opy which opro	riginal copy available for filming. Features of this opy which may be bibliographically unique, thick may alter any of the images in the production, or which may significantly change in usual method of filming, are checked below.					qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifie une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.				

The copy filmed here has been reproduced thanks to the generosity of:

University of Saskatchewen Saskatoon

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the lest page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the lest page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

University of Saskatchewan Saskatoon

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de le condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contret de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmée en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'iliustration, soit par le second plat, selon le cas. Tous les eutres exemplaires originaux sont filmée en commençant par la première page qui comporte une empreinte d'impression ou d'iliustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, seion le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

There is likewise in each of the islands a considerable number of persons of mixed blood, and Native Blacks of free condition. In Jamaica they are reckoned, as we have shewn, at ten thousand; and I have reason to believe they do not fall short of the same number in all the other islands collectively taken. The whole inhabitants therefore may properly be divided into four great classes. 1. European Whites; 2. Creole or Native Whites; 3. Creoles of mixed blood, and free Native Blacks; 4. Negroes in a state of slavery. I shall treat of each class separately; premising, however, that there are persons not comprehended in either class; such as

emigrants from North America, and a considerable body of Jews. In Jamaica, the latter enjoy almost every privilege possessed by the Christian Whites, excepting only the right of voting at elections; of being returned to serve in the assembly, and of holding any office of magistracy; but they have the liberty of purchasing and holding lands, as freely as any other people; and they are likewise allowed the public exercise of their religion; for which purpose they have erected two or more synagogues; and I have not heard that Jamaica has had any reason to repent of her liberality towards them. As, however, they differ but little in manners and customs from the rest of their nation which are dispersed in all the countries of Europe, I shall pass them by without further detail. The other White Inhabitants, not comprehended in this enumeration, are too few to merit particular, notice. # senos tests longed at the

It may reasonably be supposed that most of

\* The following account of the White Inhabitants, Free-Negroes, and Slaves, in the French West Indies, may serve to gratify curiosity. It is taken from the authority of Mons. Neckar; but I have reason to think that the Negro Slaves are nearly doubled in the French Islands since this account was taken.

Whites. Free Blacks, &c. Slaves.

### HISTORY OF THE

BOOK .

the natives of Europe who emigrate to the West Indies, remove thither with the hope of receiving greater encouragement to their abilities and industry than has offered at home. Yet let it not be imagined that the major, or even any considerable part of them are desperate and needy adventurers, who seek refuge from a prison, or expatriate themselves in the fond idea of living luxuriously without labour. These islands give but little countenance to idleness, nor offer any asylum to vagabonds and fugitives. Many of the British Colonies were eriginally composed of men, who sought in the wilderness of the New World the praceable enjoyment of those natural or supposed rights of which they were deprived in their native. country. I extend this description to persons of opposice political sentiments and connections, to loyalists as well as to republicans : for it is hoped that some of each party were menwhose principles were honest, though their conduct might have been wrong. The advocates of loyalty sought refuge chiefly in Barbadoes, and

many of the adherents of Cromwell, after the restoration of Charles II. found protection in Jamaica. At present, among the numbers whom accident or choice conduct to the British West Indies, the juniors in the learned professions of law, physic, and divinity, constitute a considerable body. These men ought to be, and, generally speaking, really are, persons of education and morals. Few places afford greater encouregement to the first and second of these employments; and, as ability is fostered and called forth by exercise, no part of the British dominion has, in my opinion, produced abler men in either (in proportion to their number) than these islands. Local prejudice, and bigotry towards great names, may perhaps incline some persons to dispute this assertion; but, prejudice and bigotry apart, it will be found, I believe, that Nature has distributed the gifts of genius more equally and generally than is commonly imagined: it is cultivation and favour that ripen and bring them to perfection. The British navy and army likewise contribute considerably to the sugmentation of the White inhabitants. Individuals in both these professions, either from the inducement of agreeable connections, which it would be strange if many of them did not form in a long residence in these countries, or captivated by the new prospects which open to their contemplation, very frequently quit the

BOOK IV. business of arms, and the dangers of a tempestuous element, and become peaceful citimay be reckoned the mercantile part of the inhabitants, such as factors, store-keepers, bookkeepers, and clerks; who are followed by tradesmen and artificers of various kinds, such as mill-wrights, carpenters, masons, coppersmiths, and others; most of whom, either through accident or necessity, after some years residence, become adventurers in the soil. Then come the husbandmen or cultivators of the land. professedly such; who are commonly distinguished by the appellation of managers, overseers, and plantation book-keepers; and they constitute a numerous body of people, composed of men of all countries and characters; for, unfortunately, every enterprising adventurer, who has either learned no particular trade, or has been brought up to one which is useless in these regions, fancies himself capable of speedily acquiring all the various knowledge of the sugar planter, and the right management and government of his fellow-creatures, the Negroes; though in truth a more weighty charge in itself, and one more important in its consequences, can scarcely fall to the lot of man.

I

le

50

I have, I think, in a former place, assigned the causes to which it is partly ascribable that emigrants from various parts of the mothercountry, successively constitute the bulk of the sugar colonists; of whom it is certain that the major part retain, in a considerable degree, the manners and habits of life in which they were educated. Yet there are authors who affect to describe the inhabitants of all the West Indies as a herd of criminals and convicts; and cite the stale crimes and violences of lawless men, a century ago, when these islands were the rendez-yous of pirates and bucaniers, as a just representation of the reigning colonial habits, manners and dispositions!

Calumnies so gross, defeat themselves by their absurdity;—but although it is in the highest degree ridiculous to imagine that a voyage across the Atlantic creates any sudden or radical change in the human mind, yet, notwithstanding what has been just observed concerning local manners and habits in the different classes of European settlers, it cannot be denied that there prevails besides, something of a marked and predominant character common to all the White residents.

Of this character it appears to me that the leading feature is an independent spirit, and a display of conscious equality throughout all ranks and conditions. The poorest White person seems to consider himself nearly on a level with the richest, and, emboldened by this idea, approaches his employer with extended hand,

and a freedom, which, in the countries of Europe, is seldom displayed by men in the lower orders of life towards their superiors. It is not difficult to trace the origin of this principle. It arises, without doubt, from the pre-eminence and distinction which are necessarily attached even to the complexion of a White Man, in a country where the complexion, generally speaking, distinguishes freedom from slavery. Of the two great classes of people in most of these colonies, the Blacks outnumber the Whites in the proportion of seven to one. As a sense of common safety therefore unites the latter in closer ties than are necessary among men who are differently situated, so the same circumstance necessarily gives birth among them to reciprocal dependance and respect. Other causes contribute to the same end. "Where slavery," says a great judge of human nature, " is established in " any part of the world, those who are free are "by far the most proud and jealous of their free-"dom. Freedom is to them not only an enjoy-" ment, but a kind of rank and privilege. Not " seeing there, that freedom, as in countries where "it is a common blessing, may be united with "much abject toil, with great misery, with all "the exterior of servitude, liberty looks among "them like something that is more noble and "liberal. Thus the people of the southern colo-" nies (of America) are much more strongly, and

with a higher and more stubborn spirit attachde to liberty, than those to the northward.
Such were all the ancient commonwealths;
such were our Gothic ancestors; such is our
days are the Poles; and such will be all masters
of slaves, who are not slaves themselves."

Possibly too, the climate itself, by increasing sensibility, contributes to create an impatience of subordination. But, whatever may be the cause of this consciousness of self-importance in the West Indian character, the consequences resulting from it are, on the whole, beneficial. If it sometimes produces an ostentatious pride. and a ridiculous affectation of splendour, it more frequently awakens the laudable propensities of our nature—frankness, sociability, benevolence, and generosity. In no part of the globe is the virtue of hospitality more generally prevalent than in the British Sugar Islands. The gates of the planter are always open to the reception of his guests. To be a stranger is of itself a sufficient introduction. This species of hospitality is indeed carried so far, that, as Mr. Long has remarked, there is not one tolerable inn throughout all the West Indies. to compar soonyall darn he soos

or esome ment le calledia billi, un history se th

<sup>\*</sup> Burke's Speech in Parliament, March 22, 1775.

<sup>†</sup> There are some peculiarities in the habits of life of the White Inhabitants, which cannot fall to eath the eye of an European newly arrived; one of which is the contrast between the general plenty and magnificence of their sables

To the same cause may perhaps be ascribed, on the other hand, that eagerness for litigation and juridical controversy, which so remarkably predominates in most of these islands. From this unfortunate passion, ruinous as it frequently proves to individuals, this advantage however results to the community at large; that the lower orders of men, from their frequent attendance at the courts of law as jurymen, acquire

of compared affector of temple of the formation of

(at least in Jamaica) and the meanness of their houses and apartments; it being no uncommon thing to find, at the country habitations of the planters, a splendid sideboard loaded with plate and the choicest wines, a table covered with the finest damask, and a dinner of perhaps sixteen or twenty covers; and all this in a hovel not superior to an English barn. Astranger cannot fail also to observe a strange incongruity and inconsistency between the great number of Negro domestics, and their appearance and apparel. The butler (and he but seldom) is the only attendant that is allowed the luxury of shoes and stockings. All the others, and there is commonly one to each guest, wait at table in barefooted majesty; some of them perhaps half-naked. Another peculiarity in the manners of the English in the West Indies (in Jamaica especially) is the number of nautical expressions in their conversation. Thus they say, hand such a thing, instead of bring or give it. A plantation well stocked with Negroes, is said to be well handed; an office or employment is called a birth: the kitchen is denominated the cook-room; a warehouse is called a store, or store-room; a sopha is called a cot; a waistcoat is termed a jacket; and in speaking of the East and West, they say to windward and leaward. This language has probably prevailed since the days of the bucaniers.

a degree of knowledge, and a clearness and precision of reasoning, which are not generally to be found in men of the same rank in England. Thus the petty juries in the West Indies are commonly far more intelligent and respectable than those in Great Britain. Every candid person who has attended the courts of criminal jurisdiction in both countries must confirm this observation.

But it is to the Creoles or Natives that we must look for the original and peculiar cast of character impressed by the climate, if indeed the influence of climate be such as many writers imagine. For myself, I am of opinion that the climate of the West Indies displays itself more strongly on the persons of the natives than on their manners, or on the faculties of their minds. They are obviously a taller race, on the whole, than the Europeans; but I think in general not proportionably robust. I have known several who were full six feet four inches in height: but they wanted bulk to meet our ideas of masculine beauty. All of them, however, are distinguished for the freedom and suppleness of their joints; which enable them to move with great ease and agility, as well as gracefulness, in dancing. From the same cause they excel in penmanship, and the use of the small sword. It has been truly observed, that the effect of climate is likewise obvious in the structure of JV.

the eye, the socket being considerably despes than among the natives of Europe. By this conformation, they are guarded from those ill effects which an almost continual strong glare of sunshine might otherwise produce; and it is a curious circumstance, that their skin feels considerably colder than that of a European; a proof, I think, that nature has contrived some peculiar means of protecting them from the heat, which she has denied to the nations of temperate regions, as unnecessary. Accordingly, though their mode of living differs in no respect from that of the European residents, they are marely obnoxious to those inflemmatory disorders which frequently prove fatal to the latter.

The ladies of these islands have indeed greater cause to boast of this fortunate exemption than the men; a pre-eminence acquired undoubtedly by the calm and even tenour of their lives, and by an habitual temperance and self-denial. Except the exercise of dancing, in which they delight and excel, they have no amusement or avocation to impel them to much exertion of either body or mind. Those midnight assemblies and gambling conventions, wherein health, fortune, and beauty, are so frequently sacrificed in the cities of Europe, are here happily unknown. In their diet, the Creole women are, I think, abstemious even to a fault. Simple water, or lemonade, is the strongest beverage

in which they include; and a vegetable mean at noon; seasoned with cayenne pepper, constitutes their principal repeat. The effect of this mode of life, in a hot and oppressive atmosphere, is a lax fibre, and a complexion in which the dily predominates rather than the rose. To a stranger newly arrived, the ladies appear as just risen from the bed of sickness. Their voice is soft and spiritless, and every step betrays languor and lassitude. With the finest persons, they certainly want that glow of health in the countenance, that delicious crimson (lassitude purpoweum juvente) which, in polder countries, enlivens the coursest set of features, and renders a beautiful one irresistible.

Youth's orient bloom, the blush of cheste desire,
The sprightly converse, and the cmile divine,
(Love's gentler train) to milder alimes retire,
And full in Albion's matchless daughters shine.

In one of the principal features of beauty, however, few ladies surpass the Creoles; for they have, in general, the finest eyes of any women in the world; large, languishing, and expressive; sometimes beaming with animation, and sometimes melting with tenderness; a sure index to that native goodness of heart and gentleness of disposition for which they are eminently and deservedly applauded, and to which, combined with their system of life and manners

BOOK IV.

(sequestered, domestic, and unobtrusive) it is doubtless owing, that no women on earth make better wives, or better mothers.

Perhaps, the circumstance most distinguishable in the character of the Natives to which the climate seems to contribute, is the early display of the mental powers in young children; whose quick perception, and rapid advances in knowledge, exceed those of European infants of the same age, in a degree that is perfectly unaccountable and astonishing. This circumstance is indeed too striking to have escaped the notice of any one writer who has visited the tropical parts of America; and the fact being too well established to be denied, the philosophers of Europe have consoled themselves with an idea that, as the genius of the young West Indians attains sooner to maturity, it declines more rapidly than that of Europeans. Nature is supposed to act in this case in a manner analogous to her operations in the vegetable kingdom, where the trees that come soonest to perfection. are at the same time less firm and durable than those which require more time for the completion of their grouth. It, is indeed certain.

that the subsequent acquirements of the mind in the Natives do not always keep pace with its early progress; but the chief cause (as Ulloa hath observed) of the short duration of such promising beginnings, seems to be the want of proper objects for exercising the faculties. The propensity also, which the climate undoubtedly encourages, to early and habitual licentiousness, induces a turn of mind and disposition unfriendly to mental improvement. Among such of the Natives as have happily escaped the contagion and enervating effects of youthful excesses, men are found of capacities as strong and permanent as among any people whatever.

As I cannot therefore admit that the Creoles in general possess less capacity and stability of mind than the natives of Europe, much less can I allow that they fall short of them in those qualities of the heart which render man a blessing to all around him. Generosity to each other, and a high degree of compassion and kindness towards their inferiors and dependents, distinguish the Creoles in a very honourable manner.\* If they are proud, their pride is

<sup>&</sup>quot;Adventurers from Europe are universally more cruel and morose towards the Slaves than the Creoles or Native West-Indians."

Ramssy, Essay on the Treatment and Conversion of the Slaves, &c.

BOOK IV. allied to no meanness. Instructed from their infancy to entertain a very high opinion of their own consequence, they are cautious of doing any act which may lessen the consciousness of their proper dignity. From the same cause they scorn every species of concealment. They have a frankness of disposition beyond any people on earth. Their confidence is unlimited and entire. Superior to falsehood themselves, they suspect it not in others.

How far this nobleness of disposition may be ascribed to the influence of a genial climate, and how far to education and example. I presume not to discriminate. The effects of heat on the body are sufficiently visible; but perhaps philosophers have relied too much on a supposed sympathy between the body and mind. "The natives of hot climates" (says one writer) "are slothful and timid;" but timidity is by no means the necessary consequence of indolence. The mind may require great force to rouse it to due exertion; but, being properly urged, may display qualities very opposite to those of a timid disposition. At least, timidity constitutes no part of the character of the natives of the British West Indies. Indolence, I admit, is too predominant among them; but that they are deficient in personal courage, no man, who has the smallest acquaintance with them will allow for a moment.

CHAPE

Even the indolence of which they are accused, is rather an aversion to serious athought and deep reflection; than a slothfulness and sluggishness nof synature end Both beexes, newbeno the springs of the mind are once set in motion, are remarkable for a warm imagination and a high flow of spirits. There seems indeed universally toureign among them a promptitude for please sure! This effect has been ascribed and perhaps justly, to the levity of the atmosphere. To the same cause is commonly imputed the propensity observable in most of the West Indians noto indulges extravagants ideas of a their riches to view their circumstances through a magnifying medium, and to feast their fancies on what another year will effect. This anticit pation of imaginary wealth is so prevalent as to become justly ridiculous; yet I am inclined to think it is a propensity that exists independent of the climate and atmosphere, and that it arises principally from the peculiar situation of the West Indian planters as land-holders. Not having like the proprietors of landed estates in Great Britain, frequent opportunities of letting their plantations to substantial tenants, they are, for the most part, compelled to become practical farmers on their own lands, of which the returns are, in the highest degree, fluctuat-

Moseley on the Climate of the West-Indies

BOOK IV. ing and uncertain. Under these circumstances, a West-Indian property is a species of lottery, and as such, it gives birth to a spirit of adventure and enterprise, and awakens extravagant hopes, and expectations;—too frequently terminating in perplexity and disappointment.

Such are the few observations which I have noted concerning the character, disposition, and manners of the White inhabitants of these islands. I proceed now to persons of mixed blood (usually termed People of Colour) and Native Blacks of free condition. Of the former, all the different classes, or varieties, are not easily discriminated. In the British West Indies they are commonly known by the names of Samboes, Mulattoes, Quadroons, and Mestises; but the Spaniards, from whom these appellations are borrowed, have many other and much nicer distinctions, of which the following account is given by Don Anthonio de Ullos,

Anciently there was a distinction in Jamaica between such of these people as were born of freed mothers (the maxim of the civil law, partus sequitur ventrem, prevailing in all our colonies) and such as had been immediately released from slavery by deed or testament of their owners. While the former were allowed a trial by jury in timinal cases, the latter were tried in the same way as the common slaves, by two justices and three freeholders. Neither were the latter admitted as evidences against

free-born persons, until the year 1748, when an act was passed in their favour, putting both classes on the same footing. CHAP.

At the same time, the legal capacities which they possessed were very imperfectly defined: The Mulattoes were allowed no other privilege than the freed Negroes, concerning whom (few of them being baptized, or supposed to be sensible of the nature of an oath) the courts of law interpreted the act of manumission by the owner, as nothing more than an abandonment or release of his own proper authority over the person of the slave, which did not, and could not, convey to the object of his bounty the civil and political rights of a natural-born subject; and the same principle was applied to the issue of freed mothers, until after the third generation from the Negro ancestor.

The principal incapacities to which these people are now subject, as distinct from the Whites, are these;

First; In most of the British Islands, their evidence is not received in criminal cases against a White person, nor even against a person of Colour, in whose favour a particular act has been passed by the legislature. In this respect they seem to be placed on a worse footing than the enslaved Negroes, who have masters that are interested in their protection, and who, if

DOOK IV. their slaves are maltreated, have a right to recover damages, by an action on the case.\* 1738 113

Secondly; They are denied the privilege of being eligible to serve in parochial vestries and general assemblies; or of acting in any office of public trust, even so low as that of a constable; neither are they permitted to hold commissions even in the Black and Mulatto companies of militia. They are precluded also from voting at elections of members to serve in the assembly. It may be urged, however, that the laws of England require baptism, and a certain degree of property, in similar cases.

Thirdly; By an act of the assembly of Jamaica, passed in the year 1762, it is enacted, that a testamentary devise from a White person to a Negro or Mulatto, not born in wedlock, of real or personal estate, exceeding in value 2,000% currency, shall be void, and the property descend to the heir at law.

As some counterbalance however to these restrictions, the assembly, on proper application, is readily enough inclined to pass private acts, granting the privileges of White people, with some limitations, to such persons of Colour as have been regularly baptized, and properly edu-

the ensleved Negroes, who have mustors that

<sup>\*</sup> In Jamaica, this grievance has been partly redressed since the publication of the former editions.

cated. On the same ground, private bills are CHAP. sometimes passed to authorize gentlemen of fortune, under particular circumstances, to devise their estates to their reputed Mulatto children, notwithstanding the act of 1762.

But there is this mischief arising from the system of rigour ostensibly maintained by the laws against this unfortunate race of people; that it tends to degrade them in their own eyes, and in the eyes of the community to which This is carried so far, as to they belong. make them at once wretched to themselves, and useless to the public. It very frequently happens that the lowest White person, considering himself as greatly superior to the richest and best-educated Free man of Colour, will discain to associate with a person of the latter description; treating him as the Egyptians treated the Israelites, with whom they held it an abomination to eat bread. To this evil, arising from public opinion, no partial interposition of the legislature in favour of individuals, affords an effectual remedy; and the consequence is, that instead of a benefit, these unhappy people are a burthen and a reproach to society. They have no motives of sufficient efficacy either to engage them in the service of their country, or in profitable labour for their own advantage. Their progress in civility: and knowledge is animated by no encouragepecy le in the Clatence.

ment; their attachment is received without approbation; and their diligence exerted without reward.

I am happy however to assert with truth, that their fidelity and loyalty have hitherto remained unimpeached and unsuspected. To the Negroes they are objects of envy and hatred; for the same or a greater degree of superiority which the Whites assume over them, the free Mulattoes lay claim to over the backs.

twould surely be a wise and humane law that should grant to every free Negro and Mulatto the right of being a competent witness, in all criminal cases and more especially in those of personal injury to himself. Perhaps indeed it might be proper to require of such persons the proof of baptism, and the ability to read and write; and I think that some useful regulations might be made to apportion greater privileges to the coloured people according to their approximation to the Whites; a system which would not serve to confound, but to keep up and render useful, those distinctions which local causes have created, and which it is not in the power of man to abolish. To the Quadroons and Mestizes for instance (who possess the necessary qualification in real property) I would grant the right of voting for representatives in the assembly. Such a privilege would give them an interest in the community, and attach them powerfully to its government. In favour of such persons also, the act of 1762 might be modified. Whether it would be wise to repeal it altogether, is a deep and difficult question. Men who are unacquainted with local manners and customs, are not competent to pronounce an opinion in this case. own advantage. Their progress

<sup>-</sup> The Assembly of Jamaica have lately granted this privilege to the freed people in that Island.

These, again, abhor the itles of being slaves to the descendants of slaves. Thus circumstanced, the general character of the Mulattoes is strongly marked by the peculiarity of their situation; and I cannot but think that they are, on the whole, objects of favour and compassion.

In their deportment towards the White people they are humble, submissive, and unassuming. Their spirits seem to sink under the consciousness of their condition. They are accused however of proving bad masters when invested with power; and their conduct towards their slaves is said to be in a high degree harsh and imperious. I suspect there is some truth in this representation; for it is the general characteristic of human nature, that men whose authority is most liable to be disputed, are the most jealous of any infringement of it, and the most vigilant in its support.

The accusation generally brought against the free people of colour, is the incontinency of their women; of whom, such as are young and have tolerable persons, are universally maintained by White men of all ranks and conditions, as kept mistresses. The fact is too noterious to be concealed or controverted; and I trust I have too great an esteem for my fair readers, and too high a respect for myself, to stand forth the advocate of licentiousness and debauchery. Undoubtedly, the conduct of

BOOK IV. many of the Whites in this respect, is a violation of all decency and decorum; and an insult and injury to society. Let it not offend any modest ear, however, if I add my opinion, that the unhappy females here spoken of, are much less deserving reproach and reprehension than their keepers. I say this, from considering their education and condition in life; for such are the unfortunate circumstances of their birth, that not one in fifty of them is taught to write or read. Profitable instruction therefore, from those who are capable of giving it, is withheld from them; and unhappily, the young men of their own complexion are in too low a state of degradation to think of matrimony. On the other hand, no White man of decent appearance, unless urged by the temptation of a considerable fortune, will condescend to give his hand; in marriage to a Mulatto ! The very idea is shocking. Thus, excluded as they are from all hope of ever arriving to the honour and happiness of wedlock insensible of its beauty and sanctity: ignorant of all christian and moral obligations: threatened by poverty, urged by their passions, and encouraged by example; upon what principle can we expect these ill-fated women to actiotherwise than they do by and evant of february

Neither should it be forgotten, at the same time, that very few of these poor females, in comparison of the whole, are guilty of that

infamous species of profligacy and prestitution, which flourishes, without principle or
shame, and in the broad eye of day, throughout all the cities of Europe. In their dress and
carriage they are modest, and in conversation
reserved; and they frequently manifest a fidelity and attachment towards their keepers,
which, if it be not virtue, is something very like
it. The terms and manner of their compliance
too are commonly as decent, though perhaps
not as solemn, as those of marriage; and the
agreement they consider equally innocent;
giving themselves up to the husband (for so the
is called) with faith plighted, with sentiment, and
with affection.

That this system ought to be utterly abolished. I most readily admit. Justice towards the many beautiful and virtuous young ladies resident in these islands, cries aloud for a thorough reformation of manners. But by whom is such a reform to be begun and accomplished? It can hardly be expected, I think, from the objects of our maintainquiries, who are conscious of no vice which their christian instructors have not taught them; and whose good qualities (few and limited as they are) flow chiefly from their own native original character and disposition.

derness of heart; a softness or sympathy of mind towards affliction and distress, which I conceive

BOOK IV.

is seldom displayed in either extreme of prosperity or wretchedness. Those who have never experienced any of the vicissitudes and calamities of life, turn averse from the contemplation of them; and those again who are wretched themselves, have no leisure to attend to the sufferings of others: but the benevolence of the poor people of whom I treat, is not merely solitary and contemplative it is an active principle, in which they may be said particularly to excel; and I have the authority of a great writer before quoted (Don Anthonio de Ulloa) to support me in this representation. Speaking of their kindness to many poor Europeans, who, in the hopes of mending their fortunes, repair to the Spanish West Indies, where they are utterly unknown, he has the following account of such of them as are called at Carthagena Pulisones; being, he says, men without employment, stock, or recommendation. " Many of these (he observes) after traversing the streets until they have nothing left to procure them a lodging or food, are reduced to have recourse to the last extremity, the Franciscan hospital; where they receive, in a quantity barely sufficient to preserve life, a kind of pap inade of cassada, of which the Natives themselves will not eat ... This is their food; itheir glodging sist the sportices of the squares and churches, until their good fortune

throws them in the way of some trader going up the country, who wants a servant. The city merchants, standing in nov need of them, discountenance these adventurers. Affected by the difference of the climate, aggregated by bad; food, dejected and tortured by the entire disappointment of their romantic hopes, they falls sick; without any other succour to apply to than Divine Providence. Now it is that the charity of the people of Colour becomes conapicuous. The Negro and Mulatto free women, moved at the deplorable condition of these poor wretches, carry them to their houses, and nurse them with the greatest care and affection. If any one die, they bury him by the alms they procure, and even cause masses to be said for " their birth. luttendants should be repointed 15. luosbelin

I believe that no man, who is acquainted with the general conduct and disposition of the same class of people in our own islands, will, doubt that they would act as benevolently and humanely, under similar circumstances, as those of Carthagena. Their tenderness, as nurses towards the sick; their disinterested gratitude and attachment where favours are shewn them; and their, peaceful deportment under a rigorous system of laws, and the influence of manners still more oppressive, afford great room to lament that a more enlightened and liberal policy is not adopted towards them. The en-

BOOK IV.

franchisement of such as are enslaved, Christian instruction to the whole, and encouragement to their industry, would, in time, make them a useful and valuable class of citizens; induce them to intumarry with each other, and render their present relaxed and vicious system of life, as odious in appearance, as it is baneful to some ciety. In or mappearance, as it is baneful to some ciety.

Hitherto I have confined myself to those people who, having some portion of Christian blood in their veins, pride themselves on that circumstance, and to the conscious value of

wrotches, carry them to their houses, and nurse \* The Rev. Mr. Ramsay has enlarged on the same idea. concerning these unfortunate people. "Children of Mu-"latto women, he observes (meaning, I presume, their "children by White men) should be declared free from "their birth. Intendants should be appointed to see them "placed out in time to such trade or business as may best " agree with their inclination and the demands of the co-" lony: this should be done at the expense of their fathers, " and a sufficient sum might be deposited in the hands of " the churchwardens, soon after their birth, to answer the "purpose; the intendant keeping the churchwardens to "their duty. By these means the number of free citizens " would insensibly increase in the colonies, and add to "their security and strength. A new rank of citizens, " placed between the Black and White races, would be es-"tablished. They would naturally attach themselves to "the White race as the most honourable relation, and so "become a barrier against the designs of the Black, &c." All this, however, is easily proposed in theory, but, I am afraid, more difficult to adopt in practice than Mr. Ramsay was aware of.

Here Wher BOOK IV. of whom—I will not say the major part, but—great numbers assuredly, have been torn from their native country and dearest connections, by means on which no good mind can reflect but with sentiments of disgust, commiseration, and sorrow!

I am not unapprized of the danger I incur at this juncture in treating the subject of African Slavery, and the Slave Trade. By endeavouring to remove those wild and ill-founded notions which have been long encouraged by misinformed writers in Great Britain, to the prejudice of the inhabitants of the British Sugar Islands, I am conscious that I shall be exposed to all that "bitterness and wrath, and "anger and clamour, and evil-speaking and "malice," with which it has long been popular to load the unfortunate slave-holder: yet nothing is more certain than that the Slave Trade may be very wicked, and the planters in general very innocent. By far the greatest part of the present inhabitants of the British West Indies came into possession of their plantations by inheritance or accident. Many persons there are, in Great Britain itself, who amidst the continual fluctuation of human affairs, and the changes incident to property, find themselves possessed of estates in the West Indies which

they have never seen, and invested with powers over their fellow creatures there, which, however extensively odious, they have never abused: some of these gentlemen, unacquainted with local circumstances, and misled by the popular outcry, humanely gave orders to remancipate all their slaves, at whatever expence; but are since convinced that their benevolent purposes cannot be carried into effect consistently even with the happiness of the Negroes themselves. -The Reverend Society established in Great Britian for propagating the Gospel in foreign parts, are themselves under this very predicament. That venerable body hold a plantation in Barbadoes under a devise of Colonel Codrington; and they have found themselves not only under the disagreeable necessity of supporting the system of slavery which was bequeathed to them with the land; but are induced also, from the purest and best motives, to purchase occasionally a certain number of Negroes, in order to divide the work, and keep up the stock. They well know that moderate labour, unaccompanied with that wretched anxiety to which the poor of England are subject, in making provision for the day that is passing over them, is a state of comparative felicity: and they know also, that men in savage life have no incentive to emulation: persuasion is lost on such men, and compulsion, to a certain degree, is humanity and charity.

BOOK IV.

The question then, sand the only question wherein the character of the planters is concerned, is this :- Making due allowance for human frailty under the influence of a degree of power ever dangerous to virtue, is their general conduct towards their slaves such only as necessarily results from their situation? If to this inquiry an affirmative be returned, surely Christian charity, though it may lament and condemn the first establishment of a system of slavery among them, and the means by which it is still kept up and supported, will not hastily arraign those who neither introduced, nor, as d shall hereafter shew, have been wanting in their best endeavours to correct and remedy many of the evils of it. is hand word and box sugmain

Having premised thus much, I shall now proceed to lay before my readers some account of the origin and present state of the Slave Trade, between the nations of Africa and such of the States of Europe as are concerned in it: this will constitute what remains of the present chapter. In the next, I shall offer some thoughts on the Negro character and disposition: after which I shall treat; first, of the means by which slaves are procured in Africa; secondly, of the mode of conveying them to the West Indies; and thirdly, of their general treatment and situation when sold to the planters there: an arrangement which will afford opportunities

enabling me to intersperse such reflections as occur to my mind on the several petitions now depending in parliament for a total abolition of the Slave Trade, all or the greatest part of which are grounded on abuses charged to exist under those several heads.

In the year 1442, while the Portuguese, under the encouragement of their celebrated Prince Henry, were exploring the coast of Africa, Anthony Gonsalez, who two years before had seized some Moors near Cape Bojador, was by that prince ordered to early his prisoners back to Africa: he landed them at Rio del Oro, and received from the Moors in exchange, ten blacks, and a quantity of gold dust, with which he returned to Lisbon.

The success of Gonsalez, not only awakened the admiration, but stimulated the avarice of his countrymen; who, in the course of a few succeeding years, fitted out no less than thirty-seven ships in pursuit of the same gainful traffic. In 1481, the Portuguese built a fort on the Gold Coast; another, some time afterwards, on the island of Arguin; and a third at Loango Saint Paul's on the coast of Angola; and the king of Portugal took the title of Lord of Guiney.

So early as the year 1502, the Spaniards began to employ a few Negroes in the mines of

BOOK 1V.

Hispaniola: but, in the year following, Ovando, the governor of that island forbade the further importation of them; alleging, that they taught the Indians all manner of wickedness, and rendered them less tractable than formerly.\* So dreadfully rapid, however, was the decrease of these last-mentioned unfortunate people, as to induce the court of Spain a few years afterwards, to revoke the orders issued by Ovando, and to authorise, by royal authority, the introduction of African Slaves from the Portuguese Settlements on the coast of Guiney. In the year 1517, the Emperor Charles V. granted a patent to certain persons for the exclusive supply of 4,000 Negroes annually to the islands of Hispaniola, Cuba, Jamaica, and Puerto Rico.† This patent having been assigned to some Genoese merchants, the supply of Negroes to the Spanish American plantations became from that time an established and regular branch of commerce.

censure and animadversion. He is charged with the iniquitous absurdity of reducing one race of men to slavery, while he was concerting the means of restoring freedom to another "While he contended," says a late writer," "for the liberty of the people born in one quarter of the globe, he laboured to enslave the inhabitants of another region; and, in the warmth of his zeal to save the Americans from the yoke, pronounced it to be lawful and expedient to impose one, still heavier, upon the Africans. It would be difficult perhaps to say what yoke could well be heavier than the rigorous one imposed by the Spaniards on the wretched Indians; under which, as the same Historian elsewhere relates, the natives of Hispaniola, "were reduced, in the short space of fifteen years, from at least a million to sixty thousand." But the conduct of Las Casas is not fully and fairly stated in the foregoing representation; for it supposes that each class of people (the Negroes and Indians) was found in a similar condition and situation of life, whereas it is notorious that many of the Negroes imported from Africa, are born of enslaved parents, are bred up as Slaves themselves, and as such have been habituated to labour from their infancy. On this account we are told, that

one able Negro was capable of performing the work of four Indians. On the other hand, the condition of these last-mentioned people was widely removed from a state of slavery. M. The inhabitants of these islands," says a cotemporary writer. " have been so used to the enjoyment of liberty, in a life of plenty and pastime, that the yoke of servitude is insupportable to them: and assuredly, if they would but embrace our holy religion, they would be the happiest of human beings in the enjoyment of their ancient freedom \* . Las Casas therefore contended, reasonably enough, that men inured to servitude and drudgery; who could experience no alteration of circumstances from a change of masters, and who felt not the sentiments which freedom alone can inspire, were not so great objects of commiseration, as those who, having always enjoyed the sweets of unbounded liberty, were suddenly deprived of it. and urged to tasks of labour which their strength was unable to perform. Las Casas could neither prevent nor foresee the abuses and evils that have arisen from the traffic recommended by him, and is not therefore justly chargeable with the rashness, absurdity, and iniquity, which have since been imputed to his conduct of our over the feel of the conduct.

a short time after his arrival on the seast, got into his possession, partly (asys. Hakleyt) algot the sword, and partly by other means, to the number of 300 Negroes, besides other means, to the number of 300 Negroes, besides other means, to the number of 300 Negroes, besides other means, to the number of some than disposed of the whole of his cargo in exchange for hides, ginger, sugar, and some pearls; and arrived in England in September 1563, after a very prosperous voyage, which brought great profit to the adventurers.

The success which had attended this first expedition, appears to have attracted the notice, and excited the avarice of the British government; for we find Hawkins, in the year following, appointed to the command of one of the Queen's ships, the Jesus of 700 tons, and with the Solomon, the Tiger, a bark of 50 tions; and the Swallow, a bark of 30 tops, sent a second time on the same trading expedition; but with what part of the profits for his own share is not mentioned. He sailed from Plymouth the 18th of October 1564, and the same day joined at sea the Minion, another of the Queen's ships, commanded by captain David Carlet, and which, with two others, the John Baptist, and the Merlin, were likewise bound for Gainey, not handgus more some of with.

in Halthyt's Collection, by a person who barked with Hawkins; from whose account it appears, that the fleet were dispersed by a violent gale of wind in the Bay of Biscay; that the Merlin caught fire and blew up; that the John Baptist put back, but that all the only vessels arrived at length at Cape Verde, on the Coast of Africa. "The people of Cape Verde says the writer, " are called Leophares, "and are counted the goodliest men of all "others saving the Congoes, who inhabit this "side the Cape de Buena Esperance. These "Leophares have wars against the Jaloffs, "which are borderers by them. These men " also are more civil than any other, because of " their daily trafficke with the Frenchmen, and " are of a nature very gentle and loving. Here "we stayed but one night, and part of the "day, for the 7th of December we came away; "in that intending to have taken negroes there "perforce; the Minion's men gave them to "understand of our coming, and our pretence; "wherefore they did avoyde the snares we had "lay'd for them."

It seems probable from this account, that the captain of the Minion having an independent command, was jealous of Hawkina's authority, or, it is rather to be hoped, was shocked at the excesses to which his avarice urged him, in laying snares to seize and carry

Minion no longer acted in concert nor sailed in company with Hawkins and his squadron.

On the 8th of December. Hawkins anchored at a small island called Alcatruse At this place we are informed that the Jesus and Solomon riding at anchor, the two barks with their boats went to an island belonging to a people called the Sapies, to see if they could take any of the inhabitants. The English landed, to the number of eighty, with arms and ammunition; but the natives flying into the woods, they returned without success. A short time afterwards, we find this righteous commander at one of the islands which are called Sambula. "In this island (says the writer) we stayed " certain dayes, going every day on shore " to take the inhabitants with burning and " spoiling their towns. These inhabitants (who "were called Samboes) hold divers of the Sa-" pies taken in war as their slaves, whom they "kept to till the ground, of whom we took many in that place, but of the Samboes none "at all; for they fled into the maine." The writer then proceeds to give an account of the manners and customs of these people; and relates, among other particulars, that slavery is the established punishment for theft. "If a " man (says he) steals but a Portugal cloth " from another, he is sold to the Portugals for

"a slave." He relates further, that the Samboes, in a time of scarcity, devoured their captives, for want of better food.

CHAP.

The rest of Hawkins's adventures are nothing to my present purpose. What has been quoted, is sufficient to demonstrate that a regular traffic had been established, so early as the year 1564, both by the Portuguese and the French, with some nations of Africa, for the purchase of slaves; that this intercourse was founded on mutual contract, and tended to civilise the natives on the coast; some nations of whom were possessed of slaves, which they kept for the purposes of agriculture; and occasionally killed for food; a horrid practice, that, I believe, no longer exists in this part of Africa. In regard to Hawkins himself, he was, I admit, a murderer and a robber. His avowed purpose in sailing to Guiney, was to seize by stratagem and force, and carry away, the unsuspecting natives, in the view of selling them as slaves to the people of Hispaniola. In this pursuit his object was present profit, and his employment and pastime devastation and murder. He made a third voyage to Africa in 1568, for the same purpose, with a squadron of six ships, which the reader will not be sorry to find terminated most miserably; and put a stop, for some years, to any more piratical expeditions of the English to the coast of Africa. 

MOOK IV. The first action which I find in history of an actual attempt by the British nation to establish a regular trade on the African Coast, is in the year 1618, when King James I. granted an exclusive charter to Sir Robert Rich, and some other merchants of London, for raising a joint stock for a trade to Guiney; ships were accordingly fitted out; but the profits not being found to answer expectation, the proprietors soon afterwards withdrew their contributions; and the charter was suffered to expire.

In 1631, King Charles I. erected by charter a second company for a trade to Africa; granting to Sir Richard Young, Sir Kenelm Digby, and sundry merchants, to enjoy the sole trade to the Coast of Guiney, between Cape Blanco and the Cape of Good Hope, together with the isles adjacent, for 31 years to come. As the English had by this time began the settlement of plantations in the West Indies, Negroes were in such demand as to induce the new company, at a great expence, to erect forts and warehouses on the Coast, for the protection of their commerce; but so many private adventurers and interlopers of all nations,

CHAP.

In the year 1662, a third exclusive African company was incorporated, consisting of many persons of high rank and distinction; at the head of whom was the king's brother, the duke of York. This company undertook to supply our West Indian Plantations with 3,000 Negroes annually; but in 1664, the king intending to make war on the Dutch, secretly sent Sir Robert Holmes to the Coast, with orders to seize the Dutch for near Cape Verde; in which service Holmes succeeded, and built at the same time a new fort at the mouth of the River Gambia, called James Fort, which we still hold. Thence sailing southward, he mastered all the Dutch factories on the Guiney Coast, except St. George, D'Elmina, and Acheen; all of which were however retaken in 1665, by De Ruyter, the Dutch admiral; together with the Fort of Koromantyn, belonging to the English company, which (if I mistake not) the Dutch hold at this day, by the name of Fort Amsterdam. The home Trans PA with Rout

In 1672 (the third company having in this year surrendered their charter to the crown) the fourth and last exclusive company was established. It was dignified by the title of the Royal African Company, and had, among its

BOOK IV.

subscribers, the King, the duke of York, and many other persons of high rank and quality; and the whole capital of 111,000% was raised in nine months. Out of this subscription, the lute company was allowed 34,000% for their three forts of cape Coast Castle, Sierra Leone, and James Fort. The new company soon improved their trade, and increased the number of their forts; and, as all former companies were obliged to send to Holland to make up an assortment for the cargos of their ships, they now introduced into England the making of sundry kinds of woollen goods, and other manufactures not before known; and they imported from the coast great quantities of gold, out of which, in 1673, 50,000 guineas (so named from the country were coined. They also imported redwood for dyers, ivory, wax, and some other valuable commodities, and they exported to the value of 70,000l. annually in De English goods. : Included adder, sboog dailgas

But the revolution in 1688 changed the scene; for by the 1st of William and Mary, as the Petition and Declaration of Right is commonly called, the African and all other exclusive companies not authorised by parliament, were abolished: the African trade, therefore, became in fact, free and open; although the company still persisted in seizing the ships of separate traders; a measure which occasioned

much clamour, and no small obstruction to the Negro trade. The disputes which this conduct gave rise to, are however too uninteresting at present to be brought again to remembrance.

In 1669 was established the first Assicuto company for supplying the Spanish West Indies with Negroes from Jamaica; and in 1698 the trade to Africa, which, by the Petition of Right was virtually laid open, was expressly made so, under certain conditions; for by statutes 9 and 10th of Will. and Mary, c. 26. it was enacted—

"That for the preservation of the trade, and for the advantage of England and its Colonies, it should be lawful for any of the subjects of his Majesty's realm of England, as well as for the company, to trade from England and the Plantations in America to Africa, between Cape Mount and the Cape of Good Hope; upon paying for the aforesaid uses a duty of 10 per cent. ad valorem, for the goods exported from England or the Plantations, to be paid to the collector at the time of entry outwers, for the use of the company.

The same liberty was given to trade between Cape Blance and Cape Mount; but, in addition to the 10 per cent. on exportation, there was to be paid a further sum of 10 per cent. ad calorem, on all goods and merchandise, redwood excepted, which was to pay only 5 per cent. at the place of exportation, imported into

CHAP.

England, or the Plantations, from the coast between Cape Blanco and Cape Mount. The duties so paid were to be applied to the maintenance of the forts and castles, the provining ammunition and soldiers. The company were yearly to render an account of the receipt of these duties and their application, to the Cursitor Baron of the Exchequer.

Persons paying these duties were to have the same protection and defence for their persons, ships, and goods, from the forts and castles, and the same freedom and security for their negociations and trade, as the company. They might settle factories within their limits, and were to be free from all molestations from the company.

No duty imposed by this act was to extend to Negroes exported, or to gold and silver, nor was the act to be so construed as to hinder any one from trading to that part of Africa, commonly called South Barbary, extending southerly as far as Cape Blanco."

t

j

1

Against the regulations of this law, which was to continue in force for 13 years, both the company and many of the private traders remonstrated without effect; and the company's affairs, in the course of a few years, declined to so great a degree, that they were timable either to support their factories with new investments, or to pay the debts which they had

already insured. Parliament, at length, was induced to give them some anistance; and in 1739 voted 10,000l, for that purpose, and the like sum annually until the year 1744, when, by reason of the war with France and Spain, the grant was doubled. In each of the two succeeding years 10,000l was again voted; but nothing was granted for 1747

In the year 1750 the African trade; after having passed, as we have seen, through different constitutions and conditions, assumed a new appearance; for in that year the law took place under which it still exists, and is at present regulated. It is entitled, "An act for extending and improving the trade to Africa;" the terms and conditions whereof I need not set forth, as the act itself is so easily referred to. Of the several countries, however, with which the trade is at present carried on, and the state of it for some years past, some particulars may be necessary. My account will be brief; there being many descriptions of Guiney extant; and an abridgment and summary of the best histories (collated and arranged with great judgment and accuracy) are given to the public in Astley's collection of voyages; wherein the reader will find much curious and useful information \* A CANA COM COM COM

In the year 1763 Senegal and its dependencies were vested in the African Company; but in 1765 the same be-

BOOK IV.

That part then of the African coast on the Atlantic Ocean, with which the people of Europe have an intercourse, extends from Cape Blanco, in 21° N. latitude, to a Portuguese settlement, called Loango St. Paul's, in the kingdom of Angola, lati 9° S. comprehending a line of coast of upwards of 1,300 English leagues, and consisting of various countries, inhabited by a great number of savage nations, differing widely from each other, in government, language, manners, and superstitions.

The first of these countries, in which the British have an establishment, is the province of Senegambia; including the river Senegal, which opens into the Western ocean in nearly 16 degrees, and the river Gambia in 13. N. latitude. Both these rivers are navigable many hundred miles up the country. The Negroes obtained from this part of Africa are known to the West-Indian planters by the general name of Mandingoes.

From Cape Roxo (or Rouge) to Cape Appollonia, the European settlements, except a came vested in the crown, and the trade was haid open. Thus the whole African trade is free to all his Majesty's subjects; but that part of it which is carried on between Port Sallee and Cape Rouge is under the direction of go-

vernment. From Cape Rouge to the Cape of Good Hope, the English forts are under the direction of a committee of the company. small English factory in the river Sierra Leone, are chiefly those of the Portuguese.—The Negroes obtained through their means, as well as from the English factory, are likewise called Mandingoes—I believe improperly; as many different languages are spoken on the coast between Senegal and Appollonia. This part of Africa is commonly called the Windward Coast.

The Gold Coast extends from Cape Appollonia to the river Vola, comprehending a line of 100 leagues. The maritime country is divided into a number of perty states or principalities, seemingly independent of, and often at war with, each other; the chief of which are Axim, Ante, Adom, Jabi, Commani, Fetu, Sabou, Fantyn (a rich and powerful people) Acron, and Agonna; some of which are said to maintain a republican, or more properly an aristocratical, form of government. Of the inland country we know but little more than that it consists of three extensive kingdoms, called Assiantee (or Shantee) Akim, and Aquambou; each of which supplies the maritime states with great numbers of slaves, which they sell to the Europeans. In the British West Indies, most of the Negroes purchased on the Gold Coast, are known by the general appellation of Koromantees, from Koromantyn, one of the earliest of our factories on this part

of the African coast, as hath beer already observed, but which is now become an insignificant village, or factory, in possession of the Dutch. It is situated in the kingdom of Fantyn, two miles from the fort of Anamaboe. I believe that the same, or different dialects of the same language, is spoken throughout all the Gold Coast countries.

From the river Volta to the river Lagos, extends the Whidah country, (at present a province to the king of Dahomey, a great inland kingdom) by some geographers considered as part of the Gold Coast; by others denominated the Slave Coast proper. It begins with the small and barren state of Koto or Lampi, next to which is the kingdom of Adra, comprehending the subordinate maritime principalities of Great and Little Popo, or Papew; from whence the Whidah Negroes are called generally, by the British traders, Papaws. The Whidah language, except as to the inhabitants of Koto, is peculiar and appropriate. The people of Koto speak a dialect of the Gold Coast, and there is a tribe of Whidah Negroes called Nagoes, who have a dialect which, though understood by the Papaws, differs from the Whidah language in many particulars. they find ( '100 to a tradeout live row

West of the river Lagos begins the great kingdom of Benin, the coast of which forms a

gulph of bright, ending at Cape Lopez, wherein are situated the trading places (being so many villages on the banks of several rivers) of Benin, Bonny, Old and New Callabar, Cameron, and Gaboon.

CHAP.

The slaves purchased on this part of the coast, have the general denomination of Eboes; probably from Arebo, the name of a village, formerly a considerable town, on the river Benin. Some of them (a tribe, I believe, from the interior country) are likewise called Mocces. In language they differ both from the Gold Coast Negroes and those of Whidah and in some respects from each other; for from Whidah to Angola, the dialects vary at almost every trading river.

From Cape Lopez to the river Congo, distant 140 leagues, I believe the trade is chiefly engrossed by the Dutch and the French. To the southward of this river, very little trade is carried on by any Europeans except the Portuguese, who, as hath been observed, have a large city at Loango St. Paul's on the coast of Angola, strongly fortified; from which place they have penetrated quite through the country to their settlements at, and south of, Mozambique, upon the eastern coast of Africa, where they have caravans constantly going and returning, and by that means carry on an extensive and advantageous inland commerce.

IV. BOOK The whole number of forts and factories established on the coast by the different powers of Europe, is I believe forty; of which four-teen belong to the English, three to the Franch, fifteen to the Dutch, four to the Portuguese, and four to the Danes.

The commodities exported by the British traders to Africa, consist chiefly of woollens, lineus, Manchester goods, Birmingham and Sheffield goods; East Indian silks and mixed goods; English printed calicoes and cottons; ready-made cloths, musquets, hayonets, cut-lasses, gunpowder shot, wrought and unwrought brass and copper, lead, pewter, wrought and unwrought iron, hats, worsted caps, earthenware, British spirits, rum and brandy, tea, sugar, coffee and provisions of every kind.—The annual value, of late years, is estimated on an average at about 800,000/, sterling.

In some parts of the coast there is a duty paid on each ship, to the king or chief man of the country; which is called his customs. In other parts this is not exacted; but it is only in such places as have but little trade. When permission is obtained to trade, the slaves are sometimes brought by the Black merchants on board the ships, and there sold; and sometimes they are purchased on shore at the merchants' houses, and brought off to the ships by the cap-

tains; after which the Black traders come on board to receive payment. In these particulars, circumstances and situations every often change the mode, just as an opposition among a numbers of purchasers makes it more or less necessary. Many of the factories on the coast are private property; of course they procure slaves for whe ships in their own concern. Sometimes they barter slaves with strangers, in order to enlarge their own assortment of goods, for to procure some particular commodities of which they are in want. Among the forts, the officers that belong to them carry on trade more or less with the shipping as their circumstances ( will admit, and according as they are more or less independent; but the Black traders are supposed to sell their slaves about forty shillings each cheaper than the fac-From 1760 to December 1760, the national

In those parts of the coast to which shipping resort all the year, the intercourse between the Black traders withinland (for an extent as yet unexplored by any White person) and those on the coast, is constant and regular; but we have no sufficiently precise and particular account of the manner in which this constant supply of slaves for sale is kept up and supported. I shall hereafter give the best information I have been able to collect on this head. I regret that I have not suf-

ficent materials to enable me to furnish an accurate statement of the number of Africans that have been transported to the British colonies since their first settlement. However, that curiosity may not be wholly disappointed, I have collected such materials as I think will enable the reader to form some judgment in this respect, which probably will not be very wide of the truth.

In the various publications with which the press abounded during the time that the disputes between the African Company and the private traders were an object of national concern, it is asserted by one party, and not denied by the other, that about 140,000 Negroes had been exported by the company, and 160,000 more by private adventurers, between the years 1680 and 1700: Total 300,000. From 1700 to December 1786, the number imported into Jamaica was 610,000. I say this on sufficient evidence, having in my possession lists of all the entries. Of the number imported during the same interval into the southern provinces of North America, as well as the Windward Islands, I cannot speak with precision; but I am of opinion that the Jamaica import may fairly be reckoned one-third of the whole. On these grounds, the total import into all the British colonies of America and the West Indies, from 1680 to

opinion

1786, may be put at 2,180,000, being, on an average of the whole, 20,095 annually. This I admit is much less than is commonly supposed: Anderson roundly fixes the annual import at 100,000; but vague and general assertions prove nothing. The re-export may be stated at about one fifth part of the import.

It appears to me, that the British slave trade had attained to its highest pitch of prosperity a short time before the commencement of the late American war. The following has been given to the public as an accurate account of the ships which sailed from England for the Coast in 1771, and the number of slaves for the purchase and transportation of which they were sufficiently provided, and I believe its authenticity cannot be doubted; viz.

Of the miserable people thus condemned to perpetual exile and servitude, though born in various and widely-separated countries, it is not easy to discriminate the peculiar manners and native propensities. The similar and uniform system of life to which they are all reduced; the few opportunities and the little encouragement that are given them for mental improvement; are circumstances that necessarily induce a predominant and prevailing cast of character and disposition. "The day," says Homer, "which makes man a slave, takes away half his worth," and, in fact, he loses every impulse to action, except that of fear. Nevertheless, there are

among several of the African nations some striking and predominant features, which cannot easily be over-looked by a person residing in any one of the sugar plantations. These peculiarities I shall endeavour to describe with candour and impartiality; after which, I shall attempt a delineation of their general character, as it is displayed under all the various modifications and circumstances of original habits, and present situation and condition.

BOOK IV. Most, if not all, the nations that inhabit that part of Africa which lies to the northward and eastward of Sierra Leone, are Mahometans; and following the means of conversion prescribed by their prophet are, as we are told, perpetually at war with such of the surrounding nations as refuse to adopt their religious tenets. The prisoners taken in these religious wars furnish, I doubt not, great part of the slaves which are exported from the factories on the Windward Coast; and it is probable that death would be the fate of most of the captives, if purchasers were not to be met with.

M

CHAP.

But the Mandingoes have frequent wars with each other, as well as with such nations as they consider enemies of their faith; and I am afraid that some of these wars arise from motives even less justifiable than religious zeal. An old and faithful Mandingo servant, who stands at my elbow while I write this, relates, that being sent by his father to visit a distant relation in a country wherein the Portuguese had a settlement, a fray happened in the village in which he resided; that many people were killed, and others taken prisoners, and he himself was seized and carried off in the skirmish; not, as he conceives, by a foreign enemy, but by some of the natives of the place; and being sent down a river in a canoe, was sold to the captain of the ship that brought him to Jamaica. Of his national customs and manners he remembers but little, being, at the time of his captivity, but a youth. He relates, that the natives practise circumcision, and that he himself has undergone that operation; and he has not forgot the morning and evening prayer which his father taught him; in proof of this assertion, he chaunts, in an audible and shrill tone, a sentence that I conceive to be part of the Alcoran, La illa, ill illa!\* which he says they sing aloud at the first appearance of

BOOK IV.

the new moon. He relates, moreover, that in his own country-Friday was constantly made a day of strict fasting. It was almost a sin, he observes, on that day, to swallow his spittle,—such is his expression.

Besides this man, I had once another Mandingo servant, who could write, with great beauty and exactness, the Arabic alphabet, and some passages from the Alcoran. Whether his learning extended any further I had no opportunity of being informed, as he died soon after he came into my possession.

The advantage possessed by a few of these people, of being able to read and write, is a circumstance on which the Mandingo Negroes in the West Indies pride themselves greatly among the rest of the slaves; over whom they consider that they possess a marked superiority; and in truth they display such a gentleness of disposition and demeanour, as would seem the result of early education and discipline, were it not that generally speaking, they are more prone to theft than any of the African tribes. It has been supposed that this propensity, among other vices, is natural to a state of slavery, which degrades and corrupts the human mind in a deplorable manner; but why the Mandingoes should have become more vicious in this respect than the rest of the natives of Africa in the same condition of life, is a question I cannot answer.

CHAP. III.

In their complexions and persons, the Mandingoes are easily to be distinguished from such of the Africans as are born nearer to the equator; but they consist nevertheless of very distinct tribes, some of which are remarkably tall and black, and there is one tribe among them (called also the Foolah) that seems to me to constitute the link between the Moors and Negroes properly so called. They are of a less glossy black than the Gold Coast Negroes; and their hair, though bushy and crisped, is not woolly, but soft and silky to the touch. Neither have the Mandingoes, in common, the thick lips and flat noses of the more southern natives; and they are, in a great degree, exempt from that strong and fetid odour, which exhales from the skin of most of the latter; but in general they are not well adapted for hard labour.\*

After all, they differ less in their persons, than in the qualities of the mind, from the Na-

fe, is a

<sup>\*</sup> There is a remarkable anomaly of nature semetimes seen in the children born of Negro women by black men. Their features are those of the Negro, but their complexions are white: not the white of the European, but a cadaverous paleness without any mixture of red, and their hair is of the same colour, though crisped and woolly. I have inspected several of these poor creatures, and always found them weak-sighted, and, in general, defective in understanding. These are the people called by the Spaniards Albinos; but that a nation of them exists in any part of the world, as asserted by Voltaire, I do not believe,

BOOK IV. tives of the Gold Coast; who may be said to constitute the genuine and original unmixed Negro, both in person and character.

The circumstances which distinguish the Koromantyn, or Gold Coast, Negroes, from all others, are firmness both of body and mind; a ferociousness of disposition; but withal, activity, courage, and a stubbornness, or what an ancient Roman would have deemed an elevation, of soul, which prompts them to enterprizes of difficulty and danger; and cables them to meet death, in its most horrible shape, with fortitude or indifference. They sometimes take to labour with great promptitude and alacrity, and have constitutions well adapted for it; for many of them have undoubtedly been slaves in Africa:—I have interrogated great numbers on this subject, and although some of them asserted they were born free, who, as it was afterwards proved by the testimony of their own relations, were actually sold as playes by their masters, others frankly confessed to me that they had no claim to freedom in their own country, and were sold either to pay the debts, or to expiate the crimes, of their owners. On the other hand, the Gold Coast being inhabited by various different tribes which are engaged in perpetual warfare and hostility with each other, there cannot be a doubt that many of the captives taken in battle, and sold in the European settlements,

were of free condition in their native country, and perhaps the owners of slaves themselves. It is not wonderful that such men should endeavour, even by means the most desperate, to regain the freedom of which they have been deprived; nor do I conceive that any further circumstances are necessary to prompt them to action, than that of being sold into captivity in a distant country. I mean only to state facts as I find them. Such I well know was the origin of the Negro rebellion which happened in Jamaica in 1760. It arose at the instigation of a Koromantyn Negro of the name of Tacky, who had been a chief in Guiney; and it broke out on the Frontier plantation in St. Mary's parish, belonging to the late Ballard Beckford, and the adjoining estate of. Trinity, the property of my deceased relation and benefactor Zachary Bayly, to whose wisdom, activity, and courage on this occasion, it was owing that the revolt was not as general and destructive as that which now rages in On those plantations St. Domingo (1791). were upwards of one hundred Gold Coast. Negroes newly imported, and I do not believe. that an individual amongst them had received the least shadow of ill treatment from the time of their arrival there. overseer of singular tenderness and humanity. His name was Abraham Fletcher; and let it be remembered, in justice even to the rebels, and as a lesson to other overseers, that his life was spared from respect to his virtues. The insurgents had heard of his character from the other Negroes, and suffered him to pass through them unmolested—this fact appeared in evidence.\*

jour

\* Mr. Bayly had himself left the Trinity estate the preceding evening, after having personally inspected into the situation of his newly purchased Africans, and delivered them with his own hands their clothing and knives, little apprehending the bloody business in which these knives were soon afterwards employed. He slept at Ballard's Vallev. a plantation of Mr. Cruikshank, a few miles distant: and was awoke by his servant at day-break, with the information that his Trinity Negroes had revolted. The intelligence was brought by some of his own people, who had aed in search of their master, and reported that the insurgents were close at their heels. No time therefore being to to be lost Mr. Bayly recommended to Mr. Cruikshank, and some other gentlemen who were with him, to proceed forthwith, with such arms as they could collect, to an estate in the neighborhood, which having a defensible house, was fixed on as a proper place of rendezvous; promising to join them in a few hours. He then mounted his horse, and proceeded himself in search of the rebels, conceiving (as he knew they had no reason to complain of ill treatment) that his presence and persuasions would reduce them to obedience. As he descended the hill on which Mr. Cruikshank's house was situated, he heard the Koromantyn yell of war, and saw the whole body of rebel Negroes in full march for the habitation of the Overseer; a smaller house situated within manity.

e insurbut was answered by a discharge of musquetry, by which ne other his servant's horse was shot under him, and both himself and the sevant very narrowly escaped with life. The sath them vages then proceeded to the massacre of the White people dence.\* in the Overseer's house; and Mr. Bayly rode round to all y about the different plantations in the neighborhood, giving them notice of their danger, and sending all the Whites to the place of rendezvous. By this measure he had collected te the pred into the before noon about 130 Whites and trusty Blacks, tolerably delivered armed; whom he then led in pursuit of the rebels. They were found at Haywood-Hall, roasting an ox by the flames rives, little ese knives of the buildings, which they had set on fire. The Whites lard's Valattacked them with great fury, killed eight or nine on the spot, took several of them prisoners, and drove the rest es distant : the inforinto the woods, where they acted afterwards wholly on the The inteldefensive, and were soon exterminated. Thus a timely , who had check was given to a conspiracy, which was found to have been general among the Koromantyn Negroes throughout the insurthe Island, and the country was probably saved from utter re being to destruction by the prudence and promptitude of as indihank, and vidual:—I have related these circumstances concerning my to proceed deceased relation's conduct on this occasion for two reasons: to an esfirst, because it presents an example to be imitated in ble house, similar emergencies; and secondly, because I have thus an omising to opportunity given me of paying a just tribute to the mehorse, and mory of one, whom I loved and honoured when living, ring (as be and lamented when dead, with more than filial affection ment) that and piety: for he possessed the clearest head, the most enobedience. larged and comprehensive mind, the sweetest temper, and nk's house the kindest and most benevolent disposition, of any man r, and saw that it has been my fortune to meet with, in my diversified or the hajourney through life! See voi. i. p. 308.

BOOK IV:

provided themselves with as great a quantity of arms and ammunition as they could conveniently dispose of. Being by this time joined by a number of their countrymen from the neighbouring plantations, they marched up the high road that led to the interior parts of the country, carrying death and desolation as they went. At Ballard's Valley they surrounded the overseer's house about four in the morning, in which finding all the White servants in bed, they butchered every one of them in the most savage manner; and literally drank their blood mixed with rum. At Esher, and other estates, they exhibited the same tragedy: and then set fire to the buildings and canes. In one morning they murdered between thirty and forty Whites and Mulattoes, not sparing even infants at the breast, before their progress was stopped. Tacky, the Chief, was killed in the woods by one of the parties that went in pursuit of them; but some others of the ringleaders being taken, and a general inclination to revolt appearing among all the Koromantyn Negroes in the island, it was thought necessary to make a few terrible examples of some of the most guilty. Of three who were clearly proved to have been concerned in the murders committed at Ballard's Valley, one was condemned to be burnt, and the other two to be hung up alive in irons, and left to perish in that dread-

ful situation. The wretch that was burnt was made to sit on the ground, and his body being chained to an iron stake, the fire was applied to his feet. He uttered not a groan, and saw his legs reduced to ashes with the utmost firmness and composure; after which, one of his arms by some means getting loose, he snatched a brand from the fire that was consuming him, and flung it in the face of the executioner. The two that were hung up alive were indulged, at their own request, with a hearty meal immediately before they were suspended on the gibbet, which was erected in the parade of the town of Kingston. From that time, until they expired, they never uttered the least complaint, except only of cold in the night, but diverted themselves all day long in discourse with their countrymen, who were permitted, very improperly, to surround the gibbet. On the seventh day a notion prevailed among the spectators, that one of them wished to communicate an important secret to his master, my near relation; who being in St. Mary's parish, the commanding officer sent for me. I endeavoured, by means of an interpreter, to let him know that I was present; but I could not understand what he said in return. I remember that both he and his fellow-sufferer laughed immoderately at something that occured, I know not what. The next morning one of them silently expired, as did the other on the morning of the ninth day.

BOOK IV.

The courage or unconcern which the people of this country manifest at the approach of death, arises, doubtless, in a great measure, from their pational manners, wars and superstitions, which are all, in the highest degree, savage and sanguinary. A power over the lives of his slaves is possessed, and exercised too, on very frivolous occasions, without compunction or scruple, by every master of slaves on the Gold Coast. Fathers have the like power over their children. In their wars they are bloody and cruel beyond any nation that ever existed; for all such of their captives as they reserve not for slaves, they murder with circumstances of outrageous barbarity; cutting them across the face, and tearing away the under jaw, which they preserve as a trophy, leaving the miserable victims to perish in that condition. I have collected this account from themselves. They tell me likewise, that whenever a considerable man expires, several of his wives, and a great number of his slaves, are sacrificed at his funeral. This is done, say they, that he may be properly attended in the next world. This circumstance has been confirmed to me by every Gold Coast Negro that I have interrogated on the subject, and I have enquired of many.

who was brought from the Gold Coast to Jamaica the latter end of 1784, relates, " that she was born in a village near Anamaboo; that her father and mother, and their children (nine in number) were slaves to a grand, named Anamoa, on whose death she herself, and two er brothers (who likewise belong to me) with several others of his slaves, were sold to pay his debts. That twenty others were killed at his funeral. I asked her which country she liked best, Jamaica or Guiney? She replied, that Jamaica was the better country, " for that people were not killed there, as in Guiney, at the funeral of their masters." She informed me also, in answer to some other inquiries, of a remarkable fact (i.e.), that the natives of the Gold Coast give their children the yaws, (a frightful disorder) by inoculation; and the described the manner of performing the operation to be making an incision in the thigh, and putting in some of the infectious matter. I asked her what benefit they expected from this practice? She answered, that by this means their infants had the disorder slightly. and recovered speedily, whereas by catching it at a later time of life, the disease, she said, got into the bone, that 

Cudjoe, aged (as I suppose) about fifty, relates that he was born in the kingdom of Asiantee, the king or chieftain of which country was named Poco. Cudjoe's elder brother having been caught in adultery with the wife of a man named Quashee, was adjudged to pay a fine to the man he had injured; which not being able to do, he delivered over him (Cudjoe) who was at that time, by his own account, a boy about sixteen, as a compensation; and Quashee immediately carried him off, and soon afterwards sold him to a Black slave-merchant, who, having purchased many others, carried them all to the sea-coast (they were two months on

BOOK

death must necessarily have lost many of its terrors; and the natives in general, conscious they have no security even for the day that is rassing over them, seem prepared for, and resigned to, the fate that probably awaits them. This contempt of death, or indifference about life, they bring with them to the West Indies; but if forfunately they fall into good hands at first, and become well settled, they acquire by degrees other sentiments and notions. Nature resumes her lawful influence over them. With the consciousness of security, the love of existence also, amidst all the evils that attend it in a state of slavery, their jemmey), and sold them to a Captain Resder, who brought them to Jamaicait II asked him, what right his brother had to sell him? S. Because, said he, ! my father was dead; and by his account fathers have an unquestionable right to sall their children, and probably, on the demise of the fither; the same power is assumed by the eldest son over the younger branches. "He relates further, that the king has the power of life and death, and that executions are very frequent. That when the king or any considerable man dies; a great number of his slaves are sacrificed at his tomb. He pretends not to ascertain any particular number, but remembers perfectly well the death of the old king whom Poco succeeded, and is positively certain that upwards of one hundred people were slaughtered on that occasion. To convince me that he understood what he said when he mentioned that number, he counted the fingers of both his hands ten times, He saith further, that wars are very frequent; that all able men are compelled to bear arms; and that when they take prisoners, the old and infirm are killed, and the years and able preserved to be sold for claves, while the

gains admission into their bosoms. They feel his and, such is the force of habitual borbarity, seem ashaned of their own weakness. A gentleman of Jamaica visiting a valuable Koromantys-Negro that was sick, and perceiving that he was thoughtful and dejected, endeavoured by scothing and endouraging language to raise his drooping spirits. Mana, said the Negro (in a tone of self-reproach and conscious degeneracy) since me come to White madie country me hib (love) life too much!

Even the children brought from the Gold Coast manifest an evident superiority, both in hardiness of frame, and vigour of mind; over all the young people of the same age that are imported from other parts of Africa. The like firmuess and intrepldity which are distinguish able in adults of this nation, are visible in their boys at an age which might be thought too tender to receive any lasting impression, either from precept or example. I have been myself an eye-witness to the truth of this remark, in the circumstance I am about to relate. A gentleman of my acquaintance, who had purchased at the same time ten Koromantyn boys, and the like number of Eboes (the eldest of the whole apparently not more than thirteen years of age) caused them all to be collected and brought before him in my presence, to be marked on the breast. This operation is performed by heating a small silver brand, composed

Nevertheless it may be easily supposed that the apparatus must have a frightful appearance to a child. Accordingly, when the first boy, who happened to be one of the Ebnes. and the stoutest of the whole, was led forward to receive the mark, he screamed dreadfully, while his companions of the same nation manifested strong emotions of sympathetic terror. The gentlemen stopt his hand; but the Koromentyn boys, laughing aloud, and immediately coming forward of their own accord, offered their bosoms undauntedly to the brand, and receiving its impression without flinching in the least, mant their fingers in exultation over the pior Eboss. water of the intermediate their president

One cannot surely but lament, that a people thus naturally emulous and in abould be sunk into so deplorable a state of parbarity and superstition; and that their spirits should ever be broken down by the yake of slavery! Whatever may be alleged concerning their ferociousness and implacability in their present notions of right and wrong, I am persuaded that they possess qualities which are capable of, and well deserve, cultivation and improvement.—But it is time to conclude my observations

CHAP.

on this nation, which I shall do, with some account of their religion; for which my readers are indebted to the researches of an ingenious gustleman of Jamaica, who is well acquainted with their language and manners. Its authoritisty has been frequently confirmed to me, on my own enquiries among the Koromantyn Negroes themselves.

They believe that Accompany, the God of the heavens, is the creator of all things; a Deity of infinite goodness; to whom however they never offer sacrifices, thinking it sufficient to adore him with praises and thanksgiving.

Asserce is the god of the earth; to him they offer the first fruits of the glound, and pour out libations of the liquors they drink to his honour.

been originally a human being like one of themselves, and the first founder of their family; upon the anniversary of whose beniel, the whole number of his descendants essentile round his grave, and the oldest man, after offering up praises to Accompong, Assarci, Ipbon, and their tutelar deity, sacrifices a cock or goat, by cutting its throat, and shedding the blood upon the grave. Every head of a household of the family next sacrifices a cock, or other animal, in like manner, and as soon as all those who are able to bring sacrifices have made their oblations, the animals which have been killed are divesed, and a great festival follows.

Among their other superstitions also, must not be omitted their mode of administering an eath of secrecy or purgation. Human blood, and earth taken from the grave of some near relation, are mixed with water, and given to the party to be sworn, who is compelled to drink the mixture, with an imprecation, that it may cause the belly to burst, and the bones to rot, if the truth be not spoken. This test is frequently administered to their wives, on the suspicion of infidelity, and the resemblance which it bears to the trial of jealousy by the bitter water described in the book of Numbers (chap. v.) is a curious and striking circumstance.

I now proceed to the people of Whidah, or Fide. The Negroes of this country are called generally in the West Indies Papawe, and are unquestionably the most docile and best-disposed slaves that are imported from any part of Africa. Without the fierce and savage manners of the Koromantyn Negroes, they are also happily exempt from the timid and desponding temper of the Eboes, who will presently be mentioned. The cheerful acquiescence with which these people apply to the labours of the field, and their constitutional aptitude for such employment, arise, without doubt, from the great attention paid to agriculture in their native country. Bosman speaks with rapture of the improved state of the soil, the number of villages, and the industry, riches, and obliging manners of the natives. He observes, however, that they are much greater thieves than those of the Gold Coast, and very unlike them in another respect, namely, in the dread of pain, and the apprehension of death. "They are," says he, "so very apprehensive of death, that they are unwilling to hear it mentioned, for fear that alone should hasten their end; and no man dares to speak of death in the presence of the king, or any great man, under the penalty of suffering it himself, as a punishment for his presumption." He relates further, that they are addicted to gaming beyond any people

CHAP.

BOOK IV:

of Africa. All these propensities, if I am rightly informed, are observable in the character of the Papaws in a state of slavery in the West Indies. That punishment which excites the Koromantyn to rebel, and drives the Ebo Negro to suicide, is received by the Papaws as the chastisement of legal authority, to which it is their duty to submit patiently. The case seems to be, that the generality of these people are in a state of absolute slavery in Africa, and, having been habituated to a life of labour, they submit to a change of situation with little reluctance.

Many of the Whidah Negroes are found to be circumcised. Whether it be a religious coremony common to all the tribes that go under the appellation of Papaws I know not. It is practised universally by the Nagoes; a people that speak the Whidah language; but I have met with Negroes from this part of the coast that disavow the practice.

We are now come to the Bight of Benin, comprehending an extent of coast of near 300 English leagues, of which the interior countries are unknown, even by name, to the people of Europe. All the Negroes imported from these vast and unexplored regions, except a tribe which are distinguished by the name of Mocoes, are called in the West Indies Eboes; and in general they appear to be the lowest

and most wretched of all the nations of Africa. CHAP. In complexion they are much yellower than the Gold Coast and Whidah Negroes; but it is a sickly hue, and their eyes appear as if suffused with bile, even when they are in perfect health. I cannot help observing too, that the conformation of the face, in a great majority of them, very much resembles that of the baboon. I believe indeed there is, in most of the nations of Africa, a greater elongation of the lower jaw than among the people of Europe; but this distinction I think is more visible among the Eboes than in any other Africans. I mean not however to draw any conclusion of natural inferiority in these people to the rest of the human race, from a circumstance which perhaps is purely accidental, and no more to be considered as a proof of degradation, than the red hair and high cheek bones of the natives of the North of Europe.

The great objection to the Eboes as slaves, is their constitutional timidity, and despondency of mind; which are so great as to occasion them very frequently to seek, in a voluntary death, a refuge from their own melancholy reflections. They require therefore the gentlest and mildest treatment to reconcile them to their situation; but if their confidence be once obtained, they manifest as great fidelity, affection, and gratitude, as can reasonably be expected

BOOK IV. from men in a state of slavery. The females of this nation are better labourers than the men, probably from having been more hardly treated in Africa.

The depression of spirits which these people seem to be under, on their first arrival in the West Indies, gives them an air of softness and submission, which forms a striking contrast to the frank and fearless temper of the Koromantyn Negroes. Nevertheless, the Eboes are in fact more truly savage than any nation of the Gold Coast; inasmuch as many tribes among them, especially the Moco tribe, have been, without doubt, accustomed to the shocking practice of feeding on human flesh. This circumstance I have had attested beyond the possibility of dispute, by an intelligent trust-worthy domestic of the Ebo nation, who acknowledged to me, though with evident shame and reluctance, (having lived many years among the Whites) that he had himself, in his youth, frequently regaled on this horrid banquet: and his account received a shocking confirmation from a circumstance which occurred in the year 1770 in Antigua, where two Negroes of the same country were tried for killing and devouring one of their fellow-slaves in that island. They were purchased, a short time before, by a gentleman of the name of Christian, out of a ship from Old Calabar, and I am told were convicted on the clearest evidence.

Of the religious opinious and modes of worship of the Eboss, we know but little; except that, like the inhabitants of Whidah, they pay adoration to certain reptiles, of which the guana (a species of lizard) is in the highest estimation. They universally practise circumcision, "which, with some other of their superstitions (says Purchas), may seem Mahometan, but are more likely to be ancient Ethnic rites; for many countries of Africa admit circumcision, and yet know not, or acknowledge not, Mahometanism; but are either Christians,

o'the discovision as make with and doube.

I have been assured by an intelligent person who had visited many parts of Africa, that the Eboes frequently offer up human secrifices in their worship of this animal. Perhaps the certainty of this may be questioned; but the following anecdote is undoubtedly true. In the year 1787, two of the seamen of a Liverpool ship trading at Bonny, being ashore watering, had the misfortune to kill a guana, as they were rolling a cask to the beach. An outcry was immediately raised among the natives, and the boat's crew were surrounded and seized, and all trade interdicted, until public justice should be satisfied and appeared. The offenders, being carried before the king, or chief man of the place, were adjudged to die. However the severity of justice being softened by a bribe from the captain, the sentence was at length changed to the following, that they should pay a fine of 700 bars (about 751.) and remain in the country as slaves to the king, until the money should be raised. The captain not being willing to advance to large a sum for the redemption of these poor wretches, sailed without them, and what became of them afterwards I have not heard.

DEAR.

the Copiet, Abistinians, or Gentiles. They (the people of Benin) cut or rase the skin with three lines drawn to the navel, esteeming it necessary to salvation. The missing of the country of the salvation.

Next-in order to the Whidah Negroes, are those from Congo and Angola; whom I consider to have been originally the same people. I can say but little of them that is appropriate and particular; except that they are in general a slender sightly race, of a deep and glossy black (a tribe of the Congoes excepted, who very nearly resemble the Eboes), and I believe of a disposition naturally mild and docile. They appear to me to be fitter for domestic service than for field-labour. They are said however to become expert mechanics; and, what is much to their honour, they are supposed to be more strictly honest than many other of the African tribes.

Having thus recited such observations as have occurred to me on contemplating the various African nations in the West Indies separately and distinct from each other, I shall now attempt an estimate of their general character and dispositions, influenced, as undoubtedly they are in a great degree, by their situation and condition in a state of slavery; circumstances that soon efface the native original impression which distinguishes one nation from

another in Negroes newly imported, and erests a similitude of manners, and a uniformity of character throughout the whole body.

Thus, notwithstanding what has been related of the firmness and courage of the natives of the Gold Coast, it is certain that the Negroes in general in our islands (such of them at least as have been any length of time in a state of servitude) are of a distrustful and cowardly disposition. So degrading is the nature of slavery, that fortitude of mind is lost as free agency is restrained. To the same cause probably must be imputed their propensity to conceal, or violate the truth; which is so general, that I think the vice of falsehood is one of the most prominent features in their character, If a Negro is asked even an indifferent question by his master, he seldom gives an immediate reply; but, affecting not to understand what is said, compels a repetition of the question, that he may have time to consider, not what is the true answer, but what is the most politic one for him to give. The proneness observable in many of them to the vice of theft has already been noticed; and I am afraid that evil communication makes it almost general.

It is no easy matter, I confess, to discriminate those circumstances which are the result of proximate causes, from those which are the effects of national customs and early habits in

-H-

BOOK IV.

savage life; but I am afraid that cowardice and dissimulation have been the properties of slavery in all ages, and will continue to be so. to the end of the world. It is a situation that necessarily suppresses many of the best affections of the human heart.—If it calls forth any latent virtues, they are those of sympathy and compassion towards persons in the same condition of life; and accordingly we find that the Negroes in general are strongly attached to their countrymen, but, above all, to such of their companions as came in the same ship with them from Africa. This is a surking circumstance: the term shipmate is understood among them as signifying a relationship of the most endearing nature; perhaps as recalling the time when the sufferers were cut off together from their common country and kindred, and awakening reciprocal sympathy, from the remembrance of mutual affliction.

But their benevolence, with a very few exceptions, extends no further. The softer virtues are seldom found in the bosom of the enslaved African. Give him sufficient authority, and he becomes the most remorseless of tyrants. Of all the degrees of wretchedness endured by the sons of men, the greatest, assuredly, is the misery which is felt by those who are unhappily doomed to be the Slaves of Slaves; a most unnatural relation, which sometimes takes place

rdice and s of slabe so, to that neaffections my latent nd comcondition the Neto their of their ship with g circumod among the most the time ther from

t awaken-

embrance

in the sugar plantations; as for instance, when it is found necessary to instruct young Negroes in certain trades or handicraft employments. In those cases it is usual to place them in a sort of apprenticeship to such of the old Negroes as are competent to give them instruction; but the harshness with which these people enforce their authority is extreme; and it serves in some degree to lessen the indignation which a good mind necessarily feels at the abuses of power by the Whites, to observe that the Negroes themselves, when invested with command, give full play to their revengeful passions; and exercise all the wantonness of cruelty without restraint or remorse.

The same observation may be made concerning their conduct towards the inferior animal creation. Their treatment of cattle under their direction is brutal beyond belief. Even the useful and social qualities of the dog secure to him no kind usage from an African master. Although there is scarce a Negro that is not attended by one, they seem to maintain these poor animals solely for the purpose of having an object whereon to exercise their caprice and cruelty. And, by the way, it is a singular circumstance, and not the less true for being somewhat ludicrous, that the animal itself, when the property of a Negro, betrays at first sight that such is his condition; for, losing his playful

CHAR.

BOOK IV:

propensities, he seems to feel the inferiority of his station; and actually crouches before each of his own species as are used to better company. With the manners, he acquires also the cowardly, thievish, and sullen disposition of his African tyrant.

But notwithstanding what has been related of the selfish and unreleating temper of the caslaved Africans, they are said to be highly suscaptible of the passion of love. It has even been supposed that they are more subject to and sensible of, its impression, than the natives of colder climates, "The Negro (says Dr.) Robertson) glows with all the warmth of de sire natural to his climate." "The tender passion (says another writer) is the most ardent one in the breast of the enslaved African. It is the only source of his joys, and his only solace in affliction Monsieur de Chanvalon (the historian of Martinico) expatiates on the same idea with great eloquence ... Love (savs) he) the child of nature, to whom she entrusts her own preservation; whose progress no difficulties can retard, and who triumphs even in chains; that principle of life, as necessary to the harmony of the universe, as the air which we breathe, inspires and invigorates all the thoughts and purposes of the Negro, and lightens the yoke of his slavery. No perils can abate, nor impending punishments restrain, the

one All this however is the language of poetry dithe visions of romance of The poor Negro has no laisure in a state of slavery to include a passion, which however descended is nourish ed by idleness. If by love, is meant that tender attachment to one individual object, which in civilised life, is desire heightened by sentiment, and refined by delicacy, I doubt if it ever found a place in an African bosom. The Negroes in the West Indies, both men and women, would consider it as the greatest exertion of tyranny, and the most cruel of all hardshipe to be compelled to confine themselves to a single connection with the other sex; and I am persuaded that any attempt to restrain their present licentious and dissolute manners. by introducing the marriage ceremony among them; as is strenuously recommended by many persons in Great Britain, would be utterly impracticable to any good purpose. Perhaps it may be thought that the Negroes are not altogether reduced to so deplorable a state of slavery, as is commonly represented, when it is known that they boldly claim and exercise a VOLETTO FILL TO THE STATE OF TH

right of disposing of themselves in this respect, eccenting to their own will and pleasure, with and passure, with any control from their matters the appreciate of their

That pession therefore to which (digulfied by the name of Love) is secribed the pointr of nings all the miseries of slavery, it mere desire implanted by the great Author of all things for the preservation of the species. This die Negroes, without deubt in posse common with the rest of the animal creation and they indulge it, as inclination prompts in an almost promiscuous intercourse with b the other sex a or at least in temporary connections, which they form without coremony, and dimoles without reluctance. When age indeed begins to mitigate the ardour, and lessen the fickleness of youth, many of them form attachments, which strengthened by habit, and endeaved by the consciousness of mutual imbecility, produce an union for life. It is not uncommon to behold a venerable couple of this stamp, who, tottering under the load of years, contribute to each other's comfort, with a cheerful assiduity which is at once amiable and affecting.

The situation of the aged among the Negroes is indeed commonly such as to make them some amends for the hardships and sufferings of their youth. The labour required of the men is seldom any thing more than to guard the pro-

vision grounds; and the women are chiefly, employed in attending the children, in nursing the sick, or in other easy avocations; but their bappiness chiefly arises from the high veneration in which old age is held by the Negroes in general, and this I consider as one of the few pleasing traits in their character. In addressing such of their fellow-servants as are any ways advanced in years, they prefix to their names the appellation of Parent, as Ta Quaco, and Ma Quasheba; Ta and Ma signifying Father and Mother, by which designation they mean to convey not only the idea of filial reverence, but also that of esteem and fondness. Neither is the regard thus displayed towards the aged confined to outward ceremonies and terms of respect alone. It is founded on an active principle of native benevolence, furnishing one of the few exceptions to their general uncelenting and selfish character. The whole body of Negroes on a plantation must be reduced to a deplorable state of wretchedness, if at any time, they suffer their aged companions to want the common necessaries of life, or even meny of its comforts, as for as they can procura them. They seem to me to be actuated on these occasions by a kind of involuntary impolse, operating as a primitive law of nature, which ecorns to wait the cold dictates of reason; among them, it is the exercise of a comBOOK IV.

mon duty, which courts no observation, and looks for no applicate all military and brokens

Among other propensities and qualities of the Negroes must not be omitted their louveciousness. They are as fond of exhibiting set speeches, as orators by profession; but it requires a considerable share of patience to hear them throughout; for they commonly make a long preface before they come to the point; beginning with a tedious enumeration of their past services and hardships. They dwell with peculiar energy (if the fact admits it) on the number of children they have presented to Massa (Master), after which they recapitulate some of the instances of particular kindness shewn them by their owner or employer, adducing these also as proofs of their own merit; it being evident, they think, that no such kind-

The greatest afront (says Mr. Long) that can be offered to a Negro; is to curse his father and mother, or any of his progenitors. It may not be improper in this place to add, that many of the Negroes attain to great longwity. In February 1792, a Black woman of the name of Flora Gale, died at the very extraordinary age of 190, at Savannala-Mar in Jamaica. She remembered perfectly well the great earthquake in 1092, which proved so fatal to Port Royal. She left a numerous progeny of children, grand and great-grand-children, and it is remarkable, that she always refused to be baptized, assigning for reason her desire to have a grand Negro dance at her funeral, according to the custom of Africa; a ceremony never allowed in Jamaica at the burial of such as have been christment.

ness can be gratuitous. 18 This is their usual exordium, as well, when they bring complaints, against others, as when they are called upon to defend themselves; and it is in vain to interrupt either plaintiff or defendant. Yet I have sometimes heard them convey much strong meaning in a narrow compass: I have been surprised by such figurative expressions. and (notwithstanding their ignorance of abstract terms) such pointed sentences, as would have reflected no disgrace on poets and philosophers. One instance recurs to my memory, of so significant a turn of expression in a common labouring Negro, who could have had no opportunity of improvement from the conversation of White people, as is alone, I think, sufficient to demonstrate that Negroes have minds very capable of observation. It was a servant who had brought me a letter, and, while I was preparing an answer, had, through weariness and fatigue, fallen asleep on the floor; as soon as the papers were ready, I directed him to be awakened; but this was no easy matter. When the Negro who attempted to awake him exclaimed in the usual jargon, You no hear Massa call you? that is, Don't you hear Master call you? Sleep, replied the poor fellow, looking up, and returning composedly to his alumbers, Sleep hab so Massa. (Sleep has hollow tree, one clid of which ferre cottank on

Of those imitative art in which perfection can be attained only in an improved state of society, it is natural to suppose that the Negrous have but little knowledge. " And opinion prevails in Europe that they possess organs poenliarly adapted to the science of music: but this I believe is an ill-founded idea. To vocal harmony they display neither variety not compale. I Nature seems in this respect to have dealt more penuriously by them than towards the rest of the buman race. As practical must sicions, some of them, by great labour and cane ful instruction, become sufficiently expert to beth an under part in a pablic concert; but I do not recollect ever to have seen or heard of a Negro who could truly be called a fine performer on any capital instrument. In general they prefer a loud and long continued noise to the finest harmony, and frequently consume the whole night in beating on a board with a stick. This is in fact one of their chief musical instruments; besides which, they have the Banja or Merriwang, the Dundo and the Goomben: all of African origin. The first is an imperfect kind of violincello; except that it is played on by the finger like the guitar, producing a dismail monotony of four notes. The Dundo is precisely a tabor, and the Goombay is a rustie drum; being formed of the trunk of a hollow tree, one end of which is covered with a sheep's shint of From such instruments bething like a regulif tune can be expected, nor is it attempted an re sioned and to the are out sones

bably of a very celebrated religious order in remote ages, is now become in Jamaici the general term to denote those Africans who in that island practise witcheraft of sorcery, comprehending also the class of what are called Myalmen, or those who, by means of a marcotic potion, made with the juice of a herb (said to be the branched Calabse or species of Solsman) which occasions a trance or profound sleep of a certain duration, endeavour to convince the deluded spectators of their power to re-animate dead bodies.

"As far as we are ble to decide from our own experience and information when we lived in the island, and from the current testimony of all the Negroes we have ever conversed with on the subject, the professors of Obi are, and always were, natives of Africa, and none other; and they have brought the science with them from thence to Jamaica, where it is so universally practised, that we believe there are few of the large estates possessing native Africans, which have not one or more of them. The oldest and most crafty are those who usually attract the greatest devotion and confidence; those whose hoary heads, and a somewhat peculiarly harsh and forbidding in their aspect, together with some skill in plants of the medical and poisonous species, have qualified them for successful imposition upon the weak

CHAP.

and credulous. The Negroes in general, whether Africans or Creoles, revere, consult, and fear them; to these oracles they resort, and with the most simplicit faith, upon all occasions, whether for the cure of disorders, the obtaining revenge for injuries or insults, the conciliating of favour, the discovery and punishment of the thief or the adulterer, and the prediction of future events. The trade which these impostors carry on is extremely lucrative; they manufacture and sell their Obeis adapted to the different cases and at different prices. 10 A veil of mystery is studiously thrown over their incantations, to which the midnight hours are allotted, and every precaution is taken to conceal them from the knowledge and discovery of the White people. The deluded Negroes, who thoroughly believe in their supernatural power, become the willing accomplices in this concealment, and the stoutest among them tremble at the very sight of the ragged bundle, the bottle or the egg-shells, which are stuck in the thatch or hung over the door of a hut, or upon the branch of a plantain tree, to deter marauders. In cases of poison, the natural effects of it are by the ignorant Negroes, ascribed entirely to the potent workings of Obi. The wiser Negroes hesitate to reveal their suspicions, through a dread of incurring the terrible vengeance which is fulminated by the

Obosh-men against any who should betray them: it is very difficult therefore for the White proprietor to distinguish the Obeah professor from any other Negro upon his plantation ; and so infatuated are the Blacks in general, that but few instances occur of their having assumed courage enough to impeach these miscreants. With minds so firmly prepossessed, they no sooner find Obi set for them near the door of their houses, or in the path which leads to it, than they give themselves up for lost. When a Negro is robbed of a fowl or a hog, he applies directly to the Obesh-man or woman; it is then made known among his fellow Blacks. that Obi is set for the thief; and as soon as the latter hears the dreadful news, this terrified imagination begins to work, no resource is left but in the superior skill of some more eminent Obeah man of the neighbourhood, who may counteract the magical operations of the other: but if no one can be found of higher rank and ability; or off, after gaining such an ally, he should still fancy himself affected, he presently falls into a decline, under the incessant horror of impending calamities. The slightest painful sensation in the head, the bowels, or any other part, any casual loss or hurt, confirms his apprehensions, and he believes himself the devoted victim of an invisible and irresistible agency. sake him; his strength decays; his disturbed imagination is haunted without respite, his features wear the settled gloom of despondency: dirt, or any other unwholesome substance, becomes his only food, he contracts a morbid babit of body, and gradually sinks into the grave, A Negro, who is taken ill, inquires of the Obeah-man the cause of his sickness, whether it will prove mortal or not, and within what time he shall die or recover? The oracle generally ascribes the distemper to the malice of some particular person by name, and advises to set Ohi for that person; but if no hopes are given of recovery, immediate despair takes place, which no medicine can remove and death is the certain consequence. Those anomalous symptoms which originate from causes deeply rooted in the mind, such as the terrors of Obi, or from poisons whose operation is slow and intricate, will baffle the skill of the ablest physician,

"Considering the multitude of occasions which may provoke the Negroes to exercise the powers of Obi against each other, and the astonishing influence of this superatition upon their minds, we cannot but attribute a very considerable portion of the annual mortality among the Negroes of Jamaica to this fascinating mischief.

"The Obi is usually composed of a farrago of materials, most of which are enumerated in

the Jamaics law, viz. an Blood, feathers, parrots' beaks, dogs' teeth, alligators' teeth, broken bottles, grave-dirt, rum, and egg-

With a view to illustrate the description we have given of this practice, and its common effects, we have subjoined a few examples out of the very great number which have occurred in Jamaica, not that they were peculiar to that island ouly, for we believe similar examples may be found in other West India colonies. Pere Labat, in his history of Martinico, has mentioned some which are very remarkable.

It may seem extraordinary, that a practice alleged to be so frequent in Jamaica should not have received an earlier check from the legislature. The truth is, that the skill of some Negroes, in the art of poisoning. has been noticed ever since the colonists became much acquainted with them. Sloane and Barham, who practised physic in Jamaica in the last century, have mentioned particular instances of it. The secret and insidious manner in which this crime is generally perpetrated, makes the legal proof of it extremely difficult. Suspicions therefore have been frequent, but detections rare: these murderers have sometimes been brought to justice, but it is the reasonmuch fact in testing companied of the water

able to believe that a far greater number have escened with impunity .... In regard to the other and more common tricks of Obi, such as hanging up feathers, bottles, egg-shells, &c. &c. in order to intimidate Negroes of a thievish disposition from plundering huts, hog-sties, or provision grounds, these were laughed at by the White inhabitants as harmless stratageme, contrived by the more sagacious, for deterring the more simple and superstitious Blacks, and serving for much the same purpose as the scarecrows which are in general used among our English farmers and gardeners. But in the year 1760, when a very formidable insurrection of the Koromantyn or Gold Coast Negroes broke out in the parish of St. Mary, and spread through almost every other district of the island, an old Koromantyn Negro, the chief instigator and oracle of the insurgents in that parish, who had administered the Fetish or solemn oath to the conspirators, and furnished them with a magical preparation which was to render them invulnerable, was fortunately apprehended, convicted, and hung up with all his feathers and trumperies about him; and his execution struck the insurgents with a general panic, from which they never afterwards recovered. The examinations which were taken at that period, first opened the eyes of the public to the very dangerous tendency VOL. II.

## OBEAH PRACTICE.

"We have the following narratives from a planter in Jamaica, a gentleman of the strictest veracity, who is now in London, and ready to attest the truth of them. and a dim agont bentice

Upon returning to Jamaica in the year 1775, he found that a great many of his Negroes had died during his absence; and that of such as remained alive, at least one-half were debilitated, bloated, and in a very deplorable condition. The mortality continued after his arrival, and two or three were frequently buried in one day; others were taken ill, and

began to decline under the same symptoms. Every means were tried by medicines, and the most careful nursing, to preserve the lives of the feeblest; but in spite of all his endeavours, this depopulation went on for above a twelvemonth longer, with more or less intermission, and without his being able to ascertain the real cause, though the Obeth practice was strongly suspected, as well by himself, as by the doctor and other white persons upon the plantation, as it was known to have been very common in that part of the island, and particularly among the Negroes of the Papare or Popo country. Still he was unable to verify his suspicions, because the patients constantly denied their having any thing to do with persons of that order, coreany knowledge of them. length a Negress, who had been ill for some time, came one day and informed him, that feeling it was impossible for her to live much longer, she thought herself bound in duty, before she died, to impart as very great secret, and acquaint him with the true cause of her disorder, in hopes that the disclosure might prove the means of stopping that mischief, which had already swept away such a number of her fellow-slaves. She proceeded to say, that her step-mother (a woman of the Popo country, above eighty years old, but still hale and active) had put Obi upon her, as she had

also done upon those who had lately died; and that the old women had practised Obi for as many years past as she could remember.

The other Negroes of the plantation no sooner! heard of this impeachment, than they ran in a body to their master, and confirmed the truth of it, adding, that she had carried on this business ever since her arrival from Africa, and was the terror of the whole neighbourhood. Upon this he repaired directly, with six White shrvants, to the old woman's house, and forging the door open, observed the whole inside of the roof (which was of thatch) and every crevice of the walls stuck with the implements of her trade, consisting of rags, feathers, bones of cats, and a thousand other articles. Examining further, a large earthen pot or jar, close covered, was found concealed under her bed. Is contained a prodigious quantity of round balls of earth or clay of various dimensions, large and small whitened on the outside, and variously compounded, some with hair and rags, or feathers of all sorts, and strongly bound with twine; others blended with the upper section of the skulls of cats, or stuck round with cats' teeth and claws, or with human or dogs' teeth, and some glass beads of different-colours; there were also a great many egg-shells filled with a viscous or gummy substance, the qualities of which he neglected to examine; and many little bags

CHAR.

stuffed with a variety of articles, the particulars of which cannot at this distance of time be recollected. The house was instantly pulled down, and with the whole of its contents committed to the flames, amidst the general acciamations of all his other Negroes. In regard to the old woman, he declined bringing her to trial under the law of the Island, which would have punished her with death; but, from a principle of humanity, delivered her into the hands of a party of Spaniards, who (as she was thought capable of doing some trifling kind of work) were very glad to accept and carry her with them to Cuba. From the moment of her departure, his Negroes seemed all to be animated with new spirits, and the malady spread no farther among them. The total of his losses in the course of about fifteen years preceding the discovery, and imputable solely to the Obeah practice, he estimates at least, at one hundred Negrota of the control of the contro

fessors of the Obeah art was such, as to induce a great many of the Negro slaves in Jamaica to engage in the rebellion which happened in that year, and which gave rise to the law which was then made against the practice of Obi.

"Assurance was given to these deluded people, that they were to become invulnerable; and in order to render them so, the Obeah-men furnished them with a powder, with which they were to rub themselves.

In the first engagement with the rebels, nine of them were killed, and many prisoners taken; amongst the latter was one very intelligent fellow, who offered to disclose many important matters, on condition that his life should be spared; which was promised. He then related the active part which the Negroes, known among them by the name of Obeah-men had taken in propagating the insurrection; one of whom was thereupon apprehended, tried (for rebellious conspiracy), convicted, and sentenced to death

"N. B. This was the Koromantyn Obeahman alluded to in our first paper.

"At the place of execution, he bid defiance to the executioner, telling him, that "It was

## CHAPTER IV.

Means of obtaining Slaves in Africa.—Observations thereon.—Objections to a direct and immediate abolition of the trade by the British Nation
only.—The probable consequences of such a
measure, both in Africa and the West Indies,
considered.—Disproportion of seves in the minber of Slaves annually expected from Africa.
Causes the regi.—Mode of transporting Nagrees
to the West Indies, and regulations recently to
tablished by act of parliament.—Effect of those
regulations.

BOOK IV. It hath been observed in a former chapter, that no certain and precise account is easily to be obtained of the means by which the market for slaves is annually kept up and supported in Africa. The several instances that are given of slavery arising from captivity in war, delinquency, and debt, seem inadequate to so regular and abundant a supply. It is difficult to imagine that casual contributions of this kind, can possibly furnish an annual export of 74,000. Having an opportunity, a few

<sup>\*</sup> Besides which great numbers are supplied from the nations bordering on the rivers of Senegal and Gambia, for the emperor of Morocco and the states of Barbary. "Caravans also travel from thence across the continent to Upper

years ago, of consulting a very intelligent person on this point, who had visited many parts of the coast, and appeared to be a man of veracity and candour, I received from him, in writing, an answer, which I shall present to my readers verbatim; and subjoin such further information as I have been able to collect. The answer which I received was given in the words following:-" In all parts of the coast, and I apprehend it to be the same inland, the body of the people are in a state of absolute and unlimited slavery; their children are born to no other inheritance, and are liable to be sold by their owners as they think proper Most parts of the coast differ in their governments; some are absolute monarchies, while others draw near to an aristocracy. In both the authority of the chief or chiefs is unlimited, extending to life, and it is exercised as often as criminal cases require, unless death is commuted into slavery; in which case the offender is sold, and if the shipping will not buy the criminal, he is immediately put to death. Fathers of free conding n have power to sell their

Egypt with considerable supplies of Negroes, some of which are sent afterwards to Constantinople. A very curious and interesting account of this traffic is given in the Report of the Lords of the Privy Council. Great numbers of slaves are likewise sent from Mozambique, and the ports on the eastern coast, to Persia, Goa, and other parts of the East Indies. Hence it has been calculated that Africa is drained annually of not less than 150,000 of its natives.

children, but this power is but very seldom enforced in I never knew an instance of it but once; and then the father was so excerated by his neighbours for the act of selling a son and daughter, that he shortly afterwards fell into a state of despondency and died. The family was of some distinction, and the son and daughtern were bought by a friendly captain, who I know afterwards gave freedom to one of them, and I believe he gave it to both. I never knew another instance of this kind, nor do I believe there is one slave in a thousand procured in this way. Neither do I imagine that there are many procured by wars or intestine broils. The truth is, the bulk of the people are born slaves to great men, reared as such, held as property, and as property sold. There are indeed many circumstances by which a free man may become a slave: such as being in debt, and not able to pay; and in some of such cases, if the debt be large, not only the debtor, but his family likewise, become the slaves of his creditors, and may be sold. Adultery is commonly punished in the same manner: both the offending parties being sold, and the purchase-money paid to the injured husband. Obi, or pretended witchcraft (in which all the Negroes firmly believe, and it is generally accompanied with the crime of poisoning) is another, and a very common offence, for which slavery is adjudged

be murdered without mercy is the same as a horse as a Such is the account which I received, and it is confirmed by several of the witnesses that were examined by the Committee of the Privy Council, and by others that appeared before the House of Commons; but it is contradicted in some material circumstances by other gentlemen, whose examinations were taken at the same time. Mr. Penny asserts, that although three-fourths of the inhabitants of the Windward Coast are slaves to the other fourth, yet that these local and domestic slaves are never sold unless for crimes. He is of opinion that in no country, either in the maritime districts or in the interior parts of Africa, are slaves bred for sale, but that most of those which are disposed of to European are sold in consequence of delinquency, or captivity in war. The same, or nearly the same account, is given of the Fantyn nation by Mr. Norris; who observes, that "a considerable portion of the community are persons born slaves, but that these have peculiar privileges, and enjoy many advantages, which the slaves of the neighbouring countries do not, and cannot be sold at the

BOOK IV. caprice of their masters." His opinion is, that the number of slaves furnished in the Fantyn country (about 2,000 annually) is made up by delinquency and debt. The state of t

Under such contradictory information wit occurred to me, during my residence in Jamaica, to examine many of the Negroes themselves. I mean Negroes newly arrived from Africa; for from those who have resided any length of time in the West Indies, it is difficult to obtain, even to enquiries of an indifferent nature, such answers as carry with them conviction of their truth. It is seldom for instance, that any Guiney Negro will acknowledge that he was in a state of slavery in his native country. Observing the respect and pre-eminence allowed to wealth and consequence among the Whites, and the privileges which attach to freedom in the West Indies. among those of his own colour who are born or rendered free he is tempted, whether justly or not, to assert his claim to some degree of con-

ortiges' specedants union each cupulate for wor.

<sup>\*</sup> Several other witnesses speak of the privileges which attach to demestic slaves in Africa, but it is observable that many of these admit, and not one I believe denies, that the African master has the power of putting such slaves to death, with impunity, whenever he thinks proper; and it will presently be shewn from the testimony of some of the Negroes themselves, that it is a mistake to suppose the master cannot sell them at pleasure.

sideration from his past, if not from his present condition; and it is a natural and excusable propensity. Conceiving therefore that the truth might be best obtained from Negroes recently imported, I enquired of many young people; from different parts of Africa, concerning the circumstances of their captivity and sale; and having reduced their information to writing I interrogated many of them again on the same subject, after an interval of several months. If the same account precisely was given by the same people a second sime, I commonly considered it as grounded in truth. On other occasions, I have examined brothers and sisters apart. If their information agreed in minute particulars, I could have no reason to suspect them of falsehood. Of five-andtwenty young persons of both sexes whom I thus interrogated, fifteen frankly declared that they were born to slavery, and were either sold to pay the debts, or bartered away to supply the wants of their owners. Five were secretly kidnapped in the interior country, and sold to Black merchants, who conveyed them from an immense distance to the sea-coast, and sold them to the ship-masters that brought them to Jamaica. The other five appeared to have fallen victims in some of those petty wars which it is probable rapacity and revenge reciprocally instigate throughout the whole continent of

\* Perhaps the reuder will not be displeased to be presented with a few of these examinations, as they were taken down at the time, and without any view to publication.

dom (a Congo) a boy as I guess about fourteen, his country name Serri, came from a vast distance inland, was waylaid and stole, in the path about three miles from his own village, by one of his countrymen. It was early in the morning, and the man hid him all the day in the woods, and marched him in the night. He was conducted in this manner for a month, and then sold to another Black man for a gun, some powder and shot, and a quantity of salt. He was sold a second time for a keg of brandy. His last-mentioned purchaser bought several other boys in the same manner, and when he had collected twenty, sent them down to the sea-coast, where they were sold to a captain of a ship. He relates further, that his father, Scindia Quante, was a chief or captain under the king, and a great warrier, and had taken many people, whom he sold as slaves.

Quew and Quemina (brothers) from the Gold Coast, one of them, as I guess, about twenty years old, the other eighteen, were born slaves to a man named Benefits, who had a great many other slaves, and sold these two to the captain that brought them to Jamaica. On being saked for what cause their master sold them, they supposed the question implied a charge against them of misconduct, and one of them replied with great quickness, that they were not the only slaves that were sold in Guiney without having been guilty of any orime: their master, they ead, owed money, and sold them to pay his debts.

Yamousa, a Chamba youth, about sixteen, was a slave to a person named Saubadou; who sold him, together with a cow, for a gan, a quantity of other goods, and some brandy.

Oliver, from Assistates—his country name Song—a) oung man, as I green, about twenty-two or twenty-three years of age. His father was a free man, a carpenter—lived in a village far from the sea. The village was attacked by a party of Fantees, who came in the night, and set fire to the houses, and killed most of the inhabitants with guns and cutlesses—particularly the old. The young people they took prisoners, and afterwards sold him and two others, for a piece of gold called sies, to a Black merchant, who carried them to the Fantee country.—He was afterwards sold or transferred over to six different Black purchasers; the last of whom carries, him down to the sea-coast, and sold him on board a ship.—Was much frightened at the sight of White mep, and thought he was to be eaten.

Rether relates that she was born in the Ebo country, about one day a journey from the sea-coast, where her grandmother lived, to whom she was sent on a visit by her father. While there, the village was attacked by a body of Negroes (she knows not of what country) on whose approach she and all the women were sent into the woods, where a party of the energy found them, and carried away all such as were able to travel. The old, and those who were averse to remove, were put to death; her grandmother among the rest. The third day she was sold to the White people. She has many marks about the chest, which she appeals to as a proof of free birth, and asserts that her father had a plantation of corn, yams, and tobacco, and possessed many slaves.

BOOK IV.

humane and enlightened people, concerning the injustice of a traffic thus supported. To attempt its defence in all cases, were to offer an insult to the common sense of mankind, and an sutrans on the best feelings of our nature. Wet a good mind may honestly derive some degree of consolation, in considering that all such of the wretched victims as were slaves in Africa, are, by being sold to the Whites, removed to a situation infinitely more desirable, even in its worst state, than that of the best and most favoured slaves in their native country. It is, on all hands, admitted that the condition of those poor people, under their own governments, is the most deplerable that we can conceive a human creature to be subject to. They have no security for property, nor protection for their persons; they exist at the will and caprice of a master, who is not amenable to any law for his ill treatment of them. and who may slaughter them at his pleasure. He has in truth but very little interest in their preservation, having no means of employing them in profitable labour, and when provisions are scarce, he has even a strong inducement to destroy them. I a work the with a program a margar said

The chief objection to the slave trade arises from the great encouragement which, I fear, it unavoidably holds forth to acts of violence, oppression, and fraud, among the natives towards each other. Without doubt, this is the strong

reflection may perhaps convince us that his opinion is founded in reason, and the nature of the case. Among the commercial nations of Runage, it is true that in smost cases of purchase and barter, the demand and the supply grow up together, and continue to regulate and support each other o but there are the arrange ments of well-informed and civilized men. oalin Africa, it is apprehended the slave merchants possess up ideas of this kind, meither does the nature of their traffic allow of such regulations. When two African states are at swar with each other, the sime of each undoubtedly is to destroy as many enemies, or seize on as great a number of captives, as possible. Of these last unfortunate victims, all such as are able to travel, are commonly sent down to the const for sale; the rest are massacred on sale anot, and the same fate attends these unbanav wretches who, being sent down are found unsaleable .... The prices indeed on the posto have been known to vary as the market is more or less plentifully supplied a but leo long as ships from Europe create a market whether the prices be high or low, it can hardly be doubted. that wars will be as frequent as ever, and that the same acts of oppression, violence, and fraud which are said to be committed by princes on their subjects, and by individuals on each other, for the purpose of procuring slaves for

sale, will exist, has usual, hwithout begulation for restraint. I be a few a little of the contract of the little of the contract of the little of the contract of the little of the lit

CHAP.

Behold then an excess of 38,000 of these miserable people (the present annual export in British shipping) thrown upon the market, and it is surely more than probable that one or the other of these consequences will follow: Either the French, the Dutch, and the other maritime nations of Europe, by seizing on what we surrender, will increase their trade in proportion to the increased supply, or, having the choice and refusal of 38,000 more than they have at present, will become more difficult to please confining their purchases to such only as are called prime slaves. Thus the old, and the very young, the sickly and the feeble, will be scornfully rejected; and perhaps twenty poor wretches be considered as unsaleable then, and secrificed accordingly, to one that is so considered and sacrificed now. Assets all is hillipring

That the latter supposition is not a mere speculative contingency, is abundantly proved by many respectable witnesses, whose examinations were taken by the committee of the privy

could of the short, that have been rejected by the the Britishear

BOOK

council :- Being asked concerning the disposal of such slaves as are rejected by the European traders, either because their cargoes are already assorted. or because the miserable victims are considered as too old or too feeble for labour it was given in evidence, as a fact too notorious to be controverted, that they are very frequently, if not generally, put to death. The slave mer! chant, not having the means of maintaining his captives for any length of time, makes no scruple to avow that it is his intention to destroy them, provided they are not sold by a certain day; and the work of death, on such occasions, is sometimes performed in sight of our shipping. Shocking as this account may seem, it is verified by undisputed testimony; and to suppose that a discontinuance of the trade by one nation only will put an end to this enormity, is to suppose that then African slave-holder will become more merciful as his slaves are rendered of less value: a conclusion which I am afraid experience will sneedative continginey, is abind therrewton

<sup>\*</sup> Mr. Newton (an evidence in support of the application to parliament for an abolition of the trade) admits that some of the slaves, that have been rejected by the Buropeans have been knocked on the head with the paddles of the boat that brought them, and thrown overboard. On the Geld Coast, Mr. Miles supposed they are mostly reserved for the purpose of being sacrificed at the burial of great men. One instance of this came within his own knowledge.—Mr. Weuves knew an instance of a woman being destroyed, who

The effect which a partial abolition would probably have in our sugar islands is now to be; considered; and here it must, in the first place, be observed, that it seems not to be known, or is not adverted to, in England, that the sugar, estates are not only very much understocked in general, but that there is scarce one of them, for reasons that will presently be seen, that post sesses a sufficient number of Negro women in proportion to the men. Of course there being fewer pairs, there are fewer children born. Thus situated, there must necessarily happen a decrease on the whole number of the slaves, even under the mildest treatment, and enjoying the greatest plenty of wholesome provisions. Secondly, it must be remembered, that most of the sugar, estates having been settled on credit, are

was accused of witchcraft, and could not be sold. In order to save her life, he offered to give an anker of brandy for her; but her head was cut off before his messenger arrived. Other instances, similiar to this, are related by Mr. Matthews and Mr. Gandy. Sir George Young saved the life of a beautiful boy, about five years old, at Sierra Leone. The child being too young to be an object of trade, would have been throw into the river by the person that had him to sell, but Sir George, to save his life, offered a quarter cask of Madeira wine for him, which was accepted—he brought him to England, and made a present of him to the Marquis of Lansdown.—Admiral Edwards, Mr. Penney, Mr. Delzel, Mr. Anderson, and others, concur in the same account of the disposal of such as are rejected by the Europeans.

The Report of the Lords of the Committee of

burthened with heavy incumbrances to persons in Great Britain. Many planters are under covenants to consign thither annually, certain specific quantities of sugar and rum. The effect therefore of a direct and unqualified abolition would be this: that while the few persons who have money at command would be waiting, and perhaps contriving, opportunities to stock their plantations with the slaves of their distressed and harassed neighbours, the great majority of planters would find themselves in a most cruel and uncomfortable situation; their estates already weak-handed, deprived of the possibility of selling their lands, and no means in their power of augmenting their stock of labourers by purchase; their creditors, at the same time, clamorous and importunate for produce, which can only be obtained by great exertions of labour: in such circumstances what are they to do? I cannot better illustrate this part of my subject, than by the case of the Dutch planters of Essequebo and Demerary: by an impolitic interdiction of foreign slaveships into those provinces, they have for some time past, felt all the effects of a virtual abolition; and here follows the account which they give of their situation, transcribed from a late memorial to the States General:-" It is impossible (say the petitioners) to inform your High Mightinesses of the real annual diminution of our slaves, but it is generally calculated persons

at five in the hundred, or a twentieth part. This is little felt the first year : nineteeen remaining Negroes hardly perceive that they do the work which the preceding e year employed twenty. But the second year the same work falls to the share of eighteen, and, if another year passes without an augmentation by purchase, seventeen must do the work first allotted to twenty. In This must give rise to discontent, desertion, and rewalt; or, if the Negroes put up patiently with this surcharge, of labour, illness and an earlier death must be the consequence. Or, lastly, if the planters seek to avoid all these inconveniences, they must gradually contract the limits of their plantations, and of course diminish their produce." Thus immediate interest in all cases, and urgent distress in many, are opposed to the principles of justice and the dietates of humanity! !! " Was some of these in

What I have thus deliberately written, is not,

THE A SEC O' TO LETTE OF THE THE SEC SELECTION

<sup>(\*)</sup> The present annual decrease of the Negrees in the British West Indies is estimated at two and a half per cent. on the whole number; but if the same quantity of labour which they now perform, shall continue to be exacted from them as their numbers diminish, it cannot be doubted that the loss will be greater every year, and augment, with accelerated rapidity. The sugar estates will, andoubtedly, suffer most, and it is no difficult matter to calculate in what time they will be entirely dismantled. In Jamaica, the number employed in that line of culture in 1789 was 128,728, all of whom, without fresh supplies from Africa, would probably be extinct in less than thirty years.

BOOK

if I know my own beart, the language of selfishnote or party Houses that reflecting on the means by which slaves are very frequently sh tained in African and the destruction that for merly attended the mode of transporting them to the West Indies, I was at one time of opinion it became this great and renowned nation; instead of regulating her conduct by that of other states, to set a laudable example to them. by vany immediate and unqualified suppression of this are probated commerce : and Isshould still maintain and avow the same sentiments were Innot on faller inquiry and better informationaled to suspece that the mean's present are not adequate to the end. I fear that wdirect and sudden abolition, by one nation alone, will nes serve, the purposes of humanity in Africa; and I am fully convinced that such a measure will tend to aggravate, in a very high degree. the miseries of a great majority of the Negroes already in the West Indies; whose decreasing population is at present unavoidable; and who. therefore, unless recruited by supplies from Africa, must find their labours augment, as their numbers diminish. had signed a system with share in

A question too arises in this place, the discussion of which might probably render all further debate on the subject of abolition superfluous. It extends to nothing less than the practicability of the measure. Whether it be possible for any nation in Europe, singly considered, to

of settishing on the ientiv sb that for ting them ne of only ed nation; y that wof le to than, uppresiden Mondal entiments? etter inforhis proposed nat a direct alone, will in Africa4 a measure igh degree, ne Negroes decreasing and who. plies from

prevent its subjects afrom procuring uslaves in CDAP African so long as Africa shall continue to selb is a point on which I have many doubte pout none concerning the possibility of conveying the slaves so purchased into every island of the West Indies, in spite of the maritime force of alks Europes No man who is acquainted with the extent of uninhabited coast in the larger of those islands; the facility of landing in every parts of them p-the prevailing winds, and the numerous creeks and harbours in tall the meight bouring dominions of foreign powers (so conveniently situated for contraband traffic), can hesitate ammoment to pronounce, that an attempt to prevent the introduction of slaves into our West Indian colonies would be like that of chaining the winds, or giving laws to the occin Milante In samenbour securit of woods sectorit

is all was said (with what truth I know not) that besides confiscation of ship and cargo, it was meant to consider the clandestine importation of slaves into our colonies as a felonious act, and to punish it capitally. The Spaniards treat many species of smuggling in this manner, and in no part of the world is the contraband traffic so prevalent as in the Spanish dominions. It is a curious question, in what manner a cargo of slaves, seized as contraband, would be disposed of ? To declare a set of poor helpless savages free, and turn them loose in a strange country; without food or clothing, would hardly be thought of; and to send them back to Africa, besides the expense and length of the voyage, would be to consign them over to certain destruction. This difficulty seems to have been altogether overlooked, during the discussion of the slave business in parliament.

IV.

The next object to which it was proposed to direct our enquiries, is the mode of conveying slaves from Africa to the West Indies, and their mortality in the voyage: constituting the seecondiground on which most of the petitioners to parliament for an abolition of the trade, have rested their application. But before I proceed to consider this part of my subject, it may not be improperate offer a few observations concorning the great disproportion of sexes in the purchases that are made on the coasts it being a well-known fact, that of the vast numbers of slaves annually exported from Africa, about one-third only are females. This circumstance has been tortured into a charge of criminal net gleet and improvident avaries against the planters in the West Indies, who are supposed from thence to have no wish of making their slaves even as happy as their situation will admit, or of keeping up their numbers by natural increase. How far these charges are founded, let the following testimony of a very competent witness determine :- "The disproportion in the number of male and female slaves exported from Africa (says Mr. Barnes \*) appears to me to be imputable to the three following causes : "First, to "the "practice" of polygamy which prevails throughout Africa. Secondly, the to give the party

esself of the Committee of Council 1789.

CHAP! IV;

to some of the very causes of slavery itself; men are more apt to commit civil offences than women, and in all such cases, where males and females are involved in the same calamity, the first cause still has its operation : the young females are kept for wives, and the males are sold for slaves. Thirdly, to the circumstance that females become unfit for the slave-market at a much earlier period than the males. A woman, through child-bearing, may appear a vary exceptionable slave at twenty-two or twenty-three years of age, whereas a healthy well-made man will not be objected to at four or five-and-thirty; consequently, if an equal number of males and females of like ages were offered for sale, a much greater proportion of the females would be rejected on that account only. With regard to the question, Whether the European traders prefer purchasing males rather than females? I have to observe, that though it is impossible to conduct the business, either of a house or of a plantation, without a number of females, yet as the nature of the slave-service in the West Indies (being chiefly field labour) requires, for the immediate interest of the planter, a great number of males, the European trader would of course wish to purchase his assortment according to the propertion wanted; but the fact is, he has not an option in the case, for the reasons already mentioned;

so that in most parts of Africa it is with great difficulty he can get as many saleable females as will form any tolerable assortment. The application of these remarks will hereafter be seen.

I now return to the manner of transporting the slaves thus purchased, from Africa to the West Indies.

It is difficult, I think, to assign any probable reason or motive why the treatment of these poor people at sea should be otherwise than as humane and indulgent as the safety of the crew will admit. Many shocking instances were however adduced, in the evidence delivered to the committe of privy council of most outragecus and wanton barbarity and cruelty exercised towards them in different ships; but as the witnesses that were brought forward to establish those charges were not the most respectable in point of character, and in some cases were proved to have suits at law with the captains against whom they gave evidence, I shall collect my account from less disputable authority with the set we were the use for men

being locked, by means of a small iron fetter, to the left of the other; and if marks, of a turbulent disposition appear, an additional fetter is put on their wrists. On the passage, when danger is ino longer apprehended, these irons are commonly taken off; and women and young people are exempt from them from the beginning They are lodged between decks, on clean boards, the men and women being separated from each other by bulk-heads ; and fresh air is admitted by means of wind-sails or ventilators. Covering of any kind, as well from the warmth of the climate as from the constant practice of going naked, would be insupportable to them. Every morning if the weather permits; they are brought upon deck, and allowed to continue there until the evening. Their apartments, in the mean time, are washed, scrapad, fumigated, and sprinkled with vinegar. The first attention paid to them in the morning is to supply them with water to wash their hands and faces, after which they are provided with their morning meal : this, according to the country from whence they

come consists either of Indian corn, on of rice

or yams. Before noon they are constantly and

regularly made to bathe in salt-water, and

<sup>\*</sup> The bulk of the cargo is generally young people from sixteen years of age to thirty. The lowest size four feet.

nothing can be more agreeable and refreshing. The dinner is varied, consisting sometimes of food to which they have been accustomed in Africa, as yams and Indian corn, &c. and at other times of provisions brought from Europe, as dried beans and peas, wheat, shelled berley, and biscuit : all these are boiled soft in steam. and mixed up with a sauce made of meat, with fish, or palm-oil; this last is a constant and desirable article in their cookery. At each meal they are allowed as much as they can cat, and have likewise a sufficiency of fresh water; unless when, from an uncommon long voyage, the preservation of the ship compels the cuptain to put them to a short allowance. Drams also are given them when the weather is cold or wet; and pipes and tobacco whenever they deaire them. In the intervals between their meals. they are encouraged to divert themselves with music and dancing; for which purpose such rude and uncouth instruments as are used in Africa are collected before their departure; and they are also permitted to amuse themselves with games of chance, for which they are likewise furnished with implements of African invention. In sickness, the invalids are imprediately removed to the captain's cabin, or a hospital built near the forecastle; and treated with all the care, both in regard to medicine and food, that circumstances will admit; and

when, fortunately for the negroes, the ship touches at any place in her wayage, as frequently happens, every refreshment that the country affords, as cocon nuts, omnges, limes, and other fruits, with regetables of all aorts, are distributed among them and refreshments of the same kind are freely allowed them at the place of their destination, between the days of arrival and sale. I refred From this account, which is confirmed by the testimony of a great number of respectable men, many of whom were wholly disinterested in the question, and could therefore have the motive to violate or suppress the truth, it may be supposed that every scheme which can easily bondevised to preserve the negroes in health; claunliness, and cheerfulness, is adopted in the voyages Son dueadful o notwithstanding, has been the mortality in several ships, wherein these precautions were used, as to evince, beyand all contradiction, that there was something in those instances intrinsically wrong; and it cannot be doubted that the a schief has been ascribed to its proper cause, namely, the criminal rapaciousness of many of the ship-masters in purchasing more negroes than their accom modations were calculated to convey. It ap peared in evidence before the House of Commons, that a ship of 240 tons would frequently be crowded with no less than 520 slaves; which was not allowing ten inches of room to each

adividualide The removed and obtainst idease repeticity was often times or the of 18 july state is the veyage, and 44 pet centralizate in the htituum of the West a Indies anseyious months the salet from diseases contracted at beer por disstruction of the human species on which it is imperaible to reflect without stidiguation land tion, between the days of arrival and sale!! rorrod If othe several larguments, however, which have been raised on the ground of these althous in support of the echeme of abolition a very short answer may be given me Admit all the mit series and destructive wretchedness which there heens placed to "this secount stoshave enisted in full force; and it will still remain 40 be inquired whether measures of a less powerful operation then a total suppression of the trade, will not obvinter in future the evils complained of inbecause, if regulations alone are sufficient for that purpose abolition in annothibe in cessery. Regulations have accordingly been framed and inforced under the authority of the British perliament, of which the certain effect ought surely to be known, before the evils they are meant to redress are pronounced irremediable. By an act of the 28th year of his present Majesty (since renewed and amended) the slave ships are restricted to the conveyance of five slaves to every three consumnd even this proportion is allowed only as far as 201 tons. For every

Thi

CHAP.

additional ton they are limited to one additional slave. To these important precautions for securing to the Negmes a sufficiency of room, is added the necessary provision of a regularly-qualified surgeon; to whom, as well as to the ship-master, very liberal encouragement is given, to induce both of them to exert every provident endeavour in preserving their unfortunate captives in health and spirits; the sum of one hundred pounds being allowed to the master, and 50% to the surgeon, if the loss on the voyage amounts to no more than two in the hundred, and half those sums if the loss shall not exceed three in the hundred.

Of the full effect which this system of restriction and encouragement hath hitherto produced in all the British colonies, I am not informed; but judging by returns which I have obtained from one of the principal marts in the West Indies, it would seem to have been found, in a very eminent degree, advantageous and salutary. At the port of Montego-Bay, in Jamaica, the Negroes imported between the 18th day of November 1789 and the 15th

It is also provided, that vessels not exceeding 201 tons shall not carry of male slaves (exceeding four feet four inches in height) more than one for each ton, and vessels of larger size more than three such males for every five tons. This regulation assume intended as an encouragement to the export of a greater proportion of females.

BOOK

of July 1791, were 9,993, in 38 ships; the mortality at see, exclusive of the loss of 54 negroes in a musiny on the coast, was 746, which is somewhat under asven per cent. on the whole number of slaves. This, though much lest, I believe, than the average loss which commonly happened before the regulating law took place, is Ladmit; sufficiently great; and, had it prevailed in lany degree, equally non the several ships concerned, Amight perhaps have mbeen considered as a fair estimate of the general mortality consequent on the trade, notwithstanding the precautions and provisions of the regulating But on examining the list, I find that eight of the 38 ships, were entitled to, and actually received, the full premium; two others received the half premium; and one other (a schooner that sailed from Jamaica to the coast before the act took place) returned without the loss of a single negro. Of the 746 deaths, no less than 328 occurred in four ships only, all of which, with five other vessels, comprehends ing the whole number of ships in which three fifths of the mortality occurred, came from the same part of the coast, the Bight of Benin; a circumstance that gives room to conclude (as undoubtedly was the fact) that the negroes from that part of the country brought disease and contagion with them from the land; an epidemic fever and flux generally prevailing on

Perhaps the truest criterion by which to estimate the beneficial effect of the regulating lawy is the comparatively trifling loss that now occurs in the harbours of the West Indies before the Guiney ships open their sales. This mortality, which was formerly extimated at 42 per centariand was mainfestly the consequence of sickness of huproper treatment in the voyage, is now happily mitigated in so great a degree, that out of the whole humber of 9,995 slaves imported into Montego Bay as before stated, the loss between the days of arrival and sale was no more than 69, or not quite ! per cent! Enough therefore had been effected to demonstrate; that it is by no mems impossible, nor indeed a very difficult matter, to render the conveyance of Negroes from Africa to the West Indies at little prejudicial to their healths, as the dansportation, of any other body of people across the ocean in any part of the world. Few voyages were more destructive to the seamen than that of Lord Anson, and none less so than those of Captain Cook; an incontestable proof that the mortality, which has commonly occurred at sear has at all times arisen from ill-constructed

Perhaps no plan is so likely to save the lives and preserve the healths of the negroes at sea, as that of limiting the slave-ships to 200 tons burthen, and allowing them to receive on board only 2 or 2½ to a ton. Small vessels are soon loaded; and from a multitude of examples that I have seen, it appears to me that the greatest mortality happens in the larger ships.

speedily to be devoured. The wisdom of the legislature of Jamaica has corrected this enormitysin that island, by enacting that the sales shall be conducted on shore, and that care shall be taken not to separate different branches of the same familys da I am afraid it hath been found difficults in all cases to enforce this latter regulation; but it is usual with most planters, I believes to sinquire of the Negroes themselves by mean of an interpreter, whether they have relations don board, and to purchase families together; or; by exchanging with other buyers; to prevent if possible that cruel separation between parents and children, and brothers and sisters, bewhich must be ometimes, a I doubt, hunavoidably take place. I never knew an instance where such purchase or accommodation was knowingly declined or refused. \*\* " " or or or or

Although there is something extremely shocking to a humane and cultivated mind, in the idea of beholding a numerous body of our unfortunate fellow-creatures in captivity and exile, exposed naked to public view, and sold like a herd of cattle, yet I could never perceive (except in the cases that have been mentioned. Soon after this was written the author of this work had the honour of proposing to the assembly of Jamaics, of which he was a member, an act which was unanimously adopted, and is now an existing law, by which the Guiney factors are compelled, under the solemnity of an oath, to do their utmost to enforce the regulations alluded to.

before their arrival, that they are to be employed in tillege; and, knowing that they were bought with money, expect to be sold in the same manner. They display therefore, on being brought to market, ivery few signs of laments tion, for their past, or of apprehension for their future condition; but, wearied out with confinement at seas commonly express great: eagerness to be sold; presenting themselves, when the buyers are few, with cheerfulness and alacrity for selection, and appearing mortified and disappointed when refused. If it happens. as it frequently does, when the purchasers have leisure and opportunity to inspect them individually, that some bodily defect or blemish is discovered in any of them, the majority seem highly diverted at the circumstance; manifest-

me to use the same, or nearly the same, marks as the savages of New Zealand, viz. deep incisions on each cheek drawn gircularly from the ear to the mouth. (Vide Hawkesworth's Voyages, vol. iii. c. 9.) It is ridiculous enough, that some of the writers against the slave-trade should ascribe these marks of superstition or false taste to the cruelty of the planters, and gravely assert that they are the scars of horrible gashes inflicted by the bloody hand of tyranny in the wantonness of punishment. The Reverend Mr. Clarkson eatches very eagerly at this idea, and asserts with great solemnity, that "it is a matter of constant lamentation with "disinterested people, who, out of curiosity, attend the Ne-"gro markets in Jamaica, that they are not able to turn their

that reflection constitutes no very predominant part of their character.

The buyen baving completed his assortment, and clothed his newly-acquired subjects with a coarses German linen, called cosnaburghed and provided them also with thats, handlevehicle and knives, sends them to the place of their intended residence : hand now a practice prevails in Jamaica, which I myself, unacquainted as I then was with the actual management in detail of a sugar plantation, and residing in distant country; used to reprobate and exclaims against; but to which I now submit from full conviction, founded on experience of its usefulness and necessity. The practice is the of distributing the newly-imported Africans among the old Negroes, as pensioners (with some little assistance occasionally given) on their little peculium, and provision grounds. This I

which Ishad authority aread : wringer and of beles On my return to the West Indies, I was surprised to find the old established Negroes, when young people newly arrived from Africa were sent among them, request, as a particular instance of favour and indulgence to themselves, the revival and continuance of the ancient system l assuring me they had the means of supporting the strangers without difficulty. Many who thus applied, proposed each of them to edopt one of their young country-folks in the room of children they had lost by death, or had been deprived of in Africa; others, because they wished, like the patriarchs of old, to see their sons take to themselves wives from their own nation and kindred; and all of them, I presume, because, among other considerations, they expected to revive and retrace in the conversation of their new visitors, the remembrance: and ideas of past pleasures and scenes of their youth. The strangers too were best pleased with this arrangement, and ever afterwards considered themselves as the adopted children of those by whom they were thus protected, calling them parents, and venerating them as such; and I never knew an instance of the violation of

BOOK IV.

a trust thus solicited and bestowed. In the course of eight or ten months, provided they are mildly used and kept free of disease, new people, under these circumstances, become reconciled to the country; begin to get well established in their families, their houses and provision-grounds; and prove in all respects as valuable as the native or Creole negroes.

What has hitherto been observed concerning the disposal of Africans newly imported, is, I believe applicable to West Indian estates of all descriptions; but, as my own personal attention has been chiefly directed to sugar plantations, I would be understood to speak of those more particularly; and shall now proceed to describe the methodical arrangement and distribution of labour with which they are conducted, as it is unquestionably more severe and constant than that on any other species of landed property in the West Indies.

The Negroes are divided into three sets or classes, usually called gangs; the first consisting of the most healthy and robust of the men and women, whose chief business it is, out of

triens, .

fo

<sup>&</sup>quot;Generally speaking, a Creole Negro is considered as worth more than one imported; but in a valuation, by indifferent persons, of two able well-disposed Negroes, nearly of the same age, the one an African, the other a native, no great difference (if any) would be made. A child just born is valued at 51.

by in-, nearly tive, no at born crop-time, to clear, hole and plant the ground; and, in crop-time, to cut the canes, feed the mills, and attend the manufacture of the sugar. It is computed that, in the whole body of the negroes on a well-conditioned plantation, there are commonly found one-third of this description, exclusive of domestics and negro tradesmen, viz. carpenters, coopers, and masons, with which each well-regulated plantation is provided. The second gang is composed of young boys and girls, women far gone with child, and convalescents, who are chiefly em-

The annual profit arising to the owner, from the labour of each able field Negro employed in the cultivation of sugar, may be reckoned at twenty-five pounds sterling money. I reckon thus -A sugar plantation, well conducted; and in a favourable seil, ought to yield as many hogsheads of sugar, of 16 cwt. annually, as there are Negroes belonging to it, the average value of which, for ten years past, may be stated at 151 sterling the hogshead; but as every plantation is not thus productive, and the rum, which is generally appropriated to the payment of contingent charges, not being always sufficient for that purpose, I will allow 101 sterling only, as the clear profit per hogshead of the sugar, which therefore is the average value of the labour of each Negro, old and young; and one-third only of the Negroes being able people, their labour may be put at 301, a head; out of which however must be deducted, the interest on their first cost, and an allowance for the risk of losing them by death or desertion (their maintenance, &c. being included in the contingent expences of the estate) for both which I allow fifteen per cent. This leaves about 251 sterling clear, or nearly a fourth part of the actual va-Pure of cach slave, 30 se centre of the year is after

CHAP V. BOOK IV. ployed in weeding the canes, and other light work adapted to their strength and condition; and the third set consists of young children, attended by a careful old woman, who are employed in collecting green-meat for the plgs and sheep; or in weeding the garden, or some such gentle exercise, merely to preserve them from habits of idleness.

The first going is summoned to the labours of the field either by a bell or the blowing of a conchahell, just before sun-rise. They bring with them, besides their bees or bills, provisions for breakfast; and are attended by a White person, and a Black superintendant called a driver. The list being called over, and the names of all the absentees noted, they proceed with their work until eight or nine o'clock, when they sit down in the shade to breakfast, which is prepared in the mean time by a certain number of women, whose sole employment it is to act as cooks for the rest. This meal commonly consists of boiled yams, eddoes, ocra, calable and plantains, or as many of those vegetables as they can procure; seasoned with salt, and cayenne pepper; and, in truth, it is an exceeding palatable and wholesome mess. By this time most of the absentees make their appearance, and are sometimes punished for their sluggishness by a few stripes of the driver's whip But I am happy to say that of late years a very slight excuse is generally admitted.

The fact is, that when the mornings are chill and foggy, as frequently happens even under the zone, the sensations of the Negro are distressful beyond the imagination of an inhabitant of frozen regions.... Instead of deriving firminess and activity from the cold, he becomes inert sluggish, and languid; and neither labour nor punishment will animate him to great exertion, until be is revivified by the genial warmth of the sun. At breakfast they are seldom indulged with more than helf or three quarters of an how; and, having resumed their work contione in the field until noon, when the bell calls them from labour. They are now allowed two hours of rest and refreshment; one of which is commonly spent in sleep. Their dinner is provided with the addition of salted or pickled fish, of which each Negro receives a weekly allowance. Many of them, however, preferring a plentiful supper to a meal at noon pass the hours of recess, either in sleep, or in collecting food for their pigs and poultry, of which they are permitted to keep as many as they please; or perhaps a few of the more industrious will employ, an hour in their provision grounds. At two o'clock they are sgain summoned to the field, where having been refreshed both by rest and food, they now manifest some signs of

vigorous and animated application; although I

can with great truth assert, that one English

CHAP.

IV.

labourer in his own climate would perform at least three times the work of any one Negro in the same period. At sun-set, or very soon after, they are oreleased for the pight! (the drudgery, so much complained of in some of the islands to windward, of picking grass, being happily unknown in Jamaica,) and if the day has been wet, or their labour harder than usual, they are sometimes indulged with an allowance of rum. On the whole, as the length of the days in the latitude of the West Indies differs very little throughout the year, I conceive they are employed daily about ten hours, in the service of their master, Sundays and holidays excepted. In the crop season, however, the system is different; for at that time, such of the Negroes as are employed in the mill and boilinghouses often work very late, frequently all night; but they are divided into watches, which relieve each other according to the practice among seamen; and it is remarkable, that at this season the Negroes enjoy higher health and vigour than at any other period of the year; a circumstance undoubtedly owing to the free and unrestrained use which they are allowed to make of the ripe canes, the cane-liquor, and syrup.

The practice which prevails in Jamaica of giving the Negroes lands to cultivate, from the produce of which they are expected to maintain

themselves (except in times of sparcity, arising CHAP: from hurricanes and droughts, when assistance is never denied them) is universally allowed to be judicious and beneficial; producing a happy coalition: of interests between the master and the slave of The enegro who has acquired by his own labour a property in his master's land, has much to lose, and is therefore less inclined to desert his work. He earns a little money, by which he is enabled to indulge himself in fine clothes on holidays, and gratify his palate, with salted meats and other provisions that otherwise he could not obtain; and the proprietor is eased, in a great measure, of the expence of feeding him. baln some of the Windward Islands they have not land enough for the purpose; nor in any one of them are the Negroes so happily accommodated, in this respect, as in the large island of Jamaica; where they are seldom either stinted in quantity of land, or confined as to situation. In fact, if the owner's territory is sufficiently extensive, the Negroes make it a practice to enlarge their own grounds. or exchange them for fresh land, every year. By these means, having quicker and better returns, they raise provisions in abundance, not only for their own use, but also a great surplus to sell. The misfortune is, they trust more to plantaingroves, corn, and other vegetables, that are liable to be destroyed by storms, than to what are

BOOK IV. called ground-precisions; such as years, eddoes, potatoes, cassada, and other esculent roots; all which are out of the reach of hurricanes; but prudence is a term that has no place in the negro vocabulary. To obviate the mischiefs which fatal experience has proved to flow from this gross inattentien, the Slave Act of Jamaica obliges, under a penalty, every proprietor of lands to keep, properly cultivated in ground-provisions, one acre for every ten Negroes, exclusive of the negro-grounds.

In Jemaica the Negroes are allowed one day in a fortnight, except in time of crop, besides Sundays and holidays, for cultivating their grounds and carrying their provisions to market. Some of them find time on these days, besides raising provisions, to make a few coarse manufactures, such as mats for beds, bark ropes of a strong and durable texture, wicker chairs and baskets, earthen jars, pans, &c. for all which they find a ready sale; but I cannot say much for the skill and elegance of their workmanship. The most industrious of the Negroes do not, I believe, employ more than sixteen hours in a month in the cultivation of their own provision-gardens (leaving all further care of them to the beneficence of nature), and in favourable seasons this is sufficent. Sunday is their day of market, and it is wonderful what numbers are then seen, hastening from all parts of the country, towards the towns and shipping-places, laden with fruits and vegetables, pigs, goats and poultry, their own property. In Jamaica it is supposed that upwards of 10,000. assemble every Sunday morning in the market of Kingston, where they barter their provisions, &c. for salted beef and pork, or fine linen and ornaments for their wives and children. I do not believe that an instance can be produced of

CHAP.

The cottages of the Negroes usually compose a small village, the situation of which, for the sake of convenience and water, is commonly near the buildings in which the manufacture of sugar is conducted. They are seldom placed with much regard to order; but, being always intermingled with fruit-trees, particularly the banand, the avocado-pear, and the orange (the Negroes' own planting and property) they sometimes exhibit a pleasing and picturesque appearance. To affirm that they are very tolerable habitations, according to the idea which an untravelled Englishman would probably form of the word, were an insult to the reader; but it may honestly be said, that, allowing for the difference of climate, they far excel the cabins of the Scotch and Irish peasants, as described by Mr. Young, and other travellers. They are such, at least, as are commensurate to the desires and necessities of their inhabitants. who build them according to their own fancy both in size and shape, the master allowing the

a master's interfering with his Negroes in their peculium thus acquired. They are permitted also to dispose at their deaths of what little property they possess; and even to bequeath their grounds or gardens to such of their fellow-slaves as they think proper. These principles are so well established, that whenever it is found convenient for the owner to exchange the negro-grounds for other lands, the Negroes must be satisfied, in money or otherwise, before the exchange takes place. It is universally the practice.

BOOK TV.

timber, and frequently permitting the estate's carpenters to assist in the building. In general, a cottage for one Negro and his wife, is from fifteen to twenty feet in length, and divided into two apartments. It is composed of hard posts driven into the ground; and interlaced with wattles and plaister, the height from the ground to the plate being barely sufficient to admit the owner to walk in upright. The floor is of natural earth, which is commonly dry enough, and the roof thatched with palm-thatch, or the leaves of the cocos-nut tree; an admirable covering forming a lasting and impenetrable shelter both against the sun and the rain. Of furniture they have no great matters to boast, nor, considering their habits of life, is much required. The bedstead is a platform of boards, and the bed a mat, covered with a blanket; a small table, two or three' low stools, an earthern jar for holding water, a few smaller ones, a pail, an iron pot, calabashes of different sizes (serving very tolerably for plates, dishes, and bowls), make up the rest. Their cookery is conducted in the open air, and fire-wood being always at hand, they have not only a sufficiency for that purpose, but also for a fire within doors during the night, without which a negro cannot sleep

with comforts It is made in the middle of one CHAP. of the two rooms, and the smoke makes its way through the door on the thatch. This account? of their accommodation, however, is confined to the lowest among the field negroes atrades men and domestics are in general vastly better lodged and provided "Many of these have larger houses with boarded floors, and are accommodated (at their own expence it is true) with very decent furniture : a few have even good beds, linen sheets, and musquito nets, and display a shelf or two of plates and dishes of queen's or Staffordshire (ware, with his apitagra visus

Of clothing, the allowance of the master is not always so liberal as might be wished, but much more so of late years than formerly.\* Few of the negroes, however, on Sundays and holidays, appear deficient in this point or shew any want of raiment, not only decent but gaudy, a mista in the contract of the second of the second

The circumstances wherein the slaves in the West Indies seem mostly indebted to their owners' liberality, are, I think, those of medical attendance and accommodation when sick. Every plantation that I am acquainted with.

and as we said the said of the

Partition of the State of the P. \* I believe the Negroes on every plantation in Jamaica, without exception, receive a yearly allowance of Osnaburgh linen, woollen, baize, checks, &c. and but very few planters deny them hats, handkerchiefs, and other little articles, as knives, needles and thread, &c. &c.

noon is under the daily or weekly inspection of a practitioner in physic and surgery, who very frequently resides on the spot; and the plentcrasbeing in general men of education themselves, are not easily reconciled, in so important; a metter, with such illiterate pretenders in medicine as are very often found in the country parts of England to the disgrace of the professional Young men of skill and science are therefore sought for and encouraged; and as but few single plantations can afford a very liheral allowance, they are permitted to extend their practice in the neighbourhood.\*

> \* The usual recompence to the surgeon for attendance and medicines, is six shillings a head per annum for all the Negroes on the estate, whether sick or well. Amputations, difficult cases in midwifery, inoculation, &c. are paid for exclusively, and on a liberal scale, A property having 500 Negroes contributes about 150l. sterling per annum; and the surgeon, if he chooses, is entitled to board, washing, and lodging; and this is altogether independent of the profits of his practice with the Whites. I suppose there are few plantation doctors in Jamaica that have less than 500 Negroes under their care; several (with their assistants) have upwards of 5000.

Among the diseases which Negroes bring with them from Africa, the most loathsome are the cacabay and the yaws; and it is difficult to ely which is the worst. The former is the leprosy of the Arabians, and the latter (much the most common) is supposed, by some writers, to be the leprosy mentioned in Leviticus, c. xiii. Both are very accurately described by Doctor Hillary, in his Observations on the Diseases of Barbadoes. Young Negro children often catch the yaws, and get through it without medicine or much incon-

CMAP.

For the better accommodation of invalids and women in child-birth, every plantation is provided with a sick-house or hospital, divided into different apartments; and over which one or more aged women preside as nurses. The proprietor commonly supplies blankets, flour, rice, sugar, and oatmeal: these things I have seldom known to be denied, and some gentlemen afford, besides fresh beef and mutton, more costly articles; such as spices, sago, and wine.

to the life to the same of the same of

venience. At a later period it is seldom or neverthoroughly eradicated; and as, like the small-pox, it is never had but once, the Gold Coast Negroes are said to communicate the infection to their infants by inoculation. I very much doubt if medicine of any kind is of use in this disease.- But the greatest mortality among the Negroes in the West Indies arises from two other complaints; the one affecting infants between the fifth and fourteenth days after their birth, and of which it is supposed that one-fourth of all the Negro children perish. It is a species of tetanus, or locked jaw : but both the cause of it in these poor children, and the remedy. remain yet to be discovered. The other complaint affects adults, or rather Negroes who are past their prime. They become dropsical, and complain of a constant uneasiness in the stomach; for which they find a temporary relief in eating some kind of earth. The French planters call this disease mal-d'estomac, or the stomach-evil. I have formerly heard of owners and managers who were so ignorant and savage as to attempt the cure by severe punishment , considering dirteating, not as a disease, but a crime. I hope the race is extinct. The best and only remedy is kind usage and wholesome animal food; and perhaps a steel drink may be of some service. Of one poor fellow in this complaint, I myself made a perfect cure by persisting some time in this method.

BOOK IV. On the whole, netwithstanding some defects, let allowance be made for the climate and soil, and it may be asserted with truth and modesty, that, if the situation of the slaves in the British West Indies were, in all cases, on a level with their circumstances in regard to food, lodging, and medical assistance, they might be deemed objects of envy to half the peasantry of Europe.

At the same time let it not be forgotten, that the legislative authority in many of the sugar islands, has been, and still is, most humanely and laudably exerted in exalting the condition of the slave in all respects, and circumscribing the power of the master.—" Protection of the " slaves (says the Report of the Privy Council) " made but a very small portion of their earlier " policy. This branch has of late been taken "up, and express directions have been given " to ensure to the negroes, the enjoyment of "many advantages tending to alleviate their " condition. In three islands particularly (Ja-" maica, Grenada, and Dominica) the wish to " soften the rigours of their situation has mu-" nifested itself more decidedly. Measures " have been devised by the legislatures of those " islands for placing them in a state of society. "where they will be entitled to a protection "that in former times would have been thought "incompatible with the dependance and sub-"ordination of slavery."

CHAP.

To this distinguished and honourable testimony it may be added, as a circumstance of still greater importance, that the age itself is hourly improving in humanity; and that this improvement visibly extends beyond the Atlantic. Its influence is felt where the law is a dead letter. This, however, is to be under stood with considerable allowance; for it is a melancholy truth, that authority over these poor people must, on several occasions, unavoidably devolve into hands that will employ it only in its abuse; and in cases too, in which, if redress be sought, the testimony of the injured party is inadmissible in a court of justice. Under those circumstances, while the law loses its authority, I am afraid that the sense of decorum alone affords but a feeble restraint against the corrupt passions and infirmities of our nature, the hardness of avarice, the pride of power, the sallies of anger, and the thirst of revenge.

That the narratives therefore of excessive whippings, and barbarous mutilations, which have lately awakened the sympathy of the public, are all of them "absolutely false;"—though it has been asserted by others, shall not be asserted by me. If they have happened but seldom, they have happened too often. The difference between me, and those who, on this ground, continue to urge the necessity of an

BOOK IV.

immediate and total suppression of the slavetrade, is this; they assert that it is not unfrequent, but common, the occurrence of every hour, to behold the miserable Negroes fall victims to a series of cruelties of which no other age or country affords an example; and they maintain that the planters, in general, are guilty of these cruelties, without commiscration or remorse. I, on the other hand, aver that, although such enormities have certainly sometimes happened, and may happen again, yet that the general treatment of the Negroes in the British West Indies is mild, temperate, and indulgent: that instances of cruelty are not only rare, but always universally reprobated when discovered; and, when susceptible of legal proof, severely punished.\*

\* As the latter part of this assertion has been very confidently denied by some of the witnesses that have appeared before a Committee of the House of Commons, I beg leave to trouble the reader with the following cases in point:

"Spanish Town, Jamaica, February 1777. Thomas Fell was indicted for assaulting a Negro man slave, the property of Richard Welch, Esquire, and found guilty. Sentenced to pay a find to the king of twenty pounds, and to be imprisoned in the common gaol one week, unduntil payment of the fine."

"Kingston, Jamaica, At the Surry assise, 1786; George Geddes was tried, and found guilty on two indictments, for cruelly beating and maining two of his own slaves. Sentence to pay a fine to the king of £100, on each indictment, and to be imprisoned six months in the jail of

Kingston, and until payment of the fine, and afterwards to find security for his good behaviour, &c."449 1408 1111

"Sarry assize, 1778. John Durant; a free man of Colour, was indicted and found guilty of assaulting a Negro man slave named Sacco, the property of Eliza Wheeler, a free Negro woman. Sentenced to be publicly flogged at the Beef-market this not hangohis about or all stringers 170

"Quarter sessions, Kingston, August, 1791. The King versus Thomson, for assaulting and falsely imprisoning a Negro boy, the property of Francis Robertson. Found guilty and fined 101.-King versus Bender, for wantonly and immoderately punishing a negro man, his own property, named Fortune. Found guilty and fined 201."

The above are extracts fairly abridged from the records in the proper office in Jamaica. Testimonies of the same kind, more fully stated, from the Island of St. Christopher, appear in the Report of the Committee of Privy Council; to whom evidence was likewise given that a White man, in the Island of Grenada, was, in the year 1776, convicted of the murder of his own slave, and executed. If many other cases cannot be cited, it may fairly be supposed, from those which have been adduced, that fresh occasion has not often been given. The following shocking instance, however, happened in Jamaica, in the summer of 1791:-William Rattrary, a carpeater at the port of Rio Bueno, in a fit of drunkenness, threw an axe at a perro boy, his own slave, which unfortunately killed him on the spot. The coroner's inquest finding it wilful murder, the man was apprehended, and sent to gaol in irons. He was not, it is true, publicly tried and hanged for the crime; for, being well assured that such would be his fate, by thought it best to execute justice on himself, and found in suicide as

mentioned, that the evidence of the slave cannot be edmitted against a White person, even in cases of the most atrocious injury. This is an evil to which, on several accounts, Infear no direct and efficacious remedy can be applied. In some of the islands, however, attempts have been made, with an earnestness suited to the importance of the subject, to supply the defect; and expedients have been adopted for that purpose. which, in most cases, it may be hoped, will have the good consequence of a solid protection. By the new slave act of Grenada, the justices are required annually to nominate three freeholders to be guardians of the slaves; who are to take an oath to see the law duly executed. They are not only to inspect the provision-ground, the clothing, and maintenance, and to inquire into the general treatment of the slaves, but also to interrogate on cath the managers and overseers, concerning the due observance of the law; and in case of breaches thereof, to prosecute the offenders. Of this measure the report of the Privy Council expresses the highest approbation: "The obliging managers and overseers (it observes) to answer upon oath, gives peculiar efficacy to a regulation intended for the benefit of persons whose testimony, by the law of the escape from the gallows. This fact, which is within my own knowledge, is certainly no proof that murderers of their own slaves escape with impunity.

CHAP.

In the same liberal spirit, and co-operating to the same generous end, the legislature of Jamaica have constituted the justices and vestry of each parish in that Island, a council of protection, expressly for the purpose of making full inquiry into the barbarities exercised on slaves, and bringing the authors to punishment at the public expence. With this view, it is enacted, that when any complaint, or probable intelligence from any slave, or otherwise, is made before a justice of the peace, of the mutilation and confinement of a slave, the justice is impowered and required to issue his warrant to bring the slave before him for inspection. "By this regulation (say the assembly) it is intended, as far as possible, to take from the owner the power of concealment; for the magistrate is enabled to obtain a view of the fact, on evidence, which, in other cases is, and ought to be, inadmissible." By another clause in the same act, in order more effectually to prevent the destruction of negroes by excessive labour and unreasonable punishments, the surgeon of every plantation is required to produce and deliver in upon oath, to the justices and vestry, an annual account of the decrease and increase of the slaves of such plantation, assigning also the causes of such decrease, to the best of his

On this head the assembly remark "how tender and cautious every rational manager must necessarily be in the punishments which he administers, who considers, that he has a resident inspector into his conduct, and that the punishment of death may follow an abuse of his authority."

Such are a few of the many forcible and decisive testimonies which the resident planters in the West Indies have given to the world of their just abhorrence of all acts of cruelty and oppression towards the poor people over whom the accident of birth or fortune have invested them with power.-They have demonstrated that their inclination concurs with their interest effectually to perform whatever humanity and the sense of reciprocal obligation require towards their African labourers; and they have armed the law with additional energy, in the hope of curbing those passions, suppressing those frailties, and preventing those excesses, which the plenitude of power is too apt to encourage. If this effect cannot, in all cases and contingencies, be produced, the failure must be comprized among the many other insurmountable difficulties and irresistible evils of life, for which human wisdom has hitherto in vain sought a remedy.

The grand (and I admit the most plausible) accusation against the general conduct of the

CHAP.

planters, arises from the necessity they find themselves under of having an annual recruit of slaves from Africa, to fill up the numbers that perish in the West Indies. So long as it shall appear that the natural increase of the negroes al ready in the Sugar Islands, is insufficient for is purpose, it will be contended that this ciru stance, of itself, affords an obvious and undenable proof that it is not to individuals alone. the blame of improper treatment ought to be attributed. That power, it is urged, must in almost all cases be abused, and that slavery must be universally excessive, which give occasion to so dreadful a waste of life. The objection has been anticipated, and in part answered, in the preceding page by the proof that has been given of the cat disproportion of the sexes in the yearly importations from Africa. It has been shewn from unquestionable authority, that one third only are females. Thus, notwithstanding every allowance for the Creoles or natives, who may reasonably be supposed to have increased according to the general laws of nature, there was in the year 1789, in Jamaica alone, an excess in its negro population of 30,000 males. But this is not the whole extent of the evil. It is a truth well known, that the practice of polygamy, which universally prevails in Africa, is also very generally adopted among the negroes in the West Indies; and he

who conceives that a remedy may be found for this by introducing among them the laws of marriage as established in Europe, is utterly ignorant of their manners, propensities, and superstitions. It is reckoned in Jamaica, on a moderate computation, that not less than ten thousand of such as are called Head Negroes (artificers and others) possess from two to four wives. This partial appropriation of the women creates a still greater proportion of single men; and produces all the mischiefs which are necessarily attached to the system of polygamy. In Africa, the redundancy of males occasioned by an unequal distribution of the females, is undoubtedly one of the sources which supplies the European trader with slaves; and the consequences attending it among the negroes in the West Indies, are a shocking licentiousness and profligacy of manners in most of their women; [who are exposed to temptations which they cannot resist. They hold chastity in so little estimation, that barrenness and frequent abortions, the usual effects of a promiscuous intercourse, are very generally prevalent among them. To the same origin may be ascribed that neglect, and want of maternal affection, towards the children produced by former connections, observable in many of the Black females. to a comment of the second of

The eircumstances thus enumerated, operat-

ing fici the rea tha frie incr able time pon Am or. ther prin men sexe prop abol

reme

piou

CHAP:

ing with combined energy, are abundantly sufficient to account for the annual diminution in the number of the slaves; and I see no good reason why it should not be frankly admitted, that slavery itself, in its mildest form, is unfriendly to population. The human race, to increase in numbers, must be placed in favourable circumstances; and, unless reason and sentiment in some degree co-operate with corporeal instinct, its offspring is born but to perish. Among men who are deprived of free agency, or by whom it is but imperfectly enjoyed, neither reason nor sentiment can be the ruling principle. It is needless to pursue this argument any farther. Men of reflection, apprized of the fact that such disproportion between the sexes exists among the Negroes, will draw the proper conclusion from it, and agree that an abolition of the slave trade will not afford a remedy.

Thus have I delivered, in a detail which the reader will probably find too diffuse and minute, such observations as have occurred to me on the several matters, of which I proposed to treat. I have declined to enlarge on the various calumnies, and gross misrepresentations, which have been spread and encouraged against the planters, because it is their misfortune that, on this question, many virtuous, humane, and pious men, misled by popular prejudice, openly

BOOK concur in, and give their sanction to, the malignant efforts, and uncharitable misconstructions of the envious and illiberal, Such proceedings, however, are as impolitic as they are unjust. They are equally injurious to the master and the slave. By exciting among the Negroes a spirit of discontent and disobedience, they compel, in many cases, the benevolent man to restrain that hand which otherwise would be stretched out for their relief; and thus, by rendering their masters odious in their eyes, these unfortunate people (apprized at the same time that they are held in a subjection which is reprobated in the mother-country) may be led to make a general struggle for freedom, through desolation and bloodshed. Far be it from me, however, to impute motives so atrocious to any of those respectable characters whose exertions for an abolition of the slave trade are at this time the object of public attention. Most of these gentlem without doubt, consider this measure as a process in a more extended and liberal plan. which has for its object, by stopping the further influx of Negroes into our islands, to compel the planters to cherish and husband their present stock; and sustain it in future by natural increase; until, by milder treatment, and the Christian institutes, the manners of the slaves shall become softened, their vices .T! .107

corrected, and their dispositions gradually prepared for a total emancipation from that absolute slavery in which they are now held. Such is the language, and I doubt not the fond expectation of many wise and excellent persons. They consider that all this will be the necessary effect of the interposition of parliament, in prohibiting the further importation of African slaves into our colonies. I have assigned such reasons as occur to me for believing that this conclusion is founded in error, and will terminate in disappointment. That I am no friend to slavery in any shape, or under any modification, I feet a conscious assurance in my own bosomess Yet that the slavery of some part of the human species, in a very abject degree, has existed in all ages of the world, among the most civilized as well as the most barbarous nations, no man who has consulted the records of history disputes. Perhaps, like pain, poverty, sickness, and sorrow and all the various other calamities of our condition, it may have been originally interwoven into the constitution of the world for purposes inscrutable to man. Of this I am certain, that an immediate emancipation of the slaves in the West Indies, would involve both master and slave in one common destruction. Thus much however is allowed; the miseries we cannot wholly remove, we may in some cases: mitigate: we may alleviate, though we cannot

IW.

cure. I have shown that this has been attempted, and in many instances effected too, by the planters themselves." What yet remains to be done, consistently with sound policy, and a just regard even to the safety and happiness of the Negroes themselves, is a subject of deep and difficult consideration. Hasty measures, however humane in appearance, and plausible in theory, may produce the most calamitous of all contests, a bellum servile; which will probably never end but in the extermination of either the Whites or the Blacks. Among the great variety of schemes which have been offered for further meliorating the condition of the slaves, the most obvious seem to be these: First, to render their labour certain and determinate fin other words, to apportion to each Negro, according to his strength, a specific quantity of work to be performed in a given time; allowing to such of them as shall have finished their task within the time limited, the rest of the day to themselves, and pay them wages for extralabour. This is not always practicable, but when it is. I am inclined to think favourably of the scheme, because it seems calculated to awaken a spirit of emulation and industry, which the dread of punishment can never produce. At the same time, it will be necessary to secure to the Negroes by law, the little property or peculium which their own industry

may, thus acquire. A second proposal is to make them arbiters on the conduct of each other, by instituting a sort of juries among them for the trial of petty offences. It is conceived that such a measure will give them right notions of distributive, justice, and operate powerfully towards their civilization and improvement; and I have heard of two instances in Jamaica in which it has been tried with success; but it is evidently a regulation that must be governed by circumstances, and left principally to the prudence and discretion of the owner: an attempt to establish and enforce it by law, in their present notions of right and wrong, would, I fear, create inextricable confusion. A third measure has been recommended, of less doubtful efficacy. ... It is, to render the sabbath, what it ought to be, a day of rest and religious improvement; to which end, the markets on Sundays ought to be suppressed. They are a disgrace to a christian country; and, if a market is found absolutely necessary to encourage the Negroes in labouring for themselves, some other day, once a fortnight, may be appropriated for that purpose.\* In the mean time,

\* The objection to this scheme is, that it will deprive the planters yearly of twenty-six days labour of the whole body of their Negrees, without producing the effect intended, as the whole of each Sunday will, in such case, be spent in drunkenness and debauchery at home. If this objection be well-founded, let the days which are now given BOOK IV. instead of abolishing the slave-trade by act of parliament, further encouragement should be given to the importation of a greater proportion of African women, until the sexes are become nearly equal; after which it is probable that, under the present humane and improved system of laws and manners, their numbers may be kept up by natural increase. If this good consequence shall happily be produced, it cannot be doubted that the slave-trade will of itself gradually diminish, and perhaps in a few years cease altogether, and expire without a struggle.

But these, and all other regulations which can be devised for the protection and improvement of this unfortunate class of people, will be of little avail, unless, as a preliminary measure, they shall be exempted from the cruel hardship, to which they are now frequently liable, of being sold by creditors, and made subject, in a course of administration by executors, to the payment of all debts both of simple contract and specialty. This grievance, so remorseless and tyrannical in its principle, and so dreadful in its effects, though not originally created, is now upheld and confirmed, by a British act of to the slaves (exclusive of Sundays) be the days of market, and compel them to work in their own gardens four or five hours every Sunday morning, and attend divine service in the afternoon. Honest labour must surely be more pleasing to the Almighty, as it is certainly more beneficial to man, than profligacy and riot. 19 1 tof head of lear of act. 2

parliament; and no less authority is competent to redress it. It was an act procured by, and passed for the benefit of, British creditors; and I blush to add, that its motive and origin have sanctified the measure even in the opinion of men who are among the loudest of the declaimers against slavery and the slave trade. Thus the odious severity of the Roman law, which declared sentient beings to be inter res, is revived and perpetuated in a country that pretends to christianity! In a few years a good Negro gets comfortably established, has built himself a house, obtained a wife, and begins to see a young family rising about him. His provision-ground, the creation of his own industry, and the staff of his existence, affords him not only support, but the means also of adding something to the mere necessaries of life. In this situation, he is seized on by the sheriff's officer, forcibly separated from his wife and children, dragged to public auction, purchased by a stranger, and perhaps sent to terminate his miserable existence in the mines of Mexico, excluded for ever from the light

The act alluded to, is the 5 George II. c. 7. entitled "An act for the more easy recovery of debts in his Majesty's plantations." Of the most violent of the petitioners to parliament, not one has solicited the repeal of this exercible statute. The society in the Old Jewry, though apprized of the grievance, its origin, and the remedy, are silent on the subject. They are men of the world, and with all their philanthropy, probably consider no rights so sacred as those of creditors.

BOOK IV.

of heaven; and all this without any crime or demerit on his part, real or pretended. He is punished because his master is unfortunate. I do not believe that any case of force or fraud in Africa can be productive of greater misery than this! Neither can it be urged, that, like, some unauthorized cases of cruelty in the West Indies, it occurs but seldom: unhappily, it occurs every day, and, under the present system, will continue to occur, so long as men shall continue to be unfortunate.

Let this statute then be totally repealed. It is injurious to the national character; it is disgraceful to humanity. Let the Negroes be attached to the land, and sold with it. The good effect of a similar regulation in the system of ancient villenage has been pointed out and illustrated by a great many writers; and those persons who now oppose an extension of the same benefit to the Negroes in the West Indies, would do well to reflect, that, while they arraign the conduct of the resident planters towards their slaves, they are themselves abettors and supporters of the greatest of all the grievances under which those unfortunate people continue to suffer.

It is peculiarly gratifying to the Author of this work that he has the opportunity, in the present edition, to inform his readers, that in June 1797, he had the hosour and happiness, as a member of the British Parliament, to bring into the House of Commons, and to succeed in carrying it into a law, a bill to repeal so much of the 5 Geo. II. c. 7. as relates to Negroes in his Majesty's plantations.

or de
or de-

A valuable Friend, than whom no man is better acquaintorded with the Negro character, and the condition of the
challend Africans, has favoured me with the following
observations, which occurred to him on a perusal of the
preceding chapter in the first edition.

dis , il miliais one to d'h . "That the treatment of the Negroes in the British West Indies, even before what has been lately done by the colonial assemblies to meliorate their condition, was not systematically bad, is to me convincing from this fact, which all who are acquainted with Negroes on plantations must admit: that the Creole race (with some few eminent exceptions) exceed the African in intellect, strength, and comeliness, in a very remarkable manner. If a better horse is produced from an inferior breed, it is fair to conclude that the colt has had a better groom, and a better pasture than the common on which the dam usually fed. The great object to be wished at present, as it appears to me, is to purify the moral sense of Negroes. Hitherto, with all their improvements, they have caught from the Whites, I am afraid, more of the vices than the virtues of civilization. Correct the idea, which a Negro may be said to imbibe with his mother's milk, that whatever he can cheat his owner of, in any direction, is clear gain to himself. Make the interest of the master and the slave go hand in hand. Now I think that small wages, subject to stoppage for delinquency, would have this effect. Such a system would be laying a foundation on which a large superstructure might be built in the reformation of manners. Even in point of expence, an estate can well afford it; for the aggregate of time wasted in the sick-house, on the mere pretence of illness, is equal

BOOK IV.

BARTHALI.

JAMAICA, J.

An Act to repeal an act, intituled "An act to repeal several acts and clauses of acts respecting slaves, and for the better order and government of slaves, and for other purposes; and also to repeal the several acts and clauses of acts, which were repealed by the act intituled as aforesaid; and for consolidating and bringing into one act, the several laws relating to slaves, and for giving them further protection and security; for altering the mode of trial of slaves charged with capital offences; and for other purposes.

Preamble.

Whereas it is for the public good, that all the laws respecting the order and government of slaves, should be consolidated, and brought into one law, in order to prevent confusion, and that justice may more effectually be executed respecting slaves; and whereas it is found necessary. for the purpose of giving further security to slaves, that the mode of trial of slaves charged with capital offences should be altered; and whereas, in order thereto, it is necessary that all the herein after-mentioned laws, and clauses of laws, should be repealed; viz. &c. & a. &c. We your Majesty's dutiful and loyal subjects, the assembly of this your Majesty's island of Jamaica, do most humbly beseech your Majesty that it may be enacted, Be it therefore enacted, by the lieutenant governor, council, and assembly of the said island, and it is hereby enacted and ordained by the authority of the same, That from and after the passing of this act, all and every the said herein before-mentioned laws, and clauses of laws, and every part thereof; be and stand annulled, repealed, and made void, and are hereby

Arbitrary punishment restrained.

XIV. And, in order to restrain arbitrary punishments, Be it further enacted by the authority aforesaid, That no slave on any plantation or settlement, or in any of the workhouses or gaols in this island, shall receive more than ten lashes at one time and for one offence, unless the owner, attorney, guardian, executor, or administrator, or overseer, of such plantation or settlement, having such slave in his care, or supervisor of such workhouse, or keeper of such gaol, shall be present; and that no such owner, attorney, guardian, executor, administrator, or overseer, supervisor, or gaol-keeper, shall, on any account, punish a slave with more than thirty-nine lashes at one time, and for one offence, nor inflict, or suffer to be inflicted, such last-mentioned punishment, or any other number of lashes, in the same day, nor until the delinquent has recovered from the effects of any former punishment, under the penalty of ten pounds for every offence, to be recovered against the person directing or permitting such punishment.

Putting iron on slaves, prohibited.

XV. And whereas a mischievous practice hath someother chains times prevailed of punishing ill-disposed slaves, and such as are apt to abecond from their owners, by fixing or causing

to be fin with proj of such said, The lawful, an under the alavė, who causing to of such a slave, for weights of cessary for every the j authorise one hundre fence, to a immediate bearing the

to be fixed round the necks of such slaves, an iron collar with projecting bars or hooks, to prevent the future desertion of such slaves: Be it further enacted by the authority aforemid. That such practice is hereby declared to be utterly unlawful, and that no person shall, on any pretence whatsoever, under the penalty of fifty pounds, punish any negro or other slave, whether his own property or otherwise, by fixing, or causing to be fixed, any iron or other collar round the neck of such slave, or by loading the body or limbs of such slave, for any offence whatsoever, with chains, itons, or weights of any kind, other than such at are absolutely necessary for securing the person of such slave; and all and every the justices of the peace, within this island, are hereby anthorized, directed, and required, under the penalty of one hundred pounds, on information and view of such offence, to order such collar, chains, irons, or weights, to be immediately taken off from the slave or slaves wearing or bearing the same.

XVI. And whereas, from the decease and removal of residence of many proprietors of slaves, and other circumstances, and from the manumission of negro, mulatto, and other slaves, without any suitable provision being made for their future maintenance, many unhappy objects, afflicted with contagious distempers, or disabled from labour by sickness, old age, and otherwise, and having no owners, prove dangerous, or become a burthen and nuisance to the several towns and parishes of this island: For remedy Justices and whereof, Be it further enacted by the authority aforesaid, That the justices and vestrymen of the several towns and ab parishes in this island be empowered, and they are hereby canpowered, to lay a tax upon the inhabitants of the said several towns and parishes in the same manner as the parochial taxes are usually laid, for the purpose of raising such a sum as they shall judge sufficient to provide for the maintenance, clothing, medical care, and attendance, in the workhouses or other convenient places of the said se-

Hook IV. How such slaves are to be disposed of. veral towns and parishes of this island, of such segro, mulatto, or other slaves, or other unhappy objects as aforesaid: And the magistrates respectively of such town and parish are hereby empowered and required, upon application being made to them, or either of them, to order all such objects as aforesaid to be removed and conveyed to the respective workhouses of each parish, where (if a slave) the former proprietor or proprietors, owner or owners, of such slave lived or resided; or, if a person of colour made free, where the person or persons who manumised or set free such person of colour resided before his decease, there to be lodged and taken care of as aforesaid: And the magistrates and vestries of the several towns and periality as aforesald, are hereby empowered and required to make from time to time all such humane and salutary regulations, for the purposes aforesaid, as to them shall appear necessary and expedient. White the makes of the home

XVII. And whereas it is absolutely necessary, that the slaves in this island should be kept in due obedience to their owners, and in due subordination to the white people in general, and, as much as in the power of the legislature, all means and opportunities of slaves committing rebellions conspiracies, and other crimes, to the ruin and destruction of the white people, and others in this island, prevented, and that proper punishments should be appointed for all crimes to be by them committed, Be it further enacted by the authority aforesaid. That no slave, such only excepted as are going with firewood, grass, fruit, provisions, or small stock and other goods, which they may lawfully sell, to market; and returning therefrom, shall hereafter be suffered or permitted to go out of his or her master or owner's plantation or settlement, or to travel from one town or place to another, unless such slave shall have a ticket from his master, owner, employer, or overseer, expressing particularly the time of such slave's actting out, and where he or she is going, and the time limited for his or her re-

owners must not allow their slaves to travel without tickets,

The first the first and the first and the

## AGRICULTURE." TO TO TO SELECT of Romania and State Sing The

The Control of the Co

h & Right & CHAPTER I. Sugar-cane. - Known to the ancients. - Conjectures concerning its introduction into Europe. -Conveyed from Sicily to the Azores, &c. in the fifteenth century, and from thence to the West Indies .- Evidence to prove that Columbus himself carried it from the Canary Islands to Hispaniola. Summary of P. Labat's reasoning to demonstrate that it was found growing spontaneously in the West Indies .- Both accounts reconciled .- Botanical name and description.—Soils best adapted for its cultivation, and their varieties described .-Use and advantage of the plough.—Usual method of holing and planting.—Season for planting. - Blast. - Manures. - Improvements suggested.

ELED.

In treating of the agriculture of the West Indian Islands, the first object that naturally excites attention is the cane, which produces

their which gene one: ancid This into: By from the c and is m an ai sage the a was | gar a

their great staple commodity; sugartaide plant which, from sits commercial importance and general utility, we may wenture to pronounce one of the most valuable in the creation of The ancient name of the cane was Saccharum. This word was corrupted, into monkish Latin, into Zucharum, and afterwards into Zucra. By the Spaniards it was converted into Acucar, from whence Sugar. The plant is a native of the east, and was probably cultivated in India and Arabia time immemorial. The sweet-cane is mentioned vice in the Old Testament, as an article of marchandize; and there is a passage in Dioscorides which seems to imply, that the art of granulating the juice by evaporation was practised in his time; for he describes sugar as having the appearance of salt, and of being brittle to the teeth, bernand with all

Salis modo coactum est; dentibus ut sal fragile.

Lucan, enumerating the eastern auxiliaries of Pompey, describes a people who used the canejuice as a common drink,

Quique bibunt tenerd dulces ab arundine succos.

Lafitau conjectures, however, that the plant itself was unknown, in Christendom, until the time of the Croisades. Its cultivation, and the method of expressing and purifying the juice,

<sup>\*</sup> Isaiab, ch. xliif. v. 24. Jeremiah, ch. vi. v. 20.

Tripoli, are described by Albertus Aquensis, a monkish writer, who observes that the Christian soldiers in the Holy Land frequently derived refreshment and support, in a scarcity of provisions, by sucking the teames. It flourished also in the Morea, and in the Islands of Rhodes and Malta, and from thence was transported into Sicily; but the time is not precisely ascertained. Lafitau recites a donation of William, the second king of Sicily, to the monastery of St. Bennet, of a mill for grinding sugar canes, with all its rights, members, and appurtenences. This happened in 1166.

From Sicily, the Spaniards are said to have conveyed the cane to the Azores, Madeira, the Canary and Cape-de-verd Islands, soon after they were discovered in the 15th century; and from some one of those islands it has been supposed to have found its way, at an early period, to Brasil and the West Indies; "producing a commerce (says Lafi au) which has proved more valuable than the rines of Peru."

Such is the commonly-received opinion respecting the history of this valuable production. Herrera positively asserts, that the sugar-cane

was transplanted into Mispaniols from the Canary Islands, in the year 1506, by a Spaniard of the mame of Aguilon; but nine this instance the respectable historian, however correct in general, is alcally mistaken; it appearing by the testimony of Peter Marty; in the third Book of his first Decaid, witten during Columbus's second expedition, which began in 1495, and ended in 1495, that the sugar cane was, at that period sufficiently known in Hispaniola.

The fact seems to have been, that Columbus himself carried it thither among other articles and productions which he conveyed from Old Spain and the Canary Islands, in his second. voyage. Martyr's account is as sfollows !-"Ad featus procreandos, equas, oves, juvencas, "et plura alia cum sui generis masculis : le-"gumina; triticum, hordeum, et reliqua ijs si-"milia, non solum alimenti, verum etiam se-"minandi gratia, prefectus apparat : vites et "aliarum nostratium arborum plantaria, qui-"bus terra illa caret ad cam important: nullas "enim apud eas insulas notas arbores invenêre "præter pinus palmasque et eas altissimas, ac " miræ duritiei et proceritatis ac rectitudinis, "propter soli ubertatem; atque etiam ignotos "fructus alias plures procreantes. Terram and comment of the effort with a section of

"alunt esse iterminum i binaium in quaise ambiunt "sidera !! uberrintum." Although in in this passage the sugar-cone is mot expressly counterated, it is evident that it was mot considered by Columbusi as nationative of sthe acountry on fair the couldn't not rabbailly! have vibeau sound quainted withothis epicoluction, (which graws in great perfections in Walencie, and other parts of Squin; yet he foundait seems on his anivale no trees or (plants in the nowlifediscovered toountry, nof which he had any previous knowledge, excepting only the pine and the coalm. to That the cane was then there appears from a subsiquent passage; in which, speaking of such hegetable productions as the Spaniards bad baown or planted in an inclosed garden immediately after their arrival, Martyr has these words, which, combined with the former, are, as I conceive, decisive of the question buil Melones cucurbitas, eucumeres et alia id genus, in diem sextum et trigesimum carpserunt. Sed nusquamuse imeliores unquant comedisse aiebant. 30 Hæcchortensia, toto anno habents recentia. CHAP.

They assert; that it was found growing spontuneously in many parts of the new hemisphere, when hist explored by the Spanish invaders, P. Labat, who appears to have considered the question with a laborious attention, is decidedly of this opinion, and he quotes, in support of it, tamong other authorities, that of Thomas Gage, an Englishman, who went to New Spain in 1625, and of whom I have had occasion to speak in a former part of this work. Gage's voyage is now before me, and it is certain sthat he senumerates sugar-canes among the fruits and provisions supplied the crew of his ship by the Charaibes of Guadaloupe. "Now," observes Labat; "it is a fact that the Spaniards had never cultivated an inch of ground in the smaller Antilles. Their ships commonly touched at those islands indeed, for wood and water, and they left swine in the view of supplying with fresh provisions such of their countrymen as might call there in future; but it were absurd in the highest degree to suppose, that they would plant sugar-canes, and put hogs ashore at the same time to destroy them; dissituate adi rol for a ri .... it

for bestowing this plant on islands which they considered as of no kind of importance, except

as the state of the delicereptic in the state of the stat

for the purpose that has been mentioned; and to suppose that the Charabes might; have cultivated, after their departure, a production of which they know nothing betrays a total ignorance of the Indian disposition and character.

"But," continues Labet: "we have surer testimony, and such as proves, beyond all contradiction, that the sugar-cene is the natural production of America. For besides the evidence of Francis Ximenes, who, in a Treatise on American plants, printed at Mexico, asserts, that the augar-cane grows without cultivation, and to an extraordinary size, on the banks of the river Plate, \* we are assured by Jean de Lery, a protestant minister, who was chaplain, in 1556; to the Dutch garrison in the fort of Coligny, on the river Janeiro, that he himself found sugar in great abundance in many places on the banks of that river, and in situations never visited by the Portuguese. Father Hennepen, and other voyagers, bear testimony in like manner to the growth of the cane near the mouth of the Mississippi; and Jean de Laet to its spontaneous production in the Island of St. Vincent. It is not for the plant itself, therefore, but for the secret of making sugar from it, that the West Indies are indebted to the

Spaniarda and Portuguese; and these to the nations of the cast." agreeable statisfication and

CHAP:

Such is the reasoning of Labat, which the learned Lafitanus has pronounced incontravertible; and its is greatly strengthened by recent discoveries; the sugar-cane baving been found in many of the islands of the Pacific Ocean, by our laterillustrious navigator Captain Cook.

In these accounts, however, there is no contradiction. The sugar-cane might have grown spontaneously in many parts of the New World; and Columbus, unapprized of the circumstance, might likewise have carried some of the plants to Hispaniola, and such I believe was the fact. But be this as it may, the industry with which the Spanish settlers applied themselves to its cultivation, affords a wonderful contrast to the manners of the present inhabitants; it appearing by the testimony of Oviedo, that no less than thirty ingenies, or sugar-mills, were established on that island so early as 1535.

The botanical name of the sugar-cane is Arundo Saccharifera. It is a jointed reed terminating in leaves or blades, whose edges are finely and sharply serrated. The body of the cane is strong but brittle, and when ripe of a fine straw colour, inclinable to yellow; and it contains a soft pithy substance, which affords a copious supply of juice of a sweetness, the

PAG Cul-

untion of

BOOK V.

The intermediate distance between each joint of the cane varies according to the nature of the soil; in general it is from one to three inches in length, and from half an inch to an inch in diameter. The length of the whole came depends likewise upon circumstances. In strong lands and lands richly manural, I have seen some that measured twelve feet from the stole to the upper joint. The general height however (the flag part excluded) is from three feet and a half to seven feet, and in very rich lands the stole or root has been known to put forthe upwards of one hundred suckers or shoots.

The tops of canes sometimes shoot up in arrows, decorated at the top with a pinnacle, the glumes of which contain a whitish dust, or rather seed; yet these being sowed never vegetate, as I have heard, in the West Indian islands; a circumstance which perhaps may be adduced as a proof that the cane is not the spontaneous production of this part of the world. In Abytsinia and other parts of the East it is easily raised from the seed. (Vid. Bruce's Travels) Since the first edition of this work was published, Sir Joseph Banks has satisfied me that there are several varieties existing in the cane with which we are wholly unacquainted in the West Indies. I have seen, in his possession, a dried specimen that was brought originally from the South Seas, which, as far as can be judged by its present appearance, is of a far superior sort to the species cultivated in our islands. It is not only of greater length in the whole, but the distance between the joints is nearly twice as great as in the finest canes I ever beheld.

que Its may be supposed that a plant the rank; capt. and succelentaireduires a strong and deep soil to bring it to perfection, and as far as my obe servation han extended I am of opinion that nowland contribettoo wich for that purpose. When bad sugar in made from fat and fertile soils, properly situated I am inclined to impute the bleme; rather to mismanagement in the manufacturer than to the land "B" The very best soil however that I have seen or heard of, for the production of sugar of the finest quite lity, and in othe largest proportion, is the ashy loam of St. Christopher's, of which an account has been given in the history of that island. Next to that, is the soil which in Jamaica is called brick-mould; not as resembling a brick in colour, but as containing such a due mixture of clay and sand, as is supposed to render it well adapted for the use of the kiln. It is a deep, warm, and mellow, hazel earth, easily worked; and though its surface soon grows dry after rain, the under stratum retains a considerable degree of moisture in the dryest wear ther; -- with this advantage too, that even in the wettest season, it seldom requires trenching. Plant-capes in this soil (which are those of the first growth) have been known in very fine seasons to yield two tons and a half of sugar peracre.\* After this, may be reckoned the black

<sup>\*</sup> This species of soil abounds very generally in the VOL. II.

mould of several varieties. The best is the deep black earth of Barbadoes, Antigne, and some other of the Windward Islands; but there is a appries of this mould in Jameica that is but little, if any thing, inferior to it, which abounds with limestone and flint, on a substratum of scapy marle. Black mould on clay is more common, but as the mould is generally shallow, and the clay stiff and retentive of water, this last sort of land requires great labour, both in ploughing and trenching, to render it profitable. Properly pulverized and manured, it becomes very productive; and may be said to be inexhaustible. It were endless to attempt a minute description of all the other soils which are found in these islands. There is however a peculiar sort of land on the north side of Jamaica, chiefly in the parish of Trelawney, that cannot be passed over unnoticed, not only on account of its scarcity, but its value; few soils producing finer sugars, or such (I have been told by sugar refiners) as answer so well in the penan expression, signifying, as I understand in a greater return of refined sugar than common. The land alluded to is generally of a red co-

French part of Hispaniols—which gives that noble island so great a superiority over most of our own sugar colonies. In Jamaica, it is confined to a few parishes only, and in those parishes to particular spots. In some places this sort of land is rather gravelly, but this circumstance, if the seasons are favourable, is of no great disadvantage.

lour; the shades of which however vary considerably, from a deep chocolate to a rich scarlet; in some places it approaches to a bright yellow, but it is every where remarkable, when first turned up, for a glossy or shining surface, and if wetted, stains the fingers like paint. I have selected specimens which are hardly distinguishable by the eye or the touch, from the substance called gamboge. Earths of various shades of red and yellow, are found indeed in many other parts of the West Indies, but in none of them are observed the same glossy appearance and cohesion as in the soil in question, which appears to me to consist of a native earth or pure loam with a mixture of clay and sand. It is easily worked, and at the same time so tenecious, that a pond dug in this soil in a proper situation, with no other bottom than its own natural texture, holds water like the stiffest clay. It is remarkable, however, that the same degree of ploughing or pulverization, which is absolutely necessary to render stiff and clayey lands productive, is here not only unnecessary, but hurtful;—for though this soil is deep, it is at the same time far from being heavy; and it is naturally dry. As therefore too much exposure to the scorching influence of a tropical sun destroys its fertility, the system of husbandry on sugar plantations, in which this soil abounds, is to depend chiefly on what are called

BOOK V.

ration canes. Ratoons are the sprouts or suckers that spring from the roots; or stoles of the canes that have been previously cut for sugar, and are commonly ripe in twelve months Canes of the first growth, as hath been observed, are called plant-canes. They are the immediate produce of the original plants or germs placed in the ground, and require from fifteen to seventeen months to bring them to maturity. The first yearly return from their roots are called first rations; the second year's growth, second rations; and so on, according to their age. AIn most parts of the West Indies it is usual to hole and plant a certain proportion of the cane land (commonly one-third) inannual succession. This, in the common mode of holing the ground by the hoe, is frequently attended with great and excessive labour to the negroes, which is saved altogether by the system we are treating of by the latter method, the planter, instead of stocking up his ratoons, and holing and planting the land anew, suffers the stoles to continue in the ground, and contents himself, as his cane fields become thin and impoverished, by supplying the wacant spaces with fresh plants. CHAP.

of minure, the produce of sugar per acre, if not apparently equal to that from the best plant-canes, in other soils, gives perhaps in the long run full as great returns to the owner; considering the relative proportion of the labour and expense attending the different systems.—The common yielding of this land, on an average, is seven hogsheads of sixteen cwt. to ten acres, which are cut annually.

In the cultivation of other lands (in Jamaica especially), the plough has been introduced of late years, and in some few cases to great advantage; but it is not every soil or situation that will admit the use of the plough; some lands being much too stony, and others too steep; and I am sorry I have occasion to remark, that a practice commonly prevails in Jamaica, on properties where this auxiliary is used, which would exhaust the finest lands in the world. It is that of ploughing, then cross ploughing, round-ridging, and harrowing the same lands from year to year, or at least every other year, without affording manure: accordingly, it is found that this method is utterly destructive of the ratoon, or second growth, and altogether ruinous. [ It is indeed astonishing that any planter of common reading or observation, should be passive under so pernicious a system. Some gentlemen, however, of late manage better; their practice is to break up stiff

BOOK V. and clayey land, by one or two ploughings. carly in the spring, and give it a summer's fallow. In a the autumn of following, a being a then mellow and more easily worked, it is holed and planted by manual labour, after the old method, which shall be presently described. But in truth, the only advantageous system of ploughing in the West Indies, is to confine it to the simple operation of holing, which may certainly be performed with much greater facility and dispatch by the plough than by the hoe; and the relief which, in the case of stiff and dry soils, is thus given to the negroes, exceeds all estimation, in the mind of a humane and provident owner. On this subject I speak from practical knowledge. At a plantation of my own, the greatest part of the land which is annually planted, is neatly and sufficiently laid into caneholes, by the labour of one able man, three boys, and eight oxen, with the common single-wheeled plough. The plough-share indeed is somewhat wider than usual, but this is the only difference, and the method of ploughing is the simplest possible.—By returning the plough back along the furrow, the turf is alternately thrown to the right and to the left, forming a trench seven inches deep, about two feet and a half wide at the top, and one foot wide at the bottom. A space of eighteen or twenty inches is left between each trench, on which the mould

being thrown by the share, the banks are properly formed, and the holing is complete. Thus the land is not exhausted by being too much exposed to the sun; and in this manner a field of twenty acres is holed with one plough, and with great case, in thirteen days. The plants are afterwards placed in the trench as in the common method, which remains to be described.

The usual mode of holing by manual labour is this:—The quantity of land intended to be planted, being cleared of weeds and other incumbrances, is divided into several plats of certain dimensions, commonly nom fifteen to twenty acres each; the spaces between each plat or division are left wide enough for roads, for the conveniency of carting. Each plat is then subdivided, by means of a line and wooden pegs, into small squares of about three feet and a half. Sometimes indeed the squares are a foot larger; but this circumstance makes but little difference. The negroes are then placed in a row in the first line, one negro to a square, and directed to dig out with their hoes the several squares, commonly to the depth of five or six inches. The mould which is dug up being formed into a bank at the lower side, the excavation or cane-hole seldom exceeds fifteen inches in width at the bottom, and two feet and a half at the top. The negroes then fall back to the next line, and proceed as before. Thus

BOOK V. the several squares between each line are formed into a trench of much the same dimensions with that which is made by the plough. An able negro will dig from sixty to eighty of these holes for his day's work of ten hours; but if the land has been previously ploughed and lain fallow, the same negro will dig nearly double the number in the same time.\*

The cane-holes or trench being now completed, whether by the plough or by the hoe, and the cuttings selected for planting, which are commonly the tops of the canes that have been ground for sugar (each cutting containing five or six germs), two of them are sufficient for a cane-hole of the dimensions described.

\* As the negroes work at this business very unequally, according to their different degrees of bodily strength, it is sometimes the practice to put two negroes to a single square; but if the land has not had the previous assistance of the plough, it commonly requires the labour of 50 or 60 able negroes for 20 days to hole 20 acres. It is reckoned a tolerable day's work for 40 negroes to hole an acre in the course of a day. In Jamaica, some gentlemen, to ease their own slaves, have this laborious part of the planting business performed by job work. The usual price for holing and planting is from eight to ten pounds currency per acre. The cost of falling and clearing heavy wood-land is commonly as much more.

† It is a maxim with some people to plant this on poor lands, and thick in rich: but it is a maxim founded in error. They suppose that the richer the soil is, the greater number of plants it will maintain; which is true enough; but they

fore, in

The ric

holes t

These, being placed longitudinally in the bottom of the hole, are covered with mould about two inches deep; the rest of the bank being intended for future use. In twelve or fourteen days the young sprouts begin to appear, and as soon as they rise a few inches above the ground, they are, or ought to be, carefully cleared of weeds, and furnished with an addition of mould from the banks. This is usually performed by the hand. At the end of four or five months, the banks are wholly levelled, and the spaces between the rows carefully hoe-forget that the plant itself will, in such soils, put forth shoots in abundance; most of which, if the lands are not over-planted, will come to perfection; whereas from thick planting if rich mould the shoots choke and destroy each other. On

forget that the plant itself will, in such soils, put forth shoots in abundance; most of which, if the lands are not over-planted, will come to perfection; whereas from thick planting in rich mould the shoots choke and destroy each other. On the other hand, in soils where the canes will not stock (viz. put out fresh shoots) the overseer must supply the greater number of plants in the first instance, or the produce will be little or nothing. To what has been said in the text concerning the method of holing, it may not be improper to add the following particulars:—A square acre contains 43,560 feet; therefore, to know the exact number of holes which an acre will admit, the rule is, to multiply the length of each hole by the breadth, as thus: Suppose you line four feet one way, and three feet the other, then four multiplied by three, makes twelve square feet, and 43,560 divided by 12, gives 3,630 holes. These are large holes, and if the land is dry and stiff, an able negro will not be able to dig more than 60 such in his day's work. It will require, therefore, in such land, just 60 negroes to hole an acre in a day. The richer the land is, the wider you line, of course the fewer holes to an acre; four feet by four feet gives 2,722 holes.

ploughed. Frequent cleanings, while the canes are young are indeed so essentially necessary, that no other merit in an overseer can compensate for the want of attention in this particular. A careful manager will remove, at the same time, all the lateral shoots or suckers that spring up after the canes begin to joint, as they seldom come to maturity, and draw nourishment from the original plants.

The properest season, generally speaking, for planting, is unquestionably in the interval between August and the beginning of Novemher. By having the advantage of the autumnal seasons, the young cames become sufficiently. luxuriant to shade the ground before the dry weather sets in. Thus the roots are kept cool and the earth moist. By this means too, they are ripe for the mill in the beginning of the second year, so as to enable the overseer or manager to finish his crop (except as to the few canes which are reserved to furnish cuttings or tops for planting) by the latter end of May. Canes planted in and after November lose the advantage of the autumnal rains, and it often happens that dry weather in the beginning of the ensuing year retards their vegetation, until the vernal seasons, or May rains, set in; when they sprout both at the roots and the joints; so that by the time they are cut, the field is loaded with unripe suckers, instead of

sugar-canes. ... January plant, however, commonly turns out well; but canes planted very late in the spring, though they have the benefit of the May rains, seldom answer expectation; for they generally come in unseasonably, and threw the ensuing crops out of regular rotation. They are therefore frequently cut before they are ripe; or, if the autumnal seasons set in early, are cut in wet weather, which has probably occasioned them to spring afresh; in either case the effect is the same: the juice is unconcocted, and all the sap being in motion, the root is deprived of its natural nourishment, to the great injury: of the ration. The chief objection to a fall plant is this; that the canes become rank and top heavy, at a period when violent rains and high winds are expected, and are therefore frequently lodged before they are fit to cut. The observation, when applied to canes planted in rich and new lands, is just; and on this account, some gentlemen have introduced the following system: They plant in August and September, clean the young sprouts, and give them mould occasionally, until the beginning of January, when they cut the young uplants close to the ground with knives, and level the bank; spreading the remainder of the mould over the roots; which soon afterwards send out a number of vigorous and luxuriant shoots all of an equal growth. It is alleged, that by this means the cane is not

erval emnual ntly dry cool they

the cutd of ober nd it ginetaset

the the of BOOK V. too rank in the stormy months, and nevertheless comes to perfection in good time the succeeding spring. of the storm of th

On the whole, it is a striking and just remark of Colorel Martin, that there is not a greater error in the system of planting, than to make sugar or to plant canes, in improper seasons of the ayear; for by mismanagement of this kind every succeeding crop is put out of regular order. A plantation, he observes, ought to be considered as a well-constructed machine; compounded of various wheels turning different ways, yet all contributing to the great end proposed; but if any one part runs too fast, or too slow, in proportion to the rest, the main purpose is defeated. It is in vain, continues he, to plead in excuse the want of hands or cattle: because these wants must either be supplied, or the planter must contract his views, and proportion them to his ability; for the attempt to do more than can be attained, will lead into perpetual disorder, and terminate in poverty.

Unfortunately, however, neither prudence in the management, nor favourable soils, nor seasonable weather, will at all times exempt the planter from misfortunes. The sugar-cane is subject to a disease which no foresight can obviate, and for which human wisdom has hitherto, I fear, attempted in vain to find a remedy.—This calamity is called the blast; it is the aphis

house, mixed up with rubbish of buildings, white-lime, &c. a said a building sector and a building sector and

In some of the Windward Islands, the cane, in very dry weather, is liable to be destroyed also by a species of grub called the borer. This calamity is fortunately unknown, at least to any extent, in Jamaica; and never having seen it, I can give no certain description of it. I conceive the insect to be the cruca minima e rubro fusca of Sloane. In Tobago they have another destructive insect called the Jumper Fly.

BOOK V.

leaves and steme of the canes; so called interestradistinction to cane-trash, reserved for fuel, and bereafter to be described.

4thly. Dung, obtained from the horse and mule stables; and from moveable pens, or small inclosures made by posts and rails, occasionally shifted upon the lands intended to be planted, and into which the cattle are turned at night.

5thly. Good mould collected from gullies, and other waste places, and thrown into the cattle-pers.

The first, i. c. ashes, is commonly supposed to be a manure of itself, well adapted for cold and stiff clays; and in some parts of Jamaics, it is the practice, in the fall of the year, to carry it out unmixed in cart loads, to the land where it is intended to be used. It is left there (or in some spot adjoining), in large heaps, until the land is holed; after which a basket full, containing commonly from fifteen to twenty pounds, is thrown into each cane-hole, and mixed with the mould at the time the plants are put into the ground. It may be doubted, however, whether ashes, applied in this manner, are of much advantage: I have been told, that if the land is opened five years afterwards, they will be found undissolved. At other

But the chief dependence of the Jamaica planter in manuring his lands, is on the moveable pens, or occasional inclosures, before deacribed; not so much for the quantity of dung
collected by means of those inclosures, as for
the advantage of the urine from the cattle (the
best of all manures), and the labour which is
saved by this system. I believe, indeed, there
are a great many overseers who give their land
no aid of any kind, other than that of shifting

the cattle from one pen to another, on the

spot intended, for planting during three or

four months before it is ploughed or holed.

\* This, however, is by no means sufficient on plantations that have been much worn and exhausted by cultivation: and perhaps there is no branch in the planting business wherein attention and systematic arrangement, as saving both time and labour, are more necessary than in collecting and preparing large quantities of dung from the sources and materials before described. In spreading the manure thus collected, the common allowance in the Windward Islands, (where this part of husbandry is best understood) is a square foot of dung to each cane-hole; so that by knowing the number of holes in an acre of land, and the number of square feet in a dung-heap, the manure may be proportioned to the ground. Nothing is more easy than to ascertain the number of square feet in a duag-heap. Multiply the length by the breadth, and the produce by the height. Thus, 30 feet, the length, multiplied by 30 feet, the breadth, CHAP.

What has hitherto bear mid, however, relates solely as the method of preparing hands for plant-cames. or Thouse who trust which trust tony find it as incoming to give their conefields untrentions and secesistance show the time the cancadares cuturas it was before they were planted. It is the advice of Colonel Martin, so seen as the canes are carried to the mill, to cut off;) by a sharp hoe, all the heads of the cane! stools three inches below the surface of the soil, and then fill up the hole with fine mould; by which means, he thinks, that all the sprouts rising from below, will derive more nutriment and grow more equally and vigorously than other wise. I know not that this advice is adopted in any of the sugar islands. It is the practice, however, in many parts of Jamaica, to spread baskets full of dung round the stools so soon after the canes have been cut as circumstances will admit. and the ground has been refreshed by rains: in dry and scorehing weather it would be labour lost. The young sprouts are, at the same time, cleared of weeds; and the dung which is spread round them, being covered with cane-trash, that its virtues may not be exhaled by the sun, is found at the end of giver 900 feet, which being again multiplied by four feet (the height) gives 3,600 feet, the full contents. This explanation is added for the use of the plain practical planter,

who perhaps has had no great opportunity of studying

three or four months, to be socked into and incorporated with the mould. At this period the rations are again well cleaned, and the spaces between the ranks reflectually hose ploughed; after which very little care is thought requisite until the canes are fit for cutting; the ancient practice of tracking rations, i.e. stripping them of their outward leaves, being of late very generally and justly exploded.

y Such is the general system of preparing and manuring the lands in Jamaica. I have been told, that more attention is paid to this branch of husbandry, in some of the Islands to Windward; but I suspect that there is, in all of them, very great room for improvement, by means of a judicious rotation of crops, and arillicial assistance. Why, for instance, are not the manures of lime and sea-sand which abound in these islands, and have been found so exceedingly beneficial in Great Britain, brought into use? Limestone alone, even without burning, (the expence of which might perhaps be an objection) has been found to answer in cold. heavy, and moist lands; no other trouble being requisite than merely to spread it over the ground and break it into small pieces by sledgehammers. Of this the quantities are inexhaustible. Marle, is another manure of vast and general utility in Great Britain. It enriches the poorest lands, opens the stiffest, and sweetens

and corrects the most rank. Lands have been raised by the use of this manure, from two shillings per acre to a guinea, annual rent. Now there is no country under the sun, wherein a soft unctuous marle more abounds than in Jamaica. To the question, why no trial has yet been made of it? no better answer, I believe, can be given, than that the planters in general have no leisure for experiment, and that it is difficult to make agents and servants (who have every thing to risk and nothing to gain) walk out of the sure and beaten track of daily practice. Every man's experience confirms this observation.

But it is not my province to purpose systems, but to record facts;—to describe things as they are, rather than as I conceive they ought to be; and it is now time to conduct the reader from the field into the boiling house, and convert the farmer into the manufacturers income and convert the

and five, seem to be pleistifting Ellianted wiffill THE time of crop in the sugar islands, is the season of gladness and festivity to man and beast. So palatable, salutary, and nourishing is the juice of the cane, that every individual of the animal creation, drinking freely of it, derives health and vigour from its use. 38 The meagre and sickly among the negroes exhibit a surprising alteration in a few weeks after the mill is set in action. The labouring horses, oxen, and mules, though almost constantly at work during this season, yet, being indulged with plenty of the green tops of this noble plant, and some of the scummings from the boiling-house, improve more than at any other period of the year. Even the pigs and poultry fatten on the

CHAP.

BOOK V. refuse. In short, on a well-regulated plantation, under a humane and benevolent director, there is such an appearance during crop-time of health, plenty, and busy cheerfulness, as to soften, in a great measure, the hardships of slavery, and induce a spectator to hope, when the miseries of life are represented as insupportable, that they are sometimes exaggerated through the medium of fancy.\*

"He," says honest old Slare the physician, "that undertakes to argue against sweets in general, takes upon him a very difficult task, for nature seems to have recommended this taste to all sorts of creatures; the birds of the sir, the beasts of the field, many reptiles and flies, seem to be pleased and delighted with the specific relish of all sweets, and to distaste its contrary. Now the sugar-cane, or sugar, I hold for the top and highest standard of vegetable sweets." Sugar is obtainable in some degree from most vegetables, and Dr. Rush of Philadelphia, among the many advantages attending the use of it in diet, enumerates the following:

"1st. Sugar affords the greatest quantity of nourishment

in a given quantity of matter of any substance in nature. Used alone, it has fattened horses and cattle in St. Domingo for a period of several months, during the time that the exportation of sugar and the importation of grain were suspended, from the want of ships.

"2dly. The plentiful use of sugar in diet is one of the best preventatives that ever has been discovered of the diseases which are produced by worms. Nature seems to have implanted a love for this aliment in all children; as if it were on purpose to defend them from those diseases.

CHAP

The great obstacle at this season to the progress of such of the planters as are not happily furnished with the means of grinding their canes by water, is the frequent failure or insufficiency of their mills; for though a sugar-mill, whether worked by vater, wind, or cattle, is a very simple contrivance, great force is nevertheless requisite to make it overcome the resistance which it necessarily meets with. It consists prin-

where sugar composes a material part of the diet of the inhabitants."

N. B. Dr. Rush quotes this last observation from Sir John Pringle, and adds his own opinion, that the frequency of malignant fevers of all kinds has been lessened by the use of sugar.

"4thly. In disorders of the breast, sugar is the basis of many agreeable remedies; and it is useful in weaknesses and acrid defluxions upon other parts of the body. The celebrated Dr. Franklin had taken large quantities of blackberry jam for the pain of the stone, and found benefit from it, but discovered, at length, that the medical part of the jam resided wholly in the sugar. From half a pint of a syrup prepared by boiling brown sugar in water, and taken just before he went to bed, he declared that he often found the same relief that he did from a dose of opium.

"It has been said that sugar injures the teeth, but this opinion does not deserve a serious reflection." Amer. Philos. Trans. vol. 3.

Mr. Hughes, the historian of Barbadoes, observes, that there is a saponaceous quality in cane-jules capable of resolving viscid concretions, to which he attributes, in a great measure, the surprising quick recovery of those sickly negroes who drink freely of it.

cipally of three upright iron-plated rollers, or cylinders, from thirty to forty inches in length, and from twenty to twenty-five mehes in diameter, and the middle one, to which the moving power is applied, turns the other two by means of cogs. Between these rollers, the canes (being previously cut short, and tied into bundles) are twice compressed; for having passed through the first and second rollers, they are turned round the middle one by a circular piece of frame-work, or screen, called in Jamaica the Dumb-returner, and forced back through the second and third; an operation which squeezes them completely dry, and sor etimes even reduces them to powder. The canejuice is received in a leaden bed, and thence conveyed into a vessel called the Receiver. The refuse, or macerated rind of the cane, (which is called cane-trash, in contradistinction to fieldtrash, described in the preceding chapter) serves for fuel to boil the liquor.\*

\* Since the first edition of this work was published, I have obtained the elevation and plan of a sugar-mill (several of which have been erected within these few years in Jamaica) after a model originally designed by Edward Woollery, Esq. surveyor of the public works in that island: and I now present my readers with an engraving thereof.—The relative proportions in the size of the different rollers or cylinders, vary from Mr. Woollery's first design; but the great improvement, the addition to the middle roller of a lantern-wheel, with trundles or wallowers, was purely his own. These act as so many friction-wheels, and their utility

y his tility CHAP:

The joice from the mill ordinarily contains eight parts of pure water, one part of sugar, and one part made of gross oil and mucilagit nous gum, with a portion of essential oil. The proportions are taken at a medium; for some juice has been so rich as to make a hogshead of sugar from thirteen hundred gallons, and some so watery as to require more than double that quantity. By a hogshead I mean sixteen hundredweight. The richer the juice is, the more free it is found from redundant oil and gum; so that an exact analysis of any one quantity of juice, would convey very little knowledge of the contents of any other quantity.

and importance are best demonstrated by their effect. A cattle or mule-mill on the old model was thought to perform exceedingly well if it passed sufficient canes in an hour to yield from 300 to 350 gallons of juice. - The common return of a mill on Mr. Woollery's construction is from 4 to 500 gallons.—I have authority to say, that one of these mills in particular, which is worked with ten mules, produces hourly 500 gallons: at this rate, allowing four hours out of the twenty-four for loss of time, the return per diem is 10,000 gallons; heing equal to 36 hogshcads of sugar of 16 cwt. for every week during the crop, exclusive of Sundays.-Few water-mills can exceed this. The ironwork of the mill in question, as well as of most of those which have been made on Mr. Woollery's model, was prepared at the foundry of Mr. Thomas Goulding, of the Bank Side, Southwark, to whom I owe it in justice to declare, that his work is executed with such truth and accuracy, as reflect the highest credit on his manufactory. It is 10 4 357

\* A pound of sugar from a gallon of raw liquor, is

BOOK V.

The above component parts are natural to, and are found in, all cane-juice; besides which, the following matters are usually contained in it. Some of the bands or green tops, which serve to tie the canes in bundles, are frequently ground in, and yield a raw acid juice exceedingly disposed to ferment, and render the whole liquor sour. Some pieces of the trash or ligneous part of the cane; some dirt; and lastly, a substance of some importance, which, as it has no name, I will call the crust. The crust is a thin black coat of matter that surrounds the cane between the joints, beginning at each joint, and gradually growing thinner the farther from the joint upwards, till the upper part between the joints appears entirely free from it, and resumes its bright yellow colour. It is frequently thick enough to be scaled off by the point of a penknife. It is a fine black powder, that mixes with the clammy exudations perspired from the cane, and is most probably produced by animalcula. As the fairness of the sugar is one of the marks of its goodness, a small quantity of such a substance must considerably prejudice the commodity.

The process for obtaining the sugar is thus conducted. The juice or liquor runs from the receiver to the boiling-house, along a wooden

reckoned in Jamaica very good yielding. Sugar, chemically analysed, yields phlagm, acid, oil, and spongy glossy charcoal.

gutten lined with leading In the boiling-house it char. is received (according to the modern improved system, which almost universally prevails in Jamaica) into one of the copper pans or cauldrons called clarifiers. Of these, there are commonly three; and their dimensions are generally determined by the power of supplying them with liquor. There are water-mills that will grind with great ease canes sufficient for thirty hogsheads of sugar in a week. On plantations thus happily provided, the means of quick boiling are indispensably requisite, or the cane-liquor will unavoidably become tainted before it can be expered to the fire. The purest cane-juice will not remain twenty minutes in the receiver without fermenting.\* Clarifiers, therefore, are

MINING Comments on The Sa Marine of Late. \* As case-juice is so very liable to ferment, it is necessary also that the canes should be ground as soon as possible after they are cut, and great care taken to throw aside those which are tainted, which may afterward be ground for the still-house.

Perhaps it is not an extravagant hope that the time will come, when the salt of the cane which we call sugar, will be made to chrystallize, by the action of fire on the juice of the cane, in as pure and transparent a form, as the salt of seawater is frequently made to do in these climates, by the action of the sun's rays. The brown colour of muscovado sugar seems to me to be derived chiefly from the effect of fire operating on the gummy parts or mucilage of the raw juice; to destroy or separate which, in the first clarifier, is the great desideratum. If this could be accomplished, the more watery particles might afterward be evaporated with-

sometimes seen of one thousand gallons each. But as powers of the extent described are uncommon, I shall rather confine myself to such properties as fall within the reach of daily observation; to plantations, for instance, that make on a medium, during crop-time, from fifteen to twenty hogsheads of sugar a week. On such estates, three clarifiers of three or four hundred gallons each are sufficient. With pans of this size, the liquor, when clarified, may be drawn off ut once, and there is leisure to cleanse the vessels every time they are used. Each clarifier is provided either with a syphon or cock for drawing off the liquor. It has a flat bottom, and is hung to a separate fire chimney having an iron slider, which being shut, the fire goes out for want of air. These circumstances are indispensable, and the advantages of them will presently be shewn.

out injuring the colour of the essential salt, which would then strike into chrystals nearly transparent.

The clarifiers are commonly placed in the middle or at one end of the boiling-house. If at one end, the boiler called the leache is placed at the other, and several boilers (generally three) are ranged between them. The teache is ordinarily from 70 to 100 gallons, and the boilers between the clarifiers and teache diminish in size from the first to the last. Where the clarifiers are in the middle, there is usually a set of three boilers on each side, which constitute in effect a double boiling-house. On very large estates, this arrangement is found useful and necessary. The objection to a great a number is the expense of fuel; to obviate which, in

CHAP.

The stream then from the receiver having filled the clarifier with the fresh liquor, and the fire being lighted, the temper, which is commonly Bristol white-lime in powder, is stirred into it! One great intention of this is to neutralize the superabundant acid, and which to get properly rid of, is the great difficulty in sugar-making. This is generally effected by the alkali or lime; part of which, at the same time, becomes the basis of the sugar. The quantity necessary for this purpose, must of course vary with the quality both of the lime and of the cane-liquor. Some planters allow a pint of Bristol lime to every, hundred gallons of liquor; but this proportion (Inbelieve is generally found too large: The lime is perceptible in the sugar both to the smell and taste, precipitates in the copper pans a black insoluble calx, which scorches the bottom of the vessels, and is not detached without difficulty. I conceive, therefore, that little more than half the quantity mentioned above, is a better medium proportion, and, in order that less of it may be precipitated to the bottom, an inconveniency attending the use of dry lime, Mr. Bousie's method of dissolving it in boiling water, previous to mixing it with the cane-juice. appears to me to be highly judicious the of their hest jollow, and it is exclused from the policy test.

some degree, the three boilers on each side of the clarifiers are commonly hung to one fire of a man and more quiter

This gentleman (Mr. Bousie) to whom the assembly

As the fire increases in force, and the liquor grows hot, a scum is thrown up, which is formed of the mucilage or gummy matter of the cane, with some of the oil, and such impurities as the mucilage is capable of entangling. The heat is now suffered gradually to increase, until it rises to within a few degrees of the heat of

of Jamaica gave 1,000l, for his improvements in the art of sugar-boiling, in a paper distributed by him among the members, recommends the use of a vegetable alkali or sales of wood calcinated, such as pimento-tree, dumb-cane, ferntree, cashew, or logwood, as affording a better temper than quick-lime; but he was afterwards sensible that sugar formed on the basis of fixed alkaline salts never standithe he. unless some earth is joined with the salts. Such earth as approaches mearest to that which is the basis of alum would perhaps be most proper. As sugar, on a vegetable alkaline basis, is generally as much superior in colour, as that on hime is in grain, how far a judicious mixture of vegetable alkaline salts and lime might prove a better temper than either lime or alkaline salts alone, is an inquiry that ought to be parsued. If there were no redundant acid in caneliquor, lime and any other alkali would be hurtful; as may be shewn by adding a few grains of lime or alkali to a clear solution of refined sugar: a precipitation will ensue. some parts of Jamaica, where the cane-liquor was exceedingly rich, Mr. Bousie made very good sugar without a particle of temper. I have said, that too much temper is perceptible in the sugar, both to the smell and taste; it might be added, and also to the sight. It tinges the liquor first yellow, and if in excess turns it to a dark red. Too. much temper likewise prevents the melasses from separating from the sugar when it is potted or put into the hogshead of order (white out, one board out? ".

boiling water. The liquor must by no means be suffered to boil: It is known to be sufficiently heated when the scum begins to rise into blisters; which break into white froth, and appear in general in about forty minutes. The d mper is then applied, and the fire exting after which, the liquor is suffered to ren full hour, if circumstances will admit, undisturbed; during this interval great part of the fectilencies and impurities will attract each other, and rise in the scum. The liquor is now carefully drawn off, either by a syphon, which draws up a pure defecated stream through the scum, or by means of a cock at the bottom. In either case the scum sinks down unbroken as the liquor flows its tenacity preventing any admixture. The liquor is received into gutter or channel, which conveys it to the evaporating boiler, commonly called the grand copper, and, if originally produced from good and untainted canes, will now appear almost, if not perfectly, transparent.\* 79 120 100 11

The advantage of clarifying the liquor in this manner, instead of forcing an immediate ebullition, as practised formerly, is visible to the

THE CHARLES OF CHARLES AND COMMON TO STATE OF THE COMMON THE COMMON TO STATE OF THE COMMON THE COMM

<sup>\*</sup> The merit of introducing into Jamaica the clarifiers at present in use, with syphons and dampers was elaimed by Mr. Samuel Sainthill, and an exclusive patent, to secure his claim, was granted to him in 1778 by an act of the assembly.

most inattentive observer. The labour which it saves in scumming is wonderful. Neither can scumming properly cleanse the subject; for when the liquor boils violently, the whole body of it circulates with such rapidity, as to carry down again the very impurities that had come up to the surface, and with a less violent heat would have staid there.

In the grand, or evaporating, copper, which should be large enough to receive the net contents of one of the clarifiers, the liquor is suffer ed to boil; and as the sonm rises, it is continually taken off by large scummers, until the liquor grows finer and somewhat thicker, This labour is continued until, from the scumming and evaporation, the subject is sufficiently reduced in quantity to be contained in the next or second copper, into which it is then laded. The liquor is now nearly of the colour of Madeira wine, In the second copper the boiling and scumming are continued: and if the subject is not so clean as is expected, lime-water is thrown into it. This, addition is intended not merely to give more temper, but also to dilute the liquor, which sometimes thickens too fast to permit the feculencies to run together and rise in the scum. Liquor is said to have a good appearance in the second copper, when the froth in boiling arises in large bubbles, and is but little discoloured. When, from such scumming and evach

porated, till it is judged sufficiently boiled to be removed from the fire. This operation is usually called striking; itsellading the liquor, now exceedingly thick outoothe cooler.

The cooler, of which there are commonly six is a shallow mooden vessel, about eleven inches deep seven feet in length, and from five to six feet wide. A cooler of this size holds a hogshead of sugar. Here the sugar grains ; i.e. as it cools, run into a coarse irregular mass of semiformed crystals, separating itself from the melasses. From the cooler, it is carried to the caring house, where the melasses drains from it.

But, before we follow it into the curinghouse, it may be proper to notice the rule for

CHAP.

<sup>\*</sup> It may be proper in this place to observe, that, in order to obtain a large grained augar, it must be suffered to cool slowly and gradually. If the coolers are too shallow, the grain is injured in a surprising manner. Any person may be convinced of this, by pouring some of the hot syrup, when fit for striking, into a pewter plate. He will immediately find it will have a very small grain.

BOOK V.

judging when the subject is sufficiently evaporated for striking, or became fit for being laded from the teache to the cooler. Many of the negro boilers guess solely by the eye (which by long habit they do with great accuracy) judging by the appearance of the grain on the back of the ladle; but the practice most in use is to judge by what is called the touch; i. c. taking up with the thumb a small portion of the hot liquor from the ladle; and as the heat diminishes, drawing with the fore-finger the liquid into a thread. This thread will suddenly break, and shrink from the thumb to the suspended finger, in different lengths, according as the liquor is more or less boiled. The proper boiling height for strong muscovado sugar, is generally determined by a thread of a quarter of an inch long. It is evident that certainty in this experiment can be attained only by long habit, and that no verbal precepts will furnish any degree of skill in a matter depend wholly on constant practice. wolled we would the but et it may be preper to reside the rise for

VOL.

<sup>\*</sup> It is probable that from this practice of trying by the touch (tactio) the vessel called the teache derives its name. A method more certain and scientific was recommended some years ago to the public, by my learned friend John Proculus Baker, Esq. Barrister at Law, in the Island of Jamaica, in a Treatise published by him, in 1775, initialed, An Essay on the Art of making Muscovado Sugar. It is as follows:—"Provide a small thin pane of clear crown glass, set "in a frame, which I would call a tryer; on this drop two or

now return to the curing-house, which is a large airy building provided with a capecious melasess cisteen, the sides of which are sloped and lined with terras, or boards. Over this cistern there is a frame of massy joistwork without boarding. On the joists of this frame, empty hogsbeads, without headings, are ranged. In the bottoms of these hogsheads eight og ten holes are hored, through each of which the stalk of a plantain leaf is thrust six 4 three drops of the subject, one on the other, and carry your "tirer out of the boiling-house into the air. Observe your "subject, and more particularly whether it gains freely, and " whether a small edge of melasses separates at the bottom. "I am well satisfied that a little experience will enable you "to judge what appearance the while skip will put on, "white cold, by this specimen, which is also cold. This "method is used by chemists, to try evaporated solutions of "allother salts; it may seem, therefore, somewhat strange, "it has, not been long adopted in the boiling-house."-I cannot mention Mr. Baker's Treatise, without observing, that I am considerably indebted to it in the course of this chapter, having adopted (with some small variation, founded on late improvements) his account of the process of boiling sugar. But the inhabitants of the sugar islands are under still greater obligations to Mr. Baker;—for it appears to me, that the present improved system of clarifying the caneliquor, by means of vessels hung to separate fires, and provided with dampers, to prevent ebullition, was first suggested to Mr Sainthill (who three years afterwards claimed the merit of the invention) by the treatise in question; a performance that, for useful knowledge, lucid order, and elegance, both in arrangement and composition, would have done honour to the first writer of the age.

or eight inches below the joists, and is long enough to stand upright above the top of the hogshead. Into these hogsheads the mass from the cooler is put, which is called potting; and the melasses drains through the spongy stalk, and drops into the cistern, from whence it is occasionally taken for distillation. The sugar in about three weeks grows tolerably dry and fair. It is then said to be cured, and the process is finished.

Sugar, thus obtained, is called muscovado, and is the raw material from whence the British sugar-bakers chiefly make their loaf, or refined lump. There is another sort, which was formerly much approved in Great Britain for domestic purposes, and was generally known by the name of Lisbon sugar. It is fair, but of a soft texture, and in the West Indies is called clayed sugar; the process is conducted as follows:—

A quantity of sugar from the cooler is put into conical pots or pans, called by the French formes, with the points downwards, having a hole about half an inch in diameter at the bottom, for the melasses to drain through, but which at first is closed with a plug. When the sugar in these pots is cool, and become a fixed body, which is discoverable by the middle of the top falling in (generally about twelve hours

<sup>\*</sup> The curing-house should be close and warm—as warmth contributes to free the sugar from the melasses.

from the first potting of the hot sugar) the plug is taken out, and the pot placed over a large jet intended to receive the syrup or melasses that drains from it. . In this state it is left, as: long as the melasses continues to drop, which it will do from twelve to twenty-four hours, when a stratum of clay is spread on the sugar, and moistened with water, which oozing imperceptibly through the pores of the clay, unites intimately, with, and dilutes the melasses, consequently more of it comes away than from sugar cured in the hogshead, and the sugar of course becomes so much the whiter and purer. The process, according to Sloane, was first discovered in Brasil, by accident: "A hen," says he, "having her feet dirty, going over a pot "of sugar, it was found under her tread to be "whiten than elsewhere." The reason assigned why this process is not universally adopted in the British sugar islands is this, that the water which dilutes and carries away the melasses, dissolves and carries with it so much of the sugar, that the difference in quality does not pay for the difference in quantity. The French planters, probably think otherwise, upwards of four hundred of the plantations of St. Domingohaving the necessary apparatus for claying, and actually carrying on the system.\*

<sup>\*</sup> The loss in weight by claying is about one-third; thus a pot of 60lbs, is reduced to 40lbs, but if the melasses which

Having now furnished the reader with the best account I am able to give of the art of making sugar from the cane-juice, I shall prodeed to a subsequent process, to which this invaluable plant bath given birth; I mean that of extracting from it, by fermentation and distillution, one of the purest, most fragrant; and salutary spirits in the world; a process of far greater curiosity than the former, and of almost equal importance in point of value, considering that the spirit procured by its means, is obtained from the very dregs and feculencies of the plant?

The still-blooses on the sugar plantations in the British West Indies, vary greatly in point of size and expense, according to the fancy of the proprietor, for the magnitude of the property. "In general, however, they are built in a substantial manner, of stone, and are commonly equal in extent to both the boiling and curing littless together." Large stills, by which it is a substantial manner, of stone, and are commonly equal in extent to both the boiling and curing littless together. Large stills, by which it is a substantial manner, of stone, and are commonly equal in extent to both the boiling and curing littless together.

is drawn off in this practice be reboiled, it will give near 40 per cont. of sugar; so that the real loss is little more than one-sixth; but the distillery in that case will suffer for want of the melasses; and, on the whole, I believe that the usage of the English planters in shipping muscovado sugar, and distilling the melasses, is more generally profitable than the system of claying.

mean such as contain from one to three thousand gallons, have this advantage over small ones, that they are purchased at first at w less proportionate expence A still of two thousand gallons, with freight and charges, will cost but little more than one of one thousand five hundred gallons, and is besides worked with but little more fuel. But as it is not every proprietor that has the means of employing stills of that magnitude, I shall consider such as are fitting for "a plantation making, communibus ansis, two hundred hogsheads of sugar of sixteen hundred weight, and proceed to describe, according to the best of my observation and experience, the mode of conducting such an apparatus on such a property, in making rum to safe out the the star the greatest advantage.

For a plantation of that description, I conceive that two copper stills, the one of one thousand two hundred, and the other of six hundred gallons, wine measure, with proportionate pewter worms, are sufficient. The size of the tanks (or tubs) for containing the cold water in which the worms are immersed, must depend on circumstances: if the advantage can be obtained of a running stream, the water may be kept abundantly cool in a vessel barely large enough to contain the worm. If the plantation has no other dependence than that of pondwater, a stone tank is infinitely superior to a

tub, as being longer in heating, and if it can be made to contain from twenty to thirty thousand gallons, the worms of both the stills may be placed in the same body of water, and kept cool enough for condensing the spirit, by occasional aupplies of fresh water.

For working these stills, it is necessary to provide, first, a dunder-cistern, of at least three thousand gallens; secondly, a cistern for the scummings; lastly, twelve fermenting vats or cisterns, each of them of the contents of the largest still, viz. one thousand two hundred In Jamaica, cisterns are made of plank, fixed in clay; and are universally preferred to vats, or moveable vessels, for the purpose of fermenting. They are not so easily affected by the changes of the weather, nor so liable to leak as vats, and they last much longer. But in the British distilleries, fermenting cisterns are, I believe, unknown. To complete the apparatus, it is necessary to add two or more copper pumps for conveying the liquor from the cisterns, and pumping up the dunder, and also butts, or other vessels, for securing the spirit when obtained; and it is usual to build a rum-store adjoining the still-house.

The ingredients, or materials, that set the various apparatus I have described into action, consist of,

and that the fig. 1 (i) the same of the The use of dunder in the making of rum, answers the purpose of yeast in the fermentation of flour. It is the lees or feculencies of former distillations; and some few planters preserve it for use, from one crop to another; but this is a bad practice. Some fermented liquor, therefore, composed of sweets and water alone, ought to be distilled in the first instance, that fresh dunder may be obtained. It is a dissolvent menstruum, and certainly occasions the sweets with which it is combined, whether melasses or scummings, to yield a far greater proportion of spirit than can be obtained without its assistance. The water which is added, acts in some degree in the same manner by dilution.

In the Windward Islands the process, according to Colonel Martin, is conducted as follows:

Scummings, one-third.

Lees, or dunder, one-third.

Water, one-third.

When these ingredients are well mixed in the fermenting cisterns, and are pretty cool, the fermentation will rise, in twenty-four hours, to a proper height for admitting the first charge of melasses, of which six gallons for every hundred gallons of the fermenting liquor, is the general proportion to be given at twice, viz. 5 per cent. a day or two afterwards, when the liquor is in a high state of fermentation; the heat of which, however, should not in general be suffered to exceed from ninety to ninety-four degrees on Fahrenheit's thermometer.

boils, after which a little fuel will serve. In about two hours the vapour or spirit being condensed by the ambient fluid, will force its way through the worm in the shape of a stream, as clear and transparent as crystal; and it is suffered to run until it is no longer inflam-

of the spirit, or give it a panicular flavour. He coolden

The spirit which is thus obtained goes by the appellation of hwwwises. To make it rum of the Jamaica proof, it undergoes a second distillation, of which I shall presently speak; but previously thereto, I shall point out some little variation between the practice of the Jamaica distillers and those of the Windward Islands, observable in the first process. This consists chiefly in a more copious use of dunder.

\* As the use of dunder is to dissolve the tenacity of the saccharine matter, it should be proportioned not only to the quantity, but also to the nature of the sweets. Thus, when the sweets in the fermenting cistern consist of melasses alone, as generally happens after the business of sugarboiling is finished, when no scummings are to be had, a greater proportion of dunder is necessary; because melasses is a body of greater tenacity than cane-liquor, and is rendered so viscous and indurated by the action of the fire, as to be unfit for fermentation without the most powerful saline and acid stimulators. For the same reason, at the beginning of the crop, when no melasses is to be had, and the sweets consist of cane-juice or scummings alone, very little dunder is necessary. In such case I should not recommend above 20 per cent. at the utmost. Dunder, in a large quantity, certainly injures the favour, although it may in-

NOOK VI

The following being a very general, and, I believe, an improved method, in Jamaica, of compounding the several ingredients, viz.

crease the quantity of the spirit. We are informed by Dr. Shaw, that the distillers in England add many things to the fermenting liquor, or wash, in order to augment the vincelty of the spirit, or give it a particular flavour. He observes, that a little tarter, nitre, for common salt, is sometimes thrown in at the beginning of the operation, or in their stead a little of the vegetable or finer mineral acid. These are thought to be of great use in the fermenting of solutions of tracele, honey, and the like sweet and righ vegetable julces, which contain a small proportion of acid, 1 have heard. that a similar practice prevails among the distillers in St. Christopher's 1, some of whom consider an addition of seawater to the fermenting liquor (in what proportion I cannot say) as a real and great improvement. Shaw recommends the juice of Seville oranges, lemons, and tamarinds, or other very acid fruits, and, above all other things; an aqueous solution of tartar; but I conceive that dunder alone answers every purpose. He likewise recommends to the distiller to introduce into the fermenting clatern a few gallons of the rectified spirit, which he says will come back, with a large addition to the quantity of spirit that would otherwise have arisen from the distillation, -- As I have tried none of these experiments, I can say nothing in their favour of my own knowledge; but I believe that a small quantity of vegetable ashes, thrown into the rum-still, will be found serviceable. The alkaline sults are supposed to attenuate the spirit, and keep back the gross and fetid oil, which the distillers call the faints; but if used in too great a quantity, they may keep back also a proportion of the fine essential oil, on which the flavour of the rum wholly depends. Perhaps the most important object of attention, in the making rum of a good flayour, is cleanliness; for all adventitious or foreign substances

lauruntu zi dunlar andung-gururani tuoda gioson

Of this mixture (or wash, as it is sometimes called) one thousand two hundred gallons ought to produce three hundred gallons of low-wines; and the still may be twice charged and drawn off in one day. The method of adding all the melasses at once, which is done soon after the fermentation commences, renders the process safe and expeditious; whereas by charging the melasses at different times, the fermentation is checked, and the process delayed.

Let us now complete the process according to the Jamaica method. The low-wines obtained as above, are drawn off into a butt or vessel, and, as opportunity serves, are conveyed into the second still of six hundred gallons, to undergo a further distillation. The steam begins to run in about one hour and a half, and will give.

destroy or change the peculiar flavour of the spirit. In truth, it should be a constant rule with the manager or distiller to see that the cisterns are scalded, and even cleansed with strong lime-water, each time they are used; not merely on account of the rum, but also because it has frequently happeried that the vapour of a foul cistern has instantly killed the first person that has entered it without due precaution.

in the course of the day, two hundred and twenty gallons, or two puncheons, of pil-proof rum, i. e. of spirit in which olive oil will sink; and thus the manufacture, if it may be so called, is complete. There will remain in the still a considerable quantity of weaker spirit, commonly about seventy gallons, which is returned to the low-wine butt. Thus two hundred and twenty gallons of proof rum are, in fact, made from five hundred and thirty gallons of low-wines; or about one hundred and thirteen of rum from one thousand two hundred of wash.\*

By means of the apparatus and process which I have thus described, the Jamaica distiller may fill weekly, working only by day-light (a necessary precaution in this employment) and at a small expence of labour and fuel, twelve puncheons of rum, containing each one hundred and ten gallons of the Jamaica standard. The proportion of the whole rum to the crop of sugar, is commonly estimated in Jamaica as three to four. Thus a plantation of the above description is supposed to supply annually one hundred and fifty puncheons of rum

Proof spirit of any kind weighs seven pounds twelve ounces per gallon. According to the English hydrostatical table; the cubic inch of proof spirit weighs 9 p. wt. 19.73 gr. troy, or 8.62 dr. avoirdupois. But it has been found that a cubic inch of good brandy is 10 grains heavier in winter than in summer, and that 32 gallons of spirits in winter will make 33 in summer.

of one hundred and ten gallons each; or eightytwo gallons of Jamaica proof to each hogshead! of hugan; and this return I do believe is sometimes fairly made from canes planted in with and meist lands; but, on a general estimate, il think it too great an allowance, and that two hundred gallons of run to three hogsheads of sugar, which is in the proportion of about two thirds rum to the crop of augar, is nearer the priety, as to that with which I am myself thirt

CHAP

This will be better understood by attending to the following particulars :- The general supply of scummings to the still-house is seven gallons out of every 100 gallons of came-liquoral Supposing, therefore, that 2,000 gallons of cane-juice is required for each hogshead of sugar of 16 cwt. the cummings, on a plantation making 200 hogsheads per ann. will be 28,000 gallons, equal to - 4,666 gallons of melasses.

Add the melasses from the curing-house, which, if the spgar is of a good qua-

volumble than the very best in Jamaica; but, on Total of aweets 16,666 gallons.

This, distilled at and after the rate of 12 per cent. sweets in the fermenting cistern, will give 34,720 gallons of lowwines, which ought to produce 14,418 gallons of good proof rum, or 131 puncheons of 110 gallons each. When a greater proportion than this is made, one or other of these circumstances must exist, either the sugar discharges an unusual quantity of melasses, or the boiling house is defrauded of the cane-liquor by improper scumming. This latter circumstance frequently happens. I hand , brid- no

It should also be observed; that it is the practice of late, of rom applications it may be product to adopt the motion.

BOOK

The reader will please to recollect, that in this, and the preceding chapter, the observations which I have made, both concerning the cultivation of the sugar-cane in the field, and the subsequent processes of the boiling-house and distillery, have been drawn chiefly from the practice of Jamaica. Some selection was necessary, and I could refer to no mode of conducting a sugar plantation with such propriety, as to that with which I am myself practically acquainted. My next inquiries will relate to the particulars of the first cost of this species of property, to the current expences attending it, and to the returns which may be reasonably expected from a capital thus employed; and here again my estimates will refer chiefly to Jamaica. That there is a considerable variation in some of the Windward Islands, I have no doubt up In St. Christopher's, for instance, some of the lands are certainly more valuable than the very best in Jamaica; but, on the other hand, Jamaica is exempted from the duty of 41 per cent. and has other advantages, which probably make the scale even.

with many planters, to raise the proof of rum; thus gaining in strength of spirit what is lost in quantity; and there are managers who make it a rule to return the scummings to the clarifiers, instead of sending them to the still-house. This last-mentioned practice reduces the crop of rum more than one-third; but it is supposed to yield in sugar more than is lost in rum; and if the price of sugar is very high, and that of rum very low, it may be prudent to adopt this method.

NOOR

it requires a registed of notions than thirty than shad sweeting to embort. in this cappings must with a thirty council of advantage, and

## baneguban of CHAPTER III a soli station

Capital necessary in the settlement or purchase of a sugar plantation of a groen extent.—The lands, buildings, and stock, separately considered.—Particulars and cost.—Gross returns from the property.—Annual disbursements.—Net profits.—Various contingent charges not taken into the account.—Difference not commonly attended to, in the mode of estimating the profits of an English estate, and one in the West Indiaes.—Insurance of West Indiaestates in time of war, and other occasional deductions.

The question, why the cultivation of the Sugar Islands has increased, under so many discouragements, considered and discussed.

A BUGAR plantation consists of three great parts; the Lands, the Buildings, and the Stock: but before I proceed to discriminate their relative proportions and value, it may be proper to observe, that the business of sugar planting is a sort of adventure in which the man that engages, must engage deeply.—There is no medium, and very seldom the possibility of retreat. A British country gentleman, who is content to jog on without risk on the moderate profits of his own moderate farm, will startle to hear that

The remaining third is reserved in native woods, for the purpose of furnishing timbers for repairing the various buildings, and supplying fire-wood for the boiling and distilling-houses, in addition to the cane-trush and for burning lime and bricks. As therefore a plantation yielding, on an average, two hundred hogsheads of sugar annually, requires, as I conceive, not less than three handred acres to be planted in cases, the whole extent of such a property must be reckened at nine hundred acres. I am persuaded that the sugar plantations in Jamaica making these returns, commonly exceed, rather then fall short of this estimate; not, as hath been ignorantly asserted, from a fond and avaricious propensity in the proprietors to engross more land than is necessary; but because, from the nature of the soil, and rugged surface of the country, the lands vary greatly in quality, and it is seldom that even three hundred acres of soil in conprocessix pose one-culture

rightly, fit for the production of sugar, can be procured. The purchaser therefore must take the had with the good. Nevertheless, as it is may intention to give as precise as idea as I can of the profits to be made in the sugar-planting business, surder the most facourable circumstances. I will allow nothing for a dead capital vested, in unproductive woodland, but fix on six hundred acres, as sufficient for all the purposes that have been mentioned; appropriating one-half of the whole, instead of one-third, to the culture of the cape.

The price of woodland in Jamaica depends chiefly on its situation. In seasopable parts of the country, and in the vicinity of the sea, I conceive it would be difficult to purchase a quantity of sugar land sufficient for a good estate, unless at a very high price. On the north side, in a fertile and seasonable parish, I have lately known a tract of eight hundred acres, with a fine river running through it, sell for ten pounds currency per acre, but it was at the distance of ten miles from the sea; and the purchaser had a new and difficult road to make for three miles of the way. Such another territory, without the inconveniences to which this was subject, would, as lands sell in Jamaica. be well worth, and easily obtain, fourteen pounds; currency, or ten pounds sterling per acre. Six hundred acres at this price is 8,400%.

All.

The stock on a plantation of the magnitude described, cannot prudently consist of less than two bundeed and fifty negroes, eighty steers, and sixty mules. It is not sufficient to object, that duced by the labour of a less number of negroes than is here allowed. I am treating of an estate which produces that quantity on a medium; consequently, as, from droughts and unfavourable seasons, the crops will sometimes fall short of, at other times they must greatly exceed the numbers prescribed; and under these circumstances, I do not believe a plantation will easily be named that possesses (or employs, in job work and otherwise) a less number of negroes annually. If such an estate there is, I hesitate not to pronounce that it is in improvident hands; for what management can be worse than that which, by overworking the negroes, sacrifices the capital for the sake of a temporary augmented income?—The cost of the stock, therefore, may be stated as follows:

Thie in occurs that quality of me at the agent

Which is only 5201. short of 42,0001. Jamaica currency, or 30,000l. sterling, the sum first mentioned; and I am further of opinion, that if the owner of such a property were to sell it by appraisement, the valuation would amount to nearly the sum expended. It would therefore be more adviseable, undoubtedly, to purchase a plantation ready settled, rather than attempt to create a new one from uncleared lands: inasmuch as the labour and risk for the undertaking would be thereby avoided; -but, however this may be, it must be considered as a fixed and well-established fact, that a sugar plantation of the extent and returns which have been supposed, whether acquired by purchase, or by the risk and labour of clearing the lands, will unavoidably cost (the necessary buildings and stock included) 30,000% sterling, before any adequate interest can be received from the capital.

CHAP.

The produce of such a plantation has been stated at 200 hogsheads of sugar, of 16 cwt. and 130 puncheons of rum, of 140 gallons, communibus armis; the value of which according to the average prices at the London market for ten years previous to 1791, may be reckoned as follows:

200 Hogsheads of sugar, at 15%	Sterling.
tersing per hogshead starts in a	3,000
130 Puncheons of rum, at 101 ster-	i wha
ling per puncheon, Wal Morris in mand	<b>1,300</b>

- bar in Englandar out pa campao has canagao

But the reader is not to imagine that all this, or even the sugar alone, is so much clear profit. The annual disbursements are first to be deducted, and very heavy they are; nor is any opinion more erroneous than that which supposes they are provided for by the rum. If such indeed were the fact, the capital would yield precisely an annual interest of ten per cent.: but a reference to the several items, which I have particularized in a note,\* will demonstrate the

-57 Admitting even that his prudence, or good fortune, may be such as to exempt him from most of the losses and calamities that have been enumerated. it must nevertheless be remembered, that the sugar-planter is at once both landlord and tenant on his property. In contrasting the profits of a West Indian plantation with those of a landed estate in Great Britain. this circumstance is commonly overlooked; yet nothing is more certain than that an English proprietor, in stating the income which he receives from his capital, includes not in his estimate the profits made by his tenants. These constitute a distinct object, and are usually reckoned equal to the clear annual rent which is paid to the proprietor. Thus a farm in England, producing an income of 31 per cent. to the owner, is in fact proportionably equal to a sugar plantation yielding

In Jamaica, the usual mode of calculating, in a general way, the average profits of a sugar estate, is to allow low sterling per change for every negro, young and old, employed in this line of cultivation.

double the profit to the planter; and p besides all that stability, certainty and security; the want of which fruthe greate drawback on the latters An English gentleman, when either extreme of dry or wet weather injures the crop on his lands, has ne other deoncers limithe calamity than such as the mere feelings of humanity may dictate. Nor is he under the disagreeable necessity inciding of war, of paying large premiums for inswing his estate from capture by a foreign enemy. and This aist another tetr, lowhich the unfortunate West Indian resident in Great Britain promust add tombis respenses and submit to the idisagreeable alternative of passing many an uneary day and sleepless night, in dreadful anxiety for the fate of his possessions and the future subsistence coso his family and harassed; perhaps, at the same time, by creditors whose importunity; increases as their security becomes endangired applies from his capitaberigander

But there is a question, maturally arising from the premises, to which it is proper that I should, in this place, give an answer; and it is this: Seeing that a capital is wanted which few men can command, and considering withal, that the returns are in general but small, and at best uncertein, how has it happened that the sugar islands have been rapidly settled, and many a great estate purchased in the mother-country, from the profits that have accrued

a applyed in this line of cultivier ?

CHAP

from their cultivation ? At were to be wished that those who emake such inquiries would inquire, on the other hands how many unhappy persons have been totally and irretrievably ruined, byfadventuring in the cultivation of these islands, without poisessing any adequate means to support themeing such great undertakings? On the failure of some of these unfortunate men wast estates have indeed been raised by persons who have shad money at dcommand: men there are who reflecting on the advantages to be derived from this oircumstance behold a sugar planter struggling in distress; with the same emotions as are felt by the Cornish peasants in contemplating a shipwreck on the coast, and hasten with equal rapaciousness to participate in the spoil in Like them atoop they sometimes hold out false lights to lead the unwary adventurer to destruction; more especially if he has any thing considerable of his own to set out with Money is advanced, and encouragement given, to a certain point; but a skilful practitioner well knows where to stop; he is aware what very large sums must be expended in the purchase of the freehold, and in the first operations of clearing and planting the lands, and erecting the buildings, before any return can be made. One-third of the money thus expended, he has perhaps furnished; but the time soon

arrives when a further advance is requisite to give life and activity to the system, by the addition of the negroes and the stock of Now then is the moment for oppression, aided by the letter of the law, and the process of office, to reap a golden harvest. If the property answers expectation, and the lands promise great returns; the sagacious creditor, instead of giving further aid, or leaving his too confident debtor to make the best of his way by his own exertions, pleads a sudden and unexpected emergency; and insists on immediate re-payment of the sum already lent. The law, on this occasion, is far from being chargeable with delay; and avarice is inexorable. A sale is hurried on, and no bidders appear but the creditor himself. Ready money is required in payment, and every one sees that a further sum will be wanting to make the vestate aproductive. it Few therefore have the means, who have even the wish, efficaciously to assist the devoted victim. Thus, the creditor gets the estate at his own price, commonly for his first advance, while the miserable debtor has reason to thank his stars if, consoling himself with only the loss of his own original capital, and his labour for a series of years, he escapes a prison for life.

That this is no creation of the fancy, nor even an exaggerated picture, the records of the courts

tim Cred hey men deri and DOUD pecor receiv ment. know which holder favour of We other, ope cl Wards cultiva and los comme undoub that I H the capi

ed. It VOL.

of

III.

of law in all or most of our islands (Jamaica especially) and the recollection of every inhabitant, furnish incontestable proof. At the same time it cannot justly be denied that there are creditors, especially among the British merchants, of a different character from those that have been described, who having advanced their mency to resident planters, not in the view of deriving undue advantages from their labours and necessities, but solely on the fair and honourable ground of reciprocal benefit, have been campelled, much against their inclination, to become planters themselves; being obliged to receive unprofitable West Indian estates in payment, or lose their money altogether. I have known plantations transferred in this manner. which are a burthen instead of a benefit to the holder; and are kept up solely in the hope that favourable crops, and an advance in the prices of West Indian produce, may, some time or other, invite purchasers. Thus oppression in one class of creditors, and gross injustice towards another, contribute equally to keep up cultivation in a country, where, if the risks and losses are great, the gains are sometimes commensurate; for sugar estates there are, undoubtedly, from which, instead of the returns that I have estimated as the average interest on the capital, double that profit has been obtained. It is indeed true that such instances are

extremely rare; but perhaps to that very circumstance, which to a philosopher, speculating in bis closet, would seem sufficient to deter a wise man from adventuring in this line of cultivation, it is chiefly owing that so much money has been expended in it: I mean the fluctuating nature of its returns. The quality of sugar varies occasionally to so great degree as to create a difference in its marketable value of upwards of ten shillings sterling in the hundredweight, the whole of which is clear profit, the duties and charges being precisely the same on Muscovado sugar, of whatever quality. Thus fine sugar has been known to yield a clear profit to the planter of no less than 1,500% sterling on 200 hogsheads of the usual magnitude, beyond what the same number, where the commodity is inferior in quality, would have obtained at the same market. To aver that this difference is imputable wholly to soil and seasons in the West Indies, or to the state of the British market, is to contradict common observation and experience. Much, undoubtedly, depends on skill in the manufacture; and, the process being apparently simple, the beholder (from a propensity naturally to the busy and inquisitive part of mankind) feels an almost irresistible propensity to engage in it. In this therefore, as in all other enterprises, whose success depends in any degree on human sagacity and prudence,

though perhaps not more than one man in fifty comes away fortunate, every sanguine adventurer takes for granted that he shall be that one. Thus his system of life becomes a course of experiments, and, if ruin should be the consequence of his rashness, he imputes his misfortunes to any cause, rather than to his own want of capacity or foresight.

That the reasons thus given, are the only ones that can be adduced in answer to the question that has been stated, I presume not to affirm. Other causes, of more powerful efficacy, may perhaps be assigned by men of wider views and better information. The facts however which I have detailed, are too striking and notorious to be controverted or concealed.

Having now, I believe, sufficiently treated of the growth, cultivation, and manufacture of sugar, &c. and pointed out with a minuteness (tedious perhaps, but) suited, as I conceive, to the importance of the subject, the first cost, and current contingencies attending the establishment and profitable maintenance of a sugar plantation, together with the risk and gains eventually arising from this species of property, I shall proceed, in the following chapter, to furnish my readers with such information as I have been able to collect concerning the minor staples, especially those important ones of cotton, indigo, coffee, cacao, pimento, and ginger,

olife ellectly of ite. a trans has gloudered THAT beautiful vegetable wool, or substance called cotton, is the spontaneous production of three parts of the earth. It is found growing. naturally in all the tropical regions of Asia, Africa, and America; and may justly be comprehended among the most valuable gifts of a bountiful Creator, superintending and providing easily semirated from Lasm to spitiesessen entire

The cotton-wool, which is manufactured into cloth (for there is a species in the West Indies, called silk or wild cotton, unfit for the loom) consists of two distinct kinds, known to the planters by the names of GREEN-SLED Corton, and Shbub Cotton; and these again have subordinate marks of difference, with which the cultivator ought to be well acquainted if he means to apply his labours to the greatest advantage.

OREEN-SEED cotton is of two species; of one of which the wool is so firmly attached to the seed, that no method has hitherto been found of separating them, except by the hand; an operation so tedious and troublesome, that the value of the commodity is not proportionate to the pains that are requisite in preparing it for market. This sort therefore is at present cultivated principally for supplying wick for the lamps that are used in sugar-boiling, and for domestic purposes; but the staple being exceedingly good, and its colour perfectly white, it would doubtless be a valuable acquisition to the muslin manufactory, could means be found of detaching it easily from the seed.

The other sort has larger seeds, of a duller green than the former, and the wool is not of equal fineness, though much finer than the cotton-wool in general cultivation; and it is easily separated from the seed by the common

CHAP.

method, hereafter to be described. I have been told that this species of the green-seed cotton is not sufficiently known to the planters in general, (being usually confounded with the former) or that probably it would be in high estimation.

Both the species above mentioned, though they produce pods at an early stage, when they are mere shrubs, will, if suffered to spread, grow into trees of considerable magnitude, and yield annual crops, according to the season, without any kind of cultivation. The blossoms put forth in succession from October to January, and the pods begin to open fit for gathering from February to June. I come now to the

Shrub Corron, properly so called. The shrub itself very nearly resembles an European Corinth bush, and may be subdivided into several varieties, all of which however very nearly resemble each other. These varieties (such

The flowers are composed of five large yellow leaves, each stained at the bottom with a purple spot. They are beautiful, but devoid of fragrance. The pistil is strong and large, surrounded at and near the top with a yellow farinaceous dust, which, when ripe, falls into the matrix of the pistil. This is likewise surrounded, when the petals of the flowers drop, with a capsular pod, supported by three triangular green leaves deeply jagged at their ends. The inclosed pod opens, when ripe, into three or four partitions, discovering the cotton in as many white locks as there are partitions in the pod. In these locks are interspersed the seeds, which are commonly small and black.

Ist, The Common Jamaica; the seeds of which are oblong, perfectly smooth, and have no beard at the smaller end of The staple is coarse, but strong. Its greatest defect is that the seeds are so brittle it is scarce possible to render it perfectly clean; on which account it is the lowest priced cotton at the British market. Such however is the obstinacy of habit, that few of the British cotton planters give themselves the trouble to select a better sort, or seem indeed to wish for it.

2d, Brown Bearded.—This is generally cultivated with the species last mentioned, but the stable is somewhat finer, and the pods, though fewer in number, produce a greater quantity of wool. The shrub gives likewise a better ration. It is therefore the interest of the cotton planter to cultivate it separately. The only disadvantage attending it is, that it is not so easily detached from the seed as the other, and therefore a negro will clear a few pounds less in his day's work.

3d, Nankeen.—This differs but little in the seeds or otherwise from the species last mentioned, except in the colour of the wool, which is that of the cloth called Nankeen. It is not so much in demand as the white.

4th, French or Small-seed, with a whitish

CHAP.

beard. This is the cotton in general cultivation in Hispaniola. Its staple is finer, and its produce equal to either of the three species last mentioned, as the shrub is supposed to bear a greater number of pods than the Jamaica, or the Brown Bearded, but is less hardy than either.

being conglomerated or adhering firmly to each other in the pod. In all the other sorts they are separated. It is likewise called Chain Cotton, and, I believe, is the true Cotton of Brasil.—
The staple is good, the pod large, and the produce considerable. A single negro may clear with ease sixty-five pounds in a day, besides which, it leaves the seeds behind unbroken, and comes perfectly clean from the rollers. It is therefore improvident, in the highest degree, to mix this species with any other.

On the whole, the most profitable sorts for general cultivation seem to be, the second of the Green-seed, the French or Small-seed, and the Brasilian. The mode of culture is the same with all the different species, and there is this advantage attending them all, that they will flourish in the driest and most rocky soils, provided such lands have not been exhausted by former cultivation. Dryness, both in respect of the soil and atmosphere, is indeed essentially necessary in all its stages; for if the land is moist, the plant expends itself in branches and leaves;

The plant is raised from the seed, the land requiring no other preparation than to be cleared of its native incumbrances; and the season for putting the seed into the ground is from May to September, both months inclusive. This is usually done in ranks or rows, leaving a space between each, of six or eight feet, the holes in each row being commonly four feet apart. - It is the practice to put eight or ten of the seeds into each hole; because some of them are commonly devoured by a grub or worm, and others rot in the ground. The young sprouts make their appearance in about a fortnight, but they are of slow growth for the first six weeks, at which period it is necessary to clean the ground and draw the supernumerary plants, leaving two or three only of the strongest in each hole. One plant alone would be sufficient to leave, if there was any certainty of its coming to maturity; but many of the tender sprouts are devoured by the grub. At the age of three or four months, the plants are cleaned a second time; and both the stem and branches pruned, or, as with is called, toppid; an inch (or more if the plants are

luxuriant) being broke off from the end of each shoot; which is done in order to make the stems throw out a greater number of lateral branches. This operation, if the growth be over-luxuriant, is sometimes performed a second, and even a third time. At the end of five months, the plant begins to blossom and put forth its beautiful vellow flowers, and in two months more the pod is formed. From the seventh to the tenth month the pods ripen in succession; when they burst open in three partitions, displaying their white and glossy down to the sight. The wool is now gathered, the seed being enveloped in it; from which it is afterwards extricated by a machine resembling a turner's lathe. It is called a gin, and is composed of two small rollers placed close and parallel to each other in a frame, and turned in opposite directions by different wheels, which are proved by the foot.\* The cotton being put by the hand to these rollers as they move round, readily passes between them, leaving the seeds which are too large for the interspuce behind. The wool is afterwards handpicked, that it may be properly cleared of decayed leaves, broken seeds, and wool which has been stained and damaged in the pod.\*

is then packed into begs of about two hundred pounds weight, and sent to market.

The finest grained and most perfectly cleaned cotton, which is brought to the English market, is, I believe, that of the Dutch plantations of Berbice, Demarara, and Surman, and of the island of Cayenne; but before the year 1780 England had no fine manufactories. In the latter end of that year, however, cotton wool of all kinds found a ready sale at the following prices:

Since that time the prices have indeed varied, but the relative value has continued nearly the same; that is, the difference of price between the cotton of Berbice and that of Jamaica has been from 25 to 30 per cent. in favour of the former; a circumstance which alone should

1780, hath made a rapid improvement, owing to the large spinning machines which are worked by water. These require the cleanest cotton, as the smallest particle of a broken seed breaks the thread in this made of spinning.

British West Indies that, if he wishes to turn his labours to account, the choice of a better species of cotton, at least of a sort more disily cleaned than that in general cultivation, is indispensably requisite.

I shall now bring into one point of view the several particulars attending the first cost and settlement of a plantation in this sort of husbandry, and the returns which may reasonably be expected from a small capital thus employed. I fix on a small capital; because I conceive that a cotton plantation may be established on a more moderate fund than any other; and it is for the interest of the community that men of small fortunes should be instructed how to employ their time and labours to the best advantage, since it is to such men chiefly that the West Indies are to look for safety in the hour of danger.

It is presumed that land proper for the growth of cotton, situated near the sea, may be purchased, in many parts of the West Indies (Jamaica especially), at 51. Jamaica currency per acre; and as it is prudent, in most cases, to change the soil after the third crop, by replanting fresh land,\* I will allot fifty acres

<sup>\*</sup> If the land is extraordinary good, four and even five annual crops are sometimes gathered from the same original plants; after which, instead of replanting; it is not un-

DOOK V.

for the first purchase, in order that the planter may have room for that purpose. Supposing therefore that one half only is planted in cotton at the same time, the capital will be invested as follows: have time, the capital will be invested as

Total expenditure in Jamaica cur-

common to cut the cotton bushes down to within three or four inches of the ground, and mould the stems in the May rains, and treat them afterwards in the same manner as plants. Some labour is undoubtedly saved by this practice, but, in nine cases out of ten, it will be found more profitable to resort to fresh land, every third or fourth year. I consider, at the same time, land to be fresh enough which has lain fallow, or been used in a different line of culture for three or four years together, the great intention of changing the land being to get rid of that peculiar sort of grub or worm which preys on the cotton-plants.

The returns are now to to considered:—In Jamaica it is commonly reckoned that one acre of cotton will yield annually 150 pounds weight, and in some years nearly twice as much; but I am afraid that, on an average of any considerable number of successive crops, even the former is too great an allowance. By accounts which I have procured from the Bahama islands, it appears, that in 1785, 1786, and 1787, (all which years were considered as favourable), the produce of the cotton-lands, on an average, did not exceed one hundred and twelve pounds per acre; viz:

In 1785 — 2,476 \\ 1786 — 3,050 \\ 1787 — 4,500 \\ \text{acres produced} \begin{cases} 2,480 \\ 3,000 \\ 4,380 \end{cotton.} \\ \text{cotton.} \\ \text{cotton.} \\ \text{cotton.} \end{cases}

The price in the Bahamas and Jamaica was the same, viz. 1s. 3d. sterling per pound.—Allowing therefore the average produce per acre to be one hundredweight, the returns are these; viz.

Sterling.

25 cwt at 1s. 3d. sterling per pound £. 175

Deduct incidental expences, as materials for bagging, colonial 25

taxes, &c.\*

The maintenance, &c. of the negroes, after the first year, is not charged, because it is conceived, that the land in cotton not being sufficient to find them in full employ-

BOOK V.

Which gives an interest of upwards of fourteen per cent on the capital; arising too from the lowest-priced cotton. If the same calculation be applied to cotton wool, of two shillings per pound value (the present price of the cotton wool of St. Domingo), the profit on the capital is twenty-four per cent.

From this display, the rapid progress which the Dutch and French planters have made in the culture of this commodity, cannot be thought extraordinary; but there remain some gircumstances, of a less favourable nature, to be taken into the account. Of all the productions to which labour is applied, the cotton-plant is perhaps the most precarious. In its first stage, it is attacked by the grub; it is devoured by caterpillars in the second, it is sometimes withered by the blast; and rains frequently destroy it both in the blossom and the pod. The Bahama islands afforded a melancholy instance of the uncertainty of this production in 1788: no less than 280 tons, on a moderate estimate, having been devoured by the worm, between September and March in that After this the reader will hardly VERT. suspect me of having rated the average pro-

ment, they may raise corn and other articles on the remaining twenty-five acres, more than sufficient to pay for their clothing and support. It is usual even to raise corn, potatoes, &c. between the ranks of the cotton bushes.

duce of this plant, for a series of years, too low.

With every disadvantage, however, the demand for cotton-wool, for the British manufactories, increases with such rapidity, that it cannot be doubted the cultivation of it, with the cautions recommended, will be found highly profitable: the British dominions not supplying, at present, much more than one-fourth part of the home demand, If, after a careful selection and trials of the different species of the seeds already in our possession, the cotton-wool of the British West Indies shall still be found inferior to that of the Dutch, no difficulty can occur in obtaining from them a better sort. It is evident that the French cotton loses its superiority in our islands, by being sown promiscuously with an inferior species.

I shall conclude the subject, with presenting to my readers the following tables, drawn from authentic sources; which cannot fail to furnish abundant encouragement for speculation and adventure.

On the whole, it is computed that not less than three hundred and fifty thousand people in Great Britain find full employment in the cotton manufactory. In point of importance, therefore, even the produce and manufacture of the great staple commodity of this kingdom, wool, does not exceed it in a two-fold proportion. According to the information of a very able and diligent inquirer, there are from ten to twelve million of sheep in England. The value of their wool may, one year with another, amount to 3,000,000l.; the expense of manufacturing this is probably 9,000,000l., and the total value 12,000,000l.

Indies. In the British Sugar Islands, they reakon three distinct species; the Wild, Guatimala, and French. The first is said to be the hardiest, and the dye extracted from it is supposed to be of the best quality, both in colour and closeness of grain; but one of the other two species is commonly preferred by the planter, as yielding a greater return; and of those, the French surpasses the Guatimala in quantity, but yields to it in fineness of grain and beauty of colour.

That the richest soil produces the most luxuriant plant, and that good seasons accelerate its growth, cannot, I think, be doubted; but, observing its long tap-root, and spontaneous growth, in almost every dry and barren savannah, I am convinced it will thrive on soils that

\* L'Abbé Raynal by a gross mistake asserts, that the plant itself was originally carried into the West Indies from the Rast. It was found growing spontaneously in all parts of St. Domingo, by Columbus himself, on the first discovery of the West Indies; and was indigenous also in Mexico, and other parts of the continent, as appears from the testimony of Pet. Martyr and all the early Spanish writers, not one of whom does it seem that L'Abbé Raynal ever read.

† The wild indigo (indigofera argentea) has short crooked pods and black seeds; the Guatimala is distinguished by the redness of the stalk, and the colour of the seeds, which is green. This is the indigofera disperma of Linnsens. The French is a short bushy plant, with roundish leaves. It has long crooked pods, and its seeds are yellow. The French call it Indigoferae. It is the indigofera tisctorie of Linnsens.

ther will not totally kill it; though much water will have that effect, if suffered to remain long on the plant.

The cultivation and minufacture are con-

The land being properly cleared of weeds, ac. is hood into simall trenches of two or three inches in depth, and twelve or fourteen inches assurder; in the bottom of which the seeds are strewed by the hand, and covered lightly with mould; but as the plants shoot, the field must be frequently weeded and kept constantly clean, until they rise and spread sufficiently to cover the ground. A bushel of seed is sufficient for four or five acres of land.

In the West Indies, the best season for planting is supposed to be the month of March, but the plant will flourish at any other period; and if sown in new land, will come to full blossom (and it is then in perfection) in about three extender months. In the southern provinces of America, the season for planting depends greatly on the nature of the spring, which varies much in these countries. If the plants appear above ground by the first day of March, they will be fit for cutting about the twentieth of August; and are sometimes equal to the best in the West Indies.

There is this difference, however, between the two countries; that in the West Indies, in

cut as two is doo

But that sun which thus improves and invigorates the plant, propagates at the same time an insect destructive to it. This is a species of grub or worm, which becomes a fly, and preys on the leases, and never fails, in the West Indies, to disappoint the planter's expectations the secont year upon the same land; the only remedy is to change the soil every year. The want of due attention to this important circumstance, has probably been one of the causes that so many persons have failed of late years in their attempts to revive the culture of this valuable commodity.

of the first cutting, will be about eighty pounds weight of what the French call pigeon's neck; or about sixty pounds of a quality equal to the Guatimals. The produce in North America is sometimes nearly as much; but when Fahilian as a second line, against

CHAIR,

<sup>\*</sup> The rations or subsequent growths from the same plants, ripen in six or eight weeks; but the produce diminishes fast after the second cutting, so that it is absolutely necessary to sow the secus anew every year.

renheit's thermometer falls to 60°, the returns there are very uncertain, both in quality and quantity; a greater heat being absolutely necessary both for vegetation and maceration. The yielding for the subsequent cuttings somewhat diminishes; but in Jamaica and St. Domingo, if the land is new, about 300 lbs. per acre of the second quality, may be expected anoughly, from all the cuttings together, and four negroes are sufficient to carry on the cultivation of five acres, besides doing other occasional work, sufficient to reimburse the expenses of their maintenance and clothing.

The process for obtaining the dye is generally conducted in two cisterns, which are placed like two steps, the one ascending to the other. The highest (which is also the longest) is called the steeper; and its dimensions are about sixteen feet square, and two feet and a half in depth. There is an aperture near the bottom for discharging the fluid into the second, which is called the battery, and is commonly about twelve feet square, and four and a half in depth. Cisterns of these dimensions are proper for about seven acres of the plant; but if stone work cannot easily be erected for want of materials, vats of strong timber well secured from leakage, will answer as well.\*

<sup>\*</sup> There is also required a lime-vat, six by eight feet square, and four feet deep; and it may be proper to observe that the tap or plug hole ought to be placed at least eight

The plants are cut with reap-hooks or sickles. a few inches above the root, and placed by strata in the steeper, until it is about three parts full. They are then strongly pressed down by boards or planks, which are wedged or loaded, to prevent the plants from buoying up; and as much water is admitted as the weed will imbibe, until it is covered four or five inches deep, and in this state is left to ferment, until the pulp is extracted: but the utmost attention and nice management are now required; for, if the fluid is drawn off too soon, much of the pulp is left behind: and if the fermentation is too long continued, the tender tops of the weeds occasion putrefaction, by which all the dye is destroyed.

To obtain a certain knowledge therefore of

inches from the bottom, to leave sufficient room for the lime to subside, before the lime-water is drawn off into the battery.

\*Some persons are of opinion that the plants should not be cut nearer the ground than six inches, and that a few branches should be left on the stem.—This practice they say, will draw up the silp better, and produce a more luxuriant ration than when a naked stalk only is left. During the first cutting it is usual to leave some of the most flourishing stalks for seed, which ought not to be gathered until it is well hardened in the pod.—It generally requires ten bushels of the pod to produce a single bushel of clean dry seed fit for sowing. It may also be observed, that many indigo planters have a notion that the plant yields the greatest quantity of the dye, when cut at the full of the moon.—Of this fact I can assert nothing of my own knowledge.

the proper degree of fermentation, has hitherto been the grand desideration of the cultivator. Repeated experiments for this purpose, were made some years ago in the island of Hispaniola, under the sanction and encouragement of the Chamber of Agriculture, and instructions (which were said to be practised with great success by Messis. Dangdale and Mongon, indigo planters in that island) were published by authority, to this effect:

"After the Indige has been steeped in the cistern eight or nine hours, draw off a little of the water, and with a pen dipped into it, make a few strokes upon white paper. The first will probably be high-coloured, in which case the indigo is not sufficiently fermented; this operation is to be repeated every quarter of an hour, until it loses its colour; when it is arrived at the true point of fermentation."

It is astonishing that an experiment so simple in itself, if it answers, should have been for so many years unknown to the indigo planters in general; and I confess, that, although I have had no opportunity of giving it a trial, I am myself somewhat doubtful of its efficiery. The following method, which I give on the authority of Mr. Lediard, is, I conceive, attended with much greater certainty:

six on eight inches from the bottom, exclusive of the opening or aperture for drawing off the

impregnated water; let this hole likewise be stopped with a plug, yet not so firmly but that a small stream may be permitted to coze through it. After the plants have been steeped some hours, the fluid cozing out will sppear beautifully green, and at the lower edge of the cistern, from whence it drops into the buttery, it will turn of a copperish colour. This copperish hue, as the fermentation continues, will gradually ascend upwards to the plug, and when that circumstance is perceived, it is proper to stop the fermentation.

"During the progress of this part of the business, particular attention should be paid to the smell of the liquor which weeps from the aperture, for should it discover any sourness, it will be necessary to let the fermented liquor run immediately into the battery, and lime-water of sufficient strength must be added to it, until it has lost its sourness. As it is running off, it will appear green, mixed with a litight yellow, or stray colour, but in the battery it will be of a most beautiful greath" at his part of the

The tincture being thus discharged into the battery, it is there churited or agitated until the dye begins to granulate, or float in little flaces on the water. This was formerly done in Jamaica with manual labour, by means of paddles, and, in the French islands, by buckets or cylinders fixed to long poles; but far more

convenient machines are now a constructed, in which the devers are worked by at cog-wheel, and kept in motion by a horse or mule: When the fluid has, by such means, been well churned for the space of fifteen or twenty minutes, and, being tried in a cup or plate, appears curdled or coagulated, a strong impregnation of limewater is gradually added, not only to promote a separation, but likewise to fix the colour and preserve it from putrefaction. But the planters (as Brown observes) " must carefully distinguish the different stages of this part of the operation also, and attentively examine the appearance and colour as the work advances, for the grain passes gradually from a greenish to a fine purple, which is the proper colour when the liquor is sufficiently worked; too small a degree of agitation leaving the indigo green and coarse; while too vigorous an action brings it to 

The liquor being properly and sufficiently worked, and the pulp granulated, it is left undisturbed until the flakes or floculæ settle at the bottom, when the incumbent water is drawn off, and the indigo distributed into small linen bags to drain, after which it is carefully put into little square boxes or moulds, and suffered to dry gradually in the shade; and this finishes the manufacture.\*

ngal,

To what has been said above of the nature of the plant, suiting itself to every soil, and producing four cuttings in the year, if we add the cheapness of the buildings, apparatus, and labour, and the great value of the commodity, there will seem but little cause for wonder at the splendid accounts which are transmitted down to us concerning the great opulence of the first Indigo planters. Allowing the produce of an acre to be 500 lbs. and the produce no more than 4s. sterling per pound, the gross

and and dity, or at itted

ក្នុង ២២៩៦ សុខា ១៩៩៤ បាន ប្រុស្ស ១៩៩៩ និង សាសាបានីកំ concerning the first process, seem to have been made with great accuracy: "When the Indigo plant is committed to cold water in the steeping vat, the following appearances take place: in a few hours a slight motion begins to shew itself throughout the body of liquor—the bulk increases considerably, with some additional heat; air bubbles are generated, some of which remain on the surface, and gradually collect into patches of froth-a thin violet or copper-coloured pellicle or cream makes its appearance between the patches of froth, and soon after, the thin film which forms the covering of the bubbles composing the froth begins to be deeply tinged with a fine blue: the liquor from the beginning will have been acquiring a green colour, and now it will appear, when viewed falling from one vessel to another, of a bright yellowish green, and will readily pass the closest filtre until the action of the air makes it turbid, a proof that the base of the colour is now perfectly dissolved in the watery menstruum. This is the time for letting off the vat—the fermentation however continues, and large quantities of froth are formed. The smell now becomes very offensive," &c. &c.

Bancroft on Permanent Colours, Appendix 439.

profits of twenty acres will be 1,400%, produced by the labour of only sixteen negroes, and on a capital in land and buildings, scarce deserving consideration.

Such, without doubt, will be the reader's first reflections. Unhappily, however, the golden hopes which speculations like these have raised in the minds of thousands, have vanished on actual experiment, like the visions of the morning. I think I have myself, in the course of eighteen years residence in the West Indies, known at least twenty persons commence Indigo planters, not one of whom has left a truce by which I can now point out where his plantation was situated, except perhaps the remains of a ruined cistern covered by weeds, and defiled by reptiles. I Many of them too were men of knowledge, Foresight, and property. That they failed is certain, but of the causes of their failure, I confess I can give no satisfactory account. I was told that disappointment trod close at their heels at every step. At one time the elementation was too long continued; at another, the liquor was drawn off too soon. Now the pulp was not duly granulated, and now it was worked too much. To these inconveniences, for which practice would doubtless have found a remedy, were added others of a much greater magnitude: the mortality

of the negroes from the vapour of the ferment, ed liquor, (an alarming circumstance, that, as I am informed both by the French and English planters, constantly attends the process), the failure of the seasons, and the ravages of the worm. These, or some of these evils, drove them at length to other pursuits, where industry might find a surer recompence.

Their history, however, furnishes a new illustration to a very trite but important remark, that a manufacture once destroyed, scarce ever takes most again in the cas country. HOf the causes from which the general culture and manufacture of Indigo was relinquished in Jamaica, enough has been said by other writers: yet the same arguments which induced the British | Government to burthen this commodity with duties under which it sunk, are still urged in the case of other colonial products, and will continue to be urged, until the same fate attends many of them as attended Indigo." Of the monstrous folly and impolicy of loading with high duties an article so essentially necessary to the British woollen manufactory, (putting colonial considerations out of the question) the Mother Country is, I believe, at length sufficiently convinced; the quantity of Indigo annually imported into Great Britain from all parts of the world, being, I believe, one million and a half of pounds of which five

excellent quality, and very light; a cubic fuch weighing

parts in seven are purchased with ready money of strangers and rivals. with a minimum, nonpit to will have a list of being distributions are

Boon after the second edition of this work was printed, my learned friend, Dr. Edward Bancroft, F. R. S. favoured the public with his " Experimental Researches concerning "the Philosophy of Permanent Colours," a work of infinite research and movit; is an Appendix, to which he gives an abstract of a botanical description, by Dr. Roxburgh of Bengal, of a new species of serium (rose bay) found in the East Indies, the leaves of which yield excellent indigo. This account however is chiefly interesting to the planters of the West Indies, as containing some experiments and opinions which lead to an improved method of entracting the common indigo by means of a bailing process; for it being found that the leaves of the serium would not yield their colour except to boiling water, it was judged by analogy that the scalding process might be savantageously applied also to the common indigo plant, and the result has exceeded expectation : "By "the scalding process (observes Dr. Hogburgh) I have al-" ways, on a small scale, made from the common indigo " plant, better indigo than I could by fermentation, and in " one fourth of the time; and what is also of great import-"ance, without the smallest degree of the pernicious effluvis "which attend the manufacture of indigo by fermentation, "and mereover; the twigs and leaves themselves of the in-"digo plant burn fiercely, after having been well dried, " and will carry on the operation without requiring any "great addition of other fuel,"

In another place Dr. Roxburgh observes, "that the Hindoes throughout the northern provinces or circars make
all their indigo by means of hot water, and precipitate
with a cold infusion of the bark of the jambalous tree,
yet notwithstanding the inferiority of this bark as an
astringent, when its effects are compared with those of limewater, I have always found their indigo to be of a very
excellent quality, and very light; a cubic inch weighing

DITTO STATE OF STATE

So many treatises have been written on the history of coffee; its introduction into the West Indies has been so fully traced by some writers, and its properties so ably investigated by others, (above all, by my learned friend Dr. Benjamin Moseley) as hardly to leave me the possibility of offering any thing new on those subjects. The few observations therefore which I shall present to my readers concerning this berry, will relate principally to its culture; and these being chiefly founded on actual experience, may perhaps afford some useful information.

"only about 110 grains, and being of a blue violet colour.

"The superior quality of this indigo must alone be imputed
to the nature of this process by which the colour, or rather base of the colour, is extracted from the plant; for
their apparatus is very inconvenient."

with windows and the to the entire it of a lot

"the scalding process, the quantity is generally increased by it; moreover the health of the labourer in this way a not endangered, as in the fementing process, by constant and copious exhalations of putrid miasma: the heat employed expels most of the fixed air during the scalding, which renders a very small degree of agrantion, and very little of the precipitant necessary. The operation can also be performed two or three times a day upon a large scale; and lastly, the indigo itself dries quickly without acquiring any bad smell, or putrid unwholesome tendenty." Surely these observations deserve the most serious attention of the planters in the British West Indigs!

The admirers of coffee have long lamented the inferiority of the West Indian to that of Mocha. That many of the complaints with which the public are amused on this subject, arise from affectation, I have not a doubt. At the same time, it must be admitted that the charge is not entirely without foundation, insamuch as the West Indian coffee is frequently drank within twelve months after it has been gathered from the tree; and that the flavour improves by age, there is not a coffee planter in the West Indies so bigoted to his own possessions, as wholly to deny.

But the notion that the coffee itself is naturally inferior to that of the East, as being the production of a coarser and less valuable species of the tree, needs no other refutation than the circumstance related by the celebrated gardener, Mr. Miller, "that from plants brought from "the West Indies, and raised in English hot" houses, coffee berries have been produced, which, at a proper age, were found to surpass "the very best Mocha that could be procured in Great Britain." It is evident therefore that the whole difference depends on the soil and climate, mode of curing, and age.

It appears, on the authority of Le Roque and other writers, that the Arabian coffee is produced in a very dry climate; and flourishes most on a sandy soil, or on mountainous slopes,

which give an easy conveyance to the rains. The propriety of choosing similar situations in the West, Indies (if a small berry, best suited for the English market, is expected) is justified by the experience of every coffee planter.

slopes,

showers, will produce a luxuriant tree, and a great crop; but the beans, which are large, and of a dingy green, prove, for many years, rank and vapid. It is singular, however, that the North Americans prefer this sort to any other, and as they have hitherto been the best customers at the West Indian markets, the planters naturally enough have applied their labours to that cultivation which turned to the best account.

Happily for the coffee planters of the British West Indies, the English market, by a prudent concession of government in 1783, was rendered more open to them. Before that period, the duties and excise on the importation and consumption of British plantation coffee in Great Britain were no less than 480 per cent: on its then marketable value. Under such exactions, its cultivation in our sugar islands must (but for the American market) have shared the same fate as that of indigo. The great and important reduction of one shilling a pound from the excise duties, created an immediate and wonderful change; and while it promoted the inte-

est of the planter, it even augmented the revenue of the state; more than double the quantity of coffee having been brought to entry in 1784 than was entered in the year preceding; increasing the sum total of the duties (though reduced two-thirds) from 2,8694 10s. 10sd. to 7,2004. 15s. 9d.; an important proof, among others, how frequently heavy taxation defeats its own purpose

As the British demand has thus increased, so, on the other hand, the American has declined, having, as I conceive, been transferred in a great measure to the foreign islands. It is now therefore become the interest of the planter to change his system, by suiting the nature of his commodity to the taste of his new customers.

This, it is true, is not within the power of every man, whose plantation is already settled, to accomplish; but assuredly it is a very important object to such persons as may have it in contemplation to adventure in this line of cultivation (in a country where every species of soil, and choice of situation, may be found) to know beforehand how to employ their morey and labour to the greatest advantage.

Coffee indeed will thrive in every soil in the West Indies; a cold stiff clay, and a shallow mould on a hot marle, excepted. In both which, the leaves turn yellow, and the trees perish, or roduce nothing; but the best and highesteit or eve cia

abo

flavoured fruit is unquestionably the growth of either a warm gravelly mould, a sandy loam, or the dry red hills which are found in almost every island of the West Indies, Jamaica capecially. Frequent showers of rain, however, are friendly to its growth, but if water remains long about the roots, the tree will lecay and perish.

If the land be fresh and naturally good, coffee plants may be set out at all seasons of the year, even in dry weather, and they will thrive in any situation, provided it be screened from the north winds, which often destroy the blossom; and sometimes, in the after part of the year when those winds prevail most, entirely strip the tree of both fruit and leaves; blasting in a moment all the hopes of the planter. The same in the same in

The usual mode of planting is, to line out the land into squares of eight feet; in other words, to sow the seeds, or set out the young plants, eight feet distant from each other on all sides, which gives six hundred and eighty trees to each acre; and, where young plants are easily procured, they are preferred to berries. The plants which are intended to be set out are generally selected of about two feet in height. They are cut off ten inches above the surface of the ground, and care is taken to dig them up with the roots as entire as possible. The holes in which they are set, are made large

oil in hallow which. ish, or ghest-

enough to hold the lower part of thestem and all the roots; and the upper fibres are buried about two inches under the surface. But, although eight feet be the usual distance of setting out the plants in all soils, it is frequently found. in wich lands, that the trees, as they grow to maturity, become, from their luxuriance, so closely intermingled together, as to impede the free passage of the air: in such cases it is thought adviseable to cut down every second row; within ten or twelve inches of the ground, and by well moulding the stumps, they will furnish was succession of healthy young trees, while the rows which are deft will bear much better for the room which is given them. Old plantations (or walks as they are called) out down in this manner, not dug up and replanted will give a tolerable crop the second year; and the operation may be frequently repeated.

In the cultivation of a young walk, the general and most approved system is to keep the trees perfectly clear of suckers, and to rear one stem only from one root. If, therefore, a healthy shoot springs near the ground, all the original plant is out off close above it, by which means, when the plant is moulded, the root, becomes well covered. At the height of five or, six feet, which the plants generally attain the third year, the trees are topped. At this height, a single.

From what has been said concerning the effect of a difference of seasons, it must be difficult to fix on the average produce of a coffee plantation by the acre. In rich and spongy zoils a single tree has been known to yield from six, to eight pounds, of coffee: I mean when pulped and dried. In a different situation, a pound and a quarter from each tree, on an average, is great yielding; but then the coffee is ininitely better in point of flavour. The following is, I believe, on a medium, as accurate a calculation as the subject will admit. Coffee trees raised from old trees, in lands neither very poor nor very rich, bear the second year from the new growth 300 pounds weight per acre, 500 pounds the third year, and from 6 to 700 pounds the fourth. If the trees are raised from young plants, no produce is to be expected until the third year from the planting; when they will yield very little; the fourth year, about 700 pounds. The average annual produce per some after that period, if the walk is properly attended to, may be reckoned at 750 pounds: and one negro is well able to take proper care of an acre and a half-pos en ned salt as noos an

We are now come to the most important business of the coffee planter, i. c. the gathering CHAP.

in his grop, and the mode of curing it for market. The practice in Arabia, according to Le Rome. is as follows When the planters por ceive that the fruit is come to maturity, they spread cloths under the trees, which they shake from time to time, and the ripe fruit drops off. The berries thus collected are afterwards spread upon mats, and exposed to the sun with the pulp on the benies, until they are perfectly dry. which requires a considerable time; after which, the beans are extricated from their outward incumbrance by the pressure of a large and heavy stone roller, when they are again dried in the sun; for the planters consider, that, unless coffee be thoroughly dry, there is danger of its heating. It is then winnowed with a large fan, and packed for sale. 1990 . 1911 . 1197. 104. 1644

It cannot be denied that this simple method must be infinitely superior to any other for preserving the genuine flavour of the berry; but it may well be doubted whether the additional price which the planter might obtain at the British market for coffee thus gathered and prepared, would be adequate to the value of the time and labour which so tedious a method would necessarily require. The usual practice in the British West Indies is as follows:

As soon as the berries acquire the colour of a black red on the trees, they are supposed to be sufficiently ripe for picking. The negroes emplo and keep pick het, best to us of as the s at the dred wills merc

dryir coffee deep with fermic lous until is fa The seads editor cured

diate

cured

ON ARE

ployed in this business are provided each with a comvastible, with a hoop in the mouth to keep it open. It is hung about the neck of the picker, who empties it occasionally into a basilest and if he be industrious, he may pick three bushels in the day. But it is not very provident to urge him on too fast, as probably a great deal of unripe fruit will in that case be mixed with the ripe. The usual practice is to pick the trees at three different stages of ripeness. One hundred bushels in the pulps fresh from the tree, will give about one thousand pounds weight of merchantable coffee.

drying the bean: the one is, to spread the fresh coffee in the sun, in layers about five inches deep, on a sloping terras, or platform of boards; with the pulp on the berry, which in a few days ferments and discharges itself in a strong acidulous moisture, and in this state the coffee is left, until it is perfectly dry, which, if the weather is favourable, it will be in about three weeks. The husks are afterwards separated from the seeds by a grinding mill hereafter to be described, or frequently by pounding them with pestles in troughs or large wooden mortars. Coffee thus cured, weighs four per cent. heavier than if cured without the pulp.

The other mode is to remove the pulp immediately as it comes from the tree. This is done

by means of a pulping will, consisting of a horizontal fluted roller," about eighteen inches long, and eight inches in diameter. a This roller is turned by a crank or handle, and acts against a movemble breast-hoard, which being a fitted close to the grooves of the roller, prevents the berries from passing whole. IN The mill is fed by a sloping trough, and the aperture of the trough, from which the bervies drop into the mill, is regulated by a vertical sliding board. By this simple machine a negro will pulp a bushel in a minute. The pulp, and the bean (in its parchment skin) fall promiscuously together. The whole is then washed in wire sieves, to separate the pulp from the seeds, and these are immediately spread open to the sun to dry in sillos

There prevails great difference of opinion among the coffee planters on the subject of these two different methods of curing raw coffee. The latter is perhaps the most profitable, as being more expeditious; but I have no doubt that the former would give the less flavoured coffee, provided the fermentation, which always takes place when the raw fruit is placed in heaps on the platform, could be prevented, which might easily be done at the expense of a little more room. The blue dingy green, which to the American is the test of good coffee, is considered by the London dealer as a proof that it has not been sufficiently cured. From both

both

methods, however, the coffee may prove very good with the powerful essistance of its great improver, age.

Hitherto, I have described the pulping mill only. There yet remains the operation of grinding off the parchment skin, or membrane which immediately envelopes the bean, and is left after the pulp is removed. It is done by a machine which will also separate, at the same time, the dried pulp (if the former mode of curing has been adopted) much more expeditiously than the pestle and mortar.

The grinding mill consists of a perpendicular axis, surrounded at some distance by a circular trough, into which the coffee is thrown, and about a foot above the level of the surface of the trough, there are commonly four horizontal arms or sweeps, tenanted into the axis, and stretching some feet beyond the trough, and on them are four rollers, fitted to run in the trough on the arms being turned round with the axis, which is done by mules yoked to the extremity. The rollers, which are generally of considerable weight, moving round in the trough, bruise the skins of the coffee, so as to render them separable by the fan, though there is always a proportion left untouched. When it appears sufficiently bruised, it is taken out of the trough and put to the fan, which clears the coffee from the chaff, and the seeds remaining unground are

separated by sieves and returned to the mill; which will clear 1,500 pounds of coffes in a day.

There is still another mode of curing coffee, both with and without the pulp, and that is by means of stoves. But it is practised by very few planters; it requiring an expensive apparatus in the first place, and in the second it is said that the smoke of the fire gives a disagreeable smell and taste to the berry. I know not if this assertion be true: it is certain, however, that nothing imbibes the smell or taste of any thing near it sooner than coffee.

For the same reason it is a matter of great consequence that proper care should be taken, in shipping it for Europe, that it be not put into parts of the ship where it may receive the effluvia of other freight. "Coffee berries (says Dr. Moseley) are remarkably disposed to imbibe exhalations from other bodies, and thereby acquire an adventitious and disagreeable flavour. Rum, placed near to coffee, will in a short time so impregnate the berries, as to injure the taste in a high degree; and it is related by Mr. Miller, that a few bags of pepper on board a ship from India, some years since, spoiled a whole cargo of coffee."

The few preceding observations are all that occur to me concerning the mode of cultivating, and preparing for market, this far-famed berry.

est its end the Inc

vat

the ral has been common the commo

that

CHAP.

I shall conclude the subject by offering a short estimate of the expenses and returns attending its culture, which I conceive tends more to the encouragement of industry, and of course to the increase of white population in the West Indian islands, than that of any other of their staple commodities: its produce being more equal and certain than that of any plant in cultivation, and its average profits more considerable in proportion to the capital employed.

It will be urged, perhaps, that if such were the fact, its culture would have been more general in the British West Indies. This objection has been anticipated and answered by what has been related of the heavy excise duties on this commodity in Great Britain previous to 1783. To say (as is commonly said in the case of all duties on goods imported) that they fall on the consumer, and not on the planter, proves nothing; for if the price, in consequence of the duties, becomes so high as that the consumer ceases to purchase, the effect is equally ruinous to the cultivator as if they fell immediately on himself. / Nothing more clearly demonstrates that the cultivation of this article was greatly affected by the British duties, than the comparative quantities imported into France and England; the whole annual import into Great Britain, on an average of five years (1783 to 1787), not exceeding five million six hundred

nill; in a

\*\* It ought to have been observed in the first edition of this work, that I am indebted for the estimates in this and the two preceding pages, to my worthy friend SAMUEL VAUGHAM, Esq. of St. James's parish, Jamaica, Member of the Assembly of that island, who has directed his attention to the cultivation of coffee with great assiduity and success. He has since favoured me with the following interesting observations, which I have great pleasure in laying before the public.

OBSERVATIONS concerning the cultivation of COFFEE in St. Domingo, and its probable increase in Jamaica, if the Slave Trade shall not be abolished by Act of Parliament.

es de commente de la commencia della commencia de la commencia de la commencia de la commencia

The French part of St. Domingo, in 1770, exported only five millions of pounds of coffee, but in 1784, a bounty of 40 livres per ton having been allowed to slave vessels arriving from

VOL. II.

.

CHAP.

BOOK

Africa and in 1786 was further beauty of 200 livres per head on slaves imported, the import of negroes increased annually from 12 and 15,000 to 25 and 30,000 and the effect in that colony of this augmentation of African labourers was a very rapid progress in every species of cultivation: but that of coffee almost exceeds belief: for the export of this article in 1789 had increased to above 76 millions of pounds, which, valued at the present price (90 shillings per cwt.), is equal to 3,490,000% sterling! Of this enlarged export, no less than 25 millions of pounds (worth 1,950,000/ sterling): were produced between the years 1786, and 1789 ; and it was supposed that the crop of 1792 fif the troubles had not intervened) would have been 80 millions, so little had the depreciation at market, from the additional quantity brought to sale, affected the cultivation. It seems probable, that the excessive price of the Mocha and Eastern coffee had formerly the effect of a prohibition of the use of this beverage among the middling and lower classes of people in Europe; for the quantity raised in this single island of St. Domingo was so great, the increase of its cultivation so rapid, and the price of West Indian coffee, though 2s. 3d. per lb. less than that of Mocha, still continuing, at the time of the greatest export, at a profitable height for the cultivator; that it is difficult to account

OMAP. IV.

for these facts, but by supposing the consumersatoabe augmented by new and numerous people. On this supposition, it is impossible to foresee the extent to which the cultivation of this article in the West Indies may be carried. It is not enough to say, it will equal that of sugar, nor is it likely, as in the case of sugar, to be checked by importation from the East, inasmuch as it has risen to its present wonderful importance in the West Indies, notwithstanding the rivalry of both the East Indies and the Levant. The diminution of the quantity of coffee produced in St. Domingo (upwards of one thousand coffee plantations having been destroyed) will most certainly be felt in a remarkable manner for some years to come: many persons from thence are of opinion, that the exportation will be reduced at least one-half (that is, forty millions of pounds) supposing even that the present rebellion was to terminate without further devastation. The export from the whole British Colonies in 1787 did not amount to four millions of pounds; and therefore, excepting by new cultivation, they cannot supply the deficiency occasioned by the troubles in St. Domingo, nor is the rest of the West Indies able to make it up; for since these troubles, the price has augmented near one-fourth, viz. from 700. to 90s. This advance of price will, if not (as in former times) checked by additional du-

ties, be a premium to all West India Islands where there are mountains; and, as cultivation cannot be carried on in St. Domingo, for some time, to its former extent, for various reasons, it is likely to be a premium of some degree of permanency. Let us now turn to Jamaica: the export of coffee from thence, before 1783, never exceeded 850,000 pounds, notwithstanding the several measures that were taken by the Assembly to encourage its cultivation. The reduction took place in 1783, of the excise, to 61d. per pound, and this seems to have had an immediate influence; for at the fourth year from this event, when we should naturally expect the f st appearance of an effect, there was a considerable increase of export; and in three years more, the produce was nearly trebled, it exceeding 24 millions. In this situation we stood when the disturbances took place at St. Domingo: it is now sixteen months since the commencement of that rebellion, and by the returns just made from the several parishes, it appears, that 21,011 negroes are employed in the cultivation of coffee in Jamaica. I will suppose, however, that onefourth of these may be engaged in other objects connected with coffee, still there will remain 15,759 negroes employed solely in raising of this article: who, according to common calculation, when the plants are all at full growth (viz. in 1797), should make a return of about sixteen mitteen times and seven year. It maica are rally speak per for concern two-twell interesthe country for it.

From a it is reason shall conti moderate p of the pre Jamaica a which, as a consequenc ing in value and import on a conti increase of here sugges liar conseq First, it wil class of W live in a d lent and in in comfort sixteen millions of pounds; that, is above eighteen times as much as was produced before 1783, and seven times as much as was produced last year. It may be added, that the lowlands of Januaica are already settled; the highlands, generally speaking, are improper for sugar, but proper for coffee; they are new, they are equal to near two thirds of Jamaica; the island is now well intersected with roads, &c. &c. In short, the country is prepared, and the time is proper for it.

From all these circumstances taken together, it is reasonable to conclude, that if labourers shall continue to be procured from Africa at moderate prices, and every advantage be made of the present moment, we shall establish in Jamaica a most extensive cultivation of coffee, which, as an export staple, will be of the utmost consequence to Great Britain, perhaps exceeding in value the staple of sugar. But this new and important commerce is entirely dependent on a continued importation of labourers. The increase of the cultivation of coffee to the extent here suggested is, in the present times, of peculiar consequence in two other points of view: First, it will augment the number of that middle class of Whites, who, though not rich enough to live in a distant country, are sufficiently opulent and independent to support their families in comfort and competence in a residence on

their own estates; secondly, mountain settlements in general increase in negro population,
being more healthy than the lowlands. The
first circumstance will add to our security, so
necessary at present, and which, at all periods,
we have in vain attempted, by other means, to
effect. The second opens a prospect of an
abolition of the Slave Trade, and that at no
distant period of time, by natural causes, which
will gradually take place without giving reason
for complaint to any body of men.

manner. Having chosen a spot of level land (a deep black mould is preferred) shaltered round with a thick wood womas to be well acreened from the wind, especially the north, and caused it to be cleared from all manner of stumps and weeds, the planter digs a number of holes at eighteen or twenty feet distance, each whole being about a foot in length and width, and six or eight inches deep. In the mean time, having selected the largest and fairest pods of the cacao when full ripe, he takes out the grains and puts them into a vessel of water. Such of them as swim are rejected; the others, being washed clean from the pulp and skinned, are suffered to remain in the water till they begin to sprout, at which time they are fit for planting. The owner then takes the banana, or some other large leaves, and places one leaf within the circumference of each hole, so as to line it round; leaving however the sides of the leaf some inches above the ground, after which he rubs in the mould, very lightly, till the hole is filled. He then selects three nuts for each hole, and plants them triangularly, by making a small opening for each with his finger, about two inches deep, into which he puts the nuts, with that end downwards from which the sprout issues, and having lightly covered them with mould, he folds over the leaf, and piaces a small stone on the top to prevent its opening. In

this manner he plants his whole walk, or orchardal. At the end of eight or ten days, the plants will generally be found to rise above the earth. The leaves are then opened, that their growth may not be impeded; but, in order to shelter them from the sun, other leaves or branches are placed round the hole; for which, purpose those of the palm kind are generally. chosen (for having a strong stem, they are easily fixed in the earth); and they are changed as often as they decay for the space of five or six months. It is also thought advisable to plant some other tree (the crythrina or bean-tree is generally chosen for this purpose) to the southwest of the cacao plant which may grow up with it, and serve it for shelter; for it must always be remembered, that young cacao trees.

If all the three nuts placed in each hole spring up, it is thought necessary, when the plants are eighteen or twenty inches high, to cut one of the down. The other two, if they spread different ways, are sometimes suffered to remain; but it seldom happens that all the nuts, or even more than one of them, will take root, which is the reason of planting three in a hole.

will flourish only in the shade. The state of the state of

CHAP.

pounds weight, according to the soil and searches; and it will sometimes continue bearing for twenty years; but the same delicacy of stamina which marks its infancy, is visible in all the stages of its growth. It is obnoxious to blights, and shrinks from the first appearance of drought. It has happened that the greatest part of a whole plantarion of cacao trees have perished in a single night, without any visible cause. Circumstances of this nature, in early times, gave rise to many superstitious notions concerning this tree, and, among others, the appearance of a comet was always sonsidered as fatal to the cacao plantations.

In spite, however, of the influence of comets, and notwithstanding the care and precaution that are requisite in the first establishment of a carao plantation, it is certain that the cuitivation of this plant was both extensive and successful in the British sugar islands, for many years after they had become subject to the Brist tish regovernment Blome, who published a short account of Jamaica in 1672, speaks of cacao as being at that time one of the chief articles of export "There are," says he, "in this island, at this time, about sixty cacao walks (plantations) and many more now planting." At present I believe there is not a single caçao plantation from one end of Jamaica to the other. A few scattered trees, here and there,

growths, is at lengths become sufficiently man

our sugar isle ds can never again enter into competition with the Spanish Americans in the cultivation of the article of which I treat. At present the only cacso plantations of any account, in our colonies, are in Grenada and Dominica; and the quantity annually exported from both those islands cannot, I believe, be estimated on an average at more than four thousand bags of one hundred weight each, which may be worth, at the London market, between ten and eleven thousand pounds sterling.

The caeso tree, both in size and shape, somewhat resembles a young blackhears cherry. The flower is of a safron cobor, extremely beautiful, and the pods, which in a green

### has previously mostly to many and it is now have the constitution of the constitution

This grateful aromatic root had a very early introduction into Hispaniols, and I should not have supposed it an exotic, but that Acosts relates it was conveyed from the East Indies to New Spain, by a person named Francisco de Mendoza.

If such was the fact, the Spanish Americans

tight of the level of the level per the finding the level of the level state are much like a cucumber, proceed immediately from all parts of the body and larger branches. As they ripen, they change their colour, and turn to a fine blueish-red, almost purple, with pink-coloured velus. This is the common sort? but there is a larger species, which produces pods of a thelicate yellow or lemon-colour. Rach ped may contain from twenty to thirty nuts or kernels, not unlike almonds, which are again inclosed in a white pulpy substance, soft and sweet, and immediately enveloped in a parchment shell. The nuts, being first simply dried in the sun, are packed for market, and require very little preparation, after removing the shell, to be made into good chosolate. The cakes which are generally used under this name in England, appear to me to be composed of not more than one-half genuine cacao; the remainder I take to be flour, and Castile soap. Considered medicinally, chocolate is said to be too heavy for weak and relexed stomache; but in the West Indies, experience abundantly demonstrates that it is in the bighest degree baleamic and restorative.—Colonel Montague James of Jamaica, who was the first white person born after the conquest of the island by the English, lived to the great age of one hundred and four, and for the last thirty years of his life used scares any other food than chocolate. must have entertained very high expectations of profit from its culture, and carried it to a great extent in a very short space of time; it appearing from the same author, that no less than \$2.055 cwt. were exported by them to Old Spain in the year 1547.

Ginger is distinguished into two sorts, the black and the white; but the difference arises wholly from the mode of curing; the former being rendered fit for preservation by means of boiling water, the latter by insolation; and, as it is found necessary to select the fairest and soundest roots for exposure to the sun, white ginger is commonly one-third dearer than black in the market.

In the cultivation of this root no greater skill or care is required than in the propagation of potatoes in Great Britain, and it is planted much in the same manner; but is fit for digging only once a year, unless for the purpose of preserving it in syrup. In that case, it must be taken up at the end of three or four months, while its fibres are tender, and full of sap. Ginger thus prepared makes an admirable sweetmeat; but it is too well known to require description.

It seems to me that this commodity is growing greatly out of use in Europe, and its cultimation in the West Indies decreases in consequence. The average quantity exported an-

smally from the British islands may be stated at the thousand bega of one court of which 6000 are the product of Barbadoes, and the remainder (except a very small part from Dominica) is relaced in Jameica. Its medium price at the Landon market, is forty shillings the bundred meight the market, is forty shillings the bundred meight the market, is forty shillings the bundred

This production is indigeneus, and was called by one class of Indians roucou, and by another achiette. Of its passent name I know not the derivation. Its betanical name is bira orellans. It is a shrub which rises to the height of seven or eight feet, and produces oblong hairy pods, somewhat resembling those of a cheanut. Within these are thirty or forty irregularly figured seeds, which are enveloped in a pulp of a bright red colour, and unpleasant smell, in appearance the sort of paint called rad lead when my ap with oil; and as paint it was used by some tribes of the Indians, in the same manner as wood by the ancient Britons.

Of the cultivation of this plant I know nothing, because most of the arnatto, shipped at present from our own islands, is I believe ga-

Jamaica alone, in 1738, exported 20,933 bags, of one cwt. each, and 3864 lbs. in casks.—An acre of fresh land, with favourable seasons, will yield about 140 lbs. annually.

It is then drawn off, and the sediment distributed into shallow vessels, and dried gradually in the shaders but transporter and the state of the

Arnatto thus prepared is mixed up by the Spanish Americans with their chocolate; to which it gives (in their opinion) an elegant tincture, and great medichial virue. They suppose that it strengthens the stomach, stops fluxes, and abates febrile symptoms; but its principal consumption, I believe, is among painters and dyers. I am informed that it is semetimes used by the Dutch farmers, to give a richness of colour to their butter, and very small quantities of it are said to be applied in the same manner in English dairies. On the whole however, it is an object of no great chinmercial importance, and the demand for it is not sufficient to encourage much attention to its cultivation, tusking and hopedonsyrthic sublitted His " At become at the sky for in this was enough the "

the island of Secotors in the Rast Indies, the introduction of which in our West Indian colonies, has hitherto been unaccountably neglected. The species called the hepatic, is the only sort known to our planters; and even of this the cultivation in the British dominions is, I believe, at present, wholly confined to the island of Barbadoes, where it is said to have been originally introduced from Bermudas. It is propagated by suckers, and will thrive in soils the most dry and barren. The mode of extracting and preparing the juice is as follows:

The plant is pulled up by the roots, and carefully cleansed from the earth, or other impurities. It is then sliced, and cut in pieces, into small hand-baskets or nets. These nets or baskets are put into large iron boilers or cauldrons with water, and boiled for ten minutes, when they are taken out, and fresh parcels supplied, till the liquor is strong and black.

At this period the liquor is thrown through a strainer into a deep vat, narrow at bottom, where it is left to cool, and to deposit its feculent parts. Next day the clear liquor is drawn off by a cock, and again committed to the large iron vessel.

same for initial successori. The rest

I CLOSE my catalogue with one of the most elegant productions in nature; a production which rivals the most valuable spices of the East, combining the flavour and properties of many of those spices; and forming (as its popular name denotes) an admirable substitute, and succedaneum for them all.

The piemento tree grows spontaneously, and in great abundance, in many parts of Jamaica, but more particularly on hilly situations near the sea, on the northern side of that island; where they form the most delicious groves that can possibly be imagined; filling the air with fragrance, and giving reality, though in a very distant part of the globe, to our great poet's description of those balmy gales which convey to the delighted voyager

<sup>&</sup>quot;Sabean odours from the spicy shore

Cheer'd with the grateful smell old ocean smiles."

MOOK

This tree is purely w child of nature, and seems to mock all the labours of man, in his endetveurs to extend or improve its growth : not one attempt in fifty to propagate the young plants, or to raise them from the seeds, in parts of the country where it is not found growing spontaneously, having succeeded. The usual method of forming a new piemento plantation. (in Jamuica it is called a walk) in nothing more than to appropriate a piece of wood land, in the neighbourhood of a plantation already existing, or in a country where the scattered trees are found in a native state, the woods of which being fallen, the trees are suffered to remain on the ground till they become rotten and perish. In the course of twelve months after the first season, abundance of young piemento plants wiff be found growing vigorously in all parts of the land, being, without doubt, produced from ripe berries scattered there by the birds, while the fallen trees, etc. afford them both shelter and shade. At the end of two years, it will be proper to give the land a thorough cleaning, leaving such only of the plemento trees as have a good appearance, which will then soon form such groves as those I have described, and, except perhaps for the first four or five years, require very little attention afterwards.

I do not believe there is, in all the vegetable creation, a tree of greater beauty than a young

on the tree, hranches, will (who are ge picking the l will fill a bag spread on a t

pientento. The trunk, which is of a grey colour, smooth and shining, and altogether, free of bark, rises to the height of fifteen or twenty feet. It then branches out on all sides, richly clothed with leaves of a deep green, somewhat like those of the bay-tree; and these, in the months of July and August, are beautifully contracted and relieved by an exuberance of white flowers. It is remarkable, that the leaves are equally fragrant with the fruit, and, I am told, yield in distillation a delicate ederiferous oil; which is very commonly used, in the medicinal dispensaries of Europe, for oil of cloves.

Soon after the trees are in blossom, the berries become fit for gathering: the fruit not being suffered to ripen on the tree, as the pulp in that state, being moist and glutinous, is difficult to cure, and when dry, becomes black and tasteless. It is impossible, however, to prevent some of the ripe berries from mixing with the rest; but if the proportion of them be great, the price of the commodity is considerably injured.

on the tree, employed in gathering the small branches, will give employment to three below (who are generally women and children) in picking the berries; and an industrious picker will fill a bag of 70lbs. in the day. It is then spread on a terrace, and exposed to the sun for

about seven days, in the course of which it loss its green colour, and becomes of a reddish brown, and when perfectly dry it is fit for market.

The returns from a piemento walk in a favourable season are prodigious. A single tree has been known to yield 150lbs, of the raw fruit, or one cwt. of the dried spice; there being commonly a loss in weight of one-third in curing; but this, like many other of the minor productions, is exceedingly uncertain, and perhaps a very plenteous crop occurs but once in five years. The price in the British market, as may be supposed, fluctuates accordingly, but I believe its average, for some years past, may be put at ten-pence the pound, including the duty, which is three-pence.

This, though certainly a much greater price than the commodity bore in former years, gives however so little profit to the owner, compared with that of some other productions, that the growth of piemento decreases every year; many beautiful walks being daily cut down, and the land appropriated to the cultivation of sagar. Its annual export from Jamaica (the only one of our colonies which produces piemento) is about six thousand bags of one hundred and twelve pounds each.

BOOK V.

ABOUT the month of July 1789, a friend of mine in Cayenne sent me, as a present, a clove tree about six of high, heving six or eight leaves, and accompanied with a printed paper respecting the entitlession of its inte itas retoired by my friend's paper, that the tree should be planted in a rich sell, and in a moist and cool struction, and in the shade of some trees round it! It was also obitived by my friend, that the tree would theire best if it were planted between four plantale trees. The continent of Cayenne being free from hurricanes, and the island of Dominica being, on the contrary, exposed to them, I thought that the plantain trees were of too tender a nature to afford a sufficient shade; because with the least gust of wind they might fall on the clove tree and destroy it: in consequence, I selected one of the richest spots on my estate, being a rich black soil, where I had sixteen thousand coffee trees growing most luxuriantly; between four of those coffee trees I planted my clove tree with great care; I surrounded it with sticks to prevent it from being trod upon; the coffee trees served as

a shade, and my intention was, what the slove tree should extend itself, to lop or out down the collections to it. Every possible care was taken of this plants it was heat clean, and every time I went on my estate I wish it; knowing of what consequence, it would be an the public in general, and to me in particular, if I could bring this experiment to succeed will may be easily supposed with what anxiety. I viewed the growth of the plant of but, elect what was my grief; when I found the close tree hardly regetating, looing its old loaves, as now once spring: at the top; and, in the long space of near six months, not guining an inch in height: disappointed in my hopes, I. informed my friend of the little success I had had, and introcted his necistance in proguring other trees if poor sible. In the mouth of December 1780; two more terms were sent to me. in From my first disappointment. I wished to plant these new trees nearer to my house, and in a place that would be convenient for watching and processing their growth. My dwelling house is situated on a hill; to the eastword, which hill is composed of a stiff red clay. collist the foot of this hill, and on the cast side, is situated my garden; to obtain a flat of about one hundred and twenty feet square, one part of that hill has been dug and levelled; which in some parts has made a bank of nearly cloves feet high; the ground was spread over, in erder to all up the inequalities of the surface ; it will readily be observed how poor some part of that surface must be particularly on that side, where eleven feet where from the hill. Here I planted the shove-mentioned two trees, but, at the same time, took care to place them as far as I could from that side of the hill, which had been sered down, as I had observed its soil was a stiff red clay a I therefore dug two hales at about twelve feet from each other, of about eighteen inches diameter, and two feet deep; finding the substratum to be of a yellow, strang, gravelly nature. I filled up these two holes with some good

growfort and in each of them I planting clove tree; they growfort and with unitriance; which induced me to transplant the first clove true I had received intrathe same garden; between the same transment; but while that tree was growing to my eatlefaction; an insect destroyed the tap of it, and consoloned its death.

In the mouth of November 1791, below at Martinico. I visited the different gardene in and about the nown of Suint Pierre ras I was walking in the gordon belonging to the Dominion friers, I remarked several young clove trate, each in a separate basket a they were the property. of a gardener from Cavenne, and were to be disposed of. I purchased the whole of them, consisting of fourteen trees : after collecting, from the generalty of my friends, different other plants, I returned to Dominion rich with my new acquisition of clove trees, and determined to try different soils. Holes were dug in several parts of my garden; from twelve to fourteen feet distance; and of about the same dimensions as those mentioned before: on examining the soil, I found some of a stiff gravely nature; in other parts, the substratum was of a yellow sandy kind; in some holes; after taking out about six inches of the surface, I found a stiff red clay; mixing some black mould with the different earths taker out of these holes, I filled them up, and planted in them ten out of the fourteen treet, reserving four trees for that part of the garden nearer the foot of the hill, where ten or eleven feet had been out from the surface of there I dug no main than was necessary to plant my trees the ground was a closel compact; stiff, red clay. In order to make an experiment of mixed no mould dung sand or other soil with design to open the poyer of the clays but planted these last four trees in that clay, without the encistance of any thing whatever makendening their fate to nature, being resolved to run the risk of losing them, for the purpose of accertaining, whether the clove tree required a rich soil or not ... At the moment I

now write, (October 1793;) twenty-three months the landed since the planting of these last fourfees their and it is with addiction I can absert; that the four tril which were planted in the clay, have grown, with ut lead as minch, if not more lexurlance than the other tan thever from five to six feet high, growing with vigour, fully fured with branches of the bottoor, and terminative in a point at the top, like a pyramid out of these fourteen se shoof them were planted in a row, in the fattest part of the garden, the ground, with which the holes had been Allow up having ounk a little below the surfact, a hollow round three of those trees was formed, and the water not having a sufficient current, calletted 'round them i one tree-died at the other two apparing to be in a declining state, I raised them shows six inches that they might be rather above the surface of the ground. Although these trees were planted with the others in November 1791, one of the two declining two de not above six inches high; and the other swulve lucker, whilst the other trues are three feet incheight a this is a bufficient proof, that the clove true requires a dry situation, and dreads a springy damp bolt i though a certain degree of moisture will promote its growth described the carrier of the contract o

In the month of January 1793, with much trouble and expense, (say trouble, because the exportation from the French islands is prohibited). I procured two bones of mother of closest, the bergies were packed, some in saind, others in loose earth: upon receiving them. I ordered bods to be prepared in my garden, and in different parts of my estate, for the conveniency of transplanting, and of saving distance, when the aurestice should be fit for that purpose. I planted these sends at about six inches distance, covering them, with about one inch of earth. I had been previously told, that the close true, when young, requires to the sheltered from the sure; but reflecting on the litting of

Carenne, and of the Moluccas, which are under the fourth and fifth degrees, the one north, the other south, and the latitude of Dominica, which is between the filecath and sixteenth degrees north, I knew that ten degrees would make a material difference in the climate, particularly on Montrollier cotate, which is cituated on an elevated citual tion, and about three miles distant from the got. "I thought:" that if I could rear those seeds without the estimated of any shade; their swould; from their disfancy; be intred to the sun and air would be more hardy and consequently would bear transplanting with loss risk and dangue; but be this I was deserved. The mother of clove, on its first visible vegetation, appears like a small, straight, red dart when it comes to two inches high, two small red leaves are seen on its top; con the first appearance of these haves, when hardly perceptible to the naked eye, I found, that on the sun akining with any degree of heat, the plants drooped and perished a whereby many toods were lost . I therefore caused small frames to be erected over all the bade, about three feet high from the ground, and I spread on them plantain leaves, in order to shade the young plants i I kept supplying those leaves for near nine months; after which time I suffered the leaves to decay gradually, that the sun might be admitted to the plants, as they soquired strength; and in the space of twelve months, they were fit to be transplanted. Out of six thousand mother of cloves, I saved from fifteen to sixteen hundred trees, which I began to transplant in January 1794, in the open field, at sixteen feet distance. They are growing very luxuriantly. I have lost but few, and none but such as were in places where the water collected if They are now lifteen months old, from the develor were transplanted, and most of them are between three and four feet high, apparently very healthy. The ground, wherein they are planted, had been under coffee for forty years; the coffee trees had decayed, which I tried in vain to replace, but they would not grow. Being

disappointed, Lturned it into a pasture, which, from neglast, was covered with guava bushes, a plant very prejudicial to any soil 1. I then resolved to clear it, and plant my close trees in it. This pasture ground, on the whole, is of a compact, strong, gravelly soil; in some parts it is of a classy wateres; but the trees grow well in both and in As Abbé Raynal has been very exact in his description of the glove, I shall adopt the same from his history. The flower of the close tree are disposed in a corymbus. " serminalise they have each of them a long quadrifid calis, "which begre as many petale, and a great number of star "mina; the pistil, inclosed at the bottom of this calin, be-" comes along with it an opiform fruit, filled up with a " single kernel, and known by the name of mother of clove; I this same cally gathered before the unfolding of the patels " and the facundation of the pistil, is the clove as sold in the "shope... The clove is fit to be zuthered when it has pequired In reddish part, and a cortain degree of framess. The two clove trees, which I planted in December 1789; sessered with clove bude, un; or about the 90th of January 1795; some of the claves were fit to be grathered in May and June following; and such of the cloves as were left on the trees for the purpose of obtaining the mother of cloves for seeds, acquired a proper degree of maturity, in July and August: so that allowing those two trees to be about one year old, when they came to me, from the seeds, which I planted. Ljudge they were of that age is I think the clove tree becomes productive, in the course of little more than siz years, instead of nine years, as mentioned by Abbé vesued me from coing to tolval, hisdered the from derreas I have this year (1795) but two clove trees that are bearing in the year 1796, I shall have twenty-four more; and furthe year 1799, I shall have from fifteen to sixteen hundred trees, in a state of production Such of the trees as are situated in flat grounds. I shall leave to

their natural growth, by which more profit will be got.

and shady walks obtained, an object of consideration in a warm cliques; and those trees that are phreed on a declivity, I shall top at eight or nine first, for the convenience of gathering. Having few cloves to gather this year, (1795), they were picked with the hand. In the Moluces, the planters either spread clothe or the ground, or average the ground clean under and about the trees, and with the assistance of reads, they cause the cloves to fall down; after which they expose them, for a few days, to emoke upon hardles, which we covered with large leaves; and this fundgation is followed by drying the cloves in the semi-

In order to encertain the heat mode of residering the cloves merchantable, I tried several ways of desicenting them when gathered. The first, that I curvel, in the shade, and in a warm room, ware a fortnight before they appeared they; and on breaking them with the nell, the ball, which is on the top of the clove, I found in the inside to be mouldy; and on chewing the clove, they had a measy trace; I from those circumstances found; that this mode of curing the cloves would not answer.

"The second gathering of cloves; I: descented entirely by the heat of the sing." When dried, they appeared of a blacker has then the Base India cloves, but of a stronger and more pungent thate." I send gain wells had no stronger

The third trial, after gathering the cloves, on a very rainy day, I put them in a stove which I had constructed for that purpose, and left for two nights and a day; the heat was rather strong, and the rainy weather having prevented me from going to town, hindered me from getting a thermometer to ascertain the degree of heat of the stove. At the end of the second night, I took the cloves from the stove, and completed the desiccation by the sun; which operation, when perfected, gave the cloves a brownish live, a good pungent tests) but not so strong a flavour as those that had been desiccated by the sun only.

The fourth same Way; be this difference. stove, I took that of the th only one night had mequired a in the Hove. degrees ; this the heat detres was on that de o'clock to two the day was fai degrees, this a equal to the the stove: PEN I found the idi hae, not so sun only, but night, and a than these last shade, I have three last desi to whose jude will decide on all of which ar gency, to those pear to me to when exposed essential oil is the case with have bought, them with mi

In curing stove, for the I perceived to

APPEK-

The fourth desicention was nevertheless done in the same way, but, having got a thermometer, I observed this difference. After putting my green cloves in the stove, I took care that the heat was more moderate than that of the third trial; I left the cloves in the stove for only one night, and helf a day, until they were faded, and had acquired a brown colour. I hung my thermometer in the stove, and found the best to very from 190 to 130 legrees; this done, I took out the thermometer, and let the heat decrease to the usual degree of my estate, which was on that day seventy-six degrees; after this, from one o'clock to two, I exposed the thermometer to the sun; the day was fair; and the thermometer getting up to 128 degrees, this showed the heat of the stove to be nearly equal to that of the sun." After taking the cloves out of the stove; the rest of the desicuation was done by the sun. I found these cloves, when perfectly dry, to be of a brownish has, not so strong in taste as those desiccated by the sun only, but stronger than those that had been, for two nights, and a day, exposed in the stove to a greater heat than these last. Having set aside the first curing by the shade, I have numbered the cloves that underwent the three last desiccations, No. 1, 2, and 3: the persons, to whose judgment these specimens will be submitted, will decide on the best quality amongst the three sorts; all of which are far superior in their strength, and punsency, to those that come from the East Indies, and appear to me to contain a great deal more essential oil; for, when exposed to heat, on pressing the nail on a clove, the essential oil is perceived to come out of it; which is not the case with the East India cloves, at least such as I have bought, in this island, for the purpose of comparing them with mine.

In curing the clove, I find it indispensable to have a stove, for the following reasons: After gathering cloves, I perceived that if they were not, within a short time

of by that of a store; faded, either by the heat of the sun, or by that of a store; that the greatest part of the cleves, on being dried afterwards, sequired a light brownish had bet their firmness, strength, or panguery, and many appeared as damaged cloves, and, as the weather is exceedingly variable in this part of the world; and the 'air, in general, damp, particularly in the country, it will be absolutely becausely to have a store heated to the degree before mentioned, and to leave the cloves in it till they are faded, I mean, until they have acquired a brown hue: after which, the rest of the desiccation may be done at ease, by the heat of the sun, or by exposure in a dry any room.

The annual production of a clove tree in the Molucca Islands, according to Abbé Raynal's account, is about three pounds for each tree. There, they are topped, at from eight to nine feet, for the conveniency of gathering: but, in Cayenne, where they are left without topping, and where there are clove trees larger than our orange trees, it is reported, they produce from forty to fifty pounds each tree.

The two trees, which, under my management, have produced cloves this year, on the Montpellier estate, have netted me four pounds and a half of cured cloves, besides two pounds, at least, of cloves, which I have left on the trees, to obtain mother of cloves, for the multiplication of that spice; and besides this I have about half a pound of cloves, which having fallen on the ground before their degree of maturity, have been dried, and are very good for domestic use: these last are strong but small; so that these two trees have produced more than seven pounds of cloves. As this is the first time of their production, and they are young, it may be reasonably expected, that when older they will acquire more strength, and more branches; and consequently will be a great deal more productive.

Soho Square, August 11, 1796.

MY LORD,

I beg leave to acquaint your Lordship, that I have read with attention the paper on the successful culture of the clove tree in Dominica, which your Lordship did me the honour of referring to me, and am of opinion, that it ought to be printed for the information of his Majesty's subjects in the West Indies, and other intertropical colonies.

i here the donner to be,

Mr. Buée is, as far as I know, the first person, who has observed, that the pimento tree prospers best in those steril soils where trees whose wood is of a head texture abound, and that sugar cannot be cultivated to advantage in such places; also, on the other hand, that where trees whose wood is soft, are naturally found, pimento trees rarely are met with, and sugar plantations will succeed; on such steril soils he has tried clove trees, and found them congenial to its nature.

These observations open to the cultivators of hot climates a new source of wealth, which will not probably be confined to the growth of cloves; other spices may also prosper best in the barren soils of the West Indies, as lavender, thyme, and other aromatic plants, are known to do in those of Europe.

I have the honour of sending to your Lordship, with this, a paper containing samples of cloves received by me from Mr. Buse some months ago: Number 1 and 2, mentioned by him p. 19, (381) are mixed; No. 3, his best sort, are separate. Your Lordship may, if you think fit, order a comparison to be made, by some dealers in spice, between these and the cloves we usually receive from the

COLAG.

BOOK VI. judge of the court of vice admiralty, to grant commissions to privateers.

Lastly, a colony governor, besides various emoluments arising from fees, fines, forfeitures. and escheats, has an honourable annual provision settled upon him by act of assembly for the whole term of his administration in the colony. For, in order that he may not be tempted to prostitute the dignity of his station by improper condescensions to leading men in the assembly, he is restrained by his instructions from accepting any salary, unless the same be settled upon him by law within the space of one year after his entrance into the government, and expressly made irrevocable during the whole term of his residence in the administration. And this, in my opinion, is a wise and most necessary restriction felautant bereatwarm

Armed with such various authorities, and possessing such transcendent pre-eminence and

\*It may not be improper to observe in this place, that the court of vice-admiralty in the Colonies, by the 4th of Geo. III. chap. 15, is invested with a concurrent jurisdiction with the courts of record, in cases of forfeitures and penalties incurred by the breach of any act of parliament relating to the trade and revenues of the British colonies in America; and in prosecutions in this court, all questions, as well of fact as of law, are decided by the judge alone, without the intervention of a jury. The judge is nominated by the crown. The colonists complain with great reason of this law, as a direct violation and infringement of their best and dearest constitutional rights.

privileges a expected, fro nature, that so great a should, on mackhy. ... G edly necessa in the choic weight and our plantat more extens England all however a and connect cible recomi for a distan and that pe ability, and to preside in if justice an stered and p for jignorun would prove fortunes, wh pated their

In nomituent part of controll the and, in most vast and ex

privileges as I have described, it is not to be CMAR! expected, from the common fallibility of human nature, that every colony-governor (placed at so great a distance from the mother-country) should, on every occasion, bear his faculties mackly. Great caution is therefore undoubtedly necessary, on the part of a British minister, in the choice of persons for a trust of so great weight and dignity; the powers with which our plantation-governors are invested being more extensive than those which the laws of England allow to the sovereign himself. It is however a melancholy truth, that party merit, and connections, are commonly the most forcible recommendations with which a candidate for a distant government can present himself; and that persons equally devoid of character, ability, and fortune, have sometimes been sent to preside in our most important settlements, as if justice and public virtue were best administered and promoted by men most distinguished for dignorance and profligacy, and that they would prove the best protectors of other people's fortunes, who by vice and profusion had dissipated their own!

In nominating to an office which is a constituent part of the legislature, which has power to controul the administration of executive justice, and, in most cases, has the sole exercise of the vast and extensive jurisdiction appertaining to a

court of aquity, it might be supposed that a prudent minister, among other qualifications in the person selected, would consider that some little knowledge of the laws and constitution of England is indispensably requisite. It is remarkable, however, that the military professions (which certainly are not eminent for such kind of knowledge) are found to supply most of the gestlemen who are elevated to this high station. It were unjust, at the same time, not te allow that some of these have acquitted themadves in the civil department with extraordinary reputation and honour. Both the late Sir William Trelawney, and Sir Basil Keith, who successively administered the government. of Jamaica, were educated from early youth in the payy's yet possessing sound judgments and pright intentions their gonduct as governors gave abundant satisfaction to the people of the colony, without incurring the disapprobation of the crown; and their names will be remembered there with reverence to long as worthy governors shall be numbered among the benefactors of mankind.

The letter

Jamaica had the misfortune to lose, in an untimely grave, their highly valued and most lamented governor, Thomas Barl of Edingham, who was appointed captain-general of that island in the beginning of 1790, and died in his government in October 1791. This numbers was admosts in

are vers instances; and it must generally be admitted, that the appointment to high civil

the army; and, with the frankness and firmuess of the soldier, possessed very extraordinary talents for civil employment.-His merit as Chancellor surpassed all that the warmest of his friends had predicted. He displayed a calmness of temper, and a clearness of conception, which the captions and subtle perplexities of forensic argument could not disturb or clude. His mind was strong, quick, penetrating, sound, and decisive; but the prominent feature of his character, which displayed itself in all cases and on every occasion, was a manly and unshaken intrepidity. He neither courted nor dreaded any man living; proceeding straight forward in the plain path of his duty, without fear, favour, or affection.—At his first entrance into the government, his manners were thought ungracious; but his talents and virtues were soon happily experienced, and he then became the most popular of all governors. The Roman people displayed not greater affliction at the death of Germanicus, than was manifested by the inhabitants of Jamaica for the loss of: Lord Effingham. The assembly voted a magnificent funeral for the remains of his Lordship, as they had for those of the Counters of Estingham, who died a short time before him. They likewise ordered a monument to be erected to perpetuate the messery of their virtues, and the author of this work had the honour of drawing up the inscription thereon; which is as follows: 4. 2000 1 and 19 19 19

To the Memory of
THOMAS, Earl of Everngham, Baron Howard,
Captain-General and Chief Governor of this Island,
in the years 1790 and 1791:
And of KATHARINE his Wife.
The latter departed this life on the 18th day of

experiment. Persons of this class, with the purest intentions, are easily misled by selfish and interested men, whom the consciousness of their own deficiencies compels them to consult. Even while actuated by honest and laudable motives, they may violate irreparably the first principles of law and a free constitution, by establishing fatal precedents which no integrity of intention can sanctify. Mr. Stokes, the late chief justice of Georgia, relates, that a governor of a province in North America (at that time a British colony) ordered the provostmarshal to bang up a convict some days before the time appointed by his sentence, and a rule of court for his execution. "He meant well." says Stokes, "but being a military man, conceived that as he had power to reprieve after sentence, he had power to execute also when he pleased: and the criminal was actually hanged as the governor ordered, nor could his excellency be persuaded, that, by this very act, he was himself committing felony." I arrive this who pagern

An anecdote not less curious than the former is related by the same author of another military governor, who, it seems, took it into his head to suspend a gentleman from his seat in the council, for no other reason than marrying his daughter without his consent.

It may be said, perhaps, that in these cases the mischief to the public, exclusive of the prece-

NOOE VI

dent, was not very great. I could produce, however, many an instance, in the condect of governors, in which semething more would appear. I am afraid, than mere folly, and the ignorant minepplication of authority. But the test is invidious, and I willingly decline it.

LIEUTENANT GENERAL, LIEUTENANT GOVERNOR, AND PRESIDENT

chief insiled or Geolitic relater that a govern-In a government comprehending several islands, as that of the Loeward Charaibean Islands, there is commonly appointed, together with thou captain general yer behick governor, a licatement general; who is mext in succession. He is usually lieutenant-governor likewise of one of the islands included within the general povernment, each of which, in the absence of the captain-general from that particular island, has its affairs administered by a lieutenant-governor, or the president of the council, most commonly the latter, as it is not often that the lieutenant-governor is on the spot; this appointment, in fact, being nothing more than the grant of a pension of 200% a year, which is paid by the crown. In Jamaica it is seldom that a lieutenant-governor is appointed during the residence on the island of a captain-general, there being no establishment or provision for such an officer holding a dormant commission; who has the is not; as I alvence on I tensint government, a the government, a

The follo amuse, but can About the year then Borl of S cation was mad maice, then me tenant-governo same time with was, to prevent sident of the co tion to the meas mother-country finding among he derived abou mand of a fortiff conceiving the be sufficiently li governor, Sir W Charles to lieute dence. Thus we a provision mad either to Great I that Sir William conduct of Lord mendable, and who has therefore neither power nor profit. He is not; as lieutenant governor, entitled even to a sent in the council. On the resignation, or sheenee on leave, of the captain-general, a lieutenant-governor, if not present, is frequently sent over, who then succeeds to the supreme command, and receives the full emoluments of the government.

\* The following instance of ministerial economy may amuse, but cannot surprise, my readers in the colonies.-About the year 1767, when the marquis of Lansdowne, then Barl of Shelburne, was Secretary of State, an application was made to his londship by some gentlemen of Jamaics, then residing in England, for a provision for a lieutenant-governor, who should reside within the island at the same time with the captain-general. The reason assigned was, to prevent a devolution of the government to the president of the council. Lord Shelburne had no other objection to the measure than an unwilling negeto saddle either the mother-country or the colony with additional expence.-But finding among other emoluments of the captain general, that he derived about 1000l, sterling per daman from the command of a fortification at Port Royal, called Fort Charles, and conceiving the other appointments of the chief governor to be sufficiently liberal, his lordship stipulated with the next governor, Sir William Trelawney, that he should reilen Fort Charles to lieutenant-governor Dalling, on condition of residence. Thus were the wishes of the gentlemen gratified, and a provision made for a lieutenant-governor, without expence either to Great Britain or Jamaica; and, considering withal that Sir William Trelawney was the minister's friend, the conduct of Lord Shelburne in the business was highly commendable, and bore the features of honour.—But mark the BOOK VI.

Mr. Long is of opinion that a president of the council, taking upon him the government on the demise or absence of a governor or lieutenant-governor, cannot legally dissolve the house of assembly, nor issue writs for calling a new one; because he has no express commission from the Sovereign under the great scal of Great Britain, giving authority for that purpose.

### warm varouton laist the COUNCIL ING! A Line

The members of this board are severally appointed by the Royal mandamus, directed to the governor, and countersigned by the secretary of state, and the names of the several members for the time being are inserted in the governor's instructions. In Jamaica their full complement is twelve: in some of the smaller islands ten: and in case of as many vacancies,

result. In the administration of Lord George Germain, General Dalling, by the demise of Sir William Trelawney, succeeded to the chief command: and the new minister, considering 1000L per ansum no despicable object, instead of continuing FortCharles as a provision for a lieutenast-governor, seized on it for his own use, and soon after assigned its profits over to one of his dependants, who has enjoyed it ever since. Thus the island suffers the same inconveniency it complained of before, with the burden of providing 1000L a year for a person who neither resides within the island, nor has any other connection with it; for the fort is generally commanded by his deputy's deputy, with whose very name, it is probable, the principal himself is unasquainted.

mission of the colony to who

by death, shearce, or suspension, as reduce the beard, under carrie, the governor or commander in chief is empowered to fill up to that number, but no further. Their privileges, powers, and offices, are these:

First. They are by courtesy severally addressed, in the colonies, Honourable; they take precedency next to the commander in chief; and on the death or absence of the governor, lieutenant-general, and lieutenant-governor, the eldest member of the council succeeds to the government, under the title of President.

Secondly. They are a council of state, the governor or commander in chief presiding in person, to whom they stand in the same relation as the privy-council in Great Britain does to the Sovereign. But although every plantationgovernor is directed by his instructions to advise with his council on most occasions. I do not know that, in his executive capacity, he is absolutely bound to abide by their advice. I conceive that he is competent to act, in most cases, not only without, but even against, their concurrence: he may, it is true, by so doing, incur the king's displeasure; but his proceedings are nevertheless efficient and legal within the 1. 6. 6 3.7 3 colony.

Thirdly. They are named, in every commission of the peace, as justices throughout the colony to which they belong

CHAP.

Fourthly The council, together with the communiter in chief, sit as judges in the court of error or court of appeal in civil causes from the courts of record; and in some of the islands swo or more of the members sit with the gosernor in the court of chancery, as assistant commissioners of the great seal, as I have elsewhere related; appeals from chancery therefare lie not before them, but are, by the king's wider, avoked before his majerty himself in with the craft man a parts help to a f

The council is a constituent part of the legislature; their concent being necessawy in the enacting of laws. In this capacity of legislators, they sit its the upper house, and in most of the colonies distinct from the governior; claim privilege of parliament, order the attendance of persons, and the production of papers and records, and commit for consempts; enter-protests on their journals after she manner of the house of peers, and have their chaptain, clerk, usher of the black rod, or in without, of a ca possible this order

It has been thought strange that one and the same body of men should act in two such differcent capacities and functions, as a privy-council sworn to secrecy and fidelity, and an upper house of legislature; " the admitting such a distinction, says a late governor, may be supposed even to free them from all obligations of the cath they take

as commenters, because their duty to the people, as legislators, it ay seems to oblige them very fraquently to support opinions, repugnant to a course of the people, and the people peo

But to this it may be answered, that if the governor's schemes, are, in the opinion of the council, repugnant to the true interests of the people, their opposition to such schemes cannot be deemed a violation of their eath of fidelity, neither does it necessarily follow that they thereby divulge what they have sworn to keep secretions.

. It appears to me, that the people at large residing withing the colonies, have much more cause of apprehension, than itheir governors, from the existence and exercise of legislative authority, in so unstable a body as the board in question : for although its individual members ought to be, and I believe indeed commonly are men of weight and property in their respective countries, yet a territorial qualification is not indispensably; necessary to their appointment, as in the case of members chosen into the assembly.... Persons therefore may be, and I am afraid in former times have been, nominated to the council, who have no natural concern in the welfare of the colony, no community of interests with its inhabitants, and who consider

This opinion of Governor Lyttleton is quoted more at

themselves wholly at the governor thisposal, and bound to support all his maintres; however incompatible with the general good: Again: from the power which the governors assume of arbitrarily inflicting the rod of sus-Whiston, the board has hot stability sufficient to insure respect to its resolutions. It has neither strength nor independency. Such of the members therefore as have property in the country, may perhaps sometimes find themselves in Twore disagreeable predicament than even those who have none; for they may be compelled to vote as a governor shall dictate, in support. the community in which all their concerns are centered, or be expessed to the affront of public degradation; to the consequent malignant misconstructions of the vulgar; and perhaps to the contempt of their own minds, in having accepted a station which subjects them to censure, for honestly discharging the duties of it. with the to provide and and and

have actually been felt by the colonists at large, from the inefficiency and instability of this body. However, as it is the excellency of the British government, not merely to correct existing abuses, but also to obviate and prevent (as far as human foresight will permit) such as may possibly or probably happen; many intelligent, persons have been led to controvert the

The principal argulating which have been with the principal argulation of this opinion, are to this opinion, are to this opinion at the constitute sale a legislative orange.

THE peers of Gleat Britisin are hereditally members of the legislature, and sit in parliament for the support of their own great interests and inherent dignity, and as an intermediate both between the crown and the people! In Civil process their bersons are sacred, and it crimi hat, they are tried by their own order. Neither can their privileges be taken from thein but in extraordinary cases, and then this by the sentence of the whole house, as a court of the highest jurisdiction, or by an act of the whole legislature. The Sovereign, it is true, "can create a hand hew peers as he pleases, but have ing ce raised a subject to this high dignity, his privileges thenceforward, as a peer of parliament, are his own; founded, not on royal concessions, but on the ancient fundamental constitution of the realing. Thus, the house of lords forms a separate branch of the legislature, distinct from and entirely independent of, the

POOK.

crown on the one hand, and the commons on the other. Now, in all these respects, it is maintained, that a colonial council has no conformity or similitude with, and therefore could not originally have been intended to form a separate estate, and supply in the colonies the place of the house of peers in Great Britain.

It is contended further, that the power of the crown is not of itself sufficiently extensive to constitute such a legislative branch, or separate estate in the colonies. The king, it is true, has a negative in legislation, but the king has no right to propose a law to, or to alter a law proposed by, the lords or commons. His power is the power of rejecting, and nothing more; which therefore is not so properly a legislative power, as a negative on the legislation of the other branches; a mere defensive privilege to enable him to withstand the encroachments of the legislature, and preserve the government entire. As the king cannot confer on others what he possesses not himsel, nothing less than a solemn and precisely declaratory law, proposed by the representatives of the people, and confirmed by the crown, could, it is pretended, have given the shadow of authority to a colonial or provincial council to form themselves into a distinct legislative estate. It follows, that their claim to legislative powers, thus unsupported, is usurpation and tyranny. 2. Harre des 18 1874

CHAP.

These arguments, or arguments to the same effect, are urged with great ability in Mr. Long's History of Jamaica. I shall not attempt to controvert them hy elaborate discussion, but content myself with briefly stating the origin, as it is in fact, (according to my conception) of the pretensions of this branch to a distinct share in colonial legislation. If it be shewn that the exercise of these pretensions may, on several occasions, be absolutely necessary to the welfare and safety of the community, a very few words will suffice on the question of their constitutional legality.

That it was originally intended to establish in any of the colonial governments three distinct independent legislative powers acting on the spot, in the view of forming constitutions on the model of England, I do not however believe; because, while the crown retains its necessary and constitutional right of disannulling all acts of the provincial legislatures, and while the privilege of giving a negative is likewise exercised by its governors in the colonies, independent of the council, there are four distinct estates, instead of three. The case seems to have been, that there being no order of hereditary nobility in the plantations, out of which to constitute a dignified and efficient intermediate body, like the peers of England and Ireland, a legislative cuthority was at an early period entrusted to the governors and their council,

between the crown on the one hand, and the representatives of the people on the other. The presence and concurrence of the governor were probably thought advisable, in the view that the interests of the grown might generally prepared in each colony, it was perhaps conceived that a salutary shock was contrived against those phases to which power, in the best hands, is sometimes liable; and on this plan the colonies possessed the semblance, at least, of an English legislative constitution.

That such was the first intention in the formation of all or most of the king's governments in the plantations (imperfect as the system confessedly is, from the instability of the council) appears from the instance of Bashadoes, where this arrangement still exists i the governor and douncil, in matters of legislation, constituting, not this separate and district bodies, independent of each other, but we goustituent branch only, sitting and deliberating together.—And such too, for some years, was the practice of

Fivery governor is expressly instructed to transmit from time to time to his Majesty the names of such of the principal inhabitants as are best qualified to supply vacancies in the council, and it is rarely that any person is appointed who is not previously recommended by the governor.

Jamaica, and I believe of all or most of the rest of the royal governments; but as it sometimes became necessary to reject popular bills, the governor, to divert the displeasure of the assembly from himself to the council, declined by degrees attending on such occasions; leaving it to the board to settle matters with the assembly as they could, without his interference: The council concurred, readily enough, in the governor's views, because his absence removing a restraint gave them the semblance of a distinct independent estate: and the crown perceiving the utility and advantage of the measure, confirmed and established the practice by degrees in most of the royal governments throughout the British plantations. If the people's representatives had considered this exclusive interposition of the council as an innovation, then was their time to have opposed it; but it has not appeared to me that the assembly of any one colony, at any one period. denied a right in the council to negative bills in the first instance, without the governor's consent or participation. Now the right in the council to reject bills altogether in the first instance, necessarily comprehends the privilege of offering amendments to particular clauses. (money bills are always, and very properly, excepted) the exercise of which privilege is in truth nothing more than an offer of compromise between the council and assembly. The

MOOK

former may say, " we propose such and such amendments; adopt them, or we use our power of rejection." And this I take to be the plain origin and actual rise of the privileges enjoyed. I believe, by the council-board in every British colony in the West Indies (Barbadoes excepted) of deliberating apart from the governor on all bills sent up by the assembly; of proposing amendments to such bills, and of rejecting altogether, and without any participation with the governor, such of them as they disapprove. Further than this, I do not know that the legislative authority of the council extends, and I have no hesitation in pronouncing the exercise of such an authority, when enforced freely and independently, a most necessary and useful expedient, tending to prevent violent and mischievous disputes between the delegates of the people, and the representative of the crown. Its origin may have been illegitimate; but its adoption in the colonies for a century at least, and recognition by the crown, have given it such a prescriptive establishment, as I conceive constitutes law.\*

In truth the colonies gained a very important acquisition by this separation of the governor and council from each other in matters of legislation; for, obtaining by this means the semblance of three distinct estates, it enabled them the more easily to accure the privilege which they claimed, that their laws should be immediately in force as soon as consented to by the governor, without waiting for the royal confirmation.

After all, the objections which have been made to the present constitution of this body." arising from its want of sufficient stability and independence; are of an important and serious nature. Men are very unfit for legislators, whose deliberations are liable to be biassed by external and improper influence. lelf, on some occasions, they are instruments of good, on others they may prove instruments of great evil. Yet I am willing to hope that even this incon22 venience might find its remedy, if the colonial assemblies would take the subject into serious and temperate consideration. Were it required by law that no person should be appointed of the council who was not possessed of a landed estate within the colony to some given value, as an indispensable qualification, so that the private interests of the members might be blended with those of every other citizen, and were the terrong of suspension, which, like the sword of Damocles, hangs but by a thread, removed from them, they would become a respectable and most useful body.\* At the same time.

There arises, however, some difficulty in considering this point. While the council are liable to be suspended at the will of an arbitrary and capricious governor (and I're-member an instance in Jamaica, of seven members being suspended in one day, on a very frivolous pretence) their authority is very lightly regarded, and sometimes they all even treated with contempt and insult. On the other hand, if they were appointed for life, they might, in their legislations.

ple in all especial manner, to keep in their own hands undiminished and unimpaired, as a secred deposit, the great and scalusive privilege of granting or withholding the supplies. If the council, independent of the governor and the people, shall once possess themselves of the smallest share in this most important of all popular rights, they will become from that moment is standing senate, and an insolest aristocracy.

tive capacity, become formidable both to the king's representative and the people. They might obstruct the supplies for no better reason than to get a new governor. I am of opinion, therefore, that they should still be amoveable, but, in order to give them greater weight than they possess at present, they should be moveable only by the king's express order, in consequence of a joint address from the commander in chief and the house of assembly. Their present constitution certainly requires some correction and amendment: the move so, as in some of the colonies they have set up pretensions of a very wide and extraordinary nature. They have, at different times, claimed and exercises he power of arbitrarily imprisoning for contempt, and formerly even for fines laid by their own authority. They have claimed a right of originating public bills at their board, and even of amending money bills passed by the assembly. They have also claimed the right of appropriating the public revenue, &c. &c. All these, and other pretensions, are equally inconsistent with their original appointment of a council of assistants, to the governor, and with the tenure by which they at present exist, and ought to be constantly and firstly recisted by the prophets representatives are yest? In this chapter, the nature and necessary uniformity of my work compel me to tread over a field wherein the footsteps of a great many preceding writers are still visible. I presume not therefore to fancy that I can produce many new arguments myself, or give additional weight to those which have been advanted by others on applicate to wall understood; and so frequently and freely canvassed during the late unhapty disputes with America. My aim will be answered, if, instead of originality and novelty, I am found to possess perspicutly and precision. Happilly, the great rights of mankind are sufficiently apparent, without the side of logical deduction, and abstracted hypothesis.

CHAP.

BOOK

the claim of the colonists to legislate for themselves, by means of those assemblies, and to display the principles on which this claim was confirmed by the mother-country. Afterwards I shall inquire by what means their allegiance to the crown of Great Britain, and profitable subordination to the British parliament, are secured and maintained.

From the arguments that have been urged in the latter part of the preceding chapter concerning a prerogative in the crown to invest the colonial council-boards with some share of legislative authority, I trust it will not follow that the English constitution has at any time lodged in the king the still greater prerogative of establishing in the British dependencies, such a form and system of government as his Majesty shall think best. It is surely one thing to say, that the crown may introduce into the plantations such . checks and controuls as are congenial to those institutions by which freedom is best secured in the mother-country, and another to aver that the crown may withhold from the colonies the enjoyment of freedom altogether. Nevertheless, were the maxim well-founded, that the prerogative of the crown in arranging the system of colonial establishments is unlimited, no conclusion could be drawn from it, that would impeach, in the smallest degree, the claim of the British colonists in America to a British constitution; inasmuch

as the representing the coole nation, has repeatedly recognized in the first settlers and their posterity, by various solemn grants, proclamations, charters, and treaties, the same liberties, privileges, and immunities, which are possessed and enjoyed by their fellow-subjects remaining in Great Britain.

I do not indeed, know that those grants, proclamations, charters, and treaties, were essentially necessary to freedom; for if, as I presume I have sufficiently demonstrated on a former occasion, even a conquered state, retaining its ancient inhabitants, no sooner becomes ceded to Great Britain, then it is assimilated to its government, and imbibes the spirit of its free constitution; -if this, as I contend, is the law of England, it requires but little argument to prove that English subjects, whether settling in countries which their valour has annexed to the British dominion, or emigrating for the purpose of forming plantations on vacant or derelict lands, are entitled of right, so long as they preserve their allegiance, to at least an equal degree of national protection, with adopted aliens and vanquished enemies. Some of our possessions in America and the West Indies (Jamaica in particular, as we have seen) were obtained by the forces of the state; the individuals of which became proprie-

conquered with him. They that fought on his side cannot with by the conquert, but mitte at him to be at mitch frequency and an obselition to share with their himself, and enjoy a part of the spoil, and other advantages that strend the conquering aword : or, at least, have a part of the standard country bestowed upon them. And the conquering hoppie are not, I hope, to be himself by tonguest, and waste their literals only to shew they are satisfaces to their leader's triumph. We are told by some, that the English

monarchy is founded in the Norman conquest, and that our princes have thereby a title to absolute dominion, which, if it were true (as by history it appears otherwise) and that William had a right to make war on this island, just his dominion by conquest could reach no righther thin to the Saxoas and Britons that were then inhabitants of this country. The Normans that came with him, and helped the conqueror, and all descended from them, are

freezien; and not subjects by conquest; let that give what doublide to will the on the fact the constitution and the control of the control o

So far Mr. Locke—His friend and correspondent Mr. Mollyneux, of Dublin, in his Treatise of the case of Ireland's being bound by English acts of parliament, repeats the same argument, and illustrates it as follows. "Supposing (he observes) that Heavy II. had a right to invide Ireland, and that he had been opposed therein by the inhabitants, it was only the ancient race of the Irish that could saffor by this subjugation; the English and Britons, that came over and conquered with him, retained all the freedoms and immunities of free-born subjects; they, and their descendants, could not in reason lose these for being successful and victorious; for so, the state of both conquerors and conquered shall be equally slayish."

AT

sion which necessarily results from the premises, and it appears to me to be clear and uncentrovertible, that the royal proclamations and charters which guaranteed and confirmed to the first planters emigrating to America and the West Indies, all the liberties, franchises, and immunities of free denizens remaining within the kingdom, were, and were meant to be, declaratory only of encient rights; not creative of new privileges. They were nothing more than royal recognitions, expressive of a reciprocal relation between the sovereign and his subjects, notwithstanding their removal conveying the consent of the king, as head and representative of the English state, to their emigration; and assuring them, expressly, or by evident implication, so long as they preserved their allegiance, the full and undisturbed enjoyment of those inherent rights, which no climate nor compact can take away or diminish. I have a said

Such, I conceive, was the ground on which the first English colonists claimed, amongst other rights, the great and important one of assenting to all laws by which they were to be bound; or, to speak somewhat more suitably to the actual situation of the people of England, of being bound by such laws only, as in their operation, should extend to, and bind the governors equally with the governed; the framers

VOL. II.

and hence, the establishment in all the British provinces of North America, and islands of the West Indies, of assemblies, or houses of representatives, which, being freely chosen by the people, forming a part of, and living among the people, and occasionally to be resolved into the general mass, must necessarily participate, with a tender interest, in every thing that concerns the people.

Perhaps, instead of confirming to the colonists this liberal system of self-government, it was, or might have been, contended on the part of the crown, that the permission of returning representatives to the British parliament was all that on their own principles, they could pretend to claim; and the examples of Durham and Chester might have been adduced in support of this argument. Those counties being

By the principles of the British constitution, every man should be represented, but the deviation from a ruletoe size for practice is safely borne, because the interest of every particular member of parliament stands as a pledge; that no individual in the kingdom can be oppressed. In other words, the great security which the people of Great Britain have, that their representatives shall not abuse their trust, is, that they exists impose on others what they are not to feel themselves. If an act of parliament was made (says judge Hobert) constituting a man a judge in his own cause, it would be void by the law of nature. See an excellent speech of George Johnstone, Require, in the Parliamentary Debates for 1775, wherein this argument is enforced.

BOOK,

counties palatine, had complained, that, "for lack of knights and burgesses, they were touched; and grieved with acts and statutes made within the court of parliament; " and they plended that all acts and statutes so made, "were derogatory unto their most ancient jurisdictions, liberties and privileges." Their plea was allowed, and parliamentary representation granted them. It is observable too, that Barbadoes and the Charaibean islands, as well as some provinces of North America, were at first created into counties palatine, expressly after the medel of Durham: 10 But the king and parliament probably thought, what all who duly consider the subject must now think, that a parliamentary union with a kingdom three thousand miles distant, was impracticable to any good purpose. It is most certain, that the British parliament, from first to last, consented that the king should govern his subjects in America (so far at least as related to their own internal concerns) as he governed his subjects in Ireland, by parliaments of their own. Nor, if the election of representatives is "an original right, vested in, and inseparable from, the freehold," as it hath been pronounced by the highest authority; \* and if the impracticability of the colonist being adequately represented in the British legislature be admitted, could such a consent be withheld

from them or any principle of reason and justice; unless indeed it be reasonable and just to contend, that the colonists, as having from their remote situation, need of greater protection than their fellow-subjects at home, are on that account entitled to less.

Provincial parliaments, or colonial assemblies (it matters not by what name they are called) being thus established and recognized, we shall find that in their formation, mode of proceeding, and extent of jurisdiction within their own circle, they have constantly copied, and are required to copy, as nearly as circumstances will permit, the example of the parliament of Great Britain. The freeholders are assembled in each town or parish respectively by the king's writ; their suffrages are taken by an officer of the crown, and the persons elected are afterwards commanded, by royal proclamation to meet together at a certain time and place in the proclamation named, to frame statutes and ordinances for the public safety. When met, the oaths of allegiance. &c. are administered unto each of them; and a speaker being chosen and approved, the session opens by a speech from the king's representative. The assembly then proceed, as a grand provincial inquest, to hear grievances, and to correct such public abuses as are not cognizable before winferior a tribunals. They

commit for contempts, and the courts of law have refused, after solemn argument, to discharge persons committed by the speaker's warrant.—They examine and controul the accounts of the public treasurer; they vote such supplies, lay such taxes, and frame such laws, statutes, and ordinances, as the exigencies of the province or colony require. Jointly with the governor and council, they exercise the highest acts of legislation; for their penal laws, which the judges are sworn to execute, extend even to life; many persons having suffered death under laws passed in the colonies, even before they had received the royal assent. On the whole, subject to the restriction that their trade-laws are not repugnant to those of Great Britain, there are no concerns of a local and provincial nature, to which the authority of the colonial laws does not ration, to need tory thereas a der in the in.

\*The fellowing account of the proceedings of the legislature of Jamaica in 1766, while it illustrates this part of my subject, cannot fail to prove highly interesting to every inhabitant of the British colonies.

onour's readiness to hear, and inclination to redress, as much as in you lies, every grievance that may affect any of his majesty's subjects, beg leave to represent to you one which calls aloud for immediate relief, it being in itself of the most dangerous and alarming nature, and having already given birth to such confusions and distractions in this unhappy country, as have not at any time before been known in it.

Our ancestors, Sir, who settled this British colony, were Englishmen, and brought with them a right to the laws of 'Ere and as their inheritance, which they did not, nor could for the systelling here. Ever since civil government was find conclished among us, which was very soon after the restoration of king Charles the Second, we have enjoyed in this colony a constitution and form of government as nearly resembling that of our mother-country as it was perhaps possible to make it; our lives, our liberties, and our 'moperties, secured to us by the same laws, have ever been determined and adjudged by similar juris. tions, and such moneys as have been necessary for the support of his ma-'jesty's government here, have, as in England, ever been raised upon the people with their own consent given by their representatives in assembly; our courts of justice, where life, liberty, and property are adjudged, are governed by the same laws, and stand in the same degrees of subordination to one another, as the courts which they respec-'tively stand for, do in England; our house of assembly. 'as representing the whole body of our people, does and ever did hold the same rank in the system of our constitution, as the house of commons does in that of our mother-country; here, as in England, our representatives in swembly are the grand inquest of our community; they have the power, and it is their duty, to inquire into the corruptions of office, the abuses of government, and the ill

BOOK VI. of the empire, and maintaining the superintending and controlling power of the mother-

administration of justice, and for that purpose it is that this body has here, as in our mother-country, ever enjoyed a superiority over all the courts of justice, and a power of examining their conduct; and all judges, magistrates, and public officers, have ever been amenable to the assembly, and their conduct liable to its inspection; and here, as in England, we owe it to the wholesome and frequent exertions of such a power in the representative body of the people, that we are at this day a free people; without it we can have no security or defence against the corruption of judges, and the abuses which may happen in every department of administration.

Let is against a most flagrant, unprovoked, and unprecedented attack and violation which Mr. Lyttelton, our late chancellor, made upon this indubitable right of the people, that we now resort to your honour for redress.

In December 1764, Pierce Cooke and Lachlan M'Neil, two men who had been committed by the assembly for breach of privilege, and were in custody of Edward Bolt, the messenger of the house, by virtue of the speaker's warrant, did, in contempt of the power and jurisdiction of the house, apply in the first instance to Mr. Lyttelton as chancellor, for writs of habeas-corpus upon the statute of the thirty-first of Charles the Second, and upon the return of the said weits, he did, in a court of Chancery which he called for that purpose, release the prisoners, and declare as follows: "That it did not appear to him from the " words of any act of parliament, or of any act of the go-"vernor, council, and assembly of this island, or of his " majesty's commission or instructions to his excellency as " governor of this island, or by any other means whatso-" ever, that the commitment of the said Pierce Cooke into " the custody of the said Edward Bolt is legal; and his " excellency the chancellor was therefore pleased to order, country in ma

country in matters of trade; but it implies also a CHAP. reciprocal engagement or obligation on the part

"adjudge, and decree, and it is hereby ordered, adjudged, " and decreed, That the said Pierce Cooke be, by the au-"thority of this court, released and discharged from the "custody of the said Edward Bolt; and did also make "the same declaration and orders as to the said Lachlan "M'Neil." which orders and declarations of his, he did most irregularly call decrees, and order them to be enrolled among the records of the court of Chancery.

It is evident from the opinions of the ablest lawyers in 'England, eversince the passing of that statute, from the opinions and declarations of judges, the uniform determinations of all the courts in England, and the constant decla-' rations and practice of the house of commons, that the said statute was not, nor could be, intended to extend to com-' mitments by either house of parliament, and that the house of commons is the only proper judge of its own privileges and commitments; this determination of Mr. Lyttelton's tends, therefore, manifestly to degrade the representatives of the people, in the system of our constitution, from that 'rank and authority which is held by the like body in our mother-country, and if suffered to remain, would subvert the fundamentals of that system, by giving the court of 'chancery a power to controul the proceedings of the assembly, and by reducing them to a dangerous and unconstitu-'tional dependance upon governors, would leave the people without that protection against arbitrary power, which no-"thing but a free and independent assembly can give them.

Every court of justice, from the meanest quarter ses-'sion up to the two houses of parliament, has a power of committing for contempt, and this power requires no act of parliament to confer it, it being incident to the insti-'tution of every court of justice, and necessary for its ex-'istence, for it would be impossible to support any autho-"rity without it " " torte her a history to a date with " to the first and to STANDER TO BE SOUTH TO SEE THE STANDER OF THE STAND

of the British parliament, not to interpose its authority in matters to which the colonial accem-

The courts of justice here, standing in the same degrees of subordination to one another, as they respectively do in England; commitments by the inferior, may be, and frequently are, examined and determined by the superior courts; and as commitments by the house of commons cannot be, nor ever were, discharged by any of the inferior courts, so this extraordinary act of Mr. Lyttelton stands ' in our country without a precedent, such a thing having never before his time been attempted.

The power of commitment by the house of commons is their's by the common law, as well as their privileges, of which they are the only competent judges, for they ijudge of these matters by the law and usage of parliament, which is part of the common law. your day to the

As all the inferior courts here enjoy and exercise the same powers with those they stand for in England, it is surely reasonable and just that the representatives of the people here, called by the same authority, and constituted for the same ends, should also enjoy the same powers with those of Great Britain.

"We beg leave to represent further to your honour, that by the thirty-first clause of an act of the governor, council, and assembly of this island, intituled, "An act for grant-"ing a revenue to his majesty, his heirs, and successors, for "the support of the government of this island, and for re-" viving and perpetuating the acts and laws thereof," which has received the royal approbation, it is declared "That " all such laws and statutes of England as have been at any "time esteemed, introduced, used, accepted, or received as " laws in this island, shall and are hereby declared to be and " continue laws of this his majesty's island of Jamaica for "ever;" and that the assemblies of Jamaica, as appears by their minutes, considering it their duty to assimilate their ' proceedings to those of the house of commons, have con-' stantly governed themselves in cases of commitment, and

in the exercise of their jurisdiction, by the law and usage of parliament, which being undoubtedly part of the law of England, the use and benefit thereof was confirmed to them

by virtue of the above act beyond a possibility or pube.

This arbitrary measure of Mr. Lyttelton, so totally unprecedented either in England or here, so repugnant to "reason, to justice, and law, and so evidently subversive of our rights, liberties, and properties, will therefore, we doubt not, be considered by your honour as it deserves to be and as it marks that gentleman's administration with the most odious colours, so, we trust, that the destruc-

tion of it will distinguish and adorn your's.

It is in full confidence of your honour's justice and love of liberty, that we this day, in the name and behalf of ourselves, and of all the good people in this colony, lay before vour honour the ill consequences and injustice of the aforesaid determination, and beseech you, as the only means of quieting the disturbance and apprehensions they have raised in the minds of his majesty's most loval and faithful subjects, to give orders that the same be vacated, and ' the enrolment thereof cancelled from the records of the court of Chancery, in such a way, that no traces may remain of so wicked and dangerous a precedent.

The preceding application from the house of assembly having been submitted by the lieutenant governor to the council for their advice, the board addressed him as follows: May it please your Honour, and the national to write idea.

We, his majesty's most dutiful and loval subjects, the council of Jamaica, have, agreeably to your honour's ' message, laving before us the address of the house of as-'sembly to your honour, taken into our serious consideration ' the subject-matter thereof: we have also examined and considered the proceedings now in the office of the register of ' the court of Chancery, and the determination of his excel-Lency the late chancellor, touching the release of Pierce

BOOK

necessarily be sovereign and supreme within their own jurisdiction; unobstructed by, and

Cooke and Lachlan M'Neil, from a commitment of the assembly. Although we have the most favourable opinion of the late chancellor's intention in that decision, yet finding that no chancellor or judge in this island, ever before took upon himself to make any determination upon a warrent or commitment of either branch of the legislature, it is with concern we observe, that such proceeding of the late chancellor in so new, in so delicate a case, by discharging the said Pierce Cooke and Lachlan M'Neil from the commitment of the house of assembly, was unprecedented and irregular.

'It is also with sorrow of heart we have seen and felt 'this his majesty's colony, ever since that determination, 'labouring under a variety of distresses, flowing chiefly from the apprehensions of his majesty's subjects, that the 'establishing a precedent of this nature in the court of 'Chancery, might lay a foundation for chancellors and 'judges of inferior courts to interfere in, and to take upon them to determine on the privileges of the legislative bodies of this island.

Permit us therefore to recommend it to your honour, as the only expedient which we conceive will be effectual to quiet the minds of the people, to unite the several branches of the legislature, and to restore peace and tranquillity to this country, that you will be pleased to cause the said determination made by the late chancellor, whereby the said Pierce Cooke and Lachlan M'Neil were discharged from their commitment, and all their proceeding, thereon, to be brought before you, and in the presence of the council and assembly, that you will be pleased to cause the register of the said court of Chancery to enter a vacatur on the said determination, or otherwise reverse it in the most effectual manner, so that the same may not be made use of as a precedent in future.

CHAP

On receiving this address, the lieutenant-governor came into council, and having commanded the attendance of the Assembly in the council-chamber, was pleased to make the following speech:

Gentlemen of the Council, Mr. Speaker, and Gentlemen of the Aveembly,

In consequence of the addresses I have received from each of your bodies, I now meet you here, and as the determination upon record in the office of the register of the court of chancery, appears to have been irregular and unprecedented, whereby the minds of the people have been greatly 'disquieted, and many distresses and evils have arisen to this country; and having nothing so much at heart, as the supporting the honour and dignity of the crown, and promoting the peace and happiness of the people, I have agreeably to your requests, taken, as chancellor, such order therein, that the said proceedings, and the entry upon record thereof, are vacated, annulled, and made void, to all intents and purposes whatsoever; and for your further satisfaction herein, I have ordered the register to attend forthwith in the council-chamber with the said proceedings, and the book of records in which the same are entered, and that he do, in presence of the three branches of the legislature of this island, enter a vacatur in the margent of the said several proceedings, and the entries of the same in the said book of records, and that he do in your presence draw cross lines over the said proceedings and the entries thereof in the usual form and manner.

'This measure, adopted upon your united recommendation, cannot, I am persuaded, fail of producing every happy consequence, by restoring and firmly establishing that harmony and unanimity so earnestly wished for, and so essentially necessary to his majesty's service, and the welfare of this community.' BOOK VI.

pose, that a people can be subject to the different legislatures exercising at the same time equal powers, yet not communicating with each other, nor, from their situation, capable of being privy to each other's proceedings.

The register of the court of Chancery attending, being called in, and having produced the records, and read the several proceedings in the said address mentioned, he did then, by the command, and in the presence of his henour, and in the presence of the council and assembly, enter a vacatur in the margin of the said several proceedings, and draw cross lines over the said proceedings, and the entries thereof, and cancelled the several papers relating thereto.

It was after a long and arduous struggle that the people of Jamaica obtained this great victory; no less than five different assemblies having been called, and abruptly dissolved, because they refused to raise the supplies, unless satisfaction was given them in this business. At length, on a change of ministers in Great Britain, the governor (Mr. Lyttelton) desired to be recalled, and the lieutenant-governor was directed to comply with their wishes, in the manner we have seen.

The author of this work was one of a small minority in the house of assembly that supported the administration of Mr. Lyttelton, whose abilities and virtues were acknowledged even by his enemies; yet is he free to confees, that, being present when the proceedings in chancery were solemnly annulled and vacated in the manner related, in the presence of a thousand spectators, he could not but participate in the general triumph and enthusiasm which prevailed on that occasion amongst all ranks of people. The towns were splendidly illuminated, the shipping in the ports were dressed in their gayest colours, and such joy and satisfaction appeared in every countenance, as we may imagine were displayed by the English Barons on receiving magne charts from the reluctant hand of king John.

\* This is spling's government of the properties of the spling of North American miralty and case

CHAP:

It has, I know, been urged, that the principles I have thus leid down and the rights which I have allotted to the inhabitants of the British colonies, tend immediately to sovereigh and national compire, distinct from, and independent of the government of the parent state. It will be found, however, that the dependency of the colonies on, their allegiance to, the crown of Great Britain and also their proper subordination to the British parliament, are secured by sufficient ties, regulations, and restraints; some of which seem at first inconsist ent even with the premises I have stated. Thus, as to the supremacy of the crown; among various other prerogatives, the king reserves to himself, not only the nomination of the several governors; the members of the council and most of bithe public moffices of all descript tions, but he possesses also at the same time, as we have seen, the right of disallowing and rejecting all laws and statutes of the cokniel assemblies, even after they had received the assent and approbation of his own lieutenant in the colony. Hence, the affirmative

\*This is spoken of those colonies which are called king's governments; for, before the late civil war, the governor, in a proprietary government, was named by the proprietor, subject to the restrictions contained in 7 and 8 W. III. c. 22. §. 6. and in two of the charter provinces of North America, all the officers, except those of the admiralty and customs, were chosen by the people.

voice of the people in their representatives is opposed by a three enegatives; the first in the council, the second in the governor, and the third in the crown; which possesses likewise the power of punishing the two former branches by dismission, if they presume to act in opposition to the royal pleasure.

Nor is the legal authority less efficient and extensive over the executive power within the colonies, than over the legislative. The governor, as I have shewn, is commonly chancellor by his office; but whether assisted by his causell, or presiding solely in this high department, an appeal lies to the king in council, in the nature of a writ of error, from every decree that he makes and the like liberty of appeal is allowed from the judgment of sentence of the governor in council, sitting as a court of error. The reason assigned in law authorities for allowing such appeals is this:—That without them, the rules and practice of

It is necessary however in either court, First, That in cases of property the matter in dispute should be to the value of 500L sterling, to be ascertained by affidavit. Secondly, That the appeal be made within fourteen days after judgment in the court of error, and within one month after the determination of the court of chancery, by giving security for the prosecution of it; and it is required by the lords of appeal in England, that the party appealing must proceed within twelve months after the appeal is allowed in the plantations, or the appeal is dismissed of course. A cause cannot be transmitted for difficulty, but must be determined one way or other.

thus extensive and dictatorial, the subjects residing within the realm have this security, that their representatives retain in their own hands the means of supporting all the Britis. forces, both maritime and military. Thus, though the king has the prerogative of commanding armies and equipping fleets, yet without the concurrence of parliament he cannot maintain them. He can declare war, but without the assistance of parliament he cannot carry it on. The royal prerogative in these respects is aptly compared by De Lohne to a ship completely equipped, but which the parliament, by drawing off the water, can at pleasure feave aground.

It seems therefore naturally and necessarily to follow, that if the inhabitants of the colonies are intitled to the same rights, and to have equal securities for those rights, as are enjoyed by their fellow-subjects in Great Britain, there must exist some restraint against the exorbitance and abuse of the power contended for in the present case. It is to little purpose to tell the colonists, when groaning under the pressure of military government, that no military force, however legally raised and maintained, can be lawfully employed to violate their rights; as whoever holds the sword will decide upon the question of law.\*

\* It is observable, that this claim in the crown was admitted to be a grievance by the commissioners appointed, in April, 1778, for restoring peace in America. In a letter

VOL. II.

To as little purpose may our remaining colonies be told, that the parliament of Great Britain will never suffer a precedent of arbitrary power to be established in any part of the British dominions. They will probably insist, that the British parliament is not competent to judge for them-at least in the first instance. They may contend that those who feel, or are in danger of feeling oppression, can best determine when it may be proper to resist its attack, or to guard against its approach.

It cannot however be denied, that if parliament should be apprised that the just authority of the crown over the colonies has degenerated into tyranny, it is not only their right, but their duty to interpose, even on their own account; for it has been well and eloquently said, that whenever the liberties of Great Britain shall be devoted, it is probable her dissolution will not begin in the centre: she will feel subjection, like the coldness of death, creeping upon her from her extremities.

Having thus pointed out some remarkable instances of colonial subordination to the king, from the earl of Carlisle, Messieurs Eden and Johnstone, three of the said commissioners, to the president of the congress, disted the 5th of June 1778, they declare a disposition to concur in such an arrangement as should provide that no military force should be kept up in the different tates of North America, without the consent of the general congress or particular assemblies.

BOOK

as the sovereign head and supreme executive in the government of Great Britain and its dominions, I shall proceed to another inquiry, of no less importance (and to which indeed some of the last observations naturally lead) and that is, how far the joint authority and collective power of king, lords, and commons, constitutionally extend, and, on the principles of a free government, ought to be exercised in supporting the unity of the empire, and preserving that subordination and dependence which the colonists; as fellow-subjects with the inhabitants of the kingdom, owe to Great Britain and its government, in return for protection received.

It is a maxim maintained by political writers, that in all societies there must exist somewhere an absolute and despotic jurisdiction, unlimit-"This absolute and desed and irrevocable. potic power (says Judge Blackstone) is, by the British constitution, entrusted to parliament." But I conceive that the learned judge has not expressed himself on this occasion with his usual accuracy; inasmuch as all "entrusted" authority is necessarily accountable, and therefore not "absolute and desputic." The truth is, that this despotie and unlimited power is reserved by the people in their own hands (not to be resorted to indeed but in the last extremity) and it never was the intention of any society of free agents, from the creation of the

world to this body of men thority in all tion indeed, have manifest that account the beginning.

world to this day, to delegate to any man, or body of men, an absolute and despotic authority in all cases over them. Such a delegation in lead, if ever it had been made, would have manifested insanity in the agents, and, on that account alone, must have been void from the beginning.

As the legislative power of Great Britain therefore is supreme only in a relative sense, even within the realm, where the people themselves participate in its authority, much less can it be said to be supreme, in all cases whatsever, over the colonies. It has indeed been solemnly declared by parliament itself, that parliament has such a power; but if parliament had not the power before, certainly their own declaration could not invest them with it.

Considering the constituent branches of the British legislature separately, it will be difficult to point out any just authority whatever, existing either in the peers or the representatives of the people, over the colonies. We have seen that the first settlers in most of the British plantations, were a part of the English people, in every respect equal to them, and possessed of every right and privilege at the time of their emigration, which the people of England were possessed of, and irrefragably to that great right of consenting to all laws by which they were to be governed. The people of England

CHAP.

BOOK VI.

therefore, or their representatives, having no rights, powers, or privileges to bestow on the emigrants, which the latter were not already possessed of equally with themselves, had no claim to their allegiance, or any pretence to exercise authority over them.

As to the English peers, they are possessed of very eminent privileges; from none of which however can they communicate any advantage to the colonies. They are a court of justice in the dernier ressort for all appeals from the people of Great Britain; but they act in no such capacity for the inhabitants of the colonies; the house of peers having never heard or determined causes in appeal from the plantations, in which it ever was, and is, their duty to serve the subjects within the realm.

Thus, incapable from their situation of being admitted to a participation with the people and peers of Great Britain in the British legislature, the colonists have legislatures of their own, which are subject to the king of Great Britain, as to their own proper head. The person, who, by the laws of Great Britain, is king of Great Britain, is their king; but they owe no allegiance to the lords and commons; to whom they are not subjects, but fellow subjects with them to the same sovereign.

Justly considering, nevertheless, the protec-

CHAP.

tion which they receive in the name of the sovereign; as afforded by the state, and that the colonies are parts of one great empire, of the various branches of which the king in parliament is arbiter, controlling and regulating all intercourse with foreign nations, they readily sdmit that they stand towards the British legislature in the degree of subordination, which implies every authority in the latter, essential to the preservation of the whole; and to the maintenance of the relation between a mothercountry and her colonies. "We are (said the Americans) but parts of a whole, and therefore there must exist a power somewhere, to preside and preserve the connection in due order. This power is lodged in the British parliament." In all matters therefore, to which the local jurisdiction of any one particular colony is not competent, the superintending controul of Great Britain is necessarily admitted; and they likewise admit that each and all the colonies owe contribution for protection.

\* The nature and extent of the subordination here contended for, was clearly understood, and is well explained, in the case of Ireland, by Davenant, in a treatise published by him soon after the Revolution.—His words are these:

"The inhabitants of Ireland, from ancient concessions, have a privilege perhaps above the Roman colonies, namely, to tax themselves by their own suffrages, within their own limits; but this is no more than what is claimed by several provinces of France, which nevertheless account themselves subordinate to the sovereign power of the whole state.

BOOK VL

To ascertain the various contingencies and circumstances wherein; on the principles stated, the British legislature has, and has not, a right to interpose, is perhaps impossible; because circumstances may occur to render its interposition necessary, which cannot be foreseen. "But al"though it may be difficult (says governor "Pownall) to draw the line of limitation, yet some such line there certainly must be, and I think those are not to be heard who affirm, "that no line can be drawn between the supreme authority of parliament, and no authority "at all."

Nevertheless, it were not difficult to point out many cases, and to imagine others, wherein the authority of parliament has been, and may

"There is a part of empire not communicable, and which must reside sovereignly somewhere; for there would be such a perpetual clashing of power and jurisdictions, as were inconsistent with the very being of communities, unless this last resort were somewhere lodged. Now this incommunicable power we take to be the supreme judgment of what is best and most expedient for the whole; and in all reason of government, this ought to be there trusted and lodged from whence protection is expected.

"That Ireland should judge of what is best for itself, this is just and fair; but in determinations that are to reach the whole, as, namely, what is most expedient for England and Ireland both, there, without all doubt, the supreme judgment ought to rest in the king, lords, and commons of England, by whose arms and treasure Ireland ever was, and must always be defended." Vide Davenant's Works, published by Sir Charles Whitworth, vol. 11, p. 247.

CHAP.

again be, constitutionally exerted, in regard to the colonies, without abolishing every restriction on the part of governors, and extinguishing every right on the part of the governed.

\* Such is the general system of the laws for regulating the commerce of the colonies; and I will now add some instances of parliamentary interference, on other occasions, which I conceive to be consistent with the principles I have laid down. Thus, when the first princes of the Stewart family affected to consider the plantations as their own demesnes, with a view of making them a source of revenue to themselves, the commons opposed and defeated a claim which, if it had been established, might have rendered the king independant of the British parliament. (See the Journals of 1694 and 1625, and Vaughan's Reports, 402.) Nobody doubts the propriety of the commons' interposition on this occasion. Again, we have seen in the History of Barbadoes, s great minister (the Earl of Clarendon) impeached by the house of commons, among other things, for introducing an arbitrary government into the plantations. It was never alleged, that the house in this business exceeded the limits of its proper and constitutional functions. Soon after the revolution, some laws were passed by one or two of the provincial assemblies, which were supposed to weaken the chain that holds the colonies dependent on the mother-country. This gave occasion to a clause in the 7 and 8 of W. III, c. 32, which declares, " that all laws (meaning the laws for regulating trade) which are any ways repugnant to the laws of England, shall be deemed null and void." This, though a strong, was certainly a justifiable exertion of English supremacy. By the 6 Anne, c. 30, a general post-office is (stablished in the colonies. This may be deemed an internal regulation; but, as Dr. Franklin observed, it was a regulation which one colony could not make for another; and as the revenue which it raised was considered in the nature of a quantum meruit, a reward for service (a service too which the BOOK VI.

Previously excluding, however, every idea of its interposition in the concerns of internal legislation, and all other matters to which the cocolonists were not bound to accept, for a man might, if he had thought proper, have sent his letters as before by a private messenger) the act was submitted to. After this, some laws were passed, which were thought to bear hard upon the rights of the colonists. By the 5th Geo. II. c. 7. in consequence of some petitions from different bodies of English merchants, complaining that the colonial laws afforded but an inadequate remedy for the recovery of debts; it is enacted, "that lands, houses, negroes, and other "heriditaments, and all real estate whatever, should be " liable to, and chargeable with, all debts, due either to "the king, or any of his subjects, and be assets for the satis-" faction thereof." And by the 24th Geo. II. c. 53. " the "governors and assemblies of the respective provinces are " restrained from passing any act, order, resolution, orvote, "whereby paper bills, or bills of credit, shall be increased " or issued." As both these laws were passed in favour of English merchants, who had advanced money for the use of the colonists, it was thought dishonourable to object to the regulations which they established. The laws were therefore submitted to, but not without murmurs on the part of the provincial legislatures, who considered them as infringing their liberties. Their submission to them, though on very laudable principles, was afterwards quoted against them, and assigned as the best of all possible reasons for requiring unconditional submission on all other occasions.

From what has been said above, and what will hereafter be stated on the subject of the commercial system, the reader will be enabled to form some idea of the boundary contended for, between a constitutional, superintending, controuling power in the British parliament, and a system of perfect unqualified tyranny, the power of binding the colonies in all cases whatsoever. lonial asset to the real clusion, in that two continued and in the continued this consecutive this consecutive the continued and in the continued and in the consecutive this consecutive the consecutive the consecutive the consecutive the continued and co

# If Gree ternal legisla sible right to does not follo even if obe h their internal " is no part of " a voluntary er lation, the " but the cou "is only nec "giftand gra to say more co the colonies. too late) has f III. c. 12. the that from then payable in any tations in No the regulation to be applied

CHAP.

lonial assemblies are sufficiently competent: for, to the reasons already stated for this absolute exclusion, may be added, the utter impossibility that two different legislatures can, at all times, and in the same moment, enforce their authority on the same moment, enforce their authority on the same object, inasmuch as they may happen to differ in opinion, and in that dilemma, this consequence must follow; either the British must yield to the provincial, or prevail over it in points, for which, from the practical or constitutional unfitness of the former, the latter was formed. Such inconsistency would render government at once oppressive and ridiculous.

\* If Great Britain had no right to interfere with the internal legislation of the colonies, she could have had no possible right to tax them for the purpose of revenue; yet, it does not follow, that she would have had a right to tax them, even if she had possessed just authority to make laws for their internal government, "Taxation (said Lord Chatham) " is no part of the governing or legislative power. Taxes are " a voluntary gift and grant of the commons alone. In legis-" lation, the three estates of the realm are alike concerned: but the concurrence of the peers and the crown to a tax, is only accessive to clothe it in the form of a law. The "giftand grant is of the commons alone." It is unnecessary tosay more concerning the right of parliamentary taxation of the colonies, because parliament itself (when indeed it was too late) has formally relinquished the claim. By the 18 Geo. III. c. 19, the king and parliament of Great Britain declare, that from thenceforth they will not impose any duty, tax, &c. payable in any of the king's colonies, provinces, and plantations in North America and the West Indies, except for the regulation of commerce: the produce whereof is always to be applied to the use of the colony in which it is levied.

BOOK

But, in a government of which freedom is the basis, and of which it is the boast that it promotes, equally and impartially, the happiness of all its subjects, it might be supposed that no other authority over its dependencies could be necessary, than that which effectually provides, that every addition to their wealth and greatness should contribute, at the same time, to the augmentation of its own riches and power. And such, before the late unfortunate divisions, was the commercial system adopted by Great Britain, and submitted to by her American colonies. To discriminate the several parts, properties, and effects of this great arrangement of restriction and monopoly; to shew that it secured every degree of authority in the parent over the child, which is consistent with the happiness and freedom of mankind (the ends of all just government); and finally that it might have answered, in the fullest degree, even the objects of revenue and contribution, if Great Britain had happily confined her pretensions to the limits originally prescribed by herself for these purposes it would be necessary to enter into a large and comprehensive discussion, to which the design of my work does not extend. How far the British sugar islands constituted a part of, and were comprized in, the general system, I shall endeavour to point out in the subsequent chapters, and a combine and a second to be take the

Prices.—Amount of British Capital vested in
the Sugar Islands.—Shipping and Seamen.—
General Observations.—Appendix.

THE establishment of colonies in America by the nations of Europe (says Montesquieu) was contrived, not in the view of building cities and extending empires, but for the purpose of carrying on trade to greater advantage than could be done with rival states. Commercial monopoly therefore, and with great reason, is the leading principle of colonial intercourse.

This account, with some little qualification, may be admitted; and a very slight inquiry will demonstrate that it applies as pointedly to the CHAP III. BOOK VI.

16 11 1

English, as to any other nation. The means indeed which Great Britain has adopted for retaining to herself the full benefit of the monopoly, have, in some cases, proved more liberal than those of rival states; but the principle by which the various nations of Europe were influenced, was precisely the same; to secure to themselves respectively, the most important of the productions of their colonies, and to retain to themselves exclusively, the great advantage of supplying those colonies with European goods and manufactures, was the chief aim and endeavour of them all.

Whether the several parts of this system, as adopted by the British government, and its consequent train of duties, restrictions, and prohibitions, were originally as wise and politic, as they are evidently selfish, is a question that of late has been much controverted. But this is a discussion into which it can answer no good purpose to enter, because the present arrangement has been too long, and is now too firmly established amongst us to be abrogated; and thus much at least has been truly said in its favour, that it is calculated to correspond with the regulations of foreign states: for so long as other nations confine the trade of their colonies to themselves, to affirm that Great Britain derives no advantage from following entitle that it applies as pointable to the

dom, the memorable law which was passed in the 12th year of King Charles II, chap. 18, commonly called, bytoway of eminence, THE NAVIGATION ACT, may be considered as the foundation. By this law it is, among other provisions, declared, arrange a large of the provisions, declared, arrange as large of the provisions, declared, arrange as large of the provisions, declared, arrange as large of the provisions.

First, That no goods or commodities should be imported into, or exported out of, any of his Majesty's plantations or territories in Asia, Africa, or America, but in ships belonging to the subjects of England, Ireland, Wales, or Berwick, or in such as are of the built of, and belonging to, such plantations, and whereof three-fourths of the mariners and the master are English subjects, on pain of the forfeiture of ship, and cargo; and all admirals and commanders of king's ships are authorized to make seizure of ships offending herein.

Secondly, That no person born out of the allegiance of his Majesty, who is not natura-

<sup>&</sup>quot;Free commerce and navigation are not to be given "in exchange for restrictions and vexations, nor are they "likely to produce a relaxation of them." So says Mr. Jefferson, the American secretary of state, in his admirable report to the congress of the United States, dated 16 December 1793; wherein the reader will find many deep and important observations on the subject of free commerce, which apply to all the maritime powers of Europe as well as to the states of America.

BOOK

lized, or made an free odenizen, shall eact as a merchant or factor in any of the said places; upon sipain of forfeiting call whis goods and chatteled any dollar was additionagent off mon

Thirdly. That all governors, before they enter into the exercise of their office, shall take an oath to do their utmost, that the above-mentioned regulations shall be punctually and bona fide observed; and a governor neglecting his duty therein, shall be removed from his government.

Fourthly, That no goods or commodities whatever of the growth or manufacture of Africa, Asia, and America, shall be imported into England, Ireland, Wales, Guernsey and Jersey, or Berwick, in any other ships but those belonging to the said places, or to the plantations, and navigated in the manner aforesaid, under penalty of forfeiting both ship and cargo.

Fifthly, That no sugars, tobacco, cotton, indigo, ginger, fustic, or other dying woods, of the production of any English plantation in Asia, Africa, or America, shall be exported therefrom to any place, except to some other English plantation; or to England, Ireland, Wales, or Berwick. The above commodities being named in the act are called generally enumerated, in contradistinction to all others of plantation growth; and,

ence and kin

ships trading to or in the plantations, and lading on board such commodities, for the due observance of this part of the law.

Such, together with the conditions under which foreign-built ships were to enjoy the privilege of English ships, are the chief restrictions and provisions of this celebrated statute, so far as they relate to the plantation trade, and they are extended and strengthened by a law which passed three years afterwards, which the plantation governors are also sworn to enforce; for by the 15th of Cha. 2. c. 7, it is enacted that no commodity of the growth, production, or manufacture of Europe, shall be imported into the British plantations, but such as are laden and put on board in England, Wales, or Berwick; and in English-built shipping, (or ships taken as prize, and certified according to a former act) whereof the master and threefourths of the mariners are English, and carried directly to the said plantations. There is an exception however as to salt for the fisheries of New England and Newfoundland, wines from Madeira and the Azores, and horses and victuals from Ireland and Scotland; and the preamble to the act, after stating that plantations are formed by citizens of the mothercountry, assigns the motive for this restriction to be, " the maintaining a greater correspondence and kindness between the subjects at home

CHAP.

Stigle

and those in the plantations, keeping the colonies in a firmer dependance upon the mother-country, making them yet more beneficial and advantageous to it in the further employment and increase of English shipping, vent of English manufactures and commodities; rendering the navigation to and from them more safe and cheap, and making this kingdom a staple, not only of the commodities of the plantations, but also of the commodities of other countries and places for the supply of them, it being (continues the preamble) the usage of other nations to keep their plantation trade to themselves.\*

Ten years after this, another act passed (25 Cha. II. c. 7.) imposing duties on sugar and other

\* The design of this act, says Postlethwaite, was to make a double voyage necessary, where the colonies used any commodities of the growth and manufacture of Europe but British: for if they could not be shipped in Great Britain, they must first be brought thither from the places of their growth and manufacture, and Great Britain would consequently have the benefit, not only of that freight, but of as many ships and sailors as must be employed in bringing them from thence. It is remarkable, that by this act Ireland was indirectly deprived of the benefits allowed that kingdom by the act of navigation, for it is required, that none of the enumerated goods shall be carried from the plantations to any country or place whatsoever, until they have been first unladen and put ashore in some port or haven in England, Wales, or Berwick. By a subsequent act this intention was avowed, and Ireland was expressly shut out from a direct trade with the plantations.

another, and the following is assigned as the reason; "that the inhabitants of some of the said colonies, not content with being supplied with those commodities for their own use, free from all customs, had, contrary to law, exported considerable quantities to divers parts of Europe; and did likewise vend great quantities to the shipping of other nations, to the great injury of the trade and navigation of the parent state." For the prevention of this inconveniency in future, the duties in question

are laid on the export of those commodities from the piantations; unless security be given to transport them directly to England, Berwick, or Wales. The duties were the same, I believe, as were then paid in England on most of those commodities imported for home con-

This act was soon found to require explanation and amendment; for the payment of the aforesaid duties having been considered in the colonies as an exoneration from giving security not to go to any foreign market in Europe, it was provided by the 7 and 8 W. III. c. 22, that, notwithstanding the payment of the duties in question, the same security should

be given as was required by former acts; and it was enacted and declared, that no commodities of the growth or manufacture of the plantations, should, on any pretence whatsoever, be landed in Ireland or Scotland, unless the same were first landed in England, and had paid the rates and duties wherewith they were there chargeable by law.

By the same act it is declared, that no goods or merchandize whatever shall be imported into, or exported out of, any British colony or plantation, but in ships built in England, Ireland, or the plantations, wholly owned by English subjects, and navigated as before; and provisions are established concerning the regestering of ships, to prevent the fraud of passing foreign-built ships as English; together with various regulations to prevent counterfeit certificates, and frauds in the import and export to and from the colonies; for all which, reference must be made to the act at large, which is systematic and comprehensive in a high degree.

These acts therefore, and some intermediate ones, which it is not necessary to particularise, may be considered as supplemental to the navigation act, and they form all together the foundation of our colonial code; most of the subsequent acts now in force, being framed in the same spirit, and intended to enforce and

strengthen the system; with some few altera- CHAP. tions and exceptions only, which however do not extend to any great and substantial change in the principle or ground-work. \*

\* The following, I believe, are the chief additions, alterations, and exceptions, so far as the British sugar islands are principally concerned. If the reader is desirous of the fullest and most correct information on this head, he is referred to a late History of the Law of Shipping and Navigation, by John Reeves, Esq. an admirable work, in which the driest subjects are treated with such clearness, precision. and elegance, as to render the book not only instructive, but in a very high degree entertaining and interesting.

By statute 3 and 4 Ann. c. 5. Rice and melasses were put into the enumeration, and by c. 8. Irish linens, laden in Ireland in English-built shipping navigated according to law, were admitted into the plantations.

By 7 Ann. c. 8. Jesuits' bark, and all other drugs, are permitted to be imported into Great Britain from the British plantations, on payment of the same duties as if imported directly from the place of their growth.

By 13 Geo. I. c. 15. and 7. Geo. II. c. 18. Cochineal and indigo were allowed for a certain time to be imported from any port or place, in British or other ships; which acts were afterwards renewed, and are now in force.

By 3 Geo. II. c. 28. Rice was permitted, under certain conditions, to be carried from South Carolina to any port of Europe southward of Cape Finisterre; a privilege afterwards extended to North Carolina and Georgia.

By 4 Geo. II. c. 15. Non-enumerated goods (viz. goods not enumerated in the 12 of Cha. II. c. 18) are admitted to be imported directly into Ireland from the colonies, notwithstanding the 7 and 8 of W. III. c. 22.-Hops, by a subsequent statute, are excepted out of this indulgence.

By 12 Geo. II. c. 30. Sugars, under certain regulations

BOOK VI. The reader will find that the system embraces two distinct objects; first, the augmen-

and restrictions, are permitted to be carried immediately from the British plantations to any port or place southward of Cape Finisterre, and also to any foreign port of Europe in licensed ships, which are to call first at some port in Great Britain.—This was considered as agreat indulgence, but the conditions and regulations on which it was granted were so strict and numerous, as to defeat in a great measure the intention of the legislature.

By 4 and 5 Geo. III. sect. 27. British plantation coffee, pimento, and cacao-nuts, are put into the enumeration; as are likewise whale fins, raw silk, hides, and skins, pot and pearl ashes; and by sect. 28. security is required that no iron, nor any sort of wood called lumber, the growth, production, or manufacture of any British colony or plantation, shall be landed in any port of Europe except Great Britain; an exception however was afterwards made by 5 Geo. III. c. 45, by which iron might be carried to Ireland, and lumber to Madeira, the Azores, or any part of Europe southward of Cape Finisterre.

By 5 Geo. III. c. 39. Bond is required to be given in the British plantations, that no rum or other spirits shall be landed in the Isle of Man; and by the 6 Geo. III. c. 52. security is required for all non-enumerated goods, that the same shall not be landed at any port of Europe to the northward of Cape Finisterre, except in Great Britain, and (by a subsequent law) Ireland.

By 5 Geo. IIi. c. 55. Any sort of cotton wool may be imported in British-built ships from any country or place, duty free.

By 6 Geo. III. c. 49, was established the measure of opening free ports in Jamaica and Dominica. By this act, live cattle, and all manner of goods and commodities what-soever (except tobacco), the produce of any foreign colony in America, might be imported into Prince Rupert's Bay

This act was temporary, but was afterwards continued, until materially altered by the 27 Geo. III. c. 27. wherein, among sundry other regulations, two more ports are opened in addition to the former, viz. St. George, in the island of Grenada, and the port of Nassau, in the island of New Providence, one of the Bahamas, into which cotton wool, indigo, cochineal, drugs of all kinds, cacao, logwood, fustic, and other dye-woods, hides and tallow, beaver and all sorts of furs, tortoise-shell, mill-timber, mahogany, &c. horses, asses, mules, and cattle, being the growth or production of any colony or plantation in America, belonging to or under the dominion of any foreign European sovereign or state. and all coin and bullion, &c. may be imported in any foreign sloop, schooner, or other vessel, not having more than one deck, and not exceeding the burthen of seventy tons, and provided also that such vessel is owned and navigated by the subjects of some foreign European sovereign or state. It is permitted also to the same description of persons and vessels to export from these parts British plantation rum, negroes, and all manner of goods that had been legally imported, except naval stores and iron. The foreign articles thus permitted to be brought into the free ports by this act, may be exported again to Great Britain or Ireland; and by a subsequent lay (30 Geo. 111. c. 29.) the restriction in regard to the tonnage of foreign vessels is taken off, but these vessels are still limited to one deck.

The next great measure was the opening the plantation trade to the people of Ireland, which was first partially done by the 18 Geo. III. c. 55. and more fully by the 20 Geo III.

BOOK VL. Britain all the emoluments arising from her colonies, by a double monopoly over them: viz. a monopoly of their whole import, which is to be altogether from Great Britain; and a monopoly of all their export, which (as far as it can serve any useful purpose to the mother-country) is to be no where but to Great Britain. On the same idea, it was contrived that they should send all their products to us raw, and in their first state; and that they should take every thing from us in the last stage of manufacture.

Most of our commercial writers, and many of our statesmen, have considered the two great leading principles above-mentioned to be so closely interwoven together, and dependent on each other, as not to be disjoined without violence to both: whereas, in truth, the monopoly of our colonial products, and the advantages

c. 10. under which they enjoy the like unlimited intercourse with the colonies, both in respect of import and export, as Great Britain; on condition only that the goods so imported and exported are made liable to equal duties and drawbacks, and subject to the same securities, regulations, and restrictions, as in Great Britain; a condition to which the Parliament of Ireland consented, by passing an act imposing duties on the imports, conformable to those of Great Britain.

The regulations with regard to America, since the independence of the United States, will be discussed in a subsequent chapter. arising from lonists, migh though foreign into the green may eventual navigation we tended by suc

arising from the supply of the wants of the co- CHAP. lonists, might not only be supported, even though foreign-built vessels were incorporated into the great body of our shipping, but it may eventually happen, that both our trade and navigation would be greatly improved and extended by such a measure.\*

That the maintenance of our naval strength is one of the most important objects to which the British government can direct its attention, no person of common understanding will venture to dispute; and so long as Great Britain can herself furnish shipping on the cheapest terms, sufficient for all the great branches of her commerce, every possible encouragement ought undoubtedly to be given to our own shipwrights, and every discouragement to the participation of foreigners in the ship-building trade; but it is the interest of the merchant to get his freight as cheap as possible; it is equally so of the manufacturer; because every increase in the price of shipping and freight,

<sup>\* &</sup>quot;There are some who confound commerce and navigation together, as one and the same thing; but the one is only an instrument of the other, and not always an essential one. Commerce consists principally in the exchange of commodities, if it exists in inland countries where there can be no navigation. China has a commerce with all Europe extremely beneficial to her, but she has no navigation to any part of Europe. The ships of Europe are her carriers," Smith of S. Carolina.

BOOK VI.

operates as a tax upon the commodities shipped, and affects the foreign demand in proportion. If therefore, from progressive improvements in our agriculture and manufactures, the two great founders and employers of shipping, the maritime commerce of all the British dominions shall at any time require a greater number of ships than Great Britain and her dependencies can furnish on any saving terms, either recourse must be had to foreign vehicles, or our trade, like the victims of Procrustes, must be lopped and shortened to make it suit the measure of our own,\*

Navigation and naval power are the children, not the parents, of commerce; for if agriculture and manufactures, and mutual wants, did not furnish the subject-matter of intercourse between distant countries, there must be an end to navigation. The remark therefore of a very distinguished senator,† concerning that

\* "Can it be reconciled to common sense to assert that if the Americans, or any other people, were to offer us 500 sail of vessels every year gratis, it would be against the interest of the nation (as a nation) to accept them, because it might prove detrimental to some individuals among us (our shipwrights, &c.)? If the argument will not hold good, considered in this extended light, it can never, by parity of reason, be admitted in cases where vessels can be purchased at one-half the price it would cost to build them."—Vide a Short Address from a Manufacturer, on the Importance of the Trade of Great Britain with the United States of America. Printed for Stockdale, 1785.

branch of our commercial system of which we are now treating, appears to be undoubtedly true, "that if the navigation act be suffered to run the full length of its principle, and is not changed and modified according to the change of times, and fluctuation of circumstances, it must do great mischief, and frequently ever lefeat its own purpose."\*

An American writer of a periodical work called the Museum, published, at Philadelphia in 1791, having been informed, that France had permitted the introduction of American vessels into the trade (in which, however, he was mistaken), expresses the following sentiments: which, to my understanding, convey conviction in every word. "If "France, (saith he) had rejected American vessels, she "would have so far sacrificed her carrying-trade to the " manufacture of ships. She wisely purchases, upon the " cheapast terms, the cradles for her marine nursery. The "first and great object of the maritime powers ought to "be, the increase of the number of their sailors, which is "best done by multiplying the chances of their employ-" ment. Among the means of doing this, one of the most " obvious and rational is, the multiplication of vessels. The " French-built ships cost from fifty-five to sixty dollars per "ton, when fitted to receive a cargo, exclusive of sea-" stores, insurance, the charges of lading, outward pilot-"age, and other expenses incidental to the employment, "and not to the building and outfit of a vessel. The Ame-"rican live-oak and cedar ships, to which none are supe-"rior, cost, in the same situation, from thirty-three to "thirty-five dollars, finished very completely. If the French "require 10,000 tons of new vessels, on any occasion, or " in any term of time, they may be procured in the United "States, on a computation of the medium price of thirty-

BOOK VI. Having observed thus much on the leading principles, or general system of our colonial trade, the application whereof will hereafter be seen, I shall now proceed to the more immediate object of our present researches, and endeavour to furnish the reader with some leading data, or facts, whereby to appreciate the value and importance of the British sugar islands, and the commerce which they create; by investigating,

1st. The nature and annual amount of the export trade from Great Britain and her dependencies, for the supply of their wants, and the profits of the British merchants and shipowners thereon.

2dly. The particulars and value of the various rich commodities, the growth of these islands, annually imported into Great Britain, Ireland, &c.

"four dollars per ton, for the sum of 340,000 dollars; but 
"if bought at fifty-five dollars, the lowest price in France, 
"they would cost the much greater sum of 555,000 dollars. 
"No argument is necessary to shew, that such a nation, 
"cæteris paribus, must produce seamen more rapidly than 
"those who refuse these cheap vessels. It would appear 
"much less unreasonable, that the government of the 
"United States should prohibit the sale of ships (the means 
"of obtaining naval strength) to foreign nations, than that 
"any of them should reject the great advantage of so cheap 
"and excellent a supply." Such is the reasoning of this author, and it is no proof that his arguments are weak, because the circumstance which gave rise to them did not exist.

niture, their

dered as so much British capital.

4thly. A state of the shipping and seamen to which the British sugar islands afford employment.

A full enumeration of the various articles which furnish the ships bound to the West Indies with an outward freight, would indeed comprise a considerable proportion of almost all the productions and manufactures of this kingdom, as well as of many of the commodities imported into Great Britain from the rest of Europe and the East Indies. The inhabitants of the sugar islands are wholly dependent on the mother-country and Ireland, net only for the comforts and elegances, but also for the common necessaries of life. In most states and kingdoms, the first object of agriculture is to raise food for the support of the inhabitants; but many of the rich productions of the West Indies yield a profit so much beyond what can be obtained from grain, that in several of the sugar islands, it is true economy in the planter, rather to buy provisions from others, than to raise them by his own labour. The produce of a single acre of his cane fields will purchase more Indian corn than can be raised in five times that extent of land, and pay besides the freight from other countries. Thus, not only their household furniture, their implements of husbandry, their

CHAP

BOOK

clothing, but even a great part of their daily sustenance, are regularly sent to them from America or Europe. On the first head therefore, it may generally be observed, that the manufacturers of Birmingham and Manchester, the clothiers of Yorkshire, Gloucestershire, and Wilts, the potters of Staffordshire, the proprietors of all the lead, copper, and iron works, together with the farmers, victuallers, and brewers, throughout the kingdom, have a greater vent in the British West Indies, for their respective commodities, than perhaps they themselves conceive to be possible. Who would believe that woollens constitute an article of great consumption in the torrid zone? Such however is the fact. Of the coarser kinds especially, for the use of the negroes, the export is prodigious. Even sugar itself, the great staple of the West Indies, is frequently returned to them in a refined state: so entirely do these colonies depend on the mother-country; centring in her bosom all their wealth, wishes ad affections. "Why should England (says an old planter) "grudge at the wealth and prosperity of the "plantations, since all that is ours she may ac-"count her own, not only because we are a " part of England as it is taken largely, but "also because all comes to the kingdom of "England, properly so called? By a kind of "magnetic force, England draws to it all that "is good in the plantations; it is the centre to

To the laudable researches of the

To the laudable researches of the lords of the committee of council on the subject of the slave trade, the public have been lately indebted for such a body of evidence and information respecting the general commerce of the British West Indies, as could not possibly have been collected by any exertions less extensive and efficient than those of government. † I have frequently had recourse to their lordships' report in former parts of this work, and shall refer to it on this occasion.

From that authority it appears, that the value of the exports from Great Britain to the British West Indies, in the year 1787 (since which time they certainly have not diminished) amounted to 1,638,703l. 13s. 10d. the whole of which (except about 200,000l.) consisted of British goods and manufactures. The exports for the same year to Africa, which, with all

<sup>•</sup> Groans of the Plantations, published the latter end of the last century,

<sup>†</sup> Report of the Lords of the Committee of Council on the Slave Trade, 1769.

POOK

subsequent profits, must be charged to the same account, amount to 668,2551. 14s. 4d. Besides this, the cost is to be stated of manufactures and provisions from Ireland, and of wines from Madeira and the Azores; the same having hitherto been purchased by British capitals, and conveyed to the West Indies in vessels trading circuitously from British ports, and the returns likewise made, for the most part, to Great Britain. For the same reason, the cost and freight of lumber, fish, and other productions of America, both from the American states and the British provinces, transported from thence to the British sugar islands, in British vessels, must likewise be added to the estimate.

Concerning Ireland, I have no account for 1787, but the reader will find, in an Appendix to this volume, official accounts for the years 1790, 1791, and 1792, as well of the exports from that kingdom to the British West Indies, as of the imports received from thence in return; both in a direct trade. Of the former, the average value is 294,353l. Irish, being equal to

<sup>\*</sup> The goods shipped for the purchase of gum, ivory, and gold, in the trade direct between Africa and Great Britain, constitute some small part of this; but I make no deduction on that account, because the freight of, and merchants commissions on, such parts as are applied to the purchase of slaves, and the profits on the sale of those slaves in the West Indies, not being charged in the Inspector General's book, I set one against the other.

<sup>&</sup>quot;Jamaica, itself for staves by this time, ner to Great Britai whole supply, is 245,000*l. per ca* 

277,218% sterling; the amount of the imports will be given hereafter.

CHAP.

Of wines, from Madeira and the Azores, the yearly consumption in these islands may be estimated, on an avarage, at 30,000%.

Respecting America, the supplies that were annually furnished by those provinces which now constitute the United States, were valued, at the places of delivery, at no less than 720,000l. sterling; and they consisted of articles so essentially necessary, that the restrictions to which this trade is now subject (how grievously soever they are felt by the planters) have not, I think, diminished the demand, or lessened the import.\* Official accounts of the present state of this intercourse are no where given to the public: a retrospective survey of its nature and extent, as it subsisted previous to the war, will be given in the subsequent chapter.

There are yet to be reckoned the imports from the American provinces which still remain to Great Britain, including Newfoundland; of which, in like manner, no account, that I have seen, has been published. Supposing they

<sup>\*</sup> Jamaica, for a while, found some resource within itself for staves and lumber; but the country is, I believe, by this time, nearly exhausted of those articles. The profit to Great Britain arising from the freight alone of the whole supply, is stated by the lords of the privy council at 245,000l, per canum.

WL.

were equal in value to the West Indian commodities shipped thither in return (a conjecture probably not very wide of the truth,) the sum to be charged on this account for 1787, is 100,506k

I shall now bring into one point of view the several great items that have been enumerated: adding to the British and Irish supply 20 percent. for the cost of freight and insurance outwards, the charges of shipping, commission to the merchant-exporter in some cases, and the profits in others of the merchant-importer in the West Indies; all which contribute to swell the debt of the planters to Great Britain; viz.

Add this sum to the British import, and the whole vearly value of the produce of the British West Indies, exclusive of what is consumed by the inhabitants themselves, is seven million two hundred and forty-three thousand six hundred and sixty-six pounds seventeen shillings and nine pence sterling; all which is produced by the labour of 65,000 whites, and

In efficial accounts before referred to of the Irish exports and imports, and subjoined at length in an appendix to this volume, it appears that the value of the goods imported into Ireland from the British West Indies, has of late years greatly increased. In 1790 they amounted to 169,5651. 8s, 10d.—in 1791 to 218,5891. 1s. 10d.—and in 1792 to 225,7741. 14s. 3d. These sums are the currency of Ireland.

455,000 bl pounds for pounds eig head per a black and West Indies

From th Great Brit duties, upy clusive of t Barbadoes, which being ed in the ge remainder, share was th merchant, a not less the the same a homeward, train of oth as it necess of claims a portion of t planters, th tants, most tain, and b extending c partly expen country; in

dustry, in

455,000 blacks, being one hundred and eleven pounds for each, white person, and thirteen pounds eighteen shillings and aix pence per head per answer for man woman and child black and white throughout all the British West Indies.

From this immense supply, the revenues of Great Britain and Ireland received, in gross duties, upwards of 1,800,000/. sterling exclusive of the duty of 41 per cent. collected in Barbadoes, and some other of the islands, and which being paid in kind, is, I presume, included in the general imports above stated. Of the remainder, we have already seen how large a share was the property of the manufacturer, the merchant, and the navigator. A further sum, not less than 1,037,000/ must be placed to the same account, for freights and insurance homeward, commissions on the sale, and a long train of other charges. The balance, reduced, as it necessarily must be, by such a multiplicity of claims and deductions, to a very small proportion of the gross returns, is paid over to the planters, their agents, mortgagees, or annuitants, most of whom are resident in Great Britain, and by whom it is partly employed in extending cultivation in the West Indies, and partly expended or invested in the mothercountry; in the one case giving vigour to industry, in the other upholding the price of

Another mode proposed by their Lordships of secretaining the capital, is to reckon twelve years purchase on its annual produce, it being, they observed not unusual in the West Indies, to sell estates at that price. I think that the sale of West Indiah estates at the years purchase, is much more common; and reckoning the mercantile value of the capital at seven millions per annual, the result, by this mode of calculation, agrees precisely with the former: a circumstance which gives room to conclude, that it is nearly as accurate as the subject will admit. There can be no possible inducement to exaggerate, where acknowledged facts are of so much weight.

There yet remains to be added a brief state of the shipping and seamen to which the suger colonies directly give employment; and it ap-

On a retrospect of the whole it may be truly affirmed, that the British sugar islands in the West Indies (different in all respects from colonies in northern latitudes) answer in every point of view, and, if I mistake not, to a much greater extent than is commonly imagined, all the purposes and expectations for which colonies have been at any time established. They furnish, as we have seen, a sure and exclusive market of the merchandise and manufactures of the mother-country and her dependencies, to the yearly amount of very near four millions of pounds sterling. They produce to an immense; value, and in quantities not only sufficient for her own consumption, but also for a great export to foreign markets, many valuable and most necessary commodities, none of which interfere in any respect with her own productions; and most of which, as I shall demonstrate hereafter, she cannot obtain on equal terms elsewhere: accompanied too with this peculiar benefit, that in the transfer of these articles from one part of her subjects to another part, not one shilling is taken from the general circulating wealth of the kingdom. Lastly, they give such employment to her ships and seamen, as while it supports and increases her navigation in time of peace, tends not in the smallest degree to obstruct, but on the contrary, contributes very eminently to aid and

CHAP.

invigorate, her operations in warper It is evident herefore, that in estimating the value and importance of such a system, no just conclusions can be drawn; but by surveying it comprehensively, and in all its parts considering its beveral branches as connected with, and dependent on each other, and even then, the sum of its advantages will exceed calculation. We are told indeed, among other objections which Ishall consider more at large in the concluding chapter of my work, that all the products of the British West Indies may be purchased cheaper in the colonies of foreign nations. If the fact were true, as it vertainly is not, it would furnish no argument against the propriety and necessity of settling colonies of our own; because it must be remembered, that foreign nations will allow few or none of our manufactures to be received in their colonies in payment: that their colonists contribute in no degree by the investment and expenditure of their profits, to augment the wealth of the British nation, nor finally do they give employment exclusively to British shipping. To what extent the naval power of Great Britain is dependent on her colonial commerce, it is difficult to ascertain: if this traffe be considered in all its channels, collateral and direct, connected as it is with our fisheries, &c. perhaps it is not too much to affarm, that it maintains a merchant

## CHAPTER III. OF BOOK VI.

NT.

Two following entheatic statement of the exports and imports between the West India Islands and Great Britain, in the year 1795, was read in the House of Commons by the Right Honourable Mr. Secretary Dundse, in his speech on the Slave Trade (April 1796). It displays such an actonishing increase as might appear utterly incredible, were it not recollected that in 1795 many of the French segur islands were in our possession:

i destrict the rolls of a 1795 of the received	Value in pounds

Imports of West India produce into Great Britain for 1795	8,881,673
Value of West India produce re-exported	
in 1795 to foreign markets	3,773,000

Mr. Dundas, in the very eloquent speech which he delivered on this occasion, after introducing the preceding statement, made the following important observations:

"If any person shall tell me, that some of these advantages would be enjoyed by us even if the West Indies stood in the same relation to this country as America stands at this moment, I shall readily admit, that as much of this

account as aries manufactures n retion. I'do fie yet, por indee state to rival when I have ad head, be allow tion it would be put out of our the West Indie a market elsew follow, and do tion ? This leads, wish to press u consideration re collect, that the lished. The se

APPEN-DIX.

account as arises out of the exportation and sale of our manufactures might possibly be the same in case of a separation. I do not think the manufactures of America are yet, nor indeed likely to be for a great many years, in a state to rival the manufactures of Great Britain. But when I have admitted thus much, it must, on the other hand, be allowed, that such an event, besides the operation it would have on the navigation of this kingdom, would put out of our power the whole produce that comes from the West Indies, and for which the planters can easily find a market elsewhere. Such a consequence would inevitably follow, and does it not form a most important consideration? We should lose all the surplus which makes so great an article in the foreign trade of this country. The whole of that important advantage would, by such an event, be lost for ever. Such would be one of the consequences of West-India independence, and such, as I have stated, de facto the relative situation existing between the mothercountry and her sugar colonies. will I as augita is done hour

Is it then, Sir, a crime in any Member of the House in this case to talk of policy? Is this the only question from which all considerations of policy are to be excluded? Is it a crime in me to call on Gentlemen, who, past the levity of youth, have arrived at a more sober and deliberate mode of thinking, maturely to weigh the consequences of rash and intemperate counsels on this occasion. Shall it be said, that I do not consult the interests of humanity, because I, who have attained a more advanced period of life, do not rush precipitately on, without clearly seeing my way before me?

This leads, me, Sir, to another consideration, which I wish to press upon the attention of the House,—and this consideration relates to America. Gentlemen should recollect, that the independence of America is already established. The separation of the West India islands from the

-BOOK

mother-country is, therefore, at this time, a very different question from what it would have been, if the connexion between Great Britism and America had still subsisted inbefore Ceptismen permit themselves to think such an event possible; before they ressive in a fit of generosity. or in a moment of anger, to declare the West India colonice independent, I wish they would at least cottaider, what scourity there is, that those islands would continue in that state of independance in which we might place them; if they were absolved from their allegiance and dismissed from the petronage of this country? I would ask, whether there is no other power in the world to be found, who would stretch out a futherly hand for their protection? If: by the egregious folly and the madness of this country, such an event should occur, if any univet and intemperate decicion of this House should unfortunately produce the independame of the sugar colonies, it is but too probable, that with explication over our fally, some other nation would read such a paper as I have this day produced, to demonstrate to the world the consequences of our insanity, by displaying the extent of our losses, and the magnitude of their gains! I feel myself impelled, by the importance of the subject, to press this again and again upon the minds of the House, and to inform them, how greatly they are mistaken if they think they are consulting the true interests: of this country in giving the smallest encouragement to the most distant idea of West Indian independancy Plant

Ably as the feregoing considerations were enforced by the Right Henourable Speaker, it may be useful to suggest some visites of the subject which he omitted,—
and, so there is a research to some based and the subject which he omitted,

" I he shows the of the West both blink from the

DEX.

First, It is a conclusion not logically just, that because the commerce of Great Britain has been prosperous a progressive since the separation of the North American colonies, it is, therefore, indebted to that separation for any part of its prosperity, and might not have arrived to a much higher pitch if such an event, had not happened. Do the American states use none but British manufactures, employ none but British agents, enrich none but British capitalists? Are they not become formidable rivals to us in commercial navigation, and has not France in the present war, found in their neutrality a powerful resource? Their advance in population and wealth, for several years immediately preceding the revolution, was so obvious and rapid, that, considering the drains and burthens which the war imposed, it would be too much to say, that their independence has given a peculiar sour to their advancement, from which Britain, as a trading nation, has derived a compensation for her loss of their exclusive trade. Could any probable expense of their protection have nearly reached the amount of that debt incurred in the war by which they were lost? The arguments by which free trade is usually recommended do not apply to this case. Such arguments imply a general liberation, but here there was no quid pre quo. Something, doubtless, was conceded, and nothing obtained in return. and the set of the set of

Secondly, Whatever may be determined respecting the advantages which Great Britain derived from her North American colonies, no fair conclusion can thence be drawn as to the value of those she possesses in the West Indies, in so many and such material points dissimilar in nature and situation. So early as the time of Sir Josiah Child, who wrote in 1660, while the colonies of both kinds were yet in their infancy, this distinction was marked; their relative fitness for raising rival manufactures, building rival shipping, and draining the mother-country of people.

are by blas stated to plain; but forothic, terms. (See Child Trade, cap, 200 It chould never be forgotten, that the cultivation of the West India telands is entirely devoted to objects which the mother-country cannot produce, yet cupact to without, and which, from their extensive consufficient afford the surest areans of ballancing her foreign trule; those colonies possess no exclusive shipping, and their mountaments course, put by indirect channels; but imby in the bosom of Great Britain. Pelitical economist may theorise concerning the utility of colenies, and the meteronce of concentring the national industry and wealth, but they forget, that such establishments are inseperable from the genius of a maritime people, and essential to its prosperity. And, if the comparative meet of colonies be examined, we may safely assert, that some over existed to reconcileable with the best principles of political econonly as those which the European nations persess in the West Jailto Lysn, up Property they apply the way of the

Thirdly, The independency of the West India islands, all things considered, is not a subject of probable speculation; they are constituted for an interchange of exclusive benefits, like that is which they now exist, and have hitherto flourished; and Great Britain would impose a task upon herself greater than any she ever undertook, were she to attempt to counteract their natural bias in that respect. Now. if any of our political economists should be disposed to maintain, that, in a state of dependance upon some other nation. Great Britain might derive advantages from their commerce, let him be asked, what benefits did she derive from the trade of Martinique and St. Domingo ten years ago > Those which France enjoyed from her exclusive colonies are stated very clearly in the valuable Analysis of the French Commerce published about the time of the revolution, by M. Arnould. It is there shewn that France imported from her colonies a value of about eight millions sterling, of which she exported about six millions, by that,

civil war: and offer some considerations on the policy of Great Britain, in the regulations and restrictions (as they affected the sugar islands) which government afterwards thought proper to adopt concerning it, in consequence of the acknowledgment of American independency; after which, I shall endeavour to furnish an account of the present state of the West Indian trade, both with the United States, and the continental colonies yet remaining to Great Britian;

It may, I think, be affirmed, without hazard of contradiction, that if ever there was any one particular branch of commerce in the world, that called less for restraint and limitation than any other, it was the trade, which previous to the year 1774, was carried on between the planters of the West Indies and the inhabitants of North America. It was not a traffic calculated to answer the fantastic calls of vanity, or to administer gratification to luxury or vice; but to procure food for the hungry, and to furnish materials (scarce less important than food) for supplying the planters in two capital objects, their buildings, and packages for their chief staple productions. sugar, and rum. Of the necessity they were under on the latter account, an idea may be formed from the statement in the preceding chapter of the importation of those commodities into Great Britian; the cultivation of which must absolutely have stopped without the means of conveying them to market.

r

-

For the supply of those essential articles, himber, fish, four, and grain, America seems to have been happily fitted, as well from internal circumstances, as her commodious situation; and it is to a neighbourly intercourse with that continent, continued during one hundred and thirty years, that our sugar plantations in a great measure owe their prosperity; itsomuch that, according to the opinion of a very competent judge, if the continent had been wholly in the hands of a foreign power, and the English precluded from all commerce or intercourse with it. it is a very doubtful point, whether, in such case, we should at this hour have possessed a single acre of land in the West Indies die and it waste

The following is an official account of the total import from North America into the British West Indian islands for the years 1771. 1772, and 1773, attested by Mr. Stanley, secretary to the commissioners of the customs in London, dated the 15th March 1775. BOOK

Of this great supply, the value at the ports of delivery, including freight was £2,160,000 sterling, or £720,000 annually; consisting of about 1,200 annual cargoes; but it is proper to observe, that the vessels employed in this trade (which were generally sloops and schooners, single decked, and without topmasts) commonly made two, and sometimes three voyages in the year; so that the actual number never exceeded in any one year 553, which were navigated by 5,339 seamen, including negroes: of the latter, the number was estimated at about 1,000. Thus, the shortness and cheapness of the navigation in a great degree supported the trade.

The chief articles with which the British West Indian islands supplied America, in return for the produce of that continent, were sugar, rum, melasses, and coffee. Of rum, the quantity annually shipped thither, before the war, on an average of three years, was 2,800,000 gallons; and the quantity of melasses was 250,000 gallons. This last may be considered as so much additional rum, each gallon of melasses producing an equal quantity of spirit of the American proof, which augmented the annual supply of that article to 3,050,000 gallons. The supply of sugar was estimated at 5,000 hogsheads, of 16 cwt.; and of coffee, at about 400,000 lbs. The value of the whole

£300,000 in was commo change, furn of remittance their debts to

(including some other small articles) was £420,000 sterling, leaving a balance of £300,000 in favour of the Americans, which was commonly paid in dollars, or villa of exchange, furnishing them so far with the means of remittance to Great Britian, in reduction of their debts to the British merchants.

From this account of the exports from the British West Indies to the continental colonies. it appears that America besides affording an inexhaustible source of supply, was also a sure market for the disposal of the planter's surplus productions; such, I mean; for which there was no sufficient vent in Europe, especially rum: the whole importation of that article into Great Britain and Ireland, having been little more than half the quantity consumed in America. On whatever side therefore this trade is considered; it will be found that Great Britain ultimately received the chief benefits resulting from it; for the sugar planters, by being cheaply and regularly supplied with horses, provisions, and lumber, were enabled to adopt the system of management not only most advantageous to themselves, but also to the mother-country. Much of that land which otherwise must have been applied to the cultivation of provisions, for the maintenance of their negroes and the raising of cattle, was appropriated to the cultivation of sugar. By these means, the quantity BOOK VI.

of sugar and rune (the most profitable of their staples) had increased to a surprising degree, and the British revenues, navigation, and general commerce, were proportionably augmented, aggrandized and extended. Having an advantaseous market for their rum, the planters were enabled to deal so much the more largely with the mother-country. On the other hand, the Americans, being annually indebted to Great Britain for manufactures, in a larger sum than their returns of tobacco, indigo, rice, and naval stores, were sufficient to discharge, made up the deficiency, in a great degree, by means of their circuitous trade in the West Indies, foreign as well as British; and were thus enabled to extend their dealings with Great Britain. Thus the effect was just as advantageous to her, as if the sugar planter himself had been the purchaser to the same amount, instead of the American.\*

\*Dr. John Campbell in his treatise, intitled, Candid and importial Considerations on the Sugar Trade, (1763) has considered this subject in the same light, and expressed himself as follows: "As the inhabitants of the Sugar Colonies are continual purchasers from such as are settled upon the continent of America, the amount of their purchases constitutes a balancefrom them in favour of those of whom they purchase. But on the other hand, the inhabitants of the northern colonies drawing large and constant supplies of commodities and manufactures from hence, we, for the same reason, have a like balance in our favour against them. It is evident, therefore, that by their transferring the balance

CHAP.

Such having been the nature, necessity, and advantage of this commercial intercourse, there was certainly every reason to expect that, on the termination of hostilities, the system which had unavoidably been interrupted and disarranged during the war, would revive as of course, and be re-established under every possible encouragement. Accordingly, the liberal and accomplished minister, who was in the direction of the finances, lost no time in presenting to parliament a provisional bill for that purpose; a copy of which the reader will find in a note.

due to them in satisfaction of that which is due from them to us, the whole accumulated profits ultimately centre with the inhabitants of Great Britain.

The following is a copy of the American Intercourse Bill which was brought in by the Right Honourable William, Pitt, Chancellor of the Exchequer, March 1783.

"A Bill for the provisional establishment and regulation of trade and intercourse between the subjects of Grent Britain and those of the United States of North America.

Whatkas the following thirteen provinces of North America, namely, New Hampshire, Massachuset's Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, North Carolina, Delaware, Maryland, Virginia, Pennsylvania, South Carolina, and Georgia, have lately been solemnly acknowledged by his Majesty to be, and now are, free, independent, and sovereign States, by the name and description of the United States of America:

Most Excellent Majesty, by and with the advice and consent of the Lords Sphritual and Temporal, and Commons, in this

CHAP.

Great Britain and America, it must be a considerable time before any convention or treaty for establishing and regulating the trade and intercourse between Great Britain and the said United States of America, upon a permanent foundation, can be concluded:

" Now, for the purpose of making a temporary regulation of the commerce and intercourse between Great Britain and the said United States of America, and in order to evince the disposition of Great Britain to be on terms of the most perfect amity with the said United States of America, and in confidence of a like friendly disposition on the part of the said United States towards Great British. Be it further enacted. That from and after the and a leading. the ships and vessels of the subjects and citizens of the said United States of America, with the merchandizes and goods on board the same, shall be admitted into all the ports of Great Britain in the same manner as the ships and vessels of the subjects of other independent sovereign States; but the merchandizes and goods on board such ships or vessels of the subjects or citizens of the said United States, being of the growth, produce; or manufacture of the said United States, shall be liable to the same duties and charges only, as the same merchandizes and goods would be subject to, if they were the property of British subjects, and imported. in British-built ships or vessels, navigated by British 

"And be it further enacted, That during the time aforesaid, the ships and vessels of the subjects and citizens of the said United States, shall be admitted into the ports of His Majesty's islands, colonies, or plantations, in America, with any merchandizes or goods of the growth, produce, or ma-

The preliminary articles of peace were signed at Versailles on the 27th of January 1783; soon after which, the house of commons having passed a vote of censure on the treaty (with what regard to justice or consistency, it is not my business at present to inquire) this event was followed by the resignation of the ministry by whom the treaty was adjusted. The new administration, it may be presumed, had too many objects to attend to,

windlest enough were bad which to be marriage was a first

nufacture, of the territories of the aformald United States, with liberty to export from His said Majesty's islands, colonies, or plantations in America, to the said territories of the said United States, any merchandizes or goods whatsoever; and such merchandizes and goods, which shall be so imported into, or exported from, the said British islands, colonies, or plantations, in America, shall be liable to the same duties and charges only, as the same merchandizes and goods would be subject to, if they were the property of British natural-born subjects, and imported or exported in British-built ships or vessels, navigated by British seamen.

And be it further enacted, That during all the time herein-before limited, there shall be the same drawbacks, exemptions, and bounties, on merchandises and goods exported from Great Britian into the territories of the said United States of America, as are allowed in the case of exportation to the islands, plantations, or colonies, now remaining, or belonging to the crown of Great Britain, in America.

"And be it further enacted, That all ships and vessels belonging to anyof the citizens or subjects of the said United States of America, which shall have come into any port of Great Britain since the "together with the goods and merchandizes on board the same ships and vessels, shall have the full banefit of this act."

on their first elevation to power, to find leisure for considering the business of a commercial treaty with America. As, however, it was indispensably necessary to repeal the prohibitory laws which had existed during the war, this was done by an act passed for that purpose; but as to the rest, parliament took the shortest course possible to save themselves trouble, by vesting in the crown, for a limited time, authority to regulate the commerce with America in such manner as his majesty in council should deem expedient.

New and extraordinary as it certainly was, that such extensive authority should be delegated by parliament to the executive power, neither this circumstance, nor the proclamation, or order of council, that issued in consquence of it, on the 2d July 1785 (afterwards renewed annually) excited much inquiry. Although by this proclamation, the importation into the British West Indies of every species of naval stores, staves, and lumber, live stock, flour, and grain of all kinds, the growth of the American states, was confined to British ships legally navigated; and the export to those states of West Indian productions, was made subject to the same restriction; while many necessary articles (as salted beef and pork, fish and train oil) formerly supplied by America, were prohibited altogether, it was considered as a measure merely temporary and ex-

<sup>\*</sup> Vide Stat. 23 Geo. 111. c. 39.

BOOK'

perimental; and until a plan of permanent regulation should be agreed to by both countries, it was thought neither impolitic nor unjust, that Great Britain should reserve in her own hands the power of restraining or relaxing her system of commercial arrangements, as circumstances might arise to render the exercise of such a power prudent and necessary.

In these reasons the West Indian merchants, and such of the planters as were resident in Great Britain, acquiesced; but on the first meeting of a new parliament, in May 1784, (another change having taken place in the meany time in the British andministration) \* the business of a commercial intercourse between the West Indies and the States of America, pressed itself on the attention of government with a force which was not to be resisted. Petitions, complaints, and remonstrances, were poured in from every island in the West Indies. Some of the petitioners represented that they had not six weeks provisions in store; and all of them anticipated the most dreadful consequences, if the system of restriction should be much longer persisted in ; expecting nothing

VOL. II.

<sup>\*</sup> The Right Honourable William Pitt, who had been Chancellor of the Exchequer from 10th July 1782 to 5th April 1783, was re-appointed to that office, and also nominated First Lord of the Treasury, on the 27th of December 1783, soon after which the parliament was dissolved.

less than a general revolt of their slaves, in the CHAR. apprehension of perishing of hungered has belur

On the other hand, the inhabitants of the remaining continental colonies, especially such of the new settlers there as were emigrants from the United States, promised to themselves the acquisition of sudden and immense riches from the vast advance of price which it was foreseen their few exports, when no longer depressed by competition, would obtain at the West Indian markets. Every exertion, public and private. was therefore made by their friends in Great Britain, to convince administration, and innumerable pamphlets were circulated to satisfy the public, that the West Indies might be very amply supplied with every article of North American produce (rice excepted) from Canada, Nova Scotia, and the island of Saint John. Hence they not only strenuously recommended a steady adherence to the system of restriction on the part of Great Britain, but openly expressed their wishes, that the United States might retaliate, by prohibiting, in return, British ships for trading in the ports of America. "The mplaints and remonstrances of the West Indians, they treated as the turbulence of disappointed faction. They accused them of having abetted the American rebellion; and their apprehensions while wallowing in wealth,

of a scarcity of food, were spurned at and ridiculed, as if hunger was no part of our nature.

It is impossible, I think, not to perceive in these, and similar arguments, a lurking taint of resentment and malignity, the relics of former provocation against the Americans; and at least as ardent a desire to wound the new republic, through the sides of the West Indians, as to: benefit Nova Scotia at their expence. These passions are among the frailties of our nature. and may be forgiven. But there was another and a numerous class of people, who stood forward on this occasion, in support of the system of restriction and monopoly, on different ground: these were the ship-builders, ship-owners, and their various dependants in London; who affected to believe, that if American ships were suffered to take sugar from our islands, they would convey it—not to America, but—to foreign countries, and rob us of the carriage of it; or they might, it was alleged, enter into a competition with British ships for the freight of goods to Great Britain. To this it was answered, that a limitation of tonnage to ships employed in the American intercourse, to which the planters would not object, confining it to vessels having only one deck, and not exceeding seventy or eighty tons, must satisfy the most scrupulous on that head; inasmuch as such

vessels could sugar across got insured But although every well-in was found in which at the gated on the future gation of Guthe discussion

vessels could never be employed in transporting CHAP. sugar across the Atlantic, nor could they be got insured if such attempts should be made. But although this answer must have satisfied every well-informed and considerate person, it was found insufficient to silence the clamour which at that time was industriously propagated on the subject of the carrying-trade, as if the future existence of the commercial navigation of Great Britain had been involved in the discussion.

So vehement was the uproar, that the minister himself was compelled to give way to the torrent. Although Mr. Pitt was now placed at the head of the British administration, he found himself unable, on his return to power, to inforce his first intentions on this subject. Instead of reviving the provisional bill which, a few months before, he had presented to parliament, he thought it adviseable to refer the consideration of the whole matter to the lords of the committee of privy council for the affairs of trade, by whom many of the West Indian merchants and planters, resident in Great Britain, were interrogated on the subject; and the writer of this had the honour to be of the number. It was readily admitted by the sugar planters, that on every principle of honour, humanity, and justice, the unfortunate loyalists of Canada and Nova Scotia were entitled to

BOOK VI.

a preference of their custom, provided those provinces possessed, in any degree, the means of supplying their wants; but this, they contended, was the main point in dispute. They therefore requested, that before any permanent regulations should be adopted by government, inquiry might be made, 1st. How much of the annual consumption of American staples those provinces had supplied hitherto? and, 2dly. how far, from their present, or probable future, situation, they might be supposed capable of exceeding their former produce and exports?

Such an inquiry was accordingly entered upon, and abundance of evidence collected on the subject; when it appeared, from the customhouse returns, that of 1208 cargoes of lumber and provisions imported from North America into the British sugar colonies, in 1772, only seven of those cargoes were from Canada and Nova Scotia; and that of 701 topsail vessels, and 1681 sloops, which had cleared outwards from North America to the British and foreign West Indies, only two of the topsail vessels, and eleven of the sloops, were from those pro-It stood therefore incontrovertibly proved, that, previous to the war, the supplies which they afforded, did not amount to a proportion of the whole consumption of the sugar islands, in any degree worthy national attention; and, on the second ground of inquiry,

it was shew the navigatio so greatly o and by west render more practicable; climate rend precarious: 1779, 1780, Canada bad of all bread, by authority very time of Thames was Quebec. O though in h there might grain, beyon tants, yet th could by no province; th must prove new inhabits the cultivation lumber, the as to cut of even if the delay and ob

Respecti

CHAP.

it was shewn respecting Canada, not only that the navigation of the river Saint Lawrence was so greatly obstructed by the ice in the winter, and by westerly winds in the summer, as to render more than one voyage in the year impracticable; but that in the province itself, the climate renders the crops of wheat altogether precarious. It was proved, that in the years 1779, 1780, 1781, and 1782, the scarcity in Canada had been such, as to occasion the export of all bread, wheat, and flour, to be prohibited by authority; and it was shewn that, at the very time of the inquiry, a ship in the river Thames was actually loading with flour for Quebec. On the whole, it appeared that, although in favourable seasons (as in 1774) there might sometimes be found an overplus of grain, beyond the consumption of the inhabitants, yet that a regular and sufficient supply could by no means be depended on from that province; that the frequency of disappointment must prove an insurmountable obstruction to new inhabitants settling there with a view to the cultivation of wheat; and, with regard to lumber, the price of labour in Canada was such, as to cut off all hopes of supply from thence, even if the navigation had been subject to no delay and obstacle whatever.

Respecting Nova Scotia, it was shewn that it never had, at any one period, produced grain

sufficient for the sustenance of its inhabitants: it had never exported any lumber worthy the name of merchandize; and so far from having any to export, it appeared that a considerable importation into the province was not that time taking place, from the opposite side of the bay of Fundy, to enable the new settlers at Port Roseway to build houses for their own residence, made and 12871 from 1881, 0871 (27)

Lastly, as to the island of St. John, it was proved that, like Nova Scotia, it had never yet furnished food enough to keep its few inhabitants alive, nor exported any one article the produce of the island. Its situation, within the gulph of Saint Lawrence, shut it up from all intercourse during five moaths of the year; and its fogs, more prevalent and durable than even those of Nova Scotia, rendered the country too uncomfortable for population, while land remained unoccupied in happier climates.

The advocates for the prohibitory system, however, were not easily silenced. They declared it would be more for the interest of Great Britain, that the West Indians should be deprived of American supplies altogether, rather than, by receiving them from the United States in American vessels, contribute to aggrandize the naval power of the new republic. They maintained, that the sugar islands had resources within themselves, which, with occa-

sional aid from them to exist the accustome American connect, it was trivere they suregular communications as suppressed.

sional aid from Great Britain, might enable them to exist very comfortably, even though the accustomed intercourse with all parts of the American continent was entirely cut off. If not, it was triumphantly asked, in what manner were they supported during the war, when all regular communication with the United States was suppressed in 1777 has a great to 1377 has a

In reply to this objection, it was proved that the British sugar islands, during the war, had been very badly supplied both with lumber and provisions; and at an expence which, if it had continued; would have been equally ruinous with the not being supplied at all. Their chief resource was the American vessels that had been captured in their way to the French islands; a resource which had terminated with the war, and at best proved so uncertain and inadequate, that many of the British islands had been driven by necessity to the worst of all applications (as British colonists) of their labour withe raising provisions, and cutting lumber upon their own estates. Instead of directing their attention to the culture of those valuable and bulky staples which contribute, in so eminent a degree, to form the dignified mass of support which the British navigation derives from her distant colonies, they had been compelled to change their system. They had abandoned the cultivation of sugar, and applied their land and labour to the purposes of

BOOK VI.

raising food. In what degree the British navigation and commerce had suffered by this measure, the custom-house books would demonstrate; from that authority it is would appear, that in 1777, previous to the capture by the French of any of the sugar islands, the import of sugar into England only had fallen short of the import of 1774 upwards of 45,000 hogsheads, of 16 cwt; dingivalue mearly one million creating a loss in freight of 150,000%. on that article alone, and a defalcation in the public revenue of 300l. a day, for every day in the year! Here then, it was said, was a full and satisfactory refutation of the popular clamour on the subject of the carrying trade. Compared with these losses and their conse quences to every part of the empire, so inconsiderable, so truly contemptible was the trifling interference; of mAmerican; shalops, carrying food to invigorate withe, hungry labourers and timbers to repair mills and houses, that wit seemed not to be an object deserving a moment's solicitude in the breast of a great nation of unod

ments offered on behalf of the West Indies; and if the question had met with unprejudiced and temperate discussion; I from inclined to think, notwithstanding the jealous and monopolizing spiritus of a traffic pathates regulations widely different from the spread system of to second out of model base base right beild

restriction and and exclusion towards America, would have been established; but, unfortunately, the private interests of some, and the prejudices and passions of others, were allowed to mingle, in the investigation. I am aware that, in common cases, it ill becomes an undistinguished individual to arraign the wisdom and propriety of the national councils; but, although there is an degree of respect due to men in authority, which I would willingly preserve, yet I dare not maintain it either by the violation or the suppression of truth. The consequences which flowed from the proceedings recommended and adopted on this occasion, will presently be seen; and they cannot be remembered; with mindifference. To suppress facts, therefore, in which the interests of humanity are so deeply concerned, is to sacrifice both the dignity and sutility of history; the great end of which is to make the errors and misconduct of one set of men, a lesson and a warning to their successors. vo becaute or vitage

The case was, to speak plainly and undisguisedly; that the committee of council, to whom the consideration of this important business devolved (with the best intentions I believe, for it cannot be supposed that they wished to injure the West Indian colonies) suffered themselves to be guided in their researches by men who had resentments to gratify, and secret purposes to promote. Some of these were persons whom

IV.

BOOK VI.

America had proscribed for their loyalty, and unjustly deprived of their possessions. That they had become, on this account, objects of compassion, and claimants on the public of Great Britain, I have no wish to deny; but, without doubt, they were the last men in the world whose opinions should have been adopted, concerning the establishment of a system of reciprocity and conveniency between the mother-country, and that which they had left. To suppose that such men were capable of giving an impartial and unbiassed testimony in such a case, is to suppose they had divested themselves of the common feelings of mankind.

The first inquiries of the committee of council (thus influenced) were directed to disprove the assertions contained in an address of the assembly of Jamaica, concerning the distress in which that island was stated to be, at that time, involved, from the want of provisions and lumber. Although those assertions were abundantly confirmed by the declarations and subsequent conduct of the governor himself, to whom the address was presented; their lordships reported, that the assembly were by no means warranted in the strong terms they had used; it appearing, they said, "from private letters laid before them, that the scarcity complained of did not exist." When their

lordships were humbly desired to communicate the names of the parties who had written such letters, that some judgment might be formed what degree of credit was due to their testimony, against that of the legislature of the colony, they refused, with tokens of manifest displeasure, to disclose them.

Their lordships, in the next place, proceeded to estimate the resources of Canada and Nova Scotia; and in contradiction to the evidence and conclusions which had been given and adduced by the West Indian merchants and planters, they asserted, in general terms, "that the exportation of grain from Canada would revive and increase, provided the West Indian market was secured to the inhabitants of that province;" and they added, "that several persons of great experience were of opinion, that an annual export of 300,000 bushels might in a few years be depended on." They admitted that the natural impediments in the navigation of the river Saint Lawrence, might affect the supply of lumber, but denied that this circumstance would injure the trade in flour. They stated, "that Nova Scotia would be able in about three years to supply great quantities of lumber, and most of the other articles which the West Indies are in want of from North America, provided grants of land were properly made and secured to the inhabitants; for that

BOOK VI. (although the sea-coast is rocky and barren) the interior parts, and the banks of the rivers, have as fine a soil as any part of the world, admirably fitted for dairy farms, and the growth of garden vegetables."

They averred, "that the climate of Nova Scotia is fine and healthy; that the new settlers were industrious; and that the neutral French who still remain (when no longer in a precarious state with respect to the government under which they are to live) would probably follow the example of the new settlers, and learn from them to improve the country; especially if due encouragement should be given to their industry, by securing them proper markets." Their lordships were further assured, from good authority, that upon the like encouragement, the population of Nova Scotia would be increased.

Such a detail of probabilities, provisoes, and possible contingencies, with the mention, among other resources, of dairy farms and garden vegetables, seemed to the disappointed planters, something very like derision and mockery. They complained, that instead of assurances of relief, they were put off with airy conjectures, with frivolous ifs and may bes, with promises inconsistent with the laws of nature, and with declarations negatived both by experience and reason!

CHAP.

In truth, the argument which eppeared to have most weight with their lordships themselves, was that which (tacitly admitting all expectation of supply from Canada and Nova Scotia to be chimerical and delusive) took for granted, that by excluding American ships from the ports of the West Indies, Great Britain would find full employment for as many additional vessels as America formerly employed in that commerce, and reap all the profits which America reaped, of which they calculated the freightage alone at the annual sum of 245,000% sterling.

On the whole, the lords of the committee strongly recommended a strict and rigid adherence to the measure of confining the intercourse between our West Indian islands and America, to British ships only, as a regulation of absolute necessity; considering any deviation from it, as exposing the commerce and navigation of Great Britain to the rivalry of revolted subjects, now become ill-affected aliens. They expressed, indeed, some apprehension, lest the congress of the United States might retaliate, by prohibiting, in return, British vessels from being the carriers between them and the British West Indies; but seemed to think this circumstance not very probable, inasmuch as the people of the United States would in that case, they said, suffer much more than any

BOOK

of his majesty's subjects; na conclusion not very decisive; the experience of all ages abundantly proving, that considerations of interest are frequently overpowered by motives of resentment.

These doctrines and opinions of the lords of the committee of council were unfortunately approved and adopted in their fullest extent by the British government; and the only solitary hope which now remained to the inhabitants of the West Indies was, that the apprehension of their lordships, concerning American retaliation, was ill-founded; and that the United States, notwithstanding the prohibitory system of Great Britain, would still open their ports to British shipping; and freely indulge them with the liberty of importing the products of the British sugar islands, carrying away American produce in return. The planters could not indeed but foresee a very great expence, delay, and uncertainty attending such circuitous navigation; but to this they were prepared to submit, as the only alternative of escaping inevitable and impending destruction.

But there was this misfortune attending the sugar planters, that their wants were immediate; and of a complexion affecting not only property, but life. Whatever resources might ultimately be found in the opulence and faculties of the mother-country, it was impossible, in

the nature of a quarter and rious demandedly. Many fered dreadf canes, in 17% of (had it not tained from gross must a Should similarly ful apprahen sorry to add,

out the prin

the nature of things, to expect from so distant a quarter an adequate supply to a vast and various demand, coming suddenly and unexpectedly. Many of the sugar islands too had suffered dreadfully under two tremendous hurricanes, in 1780 and 1781, in consequence where-of (had it not been for the casual assistance obtained from prize-vessels) one-half of their negroes must absolutely have perished of hunger. Should similar visitations occur, the most dreadful apprehensions would be realized; and I am sorry to add, that realized they were!

I have now before me a report of a committee of the assembly of Jamaica, on the subject of the slave trade, wherein the loss of negroes in that island, in consequence of those awful concussions of nature and the want of supplies from America, is incidentally stated. It is a document of the best authority; and the following extract from it, while it abundantly acquits the West Indian merchants and planters from the charge of turbulence and faction, which on this occasion was illiberally. brought against them, will, I hope, serve as an awful lesson to future ministers how they suffer the selfishness of party, and the prejudice of personal resentment, to have an influence in the national councils. mais a squite con atmate and "his

of our slaves is justly chargeable. It is but too well known to the houses that in the several: years 1780, 1781, 1784, 1785, and 1786, it pleased Divine Providence to visit this island with repeated burricanes, which spread desolation throughout most parts of the island; but the parishes which suffered more remarks ably than the rest, were those of Westmoreland, Hanover, Saint James, Trelawncy, Portland, and Saint Thomas in the East. By these destructive visitations, the plantain walks, which furnish the chief article of support to the negroes, were generally rooted up, and the intense droughts which followed, destroyed those different species of ground provisions which the hurricanes had not reached. The storms of 1780 and 1781 happening during the time of war, no foreign supplies, except a trifling assistance from prize-vessels, could be obtained on any terms, and a famine ensued in the leeward parts of the island, which destroyed many thousand negroes. After the storm of the 30th of July 1784, the lieutenant-governor, by the advice of his council, published a proclamation, dated the 7th of August, permitting the free importation of provisions and lumber in foreign bottoms, for four months from that period. As this was much too short a time to give sufficient notice, and obtain all the supplies that were necessary, the small quantities of flour, rice, and

other provisions, which were imported in comequence of the proclamation, socii fore to 46 exorbitant a price as to induce the assembly, on the 9th of November following to present an address to the lieutenant governor, requesting hims to prolong the term until the latter end of Marchy 1785; observing, that it was impossible for the natural productions of the country to come to such maturity as to be wholesome food bafore that time. The term of four months not being expired when this address was presented; the lieutenant-governor declined to comply therewith; but on the 1st of December following the house represented that a prolongation of the term was then absolutely necessary They observe that, persuaded of the rejuctance with which his honour would be brought to deviate from regulations which he felt himself bound to observe, it would give them much concern to address him on the same occasion a second time, were they not convinced that it was in a case of such extreme necessity as to justify such a deviation. Accordingly the lieutenant-governor, by the advice of his Majesty's council, directed, that the time formerly limited should be extended to the 31st of January then next ensuing (1785): but, at the same time, he informed the house, that he was not at liberty to deviate any longer . pale, with at gurn accuracy as the with course.

Mr. Book from the regulations which had been established in Great Britain. Improvement project to approximate the second of the second of

From the Slat of January, 1785, therefore, the ports continued shut, and the sufferings of the poor negroes, in consequence thereof for some months afterwards, were extreme. Providentially, the seasons became more favourable about May, and considerable quantities of corn and ground provisions were gathered in by the month of August; when the fourth storm happened, and the lieutenant-governor immediately shut the ports against the exportation of any of our provisions to the French and Spanish islands, which were supposed to have suffered more than ourselves; but not thinking himself at liberty to permit the importation of provisions in American vessels, the productions of the country were soon exhausted, and the usual attendants of scanty and unwholesome diet, dropsies and epidemic idysenteries, were again dreadfully prevalent in the spring and summer of 1786, and proved fatal to great numbers of the negroes in all parts of the country were

"On the 20th of October in that year, happened the fifth dreadful hurricane, which again laid waste the leeward parishes, and completed the tragedy. Such (without including the loss of negroes in the other islands, and the consequent diminution in their cultivation and returns) was the price at which Great Britain thought proper to retain her exclusive right of supplying her sugar islands with food and necessaries! Common charity must compel us to believe (as I verily do believe) that this dreadful proscription of so many thousand innocent people, the poor, unoffending negroes, was neither intended nor foreseen by those who recommended the measures that produced it. Certainly no such proof was wanting to demonstrate that the resentments of party too frequently supersede the common feelings of our nature. It is indeed true, that the evil did at length in some measure furnish

its own remedy. The inhabitants of Jamaics, by appropriating part of their lands and labour to the mising of provisions, and the heiring of stayes, found some resource within themselves; and, happily for the other islands, the United States did not, as was apprehended, adopt any scheme of retaliation; so that British vessels ultimately obtained the profits of the carriage (whatever it was) between the West Indies and America; and thus at length the system became recognized and confirmed by the legislature.

By the 28th Geo. III. c. 6. which took effect the 4th of April, 1788, it is enacted, "That no goods or commodities whatever shall be imported or brought from any of the territories belonging to the United States of America, into any of his Majesty's West India Islands (in which description the Bahama Islands, and the Bermuda, or Somers Islands, are included) under the penalty of the forfeiture thereof, and also of the ship or vessel in which the same shall be imported or brought, together with all her guns, furniture, ammunition, tackle, and appearel; except tobacco, pitch, tar, turpentine, hemp, flax, maste, yards, bowsprits, staves, heading, boards, timber, shingles, and lumber of any sort; horses, neat cattle, sheep, hogs, poultry, and live stock of any sort; bread, biscuit flour, peas, beans, potatoes, wheet, rice, nats, barley, and grain of any sort, such commodities, respectively, being the growth or production of any of the territories of the said United States of America. And that none of the goods or commodities hereinbefore excepted, enumerated, and described, shall be imported or brought into any of the said islands from the territories of the said United States, under the like penalty of the forfeiture thereof, and also of the ship or vessel in which the same shall be so imported or brought, together with all But, w mother-coli rangements confirmed remaining instance and clusion and derived few measure, wi in the outse late, that the cable. But whatever benefit has accrued to the CHAP. mother-country; from the regulations and arrangements which the British parliament thus confirmed and perpetuated, it is certain that her remaining colonies in North America, at whose instance and for whose benefit the scheme of exclusion and restriction was principally promoted, derived few or none of those advantages from the measure, which they had promised to themselves in the outset. They discovered when it was too late, that the decrees of Providence were irrevocable. The river St. Lawrence remained! as usual, locked up seven months in the year by an impenetrable barrier of ice; and Nova Scotia still continued inexorably sterile; so much so inand 15, was easy to 3000 wars at ward and

her guns, furniture, ammunition, tackle, and apparel, except; by British subjects and in British-built ships, owned by his Majesty's subjects, and navigated according to law.-By another clause, none of the aforesaid articles are to be brought from any of the foreign islands, under the like penalty, except in times of public emergency and distress." when the governors of any of our islands, with the advice and consent of the council, may authorise the importation of them by British subjects in British-built ships for a limited time." Such is the law as it now stands with regard to the import of American urticles into the British West Indies. Concerning the export of British West Indian produce to the United States, it is permitted to export, in ships British-built! and owned, any goods or commodities whatsoever, which were not, at the time of passing the act, prohibited to be exported to any foreign country in Europe, and also sugar, melames, coffee coesa huts, glager, and pimento; bond being given for the due landing of the same in the United States!

BOOK deed, that the very men who, in 1784, had confidently represented this province as being teapable, in the course of three years, of supplying all the West Indies with lumber and provisions. found it necessary, at the end of those three years, to apply for and obtain the insertion of a clause in the prohibitory act, to authorize the admission of both lumber and provisions into that province from the United States. (In this circumstance it is unnecessary to anticipate the reflections of the reader! on the offeren to exect

In consequence of this permission, there were shipped in the year 1790, from the United States to Nova Scotia alone, 540,000 staves and heading, 924,980 feet of boards, 285,000 shingles, and 16,000 hoops; 40,000 barrels of bread and meal, and 80,000 bushels of grain; an irrefragable proof that Canada had no surplus of either lumber or grain beyond her own consumption, or undoubtedly the Canadian market would have been resorted to, in preference to that of the United States. And thus vanished all the golden dreams and delusive promises of a sufficient supply from Canada and Nova Scotia to answer the wants of the West Indies; and the predictions of the planters and merchants have been verified and confirmed by the experience of years. I regret that I am unable to furnish the reader with an accurate account of the actual exports from those provinces to the West Indies since the war (the report of the

committee o fraught, with relate to th silent on sth sond annual tity of this tish West average of clusive) was

committee of council on the slave trade, though frought with information in all other cases that relate to the commerce of the colonies, being silent on this head), or of the fish which they send annually to the sugar islands. The quantity of this latter article imported into the British West Indies from Newfoundland, on an average of four years (1785 to 1786, both inclusive) was 80,645 quintals.

The exports, for the year 1787, from the British sugar islands to all our remaining American possessions, Newfoundland included, consisted of 9,891 cwt. of sugar, 874,580 gallons of rum, 81 cwt. of cacao, 4 cwt. of ginger, 26,380 gallons of melasses, 200 lbs, of pimento, 575 cwt. of coffee, 1,750 lbs. of cotton wool, and

<sup>\*</sup> The imports into Jamaica from Canada, St. John's, and Nova Scotia, between 3d of April 1783, and the 26th of October 1784, have been stated in a report of the Assembly of that Island. The " negative catalogue" is very copious. No flour, no ship-bread or biscuit, no Indian corn, or other meal, -no horses, cattle, sheep, hogs, or poultry .- The only provisions were, one hundered and eighty bushels of potatoes. and 751 hogsheads and about 500 barrels of salted fish .rather a scanty allowance for the maintenance of 30,000 white people, and 250,000 blacks, for the space of nineteen menths!-Of lumber, &c. the quantity was \$10,000 feet. 20 hundles of hoops, and 301,384 shingles. Previous to the war, on an average of the five years from 1768 to 1773. the whole imports into Jamaica from Canada, Nova Scotia. and St. John's, were 35 barrels of flour, 7 hogsheads of fish. 8 barrels of oil, 3 barrels of tar, pitch, and turpentine. 36,000 shingles and staves, and 97,235 feet of lumber.

AT: BOOK adults amail articles, fruit, des of little account; the value of the whole, agreeably to the current prices in London, was a \$100,506 172 100, apviling, and the alipping to which it gave employment was nominally 37,378 tone, navigated by 1,397 remain. As this however includes repeated voyages, the quantity of toneage and the multiples of men must be reduced one-half.

To the United States of America the same year the exports in British shipping were these: 19,941 ewt. of sugar, 1,620,406 gallons of rum, 1941 dwt. of cause, 339 dwi. of ginger, 4,200 gallons of melasses, 6,450lbs. of pineatto, 3,246 lbs. of cottos wook, 291 hides, and 737 harrels of fruit.

The value in sterling money, according to the prices current in London, was £ 196,460 8s as hath been stated in the former chapter. The amount of the freight on these exports, and also on American productions supplied the West Indies, is the menopoly which Great Britain has exacted by her late regulations. It examples therefore be said, that if she has lost much, she has gained nothing; but estimating her profit at the utmost, to what does it amount compared with the east of the purchase? Admitting it even to stand at the sum fixed by the committee of coordinates of the purchase?

26,000 shingles and staves, and 27,936 feet of lumber.

when placed in competition with the future growth, and prefitable existence of our sugar islands, the whole of whose acquirements centre in the bosom of the mether-country, enriching her manufactures, encouraging her fisheries, upholding, the credit of her funds, supporting the value of her lands, and augmenting through a thousand channels, her commerce navigation revenues, strength, wealth, and prosperity!

Qe the whole, it is a consideration of very seripus importance that the benefits of the present, restraining system are by no means concretsumme to the risk which is incurred from it. Lamaina, it is true in time of scarcity, may find some meroures within berself, and America. basis not yet adapted and perhaps may not month mensures of retaliation; but it must always he remembered, that every one of the West Indian islands is occasionally subject to harricanes, and many of them to excessive deoughts, which by destroying all the products of the carthi leave the metabled actives no desi pendence but on imported provisions supplied them, by their owners. Antigua has been frequently rendered by this calamity a scene, of desalation, as it was particularly in 1770, and twice again; in the years 1773 and 1778 i

professionalist planter state winch income those most besential pecessaries, state and line and the second in tries and

Should the same irresistible visitation overtake these unfortunate countries hereafter,—as the planters have no vessels of their own, and those of America are denied admittance into their ports,—how are even the most opulent among them to avert from their unhappy labourers the miseries of famine, which in a like case swept off such numbers in Jamaica? Concerning the permission that is held out to the planters to resort, in time of emergency, to the foreign islands, it is so manifestly nugatory, that I choose not to speak of it in the language which my feelings would dictate.

compared with the danger thus impending over the feeble and defenceless Africans, the inconveniency which of late has been felt and complained of in Great Britain, from the high price of West Indian commodities, deserves not the consideration of a moment. It is the necessary and unavoidable consequence of our own arrangements. Yet, perhaps, it is this circumstance alone that comes home to our feelings; and to this cause, more than to any

\* Under the present limited intercourse with America (exclusive of the uncertainty of being supplied at all) the West Indians are subject to three sets of devouring monopolists. 1st. BOOK VI.

- we have a file of at a they a to take it of THIS work having (1799) reached a third edition it is with infinite satisfaction the author has an opportunity, in this place, of presenting to his readers the 12th article of the treaty of athirty, commerce, and navigation, between his Bettatinic Majetty and the United States of Americal concluded at London; the 19th of November, 1794, and finally ratified by the American House of Representatives on the 30th of April, 1796. What effect the author's arguments in the preceding chapter produced on this occasion, he presumes not to say. That some of the facts which he stated had a very considerable influence on the minds of his Majesty's ministers, he has been assured from high authority; and indeed it were injurious to the character of those ministers to suppose that they had not. The 12th article is expressed in the words following: "XII. His Majesty con-" sents, that it shall and may be lawful, during the time "hereinester limited, for the citizens of the United States " to carry to any of his Majesty's falands and ports in the "West Indien from the United States; in their own vessels, " not being above the burthen of seventy tons, any goods or "merchandizes, being of the growth, manufacture, or pro-"duce of the said States, which it is or may be lawful to " carry to the said Mands or ports from the said States in " British vessels, and that the said American vessels shall " be fulfiect there to no other or higher torinage duties

Charges brought against the Planters introducfory of Opinions and Doctrines the Design of which is to prove, that the Settlement of the British Plantations was improvident and unpoise.—Testimony of the Inspector-General on this subject, and Animadoersions thereon. Erroneous Idea concerning a distinct Interest between Great Britain and her Sugar Islands. -The National Income and the Profits of Individuals arising from those Islands considered separately .- Opinions of Postlethwaite and Child. Whether the Duties on West Indian Commodities imported fall on the Consumer, and in what Cases? - Drawbacks and Bounties : Explanation of those terms, and their Origin and Propriety traced and demonstrated .- Of the Monopoly-compact; its Nature and Origin.—Restrictions on the Colonists emmerated; and the benefits resulting thereform to the Mother Country pointed out and illustrated. - Advantages which would accrue to the Planter, the Reveme, and the Public, from permitting the Inhabitants of the West Indies to refine their raw Sugar for the British Consumption. Unjust Clamours raised in Great Britain on any temporary Advance of the West Indian Staples! Project of establishing Sugar Plantations in the East Indies under the Protection of Government considered.—Remonstrance which might be offered against this and other Measures.—Conclusion.

t harves brought against the Planter's introduc-

BOOK. VL AFTER so copious a display as hath been given of the prodigiously increased value of these important islands, during the space of a century and a half, which have nearly elapsed since their first settlement, it may be supposed that the conduct of Great Britain towards them (notwithstanding the proceedings on which I have presumed to animadvert in the foregoing chapter) has generally been founded in kindness and liberality; and that the murmurs and complaints which have sometimes proceeded from the planters, when new and heavy duties have been laid on their staples, have been equally ungrateful and unjust; the fastidious previshness of opulent folly, and surfeited prosperity.

Charges to this effect have indeed been frequently urged against the planters of the West Indies, with a spirit of bitterness and rancour, which inclines one to think, that a small degree of envy (excited, perhaps, by the splendid appearance of a few opulent individuals among them resident in Great Britain) is blended in the accusation. They would therefore have remained unnoficed by me, were they not, on frequent occa-

sions, introc extraordinar their tender persons of a if adopted b tional counc wounds, and whole system

sions, introductory of doctrines and opinions as CHAP. extraordinary in their nature, as dangerous in their tendency; for, supported as they are by persons of ability and influence, they cannot fail, if adopted by ministers, and carried from the national councils into measures, to widen our recent wounds, and make a general massacre of our whole system of colonization. Told anomion son ;

Of these doctrines and opinions, so far as they concern the British plantations in the West Indies, the following is a fair abstract and abridgement: विकास मानवार का अन्तर्भव केरोबिन हैं है के

First. That the sugar islands have been settled by British capitals which might have been employed to greater advantage at home, in carrying on and extending the manufactures, the commerce, and agriculture of Great Britain.

Secondly. That the money expended upon West Indian estates, is in general far from yielding a profitable return to the nation, inasmuch as even a good crop does not leave the owner so much as sixty per cent. on his capital, after paymencof expenses.o. o. tis tals eliectry at si

Thirdly. That the duties on West Indian commodities fall altogether on the consumer.

Fourthly. That the several prohibitory laws which have been made, tending to force the consumption of British West Indian produce upon the inhabitants of Great Britain, have

BOOK VI. vested in the planters a complete monopoly of the British market, at the cost, and to the manifest injury, of the British consumer, who might otherwise purchase sugars, &c. from the foreign islands, 20 or 30 per cent. cheaper in those of Great Britain.

Fifthly. That from this great disparity of price between British and foreign sugars, the former cannot be made an object of export from Great Britain by any other means than by granting drawbacks and bounties out of the exchequer; the British exporter being otherwise unable to stand the competition of prices in the foreign market:—a policy which is pronounced to be dangerous and destructive.

The inference which is drawn from these premises is plainly this: that, considering the expense of protecting them in war, the settlement of sugar plantations in the West Indies was improvident and unwise; and that their further extension and improvement would not promote the general interests of the British empire.

It is probable that these, and similar notions of the same tendency, but of more extensive application, were originally disseminated with no other view, than, by depreciating the value and importance of all colonial settlements, to reconcile the nation to those rash and inconsiderate proceedings which terminated in the loss of

America.

America. They have had their day; and like CHAP. other speculations and endeavours as vain and ineffectual, might have been consigned, without injury, to oblivion. As, however, wthe manifest aim of such doctrines is to induce the legislature to adopt measures that in their consequences may check and impede the further progress of the colonists in a line of cultivation, in which, under the express encouragement, they have already embarked their fortunes, and applied their faculties, it becomes necessary, in a work of this kind, to consider them with some degree of attention.

It might indeed be alleged, and with great truth, that nothing can more clearly expose the makedness of that doctrine which affects to consider the sugar islands as unprofitable to the nation, than a plain and simple display of the productions which they furnish, the market which they create for our manufactures, and the shipping to which they give employment. And such a display hath already been exhibited in the preceding chapters; but unfortunately there prevail many popular prejudices against the colonies, which are difficult to remove, because they are founded-not in reason but selfishness. Opinions thus entrenched, are only to be encountered by recalling to the public attention, such established principles and facts

BOOK as, being built on experience, neither sophistry can perplex, nor self-interest elude.

In most of the late speculative systems that I have seen, which have treated of the British color nies, there appears this great and fundamental error, that their interests in general are considered as distinct from, and in some respects opposed to, the general interests of the empire. We speak of them indeed as our colonies, and of their inhabitants as our subjects; but in our dealings, we are apt to regard them with a spirit of rivaley or jealousy, as an unconnected or hostile people, whose prosperity is our detriment, and whose gain is our loss. 93 and 91 at 15 to 81

Intimations to this effect were, I admit, promulgated by very able writers at an early period, concerning New England, and some other of the colonies in North America; but none of those writers ever considered the plantations in the West Indies in the same point of view. They knew that the greatest benefit of colonies, is the production of a staple; commodities different from those of the mothercountry; an advantage; almost peculiars to such of our plantations as are situated in the southern latitudes. This necessary distinction seems however to have escaped the notice even of those who admit that the money which is vested in the sugar islands, is in fact British property, and that the profits and

returns arisin and no where to our West undoubtedly! rally speaking ards for thei mother-count they are inde is in Great B expended, and The produce in all reason, cisely on the the mother-co is raised by it (as far as pose to Grea market. ज िसस् , मादसं देशे \* It is the pri foreign commerce

returns arising from it, centre in Great Britain. and no where else; another advantage peculiar to our West Indian settlements. Yet the truth andoubtedly is, that the sugar planters, generally speaking, are but so many agents or stewards for their creditors and annuitants in the mother-country; for if in some few instances, they are independent proprietors themselves, it is in Great Britain alone that their incomes are expended, and their fortunes ultimately vested. The produce of the sugar islands therefore ought, in all reason, to be considered as standing precisely on the same footing with the produce of the mother-country in The sugar made in them is raised by British subjects, and the sale of it (as far as it can answer any profitable purpose to Great Britain) confined to the British market. In the actual consumption of the commodity within the kingdom, the money which it costs is only transferred from the hand of one inhabitant into that of another: hence, be the price high or low, the nation at large is not one shilling the richer nor the poorer on that account. But, of whatever is consumed at home, the value is saved, and of whatever is exported abroad, and paid for by foreigners, the amount is so much clear gain to the kingdom Willy to be a filter problem in , & , it was the

BOOK

Neither ought the national profits arising from their cultivation; to be estimated, in any degree, by the profits which are made by the several individual cultivators. The income which the nation derives from her sugar plantations, comprehends the whole of their produce. The income of the cultivators consists only of the very small proportion of that produce which is left to them, after paying duties to government, freights and commissions to the British merchants, and the interest of their debts to British ereditors. It It is indeed very possible that a concern may be lucrative to the public, which is ruinous to the individual. That the nation has been benefited in ten thousand ways from her plantations in the West Indies, no man of common sense or common candour ever denied, until the motives that I have already assigned, gave birth vourable to the nation, in which the imports are of greater value than the exports: that is, they strike a balance on the custom-house entries, and consider the excess either way, as the measure of the national advantages, or disadvantages, of such a trade. Perhaps the application of this rule to most branches of foreign commerce (rightly so called) is not improper; and it will extend, I am afraid, in a great degree, to our trade with the East Indies; but from what has been said in the text, the reader will perceive the gross absurdity of bringing our intercourse with the West-Indies to the same standard; and that our import from, and not export to, them is to be considered as the measure of their value.

But the argument that comes more immediately home to the bulk of the community, is the very prevalent idea which I have before slightly noticed, that all the products of the British West Indies, and more especially the great article sugar, are from twenty to thirty per cent. dearer than those of the plantations. this circumstance, (if it were well founded) it might seem sufficient to oppose the national benefit arising generally from the whole system; but the consumer, mindful of himself only, conceives that he ought to have permission to purchase sugar at the cheapest rate, wherever he can procure it. The refiner, whose aim it is to buy cheap and sell dear, claims the same privilege; to which indeed there would be less objection, if he would consent that another part of his fellow-subjects, the growers of the commodity, should enjoy the same freedom from commercial restraint which he requires for himself. Unluckily, however, the fact itself is altogether destitute of foundation. The existence of such disparity of price, independent of accidental and temporary fluctuations, is neither true nor possible, as is demonstrated by the magnitude of the British export, both of raw and refined

ngox , sugar, for the supply of foreign markets; it being evident, that foreigners would not recort to our market for the purchase of a commodity which they might buy cheaper at home: nor do I re-

but the area near that comes more immo-

\* Respecting the French sugar islands, I can speak of my own knowledge. Most of their largest planters having adopted the practice of claying, they pay less attention to the manufacture of good muscavado than is given to it in our islands. This latter therefore, being generally of inferior quality; may be sold proportionally cheaper than ours; but whenever it is of equal goodness, the price also is equal, and sometimes higher. Of twelve samples of muscavado sugar produced to me in Saint Domingo, as of the best quality of sucre brill made in that island, I could not honestly pronounce that any one was well manufactured; and I am persuaded I could have purchased better augurs in Jamaica at a less price than was asked for those. This was in 1791, soon after the revolt of the slaves, when it might have been supposed that the distresses of the French planters would have compelled them to sell their sugars more reasonably then they have done for several years before. In fact, the only datum for ascertaining the relative value of foreign and British sugar, is the price of each at the colonial market; instead of which, the price always referred to, is the price in Europe, after the charges of freight, duty, &c. are added to the original cost. The not attending to this necessary distinction, has probably given rise to the very erroneous idea above noticed, which has occasioned more illwill and groundless complaint against the British sugar planter, than any other circumstance. While I am on this subject, it may not be improper to take some notice of the disparity between the profits obtained on their sugar by the British and French planters in Great Britain and France In a French publication of character, the author states

with all things made of motel, even to nails. CHAP. Wiles, paper, linens, and abothousand other things came from France to Portugal; supplied us with sugar. in Allithe products (of America were poured into us from Spain; and the Venetians and Genocee retailed to us the commodities of the East Indies of their own price! The same account is confirmed by Sir Josiah Child. " Portuguese sugar (says othis waithor), before we had plantations of sour own sold for seven and eight pounds sterling the quintal or cwt.;" and it is a remarkable and well known circumstance, that after the cultivation of indigo in Jamaica was suppressed by an exorbitant duty of near 201, the hundredweight, Great Britain was compelled to pay to her rivals and enemies 200,000/ annually for this commodity, so essential to a great variety of her most important manufactures. At slength, the duty being repealed, and a bounty, some time after, substituted in its place, the provinces of Georgia and South Carolina entered upon, and succeeding in the culture of this valuable plant, supplied; at a far cheapen rate than the French and Spaniards (receiving too our manufactures in (payment) not only the British consumption, but also enabled Great Britain to export a surplus at an advanced price to fo-

reign markets invigque do sees and abundar or out

the commercial world has thought highly of their industry and knowledge it would be difficult to prove (though it is easily said, and as ously denied) that the settlement of the British sugar plantations was unwise or improvident: nor will it be found very easy to point out any other channel in which the money which has been expended hin their mimprovement, could have been applied to greater national benefit. Against advantages of such magnitude and permanence as I have shown to result from those colonies, and the various branches of our commerce dependent thereon, noither the loss to individuals in the plantations, by Improvident schemes in the outset, or improper conduct in their subsequent pursuits, nor the temporary inconvenience which is sometimes sustained by the purchasers and consumers at home, from an occasional advance of price in some few of the colonial products; outweighs in the scale of reuson a feather late and an individuo a sella cont

I shall now proceed to consider those other positions and doctrines which have been advanced concerning the duties that are paid, and the drawbacks that are granted on the products of the British sugar islands, and shall afterwards treat somewhat largely of the monopoly compact, or the privilege which the planters of those islands possess, of supplying exclusively the British consumption of sugar, and other arti-

cles. T ceptible not be d commer less und mention

been: so

Thirdly, That the monopoly, of supply vested in the planters is partial, oppressive, and unjust.

CHAP.:

I shall consider these several positions in the order in which I have placed them. The investigation of them is necessary to the completion of my work, and, with a few general observations, will conclude my labours.

If daily experience did not evince that argument has very little effect on the avarice of government, and the selfish prejudices of individuals, it might be a matter of wonder that the first of these positions (in the full extent to which it is carried) should ever be seriously repeated, after the clear and unanswerable refutation which has been given to it, both in parliament and from the press, a thousand times; and what is more, by sad experience in a thousand instances! So long, however, as it comtinues to be the language of prejudiced or interested men, it is the duty of the planters to give it attention: and although they may have nothing new to offer on a question which has been so frequently and fully investigated, they

duty of 11.7s. 2d. and white or clayed sugar of foreign growth to 2l. 5s. 6d. the cwt; East Indian sugar being ranked among the company's imports as manufactured goods, pays 47l. 16s. 3d. per cent. ad valorem. It is all white or clayed sugar.

BOOK VI.

have no reason on that account to be silent; inasmuch as the doctrine itself has not unfortunately the grace of novelty to recommend it.

The planters then have affirmed, and they repeat, that there is not an axiom in mathematics more incontestable than this maxim in commerce, that the value of all commodities at market depends entirely on their plenty or scarcity in proportion to the demand or consumption.—If the quantity at market is not equal to the demand, the seller undoubted y can, and always does, fix his own price on his goods. On the other hand, when the quantity at market greatly exceeds the event or demand, then it is out of the seller's power to influence the price, for the plenty will necessarily keep it down in spite of his utmost endeavours to raise it.

The truth therefore undoubtedly is, that in the latter case the original cost of the goods, and all subsequent charges thereon, such as freight, warehouse rent, duties and taxes of all kinds, are objects of no concern to the buyer. The quantity, and the quantity alone, regulates the price at market, and augments or diminishes the profits of the seller. If the demand be great, and the quantity small, the seller has sometimes an opportunity not only of reimbursing himself the original cost, and all subsequent

charges i profit be he finds is the ne mercial it contri other wo adequate leather, by enha on, the have it supply to more tha and if, profit, th

But, tion and and for impossib commod

VOL.

charges and duties, but likewise of making great CHAP. profit besides. Reverse the circumstances, and he finds himself a considerable loser. All this is the necessary and unavoidable nature of commercial adventure, which is only prosperous as it contrives to feed the market properly; or, in other words, to make the supply no more than adequate to the demand. Thus the taxes on leather, soap, candles, malt, beer, and spirits, by enhancing the price to, may be said to fall on, the consumers; for as the manufacturers. have it in their power, so they proportion the supply to the demand, and bring to market no more than sufficient to answer the consumption, and if, after all, they cannot obtain a living profit, they cease to deal in those commodities.

It is the same in regard to tea, wines, and other commodities, the growth or manufacture of foreign nations, over whose exports we have no controul. The merchant importer governs his imports by the demand which he computes there will be at the British market for the commodity; and ceases to import such goods as he finds will not yield him a profit, after the duty and all other charges are reimbursed.

But, in the case of articles which the situation and necessities of the owner bring to sale, and for which no other vent can be found, it is impossible that any duties or taxes which the commodity may have paid in its way to market,

BOOK can have any effect on the price; for the price arises from the demand, and the demand from the buyer's wants, which it would be absurd to say the laying any duty can create, or the not laying it diminish. Thus, when wheat is scarce, the price rises; and two or three good harvests make it cheap again, without any reference to the land-tax whether it be 3s. or 4s. and without any regard to the farmer's expenses. Nor will corn afterwards bear a good price, until the stock is lessened by exportation, or otherwise, to such a quantity as is barely sufficient for home consumption. Hops, hay, cider, and a thousand other commodities, are subject to the same rule.

Such too is precisely the situation of the West Indian planters: they are compelled to send their goods to market, or starve; and (with a few unprofitable exceptions) there is no market to which they are permitted to resort but that of Great Britain. Their produce therefore, when brought to sale, can obtain no other than its natural price, I mean that price which a greater or less supply necessarily and naturally The consumers of sugar neither care for, nor inquire after, its original cost, or the duties and charges which it has paid in its way to market. The importer however must pay the duties before he can bring his sugar to sale, for no man will buy unless the duty is first

cleared and the buyer it, by addi dependana quantity a tradiction price on t scarcity ar the same modities, Britain by very possi as neither their facto neither ar quences ar

cleared; and whether the importer can compel CHAP. the buyer to refund the whole, or any part of it, by adding it to the price of the commodity; depends altogether, as I have observed, on the quantity at market; it being an absolute contradiction to affirm that great plenty and a high price on the one hand, or on the other, great scarcity and a low price, can exist at one and the same time. That sugar, like other commodities, is sometimes brought up in Great Britain by engrossers on speculation, may be very possible; but this is a traffic in which as neither the planters in the West Indies, nor their factors at home, have any concern, so neither are they answerable for any consequences arising from it.

It is true that, when providential calamities have overtaken the West Indies, the evil has sometimes been remotely felt by the inhabitants of Great Britain. When it pleased the Almighty to lay waste the sugar islands by a succession of tremendous hurricanes, it was reasonable to expect that the reduced state of their exports, would enhance their value in Europe. It might then perhaps be said that the consumer of sugar reimbursed in some degree the charges and expences of its culture and transportation, and the duties which had been levied upon it. 11 It was the natural and only relief (inadequate at the best) which the sugar

BOOK planters could receive; but if, from some occational increase of price on such emergencies. they are made subject to permanent burthens, founded on the vain and fallacious idea that, because the consumer has replaced them once, he will replace them again; the devastations of the elements are only the lesser evil.

Admitting however that the consumer really does, in a great many cases, pay the duty, or, in other words, that the vender has it very frequently in his power to force his own price; who does not see, as an inevitable consequence, that a decrease in the consumption will soon: bring the price back to its level? The products of the West Indies are rather among the luxuries than the necessaries of life, and the great consumption of sugar especially, is with the middle and lower classes of people, who can, and undoubtedly will, lay it aside when reasons of frugality require it. If any one doubts that this will be the effect, let him only enquire of any. country grocer as to the fact, at a time when Muscavado sugar, in consequence of the calamities that have been stated, and from captures in war, rose suddenly one fourth in value; he will find that the diminution in the consumption in many parts of the kingdom, was in a much greater relative proportion; -a more fatal symptom cannot attend any branch of commerce.

The i

already;

The plan article, as on suger, constantly fell ultime however a saw and medy was either bee of them h the plante all dispute hands.

Cacao stance of portation. cle which plenty an a higher commodity

If the arguments which have thus been stated CHAP. are not sufficient in themselves to justify the remonstrances which the planters of the West Indies have thought it incumbent on them, from time to time, to urge against the increase of duties, there are facts to be adduced, which must convince the most selfish and incredulouseful to the configuration of the circum of bioffer

The instance of indigo has been mentioned already; and it cannot be repeated too often. The planters complained of the duties on that article, as they have since complained of those on suger, and they were told then, as they are constantly told in other cases, that the duties fell ultimately on the consumer. Government however at length, by abrogating all the duties, saw and acknowledged its error; but the remedy was applied too late; for if the duties had either been taken off in time, or if the weight of them had fallen on the consumer, instead of the planter, the cultivation of indigo, beyond all dispute, had never been wrested out of our bands.

Cacao, or chocolate, furnishes another instance of the fatal effects of high duties on importation. Strange as it may seem that an article which our colonies can raise in the greatest plenty and perfection, should be subject to a higher proportionate duty than the foreign commodity tea (the place of which chocolate or

BOOK

coffee might have supplied;) such however was the case even when the duties on tea were nearly double what they are at present! The consequence was, that whether the duties on cacao fell on the consumer or the planter, the effect on the latter was precisely the same; for if through want of a living profit, the planter could not afford to continue the cultivation: or if, in exacting a living profit, he lost his customers, because they could no longer afford to purchase, his situation became equally distressing; until necessity compelled him to change his system, and apply his land and labour to other objects. Thus the growth of cacao which once constituted the pride of Jamaica, and its principal export, became checked and suppressed beyond the power of recovery. I think I have elsewhere observed, that there is not at this day a single cacao plantistion, of any extent, from one end of the island to the others fruit a guil to

The cultivation of ginger succeeded that of cacao, and met with a similar fate; but perhaps the instance of coffee will come more immediately home to the imagination of ministers; because the proof which it affords arises not from what has been lost by impolitic taxation, but from what has been gained by a prudent reduction of existing duties. In the one case, the lesson it affords is too mortifying to be acceptable; the other they will receive as

a compliment to their wisdom. Having how- CHAP. ever stated the circumstance in a former part of this work, it is unnecessary to enlarge upon it heretone or noncombara end to inclavelles to

From the whole of what has been observed on the question of duties, this |concluin appears to me to be incontrovertible; in nine cases; out of ten, the duties which are aid on the products of the British plantations, fall chiefly (either immediately or eventually) on the colonist in the West Indies, who is commonly the importer, and not cong the consumer in Great Britain; and it is equally certain that, in the itenth case, when the consumer pays them, he ought to pay them; inasmuch as all taxes should it justice press with equal weight on every men'er of the community, in proportion to his ability to sustain them; of which, in the case of taxable commodities, consumption is the criterion. To this consideration must be added the well-known and established axiom, that taxes paid by the public at large distribute themselves so equally on the whole as eventually to raise the price of all other commodities; each man repaying himself for taxes which he pays on other articles, by advancing the price of his own. Let the planters then no longer be contemptuously told (for such has been the language of their adversaries) that scans, to, the money which is paid spon the

in loof unbroken The word drawback sufficiently expresed its meaning; for fexcepting the gain to government by interest, in consequence of having had a deposit of the tax for some time in its hands, and excepting the duty retained or on the quantity swested to while withe sugar continued in a British port) the orig ginal duty paid at importation is refunded on exportation, without diminution or addition. This at present, (including the last duty of 2c. 8d. laid in 1791, and declared to be temporary) is 150 the hundredweight. But do to the boundy, the case was once different. To encourage the refining trade in Great Britain, government give an actual premium on the export of refined sugar in loaves, in addition to the drawback, and the collective sums so refunded and paid, amounting together to 26s. the hundredweight, obtained generally the name of bounty; a name which it still retained, although in fact, since the last duty was laid, the extra sum which is paid beyoud the drawback, is but little, if any thing, more than a compensation for the duty which is paid on the catra quantity of raw sugar expended in producing a given quantity of refined, and lost by pilferage and waste, between the importation and day of sale, as will presently be demonstrated. 12 of other or early shoot of the want at II.s. The statute book denominates that species of refined

twins drawback and bounty, in the case of sugar

"sugar in the loaf and whole, being nett." Upon the ex-George 111. c. 45 66 14s. 66, and a further bounty of 11s. od! was igninted by the 21 George Hille, 16 making topother file per awt. and so if continues at present. The last bounty of 11s. 6d. was granted in consequence of an additional duty of 6s. per cwt. laid in 1781, on raw sugar imported, when Lord North was Chancellor of the Exchequer, who frankly declared that he proposed the aforesald bounty purposely to remunerate the planters from the import duty. which he admitted they were unable to bear, It is evident however, that the duty is permanent and certain; the relief, temporary and casual; inasmuch as the export of refined augur is altogether occasional, depending on the fluctuatling state of foreign markets. Should the foreign demand full on whom will this additional duty full but on the planter! This consideration alone is a good reason why the bounty should be more than proportionate to the drawback. Yet when parliament, in 1791, by the 31 George III. 2, 15. laid a further duty of 2s. 8d. per cwt. on raw sugar imported from the British plantations (approwhiting the same, for a term of four years, town discharge of certain exchaquer bills) making the ort duty 15s, per cwt. in the whole, no addition was made to the bounty, on the export of refined loaf. All that could be obtained was an addition of 3s. 4d. to the drawback, on what the statute calls bastards, and ground or posidered regard and also on refund loaf broke into pieces, and all sugar called candy. Upon the export of these species of sugar, the drawback previous to the \$1 George III. stood at 11s. 8d. only, while the duty paid on raw sugar imported was 12s. 4d. and it being but just that the drawback should at least be equal to the duty paid, 3s, 4d, was adcaporte

ded in that act; which, with 11s. 8d. makes 15s. per ewt the precise amount, of the import duties paid since that act took place. The minister who moved the additional duty of 2s. 8d. in 1791, proposed also at first to augment the bounty in the usual proportion; but the sagar refiners remonstrated against the measure, as being, they said, beneficial only to the planters. It is remarkable, however, that in the memorial which they presented on that occasion to the Chancellor of the Excheques, they furnish an unanswerable argument in support of an actual bonus on the export from Great Britain of refined sugar; for they admit that a greater portion of the refined article is now made from inuscavado than was formerly produced, wing, they say, to improvements made by the planters in the rate commodity. As those improvements were not effected but after many costly, and some fruitless, experiments, it seems no way consonant either to justice or reason that the refiners alone should reap the advantages of them, and the planters who sustained the risk, sit down quietly under the expense.

BOOK .VI.

helled to enter them, that the nation may seours to itself the pre-emption at its own market. If he comes voluntarily, he is apprised of the regulations and duties to which, by the laws of the port, he will be subject; he makes his option, and, if he meets with disappointment, has no right to complain; much less to expect a return of the duties which he has paid on importation, in case he shall afterwards find it more to his advantage to re-ship his goods and try another market. He comes in the spirit of adventure, and as his profits, however great, are wholly his own, if his adventure proves fortunate; so it is but reasonable that he should submit patiently to his loss, if loss is the consequence of his experiment. This conclusion is I think, too evident to require farther illus-

On the other hand, the case of those who are compelled to bring their goods to our ports is widely different. The sugar planter, for instance, is not only obliged to bring his sugar at all times and seasons to a market which perhaps is already overloaded; but to bring it too in British ships, that the mother country may have the benefit arising from the freight. On the supposition that the whole may be sold for home consumption, be is furthermore compelled to pay down the duties on the full quantity im-

ander the expense.

ported before he is permitted to sell any party CHADI The home consumption is then supplied stand a surplus remains for which a vents offers in the foreign market. The foreign purchaser however, buys nothing for which the people of Great Britain choose to pay an equal price they have the first offer, and refusal of the whole. Under what pretence then can the British government whose language it is that all the duties are, and ought to be ultimately paid by the consumer retain the duties on such part of the goods as are not purchased for the home supply? The mothercountry has already received the benefit of the freight; has had a preference in the sale of the goods, and obtained other mercantile advantages from its importation; and the owner has suffered the inconveniency of advancing a large sum of money for duties on goods which she refuses to purchase, an inconveniency of ao small account, inasmuch as, besides the loss of interest, should the goods perish by fire he would lose both his goods and the duty: "-perhaps, as an interested man, I am not com-

Since this work was first published, the author has had reason to speak feelingly on this point. In the month of December 1793, no less than 1,600 hogsheads of sugar, lying in the London warehouses, were consumed by fire. on which there had been paid in duties to government upwards of 17,000l; all this was a loss to the unfortunate owners, exclusive of the goods. The author's share of this loss was 1,2002.

DOOK!

but to me, it appears that a final retention of the duties here spoken of, would be an outrageous exercise of power, without a shadow of right; a proceeding in the highest degree unjust; fraudulent, and oppressive spoken are veg at a scorp matrial.

As the foreign market will not bear the addition of the English duty, fifteen shillings per cwt. if the money is not refunded, are taken from the colonist, for having against his will and at a great expense of freightage, sent his sugar circuitously through Great Britain. Such an extortion for passing through a market to which he does not voluntarily resort, is virtually fixing a forced price upon the commodity; and to do this or by force to take the commodity from him, without giving any price for it,—what is it but an act of the same nature. differing only win degrees of violence?-The plea of necessity is not applicable to the case: the object not being, as in the case of corn, a necessary but a luxury of life; and the colonists; to whom it belongs, have no share in the power of regulating, if regulations are to be made concerning it.

If it be urged that foreigners have otherwise the advantage of sometimes buying British plantation sugar on cheaper terms than the people of Great Britain, it is answered that this is a circumstance for which the planter is no way to be remailed in the king purchase than it had been of fore the price is at an

Government has no means in this case of taxing the consumption of foreign nations, for if the duty be added to the price of the commodity, the foreign demand terest thereon, between the time that the take

ment thereof, and the time of the receipt of the

\* Since the foregoing was written an act of the British legislature has passed, intituled, "An Act for regulating the "allowance of the drawback, and payment of the bounty " on the exportation of sugar, and for permitting the impor-"tation of sugar and coffee into the Bahama and Bermuda "islands in foreign ships." Concerning the latter part of the act, as the foreign sugar and coffee are not to be consumed in Great Britain, but put en depot in warehouses until re-exported, the planters of the British West Indies have no right to object to its provisions; but with regard to the regulations of the drawback; &c. the case is widely different. By this law it is enacted that "after the year 1792, whenever the average of the prices of brown or muscavado sugar (to be taken weekly upon oath before the Lord Mayor of London, and published in the Gazette) shall exceed, in the six weeks which respectively precede the middle of February, June and October, the amount of fifty, shillings per cwt. (exclusive of the duty) the drawback on raw sugar exported is immediately to cease for four months, and the bounty on refined is to cease during a like term, but commencing after an interval of one mouth." Such is the

TO THE

on rewregar rouly. I am now to show that my observations apply equally to that which is refered; by proving that what is realled the bounty, is but little more than merely a modification of the drawback; the money allowed beyond the original duty being an allowance not many than adequate to the loss of weight in the nave commodity for which the full duties have been paid by the importer, and the loss of interest thereon, between the time of the payment thereof, and the time of the receipt of the bounty.

The proportions of refined sugar, &c. procured by melting 112 lbs. of raw sugar, have

e tector on the entitle of Training to the first and Morano in

outline of this act, on which what I have already said in the text is perhaps a sufficient comment; yet it may not be improper to take some notice of the great argument which was urged in support of the measure in the House of Commons; namely, that it was formed on the model of the corn trade system. But the corn trade laws, though designed to reduce prices, are also contrived to encourage production. They therefore check exportation when the prices are high, and give a bounty on exportation when the prices are low. . If the sugar bill had been formed on the same principle, and had been meant to keep the price of the commodity at a fair medium between the public and the planter, it would have reduced the bounty when above the standard, and either raised the bounty, or taken off the home duty when below it, in such proportion as to keep the balance even. In its present shape the act operates wholly against the planters.

So that the apparent loss to the revenue arising from the bounty is one shilling the cwt. and no more. But as every hogshead of sugar loses considerably in weight, after the duty is paid, and before it is either exported or worked up, and as by the present strict regulations respecting tere, the duty is frequently paid for more sugar than the casks really contain, it is but a moderate cal-

BOOK culation to say that every hogshead (taking good sugars and bad together) loses 56 lbs. which at 15s. per cwt. the import duty, makes 7s. 6d. per bogshead loss to the planter, and a clear and certain gain to the revenue, let the sugar be disposed of as it may. Thus therefore is government reimbursed for a considerable part of what it appears to lose by the bounty, and the interest which it gains by a deposit of the whole duties on importation, makes up the remainder. The average annual import of raw sugar is about 160,000 hogsheads of 12 cwt. nett: now supposing every ounce of this was to be exported, and receive the drawback at 15s. per cwt. yet from the difference of weight alone in the same sugar, occasioned by an unavoidable waste, government would have received in duties, from this single article, between 50 and 60,000l. per annum more than it refunds in drawbacks and bounties on the same commodity.

> The above is a plain statement of facts concerning the drawbacks and bounties allowed by government on the export of sugar from Great Britain.—Of the system at large, or general practice of allowing the duties on the home consumption, to be drawn back on the export of goods to foreign markets, enough has been said by other writers.—If it be true, as it is generally allowed to be, that Great Britain by this means

countries, an advantageous carrying trade, the profits of which centre in herself, she has no just reason to repine at the encouragement which is thus given to foreigners to resort to her markets. It is paying money with one hand, to receive it back, in a different shape perhaps, but in more than a tenfold proportion, with the other; and no considerate statesman will easily be persuaded to think such a system improvident and prejudicial.\*

\* Thus, in a tract by William Penn, entitled "The Benefit of Plantations or Colonies," that celebrated legislator expresses himself in the following terms:

. "I denythe vulgar opinion against plantations, that they "weaken England; they have manifestly enriched, and so strengthened her, which I briefly evidence thus: First, "those that go into a foreign plantation, their industry " there is worth more than if they stayed at home, the pro-"duct of their labour being in commodities of a superior " nature to those of this country: for instance, what is an " improved acre in Jamaica or Barbadoes worth to an im-" proved acre in England? We know it is three times the "value, and the product of it comes to England, and is " usually paid for in English growth and manufacture. "Nay, Virginia shews, that an ordinary industry in one " man produces three thousand pounds weight of tobacco. " and twenty barrels of corn, yearly: he feeds himself, and " brings as much of the commodity into England besides. "as being returned in the growth and workmanship of "this country, is much more than he could have spent " here? Let it also be remembered, that the three thou-"sand weight of tobacco brings in two thousand two-

I am now brought to the third ground of objection; comprehending a subject of wider extent and more important consideration, then

"pences by way of custom to the king, which makes " twenty-five pounds; an extraordinary profit. Secondly, " more being produced and imported than we can spend here, " we export it to other countries in Europe, which brings in " money, or the growth of those countries, which is the same " thing; and this is the advantage of the English merchants ard seamen."

To the same purport writes Doctor Charles Davenant, who, if I mistake not, held the very same employment of inspector of the exports and imports, which is now exercised with such superior ability by Mr. Irving. "By whatever the returns (meaning the returns from our own plantations) are worth (said Dr. Davenant) beyond the goods exported thither, the nation is, by so much, a gainer. There is a limited stock of our own product to carry out, beyond which there is no passing. As for example, there is such a quantity of woollen manufacture, lead, tin,&c. which, over and above our own consumption, we can export abroad; and there is likewise a limited quantity of these goods which foreign consumption will not exceed. Now, if our expenditure of foreign materials be above this, and more than our own product will fetch, for the overplus we should be forced to go to market with money, which would quickly drain us, if we did not help ourselves other ways, which are, by exchanging our plantation goods for their materials," &c. In another place, Davenant states the imports from all the plantations at the Revolution at 950,000l. per annum, "whereof (saith he) 350,000l. being consumed at home, is about equal to our exports thither, and the remainder, viz. 600,000l. being re-exported, is the national gain by that trade."

To the foregoing authorities might likewise be added those of the honest and intelligent Joshua Gee, and the learned and accurate Doctor John Campbell; but, perhaps to a common

chapter; and on which prejudice, self-interest, ignorance, and misinformation, have jointly contributed to throw a veil of obscurity; I mean the privilege which is vested in the planters of the British West Indies, of supplying the British market with their chief staple commodities, in exclusion of foreigners; the high duties on foreign sugars, and some other products of the West Indies, operating (as they were meant to do) so as to prohibit their importation.

The leading principle of colonization in all the maritime states of Europe, Great Britain among the rest, was, as I have elsewhere observed, commercial monopoly.—The word monopoly, in this case, admitted a very extensive interpretation. It comprehended the monopoly

understanding, the conclusion is too clear and self-evident to require illustration or authority; namely, that the export from Great Britain to foreign markets of her colonial products, is just as beneficial to the British trade as the export of corn, or any other production of the mother-country, and equally increases the balance of trade in her favour. I shall therefore only observe further, that the export of sugar alone from this kingdom for the supply of the foreign European markets during the years 1790 and 1791, was 277,656 cwt. of raw, and 278,391 cwt. of refined, which, at the rate of 45s, per cwt, for the raw, and of 90s. per cwt. for the refined, added 1,600,000l. sterling to the balance of trade in favour of the mother-country, and enable her to pay more than one-half the sum which is annually drawn out of the kingdom for the interest or dividends of money lodged by foreigners in the British funds.

BOOK of supply, the monopoly of colonial produce. and the monopoly of manufacture. By the first the colonists were prohibited from resorting to foreign markets for the supply of their wants: by the second, they were compelled to bring their chief staple commodities to the mothercountry alone; and by the third, to bring them to her in a raw or unmanufactured state, that her own manufacturers might secure to themselves all the advantages arising from their further improvement. This latter principle was carried so far in the colonial system of Great Britain. as to induce the late Earl of Chatham to declare in parliament, that the British colonists in America had no right to manufacture even a nail for a horse-shoe. I Latti aba a mais with the refermi

> As a compensation for these restrictions and prohibitions on the colonies of Great Britain, to favour the navigation, revenues, manufactures, and inhabitants of the mother-country, the colonists became possessed of certain commercial advantages; among others, of the privilege before-mentioned—the subject of our present discussion—that of an exclusive access to the British market for the sale of their produce. Thus the benefits were reciprocal; and each country, Great Britain and her colonies, became a permanent staple, or mart, for the products and trade of the other. I the and participated by the

Such was the arrangement, or double monopoly, which, with a few exceptions, Great Bri-

tain, in

First Great F colonists reigners, Britain but also

tain, in the plevitude of her imperial capacity, thought fit to establish. It was the basis of her commercial intercourse with her trans-Atlantic plantations, and she terms it herself a system of correspondence and kindness."\* Whether it was an arrangement founded in wisdom and sound policy, it is now too late to inquire. It has existed, it has been confirmed, it has been admired, it has been imitated; and the colonists have embarked their fortunes upon the faith of it. All therefore that remains, is to point out the value and importance of the colonial contribution. It is presumed that nothing more than this is necessary to demonstrate that, if there is any security in the national faith, solemnly pledged and repeatedly ratified, the system is become a fixed and permanent compact; which cannot now be violated by either party, without the fullest compensation to the other, but on principles, which, if admitted, may serve to justify a departure from the ordinary rules of justice on any occasion.

First then, as to the monopoly exercised by Great Britain of supplying their wants:—The colonists are prohibited from purchasing of foreigners, not only those srticles which Great Britain can supply from her own resources, but also many which she is herself obliged to

siles, with a general and any a letter

BOOK VI. purchase from foreigners. Thus a double voyage is rendered necessary, that Great Britain may benefit by the freightage; the expense of which, and all other profits, being added to the cost of the goods, the extra price which the colonists pay is clearly so much profit to her, and loss to them. The commodities which the British colonies in the West Indies might purchase on cheaper terms than at the British market, are various. East Indian goods, including tea, might at all times have been obtained from Holland, and of late may be bought very reasonably in America.\* Germany would supply the coarser linens, an article of vast consumption in negro clothing, and France would furnish soap and candles, silk manufactures of all kinds, cambrics, wittes, and a thousand other articles of less importance. From the United States of America also might be obtained bar and pig iron, salted beef and pork, salted and pickled fish, train and spermaceti oil, and some few manufactures, asbeaver hats, and spermaceti candles, &c.†

 The tea imported by the Americans in 1791, directly from China, was 2,601,852 lbs.—Prices in Philadelphia 33 per cent. lower than in London, the drawback deducted. All these are now and her and in the laws methers and nec to them, made to their mi where be

Sees On ping and colonists to avail of neutr the Brit Great F of the w modities those no plied, ( the orig exports advanta followir of an In the beg writer)

endeav

<sup>†</sup> The export of salted beef and pork from the United States of America in 1991 was 66,000 barrels. The medium price of the pork was 37s. sterling the barrel; of the beef 28s.

All these are articles of vast consumption, and are now supplied exclusively by Great Britain and her dependencies to an immense amount, and in British vessels only; and so rigidly have the laws of navigation been enforced by the mother-country, that not only the convenience and necessities of the colonies have given way to them, but a dreadful sacrifice has even been made to the system, of the lives of 15,000 of their miserable negroes, as the reader has elected

On the same principle, to increase the shipping and naval power of the mother-country, the colonists are not permitted, even in time of war, to avail themselves of the cheapness and security of neutral bottoms, in sending their produce to the British market. By this second monopoly, Great Britain has secured to herself a preference. of the whole world in the sale of their staple commodities, and is thus rendered independent of those nations from whom she was formerly supplied (as the Portuguese for instance, who had the original monopoly of sugar) and over whose exports she has no controul. That this is an advantage of no small account, appears from the following circumstance recorded by the author of an Inquiry into the Wealth of Nations: " About the beginning of the present century (says that writer) the pitch and tar company of Sweden endeavoured to raise the price of their commo-

BOOK VI. dities to Great Britain, by prohibiting their exportation, except in their own ships, at their own price, and in such quantities as they thought proper. It is surely unnecessary to observe, that no such selfish policy can at any time be displayed by the subordinate and dependent governments of the colonies."

But the circumstance that presses with the greatest weight on the British planters in the West Indies, is that branch of the monopoly, which, reserving for the manufacturers in Great Britain, all such improvements as the colonial produce is capable of receiving beyond its raw state, or first stage of manufacture, prohibits the colonists from refining their great staple commodity (sugar) for exportation. This is effected by the heavy duty of 41. 18s. 8d. the cut. on all refined or loaf sugar imported, while raw or muscavado pays only 15s. The difference operates (as it was intended) as a complete prohibition. "To prohibit a great body of people (says the author before quoted)\* from making all they can of every part of their own produce, or from employing their stock and industry in the way that they judge most advantageous to themselves, is a manifest violation of the most sacred rights of mankind." To this violation however the West Indian planters have rather, as other hand by the formal and tree on

hitherto submitted without a murnur, considering it as one of the conditions of the compact, or reciprocal monopoly

CHAP. V.

The great hardship on the planters in this case is, that the loss to them by the prohibition, is far more than proportionate to the gain acquired by Great Britain. As this circumstance is not fully understood, the subject not having, to my knowledge, been discussed in any of the publications that have treated of colonial commerce, I shall point out a few of the many advantages of which the planters are deprived by this restriction.

The first advantage would be an entire saving of the loss which is now sustained in the quantity of raw sugar, between the time of shipping in the West Indies, and the day of sale in Great Britain, arising chiefly from unavoidable waste at sea by drainage. A To ascertain this loss with all possible exactness, I have compared in a great many instances, the invoice weights taken at the time of shipping, with the sale weights of the same goods in the merchants' books in London; and I will venture to fix the loss, on the average of good and bad sugar, at oneeighth part: in other words, a hogshead of sugar weighing nett 16 cwt. when shipped in Jamaica, shall, when sold in London, be found to weigh 14 cwt. only. The difference therefore is a dead loss both to the public and

BOOK VI.

the planter. The former less the use of two hundred pounds weight of sugar, and the latter is deprived of its value, which, at 40s, per ewt. may be stated at 31, 6s, per hogahead, the merchant's charges deducted.

But this circumstance requires further illustration. The quantity of raw or muscavado sugar imported into Great Britain, on an average of four years, (1787 to 1790, both inclusive) was somewhat more than 140,000 hogsheads of 14 cwt. at the king's beam. The drainage at sea amounted therefore to 280,000 cwt. being in value 560,000l. sterling.—Such is the loss to the public: and let it be remembered, that this loss is not merely contingent or possible, but plain, positive, and certain; it being as undeniably true, that 280,000 cwt, or 14,000 ton of sugar was sunk into the sea, in the transportation of 140,000 hogsheads of the raw commodity, as that this number was imported into Great Britain; and it is equally certain, that every ounce of it would have been saved, if the planters had been permitted to refine the commodity in the colonies. The consequent loss to the revenue is easily calculated mercel as abron resident mileto and a

Concerning the planter, however, other circumstances are to be taken into the account; for in this case he has a right to reckon not only on what he positively lost in the first instance, but

also, o under s stated deduct and a which don ref this pr shippir the co equal ' ling pe perhap value o in the enable the pla article howeve West the ne vided. withou means third. be cle melass the Ja

gallon,

the or

also, on what he might probably have gained CHAP. under a different system of regulations. I have stated his actual loss (the merchant's charges deducted) at 31. 6s. per hogshead; but another and a very considerable loss, is the melasses, of which 112 lbs. of raw sugar yield in the London refruery 28; lbs.: I will say 28 lbs. only. On this proportion, a hogshead of raw sugar at the shipping weight (16 cwt.) would, if refined in the colonies, yield the planter 448 lbs. being equal to 64 gallons. This, valued at 9d. sterling per gallon, gives 21. 8s. It will be said perhaps that the British refiner includes the value of the melasses produced in the refinery, in the estimate of his profits, and is thereby enabled to give a larger price for raw sugar to the planter, who thus receives payment for the article said to be lost. It must be remembered. however, that the sugar-planter in the British West Indies is his own distiller; and having the necessary buildings, stills, &c. already provided, would convert his melasses into rum. without any additional expense; and by this means add to its value somewhat more than onethird. This additional value therefore would be clear profit. Thus, allowing 64 gallons of melasses to produce only 40 gallons of rum of the Jamaica proof, these, at 1s. 10d. sterling the gallon, would yield 31. 13s. 4d.: from which the original melasses being deducted, there will

nook remain 11. 50. 4d. which may therefore be estimated as the loss now sustained by the planter in the article of melasses, on every hogshead of muscavado sugar shipped to Great Britain. exclusive of the loss in the raw material before stated rate cieff sides a wind or we be de or

> To the foregoing might perhaps be added the saving of freight, on the difference between the weight of raw and refined sugar; but I will reckon nothing on this account, because I am of opinion that any given quantity of refined sugar made into loaves, though less in weight, will nevertheless occupy more space than the full quantity of raw sugar from which it is made. It is therefore reasonable to suppose, that the price of freight would be advanced in proportion; a circumstance which ought to obviate all manner of objection to the system, from the owners of ships employed in its transportation.

But the great and decisive advantage that would accrue to the planter from refining his own sugar in the colonies, arises from the circumstance that his capital, or stock, is already provided to his hands; without which the savings that have been stated would avail him but little. I mean, not only that he possesses the raw material, but also, that the buildings and apparatus, of all kinds which are requisite for the manufacture of muscavado sugar, are,

be so

with a very small addition; all that are wanted CHAP. for the business of refining. The necessary additions on each plantation would consist chiefly of a drying-house, provided with stoves for baking the loaves, and an annual supply of earthen vessels or moulds in which the loaves are formed: with the further provision of negro labourers to be employed solely in the branch of the manufacture. The whole must be proportioned to the extent of the property. I have endeavoured to ascertain some rule for judging of this with as much precision as the subject will admit, and, without perplexing the reader with a variety of dry calculations, will observe generally, that an allowance of forty shillings sterling for each hogshead of muscavado sugar, I find to be abundantly liberal. This sum therefore I shall deduct from the difference of price at the British market between raw and refined sugar, which otherwise would be so much clear profit to the planter. The

<sup>\*</sup> The planters of Jamaica frequently refine sugar for domestic use, and I have seen it done in as great perfection as in London. In St. Domingo a process has been discovered of refining muscavado with the juice of limes and lemons. A refiner from thence of the name of Millet came to Jamaica in 1790, and introduced this practice with great success. I saw myself refined sugar made by him at Hyde Hall plantation in Trelawny, with no other material than the juice of limes and Seville oranges, which for transparency and elegance surpassed the finest treble-refined produced by the London refiners.

soon English refiner not having the same advantages, has to deduct the interest of a much larger proportionate capital and far greater expenses in conducting the manufacture. Now 112 lbs of raw sugar sold in London may be reckoned, when the prices are favourable, to yield the planter clear of all charges 11. 13e. The same quantity refined, would yield of loaves and bastards to the value of 21. 1s. 5d. exclusive of the melasses. The difference is 84, 5d. per hundredweight, or 51, 17s, 10d, the hogshead of 14 cwt. Deduct from this the extra expense of refining in the colony (40s. per hogshead), there remains 31. 17s. 10d, which being added to the former sums, it will be found that the whole loss sustained by the planter for the sake of the British refinery, is not less than 81. 9s. 2d. sterling on every hogshead of his sugar of 16 cwt. which he sends to the English market, amounting on 140,000 hogsheads to the prodigious sum of 1,184,1661. 13s. 4d. sterling money! Perhaps the circumstance may come more immediately home to the reader, by shewing how this loss affects an individual. For instance, the average returns of Mr. Beckford's plantations are, if I mistake not, about two thousand hogsheads of sugar annually. He sustains therefore a loss of 16,916l. 13s. 4d. per annum, that the

colonies TEW OF revenue portiona sugar in it would of the With ev (as well planter's and, in the color vier dut tion; so but grea the publ best stat

It is 1 ing the pu leave to su or muscay into Great the gross

British refiners may get (about one-third of the cale range)

OHAP:

It is however to be remembered, that the preceding calculations are founded on the supposition that leave was granted to import refned sugar into Great Britain from the British colonies, at the duties which are now paid on raw or muscavado. I am apprized that the revenue would, in that case, sustain a loss proportionate to the diminution in the quantity of sugar imported, unless it was (as undoubtedly it would be) made up by an adequate increase of the duties on the improved commodity. With every allowance however on this account (as well as for an increased rate of freight) the planter's profits would be sufficiently great; and, in truth, the refined sugar imported from the colonies, would afford to bear a much heavier duty than merely such a rateable contribution; so that the revenue would not be injured. but greatly improved, by its importation, while the public at large would obtain sugar in its best state much cheaper than they obtain it at opic, the autin i from on the cland, when we

snabil and war, or a solideraigh committee, have or maken

<sup>&</sup>quot;It is not my business to seek out resources for increasing the public revenue, but as a matter of couriosity, I beg leave to subjoin the following facts: The quantity of raw or muscavado sugar imported from the British plantations into Great Britain in the year 1987, was 1,926,121 cwt. and the gross duty paid thereon was 1,187,7744. 12s. 8d. If

BOOK

Thus have I shewn the magnitude of the price at which the British colonists in the West Indies

this sugar had been kept to be refined in the plantations, it would have been one-eighth more in quantity; that proportion having been lost at sea by drainage. This would have made 9,166,886 cwt. which according to the computation of the London refiners, would have yielded 1,023,443 cwt. of loaf, and 425,638 cwt. of bastards (excluding fractions). Now supposing the duty on loaf sugar had been only 10s. per cwt. more than the present duty on muscavado (which it would have well afforded) and the bastard sugar to have continued at 15s. per cwt. the British revenue in that case would have received as follows; (both the public and the planter being at the same time benefited in a high degree) viz.

Such is the sacrifice which is made by the planters of the West Indies, and the public of Great Britain, in supporting the private interests of that useless intermediate body of people, the sugar refiners in England: who, whenever the casualties of war, or providential calamities, have overtaken the West Indies, and thereby created a temporary advance in the price of raw sugar, have been the first to raise a clamour against the monopoly of supply enjoyed by the planters, themselves at the same time possessing the monopoly which I have described i It may not be useless to add, that those people are, in a proportion unknown in any other branch of

of let her first inske compensation to the colotrade, foreigners; who live in the most frugal way in England (about one thousand in the whole) and retire with their savings to their own country. There are few operations more simple, or which require a less expensive apparatus, than that of refining sugar. Can it then be just or reasonable to sacrifice to a manufacture, thus subordinate in its nature and limited in its extent, the essential interests of 65,000 British subjects in the West Indies, and half a million of money, which is now annually lost to Great Britain. that this manufacture may be supported? It is remarkable that the same observation occurred to Davenant, who wrote soon after the revolution in 1688. Speaking of the impropriety of laying heavy duties on the produce of the British West Indies, he proceeds in these words : " And here it may not be improper to take notice particularly, of the high imposition laid upon refined sugars imported hither, upon a wrong notion of advancing our manufactures, whereas in truth it only turns to the account of about fifty families (for the refiners of England are no more) and is greatly prejudicial, and a bar to the industry of at least 14,000 persons, which are about the number of those who inhabit our islands producing sugar." (Davenant, Discourse 3, on the Plantation Trade.) What would this author have said, had he known the fact which I have stated above?

BOOK VI.

a great statesman observe, "that it was a compact more solemn than any that an act of parliament could create;" and when speculative men assert, and interested men complain, that a compact thus founded and supported is at this time not sufficiently favourable to Great Britain, the answer is obvious: If Great Britain regrets its operation and wishes to dissolve it, let her first make compensation to the colonists for all that they have undertaken, and the sacrifice they have made, under it; and next. when she releases herself from all future obligation to observe it, let the release be reciprocal; extending equally to one party and the other. This done, the colonists will have no cause to accuse her of injustice,—but this not done, they will assert that she has violated her faith with them; that her conduct is oppressive and fraudulent; and her statutes snares to the unwary as no seatch beand against to promyone

In the mean time, it is impossible not to consider as exceedingly partial and unjust, those clamours and attempts by which, on any temporary advance in the prices of West Indian products, the public discontent is pointed towards the inhabitants of our sugar islands. They are partial, inasmuch as their authors consider the burthens and wants of the consumers

\* Mr. Fox.

the said of the part of the

on one side, without adverting to the burthens and distresses of the colonists on the other. They are unjust, as their manifest aim is to extend to rivals and foreigners, whose trade is not subject to be controuled by British laws, those advantages which have been purchased by, and stand exclusively pledged to, the British West Indies, whose trade is still to be left bound by our regulations.—At this juncture indeed, now that the largeness of the exportation has demonstrated, that no foreign colonies in the West Indies can supply us with sugar cheaper than our own, another project, of more fatal and extensive mischief, is resorted to; and the national attention is awakened by the hopes of a vast and profitable sugar culture, under the fostering protection of government, in boundless regions of the East Indies. Those plantations which have hitherto proved more than adequate to our wants; which from proximity and insular situation, are easily defended; which enrich our manufactures, encourage our fisheries, and return all their acquirements into the bosom of their alienated parent, are it seems to be neglected, and the national encouragement diverted to distant independent countries, whose inhabitants purchase but few of our commodities, and consume none of our fish, but take bullion instead of them; who rather send manufactures to our

3

n

d

and direct.

BOOK VI. markets, than receive them from us; and whose exports may be checked and controuled by a thousand accidents which, at this distance, can neither be obviated nor foreseen. In short, by recommending the settlement of sugar plantations beyond the Cape of Good Hope, this project maintains that it is wise to remove encouragement from proximate and dependent colonies, to countries which, being placed beyond the reach of civil regulations from hence, can be governed only by the sword, and which, at no very remote period, may regain their independence;—when however it will be too late to resort back to our ruined and deserted colonies in the West Indies!

If the reader imagines that the intention of this scheme is to open a sugar trade with the East Indies to British subjects without distinction, it is necessary he should be informed that nothing is farther from the thoughts of its advocates and promoters. Their aim is to transfer the monopoly of the West Indies, to the monopolists of the East; being well apprized that a great importation of sugar, for few years, from India, would effectually stop the cultivation of this article in the British colonies, after which the market would be their own; and the supply, as in the case of all other articles of foreign growth, be increased or diminished, as the interest of the importer, not of the public, should regulate and direct.

CASSD

CHAP.

For myself, I am unwilling to believe that the British government has at any time meditated intentional injury towards the sugar islands; and therefore cannot be persuaded that such a project will ever receive the sanction and support of administration. The planters however, judging of the future by the past. have abundant cause for anxiety and alarm; and if it were permitted to an uncourtly West Indian to expostulate freely and explicitly. with the king's ministers on the treatment which those colonies have experienced from the mother-country, during the last twenty years. and on the danger to be dreaded from innovation, he might display a statement of facts. -unpleasant indeed to bear, -but extremely difficult to controvert or elude. Such a person might without any deviation from truth, present them with a detail not unlike the following: they a could be in the man

"It is well known (he might say) that the sufferings of those colonies which fell under the dominion of France were very great; and that at the conclusion of the war, such of the planters as survived the vexations of the enemy, and were not actually bankrupts in their fortunes, as a great many were reduced to embarrassments nearly approaching to it. For the

honour of the British name it ought to be recorded that no sconer was an island taken from under the British protection, then the property of its inhabitants was treated; to all intents and purposes; as the property of natural-born enemies TYour vessels not war cruized upon them, and made prize of effects, wherever they were to be found as Even neutral flags afforded no protection against your depredations until the highest authorities in the law had prongunced such conduct to be illegal; and parliament interfered to facilitate the passage of the products of Grenada; which having surrendered at discretion, liwere batill exposed to capture Even the hurricane, that most awful visitation of Providence which usually arrests the yengeance of men, and by exciting softer affect tions, disposes them to acts of fraternity, lost its usual effect of procuring a passage reven for the necessaries of life; and those whom; the storm had spared; your rapacity would have sufferings of those colonics which fell bevate

of France over all the islands (Tobago excepts ed, which was ceded to her imperpetuity); but our miseries still survived; for the treaty of 1782 which gave peace and independence to North America, only transferred hostilities to the sugar colonies; as they have never ceased from that time to the present, to be harassed

with first arose necess continuof with of ten teen teen yet your tree wirtue

1360 Great the po condu lition very; and i views the n calum the p in, th ble c ple t lastly reduc so m as to thing with vexations of one kind or another. The first measure by which they were annoyed, arose in the policy of the state. It was thought necessary to dissolve their connection with the continent of North America. The consequence of which was, that Jamaica, being deprived of the produce of negro provisions by a series of tempests and unfavourable seasons, lost fifteen thousand of her slaves by famine. And yet you talk of humanity as if it were a national virtue I me sould be a series of the seasons.

What since has been the disposition of Great Britain towards us, may be learnt from the popular conversation at this day; from the conduct, of large bodies associated for the abolition of the slave trade, and ultimately of slavery itself; from the establishments projected and in execution, on the coast of Africa, with views declaredly hostile to our interests; from the numbers of inflammatory paragraphs and calumnious pamphlets that daily issue from the press to prejudice the West Indian planters in the public opinion; from the indefatigable circulation of addresses, exhorting the people to the disuse of West Indian sugar; and lastly, from various proposals with respect to the reduction of the price of the commodity. In so many shapes does this spirit manifest itself. as to give just grounds to conclude, that something like a decided purpose is entertained for

the total ruin of the sugar colonies, and that the vexations we have hitherto experienced, are only preliminaries to the system which is to be consummated by the grand measure of raising up rivals to our monopoly in your establishments in the East.

"It has been imputed as a reproach to the sugar colonies, that they are expensive, and that they engage you in war. Never were the West Indian colonies the cause of war; but whenever the two nations of France and England are engaged in any quarrel, from whatever cause it may arise, thither they repair to decide their differences. They are made the theatre of war; they are the victims, but never the origin of the contest. The inhabitants of the French and English islands live in an habitual intercourse of good offices, and would wish for eternal peace; and they have reason for it, for what are they to gain by war?

"When therefore we reflect upon the various means which have been employed to prejudice the West Indian planters, we find ourselves totally at a loss to conjecture what it is that could excite so much acrimony against us; as there exists none of those causes, which usually provoke the envy of men, and exasperate their malignity, The West Indians are not remarkable (with very few exceptions) either for their gigantic opulence, or an ostentatious

CHAP.

display of it. They do not emerge rapidly from poverty and insignificance into conspicuous notice. Such of them as possess fortunes of distinguished magnitude, as some gentle men of Jamaica are happy enough to do, are not the creation of a day. Their names are to be found in the earliest records of the island and their adventures were coeval with the first establishment of the colony, and of course their properties, such as we now find them, are the fruits of the toil of successive generations. Many there are indeed who have competences that enable them to live, with economy, in this country; but the great mass of planters are men of oppressed fortunes, consigned by debt to unremitting drudgery in the colonies, with a hope, which eternally mocks their grasp, of happier days, and a release from their embarrassments. Such times as we have lately seen, if suffered to continue, might possibly have given effect to their exertions, and have lifted them out of their distresses. But it seems that poverty is considered as the legitimate heritage of every West Indian planter. They may encounter loss, and struggle with adversity; but never are they to profit of scontingencies that may enable them to repair the disasters of adverse fortune, to which they are peculiarly subjected by their position. the cheer of odylar out from bottenbard

BOOK)

If the minister means the ruin of the West Indian colonies, he may effect it, by promoting the extensive cultivation of the sugar-cane in the East Indies, with a view to the supply of any part of the European market; and we have only equity to oppose to power, for we cannot repel injury or Murmurs would be unal availing, and our resentments impotent; but it would be a base desertion of interest, to suffer ourselves dito be intimidated a into a voluntary surrender of right. We protest therefore against any innovation, and adhere to the system of doubles monopoly, there we are at anchor; and iff there is monsecurity any where against the storms and afflictions of Providence, so neither. is there against the injustice of men; but wo. shall at least have the consolation of not suffering the reproaches of our own bosoms, or of leaving accusers in our posterity !! don't grange grand

respectfully but firmly delivered, it is difficult to say, what reply could be given. If, however, it is not the wish or intention of government to violate they national faith with the colonies, by depriving them of their monopoly, their apprehensions on that head may be easily removed. In this important business satisfaction being given, to the rest, if candour were to dictate an answer, although much must be admitted, much too might be said, and ho-

CHAP.

nestly said, to soften and conciliate. It may be urged that, however harsh and unkind the conduct of the mother-country has occasionally been thought, the colonies ought not to forget that they are indebted to her for all that they possess; their birth and origin, laws, government, religion and liberty; deriving from her parental solicitude and powerful protection, every circumstance that renders them prosperous in themselves, and enviable to others. If, during the fatal and destructive war which terminated in the dismemberment of the empire, they had their share—perhaps more than their share—of the general calamity, they will not forget that all of them that had suffered by capture (Tobago excepted) were restored by the peace to the blessings of a British constitution and government. Perhaps, since that time, a more liberal policy, a more generous freedom, might in some points have been wished and expected; but it should be remembered, that they enjoy and have long enjoyed, as a compensation for commercial restraint, the privilege of the British market, and the benefit of the British capital. They possess too, every characteristic mark of a free people in their internal concerns. They are taxed solely by their own representatives, and have not only the image, but the substance also, of an English constitution. This whole state of commercial servitude and

civil liberty (as a great writer, bath well observed)
taken, together, though, certainly not perfect
freedom, yet comparing it with the ordinary circumstances of human nature, may be pronounced
a happy and a liberal condition.

To the candid and ingenuous, I trust I need not offer any apology for thus having suggested considerations, which may tend to obviate misapprehensions, remove prejudices, and mitigate anger between those, who though divided by local situation, are allied to each other by the dearest ties of interest, affection, and consanguinity. I have thought this the more necessary, as it appears, by the bitterness and acrimony with which some men speak of the sugar colonies, that their aim is to instigate the national resentment, and beighten the public animosity towards them. Instead of manifesting a disposition, "fond to spread friendships and to cover heats," these gentlemen seem to me to exert their talents in misrepresentations, which can answer no other end than to set the remaining parts of the empire at variance with each other. I look not in this place to any of those fanatical writings on slavery and the slave-trade, which, equally disgraceful to humanity and letters, propagate the most daring and outrageous falsehoods without scruple or shame. I allude to authors of a very different

the substance alast of on English constitution. This whole state or connected as sections and
