THE SOLAR SYSTEM.

The Solar System consists of the Sun in the centre, the planet Mercury next, then Venus, the Earth and Moon, Mars, four small planets sometimes called Asteroids, Jupiter and his four moons, Saturn with seven, and most distant of all, Herschel with six. Each of these planets, obtains a succession of seasons, completing its year, by revolving around the Sun, and alternate night and day, by revolving on its own axis something like a top. Beyond these, is the region of the stars, which, in treating of the Solar System, may be considered as a vast hollow sphere. with the Sun and planets in its centre. Let it be remembered that the Sun is firmly stationed in the centre of a vast circle, called the earth's orbit. The earth continues to whirl along in this orbit, going entirely round the Sun once every year. It is kept in motion very much as a boy whirls an apple tied to a string around his head; as the apple cannot fly away from the boy on account of the string, so the Earth cannot fly away from the Sun on account of the attraction between the two, which operates as a string to tie the Earth to the Sun and keep it in its orbit. Well! now imagine the Earth moving around the Sun once every year. But you must recollect that the Earth is also whirling around every 24 hours upon its own axis, and this axis runs north and south. One end of the axis is called the north pole, and points always to the north; the other is called the south pole, and always points to the south. But it so happens, that at one time, this axis inclines more to the Sun than it does at another. When the north pole is inclined towards the Sun, the rays will fall directly on the northern portions of the Earth. This will cause summer at the north, and winter at the south. And when the south pole is inclined towards the Sun, it is summer at the south, and winter at the north. Thus the rotation of the Sun on its own axis every 24 hours, produces day and night; and the annual movement of the Earth around the Sun, with the different inclinations of its axis to the Sun, produces the wonderful changes of the seasons.

The Moon, by performing a revolution about the Earth, in a period of little more than 29 days, exhibits to us those appearances from *change* to *full*, and from *full* to *change*, denominated phases. She is said to change when she passes between the Earth and the Sun. When in about a

week after, she is so far from the Sun as to arrive south as the Sun sets, that is, has 90° or one quarter of the heavens between her and the Sun, she is said to be in quadrature; when 180° distant from the Sun, or in opposition to him, she is said to *full*, and rises as the Sun sets. When she rises at midnight, she is again in quadrature; it is her last quarter. In about a week from her last quarter she will again change, having completed an entire revolution about the Earth. Instead of something in the *regular course of nature*, eclipses were once considered as supernatural phenomena, and of ominous import, portending calamity to mankind in some shape or other, but generally, that of pestilence or famine; while war, rapine and violence, were generally charged to the baneful influence of some malicious comet, whose unwelcome appearance was generally sufficient to shroud whole nations in terror and dismay.

These notions, the consequences of the superstitious ignorance of barbarous or less enlightened ages, are rapidly disappearing before the light of science, and are now nearly obsolete.

When it is considered that the Moon shines only by being illuminated by the Sun, a little reflection will enable any one to understand the cause and nature of eclipses; and it only remains for the Astronomer, by calculations depending on the motions of the Earth and Moon, to predict the times on which they will happen—which he can do with as much certainty and precision as he can foretell the recurrence of day and night.

It is still, to some extent, a prevalent belief, that the change, full, and quarterings of the Moon have an influence on the coming state of the weather. If this be the case, which is very possible, and may, perhaps, be accounted for on rational principles; yet the subject is at present too little understood, or the necessary elements not sufficiently known, to enable us to calculate with any degree of certainty, what may be the state of the weather for any period of a future year.

In order to afford some facilities for viewing the planets, their times of rising, &c. are occasionally laid down in the Calendar pages of this Almanack. Those who take an interest in these matters will derive much advantage from the use of maps of the Stars; as with their assistance,

the names learned by

The Earth and goes round from any one any fixed Star in 365 days; the length of the sidereal year is 24 hour; which of a cannoner's motion is 15 miles; and west to east the heaven's rotation of the equator around the parallel is the 58,000 which is com

In the year
SUN, and

the names and places of all the principal ones, may be learned by a few evenings observations.

The Earth is ninety-five millions of miles from the Sun, and goes round him in 365 days, 5 hours, and 49 minutes, from any equinox or solstice to the same again; but from any fixed Star to the same again, as seen from the Sun, in 365 days, 6 hours, and 9 minutes; the former being the length of the tropical year, and the latter the length of the sidereal. It travels at the rate of 58,000 miles every hour; which motion, though 120 times swifter than that of a cannon ball, is little more than half as swift as Mercury's motion in his orbit. The Earth's diameter is 7970 miles; and by turning round its axis every 24 hours from west to east, it causes an apparent diurnal motion of all the heavenly bodies from east to west. By this rapid motion of the Earth on its axis, the inhabitants about the equator are carried 1042 miles every hour, whilst those on the parallel of London, are carried only about 580, besides the 58,000 miles by the annual motion above mentioned, which is common to all places whatever.

The Earth is round like a globe; as appears—1. By its shadow in eclipses of the Moon; which shadow is always bounded by a circular line.—2. By our seeing the masts of a ship whilst the hull is hid by the convexity of the water.—3. By its having been sailed round by many navigators.

EXPLANATION OF TERMS.

APHELION—Is that part of a planet's orbit farthest from the Sun.

APOGEE.—The Moon is said to be in Apogee when farthest from the Earth.

ECLIPTIC.—Is the plane of the Earth's orbit extended to the starry sphere.

PERIHELION.—Is that part of a planets' orbit nearest the Sun.

PERIGEE.—The Moon is said to be in Perigee when nearest the Earth.

DECLINATION.—Is the distance of a heavenly body from the equinoxial line

ECLIPSES OF THE SUN AND MOON.

In the year 1837, there will be **THREE Eclipses of the SUN,** and **Two of the MOON.**

I. The *first* will be of the SUN, at the time of New Moon in April, a very small eclipse, and visible only in a small part of the Southern Ocean about 1000 miles South of the Island of Van Diemen's Land.

II. The *second* will be of the MOON, at the time of the full in April, a total eclipse, but invisible in the Provinces, as the Moon will be below the horizon--Visible throughout the Eastern Continent.

III. The *third* will be of the SUN, at the time of New Moon in May, invisible; the penumbra passing by to the North. The greatest eclipse (about 7 digits,) will be in the Russian Possessions, near the North West Coast of North America, a little north and east of Mount St. Elias, in the Country of the Kolinsches Indians: the penumbra coming from the Pacific Ocean on the south west will pass over the northern part of North America into the Atlantic Ocean to the Shetland Islands, where it will leave the earth at the going down of the Sun.

IV. The *fourth* will be of the MOON, on Friday October 13th, visible and total. The Earth's penumbra coming on, may be perceived at the Moon's rising.

Digits eclipsed $14^{\circ} 15'$ in the southern Section of the Earth's shadow.

V. The *fifth* and last will be of the Sun at the time of New Moon in October, a very small eclipse, and visible in no part of the civilized world, but in the Antarctic and Southern Atlantic Oceans, and at the New South Shetland and Sandwich Islands, Cape Horn, Terra del-Fuego, and a small part of Patagonia, it will be seen from one to two digits.

ORIENTAL AND OCCIDENTAL STARS.

The Planet VENUS will be *Morning Star*, till May 18th, when she will be in superior conjunction with the Sun; the remainder of the year she will be *Evening Star*.

JUPITER will be in Aug. 22d, after that

MARS will be in *ing Star*,

SATURN be in oppo conjunction *Morning S*

MARS.

May 18th,
Sun ; the

JUPITER will be *Morning Star* till 1st Febuary, when he will be in opposition to the Sun ; thence *Evening Star* till Aug. 22d, when he will be in conjunction with the Sun ; after that he will be *Morning Star* through the year.

MARS will be *Morning Star* till 5th Febuary, when he will be in opposition to the Sun ; thence he will be *Evening Star*, to the end of the year.

SATURN will be *Morning Star* till May 4th, when he will be in opposition to the Sun ; thence *Evening Star* till his conjunction with the Sun, Nov. 12th ; and then again *Morning Star*.

EXPLANATION OF THE CALENDAR PAGES.

First column contains the days of the month—*second*, days of the week—*third*, Holy-days, Weather, &c.—*fourth*, Rising of the Sun—*fifth*, Setting of the Sun—*sixth*, Sun's declination in hours and minutes—*seventh*, Rising and Setting of the Sun—*eighth*, Moon's Southing—*ninth*, Moon's place in the signs—*tenth*, High water.

The top of the columns shows the Moon's phases, or the times of new and full Moon, and of the first and last quarter, or two quadratures with the Sun.

To find the length of the day, add 12 hours to the time of the Sun's setting, and from the sum subtract the time of rising.

When the moon comes to the meridian of any place, or twelve o'clock hour-line, she is then due south with respect to that place, and this is termed the moon's southing. The time of New Moon's southing is 12 at noon; and from the new to the full moon, the southing is after noon, or sometime between noon and midnight, but every day about 49 minutes later than the former.—The time of the full moon's southing is 12 at midnight ; and from the full to the new moon, the southing is in the morning, or some time between midnight and the noon next following ; but every day about 49m. later than before.

The Sun's Declination, at mean noon, is taken from the Nautical Almanack. It denotes the *apparent* position of the true Sun with reference to the Equator, and the true Equinox, at the instant the Greenwich mean time clock, or chronometer, indicates 0h. 0m. 0s. or when the hour angle of the true Sun is equal to the equation of time.

Monday, the first day of May.

Refri. Wind S.W.

Parque Castalia, from Plymouth
days, & Brig Crystal. — from
Liverpool, W. A. Duncan & others.

6 P.M. Snow — hard frost at

Night, a Gale of Wind, Very cold
Wind N.E. W.!!!

Tuesday, 2nd. Clear, but cold,
blow fresh till, frozen very hard
frozen th. my Country. —

Easter term commences.

Wednesday, 3rd. Clear, cool
for the season, Wind N.W.

Thursday, 4th. Continues cool
Wind N.W.

Friday, 5th. fresh gale at night
fine, a southerly wind
now for fresh clearness, appears
likely to blow from that quarter
today.

May 1851
16 May 51

Saturday 6th: Wind variable dull,
Rain, Wind E. - (W. S.)

Sunday 7th: Dull, more Weather
dull, chilly, Wind N. N. W. in the
Evening Rain, with some snow falling
chance of Frost (Night)

Monday 8th: fine clear day (Night)

Tuesday 9th: a very fine day, Wind N. W.
a cool up to 10 in the air.
Fulcrum for New London in England.

Wednesday 10th: a dull morning,
Rain, Wind S, with snow.
Snow - with chiefly as in facts.

Thursday 11th: Most extraordinary
Weather, cold, Rain, Snow, Wind N. -
Clear up at night. the proper returns
of the 11th from 11. 00. 00.

Friday 12th: day, but cold. Wind N.
Frost fresh.

Saturday 13th: fine at last - Wind S
Some onions, carrots, parsnips for
become dull again. Weather out for genuine -
J. P. & Co. & Co. & Co. & Co. & Co. & Co.

Sunday, 14th Whitsunday, a very dull day
Wind S.W. - great anxiety now prevails
in consequence of the non arrival of the steamer
punctum, which should have arrived on
Friday last. Report of the Victoria having
been wrecked near the Gut of Camo, with another
Ship, reached town yesterday morning: - a doubtful
rumour

Monday, 15th a dull morning, but
succeeded by a bright day. Wind inclining
to S. - very fine. - At 11 A.M.
a Schooner arrives from Halifax which has
the steamer off C. S. P. 1: Gump, on her way
to Halifax, loaded with horses, on
Wednesday last, to the great displeasure
of His Ex. Sir John Harvey, in contempt
of the Government & People of N. S. Island,
against the form of the Bond in that
case made and entered into.
Barque Pinar wrecked at Fox Island,
7 lives lost

Tuesday 16th Delightful day.
The fine weather appears now certain.
Wind S.W. - very warm
Decidedly, this is the first summer
day for the season.

Wednesday 17th: Utterly fine.
6. a. m. Steamer arriving. Warm -
dispersed with fire in the stove
first time this season. —

Thursday 18th: " " " " " "
dull morning, a few
drops of Rain. — brightens by afternoon.
Warm. Thermometer 74. —

Friday 19th: " " " " " "
Weather continues
very fine. English April Packet
arrives. — dull in the evening. —
a shower of Rain, very much

Saturday 20th: " " " " " "
a squall of Rain.
at noon Rain. Wind from S. E. —
delightful, frosty weather. —

Sunday 21st: " " " " " "
^{Trinity Sunday}
a fine day, pleasant
but somewhat Wind S. W.

Monday 22nd: " " " " " "
Wind S. W. — Vegetation remarkably rapid.
Mount Stewart Park's services
obtained. —

Tuesday 23rd: " " " " " "
dull & cloudy,
Set with Cabbage & Cauliflower plants
Rain. Wind, somewhat cool

Wednesday, 24th Wind N. Cool
Rain & Misty. —

Thursday 25th Weather clear up, and
Friday 10. a.m. His Excellency Sir John
Barrow, Lady, Family take their
departure in the Steamer for
New Brunswick — His Honor
George Wright, Governor is President
Commander in Chief. —

Friday 26th a fine morning Wind S.W.
11. a.m. becomes rather cool.
Bot. Holland departs this day

Saturday 27th dull in the morning.
10. a.m. becomes bright & very fine.
It is considered by many that this season
is the warmest ever known in the last.
Ther. 5. Cool. —

Sunday 28th very unsettled weather
occasionally a light shower, cool
with Wind, N. N. W, blow fresh, cloudy
at night. —

Monday, 29th: Cold for the season, -
dull, Wind N. W. very cool

Tuesday 30: Weather still cool

Wind N. W. 9. a. m. brightens
3. m. again dull & cloudy - night clear

Wednesday 31st: a dull morning
with a change of wind, consequently
milder, Wind about S. W. -
sun appears occasionally. -
but on the whole very dull weather.

Thursday 1st June

Weather continues dull Wind S. W.
with occasional sunshine
11. m. sun appears for some time
Mr. R. Holland returns -
again Rain at night

Friday 2nd: fine morning Weather
Sun in light horizon, 10. a. m. brightens
again dull - steamer arrives (report N. W. N.)
Midson & Hutton, which report N. W. off
off White Sands

Saturday, 3rd. ~~Victoria at the end of the street~~
also ~~Prig Mary Sam.~~ - Fog in the
morning which dissipates, sun appears
& warm. - Wind S. W. ^{in afternoon}
~~at night Rain then~~

Sunday 4th. Most delightful morning
Weather, Warm & Rain, Warm
a dull day - rather clear
sun distant from us in afternoon.

Monday 5th. Clear pleasant &
dry fine - The Bank & Barrow
J. Thoms, including the Pottery, &c.

Tuesday 6th. Dull, Wind S.
cool weather. Mist with mist.

Wednesday 7th. Weather continues
dull, - Wind S. E. P. M. Rain, cool
~~a continuation of dark dull weather.~~

Thursday 8th. Still dull, cool, Wind S. E.
1 P.M. Brightens & City
Steamer arriving. May Packet
~~an extra trip.~~

Friday 9th. Constant steady Rain.
Wind S. E. of course cool, but not cold
1 P.M. Steamer in
Port. Returns from S. America.
7 P.M.

Saturday 10th Rain has ceased about 11 o'clock. Wind S.W.

Sunday 11th The sun at length appears. Wind N.E.

Monday 12th Clear fair. air still cool. Wind S.W.

Tuesday 13th a dull morning, but becomes bright & fine day of pleasant. Steam on shore at Cape Cod

Wednesday 14th a fine morning, after a shower in the night previous. Warm & pleasant. Wind N.E. -
2nd of April the steamer arrives having sailed 5th Dec. the
disturbance thence, with a shower

Thursday 15th Clear & bright fine. Wind E. -
Warm. Weather does not appear to have settled.

Detachment of 85 Regt. arrives - 34th off.

Friday 16th dull weather. cool. Wind N. E. -
very cloudy, with occasional showers. fine in town
from 10 to 12 o'clock.

Saturday 17th clear & fine. Wind changes to S.W.

Sunday 18th a pleasant day, Wind S.W. 2. M. Wind
N. E. cloudy. Rain. a cool night.

Monday 19th a dull morning, brightens Wind E. -
cool. With an evening breeze in N. month

Tuesday 20th Wind S. fair. an unusual falling
of the river this season - an app. of rain.

Wednesday 21st Rain, Wind S. E. & high -
11. a.m. clear up. - rain falls.

Thursday 22nd Rain constant steady Rain.
Wind S. E. - clear & warm. 1 P.M. sun appears very fine
fresh breeze. - again shortly. Wind S. - very weak

Friday 23rd delightful weather - Wind S. E. - considered
by some to have too much Rain. This is nonsense. The
air, being like the inhabitants, or rather some of them, is perfectly
unintentional think - very warm

Saturday 24th Warm weather. Therm: 78.
Set out Cabbage plants (Quarter
Cabbages)

PREDICTIONS.—The year 1837 will be a very eventful one—to every old maid who gets married.

Throughout the whole course of the year whenever the moon wanes the nights will grow dark.

Those who have debts to pay, and no cash, will lose their credit.

It is probable that if there is no business doing, people will complain of hard times, but it is certain that those who hang themselves will escape starving to death.

If bishop sleeves go out of fashion, there will be more elbow room among the ladies. If toques follow, we may perhaps see over their heads. If either of them should be talked of, there will be much ado about nothing.

FARMER'S CALENDAR.

FOR JANUARY.

Once more, we make our annual appearance, with our agricultural axioms, epitomes of economy, maxims of morality, precepts of prudence, &c. We would hope no farmer will ever rest satisfied until his cattle, sheep and swine are composed of the best breeds which can be procured. Good breeds of cattle cost less for keeping, and yield more for profit than those which have been propagated from the worst of their species. Give your cows kept for milk the best of food and plenty of it. In addition to plenty of good hay, give them moderate messes of carrots, ruta buga, or mangel wurtzel.

Winter is a noisy, blustering, bustling season, though in general he keeps himself cool. If you leave a door ajar, he slams it wide open and comes puffing in, and blows the newspaper into the fire, oversets the clothes-horse, and cuts sundry other capers of the sort. See that your house is tight. Dont leave cracks and holes for the wind to whistle in.

FOR FEBRUARY.

Agriculture of late, like many other arts and sciences, has undergone a great change. Within a few years, the farming interest has been most astonishingly redeemed from the unjust humiliation into which it had sunk. Other employments and arts serve for the *embellishment*, but agriculture is necessary for the *support* of human life. It is not strange that it has been the business and pleasure of the world in all ages, since without it, civilization ceases and population fails. It is that occupation to which we are assigned by the Almighty Creator when he decreed that man should live by the sweat of his brow. It is agriculture that has caused "the wilderness and the solitary place to be glad, and the desert to rejoice and blossom as the rose." Visit your barn with as much punctuality as the sun comes to the meridian. Morning, noon, and night, your four-footed dependents, should be fed and looked after.

Many a man will grow rich this year—in a dream
 If the incumbent of a fat office should die, there will be a dozen feet ready to step into one pair of shoes.
 If an old miser dies, it will occasion the shedding of many tears—that “live in an onion.”
 He who marries during this year will run a great risk—that is, if he does it in a hurry.
 He who steals a match, will make tattlers gossip, and get himself into a scrape.
 He who is penniless this year will not grieve much at the fall of stocks.
 He who grows without growing wiser, will be a long time coming to the years of discretion.

FARMER'S CALENDAR.

FOR MARCH.

FOR APRIL.

During this month it is a good time to cut your wood down and get it home. If it is good sledding so much the better. The sap is down now, and the wood cut at this season is much better. Beside, the roots in this case will sprout and soon cover the field again.

Cut, split and pile, a supply of wood so that you may have at least one year's stock before hand. You may use a quantity of green wood in winter for back logs and foresticks, unless you have stone or iron substitutes for those articles. But to use green wood in summer for cooking, is as foolish as were the attempts of Dean Swift's projector who undertook to soften marble for making pin-cushions, and to extract sun-beams from cucumbers. Farmers during March should be very attentive to their milch cows, and see that they are neither stinted nor overfed. One that is well fed will keep her flesh and give twice as much milk as two that are put on a short allowance.

Industry and economy combined form the true philosophers's stone, which turns all into gold. They generally exist together; and are both so indispensably necessary to success in any pursuit of life, that where one is wanting, the other, for all practical purposes, may be absent. You may harrow your winter grain, having previously sown grass seed upon the land, and given it a top dressing of lime or ashes, or a mixture of both, put on not less than two bushels of the mixture to the acre. You may also sow clover and other grass seeds with spring wheat. The grass seed is best to be ploughed and harrowed in with the seed wheat. Attend to your garden and raise vegetables of all kinds, for the time in the month you must be guided partly by the season, and partly by directions to be found in the New American Gardener, which will also tell you the manner of preparing the soil, &c. It is well worth while for every farmer to buy “Fessenden's Complete Farmer”.

He who wants to borrow money will know the value of it.

He who laughs at his own dull jokes, and hunts for a cat with three tails, or becomes a candidate for a seat in the House of Assembly, will rival honest Dogberry, and be content to "write himself an ass."

There will be more books published this year than will find purchasers; more rhymes written than will find readers, and more bills made out than will find payers.

If a man builds a house this year without counting the cost, he will know more at the end of his undertaking than at the beginning.

If any one jumps overboard without knowing how to swim, it is two to one he gets drowned.

If any one lends an umbrella, it is ten to one that he is obliged to go home in the rain for his pains.

FARMER'S CALENDAR.

FOR MAY.

A *poor* farmer is in the strict sense of the word, a poor creature: he is a poor husband and a poor citizen; reverse the picture, and look at the farm of the man who is diligent in his business, and prudent in his concerns; what can be presented more agreeable; what can be accompanied with more pleasing ideas? His own spirit is infused into every thing around him—every thing is in repair, every thing is in its place—every thing evinces that the master's eye has seen and directed all his concerns. His fields are well arranged and productive; his crops clean and of the best quality, and secured in season from the weather: his cattle well fed, in good condition, and *often* better sheltered than the family of the slothful. Enter his dwelling it is the habitation of plenty. His wife in her department, uses the same economy that he practices in his.

FOR JUNE.

You may, by this time, form a pretty correct estimate whether hay will be scarce next winter, and if you apprehend that such is the case, you will do well to plant or sow Indian corn for fodder. It may be put into the ground for that purpose, either broad cast or in drills. The former is the least trouble, the latter will give the greatest produce and leave the soil in the best order. If the land on which you propose to raise your corn, be mowing land or pasture, fresh ploughed for that purpose, broad cast sowing will be best, as the sod after being turned over should not be disturbed. If you sow broad cast, from 3 to 3½ bushels are recommended, though some say that a larger quantity will be still better. If in drills, run light furrows about 3 feet asunder 3 or 4 inches deep, and drop the seed corn in the furrows, about as thick as peas are sown for field cultivation. Keep your crops clean by hoeing and hand weeding.

There will be a great noise about the country.—whenever it thunders, and a great dust will be kicked up—by coach horses—unless the old system of road making is altered, or the roads are McAdamised.

Whoever makes the discovery that the world is given to lying, will do what Jack Falstaff has done before him.

Many an old sinner will resolve to turn over a new leaf this year, but the new leaf will turn out blank.

Many a fond fool will jump into a honey pot, and find it mustard, without being able to say, with the fly, "I'm off."

Many things will be wondered at this year, and turn out not to be miracles.

Many a great man will tell a fine story, to which Mr. Burchell would have said "Fudge!"

FARMER'S CALENDAR.

FOR JULY.

FOR AUGUST.

Take time by the fore lock while engaged in hay making. We are told by Almanack makers, and other would be wizards, who are eminent for guessing, that more rain, on an average, falls in the latter part of summer, or after the 15th July, than before. If your hay is not quite so dry as it should be when you house it, apply from 4 to 8 quarts of salt to the ton. Or you may save green wet hay by mixing layers of dry straw in the mow or stack. Cut your grain in due season. It is quite time to reap it when the straw begins to shrink, and becomes white about half an inch below the ear. If, however, a blight, or rust has struck wheat or rye, it is best to cut it immediately, even if the grain is in the milky state. Barley, however, should stand till perfectly ripe. Let not weeds get the start of your crops during harvest, and remember that frequently hoeing corn, potatoes, &c. answers the purpose both of rain and manure.

If there be any thing among the temporals to make life pleasant, it is within the walls of a well ordered house, where all is adjusted to please—not by its finery or costliness, but by its fitness, its air of neatness and content;—which invite all who enter to taste its comforts. The woman who does not make this a grand item in all her routine of duties, has not yet learned the true dignity of her station—has not yet acquired the *alpha* of that long alphabet which is set before her; and she who despises this noble attainment despises her best worldly good, and indirectly despises her family, her neighbours, and the word of God. "She looketh well to the ways of her household" was spoken by the wisest man that ever lived, and will be told as a memorial of all those who have been eminent for this noble, this heaven-born attainment. Put on a good stout pair of leather gloves, and declare a war of extermination against the thistles in and about your premises.

Finally, we are of opinion that this will be a wonderful year—just like all that have gone before it. Politicians will make fools of themselves, pettifoggers will make fools of others, and women with pretty faces will make fools of both themselves and others. The world will go round and round, back to the place from which it set out, and this will be the course of many a man who should be up and doing. There will be a great cry and little wool, as at a shearing of pigs, or a session of the House of Assembly.

MARRIAGE.—Look at the great mass of marriages which take place over the whole world; what poor contemptible affairs they are? A few soft looks, a walk, a dance, a squeeze of the hand, a

FARMER'S CALENDAR.

SEPTEMBER.

OCTOBER.

Sow winter rye as early this month as possible, so that its roots may obtain firm hold of the soil before winter, and not be thrown out and killed by frost. Winter wheat should also be sown early this month. See that your barn yard is well adapted to saving manure, defending cattle from storms &c. Let the size be proportioned to the stock which is kept in it, and well defended by tight fences, sheds, &c. Gather and boil for your swine with a little indian meal, potatoes, or other nutritious substances, the fruit which falls prematurely, in order to destroy the worms which they contain. See also that your swine are supplied with charcoal, which will be at once food and physic for them; and that they are made to labour for a livelihood by throwing into their inclosures abundance of materials for manure, such as weeds, brakes, potatoe-tops, loam, turf, swamp mud, &c. which they will manufacture *gratis*.

Do not be in too great a hur-

ry to dig your potatoes, the roots often grow bigger and better after the tops are considerably decayed. Stiff, hard, cloggy land intended to be tilled, should be ploughed in Autumn. Fall ploughing saves time and labour in the spring when cattle are weak, and the hurry of work, peculiar to that season press on the farmer. If the husks and bottoms of corn, when stowed away for winter, are sprinkled with a strong solution of salt in water, and when dealt out cut fine with a straw cutter, they will make excellent fodder. If you have any leisure, don't go to a tavern, for of all places on earth, the worst is a tavern bar room. Stay at home and put your garden and farming tools in order. Mend the fastenings of your doors; see that your doors shut well. If they creak on their hinges, grease them. Look to your window shutters; don't let them slam and bang every windy night as if witches were beating a tattoo around your house.

opping of the question, a purchase of a certain number of yards of white satin, a ring, a clergyman, a stage or two in a hired carriage, a night in a country inn, and the whole matter is over. For five or six weeks two sheepish looking persons are seen dangling on each other's arm, looking at waterfalls, or making morning calls, and guzzling wine and some fine cakes — then every thing falls into the most monotonous routine. The wife sits on one side of the hearth, the husband on the other, and little quarrels, little pleasures, little cares, and little children, gradually gather around them. This is what ninety-nine of a hundred find to be the delights of matrimony.

EARLY MARRIAGES.—From early marriages proceed the rivalry of parents and children. The son is eager to enjoy the world before the father is willing to forsake it; and there is hardly room at once for two generations. The daughter begins to bloom before the mother can be content to fade; and neither can forbear to wish for the absence of the other.

FARMERS' CALENDAR.

NOVEMBER.

Do not undertake to winter more cattle than you have abundant means of providing for. It is recommended not to begin to fodder with the poorest materials. Cold weather will increase the appetites of your cattle, and they will eat food in mid-winter which they would reject at the commencement. They will, likewise, at any time, eat materials when cut with a straw-cutter, which they would refuse, if at full length. You may now carry out and spread soot, ashes, compost, &c. on such of your mowing lands as may need manure. Though it is asserted by some that the best time for dressing mowing land is immediately after haying; others contend that late in autumn is quite as well. See that your house is tight; don't leave cracks and holes about the doors and windows, so that Jack Frost may steal in while you are asleep, and cut rapers in your cellars and pantry.

DECEMBER.

It is quite time to barricade your premises against a certain blue-nosed belligerent, called Brigadier Boreas, who is marshalling his airy forces, & has issued his orders for a general attack on these Northern Provinces. Your cellars, and other repositories of provisions for man & beast, which are situated under ground, or on a ground floor, should be made frost-proof by banks; more useful as well as more stable than some other things of the same name, but which farmers should deal with as little as possible. Treat your cattle in such a manner that they may be convinced you are their friends, otherwise they will be wild & ferocious, and will not thrive nor fatten so kindly. Settle your accounts, & make your books square at the end of the year, lest, by and by, you find yourself debtor in such round sums, that you will be obliged to turn a sharp corner, in order to take yourself off in a right line from the Sheriff.
