JOHN HART, PERTH.

NINETEENTH YEAR OF PUBLICATION.

HART'S
CANADIAN ALMANAC

AND

Repository of Useful Information,

AND

DIVISION COURT DIRECTORY FOR THE COUNTY OF
LANARK,

FOR THE YEAR OF OUR LORD

1875.

Being the third after Bissextile or Leap Year, and until the 20th
June, the thirty-eighth Year of the Reign of Her Majesty
Queen Victoria.

ASTRONOMICAL CALCULATIONS.

Calculated for the Meridian of Montreal, in Latitude $45^{\circ} 30' 26''$
North, and Longitude $73^{\circ} 24' 22''$ West, from the Royal Observa-
tory, Greenwich, but arranged so as to serve without essential
variation for the vicinity of Perth, which is in Latitude $44^{\circ} 44'$,
Longitude 77° west.

EXPLANATION OF CALENDAR PAGES.

The Publisher of this Almanac, with a view to increase its circulation and usefulness, has adapted its calculations for the whole country. The Moon changes are given for five different places, viz.: Quebec, Montreal, Perth, Toronto, and London. The rising and setting of the Sun are given for Montreal and Toronto. The rising and setting of the Moon are given with sufficient exactness for all practical purposes. The weather prognostications are again calculated according to the table of the celebrated Dr. Herschel; and for extraordinary accuracy Hart's Almanac retains its wonderful popularity.

HERSCHEL'S WEATHER TABLE.

For foretelling the Weather, through all the Lunations of the Moon for ever.

	In Summer.	In Winter.
If the new Moon, the first quarter, the full Moon, or the last quarter happens.		
Between midnight and 2 in the morning.....	Fair.....	{ Haed frost, unless the wind be S. or W.....
— 2 and 4 morning.....	Cold, frequent showers, Rain.....	Snow and stormy, Rain.
— 4 and 7 “	Wind and rain.....	Stormy.
— 6 and 8 “	Changeable.....	{ Cold rain, if wind be west; snow if east.
— 8 and 10 “	Frequent showers.....	Cold, and high wind.
— 10 and 12 “	Very rainy.....	Snow and rain.
At 12 noon, and 2 P. M.	Changeable.....	Fair and Mild.
Between 2 and 4 P.M.....	Fair.....	Fair.
— 4 and 6 P.M.....	{ Fair, in Wind, N.W.....	Fair and foosty, if wind north or north-east.
— 6 and 8 “	{ Rainy if S. or S. W.....	Rain or Snow, if S.S.W.
— 8 and 10 “	“ “ “.....	“ “ “
— 10 and midnight.....	Fair.....	Fair and frosty.

Observations—The nearest time of the Moon's change, the first Quarter full and the last quarter, are to midnight, the fairer will the weather be during the seven days following.

2. The space of this calculation occupies from 10 at night till two next morning.

3. The nearer to mid-day or noon the phases of the Moon happen, the more foul or wet weather may be expected during the next seven days.

4. The space of the calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to the Summer, though they affect Spring and Autumn nearly in the same ratio.

5. The Moon's change, first quarter, full, and last quarter, happening during six as the afternoon hours, *i. e.*, from four to 10, may be followed by fair weather; but this is most dependent on the wind, as is noted in the table.

BANK HOLIDAYS IN ONTARIO.

Sundays, Christmas Day, New Year's Day, Good Friday, The Queen's Birth Day, and each day appointed by Royal Proclamation as a general fast or thanksgiving day.

JOHN HART sells every requisite for the School Room and Office.

JANUARY.—We give prominence to the words of the Governor-General, relating to the benefits of immigration to the class of agriculturists. He says: "I have met no one who did not gladly acknowledge himself better off than on his first arrival, and among thousands of persons with whom I have been brought into contact, none seemed ever to regret that they had come here. Undoubtedly their hardships had been very great, the difficulties of climate and locality frequently discouraging; their personal privations most severe; but the language of all was identical, evincing, without exception, pride in the past, content with the present, and hope in the future. Let a man be sober, healthy, and industrious, not afraid of hard work, and I can scarcely conceive how he should fail in his career."

FEBRUARY.—It is a great mistake to suppose that the business of the farmer requires less care and judgment than any other pursuit. Some have talked in a way that shows how deficient they are in knowledge of the true qualifications of a good farmer. If a man fails in other pursuit it is suggested that he had better take to farming. Such a man might possibly succeed, but there is hardly a chance of his so doing, simply because a successful agriculturist requires first, a real taste and preference for it. He must have sound judgment as respects times and places and methods of working. He must have and exercise discrimination about soils and seeds and their relations. Then it demands a good deal of skill and experience in all matters relating to cattle, horses and sheep. In short a farmer should have a first-class intellect.

MARCH.—Farmers in Ontario and Quebec have a great many difficulties to contend with, but if they will just consider how much worse off their *confreres* are in many other countries, they will find sufficient reasons for thankfulness. We have sometimes short crops and early frosts, curtailing our incomes and increasing our expenses. But let us look at Minnesota and Manitoba with their periodical plague of grasshoppers. The stories of the past seasons are almost incredible. It appears the creatures came in clouds so dense that the sunlight was entirely shut off. These, in one day, in one district of Minnesota, utterly devoured three thousand one hundred acres of wheat. Two years ago hailstorms destroyed the crops, and for two years in succession the grasshopper. Hard times there.

APRIL.—A word about health. In rural districts there is often a good deal of intermittent and other fevers, by which the lives of many are destroyed. How is this? Is not the country healthier than the city? As a general rule it is, but in the country there is too frequently a careless inattention to the laws of health. During the day there may be exposure to heat, producing perspiration. When the cool breezes of the evening spring up there is great temptation to sit down, and quietly enjoy the delightful atmosphere. This is done without putting on any additional clothing. The effect is a chill. It is thought nothing of, and the same foolish course is followed another day, and another. The whole system in this way becomes disordered and the foundations of fevers are laid. Beware of chills, avoid cold drafts and regulate your clothing according to circumstances.

MILLER'S Carpenter's and Companion Spelling Books, at HART'S.

MAY.—It is generally agreed that bread made from wheat flour is more strengthening than bread made from barley or oats. The reason is thus stated; because, as gluten, albumen, and caseine are the only substances in the bread capable of forming blood, and consequently sustaining the strength and vigor of the body, they have been appropriately called the food of nutrition, as a distinction from those which merely support respiration. Wheat contains eight hundred and twenty-five parts of starch, three hundred and fifteen of gluten, albumen and caseine, and sixty of sugar and gum, while barely contains 1,200 of starch, 120 of gluten, albumen and caseine, and 160 of sugar. Wheat is, therefore, much richer in the food of nutrition.

30	Wed.	20 46	27 39	23 10	1 38	1 38	1 38	Month ends calmly.		

JUNE.—A very short arithmetical calculation will enable any one to apply the statement of the *Rural World* to this Canada of ours. The valuable journal says: When we consider that less than one-third of the area of the United States, and less than a fifth of the entire domain of the United States is mapped into farms, and remember of this farm area, only one-fourth is tilled or mowed; and when we further reflect that the average yield per acre could be doubled if the many could be brought up to the plain of the few in the practice of intensive culture; then we begin to realize what numbers our country is capable of feeding, and what waste of toil and effort comes from neglect of the economic lessons taught by the statistics of scientific agriculture. The misfortune is, that so few think on this subject, and many who think and know, will not practically exert themselves.

JULY.—Why do so many farmers treat their horses and colts so much better than their cows and heifers? Care is taken of the former in regard to stabling and feeding, while the cows and heifers have to shift for themselves and are often exposed to severe storms, fed on coarse straw. A cow that is poorly fed cannot give much milk, nor milk of a good quality. Milk is among the most nutritious of all the substances we consume, and cannot be manufactured from food that does not contain nutritious substances. We have heard of farmers telling their wives not to give corn to the cows, because it dries them up. It is not so, and the women show proper sense when they give good food to the cows, even though the husband should grumble. Good feeding to milch cows pays quite as well and better than almost any other animal.

The Danville School Slates are superior to any now in use.

AUGUST.—On the subject of profit arising from the proper treatment of milk cows, let it be remembered, that the average value of milk in town and country is six cents a quart. Suppose a cow to give three gallons a day, that would bring 72 cents, or nearly 22 dollars per month, as the value of her product. What other animal will make such generous returns for food, care, and generous feeding. Sound policy, therefore, demands cleanliness, good food, and proper shelter. Besides, every farmer knows, or ought to know, that the quality and quantity of manure which the farm requires depends on attention to the matter on which we have here written. An Englishman says, the more we feed the more we can produce, but he certainly means we should do the feeding on our own land or premises, and not on the king's highway. That is absolute folly and loss.

SEPTEMBER.—An agriculturist has just given us his opinion about potatoes and their planting. He says he was educated to plant three or four good sized potatoes in a hill. Now, he knows better, and recommends cutting. Have the ground in good condition, plant at the right time, and then give them proper attention. He says, three years ago I planted one bushel each of Early Rose and Brigham seedlings, and dug of each kind thirty-two bushels of marketable potatoes. Have been in the habit of cutting my seed as I would to plant, yet I think it would be better to cut a few days before using, so that they may become glazed. Of all the varieties I have tried, I prefer the Early Rose. They are not only better in quality, but equal in quantity.

OCTOBER.—There have been great differences of opinion concerning the virtues of orchard grass. This, like most other things, is settled by experiment. A writer in the Philadelphia Press says that he has had a field of orchard grass over 30 years, that still gives bounteous crops breast high at maturity. The soil is strong, sandy loam. It was originally seeded in connection with red clover and timothy, which were long ago run out. There is now annually some white clover and blue grass which aids to make a thick bottom growth. The orchard grass, however, maintains the ascendancy, and he knows of nothing, alfalfa excepted, which will yield annually so much cattle food. But it is even superior to alfalfa or lucern as it is sometimes called, because better adapted to the rigorous temperature of northern latitudes. The facts herein recited, are worth remembering.

NOVEMBER.—Theory, based on experience, respecting raising pork, has been furnished by a correspondent, who says, during the hot summer months I would give very solid food, such as corn in the ear or uncracked. I would keep hogs on green food constantly, either grass, oats, or rye; and feed them at regular intervals, once or twice a day upon mashed food, either shorts, chopped oats, or rye, or buckwheat, &c., fed in troughs. When fed in this way and at the same time allowed access to water and shade, then they will make flesh. This also puts them in good condition for corn feeding, which should commence about the first of September, when the new crop is new and tender. Treated in this way, there is no doubt about hogs flourishing.

DECEMBER.—Various opinions have been expressed about the uses and advantages of lime as applied to the soil. Some maintain that lime should be applied as soon after harvest as possible and upon wheat stubble. This is said to help the grass crops, puts the ground into good condition for corn, and does not make oats ripen unevenly. Another practical man says he obtained most profit by applying lime on the sod, the winter before the corn is planted. Another says, crisply, "Get it on, never mind where, but get it on." Another says he applied a handful of airslacked lime to the hill of corn after it was up, with marked benefit. The same also says, he made a mixture of 50 bushels of lime, 10 bushels of plaster and 6 bushels of salt. He dissolved the salt and slacked the lime with the brine. He sowed the mixture on twelve acres of grass in the spring and had a fine crop on land poorly set.

The Royal Family.

THE QUEEN.

VICTORIA, of the United Kingdom of Great Britain and Ireland, &c., Queen and Defender of the Faith. Her Majesty was born at Kensington Palace May 24, 1819; succeeded to the throne June 20, 1837, on the death of her uncle King William IV.; was crowned June 28, 1838; and married February 10, 1840, to his late Royal Highness Prince Albert. Her Majesty is the only child of his late Royal Highness Edward Duke of Kent, son of King George III. The Children of Her Majesty are:—

Her Royal Highness VICTORIA—Adelaide-Mary-Louisa, PRINCESS ROYAL OF ENGLAND AND PRUSSIA, born November 21, 1840, and married to his Royal Highness Frederick William of Prussia, January 25, 1858, and has issue five sons and three daughters.

His Royal Highness ALBERT-EDWARD, PRINCE OF WALES, born November 9, 1841; married March 10, 1863, Alexandra of Denmark (Princess of Wales), born December 1, 1844, and has issue three sons and three daughters.

Her Royal Highness Alice-Maud-Mary, born April 25, 1843, married to H. R. H. Prince Frederick Louis of Hesse, July 1, 1862, and has issue three daughters and two sons.

His Royal Highness Alfred-Ernest-Albert, Duke of Edinburgh, born August 6, 1844.

Her Royal Highness Helena-Augusta-Victoria, born May 25, 1846, married July 5, 1866, Prince Frederick Christian of Schleswig-Holstein, and has issue two sons and one daughter.

Her Royal Highness Louisa-Caroline-Alberta, born March 18, 1848, married March 23, 1871, to the Marquis of Lorne.

His Royal Highness Arthur-William-Patrick-Albert, K. G., born May 1850.

His Royal Highness Leopold-George-Duncan-Albert, born April 7, 1850.
Her Royal Highness Beatrice-Mary-Victoria-Feodore, born April, 14, 1850.

Office Hours.—From 9 a.m. to 8 p.m. daily, Sundays excepted.

How to Lay off a Square Acre
of Ground.

Measure 209 feet on each side, and you will have a square acre within an inch.

Barrel Measure.

A barrel of flour weighs 196 pounds.

A barrel of pork, 200 pounds.

A bag of rice, 224 pounds.

A keg of powder, 25 pounds.

A firkin of butter, 56 pounds.

A tub of butter, 50 pounds.

Bushel Measure.

The following are sold by weight per bushel:

Wheat, beans, and clover-seed, 60 pounds to the bushel.

Corn, rye, and flaxseed, 56 pounds.

Buckwheat, 50 pounds.

Barley, 48 pounds.

Oats, 32 pounds.

Bran, 20 pounds.

Timothy-seed, 45 pounds.

Peas, 66 pounds.

Coarse salt, 85 pounds.

GILT-EDGED BUTTER.—Farmers often speak, sometimes sneeringly, of "gilt-edged butter," meaning that which brings the highest market prices, but complain when perhaps a third or half of the gilt-edged price is offered them for theirs. The high price is simply the return for the exercise of proper care and attention which they, in preparing their butter, failed to give. There are many more customers in town and city who will pay almost any price for the best quality of butter that can be supplied, and there is no excuse for the production of an inferior quality.

MONEY ORDERS.

Every money order office in the Provinces of Quebec, Ontario, New Brunswick, Nova Scotia, Prince Edward Island, Manitoba and British Columbia, issues money orders on every other money order office in these Provinces, as well as on every money order office in the United Kingdom. Every money order office in the United Kingdom also issues money orders on every money order office in these Provinces.

All the money order Post Offices are authorized to draw money orders on each other for any sum up to \$100, and for as many orders of \$100 each, as the applicant may require, upon the following term, viz.,

On Orders up to \$4.....	2 cents.
“ “ \$10.....	5 “
“ over \$10 and up to \$20	10 “
“ over \$20 “ \$40	20 “
“ over \$40 “ \$60	30 “
“ over \$60 “ \$80	40 “
“ over \$80 “ \$100	50 “

MONEY ORDERS ON THE UNITED KINGDOM.

The money order offices throughout the Dominion also draw upon all the money order offices in England, Ireland and Scotland, and the Channel Islands, for any sum up to £10 sterling, and grant as many orders for £10 sterling each as may be needed to make up the amount to be remitted. The terms are as under:

On Orders up to £2.....	25 cents
“ over £2 and up to £5.....	50 “
“ over £5 “ £7.....	75 “
“ over £7 “ £10.....	1.00

MONEY ORDERS ON THE LOWER PROVINCES.

The money order offices in Canada draw also upon all money order offices in Newfoundland. Orders like those of the United Kingdom, are made payable in sterling money, and for sums up to £10 sterling. The terms are:

For orders up to £5, 25 cents.

“ over £5 and up to £10, 50 cents.

No half cents can be introduced into orders.

No money order exceeding \$100 in amount can be granted in any office in Canada; but Postmasters are at liberty to grant two or more orders for \$100, or for any lesser sum.—They cannot, however, grant two or more orders for sums of or under \$30 on the same day to the same applicant in favor of the same payee.

POST OFFICE SAVINGS BANK.

1. The direct security of the Dominion is given by the Statute for all deposits made in the Post Office Savings Banks.
2. Any person may have a deposit account, and may deposit yearly any number of dollars, from \$1 up to \$300, or more with the permission of the Postmaster General.
3. Deposits may be made by married women, and deposits so made, or made by women who shall afterwards marry, will be repaid to any such women.

4. As respects children under ten years of age, money may be deposited—

FIRSTLY—By a parent or friend as Trustee for the child, in which case the deposits can be withdrawn by the Trustee until the child shall attain the age of ten years, after which time repayment will be made only on the joint receipts of both Trustee and child.

SECONDLY—In the child's own name—and, if so deposited, repayment will not be made until the child shall attain the age of ten years.

5. A depositor in any of the Savings Bank Post Offices may continue his deposits at any other of such offices, without notice or change of Pass Book, and can withdraw money at that Savings Bank Office which is most convenient to him. For instance, if he makes his first deposit at the Savings Bank at Cobourg, he may make further deposits at, or withdraw his money through, the Post Office bank at Collingwood or Quebec, Sarnia, Brockville, or any place which may be convenient to him, whether he continue to reside at Cobourg or remove to some other place.

6. Each depositor is supplied with a Pass Book, which is to be produced to the Postmaster every time the depositor pays in or withdraws money, and the sums paid in or withdrawn are entered therein by the Postmaster receiving or paying the same.

7. Each depositor's account is kept in the Postmaster General's Office, in Ottawa, and in addition to the Postmaster's receipt in the Pass Book, a direct acknowledgment from the Postmaster General for each sum paid in is sent to the depositor. If this acknowledgment does not reach the depositor within ten days from the date of his deposit, he must apply immediately to the Postmaster General, by letter, being careful to give his address, and, if necessary, renew his application until he receives a satisfactory reply.

8. When a depositor wishes to withdraw money, he can do so by applying to the Postmaster General, who will send him by return mail a cheque for the amount, payable at whatever Savings Bank Post Office the depositor may have named in his application.

9. Interest at the rate of 4 per cent. per annum is allowed on deposits, and the interest is added to the principal on the 30th June in each year.

10. Postmasters are forbidden by law to disclose the name of any depositor, or the amount of any sum deposited or withdrawn.

11. No charge is made to depositors on paying in or drawing out money, nor for Pass Books, nor for postage on communications with the Postmaster General in relation to their deposits.

12. The Postmaster General is always ready to receive and attend to all applications, complaints, or other communications addressed to him by depositors or others, relative to Post Office Savings Bank business.

13. A full statement of the Regulations of the Post Office Savings Bank may be seen at the nearest Post Office.

THE STAMP ACTS.

These Acts impose a duty on every promissory note, draft, or bill of exchange, not exceeding \$25, 1 cent; not exceeding \$50, 2 cents; less than \$100, 3 cents; not less than \$100, if executed singly, 3 cents per \$100, or fraction thereof; if executed in duplicate, 2 cents per \$100, or fraction thereof on each part; if executed in more than two parts, 1 cent per \$100 or fraction thereof on each part.

Any interest payable with note at maturity must be counted as part thereof. The duty is to be paid by bill stamp, on which the date is to be written. Bank notes, checks, and money orders are exempt. These Acts impose heavy penalties for violation.

Each Court

DIVISION COURT.

This Court is for the summary disposal of cases by a Judge ; but a jury of five persons may be demanded in certain cases. Their jurisdiction extends to actions of debt or contracts amounting to \$100 ; injuries or torts to personal chattels amounting to \$40. Courts are held once in two months in each division, or oftener, at the discretion of the Judge.

CLERKS MAY ENTER JUDGMENT.

" *Special Summons*," shall be returnable on the 11th day after the day of service thereof upon the defendant, in case the defendants or one of the defendants reside in the county in which the action is brought, and unless the notice required by the second section of the Act of 1869 has been given by a sole defendant, or by one or more of several defendants, and leave to dispute the plaintiff's claim has not been given by the Judge, the clerk, after receiving a return of the "*special summons*," with the proper affidavit of service, may, on the 12th day after the service of the summons, enter judgment against the defendant or defendants so served as aforesaid, for the claim, or so much thereof as has not been disputed, if the plaintiff is content with judgment for such part.

If the plaintiff is not content to take judgment for the part not disputed he must proceed to trial, as in ordinary cases, and the part of such claim not disputed shall be considered as admitted and confessed by the defendant or defendants.

(See General Rules and Orders, for the practice of the Division Courts in Ontario, &c.,—to be had at Hart's Bookstore, Perth, at \$1 per copy.)

VALUABLE RECIPES FOR COLOURING.

REMARKS.—It may be necessary to remark, (says Dr. Chase in his valuable collection of Recipes,*) and I do it here, once for all, that every article to be dyed, as well as everything to be used about dyeing, should be perfectly clean.

In the next place, the article to be dyed should be well scoured in soap, (to remove any grease or oil used in carding the wool), and then the soap rinsed out. It is also an advantage to dip the article you wish to dye in warm water just before putting it into the alum or other preparation; for the neglect of this precaution, it is nothing uncommon to have the goods or yarn spotted. Soft water should always be used, and sufficient to cover the goods well.

As soon as an article is dyed it should be aired a little, then well rinsed and afterwards hung up to dry.

It is also highly important in dyeing reds, to use a brass or copper boiler or, in the absence of either, a good new tin boiler, as the acids used in colouring, if brought into contact with iron, will darken the reds, and often a dirty brown is produced by using a tin boiler with the tinning partly worn off.

The best dye stuffs should always be used irrespective of price, as the common or cheaper qualities often disappoint the domestic dyer.

The best dyes are always to be had at the store of John Hart.

BLACK.—On wool, silk, or cotton.—For every pound of cloth it will require one ounce of extract of logwood, and half an ounce of blue vitriol. Prepare an iron kettle, with a sufficient quantity of water to admit the yarn or cloth to be worked in the dye without being crowded—bring the water to scalding heat—then put in the yarn or cloth a few minutes—when it is thoroughly wet take it out and drain it—in the next place add the blue vitriol, and then, when dissolved, and water skimmed carefully, put in the material to be coloured, and let it remain half an hour at a scalding heat, airing it occasionally—then take it out and rinse it in soft water—the vitriol water may now be emptied into a separate vessel, and the extract of logwood, dissolved in a sufficient quantity of water, brought to a scalding heat, and skimmed—put in the cloth, keeping the dye at the same temperature, and let it remain half an hour, airing it frequently—then take it out and drain it—add the vitriol water to the dye, and put it in again, and let remain fifteen minutes, airing as before—cleanse it well.

Chip Logwood, and Extract of Logwood, Blue Stone, Copperas and everything required for Black, to be had at Hart's.

BLUE.—A splendid blue may be produced in an hour by the following

* Dr. Chases Book of Recipes and valuable information for sale, and sent free by mail on receipt of 75 cents, or cheap Ed. at 50 cents.

process:—For each pound of wool or cloth take two and a half ounces of alum and one ounce and a half of cream of tartar. Boil these together in a brass or copper kettle for about an hour; now take sufficient warm water to cover the cloth or wool, and colour it to the shade you wish with the liquid blue; put the whole into the copper pot and boil in a short time, taking care to keep it stirred; remove the cloth, and rinse it in clean cold water, and hang it up to dry. For a light blue, one ounce of the liquid blue, and more for a deeper shade, for each pound of wool.

The best and common qualities of Indigo, Liquid Blue, etc., always on hand and for Sale at Hart's.

BROWN.—For each pound of wool take a quarter pound of alum and two ounces of cream of tartar, and boil for half an hour. Take half pound of red wood, quarter pound fustic, and two ounces of logwood, soak these a night in sufficient warm water to cover the wool; take the wool out of the alum water, and boil with the woods for about half an hour. If a dark brown is wanted, add about a table-spoonful of copperas.

GREEN.—For every pound of yarn or cloth add three and a half ounces of alum and one pound of fustic; steep to get the strength, but not boil, soak the cloth until it acquires a good yellow colour; then throw out the chips and add the indigo compound slowly, until you have the desired shade of green.

An ounce or more of the compound is required for the above quantity varied according to the depth of shade.

LILAC COLOUR.—This colour is made by boiling the cloth or wool for a short time in cudbear.

Fustic, Indigo Compound, and all Dyes for Brown, Green and Lilac to be had of reliable qualities, only at Hart's.

MADDER RED.—Take one pound of madder, for every two pounds of yarn or cloth; soak the madder in a brass or copper kettle one night in warm water, enough to cover the yarn you wish to colour; next morning put in two ounces of madder compound for every pound of madder which you have soaked then wet pour yarn or cloth and wring it out in clean water—afterwards put it in the dye—now place the kettle over the fire, and bring it slowly to a scalding heat, which will take above half an hour, keep it at this heat half an hour if light red is wanted, and longer if a dark one, the colour depending upon the time it remains in the dye. When the colour is made, rinse the cloth immediately in cold water, and it will then be finished.

Another good **MADDER RED** may be thus obtained:—For every two pounds of yarn or cloth, take one pound of madder, one half pound of alum, and two ounces of cream of tartar; take a brass, copper, or a *new tin* kettle well cleaned, fill it with water, and boil it, and put in the alum, cream of tartar, and the yarn or cloth; keep them in two or three hours, stirring frequently; keep the liquid at about blood heat; when this is done, take out the yarn or cloth, and throw out liquid. Fill the kettle with fresh water, heat it as warm as one could bear his hand in it, put in the madder, (which should be soaked the night before,) stir it well so as to get it thoroughly mixed; then put in the yarn or cloth, let it remain one hour, stirring frequently, and keeping the madder hand-warm all the time—after this take out the stuff and dry for use.

The best Dutch Madder, and best only should be used. Madder Compound, Cream Tartar, and Alum to be had only at Hart's.

MAGENTA.—Take four ounces of cudbear to every pound of wool or silk, pour a sufficient quantity of boiling water upon the cudbear, enough to cover the article you wish to colour; then put in your wool or silk, airing it frequently. When the colour is made, take it out of the dye and dip it into a solution of salts tartar, previously dissolved in a separate vessel.

LIQUID MAGENTA.—Produces a brilliant crimson by the following simple process:—About one ounce of the liquid is sufficient for a pound of wool or yarn,—pour the liquid into scalding water in an earthen vessel, and dip

your goods into it and wash in clean water in a brilliant sea-manner.

Cudbear of the East and Liquid Scarlet

PINK.—For every quart of water, take one ounce of cochineal in warm water and add the cream of tartar, and rub through it in moments and it will be cochineal; if a deep red of cochineal used

ORANGE.—A cheaper nickwood for magenta

SCARLET.—(Very fine) Take one ounce of cream of tartar, and rub through it when it is a little dissolved in the solution of the dye till the yarn will colour three

Some dyers say, of quercitron bark and cochineal scarlet

Cochineal Powder
Iron Brak, etc., t

A FINE WINE.—One ounce of madder all night, mix it with glass) and add it to the dye, boil above boiling in the sa

TO DYE A SAL.—Take annatto, and a quarter of the wool, in which water, put it into the shade may annatto used.

YELLOW.—One ounce of fustic, quarter pound of sufficient hot water half an hour's boiling deeper and rich of fustic, and put Annatto, fustic the best qualities Cam-wood law

Magenta, scarlet colors, in bottle

The best annatto Dairyman for c

your goods into it, airing frequently until deep enough in the colour. Dry and wash in clean soft water.

A brilliant scarlet may be produced by using Liquid Scarlet in the same manner.

Cudbear of the first and second qualities, Salt of Tartar, Liquid Magenta and Liquid Scarlet, always in stock at Hart's.

PINK.—For every three pounds of yarn or cloth take three and a half quarts of water, or enough to cover the articles you wish to colour, two ounces of cochineal, and half an ounce of cream of tartar; steep the cochineal in warm water two hours, or until the strength is entirely extracted and add the cream of tartar—then wet the cloth in clear water—wring it out, and put it in the dye—bring it to a scalding heat—let it remain a few moments and it will be finished. If a lighter colour is wanted, use less cochineal; if a darker one, more, the shade depending upon the quantity of cochineal used.

A cheaper, yet handsome pink, may be obtained by substituting nickwood for madder, in the recipe for madder red.

SCARLET.—(Very superior.)—Three ounces of cochineal, three ounces of cream of tartar, and four ounces of solution of tin; powder the cochineal and rub through a bag into blood-warm water sufficient to cover the yarn; when it is a little warm put in the cream of tartar, and simmer, then add the solution of tin—your yarn must be wet with clean water—steep in the dye till the yarn is properly dyed. Dry your yarn before you wash it. This will colour three pounds.

Some dyers say that a brighter scarlet may be made by using a weak dye of quercitron bark to make the wool a light orange as a preparation for the cochineal scarlet.

Cochineal Powdered do, Cream Tartar, Solution of Tin, Nicwood, Quercitron Brak, etc., to be had at Hart's.

A FINE WINE COLOUR.—One pound of wool, half pound of red wood, one ounce of madder compound. Soak the powdered wood in warm water all night, mix the madder compound with about half a pint of water (in a glass) and add it to the rest; rinse the wool in warm water, and put into the dye, boil about half an hour, take out the wool and rinse in cold water.

A colour almost as fine may be had by using quarter pound of alum, and boiling in the same way.

TO DYE A SALMON COLOUR.—Take one pound of wool, quarter of a pound annatto, and a quarter of a pound of soap. Take water sufficient to cover the wool, in which dissolve the annatto and soap, rinse the wool in warm water, put it into the annatto mixture, and boil it about half an hour. The shade may be made lighter or deeper according to the quantity of annatto used.

YELLOW.—One pound of wool or cloth, three quarters of a pound of fustic, quarter pound of alum—put all into an earthen vessel and pour on sufficient hot water to cover the wool and keep it warm all night; give it half an hour's boil in a brass kettle and then rinse in cold water. A much deeper and richer yellow may be made by using turmeric powder instead of fustic, and proceeding in the same manner.

Annatto, fustic, turmeric powder, alum, and the following dye stuffs of the best qualities always in stock.

Cam-wood lac dye, nut galls, red wood, blue vitriol, &c.

ALINE COLOURS, IN CRYSTALS OR LIQUID.

Magenta, scarlet, mauve, purple, blue, brown, green, yellows, and other colors, in bottles and by the ounce.
