the Roman military force consisted onlr of a moderate number of cavalry and in fantry dirisions of the inferior class; subsequenty one ala and fore cohorts - about 3.000 men - Were stationed there. These troops were perhaps taken orer from the earlier government at least in great part formed in the country itseif, mostir. lowever, from Samaritans and Syrian Greeks. The province did not ohtain a legionary garrison, and even in the territories adjoining Julaea there was stationed at the most one of thi: four Syrian legions. To Jerusalem there came a standing Roman commandant, who took up his abode in the royal castle, with a weak standing garrison; only during the time of the staniling garrison; only during the time of the Pasmer, when the whole land and countless sirangers fucked to the tempie, a atronger divis. on of fuman soldiers was statloned in a colon. nade belonging to the temple. . . For the native authorities In Judaea as everywhere the urban conmunities were, as far as posslhle, taken as a bisis. Samaria, or as the town was now callent, Sebaste, the newly lalif out Caesarea, and the other urban communities contained In the former kingdom of Archeiaus, were self-admin. istering, under superintendence of the Roman anthority. The government also of the capital with the large territory belonging to it was exaised in a similar way. Already in the pre.

Roman period under the Seleucids there was formed .. In Jerisalem a councii of the elders, the Synhedrion, or as Judalsed, the Sanhedrin. The presidency in It was held hy the high priest, whom each ruler of the iand, if he was not possihly himself high priest, appolnted for the time. To the college belonged the former high priest and esteemed experts In the law. This assembly, In which the aristocratlc element preponderated, acted as the supreme spiritual representative of the whole boly of Jews, and, so far as this was not to ise separated from It, also as the secular representatlve in particular of the community of Jerusalem. It is only the later Rahblnism that has by a pious fiction transformed the Sanhedrion of Jerusalem Into a spiritual Institute of Mosaic appointment. It corresponded essenidaliy to the council of the Greek uriman constitution, but certainly bore, as respected its composition as well as its sphere of working, a more splritual char acter than belongeal to the Greek representations of the rommunity. To tinis Synhedrion and lts high priest, who was now nominated hy the proenrator as representative of the imperial suze nuin, tise lioman government left or committed that jurisiiction which in the Hellenie suhject communitics belonged to the urban authoritiea and tiue common councils. With Indiferent short-sightetness it allowed to the transcendental Hessianism of the Pharisces free course, and to the by no means transcendental land-conslstory -acting until the Messiain siould arrive- - toler. ably frce sway in affairs of faith, of manners, und of law, where Roman interests were not directig affected thereby. This applied in particular to the administration of finstice. It is true that, as far as Roman burgesses were coneerned in the matter, justice in civil as In eriminal affairs must have ieren reserveti for the Roman tribunais even airealy before the annexation of the land. But clvii justice over the Jews remained eren after that annexation chiefy with the local autiority. C'riminal justice orer them was exercised by the latter prohahiy in general concurrently with the IRoman procurator; only sentenccs of death could not be executed hy ft otinerwise than after confirmation by the imperial magistrate. In the main those arrangementa were the inestable consequences of the aboition of the principality, and when the Jews had oh tained this request of theirs. they $\ln$ fact obtained those arrangements along with it. . . . The local coining of petty moneys, as formerly practised i) the kings, now took place in the name of the lioman ruler: but on account of the Jewish ah horrence of images the head of the emperor was not even placed on the coins. Setting foot within tine interior of the temple eontinued to be forhilden In the case of every non-Jew under penalty of death. . The events at Rome which elevated Veapasian to the throne were the principal reasons that the siege of Jerunalem was not sctually commenced till the early aummer of tie yeur 70, when, In April. Titus began his march from Cremarea. . . . The city, meanwhile, hal beru continuing those civll dissensions which hastened its ruin. John [of Gischala], Simon Bar Gioras, and Eleazar, each at the head of his own faction, made the streets run with bloud. John, whose followers numbered 6,000, held the Lowit Siew, and Middle City; Simon, at the bersi $110,000 \mathrm{Jews}$ and 5,000 Idumeans, had the strong post of the L'pper City, with a portion of the thiri wnil; Eleuzar, with 2,000 zealona, more fanatic than thes rest, had barricaced hinseif witbin the remple itself.

Iu the sailies which John and Simon made upon ench otler all the buidings in this part of the town were lestroyed or set on fire, and all their corn burved; so that famine had actually begun before the conmencement of the slege."-W. Besant and E. II. Pammer, Jeruanlem, the City of IIerod and Galadin, ch. 1-2.- The awful hut fascinating ntory of the slege, as told hy Josephus and repested hy many writers eince, is familiar to most realers and will not be given here. It was proionged from April until the 7 th of Septomber, A. D. 70 , when the Romans forced their way into the upper city. "They spread through the streets, slaying and burning as they went. In many houses where they expected rich plunder, they found nothing but heaps of putrid boties, whole families who had died of hunger; they retrinted from the loathsome sight and insuferable stench. But they were not moved wo mercy towards the living; in some places tise flames were actualiy retarded or quenched with streams of hlood; night alone put an enc: to the carnage.

The city was ordered to k : ma, i , extcpting the three towers, which werc left as standing monuments of the victory. . During the Whole siege tbe number killed [according to Josephus] was $1,100,000$, that of prisoners 97.000 . In fact, the propulation not of Jerusal nu alone. but that of the adjacent districts - .any who had taken refuge in the city, more who had assembied for the feast of unleavened bread - had been shut up by the sudden formation of the siege." Of tbose who survived to the end and were snarei, when the Roman soldiers had tired of siaughter, "nll above seventeen years old were sent to Egypt to work in the mines, or distributed nmong the provinces to be exlibited as glaliators in the public theatres, and in combats sgsinst wid beasts. Twelve thousand died of hinger. . . Thus fell, and forever, the metropolis of the Jewish state. . . . Of all the stateiy city - the popuious streets, the palaces of the Jewish kings, the fortresses of her warriors, the Temple of her Gud -- not a ruin remained, except the tali towers of Phasaelis, Marinmne, and Hip. picus, and part of the western wall, winich was left as a defence for the Roman camp. have been expected that, from the chameter of the great war with Rome, the people, as well a the state of the Jowe, would : sve fallen into utter diseolutlon, or, at last, verged rapidly towards total extermination. Berides the los of nearly a million and a half of lives during the W8r, the markets of the Roman empire were glutted with Jewish slaves. ... Yet still this fucxhaustille race revived before long to offer new candidates for its inalienable lnheritance of detestation and misery. Of the state of Pales. tine, indeed, immediately after the war, we have little accurate information. It is uncertain how far the enormous loss of life, and the uumber carried Into captivity drained the country of the Jewish population; or how far the rescript of Vespasian, which -Tered the wiole landed protserty of the provlice for sale, introduced a foreizn race into the possession of the soil. 'the im mense numbe's engaged in the rebellior during the reign of "adrian imply, cither that the coun try was not ueariy exhausted, or that tue reproduction in tbis still fertile region was extremely rapid. In fast, it must be remembered that
the ravage uf war was, after ail, hy no mean universal ir the province. Gailice, Judke, and great part o. Idunaea were weasted, and probably much deporpulated; hut, excepting a few town which made resistance, the populous regions and weaithy cities beyond the Jordan escaped the devastation. The dominions of King Agrippa were, for the most part, respected. Samaria submiltted without resistance, as did most of the cities on the sea-coast. $\qquad$ The Jews, though looked upur with contempt as well as detestation, were jet regarded, luring the reign of Vespasian and his immediate successors, with jealous watchfulness. A garrison of 800 men occupied the ruins of Jerusalem, to prevent the reconstruction of the city by the fond and relim us zeal of its former inhabitants. . . . Still,
it is impossible, unless of mmunities were suliered to be formed, and the whole race enjoyed comparativesecurity. that the nation could have appeared in the formidable nttitude of resistance which it assumed in the time of Ha-drian."-H. Al. Jilman, Jist, of the Jeut, bh. 18 (c. 2).
A. D. 116.-The riaing in Trajan'a reign."Not quite flfty years after the destruction of Jerusalem, in the year 116, the Jews of tire eastern Mediterranean rose against the imperial government. The rising, although uhdertaken by the Ininspora, was of a purely national character in lts cbief seats, Cyrene, Cyprus, Egypt, directel to the expulsion of the Romans as of the llellenes, and, appurently, to the establishment of a srpparate Jewish state. It ramitied even into Asiaic territory, and seized Mesopotamia and Palestinc itself. When the insurgents were victorious they conducted tbe war with the same exasperation as the Nicarii in Jerusalem; they kiiled those whom they selzed. ... In Cyrene 220,000 , in Cyprus even 240,000 men are said to have been thus put to acath by them. On the other hand, in Aiexnndria, which does not appear itself to have fnllen into the hands of the Jews, the besieged Hellenes slew whatever Jews were then in the city. The immediate cause of the rising is not clear. . . To all appearance it was an outbreak of religious exasperation of the Jews, which had been growing in secret like a volcano since the deatruction of the temple.

5-6th Centnries. Early Jewioh settiemento in Europe.-Arian toleration and Catholic persecution.- "The survey of the settle. ment of the Jews in Europe begins, at we leave Asia, with the Byzantine Empire. They already Hved in its citlew befnre Chris lanity acqulred the empire of the world. In Constantlnople the Jewish communlty Inhabited a separate quarter, called the brasermarket, where there wan also a large byagogue. They were, however, expelled theace hy an emperor, elther Theolosius II., or Justlaus II., and the synagogue was converted lnto the 'Church of the Mother of God.' . . . In Greece, Dlacedonla, and Illyris the Jews had slready been settled a long time. . . . In Italy the Jews are known to have been domiciled as early as the time of the lepublic, and to bave been in enjoyment of full polltcal righta until these were curtalied by the Christlan emperors. They probably looked with excumable pleasure on the fall of Rome. . . . When Italy became Ontrogothic under Theodorlc, the position of the Jews In that couutry was pecullur. Ontbreaks of a spirit of hostility to them were not lofrequent durlng this relgn, but at the bottom they were not direeted against the Jews, but were meant to be a demoustration against this Lated Arian monareh. . . . Those nations which were baptised In the Arian ereed betrayed less intolerance of the Jews. Thus the more Arianism was driven ont of Europe and gare way before the Cathoile religlon, the more were the Jews harassed hy proselytising zeal. ... In spite of the antlpathy entertained sgainst them by the lesters of oplnion, the Jews of Italy were happy in comparisou with their brethren of the Byzatine cmpire. Eren when the Lombards embracen the Cathollc faith the positlon of the Jews in Italy remalned supportablc. The heads of the Catholic Church, the Popes, were free from savgge intolerance. Gregory 1. ( $500-604$ ), sur. aamed the great and holy, who lati the foundation of the power of Catholiclsm, gave utterance to the prlueiple, that the Jews should only be converted by meins of persiasion and gentleness, not by volence. In the territory whlch was suh ject to the Papai sway, in Irome, $L$ wer Italy. Sicily, and Sardlnia, he steadiastly persisted in this conrse in the face of the fanaticai blshops, who regarded the oppression of the Jews as a pious work. . . . In the west of Europe, in France and Spain, where the Church was first whiced to make its way laboriously, the situation of the Jews assumed a different and much more farourable aspuct. . . . It was a lone while before Catholicism gained a from footing in the West of Europe, and the Jews who hail settled there enjoyed unilisturbed pcace until the victorious Church gained the upper hand. The Immigrution of the Jews into these important and wealthy provinces took place mort probably as early as the tlme of the IRepublic ur of Casar.

The presence of the Jews ln the wcst of Europe in, however, not certain until the ad fenturs. The Gaulish Jews, whose first settlement Was in the diatrict of Arles, enjoyed the fuli
rights of Roman citizenship, whether they ar rived It Gaul as merchants or fugitlves, with the pedlar's pack or in the garb of slaver: they were likewlse treated as Romans by the Frankish and Hurgundlan conqueroms." The Burgundian King Sigismund, who embraced the Catholle falth in B16, "first ralsed the barrier between Jews and Cliristians. . . A splrit of hoatllity to the Jewe griduaily spread from Burgunely over the Frank. inh countries. . . . The later of the Nlemovlagian klngs lecame more and more blgnted, and their hatred of the Jcwa conser fuently lncreased.
The Jews of Germany are certalnly only to be regardenl as colonles of the Frankish Jews, and such of them as lived in Austrasia, a province subject to the Dlerovingian lings, ehared the came fate as thelr brethreu in France. Whlle the intatory of the Jcwa in Byzance, Italy, and France, possesses but special Interest, that of thelr brethren In the Pyrencan peninsula rises to the height of universal importance. . . . J•w. ish Spain contributed almost as greatly to the development of Judaism as Juifea and Babylonia. . Condova, Grenada, and Toletlo, ure as famlithr to the Jews as Jerusalem and Tilerian, and almust more so than Naherdea nnd Surs. Wheu Judaism lad come to a standstill ln the East, and hat! grown weak with age, it actulred new rigour in s,ain.

The first settlement of the Jews in krautifnil ilesperia is buried in dim obscurity. It is certaln that they came there as free men as earty as the the of the loman IRepublic, In orider to take advantage of the prodinetive resourecs of this country. The tortured victins of the unhappy insurrections unicr Vespasian, Titus, aud Hadrian were also dispensed to the extreme west, and an exaggerated account reiates that 80,000 of them were dragged off to Spain as prisomers. . . The Jews . . . were unmolested under the Arian kings: . . . but as soou as the Catholie Church olitained the supremac - in Spain, and Arianism began to be persecuted. an unfavourable erisis set $\ln$. 7th Century.-General persecution.-Firat exnulsion from Spain. - In the seventh eentury during the reign of the Eastern Roman Emperor Heraclius (A. D. 610-641) the Jews vere suh jected to a more general and hitter $p$ :rsecution than they had experienced before at the hand of the Christians. "It is suld that about this time a propheey was current, which deciared that the Roman empire wonld be overthrown hy a circumcised people. This rejort may have been spread hy the Jews, iu order to excite their own ardour, and assist their projects of rebeilion; but the propheey was savel from oblivion by the subsequent conquests of the Saracens. .... The eondinct of the Jews excited the bigotry, as it may bave awakened the fears, of the imperial government, and both Phocas and Ileraclius attempted to exterminutc the Jewish religior, and if possiblc to put an cnd to the national existence. Heracilus not ouly practised every spe. cies of cruelty himself to cffect this objeet wlthin the bounds of his nwn finminions, but he eqeas made the forced eonversion or hanishment of the Jewa a prominent feature in his diplomacy."

A. D. 1727-1880.-Persecutions and restrictions in Russia.-The Pale.-"The refugees from the Ukraine who had settled in Littie Russia were expelied in 1727 . No Jews from without were allowed to enter Russia upon any pretext. The few physicians and other profes. sional men of the excluled race who did nanage to remain lu Russia were In continual jeoparily of insult and expulsion. Over nod over again Russian stntesmen who were anxious to deveiop the resources and trade possibilities of their back. ward and bnrbnrous land, hinted at the advksbiiity of hringing in some Jews. The Imperial wiii was resolutely opposed.

When the brad-minded Catherine II ascended the tinrone these efforts were renewcd, but sire too resisted then, ar!l says in her Mcmoirs, 'their admission Into Russia might have occasjoned much injury to our smaii trudesmen.' She wis too deepiy bitten witi the Voltairean jhilosophy of her time to hare, or even assume, any relipious ferrour in the natter, but thongh in 1786 she issued a high-sonnding edict 'resjecting the protection of the rights of Jews of Russing, the perscution on cconomic and sociai grominds continueti unabnted. By this time It wili be seen the haws did, however, recognise the existence of Jews iu I Iussia. The explanation is that the first partition of Poland and tite annexation of the great Turkish territory lylng between the Dnicper and the Dniester had bronght into the empire suein a vast IIehrale population that any thought of expuision was hopeless. . . . The rape of lowiand and the looting of Turkey had brought two miliions of Jews under the sceptre of the Czar. The fact cousd not be blinkerl. Ther were there - insile the Holy Empire, whose lwast for centurice had been that uo circumeised dog couid find rest for his foot on its sametitied territory. To au autocracy inased so wholly on an orthotox religion as is that of tite Czars, this semeit a most trying and perpicxing problem. The silution they hit upon was to set aslile one part of the empire as a sort of inzar house, which should serve to kecj the eest of it from poilution. Hence we get the Paie. Alinost every decade since lisis, the diate of Catherine's ukase, has witnessel some aiteration made in the dimensions and houndaries of tils Pale. Now it hns been expanied, now sharply contracted. . . . To trace these changes would be to unnecessariiy To trace ourwives with details. It is pnough to kecp in wind that the creation of the Paie was Russia's
solutlon of the Jewish problem in 1788, and is stlll the only one it can think of. Slde by side Wlth this naire notion that Holy Russia could be kept an laviolnte Christlan land in the eyes of Ileaven by juggling the map, there grew up the more worldly conception of turulng the Jew to account ns a klad of mllek cow. . . In 1819 Jewish brandy distlliers were ailowed to go lnto the interior and settie 'untll, as the ukase said, ${ }^{-}$Russlan master distillers siuall have perfected themselves In the art of distilling.' They availed thenselves of this permisslon in great numbers, and at the end of seven years were all summarly driven ont agnin, a new ukase expiaining that 'the number of Christian distillers was now sufficlent.'. . . The pnst century's inlstory of the Jews In Russia is made up of conflicts between these two impuises In the chlidilike Slavonle brain - tife one to drive the heratic Jew into the Paie ns futo a kennel with kicks and stripes, the other guardediy to entice him out and manage to extract some service or profit from him In 1825 Nicitolas nscended the throue. Within a year he had enrned fron the Jews that sinister title of 'The Secoud IIanan, by winich Israel stili recalls him.

With the death of Nicholas [ 18,5 ] and the adrent of Aicxander II a new era huwned. Dr. Mackenzie Wallace hins drawn a spirited and compreinensive picture of the Iteral stamperle ail Russin nude to reform everything.

Aimost the tirst thing the young Czar did wns to revire a commission to inquire into the condition of the Jews, which Nichoias had decrecd in 1840 and then ailowed to inpse. This commissiou sent ont a list of inquiries to nll the Provineiai Goveruors. These gentiemen returned vojumlnous reports, nli, without exception, faVourable to the Jewrs. . C pon the strength of titese reports were issued the ukases of 1859 , 1801, and 1465, . . by which Jews of the tirst mercantile guild and Jewish artisans were al lowed to reside nif over the Empire. It is fust as weil to remember that even these beneficent concesslons, which seem by contrast witil what hand goue before to mark such a vast forward step in liusso-Jewish history, were confessedshackles were utilitarian consideratious. The shackles were strickeu only from the two cate. gories of Jews whose freedom would bring protit to Rusyin.

A. D. 1791. - The French Revolutionary emancipation.-' It is to the Frucil Revolution that the Jews owe their inproved jusition in the morlern worid. That proitic parent of good and evii has at least deserved well of them. It was the first to do justice, fuil and unequivocal, to those whom every other great political movement passed over as two insignifteant or too contemptible to be taken into account. Mirabeau nnd the Abbé Grégoire, the one in his desire to sccuiarise the State, the other in his policy of Christianis $\ln y$ tine Revoiution, as our historian Graetz puts it, hoti urged ou a movement which, In an incredibly short space of time. succeedeal la effecting the complete emancipntion of ai the Jews under the ruie of the Repubic. 19th Century-The Antl-Semite movement. - Later persecution of the Jews in Ruasia.-- Among the striage and unforeseen de: : i,p. ments that have claraeterized the fourtio quarter of the nincteenti century, few are likely to be regaried by tite finture historian with a deeper or more melancholy lnterest tian the anti-Semite movement. which has swept with such a portentons rupldity over a great part of Europe. It has produced lu lissiu by far the most serious relif glous persecution of the century. It has raged fiercely in liommanin, the other great eentre of tie Oriental Jews. In cniightened Gcrmany it has beeome a considembie purliamentary force. In Austria it counts amoug lis adiferents men of the highest social station. Eiven France, which from the days of the devolution lans been speclally distinguisthed for its iilberaity to the Jews, hus not escaped the contarion.

It is thls movement which has been the occasion of the very vainabie work of M. Ammole laroy. Beaulleu on 'Israel amoag the Nations.' The nutior, who la unlversally recogniani as one of the grentest of living pollitical writers, has spccial quatitientions for his task. Witit an exceetiagly wide knowi. edige of the literature relating to his sulbjeet he coabbincs muril jenmal knowledge of tire Jews In Palestive amb in many other eountrics, ami es. pecialiy in those countrics where the persecution has most furionsly raged. That persecution, he justiy salys, mites in different degrees thrce of the inost powerfui clements that cian anve man. kiai-tite spirit of relicions Intohermes ; the spirit of exclusive nutionality: aud the jealousy which aprings from trade or incrantile comperf. tion. of these elements M. In that hideus Russina persecution wiicil 'the New Exmins of Frederie has made familiar to the English rember, the religions efement certuinty weapies a very leadiag place. Pabeelonesteff who shares with his master the ellef guit and infamy of this atrocions crime, belongs to the same type as the Toryuemadas of the past, ant the spirt that animites intm has cutered largely

Into the antl-Semite movement in other lande Another element to which M. Leror. Beau. lieu attaches conalderable importance is the Kul. tur Kampf in Germany. When the German Government was engaged In its deree struggle with the Cathollcs, these endeavored to elfeci a diversion and to avenge themselves on pspers, which were largely in the hands of Jews, by raislng a new cry. They declared that a Kuttur Kampt was Indeed needed, but that It should be directed agalnst the allen people who were under. mlning the moral foundatlons of Christian sorie. tues; who were the Implacalle enemies of the Christian creed and of Christian idesls The cry was soon taken up hy a large body of Evangetical Protestants. . . . Still more powerfui, in the opinlon of our author, has been the spirit of Intense and exclusive untionality wilic! has in the present generation arisen in so many coun. tries and which seeks to expel all aiien or lietero. geneous elements, and to mouid the whole na. tlonal being into a slngle defnite type. The movement has been stlil further streagthened by the greater keenness of trade conpetition. In the midst of many idle, drunken aud ínoranat ponulations the shrewid, thrifty and solver Jew slands conspleuous as the most suceessfuit trader. llis rare power of judging, Influcucing and managing men, hlo iertility of resource, his indomitabie perseverance and Industry continually foree him into the forcmost rank and he is prumb. neat in oceupations whle hexcite amchanimusity. The tax-gatherer, the agent, tie nuiduleman, and the money-lender are very commonly of Jewish race and great Jcwlsh capltaiists largely contmil the money markets of Europe at a time when capltal is the spectinl object of socialititicatucks" -W. E. II. Leeky, lsrael ammay the Jiftions (The Forum, Dec., 1893). -"Cntii 1881 the lives and property of Jews had been respected. Their libertics were restrieted, not obsolete. with all Rusaians, Jews are subject to the Law of Cruscription. Unllik Chriatians, they may not provide a subatitute. They may not follow any trade, or profession, until they have produced evidence of regiatration in the recruit. ing district. While subject to military service Jews cannot rise higher than the rank of non commissloned officer. The journal of statis. tles gives the proportion of Jews to the population as 3.95 per cent., whereas the percentage on the conscription rolls is $\mathbf{5 . 8 0}$. Thus the Hebrew is ground between the upper and nether milistone. . . . In December 1890 Russians were forbldden to sell, lease, or mortgage real eatate to Jews throughout the Empire, a measure hitherto applied only to Poland. Where Jews have ncquired such property they will be compelled to dispose thereof. The Jewish artisans, apothecaries' assistants, dentlsts, and midwlves, with all apprentces, sre to be expelled from all places outsile the Pale. Exceptions to this are obtnina. ble oniy by apectal permisslon from the Minlater of the Interior. Even then the chlldren of such must be removed to the Pale as soon as they come of nge, or marry an unprivlleged Jcw. This Pale of Settlement, which stretches along the frontler, from the Baltlc to the Black Sea, is a hell of scething wretcherlness. Here five miliinns of Jews nie compelled to live, and die, in a Ghetto of filt ${ }^{\text {h }}$ and misery, mocked with a feast of Tantalus. Beyond are lands where corn rots for lack of Ingatherers; yet they are cubined nud contined. Inabillty to bribe a corrupt mass of administrators has led to the expulsion of poor Jews from villages whthin the Palc, into crowded towns, such as Tchernizo, where the population
has consequently risen from 5,000 to 20,000
In September [1890] the Jews were expelled from Trans casplan territory; in October, Jews, not having the right to IIve in St. Peteriburg, were ordered to be transferred, with their families, to thelr proper placea of abode; in January the Jews were ordered to be expelled from the Terke region of the Caucasus; in February the Jews in Novgorod were expelled. It has been declared expedient to expel them from the Cossack Stan. itzas of the Caucasus. Three years ago the Jews were forbldden to live on Crown lands. Elghty. seven familles were recently ordered to leave Saraka districts, because they had settled there after the passing of the Ignaticfl laws. Artisans are henceforth to be confined to limits of restdence whithin the Palc. It is the same with millers; therefore mills are idle, and the price of corn has decllned. In Courland and Livonia, descendants of Jewlsh famlies, whlch were es tablished when those provinces were incorporated into Russia, may remaln; but no others may settle. . . Jews who have llved elght years in a village may be Interned therein, and may not
move, even walking distance, without move, even walking distance, without leave. Jews lcaving one viliage for another lose thelr rights, and must go to the Ghetto of the nearest town. This is practically a sentence of death. Executlons arc going on, not upon acaffolds, but

KALEVALA, OR KALEWALA, The-
'To a certain class of modern philhhurlsts, Do poem in the world is moro funillis than the Kaiewala, the long eple, which is to the mr. thology and truditional hre of the Finns what the Iliad and Odyssey of Ilomer are to the herric story of ancient Grecce. It is the solnte from which ncarly all the information conurectel with the religious ereed, the moral notions, the customs, and the domestic details of a most nemark. ahle race is to be ohtudined. If we would hnow how the Greeks of the herolc age praycl. fonght,
eat, drank, sported, and elothed eat, drank, sported, and elothed theinselves, we turn to the pages of IIomer. If we would obtain similar knowledge on the sibject of the Finas. we consult tho Kaiewaln. Though the traditions of the Finnish herues are possibly is what as those of Achilles and Ajax, the arrangement of them into a contlnumas poem is a work of very revent date. No Woltlan controversy will arise respecting the construction of the Kalewala, fur it is not more than twenty- five years since the Peisis. tralif who tirst put together the ivilated songs, or Runes, pubifised the result of his labours, Fragnicnts of Finnish poetry, collo tenl from the orai trailtions of the people, had alromly made their appearance, though even the tirat inuportant collection of these, which was maln by Ir. Zacharias Topelius, dates no furt her back ithan 1822. But it is with Dr. Lonurut :hat the existence of the rpic as an cpic, with the tithe 'Kalewain,' begius. Ife pubtished it in thirr. two Runes, - that is to say, buxis or cantes, for the word, which previous $Y$ denoted an indeperdent poem, now sinks into little mur. thata a siga of divisiou, though hore and there. it mat be confessed, an abrupt transition oce trr. to which a parallel would not be found in the thind or the Odysery. In 1849 a second cdition of the Kale. wala was published, likewise unter the superintendence of Dr. LDnarot, containiny fifty canted and nearly 23,000 lines. " -J . Oxenforil, hitheriha (Temple Bur, December, 1860) - "Besides its fresh and simple beauty of style, its worth as a storehouse of every kind of primillve folk wre. erims as it is the production of au Urvelh. a vation

that hss undergone no vioient revolution in language or Institutions - the Kalevala has the peculiar interest of occupying a pooltion between the two kinds of primitive poetry, the ballad and the epic. Sixty yearn ago, It may be said, no one was aware that Finland posessed a national poem at all. Her peopie whoclaim affinity with the Magyars of Hungary bat are possiniy a back-wave of an eariler tide of prpulation - had remalned untouched hy for. eign $\ln f l u e n c e s$ aince their conquest by Sweden, and their somewhat lax and whoicsale conver sion to Christianity: events whieh took piace gradusliy between the milddie of the tweiftli and the end of the thirteenth centuries. ... The annexation of Finiand hy Russia, in 1800, awak ened natlonal feeling, and stimuiated rescareh intu the songe and cuatoma which were the heir looms of the people.

From the north of Norway to the slopea of the Aital, andent expiorers sougint out the fragmenta of unwritteu early poetry. These runes, or runota, were aung chiefly iy old men called Runoias, to beguile the wisriness of the long dark winters. The custoni was for two champions to encave in a contest of metmory, ciasping eaelı other'a aands, and reciting in turn till he whose memory first gsve in slackened his hold. The Katevaia contains $s n$ instance of this practiee, where it is salid that no one was so hardy aa to ciasp hancia with Wainamoinen, who is at once the Orpleus and thes Prometiseus of Finnish mytlology. These Rimolas, or rhapsodists, complain, of course, of the degeneraey of human inemory; they notice how any forelgn lnftuence, in religion or politics, Is cestructive to the natlve songs of a race. As for the laya of old time, a thousand bave leen seattered to the wind, a thousend buried in the snow.

As for those whlich the Nuaks (the Teutonic knights) swept away, and the prayer of the priest over-wheimed, a thousami tongues were not able to reeount tinem. In spite of the losses thua caused, and in spite of the surgivicioos character of the Flnns, which often mate the task of collection a dangernne one, enough materinls remained to furnish Dr. Lomarat, the most noted expiorer, with thirty ine Runots, or cantos. These were published in 1835, but later research produced the tifteen cantos which nake up tie symmetricnl fifty of the Kiluvala. In the task of arranging and uniting these, Dr. Lonnrot played the part generaly ascribed to lisistratus in relation to the liad and oiysscy. He ls said to have handied with singular tidelity the maternis willein now come before us as one poem, not without a certain unity and continuous thread of narrative. it is this unity which givea the Kilevaia a elaim to the titie of eple, although the eiement of permanence which is most obvious in the Greek epics, ani in the eariiest Heorew recorda, is here conspurnousis absent

Among the Finns we fint no truce of nn aristocraey; there is scarcely a mention of kings, or priests; the heroes of the pown are realiy popular heroes, fisieers, smiths, hashammen, 'mediclue-men' or wizarls: exaggerited shadows of the peopie, pursuing on a beruic scale, not war, hut the common daliy busiuess of prinitive and peaceful men. In recorting their adventures, the Kalevaia, like tile shield of Achilies, reflects ail the iife of a race, tar focsito, the funerals, the rites of seed-tinie and harvest, of marriage and death, the hymn,
and the magicai incantation. Were this all, the eple wouid only have the vaiue on an exi!. ustive collection of the popular lailada which, ms we have seen, are a poetical recond of ali the intens. er momenta in the exiatence of unmophistleated tribes. But It is diatinguished from aueh a col. lection, by presenting the haliais as they are produced hy the eventa of a continuous narra. tive, and thos it takes a distinct place between the aristocratic epica of Greece, or of the Franka, and tite scattered songa whleh have been coiiected in Scotiand, Sweden. Denmark, Grece, and Italy. Besides the lnterest of its unique positlon as a popular epic, the Kaievala ia very precious, both for its ifterary beauties and for the ennfused mass of folk-lore which it contalna.

What is to be unterstoon by the word - Kaievala': The affix 'la' signitiea 'abode.' Thus, 'Tuoncia' is 'tle nbode of Tuonl,' the god of the lower worid; and ns ' kaieva' meana 'herole, ' magniffeent,' 'Kalevala' is 'The Ilome of Heroes,' ilke the Indinn 'Beerbinom, or 'V'lrh. haml.' The poem is the record of the adventures of the people of Kaievala - of thelr strife with the men of Pohjoia, the piace of the worid's end."一A. Lang, Kinlecala (Ftruer'n Uay., June, 18:2) - A complete translation of the Kalevala intu Engiish verse, by Joim Martin Crawford, was puhiished In New York, In 1888.

KING'S PEACE The.-" The peace, as It was called, the primitree alliance for mutual good bebavlour, for the performance and enforcement of rights and ditles, the voluntary restralnt of free soctety in lta earllest form, was from the begln. ding of monarchy [In early England] under the protection of the king. . . But thls positlon is far from that of the fountaln of justice and source of jurisdlctlon. The klng's guarantee was not the sole safeguard of the peace; the bundred had its peace as well as the king; the kiog too had a dlstlnet peace whlch llke that of the church was not that of the country at large, a special gusrantee for those who were under special protection. . . . When the king becomes the lord, patron and 'mundborls' of hls whole people, they pass from the anclent natlonal peace of whicb be ls the guardian into the closer personal or territorial relatlon of whleh be is the source. The peace is now the kiug's peace.

The process by whlch the natlonal peace becsme the king's peace ls almost Imperceptlhle; and it ls very gradually that we arrive at the time at which all peace and law are supposed to die with the old king, and rise again at the priclamstion of the new."-W. KNIGHTS OF THE SHIRE, - Diring the thirteenth century tiere grew up in Enghnd the practice of seming to the Great Conncil of the king a certuin number of kuights from each shire to represent the "leaser baronage." which had formerly possessed the privilege of nttend. ing the council in person, but which hal become more neglectful of attendauce ns their nmbers increased. In theory, these knigints of the shire, as they came to be called, were representatives of that "lesser baronage" only. "But the necessity of bolding their electlon in the Countr Court renierei any restriction of the electoral body physically Impossible, The colit was cumposed of the whole hoily of freeholiers, nai no sheriff could disthgenish the 'aye, aye' of the Feoman from the 'aye, aye' of the lesser baron. From the inst moment therefore of their atten. dance we find the knights regarded not as mere representatives of the baronnge, but as knights of the shire, und by thls milent revolntion the whole binly of the rural freeholders were and mitted to in share in the government of the ream."-J. il. (ireen, Short Mixt. of the Englinh Pengle, ch. 4.-The history of the knights of the shire is the history of the origin of county repre. sentation in the English Parliament. The repre. sentition of boronghs, or towns, has a history quite dist'uet. Of the leading part pluyed by the kuights of the shire iu the development and ctablishment of the English Constitution Mr. Stubbs remarks ("Const. Tlist. of Fing.." eh. 1\%, sect. 27: ): " Buth historical evidence und the naare of the case lead to the eonviction that the vic. tory of the constitution was won by the knights of the shires; they were the lealors of parlinmentary debate: they were the link between the goind jeers and the goon towns; ther were the indestructible element of the honse of commons ; they were the representatives of those locai dirisions of the realm which were eocval with the historical existence of the people of England, ani the interests of which were most directly attacked by the ahuses of royal prorogative." ## KOREA

KOREA.-" Lke most regions of the extreme Eant, Kores is known to forelgners by a name which has little currency in the countiy liself. This term, belonging formerly to the petty state of Koric, has heen extended by the Chinese and Japanese to the whole peainsula, under the forms of Kaokiuli, Koral, Kawii. When all the principalities were fused into one mouarcily, towards the close of the 14th century, the country, at that tlme suiject to China, took the oftieial title of Chaoslen (Tsiosen) - that is, 'Serenity of the Borning' - In ailusion to lts geographleal posithon enst of the emplre, . . . Athougin washed by two muei. frequentei scas, und yeariy sighted by thousunds of seafurers, Kiorea is one of tite least known Aslatie regions. . . . From Its very position between China and Japan, Korea could not fali to have been a suhject of contention for its powerful neighbours. Before lis fusion in one state it comprised several distinct princlpallties, whose limits were suhject to frequent cianges. These were, in the north, Kaokiull (Kuoli), or Korea proper: In the centre, Chansien and tie is so ealied 'kingloms' of Chinese foundation, usualiy kuown nas the San Kan (San Han), or 'Tiree Han'; In the south, Petsi, or Haksar (Kudara), the Siulo of the Chincse, or Siragi of the Japnuese ; heside the petty state of Kara, Zinm, or Mimana, in the south-east, round nhout the Bay of Tsiosau. The northern regions naturnil gravitated townrds China, whose rulers repeatediy interfered in the internal affairs of the eountry. But the inhahitants of the south, known in history hy the Japunese name of Kmiso, or 'Herd of Bears,' were long subject to Japan, while int other times they made frequent incursions into Kiu-siu anil lloudo, and even formed settements on those islands. The first conquest of the country was made hy the forces of the Queen itegent Zingu in the 3 century. Towards the end of the 16 th the celehrated Japanese dictator and usur per Tnfkosama, having coneelsed the project of conquering China, hegan with

Korea, unilr the pretext of old Japmese rights over the country of the Kimaso. After wasting the land he conpeiled the King to hecome his trihutary, and left a permanent garrison in tbe peninsuia. A fucsh expedition, although interrupted hy the death of Talkosama, was equaly successful. Tsu-sima remained in the hands of the Japanese, and from that time tili the middle of the present century Korea continued in a state of vassalage, scoding every yoar presents aud trihute to Nippon. . . Thanks t, the aid sent by the Ming dynasty to Korea, in its victorious struggle with the other petty states of the peniusula, and in its resistance to Japan, its relntions with Chlna costinued to be of the most friemily character. Admirers of Chinese culture, the native rulers felt bonoured hy the iuvestiture granted them by the 'Son of Heiven.' But after the Manchu conque:t of the Middle Kingeiom, Korea remaining faithful to the cause of the Minge, the new masters of the empire invaded the perinsula, and in 1637 dietated a treaty, imposing on tive Koreans a yearly trihute.
But although since that time tiie uative ruler takes the title of 'Suhject,' China exercises no real sor reign rights in Korea, "-E. On Juiy ith. INeib, a Roman Catholic missionary arrivedín a Corean boat at Chefoo, with a tale of dire perserution. Two blshops, ninc priests, aud a wuulsr of Christians of both sexes had leerll maswirid, many of them after juileial tortures of atrowinus cruelty. Three memhers of the nission ouly survived, and M. Ridei had been chosell to carry the news to China, aud endeavour to prowre asalstance. It was to the French unthorities, nnturaliy, that he addressed himaclf: mal luth Admiral Ioze, the Commandant of the French flect in Chinese waters, and M. de Belionet, thea charge d'affaires at Peking, leut a symputhetic ear to his protest.

An expedition was accortingly resolved on.

Admiral lioze started from Chefoo with the expeditionary force on Oetoher 11th, arrived of Kung-itwa on the 1th, and occupied it, after a merely nomiand resistanee, two days later. Tbe Coreans were nipar. cutly taken by surprise, having perhips thought tbat the danger had passed.

The fortualong the banks of the river were found ungarriwnelf, and Kang. hwa itself, a considerahle fortues reataining large stores of munitions of war, whs practicaliy undefended. A letter was remived, a few days iater, inviting Admiral lloze to crme or send delegates to soul, to talk over matters in a friendly spirit; hut le replied that, if the ( 0 orean authorities wished to treat, they had better come to Kang.hwa. This uttitude was moant. no douht, to he impressive, hut the evalt proved it to be slightiy premature. So far ull hand gone well; hut the expedithon was ahout to collipse with a suddenness contrasting remarkable with the expectations raised hy M. te Bellonit's denumclations and Admirai lRoze's bautiur. The disastrous termination of . . . two more. ments appears to have persuaded .Ilmitul Roze that the foree at his disposal was insulticient to prosceute the enterprisp to a successful issur, in the face of Corean hostility. It was mo mager a question whetiner he siould go to Nibul or the Coreans come to him: the expedition was at a deadiock. He hail rejected the tirst overtures, and was not strong emough to impose terns. A retreat was aecordingly decoulul on. The" city of Kang hwa was hurned, with its public oflice and royal palace."-It. Two years later, after the Japanese revolution which restored the Jlikado to his full soverelgnty, the Kormas de clined to acknowicdge hls suzerainty, mill bitterly hostile feelings grew up between the two peoples. The Japanese were restrained from

"LATIN NAME," The.-"We must explain What was meant in the sirth century of Home [thlrd century B. C.] by the 'Latin amme."

## 1.ATIN NAME

The Latin name was now extended far heFond its old gengruphlcal ilmits, and was represented by a multitude of flourishing citles scattered over the whole of Italy, from the fronther of Clsalplne Gaul to the southern extremity of Apulla.

Not thst they were Latlns In their origin, or connected with the cltles of the old Latlum: on the contrary they were by ex. traction llomans: they were colonles foundel by the Romun people, and conslstlog of Roman chtizens: but the loman government had resolved that, In their polltical relatlons, they should be consldered, not as Romans, hut as Latins: and the Romsn settlers, In conslderation of the advatages which they enjoyed as eoloblsts, were conteut to descend politlenlly to a lower condltion than that whlch they had recelved as thelr blriliright. The states of the Latho name, whether eltles of old Latium or Roman colonies, all enjoyed thelrown laws and municipal government, like the other allies

They were also so much regarllal us forcigners that they conld not buy or inherit iand from Roman cltizens: bor ham they generally the right of intermarrince with IRomans Bit they had two preculiar privileges: one, that any Latin who left leblind hint a sith in hils own clty, to perpetuate bis fantio there, might remove to Rome, and nequire the lioman franchise: the othro that every person Who had heid any magistrucy or distiughibhed] oflle e in a Latln state. might beconve at once a Roman citizen."-T. LATIUM.-THE OLD LATINS.-"The plafn of latinns must have been In primeval thmes the scene of the grandest conflicts of nature, whic the slowly formative agency of water deposited, and the erinptions of mighty voleanors upheavel, the snccesslve serata of that soil on whlch was to be dechded the questlon to what people the soverelgnty of the world shonlid helong. Latium is bounded on the east by the mountains of the Sabines and Aequl. whlch form part of the Apennines; and on the sonth by the Volscian range rising to the beight of 4.000 fect. whleh is separated from the maln chaln of the A pennines ly the unclent territory of the Hernicl. the table hand of the Sacco (Trerus, a tributary of the Liris), and stretching In a westerly direc. tion terminates in the promontory of Terracina. On the west lis loondary is the sea, whleh on this purt of the eonst forms but few and luitilier. ent harhours. On the north It inspereepthly merges Into the bromil lighiands of Etriria, The region thus enclosed forms a magnificent plain traversed by the Tiber, the 'mountaln-stre:im' which issues from the Cmbrian, and by the Anio, whleh rises in the Sabine monntnins. 1lills hore and there emerge, Hke lalunds, from the piain; some of them steep limestone cllfs, such as thit of sorsete In the northeast, and that of the Circclan promontory on the gouth-west, as weil as the slmallar though lower helght of the Janiculum near lrome; others volcanic pleva. tions, whose extlnct craters had become converted into liakes wheh in some eases still exlst: the most imprortant of these is the Alban range. which, free on every slde, stands forth from the Hasin between the Volsclan chain and the river Tiber. Here settled the stock which is known to

hlstory under the name of the Latlns, or, as they were subsequently called by way of distinction from the Latin communltles heyond the brumbs of Latlum, the 'Old Lathas' (' prisel Latini'). But the territory oceupled hy them, the dlstrict of Latlum, was only a small portion of the central plain of Italy. All the country north of the Tlber was to the Latlos a forelgn and even hostile domain, whth whose inlabitants no lnsting allance, no public peace, was possible, mul such armistices as were coneluded apprear miwass to have been for a llmited perion. The Tilur fonned the northern boundary from early thmes.
We find, at the tlme when our hilstory bepias, the flat and marshy traets to the suith of the Alhan range in the hands of Cimbru-falsellian stocks, the Rutull and Volsci: Arlan and Vell. trae are no longer In the number of originally Latln towns. Only the central porion of that region between the Tlber, the spurs of the $\mathrm{A}_{\mathrm{i}} \mathrm{en}$ nines, the Alban Mount, and the scell -a distinct of abont 700 square miles, not much larg. r than the present canton of Zurleh - was Latium proper, the 'plaln,' as It appears to the eye of the observer from the heights of Honte Cavo Though the country ls a plain, it ls turt movotonously flat. With the exception of the seabeach which ls annty and formeal in part by the accumblathons of the Tlber, the level is evers. where brokeu by lillls of tufa monlerate in height. though often somewhat steep, anl by dirp flssures of the ground. These ultormating eis tions and depresslons of th. . . rfice lend th the formatlou of lakes in winter; and the exhahatinas proceedling $\ln$ the heat of summer froul the putrescent organie substances which thry crntain engender that noxlous fever-halen athonphere. which in nnclent thmes talnted the distriet as it taints it it the present day."-T. A. D. 449-1066.-Triai by Jury nnknown to Anglo-Saxons, "It may be confidently as serted that trial by jury was unknown to our Angio-Saxon ancestors; and the idiea of its exis. tence in thelr legai system has arisen from a want of attention to the radical distinction between the members or judges composing a court, sad a body of men apart from that court, lout sum. moned to attend it in order to determine conclusiveiy the facts of the case in dispute. This is the principie on whicil is founded the inter. ventlon of a jury; and no trace whatever can be found of such an institution in Anglo-Saron times." W. Forsyth, Trial by Jury. p. 4.

A. D. 871-1066. - The King's Peace. -1 . The technicai use of "the king's peace " is. i suspect, connected wheth the very anciont rule that a hreach of the peace In a house nust be atoned for in proportion to the hatsehouder's rank. If it was in the king's dwelling, the offender's iffe was $\ln$ the king's hand. This pecullar sanctity of the king's house was gradu ally extended to ail persons who were about bis business, or speciaily muder his protection; but when the Crown midertook to keep the peace everywhere, the klng's peace becume coincilent with the genemi peace of the kingdom, and hises. peciai protectlon was deemeri to be extended to ali peaceahie subjects. In sulstance, the term marks the estahlishment of the conceptina of puhif justlce, cxercised on lecialf of the whole commonwealti, as something apart from and above the right of private vengenner,- a right which the party offended might pursite or not, or accept composition for, as ine thonght fit. The jrivate bioolfend, it is true, formally and finaily disapieared from Engilsh jurisprudence oniy in the present century; hut in its legrilizid his torical shape of the wager of battie it was aut a native Engilsh institution.- Sir Frcherick Pol. iock, Eumys in Juriopruilence and Elhics, p. :05. -Sec, also, Kina's Peace.

It is incredlbie that so important a fcature of our juris. prudence, if it had been known, would not have been ailuded to in the various compilations of law which were made in the reigns of the cariy Norman kings. . . . Aithough the form of the jury dld not then exist, the rudlments of that mode of triai may be distinctiy traced, in the selection from the nelghborhood where the dispute aroee, of a certain number of persons, who after being duiy sworn testified to the truth of the facts within their own knowiedge. Thls is what distingutshes the proceeding from what took place among the Angio-Saxons - namely, the choosing a ilmited number of prohi homines to represent the community, and glve testimony for them. A. D. 1066-1 154 .-The Curia Regis. - "As a legai trihunai the jurisdilctlon of the Curia was both civli and crimlnal, original rad appellate. As a primary court it heari ali causes in which the king's interests were concernei, as weil as all causes between the tenants-In-chlef of the rrown, who were too great to suhmit to the local trihunals of the slife and the bundred. As an appeliate court it was resorted to in those cases in which tha powers of the locai conrts had been exhausted or had falled to do justlce. By virtue of speclai writs, nnd as a speelal favor, the king eould at his pleasure cail up causes from the focal courts to be heani in hils own currt according to such new methois as his advisers might lnvent. Through the issuance of these sperelal writs the klog became practleally the fountalu of justuce, and through their ageney the new system of rogal taw, which finds its source ln the person of the klng, was hrought ln to remedy the deferts of the oli, unelastic system of customary iaw which prevalled in the provincial courts of the peopie. Tho curia foilowed the person of the king, or the justieiar in the king's absence."- Ilannis Tayior, Origin and Cimith of the Engliah Conatitution, pt. 1, pp. 455-946.
A. D. 1006-1215.-Purchasing Writs.-"The course of appilication to the curia regis was of this nature. The party suing paid, or undertook to pay, to the king a finc to have justltiam et rectam in his court: and thereupon he ohtained Writ or precept, by means of which he conmencel his sult; and the justices were author. izeif to hear and determine his cialm."-Reeves' (Finlason's) IFiat. Eng. Lato, v. 1, p. 267.
A. D. 1077.-Trial by Battie.- "The earliest reference to the battle, $I$ believe, in any account of a trial in England, is at the end of the case of Bishop Wififitan v. Ablot Waiter, in 1077 . The controversy was settled, and we read: 'Thereof there are lawful witneases . . . Who asid and
heard this, ready to prove it by cath and battic." Thin is an ailusion to a common practice in tho Middie Ages, that of chalienging an adversary's Witness, or perhaps to one method of dlaposing of cases where witnesses were ailowed on opposite sides and contradicted each other.

Thus, as among nations stifi, so then in the popular courts and between contending private partles, the hattie was often the uitlma ratio, in cases where their rude and unrational methods of triai yielded no resuits. It wns mainiy in order to dispiace this dangerous. . mode of proof that the recognltlons - that is to say, the first organized form of the jury - were introduced. These were regarded as a special boon to the poor man, who was oppressed in many ways hy the duei. It was hy enactment of Henry II. that this reform was hrought about, first in his Norman diominions (in 1150-52), before reachlng the Engilsh throne, and afterwards in Engiand, sometlme after he became klng, in $1154 . A. D. 1100 (circa).-Origin of Statutes of Limitation.-"Our ancestors, instead of fixlng a glven number of years as the period within which legal proceedlings to recover reai property must be resorted to, had recourse to the slnguiar expedlent of makling the period of ilmitation run from particuiar events or dates. From the time of IIenry I. to that of IIenry III., on a writ of right, the time wilhin whlch a descent must be shown was the time of Kling IIenry I. (Co. Litt. 114h). In the twentiet: ear of II enry III., hy the Statute of Merton (c. 8) the date was altered to the time of IIenry II. Writs of 'mort d'ancestor 'were llmited to the tlme of the last return of King John lato England; writs of novel dlsscislu to the time of the king's tirst crosslng the sea Into Gascony. In the previous reign, acconllng to Glanvilie (lib. 13, e. 33), the disseisin must have been since the last voyage of King IIenry II. Into Normandy. So that the tlme necessary to har a cloim varied materinily at different epochs. Thus matters remalned untii the 3 Edw. I. (Nitat. West. 1, c. 30), when, as ali iawyers are aware, the time withln which a writ of right night le brought was limited to cases ln which the scisin of the ancestor was since the time of King IRichari I., whleh was construed to mean the begioning of that klng's relga (2 inst. 238), a period of not less than elghty-six yars. The icgislature having thus edopted the relgn of illehard I. as the date from which the limitation In a reai action was to run, the courts of law adopteri it ns the periol to which, in all matters of prescriptlon or custon, legal memory, Whach tlif then hai been critined to the tlme to whleh ilving memory could go hack, shouid thenceforth be requlred to extend. Thus the iaw remalned for two centuries nud a half, hy which tlme the flmitation Inaposed in respect of actlons to recover real property having iong become inoperative to har ciaims which had their origin posterior to the tlme of Richard I., and inaving therefore ceased practlcally to affori any protection against antlquated ciaims, the iegisiature, in 32d of Henry VIII. which a sult shouid be entertained. of courte impossihie that as time went It was adoption of a fixed epoch, as the time from which legai memory was to run, shouid not be attended by grievous inconvenience and hardship. Possession, however long, enjoyment, however interrupted, afforded no protection against staie and obmoiete ciaims, or the assertion of iong abandoned rights. And as parilament falied to Intervene to amend the law, the judges yet their Ingenuity to work, by flctlona and presumptions, to atone for the supineness of the ieglslature.

They first iaid down the somewhat atarting rule that from the usage of a iifetime the preaumption arose that a aimilar usage had exlsted from a remote antiquity. Next, as it couid not but bappen that, fn the case of many private rights, eapecialiy in that of easementa, which had a more recent origin, auch a presumption was impossihie, judlciai astuteness to support possession and enjogment, which the inw ought to have invested with the character of rights, had recourse to the questionabie theory of iost grants. Juries were first toid that from user, during living memory, or even during twenty years, they might presume a lost grant or deed; next they were recommended to make such presumption; and iastly, as the flat consummation of judiciai legisiatlon, it was held that a jury shouid be toid, not oniy that they mlght, but also that they were bound to presume the ex. istence of such a lost grant, aithough neither judge nor jury, nor any one eise, had the shadow of a iexief that any such instrument had ever resily existed.

When the doctrine of presumptions had proceeded far towarls its deveiopment, the iegisiature at iength iuterfered, and In respect of reai property and of certain specifled easements, fixed certain periods of possession or enjoyment as establishtng presumptive rights."-C. The tiction that the king is everywhere present. though not formuiated, was tacitiy adopted; the protectlon once conflned to his househoid was extended to the whole kingdom. The fiction that the king never dies was yet to come. It was not the peace of the Crown, an authority having continuous and perpetuai succession, that was pris. cialmed, but the peace of William or ileary When Wililam or Henry dled, all authoritles de rived from hlm were determined or suspuraded and among other conserpuences, his perace died With him, What this abeyance of the Kings Peace practicaily meant is best todil in the words of the Chronlcie, which says upon the desth of IIenry I. (anno 1135): "Then there was tribula. thon soon in the land, for every man that could forthwith robled another.' A. D. 1154-1889.-Origin of Unanimity of Jury. - The origin of the ruie as to unaniunty muy, I think, be explalued as follows: 'In the assise us iustituted in the relgn of lleury 1i it was necessury that tweive jurors shouht agree in order to determine the questlou of ollswisin; but tils unaulmity was uot then secured by any process which tended to make the agrayinent compulsory. The civil law re. quired two witnesses at least, nui in simur cases a greater mumber, to establelsh a fact lit diquite. as, for instance, where a debt was securcil by a written instrument, tive witnesses ware umemary to prove payment. These womhl have leed cailed by our ancestors a jurata of tive. At the present day, with as no will is valid which is not attested by at ieast two witnesses. In all coun"ries the polley of the law determines what it will accept as the minhmunt of proof. Bearing thea in mind that tie jury system was in its !ureplion nothing but the testlmony of wlthesses informing the court of facts supposeri to tie within their own knowledge, we see at once that tormire that tweire men should be unanimons was simply to fix the amount of evidence which the law decmed to be conciusive of a matter Indispute. This was foliowed by the Statute of Northampton, A. Aad not oniy was the king's writ sold, hut it was sold at arhitrary and varying prices, the only explaantion of whiel nppears to be that in every case the king's offleers took ns much as they coali get. Sow we are in a position to under. stand that fumous elnuse of the Grent Charter: 'To no man will we sell. nor to none deny or delay, right or justice.' The Great Charter comes shoat half a eentury after the time of which we have tren speaking; so in that time, you see, the great advanee had been made of regarding the king s justice as a matter not of favour but of right. And hesides this efause there is ano her which provities for the regular sending of the king's judges into the counties. Thus we may date from Magna Carta the reguiar alministrativa of a unfform system of law throughout Eagland. What is more, we may nimost say that Magna Carta gave Engiand a cnpital. For the hing's court had tili then no fixed seat; it would lie now at Oxford, now at Westminster, now at Winchester, sometimes at places whieh by this time are quite olscure. D. is89.-Legal Memory.-lis effect.-- No doult usage for the last fifty or sixty years would be some evidenee of usage 700 years ngo, hut if the question is to be eonsidered as an ord:nary question of faet, 1 certalily for one would very seidom that a verdict in suppone of the right as in fact so aucient. I can hardly befieve, for instanee, that the sime fees in eourts of jus. tiee which were till reeently received hy the ofticers as ancleat fees attached to their ancient oftlees were in fact reectived to0 years ago; or that the eity of London took before the fime of Ricliard I. the same pyments for measuring coru and conls aud orsters that they do now. I have no dowht the eity of Bristol did levy dues in the Avon before the time of legal menory, and that the mayor, as head of that corporation, got some fees at that time; but 1 ean hardly bring myself to believe that the mayor of Bristoi nt that the recelvell 5s. a year from every ship above sixty tons burthen whieh entered the Avon; yet the elaim of the eity of Bristol to their ancient mayor's dues, of which this is one, Was established before Lorl Tenterden, in 1828. I thiuk the ouly way in white verdiets in sup. port of such clatms, and there are many such. conid have properly been found, is by supposing that the jury were aiviset that, in favor of the loug eontluued user, a presumption arose that it was fegal, on which they ought to find that the user was inmemorial, if that was necessary to fegallze it, unirss the contrary was prosed; that presumption not being oae purely of fact, and to be aeted on only when the jury really entertained the opinion that in faet the leail origin existed. This was stated by Parke i3. on the first trial of Jenkins v. Harvey, 1 C. M. \& R. 894, as befing his praetice, and what he eon. sidered the correct nomie of leaving the question to the jury; aud that was the view of the majorlty of the judges in the Court of Exchequer Chamber in Sheplard v. Pus ne, 16 C . B. (N. S.) $13^{3}: 33 \mathrm{~L} . \mathrm{J}$, (C. P.) 158. . This is by no means a nowern doctrine; it is as anclent as the time of Littieton, who, in his Tenures, \& 170, says thnt ail are agreed that usage since the time of Richarll 1. is a tlte; sonic, he says, have thought it the oniy titie of prescription, but that others have said 'that there is also another titie of prescription that was at the common inw before any statute of limitation of writs, de., sad that it wiss where a custom or usage or other laing inath been used for time whereof mind of mas runneth not to the contrary. this ls proved by the pleading where a man will plead a title of prescription of cuntom. Ho shall tay that such a custom hath been used from time whereof the memory of men runneth not to the contrary, that is as much an to say, when such a matter is pieaded, that no man then allve hath hend any proof of the contrary, nor bath no knowledge to the contrary; and lnsomuch thst such title of prescription was at the common law, and not put out by any statute. ergo, it abldeth an it was at the common law; and the rather that the aald limitatlon of a writ of right ls of so long tlme past. 'Ideo quacre de hoc.' J• is practically the same thing whether we any that usage as far back as proof extends Is a thile, though it does not go so far back as the ycar 1189; or that such usage ls to be taken In the absence of proof to the contrary to establlsh that the usage began before that year; and certaln!y the lapse of 400 years slace Litileton wrote has added force to the remark, 'the rather that the ilmitation of a writ of right is of so long tlme past.' But elther way, proof that the oricin of the usage was slace that date, puts an end to the title by prescriptlon; and the questlon comes round to be whether the amount of the fee, viz. 13a, is by liself sufticlent proof that it must have originated since."-J. In these cases the jury and the witnesses named in the deed were summoned together, and all went out and conferryl pri. vately as it compoding one body; the winemes did not regularly teetlfy in open court. Cases of thls kind are found very early, e. g. In $1200-1200$ (PL. Ab. 63, col. 1, Berk.).

In the carlier cases thene witnenses appear, sometimes, to bare been concelved of an a constituent part of the jury; it was a comblnation of buslness. wlinesea and communlty-witaemes who tried the case, the former supp:ylng to the others thelr nom cxact lnformation, just at the hundrelers, or those from another county, did In thic cases be fore notlced. But ln time the jury and the wit. nesses came to be sharply dlscriminated. Two or three cases in the relgn of Edwarl III. show this. In 1337, 1338 and 1340, we are toll that they are charged differently; the clarge to the jury is to tell the truth (a lour asclent) to the lest of thelr knowledge, whlle that to the wituesseg is to tell the truth and loyally inform the luquest wlthout saying anythlng about thelr knowledge (sans lour scient): 'for the witnesses,' sars Thorpe, C. They were continually travelling about from place to place, either to consume in klind pait of thetr revenue, or to hunt or to Dght. Wherever they went the great ofticers of their court, and in particular the chancelior whith his clerk, and the various justices had to follow them. A. D. 1216.-Distinction bet $\mathbf{w}$ : $n$ Common and Statute Law now begins. -: The Cliancellors, daring this reign [John 1. The guariliuna of iaw were the fendiai burons, assisted hy somic enilightenet churchanen, and by their efforts the dectrine of Fesistance tolawless ty ranny was fully cstablished in Englani, und tho rights of ail classes of the people were defined and consolidated. We here reach a prmarkuhle cra in our constitutional history. Siationall councils had inet from the mast remote times; hut to the end of this reign their acts not being preserved are supposed to form a part of the lex non scripta, or cummon law. Nuw begins the distinctlon hetween common and statute law, uni henceforth we can distinctly trace the chauges which our jurilical system has undergone. These changes were generaily introduced by the Chanceilor for the time being." - Lird Campbell, Lires of the Chancellors, r .1 , p. 115
A. D. 1216-1272.-Henry de Bracton.-" It is curious that, in the ninst disturberl perioxi of this tarbuient reign, wheu ignorance seemed to be thickening and the luman lateliect to decline, there was written and given to the world the best treatise upon law of which England could boast, till the pullication of Blackstone's Commentaries, in lue midhle of tie eightwenth erntury. It would bave leren very gratifying to me if this work could late beco ascribed with certainty to any of thir (lumeellurs whose ilves have been noticed.

The suthor, usuaily atyied Menry de Bracton, has gone by the name of Brycton, Britton, Briton. Bretou, and Brets; and some have doubted whether ali these names are not imaginary. From the elegance of bla atyle, and the famillar knowl. edge he displays of the Roman inw, I cannot doubt that he was an eccleslastle who had addictell himself to the study of jurisprudence; and as he was llkely to galo advancement from his extraordinary proficiency, he may bave been one of those whom I have commemorated, although 1 must confess that he rather speaks the ianguage likely to come from a disappolnted practitioner rather than of a Chanceilor who had been hlmself in the hahit of maklog Judges. For comprichensiveness, for lucid arrangement, for loglcal precislon, thls author was unrivalled durlng many ages. Littieton's work on Tenures, which illistrated the reign of Edward IV., approaches Bracton; but how barbarous are, in comparison, the commentaries of Lord Coke, and the law treatises of liale and of Hawklos !"Lord Campbell, Lites of the Chancellors, $v .1, \bar{p}$. 139.-For opposite vlew sce 8 American Bar Asain Rep., p. 103.
A. D. ${ }^{1217}$.-Dower.-" The additional provision made in the edition of 1217 to the provislons of the eariier lssues of the Charter in respect of wldow'a rights tixel the law of dower on the basls on whllchit still rests. The generai rule of law stiil is that the widow is entitled for her iffe to a thirl part of the lnuds of which ber husband was seized for nnestate of loheritance at any time
during thic marringe during the marringe. At the present day there are means providel which are almost universaliy adopted, of barring or diefeating the widow's clain. The geueral rule of law, however, remalns the same. Tine history of the iaw of dower deserves a slourt notice, which may convenieatiy find a place inere. It seems to he in outione as foilows. Tacitus noticed the contrast of Teutonle custom and floman law, in that it was not the wife who conferred a dowry on the hasband, but the hushaud on the wife. By carly Teutonie custom, besiles the bride price, or price paid by the intending hustanal to the fanaily of the bride, it seems to hase leen usuml for the busband to make gifts of lands or chattels to the hride herself. These appear to have taken two forms. In some cases the hashand or his father executed before :arriage an instrument called biheilun dotis." spectifylng the nature and extent of the property to be given to the wife. . . . Another and npparontly among the Anglo-Suxons a commoner form of dower is the ' norning gift." Thls was the gift which on the morning following the weulding the husband gave on the wife, andinight consist clther of land or chattels. . . By the law as stated by Gianvil the mim was bound to endow the womnn 'tempore desponsationis ad ostinn ecciesiau.' The dower might be specified or not. If not specified it was the third part of the freehuld which the hushand possessed at the the of betrolhal. If more than a thirif part was r.mmed, the dower was after the husband's death cut down to a thiri. A gift of less would howcver be a satisfaction of dower. It was sometimes permitted to lacrease the dower when the freehold availahie at the tine of betrothal was small, by giving the wife a third purt ur less of subsequent acquisitions. Thls however caust have beed expressiy granted at the time of betrothal. A woman couid never clalm more than

A. D. 1650-1700. - Evidence. - "Best Evidence Rule."-"Thia phrase la an old one. During the latter part of the seventeenth century and the whole of the elghteenth, whlle rules of evidence were forming, the judgea and text writers were in the habli of laying down two prindples; namely, (1) that one nust bring the luat evlleace that he can, and (2) that if he does this, it is enough. These princlples were the begloning, In the endenvor to glve conslstency to the system of evilence before furiea. They were never titurally enforced, - they were princlples and not exact rulea; but for a loug time they afforled a valuable teat. Aa rules of erlitence and exceptlona to the rulea became more definte, the field for the applleation of the general princlple of the 'Best Evidence' was narrowcr. But 1 l was often resorted to as a definite rule and test ln a manner whleh was very mis. leading. This is atlll orcaslonally done, as when we are toll $\ln$ Jlekinnon v. Bliss, 21 N. Y., p. 218, that 'it is a unlversal rule founded on neces. alty, that the best evidence of whlch tbe nature of the rase ndmits ls always recelvable.' Greenleaf's treatment of this topir (followed by Taylor) Is perple xtuc and antiquatell. A juster concep. thon of t is found in 1 bext, Ferld s. 84 . Always the chlef example of the ' 1 bext Evidence' prin. elple was the rule alwout roving the contents of a writhg. But the origin of this rule alout writhgs was ohder than the 'lhest Evidence princlple; and that prinelple may well have leen a generalization from this rule, which appears to le traceable to the doctrine of profert. Thint doetrine required the actual prosluction of the Instrment which was set up in plending. In like nanner, It was suld, In dealling with the jury, that a jury could not speeditically tind the contents of a deed unless to baid beven exhibited to thera in evidence. And afterwarla when the jury came to hear testhmony from witnesses, it was sadil that witnemea comid not undirtake to speak to the comberts of a deed without the produetion of the deed ltapef. . . . Such then being the facts from which the iaw will raise an chliga. tion toaccount, the next question ls, How can such an obligation be enforced, or, what is the remedy apon such an ohligatlon? It la obrlous that the only adequate remedy is speclfic performance, or at lesst specific reparation. An action on the case to recover damages for a hreach of the obli. gation, even if such an action wruld lie, noulli be clearly inadequate, as 12 would lnvolve the necessity of investigating all the Items of the account for the purpose of ascertaining the amount of the damages, and that a jury is not conpetent to do. In truth, however, such an action will not lie. If, indeed, there be an actual promise to account, either an express or implied in fact sa action will lie for the brench of that promise; but as such a promise is entirely collateral to the obligation to nccount, and as therefore a recovery on the promise would be no bar to an action on the ohbigation, it would seem that nominn damag" "mly could be recovered in an action on the promise, or at the most only such specinl damages as the plaintiff had suffered by the breach of the promise. LAZICA.-LAZIC WAR.- "Lazica, thw ancient Colchis and the molern Miagrcila and Imeritia, borriered upon the Biack Sea." From A. D. 592 to 541 the littie kingdom was a depeadency of Rome, its king, having accepted Christhanity, aeknowiedging himseif a rassal of the Roman or Byzantine emperor. But the Ronams prowokedi a revolt by their eacroachments. "They sized add fortified a strong post, called Petri, upun the coast, appoiated a commaadant who clahned aa authority as great as that of the Lazie king, aad establlshed a comnerclal monopolv which pressed with great severity upoa the moner classes of the Lazi." The Persiaas were acconlingly invited la to drive the Romans out. and did so, reducing lazica, for the time beine, to the state of a Persian province. But, la their turn. the Persians became obaoxlous, aad the Lazi, making thelr peace with Rome, were taken by the Emperor Justlnian uader his protectlon. "The Lazic war, which commenced In consequence of this act of Justinian's, eoatiaued al must without intermissioa for nine years - from A D) 549 to $55 \%$. Its detalis are related at great length by Procopius and Agathias, who vlew the struggle as one which vitaily concerned the interests of their couatry. Accorting to them, Chwirives [the Persian kling] was bent upon hoidi. ing Lazica in order to coastruct at tife mouth of the Phaxis a great narai statlon and arsenai, from which his flcets might issue to command the com. merce or ravage the shores of the Black Ser:" The Persiaas in the end withdrew from Laziea. but the ilomaas, by treaty, paid them an aaaual tribute for their possession of the country.-G. hawlinson, Serenth Great Monarehy, ch. 20. Ile eaused transeripts to be inade of such books as had eseaped the Dioelctian persecution; to these he added others, and with the whole formed a valuahle Llisary at Constanti. nople. On the denth of Constantine, the number of books contalued in the Imperial Lilirary was only six thousand nlue hondred; hut lt was sue. cesslvely enlurged by the emperors, Jullan and Theodosius the younger. the latter of whom angmented it to one hundred thousand volumes. Of these, more than half were burnt in the seventh century, by command of the emperor Leo III., in order to destroy all the monmments
that might be quoted in proof against his opposition to the worship of images. In thls library was depoaited the only authentic copy of the Council of Nice: It has also been assertel that the works of Homer, written in golden letters, were consumed at the same time, together with a mag. nificent copy of the Four Gospels, bound in plates of gold to the weight of fifteen pounds, and en. riehed with precious stones. Monastic Libraries.-" In every momastery there was estahlished first a library, theu great studlos, where, to inerease the numliner of heolss skllful callgrajhers transeribed manuscripts; and fnally, sehools, open to all those who litd need of, or clesire for, instruetlon. At Jontierender, at Lorsch, nt Corvey, at Fuldn, it St. Gall, st Relchenan, at Nonantula, nt Monte' Cissino, st Wearmonth, at St. Albnns, at Croy limhl, there were fumous llhrarles. At St. Mlehnel. at Lituchurg, there were two- oue for the ablest and one for the monks. In other ahbeys, ns at Ilitwolan, the abbot hlmseif took his place in the Scriptorium, where many other monks were occupienl in rupy: $\operatorname{lng}$ manaseripts. At St. Rlquier, bowhis Inught for high prices, or transcribed with the ntmost cure, were regarded ns the most valuable jewels of the inonastery. "Here,' says the clromicler of the abley, counting up with lnureent pride the volumes which it contalned - 'here are the riches of the clolster, the treusnres of the cell tial life. which fatten the soul hy their swertuens. This is how we fultil the excellent procept. Lave the stanly of the Seriptures, and you will hat love vlce. If we were called njon to cinmatate the principal ecntres of learning $\ln$ this whaty. We should be ohliged to unme nearle all the grat abbegs whose fonallers we have inentinuol, for most of them were grent homes of huwhedge.

The princlpai mul most constant or cujatlon of the learnel Bencdictine nums was the transcription of manuscrlpts. It tall never bo known how many services to learning and history were rendered hy thelr delieate hands thronghont the mildle ages. They lromyth to the work a dexterity, an elegance, ind ati assidulty whleh the monks themselves could not st. taln, and we owe to them some of the most beautiful specimens of the marvellous caligraphy of the prifind. rivals of monks in the task of enlargiag sod
fertilising the field of Catholic learning. Every one is awnre that the copying of manuscripls was one of the habitual occupations of monks. By it they fed the claustral llhraries already spoken of, and whicb are the principal source of modern knowletge. Thus we must again refer to the first beginning of the Monastic Orders to find the eariest traces of a custom which from that time was, as it were, Identifled with tho practices of rellgious life. In the depths of tho Thebaide, in the primitive monasteries of Ta. benna, every honse . . . had its library. There is express mention made of thls in the rule of St. Beaedlct. . . . In the seventh centiry, St. Benedlet Blscop, founder and abbot of frearmouth in Enghnd, undertook five sea-voyages wsearch for and purchase books for hls abbey, to which cach time be brought back a large eargo. In the alath century, Loup of Ferrieres transformed his monastery of St. Josse-sur-Mer thto a kind of depot for the trade in books whlch was carried on with England. About the same time, during the wars whlch ravaged Lomburly, most of the literary treasures which are now the pride of the Ambrosian library were being collected in the abbey of Bobbio. Tho monastery of Pomposa, near Ruvenna, had, according to contemporaries, a finer llbrary than those of Rome or of any other town in the world. In the cleventh century, the Hhrary of the abbey of Croyland numbered $\mathbf{3 . 0 0 0}$ volumes. The librury of Novalise had 6.700, whleh the monks saved at the risk of their llves when their ahbey was destroyed hy the Sirncens in 005 . Hirschau contalned in immense number of manuserlpts. But, for the number and value of lis books, Fulda celipsell all the inomasteries of Germany, and perhups of the whole Christian world. On the other hand, some writers assure us that Ilonte Cassino, under the Ahbot Dldier, the friend of Gregory VII., possessed the richest collectlon wheh it was possibie to tind. The librarles thus created by the labours of monks became, as it were, the intellectuni arsenals of princes aad potentates. . . There were aiso collections of books in all the cathedrais, in ail the colleglate charehes, and in many of the eastles. Dluch has been suld of the excessive price of certain books during the middle ages: lobertson nnd his imitators, in support of thls theory, are foad of quoting the famons collection of homilies that Grecia Countess of Anjou bouglat, in 10:5, for two hundred sheep, a meas. ure of whrat, one of miliet, oue of rye, several marten-shins, and four pounds of sllver. An instance like thls always produces its effect: hut these writers forgot to say that the books buinght for such high prices were admimbie specianeas of caligraphy, of painting, and of carving. It Wiulit be just as reasonable to quote the exorbitant sums pail at sales hy hibilomaniacs of our dars, in order to prove that since the lnvention of printing. books have been excessive in price. Moreover, the ardent fondness of the Countress Grecia for beautiful books had been slaared by other amatcors of a nuth earlier date. Bede relstes that Alfred, King of Northumbria in the seventh eentury, gave eight hides of land to St. Benedict Biscop in exchange for a Cosmography which that book-loving ahbot had bought at Rome. The monks loved thelr books with a passion which has never been surpassed in modern times.

3-30
It is an error to ... sup-
pose that books of theology or piety alone filled the lliraries of the monks. Some enemies of the religious orders bave. Indeed, argied that this Wus the case; but the proof of the contrary is evident in all documents relating to the subject. The catalogues of the principal monastlc lihrsries during those centuries which bistorians regard as most barbarous, are stlll in exlstence; and these cataiogues amply justlfy the sentence of the great Lelbnitz, when he sald, 'Books and learning were preserved by the monasteries.' It is acknowiedged that if, on one hand, the Benedlctines settied in Icelnnd collected the Eddas and the principal traditlons of the Scandluavian mytiology, on the other ail the monuments of Greece and Rome whlch escaped the devastations of barbartans were saved hy tine monks of Italy, France, and Germnny, aad liy them alone. And If in some monasteries the seareity of parchment and tine ignonince of the superiors permilted the destruction, by copylsts, of a certain smail number of preclous works, how can we forget that without these same copylsts we shonld possess nothing - alisolutely nothiag - of classlc antlquity?:. Alculn cuumerates among the books in the library at York the works of Aris. totle, Clcero. Piay. Vlrgil, Statius, Lican, and of Trogus Pompenis. In his correspondence whth Charlemagne he quotes Ovid, Ilomce, Terence, aad Clcero, uckaowledging that in his ronth he had heen more moved by the tenrs of Dido tian hy the Pealms of Inviil. "-Connt de Montalembert, The Monks of the West, bk. 18, ch. 4 (c. 6) - - "lt is in the great houses of the Benedictine Oriber that we find the lirgest libnaries, sueh as in Englatad at Bury St. Eflumad's, Glastonbury, Peterhorongh. leading, St. Aiban's, and, ahove nli, that of Christ Church in Canterbury, probahly the carliest library formed in Englaad. Anong the other Eaglish monasteries of the liloraries of which we still possess catnlogues or other details, are St. Peter's at York, described in the eighth century hy Alealn. St. Cuthbert's at Jurham, anl St. Augastine's at Canterhury. At the dissoluthon of the monasteries thelr libraries were dispersed, and the basis of the great modern lilbraries is the volumes thas seattered over Englinnl. Ia general, the volumes wore disposed much as now, that is to say, upright, nad in large cases nffixed to a wall, oftea with doors. The farger volumes at least wore in meny cases chnined, so that they could only he used within about six feet of thelr proper place; and since the e.ain was nlways riveted on the fore-edge of one of the sinces of n book, the back of the volume had to in thrast tirst into the shelf, leaving the frout rolge of the leaves exposed to view. Many old volumes bear a mark in ink on this front edge; and when this is the case. We may be sare that it was oaco chained In a library; and usually a littie further investigntion will disciose the mark of a rivet on one of the sides. Iegulathons were carefully mnde to prevent the mixture of different kinds of books, and their overcrowdlng or iuconvenient positlon; white an organized system of lending was in vogue, by which ut least onee a year, and less formally at shorter iatervals, the monks conld change or renew the volumes already on iosn.

Let us take an example of the arrangement of a monastic ilimary of no spental distinction in A. D. 140!. - that at Titchfleld Ahbey,- des. cribing it in the words of the register of the
monastery liself, only translating the Latin into English. The arrangement of the library of the monastery of Tyehefeid is this:-There are In the library of Tychefeld four cases (columnae) In which to piace books, of which two, the first and second, are on the eastern face; on the southern face is the third, and on the northern face the fourth. And each of them has eight shelves (gradus), marked with a letter and number affixed on the front of each shelf, that is to say, on the lower board of each of the aforesaid shelves; certain letters, however, are excepted, nameiy $\mathbf{\Lambda}, \mathrm{II}, \mathrm{K}, \mathrm{L}, \mathrm{M}, \mathrm{O}, \mathrm{P}$. Q, which have no numbers affixed, because nil the volumes to which one of those letters belongs are contained in the sheif to which that letter is assigned. [That ls, the sheives with the letters $A, 11, \mathrm{~K}$, etc., have a compiete class of books in each, and in no case does that ciass overtlow into a second shelf, so there was uo need of marking these sineives with numbers as well a letters, in the way in which the rest were marked. Thus we shonlif find 'B1.' ${ }^{3}$ B2,' $\mathbf{B} 3$, , $\therefore \cdot$ B 7 ', hecause $B$ flifed seven shelves; but ' $A$ ' only, because $A$ afled one shene shelves; but ail and singniar the voinmes of the said library
are fuily marked on the first leaf and eleewher are fuily marked on thic first leaf and elsewhere on the shelf beionging to the book, witis certain numbered letters. And in order that what is in the library may be moro quickiy found, the marking of the sheives of the snid library, the inscriptions in the books, and the referances in the register. In ail points agree with each other. Anno Domini MCCCC.'

Titchified Abbcy was a Premonstratensian
ise, founded in the thirtcenth century, and never specialiy rieh or prominent; yet we find it with a good library of sixty-eight books in theology, thirty nine iu Canon and Civii law, twenty-nine in Medicine. thirty-seven in Arts, and in ali three hundred and twent $y$-six volumes, many containing severai treatises, so that the total nunnber of works was considerabiy over a thousand. Italy. - On the revival of learning in Itals, "gcareity of broks was at first a chief impedi: ment to the study of antiquity. Popes and princes and even great reigioivis institutions possessed fir fewer books than many farmers of the present age. The library beionging to the Cathedmal Chareh of S. Martino at Lueca in the ninth eentury contained oniy nineteen voinmes of abridgements from ccelesiastical commentaries. The Catheiral of Novara in 1212 eouid boast copies of Boethins, Priselan, the Cole of Justinian, the Deeretais, and the Etymology of Isidorus, besides a bible and some devotional treatises. This sleader stock passell for great riches. Each of the precions volnmes in such a collcetion was an epitome of medieval art. Its pases were composed of ti-s veiluma alorned with pietures. The inltial let. -s displayed eiaborate fourisiies and exquisitely ilinminated groups of fignres. The scribe took pains to render his caiigraphy perfect, and to ornament the margins with crimson, gold, and blue. Then he handed the parehment sheets to the hinder, who encased them in rich settings of velvet or earved ivory and wood, embossed with golif and precious stones. The edges were gitit aud stampell with patterns. The clasps were of wrought siiver chased with
nlcilo. The price of sucil masterpleces was enormous. ... Of these Misis, the greater win were manufactured In the eloisters, and it was here too that the martyrdom of mucient authors took place. Lucretius and Livy gave place to chronicles, antiphonaries, and homilies. Parchmest was extremely dear, and the scrulis whlch nobo. ly could read might be scraped auti washed Accordingly, the copyist erased the learuiag of the ancients, and filled the falr blank spare be gained with litanies. At the same time it is but just to the monks to add that palimpsests bave oceasionaliy been found in winein cecheslastical works have ylelded place to copies of the Latio poets used in clementary education. Amother obstacle to the diffusion of learning was the in. competence of the copyists. It is true that at the great universitles 'stationariil.' Who suppliewi the text-books in use to students, were certifinit and subjected to the control of spectial erensors eafied 'peciarii.' Yet the aumber was not large, and when they quitted tie routine to which they were accustomed their incapacity leetraycui itelf by numerous errors. Petrareh's luveetive against the professional copyists shows the depth to Which the ntt had sunk. 'Who, he exclains, wiil discover a cure for the lgnorance and vile sloth of these copyists, who spoif everything and turn it to nonsense? If Cieero, Livy, und other ifinstrious aneients were to return to life, do vo think they wonid understand their own worhs? There is no cheek upon these copyists, seleceted without examination or test of their capacity,

At the same thme the coingists forneni a necessary and tlourishing cl.ass of criftsmen. They were well pail. . . Under thene circum atances it was nsual for even the most (minment scholars, likc Petrareh, Boceacelo, nuf P'orgio, ti make their own copies of MSS. Nicculo de : Xic coli transcribed nearly the whoie of the colices that formed the nuclcus of the Libloriry of the Sark. . It is ciear that the first step tom thand the revival of learning implied tirree things: first,
the colicetion of MSs. Whercver they ismlid be the coilection of دiss. Whercver they impld be
savell from the indoience of the momks sscondly the formation of librarics for their prevervation: and, thirdiy, the invention of an art wherely they might be muitipiied cheapiy, convenie mily, anil accurately. Thi labonr invoived in the collec. tion of classical manuscripts inad to be performed by a few entinsiastic scholars, who rexeived niv help from the universities and ther acadenical scribes, and who met with no sympathy in the monasteries they were bent on ransaching. The monks performed at best the work of earth worms, who unwittingly preserve fragnemta of Greek arehitecture from corrosion ly heaping mounds of mouid and rublish rowind them. Meanwhile the humanists went forth with the instinet of expiorers to release the ciptives and awake the dead. From the convent libraries of Itaiy, fron the museums of Constintinople, from the abbeys of Germany and Swltzerlan! an! France, the siumbering spirits of the ancients uad to le evoked. . . The account given by Benvenuto da Imoia of Boccaccio's visit to Monte Cassino brings vlvidiy before us both the ariour of these first explorers and the apathy of the lienelic. tines (wio have sometimes been called the savlours of learning) with reghrd wo the (reas. ures of their own iibraries. . . . weing the collectlon of books, which he understood to be a very choice one, he modestly asked a monk - for he was always most courteous in manaces - to open the litrary, as a lavour, for hin. The monk answered stifly, pointing to a ateep staircase, "Go up; it is open." Boccnccio went up gladiy; but he found thnt the place which heid so great a treasure was without or door or key. He entered, and saw grass sprouting on the windows, and all the books and benches thiek with dust. In his astonishment be began to open and turn tho leaves of first one tome snd then another, and found many and divers volumes of anclent and foreign works. Some of them had lost severai sheets; others were snipped and pnred all round the text, and mutliaterl in varions ways. At iength, iamenting that the toll and study of so many ilinstrious men shonki have passed into the handis of most abandoned wretches, be departed with tears and sighs. Coming to the cloister, he asked a monk whom be met, why those vnluabic books had been so disgracefully mangled. IIc answered that the monks, seeking to gain a fcw soldi, were in the hahit of cutting off shects and making praiters, which they sold to boys. The margins too they, manufactured into charms, and sold to women. . . . Wint Italy contained of nneicut conlices goon saw the ligit. The visit of Poggio Bracciolini to Constance (1414) opened up for Italian scholars the stores that lsy neglected in transaipine monasteries.

The treasures he unearthed at Reiehenan, Weingarten, and above ail S. Galien, restored to Itaiy many lost mnster. pieces of intin iiternture, and supplied students with fuli texts of authors who hail hitherto been known in mutiated coples. The account he gave of his visit to S. Gsilen in a Latin letter to a friend is justiy celebrated. .. . 'In the middie [he says] of a wcli-stocked lilirary, too large to eitulogne nt present, we discovered Quintilian, sufe as yet and sound, though covered with dist and fithy with neglect and age. The books you must know, were not housed according to ihrir worth, but were lying in a most foul and obscure dinngeon at the very bottom of a tower a piace luto which condemned criminals would hanlly inave been thrust; and I am firmly per. suaded that if anyone wouid but explore those ergastula of the linrbarians wherein they inearcerite such men, we should meet with like goox fortune in the ease of many whose funersi orstiuns have long ago been pronounced. Besilles Quiatilian, we exhumed the three first books and a half of the fourth book of the Argonantica of Flarens, and the Commentaries of Asconius Pelianus upon eigit orations of Cicero.' Never wns there a time in the world's history when money was speut more freely njwn the collection and preservation of MSS., mid when a more eomplete maehinery was put in motion for the sake of sceuring literary treasures."-J. Europe: Rise and growth of the greater Libraries.-In a work entitied "Essai Statisticue 183: les Bibiothèques de Vienne," pahished in lon of the litab entered into an examina. principai literary and nameriesi ratiuc of the principai ithmies of ancient and modern times. If. Balbi, in this work, shows that "tile Impe-
risi Library of Vienna, regularly lncreaslng from the epoch of lis formation, by means equally honorabio to the soverelgn and to the nation, held, until the French revolution, the frst place amony the libraries of Europe. Since that periol, several other institutions have risen to a much higher numerical rank. .. No one of the iibraries of the first class, now in cxistence, datcs beyond tie fifteenth century. Tho Vatican, che orfigin of which has been frecjuently carried back to the dnys of St. Hilarins, in 465, cannot, with any propricty, be said to hnve deserved the name of librnry before the reign of Martin the Fifth, by whose ordier it was removed from Avignon to lame in 141\%. And even then, a strict atten. tion to the force of the tern wonld require us to rithhoid from it tinis titic, until the period of its find organization by Niehoias the Fifth, in 1447. It is dithenit to spenk with certainty concerning the ibraries, whether public or private, which nre supposed to have existed previous to the fifteentil century, botion nceount of the doubtful anthority nnd Indefiniteness of the passages in which they ure mentionced, and the custom which so readily obtnined, in those dark ages, of dignifying every petty coliection with the name of iibmiry. But many iibraries of the fiftecntil century being stiii in existence, aud others having leen prescrved lomg enongh to make them tho subject of historical inquiry before their dissohntion, it becomes casier to fix, with sutisfactory aceuracy, the date of their fonndation. We tind necoriliugly, that, incluting the Vatlean, and the libraries of Viemna, Ratisbon, and the Laureutian of Fiorence, which are n few years nnterior to it, no less than ten wre formad between the lears $1+30$ and 150 . The increase of Europenn libraries has gemarally been siowiy progressive, aithongh there have leen perionds of sndieu ang: mentation $\ln$ neariy atl. Most of them begau With a smail nmmber of mannseripts, sometimes with u few printeri voinmes, and often without nny. To these, gradual accessions were made, from the different sources, which have niways been more or le'ss at the command of the sovereigns and nobles of Europe. In 145\%, the Vatiean contained $5,0(4)$ mimmscripts. . Far difforent was the progress of the loyal Library of Paris. The origin of this institution is placed in the year 1593, the date of its removal from Fontainehlean to f?arls by ortier of lienry the Fonrth. In 1660, it eontuhed but 1.435 printed voinmes. Iu the eourse of the following year, this number Way raised to 10,76 , loth printed voinmes and mimuscripts. During the ensuiug elght years the librnry was nearly doubied; and before the close of the next century, it was supposed to have becn nngmented by upwaris of 100,000 volumes more."-(i. W. Greene, Historical studies, Mi. eis-is1. -"The oidest of the great dibnuries of printed looks is probnbiy that of Viemma, which dintey from $14+0$, and is suld to have beeu opened to the puhiic as early as 1525. Italy. -"There nre in Italy between thlrty and furty libraries whleh the present Natlonal Government, in recognition of former Governmeutal support, ic eommitted to maintain, at least in sonte degree. It is a division of resourees which even a rich country would find an lmperliment In developing a proper National Library, aull Italy, with lts over-burdened Treasury, is far from leing iu n position to offer the world a single librity of the first cliss. . .. Italy, to bilil up a library whel shall rank with the great natlonnl librarles of the future, will need to conceutrate her resources; for tbough she has libraries now which are rich in manuscripts, she has not one which is able to meet the grent demanils of modern scholarship for printed books.

If with this want of fecundity there went a correspouting slothfulaces in libraries, there would be llttle to be boped of Italy in amassing great collectlons of books. In some respects I have found a mure active bibliothecal spirit in Italy tban e'sewhere In Europe, and I suspect

England: The King's Library and the Britith Mnseum. -' No monareh "' England Is known to have been an exteusive collector of books (in the molern aeceptation of the term) except George III., or, if the name of Cbaries I. should be addelf, it must be in a seeondary rank, aul With some nucertuinty, because we bave not the same evidince of his collec.lon of books as wi. have of his pletures, in the catalogue which cx ists of them. A 'oynd llbrary had, indeed, been established in the reign of IIenry VII.; it was increased, as noticed by Walpole, by many presents from ahroad, made to our monarchs after the restoration of learnirg and the invention oi printing: and naturally received arresslons in every subsequent relgn, if it were only from the various presents hy which nuthors deslred to show their respect or to solicit prtronage, as well as front the custom of making new year's gifts, which were often books. There were also adidei to it the entire litrarles of Lord Lumley (includIng those of Ilenry, Eari of Arnndel, and Arehbishop Cranmer), of the celebrated Casnubon, of Sir John Morris, and the Orientai MSs. of Sir Thomas Roe. Whilst thls collection remained at St. James's Palace, the number of books amassed in each relgn could have been easily dlstinguished, as they were chassed and arranged under the names of the respective sovereigns. In 1759 King George II. transferred the whole, by letters patent, to the then newlyformed estahulshment of the British Musenin; the arrangenent under reigns was some tlme after depurted from. and the several royal collections interspersed with the other books obtalned from sir Ilans siosue, Major Edwards, and various other sources.

such an act, and in 1851 made the act apply to all the citles and towns in the State. In 1840 donations of books were made to the Boston Publle Llbrary. Late In the same year Mr. Edward Everett made to it the donatloa of his very complete collectlon of United States docmments, and Mayor Blgelow a gift of $\$ 1,000$. In May. 18.52, the first IKoard of Trustees, with Mr. Fverett as presldent, was organlzed, and Mr. Jishun Bates, of Iondon, made hls first donation of $\$ 50,000$ for the use of the library. It was fortunate that the public-llbrary system started where it ikd and under the supervislon of the enlinent men who constituted the first board of trustees of the Boston Publle Library. Mr. George Tleknor wus the person who mapped out the saguclous polley of that library - a polley which has never becn improved, and which his been alopted by ali the puhlic libraries in tinis eonntry, and, in Its maln features, by the free libraries of England. For fifteen years or more Mr. Tleknor gave the subject his personal atten. tlon. Ile went to the llbrary every day, as regu. lariy as any of the employés, and devoted several hours to the minntegt detaiis of Its admingstra. thon. Before he lual any officin relations with It, he gave profound consideration to, nod settled in hls own mind, the leadhis priuciples on whlch the lil.rary shonhl be conducted. . Sturtedas the public-Ilbrary system was on such principles. and under the guldance of these emlnent neen, iihraries sprang up ruplly In Massachusetts, and simblar leglsiation wis adopted in other States. The first leglslation in Massachusetts was thmid. The Initiative inw of 18 thallowed the elty of Bes. ton to speud only 85,000 a year on its Puhlie Library, whlch has since cepended $\$ 125,000$ a year. The State sum ubolished nli limitation to the amonnt which might be raisell for iibrary Purposes. Sew Lampshlre, in 1849, anticipated Massachusetts, by two year, in the adoption of a general library law. Maine followal in 18 :4; Vermont In 1865 ; Ohio in 1867 ; Colorndo. United States of America: Library Statistics of 1891 . -"As to the enrly stitisties of librarias $\ln$ this country bat lltile can lne found. I'rof. Jowett, In his ' Notices of I'nblic libraries. published ly the Smithsonian Institution In 18.50, gave a summury of publle libraries, anoountlug to 004 and contalning it that tince $2,201,632$ volames. In the censis of 1850 an attempt wis made to give the mimber of libraries and the number of volmmes they contained, exclusive of scherol ami Sunday sclowi Ilbraries. This man. ber was 1,560; the number of volumes, 2,447,080.

In 1856 Mr. Edward Edwards In his anmmary of llbraries gavo a much smaller number of illiraries, being only 341 , but the number of volunies was nearly the same, belng $2,371,887$, anll was also based upon the census of $18, \% 0$. Mr. William J. IRhees, In hls ' Manual of Publie Librarles, whlch was printed $\ln 1859$, gave a llst of $2,012 \mathrm{~m}^{2} \mathrm{ll}$ raties, but of ali thls number only 1,812 hul any report Whatever of the number of volumes they con talned. From these meager statlstles it is sten that the reports do not vary very mush, giving about the same number of libraries and number of volumes in them, taklng nceount of the changes that would occur from the different classificatlons as to what was excrepted or omitted as a library. The annual reports of the Bureau from 1870 to 1874 eontalniet limited statlistles of only a few lundred ibloraries, and little more is shown than the fact that there were about 2,000 publle Ilbraries of ail kluls in the United States. Abont tive yeurs of labor was expended in coliecting material for the spectial report of the Bureau upon pollice libraties which was printed In 1876, and thls gave a live of 3,640 llbraries of over 300 volumes, and the total ummber of volumes was $12,276,064$, this thing abont the first fairly eomplete conlection of iibrary statistics. In the report of the buran for 1884-8.5, ufter considerable corrospometence and using the former work as a lusis, onother list of public libraries was publishert, mumuting to 5,388 libmaries of over $3(0)$ volanes, an in crease of 1,809 iibraries in ten yoars, or nlmmat of per cent. The mimber of vohmers containen! In these librarles at that tlme was :"1, 6\%2. 10.6 , ir nn inerease of about 60 per cent, unl shawimg that the percentage of increase in the mumber of voinmes was even greater than thut of the number of libraries. An estimate of thu propurtion of smalier librarles under 50 m volunes in that fist Indlentes that these smalier libricrioss jueluded $0 \cdot$ ly alkout 20 per cent of the lowks, me thut this list could be said to fairly show the extont of the libraries at that time. In the report for lewi-xi. detailed statistles of the various clasese of libraries were glven, except those of colleges ab schools, whieh were Incincied in the statisties of those Institutlons. From the mucertainty of the datn nnd the imperfect records givell of the very small librurles, it was recomed hav tor restrint the statistics to collections of lrwhes that wight be fairly calied representative, unt is thuse having less than 1,000 voiunues mirice but a propertionally smail percentage of the whole humlar of landis the lasis of 1,000 volumes or ower wavtake This list Inclutes the statistics ouly of libraries of

The North Atlantic Divislon contains 1,913 librartes, or 50.3 per cent of the whole number the South Atlantic, 339, or 8.88 per cent: the south Central, 258, or 6.73 per cent; the North Central. 1,098 . or 28.87 per cent, and the West. em. 108 , or 5.22 per cent. Ot the distrihution of poluntes in the librarles, tho North Atlantle Di. vislon las $18.605,286$ or 53.34 per cent ; tie Soutit Allantie, 4.276.894, or 13.71 per cent; the South Central 1.345, 708, or 4.03 per cent; the North Central, $i, 320,045$, or 23.32 per cent; and the Western, $1,593,974$, or 5.34 per cent. . and From [ 1885 to 1801] the increase in the Ünited States in the number of llbraries wus from 2,047 to 3,894, sn inerense of 817 , or 27.35 per cent: in the North Atlantie, from 1,543 to 1,913 , an increase of 370 , or 24 per cent; in the Somth At . lantie, from 249 to 338 , an increase of 49 , or 17 per want : in tbe South Central, from 201 to 258 an inenamse of 55 , or 27.5 per cent; in the North Ceniral, from 813 to 1,099 , an inerease of 286 , or 35.18 per cent; nat in the Western, from 141 to 198, sn inerense of 57 , or 40.43 per cent. These figures show thut, conparatively, the largest incresse in the mumber of lihraries was in the Western Itivisiun, and of the number of volumes the greatest inerense wins in the North Centrul Dirlsion. The percentuge of inerease in the whole country was 66.3 for six years, or an arenge of over 11 per cent each year, whifh at this rate would double the number of volumes and libraries cvery nine yenrs... In the Caited states $\ln 1880$ there was one librury to eact $1 \times, 8$ i2 of the populntlon, white in 1891 there was one to every 16,462, or a decrease of papulation to $n l l i$ riry of 2.380 , or 12.5 per cent In the Xirrb Allantie Division the decrense was frmm 10.46 to $9,096,1,150$ or 11.2 per cent: in the South A Hantie, from 28,740 to $28,206,2,534$, or 8. Wh Ike rent: iu the South Central, from 48,97 to tevis. 6.1 H, or 12.5 per cent; in the Nortí Centrai, from ? 4,807 to $20.348,4,459$, or is per ceat; and in the Western, from $15,0.57$ to 15,200 , \%i, or 1.8 pur ceut. The distrihution of lilim nies in the North Muntic Drision shows the smallest avirage population to a library and the leass change in the number, except the Western Division. where the inerease of populatlon from immigration has been greater than the increase in the aumber of llhraries. But, generally, the stablishument and growth in the slae of llitiraties
avell very large in nearly every section. Thed shows that $\ln 1885$ there were in the Caited sates in the libraries of the size menthile in twal this to every 100 of the popuintion. of 16 houls, or 17 number was 50 , or an increase lante livisisinn the per ceat. In the North At. locrase of 99 line puerease was from 66 to 95 , an Antantic of 99 lxoks, or 34 per cent; in the South Atlantic, fromi 44 to 48, an increase of 14 , or 41 per cent; in the south Central, from 9 to 12, an Centrail from or 33.33 per cent; in the North entral, from 20 to 33, an lacrease of 19, or 65 lactrase of 10 or the Western, from 43 to 53 , an thow that, comparatively the largest ine figures
broks to population has been in the great Northwest, over 11 per cent each year. In the whole country there inas been an average increase of 7.8 per cent per annum; that is, the increase of the number of books in the fihraries of the country has lueen 7.8 per cent greater than the increase of the population diuring the past six years", -W. upon those engaged in tbe work of American libraries, to eievate their aims, to increase their efficiency, and to make their avocation a recog. nized profession, exacting well-deflned qualifications. The general resuit among the llbrarics of the country has been an lncrease of public use. iulness beyond measure. To this renaissance in the llbrary world many persons contributed; but its ieading spirits were Melvii Dewes, iatterly Director of the New York State Llbrary; Justin WInsor, Librarian of Harvard University, formerly of tbe Boston Public Library; the late Wllliam F. Pooie, LL.D., Librarian of the Newberry Library and formerly of the Cbicago Publle Llbrarr: Cbarics A. Cutter, iately Librarian of the Boston Athenæum; the late Fred. erick $1 \times$ 'vpoldt, first publisber of the "Library Journai," and bis successor, R. R. Bowker. The new ilbrary spirit was happily defned by James Russeli Loweli, in his address delivcred at the opening of a free pubilc library ln Claclsen, Mass, and published in the volume of lis works entitied "Democracy and otber Addresses": "Formerly," he saill. "the duty of a ibibrarian was considered too much that of a watch dog, to keep peopie as much as possible away from the books, aud to band these over to hls successor as Ilttie worn by use as he could. Librarians now, It is pleasant to see, bave a different notion of their trust. and are in tbe habit of preparing, for the direction of the inexperienced, lists of such books as they think best worth reading. Cataloguing has aiso, tbanks in great measurc to American librarians, become a science, and catalogues, censing to be labyrinths withont a ciew, are furnished with finger-posts at every turn. Subject catalogues again save the beginner a rast deal of tlme and trouble by suppiying him for nothing with one at least of the results of thorougb sehoiarship, the knowing where to look for wbat he wants. I do not mean by this that tbere is or can be any short cut to learning, but that there may be, and is, sucb a sbort cut to information that will make iearning more easily accesslbic."
Tbe organlzation of the American Library Association ied to the formation, in 187\%, of the Library Association of the Unlted Kingdom, whleh was incident to the meetlng of an inter. natlonai conference of Librarians beld in London.

Tiesese rerses, which were in no respect nbove the ordlnary standurd of street poetry, had for ijurden some giblerish which wns said to hnve been uset as a watcinword ty the insurgents of Cister in 1611. The verses and the tune caught tiee funcy of the nation. From one end of Englaud to thit other all classes were constantly slagiag tivis hife riyme. It was especinily the delight of the Engiisis army. More than seventy years after the Revolution, a great writter delineated, with exquisite skill, a veteran who had fought at the Boyne and at Namur. One of the characteristics of tite good old soldier is hls trick of whistling lillibuliero. Wharton afterwards boasted] that he had suug a Klag out of thrce kingdonis. But in truth the success of Lillibuilero wns tine effect, and not the cause, of that excited state of pubilic feching whlch produced the leveriution.

The song of Lllifibullero is among the state Poems. In Percy's Relics the first part wiil be found hut not the second part, which was added after William's landing." Lord Macnuiay, Iliw. of Eng., ch. $\theta_{\text {, rith fone: note. }}$

D. 6r,-Destruction by the Iceni. - Londinlum whs one of the Roman towns in Britaln destroyed by the Icen, at the tlme of the furfons Insurrcetion to which they were incited by their outraget queen Boudlcea, A. D. 61. It "was crowded with Roman residents, crowded still more at this moment with fugltives from the muntry towns and vilias: hut it was undefendet by walls, its population of tralers was of little account in millitary eyes, and Snetonlus sternly determand to leave It, with all the wealth it barboured, to the barbarinns, rather tban sacrifice his sulhiers in the attempt to save it.
Amldst the uverthrow of the great citles of southem Brituin, not less than 70,000 Roman entonists . . . perished. Tive work of twenty years was in a monent undone. Far and wilde erery vestlye of Roman clvillzation was trodden into the soil. At thls day the workmen who dig through the foundiatlons of the Norman and the saxon Lonlun, strike beneath them on the traces of a donble izoman city, between which lles a mass of charred and broken rubbish, attestlng the contharation of the terrible Buadicea." - C. Merivale, Hint. "f the Romana, ch. 51 .
4th Century.-The Roman Augusta and its walls,-" It is certaln that, either under Constantine [the emperor] himself, or under one of has immelliate successors, the outer wall was bulit. Though the bulliing of the Roman wall, which still in in sense detines the city boundartes, is an event in the iflstory of London not secoud in importance even to its foundation, since it made a more vlllage and fort with as 'téte du poot' lato a areat city and the capltal of prowincial Britaln, yet we have no records by which an exact date can be assigned to It . All we now is that In 350 London had no wail: and In 369 the wall exlsted. The new wall must brve caken In on hnmense tract of what was untll then oferl comutry, especialiy along tbe Watilng street, towarls Cheap and Newgnte. It trans ormed London into Augusta; and though the ow name hardly appears on the page of history, and never without a reference to the older one its existence proves the Increase in estimation which was then aceorded to the place. The object of this extensive circumpaliation is not rery cleur. Tha populatlun to be protected might very weil have been crowded into a much smalier apsce. . . . The wall encloserl a space
of 380 scres, heing 5,485 yards in length, or 8 mhes and 205 yards. The portion along the river extended from Biackfriars to the Tower." river extended from Biackiriars to the Tower." -W. J. Loftie, Hint. of Landon, ch. ${ }^{2}$ (v. 1). "The historian Ammianus Marcellinus, who wrote about A. D. 380, In the reign of Gratian, states that Londinium (he calis it Lundinium) was in hls days calied Augusta. From him we learn that Luplcinus, who was sent by Julian to repress the inroads of the Scots and Ficts, made Londinlum his head quarters, and tbere concerted the plan of the campalga. In the reign of Vakentinian Britain was again disturbed, not only by the northern barbarians, but aiso by the Franks and Saxons. Theodoslins, who was appointed commander of the legions and cohorts selected for this service, came from Boulogne by way of Ristupic, to Londinium, the same route taken a few years prevlously by Lompicinus and tbere he also matured his plan for the res, toration of the tranquillity of the province. It is on thls occasion that Marcedinus speaks twice of Londlnium as an anciont town, then calied Ailgusta. By the anonymous chorographer of Ravenna it is calied Lonilinlum Augusta; and it is in thls sense, a cognomen or distinguisining appelhation, as applied to a pre eminent town or caplal, that we nust probably understand the term as used by Marcellimis in relation to Londinlum.

The extent of Loudlnhim, from Ludgate on the west to the Tower on the east, was about a mile, and abont half a mile from the wall oi the north (London Wall) to the Thames, giving dhmenslons far greater than tbose of any other lammen town in Britain. These were the llmits of the clty when the luomans relinqulshed the domlulon of the island. "-Chas. Roach Smith, Illuatrations of Lhmirn London, pp. 11-12.

4th Century, - The growth of the Roman city. -"That Loullon graduaily increaseyl in importance beyond the dignity of a commercha clty is plrin, from the mention of it in the It Inera, which show the mumber of marehing roads begloning and terminating there. . London then [In the

6th-oth Centuries.-Duriag the Saxon conquest and settlement.-For nearly haif a century after lts conquest by the East-Saxons (whieh took place profuhly about the middle of the bth century) London "wholly disappears from nur view." "We know nothing of the circumstances of its eonquest, of the fate of lis cltizens. or of the settlement of the conquerors within its walls. That some such settement hal taken place, at least as early as the elose of the seventh century, is plain from the story of Mellltus, when placed ns blshon within lis walls [see England: A. D. 597-84.)] ; but it is equally plain that the settlement was an English oue, that the provinelats had here as elsewliere dis.

 appenred, and that the ruln of the elty had been complete. Had London merely surremered to the East-Saxons nnd retained its older populatlon and muncipal life, it la hard to lmacine bow, withln less than half a century, lts burghers could have so wholly lost all trace of Christianity that not even a rulned ehurch, ns at Canterbury. remained for the use of the Cliristinn bishop, and that the first care of Mellitus was to set up a misston church in the midst of a heathen population. It is even harder to haglue how all trace of the municipal Institutions to which the Roman towns clung so obstinately should have so utterly disuppeared. But more direct proofs of the wreck of the town meet us in the stray glimpses whieh we are able to get of lis carller topographieal history. The story of early Loudon is not that of a settled comimunity clowly putting off the forms of Roman for those of English life, but of a number of litte groups seatered here and there over the aren within the walls, each growing up with lis own life and Institutlons, gilds, sokes, rel'clous louses, and the like, and only slowly drowing together lnto a munieipal uuton which remained wrak and Imperfect even at the Sorman Conquest.Its position Indeed was such that traftic eould not fall to recreate the town; for whether a bridge or a ferty existed nt this time, it was here that the traveller from Kent or Ganl would still eross the Thames, nal it was from Loudon that the roals still diverged whith, sllent and desolate as they had lecome, furbished the means of communlcation to any part of lbritain. Tho inhabitants, without being able to provide etualiy for their reilef, were reduced to iee specutors of their own ruln; and were pursued from street to street by the flames which unexpectedly gathered round them. Three days and nights did the fire adrance; and it was oniy by the blowing up of houses that it was at last extlinguisheri.
About 40 ) streets and 13,000 honses were reduced to ashes. The causes of the caiamity were evident. The narrow streets of Londou, the honses built cutircly of wood, the dry season, and $a$ violent east wind which biew; these were s) many concurring circuinstances which ren dered it easy to asaign the reason of the destruction that cosued. But the people were not satisfied wiht this obvious account. Irompted by bind rage, some aseribed the guilt to the republcans. others to the Cathoiles.

A. D. 1685 . The most popuious capitai ia Europe. - The first lighting of the atreets." There is reason to belleve that, in 1685 , Lon don bad been, during about half a century, the most populous capital in Europe. The inhabl tants, who are now [1848] at least 1.9010 .000 were then probabiy littie more than hisif a mil. lion. London had in the world oniy ove com mercial rival, now long ago outstripped, the mighty and opulent Amsterdam. In January, 1634, Charles pursued hla eccentric career by granting ail hls rights in the duchy to bis brother, the Cardinal of Lorraine. The new duke also married a cousin in order to unite the rights of the two branches. . . Charies adopted the life of a wandering soldier of fortune, whlch Was most to his taste, and commanded the Im. perial furces at the hattle of Nordlingen. He soon assumed again the rights which he had ceded, but 1 is conduct rendered them constantly fess valusble. The following years were flifed with struggies wlith France, which resulted in haf tsking pmasesfion of still more of Lorratue, until its duke was entirely a fugitive. Such stuggles brought upon Ita lohahitants a condi. tion of coustantly lacreasing want and misery.

It was ravaged hy the hordes of the Duke of Weimar and the swedes [ree Germant: A. D. 1634-1639], and on erery nde were plliare and burning and murders. Famine followed, and the horron perpetrated from it were sald to be mor than could be described. Hehelleu himtelf wrote that the Inhahitsanta of Lorralne were mostly dead, viliages hurned, celtles deserted, and a century would not entirely rentore the country. Vincent de Paul did mueli of his charitablo work In that unhappy province. . . . At once it became a questlon of vital importunce how these people were to find avenues of commerce with the outer world.

Immigratlou to the interior must cross the mountalns: lut the natiral high way for commerce was the Mississippl ikiver. If the use of this river were lift free, hothing better could Ine deslreti. Linfortuuately it was uot free. The (ast bank of the river, as fur south us the north bonumary of Florita [whleh included some part of the present states of Aiabama and Misslsslppl, but with the uortlern boundary in dispute - see Flomba: A. It was Inconceivable that such pretensions shouid be tolerated If sumesful resistance were possihie, hut the sottlers wer ahle to combat it on two grounds, cither of whle seemed, according to recognized rultes of intema tlonui iaw, concluslve. First, As citizins of the conntry owning one of the banks on the upper purtion of the stream, they clalined the free narl gatlon to the sea with the privllege of a landing place at its mouth as a natural right: and the were ahie to fortliy this claim - If It beedell sup iort - with the oplalons of publiclsts of acknowl edged authority. In $178 \%$ he opened trade with New Orieans, and endea vored to impress upon the Spanish authorities the lm portance of an amleahle understanding with the pettiers In the Ohlo valley. Hlis representations for a time had considerabie effect, nud the trade was aot only relieved of oppressive burdens, but Americans were lnvited to make settlements within Spanish llmits In Louisiana and West Florida. A considerahle settlement was actuaily made at New Madrid under this lnvitation. But there is no reason to believe that genuine gond feeling inspired this policy; the purpose plainly in view was to huild upa Spanish party among the American settlers and eventually to detach them from the United Btates. But the course pursued was variable, belng characterized In turn by liberality and by rigor. Wilkinson appears to have been allowed special privlleges iu trade, and this, together with the fact that he was known to receive a heavy remittnuce from New Orieans, begat a suspicion that he was under Spanish pay; a suspleion from which he was never whaily reileved, and which prohahiy to some extent affected the Judgment of men when be came muier further suspicion in consequence of equivocal relations wltii Aaron Burr. In 1789 a British emissary made his appearance in Ken. tucky, whose mission seemed to be to sonnd the sentinents of the people respecting union with Canala. LOUISIANA, 1798-1803.

Three regiments of the regular army were at once dispatched to the Ohfo. The peopie flew to arms. Invation appeared imminent." But the bjanish authorities gave way, and a new intendant at New Orieans "received from his Government orders to remove the interdict lssued by Gayowo and to restore to the Western people the right of depoait at New Orieans. These orders he promptly obeyed, thus reviving good feeiling between his province and the United States. Trade revived; immigration increased.

The deluge of immigration starticd the Spaniards. They saw to what it was swiftly tending. A few more years and this tide would rlso too high to be resisted and Louisiana wouid be lost to the king, iost to the hoiy religion, given over to freeriom, repuhilicanism and ruin.
On the 18th of Juiy . : [1802] the king oriered that no more grants of iand be given to citizens of the United States. Thls effectuaily kilied the commerce of the Mississippi River, and the indignation of the Western peopie kuew no bounds.

Rumors, apparentiy weil founded, were afloat that the irresistihie genius of Napoleon was wringing the province from Spain and that this meant a division of the territorics between France and the United States. To a large majority of Louisiana's popuiation these were thrillingiy weicome rumors. The very thought of once more becoming the suhjects of France was enough to intozicate them with deight. The treaty of Ildefonso, however, which had been ratified at Madirid on the 21st of March. 1801, had been kept a secret. Napoicon had hoped to occupy louisiana with a strong army, consisting of 25,000 men, together with a fleet to guard the coast; hut his implucahie and ever watchfui foe, Engiand, discovered his design and thwarted it. But hy the terms of the treaty, the coiony and province of Loulsiana had gone into his hands. He inust take possession and hoili it, or he must see Engiand become its mas. ter. Pressed on every side at that time by wars and pollticai compilcations and weli underatanding that it would endanger his power for hlm to undertake a grand American enterprise, ie gladiy opened negotiations with the Lnited States looking to the cession of Louisiana to that Government. . . . Napoleon had agrecd with Spain that Louisiana shouid not be ceded to any other power. . . Dipiomary very quickiy sur. mounted so smail an obstacie. .. Tlise treaty of cession was signed on the 30th of Aprl, Is03, the United States agreeing to pay France $60,000,000$ francs as the purchase price of the terrtory.

In addition, the sum due American citizons. . . was assumed by the United States. The treaty of A prif was ratitied hy Na. prieon in May, 1803, and hy the Senate of the Cnited States in October. . . . Pausing to giance at this strange transaction, hy which onc repuhlic selis outright to another repubilc a whole country without in the least consuiting the wishes of the inhalitants, whose alleglance and ail of whose poilticai and civii rights are cianged thereby, we are tempted to wonder if the republle of the Uniterd States could to-day seli Loulsiana with the same impunity that attended the purchase! She bought the country and its peopic, just as she might have bought a desert friand with its goats."- M. Thompron, The Elory of Lavistana, ch. 6, with frot.note.-" No one coulif ay what was the southwest boundary
of the territory acquired: whether it should be the Sabine or the Rio del Norte; and a contmversy with Spain on the suhject might at aos tirne arise. The northwest bonndary was also somewhat vague and uncertain, and would be open to controversy with Great Brituin. [That] the territory extended west to the lowiky Mous. tains was not questioned, but it might lee clalmel that it extended to the Pacifc. Xn impression that it did so extend has aince prevallerl in some quarters, and in some puhlic papers and docu. ments it has been assumed as an undoulited fact. But neither Mr. Jefferson nor the Freuch, whose right he purchased, ever clained for Lovisians any such extent, and our titic to Oregon has ieen safeiy deduced from other sumees, Mr Jefferson matil expresely: 'To the wuters of the Puciflc we can found no ciaim in rgitt of Lound. ana." LYCIAN LEAGUE, The.-"Probahly the best constructed Federai Government that the ancient worid beheld. The account given by Strabo, our sole authority, is so fuil, ciear, and brief, that I cannot do better than transiate it. The aacestral constlution of the Lykian League ' ia described by the great geographer in these words: 'There are three and twenty cities which have a share in the suffrage, and they come together from each city in the common Federal Assembly, choosing for their place of meetling any clty which they think best. And, among the cltles, the greatest are possessed of three votes apicce, the middie ones of two, and the reat of one; and in the same proporton they pay tases, and take their share of other public burthens. . And, in the Federal Assemhiy, Arst the Lykiarch is chosen and then the other Maplstrates of the league, and bodles of Federai Judges are appointed; and formeriy they used to eonault about war, and peace, and alliance; this now, of course, they cannot dio, but these thinga nuat needs rest with the Romans.'
On the practical working of this constitution Strabo beatows the highest praise. Lykia was, in his dsy, a Roman dependency, but fi retained lts own hiws and internai government. "一E. A. Freeman, Hiat, of Federal Gort., ch. 4, eect. 4.

Another lnflux of population was condueted to this coast ly means of the Rhodian ehain of islands: men of Crete came across, who calied themedves Termill or Trameh, and vencrated Sarpeldill as their llero. After anarduous string. gle, they grahnaily made themselves masters of the land enclreled oy sea and rock. . . . From the mouth of the Xanthus the Cretsins entered the land. MACEDONIA AND MACEDONIANS, The.-" The Macedonians of the fourth century B. C. acquired, from the ahllty and enterprise of two successlve klags, a great perfectlon in Oreek military organization. Wlthout any of the loftler lleilente qualities. Thelr career In Greece ls purely dentructive, extlingulshing the free movement of the separate cltfes, and dlatming the cltizen-boldler to make room for the forelgy mercenary whose sword was unhallowed by any feeilnge of patriotism - yet totally Incompetent to substltute any gown system of central or pacific administration. But the Macedonlans of the meventh and sixth centuries B. C. aro an aggregate ouly of rude luland tribes, inbilvided into distinct petty princlpalitles, and separated from the Greeks by a wlder ethnlcal difference even than the Eplrots; slnce Ilerolotus, who conslders the Epirotlc Molosslans and Thesprotlans as children of Ileifen, uechledly thlaks the contrary respectlng the Macedonluns. C. 838) for the invadion of the Persian Empire. He was succeeded hy his mon. Alexander, who applled himself tirnt, with aignificant energy, to the chatisement of the tmubiesome barbarians on his northern frontier, and to the crushing of revoit in Greece (see Guezce: B. C. $836-885$ ). He haid not yet been a year un the throne " when he stood forth a greater and more powerfui mover. elgn than his father, with hia emplre united in the fomis of fear and admiration, and ready to carry out the long premeditated attack of the Greeks on ti.e dominlon of the Great king. He had inileed a spienild army of all branches, beavy infantry, ilght infaniry, slingers and archers, artiliery such as the ancients couid produce without gunpowier, and cavairy both Thessailian and Macedonlan, it for both skirmisiIng and the shock of battie. If Its numbers were not above 40,000 , this modente force was sureiy as much as any commander could hanilie in a rapifi campaign with long marchee through a hostlle country.

After a Homeric ianillng on the coast near llium, and sacrifices to the lifian goidess at iner anclent shrine, with feasts and gamies, the king starterl East to meet the Persian satrapa, who had collectet their cavairy and Greek mercenary infantry on the plain of Zeleia, behind the river Granicus (B. C. 334). Ilere be fought his firat great inatie, and showed the naturr pis tactics. He used his heary infantry. d1- '. ' into two columns or phaian xes as his ieft Wi : anked hy Thessalian cavalry, to threaten
sht of the enemy, and keep him engaged
e he dellvered bls main attack. Deveioping Itis movement by a rapid advance in echelonned squadrons thrown forward to the right, threatening to outflank the enemy, he indueed them to spread their forces towards their left wing, and s) weaken their left centre. No sooner had he snecceded in this than he threw his heavy cavairy on this weak polne, and after a very severe struggle in rmasing the river, and elimbing its rugged banks,, completely broke the enemy's ine. . . Ile ulif not strike straight into Asia, for this would have ieft it possible for Meutor and Memnon, the ahie Khodians whocommanded ou the coast for Darius, either to have raised all Asia Binor against him, or to bave transferred the war hack to Maceion.

Whom were sufficientiy strong to asaert their rights to the throne. Thus Antigonus eeemed indeed destined to become vicar and master of the entiro Alexandrian kfugdom, and to restore the unity of the empire. But not only was this union not realized, hut even the great reaim which Antigonu: had estahlished in Asta was doomed to inevitahie destruction. The generais who possessed the various satraples of the empire could not bear his supremacy, and accoriIngiy entered into a convention, which gradualiy ripened into an actlve alifance against him. The prineipal organ of this movement was Sefeukus. who, having escaped to Ptotemy of Egypt, first of all persuaded the latter to form an alitancewhich Kusasnder of Macedonia and Lysimachus of Thrace readliy joined - againat the formidahle power of Antigonus. The war lasted for four Years, and was carried on in Asin, Europe, and Africa. Its fortunes were various [the mont moteworthy event being a blooxly defent infleterl upon Demetrius the sin of Antigonus, ly Ptoiemy, at Gaza, in 312], hit the resuit was not decisivc.

In 311 B. C. a compact was maile between Antigonus on one sife, and Kassander. Ptolemy, and Lysimachus on the other, wherehy 'the supreme comnand in Europe was guaranteed to Kassander, untlit the maturity of Aicxander, son of Koxana; Thrace being at the same time assured to Lysimachus, Egypt i" Ptolemy, and the whote of Asia to Antigonna. It was at the same time covenanted by all that the Hellenic elties shouid be free.' Evidently this peace contained the seerls of new disputia and inereasing jeaiousles. The first act of Kas. sander was to cause the death of Roxana and her chifd in the fortrese of Amphipoits, where they hat lewn continef; and thus disappeared forever the only link which apparently maintained the union of the empire, anif a reaily career now fay upen to the amblition of the suc cessors. Again, the name of Seleukus was not even mentioned in the peace, while it was weil known at the time it was concluded that he had firmly estahished his ruie over the eastern sa trapies of Asia. . . . The troops aiso of Antigonus, notwithstanding the treaty, stlif remainedi in ilefias, under command of fils nephew Ptoiemy, Puifer: of Egypt, therefore, accusIng Antigonus of uaving contravened the treaty by garrisoning varinus Heflenic cities, re newed the war and the triple alliance against hims." A serier of assasainations soon folfowed, which put out of the way the young prince Herakles, bastard son of Alexander the Great, and Kleopatra, the sister of Alexanier, who was preparing to wed Ptolemy of Egypt when Antigonus brought about her murder, to prevent the marriage. Another vletim of the jeatoustes that were rife aniong the Iialochl was Antigonus: nephew Ptotemy, who had deserteri his uncle's shie, but who was kllited hy the Egyptian Ptoleny. "For more than ten yeara Antigonns, Prolemy, I.ysimachus, and Kamander miscrasively promiand to leave the Greeks indejendent, free, and unguarled; hut the iatter never ceasel to be guarded, taxed, and ruied hy Maceionian despots. When Demetrus entered Athens he was received as before whith the most extravagant flatteries. In the course of the same year the struggle between Antigonus and his rivala was brought to a cine hy the battie of ipaus in Phrygla, in which Antigonus was Hileci, and his army compietely defeated. Antigoaus lad attained the age of 81 at the time of his death. Demetrius retreated with the remnant of the army to Ephesus, whence he sailed to Cyprus, anilafterwards proposed to go to Athens; but the Athenians, alienated by his ili-fortune at ipsus, refuseni to receive him. "-W. Smith, Ifiat. of (irrece, oh. 45) - "After the batile [of Ipsus] it remalard for the conquerors to divide the spoil. The dominions of Antigonus were actualiy ln the haods of Seleucus and Lyaimachus, and they aloae had achieved the Fletory. It does not appear that they consulted either of their allies on the nartition, though It seema that they ob. talaed the assent of Cassander. They agreed in share all that Antigonus had possessed between themselves. It is not clear on what principle tive line of demarcation was drawn, nor is it possible to trace it. But the greater part of Asia lifar was given to Lysimachus. The portion of Seleucus included not only the whole country betwera the coast of Syria and the Euphrates, but alm, it secms, a part of Phrygia and of Cappadocia. CIlicis was assigned to Casanmer's brother Pidistarchus. With regari to Syrda howeres a ditfleaity remained. The greater part of It hai. been conquered by Ptolemy: Tyre and Sidon alone were stili occupied hy the garriwas of Autigonus. Ptolemy had at leastas good a right as his aliy to ail that he possegsed. For the prospects of Greece, on the other hand, the fall of Antigonus must clearly be accounted an mivantage, so far as the effect was to dismemlerr his territory, and to distrihute it so that the innst powerful of his successors was at the greatest ils. tance. It was a gain that Macedonia was left as inciependent kingdom, within its ancient limits, and bounded on the north by a state of superior atrength. preiudice and open to conviction, he studied the varlous ayatems of belicf whlch he found establisher In Western Asia - the Caballsm of the Babylonian Jcws, the Duallam of the Magi, the mysterious doctrines of the Christlans, and even the Buddhism of indla. At first he inclined to Cliristianity, aud is sald to have been admitted to priest's onlcrs and to have ministered to a congregation; but after a time he thought that ine saw his way to the formation of a ncw creed, which should combine ali that was best in the religlous systems which he was acqualnted wlth, and onlt what was superfluous or objectionable. He adopted the Duaiism of the Zoroastrians, the inetempsychosis of India, the angcllsm and demonlsm of the Taimud and Trinltarlanism of the Gospel of Christ. Clirist himself he identifed with Mithra, and gave Him hls dweillng in the sun. He assumed to be the Paraclete promlsed by Christ, who should guile men into ail truth, and claimed that his 'Ertang,' a sacred book illustrated by pletures of his own painting, should supersede the New Testament. Such pretenslons were not likely to be toinrated by the Christinn community; and Manes had not put thein forwarl very long when he was ex. pelled from the church and foreed to carry inls teaching elsewhere. Under these cireumstances he is said to lave adiressed himself to Sapor [the Persian king], who was at first inclined to show him solne favour; but when he found out what the doctriaes of the now teacher actually were, hls feelings underweut a change, and Manes, proscribed, or nt any rate threateued with penalties, lad to retire iuto a foreign conntry. ... Though the morality of the Sianichees was pure, and thongh their religion is regaried by somc as a sort of Christianity, there were but few points In which it was an lmprovement on Zoroastrianism."-G. ## MANORS

MANORS.-"The name manor is of Norman origin, but the eatate to Fhich it was given existed, in its essential character, long before the Conquest; it recelved a new name as the shire also did, but neither the one nor the other was created by this change. The local jurisdictions of the thegns who had grants of sac and soc, or whe exercised judicial functlons amongst their free nelghbours, were identical with the manurial jurisdletlons of the new owners.
The manor ltself was, as Ordericus teilis us, noth. ing mon nor less than the anclent towaship, now held by a lord who possessed certaia judiciai righte varying according to the terins of the grant by which he was infcoffed. Every manor had a court baron, the anclent gemot of the township, ln which by laws were male and other focal busincss transacted, and a court customary in which the buslness of the villenage was despatched. Those manors whose fords hat uader the Anglo. Saxon faws possessed sac and soc, or who slnce the Conquest had had grants ia which those terms were used, had also a court • h't. or criminal jurisdletion, cut out as it were from the criminai jurisdiction of the hundred, and excus. ing the suitors who attended it from going to the court-icet of the hundred."- W. Stubbs, Const. Small gatherings of houses and cots appear as oases in the moorland and forest, more or less frequent according to the early or late settiennent of the district, and lis freedom from, or exposure to. the ravages of war and the punishmont of rebellion. These oases, townships or vills if of some extent, hamlets if of but a few houses, gather round onc or more mansions of superiot size and Importance, the Manor houses, or abodes of the Lords of the respective Namors. lound cach townshlp stretch the great phughed fiells, usually three in number, opeu and uninclosed. have to supply the labour necessary to cuitivste the srahle land that the Lord of the Manor keeps to his own hands as his domain, domlnicum, or demeane."-T. E. Scrutton, Commons and Common Fields, eh. 1. - Relative to the origin of the manor and the development of the community from which it rose there are dlvergent vlews much dlacussed at the present day. "The interpretatlon, current fifteen years ago, was the patural outcome of the Mark theory and was somewhst as follows: The community was a voluntary association, a simple unlt withln which there were households or familles of vafous degrees of wealth, rank and authority, but in polnt of status each was the equai of the other. Each was subject only to the customs and usages of the communlty and to the court of the Mark. The Mark was therefore a judlclal and polltical as weli as an agricultursl unit, though cultiva. thon of the soil was the primary bond of union. Ali offices were filled by electlon, but the lnenm. bent in due tlme sank back into the general body of 'markgenossen.' He who was after wards to be the lord of the manor was originally only 'the first Marksman,' who attained to this pre eminence ln part by the prestlge of election to a position of headshlp, in part by usurpation. and in part by the prerogatives which protection and assistance to weaker Marksmen brought. Tius the first Marksman became the lord and helif the others in a kind of subjection to himself, and recelved from them, though free, dues and servlees which grew increaslngiy more severe. The main difficulty here seems to be in the premise, and it is the evident artificiallty of the voluntary assoclatlon of freemen whlch has led to sucal adverse critlclsm upon the whole theory. . . Whlle the free vlllage community wat under tire at home as well as abroad, Mr. Seeboim prescnted a new view of an exactly opposite character, with the formula of the community in villelnage under a lord. Although thls New bas for the moment divlded thinkers onthe suhject, it has proved no more satlsfactory than the other; for while it does explain the origin of the lord of the manor, it leares wholly untouched the bouly of free Saxons whom Earle calls the rank ani file of the invarling army. Other theories hiave sought to supply the omissions in this varue non-documentary ficld, all crected with learuing and skill. but unfortunately not in harmony with oue another. Coote and Finlason have giren to the manor an unqualliced Roman origin. Lewis holds to a solld Brltish foundation, the Teutonlsts would make it wioliy Saxon, while (romme is Inclined to see an Aryo-Britlsh comnuuity under Saxon overlordshlp. Thus there is a whie range from whlch to select; ail cannot the true; no one is an explanation of all conditlons, yet most of them have conslderable ound evidence to support them. It is this lack of hasmony which drives the student to dlscover mome theory which shall be in touch with known tribai conditions and a naturai consequence of their development, and which at the same time shali be sufficlently elastlc to conform to the facts which confront us in the early historical petiod. An attempt has been made [in the work aere quoted from] to lay down two premises, the first of whlch ls the composite character of the tribai and village commurlty, and the second the diverse ethnological conditlons of Britain after the Conquest, conditlons which would allow
for different resuits. . . . Kembie in his chapter on Personal Rank has a remark which is ill in keeping with his peacefui Mark theory. He says: 'There can be no doubt that tome kind of military organlzation preceded the peaceful settiement, and in many respects determined its mode snd character.' To this statement Earle has adiled another equally pregnant: 'Of all principles of military regiment there is none so necessary or so elementary as this, that all men must be under a captain, and such a captain as ls ahle to command frompt and willing obedlcace. Upon this military princlple I conceive the English settlements were originally founded, that eacil several settlement was under a military learier, and that thls milltary leader was the ancestor of the lord of the manor.' Professor Farle then continues in the endcavor to apply the suggestion contained In the above quotation. He shows that the 'hundreds' represent the first perinsnent encampment of the invading host, and that the mllitary occupation preceded the civil organization, the latter falling lnto the mould whleh the former had prepared. Accordlng to this the manorial orgsnlzatlon was based upon a composite mllitary foundation, the rank and file composing the one element, the village community; the captain or mliitary leader com. posing the other, settled wlth suitable provision by the sitle of his company; the lord by the side of free owners. In this attempt to give the manor a composite origln, as the only rational means wherely the chief difficulty can be remored, and $\ln$ the attempt to carry the selgnorial element to the very beginning we believe him to be wholly right. But an objection must be ralsed to the way in which Professor Earle makes up hls composite element. It ls too artificlal, too exelusively military; the occupiers of the viliage are the members of the 'company,' the occupler of tive adjacent seat is the 'captain,' afterwards to become the lord.

We feel certain that the locai community, the viliage, was simply the kindired, the sub-clan group, which had become a local hahltation, yet when re attempt to test Its presence in Angio-Saron Britain we meet with many ditticultles.'-C. McL. Andrews, The Old Eng. Vanor, pp. 7-51.

MANX KINGDOM, The.- The Isle of リao in the !rish Sea gets its English name, Man, bs an abbreviation of the natlve name, Mannin, the orgin of which is unknown. The language, cailed Manz (now little used), and the inhabl. tants, cailed Manxmen, are both of Gaclic, of Irish derivstion. From the sixth to the tonto century the isiand was successivnly ruled by the Scots (Irish), the Weish and the Norwegiass. finaily hecoming a separate petty kinglom, with Norwegian cinims upon it. In the thirtecoth evntury the iittle kingdom was annexin to Scot: iand. Subsequentiy, after various vicissitudes. It passed under English control and was grated by Heary IV. to Sir John Stankey. The Stan. leys, after some generations, found a digoitr which they estecmed higher. in the carldom of Derhy, and relinquished the title of King of Man This was done by the second Earlof Derbs, 1505. MASCARENE ISLANDS,The.-Thethren contiguous islands of Mauritius, Réumion sad Kodrgues, in the Indian Ocean, east of Mada. gascar, are eoileetively so called from the lor. tuguese navigator Mascarenhas, who discovered them in the 16 th century. About the middle of the neat century the Dutch attempted a settle ment on Mauritius, which they named from their stadtholder, Count Maurice. In 1712 they uhar doned the island, and it was occupied sumin ufies wards by the French, who had alrealy plasted a colony on the neighboring island. first named Isie de Bourbon, and afterwards Réunion. To Maurltus the French gave the pame of the isie of France. Under the ceiebrated Labourlonnais, who became governor lu 1734, these islands as sumed great colonial importance and lyecame the seat of a powerful attempt to establish Freach ascendancy in the East. See India: A. i) 1i+33 1752. In 1810 ali three islands were surtendered to the Englisi. Trémion was restorel to France, at the peace, but the Isle of France, with its older Dutch name of Mauritius reinstated, and Rodrigues, were retained and have formill part of the British Empire since. The Name.-"The name Massachusetts, so far as 1 have ohserved, is firat mentioned hy Captain Niuith In hls ' Descriptlon of New Eng. land, '1616. He spells the word varlously. hut be appears to use the term Massachuset and Nassachewset to denote the country, whlie he addels a finai 's' when he is apeaklng of the Inhahltants. Ile speaks of Massachusets Mount and Hassachusets River, uslng the word also In Its possessive form; whlle In another place he calis the former 'the high mountain of Massachusit.' To this mountaln, on his map, he glres the Eng. lish name of 'Chevyot Ilills.' Hutchlnson (1. 460) supposes the Blue Ilills of Milton to be lntended. He says that a small hlll nenr Squan tum, the former seat of a great Indinn sachem, was called Massachusetts Iliil, or Mount Massa. chusetts, down to hls tlue. Cotton, In his Indian rocabulary, says the worl means 'a hili In the form of an arrow's hend.' See, also, Neai's 'Sew Engiand,' II. 215, 216. "The nueans at command provided ouls for sending a portlon of the company; and 'those that stayed, being the grenter nuniber, requirel the pastor to stay with them,' while Eller Brewster accompanled, in the pastor's stead, the aimost as numerous mlnority who were to constitute a church by themselves; and in erety church, hy lRohlnson's theories, the 'gov. eming eider,' next In rank to the pastor and the teacher, inust be 'apt to teach.' A smail ship, the 'speelweli,' - of some 60 tons hurden, wus bought and fitted out ln Holiand, and early ln duly tuse who were ready for the formidahle Toyage, being 'the youngest and strongest part,'left Leyden for emharkatlon at Delft-Haven, neariy 30 milles to the southward, - sad at the parting. ' but.' says Bradford, 'they knew that they were pigrims.' About the mlddle of the serondl week of the month the ressel salled for Southampton, England. On the nrrival there they found the 'Jlayflower,' a shlp of nbout 180 tous hurden, which liad been hlred In London, awaiting them with thelr feliow passengers, partly laborers employed hy the merchants, partly Englishmen like-minded with themselves, who were disposed to join the colony. Mr. Weston, also, was there, to represent the mer chants: but, when dlscussion arose about the terms of the contruct, he went off in nager, leaving the contract unsigned, and the arrangements so incomplete that the Pilgrims were forced to lispose of sixty pounds' worth of their not alundant stock of provislons to meet absolutely necessary charges. The ships, with perhaps 120 passengers, put to sea about August $5 / 15$, with linpes of the colony being weil settled before winter; hut the 'Speedweli was soon pronounced too leaky to proceed without belng overhauled, and so both silps put in at Dartmouth, after elyit days' saii. Repairs were made, and before the end of another week they started agaln; but when about a hundred leagues berond Land's End, Reynolds, the master of the "Speedweil," deelared her ln imminent danger of sinking, so that both shlps again put about. Un reaching Plymouth Harbor it was declited to abandon the snalier ressel, and thus to send hack those of tite company whom such a succession of mlshaps hal disheartened.

It was not known till later that the alarm over the 'Speedwell's' condition was owlag to deception practlsed hy the mister and crew. At length, on Wednesday, September 6/16. the Maytlower left Plymonth, and nine weeks from the followhig dny, on November $9 / 19$, sighted the eastern coast of the tlat, but at that time weil-wooded shores of Cape Cow. She took from Plymoutia 102 passen. gers. besides the master and crew ; on the voyage one ninn-servant died and one child was born, making 102 ( 33 maies and 29 females) who reached their destination. Of these, the colony proper consisted of 34 aduit males, 18 of them accumpanled by their wises nad 14 by manor citildren ( 20 boys and 8 giris): besldes these, there were 3 mald-servants and 19 men-servants, sallors, and craftsinen, - 5 of them only half-grown of the - Who were hired for temporary service. Of the 34 men who were the nucleus of the coions, more than half are known to have come from Leyden; ln fact. but 4 of the 84 are certiainly knowin tu be of the Southampton acces. sions.

And whither were they bound? As we liape sinn, a patent was srcured in 1810 lu Nr. Wincoh's name; hut 'Gol so disposed as he nerer went nor they ever made use of thin
patent,' says Bradford,- not however making it clear when the intentlon of colonizing under thla Instrument was ahandoned. The 'merchant ad venturers' while negotlatling at Leyden seem to have taken out another patent from the VIrginin Company, In Fehruary, 1020, ln the pames of John Pelrce and of hls aseoclates; and thls was more probahly the authority under whlch the Mayflower voyage was undertaken. As the Pilgrims had known before leaving Holiand of an fitended grant of the northern parts of VIrglnia to a new company, - the Councll for New Eng. land, - when they found themselven of Cape Cod 'the patent they had belng for Virginin and not for New England, whleh helonged to another Government, with which the Virglala Company had nothlng to do, they changed the shlp's course, with Intent, says Bradford, 'to find some place about IIudson's River for thelr hahitation, ${ }^{\prime}$ and so fulfil the conditions of thelr patent; hut difficulties of navigation and opposlton from the master and crew cnused tive exlles, after half a day's voyage, to retrace thelr course and acek a restlag.place on the nearest shore.

Thelr radical change of destlnation exposed the coloulsts to a new danger. As soon as it was known, some of the hired lnborers threatened to hreak loose (upon landing) from their engagements, and to enjor full license, as a reanit of the ioss of tie nuthority delegated In the Vlrginia Company's patent. The necessity of some moxie of eirli goverument had been enjoined on the Pigrims in the fareweil letter from their pastor, and was now nvaited of to restrain these insurgents and to unlte visibly the well-affected. A compact, which has often heen eulogized as the first written constitntion ln the world, was (lawn ui) Of the 41 slgners to this compact, 34 were the aluts called above the nuciens of the colony, nad seven were servants or hlred workmeu; the seven remaining alult males of the latter sort were periaps tix) iii to sign with the rest (all of them soon died). or the list of signers may be imperfect. This needful prellmiuary step was taken on Saturlay, November 11/21, by whincit time the Mayflower had rounded the Cape nad found shedter la the qulet harbor on which now lies the vilhuge of Provincetown; and probably on the same day they chose, or rather contirmed, as l3radfonl has it, . . . Mr. Johal Carver governor for the ensuing yenr. On the same day an armml delegation visited the ncighboring shore, finding noinhabitants. There were uo attractions, however, for a permanent sectlencut, nor even accommonlatlons for a comfortable eucampment while such $n$ place was being sumbte." some days were spunt in exploring Cape Coxi Bay, and the hartur since known as Piymouth Bay wns chasen for the settement of the colony. The exploring party landed, as is belinverl, at the fumous lock, on Monday Deecmber $11 / 21$. "Throuri an unfortunate mistake, originating in the list century, the 22d has bren commanly aiopted as the trine date. The well carried out the dend through the cold and snow, and then hastened back from the huriai to wait on the sick; and as the slek began to recover, they took the places of those whose strengti had been exhansted." In Mareh, the first intereourse of the colonists with the few natives of the reglon was openedi, through Samoset, a friendly Indian, who haid learned from fishermen on the more castern coast to speak a little Engllsh. Sion afterwards, they male a treaty of friendship and ailiance with Massasit, the chlef of the nearest tribe, whi h treaty remained in force for 54 years. Soon after the departure of the Msydower, Carver, the Governor, died "Brad. ford was chosen to the vacant office, with Istae Allerton, at his request, for his Assistant. Fortysix of the eolonists of the Dlay flower were now dead, - 28 out of the 48 adult men. Before the arival of the second party of emigrants in the autumn, the dead reached the number of 51 , and only so equal number survived the first miseries of the enterprise. . . Before the winter set in tillings from England had come, to relieve the long year's lonesomeness; and a welcome adidi tion was made to the sadiy diminished number. Pl portune, a vessel of 55 tons' burden, reached Plymouth after a passage of four months, with Cushman and some 30 other emlgrants. The men who now arrived outnumbered those of their predecessors who were stlll living. sme were old friends of the colonists, at Ley. den Others were persons who added to the moral as well as to the numerical strength of the settlement. But there were not wantling such as became subjeets for anxlety and coerclon." The Fortune aiso brought to the colonista a patent fom the Council for New England, as it was commonly known - the corporatlon into which
the old Plymouth Company, or North Vlrginta
lunnch of the Virginia Company, had been trans-
formed (see New Enoland: A. D. 1620-1623).
"Upon lands of this corporatlon Bradford and
his companlons had sat down wlthout leave, nnd were of course llable to be summarily expelled. Informed of their position by the return of the Mayfiower to England ln the spring, their frienis obtalned from the Council a pntent which was brought by the Fortune. It was taken out ln the name of 'John Pierce, citizen and clothworker of London, and his associates, ' with the understanding that it should be held in trust for the Adventurers, of whom Pierce was one. It allowed 100 acres of land to every colonist gone and to go to New England, at a yearly rent of tro shnllings an acre after seven years. It granted 1,500 acres for public uses, and iiberty to 'huwk, fish, and fori'; to 'truek, trade, nad traffic with the savages'; to 'establish such laws
and ordinances as aro and ordinances as aro for their hetter government, and the same, hy such officer or offieers as they shall by most wices elect and choose, to put in executlon'; nnd 'to encounter, expulse, repel, and resist hy force of arms' all intruders.

The instrument was signed for the Council by the Duke of ilamilton, the Duke of Lenox, the Eari of Warwiek, Lord Sheflield, nad Sir Ferdinando Gorges.

The precise time of the aloption of the name which the settlement has borne since its tirst yeur is not known. Ply. mouth is the name reeorded on Smith's map as having bern given to the spot hy Prince Charles. It seems very likely that the emigrunts had with them this nap. Whieh had leen maeh circulated.

Bhould view with a hostile eye the growth of a l'uritan state in Niw Engiand is not at all surprising. The only fit ground for wonder would seem to be that Charles shomld have been willing at the outset to grant a charter to the able and Intuential Puritans who oganized the Compary of Massachusetts Iay. Probably, however, the king thought at first it Fonill relieve him at home if a few dozen of the Puritan leaders eonid be allowed to concentrate their minds upon a project of colonizatiou lu America. It might divert attention for a moment from his own despotic schemes. Very likely the scheme wouid prove a failure and thic Massachusetts colony incur a fate like that of Roanoke Ishand; and at all events the weaith of the I'uritans might better be sunk in a remote and peribous enterprise than employed at home in organizing resistance to the crown.  a decision had to be mude concerning atests. On the whole, the clergy conclaled li would be wismer to obey the crown, 'provilidithey be, with vtnost care \& cantion, qualtiol as to their instructions.' Accordlngly, after a short ad. journment, the Gencraf Court chose Willium Stoughton and Peter Bulkely; an.l having strictiy limited thelr power to a settlement of the terrltorial controversy, they sent then on their m'ssion.

The controversy comererning the b undary was referred to the two chief justices, who promptly decided aguinst the Company; and the easy acquiescence of the General Coun must raise a doubt as to their faith in the soundness of their claims. Anl now again the fatitity which seemed to pursue the thencracy in all its dealings with England letlit to give frest prurocatlon to the king by secretly hiying the tithe of Gorges for 1,250 pounds. Almost immediateiy the Privy Counell had begun to open other matters, such as coining and illieit trade; and the attor. ney.generai drew up a iist of statutes which, in his oplnion, were contrary to the laws of Engiand.

In the spring the law offlcers gave an opinion that the misdemeanors alieged against Massachusetts were sufficient toavoid her patent : and the Privy Couneil, in view of the encroachments and injuries which she had continualiy prastised on her neighbors, and her contenipt of his majesty's commands, advised that a 'quo warranto' shouid be hrought agalnst the charter. Randolph was appointed collector at Boston. Even Leverett now saw that some concesslons must be made, and the General Court ordered the oath of ailegiance to be taken; nothing but perversity seems to have caused the iong delay. The royal arms were a'so carved in the court. bouse; and this was ail, for the ciergy were determined upon those matters touehing thelr uthority.

Neariy haif a century had claped since the emigration, and with the growth of wealth and popuiation clanges hadi come. In March, John Leverett, who hadi long been the bead of the high-churel party, diledi, and the eleetlon of simon Bradstreet as his successor was a trumplh for the opposition. Great as the clerical influence still was, it had lost much of its old despote power, and the congregations were no longer united In support of the policy of their pascors.

Boston and the larger towns faroryd concesslon, while the country wa the ministers' stronghoid. The result of this diver. ence of oplnion wus that the moderate porty, to chich Bralstreet and Dudiey beionged, pre dominated in the Bonrd of Assistants, white the deputles remaineri immovable. The branehes of the leglslature thus became opposed; no course faction could be agreeti on, and the theocrary driftexi tolts destruction. Meanwhile izan dulph hal renewed his attack. He deciared that in spite of promises and exeuses the revenue haws were not eaforced; that his men were beaten, and that he hourly expected to be thrown luti prison; wherens in other colonies, he asserten, he was trated with grent respect. There can bo ao domit Ingenuity was used to devise nueans of anoyaurc; and certainly the life he was made to leal was hard. Proceedings were begun at once, and Randolph was sent to Boston to serve the writ of 'quo warranto'; he was niso ehnrged with a royai deciaration promising that, even then, were suhmission made, the charter should be restored with only such ehanges as the puhilie welfare demanded. Dudicy, who was a man of much politicai sagaelty, had returned and strongly urged moderation. The magistrates were not without the instincts of statesmanship: they saw that a hrench with Engiand must de stroy all safeguards of the common freedom, and they voted an mddress to the cmwn acecpting the profered terms. But the clergy strove againet them : the privileges of their oriler were at atake they feit that the loss of their importance would be deatructive to the interest of religion and of Chriat's kingtom in the colony,' and they roused their congregations to resist. The deputies did not represent the poople, hut the clureh.

Charles I'axton, the priaclpal officer of the custom-house In Prston, applied to the Superlor Court to graut him the authorly to use 'writs of asslstauce' in searching for sinuggled goovls. A writ of asslstance was a general seirelh-warman, empowerlug the oflicer arned with it to enter, by force lf necessury; a ay dwelling house or warelouse where contraband gools were supposed to be stored or hideden. A speclal searell-warrsnt was one ln whleh the name of the suspected person, und the house whele it was proposed to search, were accurately specified, und the groals which it was lateudel to selze were as far as posslble deserlised. In the ase of such spechal warrant- there was not mbih danger of yross injustlce or oppression.

But the general seareh warrant, or 'writ of assistance, "is it was called because men try to cover up the ngliuess of bateful things by glolng them innocent mames, was quite a differint affir. It was a blank form upou which the eustom limse ofleer night fill in the names of persons anil descriptions of houses aud goats in suit hlmself.

The writ of asslstance $w: 1 s$ therefore an alonitaable Instrument of ty ramny. Such writs hall becu ullowed by a statute of the evll relgu of Charles 11 ; a statute of Willam 1II. had clothed custom house ofteers in the colonles with like powers to those whild they possessed in Eurland; und neither of these statutes hal beer repeated. Thure can therefore be little doult that the issue of such seareh.warrants was strictly ligal, unless the authority of P'irlianuent to make laws for the colonles was th in denicul. ## MEDICAL SCIENCE.

Chronology of Deveiopment,-Renouard, in hif "illstory of Medicine," arranges the chronology of the development of medieai knowiedge in three grand divisions or Ages, subdividrai into elght periouls. "The First Age commences whth the infaney of soclety, as far back as historte trulition turrios us, and terminates toward the emi of the secoudi century of the Christinn era, at the death of Gitlen, during the reign of Scp. timus strerus. This lupse of time constitutes. in Moticine, the Foundation Age. The germ of the liealing Art. concenled, at tirst, in the lustinets of nen, is sramally develomed; the inasis of the science is inidi, and great principles are discusmel. . . Tlie sorond Age, which mar be cailed the Age of Transition, offers very little nuterini to the history of Medicine. We see no longer the conticts and disenssions betwen partimans of different dicetrines: the medient sects are confonnded. The art remuins stationary, or imperceptibly retrogrades. I ean not hettir dibpiet this epoch than by comparing it to the ife of an insect in the nymplas state; though no exterior change appears, an admirabie metnmurghowis is going on. imperceptlbly. within. The eye of man oniy jerceives the womilerufter it has tee en finisised. Thas from the linth century: Whith is the theginning of the third uni hast $\mathbf{A C O}$ of Wetheine, of the Age of izenovathon, Europe offers us a spuetarie of which the most ghorious cras of the repulites of croere and izome onty con give us milite. It wonlid serem ins if a new iffe was infused into the veins of the inhahitants of this part of the worli; the selences, tine arts, intiustry, relipiom. social institutions, ali are changed. A multitude of schonis are open for tearbing Merlicine. Fstahlishments which had no moklels amoug the uncients, are ereated for the purpose of extending to the poorer ciasseg the levetits of the Ifeailng Art. The
ingenfous activity of modern Christians cs. piares and is sufficient for everything. These three grand ehronoiogieai divisions do not suttice to classify, in our minis, the primipal phases of the history of Medicine; consequently, i hase subilivided ench age into a smatier gumber of sections, easy to be retained, and which i hare named Perioxis. The tirst Age cmbraces four periods, the second and thiri uges, euch, two,

The tret perixi, which we namu i'riultive Periofi, or that of instinet, ends with the ruin of Troy, alout twelve centuries le.fure the ('litistian era. The second, called the Hystle or samed Period, extends from the dissilation of the 'Pythagorean Society' to about the yar fiy A. C. The third perion, which etuly at the foundation of the Aiexandinian ifilmury, A. © 320 , we name the I'hiosophie l'erick. The fourth, whleh we designate the Anamaic, cr. tends to the end of the first nige. i. ce., to the yar 200 of the Christian era. The fifil is ralleal the Greek I'erlom: it emis at the dextruction of the Alexnndrian Lihrary, A. I). 640. The' weth re. cefves the surnmme of Arahic, und clioses with the 14 tis century. The seventh proini, whinh be. gins the thiri age, comprises the loth and loth centuries: it is distinguished as the Erudite. Finaly, the eighth, or last perionl, embracts the 17th and 18th centuries [beyond which the writer did not carry his history]. I cail it the Ikeform Period."-P. V. Ienouarl, Ilintory of Mealicine, introd.

It is also well known that the Asclepiade noted down with great care thi symptoms nnd issue of every ease, and that fron such observations, they hecame in thim great adepts in the art of prognosls.

The oflice of priesthood was henedltary in certaln families, so that information thus aequired would le transmilted from father to son, aud go on accumulating from one generatlon to another. Whether the Ascleplade avalled themselves of the great opportundties whleh they must undoubtedly have had of cultlvating human and comparative anatomy, has been much disputed in mondern times. . . It ls worthy of remark that Galen holds IHppocrates to huve been a very successfn!, cultlyator of anatomy. . . . Of the 'Ascleplu' we have mentloned above, it will aturady le supposed that some were in much bikher repute thun others, clther from belng pusesseyl of peculiar advantages, or from the prevalente of fashion. The practice seems to have originnted In an opinion that there is momethling sacred or divine stiacbing elther to the sovereign or his functions.

The practiee appears to be one of English growth, commencing with Eifward the Confessor, and descending only to forcign potentates who could show an niliance with the royal fnmily of Eng. Inad. The kinga of France, howerer, clnimed the right to disponee the Gift of Heallng, nad it Was certniniy exelcised by Philip the First; but the French historinns say that he wns deprived of the power on account of the irregularity of his life. Laurentius, first physician to llenry IV. of France. who is indignant nt the attempt made to derive its origin from Edward the Confessor, asserts the power to have commenced with Clovis I, A. D. 481, and says that Louis I, A. D. 814, adiled to the ceremoniai of touching. the sign of the cross. Mezerny aisn says, that St. Louis, througb thumility, first added the sign of the cross in touching for the king's erii.
If credit is to be giren to a statement
by Wiliam of Mnlmeshury, with respect to Edwaril the Confessor, we mnst admlt that in Engiand. for a period of neariy 700 years, the practice of the royai touch was exereised in a greater or lesser degree, as it extended to the reign of Queren Anne. It must not however be supposed that historicai docunients are extant to prove a regniar continuance of the practice during this time. No aceounts whatever of the tirst four Norman kings attempting to cure the complaint are to be found. In the reign of Wililam Ill, it was not on any occasion exereisel. Ile manifested more sense than his preiecessors, for he withheld from employing the royai touch for the cure of scrofuia; and lapin says, that he was so persuaded he shouid do no injury to persons afficted with this distemper by not touchiug them, that he refrained from it ali his reign. Queen Elizabetb was also arerse to the practice, yet she extensively performed it. We then describe the motlons of arteries, of the ventricles of the heart, and of lis auricles. as meen In lloing animals, and the use of these movements. He shows that the blood comlng lutu the right auricle from the ve it eava, and bassing thin to the right ventricie, is pumped out to the lungs through the pulmonary artery, panest through the parenehynas of the lungu, and comed thence by the pulmonary velno to the left ventriele. Thia same bloonl, he shows, is then pumped ont to the lenly. It ls earrial out hy arterles and eomes back by velus, performing a eomplete elrculation. Ile showa that, In a llve snake, when the great velns are thed some way from the heart, the plece of veln between the ligature and the heart is empty, and further, that hlool coming from the heart is ehecked in an artery hy a ligature, so that there is hood between the heart and the lhgature and no blood beyond the ligature. He then ahows how the blowal eonus hack to the heart by the velns, nad demonstrates thelr valven. According to Stahl, dis. eases arise from the direct action of noxious powers upon the body; and from the reaction of the system itseif endeavouring to oppose and counteract the effecte of the noxious powers, and so preserve and repalr itself. He did not consider diseases, therefore, perniclous in themseives, though he admitted that they might become so from mistakes made by the soul in the choice, or proportion of the motions excited to remove them, or the tlme when these efforts are madc. Death, according to this thenry, is due to the ladolence of the soul, leading it to desist from lts vital motions, and refusing to continue longer the struggle agalast the derangements of the body. 17-18th Centuries.-Introduction of the Mleroscope ln Medicine.-Firtt glimmerings of the Germ Theory of Disease. - " Since Athanasius Kircher [1601-1680] mistook biood and pus corpuscles for smali worms, and buit up on his mistake a new theory of disease sud putrefaction, and since Christian Lange, the Professor of Pathological Anatomy lu: :ipzig. in the preface to Kircher's book (167i) expressed his opinlon that the purpura of lylng in women, measles, and other fevers were the resuit of putrefaction caused by worms or animaicuir, s 'Pathologia Animata has, from time to time, been put forward to explaln the causathon of discase.

Remarkable as were Klreher's obser. vations, stlil more wonderful were those of ts thony van Leeuwenhoek, a native of Inlft in Hoiland, who in his youth had learned the art of polishlng lenses, and who was able, ultimately, to produce the first realiy good mleroscope that had yet been constructed. Linneaus [17071778], however, with his wonderfui powers of obervition and deduction, considered that it was possihle that there might be rescued from this 'chaos' amall living beings which were as yet insufficiently separated and examined, hut In which he firmly believed might lie not only the actual contaglum of certalin eruptive diseases. and of acute fevera, hut also the excitling causes of both fermentatlon and putrefactlon. The man, however, who of all workers earliest recog. aized the Importance of Linnæus' observations was Viennese doctor, Marcus Antonius Plenelz.

He it was who, at thls tlme, insisted upon the specific character of the Infective agent in every case of disease; for scarlet fever there was a scarlet fever seed or germ-a seed which couill never give rise to smallpox. He showed that it was possihle for this organism to become disseminated through the air, and for it to multiply in the body; and he explained the incula. tion atage of a febrile disease as dependent on the growth of a germ wlthin the body during the period after its introduction, when its pres. eace had not yet been made manifest.
his method. It was one of a severe kind of colic cured hy a strong dose of veratrum alhum. Belore this suhstance gave relief to the patient it excited a severe aggravation of his symptoms. This induced liahnemann, instead of drops or grains, to give the fraction of a drop or grain, and he thus int roduced infinltesimal doses. Som years later he applied hls new principle ln the treatment of scarlet fever; and finding that bella. donna cured the peculiar type of that disease whlch then prevailed in Germany, he proposed to give this medicine as a prophylactle, or preventlve agalnst scarlet fever; from that tlme it has been extensively employed for this purpose. In the year 1810 he publislied his great work, entitlerl Organon of Medleine, whicil has been translated Into all the European languages, aa weli as into Arahic. In this hook he fully expounderl hls new system, which he called Homeropatiny. Ills next publlcation was a Ma. teria Medica, consisting of a deseription of the effects of medicines upon persons in health. These works were published bet ween the years 1810 and $18: 21$, at Leipsic, where he founded a achool, and was surrounded hy disclples. 18th Century. - Preventive Inoculation against Smallpox. - "One of the most notable events of the 1 ith century, or for that matter, in the hlstory of medtelne, was the Introluction of the systematle practice of preventive inoculation ngalnst smail-pox. We are so generaily tanght that this is entirely due to the efforts of Jenner. or rather we are so often allowed to think tt without being necessarily taught otherwise, that the measure deserves a historical sketch. The communteation of the natural diseme to the healthy In oriler to protect them from the sane natural disease, In other worls, the communication of small-pox to prevent the sume, reaches Inck Into antlyuity. It Is mentlonel In the Sanskrit V י'....d as thell performed, slways by Brahmins, wi.u cimployed pus procured from small-pox insicies a year before. They ruhbell the place selectell for operation until the skin was red, then scratched with a sharp instrument, and latd upon the place cotion somked In the variolous pus, moisteard whth water from the sacred Ganges. Along with this measure they Inslsted upon most hygiruic regulations, to which In a large measure their genal resilts were dire. Among the Chinese was practisell what was known as 'l'ock-sowing. and as long ago us 1000 years lefore Christ they introluced into the nasal cavities of young chlifreu plecherets of cotion saturated with variolous pis. The Arablans Inocuiatel the same Itsense whth needies, and so ith the Circassians. whlle In the states of north Afriea inclaions were made bxtween the fingers, anil among some of the negroes iuoculation was performed in or upon the nose. In Constantinople, Huder the Greeks, the custom had long been naturailizel and whs practised by old women instructed in the art, whon regarled it as a revelation of St. Msry. The first aceounts of thls practice were given to the Ruyai soclety by Tlmoni, a physiclan of Constantinople, in 1714 . The actual introluction of the practice lnto the West, how. ever, whe lite to Lady Mary Wortley Montagn, who diled In 1762, and who was wife of the English ambanadior to the Porve $\ln 1 \mathrm{I}_{\mathrm{t}} \mathrm{t}$. She had her son inoculated in Constantinople by her aurgeon llaltiand, and after her return to Lon-

During the same years experiments were undertaken by Maitland upon criminals, and as these turned out favorahly, tin l'riace of Wales and hls nisters were lnoculated hy Meal The practice was then more or less speedily adopted on this side of the ocean as weil as on that, but suffered occaslonal severe blows because of unfortunate cases here and there, such as never can be avolded. The clergy, especiaily, using the Bibie, as designing men always cia use It, to hack up any view or practlce, became warm opponents of vaccination, and stigmatized it as a very atrocious $\ln$ vasion of the liviae prerogatlve of punishment. But $\ln 1746$ the Bishup of Worcester recomisendel it from the puipit, and establlshed houses for inoculntion, and thus made it again popular. Cuilen regarteci the atony of the small vessels as the proximate cause of fever. Brown, improving on this hypothesis, admits, with harily auy exceptions. only ihypoathenic dlseases. .. The Scotch physloiogist distlngulshed ouly two pathologicai states - one conslating in an excess of lucitabillty, whlch he names the sthealc diatiesis: the other, constituted by a wat, more or less notahie, of the same facuity, which he desiguates as the asthenic dlathesls. Besides, Brow in conslders these two states as affecthy the entire cconomy, rather than any organ in partlcular. ... After hiaving reduced all diseases to two genera, and withdrawn from pathology the study of focal iesloas, Brown arrives, by a subtile argumentatlon, to cousider the affections of the stienic order as prevaliling lu a very smail muber of Instauces, so that the discases of the astheaic type comprehend neariy the totaity of affections. which was loat at death. This entire condition of thinge, which physically speaking asserts no more than the nerves, as concerns the changes Which take place in them after excitation, are in an exceedingiy unstable state of equilibrium; this was looked upon as the fundamental property of animal life, and was unhesitatingly trans. ferred to the other organs and tissues of the body, for which there was no similar justification. It was believed that none of them were active of themselves, hut must receive an impulse by a stinuius from without; air and nourshment were considered to be the normal stimuii. The kind of activity seemed, on the contrary, to be conditioned by the specific energy of the organ, under the influence of the vitsl force. Increase or diminution of the excitability was the category under which the whole of tine acute diseases were referred, and from which indics. tions were taken as to whether the treatment should be lowering or stimulating. The rigid one-sidedness and the unreicnting logic with which . . . [John] Brown had once worked out the system was broken, hut it always furnished the leading points of view. "-H. 18th Century. - Physloiogical Views of Bichat. - Maric Francis Xavier IBichat, was born In 1771 and died in 1802, accomplishing his extraordinary work as an anatomist and playsician within a lifetime of thirty-one years. "The peculiar physiological views of Bichat are to be found stated more or less distinctiy in all his works; and It is a merit of his that he has always kept in sight the necessary conncxion of this part of the science of medicinc with evcry other, and. so far as he has developed his ileas upon the sillijerts of patiology, materia medica, and ther uties, they seem ali to have been founded nimen and connected with the principles of physsolugy, which he had adopted. Everything around living bodies, accoriing $\hat{\text { o }}$ Bichat. tunds constantly to their destruction. And to this influcnce they would necessarily yledd, were they not gifted with some perma. nent principie of reaction. This principie is their life, aud a tiving system is therefore necessarily aiways engager in the performance of functions, whose objuct is to resist death. Life, howcver, does not consist in a single principle, as has leen taught by some colebrated writers, by Stahi, Vun lielmont, and Barthez, \&c. We are to stuly the phenomena of life, as we do those of other matter, and refer the operations performed in living systems to sur-h ultimate prinefics as We can trace them to, in the same Way that we do the operations taking place annong inorganic substances. $\qquad$ Ifis essentin! doctrine . . is that there is no one singie, incil. ridual, presiding principle of vitaity, which animates the boxly, but that it is a coflection of matter gifted for a time with certain powers of action, combined into organs which are thus enabled to act, and that the result is a serics of functions, the connected perfonnance of which constitutes it a living thing. This is his view of life. cousidered in the most general and simple way. llut in carrying the examination further, he polnts out two remarkahie modifications of life, as conslderex in ififferent relations, one common both to vegetables and animals, the other peciLiar to animals.

Those which we have in
common with the regetable, wnich are necemary merely to our indivldual, bodily existence, aro called the functions of organic life, because thes are common to all organized matter. Those, on the other hand, which are peculiar to animals, Which in them are superadded to the possesslon of the organic functions, are called the fnuctions of animal life. Physiologically speaking, then, we have two lives, the concurrence of which enables us to llve and move and have our being: bcth equally necessary to the reiations we maintain as human beings, but not equally necessary to the simpie existence of a living thing. The two lives differ, in some important re. spects, as to the organs by which their functions are performed. Those of the aninnil life present a symmetry of external form, strongly con. trasted with the irreguiarity, which is a promi. nent characteristic of those of organic life. In the animal life, every function is cither performed by a pair of organs, perfcctly similar in structure and size, sltuated one upon each shde of the median diviling line of the boiy, or else by a single organ divided lnto two similiar and perfectly symmetrical halves by that ilne.
The organs of the organic life, on the contrarg, present a picture totaily different; they are ir. regularly formed, and irregulariy arrunged.
This symmetry of the form is accompinied by is corresponding harmony in the functlons of the organs of tile animai life. . . . The functions of the organic life are constantly going on; they sdmit of no interruption, no rejose. In those of tic animal life, the case is widely lifferent. They have intervals of cntire repose. The organs of this life arc incapable of constant activity, they become fatigued by excreise and require rest. This rest, with rugard wany par ticuiar organ, is the sleep of that organ. Upon this principle, Blehat founds his theory of sleep. General sieep is the conbinatlon of the sleep of particuiar organs. Sleep then ls nut any definite state, but is more or less romplete rest of the whole system in proportion to the number of organs which require repose. Tise two lives differ also in regarif to habit: the animal being much under its control, the organic but slightiy.

But the principal and most important feature in the physiological syatem of Bichat, is the complete, and entlro, aui cxelusire explanation of all the phenoinena of the living system upon the principles of vitality alone. Former physiologists have not alway ${ }^{2}$ kept this distinctiy in view. . . . The imman bods has been regareled, too often, as a mass of mattet, organized to be sure, but jet under the direction of physical laws, and the performance of us functions has been ascribed to the powers of inorganic matter. Ifence, physiology has generally been mewhat tinctured by the favorite science of the age, with some of its notions.
With Bichat the properties of life wore ali lin all The phenomena of the systum, whithor fin health or clisease, were ali ascribed to thoir influence and operatlon."-J. Ware. Life and Writings of Hichat ( North Am. Kev., inly. 1 N:2).

previous experience of the physician, here stood him in good stead. He had been a diligent student of the authorities of his own and foreiga countries on diseases of the mind, and in his earlier yeari had been appolated ty the French government to report on the condition of the ayiums at Paris and Charenton. On assuming the oversight of the Bicetre, he found 63 men languishing in chains, come of whom had been bound for a great number of years. Thase were regarded hy the authorities as dangerous and ven desperate characters; hut the sight of men rown gray and decrepit as the resuit of prolongel torture, made a very different impression on the mind of Pinei. He addressed appeal after appeai to the Commune, craving power to release, without deiay, the unhappy beings under his ciarge. The authorities tardliy and un--liliariy yieided to the importunity of tise phy. sician. An officiai, who was deputed by the Commune to accompany the smperintendent and watch his experiment, no sooner caught sight of the chained maniacs than he excitediy exciaimed: Ah, ça! citoyen, es-tu fou tol-méme de vollioir déchainer de parelis animaux '' The physician was not to be deterred, however, from carrying out his benevolent project, and did not rest satis. fied until ail ni the 53 men had been gradualiy liberated from their chains. Singuiar as it may appear, the man who had been regarded as the most isngerous, and who had survived forty pears of this severe treatmrnt, was afterwards known as the faithful and l:-voted servant of Pinel. The reforms of Pinci were not confined to the Bicetre, an estahishment exciusively for men, but extended to the Saipetriere, an institu. tion for women. The nitrous oxide might have heen of as littie generai interest as the carbonic or any other, had it not been for the strang. and various excito nents produced by its inhaiation. These made it a favourite suh ject with chemicai lecturers, and year after year in neariy every chemical theatre, it was fun to inhaie it after the lecture on the gaseous com pounds of nitrogen; and among those who in haied it there must have been many who, in their intoxication, received sharp and heavy hiows hut, at the time, feit no pain. And this went on for more than forty years, exciting nothing worthy to be called thought or ohservation, tili in December 1844, Mr. Colton, a popular itinerant iecturer un chemistry, delivered a lecture on ' iaughing gas 'in IIart ford, Connecticut. Among his auditors was Mr. IUurace Welis, an enterpris. ing dentist in that town, a man of some power in mechanical invention. After the iecture came the usual amusement of inhaiing the gas, and Weils, in whom iong wishing had bred a kind of belief that something might be found to make tooth-irawing painiess, observed that one of the men excited by the gas was not conscious of hurting himseif when he feli on the benches and hruisel and cut his knees. Even when he became caim and clear-ieaded the man was sure that he did nut feci pain at the time of his fali. Wells was at once convinced - more easily con. vinced than a man of more scientific mind would have been - that, during similar insensibility, in a state of intense nervous excitement, tepth might be drawn withont pain, ani he determined that himseif and one of his own largest teeth shouid be the first for triai. Next morninx Coiton gave him the gas, and his friend Ir. Riggs extricted his tooth. Ile remained unconscious for a few moments, and then exclaimed, A new era in tooth puiling! It did not hurt me more than the prick of a pin it is the greatest discovery ever mule. In the next three weeks Welis extracted teeth from some twelve or fiftern persons under the in thence of the nitrous oxide, and gave pain to only two or tirie. i)r. Iliggs, siso, used it with tive same success, and the practice was weli known anil taiked of in liartfoni. Encouraged by his succuss Weifs went to Boston. wishing to enlarge the reputation of his discovery and to have an opportnnity of giving the gas to some one under. guige a surgicai uperation. [Ir. J. It was often thus used hy young peopie in many places in the Unlted Btates. They had what they calied e etherfrollcs.'. . Among those who had jolned in these ether-frolice wis Dr. Wilhite of Cadermon, South Caroilna. In one of them, in 1839," a negro boy was unconscious so long that be wat sapposed for some tina to be dead. "The fright at having, it was supposed, so neariy killed the boy, put an end to the ether-froilcs in that neighbourhood; but in 1842, Wilhite had become a pupil of Dr. Crauford Long, practlsing at that time at Jefferson (Jackson County, Georgia). Here be and Dr. Long and three feliow puplis otten amusel themseives with the ether.inhalation, and Dr. Long observed that when he become furiously exclted, as he often dif, he was unconsclous of the biows which he, by chance, recelved as he rushed or tumbled about. He ohserved thesame in hla puplis; and thinking over thls, and emboidened hy what Mr. Whihite toid hlm of the negro-boy recovering after an hour's insensllility, be determined to iry whether the ether.Inhalation would make any one insensibie of the paln of an operatlon. So, in March, 1842 , nearly three gears before Wells's observations wlth the uitrous oxide, he indinced a Mr. Venahie, who hail been very fond of inhallng ether, to inbate it tili he was quite insensibie. Then he dissected a tumour from bis neck; no paln was felt, and no harm foliowed. Three months later, be similarly remcved another tumour from hlm; and agalu, in 1842 and in 1845, he operated on other three patlents, and none felt pain. IIs opera. tions were known and taiked of in hls nelghbourhoorl; but the nelghbourhood was only that of an ohscure fittle town; and be did not puhlish any of his observatious. . . . Among those with whom, in hla unlucky vislt to Jostun, Wells talked of hls nse of the nitrons oxlile, and of the grent discovery wheh he In lieved that he hal haile, were Dr. Morton and Dr. Charles Jaekson.

Morton was a restless energetle dentist, a rough mau. resolnte to get practlce ani make his fortune. At the time of Wifls's visit, Morton, who had been his pupit lu 1543, and for a short tine. In 1843, his partacr, was stuiylug nuedielne and anutomy at the Mansim hus.tts Medical College, and was llv. ing In Jirksmis inuse. Neither Morton nor Jarkwon put much if any falth in Weils's story. and Mortun witnessed his fallure in the medleal theatre. Still. Murton hal it in his head that touth-alrawing might somehuw be made painiess.

Jacksin hail long known, ss many others bid, of sulphuric cther being labaiel for anumes. ment and of it producing cffects ilke those of nitrous oxide ; be kuew aiso of its employmeut
as a remedy for the irritation caused by labaling chiorine. He had himseif used it for thls pur. pose, and once, in 1842, while using it, he became completely insensibie. Ile had thus been led to think that the pure ether might be usen for the prevention of pain in surgical operatlons; be spoke of It with some scientific friends, and mometimes advised a trial of it; hut he did nut urge It or take say active stepa to promote even the trial. One evening, Morton, who was now in practice as a dentiat, calied on hin, full of some scheme which he did not divulge, and urgent fur success in palniess tooth-drawiug. Jaeksin ad. vised him to use the ether, and laught hin how to use it. On that same evening. the 30th of September, 1846, Morton inhaied the cther. put himself to sleep, and, when be awoke, finnd that he had been anleep for eight minutes, instantiy, as be teils, he fooked for an opportunity of glv. ing it to a patient; and one jusi then coming in, a stout bealthy man, he inducet hinn to inhate, made him quite iusensible, and drew bis tooth without his having the least cousclouspes of what was done. But the great step hal yet to be made.

Could it be rigint to incar the risk of Insensibility jong enough and derp enoush fur a large surgical operatlon' It was generaliy believed that in such insensihility there was serious danger to life. Was it reaily sol Jackson ad. vised Morton to ask Dr. J. C. Warren to let blm try, and Warren dared to let himi. It ls hard, now, to think how iold the enterprise must have seemed to those who were capsble of thiuking securately on the facts then known. The firat triai was made on the 16 th of Octolner. 1846. Morton gave the ether to a patient In the Massachusetts Generai IIospltal, nnl Dr. Wiarren removed a timmour from his neck. The resnit was not complete success; the pathent hanily felt the pain of the cutting, but he was aware that the operation was being performerl. On the pest day, in a severer operatlou by Dr. Ilaywani. the success was perfeet; the patlent felt mothing, and in long insenslblilty there was monpearance of danger to ilfe.  In 1830 a very wonderfui reply u:t givan to this question. In that year Ciguiard de is Tour
dincorered the yeant-plant - a ilving organism, which when placed ln a proper medlum feeds, grows, and reproduces ltaclf, and in thly way carrlea on the procets which we name fermenta. tion. By thls striking discovery fermentation was connected with organle growth. Schwann, of Berlin, diccorered the yeant-plant indepen: dentiy about the mame time." -J . Tyadail, Prag. menti of Sciemae, v. 1, eh. 5. - The question of fermentation "had come to present an entireiy new mpect through the discovery of Cagalard de In Tour that yeast ls reaily a piant belonging to one of the lowest types of fungi, which grows and reproduces Itseif In the fermentabie fluld, and whose regetative actlon is presumabiy the cause of that fermentation, just as the deveiop. ment of mould in a jam-pot occasions a iike change ln the upper atratum of the jam, on whose surface, and at whose expenge, it ilves and reproduces liseif. Chemlsts gencraily especially Lleblg, who had a termentation theory of his own - pooh-poohed this ldea altogether; maintaining the presence of the yeast-plant to be a mere concomilant, and refusing to believe that it had any real share in the process. But In 1843, Professor Ifeimhoitz, then a young undistinguished man, devised a method of stopping the patsage of organle germs from a fermenting lato sermentabic liquid, without checking tise passage of fluids; and as no fermentation was titen set up, he drew the Inference titat the ' particu. late ' organic germs, not the soluhie materlai of the yeast, furnish the primum mohile of this change, - a doctrine whlch, though now unlver sully wrepted, lind to fight its wny for some. tine against the whoic force of chemicai author ity. A iittie before Cagnlarl de is Tour's dismorery, a set of lnvest!gations had been made br Schuze and Schwann, to determine whether tbe exciusion of air was absoluteiy necessary to prevent the appearance of living organlsuns in decomposing fluids, or wiether these fluids aight be kept free from animai or vegetahle iife, by such menns as would presumalily destroy any gurms which the air admitted to then inigit bring in from whthout, such as passiug i! thruagh a rmi hot tube or strong aniphuric aeid. Thase experiments, it should lee said, had refer. che rather to the question of 'spoutaneous geueration,' or 'abiogenesia,' than to the canse of fermeatation and decomposition; its ohject being to determine whetiter the iiving things found by the microscype in a decomposing liquid exposed to the sir, spring from germs brought hy the atmosplare. or are generated 'de novo' lit the act of diccay - the fatter doctrine having theu many upholders. But the discovery of the reai nature of yeast, and the recognition of the part it piays in aicultoile fermentation, gave an entirely new ralue tu Schuize's and Schwann's resuits: sug. gestiag that putrefactive and other kinds of de. composition uay be really due, not (as formeriy supposed) to the action of atmospiserie oxygen upon uastable organic compounds, but to a new arrangement of elements brougit about by the de. relopment of germinal particies deposited from he atmosple re. It was at thls point thnt Pasteur took up the inquiry; sad for lts subsequent compiete working-out, science is mainjy indehted to him: for aithough other investigators antably Proficasor Tymdall - have contirmed and ertealed his eonciasions hy ingenious variations on his mode of research, they would be the first

The first applicatlon of these doctrines to che study of disease in the llving animal was made in a very Important invesilgation, committed to Pasteur hy his oid manter in chemistry (the eminent and eloquent Dumns), into the nature of the 'pelhrine,' which was threatening to extiuguish the whoie slik culture of France and Italy. ... Though It concerned oniy a humbie worm, it laid the foundatlon of an cntirely new system and method of research into the nature and causes of a iarge ciass of diseases in man and the higher animnls, of which we are now oniy beginning to see the important issues. Among the most immediateiy productive of its resuits, may be accounted the 'antiseptle surgery of Professor Lister; of which the principie is the carefui exelusiou of living bacturin and other gernis, nilke from the naturai Internai cavities of the borly, ani from such as are formed by disease, whenever these may be lald open by accident, or may have to be opened surgi. caliy. gith Century. - The Theory of Germ Dis-eases.-"An account of the innumerahie ques. tious and investigations in this department of modern pathogenesis, of the various views on certaln questions, efc., does not fali within tie conipass of our brief sketch. Nor are we ahie to furnish a consistent theorr, simpiy because such an one dines not [i8NO] exist. One fact alone is agreed upon, to wit, that certain of the iower fungi, as parasites within or upon the buity, exelte dis:ases (infectious diseases). As regards the moxius operantii of these parasites two main theories are heid. According to one theory, theme parasites, by their cleveiopment. deprive the bmaly of its nutriment and endanger iife particuiarly when, thronging in the biowi, they deprive this of the oxygen necessary for ex. istence. According to the other theory, they threaten life bj occasioning decompositions which engender putid poisons (ptomaines). These latter foisons were first isolated by ${ }^{12}$. L. Panum in 1856, and have been recently specialiy studied by Brieger (Veber Ptomaine, Beriin, 184.j-86). They set differentiy upon bodies accurcilng to the variety of the aikaioidal poison. Metselinikoff regards the white hiowi-corpuscies as untagonists of these parasites (thus explaining the cases of recovery from parasitic discases), and in this point of view calis them 'phagorytes.' On the other hami E. Saimon and Theo dore Smith ('Transactions of the Washington iBiologieai Society, Feh. 22i, 1886) were the first to demonstrate that sterilized nutribive schutions or germ free products of change of matter of the virment exciters of disease, when injected, afford protection. A. Chaupeau as early as 1880 had lorought forwari evidence of the probability of this fact, and Hans Buchner in $18: 0$ almitted the possibility of depriving , teria of their virulence. Pasteur, however, lieves he has demonstrated that by emotlnuer) a alturpa (alan a sort of bacillary lapathy) 'debilitated' germs act as prophylactics againat the corresponding parasitic diseases, and he even thinks he has con-

two centuries following, there fourished in Ccntral America the great Maya empire of the Chanes, Culhua, or Serpente, known to its foes an Xibalbe, with its centre In Chlapas at or near Patenque, and with aeveral allied capitals in the surrounding region. Its firat eatahlishment at a remote period was attithuted hy the people to a belng called Votan, who was afterwards worshipped as a god. ... From lis centre la the Usumacinta region the Votanle power was graduslly extended north-westward towards Andhuac, where lts suhjerts vaguely appear In tradition as Quinames, or gianta. It also penetrated north. east ward into Yuc-ian, where Zamns was lts reputed founder, and the Cocomes aud Itzas probady lts suhjects.

The Maya empire seems to have been in the helght of lts prosperity when the rival Nalua power came into prominence, perhaps two or thrse centuries before Christ. The origin of the new people and of the new institutions is as deeply shivuded in mystery as is that of their predecessors. . . . The Plumed Serpent, known in different tongues as Quetzal. coatl, Gucumatz, and Cukulcan, was the beltg who traditionally founded the new order of thinga. fully set forth in the sth volume of thls work It is probahle, however, that this account, wecu. rate to a certain degree, has been by many writers too Itterally construed; since the once popular theory of wholemale natlonal migrationa of American peoples withln bistorie tlmes, and partlcularly of such migrations from the northwest, may now be reganled as practically unfounded. The 6th century is the most remoto period to which we are carried in the annals of Anáhuac hy trailtions sufficlently definte to be conaidered in any proper sense as hlatoric records. At the opening. . . of the historic tlmes, we find the Toltecs in possenslon of And. hilacand the surr nillng country. Though the clvilization was o.., the name was new, derived probuhly, although not so regarled hy all, from Tollan, a caplal city of the emplre, hut afterwarl beconing synonymous with aif that is excellent in art and higl cuiture. Tranltion 1 m putis to the Toltecs a hlgher civlization than that fonnd among the dztecs, who had degenernted with the growth of the warlike spirti, and especially hy the intrmiuction of more cruel and sanguinary reflglous rites. But this superlority, in some reapects not improbable, resta on no vert strong evilience, since this people left no rellics of that artlstle sklli which gave them so great tradithomil fume: thicre la, however, much reagon to ascrithe the construction of the pyramlds at Terelinascan aud Cholula to the Toltic or a still carlier perini. Amoug the clvilized peoples of the 16th centary, however, and among thelr descemantans lown to the present day, uearly every ancient relle of archltecture or sculpture is ac. crmiltarl to the Toltecs. from whom all clalm descrant. . . . There are no data for fixing
ncrurately the bounds of the Toltec domain, partenlarly In the sonth. There is very ilttle, however. to indleate that it was more extensive In thls illrection than that of the Aztecs in later times, althoogh it reems to have extended somewhat farther northward. On the west there is some evillence that it fuchided the territory of Mrhancau, uever subsiuenl by the Aztecs; and it probably stretelhed eastwarid to the Atlantle.

Daring the most fourishing perimi of it traditional tive centuries of duration, the Toltec cmplre was rulul by a confederacy, slmilar in somic reaprects to the ailiance of later clate betwern Mexico, Tezcuce and Tlacopan The caplala were Cuihmacan Otumpan, and Tollan, the two former curtrym atlog soniewhat in territury with Bexlco and Tezcico. while the latter was just beyond the llmalts of the vailey towand the north-west. D. 15se-3520.-Captivitz of 'Miontesuma, Cortife ruling la hie mame. - The diecemfture of Narvaez, - The revele of the capleal. - When Cortion hal time un survey and to mallze hle prieltion In the Mexienn capital, he saw that it wan full of extreme danger. To be lsolated with an small a force in the midat of any houtile, Fopulones cty would be perilous; hut fn Mexico that peril was immeasurahly Increased hy the irculiar altution and conatruction of the Iblandclity - Venlee. llke In Its Inaulation, and connected whith the maluland hy long and narrow caumeways and brilgen, eailly liroken and dificult to wecure for retreat. With characteriatic audaci15, the Spmaish lealer mastered the danger of the sltuation, co wspenk, hy taking Montezuma himself in pledge for the peace and groad behavior of hle nhlijects. Commanded hy corten to quit his palare, and to take up his residence whth the Spanlaris In their qualuers, the Mexlcan monarch remunstrateyl but obeyed, and became from that day the slondow of a king. "During aly montha that Cortes remaluetl in Mexlco ffrom Noveniler, 1519, untll May, 1520), the monarch contlaned lu the Apmish quartera, with an ap prearance of as cutlre antinfaction and trangullilty as if he had reslidell there, not from constraine but throngh citolce. Itis ninlsters aud officer attenderl him as usual. He took cognizance of sil affalra; every order wes lowued lo hla name

Sucla was the dreal which loth Montezuma. and hils mulffects hat of the Spanlaris, or such the rineration In which they held them, that un sttempt was made to dellver thelr moverelga frum continement, and though Cortea, relying on this ascemalaut which he had acquired over thelr minuls. pernitteyl him not only to vlatit his temples, but to make huntlug excursions beyond the lake, a guard of a few Npaniarls carried wlth It ancla a ferruar as to Intimitate the multitude. and mecure the captlve murnareh. Thas, by the fortunate tenerity of Corses In selzing Monecrums, the Spaniands at nonce secured oo themselves inere exicualre authority In the Mexlcan empire than it was posslble to hare acquired la a long course of time by open force, and they excrefsed more aboolute sway In the name of anuther than they could have done In thelr own.

Cortes avaifell himself to the utmust of the powers whlch he lumeseseyl by belag able to set In the name of Muntezunua. Ife sent some Spanlaris, whom he juilgeal lest quallifed for such commioluns. Ile alo, perruaded Nontezuma to setzombodge himeet a tamat of the King of Catilo, and to aubjert hily EIngloma to the pament of an anaual iribute. But, while his cunalag conquent of an exapire was oivanclag thus promperously, the satute - pantich captaln aliowed hlo prutence to be overrdiles by hlo rellglous zeal. Boerming Impetient at the obstinacy with which Montemuma clung, to his false goif, Cortes made a reah attempl, with his coldiers, to cast down the hols in the great temple of the cliy, and to cet the lmage of the Virgin in their pisce. The sacrliegious outrage mused the Mrsicans from thelt rame sub. mimiuo and fred thetw with an Inextinguishable rige. Cortes faced the rew menace as boldiy me hed facell all uthers. Leaving 150 men in the angry Mexican caplat, ubiler Pedio de Alvarain, he ect out with the malt remainder of his force to attack the Spanish intriders. Even after pirk. Ins up oome detachments outolde and fnining the garrison at Vern C'rux, be could wustep hut 250 men; whlie Narvaez, who commariel the expedition from Cube, had brought two 8001 soldters and 80 horse, with twelve plecen of cannon. The fatter had taken posemalon of the city of Zemponilia and was sfrongly poeted in one of It tempies. There Ciotes surprised htm. In a night attack tiok him primoner. In a wounderi state, and competted his troops to lay down thelr arms. Nearly the whole of the latter were soon captivated ly the commanding genius of the man they had been sent to arrest, and enilateri in hlo service. Ile found himeit note at the hemd of a thousand well armel men; and he found in the same moment that he neerlai them all. For news came from Mexlco that Aliarmio, thinking to anticipate and crush a nuppectel Intention of the Mexlcans to rise against him, hat provoked the revolt and made it desperate by mont pertidious, brutal massacre of ecvernt hundred of the chief persons of the empire, committed wille they were ceiebrating one of the festivals of their reilgion.
