CHIGNECTO POST.

Deserve Success and you shall Command it.

VOL. 14.—NO. 13.

SACKVILLE, N. B., THURSDAY, AUGUST 2, 1883.

WHOLE NO. 688.

Farm and Household.

Curing a Cold.

Ignorant people often think to break up a cold by the free use of spirits. It is a dangerous experiment, for if there is any degree of inflammation, which is most generally the case, strong liquor, in place of removing, will be sure to increase the trouble, and is very liable to induce inflammatory fever.

To Stop Bleeding.

When an artery is cut, the red blood spurts out at each pulsation. Press the thumb firmly over the artery near the wound, and on the side near the heart. Press hard enough to stop the bleeding, and wait till the physician comes. The wounded person is often able to do this himself if he has the requisite knowledge.

Disinfectants.

The London Medical Record concludes that the only certain disinfectants are chlorine, bromine, and corrosive sublimate. Solutions of one part of the latter to 1,000 parts of water will kill spores in ten minutes, while a solution of 1 in 15,000 is strong enough to arrest the power of development in micro-organisms.

A High Priced Cow.

A notable event in connection with the Chicago show was the sale of an Angus (polled) cow for \$1,500. It is quite safe to predict, knowing of what stuff these black polled cattle are made, that one day when they are sufficiently numerous to afford it and their beef will be on exhibition. It will come into successful competition, too, with the Short horn beef and run the white-faced Herefords very closely.—Farmers Magazine.

The Use of Milk.

Milk is now largely used in febrile diseases. In typhoid fever many physicians nourish their patients with milk. It is easily digested, and quiring only an hour and a half in the process. A hospital in Philadelphia is devoted exclusively to the milk diet. Let the victim of diabetes live on skim milk or butter-milk, and he will lose fat, increase his muscle and prolong his life. Milk is far better for a person who is to be exposed to the cold than alcohol. A milk diet is highly esteemed by the medical profession.

The Tongue.

A white fur on the tongue attends simple fever and inflammation. Yellowness of the tongue attends a derangement of the liver, and is common to bilious and typhus fever. A tongue vividly red on the tip and edges, or down the centre, or over the whole surface, attends inflammation of the mucous membrane of the stomach or bowels. A white velvety tongue attends malarial disease. A tongue red at the tips, becoming brown, dry and glazed, attends typhus state.

Cure for Diphtheria.

A correspondent of the Boston Journal writes that he has used the following remedy for diphtheria in a great many cases, and it not only has failed to effect a cure. It is as follows: Procure some pitch tar,—not gas tar,—put a little on a hot iron, invert a funnel over the smoke, and let the patient inhale as much as can be without strangling, for a few minutes, five or six times a day. During the intervals let the patient have small pieces of ice to keep as near the root of the tongue as possible.

Remedy for Scarlet Fever.

Dr. Beebe's remedy for scarlet fever and diphtheria, which is rather in the nature of a preventive,—sulpho-carbolate of soda,—attracts much notice, and excellent reports are given of its efficacy. The dose for an adult is four grains, pulverized with an equal amount of sugar, and half that quantity for children under ten years of age. To prevent atmospheric contagion the dose should be taken morning and evening. When either disease is in a building with non-infected persons, the latter should get four doses a day. In the treatment of either disease the dose may be repeated every two hours, in addition to other indicated remedies.

High Heeled Boots.

High-heeled boots undoubtedly injure not only the foot but the shape of the leg. Perfect freedom of these useful members preserves their symmetrical shape, while exercise unfolds the muscular system, producing a full, bold outline of the limbs, at the same time that the joints are knit small and clean. Look at the legs of the poor Irishman travelling to the harvest with bare feet, the thickness and roundness of the calf show that the foot and toes are free to permit the exercise of the muscles of the leg. Look, now at the legs of an English peasant whose foot and ankle are tightly laced in a boot with an inflexible sole, and perceive from the difference which he lifts his leg, that he is as much as if he went on stilts; and therefore are his legs small and shapely. In short, the natural exercise of the parts, whether they be active or passive, is the stimulus to the circulation through them; exercise being as necessary to the perfect constitution of a bone as it is to the perfection of muscular powers.

Farm and Household.

Cholera Infantum.

It may not be generally known that this disease, so fatal to many of the children in crowded localities during the summer months, can be treated successfully by injection of pure warm water, which serves to cleanse the lower intestines, where the derangement appears to begin. Authentic evidence in relation to more than thirty cases treated in Concord, N. H., by one physician, without the loss of a single patient, is at hand, and shows that a very simple and safe remedy can be used to great advantage, especially if resorted to in season.

Remedy for Erysipelas.

At the recent congress of German surgeons, Dr. Fisher, of Strasburg, drew attention to the value of naphthalene as an antiseptic. For some skin diseases, and especially in the treatment of erysipelas, it is almost specific. The application is made in the most simple manner possible, by rubbing gauze in the powdered material, or dipping any suitable fabric in an ethereal solution diluted with alcohol. Naphthalene being very cheap, this preparation will be less expensive than anything of the kind now in the market. It is extensively used in Strasburg, where it is regarded as a perfect preventive of erysipelas; and it is hoped that if this valuable property can be substantiated, it will be used for the same purpose in this country. Dr. Fisher does not state whether its use in the manner stated is attended with any inconvenience or pain to the patient; but persons afflicted with erysipelas, and elsewhere who have suffered from sores of naphthalene entering the eyes, etc., would be disposed to regard the remedy with very considerable suspicion.

An Antidote for Poisons.

We do not know where the following originated, or how much truth there is in it, but as the antidote is entirely harmless, and may prove useful in some cases, we give it a place.

A plain farmer says it is now over twenty years since I learned that sweet oil would cure the bite of a rattlesnake, not knowing that it would cure any kind of poison. Once, observing a snake bite a man, I saw him take a little of the oil, and he was cured. I have since used it on many occasions, and it has cured many a man and beast. I think no farmer should be without a bottle of it in his house.

The Use of Tobacco.

It is rather singular that Americans are the only civilized people who habitually chew tobacco, although sailors of nearly every nation are addicted to the practice. It is singular, too, that we, probably, employ tobacco in other ways less than other countries. Snuffing is rather rare here, common as it is in Europe, especially on the continent. We do not smoke any more than, as much as the English; and the French, Italians, notably the Germans, Dutch and Spaniards, exceed us in smoking. But as to tobacco eaters we occupy the field alone, having, it is to be regretted, a monopoly of one of the most unwholesome and obnoxious practices. The national intemperance and expectation are known over the world, and do ample service in all occupations and caricatures of Brother Jonathan. To see a landman chewing tobacco anywhere abroad is to know him for an American, native or adopted. Perhaps we stick to worst of three customs because tobacco is so to large an extent an American plant. Europe knew nothing of it until the discovery by Columbus of the Western world. The sailors he sent ashore at Cuba found the natives smoking, and seeing them emit smoke from their mouth and nostrils, imagined they by on fire. All the natives from the northwest coast to Patagonia used tobacco, and to chew it is one of our inalienable and aboriginal rights.

Scientific and Useful.

Salicylic acid added to cold cream prevents the latter from becoming rancid and adds to its healing power.

A piece of zinc placed on the live coals in a hot stove will effectively clear out a stove-pipe, the vapors produced carrying off soot by chemical decomposition.

Professor See of the Hotel Dieu, says that the new extract of Lily-of-the-valley is one of the most important remedies in heart disease known. It is a powerful poison.

A Boston furniture manufacturer is making some chairs and tables from oak logs taken from a bridge in Germany. They have been in the water since the year 1780, and are consequently about 1,100 years old. The logs are in remarkably fine state of preservation, and they show no signs of decay after penetrating two inches below the surface.

To purify muddy water, agitate each quart of water with an ounce of phosphate of lime and allow it to settle, and it will be found that most of the impurities are carried to the bottom. The supernatant water is now filtered without any trouble through absorbent cotton. Ordinary cotton will answer as well as previously moistened with alcohol, and then washed with water. Of course, either of them must be pressed tightly into the neck of the funnel. Clear water can be obtained in about five minutes.

A French chemist is said to have obtained a dense black gum from the outer layers of the birch tree bark by distillation, possessing all the ordinary properties of gutta-percha, and having the additional merit of resisting the deteriorating influence of air and the corrosive action of acids. This advantage would make it useful as an ingredient of India rubber and gutta-percha, which it would render far more durable. It would be interesting to know just what species of birch supplies the bark used.

Cramps and pains in the stomach or bowels, or in any part of the body, no matter how severe or what the cause, can be relieved by Johnson's Anodyne Liniment used internally and externally.

Personal Intelligence.

Joaquin Miller on Canada.

More Solid Happiness Here than in the States—The Ontario Model Farm.

Joaquin Miller, the Poet of the Sierras, writes a characteristic letter to the New York Star of people and things in Canada. He says of himself,—"I have been roaming industriously up and down Canada now for two weeks, and as one of the general results of my observations I am bound to bear testimony that there is more solid happiness to be found here than in the States."

Then again he says of this country:—"In fact, this is a land of room, and it is a land to be filled up entirely with people; a land of tremendous possibilities. For reasons I have not space to explain, I count it forty-fold more desirable than Mexico, toward which America has set her face of late."

While in Ontario the poet visited the Ontario Industrial Farm, and devoted considerable space to a description of this model institution. The Province pays \$30,000 a year to maintain a school for the practical education of farmers. This institution turns out annually from two to three hundred well-disciplined and splendidly equipped men to take charge of the most important, healthy, and altogether honorable pursuit on earth. We in the States are accustomed to think if a man is fit for nothing else he can settle down on a farm and get on.

We have made the farm the last refuge of the tramp. They here are making the farm the first place for the true gentleman. And this is right. Writing the necks of sweet and simpering clerks and counter-jumpers, whose highest achievement is to tie their bow ties before a glass, and breathe their perfume if you like, my lady, but don't make him a darling in preference to the manly fellow who after his fashion is the creator of fortunes and a builder of worlds. We must have one of these institutions in every State of our Union, a dozen if necessary, to dignify and make easy and intelligent the office of the farmer. The trade of war is out of date, the lawyer's office is of doubtful calling, for what does it give to the world in return for its bread? The doctor's place is hardly desirable for a refined nature, but the Canadian has decided that the farmers hold the world on their shoulders and are standing truly by them. They have altogether in the Dominion more than eighty associations to the purpose of the improvement of stock and grain.

A Hasty Marriage.

The quickest marriage on record in modern times is thus described by the Middletown, N. Y., Argus:—"A young man, named By, married in this village a short time ago, and one, too, which promises to be a happy one, notwithstanding the fact that it was not even dreamed of by the parties interested an hour before it occurred. A young gentleman met a young lady of his acquaintance who is employed in one of the hat shops, on the street, and in conversation the young lady stated that everything had gone wrong with her at the shop that day, and that she had the 'blues' terribly; in fact, she was about ready to give up the fight for existence. The young man responded that she could triumph over all her difficulties by marrying him, and this meeting her views, the young couple started for the nearest minister and were married."

W. W. McLellan, L. N. S. writes:—"I was afflicted with rheumatism, and had given up all hope of recovery. By chance I saw Dr. Thomas' Electric Oil recommended. I immediately sent (fifty miles) for a bottle, and with only two applications I was able to get around, and although I have not used one bottle, I have nearly well. The other three bottles I gave around to my neighbors, and have had so many calls for more, that I feel bound to relieve the afflicted by writing to you for a supply."

Given up by Doctors. It is positive that Mr. Godfrey is up and at work, and cured by so simple a remedy? "I assure you it is true that he is entirely cured, and with nothing but Hop Bitters; and only ten days ago his doctors gave him up and said he must die!" "Well—well! That's remarkable! I will go this day and get some for my poor George—I know hops are good."

Hall's Vegetable Sillian Hair Restorer never fails in restoring gray hair to its youthful color, lustre, and vitality. Dr. A. A. Hayes, State Assayer of Massachusetts, endorses it, and all who give it a fair trial will find it a grateful testimony to its many virtues.

How to Get Sick.—Expose yourself day and night, eat too much without exercise, work too hard without rest, doctor all the time, take all the vile nostrums advertised and then you will want to know how to get well.—Which is a answer in three words—Take Hop Bitters!

A Diamond in a Horse's Hoof.

It will be hard to bring a case to outdo this among examples of odd recoveries.

A wealthy physician of Murfreesboro, Tenn., bought a \$1,500 diamond ring for his daughter. About three years since, while riding out, the ring was lost. It was advertised and liberal rewards offered for its recovery, but nothing was ever heard of it.

A few weeks ago a child of a blacksmith was taken sick, and the physician referred to had to call and see it. While at the bedside he had occasion to mention his daughter's name. At this the child's mother took from her finger a ring, handed it to the physician and asked him if his daughter had recently lost a ring, for the ring contained the name he had just pronounced.

The physician said she had not, but that some years ago she lost a diamond, and as his eyes fell upon the sparkling object he recognized his daughter's long-lost treasure. The lady said her husband had found it in the bottom of a horse's foot. "Really?" said the physician, "Can you explain to me how it came there?" "I got a fast, the top story of which has always remained vacant."

—A man was quietly munching on a piece of pie in a saloon Friday morning when a look of distress suddenly displayed the serene expression on his face. Taking something from between his teeth, and looking at it, he cried to the waiter: "Here, you, there's a stone I found in this pie!" The waiter took it, glanced at it critically, and handing it back, briefly said: "It's no good to us; you can have it."

—Is the lady of the house, in? asked a tramp of the servant who rang the doorbell of one of the state-let mansions in Austin. "De lady ob de house don't come to de door to talk wid de like ob you." "Then," said the tramp, elevating the remnant of a hat, with a grace Chesterfield might have envied, "tell the lady of the house a gentleman wishes to speak with her in the parlor."

Flour! Flour!

TO ARRIVE: 25 "CHESTER FLOUR," 25 "MAJORS FLOUR," 25 "CORN & OATMEAL."

F. L. DOBSON. Sackville, June 18, 1883.

Job Work, of every description, neatly done, at low rates at this Office

Sackville Academy.

Rev. Chas. H. Paisley, M. A., Principal.

THE FIRST TERM of this highly successful institution will open

AUGUST 23rd.

The Institution is designed to impart a thorough English and Classical Education, as well as to train Students to Matriculate at College.

Instruction is also given by thoroughly competent Teachers in French, Music, Instrumental Voice, Book-keeping, Penmanship and the ordinary forms of Commercial Transactions.

For Calendar containing terms, etc., apply to

PRINCIPAL.
