**Technical and Bibliographic Notes / Notes techniques et bibliographiques**

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

- Coloured covers/  
Couverture de couleur
- Covers damaged/  
Couverture endommagée
- Covers restored and/or laminated/  
Couverture restaurée et/ou pelliculée
- Cover title missing/  
Le titre de couverture manque
- Coloured maps/  
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/  
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/  
Planches et/ou illustrations en couleur
- Bound with other material/  
Relié avec d'autres documents
- Tight binding may cause shadows or distortion  
along interior margin/  
La reliure serrée peut causer de l'ombre ou de la  
distortion le long de la marge intérieure
- Blank leaves added during restoration may appear  
within the text. Whenever possible, these have  
been omitted from filming/  
Il se peut que certaines pages blanches ajoutées  
lors d'une restauration apparaissent dans le texte,  
mais, lorsque cela était possible, ces pages n'ont  
pas été filmées.
- Additional comments:/  
Commentaires supplémentaires:

This item is filmed at the reduction ratio checked below/  
Ce document est filmé au taux de réduction indiqué ci-dessous.

10X	14X	18X	22X	26X	30X
12X	16X	20X	24X	28X	32X

The copy filmed here has been reproduced thanks to the generosity of:

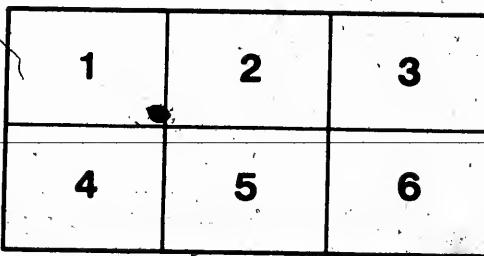

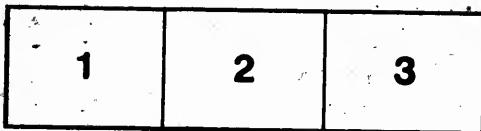

Metropolitan Toronto Reference Library  
Baldwin Room

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

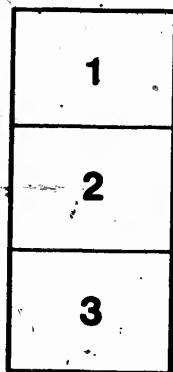

Metropolitan Toronto Reference Library  
Baldwin Room

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "À SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## P R E F A C E.

---

We offer no apology for adding this treatise to the almost endless list of text-books on commercial science. If it is not needed, the verdict of the public—from whose decision there is no appeal—will so be rendered; if it is, the same tribunal must announce the fact, and all the special claims, and *ex parte* statements put forth as an advertisement, by interested parties, will have little weight in the decision.

The steadily increasing importance attached to commercial pursuits, and the very general attention which this branch of industrial economy is exciting throughout the civilized world, have, within the past few years, awakened such an interest in all efforts tending to promote its advancement, that whoever may say or do aught that shall add to the general momentum, can have the consciousness at least, that his effort will be felt, whether or not the hand that gave force, or the thought that directed, are recognized in the result.

While we are free to admit that considerations of a more personal nature have impelled us somewhat in this task, we will not affect an indifference which we do not feel, as to the part we may thus be acting in the great purposes of life, or the value which may be put upon our labor by those whose good opinions we crave.

We understand the true object of a text-book to be the imparting of knowledge in some particular department of art or science. In the preparation of such a work the following prerequisites are essential:

1. A comprehensive understanding of the subject treated;
2. A particular knowledge of the difficulties to be overcome in the mind of the learner.

The very fact of the appearance of this book then, must be presumptive evidence that its authors claim for themselves the above qualifications; a point which it would be mock-modesty to attempt to evade. As to the grounds of this assumption, they may be permitted to observe that many years' active employment, both in the practical departments of commercial life, and in the arduous duties of professional teaching, have given them a degree of confidence, which might otherwise be deemed presumption. In their special department of labor, they have keenly felt the want of a work which should serve them in matters of reference, and give to oral instruction the additional force of well-digested propositions, clearly-expressed principles, and adequate forms; a work suited not only to the tastes and wants of private students and adepts, but to the more general purposes of the class-room. Having made the specialty of instruction in Book-keeping and its collateral branches a life-business, they have not been content to accept an *ad plus ultra*, the crude and ambiguous formulas which constitute the chief merit of the earlier authors in this science. They are troubled with no superstitious veneration for those monuments of unreciprocated labor, which, in the twilight of commerce acted so important a part in the then slowly-moving machinery of progress; desiring rather to do those authors the simple justice of awarding to them the credit of being fully up to the requirements of their time. Benjamin Franklin first discovered the laws of electricity, and Robert Fulton made the first application of steam in navigation; and yet, who at this age would think of consulting the works of Franklin for practical hints on telegraphing, or of Fulton as to the construction of steam-engines? As pioneers in developing the hidden laws of powerful agents, these men and their labors cannot be overrated; but the more wonderful developments of the present day, show them to have made but an almost imperceptible beginning. It may not be that the improvements which have followed the primary enunciation of "equal debits and credits"—supposed to have been evolved through the necessities of Italian commerce—have been so marked and distinctive as the various steps in the progress of steam and electricity; but it cannot be denied that the impetus which, during the last twenty years, has been given to commercial education in all parts of the country, first by the demands of commerce itself, and next through the laudable efforts of teachers and authors who have given the matter their special care, has rendered necessary a higher grade of exponents than those wonderful appropriations of "poetic license" which at one time threatened to convert all the Arabic numerals into "figures of speech."

## P R E F A C E.

We believe that the science of Accounts is, eminently, a *teachable* science; and that the most that is necessary is to bring its terms within the comprehension of the learner, and to place in the hands of the teacher an assistant which can be relied upon to do thorough work. In the preparation of these pages, we have had special reference to the wants of the profession; and in reviewing the labor, we have the assurance of our more deliberate judgment, that if the hints and instructions, here indicated, are faithfully carried out, there can be no doubt as to the most favorable result.

Above all, have we aimed to make the work practical and expressive of the times; and while we have not deemed it unimportant that at the outset the broad principles of the science should be distinctly announced, and rigidly enforced, we have studiously sought to make the transactions themselves do the chief work of interpretation.

We are fully aware that there may exist honest differences of opinion among teachers as to the best mode of conveying instruction; differences affecting not the principles taught, but the method of teaching; and that, often, the statement of a vital proposition may afford such an open field for discussion, that among *professional* teachers, at least, such a thing as perfect harmony in all the diversified shades of reasoning is impossible. This is as it should be. A teacher who is worthy of the sacred profession he has chosen, must be endowed with powers that belong exclusively to himself. One cannot be a teacher and not a thinker; and one cannot think without forming decided opinions; and he who has an opinion, and dare not give it expression, is possessed of a degree of modesty which will be very apt to be mistaken for cowardice.

We would desire to call particular attention to one feature of the work, which, while it is unique, must confine itself at once to the faithful teacher. We allude to the plan of following each illustrated and explained set, by a series of "exercises for the learner," embracing all the principles of the preceding set, to which the student, unaided, must give form and expression. No better test of proficiency could be given, and teachers should be careful that no part of these exercises be omitted.

In its adaptation to the general wants of the tradesman, the farmer, and the merchant, we have sought to make the work acceptable to the various classes interested in the science. It cannot, of course, be expected that, in so limited a space, every shade and variety of transaction and form will be given; but we have done sufficiently, we think, to show the adaptation of Double Entry to every department of business.

In conclusion, we would say, that in the inception and prosecution of this work—and in this view it has been truly a "labor of love"—we have had constantly in mind, first, the wants of the young men of the country, who, yet inexperienced in the drudgery of commercial pursuits, are looking forward to a "position in life," and ready to use with diligence, any honorable means promotive of the great end; next, of that other great class who have passed from the chrysalis state into the open world of active employment, but are yet careful to lay hold of whatever may promise the instrument of real advancement; and last, though by no means least, of that worthy army of self-sacrificing men and women, who, content with the humble lot and fortunes of the teacher, seem to be living in a world of their own, but living for the good of others, and who are, perhaps, of all others, best qualified to judge of the faithfulness of our labors. Of the first of these three classes, we have worthy representatives under our special daily care; of the second, thousands have gone out from us, and are doing for themselves and their country in almost every city and hamlet in this broad union of states; while among the third class, we are proud to reckon many of the most endeared and respected of our personal friends. In the hands of such we are willing to trust our labors, feeling well assured that if, in criticizing the work, they "nothing extenuate," they will be equally cautious to "set naught down in malice."

## A SHORT ADDRESS,

RESPECTFULLY DEDICATED TO THE YOUNG MEN OF THE COUNTRY.

Every human life has its purpose, as every thing in nature its uses; and, however much the desire may grow to evade the responsibilities which rest on each individual soul, or to absorb them in the general application to the race, or to whatever extent we may throw ourselves upon the soothing thought—

"There is a Divinity that shapes our ends,  
Rough-hew them how we will!"—

still ever within the heart there lives a consciousness that, in the duties of life, every one must answer for himself, and not another. This very consciousness is the key-note of existence, lending to life its charm, and to society its surest safeguard. We desire to accept it as the basis of a few suggestions, which we think not out of place in this connection.

Let us come, then, directly to the point: What is your purpose in life, and how do you hope to accomplish it? Do you desire riches? You have but to stretch forth your hand and take them. Honor? It is yours for the asking. Fame? Many less noble and talented have won it, and so may you. Friends? They will come of their own accord, if you get but the others. There is, indeed, a wonderful potency in the human will, and an efficiency in human hands scarce dreamed of by the brightest visionary. But let us separately consider these desires, and the avenues which lead to their consummation.

### 1. Riches.

It is folly to contend against this desire, even on moral grounds; as he who would be able to make the clear-cut case, would still fall in convincing himself that a "reasonable" share of this world's goods would necessarily disqualify him for the highest state of human enjoyment. Even the Prophet, speaking through inspiration, as positively denounces poverty as its opposite; and the world has yet to see a philosopher, of whatever school, who would not make himself an exception to any rule which would constitute the getting of riches a moral wrong. The possession of wealth is, in itself, neither good nor bad. It is only the use of money which circumscribes its moral tendencies. Even the Bible—that highest text-book of morality—does not denounce riches *per se*. It is not money, but the *love* of it which is called "the root of all evil." To desire riches, then, is no evil. On the other hand, we consider it to be not only legitimate, morally speaking, but highly commendable. The possessing of wealth not only adds to one's importance in the community, but places within his power almost limitless opportunities to do good. There is not an enterprise, having for its object the bettering of human condition, that does not depend, in the greatest measure, for its usefulness, upon money. Through its potency, states are inhabited, churches erected, knowledge diffused, the avenues of commerce kept open, industry rewarded, genius fostered, and the refining influences of civilization strengthened and perpetuated. The acquisition of wealth, then, for the good it may do, is a worthy purpose of life. How shall it be accomplished? If one may judge by the flaming advertisements which disgrace the columns of our daily papers, there is no method which ingenuity can devise, or rascality concoct, that is not resorted to for this end; and the world will probably never be so good or so wise, this side of the millennium, that such will not be the case. To become *sudden*ly rich, is the passion of the age; and if one out of every ten thousand, who run the gauntlet of this mad ambition, succeeds, the nine thousand nine hundred and ninety-nine disastrous failures are lost sight of in the dazzling effulgence of that one success. Like policy-dealers, who

## A SHORT ADDRESS.

blind the eyes of willing victims to the almost inevitable result of their folly, by dwelling alone upon the magnitude of coveted but inaccessible prizes, so the deluded and deluding followers of mammon cheat their own better judgment in the wild pursuit of impossible fortunes, expecting, despite experience to the contrary, by some grand coup d'etat to surprise the strongholds of wealth, and take her captive.

It is not thus that sensible people seek to grow rich, nor thus that we would prescribe the means. Our suggestions on this head, though possessing not the freshness of novelty, nor the charm of mystery, shall be to the point. The three prerequisites to this enviable and attainable condition are: *honesty*, *industry*, and *frugality*; three homely virtues, whose names are as "familiar in our mouths as household words," and which are as necessary to our personal comfort and self-respect as is the condition they would bring about. We are, in truth, the architects of our own fortune; and this is the sweetest consideration of all. That which has become ours by patient, honest, unremitting endeavor, will be appreciated, and we shall the better know how to dispose of it. Again, true riches cannot be wholly measured by any known financial standard. Wealth is a purely comparative condition, and its extent has less to do with the number and significance of the figures composing its total than the relation which those figures bear to the real necessities of life. He who has enough for his own immediate wants—who owes no man any thing, and is not foetering in his own heart a brood of extravagant desires, is "comfortably rich." He who has more than this, is, to that extent, *wealthy*. To such a position, it is not only the privilege but the duty of every young man to aspire; for not only will the coveted prize repay all his exertions, but every well-meant endeavor will bring its own immediate reward in developing the internal resources, in raising the standard of self-respect, in enlarging the capacities of enjoyment, and in begetting the self-consciousness of having performed one's part and lot in the world.

### 2. HONOR.

To be esteemed of men, is also a commendable desire; and, next to riches, is it the ruling passion of life. It is, in fact, to this end that most men desire riches. That position in life, however, which is the mere contingency of wealth, will not repay the effort necessary to acquire it. To be truly esteemed of men, is to be the possessor of qualities which money cannot buy. To be worthy of that esteem, is the highest social position attainable in this life. How shall it be reached? Everybody has heard that "honesty is the best policy;" and the truth of the maxim is substantiated in every phase of human history: but if no higher moral ground than this were possible, we should despair of ever witnessing a correct standard of honor. Honesty which springs from motives of *policy*, deserves not the name. It is akin to that bastard friendship begotten of selfishness, and is not entitled to a place on the list of virtues. To be truly honorable, all actions must spring from pure motives, and pure motives can rest only on correct principles. So we come down to the position that *correct principles* alone can produce that "noblest work of God"—an honest man. But how is one to judge of correct principles? We might answer as most moral instructors would: Go to the Bible. The answer would not be amiss; and yet, there is planted within every human breast a little monitor, the pure instincts of which are as unerring as truth itself. An appeal to conscience will invariably settle the little perplexing questions which sometimes become so inwrought in the very constitution of moral actions as to threaten the utter destruction of all safeguards. It is through neglect of this appeal that so many hundreds of names are yearly added to that dishonored catalogue of "ruined young men." The first step in a wrong direction is always the most difficult. One such step, unrepented of, is a sure precursor to a course of infamy. No young man, at the beginning of his career, coolly premeditates a life of dishonor; but, having once launched upon the tide, he is like the impotent boatman who permits his craft to drift into the rapids of Niagara. Occasionally one such, in his swift descent toward the awful chasm, may strike upon a friendly rock, as did poor Avery; but, as in his case, the relief will be but temporary, and the wild hopes of rescue will only add pangs to the certainty of destruction. Honesty is the best policy; and better than that, it is as the right hand of God; a "present help in every time of need."

### 3. FAME.

This is an empty bubble, at best, though men have willingly yielded up their lives to secure the heritage for their children. It has been truly said that "some men are born great, others achieve greatness, while others have it thrust upon them." As, in this country, the first of these conditions is impossible, and the last inaccessible by any human effort, there remains but the process of achievement for those who desire to be famous. It will be apparent to the most careless observer, that the very existence of fame is dependent upon its opposite, as the existence of a mountain would be impossible without its contiguous plain or valley. As the height of a mountain is estimated by the distance of its summit from "the level of the sea," so is the extent of a man's fame measured by his relative distance above the level of society. He who would court

## A SHORT ADDRESS.

Fame, then, must not be content to do as well as others. Negative virtues count as aught in such a contest and no one who has not the positive qualities of energy and perseverance can hope for success in this endeavor.

### 4. FRIENDS.

Sentimentalists talk of friendship as self-created connoisseurs in art point out the beauties of an Italian escape, or a boarding-school miss would apostrophize "a love of a bonnet." So widely prevalent is the disgust which these sickly views of the noblest of human sentiments have produced, that we are fast becoming infidels on this point; and no opinion is more common or more freely expressed than that "friendship is but a name." We are not willing to accept this conclusion, for many reasons. First, history proves its fallacy; and next, to yield this point, would be to strike from the world every living virtue; for if pure, unselfish friendship does not exist, then truth has no abiding-place, and love, the sum of all the virtues, would be without foundation. It is the privilege of every young man to contribute to a healthier sentiment in this regard, first by deserving friends, and next by enjoying them. By friends we mean not those summer birds who twitter about the opening petals of our joy, and sing in the branches of our prosperity, while the winter and gives life, and the soft breezes stir the tender foliage. Flatterers are not friends, how musical soever may be the sweet cadences of their adulation. Those, and those only, are our friends in the mirror of whose hearts the angles of incidence and reflection are rendered equal from surface unruffled by pride or any selfish quality—who can tell us of our faults as they would point out a malady which threatened to undermine our health—not for the gratification it may give them, or the mortification us, but that efficient means may be taken for its eradication. As a father affords the strongest proof of love for his child by inflicting pain that good may follow, so the earnest test of friendship is a fault to our good which will not shrink from any duty towards us, however unpleasant, or liable to be misconstrued. Again, society is not so depraved as we are apt to think, and men will learn to put a true estimate on character, entirely independent of extraneous considerations. Beauty and symmetry have charms, even to those who are themselves most uncomely; and if one desires the acquaintance of such friends as will not desert when most their friendship is needed, the surest method of obtaining them is not to seek by flattery and fawning, or at the expense of one particle of self-respect, but to deserve by a life and character which must force them into the ranks. One friend thus secured is worth a thousand flatterers who live in the sunshine and die in the storm.

We have thus briefly reviewed some of the important desires which actuate young men in adopting rules of conduct which are to regulate their lives. Let us, a little more explicitly, consider the points which bear upon

### THE CHOICE OF VOCATION.

Very few young men before fairly starting in life have any decided predilection for a special calling. It is true that the organ of hope, which so preponderates in the earlier stages of life, draws extravagant pictures of what we shall be "when we are men," but even this ambition changes with the shifting panoramas which produced it; and we run in imagination, through the entire category of professions and positions, impelled alone by the distant halo, which in our youthful wonder, surrounds the objects of our envious regard.

It is, perhaps, as well that this is so; for no decision abstractly made, and without experience to give it force, would bind our riper judgment, if not in accordance with it. Besides, it is absolutely impossible thus to dispose of our future selves. For instance, it is one of the peculiar and fascinating doctrines of our republic, that the highest positions of honor and emolument are open to its children. It is common when referring to the humblest scion of the humblest stock—"the unwashed democracy"—to remark, "Here may be a future president," or, "Disguised in that torn and faded apparel is an embryo governor;" and history is not wanting in examples to prove that, in this country at least, the end of human success can never be estimated from its beginning. The accident of birth has no weight in deciding destiny. Suppose, then, reasoning from this basis, every ambitious young man should say: "There is nothing in my birth, position, or constitution which can stand in the way of my elevation to the presidential chair; it is worthy of my best efforts, and I will not rest until that purpose is accomplished." The very supposition proclaims its own folly. It is true that all aspirations of this kind may be legitimate; but, considering how few presidents are chosen in each generation, the chances for such preferment are even less than that of obtaining the chief prize in a lottery scheme by the purchase of a single ticket. A great man—one who was himself nearer to the realization of this fond dream than any other who failed—has left on record a sentiment which does him more honor than would the office he coveted. It is appropriate here: "I would rather be right than president." If this be the ruling ambition in life, the accident of place—for it is, at best, but an accident—will be valued only as it can be made best to subserve the higher purposes of existence. "I was once called upon," said a popular divine, "by a conscientious member of my church who confided to me the secret wish of his heart to become a preacher of the Goo-

## A SHORT ADDRESS.

pel. He was a banker, able, consistent, and prosperous, and he desired my advice as to the propriety of forsaking his chosen vocation, that he might the more effectually win souls to Christ. "Preach the Gospel," I said to him, "by all means! Preach it daily and hourly; but do not forsake your business. Your counter is your best pulpit, and the sermons which speak through the common transactions of life have efficacy such as seldom follows the exhortations of those who make a profession of Theology, and are paid to preach the Gospel." There is common sense as well as sound theology in such advice; and so we would say to every ambitious young man: Be not so careful concerning the particular line of your duties, as you are to make your position the means of scattering blessings around you.

Again, young men are apt to be impatient of preferment, and to place a higher estimate on the intrinsic value of their services than the state of the market will warrant. "I have one objection," said a shrewd business man to us, "to employing graduates of Commercial Colleges. They are apt to think when their preliminary studies are finished, that they know all that is worth learning, and to value their services accordingly. This remark does not apply alone to the graduates of colleges, however truthful it may be in this application. It indicates a constitutional weakness which, like the measles and whooping-cough is quite sure to visit us all at some stage of life. If the disease can be forced outward, or, as physicians say, "driven to the surface," it may be of short duration and leave the system in better condition than before the attack; but if it "strikes in," much skill and courage is required to take the patient safely through.

Of one thing aspirants for position and preferment may rest assured; that the business world will put an estimate on every man entirely independent of his own self-valuation, and in strict accordance with his merits. The universal law of "supply and demand" is as inexorable in prescribing social position as in regulating the markets; and the surest way to attain to a certain desirable point is to cultivate those qualities which are essential to its duties. That detectable cowardice which whines at the "fickleness of fortune," and lays such serious charges at the door of an "unappreciating public," should be purged from every heart. Whoever would win for himself a place must expect to contest the ground, inch by inch, using each obstacle overcome as a stepping-stone to his own advancement.

Above all, let us earnestly beseech you, do not wait for something in the future which, to your unpractised eye, promises greater reward than that which is at present attainable. If, by a well-directed effort, you can secure the starting-point which you most desire, as congenial to your tastes, and, in your judgment possessing the germ of success, strike out boldly and fearlessly. Should you fail in this, do not despair, but turn your attention to the next most desirable object. There is nothing so hopeful of future success as *present employment*. Never be idle. There is always something for willing hands to do; and no class of persons have less favor with right-thinking men than those who are "out of employment."

Do not set your heart upon city life. It is a mistaken idea which seems to have taken possession of certain young men reared in the country, that the surest road to wealth and distinction leads through the metropolis. It is true that the majority of those who are eminent for wealth or talent in the large cities are country born; but they compose a meagre share of that almost ceaseless tide of influx which is daily swelling the ranks of the restless horde of adventurers clamorous for something to do—any thing to obtain a foothold in the city. It is true that young men are wanted in every avenue of city life, and that without them the very channels of commerce would become stagnant; but there is already an over supply of those "to the manner born," while beyond the limits of city life there are fields of adventure, and enterprises of industry, actually offering for strong hands and stout hearts. Besides, there are no qualifications which would secure eminence in city life, that may not be made equally productive, if not more so, in less populous districts. In all large commercial centers, every department of industry is filled with competitors, a few only of whom can, in the nature of the case, stand at the head of their business. In the country, competition is less severe, and appreciation assumes a more genial type. In large cities, the eternal strife necessary not only to obtain position and wealth, but to retain them, tends to selfishness and moroseness, slights out the nobler heart-qualities, fossilizes the affections, and makes men recreant to their own better natures. We do not say that this is so, necessarily; but the commonest observation will substantiate its essential truth.

In conclusion, we would say to the young men, and particularly to such as are about entering upon busy life: Be in earnest. Whatever is worthy of your attention at all, is entitled to your best energies of thought and action. Do not despise the day of small things. If you would be sure of success in any department of life, earn it. Do not place a false estimate upon yourself, but accept the estimate of others as the safest standard upon which to act. Never despair of obtaining what you desire, and have a right to possess. Seek to rise upon your own merits, rather than through the favor of friends. Do not defer action, in hopes of some better starting-point in the future. In whatever you do, act from principle, appealing to your own conscience, and the revealed Word for decision in every doubtful case.

If, by adhering to all these requirements you should at length fail of riches, honor, fame and friends, you may still have the consciousness of a life well spent, and an eternal reward.

## INTRODUCTION.

---

\* **BOOK-KEEPING** is the faithful and systematic record of business transactions.

\* All business transactions consist in an exchange of values; and hence, \*Book-keeping is the science by which these exchanges are recorded and their results shown.

\* There are two methods of Book-keeping in general use, distinguished as *Single* and *Double* Entry. Both of these methods may be made to show the same general results, but \*the latter is conceded to be greatly superior, both from its better facilities for developing results, and its more excellent tests for determining the correctness of the work.

\* The characteristic feature of Double Entry may be inferred from its distinctive title. \*Each transaction must be entered to two or more Ledger accounts, as two or more persons or things are affected thereby.

\* The three main books used in Double Entry are the Day Book, Journal and Ledger. \*The Day Book and Journal are sometimes combined in one.

\* The number and character of the auxiliary books depend somewhat on the nature and extent of the business, but more on the amount and kind of information desired. Of these we shall speak more fully hereafter.

### "THE DAY Book

Is the book of original entry, and contains a consecutive history of the transactions in the date and order of their occurrence. \*It should be plain, concise, and unequivocal in its statements; neither confusing the mind by redundancy of language, nor leaving room for improper inferences from lack of sufficient explanation. \*As the records in this book are supposed to be made when the transactions and all the circumstances connected therewith are fresh in the mind, it is the only book allowed in court, in cases of litigation. \*Its importance, from this fact, and also on account of its being the basis of all the results shown by the other books, cannot be overrated.\*

---

\* There is, perhaps, no one thing leading more directly to unpleasant and mischievous results than the lack of clearness in the original record of transactions. So palpable is this fact to the minds of many experienced business men, that they insist upon putting in black and white every thing which may affect the interests of any party, however remote; writing out all contracts in full, and even preserving the *figures* upon which all agreements are based. We cannot too strongly commend this practice, either in connection with the Day Book, or in a book kept for the purpose. Much of the difficulty growing out of misunderstandings would be readily avoided by reference to all the circumstances affecting agreements; and particularly if these circumstances were written down at the time of such agreements.

## INTRODUCTION.

### "THE JOURNAL

Is distinct from the Day Book, insomuch as its special use is to decide upon the proper debits and credits involved in each transaction, preparatory to their entry upon the Ledger.  
It is sometimes combined with the Day Book, and sometimes omitted entirely, "its labor being performed mentally. Its essential character and convenience, however, are not to be questioned, "and the improvements which have been instituted in its form have rendered it not only important as an interpreter, but valuable for labor-saving purposes."

### "THE LEDGER

Is the merchant's encyclopedia. All other books of the series are subservient and tributary to this. "Here are shown the results of all the transactions, arranged under distinct and appropriate heads, called accounts. "Each account has two sides, a Dr. and a Cr., each governed by well-defined conditions, and showing certain important facts bearing upon the general result.

## FORM OF THE PRINCIPAL BOOKS.

We give below the usual forms of the three principal books, showing their characteristic records of the same transaction:

### 1.—Day Book.

NEW YORK, JANUARY 1, 1859.

Check-mark.	Statement of transaction.	Date		
			Dollars.	Cents.
✓	Bought of James Monroe, on account, 500 Bbls. Flour @ \$10	2	5000	
✓	Sold Andrew Jackson, for cash, 100 Bbls. Flour @ \$10.50		1050	

### 2.—Journal.

NEW YORK, JANUARY 1, 1859.

Page of Ledger.	Dr.	Or.		
			Dollars.	Cents.
1	Merchandise Dr.			
2	To James Monroe		5000	
		2		
2	Cash Dr.			
1	To Merchandise		1050	
	Date		Dollars.	Cents.
	Ledger Titles.		Dollars.	Cents.

## INTRODUCTION.

### 3.—*Ledger.*

Date	Dr.	MERCHANDISE.				Cr.	
		1859	Jan.	2	By Cash		
1859 Jan.	1	To James Monroe	1	5000		1859 Jan.	2
				Dollars.	Cents.

*Cents.*

### JAMES MONROE.

				1859	Jan.	1	By Mdse.	1	5000

### CASH.

				1859	Jan.	3	To Mdse.	1	1050

### MERCANTILE TERMS.

#### LEDGER ACCOUNTS.

"A very person, species of property or cause, which enters into the transaction, producing a debit or credit, is designated by a *name*, which appears upon the *Ledger*, and is known as an *Account*. Each account has two sides, one of which ("the left-hand side) is called *Debtor*, and the other, ("the right-hand side,) *Creditor*.

#### DEBITS AND CREDITS.

"These terms are contradistinctive, and are used to denote the relation in which persons, property and causes stand to the business. "In every transaction the sum of these must be equal. Various authors and teachers have spent much effort, and exhausted both time and ingenuity to bring these terms to the test of some general and "infallible" rule; while others have gone so far in the opposite direction as to insist that the items of which they are composed "would form a list of incongruous facts, having no object in common." Their true significance and use can be ascertained in no way so well as by noting particularly their application to the various objects and causes which enter into each transaction. "Each *Ledger account*, by the use of these terms, is made to show an important result of itself.

## INTRODUCTION.

### RESOURCES AND LIABILITIES.

"Any kind of value belonging to the concern is a Resource, and "any debt owing by the concern is a Liability.

#### CASH

Is the title to designate money. "The Cash account in the Ledger is debited with all receipts of cash, and "credited with all disbursements." The difference between the two sides must, at any time, exhibit a resource of the exact amount of cash on hand. "It will be evident that the credit side of Cash account cannot exceed the debit, as more cash cannot be paid out than has been received.

#### BILLS RECEIVABLE.

"By this title is meant all written obligations of whatever form,\* in our possession, for which a certain specified amount is to be received. "The Bills Receivable account is debited with notes received, and "credited with those disposed of, or in any manner canceled. "The excess, if any, must be on the debit side, and will indicate that portion of our resources consisting in notes.

#### BILLS PAYABLE.

"By this term is meant the written obligations of the concern, for which a specified amount is to be paid. Under this head are placed, on the credit side, "our notes and acceptances issued, and on the debit side, "such of them as have been redeemed. "The difference, if there be any, must exhibit our outstanding notes, or our liability on unredeemed paper.

#### MERCHANDISE.

"This term may be more or less general in its application, according as it embraces a larger or smaller variety of property. It usually implies all property purchased or owned by the concern for purposes of traffic, and remaining in store. It generally embraces all such

\* There are, in common use, two forms of written obligations known as "negotiable paper." One is called a note, and the other a draft, or acceptance. They are precisely similar in their legal effect and value, differing only in form, from the different circumstances of their origin. A Note originates with the paper, and is a voluntary promise to pay, thus:—

#### NOTE.

\$1000.

18 Cooper Institute, New York, July 1, 1859.

Sixty days after date I promise to pay S. S. Packard, or order, one thousand dollars, for value received.

H. B. Bayant.

A Draft originates with the person on whose account the payment is to be made, being in the form of a request thus:—

#### DRAFT.

\$1000.

New York, July 1, 1859.

Sixty Days after date pay to H. D. Stratton, or order, one thousand dollars, value received, and charge to the account of

S. S. Packard.

To H. B. Bayant,  
18 Cooper Institute, New York.

To make the latter equivalent to the former, it is necessary that the person on whom it is drawn, or of whom the request is made, should respond, which he does by writing across the face "Accepted," and signing his name. This is now as virtually a "promise to pay" as the other, and there is no commercial difference between the two.

## INTRODUCTION.

property, "unless the merchant, being curious to know his gains or losses on a particular kind, opens a separate account with that particular kind, under its own special title. " This account, or any of its correlative titles; is debited with the cost of the property represented, and credited with its return." As this kind of property has no standard or stipulated value, like cash and notes, but is usually bought at one price and sold at another, it will be evident that the difference between its sides cannot represent an exact resource; but, rather, "the debit showing its cost, and the credit its proceeds, the difference must be a gain or a loss. " "This is the case, provided we reckon with the proceeds from sales the real value of that which remains unsold.

## REAL ESTATE.

"This relates to such property as houses and lands, and "the account is similar in its objects and teachings to that of Merchandise.

## BANK STOCK, RAILROAD STOCK, ETC.\*

"Accounts of this kind are not dissimilar to Merchandise and Real Estate, inasmuch as stocks of all kinds are bought and sold at their *market* value, rather than the value written on their face.

## SHIPMENT OR ADVENTURE.

"When property is sent away to be sold by an agent for us we should distinguish it from our merchandise in store by giving it a significant name, such as "Shipment to Buffalo," or "Shipment to A," our agent, or "Adventure" to the place sent. All such accounts are debited with their entire cost, and credited with their proceeds, the difference being a gain or loss. Should we desire to show the result of our business, before receiving advice from our agent, it is proper to reckon this property as a resource at its cost. "This is but another name for Merchandise, and is used to distinguish between property in store and *out* of store.

## PERSONAL ACCOUNTS.

"Accounts representing personal indebtedness, and designated by the proper names of such persons as sustain relations of debtor and creditor to the concern, are capable of showing either resources or liabilities. "They are debited with such sums as, from time to time, the persons may become indebted to the concern, or the concern has paid them, and "credited with what they have paid the concern, or the concern may have become indebted to them. "An excess of debits in a personal account will thus show a resource, and "an excess of credits, a liability.

## STOCK.

Beginners are apt to misapprehend the term "Stock," supposing it to relate to some kind of property, or rather to property in general. Such is its common signification, but "when used as a Ledger title, it means simply the proprietor of the business, or the stock-holder. "There would be no valid objection to using the proprietor's name instead; "but as no real

\* For a full description of Stocks, please refer to page 165.

## INTRODUCTION.

good would result from the change, authors, teachers and practical accountants have been content to accept the term which custom has suggested.

This account is usually the first opened in the Ledger, and is important to show "the net investment. It is generally credited with the whole investment, and debited with such liabilities as the concern assumes to pay for the proprietor. The difference is the net investment, or what the concern owes the proprietor. "It is not customary to use this account during the business, except for the purpose of recording subsequent investments; but it will appear evident to any studious mind that "it would be philosophically correct to credit the account with any increase of resources, either from actual investment, or from the gains of the business, just as often as such increase occurs; as also to debit it with amounts drawn out by the proprietor for his private purposes. "Such a course, however, would be attended with many difficulties, and we would, by no means, recommend its adoption; particularly as the same result is achieved with much less labor by the usual method.

From the foregoing remarks we gather the following

## GENERAL PRINCIPLES.

### L.

The person or persons investing in the business should be credited, under some title, for all such investments, and also for his or their share of the gains. On the other hand, he or they should be debited for all liabilities assumed by the concern for him or them, for all sums withdrawn by him or them from the business, and for such losses as he or they are entitled to share.

### II.

Cash account should be debited for all cash receipts, and credited for all disbursements.

### III.

Merchandise, and all species of property bought upon speculation, should be debited, under some appropriate head, with the cost of the property represented, and credited with its proceeds.

### IV.

Bills Receivable account should be debited with other people's notes, acceptances and other written obligations when they become ours, and credited when they are paid, or otherwise disposed of.

### V.

Bills Payable account should be credited with our notes, acceptances, or written promises to pay when they are issued, and debited when they are paid or redeemed.

### VI.

Personal accounts, such as the names of persons, banks, or other institutions competent to sue or be sued, should be debited under their proper titles when they become indebted to us, or we get out of their debt, and credited when we become indebted to them, or they get out of our debt.

## INTRODUCTION.

### VII.

All expenses, of whatever name, should be debited with the outlay, and all causes, of whatever kind, producing us value, should be credited, under some name, for the amount thus produced.

The foregoing principles are all embraced in the following simple

### Formula.

DEBIT WHAT COSTS THE CONCERN VALUE, AND CREDIT WHAT PRODUCES THE CONCERN VALUE.

## QUESTIONS FOR REVIEW.

Appropriate answers to all the following questions may be found in the foregoing remarks. The student should be able to give them without hesitation before proceeding to the main portion of the work. The teacher will, of course, exercise his own judgment as to the thoroughness of this review, and not confine himself necessarily to these questions.

1. What is book-keeping?
2. In what do business transactions consist?
3. What has book-keeping to do with the exchange of values?
4. How many methods of book-keeping are there, and how are they distinguished?
5. Which is the better method, and for what reason?
6. What is the characteristic feature of Double Entry?
7. Why must each transaction be entered twice on the Ledger?
8. What are the three main books in Double Entry?
9. Which two are sometimes combined in one?
10. Upon what do the number and character of auxiliary books depend?
11. Describe the Day Book.
12. What should be the character of Day Book expressions?
13. Why is the Day Book alone produced in court?
14. What other importance has it?
15. What is the special use of the Journal?
16. Is it ever omitted?
17. When such is the case, how is its labor performed?
18. Why is the Journal an important book?
19. What is the character of the Ledger?
20. What is shown in the Ledger?
21. How many sides has each account, and what are they?
22. What is an account?
23. Which is the debit side of an account?
24. Which the credit?
25. How are the terms *debit* and *credit* used?
26. What is a sure condition of debits and credits?
27. What importance is attached to Ledger accounts by the use of debits and credits?
28. What is a Resource?
29. What is a Liability?
30. What is meant by the term Cash?
31. For what is Cash account debited?
32. For what credited?
33. What is shown by the difference between the sides?
34. Why cannot the credit side of Cash be the larger?
35. What is meant by Bills Receivable?
36. For what is Bills Receivable account debited?
37. For what credited?
38. What does the difference show?
39. What is meant by Bills Payable?
40. For what is Bills Payable account credited?
41. For what debited?
42. What is shown by the difference?
43. What is usually implied by the term Merchandise?
44. What exceptions are there to this general application?
45. What is Merchandise account debited with?
46. With what credited?
47. What is shown by the difference?
48. Is this always the case?
49. Where is it?
50. What is meant by Real Estate?
51. How is the account kept?
52. Wherein are accounts with Bank Stock, Railroad Stock, etc., similar to Merchandise?
53. What is meant by Shipment, or Adventure?
54. Wherein do such accounts differ from Merchandise?
55. What are shown by personal accounts?
56. With what are they debited?
57. With what credited?
58. What does an excess of debits in a personal account show?
59. An excess of credits?
60. What is meant by the term Stock?
61. Would there be any valid objection to using the proprietor's name instead?
62. Why is not this done?
63. What does Stock account show?
64. Is it customary to use this account during business?
65. Would it be improper to do so?
66. Why is it not done?

The student should either commit to memory the seven General Principles laid down, or satisfy the teacher that he fully understands them. It is impossible that he should be able to proceed without the knowledge which they convey.

## GENERAL PLAN OF THE WORK.

---

The design of this book is to supply what its authors have been led to consider an important deficiency in the high schools and academies of the country—the want of a competent text-book on commercial science. With this view, great care has been taken to make the instructions progressive, and as full as possible.

The first four sets—with their intermediate "Exercises for the Learner"—are intended to establish, as far as possible, the theory of accounts. These sets, although each is distinct in itself, illustrate the continuation of the same business, from year to year, with such changes in proprietorship, and such varieties of success and adversity, as are usual in business. The process of opening a new set of books from the Balance account of an old, is here most thoroughly shown up, and cannot fail to give light upon a subject which is often calculated to confuse the tyro, viz.: the perfect analogy between a statement at closing, and a statement at commencing business. The first three of these sets represent the business of a single proprietor, who, at the close of the third set, admits a partner, and the business itself undergoes an important change. Set 4, is both comprehensive and practical, written out in full, with numerous auxiliaries. The theory of Merchandise Company accounts, is here fully discussed and illustrated. The Day-Book and Journal are combined in one, and many important features are introduced. Set 5, is, perhaps, the most severely practical of the series, showing the routine and forms of a large Jobbing and Importing business. The materials for this set were obtained from one of the most extensive Importing and Jobbing houses in New York, and its importance cannot be over-rated.

The introduction of Single Entry books in the body of the work is an original feature, and one which we feel sure will be appreciated by teachers. Ample instruction is here afforded in Single Entry, with a view of changing to Double Entry. The position assumed by the authors is that the peculiar features of Single Entry can be better explained to one understanding the principles of Double Entry.

The Farmer's set, which succeeds, embraces new and important features, among which is the use of the six-column journal, and a few practical forms. In the transactions of this set, sufficient variety has been given to fully illustrate the adaptation of farming business to systematic and satisfactory record.

The "General Instruction" in the latter part of the book is necessarily circumscribed, and yet we trust its importance will not be overlooked. We have here been enabled to put forth hints and applications which could not well be done in connection with the main work. It is to be hoped that the teacher and student will not fail to consider this a part of the treatise.

Especially should care be taken to carry out the design of the work in writing up the series of "Exercises for the Learner." This feature, more than any other, is relied upon to produce good fruits.

## SET I.

---

### DAY-BOOK, JOURNAL, AND LEDGER:

REPRESENTING THE BUSINESS OF A SINGLE PROPRIETOR.

---

BUSINESS PROSPEROUS.

## INSTRUCTIONS.

### INSTRUCTIONS FOR SET I.

It should be the first care of every student to mark his own progress, not by the extent of his studies, but by the amount of useful information secured. Particularly should he be careful in entering upon a new department of study, to thoroughly comprehend each progressive step in the unfolding of its principles, that in their application, he will be enabled to constantly keep in view the result of his labor. There is no science more liable to be gone over by the easy process of copying, than that of Book-keeping, as it is presented in the majority of text books. It is essentially a science of forms—or, more properly, its principles are best shown through forms, which, being submitted, offer serious temptations to the mere copyist. We have endeavored to avoid this evil as far as possible, and have, therefore, left for the student plenty of brain-work, which, if he honestly performing, must advance him in the science. The general instructions given in connection with this set will apply with equal force to the succeeding work. They should, therefore, be properly heeded.

To the majority of learners the following forms, and the order of entry to be observed, will be immediately apparent; but for the benefit of those who may not observe so readily, and to follow out the original plan of this work—to divest the study of Accounts of even the appearance of mystery—we give the following brief exposition.

In writing up this first set, it will be well to employ loose paper. If it cannot be obtained readily properly ruled, let the student rule it for himself. This exercise will be found highly serviceable. First, copy the Day Book, observing well the form and expression. Do not copy the footings of the money column from the book, but perform the addition without assistance. First add the columns upwards, and then prove the result by adding downwards. Careful accountants usually write the amount in pencil and carry forward. This is to avoid inaccuracies, in case any of the additions should prove, on examination, to be incorrect. The best accountants are generally those who do the least scratching in their books.

In journalizing the transactions, the careful student will always keep the Ledger in view, as the process is simply deciding how the accounts shall stand on the books. Let the decision be made, in every case, in accordance with the principles laid down, and set the transactions are the most simple that could be suggested, each requiring but one debit and one credit entry. Let the check-mark ( $\checkmark$ ) be made opposite the Day Book entry, immediately upon its being journalized—never before.

Transferring to the Ledger is called "posting." If the transactions are properly journalized, the labor of posting is simply mechanical. It requires great care, however, and constant watchfulness, else nothing is more common with new beginners than errors in posting. As these errors will all be found and corrected before he can progress, the student will find discretion the better part of valor, and, after confusing his brains and sharpening his wits as much as a few days will come to the conclusion that errors are much more easily avoided than detected.

Commence with the first account indicated on the Journal, and write it as a heading in the Ledger.\* See if the amount opposite be in the debit or credit Journal column, and enter it

\* It is customary and proper always to open as the first accounts in the Ledger, Stock, or the Partners. Some honest, desiring to keep the particular interests of the partners, or the conditions of the copartnership from the public, or from the knowledge of any parties except themselves, keep a private Stock Ledger, to which even the book-keeper has no access. In such cases the books are kept as Stock books, with but one account to represent the capital.

## INSTRUCTIONS.—SET I.

the corresponding side in the Ledger, using as an expression "the opposite journal entry." For example, suppose the journal entry to be "Cash Dr. To Merchandise." This expression implies, of course, that Cash is to be debited, and Merchandise credited. Under Cash account in the Ledger, on the *debit* side we say, "To Merchandise;" and carry the amount to the money column. Also, under Merchandise account on the *credit* side, we say, "By Cash," and carry the amount into the credit column. It is not really necessary that any expression should be made in the Ledger, as the *fact* which we are after is expressed by the *figures*. However, the expression properly made is suggestive of the transaction, and hence is rarely ever omitted by accountants. In posting from the Journal, be careful to enter in the column at the left of the account, and directly opposite, the *page* of the Ledger to which the amount is posted, "immediately after the amount is entered in the Ledger, but never before."

There is nothing in business that pays better than *system*; and it should be rigidly enforced at every step. No legislative body can be properly conducted without an "order of business," much less, the intricate machinery of business itself. Let each student feel, therefore, that his success in life will depend, in a great measure, upon his habits of order, and let him be as careful in observing the minute essentials in these exercises, as though his reputation depended upon it. Learners are too apt to think that in these initiatory steps no importance should be attached to neatness and accuracy, as no real financial results depend upon them; and, thus reasoning, adopt slovenly habits, which may follow them through life. It is a pungent truth, that "Whatever is worth doing at all, is worth doing well," and nowhere will the sentiment better apply than in the work before us. It is scarcely to be expected that the beginner should be able to carry out his instructions so fully at the first as to avoid entirely the "errors and omissions" which even more experienced persons have to guard against, watchfulness and care; but if he makes each error a lesson which shall preclude its own repetition, his progress will be real as well as apparent, and the study of what he at first considered an abstract and difficult science will become as a pleasant pastime, and infinitely more profitable.

It will be well in all these primary exercises, and until the student is so thoroughly drilled in the principles as to be beyond the recurrence of the little perplexing errors which so much annoy, to employ *loose* paper ruled for the purpose, and continue to write and re-write all the books, until the proper results are satisfactorily achieved. This kind of *practice* is what is needed to fasten *theory*, and fit one for the more arduous toil of actual business.

Our earnest advice, then, is to attach importance to the most minute instructions bearing either upon principles or arrangement, and, under no circumstances, to progress more rapidly than the subject is fully understood.

\* This instruction will, of course, apply only to cases where the post-mark is used also as a check mark. It is customary with some accountants, in order to facilitate the labor of posting, to enter opposite the Journal entries, before posting, the page of the Ledger to which each entry is to be posted; and to indicate the *fact* of posting by an additional post-mark. In this case, of course, the check mark and not the Ledger page, is subject to the above restriction.

\* This phrase may not seem, at first view, properly significant; but we apprehend that it is truthful, nevertheless. For, although it may not be true that the difference between the cost of merchandise and the proceeds of a certain portion sold exhibits the *net cost* of that which remains unsold, yet that difference does express what we lack, so far, in receiving as much as we have paid for merchandise; therefore, we say it has really *cost* us this difference. If this amount should express the cost over proceeds, with the *properly all disposed of*, it would represent a *loss*; but as there is yet actual value in that which remains unsold, we can safely anticipate further proceeds equal to that value. When this is shown, as it will be in the final exposition, the difference between the cost and the returns will be the *gain or loss*.

TRIAL BALANCES.

Cr.

285
500
1000

GENERAL STATEMENT.

After posting all our transactions to the Ledger, in accordance with the principles laid down, we are enabled to deduce therefrom the following result:—

Trial Balance.—Face of Ledger.

Dr.		Cr.
500	<i>Assumed by the Concern, STOCK . . . . .</i>	<i>Invested as capital . . . . .</i>
6513 75	<i>Received . . . . .</i>	<i>Paid out . . . . .</i>
500	<i>Our % against him . . . . .</i>	<i>His % against us . . . . .</i>
2731	<i>Cost . . . . .</i>	<i>MERCHANDISE . . . . .</i>
40	<i>Our % against him . . . . .</i>	<i>Returns from sales . . . . .</i>
500	<i>Our notes redeemed . . . . .</i>	<i>H. D. STRATTON . . . . .</i>
57 50	<i>Others' notes received . . . . .</i>	<i>BILLS PAYABLE . . . . .</i>
184	<i>Outlay . . . . .</i>	<i>BILLS RECEIVABLE, Others' notes disposed of . . . . .</i>
115	<i>He owes us . . . . .</i>	<i>EXPENSE . . . . .</i>
		<i>E. G. FOLSON . . . . .</i>
11141 25		<i>J. D. COMSTOCK . . . . .</i>
		<i>We owe him . . . . .</i>
		<i>Equilibrium . . . . .</i>
		96
		11141 25

The above statement is called a "Trial Balance," for the reason, most apparent; "it is a trial to ascertain if the debits and credits of the Ledger are equal, or balance." "It does not, as some suppose, prove the Ledger to be absolutely correct, as there are many circumstances under which the Ledger may balance, and yet be wrong." This form of Trial Balance, however, is so nearly a test, that, under ordinary circumstances, it may be considered satisfactory. "By observing the footings you will see that they exactly agree with those of the Journal, which could rarely be the case if any of the Journal entries were omitted to be posted;" "and as the footings of the Journal columns also tally with that of the Day Book, we must be satisfied that all the original entries have found their way into the Ledger." "This leaves but two chances of error in the accounts, viz.: from improper Journal entries, or from posting to the wrong accounts in the Ledger."

"It will be seen that, in order to afford this additional test, we have found it necessary to carry into the Trial Balance the *total footings* of the Ledger. "If we desired only to test the balance of our Ledger, this would not be necessary, as will be seen from the following example:

Trial Balance.—Differences of Ledger Accounts.

Dr.	Cr.
STOCK . . . . .	<i>Net investment . . . . .</i>

	831
	5531

## ACCOUNT OF STOCK.

Here we have a test of equal debits and credits quite as satisfactory as the other, and much more brief, upon the principle of cancellation; that is, permitting a debit to offset a credit of the same amount, and vice versa. These forms have each its peculiar advantages, and accountants have found it very convenient at times to combine them in one. This latter method is exemplified in another portion of the work.

We will now turn our attention more particularly to the object and sphere of the Ledger.

The important consideration with the business man, is to keep his resources and liabilities constantly in view. He is thus enabled to estimate, not only theoretically, but practically, the degree of his prosperity. A Ledger properly kept will show, at any time, all resources having a real or fixed value, and all liabilities of whatever kind. There is a class of resources, however, that cannot be determined from the Ledger. This embraces all property purchased on speculation or subject to fluctuation in price. The real value of such property can be ascertained only by actual appraisal.

By reference to the Ledger, in Set I., it will be seen that the only property represented which is subject to fluctuation or speculation, is Merchandise. Had we sold our merchandise for the same price for which we purchased it, the difference between the sides would show the value of that remaining unsold, reckoning it at the cost price; or had we credited Merchandise account with only the cost price of that which was sold, the difference would also show the value of that remaining unsold. But we have adopted the usual plan of crediting the Merchandise account with its *proceeds* from sales, and, as it was previously debited with its *cost*, the difference will fail to represent the amount on hand in the exact amount of the discrepancy between the cost and the proceeds from sales: and as we have no means of knowing what this discrepancy is, our only method of ascertaining the value of unsold merchandise, is to go to our shelves and estimate by actual inspection. This process is called "taking an inventory," or "taking an account of stock."

This we now proceed to do, with the following result:

### INVENTORY.

*Merchandise remaining unsold, Jan. 31, 1859.*

100 yards English Broadcloths . . . . .	@ \$3 . . . . .	570
200 do Domestic Cussimeres . . . . .	@ \$1 . . . . .	200
100 do Black French Cloths . . . . .	@ \$4 . . . . .	400
4 dozen Soft Hats . . . . .	@ \$24 . . . . .	96
15 reams Extra Foolscap . . . . .	@ \$3.50 . . . . .	52
5 do Letter Paper . . . . .	@ \$3 . . . . .	15
		1333 50

We have now sufficient data to enable us to ascertain the exact condition of our affairs on the 31st of January, and to show us, beyond a reasonable doubt, how much has been gained or lost in the month's transactions.

In the statements which follow, such forms have been adopted as would seem to place the facts aimed at in boldest relief, having little reference to symmetry of arrangement, which will be more fully appreciated when the truths indicated are better comprehended.

It is hoped that the instructions given in this treatise will enable each student to originate his own forms, as well as to detect the truth, in whatever garb it may be clothed.

## STATEMENT OF RESOURCES AND LIABILITIES.

### Statement of Resources.

1. Taken from the Ledger.					
CASH . . . .	Amount received . . . . .	6513	75		
	Amount paid out . . . . .	2084			
	Balance on hand . . . . .			4420	75
H. D. STRATTON	Our account against him . . . . .	40			
	His account against us . . . . .	20			
BILLS RECEIVABLE	Others' notes received, and on hand . . . . .		20		
E. G. FOLSOM	He owes us . . . . .		57	50	
			115		
2. Taken from Inventory.					
MERCHANDISE . . . . .	Value of that unsold . . . . .			1333	50
	Total Resources . . . . .			5955	75

### Statement of Liabilities.

Taken from the Ledger.					
BILLS PAYABLE . . . . .	Our Notes issued, . . . . .	1735			
	" redeemed, . . . . .	500			
J. D. COMSTOCK	" outstanding, . . . . .			1235	98
STOCK . . . . .	We owe him . . . . .				
	Amount invested for the proprietor, . . . . .	5000			
	" assumed for " . . . . .	500			
	Net investment . . . . .			4500	
	Total Liabilities, (less unappropriated gains) . . . . .			5831	

From these statements it appears that the Total Resources of the } \$5955 75  
concern are.....

And the Total Liabilities (as shown). . . . . 5831

Leaving an excess of. . . . . \$124 75

It is plain that this excess of resources must have accumulated during the business, as at the commencement the resources and liabilities were shown to be equal, upon the principle that the concern owed "Stock" or the proprietor for his net investment. Upon the same principle Stock should be credited with the increase or gain, and, as we have before intimated, it would be proper to do so at any time when such increase or gain can be ascertained. Should we now credit Stock with this excess—\$124.75—it will equalize our resources and liabilities, and place the proprietor's account in the same relative position to the business which it occupied at the commencement, viz.: as showing the net investment.

The fact most clearly demonstrated thus far, then, is that, whether apparent or not, the difference between the resources of a concern and its outside liabilities is what the concern is owing to the proprietor, or his real net investment, and should be equal to the excess of credits of Stock or Partners' accounts, when those accounts are made to show their adequate results.

This will be more plainly seen in the following schedules:

## STATEMENT OF RESOURCES AND LIABILITIES.

### At the Commencement of Business.

<i>Resources.</i>				<i>Liabilities.</i>
Cash . . . . .	5000		Peter Cooper Stock . . . . .	500 4500
	5000			5000

### On the 31st of January.

<i>Resources.</i>				<i>Liabilities.</i>
Cash . . . . .	4420	75	J. D. Comstock . . . . .	96
Bills receivable . . . . .	57	50	Bills Payable . . . . .	1235
H. D. Stratton . . . . .	20		Stock . . . . .	4624
E. G. Folsom . . . . .	115			75
Merchandise . . . . .	1283	50		
	5055	75		
				5955
				75

It will now be evident that "when the real condition of any concern can be ascertained, it must exhibit equal resources and liabilities; and that, if at any time during the business this fact is not apparent, it is only from some temporary cause or convenience. Let us see if this cause can be ascertained.

By reference to the statement showing the resources and liabilities of the concern on the 31st of January, it will be seen that all the open *Ledger* accounts are there represented except Merchandise and Expense. It is true that the amount of merchandise on hand, as shown by the inventory, is reckoned among the resources, but this had nothing whatever to do with the Merchandise account in the *Ledger*. Why were these two accounts omitted? "Evidently because they were not necessary in showing the resources and liabilities. What then do they show? "The debit of Merchandise account shows the cost of merchandise, and the credit the proceeds from sales. If to these proceeds we add the *anticipated* proceeds of that remaining unsold, we shall have the total in value of what has been produced by merchandise. From this amount if we deduct its *cost*, we shall get the *gain* on merchandise; or, if the cost be *more* than the proceeds, the excess will be the *loss*.

The credit side of merchandise account, or the proceeds from sales is \$1706 25  
The inventory of merchandise unsold, or the anticipated proceeds is. 1333 50

Making Total Proceeds..... 3039 75  
The debit side or cost of merchandise is..... 2731  
Which, deducted from the proceeds, shows a gain of..... \$308 75

It would now seem, at first view, that we must have made in business, \$308.75, and such would be the case if we had incurred no further expenses than what appear on the debit side of our Merchandise account. Now, if we dissect the items which make up our Expense account (\$184), we shall find that, of that amount, \$20 was paid for a set of books, in which

## **STATEMENT OF LOSSES AND GAINS**

to record our business transactions, and the balance, \$164, for store rent and clerk hire. "It is reasonable to suppose that all these expenses were incurred to facilitate the purchase and sale of merchandise, as that is the only property we have dealt in; and, such being the case, would it not have been proper to debit Merchandise account with these items, instead of Expense? Had this method been pursued, our gains on merchandise would appear to be \$184 less than they now show. Our gains in business would thus be reduced to \$124.75, which, it will be seen, exactly agrees with the excess of resources already shown. "Inasmuch, therefore, as we choose to exhibit our contingent expenses under special titles, such as "Expense," we must not forget that the amounts thus taken from the legitimate accounts for which the cost was incurred, thereby forcing such account to show an excessive gain, must ultimately be used to cancel that excess. This fact will be more apparent by the following

### Statement of Losses and Gains.

	Returns from Sales . . . . .	1706	25
	Anticipated returns (mdse. unsold) . . . . .	1333	50
MERCHANDISE	Total Returns . . . . .	3039	75
	Cost . . . . .	2731	
	Gain on Merchandise . . . . .	308	75
	Outlay . . . . .	184	
EXPENSE	No Returns . . . . .		
	Loss on Expenses . . . . .	184	
	Net Gain . . . . .	124	75

From the foregoing schedules, it will be readily seen that there are two classes of accounts, "from one of which can be ascertained the resources and liabilities of the concern, and from the other, the unappropriated gains and losses. We learn, moreover, that whenever the resources and liabilities of a concern can all be shown they must be equal; and that, if at any time these are not apparent on the Ledger, it is from the use of certain temporary accounts for the purpose of containing the gains and losses of the business, until such time as it may be convenient or desirable to distribute them under the

As we shall need frequently to refer to these two classes, and desire them in their application to be thoroughly understood, we will denominate them **REAL** and **REPRESENTATIVE**, with the simple definition, that "**Real** accounts are such as exhibit, from an excess of debits or credits, real **resources** or **liabilities**, and "**Representative** such as represent the stockholder or stockholders, by exhibiting such **gains** or **losses** as are ultimately to be carried to his or their proper accounts. "When it is further understood that all gains in business must appear, either in an **increase** of **resources**, or a **decrease** of **liabilities**; and that all losses must appear, either in a **decrease** of **resources**, or an **increase** of **liabilities**, it will be sufficiently plain that the two classes of accounts we have named, must always run exactly parallel.

\* Formerly authors and teachers were accustomed to divide accounts into three classes, under various titles. So far as we know to the contrary, the credit of first reducing this number to two, and of giving substantial reasons for the division in clear and satisfactory analysis, belongs to Thomas Jones, author of "Book-keeping and Account-anship," published in 1833. MR. Jones distinguishes by the appellative terms "Primary" and "Secondary," classifying "Stock" or Partners' accounts with those which do not show resources or liabilities.

## QUESTIONS FOR REVIEW.

We will now make a practical application of these lessons, in restoring our Ledger to its proper condition. By referring to the Stock account, you will see that it has remained unchanged since the commencement of the business; while we knew, from the foregoing statement, that the business itself has changed in a material sense. You may remember that "Stock account was opened for the purpose of showing the net capital or investment." It answered this purpose thoroughly at the start, and would do so even now, if the capital or investment had remained the same. But such is not the case, and consequently Stock account fails of its full mission in just the amount of the fluctuation of invested capital. We have already shown, by two processes, what this fluctuation is, and it is now "with a view to restoring Stock account to its nominal condition, that we "close up" the Ledger accounts, exhibiting the grand result by the balances of resources and liabilities. We wish this process distinctly noted, as the entire theory we have sought to advance, is herein practically demonstrated.

## QUESTIONS FOR REVIEW.

### GENERAL INSTRUCTIONS.

1. Why should the student keep the Ledger in view when journalizing? 2. When should the check-mark ( $\checkmark$ ) be made in the Day Book, and where? 3. What is transferring to the Ledger called? 4. Why is it necessary to observe care in posting? 5. What is the first account opened in the Ledger? 6. When, an account is posted to the Ledger what expression should be made? 7. Is it necessary that any expression should be made? 8. Of what should the Ledger expression be suggestive? 9. When should the page of the Ledger to which an amount is posted be entered in the Journal, and where?

### GENERAL STATEMENT.

10. Why is a Trial Balance so called? 11. Does the Trial Balance prove the Ledger to be absolutely correct? 12. Is the test afforded by the Trial Balance usually satisfactory? 13. What test is afforded proving all the Journal entries to have been posted? 14. What to prove that all the original entries have been journalized? 15. When these precautions are used, how many chances are there for errors which may escape the Trial Balance test? 16. What must be the condition of the Trial Balance which affords these tests? 17. Would it be necessary to carry the total footings into the Trial Balance did we not desire this additional security? 18. Can a correct Trial Balance be had which will contain simply the balances of the Ledger accounts? 19. Upon what principle is this effected? 20. Are these two forms of Trial Balance ever combined in one? 21. What is the important consideration with the business man in connection with his accounts? 22. What does this enable him to do? 23. What will a Ledger properly kept show at any time? 24. What kind of resources cannot be shown from the Ledger? 25. How is the real value of such property ascertained? 26. Is there any property of this kind represented in Set I., and what is it? 27. What will the difference in the sides of Merchandise account show, if debited and credited with the same value? 28. When the Merchandise account is debited with the cost of merchandise, and credited with its proceeds, how much will the difference between the sides fail of showing the value of merchandise unsold? 29. When the account is so kept what is our only method of ascertaining the value of merchandise unsold? 30. What is the process called? 31. When the real condition of a concern is stated, what must it exhibit? 32. In the statement of resources and liabilities on page 29, why were not the Ledger accounts of Expense and Merchandise taken, cognizance of? 33. What is shown by these accounts? 34. Is there any similarity in these accounts? 35. What must be borne in mind with reference to the nature of such special accounts as Expense? 36. How many classes of accounts are there? 37. What can be learned from each? 38. When the resources and liabilities of a concern do not show to be equal, what must be the reason? 39. What accounts are called Real? 40. What Representative? 41. How is it shown that these two classes of accounts run exactly parallel? 42. For what purpose is Stock account opened? 43. Why does not Stock account perpetually represent the net investment? 44. For what purposes is it necessary to close up certain of the Ledger accounts?

## CLOSING THE LEDGER.

### CLOSING THE LEDGER.

This phrase is much more technical than descriptive; and, although the process may be easily learned, experience has taught us that the great difficulty in the matter with learners is to be able clearly to understand the *object* to be attained by "Closing the Ledger." We will endeavor to explain.

"To "close up" an account in the Ledger is to put an end to its *current* condition. This may be for a temporary purpose only, or it may be final. In closing a *Real* account, if the sides be equal, it is necessary only to add up the two sides, and draw red lines underneath the amounts of each. The account thus becomes canceled, and, so far as our business is affected, is as though it had never been. If the sides be not equal, and we desire to close the account, for the purpose of showing the result, we enter upon the *smaller side*, in red ink, an amount which will make it equal to the larger side. This will, of course, be the difference between the sides, or the *excess* of the larger, and must be shown as such, either in a continuation of the same account, or in another account of the same import. The balance thus shown will be either a *resource* or a *liability*. If the sides of a *Representative* account be equal, and the proceeds all shown, it is also closed by adding up the debit and credit columns, and drawing red lines underneath; if unequal, the excess will be entered on the smaller side in red ink, and will represent a *gain* or a *loss*. The columns will then be added, as in the other case.

So much for the *process*. Let us now ascertain for what purpose the Ledger accounts are closed at all, and each step will then suggest its own philosophy. We have already shown that just as soon as the invested capital begins to fluctuate or change in value, Stock account ceases to represent the real interest of the proprietor. This is simply because the gains and losses are not carried to Stock account when they occur, but are allowed to remain in the Representative accounts. As often, therefore, as we wish to show what is the proprietor's interest in the business, or what the concern is owing him, we must take these gains and losses from his Representative accounts, and carry them to the Stock account. We do this by "closing up" the accounts, and transferring their balances. The usual method is to open a general account, called "Profit and Loss," or "Loss and Gain," and first transfer to it all the gains and losses. This enables us to get the net gain or the net loss in one amount, which we carry to Stock; if it be a net gain, it will go to the credit side of the account, increasing the investment; if a loss, to the debit side, decreasing the investment.

"This can all be accomplished without disturbing the *Real* accounts. If, however, it is desired to show in a tabular form the resources and liabilities of the concern, we can easily do so by opening an account for this purpose called "Balance," and close the Real accounts into it. Or if we wish to show an era in our business, we can close up these accounts, and bring the balances down, as shown in the Ledger which follows.

"The object, then, of closing the Ledger accounts is to restore the proprietor's account to the same relative position towards the business which it occupied at the commencement, viz., as showing the net investment, or net interest of the proprietor.

"An entry in red ink on the Ledger, denotes that the amount thus written is to be transferred, either to some other account, or to another position under the same account. It also shows that the entry is first made in the Ledger, not having passed through the usual preliminary books of entry. Red ink entries are always transferred to the opposite side from where they first appear, for the reason that they indicate an excess of that side.

## ORDER OF CLOSING.

### ORDER OF CLOSING.

In closing the Ledger accounts, for the purposes of a general exposition of affairs, the following order should be observed:

1.

"Open an account with "Loss and Gain," (if not already opened,) and another with "Balance;" "the former to exhibit the *losses* and *gains*, and "the latter the *resources* and *liabilities*.

2.

"Ascertain from the inventory if any property remains unsold; and, if so, credit each account for which such property was originally debited with the value of that unsold, making the entry in *red ink*, "By Balance," and transferring the amount directly to the debit side of Balance account, making this entry in *black ink*, "To Merchandise," or "To Real Estate," or any other account from which the amount is transferred. "The Ledger accounts will each show, now, one of the four following results, viz: a Resource, a Liability, a Gain, or a Loss.

3.

"Omitting Stock account, (or Partners' accounts,) commence with the first account in the Ledger. First ascertain which of the above results it shows, and make the closing entry accordingly. If the difference represent a resource, or a liability, enter upon the smaller side, in *red ink*, "To," or "By Balance," as the case may be, and transfer the amount in *black ink* to the opposite side of Balance account. If the difference represent a gain or loss, enter on the smaller side in *red ink*, "To" or "By Loss and Gain," and transfer the amount, in the same manner to Loss and Gain account. Close all the accounts (except Stock or Partners') and transfer the balances as directed. "The Loss and Gain account will now show, on the debit side, all the losses, and on the credit side, all the gains, the difference being the net gain or net loss." "The Balance account will show on the debit side all the resources, and on the credit side all the liabilities, (excepting the result of Stock or Partners' accounts,) the difference being the real interest or present investment of the proprietor or proprietors.

4.

"Take a "Second Trial Balance," or a Trial Balance of the remaining open accounts: Stock or Partners', Loss and Gain, and Balance. "If the balances have been properly transferred the debits and credits of these accounts, taken together, must be equal.

5.

"Close the Loss and Gain account into Stock, or, if it be a partnership business, into the partners' accounts, dividing the gain or loss according to agreement. "The Stock or Partners' accounts will now show the original investment, increased by the gain, or decreased by the loss; the difference being the *present* net investment. "As the Balance account shows the same thing, they must, of course, agree.

6.

"Close Stock account (or Partners' accounts) into Balance account, which must equalize that account, it showing now, "on one side the total resources, and on the other the total liabilities, and presenting in the most condensed form, the exact present condition of the business.

The student will please observe this order in making the closing entries which follow. It will be seen that this Ledger presents the same accounts as the preceding, and differs only in having disposed of the gains and losses. The balances of the *Real* accounts (except Stock) agree with the Trial Balance, showing balances on page 27, while the *Representative* accounts have ceased to exist, their results being exhibited in the Stock account.

## GENERAL REMARKS.

## GENERAL REMARKS.

By referring to the Balance account in the preceding Ledger, we shall find "a full statement of the resources and liabilities of our concern on the 31st of January. Should we desire to open a new set of books on the 1st of February, "we have all the necessary information for that purpose; or we can represent the state of our affairs in our present Ledger, "simply by bringing down the balances showing resources and liabilities under their separate accounts, instead of transferring them to Balance account. "This we have done. It will now be evident that "there was no actual necessity of opening a Balance account; the only object in doing so was "to exhibit, *under one title*, the resources and liabilities. "In practice, this account is rarely ever exhibited on the Ledger, but "its contents are shown in a separate Balance Sheet, various forms of which we have given elsewhere in this work.

It is often a matter of wonder to the new student in Accounts why the difference between the sides of Stock account, being transferred to Balance account, should equalize it. A moment's thought will dispel the mystery. "Before closing any of the accounts in the Ledger, we ascertain by the Trial Balance that our debits and credits are equal, and we take care, in every step, to keep them so; for whenever we debit any account, we credit some other account with the same amount, and *vise versa*. In "closing up" the Ledger, we call this process "transferring;" but it is exactly "equivalent to posting. Let us see if this is not so.

"The first entry of this kind was to *credit* Merchandise and *debit* Balance with the property unsold. So far as this affected our Merchandise account, it was equivalent to selling the merchandise, and receiving therefor an absolute resource, which we have called "Balance," but which is Merchandise, reckoned at its true value. We can now treat our Merchandise account as if the property were all disposed of. This we do, in fact, by representing the difference between the sides as a *gain*. We now *debit* Merchandise account with this gain, and *credit* Loss and Gain, preserving, as before, our fundamental rule of "equal debits and credits." We pursue this policy with all the accounts, transferring always to the opposite side from that on which the closing entry is made, and thus maintaining a perpetual equilibrium. "The balances which we transfer to Loss and Gain account might, with equal propriety, be carried directly to Stock account, but that "it is desirable to exhibit, in one amount, the net gain or loss during the business. It will be borne in mind, that the balancing or closing of an account is simply "upon the principle of cancellation. The account is made to "balance" only "by taking away the *excess*. But that excess appears "elsewhere, and *on the same side* of the Ledger. These balances of gains, losses, resources, and liabilities are thus transferred to the two accounts, "Loss and Gain" and "Balance," thus exhibiting in the former, all the gains and losses, and in the latter all the resources and liabilities. This leaves, except the Stock account, but these two accounts open, which, taken together, must have equal debits and credits, "as we have never failed in each step to produce this result. The Stock account, as it now stands, shows "the capital at *commencing*, and the Balance account "the capital at *closing*. There must, of course, be a discrepancy between these two accounts, "exactly equal to the gain or loss in business. Now as the gains and losses are all shown in the Loss and Gain account, "the difference between the sides being the net gain or loss, it follows that this difference must exactly equal the discrepancy between the capital at commencing, and the capital at closing; or, in other words, between the Stock and Balance accounts. If, then, we close the Loss and Gain account into Stock, we shall have exhibited in Stock account, "first, the capital at commencing, and next, the gain or loss during business, which, together, must equal the

## GENERAL REMARKS.

capital at closing. "The Balance account showing all the resources, and all the outside liabilities at closing, must represent the same amount; and hence, the balance of either transferred to the other, must equalize the sides."

This is usually one of the most difficult points of comprehension in the student's path, but all such difficulties give way readily to a little momentum of reason and determination.

It will be apparent that throughout the discussion thus far, we have drawn a marked distinction between the *proprietor* and the *business*. It is necessary that this distinction be clearly apprehended before we proceed farther; as, if there is any thing peculiar in this treatise, it will be found to emanate from this recognition.\* The great fact to which we refer, is strikingly apparent in the first entry upon our books, which was to credit Stock with the investment. Now if we inquire *who* credits Stock, we shall be forced to the conclusion that there is a party represented here, entirely distinct from stock, or the proprietor; as it would be sheer nonsense to express the fact that a man owes *himself*. The person competent to construct a system of philosophy on such a basis, would be able to show how a man might lift himself by his own boot-straps, or get rich by taking money from one pocket and putting it in the other. The fact clearly stated is, that the books represent "the concern, and not the proprietor, and the account opened with "Stock" is precisely "the same as that opened with any other person, except that the *final settlement* with Stock will not take place until the business ceases, or he withdraws from it. If Stock account, then, shows an excess of credits, "it is as much a liability as Peter Cooper's account, and must eventually be canceled by payment as well. To make this still more plain, let us see in what light Stock himself views it. Suppose the investment in this enterprise is only one among many which he has made. Suppose he has, also, a mill, wherein he has invested \$10,000; and a tannery where he has invested \$15,000. How will he keep an account with these three distinct concerns in his private books? According to the principles of accounts, he will charge the mill, the tannery, and the store, each with its cost, or the amount invested in it. He does this upon the principle of holding these concerns responsible for such investment, and upon the full expectation that they will eventually pay him what they thus owe. Our reasons for crediting Stock on the books of the store (which is the concern here represented) will now be sufficiently apparent, and the attentive student cannot fail to see that this credit is as much a liability of the concern as any credit on our books.

If there be still any doubt as to the correctness of this position, let us dissipate it, at once, by analyzing the second entry in the preceding series of transactions. The first entry, according to our theory, gave us a resource in cash of \$5000, and a liability to Stock of the same amount. The second entry, which we propose now to consider, created a new liability to Peter Cooper of \$500, but, at the same time, reduced the former liability to Stock in the same amount; so that the relative position of our resources and liabilities was not changed. The reason for this entry was this: Stock was owing Peter Cooper \$500, which he did not

\* All authors whom we have consulted—and "their name is legion"—agree that "Stock," as a Ledger title, represents the proprietor, or as some few elegantly express it, "the owner of the books"; while not one among them attempts to give a reason for crediting this account with the investment, except that it is used to represent the capital; and of all the rules given, both fallible and "infallible," for journalizing, no one attempts to apply such rule to the first, or opening entry. Now, it is impossible, grammatically, that the same set of books should, at the same time, represent two distinct and opposite interests. All the expressions used in the books purport to emanate from some person or persons having a common interest in the transactions, and all the entries, of whatever nature, must necessarily be the exponent of the same interests. A pronoun in the first person, either expressed or understood, cannot properly represent two separate and distinct parties in the same sentence, or the same discussion. So, if it be necessary, in crediting Stock for the original investment to assume a position *distinct* from Stock, the same necessity must exist, with equal force, through all the subsequent entries. The more this position is studied, the more apparent will be its truthfulness.

## EXERCISES FOR THE LEARNER.

care to pay from his private funds. He reasons thus: I have \$5000 which I can invest in this business, but I also owe Peter Cooper \$500, which is not yet due. Now I will invest this capital upon the condition that this liability be paid by *the concern* when it matures. The concern accepts this proposition, and first credits Stock with his investment, and next debits him with the amount *assumed* for him. The liability to Peter Cooper is now transferred from Stock's private books to those of this concern, and the concern's liability to Stock is decreased to the extent of the new liability thus assumed.

---

## EXERCISES FOR THE LEARNER.

### FIRST SERIES.

It is hoped that the preceding exercises in their fullness of explanation and illustration will enable the student to carry successfully through a series of transactions embracing the same general principles. The following memoranda will comprise a month's business, and the student is required to write up therefrom all the books represented in the preceding series. The form and arrangement of the books he will of course gather from the examples given; and he will find no point of difficulty which has not been fully discussed in connection with Sol. I. These exercises will require him to study well the form of expression in the Day Book, and the principles which govern the Journal, and will afford an excellent test of his proficiency in what he has passed over. The great objection to be urged against published text books in this science is, that too little is left for the mind of the student. There is a wide difference between *copying* the forms in Accounts and *originating* them; and hence we have followed each exemplified set of books, with a series of transactions embracing the same principles—which the student is required to put in proper form in the various books—and giving the *result* of the entries which he is required to produce. If we are not greatly mistaken, this will be the most useful portion of the work, and should, under no circumstances, be omitted.

### Memoranda.

Jan. 1st, Commenced business with a cash capital of \$6000. 2d, Bo't of E. R. Felton, for man, 100 bbls. Flour, @ \$8. 3d, Sold W. E. Crocker on %, 20 bbls. Flour, @ \$8.50. 4th, Bo't on our note, @ 30 days, of C. S. Sill, 20 pieces Calico, @ \$3; 10 do. figured Silks, @ \$9. 5th, Sold E. C. Packard, for cash, 30 bbls. Flour, @ \$8.25. 6th, Paid cash for set of books for use of store, \$15. 7th, Bo't of E. P. Selmer, for cash, 200 bbls. Genesee Flour, @ \$9; paid Drayage on same, in cash, \$3. 10th, Sold Hiram A. Pryor on his note @ 30 days, 100 bbls. Genesee Flour, @ \$9.50. 12th, Sold W. H. Clark, for cash, 10 pieces Calico, @ \$3.75. 15th, Paid Cash for repairing store, \$15. 16th, Bo't of J. D. Williams, on %, 50 pieces Merrimac Prints, @ \$5. 17th, Sold R. C. Spencer, on %, 25 pieces Merrimac Prints, @ \$5.35. 20th, Sold R. W. Hoadley, for cash, 50 bbls. Genesee Flour, @ \$9.50. 21st, Received Cash, in full, of W. E. Crocker's %. 22d, Paid J. D. Williams Cash on %, \$100. 25th, Paid Clerk hire in full to Feb. 1, \$50. 27th, Sold E. B. Rockwell, on %, 50 bbls. Genesee Flour, @ \$10. 29th, Received Cash on % of E. B. Rockwell, \$250. 31st, Paid Store rent, in cash, \$100.

\* The student will please ascertain if this is correct.

## QUESTIONS FOR REVIEW.

## QUESTIONS FOR REVIEW.

### CLOSING THE LEDGER.

- Account will
- 5
1. What is the chief difficulty with learners in closing the Ledger? 2. What is the effect of "closing up" an account? 3. How is a *Real* account closed when the sides are equal? 4. How, when unequal? 5. How is a *Representative* account closed when the sides are unequal? 6. At what stage of the business does Stock account cease to represent the proprietor's interest? 7. Why is this? 8. How can we at any time ascertain the proprietor's interest? 9. What is the usual method of carrying gains and losses to Stock account? 10. What is the advantage of opening a "Loss and Gain" account? 11. To which side of Stock account are gains carried, and how do they affect that account? 12. To which side are losses carried, and how do they affect the account? 13. Can the gains and losses be thus disposed of, without disturbing the *Real* accounts? 14. What is the object of opening a "Balance" account? 15. How can we dispose of the amounts properly carried to Balance account, if we wish merely to show an era in our business? 16. What, then, is the prime object in closing the Ledger accounts? 17. What does an entry in red ink on the Ledger denote? 18. How are red ink entries always transferred? 19. Why transferred to the opposite side?

### ORDER OF CLOSING.

- 5
20. What is the first step in closing the Ledger? 21. What results are shown by the "Loss and Gain" account? 22. What by the Balance account? 23. What is the second step? 24. When the inventories are all entered to the proper accounts, what will be shown by the Ledger? 25. What is the third step? 26. When the balances have been properly transferred, what will the "Loss and Gain" account show? 27. What is the "Balance" account? 28. What is the fourth step? 29. Of what use is the "Second Trial Balance"? 30. What is the fifth step? 31. When the net gain or loss has been transferred to Stock or Partners' accounts, what will those accounts show? 32. Why must the balance of these accounts agree with the balance of Balance account? 33. What is the sixth step? 34. What will the Balance account show when complete?

### GENERAL REMARKS.

- 150  
150  
6075 75
- 6375 75
36. What is shown by the Balance account in Set I? 37. Have we sufficient data here to enable us to open a new set of books? 38. How can we represent the state of our affairs in the present Ledger? 39. Has this result been shown? 40. Was there really any necessity for opening a Balance account? 41. Why was it done? 42. Is this account often exhibited on the Ledger in actual business? 43. Why does not the transferring of balances from one account to another disturb the equilibrium of the Ledger? 44. What is this transferring of balances equivalent to? 45. Will you explain this by analysis? 46. Where might the balances carried to the Loss and Gain account properly be transferred? 47. Why is it not done? 48. Upon what principle are accounts "balanced"? 49. How is an account made to balance? 50. Where does this excess subsequently appear? 51. When all the balances except Stock, are transferred to Loss and Gain and Balance accounts, why must these, with Stock account, contain equal debits and credits? 52. What is shown by the Stock account at this stage? 53. What by the Balance account? 54. What discrepancy is there in these two accounts? 55. Why will this discrepancy exactly tally with the difference between the sides of Loss and Gain account? 56. What will the Stock account show when this discrepancy is transferred from the Loss and Gain account? 57. Why will the Stock account now agree with Balance? 58. What particular interest is always represented by a set of books? 59. What relation does Stock account sustain towards the business? 60. If the credit side of Stock account exceeds the debit, how does it affect the business?

**INDEX TO LEDGER B.—SET II.**

## **INDEX TO LEDGER B.—SET II.**

The purpose and importance of an Index to the Ledger will be immediately apparent. Where there is a large number of accounts much time is saved by having an alphabetical list to which to refer. The example given below will be sufficient to show the general purport of an index, but does not present the best form. The form in general use is so common and so very simple, that any attempt at explanation would be useless. We have not thought it necessary to give the index in connection with any other Set, as it would merely occupy space without affording information. We have chosen this page instead of the one next preceding the Ledger, because it best answers our purpose so to do.

\* The term "Sundries" is difficult of explanation to a beginner; and many teachers and a few authors have thought to get rid of the difficulty by ignoring the term, upon the principle often quoted, that—

“ Where ignorance is bliss, 'tis folly to be wise;”

but, like most attempts of this kind, it falls very far short of its object; for, however unnecessary the term may be in journal expressions, its convenience will secure its perpetual use by practical men, and the sooner it is comprehended by the learner the better. As used in this connection, it is, as will be readily seen, merely a caption for the Journal entry, indicating that the entry consists of sundry debits and sundry credits. These sundry debits and credits being afterwards specifically named, and their amounts extended, it is easy to infer that "Sundries" is not used as a Ledger account, but merely as an expression. Its convenience will be more readily apparent in posting to the Ledger, as it affords an expression to be entered under the Ledger title. There are, in reality, four kinds of journal entries, each requiring a different expression, viz.: 1. Those consisting of one debit and one credit; 2. Those consisting of one debit and several credits; 3. Those consisting of one credit and several debits; 4. Those consisting of several debits and several credits. Each of these is illustrated in this journal, and a little careful attention will make the student sufficiently acquainted with their characteristics.

\* The term "Mortgage Payable" is but another name for Bills Payable; the accounts may be kept separate or together. We have adopted the former method, for the purpose of illustrating the principle, and to express our preference. There is a distinction between a promissory note and a mortgage on real estate; and the majority of business men would prefer to have that distinction preserved in their accounts.

## GENERAL STATEMENT.—SET II.

### GENERAL STATEMENT.

In the preceding Ledger (Set II.,) we have the current condition of H. B. Bryant's business on the 28th of February, as far as that condition can be shown by the Ledger, *without closing the accounts*. This part of the labor we leave for the student; but shall give, in this connection, a statement which will afford him efficient aid. It is essential that the principles of this statement, as also the peculiar form and method of enforcing these principles, be clearly comprehended, as herein lies the key to much that at first seems mysterious and incomprehensible. It will be seen that this statement differs from the previous one (Set I.,) only in form and arrangement.

#### Trial Balance.

## EXERCISES FOR THE LEARNER—2D SERIES.

The theory enforced by the preceding "General Statement," is one that must perpetually govern the record of business transactions, and one that will afford ample basis for explanation to those not thoroughly familiar with the science of Double Entry. It is, simply, that *all gains or losses in business are substantiated by the actual increase or decrease of net resources.* As simple as this proposition may appear, it will require not a little well-directed mental effort to comprehend it in all its special relations and applications.

The student is now required to "Close up" the Ledger according to instructions in Set I.

## EXERCISES FOR THE LEARNER.

### SECOND SERIES.

Feb. 1st, Commenced business with the Resources and Liabilities shown in Balance account, Ledger A.\* Sold John D. Hinde on  $\frac{1}{2}$ , 50 bbls. Flour, @ \$11. Bo't of John Gundry for cash, 200 sacks Coffee, 13,000 lbs. @ 9 c. 2d, Accepted J. D. Williams' Draft on us @ 10 days, in favor of E. C. Bradford, in full of his  $\frac{1}{2}$ . 3d, Bo't of D. C. Collins 500 bbls. Flour, @ \$8; Paid him cash, \$1500; order on R. C. Spencer, \$183.75; our note for balance, due in four months. 4th, Paid cash for sundry expenses, \$15. Sold to J. A. Harper for cash, 200 bbls. Flour, @ \$8.25. 5th, Received cash of Hiram A. Pryor, in full for his note of \$950. 6th, Paid our note in favor of C. S. Sill, given him on the 4th ult., in cash, \$150. 7th, Rec'd cash of E. B. Rockwell, in full of  $\frac{1}{2}$ . Paid Store rent in cash, \$150. 8th, Sold Samuel Jones on his note, 300 bbls. Flour, @ \$8.50. 10th, Sold J. H. Bell on  $\frac{1}{2}$ , 10 pieces Calico, @ \$3.75. 15th, Received from the executors of my deceased father's estate, in cash, \$1200. 16th, Paid cash for acceptance favor of J. D. Williams, 2d inst. 20th, Sold Henry A. Wise, 10 pieces figured Silk, @ \$10. Received in payment his draft @ 10 days on John Brown. 22d, Bo't of James Buchanan on  $\frac{1}{2}$ , 6 pipes of Wine, 720 gallons, @ \$3.50. 25th, Sold our sight draft on J. D. Hinde, to balance his  $\frac{1}{2}$ , for which received cash. 28th, Discounted our note of 3d inst., favor of D. C. Collins, due in four months from date. Paid for face of note, less discount for 3 months @ 7 per cent., in cash, \$2324.84.

## AUXILIARY BOOKS,

We give below two of the most common and essential auxiliary books in use, the Cash Book and the Bill Book. A moment's inspection will suggest the great advantage of these books, as showing special facts not easily gathered from any other source. The Cash Book, when kept, is closed every night, and the balance—which must agree with cash items on hand—brought down as a basis for the next day's business. This necessity of having the difference between the receipts and disbursements of cash, as shown by the two sides of the Cash Book, agree with the cash on hand, is the best possible safeguard against errors and omissions, and one which we shall more fully exemplify hereafter.

## SET II.

The Bill Book should never be omitted in any business dealings with notes, either payable or receivable; and especially is it important to keep a record of the amount and condition of notes payable.

It will be seen that the entries made in these auxiliaries are taken from the transactions of Set II., and hence the cash on hand, notes on hand, and notes outstanding, as here shown, will be found to agree with the balance shown in the proper Ledger accounts.

The forms submitted are those in general use, and are sufficiently suggestive.

## QUESTIONS FOR REVIEW.

## QUESTIONS FOR REVIEW,—SET II.

In the previous questions under this head, we have referred, by number, to the written answers in the preceding remarks. We shall hereafter secure to the student the advantage of framing his own answers, aiming, however, to ask no questions upon which instructions have not been previously given.

1. Where are the Resources and Liabilities shown at the commencement of Set II obtained? 2. Can Gains and Losses be shown at the commencement of business? 3. Why not? 4. What has become of the gain shown to have been realized in the month of January? 5. How does the interest of the proprietor at the commencement of Set II vary from his interest at the commencement of Set I? 6. What has effected this difference? 7. When is it proper to increase the credit side of Stock account? 8. When the debit side? 9. Is the term "Sundries" used as a Ledger account? 10. For what purpose is it used? 11. How will its convenience be most apparent? 12. How many kinds of Journal entries are there, and what are they? 13. What is meant by the term "Mortgage Payable"? 14. What is the difference in effect between a Mortgage Payable and a Bill Payable? 15. Is there any difference? 16. How may Ledger accounts be opened in Set II? 17. How many of them are canceled? 18. Which of these Ledger accounts exhibit Resources? 19. Which Liabilities? 20. Which Gains? 21. Which Losses? 22. What is the distinction between the accounts of "Union Bank" and "Union Bank Stock"? 23. What will be the first step in ascertaining the gain or loss in Merchandise account? 24. If the net cost of merchandise exceeds the value of merchandise unsold, will the account show a gain or a loss? 25. Why do you carry the value of merchandise unsold to the credit of the Merchandise account? 26. Why make the entry in red ink? 27. Can you give a rule for the use of red ink entries in the Ledger? 28. In transferring a red ink entry to another account why do you always carry the amount to the opposite side of the new account? 29. What Ledger account in Set II corresponds with Stock account in Set I? 30. What does H. B. Bryant's account represent, as it stands on the Ledger? 31. How much does it fall to show his interest in the business on the 28th February? 32. Where will you get the amounts which will make up the difference? 33. Is it necessary that a "Loss and Gain" account should be opened? 34. If not opened, to what account would it be proper to carry the losses and gains at the close of business? 35. What advantages are gained by opening a "Loss and Gain" account? 36. Is it necessary to open a Balance account? 37. If a Balance account is not opened, how can the resources and liabilities be represented on the Ledger? 38. Is it customary in business to open a Balance account? 39. What is the theory of the "General Statement" as given in Set II? 40. What are the auxiliary books given in connection with this set? 41. For what purpose is the Cash Book used? 42. How often is the Cash Book closed? 43. With what must the difference in the sides agree? 44. What is the advantage of the daily test? 45. For what purpose is the Bill Book used? 46. What is the particular convenience of the Bill Book? 47. With what account in the Ledger will the uncancelled notes in the Bill Book Receivable agree? 48. In the Bill Book Payable?

\* The Bill Books in common use have the records of Bills Payable in one part, and Bills Receivable in the other, conversely arranged, so that each seems to be at the commencement of the book. It is usual to put the last day of grace in the "When due" column, although some insist upon including the day upon which the note is written to fall due. When both dates are specified, it is done in the form of a fraction, similar to the example shown.

Cash for balance	44 00—156 50			
Received Cash for rent of offices in second story				500
	39848 75			

\* We have varied this statement from the former, for the purpose of illustrating the different methods of opening books. The *Liabilities* here enumerated are simply those amounts owing outside the concern. The amount owing to the proprietor is, of course, the difference between the sum of these outside liabilities and the sum of all the resources, and, instead of being shown in one amount, as in Set II., will be indicated by the difference between the debit and credit of the Stock, or H. B. Bryant's account.

DAY-BQOK,—SET III.

Shipment to Albany	Dr.	To Sundries . . . . .	741
		" Merchandise . . . . .	740
		" Cash . . . . .	1
" Shipment to Albany " is a new account, opened to represent a particular enterprise, and although it relates to merchandise, it is distinct from the merchandise in store, and is given this new name to mark that distinction. It is as though we had sold our merchandise for \$740, and immediately invested the same in this adventure. The account is debited with its cost, and merchandise and cash credited, as per formula on page 17.			
			2
Cash	Dr.	To Merchandise . . . . .	52
			52
J. R. Wheeler & Co.'s Consignment		To Cash . . . . .	100
			100
The account here opened—J. R. Wheeler & Co.'s Consignment—is precisely the same, in effect, as would be an account with J. R. Wheeler & Co., although it really represents the <i>property</i> of that firm, which we receive, as commission merchants, to sell. Instead, therefore, of debiting the Consignment account with the value of the property, we debit it only with what it has cost us.			
			3
Sundries	Dr.	To Merchandise . . . . .	156 50

The entry above is made for the purpose of exhibiting on our books the net amount owing to J. R. Wheeler & Co., as the result of our business with them so far; and as their Consignment account was used to show the facts connected with the sale of their property, we can ascertain from this account how much they are entitled to, as net proceeds, which will make the difference between the sides of that account, when its entire contents proceed are properly shown; in this case, \$11575. The effect of this entry will be to close the Consignment account, and carry its results to the account of J. R. Wheeler & Co.

	16				
Private Account	Dr. . . . . To Cash . . . . .	500		500	
According to the principles already expressed, it would be proper to debit H. B. Bryant with this amount, as he has drawn it from the business for his own private use. "Private Account," then, is simply a subdivision of H. B. Bryant's, or Stock Account—and should, eventually, be closed into this account.					
	17				
Cash	Dr. . . . . To Bills Receivable . . . . .	57	50	57	50

		77005	45	77005	45

\* Some authors teach the propriety of opening a "Private Expenses" account for transactions of this kind, closing it into Loss and Gain, the same as the general Expense account of the business. It requires no great tact to see the fallacy of this reasoning—if, indeed, it is properly so called—as, in such a case, the prosperity or adversity of the business would depend, not on the real amount of *gain* or *loss*, but upon how much was drawn out for private use. There is no more justice in debiting Loss for sums drawn from a concern by the sole proprietor, than there would be for sums drawn by a partner. The authors who propagate this fallacy, usually give two rules for journalizing—both "infallible,"—one for stock books, and another, and different one, for partnership books.

# JOURNAL,—SET III.

NEW YORK, MARCH 18, 1859. Dr.

Cr.	U.S.		Amount brought Forward . . . . .	77005 45	77005 45

375		Cash Dr.	To Shipment to New Haven	1200	1200
150		Cash Dr.	To C. S. Dole & Co.'s Consignment	4500	4500
300		Cash Dr.	To Union Bank Stock	3000	3000
1000		Sundries Dr.	To Cash		
500		Bills Payable			
275		Interest . . . . .			
500			It should be borne in mind that notes, like cash, ought always to be debited and credited with the value written upon them. If they are really worth more or less than this expressed value, that difference must be shown in some other account. In the case above, the face of the note is \$1000; but the worth of the note, with the interest due upon it, is \$1005.83; and this is the amount we are obliged to pay, in order to cancel it. We therefore debit Bills Payable with the face of the note, and Interest with the amount we pay for interest.		
57 50		Bills Payable Dr.	To Sundries . . . . .	1600	
300			To Cash . . . . .		
205 45			" Interest . . . . .	1665 57	34 48
			In this case, the note is really worth less than its expressed value, as we are obliged to pay for it only \$1665.57, which is \$34.48 less than its face. We here debit Bills Payable with the face of the note, according to principles laid down, and credit Cash for the amount of cash paid, and Interest for the difference, that being the amount produced by Interest, or by paying our note before it is due."		
		Cash Dr.	To C. S. Dole & Co.'s Consignment . . . . .	4250	4250
		J. R. Wheeler & Co. Dr.	To Bills Payable . . . . .	11575	11575
				104136 28	104136 28

\*The difficulty experienced by teachers in explaining the debit and credit of Interest arises most frequently from the fundamental error of definition. Webster defines Interest—"Premium [cash] paid for the use of money." This definition answers Webster's purpose admirably; but the accountant who accepts it for the purpose of applying any rule for journalizing, will most assuredly get befogged; for interest is not what is received or paid for the use of money, but the use of money itself. As well might one say that labor is what is received or paid for services rendered. To make this distinction plain, let the student bear in mind that whoever uses the money upon which interest is to be paid, pays for the use: in other words, pays for the interest. When defined in this way, he will have no difficulty in applying any rule or principle competent to distinguish debits and credits.

We have thought proper to omit the Ledger in this Set, believing the student to be fully capable to post the accounts without assistance of this kind. We shall adhere to this plan hereafter, except in cases where some new principle or application may be otherwise more clearly shown. The result of this business will differ from that shown in the preceding Sets, exhibiting, instead of a net *gain*, a net *loss*. This fact will of course, be apparent in the Loss and Gain account—the debit side of that account being the larger—which will be closed “By Stock,” and the result carried to the debit side of Stock (H. B. Bryant’s) account. Before attempting to show the result of the business, by closing the Ledger or making a Statement, the student must not forget to close “Private Account” into H. B. Bryant’s (Stock) account, it having already been explained that Private Account was merely a subdivision of Stock account. This might have been done, and very properly, too, by a regular Journal entry, but the result is the same, and the method here suggested, besides being more simple and direct, is equally intelligible.

In order, however, that the student may be made familiar with the various methods of closing Ledger accounts, we shall exemplify in the succeeding Set the manner of producing all the results through the Journal. This latter method is practised to considerable extent in business houses, and particularly in joint stock concerns.

We have here a somewhat novel feature, indicated in the Inventory as “Interest Payable, due on Mortgage.” This represents the interest which has accumulated and is unpaid on the mortgage held against us; and is as much a liability as the mortgage itself. In closing up the Interest account, this amount (#84) should be brought in, on the debit side in red ink “To Interest Payable,” and carried to the Balance account as a liability. Were the business to be continued under the same proprietorship, this accumulating interest might be allowed to run on without mention until paid, when it would be charged to Interest %, thereby decreasing the gains; but as it is necessary to show the exact state of the business at this time, *all* the liabilities must be shown.

The student will please make his Ledger conform to the following Trial Balance, and close it in accordance with the Statement which follows.

## H. B. BRYANT'S BOOKS "CLOSED."

From the foregoing statement the student will be enabled to close up this Ledger with certainty, and to produce the results in a balance account which are exhibited under the head of Resources and Liabilities there shown. The only difference between this and the preceding sets is, that the business has been a losing instead of a prosperous one, and that, consequently, the net resources of the concern are diminished.

Mr. Bryant now proposes to change his business, and to take in a partner, Mr. H. D. Stratton, who is to furnish an equal amount of capital. The new concern will commence with a cash capital, and with no liabilities. A new set of books will be opened. This will leave Mr. Bryant to close up his old business in his own books.

The Memoranda below are for that purpose, and the student is required to write up the transactions given, and produce a Balance Sheet of the result before commencing the next set.

In closing up the business of H. B. Bryant, as per memoranda, it will not, of course, be necessary to open a new Ledger, nor even new accounts in the old Ledger; particularly, if there be sufficient space under the old accounts for the few necessary entries. The opening entries below, enumerating resources and liabilities are supposed to be taken from the last Balance account. The same purpose would be effected by bringing the balances down under their proper accounts, instead of transferring them to the Balance account. This method is shown at length in the succeeding set.

### Memoranda—H. B. Bryant's Books Continued.

April 1. The following is a statement of the Resources and Liabilities of H. B. Bryant's private books, as taken from the Balance account of his Ledger:

**Resources.**—Mds on hand, \$37.50; Real Estate, \$12000; Cash, \$11337.65; Bills Receivable, \$4500; Union Bank, \$1000; E. R. Felton's Indebtedness, \$4000.

**Liabilities.**—Bills Payable outstanding, \$11575; Mortgage Payable, \$9000; Interest due on same, \$84; Bryant's net investment, \$12216.15.

1. Invested in the concern of Bryant and Stratton, Cash, \$10000.\*
2. Received Cash of E. R. Felton, in full of %, \$4000.
3. Sold Bryant & Stratton Store and Fixtures for \$12500. Transferred Mortgage for \$9000; Interest due on same, \$84; received Cash for balance, \$3416.
4. Paid our acceptance favor of J. D. Wheeler & Co., \$11575. Gave in payment W. H. Crocker's Note, due May 7, \$4500, less discount of 34 days, \$29.75; Cash for balance, \$7104.75.†
5. Sold James Atwater, Lockport, for Cash, 50 sets Penician Writing Books @ 80 cents, \$40.
6. Deposited in Union Bank, Cash, \$1088.90.
7. Drew from Union Bank and invested in Bryant & Stratton's concern, \$2688.90.

\* The account with Bryant & Stratton should be treated in H. B. Bryant's books the same as any personal account. Mr. Bryant has, in reality, laid this money to Bryant & Stratton. He, therefore, should debit them and credit cash. See corresponding entry on Bryant & Stratton's Books, Set IV.

† The note which we hold against W. H. Crocker is really worth its face, less the interest for the time it has yet to run, and will be received only for its real value, \$4470.35. In this transaction, therefore, we pay for our note, \$11575, and for the discount on W. H. Crocker's note, \$29.75. Our entry, then, is,—Debits: Bills Payable, \$11575; Interest, \$29.75—Orbits: Bills Receivable, \$4500; Cash, \$7104.75.

## COMMISSION BUSINESS.

### Trial Balance.

Debitors.	Balances.	Creditors.	Balances.
	37 50	H. B. Bryant	12210 15
12000	18735 65	Merchandise	12000 15
	4500	Freal Estate	12000 15
	11675	Cash	12000 15
	6000	Bills Receivable	18735 65
	12000	Bank	4500
	12000	Bills Payable	2068 90
	12000	Interest Payable	11575 90
	12000	Salon	9000
	12000	Stratton	4000
	12718 65	Interest	73313 70
	75413 70		12718 65

### Balance Account.

Receipts.	Balances.	Liabilities.	Balances.
Bryant & Stratton	12000 60	H. B. Bryant	12000 90

The above Balance account shows the final result of the three months' business of H. B. Bryant, embraced in the foregoing three Sets, and most clearly demonstrates the fundamental principle for which we have contended. It will be apparent that this result could as well, and much more easily, have been shown without closing the Ledger at the end of each month, but the student, if he has faithfully followed his instructions, will not find it necessary to inquire why this was not done. We might have presented a greater variety of transactions had we chosen a different kind of business for each Set; but that would have deprived us of one of our chief objects—that of exhibiting the method of opening a new set of Books from the Balance account of an old Ledger, and the continuation of the same business from one set to another. Having, as we think, faithfully accomplished this part of our design, we shall seek new attractions and illustrations in other channels.

## COMMISSION BUSINESS.

### SALES DEDUCTED ACCOUNTS SALES.

On the three following pages we give a few brief examples of the special forms necessary for a Commission business. They are not submitted as models, but as forms more or less commonly in use. The Commission Sales Book on pages 72 and 73 contains all the particular connected with the three consignments which comprise a large share of our business in Sevenoaks, and the Accounts Sales on the opposite page are simply abstracts of those special sales, such as the commission merchant sends to his principal upon the "closing cut" of a consignment. We have varied the form in these Accounts Sales, that the student may become familiar with the different methods of expressing the same result, in use among business men.

### ACCOUNTS SALES.—SET III.

## EXERCISES FOR THE LEARNER.—THIRD SERIES.

### EXERCISES FOR THE LEARNER.

#### THIRD SERIES.

##### Memoranda.

March 1st, Commenced business with the Resources and Liabilities as shown in the Balance account of Ledger B.\* 2d, Sold L. S. Blits, for cash, 25 pieces Merrimac Prints, @ \$5.75. Received from Joseph Cary, Albany, to be sold on his % and risk, 200 bbls. Flour, invoiced \$8; 10,000 lbs. canvassed Hams, invoiced at 11 c. Paid freight on same, in cash, \$100. 4th, Shipped N. C. Winslow, Cleveland, to be sold on our % and risk, 200 sacks Coffee, 12,000 lbs. @ 9 c.; 6 pipes Wine, 720 gals., @ \$2.50; paid cash for Insurance on same, \$50. 5th, Sold W. H. Hollister, on his note at 60 days, 200 bbls. Flour, (Cary's Consignment,) @ 90. Received cash in full of John Brown's acceptance, dated Feb. 30, at 10 days, \$100. 7th, Shipped per steamer Isaac Newton, and consigned to J. G. Deshler & Co., Buffalo, to be sold on our % and risk, 102 boxes Sugar, each 500 lbs. @ 8 c., which we purchased of Samuel Jones, giving in full payment therefor his note of Feb. 8, for \$2500. 9th, Sold John J. Cape, at 10 days on %, 10,000 lbs. canvassed Hams, (Cary's Consignment,) @ 11 c. 12th, Closed Cary's Consignment, and rendered him an Account Sales of the same. Our charges for storage and advertising, \$25; commission 2½ % on \$2,900, \$72.50. Joseph Cary's net proceeds, \$2702.50. Due by equation April 23. 14th, Received of L. S. Paine, Tonawanda, to be sold on his % and risk, 2000 bush. Corn, invoiced at 80 c.; 1000 bush. Wheat, invoiced at \$1.75; paid freight in cash, \$150. 15th, Sold Stephen A. Douglas, for cash, 1,000 bush. Wheat, (Paine's Consignment,) @ \$1.90; Sold Horatio Greeley, for cash, 2,000 bush. Corn (Paine's Consignment,) @ 90 c. 16th, Closed Paine's Consignment, and rendered him an Account Sales. Our charges for storage, etc., amount to \$15. Our commission, @ 2½ %, \$2700, \$675.00. L. S. Paine's net proceeds remitted in cash. 20th, Received advice from N. C. Winslow, Cleveland, of the sales of Coffee and Wine shipped him on the 4th inst. Our net proceeds of the same amount to only \$2500, which he has remitted us in cash. 21st, J. H. Bell pays us cash to balance %, \$37.50. 22d, Paid James Buchanan's draft on us for \$2520, in cash. 23rd, Received advice from J. G. Deshler, Buffalo, of the sales of the sugar sent him on the 7th inst., our net proceeds of which are \$2700, and for which he has remitted us his note @ 10 days from March 17th. Received cash of John J. Cape, in full of his indebtedness. 20th, Closed our % with Joseph Cary, due by equation, April 23; amount due him \$2702.50; discount off, in our favor \$14.70. Paid him W. H. Hollister's note, due May 7th, for \$1800, less discount for 42 days. Cash for balance, \$602.50. 30th, Paid clerk hire and rent in cash, \$175. Received cash in full for J. G. Deshler's note of the 17th, due this day.

\* Second Series.

† In cases of this kind, where a debit of interest may offset a credit of the same amount, it may be optional with the accountant whether or not he make any entry to the interest account. If it be desirable to show the total amount received and paid for interest, it will be necessary to enter all the debits and credits of the account, whether they cancel or not.

### TO THE STUDENT.

It is presumed that you have, so far, followed out the design of the work in its practical and progressive development of the principles of Accounts, omitting nothing which has been prescribed, because you could not, for the moment, appreciate all its benefits. If you have pursued this policy, you cannot, at this stage, fail to see the advantages derived from these series of "Exercises for the Learner." Our object in instituting this feature was to shield you from the temptation of passing over the work without the trouble of thinking. We know the strength of such temptations, and we know, also, the utter fruitlessness of the issue, when they prevail.

We have, so far, confined our record of transactions to the old Italian method of historical Day Book, with Journal separate. We did so on account of its greater simplicity, and because we did not wish to distract the mind from more important considerations which it was necessary to enforce. As you are now more thoroughly grounded in the great truths of the science, we shall henceforth give a little attention to the more practical forms in use, and to a greater scope and variety of entries than heretofore. We wish you particularly to note the peculiar form of the Journal Day Book introduced in the following Set, that you may be able to express, in this manner, any conceivable transaction, combining all the essential points of the separate Day Book and Journal. Very few business houses adopt the old method of first entering transactions in a historical Day Book, and journalizing therefrom. Where more severely practical forms—for the purposes of condensation—are not in use, the Journal Day Book meets with great favor, as being both plain and practical.

## QUESTIONS FOR REVIEW.

### QUESTIONS FOR REVIEW.—SET III.

1. In what particular does the statement on opening the books in this set differ from previous statements?
2. What liabilities can there be to a business except to outside parties?
3. How can you ascertain what the concern owes to the proprietors or stockholders?
4. Is this amount always apparent?
5. Why not?
6. What does the account "Shipment to Albany" represent?
7. In what particular does it differ from Merchandise account?
8. What is represented by the account "J. R. Wheeler & Co.'s Consignment?"
9. Should his account be debited with the value of the property consigned to us?
10. How would such an entry affect us?
11. When the property represented in "Consignment" account is disposed of, why do you cancel the account?
12. How do you determine the net proceeds of a Consignment?
13. What is represented by "Storage and Advertising" account?
14. What by "Commission?"
15. What is the nature of a draft?
16. Why do you debit Ivison & Phinney with the face of their draft?
17. In what particular does H. B. Bryant's "Private account" differ from his Stock account?
18. How is "Private account" sometimes closed?
19. Why is it not proper to represent the balance of such an account as a gain or a loss?
20. Would the same rule apply to Partnership as to Stock books in this regard?
21. With what amounts ought notes and cash always to be debited and credited?
22. If they are really worth more or less than the face, how ought the difference to be shown?
23. What is the chief difficulty in ascertaining the debit and credit of interest?
24. Will Webster's definition of "Interest" suffice as a basis for journalizing?
25. What is a correct definition of "Interest" as the accountant should view it?
26. Is the business represented in Set III, a gaining or losing business?
27. How can you ascertain?
28. How will a loss in business effect the proprietors' account?
29. How should the account of Bryant & Stratton be treated in Mr. Bryant's private books?
30. How should the interest due on "Mortgage Payable" have been represented at the close of the March business?
31. How could it have been done?
32. Would this have increased or decreased the loss?

### GENERAL QUERIES.

33. In opening a Set of Books, what is the first consideration?
34. What will always be the difference between the resources of a concern and its outside liabilities?
35. Does Stock account in an individual business always represent the invested capital?
36. When does it not?
37. Will Stock account and the Representative accounts, taken together, always represent the invested capital?
38. Why are the Representative accounts so called?
39. Are they less real than the accounts technically so called?
40. If the increases and elimination of resources, commonly called gains and losses, should be carried immediately to Stock or Partners' Accounts, would there exist any necessity for Representative accounts?
41. What would the difference between the debit and credit sides of Merchandise account represent in that case?
42. How many methods are there of indicating the loss or gain in business?
43. What are they?
44. In what way can these two methods be made to prove each other?
45. In a final exhibit of resources and liabilities, what becomes of the Representative accounts?

\* To one who has looked carefully at the distinction between Real and Representative accounts, as shown in this treatise, it will be apparent that Representative accounts are temporarily used for convenience' sake, containing the gains and losses which are finally to be carried to Stock or Partners' accounts, thereby increasing or decreasing the net investment; while Real accounts are permanent, exhibiting perpetually, in the differences between their sides, exact resources or liabilities. While Representative accounts must always cease to exist by being absorbed into the accounts which they represent, whenever an exhibit of the condition of the business's resources, Real accounts form the essential matter of all such exhibits.

SET IV.

---

JOURNAL DAY BOOK,  
COMMISSION SALES BOOK, INVOICE BOOK, FORMS OF NOTES,  
DRAFTS, LETTERS, ETC.

LEDGER CLOSED WITHOUT BALANCE ACCOUNT; ALSO, BY JOURNAL ENTRIES.

---

PARTNERSHIP BUSINESS: PROSPEROUS.

## REMARKS ON SET IV.

## REMARKS ON SET IV.

In the transactions of this Set, we have introduced several new features, which will require more than a passing thought from the student.

**First.**—*The form of original entry—combining the Day Book and Journal.* This form is the most practical in use for general purposes, and is adopted, in essence, by accountants, in every department of business. Its chief advantages are in dispensing with a separate Journal, and in bringing the Day Book and Journal entries into such immediate connection as to leave no room to doubt their identity. The only objection that can be urged against it is the difficulty of making the entry intelligible, as well as symmetrical. As there can exist no transactions more difficult of expression than those given in this Set, we think this objection should have very little, if any, force. However, the student will often find his ingenuity taxed to the utmost in submitting transactions to this form.

**Second.**—*The different methods of considering Mdse. Co. transactions.* It will, of course, be understood that by "Merchandise Companies" is meant the temporary copartnerships existing between the consignor and consignee, having reference to the sale of particular consignments of merchandise. The nature of this species of copartnership differs from that of a general copartnership only in its duration, and the manner of conducting its sales. In Mdse. Co. business, one of the partners—the consigned—is the commission merchant, and, in that capacity, receives and disposes of the property as he would of a simple consignment; the only difference being that he is interested in the gains and losses. The two methods alluded to, and which are fully illustrated in the two months comprising this Set, differ only as regards the opening and closing entries. In the *first* method—exemplified by the three Mdse. Co. accounts, "A," "B," and "C," in the month of April—the principle recognized is, that the *holder* of the property is responsible for it. Thus, when we receive from Logan, Wilson & Co. an invoice to be sold on joint %, we debit "Mdse. Co. A" with the invoice and expenses, and credit the consignors with the cost of the invoice, thus making ourselves responsible for the property as though it were all our own. The consignor's entry, if recognizing the same principle, will be to debit us for the entire cost of the merchandise.\* In the *second* method, shown by the three Mdse. Co. accounts, "D," "E," and "F," the principle recognized is that the *owner* of the property is responsible. Thus, when we receive from Wm. K. Sadler, merchandise to be sold on joint account, we debit "Mdse. Co. D" with *our own share* only, and credit the consignor. The consignor's entry, in this case, if made to correspond with ours, would be to debit us for our share, and "Shipment in Co. to New York," for his share.

Where there are more than two parties interested, if the accounts are kept by the *first* method, the consignee should, as before, debit the Mdse. Co. account with its entire cost—in voice and expenses—and credit the consignor with their (the consignee's and consignor's) joint share, and any other party or parties with his or their share. The consignor would, in such a case, debit the consignee with their joint share, and each of the other parties with his or their share. The other parties would, if making an entry to correspond, debit the consignee, and credit the consignor each for his own share.

Where there are more than two parties interested, and the accounts are kept by the *second* method, the consignee should debit "Mdse. Co." account for *his own share* and *all charges*, and credit the consignor for his (the consignee's share). The consignor, on the other hand, should debit each of the parties for their respective shares, and "Ship't in Co." for his own

\* The supposition, in all these cases, is that the consignor furnishes from his own resources the property shipped.

## REMARKS ON SET I.V.

share. Each of the other parties should debit "Shipment in Co." and credit the consignor each for his own share.

The examples given, it is hoped, will fully illustrate these several points, and fasten the principles upon the mind of the learner. As will be seen in the results, the only difference in the two methods, is a simple matter of time. By the first method, the consignee is considered as responsible for the property *when he receives it*, and by the second, *when he has disposed of it*. The final result is the same in either case.

We do not submit these separate methods because we deem our understanding of them so essential in the conduct of Mds. Co. accounts,—although it is essential in this regard,—but because the more the learner permits himself to dwell upon these principles, and the better he comprehends them in all their bearings, the more thorough and available will be his knowledge of the science. He will learn little by copying the Journal where the opening and closing entries are made ready to hand, and the calculations upon which they are based are performed by the author, but in applying the principles in writing up the "Exercises" which follow, he will have ample opportunity to test his proficiency. We need hardly say, that, so far as absolute right and responsibility are concerned, the *second* method is the correct and philosophical one—the principle recognized being that the *owner* of the property is responsible. The only advantage possessed by the *first* method is, that the "Mds. Co." account shows its entire cost at the commencement.

The student will, doubtless, find it difficult to classify Mds. Co. accounts, as, in their current condition, they are neither Real nor Representative. It is for this reason, mainly, that it is deemed best to close them by a Journal entry, when the property they represent is disposed of. They might be made either Real or Representative. Thus, by debiting them with all the cost, and our share of the gain—(or, crediting with our share of the loss) the difference will represent what we owe to the parties interested, the account becoming thus Real. Or, by debiting them with all the cost and the gains of the other parties (or, crediting with the loss of other parties), the difference will represent our gain or loss, and the account thus becomes Representative. The learner will gain much by looking at this matter in all its bearings.

**THIRD.—The different methods of closing the Ledger.** In the month of April, the Ledger is closed without the use of a Balance account, by bringing down the resources and liabilities under their proper accounts. This is the *business* method; and if each month is supposed to represent a year, this would be a fair example of the manner of closing business books at the end of each year, forming a basis of resources and liabilities for the next year's accounts. The method of closing the Ledger by Journal entries, as exemplified in the month of May, is used in a large proportion of business houses, though requiring more labor, and possessing no advantage over the method heretofore explained. The usual entry in bringing down resources and liabilities is: "Old account, Dr. To New account," and the reverse. The "Balance" account is precisely the same as "New account."

**FOURTH.—A larger variety of auxiliary forms.** We have purposely introduced a great variety of auxiliaries that the student may become familiar with forms. We shall hereafter indicate how a majority of these books might be used, in connection with the Journal, to contain the record of original entries. This practice is becoming very prevalent in the larger business houses, where it is essential for the purposes of dividing labor and avoiding unnecessary writing. For instance, one clerk may keep the Invoice Book, another the Sales Book, another the Cash Book, etc., and each of these may be so kept as to post directly from them to the Ledger, instead of passing all the transactions through the Journal. Or, the Book-keeper may himself prefer to keep these special books separate, and at the same time avoid unnecessary repetitions of the same entry.

# JOURNAL DAY BOOK,—SET IV. •

NEW YORK, APRIL 1, 1859.

H. B. Bryant and H. D. Stratton have this day entered into copartnership, under the style and firm of "Bryant & Stratton," in the prosecution of a general Commission and Grocery Business; to invest in equal amounts, and participate alike in gains and losses.

## INVENTORY.

### Resources and Liabilities not shown in Ledger Accounts.

Store and Fixtures, valued at	15000
Steamer Empire Stock . . . . .	10000
Interest due us on Notes . . . . .	8140 82
Less, interest due from us . . . . .	18 37

\* The amounts in this column do not comprise, like those in the preceding balances, the footings of all the Ledger accounts, but such only as do not balance or cancel. The footings of this column and its opposite will not, therefore, tally with the footings of the Journal, as has been the case with the Trial Balances heretofore. The method here adopted is the one most in use with accountants, but does not afford so sure a test of the correctness of the Ledger.

## BALANCE SHEETS

### BALANCE SHEETS.

We give on the following pages two of the most condensed and perfect forms of statement known, the first representing the business of a single proprietor, as exhibited in Set I, and the second showing the result of the partnership business of Set IV. The symmetry of these Balance Sheets will commend them to the favor of all systematic accountants, while the fullness of their illustrations must satisfy all interested parties. This form of statement has been used, with more or less variation, for the last twenty years, but has never been adopted to any great extent by business houses; the chief objection being its inadequacy to contain long lists of personal accounts. This objection can be overcome, in all cases where the general result alone is wanted, by using, instead of the persons' names, the general titles—“Accounts Receivable,” and “Accounts Payable.” In most kinds of business this will reduce the number of accounts within the limits of this form.

A degree of ingenuity, and some patience, are necessary in preparing these Balance Sheets; but a little practice will overcome all such obstacles. The following brief explanation will enable the student to prepare this form.

Get a sheet of paper of the proper size, and for a border rule double red lines around the margin.\*

First, rule the parallel head-lines, leaving proper space for the double captions, as in the example. Next, ascertain the number of Ledger accounts to be represented. This will, of course, embrace all the accounts in the Trial Balance that do not cancel. If the business is that of a single proprietor, usually called “Stock business,” rule, in pencil, as many lines as will contain all the accounts, and ~~five additional~~. If it be a partnership business, with two or more partners, rule three additional lines for each partner. Thus: for “Stock” business ~~five~~ lines more than all the accounts; for two partners, ~~eight~~ lines more than all the accounts; for three partners, ~~eleven~~ lines more, and so on.

Next, lay off proper spaces for debit and credit money columns; first, for the footings of Ledger accounts, second, for Gains and Losses, third, for Stock—or if partners, for each partner—and fourth, for Resources and Liabilities; also, for a *single* money column for Inventories, and for the Ledger titles and their Ledger folios. The position of these columns you will see in the example given. These spaces can best be appropriated by using a pair of dividers, and giving each of the captions its just proportion.

After denoting the proper space for each heading—which can best be done with pencil—commence to rule in red ink at the right hand, and bring all the lines of the first two captions—Real Accounts and Stock, or one of the partners—down to the lower pencil line. For the other partner drop two lines. For Losses and Gains drop two lines for Stock business, and an additional line for each partner.

Next, rule the foot-lines as shown, and the schedule will be ready to receive the accounts.

The process of showing results is precisely similar in its order, and the results the same as in “closing the Ledger,” and will need no explanation aside from the example given.

As this form of statement, neatly done, will always challenge the admiration of a systematic business man, no student should permit himself to pass over it without fastening all its peculiarities indelibly upon his mind; and as no one qualification is more essential to the proper appearance of a Set of Books or a Business Statement than clean ruling, the student can hardly choose a better exercise than that of preparing these Balance Sheets.

\* The border may be made either plain or ornamental, as best suits the taste of the accountant; but we would recommend in this, as well as all business statements, the utmost neatness, and the avoidance of that kind of affecting or display vulgarly known as “gingerbread work.”

## H. B. BRYANT'S BALANCE SHEET,—SET I.

- The Trial Balance from which this Statement is made will be found on Page 27.

## AUXILIARIES.

### AUXILIARIES TO SET IV.

We give herewith a few of the auxiliary books and documents which would be proper in connection with the transactions of Set IV.

We have already remarked that "the number and character of auxiliary books depend upon the nature and extent of the business, and the amount and kind of information desired;" we might have added, and upon the taste and ingenuity of the accountant. Perhaps there is no way in which a business man can more satisfactorily exhibit the lucidness of his own thoughts than by such methodical arrangement of the separate facts embraced in his transactions as are afforded in auxiliary forms. The only objection that can properly be urged against a multiplicity of auxiliary books is the additional labor required; and in large establishments even this objection is removed by the use of special books and forms containing characteristic portions of original entries; thus, all transactions involving the receipt or disbursement of cash are entered alone in the Cash Book, and posted from that book directly to the Ledger. In the same manner, all sales of merchandise are first entered and posted from the Sales Book, etc. This method we shall hereafter briefly illustrate.

We have already given, in connection with the preceding Set, (III.), one form of a Commission Sales Book. It is the form commonly in use, and is happily suggestive of the nature of the business. In this connection we give a different form, discarding the special columns for *quantities* of merchandise. The business also differs, the sales in this case being on joint account of the commission merchant and the consignor, and the net proceeds, shown both in the Sales Book and the Account Sales are made to correspond therewith.

We also give a brief exposition of the books containing our Bank Account, and the usual method of showing, perpetually, the balance on deposit. These books are too simple to need much explanation.

The letters and notes are not submitted as absolute models in their way. It would, in fact, be as difficult to afford a model of a business letter—one, we mean, which it would be proper for every one to copy—as it would for an artist to produce a cast of features that *everybody* would consider perfect. And that class of humane authors who aim to bless the world by doing all the *thinking*, as well as *talking*, for their generation, furnishing to hand "ready letter writers," apt "poetical quotations," and "rhyming dictionaries," should find little favor with persons competent to think for themselves.

To be able to write a *good* business letter is no small accomplishment, nor can it be acquired by studying models, although much aid may be secured in this way, pertaining to form, arrangement, and even style, if undertaken with no undue surrender of individuality; for a good business letter should be neither more nor less than the transcript of a man's thoughts, or what he would say were he to speak with care and deliberation. Now, as no two men ever think or talk exactly alike, so no two could be expected to write alike. Hundreds of men, doing business for years with each other, enjoy the most intimate and satisfactory acquaintance ship through their correspondence alone; having, it is possible, never met face to face, they, nevertheless, learn each other's peculiarities with as much certainty as if reared in the same family. All proper business letters, therefore, will differ in their general aspect, form, tone, and construction, as their authors differ in those characteristics which mark their individuality.

While all this is emphatically true, there are certain qualifications in business letters which are equally essential to all, and with reference to which, general instructions may be given.

We will enumerate a few of these points:

*First.* A business letter, like all other documents in manuscript, should be, chirographically, *well written*. We have no particular reference to any "System of Penmanship," meaning,

## AUXILIARIES.

rather, by a "well written" document, one which, in its general appearance, as well as upon closer inspection, will at once commend itself to the reader. Neatness and legibility are the chief requisites in a hand-writing.

*Second.* The grammatical construction should be faultless; and, above all, no document should be disfigured with misspelled words.

*Third.* The subject matter should be immediately apparent, stated without circumlocution, and in terms not to be misconstrued. One important characteristic in a business document is brevity; but brevity should never be secured at the cost of perspicuity. The briefest are sometimes the most unsatisfactory of communications, and an affectation of brevity is as reprehensible as an unnecessary display of words. The rule on this point should be, to speak plainly and directly upon the topics discussed, avoiding unnecessary repetitions, and leaving no part of the instruction or information to be guessed at or inferred.

There are other points which we might enumerate, but they are all subordinate to the three above-named; besides, there is little fear that any one will be proficient in these, and deficient in the others.

We cannot too strongly urge upon young men looking forward to a life of usefulness and honor, the importance of this department of their education, as there is no qualification which will more surely commend one to the favor of an employer than proficiency in Business Correspondence.

It is scarcely possible, in a treatise of these dimensions, to give, in detail, all the documents and forms which would enter into actual transactions such as are here recorded. We have supplied this necessity in a measure in the latter part of the work, but have not attempted a complete list. The forms of Deeds, Bonds, Mortgages, etc., vary in the different states; the printed blanks of which can be procured at any ordinary book or stationery establishment. The forms of Notes, Drafts, Receipts, etc., will be found on page 118.

It should not be taken for granted that any of the forms here introduced are the best that could be invented. They will certainly answer the purpose, and, in the absence of better, will do to adopt; but we would advise every intelligent accountant to learn to depend upon himself, and to ascertain and administer to his own wants. One of the most common objections urged against works on Book-keeping and Commercial Schools, is, that the forms and illustrations thus inculcated are inefficient, from the fact that no two business houses use the same forms. If this argument proves any thing, it proves too much, as it would also render futile, knowledge acquired in the counting-room, as well as in the school-room, and the private studio. The fact is, different forms are but the different methods of expressing the same great truths, and are to be estimated according to the degree of explicitness with which they announce these truths.

An accountant, possessed of the least originality or energy, will be better able to prescribe his own forms than any person unacquainted with all the details of his particular business, however well versed in any other specialty of the science.

# BANKING - AUXILIARIES.

All Banks of Deposit furnish their dealers with the necessary blanks for keeping a Bank Account. These are, mainly, a Check-Book, a Pass-Book, and Deposit-Checks, all of which are here exhibited.

## THE CHECK-BOOK.

As will be seen, is a book of blank-checks, with a margin for memoranda, containing, in brief, the Bank Account. The checks are filled and torn off, leaving the memoranda. By adding deposits and deducting checks, the balance in bank is always apparent. Many houses keep no other bank account than this, in which case, the balance in bank is always included in the Cash Account.

## THE PASS-BOOK.

Exhibited below, is a simple memorandum of deposits, in which the receiving teller of the bank enters the date and amounts deposited, and as often as required the checks drawn are entered up, showing the balance in bank. This is our Receipt-Book with the bank.

The following example is intended to illustrate a folio, or two pages:

Dr. EAST RIVER BANK IN \$ WITH BRYANT & STRATTON, Cr.	
1859	1859
Apr 1 To Cash..... \$ 10000	Apr 25 By Cash Cr. 1 200

	" Cr. 8 400 50
	" Cr. 9 4150 50
82500	82500
Balance 91387 50	

## DEPOSIT-CHECKS

Accompany the deposits, and contain a memorandum of the kind of funds and the total of each deposit. The receiving teller compares these items, and if correct, enters the amount in the Pass-Book.

## Deposited in EAST RIVER BANK,

By Bryant & Stratton.

W.M. K. SADLER.

LETTER BOOK.

Messrs. Bryant & Stratton,  
New York:

PITTSBURG, April 1st, 1859.

GENTLEMEN:—As per our agreement of the 30th ult., we ship you this day, (Invoice enclosed), 800 kegs Nails and 20,000 lbs. Lead, to be sold on our joint %.

We shall leave it entirely at your option to push them upon the market, or to await better prices. Your reputation and experience afford sufficient guarantee that whatever course you may see fit to pursue will be the best.

Very truly yours,

LOGAN, WILSON & CO.

Messrs. Bryant & Stratton,  
New York:

BUFFALO, April 2d, 1859.

GENTLEMEN:—Enclosed you will find Invoice of 500 bbls. Flour, which we ship you this day on joint %. You will, perhaps, find it best to take advantage of the present demand in your city to close out the sales at an early day. However, we leave that matter to your own good judgment.

Please keep us advised as to the indications.

Yours,  
NILES & KINNE.

Logan, Wilson & Co.,  
Pittsburg:

NEW YORK, April 6th, 1859.

GENTLEMEN:—We enclose you Account Sales of the Nails and Lead shipped us on the 1st inst. Your net gain, as shown, is \$336.23. We think the present a favorable time for this class of sales, and shall be happy to join you in any reasonable amount.

Let us hear from you soon.

Respectfully,  
BRYANT & STRATTON.

LETTER BOOK.

Messrs. Niles & Kinne,  
Buffalo:

NEW YORK, April 7th, 1859.

GENTLEMEN:—You will please find, enclosed, Invoice of 20 hhds. Sugar, 100 bags Coffee, and 100 boxes Raisins, to be sold, as per our agreement, on joint %.

We have an excellent opportunity, in prospect, of purchasing, to advantage, in this line, and shall be happy to learn from you that the demand will warrant a fair investment. We await your further advices.

Respectfully,  
BAYANT & STRATTON.

Messrs. Niles & Kinne,  
Buffalo:

NEW YORK, April 8th, 1859.

GENTS:—Enclosed please find Account Sales of the Flour shipped us on the 2d inst. We feel satisfied with the returns, particularly as since our sales were effected, prices have materially declined. The uncertainty of European affairs renders the provision market extremely unstable, and all prognostications, at this time, unreliable. We have no doubt, however, that the ultimate tendency will be favorable to investments, and do not hesitate to advise you to secure any good bargains which the present seeming depression may throw in your way.

Truly, yours,  
BAYANT & STRATTON.

Messrs. Bryant & Stratton,  
New York:

TROY, April 10th, 1859.

GENTS:—I ship you to-day, as per Invoice enclosed, 1000 bbls. Flour, to be sold on joint % of yourselves, S. G. Payn, Albany, and myself, each one-third. You will please open an account with Mr. Payn, and render him an Account Sales of his one-third, as per our agreement. I have charged you for your one-third invoice. Please keep me advised.

Yours,  
PLINY MOORE.

Pliny Moore, Esq.,  
Troy:

NEW YORK, April 13th, 1859.

SIR:—We send you, enclosed, Account Sales of Flour shipped us on the 10th, having effected the sale in less time than we had anticipated. We trust the result will be satisfactory. You now stand credited on our Books \$6,000.67. We have communicated with Mr. Payn. We think the present a favorable time to invest in Flour, and shall be happy to join you in speculation, or to sell for you on commission. We await your further orders.

Respectfully,  
BAYANT & STRATTON.

S. G. Payn,  
Albany:

NEW YORK, April 13th, 1859.

SIR:—Enclosed please find Account Sales of Flour, shipped us by Pliny Moore of Troy, as per our understanding. Your one-third net gain is \$340, which gives you a total credit on our books of \$3,173.33.

Respectfully yours,  
BAYANT & STRATTON.

LETTER BOOK.

*Messrs. Bryant & Stratton,*

*New York:*

BUFFALO, April 18, 1859.

GENTS:—We enclose you Account Sales of the Sugar, Coffee and Raisins, shipped us on the 7th inst. Your net proceeds from Sales, including Invoice and Gain, is \$3215, which we have entered to your credit.

We shall be happy to hear from you.

Respectfully,

NILES & KINNE.

*S. G. Payn, Esq.,*

*Albany:*

NEW YORK, April 22, 1859.

SIR.—We ship you this day, per Merchants' Line, 30 hhds. Sugar as per enclosed Invoice, to be sold on joint  $\frac{1}{2}$  of yourself, Pliny Moore, Troy, and ourselves, each  $\frac{1}{2}$ . We have advised Mr. Moore, and he will look to you for an account of the sales.

Please write to us.

Truly yours,

BRYANT & STRATTON.

*Pliny Moore,*

*Troy:*

NEW YORK, April 22, 1859.

DEAR SIR.—We enclose you Invoice of 30 hhds. Sugar, shipped this day to S. G. Payn, Albany, to be sold on joint  $\frac{1}{2}$  as per arrangement. We have charged you with your  $\frac{1}{2}$  invoice, and advised Mr. Payn to account to you for the sales.

Very respectfully,

BRYANT & STRATTON.

*Messrs. Bryant & Stratton,*

*New York:*

ALBANY, April 20, 1859.

GENTLEMEN—I send you enclosed an account of the sales of Sugar shipped by you on the 22d inst. Your  $\frac{1}{2}$  loss on sales as per statement, is \$115, which reduces your net proceeds to \$1218.34.

I regret the result, but have done the best I could, under the circumstances. The rapid decline in Sugar could not have been foreseen, and had I delayed the sales another day the result would have been far less satisfactory.

Respectfully yours,

S. G. PAYN.

*Messrs. Bryant & Stratton,*

*New York:*

PHILADELPHIA, April 30, 1859.

GENTS.—I ship you this day, as per arrangement, 100 bbls. Cider Vinegar, 50 do. Linseed Oil, and 40 h'f kegs White Lead, to be sold on joint  $\frac{1}{2}$ . I have charged you  $\frac{1}{2}$  the enclosed invoice, according to agreement. Please exercise your own judgment in the matter of sales.

Respectfully yours,

Wm. K. SADLER.

*R. W. Hoadley, Esq.,*

*Philadelphia:*

NEW YORK, May 2, 1859.

DEAR SIR.—We enclose you Invoice of 200 bbls. Pork, shipped you this day, to be sold on our joint  $\frac{1}{2}$ . Your  $\frac{1}{2}$  Invoice (charged) is \$909. We shall trust entirely to your judgment in effecting sales.

Truly yours,

BRYANT & STRATTON.

## LETTER BOOK.

Hanna, Beaser & Co.,

Detroit:

NEW YORK, May 3, 1859.

GENTL.—Enclosed we send you Invoice of Oil and Lead, shipped you this day, as per your order of the 28th ult. We possess extraordinary facilities for purchasing to advantage in this line, and shall be happy to merit your patronage. We trust we need not assure you that your orders shall receive the most prompt attention.

Your ob't serv'ts,

BRYANT & STRATTON

Wm. K. Sadler, Esq.,  
Philadelphia:

NEW YORK, May 3, 1859.

DEAR SIR—We enclose you Account Sales of Vinegar, Oil and Lead shipped us on the 1st inst. We think we were fortunate in effecting the sales, and have no doubt, in the present state of the market, that, should you invest pretty heavily at your former figures you would not regret it. We will join you in any amount, or sell for you or commission.

Truly yours,

BRYANT & STRATTON.

Bryant & Stratton,  
New York:

NEW ORLEANS, April 26, 1859.

GENTLEMEN—Your favor of the 18th is just at hand. Your proposition for a special copartnership strikes us favorably, and we have, without delay, shipped you as per Invoice enclosed, 100 hhds. Sugar, to be sold on joint % of yourselves, Campbell & Strong of this city, and ourselves, each  $\frac{1}{4}$ . Campbell & Strong are advised of the arrangement, and you will please communicate with them. We send you their card, and beg to say that you will find them, in all respects, first-class business men. Your references are unexceptionable, and it shall not be our fault if our mutual interests cease with this experiment. You will please exercise your own judgment in conducting sales, and have no delicacy in indicating how we may be of service to you in any direction. We are,

With much respect,

Yours,

F. A. BOYLE & CO.

Messrs. Bryant & Stratton,

New York:

ST. LOUIS, May 1, 1859.

GENTLEMEN—Your Mr. Stratton called on me to-day, and effected arrangements for a special partnership in the purchase and sale of provisions. I have formerly consigned on my own account to John J. Cape of your city, but shall be glad to join you in speculation. I have accordingly shipped, as per enclosed Invoice, 500 bbls. Pork, and 200 bbls. of Lard, one-half of which I have charged to your account.

Hoping that the result of this small adventure may be such as to encourage a more extensive and permanent arrangement, I beg to subscribe myself,

Very truly yours,

H. D. VAN SYCKEL.

KEL.

F. A. Boyle & Co.,

New Orleans:

NEW YORK, May 8, 1859.

GENTLEMEN—We enclose you Account Sales of the Sugar shipped us on the 26th ult. There can be no trouble in disposing of such a grade at fair rates, and, if acceptable to you, we should like the experiment and risk of a much larger Invoice.

Very truly yours,

BRYANT & STRATTON.

Messrs Bryant & Stratton,

New York:

DETROIT, May 13, 1859.

GENTLEMEN—We send you enclosed Account Sales of the Oil and Lead, shipped us the 3d inst. Your net proceeds, as per statement, has been carried to your credit.

Respectfully yours,

HANNA, BEASER & CO.

H. D. Van Syckel,

St. Louis:

NEW YORK, May 17, 1859.

DEAR SIR—Enclosed please find Account Sales of the Pork and Lard shipped us on the 1st inst. The result has been, greatly to our regret, unfavorable, but we cannot attribute it to any fault of our own. Had we had, from indications, any reason to expect a more favorable turn of the market, we should, of course, have held on; but we chose to secure both ourselves and you against a greater sacrifice, by submitting to a lesser. You will see from the present quotations that we did not err in judgment.

Yours to command,

BRYANT & STRATTON.

Messrs. Bryant & Stratton,

New York:

PHILADELPHIA, May 24, 1859.

GENTS.—I send you enclosed Account Sales of the Pork shipped me on the 2d inst.

Hoping you will find the result satisfactory, I remain,

Yours truly,

R. W. HOADLEY.

GENERAL LETTER OF INTRODUCTION.

To Whom it may Concern:

BRYANT, STRATTON & PACKARD'S MERCANTILE COLLEGE, }  
18 COOPER INSTITUTE, NEW YORK, May 31, 1859. }

The bearer, Mr. John F. Simmons, is well known to us as a most estimable young man, and one possessing qualifications which will render him serviceable in any position of trust. He is a thorough accountant, and unusually expert and correct in calculations. We have no hesitation in recommending him to the public.

Very respectfully,

S. S. PACKARD, Resident Principal.

## EXERCISES FOR THE LEARNER.—FOURTH SERIES.

### EXERCISES FOR THE LEARNER.

#### FOURTH SERIES.

In the following transactions we have endeavored to present the prominent features of the preceding Set, leaving the student to apply the principles without any special instruction. The two months' business will represent two years' as in Set IV., bringing down the balances at the end of the first year and closing finally by Journal entries. As in Set IV. also, the two methods of keeping Mdse. Co. Accounts are represented, to which the attention of the student is particularly called.

#### Memoranda for April.

## SET V.

---

JOBBING AND IMPORTING BUSINESS,

EMBRACING AS PRINCIPAL BOOKS,

CASH BOOK, DOMESTIC AND FOREIGN INVOICE BOOKS,

SALES BOOK AND JOURNAL;

AND AS AUXILIARIES,

INVENTORY BOOK AND BILL BOOK,

WITH A ROUTINE OF TRANSACTIONS TAKEN FROM ONE OF THE MOST EXTENSIVE BUSINESS HOUSES  
IN NEW YORK.

## REMARKS ON SET. V.

### REMARKS ON SET V.

In the following set we have illustrated a practical method of keeping the accounts of an Importing and Jobbing business. The particular feature in this set consists of the manner and form of original entries, which are made in separate books,—elsewhere used as auxiliaries,—from which they are either journalized, or passed directly to the Ledger at stated periods. This method has many advantages over consecutive entries in the Day Book, and, in one form or other, is adopted generally in all large establishments. The labors of the Book-keeper are thus divided up, and the separate departments of the business receive such special record as to present all the facts in their clearest light. Thus, if any particular information is desired respecting purchases, all the facts can be shown at once from the Invoice Book; and, in the same manner, the fact and condition of the sales can be shown from the Sales Book, the receipts and disbursements of cash from the Cash Book, etc.

In the previous sets these books are represented, but they are used only as auxiliaries, the entries of the business being made in the other books without reference to them. This plan, it will be evident, although possessing some merits, involves a large amount of unnecessary labor, which would prove a great objection in extensive houses. The special books themselves, however, are so essential to every well-regulated business, that they would receive favor, even at the expense of this additional labor. If, therefore, they can be used without additional labor, and even at a reduction of labor, it would seem that no farther argument would be needed to secure their adoption.

The only difficulty in the way of using special books for original entries lies in the danger of making the entries in the different books conflict with each other upon the Ledger. For example: if a Cash Book is used, it should be competent to show all receipts and disbursements of cash. This purpose is very easily effected by placing the receipts on one side, and the disbursements on the other—the difference, of course, being, at any time, the amount on hand. But this does not cover the entire utility of the Cash Book. At the same time that cash received is entered upon the debit side of the Cash Book, the object or cause for which it is received may also be stated; in which case a double entry is effected, although but one amount shown. The same principle will hold in entering the disbursements of cash; as, when cash is paid, the object or cause for which it is paid is properly expressed. The appropriate caption for the debit side of the Cash Book, then, would be "Cash Dr. To Sundries;" the debit of cash being the total amount received at any specified time, and the credit of sundries being the separate amounts produced by the different causes represented; and, on the other hand, the caption for the credit side would be "Sundries Dr. To Cash," cash being credited for the total disbursement as shown, and the sundry causes for which cash was paid debited for their separate amounts. It will thus be seen that the debit side of the Cash Book contains the credits of all accounts producing cash; and the credit side, the debits of all accounts costing cash.

Upon the same principle the Invoice Book, which sustains the same relation to merchandise that the debit side of the Cash Book does to cash, while it shows, in total, the entire cost of merchandise, will also exhibit the separate credits producing merchandise; and the Sales Book, which sustains the same relation to merchandise that the credit side of the Cash Book does to cash, while it shows, in total, the proceeds of merchandise, exhibits also the separate debits produced by the sales. The difficulty of which we have spoken will now be apparent; as, in every case involving any two of these books, the tendency will be to debit and credit the same accounts twice—effecting thus a double entry not contemplated by projectors of the

## REMARKS ON SET V.

science, and of course not warranted by the facts in the case. Thus, all cash receipts being entered, at specified periods, in total, from the debit side of the Cash Book, and all cash disbursements from the credit side, it would be erroneous to enter cash from any other book; and the same theory will apply with equal force to the Invoice and Sales Books.

If, therefore, the peculiar rights of each of these books be respected, viz.: permitting all cash entries to be taken to the Ledger from the Cash Book, and all purchases and sales of merchandise from the Invoice and Sales Book, it would preclude the entering of cash in the Invoice or Sales Book, and also of merchandise in the Cash Book. Take a single example: Suppose the entry to be "Cash Dr. To Merchandise." All cash receipts must appear on the debit side of the Cash Book, and the entry on that book would be "To Merchandise," extending the amount into the debit column. When the Cash Book is posted, this amount will, of course, be included in the total cash debit, and must comprise one of the opposite, or credit entries. So cash would be debited and merchandise credited, both from the Cash Book. Again, all sales of merchandise must be entered in the Sales Book, and when entered the corresponding debit—in this case, cash—must also be expressed. When the Sales Book is posted, the total for which merchandise is credited will include this amount (already entered and posted from the Cash Book), to correspond with which, and to secure the necessary condition of equal debits and credits, cash must again be debited. According to this standard, therefore, in every case where merchandise is either bought or sold for cash, and the fact expressed through these special books, this error of duplicating debits and credits would occur.

To avoid this difficulty—the only one which stands in the way of classified original entries—two methods have been successfully used; one of which places the books upon an equality, using "neutralizing" accounts for the conflicting entries, and the other acknowledges the supremacy of some one or more books, to which, in all matters of conflict, the others must yield. To be more explicit: In the case before instance, "Cash Dr. To Merchandise." If the Cash Book and Sales Book were upon an equality, the one claiming to furnish all cash entries for the Ledger and the other all merchandise sales, it would be improper to write Cash as a Ledger title in the Sales Book or Merchandise in the Cash Book, for the reasons adduced; but a neutralizing account might be opened, to take the place of cash in the Sales Book and merchandise in the Cash Book, thus receiving a debit and credit of the same amount, which would, of course, cancel it. Suppose the merchandise to be sold to A, for cash: In the Sales Book the entry would be "A" Dr., and in the Cash Book, "A" Cr. The result would be the same as if A had purchased on account, and subsequently paid the amount in cash, thus closing his account. But suppose we acknowledge the supremacy of the Cash Book in all cases where the two are conceived. When merchandise is sold for cash, the entry in the Cash Book will be "Cash Dr. To Merchandise," both of which—the debit of cash and the credit of merchandise—will go to the Ledger from the Cash Book. The same entry can be made in the Sales Book, *but not posted*. For this purpose a special column may be used—as in the following examples—which, at such times as the general result may need to be shown, can be extended into the other column, which in the total footing will embrace all the sales.

Each of the above methods has its advantages; the latter, however, is generally preferred as being more brief and direct, if not more in keeping with the spirit of the times.

The Invoice Books, and the Sales Book which follow, contain all purchases and sales of merchandise, with the conditions thereof. All sales and purchases *not made for cash* pass from these books to the Ledger; all others, from the Cash Book.

The transactions of this, and most of the forms, are taken from one of the largest Importing and Jobbing houses in New York, and may be relied upon as eminently practical.

## ROUTINE AND EXPLANATIONS.

## ROUTINE AND EXPLANATIONS.

THAT the student may get the full advantage of this Set, it will be necessary that he pay strict attention to the routine of transactions as indicated below. Let him make the entries in the different books precisely in the order given. Let the invoices be copied with care, and all the calculations and extensions made by himself. It is thus alone that the design of the Set will be carried out. The exercises connected with the Foreign Invoice Book, involving compound numbers, and reduction of currencies, are highly essential. In reducing sterling to federal currency, we have taken the Custom House standard of \$4.84 to the £ sterling. We have also added to each foreign invoice, the duties, which being paid in cash, are not extended with the invoice, but posted from the Cash Book. In most importing houses, the duties are not extended in the invoice Book, but only in the Cash Book. For strong reasons, we prefer the method here adopted.

### ROUTINE FOR JULY.

1. The books are opened, as per first Journal entry. (Inventory Book copied—Cash Book commenced with balance on hand—Bill Book written up to show the notes, receivable and payable, as indicated in Journal entry). . . . . Bought of C. F. Spalding, on note @ 4 months, Invoice of Sheetings, \$553.57, (Dom. L. B.—B. B.) . . . . Received per steamer Edinburgh, Invoice of Jaconets from S. B. Higgins & Co., \$1,252.55; Paid duties in cash, \$300.61, (For. I. B.—C. B.) . . . . Bought of B. S. Olmstead for cash, Invoice of Prints, etc., \$1,809.76, (Dom. I. B.—C. B.) . . . . Sold Gordon Bailey, Buffalo, on note @ 8 months, Invoice of Jaconets, \$891.85, (S. B.—B. B.) . . . . Sold Mr. Packard, Peru, Ind., on note @ 6 months, Invoice of Hose and Gloves, \$278.52, (S. B.—B. B.) . . . . Sold Mds. this day, per Petty Cash Book, \$97.50, (C. B.) . . . . Received cash on % of John Lewis, \$500, (C. R.)
2. Paid Francis & Loutrel for Stationery, \$16.75, (C. B.) . . . . Lent J. E. Jenkins, for one day, \$1,000, (C. B.) . . . . Sold Mds. per Petty Cash Book, \$125, (C. B.)
3. Sold Hiram Newell, Tonawanda, on his note @ 6 months, Invoice of Sheetings, \$697.84, (S. B.—B. B.) . . . . Received of J. E. Jenkins, return loan, \$1,000, (C. B.) . . . . Paid cash for Postage Stamps, etc., \$8, (C. B.) . . . . Paid S. S. Packard, on private %, \$100, (C. B.)
4. Received cash of J. H. Lewis, in full of %, \$1,200, (C. B.)
5. Paid Richard Beal cash, in full of %, \$185, (C. B.)
6. Sold Mds. per Petty Cash Book, \$157, (C. B.)
7. Bought of John Walker & Co., on our note @ 8 months, Invoice of Cotton, \$1,006.64, (Dom. I. B.—B. B.) . . . . Received per steamer Manchester, from Johnson, Quigley & Co., Manchester, Invoice of Cotton and Silk Goods, \$221.11; Paid duties in cash, \$44.81, (For. I. B.—C. B.) . . . . Bought of Claffin, Meilen & Co., for cash, Invoice of Prints, \$2,812.52, (Dom. I. B.—C. B.) . . . . Sold W. P. Pratt, Cincinnati, for cash, Invoice of Jaconets, 714.23, (S. B.—C. B.) . . . . Sold Baldwin, Laundon & Co., Elyria, O., on their note @ 8 months, Invoice of Shirting, \$869.38, (S. B.—B. B.)
8. Received cash of W. Pennel, in full of %, \$483.50, (C. B.)
9. Sold Charles Claghorn, Homer, Ill., Invoice of Cloths, \$483.12, (S. B.—C. B.) . . . . Paid cash for Drayage and Portage, \$55, (C. B.)
10. Received cash in full of John Gundry's note, 1,580, (C. B.—B. B.)
11. Received per steamer Etna, from A. & J. Bailey, Bradford, Invoice of Goods, \$246.98; Paid duties in cash, \$46.80, (For. I. B.—C. B.) . . . . Sold E. Mosey & Co., Amherst, O., on their note @ 6 months, Invoice of Shirting, \$928.25, (S. B.—C. B.) . . . . Sold Mds. for cash, as per Petty Cash Book, \$115.75, (C. B.)
12. S. S. Pomroy's note discounted, \$1,000; Discount off, \$16.92, (C. B.—B. B.)
13. Bought of E. Lambert & Co., on our note @ 8 months, Invoice of Bleached Shirtings, \$660.73, (Dom. I. B.—B. B.) . . . . Sold Starr & Co., Elyria, O., on their note, @ 6 months, Invoice of Prints, \$1,425.48, (S. B.—B. B.) . . . . Paid J. T. Calkins on private %, \$150, (C. B.)
14. Sold Mds. for cash, per Petty Cash Book, \$127.50, (C. B.)
15. Sold M. Shipley & Co., Cincinnati, on his note @ 8 months, Invoice of Bleached Shirting, \$1,450.14, (S. B.—B. B.)
16. Paid cash in full of note, favor of H. G. Smith, \$4,000, (C. B.—B. B.)
17. Sold Bidwell & Co., Adrian, Michigan, for cash, Invoice of Goods, \$400, (S. B.—C. B.) . . . . Starr & Co.'s note discounted; Face of note, \$1,425.48. Discount off, \$50.44, (C. B.—B. B.) . . . . Received per

## ROUTINE AND EXPLANATIONS.

- steamer Halifax, from S. T. Horton, Glasgow, Invoice of Goods, \$440.14; Paid duties in cash, \$105.63. (For I. B.—C. B.) ... Bought of A. T. Stewart & Co., for cash, Invoice of Prints, \$892.53, (D. I. B.—C. B.)...Paid clerk hire in cash, \$65, (C. B.)
- 27. Sold Mdse. for cash, as per Petty Cash Book, #275, (C. B.)
  - 28. Sold E. C. Packard, Crystal Lake, Wis., on his note @ 8 months, Invoice of Goods, #171.04, (S. B.—B. B.)

- 18. Sold Mdse. per Petty Cash Book, #115, (C. B.)....Paid cash in full of Drayage %, \$50.75, (C. B.)

# DOMESTIC INVOICE BOOK.

## DOMESTIC INVOICE BOOK.

THIS book contains copies of all invoices of merchandise purchased from importers and others in this country, with the conditions of all such purchases. Each lot and package is distinguished by some peculiar mark, which is transferred to the invoice, thus serving an important purpose in checking the articles, adjusting disputes, etc.

The purchases on time, for which notes are given, are passed to the Ledger from this book; those for cash, from the Cash Book.

## SALES BOOK.

## SALES BOOK.

This book contains all the regular sales, either for cash or on time; the cash sales being extended in the inner column, are, of course, not included in the amount for which merchandise is credited from the Sales Book. These sales, together with the petty sales not entered on the Sales Book, are posted from the Cash Book. The total credit of the merchandise account for the month will agree, in amount, with the monthly recapitulation in the Sales Book.

# CASH BOOK,—

This is the most convenient form for a Cash-Book to be kept in-connection with a general merchandise business; the feature of *special columns* may be extended, if desirable. It will be seen that all cash entries, debit and credit, are taken to the Ledger, either through the Journal or directly, from this book, together with all accounts producing or costing cash. The amounts distinguished as "per petty Cash-Book," are entered here from a book contain-

		Dr.		Cash.		Miles.	Hundreds.	Balances.
1860								
July	1			Amount on hand . . . . .				
	1	Mdse.	Sales, per petty Cash-Book . . . . .	97	50			6725 20

# SET V.

ing sales too insignificant to be entered on the regular Sales Book. The column headed "Balances," will be found very convenient for the purposes for which it is used. The Check-marks, in the column following dates, are made to indicate that the amounts opposite in the "Sundries" column have been journalized. Were these amounts posted directly to the Ledger, the Ledger-page would be written instead of the Check-marks.

				Cash.		Cr.
				Mdse.	Sundries	
20	July	1	Mdse.	Paid duties, per Foreign I. B. . . . .	300	61

# BILL BOOK,—SET V.

THE Bill Book can never, with advantage, be made a *principal* book, from which to post; although some authors have attempted so to use it. The form presented below is the best for general purposes, although the arrangement in the former example is more comprehensive.

## Bills Receivable.

No.	When Rec'd.	Drafter or Endorser.	Drafter or Maker.	Date.	Time.	When Due.	Amount.	When and How Disposed of.

# INVENTORY BOOK

## INVENTORY BOOK.

This book is used to enumerate the different articles of unsold merchandise, at such times as may be deemed desirable. It is, in this instance, purely an auxiliary, the amount of merchandise on hand being included in the opening journal entry. Inventories are frequently copied into one of the invoice Books; but a separate book is preferable.

**Mds. on hand, July 1, 1860.**

## QUESTIONS FOR REVIEW.

## QUESTIONS FOR REVIEW,—SETS IV. AND V.

### REMARKS.—PAGE 78.

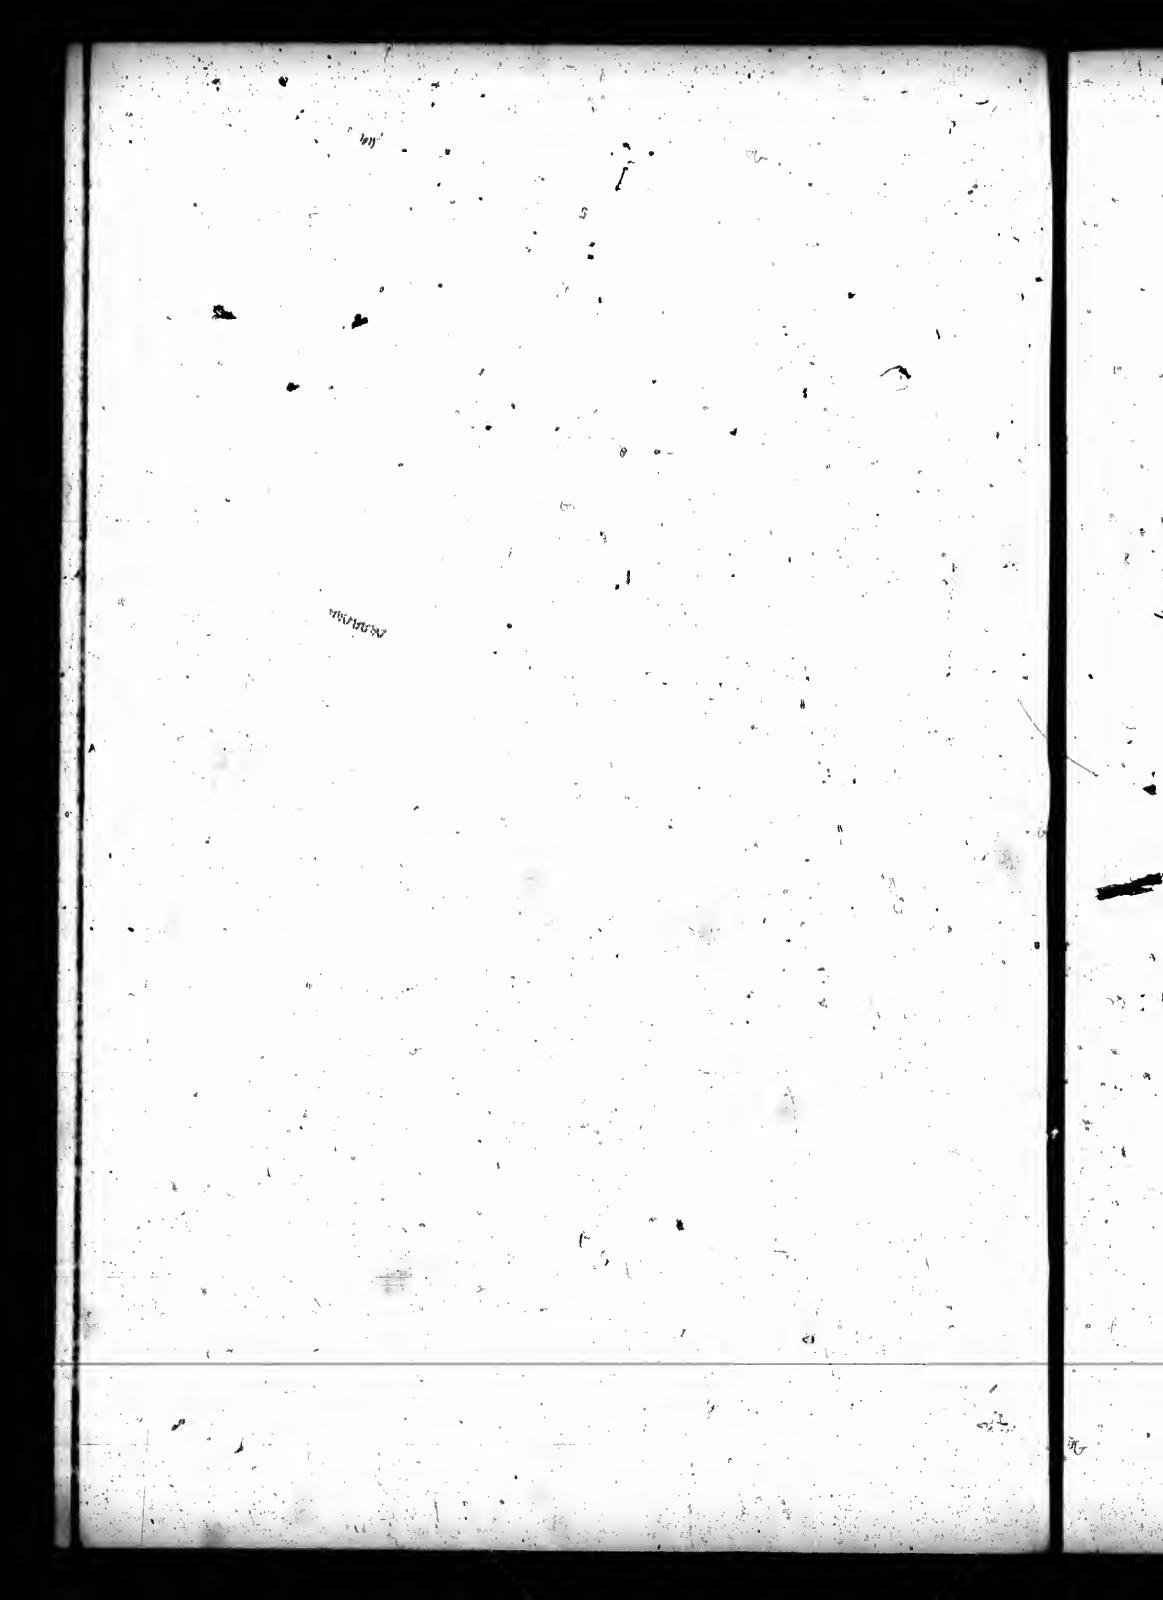

1. What are the peculiar characteristics of Set IV? 2. What advantage does the Day-Book in Journal form have over the Historical Day-Book? 3. What objection can be urged against it? 4. What is meant by "Merchandise Companions"? 5. In what particular does this species of copartnership differ from general copartnership? 6. Wherein do the two methods of keeping Mds. Co. accounts, as shown in this set, differ? 7. What is the principle recognized in the first method? 8. What in the second method? 9. Give an illustration of each. 10. By the first method, when more than two parties are interested, what entry should the consignee make on receipt of the property to be sold on joint %? 11. What the consignor upon shipping the property? 12. What the other parties? 13. By the second method when three or more parties are interested, what entry will the consignee make on receiving property to be sold on joint %? 14. What the consignor? 15. What the other parties? 16. Is there any difference in the final result by these separate methods? 17. When is the consignee considered responsible by the first method? 18. When, by the second? 19. Which method is absolutely correct? 20. What advantage has the other? 21. Are Mds. Co. %'s to be classified as *Real* or *Representative*? 22. How may they be made *Real*? 23. How *Representative*? 24. What different method of closing the Ledger is shown in Set IV? 25. Is there any necessity for a *Balance* account? 26. How can its place be filled? 27. What is the usual entry in bringing down balances of resources and liabilities? 28. What is the advantage of using auxiliary books? 29. Can special books of entry be so used as to dispense with the Journal?

### BALANCE-SHEETS, AND AUXILIARIES.—PAGES 101 AND 104.

30. Explain the method of ruling the Balance-Sheet. 31. What advantages has this form over any other in use? 32. What objection may be urged against a multiplicity of auxiliary books? 33. How is this objection removed in large establishments? 34. What are the essential points in a good business letter? 35. Can a sufficient knowledge of business correspondence be learnt from models?

### REMARKS ON SET V.—PAGE 138.

36. What species of business is represented by this set? 37. What is its peculiar feature? 38. Has this method any advantages over that of consecutive entries, hitherto exhibited in this work? 39. Wherein do such advantages consist? 40. What difficulty lies in the way of using the various books of original entries as principal books, from which to post or journalize? 41. What should the Cash-Book show? 42. How is it made to allow all receipts and disbursements? 43. What will the difference between the two sides of the Cash-Book represent? 44. When cash is debited on the Cash-Book, what is credited? 45. Is every entry made on either side of the Cash-Book really a *double entry*? 46. What would be a proper caption for the debit side of the Cash-Book? 47. What for the credit side? 48. What credits are shown on the debit side of the Cash-Book? 49. What debits on the credit side? 50. Does the same principle hold with reference to the Sales Book and Invoice Books? 51. Will you now state the difficulty likely to occur in transactions required to be entered in these books? 52. If the peculiar rights of each book is respected, will it be proper to post cash from the Sales or Invoice Book, or merchandise from the Cash-Book? 53. What would be the effect of such posting? 54. How many methods are there of avoiding this difficulty? 55. What is the first? 56. What the second? 57. Which of these two methods is preferable? 58. Which is adopted in this Set? 59. What does the Inventory Book in this Set contain, and how is it used? 60. What does the Domestic Invoice Book contain? 61. What entries are passed to the Ledger from this book? 62. What does the Foreign Invoice Book contain? 63. The Sales Book? 64. With what will the total credit of Merchandise account for the month agree? 65. Will you explain the characteristics and use of the Cash-Book? 66. Are all the debits and credits appearing on the Cash-Book posted? 67. What amounts are entered in the "Sundries" column? 68. How are these amounts posted? 69. What does the check-mark, opposite these amounts denote? 70. What would be written instead of the check-marks, were the amounts posted directly from the Cash-Book? 71. Can the Bill Book be used to advantage as a principal book?

SINGLE ENTRY  
CHANGED TO DOUBLE ENTRY,  
WITH AMPLE ILLUSTRATIONS AND EXPLANATIONS.

EMBRACING

TWO DISTINCT SETS OF BOOKS BY SINGLE ENTRY,  
ONE REPRESENTING THE BUSINESS OF A RETAIL MERCHANT AND THE OTHER THAT OF  
A BUILDER, BOTH OF WHICH ARE

CHANGED TO DOUBLE ENTRY, AND THE BUSINESS CONTINUED.

IN THE LATTER SET A DISSOLUTION OF COPARTNERSHIP TAKES PLACE, AND THE STUDENT IS REQUIRED  
TO WRITE UP ORIGINAL TRANSACTIONS TO COMPLETE THE SET.

## CHANGING SINGLE, TO DOUBLE ENTRY.

### CHANGING SINGLE, TO DOUBLE ENTRY.

We have, so far, omitted any special instruction in Single Entry Book-keeping for the reasons, first, that we desired not to distract the mind from the more important considerations bearing upon the science of Accounts, and secondly, that we deemed it much more easy to explain the characteristic features of Single Entry, to one thoroughly familiar with the principles of Double Entry.

We have distinguished Double Entry Book-keeping as the "science of Accounts," because its theory rests on scientific principles, and its work is susceptible of scientific analysis. Single Entry, although, by no means, devoid of excellences as a system, cannot properly be called a science. It is, however, the *beginning* of a science; bearing about the same relation to Double Entry that the three terms of a compound ratio do to the proportion fully expressed.

We are not among the number who can see no merit in a system that does not square in all respects with our notions of symmetry and perfectness; and we are, therefore, quite ready to accord to Single Entry Book-keeping, all the merits it may possess. But the chief difficulty in the matter is to decide upon the fact and extent of Single Entry; and this difficulty becomes the more intense the more we seek its solution by any standard afforded in actual business. While all scientific accountants by Double Entry must agree as to the necessity of equal debits and credits—no matter through what forms expressed, Single Entry accountants differ in this regard, according to the amount of light they may have, or the condition of the precedents which they follow. Thus, while some would represent on the Ledger only accounts with individuals, others who have had the ingenuity to concoct, or the good sense to observe, find an advantage in dealing in the same manner with the other various kinds of resources and liabilities. This is, sometimes, carried so far by intelligent accountants that, although without any suspicion on their part, their books will be found to contain nearly all the requisites of Double Entry. It is from this fact that we find it difficult adequately to define Single Entry.

The term "Single Entry," as distinct from "Double Entry," has reference more particularly to the fact, that for every separate Day Book entry but one posting is made to the Ledger; but to what extent these single Day Book entries shall be carried, or how much real information contain, has never yet been decided by authors, teachers, or business men. It is usually understood, however, that the difference in the two systems consists mainly in the fact that while the Single Entry Ledger contains only accounts with *persons*, Double Entry deals also, and in like manner, with *property and causes*.

We have shown in the previous lectures that Double Entry Book-keeping, or the "Science of Accounts," comprises a *perfect* and continual record of resources and liabilities; and we may now say, contradistinctively, that Single Entry comprises an *imperfect* record of resources and liabilities; or, rather, a record of only a portion of them. Whenever this deficiency is supplied the requisitions of Double Entry are met. Therefore,

To convert Single, to Double, Entry Books, open such additional accounts in the Ledger as are necessary to exhibit the entire resources and liabilities of the concern.

If accounts have been previously opened with the partners, or an account with Stock, as the case may be, representing investments and sums withdrawn, it will, of course, be necessary first to carry the gain or loss of the business to those accounts, as a perfect record of resources and liabilities cannot otherwise be made. The method of ascertaining such gain or loss will be shown in the succeeding statement.

## CHANGING SINGLE, TO DOUBLE ENTRY.

It will thus be seen that Double Entry is but a continuation of Single Entry; traveling with it hand in hand, as far as it goes, but carrying out its principles to their full symmetry and perfection. Those who array formal objections against the practice of Double Entry, on account of its intricacy, its additional labor, or its departure in any sense, from the recognized principles of debits and credits as practised in Single Entry, evidently do not know of what they speak. In changing a set of books from Single to Double Entry, it is not necessary to disturb any account already opened in the Ledger, nor to keep any such account differently thereafter. This fact will be clearly shown in the illustrations given.

In the exercises which follow, we have, first, a set of Single Entry Books, comprising a Cash Book, Day Book, and Ledger. The Cash Book is for the same purpose, and kept somewhat upon the same principle as the Double Entry Cash Book, the only difference being in the form of recording entries. As we neither journalize nor post from the Single Entry Cash Book, it is not necessary to specify Ledger titles, as in Double Entry; the object of the Single Entry Cash Book being simply to complete the record of transactions omitted in the Day Book, and to keep the necessary check upon receipts and disbursements of cash.

It is also customary, in connection with Single Entry Books, to keep a Bill Book, for the purpose of recording Bills Receivable and Bills Payable. If, in addition to these, we should keep an Invoice Book and a Sales Book, either separate or together, for the purpose of recording purchases and sales of merchandise, we should embrace nearly all the requisites of Double Entry; the chief difference being that instead of showing the entire result upon the Ledger, we divide the honor among these various auxiliaries.

In the illustrations given we have shown first, a Single Entry Ledger, containing only personal accounts, and next, the additional accounts necessary to constitute a Double Entry Ledger. In the student's manuscript these two parts will, of course, be united, forming together a Double Entry Ledger, fulfilling the requisites of equal debits and credits, and, consequently, equal resources and liabilities. The intervening statement preparatory to changing, should be closely examined, and thoroughly understood.

The memoranda of transactions following, are intended, of course, to be regularly written up and posted to the Ledger as changed; and the general results exhibited according to the principles already laid down.

To one who fully appreciates the advantages of Double Entry, no argument nor illustration will be necessary to enforce its entire superiority over any other system, notwithstanding the crude notions sometimes expressed by those whose very position should render ignorance on so vital a point, inexcusable; but it should, nevertheless, be the aim of every intelligent accountant to place himself beyond the pale of prejudice, and let him not insist, because he esteems his own way best, that there can be no merit in any other.

It is but natural that men who have, for a lifetime been familiar with a certain routine of transactions, expressed through a certain medium, should become unalterably attached to both, and should look with jealousy upon any thingavoring of innovation. It is the duty of the accountant, who acts simply as such, to humor prejudices of this kind, rather than abuse them, and thus show his own superiority, by making even inadequate forms convey more substantial and extended information than their friends and advocates have claimed for them.

The chief advantages of Double, over Single, Entry, consist, first, in the security afforded by the Trial Balance test and next, in designating the particular channels through which gains and losses come. The fact of gains and losses, and the exact amount of either can be as well ascertained by Single Entry, provided we have the means of knowing that the work is correct.

## PROCESS OF CHANGING.

### PROCESS OF CHANGING.

The intelligent learner need not, at this stage, be told that the first requisition in opening a Set of Double Entry Books is a statement of resources and liabilities. This statement is also necessary in Single Entry as often as it is desirable to know the progress or condition of the business; either with a view to apportioning gains and losses, or for any other purpose whatever. In the preceding Ledger we have a systematic record of such of the resources and liabilities as consist of personal accounts,—the remainder must be ascertained from some other source.

Inasmuch as the partners were credited, each for his net investment, we are enabled to know from their accounts what was the original capital. If there be now, either more or less net resources than this original investment, the result will show a gain or loss, as the case may be. If a gain, the partners should, of course, be credited in their proportionate shares; and if a loss, they should be debited. This will, again, equalize the resources and liabilities, and give us sufficient data for a Double Entry Ledger.

To this end we present the following

#### Preparatory Statement.

Statement of the Resources and Liabilities of James Mason and Robert Walker, who have this day changed their Books from Single to Double Entry.

##### Resources.

Personal Accounts Receivable (already posted)	413	50
Notes Receivable on hand per Bill Book	815	
Cash, per Cash Book	6834	73
Merchandise, per Inventory	2975	
Store and Fixtures, per cost	6750	17788 23

##### Liabilities.

Personal Accounts Payable (already posted)	925	
James Mason, Net Investment	7750	
Robert Walker,	7750	10425
Total net gain in business		1363 23
James Mason's $\frac{1}{2}$	681.61	
Robert Walker's $\frac{1}{2}$	681.62	

From this schedule it will be evident that when the above resources and liabilities are duly entered upon the Ledger—the resources to the debit, and the liabilities to the credit of the accounts representing them—they will lack just the amount of net gain (\$1363.23) of balancing. If this amount, then, be entered to the credit of the partners, where it properly belongs, and the additional accounts opened, we shall have the commencement of a Double Entry Ledger.

We now complete this process, crediting the partners each for his  $\frac{1}{2}$  gain, and opening accounts in the extended Ledger with the additional resources: Bills Receivable, Cash, Merchandise and Store and Fixtures. These four new accounts constitute the "change," and will serve, very clearly, to show the exact difference in the two systems, so far as the Ledger is concerned.

HISTORICAL DAY BOOK—DOUBLE ENTRY.  
PHILADELPHIA, FEBRUARY 20, 1800.

	Paid Cash for Insurance on store and contents, 1% on \$4000. (Manhattan Insurance Co.)	30
87 50	Received Cash of Jabez Dunham, in full of %	50
50	Paid Expenses of store to date, per Expense Book.	150
100	Our store and contents were this day consumed by fire: Value of Store and Fixtures . . . . .	\$5000+
350	Mdsse on hand . . . . .	2800
290	Manhattan Insurance Co. owe us per policy . . . . .	4000
64	Received Cash in full for R. S. Hayward's Note, due the 18th inst . . . . .	65
140	(Received Cash of the following persons: Erastus Young, in full of % . . . . .	\$14
500	David T. Fuller . . . . .	47 50
51 50	Charles Clapporn . . . . .	22 50
50	Henry Dwight . . . . .	10
75	Schuyler Corbit . . . . .	27 50
	Henry Shaft . . . . .	34
	Paid Cash to Wilson G. Hunt, in full of % . . . . .	575
	Received Cash of Manhattan Insurance Co. . . . .	4000

As this Insurance is to be applied proportionately on the store and the merchandise it may contain, it will be more simple to charge it to Expense-account, or to open a separate account with "Insurance." It is proposed to include in this Insurance both Store and Fixtures and Merchandise in proportionate value. It is the student's business to ascertain how much of the \$4000 should be credited to Store and Fixtures account, and how much to Merchandise. This cannot be difficult, as the basis of valuation is given.

## EXERCISES FOR THE LEARNER.

### EXERCISES FOR THE LEARNER.

#### FIFTH SERIES.

The following memoranda of transactions will serve as material for a Set of Single Entry Books, which the student is requested to write up. Let him record the receipts and disbursements of cash in the Cash Book, adopting the form used in the previous Set; also, rule up a Bill Book, after the form on pages 54 and 55, in which enter the Bills, Receivable and Payable. Should he choose, in addition, to keep a Sales Book and an Invoice Book, in which to record receipts and sales of merchandise, it will much facilitate the labor of collecting resources preparatory to deciding upon the gain or loss in business. We have here an important change in the business; occurring at the end of the first month. One of the partners retires from the concern, his interest having been purchased by the remaining partner, who continues the business in the same books. This is a most important matter for the student to understand, both because of involving in itself principles having a general application to the science, and for the reason that such events in actual business are of the most frequent occurrence.

The first thing to be considered in buying or selling the interest of a partner in business is to know the exact pecuniary amount of that interest, or, how much of the net resources of the concern belong to him. His prospective interest, or the "good will" of the concern, is an after and separate consideration. The interest which any sole or partial proprietor has in a concern is equal to his net investment, plus his share of the gain, or minus his share of the loss. Consequently, if he has already been credited with his net investment, it is only necessary to ascertain his share in the gain or loss, which, carried to the credit or debit side of his account, as the case may be, will make that account express his real interest in the business. This principle, will, of course, need no enforcement here, as it has already been so frequently applied in its various bearings. The method of ascertaining gains and losses, where books are kept by Single Entry, is neither sound nor satisfactory as the process by Double Entry, but it can be done, nevertheless, with certainty and exactness. That the student may learn the real difference in the two systems, he is requested to write up the following series, first in Single, and next in Double Entry form. This process will afford a more appreciable distinction between the two systems than could be otherwise obtained.

#### Memoranda—Partnership Books.

*Buffalo, Nov. 1, 1859.*—W. P. Spencer and E. R. Felton units in copartnership for the purpose of conducting the business of Building. Each to receive interest on his average investment, and the gain or loss to be divided as follows: W. P. Spencer,  $\frac{1}{2}$ ; E. R. Felton,  $\frac{1}{2}$ .

#### W. P. SPENCER INVESTS:

Cash deposited in N. Y. and Erie Bank, \$5000; Bills Receivable as follows: Note of A. M. Clapp's, favor of J. C. Bryant, dated July 1, @ 6 mo's, with interest @ 7% from date, \$500; Wm. T. Bush's accepted draft, drawn by H. Newell, Nov. 1, 1859, @ 90 d's, for \$1500; Personal accounts, viz.: Robert Van, \$175; Henry Gray, \$280; J. Pinner, \$300; Oct. 1, \$20.58.

If it is deemed proper to keep a Bank account in the Ledger, it will, of course, be subject to the same conditions as any personal account; for such it is.

In determining the exact investment, it is necessary to reckon these notes at their real value; hence, the

## EXERCISES FOR THE LEARNER.

### E. R. FELTON INVESTS:

Cash, \$1500; Tools, Implements and Materials, \$1000; Unfinished Contract with Smith & Sons—present value, \$5000.\*

2d. Received from Smith & Sons, cash on %, 1750; Deposited the same in N. Y. & E. Bank. 3d. Paid laborers cash as per Receipt Book, \$375; Paid petty expenses, as per Expense Book, \$10.75. 4th. Bo't horse and dray for use of business; for which gave check on N. Y. and E. Bank, \$250; Contracted with A. H. Tracy to build for him on Delaware Street, a brick residence; amount of contract, \$15,000. Received cash, in advance, as per agreement, \$5000. Deposited the same in Bank.† 5th. Paid plumber's bill on Smith & Sons' house, per check, \$375; Paid masons and laborers on Smith & Sons' house, per check, \$150. 6th. Finished small job for J. C. Gansevoort, on South Division Street, for which he owes us \$340.64. 7th. Received cash of J. C. Gansevoort on account, \$300. 9th. Entered into contract with Millard Fillmore, to build for him a cottage on Niagara Street, for \$1000; Received cash on contract, \$1000. 10th. Paid cash to C. Kohler, for 100 M. pressed brick, @ \$11 per M.; Bo't of Seth Pierce, Lockport, on %, 20 bbls. cement, @ \$1.50. 12th. Paid Dean Richmond's draft on W. P. Spencer, per check, \$500; Paid carpenter's bill on Smith & Sons' house, per check, \$1300. 13th. Finished Smith & Sons' contract, and delivered them the keys of the house. Rendered bill for the same, as per contract, \$7500, which was accepted.‡ 15th. Paid laborers and masons cash, as per Receipt Book, \$475; Paid cash for sundry expenses, as per Expense Book, \$23. 18th. Received of Smith & Sons, note @ 60 days, to balance %, \$3750. 20th. Received cash for small jobs this week, \$400. 21st. Received cash of J. Plinner on %, \$150; also, of Henry Gray, in full of %, \$280. 22d. Paid laborers, per Receipt Book, cash, \$500; Paid sundry expenses in cash, as per Cash Book, \$35. 25th. Paid E. R. Felton, cash, on %, \$500. 25th. Finished job of repairing outhouse for Jacob Van Brunt, for which he owes us, as per bill of items, \$175. 28th. Paid cash to laborers in full to date, \$378.50. 30th. Paid office rent in cash, \$50; Paid Book-keeper to date, per check, \$125.

former (\$500) having already been on interest 4 months, is worth its face and the interest to date; while the latter (\$1500), being drawn without interest, is worth its face, less the current rate of interest for 60 days—the date of its maturity. (We shall, in this case, assume the legal rate of interest allowed by the State to be the current rate, which is 7%.) Therefore, in giving Mr. Spencer credit for his investment, we will estimate the value of the first note at its face, \$500, plus the interest on \$500 for 4 mo's, @ 7%, \$11.47, making in all \$511.47; and the second, at its face, \$1500, minus the interest on \$1500 for 60 days, @ 7%, \$34.38, making \$1475.62. In the Single Entry System it will be necessary only to credit Mr. Spencer with these real values, and enter the notes in the Bill Book. In Double Entry it will be proper also to open accounts with Interest Receivable and Interest Payable, representing the two amounts, which should be arranged under those titles.

\* It is customary, in business of this kind, to enter into written contract with the parties for whom work is to be performed, and other receive pay by regularly fixed instalments, or at the completion of the contract. In all such cases, it would be eminently proper to keep a book containing a transcript of such agreements, and a separate account with each job. This is often done, even where the books are kept by Single Entry. The estimated value of this "Unfinished Contract" is, of course, based upon the actual labor performed, and not paid for, and the approximate gain thus far realized. The anticipated gain in the further completion of the work should, of right, be shared by the partners, the same as gains accruing from new contracts.

† It would not, of course, be proper to charge Mr. Tracy, directly, with the amount of this contract, as the work is not yet completed. We should, however, credit him on account for the \$5000 advanced.

‡ Smith & Sons now owe us \$7500, less what they have paid on %, and with which they have already been credited. It is therefore proper to charge them this amount.

## EXERCISES FOR THE LEARNER.

### Dissolution of Copartnership.

The copartnership heretofore existing between W. P. Spencer and E. R. Felton is this day dissolved by mutual consent, Mr. Spencer retiring from the firm. The conditions of the dissolution are, that the retiring partner shall receive for his interest, (as shown by his account after being credited with his share of the gain,) one-half cash, and one-half note, payable in six months, with interest from date.

The Resources and Liabilities of the Concern at this time are as follows:

	<i>Resources.</i>		<i>Liabilities.</i>
Cash on hand, per C. B.	440	33	
Balance in Bank	8650		
Notes on hand	7750		
Interest due on same	14	58	
Balance due on personal accounts	740	64	
Horse and Dray	250		
Tools and Implements	1000		
Valuation of unfinished contracts	3500		
	22545	55	
Balance due on personal accounts			6030
Interest for unexpired time on Bush's acceptance		17.50	
Do. on Smith & Sons' note		32.67	
			71 17*
W. P. Spencer, net investment		7500	
Int. on same		44.02	
			7544 92
E. R. Felton, net inv. \$7000			
Int. on same		43.26	
			7043 26
Total net gain			1856 20
W. P. Spencer $\frac{1}{2}$		1113.72	
E. R. Felton $\frac{1}{2}$		742.48	
			22545 55

From the above schedule we are enabled to arrive at the exact amount of Mr. Spencer's present interest in the concern, which is the interest to be purchased. The partners should now be credited each with the interest on his average capital, and also his share of the gain. When this is done, their individual accounts will show their separate interests in the concern.

The business will now be continued in the same books, under the sole proprietorship of Mr. Felton.

It may not be strictly true that the concern owes this amount of interest; and yet, should we desire to get the notes cashed, or to receive their net value in any other commodity, we should be obliged to shew thus much from their face. In other words, we have estimated the notes as resources at more than their present value, (for the purpose of expressing the value written upon them,) and we must now offset this excess of resources by a corresponding liability. The same effect could have been wrought by reckoning the notes at their real value. The present form would be essential in a statement drawn from a Double Entry Ledger, where notes, either receivable or payable, are always reckoned at their written value.

According to the partnership contract, each partner is to receive interest on his "average investment." As no method of ascertaining the average capital is more fully explained in its appropriate place, we shall only indicate, in this connection, that the most simple and direct method of obtaining this result is to reckon interest on all sums invested from the date of investment until the date of settlement, from which deduct the interest on all sums withdrawn from the date of withdrawal to the date of settlement. The difference will be the interest on the average investment.

## EXERCISES FOR THE LEARNER.

### Memoranda—Business Books.

December 1, 1859.—E. R. Felton has this day purchased the interest of his former partner W. P. Spencer, in the concern of "Spencer and Felton," and proposes to continue the business in his own name. Paid for the same, check on N. Y. & E. Bank, \$4329.32; Note @ 6 mo's, with interest from date, \$4329.32. 2d. Received cash in full for principal and interest on A. M. Clapp's Note, due Jan. 1, 1860; Note, \$500; Interest to date, \$14.50. 3d. Paid cash for tinner's bill, for roof and leaders on Mr. Fillmore's cottage, \$150; Paid Charles Ely's bill in part, for sills and lintels for A. H. Tracy's collar, \$50. 5th. Paid workmen to date in cash, \$438.50. 6th. Completed job for S. G. Haven, as per bill of items, for which he owes \$430. 7th. Paid cash for ton of hay, \$20; and for 50 bushels oats, @ 75c., \$37.50. 9th. Bought of Jacob Van Brunt, on %, 10,000 feet pine lumber, @ 15c., \$1500. 10th. Rec'd cash for job of mason-work, done for Peter Greiner, \$125. 12th. Paid workmen to date, per check, \$1475. 13th. Finished job of mason-work for Uriah Driggs, Tonawanda, for which he owes \$275. 20th. Completed contract with Millard Fillmore, and rendered him bill for the same, \$9000. 22d. Paid laborers' wages, per check, to date, \$1450. 23d. Passed our note, @ 60 d's, to Merritt Crandell, for bill of Lumber to date, \$3000. 25th. Received cash of Uriah Driggs, in full of %, \$275. 26th. Received cash of J. C. Gansevoort, in full of %, \$240.64. 27th. Paid workmen in full to date, per check, \$563. 30th. Paid sundry expenses in cash, as per Expense Book, \$175.

### Changing to Double Entry.

Mr. Felton now proposes to change his books to Double Entry, preparatory to which he makes the following statement of the condition of his business:

Resources.		Liabilities.
Cash on hand, per C. B.	724 55	Due on personal accounts . . . . .
Balance in Bank	1032 06	notes . . . . .
Tools and Implements	1000	E. R. Felton, net investment . . . . .
Notes on hand	7250	" " net gain . . . . .
Due on personal accounts	875	6355
Horse and Dray	24	7329 32
Value of unfinished contracts	400	7785 74
	<u>23012 23</u>	1542 17
		<u>23012 23</u>

The student is requested to enter up these accounts in the Ledger, according to the examples given in the previous Set, and to continue the business in Double Entry form, for one month, originating his own transactions, and closing his Ledger at the end of the month, according to the principles of Double Entry.

\*It will be evident, from these frequent statements, that just as often as it is necessary, for any purpose, to know the exact condition of the business, the account or accounts representing the capital—usually called Stock Account, or Partners' Accounts—must be made to agree with the difference between the absolute resources of the concern and its outside Liabilities. In Double Entry Books this is done by carrying to these accounts the result of the Representative accounts, which is the net gain or loss. As there are no such accounts in Single Entry, the same object is attained by taking the difference between the capital at commencing and at closing, which must, of course, be the net gain or loss. Any statement showing resources and liabilities will afford all the necessary material for Double Entry Books, or for any purposes of negotiation where partners' interests are concerned.

AND

OTHER NEW FEATURES

## FARM ACCOUNTS.

### FARM ACCOUNTS.

In the exercises which follow, we have sought to illustrate, briefly, the business of farming. It is, of course, impossible, in so short a space, to give the daily routine of what might be expected to occur in connection with this business; but we have endeavored to make each record as much as possible the representative of a class, and thus, without unnecessary repetition, to indicate and enforce in this department of industry the principles which we have found applicable generally to business transactions.

In certain essential particulars all departments of business assimilate; and any peculiarities which may exist will be found to depend, not upon a change of the principle, nor a difference in the application of these principles, but in the forms and methods of expression growing out of the transactions themselves.

The conditions common to all business enterprises may be briefly stated, as follows:

1. **INVESTMENT.**—Capital, of some kind, is essential. It may consist in *valuable resources*, such as cash, notes, merchandise, real estate, live stock, personal indebtedness, etc.; or, in *productive power*, such as professional ability, talent, industry, a good name, etc.; or in both.

2. **PRODUCTION.**—The prime object of all business is *gain*; or, what is the substantial proof of gain, *increase of resources*. Something must produce this increase, whether it be financial capital, or enterprise, or both combined. In various kinds of business this producing power is properly represented under distinct titles, usually subdivisions of the general account. For instance, in common mercantile business, the entire gain or loss may be shown in a general "Merchandise" account, or through a variety of correlative accounts, such as, "Shipment," "Adventure," "Expense," "Loss and Gain,"\* and the specific titles of the different kinds of merchandise, such as, "Corn," "Wheat," "Flour," "Cloth," "Sugar," etc. In a banking business the most common titles given to producing agents are, "Interest," which shows gains and losses accruing from money loaned, and "Exchange," showing similar results in buying and selling uncurrent or premium funds. In a purely commission business, "Commission" account is used for this purpose, and in any professional business, "Profession," "Service," or "Labor," would answer the same ends.

In short, it requires no great effort of the imagination to supply these terms, in advance, for any department of business; and it is only necessary to know the routine of transactions to be able to prescribe, with great accuracy, both appropriate titles and forms.

In the business before us we have no transactions which are not easily subjected to the general principles already advanced; and even the forms, although exceedingly practical, and containing the very essence of concentration, need only be examined to be readily and thoroughly understood.

One essential point with the farmer is to be able to dispense with all unnecessary books; in other words, to do as little writing as possible. The "Practical" Journal given in this connection will, if adopted, secure to him this advantage in an essential degree. This form, usually called the "Six Column Journal," is one of the most practical and comprehensive in use, and is applicable to any kind of business. Its principal feature—that of affording special columns for the accounts most used—may be carried to any extent desirable. The result is a vast saving of time in posting, and additional security as to the correctness of the work. The "Six-column Journal" is extensively used in retail dry goods establishments.

The subdivision of the "Farm" account, as shown in this connection, is also a feature of some importance, and may be adopted or not, at pleasure.

\* See preceding remarks on page 80.

## CASH MEMORANDUM BOOK

### Cash Memorandum Book.

The advantages of a Cash Book in business cannot be overrated; and, to a thorough business man, any argument in favor of its use would be superfluous. It is the great conservator of Finance, and is alike essential to the merchant, the mechanic, the farmer, the professional man, and the man of leisure. It not only serves as a check on extravagant expenditures, but, from its frequent comparisons with actual results, guards, in an essential degree, against errors and omissions. To those who feel the force of these facts, but find it difficult to reduce the theory to practice through any of the rigid forms in use, we commend the following simple form as possessing all the necessary qualities of a Cash-Book, besides being so simple and practical that a child may comprehend it. A small pocket memorandum book, such as all stationers keep, is sufficient for this purpose, and the writing may be done either with pencil or ink. It should be carried constantly, that no excuse may exist for omitting the entry of receipts and disbursements of cash, which should always be entered at the time. The balancing may be done daily or weekly, as most convenient.

In the form below we have exhibited the cash transactions for one month, which is sufficient to show the use of the form.

## FARM ACCOUNTS.—HISTORY OF TRANSACTIONS.

Riverdale Farm, Northampton, March 1, 1860.

The following List embraces the real and personal property and debts of William Mitchell, farmer who is sole proprietor of "Riverdale Farm," in the town of Northampton, Mass.

### Resources.

75 acres cultivated land, @ \$300; 10 do. woods pasture, @ \$350; dwelling-house, out-buildings, and improvements, \$2500; 2 carriage horses, \$400; 2 work horses, \$275; 1 colt \$100; 3 milch cows, \$100; 1 yoke oxen, \$125; 10 hogs, \$75; 30 sheep, \$50; 2 calves, \$5; 50 chickens, \$10; 6 turkeys, \$5; 10 geese, \$5; farming utensils, \$250; 1 family carriage, \$200; household furniture, \$100; 200 bushels wheat, \$350; 500 do. corn, \$375; 125 do. oats, \$110; 10 tons hay, \$120; 50 bushels potatoes, \$37.50; feed, \$25; 50 shares Connecticut River R. R. Stock, \$5000; cash in hand, \$120; do. deposited in Holyoke Bank, \$1200.

### Liabilities.

Mortgage on farm, due in five years, from January 1, 1850, with annual interest, @ 6%; \$4000; interest unpaid to date, on same, \$40; Due Samuel Hill on \$, \$75.

B't of Lewis H. Bartlett, on \$, 1 two-horse wagon, for \$75; Sold for cash, 10 lbs. butter, \$2; 10 doz. eggs, \$2.

B't of Jonathan Dawes, 10 head of stock cattle for breeding and grazing, for \$650; Paid him check on Holyoke Bank, \$300; note @ 30 d's for balance.

Paid cash for the following articles: Boots for Johnny, \$3; Cap for Harry, 75c.

Sold James Banks for cash, 10 bushels wheat, @ \$1.50 per bushel; Paid cash for set of harrow teeth, \$3; Shoeing horse, \$1.50.

Paid cash for G. F. Wright's grocery bill, \$17.50.

Paid hired man cash for services to date, as per receipt, \$10; Sold for cash, 15 bushels potatoes, @ \$1 per bushel.

Sold L. S. Bliss, Hatfield, 2 year old colt, for \$125 cash.

Paid cash for premium for insurance on farm buildings, \$12.50.

Paid Mrs. Mitchell cash for household expenses, 75c.

Sold C. S. Clark & Co., for cash, 20 bushels oats, @ 75c. per bushel.

Paid cash for shoes and toys for children, \$1.75; B't of S. C. Parsons, on \$, 1 ton Peruvian guano, for \$30.

## FARM ACCOUNTS.—HISTORY OF TRANSACTIONS.

**Riverdale Farm, Northampton, March 19, 1860.**

Paid one year's subscription to Hampshire Gazette, in cash, \$1.50; Yearly contribution to poor fund, \$25; Pew rent, 1 quarter, 85.

20 Paid Dr. Jones cash for filling teeth, \$5; Paid cash to Bridgman & Childs, for books, \$1.

23 Sold Hillman & Graves, for cash, 10 sheep, @ \$2 per head.

24 Received cash for poultry sent to market, \$2.

25 Deposited in Holyoke Bank, cash, \$150.

27 Received cash for butter, cheese, and eggs, \$10.25.

29 Paid E. L. Kingsley, cash, for repairing farm implements, \$3.25.

31 Paid Charles Jones, cash, for painting house, \$25.

**April 1**

Received cash for marketing, as follows: 25 lbs. butter, @ 25c.; 10 bush. potatoes, @ \$1.

13 Paid Theo. Rust, cash, for 1 ton plaster, \$8.

25 Paid cash for winter's school bill, books, &c., \$17.50.

26 Bo't of James Hubbard, on %, 32 bushels oats for seed, @ 60c. per bushel.

28 Paid hired hands in full to date, \$40.

**May 1**

Received cash for dividend on Conn. Riv. R. R. stock, 5% on \$3000.

15

Paid cash for 1 new plow, \$10; For repairing old plow, \$3.

25

Exchanged horses with E. T. Wood; Paid difference in cash, \$25.

**June 1**

Paid hired hands to date, cash, \$55.

15

Bo't for our own use, 1 rosewood piano, for \$275; Paid for the same, check on Holyoke Bank, \$75; note @ 6 mo's for balance.

**July 1**

Paid hired hands to date, \$60.

5

Sold, for cash, 3 bushels cherries, @ \$4 per bushel; 6 do. currants, at \$1.

178

## FARM ACCOUNTS.—HISTORY OF TRANSACTIONS.

Riverdale Farm, Northampton, July 10, 1860.

Paid cash for groceries, \$4.75; dress pattern, .98; Stoddard & Lincoln's bill for dry goods, \$17.50.

20

Finished cutting and harvesting hay, which has been estimated at 75 tons, worth, on an average, \$10 per ton.\*

25

Bo't of Henry Claghorn, for Cash, 2 Berkshire pigs, \$15.

30

Sold for cash, 3 hogs, \$25; 4 lambs, \$10; 2 calves, \$4.

31

Paid cash to hired hands, \$37.50.

Aug. 1

Received cash of Benjamin Claghorn, in full for the rental of 10-acre lot, as per contract, \$200.

5

Received cash for pasture, to date, \$175.

10

Sold Graves Bro's, Florence, 10 tons hay, @ \$11; received cash, \$50; balance on 5.

20

Finished threshing grain, and have put in bins, as the result, 250 bushels wheat, worth \$1.50 per bushel; 300 do. corn, @ 75c.; 50 do. rye, @ 60c.

30

Paid hired hands cash, to date, \$50.

Sept. 5

Sold for cash, 30 bushels wheat, @ \$1.63.

10

Finished harvesting potatoes, the result of which is, that we have in cellar 75 bushels, worth 75c. per bushel.

15

Sold for cash, 20 bushels potatoes, @ 87½c.

30

Have gathered from orchard, 100 bushels apples, worth 50c. per bushel.

Oct. 5

Sold for cash, the following produce: 200 bushels wheat, @ \$1.50; 300 do. corn, @ 75c.; 40 do. potatoes, @ 1; 35 do. apples, @ 50c.

10

Paid hired hands to date, cash, \$75.

15

Received cash for pasturing 15 head of cattle, \$75; 10 horses, \$60.

\* Should we keep but one general producing account for the farm, this entry could not properly be made in the journal, as it would necessitate both a debit and a credit to that one account, insomuch as there has been nothing disposed of, and consequently, nothing actually produced. If, however, we desire to keep up the distinctions between the different subdivisions of the general account, as in the Ledger form given, the entry in this case will be "Produce" Dr. to "Real Estate," as each of the subdivisions should show its cost and proceeds, the same as any general account.

## FARM ACCOUNTS.—HISTORY OF TRANSACTIONS.

Riverdale Farm, Northampton, Oct. 18, 1860.

Paid Samuel Hill, jr., cash, in full of %, \$75.	21
Paid cash in full for note, favor Jonathan Dawes, due April 6. Face of note, \$350; Interest to date, \$1.37.	22
Sold Thayer & Sergeant, 4 fat cattle, for \$350, cash.	25
Sold Alvan N. Claghorn, on %, 5 tons hay, @ \$10 per ton.	28
From inventory taken, we are prepared to estimate the amount consumed by family and live-stock since March 1, which is as follows: FAMILY EXPENSES—Mutton, \$15; pork, \$17; poultry, \$19; eggs and milk, \$10; flour, \$40; potatoes, \$10. LIVE STOCK—Corn, \$50; hay, \$75; feed, \$25; oats, \$37; pastureage, \$50.	30
Upon careful estimation, the apportionment of expense, as charged in the "Expense" %, (\$820,* should be as follows: To real estate, \$164.50; live stock, \$82.25; produce, \$82.25.	31

## SIX-COLUMN JOURNAL.

The peculiar characteristics of the practical Journal here introduced will be immediately understood and appreciated. Its advantages may be briefly stated, as follows:

*First*—A vast saving of time and space in posting.

*Second*—Embracing the principles of four books in one, viz.: Cash Book, Invoice Book, Sales Book and Journal.

*Third*—Showing monthly totals of the principal accounts in the Ledger that the same may be compared year after year.

*Fourth*—Affording an opportunity to post personal accounts immediately, the debits and credits appearing separately in the "Sundries" column.

*Fifth*—Giving additional security of the correctness of the Ledger, there existing no probability of omitting debits and credits of the same amount.

Want of space will prevent the giving of more than one month's transactions through this form. The student is requested to write up the remainder as given in the memoranda, putting the months of April, May, June and July together as one month, and August, September and October as one.

The method of posting from this Journal is extremely simple. The separate items in the "Sundries" column are posted the same as from the common Journal, while the amounts of the "Cash" and "Farm" columns are posted at the close of each month.

This idea of special columns is not original with any modern author, as variously claimed, but has been in use, to a greater or less extent, for a quarter of a century. The principle can be carried to any desirable extent; and in some jobbing-houses as many as eight special debit and credit columns are used. The form given in this connection is sufficient to indicate the principle.

\* Paid for services and horseshoeing.

† This is the case when the form is used in a general merchandise business; in which case the special columns, debit and credit, would be "Cash," and "Merch."

### PRACTICAL HINTS FOR FARMERS.

#### 1.—MEASURING GRAIN.

By the United States standard, 2150 cubic inches make a bushel. Now, as a cubic foot contains 1728 cubic inches, a bushel is to a cubic foot as 2150 to 1728; or, for practical purposes, as 4 to 5. Therefore, to convert cubic feet to bushels, it is necessary only to multiply by  $\frac{4}{5}$ .

**EXAMPLE.**—How much grain will a bin hold which is 10 feet long, 4 feet wide, and 4 feet deep?

**Solution.**— $10 \times 4 \times 4 = 160$  cubic feet.  $160 \times \frac{4}{5} = 128$ , the number of bushels.

*To measure grain on the floor.*

Make the pile in form of a pyramid or cone, and multiply the area of the base by one-third the height. To find the area of the base, multiply the square of its diameter by the decimal .7854.

## PRACTICAL HINTS FOR FARMERS.

EXAMPLE.—A conical pile of grain has a diameter of 6 feet, and 4 feet high, how many bushels does it contain?

Solution.—The square of 6 is 36;  $36 \times .7854 = 28.26$ ;  $28.26 \times 4 = 113.04$ ;  $113.04 \times \frac{1}{3} = 37.68$ , the number of cubic feet.  
Therefore,

$$37.68 \times 6 = 226.08. \quad \text{Answer.}$$

### 2.—TO ASCERTAIN THE QUANTITY OF LUMBER IN A LOG.

Multiply the diameter in inches at the small end by one-half the number of inches, and this product by the length of the log in feet, which last product divide by 12.

EXAMPLE.—How many feet of lumber can be made from a log which is 38 inches in diameter and 10 feet long?

Solution.— $38 \times 18 = 684$ ;  $684 \times 10 = 6840$ ;  $6840 \div 12 = 560$ . Answer.

### 3.—TO ASCERTAIN THE CAPACITY OF A CISTERNS OR WELL.

Multiply the square of the diameter in inches by the decimal .7854, and this product by the depth in inches; divide this product by 231, and the quotient will be the contents in gallons.

EXAMPLE.—What is the capacity of a cistern which is 12 feet deep and 6 feet in diameter?

Solution.—The square of 72, the diameter in inches, is 5184;  $5184 \times .7854 = 4071.51$ ;  $4071.51 \times 144 = 580297.44$ , the number of cubic inches in the cistern. There are 231 cubic inches in a gallon, therefore,  $580297.44 \div 231 = 2518 +$ , gallons. To reduce the number of gallons to barrels, divide by 31  $\frac{1}{3}$ .

### 4.—TO ASCERTAIN THE WEIGHT OF CATTLE BY MEASUREMENT.

Multiply the girth in feet, by the distance from the bone of the tail immediately over the hinder part of the buttock, to the fore part of the shoulder-blade; and this product by 31, when the animal measures more than 7 and less than 8 feet in girth; by 28, when less than 7 and more than 6; by 16, when less than 6 and more than 3; and by 11, when less than 3.

EXAMPLE.—What is the weight of an ox whose measurements are as follows; girth, 7 feet 6 inches; length, 5 feet 6 inches?

Solution.— $5\frac{1}{2} \times 7\frac{1}{2} = 40\frac{1}{2}$ ;  $40\frac{1}{2} \times 31 = 1204 +$ . Answer.

A deduction of one pound in 20 must be made for half-fitted cattle, and also for cows that have had calves. It is understood, of course, that such standard will at best, give only the approximate weight.

### 5.—MEASURING LAND.

To find the number of acres of land in a rectangular field, multiply the length by the breadth, and divide the product by 160, if the measurement is made in rods, or by 43560 if made in feet.

EXAMPLE.—How many acres in a field which is 100 rods in length, by 75 rods in width?

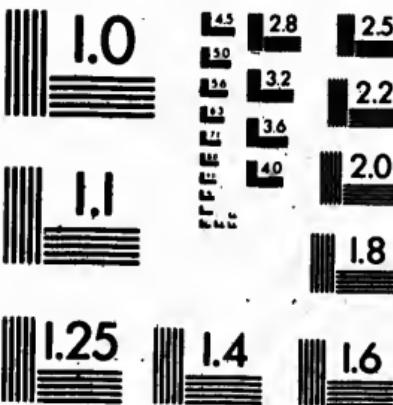

Solution.— $100 \times 75 = 7500$ ;  $7500 \div 160 = 47\frac{1}{2}$ . Answer.

To find the contents of a triangular piece of land, having a rectangular corner, multiply the two shorter sides together, and take one-half the product.

## QUESTIONS FOR REVIEW.

## QUESTIONS FOR REVIEW.

### CHANGING SINGLE TO DOUBLE ENTRY,—PAGE 152.

1. Why should Double-Entry Book-keeping be distinguished as the "science" of Accounts?
2. May Single Entry be properly called a science?
3. Why not?
4. What relation does Single Entry sustain to Double Entry?
5. What is the chief difficulty in defining and treating Single Entry?
6. In what particulars do Single Entry Book-keepers differ among themselves?
7. What does the term Single Entry denote?
8. What is usually understood to be the difference between Single and Double Entry?
9. What is the rule for converting Single to Double Entry?
10. If an account has been kept with Stock, or accounts with the partners, what must be done with the gain or loss?
11. Do you consider Double Entry more intricate or laborious than Single Entry?
12. What, in your opinion are the principal advantages of Double over Single Entry?
13. In changing Single to Double Entry, is it necessary to disturb the accounts already shown on the Single Entry Ledger?
14. What are the usual books in Single Entry?
15. For what purpose, and how is the Single Entry Cash-Book used?
16. What is the difference between the Single Entry and the Double-Entry Cash-Book?
17. Is it customary to journalize or post the Single Entry Cash-Book?
18. What other books than the Day Book, Cash-Book, and Ledger are used in Single Entry?
19. When all these auxiliaries are kept in Single Entry, how will it differ from Double Entry?
20. Can the gains and losses in business be ascertained by Single Entry?
21. How?

### FARM ACCOUNTS,—PAGE 170.

22. Upon what do the peculiarities of business chiefly depend?
23. What conditions are common to all business enterprises?
24. What do you understand by *Investment*?
25. Can anything properly be called an investment except tangible resources?
26. Can you explain how professional ability, talent, a good name, etc., may be considered capital?
27. What is the prime object of business enterprises?
28. What is the substantial proof of gain?
29. How is the increase of resources effected?
30. How is the producing power in business variously represented?
31. What are the general producing accounts in a mercantile business?
32. In a banking business?
33. In a commission business?
34. In a professional business?
35. Is it difficult to supply the appropriate terms in any kind of enterprise?
36. What is the essential point in Farm Books?
37. Can you explain the "Six Column Journal" as used in this set?
38. What are the advantages of a Cash-Book in business?
39. What is the peculiarity of the Cash-Book used in this connection?
40. What are the five points of excellence claimed for the practical Journal used on this set?
41. How are the separate items posted from this Journal?
42. How the amounts of the "Farm" and "Cash" columns?
43. Can this form be used in any other kind of business than farming?
44. When used in mercantile business, what will be the titles to the special columns?
45. Can the number of special columns be increased?
46. What kind of business is peculiarly adapted to special columns?
47. How many debit and credit columns are sometimes used in jobbing houses?

### PRACTICAL HINTS FOR FARMERS,—PAGE 182.

48. What rule have you for measuring grain in a bin?
49. How many cubic inches in a bushel?
50. Can you measure grain upon the floor?
51. How?
52. Give the rule for ascertaining the quantity of lumber in a log?
53. What is the rule for ascertaining the capacity of a well or cistern?
54. How can you get the approximate weight of cattle by measurement?
55. What is the rule for measuring land?

## GENERAL INSTRUCTION,

### EMBRACING A FEW PRACTICAL HINTS ON PRACTICAL SUBJECTS.

#### S T O C K S .

In connection with this subject, we present exact copies of a few of the different kinds of paper which figure so extensively in the financial world, under the name of Stocks, and shall here, as briefly and distinctly as possible, treat of the characteristics and relative merits of this class of commercial values.

The public funding system originated in Venice in the 12th century, and was introduced into Florence in the year 1340. In England, the practice of pledging the public wealth for the repayment of loans had its rise in 1672-94, and has become so much a settled policy of the country, that many of her wisest statesmen maintain that the perpetuity of the government centers in the public debt. We can readily understand how such would be the case were the holders of these pledges citizens, and the pledges held in small quantities, and by the various classes of the community; for the greater pecuniary interest a people may have in their government, the more ardently will they seek to perpetuate its institutions, and the more jealously watchful will they be of its interests. In England, the term *Stocks* is applied mainly to government funded debt, such as Consols,\* Bank of England Stock,† etc.; and the term *Shares* to the capital, or joint stock of railroad companies, banks, manufacturers, etc. In our own country, the term *Stocks* is used in a more general sense, including United States funded loans, State loans, and the stocks, or shares in various corporations, joint-stock companies, etc.

Stocks, in our common acceptance, may properly be divided into two classes, which, for the sake of distinction, we will denominate *Interest Stocks* and *Dividend Stocks*.

*Interest Stocks* are those calling for a certain fixed percentage on the amount loaned, and are secured either by pledge of the public wealth, or by mortgage on adequate intrinsic value. Of this class are government securities of all kinds, bonds of railroads and other corporations, mortgages on real estate, etc. The only influences which can really affect the value of this class of Stocks are the worth of money, and the character of the securities upon which they rest.

*Dividend Stocks* are those which call for a dividend of the net earnings of certain enterprises, and are secured by the net resources and earning capacity of such enterprises. Of this class are the shares in the capital stock of railroads, banks, manufacturing and mining establishments, and other joint-stock corporations. They fluctuate in value according to the pecuniary success and prospects of the business which they represent; and, as the intrinsic value of all property depends upon its producing power, so the dividends which are declared upon these shares—if the same are known to be from the legitimate earnings of the business—regulate, in the greatest degree, their market value. Other influences may force these values out of their proper relations to this test, but if left to their legitimate course, like other commodities, the parallel between earnings and commercial value must hold good.

Of these two classes of Stocks, the latter only, figures to any great extent in the market lists, from the fact that good securities pledging a regular, unvarying dividend, are not capable of sudden inflation and depletion, like those which are dependent for their very existence upon a variety of unseen causes, and subject to disasters from financial reverses, bad management, etc. There is, of course, a difference in the value of what we have denominated *Interest Stocks*, not dependent upon the percentage of dividend. Such difference must, of course, be owing, mainly, to the character of the securities. For instance, United States Stocks, dividing 5 %

\* Consolidated fund of the English Government, bearing 3 % interest.

† The Bank of England is a part of the government, and, consequently, cannot be classed with private corporations.

## GENERAL INSTRUCTION.

per annum, always sell at a premium; while the various grades of railroad bonds, declaring from 7 to 8 %, vary from 1 % premium to 90 % discount. The reasons for this will appear by a little investigation into the comparative circumstances. In the case of United States Stocks, the country itself is pledged for the payment of principal and interest; and even should the public property and revenue prove insufficient (which is scarcely to be supposed), there would be no difficulty in obtaining the consent of the people to be taxed. Nothing can be more disastrous to the honor of a country than the repudiation of its debts; and no fair-minded citizen of the United States would willingly permit so foul a stain upon his nation's glory. The same would prove true to a greater or less extent respecting states, counties, municipal corporations, etc., although the history of some of the states, in this regard, is not as creditable as could be desired.

In the case of bonds and mortgages on private corporations, real estate, etc., securities vary with the success of the enterprises and the value of convertible resources thus mortgaged.

In all this class of Stocks, the value is regulated by the amount of interest to be paid and the character of the securities. The rates of United States Stocks rule higher than those of state, county, and municipal Stocks, on account of being better known; and, therefore, more generally available.

The true basis of value in *Dividend Stocks* is, first, the permanent prospects of the association represented, and next, its real, net earnings. The law which makes it incumbent upon banks to publish, at certain periods, a sworn statement of their affairs, is eminently calculated to further the interests of the public; and if one could always be sure that things are called by their right names in these statements, the process of estimating the value of such Stocks would be simple enough. Take an example: On the 19th March, 1859, the net reserved profits in the Chemical Bank of New York were \$588,176, and the capital stock \$300,000. During the succeeding year this bank paid to stockholders a dividend of 12 %, and added to the "reserved profits," \$42,056, which is equivalent to 14 % of the capital. The net earnings during the year, therefore, were 26 % on the capital stock. The question now is: What is stock worth which produces 26 %? or, what is its value as compared with money? The first thing to be ascertained, then, is the *value* of money, which, by reference to street quotations at this time, we find to average about 6 $\frac{1}{4}$  %. We have now a simple problem in proportion, viz.: If one dollar produces 6 $\frac{1}{4}$  cents, how much will be required to produce 26 cents? The solution is as follows:

$$6\frac{1}{4} : 26 :: 100 : 400.$$

The answer is: One dollar in Chemical Bank Stock is worth four dollars in money; which is the quoted market value of this Stock.

Another example: The Atlantic Bank, on the 19th of March, 1859, had a reserved profit of \$14,642, and a capital stock of \$400,000. During the year the bank declared a dividend of 7 %, which reduced the reserved profits \$8,430, being a little over 2 % on the capital. The net earnings, therefore, of the bank were a little less than 5 %—say 4%. What is the value of the stock? Solution as before:

$$4\frac{1}{4} : 4 :: 100 : 73.$$

Atlantic Bank Stocks are quoted @ 70c., which varies only slightly from the above result.

While it is true that upon a basis of this kind the approximate value of a large portion of the current Stocks can be ascertained, the parallel will not hold good in all cases. For instance, many of the railroads in the country pay regular semi-annual dividends of from 3 to 4 %—or 8 % per annum—whose Stocks are never quoted at a higher figure than 80c. The reason for this discrepancy between dividends and market value can exist only in a lack of confidence in the management and prospects of the corporations. It is known, in fact, that railroad dividends are often declared *without reference to earnings*, for the purpose of giving a fictitious value to the Stocks. Of course, when such is the case, money for this purpose has to be borrowed, and must eventually be paid. So recklessly have some railroad companies been in these matters, that the original Stock, which, by prudent management and a persistent course of honesty towards the public, might have been kept at a low rate of discount, if not at par, has been run down to zero, carrying with it, of course, all securities based upon it. There are various ways of "cooking up" the financial affairs of a large corporation, so that those who have no means of knowing the intrinsic worth of what are called its resources may be easily deceived. Nothing is more deceptive than an ingenious array of sober-looking figures. Efforts have been made by the various State Legislatures to infuse a little leaven of honesty into joint-stock associations by obliging them to make periodical statements to the public, under oath, of their condition; but such enactments afford no absolute guarantee. It is a difficult matter to legislate men honest; and corporations are, certainly, no better than men.

It would be proper, in this connection, to dwell somewhat at length upon the dishonest influences brought to bear upon Stocks by that class of speculators termed, not unaptly, "Stock Gamblers," but want of space will prevent it. We shall, therefore, close this subject by submitting a few copies of genuine documents:

## JOINT STOCK BUSINESS.

### JOINT STOCK BUSINESS.

The theory of joint stock business differs, in no essential particular, from that of individual or partnership concerns; the prime object in all being the accumulation of gain through an intelligent application of capital and talent. The means of joint-stock concerns are usually applied to enterprises requiring large investments, such as the constructing and working of railroads and manufactoryes, building and running steamships, purchasing and working mines, establishing and conducting banks, and in the various channels of public enterprise where it is supposed such investments will pay. The capital of a joint-stock concern is divided into certain number of shares, each representing a stated investment, which shares are purchased and held by the owners or *stockholders*, who, through appointed agents or directors, conduct the business of the concern. These shares are worth more or less than their nominal value, according to the present and prospective condition of the business they represent. If worth their face, they are said to be at *par*; if worth more, at a *premium*; if less, at a *discount*. Some of the different tests of this value are given in the preceding chapter. The majority of joint-stock associations work under a special or general charter granted by the legislature of the states in which they are located; and from this cause, and because such charters are guarded by wholesome restrictions, they have a kind of importance in the public estimation not shared by private concerns. Especially is this the case with banks, the promissory notes of which are paid and received as cash, and comprise the great medium of commercial transactions. The restrictions which the laws of the different states throw around banking institutions are intended both to protect the public against abuse of confidence and to encourage the concentration of capital in such legitimate channels as shall administer to the general good. Banks are the acknowledged financial agents of the community. They occupy a position between the borrower and the lender, saying to those who have more money than they need, We will find you responsible customers who will pay you for the use of your surplus means; and to those who are in want of funds for the prosecution of their legitimate business, We will supply your necessities at fair rates of remuneration. The bank also affords safe custody for the deposit of the surplus funds of its dealers, attends to the collection of their notes, negotiates exchanges, and, when properly conducted, serves an important end in facilitating financial operations.

The special privileges which banks possess are, the issuing of bills payable which circulate as money without drawing interest, and the holding of large balances in favor of depositors without paying interest. Both the bills payable and deposits are employed in discounting paper, upon which interest is charged. The restrictions under which banks operate constrain them to give ample security for the redemption of their own notes—which are always payable “on demand”—to keep a certain percentage of specie on hand for the accommodation of bill-holders and depositors, to abstain from speculations, and to confine their rates of interest within stated bounds. In order the more fully to secure these ends, the banks in most states are required to make periodical statements of their condition to the public. The following form is prescribed by the “Free Banking Law” of the State of New York, and is an exact copy of a “Bank Statement.”

### QUARTERLY REPORT.

STATEMENT showing the true condition of the “Niagara River Bank,” of Tonawanda, N. Y., an Associated Bank, on the morning of Saturday the third day of June, 1854.

<i>Resources.</i>			<i>Liabilities.</i>	
1. Loans and Discounts except, to Directors and Brokers	85305	89	1. Capital	101000
2. All sums due from Directors of this Bank	13300		2. Profits	3105 63
4. All sums due from Brokers	199	25	Registered Bank Notes received from Comptroller and not returned	
6. Bonds and Mortgages	48971		3. Due Comptroller	101290
7. Stocks	50000		4. Leaves Reg. Bank Notes in Circulation	75299
9. Loss and Expense Account	1200		5. Due Treasurer State of New York	5743 .55

## JOINT STOCK BUSINESS.

COUNTY OF ERIE, &c.: FRANCIS S. PRONK, President, and TILTON W. WOOLSON, Cashier of said Bank, being duly sworn, severally depose and say, that they are the President and Cashier as aforesaid, and that the foregoing is, in all respects, a true statement of the condition of the said Bank, before the transaction of any business, on the morning of the third day of June, 1854, according to the best of their knowledge and belief; that the said Bank is an Associated Bank, and is located in the town of Tonawanda, in the County of Erie, where it has a Banking House for the transaction of its business; and that from the first of June, 1853, up to the day of making this report, the business thereof was transacted at such location.

F. S. PRONK, *President*,  
T. W. WOOLSON, *Cashier*.

Subscribed and sworn by both deponents this 21st day of June, 1854, before me,

L. K. HADDOCK, { *Commissioner of Deeds  
for Buffalo*.

As this statement is intended for the enlightenment of the public, let us see how much satisfaction the public is likely to get out of it. The first item on the list of resources, is "Loans and Discounts." This we take to consist of promissory notes and other evidences of debt, held by the bank as security for the payment of money loaned. The real value of this species of resource will depend, of course, upon the certainty of payment at maturity. Of this the public knows nothing. The same is true of the second item, "Sums due from Directors of this Bank." This distinction is made that the public may know what proportion of the "accommodation" of the bank is absorbed by its officers; and is in accordance with the requirements of law. Item 4, "Sums due from Brokers," is an absolute resource if "Brokers" are sure to pay. Items 6 and 7, "Bonds and Mortgages," and "Stocks," comprise securities deposited with the Bank Superintendent as a basis of circulation, and, we must conclude, are worth their estimated value. Item 9, "Loss and Expense Account," is of a different nature, and will need a little explanation before "the public" will be ready to accept it as a resource. Were the bank to become insolvent, and its creditors to force it into liquidation, the amount called "Loss and Expense" would serve a sorry purpose in cancelling debts; and yet we are not fully prepared to say that it does not represent a resource. Among the liabilities enumerated are two items, called "Capital" and "Profits." These, although first mentioned, are the last to be paid, inasmuch as they are but other names for the stockholders, who are the owners of the bank. In paying the other liabilities, which, for the sake of distinction, we have elsewhere called "outside liabilities," we can, of course, use no part of the resource called "Loss and Expense;" and as the resources and liabilities are equal, we cannot throw out this amount without becoming insolvent. It must, therefore, apply in the payment of the liabilities to stockholders; and, inasmuch as that which will cancel a liability may properly be called a resource, we violate no principle in so denominating "Loss and Expense."

We are fully aware that the above argument is not without "special pleading," but we are also aware that the special case demands it. We do not claim, even, that the statement presented, although prescribed by the state, is the best form by which to illustrate the *solvency* of accounts; but this fact does not render it less important to be understood. The statement is, in fact, neither more nor less than a Trial Balance, the debits of which are called Resources, and the credits Liabilities. The Representative accounts not having been cancelled, are here arrayed against each other. But so long as the *questionable* resources do not exceed the "Profits," the public may fear nothing from their being enumerated. The only point about which the public must ever be in the dark with reference to Bank Statements, is the real worth of that omnibus account called "Loans and Discounts." If proper vigilance is exercised by the officers of the Bank Department, whose duty it is to investigate these securities, so that "Loans and Discounts" may include nothing of a doubtful character, the relative bearing of other items in the schedule can be easily estimated. For instance, if the item in the above statement called "Loss and Expense" were omitted, "Profits" would be reduced just that amount, which would, perhaps, render the statement easier of explanation, but not, in reality, more truthful.

We have given to banks a pre-eminence among joint-stock associations, because they are more intimately connected with the public wealth; furnishing, as they do, the credit upon which the bulk of all commercial exchanges are effected. Every man who is, or expects to be, the holder of a bank note, or a bank creditor by deposit or otherwise, is, to that extent, interested directly in the scheme which regulates the value of such possessions.

All joint-stock companies prudently conducted will make their dividends conform, in some degree, to their earnings; and in no case should the dividends exceed the current and "reserved" profits. The practice which certain railroad corporations have of *borrowing* funds to divide among stockholders is reprehensible in the

\* The term "insolvent" is, of course, used in its restricted sense, taking cognizance of the fact that the amount due stockholders, both for profit and original capital, is among the liabilities.

## EXCHANGE.

extreme, and should destroy public confidence in them, which it does. It would be far better for all such corporations to adopt the policy pursued by some banking institutions, restricting the dividends to such a point as to allow a constant accumulation of *reserved profits*, or "sinking fund." To secure this end, great care should be taken; in the enumeration of such resources as have intrinsic value, to state that value as nearly as can be done without reference to cost. For instance, in the statements of railroad, manufacturing and mining companies, upon which profits are determined, "Construction," "Machinery" or "Fixtures" accounts should be made to exhibit the *true value* of the property thus represented, instead of what may have been charged to such accounts. It is very probable that these accounts may have been debited with items which should have gone at once to *Expense* or *Loss* and *Gain* account; and, if so, the gains will show too large. The same may be true of other resources, such as personal accounts, bills receivable, etc.

In short, the same policy which will secure the best results in individual or partnership business, will hold equally good in joint-stock concerns. In the latter more particularly should great care be taken to avoid the reduction of capital stock. In private concerns, where each partner is immediately cognizant of, if not an active participant in, all the transactions, a reduction of capital by unfortunate speculations, or otherwise, is not fraught with such evils as where innocent holders of stock are injured through the imprudent or unfortunate management of accredited agents, over whom they have no control except to remove them by vote. It will be borne in mind that all dividends in joint-stock concerns are based upon the original or nominal stock, each holder receiving his just proportion. If the *working capital* exceed this nominal amount—as is the case where "reserved profits" are held—the prospects for dividends will, of course, be better than if it be less—as is the case when the capital has been reduced, either by actual loss or excessive dividends. It is an excellent, though homely maxim, that "a dinner should not be eaten before it is earned."

## EXCHANGE.

EXCHANGE is a term used to denote that commercial usage by which individuals are enabled to cancel debts at a distance without the transmission of money. This is effected through the agency of a species of commercial paper known as "Bills of Exchange."

A Bill of Exchange is a written order addressed to some person directing the payment of a certain sum of money, either upon its presentation or at a specified time thereafter. The parties to a Bill of Exchange are, first, the person who draws it, and who is called the *drawer*; second, the one on whom it is drawn, called the *drawee*; and third, the one for whom, or in whose favor it is drawn, called the *payee*. By legal construction and commercial usage, the drawer of a bill is also considered its *endorser*; his signature being a virtual guarantee of its fulfillment. The *drawer* is also denominated the *payer*; and, if he accept the draft to be paid at a future time, he is called the *acceptor* or *maker*.

DOMESTIC EXCHANGE consists of drafts, notes, checks, certificates of deposit, etc., the parties to which reside in different parts of the same country.

FOREIGN EXCHANGE is represented by drafts, the parties to which reside in different countries. They are usually drawn in sets of three or more, one of which being honored the others become void. This precaution is deemed important to guard against the contingencies of transmission. The separate bills are sent by different routes, or at different times, and the first that comes to hand, if either, is honored. Foreign Bills of Exchange are made payable in the currency of the country upon which they are drawn, instead of that where they originate.

### FORM OF A SET OF EXCHANGE.

EXCHANGE FOR £1000.

New York, March 31, 1860.

Thirty days after sight of this my first Bill of Exchange (second and third of the same date and tenor unpaid) pay to Daniel F. Tiemann, or order, One Thousand Pounds sterling, value received, with or without further advice.

CYRUS W. FIELD.

To Geo. Peasey & Co.,  
Bankers, London.

## EXCHANGE.

### EXCHANGE FOR £1000.

— 2 —

Thirty days after sight of this my second Bill of Exchange (first and third of the same date and tenor unpaid) pay to Daniel F. Tiemann, or order, One Thousand Pounds sterling, value received, with or without further advice.

New York, March 31, 1860.

Cyrus W. Field.

To Geo. Peabody & Co.,  
Bankers, London.

### EXCHANGE FOR £1000.

— 3 —

Thirty days after sight of this my third Bill of Exchange (first and second of the same date and tenor unpaid) pay to Daniel F. Tiemann, or order, One Thousand Pounds sterling, value received, with or without further advice.

New York, March 31, 1860.

Cyrus W. Field.

To Geo. Peabody & Co.,  
Bankers, London.

Bills of Exchange are bought and sold the same as any other currency, being negotiable by endorsement. If the person to whose order the bill is drawn endorses *in blank* by merely signing his name, no after endorsement is necessary; if, however, he endorses *in full*, mentioning the name of the party to whom, or order, the payment is to be made, the endorser must also endorse to give the bill currency. Each endorser, unless he signs "without recourse," is held responsible, and may be sued for recovery of the bill.

The intrinsic *Par of Exchange* is the value of the currency of one country, estimated in the currency of another, by comparing the quantity of gold and silver in their respective coins.

The *intrinsic* value of the English sovereign, which represents the pound sterling, is \$4.86 in our gold taken as a standard.

The *exchange* value of the English pound is \$4.44, and all premiums are computed upon this standard.

The *commercial* value of a Bill of Exchange on London is its exchange value, plus the premium it will bring in the market.

The Custom House regulations have fixed this premium at a little less than 9 %, making the value of the pound sterling \$4.84 in our currency.

The course of exchange, or the fluctuation above or below par, depends generally on the amounts due between different countries. Thus, when the debts and credits between two countries are equal, the real exchange is at par. But if New York owes London more than London owes New York, there will be a greater demand for the bills on London; and this demand will cause the bills to be at a premium. The premium, however, can never exceed the cost and risk of transporting specie; otherwise the debts would be paid in specie.

The operation of Bills of Exchange may be explained by a single example: If A of Boston, owes B of Paris, and C of Paris, owes D of Boston, A purchases in the market a *bill* upon Paris; that is, he buys of D an order on his debtor C to pay A, or order the amount desired. A endorses the bill and sends it to B, who receives payment from C. Thus the two debts are cancelled by a single remittance.

In making remittances to foreign countries, it is not always best to remit by the direct course. For example, suppose a merchant in New York desired to pay a debt in London where drafts on New York are below par, while at the same time they are at a premium in Paris, and Paris funds are at par in London; it will be evident at once, that the most economical method of getting funds to London, will be to remit through a house in Paris. The determination of the value of such remittances is called the *Arbitration of Exchange*, and is most easily accomplished by the application of what is known as the "Chain Rule."

**Note.**—It is no part of the design of this work to supply the place of a Treatise on "Commercial Calculations," such a book having been specially prepared and published to accompany this series. We refer the student to "Bryant & Stratton's Commercial Calculations" for a full exposition of all the practical arithmetical questions growing out of business transactions, including the topics here discussed. The special exercises under this head which follow have immediate connection with the transactions of the various sets enumerated in the body of the work.

## EXCHANGE.

### FORMS OF NOTES, DRAFTS, RECEIPTS, ETC.

We have given various forms of Notes, Drafts, etc., in the body of the work. The following varieties will serve farther to denote technical distinctions in form and usage:

#### Notes.

##### 1. Individual Note.

NEW YORK, July 1, 1860.

One day after date, I promise to pay to M. B. Scott, or order, Five Hundred Dollars, value received.

JACOB HINDS,

##### 2. Joint Note.

NEW YORK, July 1, 1860.

Sixty days after date, we promise to pay N. C. Winslow, or order, at Metropolitan Bank, One thousand Dollars, value received.

H. H. BRYANT,  
S. S. PACKARD,

##### 3. Joint and Several Note.

SPRINGFIELD, April 10, 1860.

One month after date, we, or either of us, promise to pay Orlando Warren, or order, Fifteen hundred Dollars, value received, with interest from date.

E. C. BRADFORD,  
F. A. HAWKES,

##### 4. Principal and Surety Note.

CUMMINGTON, January 1, 1860.

\$600. Thirty days after date, I promise to pay Elihuelt Packard, or order, Six Hundred Dollars, value received.

JOHN ORCUTT, Principal,  
ZENAS BRADLEY, Surety.

##### 5. Chattel Note.

BUFFALO, March 10, 1860.

Three months after date, I promise to pay Henry P. Smith, or order, Four Hundred Dollars in Goods from my store, value received.

HIRAM NEWELL,

##### 6. Non-Negotiable Note.

DETROIT, May 15, 1860.

\$375. One month after date, I promise to pay J. H. Goldsmith Three Hundred and Seventy-Five Dollars, at his office, value received.

J. C. BRYANT.

**R**EMARK.—Nothing is more essential to the holder of a note than to know when it falls due, as a neglect to present for payment on the day of maturity will discharge all parties but the principal. In this country all notes and drafts on time are allowed, by statute, *three days' grace*, unless otherwise expressly stated; that is, they are not legally due until three days after the written date of maturity. In the State of New York no grace is allowed on sight drafts, they being payable on presentation. If the last day of grace falls on Sunday or a legal holiday, the note is due on the Saturday or other day before the holiday. But if there be no grace, and the note falls due on Sunday or other holiday, it is not payable till the succeeding day. If a bill is drawn, payable in or after a certain number of days from date, sight, or demand, the day of date, sight, or demand, is excluded, and the day on which it falls due included. Thus, if a note be dated January 1, due in "twenty days from date," we commence counting from the day of date; January 2 being one day, January 3, two, and so on. The twenty days will elapse on January 21, to which add three days' grace, and the date of payment will be January 24. If a bill be drawn, payable in any stated number of months after date, it will be payable on the day of the month corresponding with its date, adding grace. Thus, if a note be dated January 1, payable "six months from date," it will fall due July 4, which being a national holiday, it will be payable on July 5; or, if that day be Sunday, on July 2. Presentment for payment must be made at the place designated, *during business hours* of the day of maturity. Most banks close at 3 o'clock, p. m. of each day, in which case, notes maturing at banks should be presented before that hour. It is customary to leave such notes with the bank for collection, some days before maturity. The only point about which the holder should be careful is, that the note be at the place designated at the time of its maturity.

If the place of payment be not specified in the note, a demand is sufficient, if made at the usual residence or place of business of the payer; either of himself or an agent authorized to pay.

Interest cannot accrue on a note before maturity, unless so specified.

Notes drawn "on demand" are not legally due until a formal demand has been made. For this reason, if for no other, the better expression is, "one day after date."

The phrase "value received," though not essential to the legality of notes and drafts, should be inserted to save the holder from the necessity of proving value.

To be negotiable, a note should be made payable either to "order" or "bearer." Some States require also the words, "without defalcation," others "without defalcation or discount."

## EXCHANGE.

### Drafts.

#### 1. Time reckoned from Sight.

\$800.

CLEVELAND, April 12, 1860.

At ten days' sight, pay, to the order of Ivison & Phinney, Five Hundred Dollars, value received, and charge to account of

T. P. HANDE

To BAYNTN, STRATTON & PARKER,  
10 Cooper Institute, New York.

#### 2. Reckoned from Date.

\$700.

CHICAGO, June 15, 1860.

One month from date, pay to James Magoon, or order, Seven Hundred and Fifty Dollars, at the Bank of the Interior, and charge the same to my account.

Dear V. BILL.

To MECHANICAL & CLARK,  
44 Broadway, Albany.

**REMARKS.**—As stated elsewhere in this work, a draft differs from a note only in form; the *endorse* of a draft contains the same relation to the other parties as does the *maker* of a note. The *drawer* of a draft is also identical with the *endorser* of a note, being holder for payment in case the *drawee* should fail to comply.

The regulations and provisions stated as pertaining to notes are, in all respects, equally applicable to drafts.

The term "sight" as used in drafts, refers to presentment, which time is usually denoted by the date of acceptance. (See example on page 118.)

### Due Bills.

#### 1. For Cash Drawing Interest.

\$175  $\frac{3}{4}$ .

Louisville, April 28, 1860.

Due John Jones on demand, One Hundred and Seventy-Five  $\frac{3}{4}$  Dollars, with interest from date.

J. R. BLACKLOW,

#### 2. For Merchandise, without Interest.

\$100.

Syracuse, June 10, 1860.

Due W. Carpenter, or order, One Hundred Dollars, payable in Wheat at the market price, on the first day of September next.

Comstock & Co.

**REMARKS.**—Due Bills are equally binding and effective with notes and drafts, and may be made negotiable as well. They are usually drawn on demand, and for some special purpose, wherein a note or draft would not be appropriate. They draw no interest unless specified. Due Bills are of every conceivable form, there being no usual formula, as in the case of notes and drafts.

### Orders.

#### 1. To apply on Account.

Mr. J. Austin Sperry will please pay to the bearer Fifty Dollars in Merchandise, on my account,

J. D. Hinde,

#### 2. In full of Account.

THOMAS PEAK, Esq.,

FREDONIA, O., July 10.

Please pay to E. M. Hale, or bearer, Fifty Dollars from your store, and this shall be your receipt in full of my account.

JACOB S. DUKE.

**REMARKS.**—An order is similar in character to a draft, with the difference that a draft is always for money, while an order is for goods. An order, if accepted by the *drawee*, is precisely the same in effect as a chattel note.

### Receipts.

#### 1. On Account.

\$400

Received, January 1, 1860, Four Hundred Dollars on account of W. Armstrong.

GEORGE PHILMAN,

#### 2. In full of all Demands.

\$375

ALBANY, June 10, 1860.

Received, of Calvin S. Sill, Five Hundred and Seventy-five Dollars, in full of all demands to date.

BENJ. PAYE.

## EXCHANGE.

### 3. To apply on Contract.

\$1000.

Received, of J. W. Eddy, One Thousand Dollars, the same to apply on contract for building house,  
dated April 20, 1860.

ALBANY, April 20, 1860.

W. H. Clegg.

### 4. To apply as an Endorsement.

\$75.

Received, on the within note, Seventy-five Dollars.

JULY 10, 1860.

JAMES SMITH.

### 5. Receipt for Property.

CINCINNATI, May 10, 1860.

Received of Jacob Strader the following enumerated articles, to be held in trust: ~~for him~~: One Gold Watch (hunting case); one Silver Watch; two Promissory Notes, each dated January 1, 1860, and signed by Robert McDonald—one for Three Hundred Dollars, due in six months from date, and the other for Fifty Hundred Dollars, due in eight months from date.

D. C. COLLINS.

**REMARKS.**—There is absolutely no end to the variety of Receipts; neither do they need any special explanation, as each explains itself. The common business way of obtaining a receipt is explained in connection with checks and certificates of deposit.

### Certificates of Deposit.

\$100.

David T. Fuller has deposited in this Bank Five Hundred Dollars, payable to Albert H. Tracy or order, on the return of this Certificate, properly endorsed.  
(No. 1275.)

ALBANY, March 1, 1860.

JAMES A. THORND, Teller.

**REMARKS.**—The above is the usual form of Bank Certificates, and is sufficiently suggestive of their character. The particular convenience of such a document is its adaptation to the purposes of remittance. It is the same in effect as a "certified check," the bank being as much bound to redeem it as one of its own notes. It is much safer to remit than a bank-note, as, in case of misappropriation or theft, the payment is stopped, and a duplicate will be issued. It also serves as a receipt, inasmuch as the party in whose favor it is drawn must endorse it before it can be redeemed.

### Checks.

#### 1. Payable to "Bearer."

\$100.

MERCANTILE COLLEGE BANK,

Pay to Joseph Dawson, or bearer, One Hundred Dollars.  
(No. 1351.)

NEW YORK, May 16, 1860.

S. S. PACKARD.

#### 2. Payable to "Order."

\$300.

MERCANTILE COLLEGE BANK,

Pay to Charles Strong, or order, Three Hundred Dollars.  
(No. 1500.)

NEW YORK, June 20, 1860.

S. S. PACKARD.

**REMARKS.**—The only distinction in these two forms exists in the words "bearer" and "order." The difference growing out of this distinction, however, is sometimes very important. For instance, a check, payable to bearer, is negotiable without endorsement, while, if payable to "order," it must be endorsed by the party in whose favor it is drawn, thereby serving as a receipt for the payment of its face. The latter method is pretty generally adopted by business men, to avoid the necessity of special receipts. It is often the case that persons receiving checks as cash require them to be certified by the proper bank officer, in which case they are the same as certificates of deposit.

It must be borne in mind, that drafts, orders and checks are always drawn against existing debts due to the drawer, except in special cases where it is otherwise agreed. Drafts are frequently drawn by *consignees* against special consignments in the hands of the drawee, in which case they are paid from the avails of such consignments.

## COMMERCIAL CALCULATIONS

### COMMERCIAL CALCULATIONS.

It will, of course, be impossible to do more than hint at a few of the most prominent questions properly embraced under this general subject; and it shall be our earnest aim to make these of the most practical kind. The very idea of accountantship is inseparable from a thorough knowledge of calculations; and all theoretical abstractions which lie at the basis of the science of accounts, will be found of little avail without the practical results which come along through the almost magical power of figures.

#### ADDITION.

The simple process of addition would seem to need no enforcement or illustration; and yet there is no part of the science of numbers more important to accountants, or in which they are more apt to be deficient. We mean, of course, the process as applied to the addition of long columns of figures, which should be done with facility and correctness. Authors and teachers have shown both ability and ingenuity in their various suggestions and aids, but nothing can be of so much service to the student as *continued practice*. The most approved method of testing the correctness of addition is to add the columns in both directions, first upward and then downward, or the reverse. The philosophy of this is, that the combinations are thus varied, and the chance of committing the same error twice is avoided.

Three very simple processes of retaining the figure to be carried to the next column—a very important consideration with beginners—are shown below. The first is the usual method of writing the figure to be carried, *small*, under the unit amount of the column which produced it. The second requires the addition of each separate column to be written down on a waste space, commencing with the right-hand column, and carrying to the next column, as in the usual method; these separate amounts placed in their order one under the other, will present in their unit figures, counting upward, the general result. The third method consists of the proper arrangement of the independent sum of each column, so that being again added, the proper result is secured.

#### EXAMPLES.

First Process.	Second Process.	Third Process.
1829.25	1st. column 50	5 0
748.18	2d. " 29	2 4
2562.23	3d. " 84	8 2
145.19	4th. " 89	8 8
2823.25	5th. " 39	8 6
7874.28	6th. " 19094.90	1 6
4291.83		
25.64		
19094.90		1 9 9 9 4 . 9 0
1112.58		

When the student becomes more accurate and self-reliant, he may feel justified in dispensing with all such aids; and particularly if his memory is sufficient to retain the carrying figure; but until he arrives at this desirable state of perfection, it becomes him to guard himself on every hand. Great proficiency in this regard may be readily acquired by practice, some accountants being able, very readily to cast up three and four columns of figures at once.

#### INTEREST.

Interest, in the accountant's vocabulary, means the *use of money*. The amount received or paid for interest is usually a percentage on the sum used, and is fixed either by contract or statute. *Per cent.* signifies by the hundred, and implies, in interest, so many cents on the hundred cents, so many dollars on the hundred dollars, etc. It is usual to reckon interest by the year; but it is always proper to express the time, as it is not necessarily understood.

In calculating *per annum* interest, it is customary to reckon 360 days to the year, and 30 days to the month; although in some states the whole number, 365 days, is reckoned to the year, and any number of days as a proportion of 365. In the State of New York the basis of 360 days to the year is fixed by law. The section reads thus: "For the purpose of calculating interest, a month shall be considered a twelfth part of a year and as consisting of thirty days; and interest for any number of days less than a month shall be esti-

## COMMERCIAL CALCULATIONS.

mated by the proportion which such number of days shall bear to thirty." There are those, however, who consider interest reckoned on this basis as usurious, it being  $\frac{1}{3}$  more than by the basis of 365 days to the year.

In the illustrations which follow we shall adopt the usual standard of 360 days.

The rate, or *per centage* of interest is established by law in most countries and states. Any excess over this rate is termed usury, for the exactation of which various penalties are prescribed.

The rate of interest in Pennsylvania, New Jersey, (except in Jersey City and Hoboken,) Delaware, Maryland, Virginia, North Carolina, South Carolina, Tennessee, Kentucky, Ohio, Indiana, Illinois, Iowa, Missouri, Arkansas, Mississippi, Florida, the six Eastern States, the District of Columbia, and on debts due the United States, is 6 per cent. *per annum*.

In New York, Michigan, Wisconsin, and Georgia, it is 7 per cent.

In Alabama, 8 per cent.

In California, 10 per cent.

In Louisiana, 6 per cent.

In most of the states the law permits a higher than the established rate, in cases of special contract.

In reckoning interest, at whatever rate, it is most convenient first to obtain it, for the given time, at 6 per cent., and then add or subtract for the difference. Particularly is this the case, where 360 days are reckoned to the year; 6 being an aliquot part both of 360, the number of *days* in the year, and 12, the number of *months*.

There are many processes of reckoning interest, all more or less worthy of thought; but we shall confine our practice to the one which, under all circumstances, we consider the best.

Taking as a basis 360 days to a year, 30 days to a month, and 6 per cent. *per annum*, we are easily led to the following conclusion: If 12 months produce 6 per cent., 1 month will produce one-twelfth of 6, or one-half of 1 per cent., and two months, 1 per cent. One per cent. of any amount, therefore, is the interest on that amount for 2 months, or 60 days, at the rate of 6 per cent. *per annum*. One per cent. being the one hundredth part of any amount, is easily obtained by dividing by 100, or, what is the same, cutting off two right-hand figures.

**EXAMPLE 1.**—Required the interest on \$3750, for 2 months, at 6 per cent. *per annum*.

$$\text{Solution : } 37 \mid 50 ; \text{ or } \$37.50$$

Having this starting point, the process of obtaining the interest for any given number of months or days becomes extremely simple.

**EXAMPLE 2.**—Find the interest on \$4675 for 3 months, 16 days, at 6 per cent.

$$\begin{array}{r} \text{Solution : } 2)46'75 = 2 \text{ months.} \\ 2)23'975 = 1 \text{ month.} \\ \hline 11)6875 = 15 \text{ days.} \\ \hline 81)6125 \end{array}$$

**REMARK.**—We first find the interest for 2 months by the process already given, which is \$46.75. Dividing this amount by 2, will give us the interest for 1 month, \$23.375; and this by 2 will give the interest for one-half a month, or 15 days, \$11.6875. By adding these results together, we get the grand result, \$81.61+.  
The

Should the number of days be no equal part of 60, nor of any other number for which the result is shown, it will be necessary to use such component parts as are equal parts of 60. Thus, if the number of days be 13, we can take 1 and 12, or 3 and 10; 1 being the sixtieth part, 12 the fifth; 3 the twentieth, and 10 the sixth of 60. If the number of days be 18, take 6 and 12, or 3 and 15, and so on.

From these remarks and illustrations, we are prepared to submit the following rule for reckoning interest on any given amount for any given time, at 6 per cent. *per annum*.

**RULE.**—*Cut off two figures from the right of dollars in the principal, by a perpendicular line; the result will be the interest for 60 days, the dollars being on the left, and the cents and mills on the right of the line. Multiply this result by one-half the number of months required, to which add, for days, that proportion of the interest for 60 days which the given number of days is of 60.*

The using of a perpendicular line for the separatrix is of more consequence than will appear at first view. All necessity for pointing off in the product is thus happily dispensed with, and the work is brought within

## COMMERCIAL CALCULATIONS.

the smallest possible compass. For universal use, we do not know of a better rule for computing interest than the foregoing.

If the rate of interest be any other than 6 per cent., the proper proportions added to, or deducted from, 6 per cent., will, of course, produce the result. If 5 per cent., deduct  $\frac{1}{6}$ ; if 7 per cent., add  $\frac{1}{6}$ ; if 8 per cent., add  $\frac{2}{6}$ , or  $\frac{1}{3}$ ; if 9 per cent., add  $\frac{3}{6}$ , etc.

### DISCOUNT

Discount is an allowance made for the payment of a debt before it is due. The present worth of such a debt is that sum which being put at interest for the given time, would at the end of that time amount to the face of the debt.

Thus, if I owe \$100 due in one year, without interest, and money is worth 6 per cent. per annum, the present worth of the debt is \$100; because \$100 at 6 per cent. will amount in one year to \$106. The discount would, in such case, be \$6; which is the difference between the present value of the debt, and its value one year hence.

To find the present worth of any sum due at any given time and rate, it is only necessary to divide the sum by the amount of \$1 at the given rate and time. To find the discount, subtract the present worth from the given sum.

**EXAMPLE 1.**—What is the present worth of a note for \$750, due in 4 months, without interest, if the use of money is worth 6 per cent. per annum?

*Solution.*—The amount of \$1 for 4 months at 6 per cent. per annum is \$1.02; therefore, \$750 divided by \$1.02, will be the present worth:

$$750 \div \$1.02 = \$735.29 + \text{present worth}.$$

The discount on the above note can be obtained by subtracting the present worth from the note, viz.:  
 $750 - \$735.29 = \$14.71$ .

The rule and process above will obtain the *true* discount; but business custom varies from this standard. Business discount, as it is called, is simply interest on the face of the debt, taken in advance. Thus, if I owe \$106, due in one year without interest, when money is worth 6 per cent. per annum, and I wish to discount the debt, or pay it *now*, business custom warrants me in computing the *interest* on \$106 for the time, which interest is deducted from the debt, leaving the present worth, or the sum I am to pay. The interest for one year at 6 % on \$106, is \$6.36, which deducted from \$106, leaves as present worth \$99.64, instead of \$100, which, as before shown, is the *true* worth.

By this method I gain 36 cents, which, it will be seen, is the interest on the *true* discount, \$6 for 1 year. The difference between these two methods then, is, that by *true* discount the interest is considered due when the debt is due; while by *business* discount it is considered due when the debt is discounted.

**EXAMPLE 2.**—What is the present worth of a note for \$1500, due in 60 days without interest, when money is worth 6 % per annum; discount reckoned by the business standard?

*Solution.*—The interest on \$1500 for 60 days at 6 %, is \$15; which deducted from the face of the note, \$1500, leaves the present worth, \$1485.

There are various and conflicting opinions as to the legality of this mode of reckoning discount, but as it is almost universally used, both in banks and business houses, we must concede its practical authority.

### EQUATION OF PAYMENTS.

**EQUATION OF PAYMENTS, OR AVERAGE,** as it is more frequently called, is the finding of an average or mean time for the payment of several amounts, due at different times; and also, when the balance of an account having both debit and credit amounts, will average due, that no loss may be sustained by either party. The philosophy of equation is based upon the compound relation of *money* and *time*; or upon a recognition of the fact that the *value* of the use of money is in proportion to the *amount* used, and the *time* for which it is used. As a simple illustration: If the use of \$100 is worth a certain sum for one month, it is worth twice that sum for two months; or, if \$100 is worth a certain sum for one month, \$200 for the same time is worth twice as much.

## COMMERCIAL CALCULATIONS.

**EXAMPLE 1.**—A owes B \$1200, payable as follows: \$100, in 30 days; \$400, in 60 days; and \$700 in 90 days. When will the entire debt average due?

**Solution.**—The question is, how long may \$1200 be used, to be equivalent to the use of \$100, for 30 days; \$400, for 60 days; and \$700 for 90 days?

The use of \$100 for 30 days is equal to the use of \$1 for 3000 days.							
"	\$400	"	60	"	"	"	\$1 " 24000 "
"	\$700	"	90	"	"	"	\$1 " 63000 "
	<u>\$1200</u>						<u>90000</u>

Therefore, the use of \$1 for 90000 days would be equivalent to the time to which A is entitled on his debt of \$1200. We have, then, this statement:

The use of \$1 for 90000 days is equal to that of \$1200 for 75 days.

The average time for the payment of A's entire debt, is 75 days hence.

We are thus enabled to give a general rule for finding the average time of payment of several amounts, due at different times.

**RULE.**—Multiply each payment by the number of days before it is due, and divide the sum of the products by the sum of the payments. The quotient will be the number of days (to be counted forward from the date of reckoning), to the average time of payment.

**EXAMPLE 2.**—Abram Jones purchased of Samuel Lincoln the following bills of merchandise:

Jan. 1, 1860, a bill amounting \$175.34
Apr. 15, " " " \$388.25
Apr. 30, " " " \$180.60
June 9, " " " \$400.00

The term of credit on each purchase is 4 months. If Mr. Jones should propose to give his note for the full amount, due in 4 months from date, when should the note be dated?

**NOTE.**—To apply the foregoing, or any other adequate rule to a statement of this kind, it will be necessary first, to settle upon some date from which the time on each payment is to be reckoned. It is usually best to select the date, either of the *first* or *last* amount, and reckon backwards or forwards, counting the average time accordingly. As the purchases are all made on 4 months' time, and the note is to be drawn at 4 months, it will not be necessary to take either fact into consideration. If, in this case, we select the *first* date from which to count, we shall have the following solution:

Amount.	Days before due.	Product.
175.34	x 0	= 0
538.25	x 104	= 55978.00
180.60	x 119	= 21541.40
400.00	x 159	= 63600.00
<u>\$1294.19</u>	)	141119.40 ( 108 + days.

The average is 108 days; which is the number to be counted forward from the date selected, Jan. 1. The note must be dated Apr. 19.

### AVERAGING ACCOUNTS CURRENT.

An ACCOUNT CURRENT is a statement of the transactions between two parties, showing dates, items, and amounts, both debit and credit, during a certain period.

The balance of an Account Current is the difference between the debits and credits; or what one party is owing the other, as indicated by the items.

To average an Account Current is to fix the date when the balance is due. The adjustment is called "Compound Equation," or "Compound Average." The usual process is, first to average each side of the account; and then multiply the amount earliest due by the number of days between the average dates, and divide the product by the balance of the account. The quotient will be the number of days from the latent date, when the balance will average due; to be counted forward if the amount latest due is the larger, and backward if the amount latest due is the smaller.

## COMMERCIAL CALCULATIONS.

A better process than this, we think, because more easily comprehended and practical, is the averaging by interest. Not having space to exemplify more than one method, we shall choose the latter.

**EXAMPLE 1.**—The following account is found on my Ledger. The amounts on each side are supposed to be due at their several dates. When is the balance due?

Dr.		JOHN ANDERSON.				Cr.	
Jan. 15	To Mds.	275		Feb. 1	By Cash	500	
Apr. 10	"	650				425	
		925				925	

**Solution.**—First assume the date of settlement to be the latest date on which any amount, debit or credit falls due, and reckon interest on the debit and credit items to that date, viz.:

**Credit.**—The interest on \$500 from Feb. 1 to Apr. 10, @ 6 %, is \$8.75.

**Debit.**—The interest on \$275 from Jan. 15 to Apr. 10, @ 6 %, is \$8.90.

Excess of credit interest, \$1.85.

It will thus appear that on the assumed date of settlement, April 10, Mr. Anderson owed me \$925 of account, and \$2.90 interest; while I owed him \$500 of account, and \$8.75 interest. In other words: he owed me the balance of the account (\$425) less the balance of interest (\$1.85). It would be very easy to settle the account at this date, provided the rate of interest was satisfactory, by deducting the balance of interest from the balance of account; but, instead of this, it is proposed that Mr. Anderson pay me the exact balance shown to be due by his account, *at such time* as will secure an equitable adjustment of the interest. It will be evident that were he to pay me the balance of account on the assumed day of settlement, April 10, he would be the loser of the balance of interest due him at that date. The simple question then is, how long may he retain the balance of account (\$425), to accumulate the balance of interest (\$1.85)?

First ascertain how much the balance of account will accumulate in one day, and divide the balance of interest by it: the quotient will be the number of days which the balance may be held.

The interest on \$425 for one day, at 6 % per annum, is \$0.0708.

Then,  $\$1.85 + \$0.0708 = 26+$  = the number of days.

In 26 days from April 10, then, which will be May 6, Mr. Anderson will owe me, by average, the balance of his account, \$425.

**EXAMPLE 2.**—When will the balance of the following account average due, assuming the different items to be due at their several dates?

Dr.		ALONZO MITCHELL.				Cr.	
May 1	To Mds.	185		June 1	By Cash	400	
" 15	"	750		" 15	"	200	
July 1	"	475				810	
		1410				1410	

**Solution.**—Assuming the date of settlement to be July 1, we have:

### *Debit Interest.*

\$185 from May 1, to July 1—2 mo. . . . \$1.85  
 \$750 " " 15, " " 1 mo. 15 da. \$0.50 \$7.48

### *Credit Interest.*

\$400 from June 1 to July 1—1 mo. . . . \$2.00  
 \$200 " " " " 15 da. . . . \$0.50 \$2.50  
 Leaving the excess of debit interest, \$4.98

On July 1, the assumed date of settlement, therefore, Mr. Mitchell owes, not only his balance of account, (\$810) but a balance of interest, (\$4.98.) It is evident, then, that the balance of account has been due long

## COMMERCIAL CALCULATIONS.

enough to accumulate this interest. What is the time required? By the process already shown, we ascertain the time to be 87 days; which reckoned back from July 1, will make the average date May 28.

From the foregoing examples, we adduce the following rule for obtaining the date when the balance of an account will average due:

**RULE.**—Assume as the date of settlement the latest date at which any amount, debit or credit, falls due; ascertain the balance of interest due at that date, at any given rate, and how long it will take the balance of account to accumulate this interest, at the same rate. The answer will be the time before or after the average date. If the balance of interest, and the balance of account are on the same side, reckon backward; if on opposite sides, reckon forward.

**Note.**—Although to average an account is to obtain a date when no interest is due from either side, yet the important principle recognized is, that the use of money is valuable to the user, in the compound ratio of time and amount; and the real achievement of any correct process of average, is to make the value thus determined, on one side, balance that on the other. For this reason, the rate of interest is unimportant, so long as the same rate is used on both sides. We have chosen 6%, because it is more easily obtained.

Any other time may be assumed for the date of settlement, as well as "the latest date at which any amount falls due," but, for evident reasons, this date is preferable.

We will now apply the foregoing rule in averaging the time for the payment of net proceeds in a few of the Consignment and Mds. Co. accounts in the body of the work.

**EXAMPLE 3.**—Account Sales of Flour and Wheat sold on % and risk of J. R. Wheeler & Co. (Page 71.)

Date.	Article.	Amount.	Time.	Interest.	Date.	Article.	Amount.	Time.	Interest.
Mar. 2	To Cash . . .	100	66 da	1 10	Mar. 6	By Cash . . .	7500	63 da	77 50
" 6 <sup>a</sup>	Storage, etc. . .	826	63 da	8 36	May 7 <sup>b</sup>	" . . .	4500		
	<i>Net proceeds . . .</i>	111875							
	<i>Bal. Interest . . .</i>			73 04					
		12000		77 50			12000		77 50

Balance of account (\$111875); and balance of interest (\$77.50) on the same side. Ascertain the time it will take \$111875 to accumulate \$77.50, and count backward. Ans. 88 days before May 7, or March 30.

**EXAMPLE 4.**—Account Sales of Nails and Lead, sold on joint % of Logan, Wilson & Co., and ourselves, each  $\frac{1}{4}$ . (Page 110.)

Date.	Article.	Amount.	Time.	Interest.	Date.	Article.	Amount.	Time.	Interest.
Apr. 3	To Cash . . .	100	36 da	60	Apr. 5	By Cash . . .	1400	34 da	7 98
" 5	Storage, adv. . .	463 75	33 da	2 55	May 9	" . . .	3300		
	Com. and Gain <sup>c</sup> . . .	463 75							
	<i>Net proceeds . . .</i>	4136 25		4 78					
	<i>Bal. of Interest . . .</i>			7 98			4700		7 98
		4700							

Balance of account, \$4136.25; balance of interest, \$4.78. Time from date of settlement, (May 9), reckoned backward, 7 days. Equated time, May 2.

\* The Commission, Storage, etc., is assumed to be due when the account is rendered.

† This is the assumed date of settlement, as the note given March 6, falls due at that time.—See Account Sales.

‡ It must not be forgotten, that although the consignee is, in this case, a partner, his account is rendered similarly as an agent, or consignee. In this view, his own share of the net gain is as much a part of the "charges" as is his claim for commission. In all these statements of Company sales, we have considered the invoice furnished by the consignor as subject to the same time of settlement as the average sales. The fact in all such matters should properly be stated in the partnership contract. If the consignee's share of the invoice is considered due when the property is shipped, it will, of course, vary the time of equation.

## COMMERCIAL CALCULATIONS.

**EXAMPLE 5.**—Account Sales of Vinegar, Linseed Oil, and White Lead, sold on joint  $\frac{1}{2}$  of W. K. Seiler and ourselves, each  $\frac{1}{2}$ . (Page 111.)

Date.	Article.	Amount.	Time.	Interest.	Date.	Article.	Amount.	Time.	Interest.
May 1	To Cash . . .	80	62 da	53	May 8	By Cash . . .	780	60 da	780
" 8	Storage, Adv. Com. and Gain . . .	189	60 da	189	" 8	" . . .	2370		
	<i>Net proceeds . . .</i>	<i>2881</i>		<i>5.09</i>					
	<i>Bal. of Int. . .</i>	<i>8120</i>		<i>7.50</i>			<i>8120</i>		<i>7.50</i>

Balance of Account, \$2881; balance of interest, \$5.09. Time from date of settlement, (July 8,) 13 days, reckoned backward 13 days. Equated time, June 20.

**EXAMPLE 6.**—Account Sales of Sugar, sold on joint  $\frac{1}{2}$  of F. A. Boyle & Co., N. O., Campbell & Strong, and ourselves, each  $\frac{1}{2}$ . (Page 111.)

Date.	Article.	Amount.	Time.	Interest.	Date.	Article.	Amount.	Time.	Interest.
May 6	To Cash, paid Fr't Storage, Ad. etc. . .	500	2 da	17	May 8	By Cash, Note, etc. . .	7800 00		
" 8		237.50							
" 8	Our net gain . . .	234.17							
	<i>Net proceeds . . .</i>	<i>5508.33</i>					<i>7800 00</i>		<i>17</i>
		<i>7800 00</i>		<i>17</i>					

Balance of account, \$5508.33; balance of interest, \$0.17. The time it would take for the balance of account to accumulate this interest would be much less than one day. Equated time, May 8.

**Note.**—It must be borne in mind that the *net proceeds* above comprise the amount due to *both* of the other parties. In equating time on an Account Sales—whether the consignee is a partner or not—the *net proceeds*, or “balance of account” should be the difference between the charges (including the consignee’s share of the gain, when he is a partner,) and the gross proceeds. This is upon the supposition that the consignee’s share is subject to the same terms of payment as the *net proceeds*.

### ACCOUNT CURRENT, AND INTEREST ACCOUNT.

The following illustrations are based upon an understanding between the parties that all amounts, debit and credit, shall draw interest after due, at a specified rate. The settlement may be effected at any time and interest adjusted as per agreement. This method is preferred by some to that of averaging payments. The form will be sufficient without specific instruction:

**P. R. SPENCE, IN ACCOUNT CURRENT AND INTEREST WITH B. S. & P., April 10, 1860.**

Dr.		Amount.	Days.	Interest.	1860	Prd.	1	By Cash . . .	Amount.	Days.	Interest.
Jan. 1	To Mds.	500	100	8.33				675	59	7.75	
" 10	" "	475	91	2.46	" 15			400	55	3.65	
" 15	" "	700	86	10.03							
Mar. 1	" "	870	40	5.80							
	<i>Bal. of Int. . .</i>	<i>10.20</i>						<i>1480.20</i>			
		<i>2855.20</i>		<i>21.62</i>					<i>2555.20</i>		<i>21.62</i>
Apr. 10	To Balance . . .	1480.20									

**Note.**—The rate of interest taken in the above is 6 %. The debit interest exceeds the credit interest on the day of settlement, \$10.20, which amount is brought forward to increase the debit side of the account.

The statement on the following page is somewhat more complex, owing to the necessity of both debit and credit interest columns on each side. We think this form altogether preferable to the one used by most authors, necessitating the frequent transfer of interest from one side of the account to the other.

As the settlement takes place before several amounts on either side are due, interest must be calculated from, instead of added to, such amounts. This is effected by the double interest formula on each side, ignoring the debit interest on the credit due at account, and the credit interest on the debit side. The excess of credits interest

The balance of account and balance of interest being on opposite sides, the balance of account must be held until it accumulates the balance of interest, which is 48 days, nearly. The account will, then, average due in 48 days from December 1 or January 16, 1860. To make these two processes prove each other, it is only necessary to ascertain what would have been due had the account been paid, on September 1. Deducts the interest on \$1025 for 187 days, from \$1025.

## COMMERCIAL CALCULATIONS.

### PARTNERSHIP SETTLEMENTS.

The adjustment of accounts between partners involves, often, the most discriminations, and the most thorough appreciation of the various bearings of different entries.

The basis of all such settlements is, of course, the original agreement or contract between the parties; the terms of which should always be of the most plain and unequivocal nature.

A few points, only, need be expressed in a partnership contract; among which are:

*First.* The amount to be invested by each partner.

*Second.* The services to be rendered by each, and the compensation to be allowed therefor.

*Third.* The basis of gain or loss, and the proportion to be shared by each partner.

It is frequently the case that partners, desiring to have everything *expressed* in the contract, and not appreciating the full bearing of certain conditions, defeat their own purposes, by making the terms themselves incompatible. In such cases, the construction should be in accordance with the evident *intent* of the parties.

The difficulties existing in partnership settlements are so irregular, that any attempt at supplying competent rules to meet every case, would be preposterous. It is, however, possible to give such general hints and illustrations as will apply in the majority of cases; a thorough knowledge of the principles of accounts, with sufficient common sense to apply them, must do the rest.

The following general statements, although many of them are self-evident, will serve a purpose in the solutions under this head:

1. *The present worth* of a concern is its net resources; or the excess of its resources over its outside liabilities.

To find the present worth, subtract the liabilities from the resources; or, ascertain the original investment, to which add the net gain, or from which subtract the net loss.

*Note.*—If the liabilities exceed the resources, the difference is the *net insolvency*.

2. *The net investment*, in business, is the amount invested, less the amount drawn out by the partners.

3. *The average investment* is a sum which being kept in the business during the specified time, would be equivalent to the actual investments, in the compounded ratio of time and amount.

To ascertain the average investment, multiply each investment by the time of its continuance in the business, and divide the sum of the products by the time for which the average is wanted. The most satisfactory proof is to compute the interest on each investment for the time of its continuance, which must be equal to that on the average investment for the specified time of average.

4. *The gain or loss* during a certain period of business is measured by the increase or diminution of the net resources for that time.

To ascertain the net gain or loss, get the difference between the *net investment* and the *present worth*. If the present worth is the larger, the difference is a *gain*; if smaller, a *loss*.

**EXAMPLE 1.**—A and B are partners, commencing with a joint capital of \$10,000. The terms of the contract are that A shall receive  $\frac{2}{3}$  and B  $\frac{1}{3}$  of the net gain. At the close of the year, when the division is to be made, the resources and liabilities stand thus:

Resources.	Liabilities.
Cash, . . . . .	\$5793.25
Merchandise, . . . . .	3500.00
Bills Receivable, . . . . .	1500.00
Personal Accounts, . . . . .	5500.00
	<hr/>
	\$16293.25
	Bills Payable, . . . . .
	Personal Accounts, . . . . .
	<hr/>
	\$3000
	1500
	<hr/>
	\$4500

What proportion of the net resources belongs to each partner?

*Solution.*—First ascertain the net gain, by subtracting the investment from the present worth, viz.:

Total Resources, . . . . .	\$16293.25
Less Total Liabilities, . . . . .	4500
Leaves Present Worth, . . . . .	<hr/>
From which subtract investment, . . . . .	\$11793.25
Leaving Net Gain, . . . . .	10000
	<hr/>
	\$1793.25

## COMMERCIAL CALCULATIONS.

Then add each partner's share of the gain to his share of the investment, via:

$\frac{1}{2}$ of \$1798.26 = \$ 448.81, H's share of gain.	
$\frac{1}{2}$ " " = 1844.94, A's " "	
A's Investment, . . . . .	8000
Plus his Gain, . . . . .	1844.94
Equals his Present worth, . . . . .	<u>\$4844.94</u>
B's Investment, . . . . .	8000
Plus his Gain, . . . . .	448.81
Equals his Present Worth, . . . . .	<u>8448.81</u>
Total Present Worth, as before shown, . . . . .	<u>\$11798.26</u>

EXAMPLE 2.—C, D and E invested as follows:

C put in \$4000, and drew out \$ 700	
D " 4000, " 825	
E " 4500, " 1000	

The gain in business is \$1500, of which each is to share  $\frac{1}{3}$ . What is the interest of each in the business at closing?

Ana, C's, \$3600; D's, \$4675; E's, \$4000.

EXAMPLE 3.—F, G and H are partners. They invest in equal amounts. At the close of the year their resources exceed their Liabilities \$27000; and their gains have been \$4000, of which F is to share  $\frac{1}{3}$ ; G,  $\frac{1}{3}$ ; and H,  $\frac{1}{3}$ . What was the capital of each at commencing? What, at closing?

Note.—The capital at commencing, subtracted from the capital at closing, will equal the net gain; and, consequently, the net gain subtracted from the capital at closing, or present worth, will equal the capital at commencing, or the net investment.

Ana, to the above: F's capital at commencement, \$7666.66 +; G's and H's the same. F's capital at closing, \$8333.33; G's, \$9000; H's, \$9066.67.

EXAMPLE 4.—A and B are partners, investing equally, and sharing equally in gains or losses. At commencing business, their resources and liabilities are as follows:

Resources.	Liabilities.
Cash, . . . . .	\$8000
Mds., . . . . .	1475
Bills Receivable, . . . . .	750
	<u>\$7215</u>

At closing, as follows:

Resources.	Liabilities.
Cash, . . . . .	\$7000
2000	
Bills Receivable, . . . . .	\$9000

What is the whole gain or loss? What each man's net capital at closing?

EXAMPLE 5.—K and L enter into a partnership, with the understanding that the gain or loss shall be divided in proportion to the average investment. They remain in business one year, during which time they have invested and drawn out as follows:

K.	L.
Drawn out.	Invested.
Jan. 15, . . . \$600	Jan. 1, . . . \$7000
July 1, . . . 650	Mar. 1, . . . 6000
Aug. 31, . . . 600	Sept. 15, . . . 600

## COMMERCIAL CALCULATIONS.

At the close of the year their resources and liabilities are as follows:

Resources.	Liabilities.
Cash, . . . . .	\$6100
Bank Stock, . . . . .	6000
Real Estate, . . . . .	7500
Bills Receivable, . . . . .	4000
Personal accounts, . . . . .	2000

What is each man's share of the gain? What each man's capital at closing?

**Note.**—There are two methods of obtaining a basis for the division of gains or losses under such an arrangement as the preceding: one, to ascertain, according to previous suggestions, the *exact* average capital of each partner; and the other, to compute the interest on the investments, which assume as *relative* capital. The latter is preferable, when the only object is a basis for division; first, because interest is more easily obtained than the average capital, and next, because it is more easily used when obtained. We shall briefly illustrate both methods.

**First Solution.**—Multiply each investment by the time of its continuance, and divide the sum of these products by the time for which the average is wanted:

### *K's Investments.*

\$7000 from January 1, to January 18, $\frac{1}{2}$ month = \$3500
6500 " " 18, " March 1, $1\frac{1}{2}$ " = 9750
12500 " March 1, " July 1, 4 " = 50000
11850 " July 1, " August 31, 3 " = 23700
6850 " August 31, " December 31, 4 " = 88400
<b>\$122350 + 12 = \$10195.83, K's average investment.</b>

### *L's Investments.*

\$3000 from January 1, to January 31, 1 month = \$3000
7600 " " 31, " April 18, 2 $\frac{1}{2}$ " = 19000
5600 " April 31, " July 1, 2 $\frac{1}{2}$ " = 14000
9000 " July 1, " September 18, 2 $\frac{1}{2}$ " = 24000
9100 " September 18, " December 31, 3 $\frac{1}{2}$ " = 31850
<b>\$96850 + 12 = \$8070.83, L's average investment.</b>

<b>K's average investment, . . . . .</b>	<b>\$10195.83</b>
<b>L's " " . . . . .</b>	<b>\$8070.83</b>
<b>Total " . . . . .</b>	<b>\$18266.66</b>

We have, then, the familiar formula: "As the whole investment is to each man's investment, so is the whole gain or loss to each man's share of the same."

### *Operation.*

$$\begin{array}{r} \$18266.66 : \$10195.83 :: \$3400 : \$1897.76 = \text{K's share}, \\ 18266.66 : 8070.83 :: 3400 : 1602.24 = \text{L's "} \end{array}$$

**Second Solution.**—Compute the interest on each investment for the time of its continuance, and take the interest due each partner as his relative investment; and proceed as with the average investment.

### *K's Interest Account.*

Interest on \$7000 from January 1, to January 18, $\frac{1}{2}$ month = \$17.50
" 6500 " " 18, " March 1, $1\frac{1}{2}$ " = 48.75
" 12500 " March 1, " July 1, 4 " = 250.00
" 11850 " July 1, " August 31, 3 " = 118.50
" 6850 " August 31, " December 31, 4 " = 177.00
<b>\$611.75</b>

## COMMERCIAL CALCULATIONS.

### *L's Interest Account.*

Interest on \$8000 from January	1, " January	81, 1 month =	\$40.00
" 7000 " " 31, " April	10, 2½ " "	= 55.00	
" 6000 " April 18, " July	1, 2½ " "	= 10.00	
" 9000 " July 1, " September 10, 2½ " "	= 130.00		
" 8100 " September 18, " December 31, 2½ " "	= 159.75		
			<b>\$484.25</b>

Taking these amounts of interest due, as relative capital, we have statement as before, via:

$$\begin{array}{l} \$1096 : \$411.75 : \$3400 : \$1897.75 = K's \text{ gain}, \\ 1096 : 411.75 : 3400 : 1897.75 = 1/2 " \end{array}$$

K's net investment is, . . . . .	<b>\$8830.00</b>
" " gain " " " "	<b>1897.75</b>
" " capital at closing, . . . . .	<b>\$10727.75</b>
 L's net investment is, . . . . .	<b>\$9100.00</b>
" " gain " " " "	<b>1592.25</b>
" " capital at closing, . . . . .	<b>\$10602.25</b>
Present worth of firm, . . . . .	<b>\$21380.00</b>

**Note.**—In computing the interest above, as also, in multiplying the investments by the time of their continuance, we have taken the common method of using the *exact amount* of capital, from one date to another. The same purpose may be effected by getting the value of each investment from the time invested till the end of the year; and also of each amount withdrawn from the time withdrawn to the end of the year, subtracting the latter from the former. This latter method is preferred by some, and is identical in its results, with the method shown.

The plan of dividing gains and losses in proportion to investment is not adopted, to any great extent, in general copartnerships, but is peculiar to joint-stock concerns, where it is estimated as a *percentage*, the result being precisely the same as by the above method. It is much more easy to declare a percentage dividend in joint-stock concerns, for two especial reasons: first, the capital does not fluctuate—the amount of stock which a man holds being always his *average* investment—and next the gains are not usually *all* divided; so that an *exact* percentage may be divided, leaving the balance of gain as a sinking, or accumulating fund.

The precise distinction between a general copartnership and a joint-stock association, so far as keeping the accounts is concerned, has chief reference to the basis of dividends. In all joint-stock concerns the gains are divided according to the capital held, while in general copartnerships the usual method is first to equalize the capital by allowing interest on net investments, and then to divide the gain or loss equally. It is also customary in copartnerships, for the partners to draw regular salaries for services the same as employees.

The more usual basis of a partnership contract is, first, to equalize the capital by allowing each partner interest on his average investment, and then to divide the net gain or loss in certain proportions independent of capital. The following examples will illustrate this point.

**EXAMPLE 7.**—A, B & C are partners under a contract providing that each man shall receive interest on his average capital, at the rate of 6% per annum, and the net gain be divided equally. They invest, and draw out as follows:

A.	B.	C.			
Drawn out.	Invested.	Drawn out.	Invested.	Drawn out.	Invested.
May 1, . . . \$300	Jan. 1, . . . \$4000	Jan. 15, . . . \$150	Jan. 1, . . . \$5000		Jan. 1, . . . \$10000
	Mar. 1, . . . 7000	Apr. 1, . . . 200	April 1, . . . 5000		

At the end of six months, July 1, they ascertain that the business has gained \$1500, not reckoning the interest due on capital. To how much of the \$1500 is each man entitled? and what is each man's interest in the business on the first of July?

**Solution.**—Ascertain the interest due each on his investment, which deduct from the gain, leaving the amount to be divided *equally*. Add each man's interest to his *net* gain to obtain his share of the \$1500. Add each man's share thus found to his *net* investment, to obtain his interest in the business on the first of July.

## COMMERCIAL CALCULATIONS.

Operation.				
A's credit interest, \$4000, for 6 months — \$120.00				
7000, " 6 "	— 110.00	\$240.00		
" debit " 300, " 3 "	3.00			
A's net interest, . . . . .		247.00		
B's credit interest, \$4000, for 6 months — \$120.00				
8000, " 8 "	— 76.00	\$216.00		
" debit " 150, " 8 1/2 "	— 6.18			
800, " 8 "	— 8.00	9.18		
B's net interest, . . . . .		217.87		
C's credit interest, \$10000 for 6 months, . . . . .				
Total interest due partners, . . . . .		800.00		
Total interest due partners, . . . . .		8774.87		

$\$1800 - \$774.87 = \$225.18$ , net gain to be divided equally; via:  $\$774.87 \div 3 = \$254.71$ .

A's net interest, . . . . .	\$287.00	B's net interest, . . . . .	\$217.87	C's net interest, . . . . .	\$200.00
" & net gain, . . . . .	241.71	" & net gain, . . . . .	241.71	" & net gain, . . . . .	241.71
" share of total gain, . . . . .	483.42	" share of total gain, . . . . .	486.88	" share of total gain, . . . . .	484.71
" net investment, . . . . .	10780.00	" net investment, . . . . .	9480.00	" net investment, . . . . .	10000.00
" capital, July 1, . . . . .	\$11196.71	" capital, July 1, . . . . .	\$10109.88	" capital, July 1, . . . . .	\$10841.71

**Note.**—In a set of Double-Entry Books, a settlement like the above would be easily effected, by carrying the interest allowed the first partners directly to the debit of Loss and Gain account, the same as any other expense which would leave in the Loss and Gain account the net gain to be divided. If we take into account the fact that the investment is borrowed from the partners, who receive interest thereon, the same as on money loaned to other parties, the proposition is simple enough. It is always proper, whether practiced or not, to deduct the interest on investment, as well as the salaries of the partners—if they are entitled to any—from the gains, before attempting to decide upon the prosperity of the business.

**Example 8.**—A, B, C, and D are partners. The contract provides that A and B are to furnish the capital, and C and D to defray the expenses. The gain is to be divided as follows: A,  $\frac{1}{2}$ ; B,  $\frac{1}{2}$ ; C,  $\frac{1}{4}$ ; and D,  $\frac{1}{4}$ . The net gain, besides expenses, is \$4000; the expenses, which have been paid from the business, are \$800. How much of the net gain is each partner entitled to?

**Solution.**—It would seem at first view, that there is a hopeless incompatibility in carrying out this contract. It is true that if \$4000 be assumed as the gain, to be divided among the four partners, justice would be done to A and B, as they were not to participate in the expenses; and it will readily appear that if C and D had paid the expenses from their own pockets, instead of from the avails of the concern, the gain would appear \$800 more. So far, then, as A and B are concerned, the net gain is \$4800.

$\frac{1}{2}$ of \$4800 — \$1800, A's share of the gain.
$\frac{1}{2} " 4800 — 1125, B's " " "$
$\frac{1}{4} " 4800 — 1125, C's " " "$
$\frac{1}{4} " 4800 — 750, D's " " "$

C and D are entitled to be charged with half of the expenses, \$800, which deducted from their share of the gain as above will leave the result:

$$\begin{aligned} \$1125 - \$250 &= \$875, C's share of the \$4000, \\ 750 - 250 &= 500, D's " " " \end{aligned}$$

**Note.**—There are, in reality, two distinct contracts to be regarded in the above adjustment; one for the payment of the expenses, and the other for the division of gain; and they should by no means be made to conflict. The difficulty which the tyro would be apt to encounter, would be the attempt to divide what seems to be the net gain—\$4000. The fact is, C and D had no right to charge the expenses to a general account of the concern, thereby reducing the gains, but should have charged their own personal accounts, the same as for money drawn for any private purpose. The net gain is really \$4800, and each partner should receive his appropriate share. As C and D have already received each \$250, it should be deducted from their gain.

## COMMERCIAL CALCULATIONS.

**EXAMPLE 9.**—Three methods of adjusting interest between partners.—X, Y, and Z enter into equal partnership with unequal capital, each man to receive interest on his average investment. X's interest amounts to \$80; Y's to \$180; and Z's to \$18. How can the adjustments be made?

**First.**—The total amount of interest may be charged to Loss and Gain account, which being divided equally between the three partners, each of whom are credited for their respective portions, will produce the following results:

Dr. X Cr.	Dr. Y Cr.	Dr. Z Cr.
\$48.83   80	\$48.83   180	\$48.83   18

**Second.**—X's and Y's excess of interest over Z's may be charged to Loss and Gain account, and they credited with the same; the Loss and Gain account to be shared equally as before, viz.:

Dr. X Cr.	Dr. Y Cr.	Dr. Z Cr.
68.83   120	68.83   70	68.83

**Third.**—A Journal entry may be made direct, without taking the amount to the Loss and Gain account, viz.:

Dr. X Cr.	Dr. Y Cr.	Dr. Z Cr.
68.83	68.83	68.83

It will be seen that the debits and credits are the same in each of the three methods, clearly proving the essential identity of the different results. The former method is, perhaps, preferable, because more readily understood and applied.

**EXAMPLE 10.**—A, B and C enter into a partnership with equal capital, upon the following conditions: A to receive as a salary \$1800; B, \$1800; and C, \$1000; the gain to be divided equally. At the close of the year, the net gain, exclusive of salaries, proves to be \$3000. To how much of this amount is each partner entitled?

**Solution.**—It will be plainly seen that had the partners received their stipulated salaries and the total been carried to Expense %, instead of a gain of \$3000 there would have appeared a loss of \$700. The provisions of the contract are that the "gain shall be divided equally," and it may be proper to suggest, that if there be losses instead of gains, the proportion must be the same. We have, then, the following result:

A's salary, . . . . .	\$1800	A's $\frac{1}{3}$ -net loss, \$233.33; B's, \$233.33; C's, \$133.34.
B's " . . . . .	1800	Therefore, \$1500 - \$233.33 = \$1266.67, A's share.
C's " . . . . .	1000	1200 - 233.33 = 966.67, B's "
From which deduct gain, . . . . .	8000	1000 - 233.34 = 766.66, C's "
Leaves net loss, . . . . .	\$700	Total, . . . . . \$3000.00

A common fallacy with reference to settlements like the above, would be to divide the \$3000 in proportion to the salaries. The reasoning would be this: If there had been earned just \$3700, A would have received \$1800; B, \$1800; and C, \$1000; therefore, if there be less than enough to pay these amounts, it should be divided in the same proportion. The solution, according to this understanding, would be as follows:

$$\begin{aligned} \$3700 : \$1800 &:: \$3000 : \$1216.22, \text{ A's share.} \\ 3700 : 1800 &:: 3000 : 972.97, \text{ B's "} \\ 3700 : 1000 &:: 3000 : 810.81, \text{ C's "} \\ \text{Total, . . . . .} & \$3000.00 \end{aligned}$$

The remedy for all such misconceptions is to understand the distinction between the separate contracts in the copartnership. The apportionment of salary, in the above case, is *absolute*, and is not at all contingent upon the gain or loss. To appreciate this fact fully, suppose the salary is to be paid to clerks instead of to the partners; the result would be a loss of \$700, as shown in the first statement. The partners act in the double capacity of proprietors and employees; as employees, they gain each the amount of his stipulated salary; as proprietors, they lose each  $\frac{1}{3}$  of \$700.

## GENERAL HINTS AS TO DIVIDENDS.

### GENERAL HINTS AS TO DIVIDENDS.

It is customary with all establishments to declare, periodically, the gains or losses in business. Joint-stock companies usually do this twice a year, and all other concerns as often as once a year. It is well to consider, in all such cases, not only what appears to be the condition of the business with reference to gains and losses, but what that condition really is. It is not impossible that the Representative accounts should make a fair show of prosperity, while the state of available resources would plainly indicate an entirely different state of affairs. For instance, the credit side of Merchandise account may exhibit a commendable preponderance over the debit side, showing thereby a gain; while the resources which that credit produced may have a fictitious value. Suppose the merchandise to have been sold on notes and personal accounts which are not worth more than half what their Ledger titles express. It will be evident that the Merchandise account exhibits a fictitious gain of exactly the amount of such depreciation of resources; and any dividend declared on such a basis would be false to that extent; as it would fail, by so much, of being realized. The question, then, arises, Would it be best to dispose of these doubtful accounts by carrying their deficiency to Loss and Gain? Such a course would doubtless be legitimate, were it possible to determine just how worthless the accounts were, or how much of them it would be safe to retain as absolute resources. This uncertainty would suggest the propriety of permitting them to remain upon the Ledger until their worth could be ascertained; besides, it would scarcely be advisable to close up a personal account so long as any chance remains of realizing it. What, then, is the best method of retaining these doubtful accounts on the Ledger, and yet avoid showing a fictitious gain? The most satisfactory plan of which we have a knowledge, is to open a general account to represent liabilities; as, for instance, "Suspense," or "Sinking Fund" to the credit of which carry all doubtful resources, debiting Loss and Gain with the same. It is well understood that a liability will cancel a resource, and vice versa. As the "Suspense" account would thus be considered a liability, it would, of course, offset just so much of what appears elsewhere as resources; and thus permit the dividend to be made from the actual gain. In all cases, however, where resources have been thus canceled, there should be some method of knowing which they are, that if any thing is thereafter realized on them, "Suspense" account may be charged and Loss and Gain credited.

The result of this arrangement would be to guard, in the most effectual way, against excessive dividends, and to exhibit perpetually the accounts in "suspense," without exciting the suspicion of the parties from whom we may hope, eventually, to realize a fair proportion, at least, of the amounts shown to be due.

Where the object is simply to declare dividends due partners that are to continue in the same relation, it is not necessary to be very exact in these estimates; but if the purpose be to arrive at the actual condition of the business with a view to changing the relations of proprietorship, it will be necessary to estimate the real value of such doubtful resources, or as nearly as possible.

The plan usually adopted of closing all doubtful resources into "Suspense" is not only injurious, but utterly useless, as the Suspense account must then represent a resource or a loss. If a resource, the accounts may as well have remained under their proper titles, and if a loss, they should have been carried directly to Loss and Gain. But the chief objection to such a course would be the exhibiting of accounts as closed which are yet owing, and may be paid. If Mr. A., for instance, whom we have thus considered doubtful, should desire to see his account on our Ledger, that he may pay it, it might be awkward to inform him that, having considered his account worthless, we had carried it to Loss and Gain. He might not desire to contribute so directly to our profit.

In Joint-stock concerns, particularly, where the settled policy is, under no circumstances to decrease the capital stock, a "Suspense," or "Sinking-Fund" account is exceedingly proper; and it is well, under such circumstances, to carry to such account, not only the resources which are doubtful, but a sufficient amount to cover all contingencies. It is quite as easy to estimate the real value of a "Sinking Fund" account as that of any doubtful resource, and in case an exact statement of the condition of the concern is wanted, any excess which may have been transferred hither may be easily restored.

## QUESTIONS FOR REVIEW.

## QUESTIONS FOR REVIEW.

### STOCKS.—PAGE 188.

- 1 Where, and in what year did the public funding system originate?
- 2 When was it introduced into Florence?
- 3 When, into England?
- 4 What is thought of the effect of the public debt in England?
- 5 Under what circumstances would a heavy public debt be beneficial to a country?
- 6 To what does the term *Stocks* apply in England?
- 7 To what in this country?
- 8 Into how many classes may Stocks be divided, and what are they?
- 9 Define *Interest Stocks*?
- 10 *Dividend Stocks*?
- 11 Upon what does the earnings of *Interest Stocks* depend?
- 12 Upon what, *Dividend Stocks*?
- 13 Which of these two classes figures most extensively in the Stock market?
- 14 What causes produce fluctuation in *Interest Stocks*?
- 15 Why are the Stocks of the United States, declaring a certain percentage, more valuable than those of other corporations declaring the same?
- 16 What is the true basis of value in *Dividend Stocks*?
- 17 Can the value of *Dividend Stocks* be estimated upon any correct statement of past earnings?
- 18 Why do Railroad Stocks, producing 8% per annum, sell for less than Government Stocks producing 5%?

### JOINT-STOCK BUSINESS.—PAGE 189.

- 19 Does the theory of joint-stock concerns differ from that of individual or copartnership business?
- 20 What is the prime object in all?
- 21 To what are the means of joint-stock concerns usually applied?
- 22 How is the capital of a joint-stock concern divided?
- 23 By whom is it held?
- 24 When are these shares said to be at par?
- 25 When at a premium?
- 26 When at a discount?
- 27 Why do joint-stock concerns have an importance in communities not shared by private companies?
- 28 In what particulars are banks more intimately connected with the public than other joint-stock associations?
- 29 What are the restrictions thrown around banks?

## EXPLANATIONS.

Suppose the time be required from July 10 to September 10. Find July in the left-hand column, and follow out the line to the right until you come to September; the number of months is 2, of days 02. If the date to which we reckon be either greater or less than the one from which we reckon, the difference should be added or subtracted as the case may be. For example: How many days from February 1 to August 31? By following out the February line to the August column, we find the time from February 1 to August 1 to be 131 days, to which if we add 30, the difference between 1 and 31, the time required will be 211 days. If the time be required between February 29 and August 1, we find the time from February 29 to August 29 to be 181 days, from which, if we subtract 27, the difference between 1 and 28, we get for the number of days, 154.

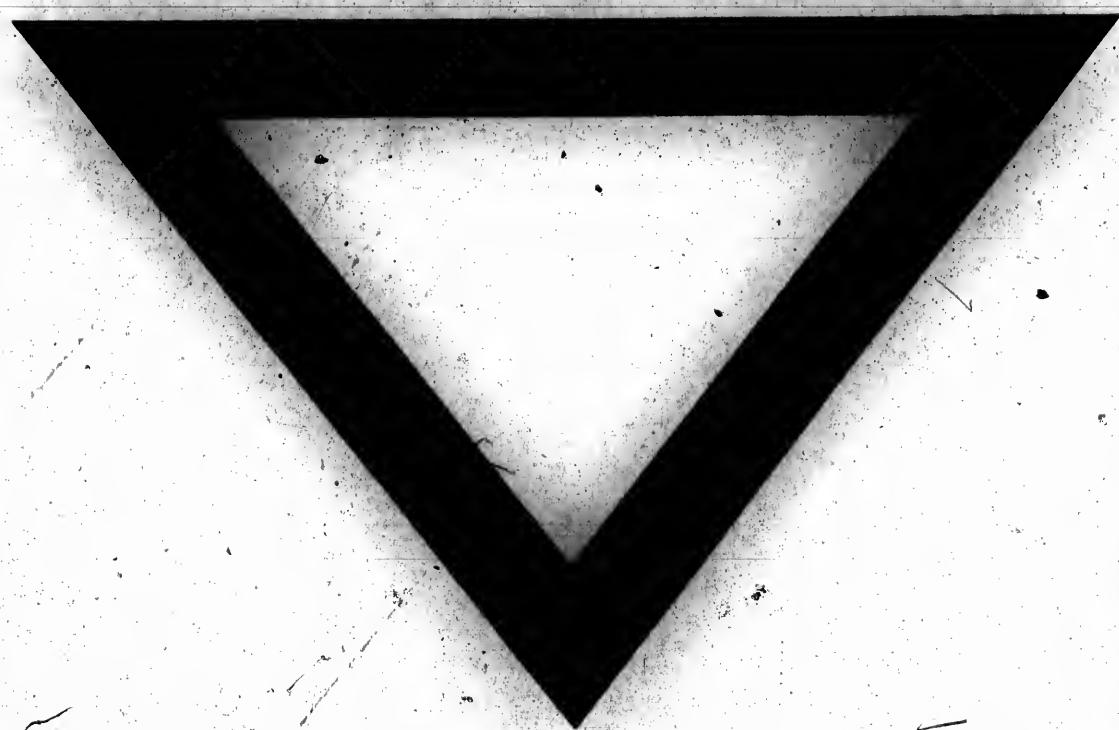

The Table is one of quite common use, but is none the less important. It may be used to great advantage in the processes of averaging.
