The copy filmed here has been reproduced thanks to the generosity of:

Library of the Public
Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➡ (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives
publiques du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole ➡ signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

WEATHER GUIDE.

The following Table (the result of many years' actual observation) is ascribed to Dr. Herschel. It is constructed upon a due consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and serves to show what kind of weather will most probably follow the entrance of the Moon into any of her quarters:—

Moon.	Time of Change.	In Summer.	In Winter.
If New Moon, First Quarter, Full Moon, or Last Quarter, happens	Between midnight & 2 A. M.	Fair.	Hard Frost unless wind be S. or W.
	" 2 and 4 A. M.	Cold with showers.	Snow and stormy.
	" 4 " 6 "	Rain.	Stormy and rainy.
	" 6 " 8 "	Wind and rain.	Stormy.
	" 8 " 10 "	Variable.	Rain if wind W.
	" 10 " 12 "	Showery.	Snow if E.
	At 12 Noon, and to 2 P. M.	Very rainy.	Cold and high wind.
	Between 2 and 4 P. M.	Variable.	Snow or rain.
	" 4 " 6 "	Fair.	Fair and mild.
	" 6 " 8 "	Fair if wind be N. W.	Fair.
If New Moon, First Quarter, Full Moon, or Last Quarter, happens	" 8 " 10 "	Rainy if S. or S. W.	Frosty if wind N or N
	" 10 " midnight.	Ditto. Ditto.	E. Snow if S or S W.
		Fair.	Ditto. Ditto.

The nearer midnight any of the Moon's changes occur, the finer will be the weather during the succeeding week; the nearer noon any of those changes happen, the more foul and wet will be the weather that will follow.

Commence the New Year by patronizing SMITH'S Drug Store.

JANUARY.—Nova Scotian Agriculture has entered upon an entirely new phase. Our Agriculturists are, in many districts, zealously seeking after scientific methods of culture, introducing labour saving machinery, and improving their live stock. The advantages resulting from all this are such as to arrest the attention of cultivators even in the most backward districts, and we may soon hope to see our Province take a first rank among Agricultural Countries. An impetus has been given to cattle raising by the recently established system of live cattle exportation to Europe, and the Dead Meat Trade. An unlimited market thus presents itself, and our Agriculturists may enter upon cattle raising without fear of over-produce.

tion. To do this successfully and profitably it is necessary to start with good calves. These should be raised from carefully selected cows of good size, and healthy, and crossed by thorough-bred bulls; either Hereford or Devons may be used, but the Short Horn Durhams are preferred before all others, chiefly because they reach a great size in a short period. If there is an Agricultural Society in your district the best way is to join it, and obtain the use of its thorough-bred stock; if not you can purchase a young bull from an established breeder at a reasonable price. If your selection is delayed till the spring months you will have to pay a higher price and have a more restricted choice.

SMITH'S ANTIBILIOUS PILLS—TRY THEM.

FEBRUARY.—The subject which, above all others, requires the attention of the farmer during the month of February, is the feeding, watering, grooming, and general care-taking of his stock. Feed well at this season, not over-much, but judiciously. Calves and young stock will not thrive on dry hay alone; they require the hay to be cut and mixed with meal, crushed grain or mill stuff of some sort. All animals at this season should have roots, especially young stock. If fed entirely on dry feed their first stomach will be so distended that they will lose all shape, and never afterwards be presentable in the exhibition ring. More serious results than this follow, for, when spring time comes, the animals will be sure to scour, get thin, and possibly die. Ignorant farmers wonder why so many animals die. Intelligent farmers are as apt to wonder why so many live. Let us enquire briefly into the *rational* of feeding. All the food of animals consists of

several compounds having distinct properties, and it is to the relative proportions of these that different food materials owe their differences in feeding value. Hay, besides woody matter which is nearly useless, contains starch, sugar, gum, oil; these are non-nitrogenous, and maintain the warmth of the body and produce fat. It also contains albuminous bodies, which are nitrogenous; these repair waste and afford material for the growth of flesh. Not only hay, but also grain, straw, roots, vegetables, all contain both of these classes of substances, viz: the fat-formers and flesh-formers; if we wish to produce fat on an animal we feed indian corn or some other food rich in fat-formers; if the object is to produce flesh, on the other hand, we feed oats or wheat rich in flesh-formers. For milk, the best of all food is green grass, or, in winter time, hay, well made from young grass, supplemented by succulent roots such as mangels.

J. GODFREY SMITH, Druggist, 147 Hollis Street.

MARCH.—This is the month of preparation for the actual culture of the soil, which may be still frozen hard and covered with snow. One secret of successful farming is to be always ready for favorable weather. What preparations are now to be made? As soon as manure can be carted out on the frozen fields, let it be done. In bad weather see to the repair of implements. Calculate what seeds and artificial manures will be required, and send your orders at once to reliable houses. If you wait till the time comes for planting and sowing, you may be disappointed in obtaining what you want. In order to raise early plants for the vegetable garden and flower beds, a hot bed should be started this month. (See Instructions

In former years' Almanacks.) If hay should become scarce, do not allow your cattle to suffer, but give them some middlings or bran with the cut fodder. Cattle allowed to "go down" at this season will take half the summer to recover. The experience of many of our stock raisers last year showed the necessity of careful attention to cattle during the spring months. This is the time when insect parasites are developed, and watchfulness is needful to prevent stock being ruined. When lice appear on cattle, wash the spots with a weak solution of carbolic acid, or, what is better, use carbolic soap. Even washing with common soap and water will prove effective if done in time.

A sure and safe medicine—SMITH'S ANTIBILIOUS PILLS.

APRIL.—This is the month when the cultivation of the soil actually begins; the operations of ploughing, harrowing, rolling, planting, cultivating, have now to be attended to as the season advances and as the weather may permit. The theory of cultivation of the soil may well claim more than a passing reflection from the intelligent farmer. All soils consist of a mixture of clay and sand, the clay holds water, the sand allows it to filter through. When the clay is in excess we have a clayey soil, when sand is in excess we have a sandy soil, and when both are equal we have a loam, which is best of all for general purposes. There are other substances, which form but a very small proportion of the soil, but are essential for its fertility. The principal ones are (1) phosphoric acid, (2) potash, and (3) ammonia. They are removed in greater or less quantity by every crop, and when they are taken out, the soil, whether clayey, sandy or loamy, becomes

MAY.—With the general improvement in our Agriculture, it is hoped that a taste for rural ornamentation will grow. Every farm house should have its Flower Garden, the care of which may be relegated to one or more of the female members of the family, now that cheese factories and cattle feeding have relieved them of the labor of butter making. One of the speediest ways of ornamenting a country house is to plant and train around the doors and windows such rapid growing creepers as Morning Glory, Echinocystis, Eceremocarpus, Honeysuckle, Nasturtiums, Prairie and Ayrshire Roses, Clematis, Indian Potato, Duchman's Pipe, Grape Vines, Virginian Creeper. The plants most suitable for a Farm Flower

JUNE.—All seed crops not yet committed to the soil should be put in without delay. After the first day of June it is not too early to sow any kind of seed suitable for our climate. The drill crops put in during April and May will now require attention, first in the way of hand hoeing, where this has to be done, and secondly by the use of the horse hoe or cultivator. But there are still some crops

to be planted or sown. Put out cabbages and cauliflowers, but only in soil that has been well worked and well enriched. The *Haltica*, or turnip flea, is the great enemy of the cabbage: all efforts at his destruction have failed, and the only effective way of warring war with him is to treat him generously by sowing, between the cabbage rows, common white mustard, the young seedling plants of which are far more palatable to the flea than cabbage. Tomatoes may also be set out later in the month. Ground cherries do best when they come up from seed in the soil, which they will do for years. Finish planting everything now in field and garden, such as Indian corn, bush and pole beans, cucumbers, squashes, turnips. Tender plants may now be put out in the flower beds. Do not touch strawberry plants by weeding or

Look out for gooseberry and currant caterpillars, and dust the bushes while the morning dew is on them with powdered hellebore or lime. Celery may be planted out at the end of the month. If there are still any "farmers" in the Province who are not members of an Agricultural Society, or if no such Society exists in their district, then the duty devolves upon them this month of joining a Society or organizing a new one. There can be no general progress among our farmers without co-operation, for the obtaining of suitable thorough-bred animals of the very highest class is beyond the reach of individuals.

sow their Swedes this month, and the soft Turnips for immediate feeding need not necessarily be sown till the end of July. The ground should have undergone a thorough pulverization. Light sandy soil is the best for Turnips. They start best after the ground is warm, but the bulbs swell most rapidly during the cool dewy nights of Autumn. The soil cannot be worked too deep or made too fine for Turnips. Town manures are valued for this crop; and crushed bones have been applied with the best effects, either when covered in the drills in the manner of ordinary dung, or when sown by machine along with the seeds, so as to be in immediate contact with the factor. Guano has been largely used of late years. Superphosphate is very efficacious. One point of Turnip culture that is often neglected in Nova Scotia, although well understood elsewhere, is that the seed

should be put in the moment the soil is prepared. If the earth of the prepared drill gets dried up in the sun before the seed is committed to it, how can the latter be expected to germinate. Hoeing and weeding of all drill crops should be carried on actively this month and completed before haying time. Haying is the operation before which all others may give way. The secret of good hay making is fine weather, and the secret of the weather is to keep in mind that at this season we do not have many hot clear days in succession. If the day is clear and the temperature high, do not be tempted to mow too much; wait till the rain is clearing away and the air begins to cool. Then do your mowing early in the week, so that your hay will not have to lie over Sunday washing in the rain or bleaching in the sun.

attention to feeding and grooming his cattle for the fall Exhibition. Systematic careful feeding will make a wonderful improvement upon animals at this season, especially if they are in good pasture. Our farmers are now working into a mixed husbandry, so that cattle may not feed on hay all winter and pasture in the summer, but feed in winter on straw and roots and coarse grain, and in summer partially or wholly on green fodder in-doors. This is the only way to enrich a farm, or to attain to anything like high farming. We therefore recommend our readers to note at this season how convenient it is to have a field of tares or green oats or barley or Indian corn or rape, or any other green eatable thing for the cattle to grow or fatten upon when the pastures are all burnt up. After haying there will be work in the garden, and especially in the orchard. Look after the ripening of fruit, destroy caterpillars, if any still remain; pick the early August apples, and

The calving of cows for the season will now be over. All thorough-bred calves should be at once registered in the Official Stock Register of the Board of Agriculture. For grade stock the farmer should keep a book for after reference.

SEPTEMBER.—September is Exhibition month. If Exhibition Committees made their arrangements in time, the date of each Exhibition would be duly foretold in its proper place in the daily calendar of this Almanack. Our Provincial Exhibition is held once in two years, during the last week of September or first of October, and District Exhibitions are held in the alternate years, when there is no Provincial Exhibition. These Exhibitions afford to the farmer the opportunity of seeing what improvements in implements and cultivation are being introduced; what progress

The ingathering of fruits as they ripen, and before they suffer from the fall frosts or protracted rains, which sometimes come at this season, will fully occupy the farmer's time. Perpetual watchfulness is more profitable than even hard labour in harvesting operations, and the wise farmer will daily examine his crops, and note their progress.

and, as the culture of them is extending throughout the Province, we would impress upon all who have not had long experience the necessity of attending to the points noted below:—To take up and store roots successfully is a simple art when properly understood, but the frequent destruction of roots in the cellar shows that it is not always understood or carried out. Potatoes should be dug in dry weather, and allowed to dry completely on the surface before being put together in heaps or in the cellar; the best way is to put them on a barn floor and exclude the light, otherwise they will become green and acquire a bitter taste and poisonous qualities. Mangels, turnips and carrots should be topped and the fine root fibres cut off. Before storing they should, in like manner, be exposed to dry air that the wounds may heal over; if put at once into the cellar, the wounded tissues will

begin to ferment, and a large portion of the roots will be rotted by contact. If facts such as these are kept clearly in view, no farmer need lose his roots. Of course the cellar must be kept well aired, cool and dry, and frost carefully excluded.

NOVEMBER.—The previous month will have been occupied pretty well in securing the root crops. Now the whole strength of the farm should be thrown into fall ploughing. This is a most important operation, whether we view it as a means of preparing the soil for the future crop, or as a convenience to enable the farmer to have spring time for proper spring work. The addition of manure to a soil is not enough, the pulverization, mixture, freezing, thawing and rain-washing of the soil are the processes by which its fertility is to be secured. Let us illustrate this:—bone, an insoluble tribasic phosphate, receives the rain-water which contains carbonic acid gas; this changes a portion of the bone into carbonate of lime, and

the rest into bi-basic phosphate which gradually dissolves and becomes available to the plant. If the rain water drains away over the hard surface, or if the soil lies soaked in stagnant water, and there is no passage of rain through it, this change cannot take place. When lime is added to the soil it quickly acts on the organic matter, but the lime must be diffused completely throughout the soil, otherwise it becomes inert before it has had an opportunity of doing its work by being brought into actual contact with soil-particles. The clay of the soil is a silicate of alumina; with lime, if the particles be brought together in presence of water, a double silicate of lime and alumina is formed. If soda be brought into contact with this, the lime gives way and a double silicate of soda and alumina is formed. If potash be added, the soda gives way, and we have now a double silicate of potash and alumina; and lastly, potash will yield to ammonia, and thus ammoniac will be

annual grant in aid to promote its operations. The special purpose of a Society is to improve the live stock of its district, which is accomplished by obtaining and keeping for the use of members, superior male animals, such as bulls, rams and boars. Societies may also introduce seeds of new varieties of grain, roots, and also improved implements, and sell them to members at cost and charges. Exhibitions are held by some Societies or by the Societies of a County combining. The whole of the Societies of the Province meet on the second Monday of December, each in its respective district, when the members receive the Directors' Report, and select officers for the ensuing year. Full information as to the method of organizing Societies may be obtained on application to the Member of the Board for the District, (see Board of Agriculture in another part of the ALMANACK), or to the Secretary, Professor Lawson, Dalhousie College, Halifax.

The following extracts from the Weights and Measures Act of 1879 will give valuable information:

In contracts for the sale and delivery of any of the undermentioned articles, the bushel shall be determined by weighing, unless a bushel by measure be specially agreed upon—the weight equivalent to a bushel being as follows:—

Wheat, sixty pounds,	Timothy seed, forty-eight pounds,
Indian Corn, fifty-six pounds,	Buckwheat, forty-eight pounds,
Rye, fifty-six pounds,	Flax seed, fifty pounds,
Peas, sixty pounds,	Hemp seed, forty four pounds,
Barley, forty eight pounds,	Blue grass seed, fourteen pounds,
Malt, thirty-six pounds,	Castor beans, forty pounds,
Oats, thirty-four pounds,	Potatoes, turnips, carrots, parsnips,
Beans, sixty pounds,	beets and onions, sixty pounds.
Clover seed, sixty pounds,	

In using a Dominion Measure of capacity the same shall not be heaped, but either shall be stricken with a round stick or roller straight and of the same diameter from end to end, or if the articles sold cannot from its size or shape be conveniently stricken, shall be filled in all parts as nearly to the level of the brim as the size and shape of the article will admit.

Every contract, bargain, sale or dealing made or had in the Dominion of Canada for any work, goods, wares or merchandise, or other thing which has been or is to be done, sold, delivered, carried or agreed for by weight or measure, shall be deemed to be made and had according to one of the Dominion weights or measures ascertained by this Act, or to some multiple or part thereof, and if not so made or had shall be void, except only when made according to the metric system; and all tolls and duties charged or collected according to weight or measure, shall be charged and collected according to one of the Dominion Weights or Measures ascertained by this Act, or to some multiple or part thereof.

No local or customary measures in the use of the heaped measure shall be lawful.

Any person who sells by any denomination of weight or measure other than one of the Dominion weights and measures or some multiple or part thereof, shall be liable to a fine, not exceeding twenty dollars for every such sale.

Every weight, except when the small size of the weight renders it impracticable, shall have the denomination of such weight stamped or engraved on the top or side thereof in legible figures and letters. Every measure of capacity shall have the denomination thereof stamped or engraved on the outside of such measure in legible figures and letters. Every beam, steelyard or weighing machine shall have marked upon some essential part of it the maximum weight which it is constructed to weigh, and also on the weights or poises used with it their actual weight when truly adjusted, in parts or multiples of the avoirdupois pound. A weight or measure not in conformity with this section shall not be stamped with such stamp of verification under this Act, as is herein mentioned.

or of measuring any land, goods, materials or other thing, for the purpose of charging for or ascertaining the price to be paid, or the charge to be made therefor, any weight or measure, or weighing-machine which has not been duly inspected and stamped according to this Act, shall be guilty of an offence against this Act; and shall, on conviction, incur a penalty of not more than fifty nor less than five dollars for each such offence; and every such unstamped weight, weighing-machine or measure so used, found in his possession, shall, on being discovered by the inspector, or his assistant, be forfeited and forthwith seized and broken by him, without suit or other authority than this Act:

Except that the manufacturer of or dealer in weights, measures or weighing machines who has in his possession for sale any weight, measure or weighing machine, shall not be bound to have the same inspected and stamped according to this Act, so long as the same remain in his manufactory or warehouse; but no such weight, measure or weighing-machine shall be removed from his premises, sold or taken into use for trade without having been inspected and stamped:

Any trader not being a manufacturer of or dealer in weights, measures or weighing machines, having in his possession any unstamped weights, measures or weighing-machines, shall be liable to a penalty of twenty-five dollars for the first offence, and for each subsequent offence to a penalty of fifty dollars; and the inspector or his assistant shall forthwith seize such weights, measures or weighing-machines which shall be forfeited.

If any person forges or counterfeits any stamp used for the stamping, under this Act, of any measure, weight, balance or weighing-machine, or used before the commencement of this Act for the stamping of any measure, weight, balance or weighing-machine under any enactment repealed by this Act, or wilfully increases or diminishes any weight or measure so stamped, or in any way alters or tampers with any balance or weighing machine which has been so stamped, so as to cause it to weigh unjustly, he shall be liable to a penalty of forty dollars for the first offence, and for each subsequent offence he shall incur a penalty of one hundred dollars and two months imprisonment:

Any person who knowingly uses, sells, utters, disposes of, or exposes for sale, any measure, weight, balance or weighing-machine, with such forged or counterfeit stamp thereon, or any weight, measure, balance or weighing-machine so increased, diminished, falsified or tampered with, shall be liable to a penalty for the first offence not exceeding fifty dollars, and for each subsequent offence one hundred dollars.

Any person, not being a manufacturer or dealer in weights, measures and weighing machines, who refuses to produce for inspection when required to do so by any inspector or inspector's assistant appointed under this Act, all weights, measures and weighing machines in his possession and used for any purpose of trade, or—

Any manufacturer of or dealer in weights, measures or weighing-machines, who refuses to permit the inspection, when required in the manner herein provided, of any weights, measures or weighing-machines about to be removed from his premises to be used for purposes of trade, or who permits any such weights, measures or weighing-machines to be so removed without having been first inspected and stamped as herein required,—shall, on conviction, forfeit and pay a sum not exceeding twenty dollars for the first, and forty dollars for the second or any subsequent offence.

All forfeitures and penalties imposed by this Act, or by any regulation made under its authority, shall be recoverable, with costs, before any civil court of competent jurisdiction, or before any Justice of the Peace

Calvert, Tar, Pitch, at PICKFORD & BRACKS.

for the district, county or place in which the offence was committed, if such forfeiture or penalty does not exceed fifty dollars, and before any two such justices, or any magistrate having, by law, the power of two such justices, if it exceeds fifty dollars, upon proof by confession, or by the oath of one credible witness,—and may, if not forthwith paid, be levied by execution of distress and sale of the goods and chattels of the offender, by warrant, under the hand and seal of such justice, justices or magistrate—by whom also any imprisonment to which the offender is liable may be awarded; and to all such cases the Act passed in the session held in the thirty-second and thirty-third years of her Majesty's reign, and intituled "*An Act respecting the duties of Justices of the Peace out of Sessions in relation to summary convictions and orders*," shall apply, subject to the provisions of this Act:

One half of any penalty so recovered shall belong to the party suing for the same, not being an inspector, or an inspector's assistant, and the other half, or (if the party suing is an officer acting in pursuance of this Act) the whole penalty shall belong to Her Majesty for the uses of the Dominion:

Every such suit shall be instituted in the name of the inspector acting in pursuance of this Act, who shall account for the penalty to the Department of Inland Revenue:

Any person aggrieved by the use of any weight or measure, or weighing-machine, which has not been duly inspected and stamped according to this Act, or which may be found light, deficient or otherwise unjust, may recover treble damages and costs.

No action or prosecution shall be brought against any person for any forfeiture or penalty imposed by this Act, unless the same is commenced within three months after the offence is committed.

The following clauses of the Medical Act (Chap. 28, Revised Statutes, 4th Series,) are here published for the information of the profession and the public:

8. Subject to the exceptions hereinafter made, no person shall practice pyhsic, surgery or midwifery in Nova Scotia, unless his name shall be registered in the Book of Registry of the Provincial Medical Board, and unless he shall have received from such Board a license to practice.

16. Any person entitled to be registered under this chapter, but who shall neglect or omit to be so registered, shall not be entitled to any of the rights or privileges conferred by the provisions of this chapter, so long as such neglect or omission shall continue.

17. No person, otherwise fully qualified under this chapter, shall be refused registration or a license to practise on account of his adopting or refusing to adopt the practice of any particular theory of medicine or surgery. In case of such refusal by the Board, the party aggrieved shall have the right to appeal to the Governor in Council, who, upon due cause shown, shall issue an order to the Board to register the name of such person and to grant him a license to practice.

21. Every person who shall be registered under the provisions of this chapter, shall be entitled according to his qualification or qualifications to practise Medicine, Surgery, and Midwifery, or either or any of them, as the case may be, in Nova Scotia, and to demand and recover in any court of law reasonable charges for professional aid, advice and visits, and the cost of any medicine or other medical or surgical appliances rendered or supplied by him to his patients.

22. No person shall be entitled to recover any charge in any court of law for any medical or surgical advice or for attendance, or for the performance of any operation, or for any medicine which he shall have both prescribed and supplied, unless he shall prove upon the trial that he is registered under this chapter.

24. No person shall be appointed as medical officer, physician or surgeon in any branch of the public service, or in any hospital or other charitable institution, unless he shall be registered under the provisions of this chapter.

25. No certificate required by any Act now in force, or that may hereafter be passed, from any physician or surgeon, or medical practitioner shall be valid, unless the person signing the same shall be registered under this chapter.

26. If any person not registered or licensed under the provisions of this chapter, or not being actually employed as a physician or surgeon in Her Majesty's naval or military service, practises Physic, Surgery or Midwifery for hire, gain, or hope of reward, he shall thereby forfeit a sum of twenty dollars for each day on which he so practises.

27. Any sum forfeited under the next preceding section shall be recoverable with costs, and may be sued for and recovered in the same manner as a private debt, by the Provincial Medical Board or any member thereof; and being recovered, shall belong to the Board for the use thereof under

THE BLUE RIBBON CLUBS within the past four years have been organized in nearly every County of the Province. The aggregate membership in the Autumn of 1878 was estimated at 20,000.
