NOTICE TO PARENTS AND TEACHERS SCHOOL BOOKS

SCHOOL BOOKS

THE Subscriber has since his entering into the stationery and book business commenced by his father, endea-woured to furnish and keep up a supply of suitable School Books; and while he has kept in view the difficulty experienced by Teachers, in changing from one book to another, occasioned by a want of uniformity in the series of works in use, the has studied to improve those formerly used; and in adopting new ones, has been guided by the leading members of the Board of Education, and some of the best teachers who have given their sanction to his publications. Many of the books imported from the Mother Country, being found to be too expessive, and the reprints from the neighbouring provinces, not given their sanction to his publications. Many of the books imported from the Mother's Country, being found to be too expensive, and the reprints from the neighbouring provinces, not only incorrect, but badly printed, it was thought than attempt to print some of them at home, might meet with success. In order to be able to sell the books at a price within the reach of the bulk of the people, a large number of each work has been printed of those books in general use. The Irish national series, imported by the Board of Education as one of the cheapest sets of books that could be procured, has been taken as the basis of the series of books now reprinting. I hey have been made applicable to the circumstances of the country by alterations only in such passages as have appeared to require them. In order to suit them to the locality of the Island a fuller and more correct abstract of the Geography of North America, has been substituted, and several slight errors in Spelling and Grammar amended.

The books already published are—
Murray's Second do, with an appendix from Professor Sullivan's Spelling book,
Irish National Second, Third, and Fourth books,
Lennie's Grammar.

POBUTE.

THE INDIAN SUMMER.

There is a time, just ere the frost Prepares to pave old Winter's way, When Autuma in a reverie lost, The mellow day-time dreams away.

When Summer comes, in musing mind, To gaze once more on hill and dell, To mark how many sheaves they bind, And see if all is ripened well:

With balmy breath she whispers low,
The dying flowers look up and give
Their sweetest incense ere they go,
For her who made their beauties live.

She enters 'neath the woodland shade, Her zephyrs lift the lingering leaf, And bear it gently where are laid The loved and lost ones of its grief. She seeks the shore, old Ocean heaves In gladness huge his mighty breast; Prisons his wild winds in their caves, And basking in her smiles, is blest.

At last old Autumn, rising, takes Again his sceptre and his throne, With boist rous hand the trees he shakes, Intent on gathering all his own.

Sweet Summer, sighing, flies the plain, And waiting Winter, gaunt and grim, Sees miser Autumn hoard his grain, And smiles to think it's all for him!

Temperance.

(From the National Temperance Chronicle.)

GOVERNMENT LICENSE.

GOVERNMENT LICENSE.

Many persons object to an appeal to the legislature on the subject of intemperance, and they would have us rely on moral sausion. We, ourselves, are greatly opposed to the interference of the legislature in matters which lie within the reach of private individuals or social organization; and we are advocates of meral sussion to the fullest extent, having faith both in the power and loveliness of truth. At the same time, howeve, we hold that go vernments may err, and that members of the legislature may, in their public capacity, commit grievous sins, and that we have as much right to use moral sussion towards them as towards any other parties. If they are the cause, even in part, of national evils, we are bound to approach them with potition and remonstrance. We further are of opinion, that the legislature has committed and is committing a grievous sin in giving public sanction to the sale of intoxicating liquotis, and by royal license puting the seal of respectability on the makers, venders, and drinkers of alcoholic beverages. When, therefore, we call for legislative interference, it is that members of parliament and ministers of the crown may andle the mischief they have done, and that they may withdraw that interference which is now one of the mightiest obstacles in our way. Would they think it right to license houses of profligacy, gambling, theft, and murder? No, not even for a revenue of fifteen millions of pounds sterling a year. Why then license those houses which do more to corrupt, to madden, to pauperize, and to slay the people than all other places of vice and infamy put together? Let the l'arliament, the government, and the Queen, cousider what they do when they give the sanction of the State to houses of tippling! If the prayers of the Church of England are not to be accounted a mere mockery, they hold up a very different standard of conduct from that which is now pursued by our rulers. One of the prayers for the Queen contains the following petition: "that in all her thoughts

snops, they, more than any other class, create and encourage wickedness and vice, and in thousands of instances, they destroy all true religion and virtue. The prayer of the Church and the license of the State do not agree. Either let the license be withdrawn or the prawer left out, as offensive hypocrisy in the sight of God. For what good end does the government grant its license to man who lives by using every means in his power to induce men to drink intoxicating drinks? Undoubtedly for the sake of the revenue! For this purpose, even in our colonies where the natives had not learned the vice of drunkenness, our government has introduced the liquor shop, and has derived large revenue therefrom. But in obtaining this revenue by the introduction of intoxicating drinks among the people, do they consider the other results which follow? Seener or later these results will shew them that by destroying the health, morals, property, and wealth-producing power of the people for the sake of revenue, they have adopted a policy as foolish as it is wicked and cruel. The landlord of the public house and beer shop is licensed in order that he may bring money to the State treasury; but experience has shown, that many other purposes are accomplished by that license. He is, in fact,

hed by that license. He is, in fact,

'Licensed to make the strong man weak,
Licensed to lay a wise man low;
Licensed a wife's foud heart to break,
And make her children's tears to flow!
Licensed to do his neighbour harm,
Licensed to kindle hate and strife;
Licensed to nerve the robber's arm,
Licensed to whet the merderer's knife!
Licensed to whet the merderer's knife!
Licensed to make this world a hell,
And fit man for a hell below!

And fit man for a hell below?

Can it be possible that our government has deliberately established a system of spanion so cruel and yet so unwise? We do not charge them with introducing it into the country, but we charge them with rireducing it into the country, but we charge them with deliberately continuing it for the sake of revenue, although the judges of the land ascribe to these intoxicating drinks almost all the crime, medical men almost all the sickness and insanity, poor-law guardians almost all pauperism, and ministers of religion the chief impediment in their way. That governments are aware of this may be seen from the occasional profest they have stade against intemperance. In England, the Government has granted a pension to Father Matthew for his efforts to promote Total Abstinence: and Lord John Russell has publicly declared that no cause is more likely to elevate the people of this country, whether as regards religion, political importance, or literary and moral cultivation, than this great question of Temperance. In Sweden, another country addicted to drankenness, the King and Queen have joined the Temperance Seciety, and set to their people the example of Total Abstinences. In the United States, a country that was at one time more in danger from intoxicating drinks than our own, seven presidents, Madison, Adams, Jackson, Van Buren, Tyler, Polk and Taylor, have signed the following declaration:

"Being estisfied from observation and experience, as well as

The true riches of a nation are the products of the soil, and the labour of the people: the former is the natural, the latter the acquired wealth of a nation.

The foundation of national property is agriculture, or the art of calivating land so as to render it as fruitful as possible, and it is the parent of all other arts, and the source of the natural riches of

the parent of all other arts, and the source of the natural riches of any nation.

Next in the scale of national importance are the useful arts and manufactures, by which the acquired riches of a state are augmented by the most profitable exertion of the labour of the people. The cultivation of the liberal and polite arts contributes to the prosperity of a nation, because they enlighten and embellish society, and are sometimes carried to such perfection, as to contribute to the relative riches of nations; but their usefulness cannot bear comparison with the mechanic arts, though their professors are generally held in higher estimation.

Agriculture is the most essential to a nation because, independent of its being absolutely necessary to the subsistence of any people, the trade that issues from it is more certain and more profitable: it increases population, and thus augments the relative riches of a nation.

it increases population, and thus augments the relative riches of a nation.

It is the most certain, because the sale of absolute necessaries must be much more certain than that of superfluities.

It is the most profitable because, by a judicious system of husbandry, the produce of the earth may be increased to an almost indefinite extent; and because the sale of that produce is almost always certain, and the returns immediate.

Agriculture deserves the attention of a wise legislature, in the highest degree; for, however flourishing the commerce may, it is constantly liable to serious check, and even to total destruction; but a nation can never be reduced to the extremity of distress while due attention is paid to this most important art.

A neglect of agrigulture injures other branches of industry. For when from a scarcity of the necessaries of life, they become dear, the price of labour in our manufactories, must be raised in proportion. This of course enhances the price of manufactured goods, and affords foreign nations an opportunity of underselling us in the market.

tion. This of course enhancer the price of manufactured goods, and affords foreign nations an opportunity of underselling us in the market.

The test principle on which an extensive commerce depends is, the establishment and support of manufactures. Thus, in the early stages of society, the real wants of mankind were confined to bare subsistence,—thus roots, fruits, water, milk, fowl, and fish, prepared in the most simple manner, served for food; the skins or fur of animals for clothing; and a few rude instruments to fit these for their several uses. But as society enlarged and grew more refined, imaginary wants multiplied upon them; and notions of property beginning to be entertained, those who had none endeavoured to obtain a share, by exerting their ingenuity in administering to the luxuries of those who had.

The first advantages of manufacturing are many.—First, a manufacturing nation will procure, from its own immediate territories, more of the natural products of the soil, than one that has so manufactures.

Secondly, the art of giving new form to, and improving those natural products, will furnish increase of employment, and thus encourage population.

Thirdly, many of the works of art, being sought for by other nations, will be the means of bringing great wealth to the manufacturing nation stronger, and more capable of defending, itself against its enemies—caleria paribus—other things being equal—than another that has an manufacturies.

It is essential to the establishment of a manufactory, that if on diligent enquiry a reasonable expectation of success may be enterained, an advantageous situation for its establishment mate first be obtained, the defects must be remedied as much as possible by art.

Generally speaking, a situation is advantageous for its praximity.

art.

Generally speaking, a situation is advantageous for its praximity to navigable rivers or canals—a neighbouring population sufficient to afford hands on reasonable terms—a facility of procuring provision and fael—and a salabrious air, by which the health of the persons employed may not suffer.

For the success of a manufactory, it is necessary that all goods be made of the best material that their qualities requires, finished in the best possible manner; that the internal management should be regulated with the utmost exactitude, all confusion, riot and waste being diligently prevented by those whose duty it is to superintend the concern. To rely on economizing cost and judicious sale.

— United States Economist.

GREAT TELESCOPE.—A gigantic telescope, destined to eclipse that of Lord Rosse, is one of the latest scientific and mechanical marvels. It is now in course of construction, and near completion, in Wandsworth Common, within a short of London, England. It consists of a monster tube, 80 feet long, with object glasses of 24 inches in diameter, which tube is to be affixed to a tower 64 feet high, and is capable, by menns of a short circular iron railroad, of being turned to any part of the beavens. According to the description given, it will be by far the largest telescope over made, or even dreamed of, for looking directly at an object—in this respect differing from Lord Rosse's, which is a reflecting telescope. Its powers have been already tried on the most distant groups of stars and found to be prodigious, and may be expected to help us to a further insight into the nature of the leavenly bodies. On this last subject, by the way, some pretty decided conclusions are advanced in an interesting article by Dr. George Wilson, entitled 'The Chemistry of the Stars,' in the Edinburgh Review, and lately separately published by the Mesra. Longman. In that article the worthy Doctor urges sundry reasons—based on our observation and knowledge of the planets, and also on the composition of the meteoric stones now believed to have formed part of the stars, and which have fallen upon our earth—for doubting whether any thing resembling or organic or terrestrial life exists, upon the stellar globes. This unquestionably clashes with the popular and more pleasing notion of their being vist theatrea of life, under diversified conditions, perhaps, but on the whole bearing a general resemblance to our own; and certainly, if the monster telescope is only to reveal to us unnumbered sterile and uninhabitable spheres, mere human interest in them is wonderfaulty lessenod, even though humanity itself may seem to be existed.

though humanity itself may seem to be exalted.

AUSTRIAN BANDITTI.—The Vienna journals centain an account of a very horrible affair: A peasant of Gallician Pedelia went ton days ago to the fair of Zhanza to self a pair of oxen. On his return, having been drinking rather too much, he placed his money in a girdle, which he fastened round the body of his daughter, who accompanied him. On passing through a wood a man stopped them and imperatively demanded their money or their lives. The peasant declared that he had no money on him; but we man, knowing

from medical testimeny, that ardent epirits, as a drink, is not only needless, but hurtful; and that the entire disuse of it would tend to promote the health, the virtue, and happiness of the communit; We hereby express our conviction, that should the citizens of the United States, and especially all young men, discountenance entirely the use of it, they would not only promote their own personal benefit, but the goed of the country and the world.

In our own country the system of raising a revenue from intexicating drinks was introduced, we believe, about the time of King Charles II, and it was found so easy to raise money in this way, that succeeding governments carried it out still further, and at the present time, the English government derives more than fifteen millions sterling, or nearly sea-third of the annual revenue from this source. This is a large sum to relinquish; but as long as they continue to raise money by means which cause poverty, crime, madness, and death, we deliberately charge them with governing the people unrighteously, and instead of being a terrot to evil doers, and a praise to them that do well, they reverse the order, and a praise to them that do well, they reverse the order, and a praise to them forthwith withdraw their license from public houses and beer shops.

A SHORT CHAPTER ON ARTS AND MANUFACTURES.

The true riches of a nation are the products of the soil, and the country of the cost of the country and the country and the country of the cost of the country to the wood. There two other man joined him, and the three murdered the unfortunate man. The girl distinctly man defined the three murdered the unfortunate man. The pird the torms perpetuated. Greatly terrified the took to flight, and after proceeding some distance saw a cottage. But the true raise and the three murder of saw and in compliance with the prayer of the girl ound a woman. She told the woman what had cocurred, and after proceeding some distance was a cottage. But the the reme perpetuated. Greatly terrified the tw

Going A-Head with a Vengenne.—Within the last quarter of a century we have made great progress in locomotion but we were not prepared for the startling proposition of Mr. D. S. Brown, who proposes to reach America in forty-eight hours, and make the voyage to India and back in a fortaight? Mr. Brown intends to put his theory into practice by vessels of quite different construction to those at present in use, giving them a greater breadth of beam. He proposes to make the under surface of the vessel, which is flat, of two inclined planes; the effect of this will be, when the ship is in motion, to raise her whole hull to the surface of the water, thereby removing entirely the resistance at the bows, which is stated to be the great obstacle of her progress, being an illustration of the principle well known to every school boy who has thrown a stone slantingly on the surface of the water, making what is vulgarly called a "duck and drake." By reducing the angles of the inclined plane, speed could be added to the vessel, which could be increased from thirty to sixty miles per hour, and a ship so constructed would be as little affected by the ordinary waves of the Atlantic as a Gravessend steam-boat is by a Thames ripple. The hull of the vessel is of a square tubular form; the deck, bottom, and sides being of great thickness; and in order to combine lightness with strength, they are intersected throughout with hollow cells or cavities, consisting of a series of central cells, surrounded by another series of smaller cells; by means of these the weight of the vessel would be reduced to one-eighth of the amount, according to the number of series employed, and still have nearly all the advantages of solidity; while the form in which the hull is made gives to it the strength of a tabe, enabling it to be made of almost any length with perfect safety. If water obtains its wonted superiority as a mode of locomotion, the velocity of a steam-ship might as much exceed that of a railway carriage, as the railway carriage now does th GOING A-HEAD WITH A VENGEANCE.—Within the last

HEALTH AND EDUCATION.—The official stat French departments prove that the average duration of haman life is from six to eight years longer, in the districts which are the most advanced in respect to education. In like manner, the inhabitant are most healthy in those departments where agriculture is most improved, manufactures most extended, and commerce most active.

A Scotch paper relates, that a young man who left Paisley about three years ago for Australia, on recently returning home, found his mother engaged winding weft on weavers' piras. After mutual greetings, he produced a bank cheque for £100,000, the produce of his industry at the Australian gold-diggings.

English Mail of October 2.

(From the (Halifax) Provincial Wesleyan, October 14.) Royal Mail Steamer America, Captain Shannon, arrived on Tuesday at 12 o'clock—with a full freight and 117 passengers—18 for Halifax.

Her Majesty has decided, that the remains of his late Grace the Duke of Wellington shall receive the honours of a public funeral, and be deposited under the great dome of St. Paul's Cathodral, beside the remains of the immortal Nelson. The grand and soleum obsequies were to be deferred till Parliament should meet, and stamp, by its sanction, the proposed ceremon ies, with great

stamp, by iffsanction, the proposed ceremonies, with greater selemnity. It was conjectured, that it would devolve upon Lord
Brougham to pronounce the late Duke's calegium in Parliament.
Her Majesty's departure for Ealmoral Castle, was fixed for Mon
day the 1th instant. Her Majesty and the Royal Household went
out of mourning for the late Duke of Wellington, on the 29th alt.
A Free Trade Banquet was to have been held in Manchester,
two days previous to the meeting of Parliament. The leading Free
Trade Members of the House were to have been invited.
Seven armed desperadoes, which were named the 'Northern
Banditti,' were recently prowling about the streets of London, four
of whom have been arrested.
Emigration to Australia continues unabated—200 Dutchmen re-

Banditti,' were recently prowling about the streets of London, four of whom have been arrested.

Emigration to Australia continues unabated—300 Dutchmen recently saited from Gravescend for Port Philip, in a Dutch wessel named the Six Sisters—chartered by Government.

Lady Lovelace, Lord Byron's Ada, was lying dangerously ill—having been given over by her physicians.

The harvest in Eagland has not proved abundant, but, notwithstanding, the country seems to advance in prosperity, at an almost unprecedented rate.

Violent gales have raged in the English Channels during the week, and have caused much destruction of shipping. The only American reported is the 'Emporium,' from America, which went ashere on the coast of Northumberland;—crew and passengers, including three females, saved.

The papers are full of speculation on French and American affairs, quite to the exclusion of local. It is remoured that Farlimment will be summoned for business on the 21st October.

The London papers are rabid against Captain Jewett's expedition to the Labos, seeing in it a deep-laid scheme for the saneantion of Peru!

The West India mail steamer La Plata at Southampton, Wednesday 28th ult., with dates from Chagres to 8th, had on freight \$1,374,766, of which \$329,717, were on account of the Mexican dividends.

FRANCE.

FRANCE.

The public mind appears to be made up in favour of the immediate proclamation of the Empire. It is even exid, that Louis Napoleon will return to Parie as Emperor, and that the Proslamation will be at Tours, the ancient capital of Touraine, on the 14th inst., His reception at Toulon, Avignon and Marseilles was enthusiastic, le was met and cogratulated by the envoys of Piodmont, Naples, and the Pope.

He was met and organismuce of the second of the Pope.

The Gazette de Breslau nays, that the Emperor of Austria has demanded the hand of the Princess Vasa, and that the Emperor of Russia is using his influence to win over the same lady for Prince Adalbert of Bavaria, brother to the King of Greece. This, howe-

Adalbert of Bavaria, brother to the King of Greece. This, however, is discredited in Paria.

The Belgian Ministry have again resigned, and the Chambers are adjourned till 26th instant. The cause of resignation was the election of M. Delehayes over M. Verhagen, the Ministerial Candidate to the presidency of the Chamber of Duputies. The event is regarded as a triumph of the French party.

SPAIN.—Government has ordered honours to be rendered to the memory of the late Duke of Wellington. General Castanos, who served under Wellington, is juridead, aged \$5, and will be buried with sational solemnities.

Grant of the Calegre Gazetle states, that negotiations are in communities. The Calegre Gazetle states, that negotiations are in communities. It is said, the U. States Government has expressed willingness to favour the importing America of certain articles of the Zollverein, and the crisis, in which the customs' question has recently been placed, has alone prevented the completion of the matter.

Negotiations are opened for a concordat between Austria and the Papal See, and ratifications of the extraordinary treaty between Austria and the Netherlands have been exchanged.

Cholera is rapidly declining in Poland and Prassia.

A change in the Tuscan Ministry is again imminent.

Serious damage has been done by inundations at Naples.

SUBMARINE TELEGRAPH BETWEEN THE NEW AND

The content and political content between the political content of the content of

LOSS OF HE by splinters.

ELECTRO-TELEGRAPH PROCESS.—The Builder has already alliaded to the effect likely to be produced by the electro-telegraph—an effect far beyond what seems at first probable. The whole civilised world will be in immediate communication before long, and the East India: Company have already determined on an immense step towards it. They have arranged for the connection, by missins of the electro-telegraph, of the greater part of India, and have actually given orders, as we understand, which will require for their execution no less than 3,500 tons of galvanized iron wire! Truly an commons work, involving great results. We are beginning to move. What a future 'bonne in the distance!' As Westersprize.—An Association has been formed in England, with the Earl of Yarborough at its head, and Mr. Petto, M. P. deputy chairman with a view of constructing Mammoth attenders of the burthen of 5,000 tons and 1,500 horse power, to carry passengers from Milford Haven, to Halifax, at £10 per head.

WEST INDIES.

WEST INDIES.

Our files furnish the following items:

of ABRATCA.—The small pox still prevailed in the Island, but its
virulence had considerably abated. Two isolated cases of cholera
recently occurred, one in Kingston, the other on the north side of
the Island, which had caused some apprehension as to the return
of that terrible scourge. Shocks of earthquise have been alarmingity frequent in different parts of the Island. The depressed condition of the Colony, both agriculturally and commercially, still ocsuples the attention of the Jamaica press. The whole crop of sugar
for 1852, was not expected to exceed 28,000 hogsheads, a return
little more than one half of the crop of the small island of Barbadoes. The communications from the Jamaica Delegates in London plainly show, that Sir John Pakington holds out no hope, that
a differential duty on Sugar will be imposed by Parliament for the
benefit of the British Colonies, which is the mode of relief the delegates are agricult to secure.

Barranous—The scanty supply of American provinious and
the deficient crop of yams, potatous, &c., had caused considerable
privation among the labouring class of this densely populated colony; but at the last advices, supplies from the United States were
coming in more rapidly than had been the case for saveral weeks
previously. Sugar-growing now absorbs nearly the whole attention of the Barbadees planter; for it appears by the papers, that
a cluding the quantity of Sugar reserved for consumption of the
is habitants, the crop of this year amounted to 50,000 hogsheads.

To J. D. HASEARD, E. Q.

DEAR SIR;
Had any one asserted a week previous to the Horticultural Show, that 119 samples of fruit, comprising Grapes, Melons, Pears, Apples, Green Gages and Plunss of various sorts, the produce of the Island would be displayed at the same time in one place, he would have been looked upon as a more enthusiastic dreamer than the Secretary of the Horticultural Sensity himself, and yet, such was the fact. There were exhibited.

A Meeting of the P. E. Island Company emigrating to Australia, was held at Mr. Stephen Boyyer's, on Wednesday evening, the fish inst., when most of the Sharee required for australia, was held at Mr. Stephen Boyyer's, on Wednesday evening, the fish inst., when most of the Sharee required for early on the description of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee required for earlying on the concern were taken up, and the following persons of the Sharee and the following persons of the Sharee and the following persons of the Sharee was a goodly share of Special taken up, and the following persons of the Sharee and the following persons of the Sharee and the following persons of the Sharee was a goodly share the persons of the Sharee and the statement of the Sharee and the following

STORM OF FRIDAY NIGHT LAST.

On Friday night, the 15th instant, a little before midnight, the people of Charlottetown were much alarmed by the breaking out of a storm of great and unasual violence. The wind, which was Southerly, blew with great fury; and, in such quarters of the town as were more innightately exposed to the blast than others, the trembling, rocking, 8th creaking of the houses were, we have been told, so alarming to the innuates that, in many instances, they arose from their beds to provide for their own personal safety.—The tide, which was full about \$2 \text{ o'clock}, was one of the highest that have ever been experienced in our harboar. It covered the wharfs, pever which it was driven with awful fury by the wind; being sent tolling and dashing ever up Queen-street to a considerable distance. Many of the vessels witch were lvinz in the harbour were driven and dashed

A Meeting of the P. E. Island Company emigrating to Australia, was held at Mr. Stephen Bovyer's, on Wednesday evening, the 6th inst., when most of the Shares required for earrying on the concern were taken up, and the following per-

AUTUMN AND WINTER. BY PRANCES GAGE.

The autumn is going with its beauty so glowin And Winter o'er all things is casting its pall. The rese-tree is fading, no longer 'tis shading The arbor of love or the bright water-fall.

The dahlias are lopping, the ripe fruit is dropping,
The corn-leaves are withered and dry on the stalk;
The ring-dove is sighing, the grasshopper dying,
The fire-fly no longer enlivens the walk.

The forests are changing, the wild birds are ranging To hunt out a hole where the skies are more clear. The stream deeply flowing, the chilly winds blowing, All tell us that Winter, cold Winter is near.

ner's sweets while we're tasting, away all are hasting,
The days of the peach and the melon are o'er;
Then let us be trying while Au umn is dying,
To lay up for Winter a plentiful store.

Work freer and harder, fill the barn and the larder, Then give to old Winter, whene'er he shall come, A welcome most willing; we'll heed not his chilling, If there's warmth round the hearth-stone and plent

But while we are cheerful—no cause to be tearful,
Let us think of the children of Sorrow and Wrong,
And give from our treasure, with no stinted measure,
Of the good gifts of Heaven to help them along.

Varieties.

UNCLE TOM'S LOG CABIN.

This book has been the most fortunate of any publication for a long period. Already 130,000 copies have been published in the United States, for which Mrs. Stowe, the talented authoreas, has received twenty five cents per copy, and thus realised a handsome competence by this single work.

In Canada, a cheap edition has been published by a book seller of Toronto, of which many thousands have already been sold. In England, the work has had an almost unprecedented sale. The London correspondent of the Boston Post says:—
Uncle Tom's Cabin is meeting with a run of favor wholly unprecedented in an American book on this side of the Atlantia and indeed in any English book. It has been republished by no less than five different houses, its history with one of which is a fair specimen of the whole. Messrs. Clarke & Co., of Fleet street, struck off an edition of 5000 in April. It made no stir until the middle of June, although it was advertised very extensively. From them it began to make way, and sold at the rate of 1000 per week through July. In August the demand become very great, which wend on increasing until the 20th, at which time it became our feerly overwhelming. They have now shove 400 people employed in some way or other about the book, and seventeen printing machines in mution.—The following is a correct statement of their sales, viz. Illustrated edition. 7s 6d, fifth thousand; original edition, 2s 6d, thirtieth thousand; railway edition, 1s, ninety-fifth thousand; people's penny edition, thirty thousand weekly.

The disgusting features of negre slavery, and its demoralising influence upon all classes, are well pourtrayed in "Uncle Tom's calculated to have an immense effect upon the future of slavery in the United States. This book seals its fate.

Make Yousely Indispensable to Your Employers.—

Make Yousely Indispensable to the seal of the proper o

aleury in the United States. This book seals its fate.

Make Yoursell indispensable to your employers; that is the golden path to success. Be so industrious, so prompt, so careful, that if you are absent one hour out of the usual time, you will be missed, and he in whose service you are, shall say, 'I did not dream L-was so useful.' Make your employer your friend, by performing with minuteness, whatever task he sets before you; and above all, be not too nice to lend a hand at dirty work, no matter how regulation in the your employer your friend, by performing mant to your sense of neatness it may be. The success of your besiness in offer years depends upon how you deport yourself now. If you are really good for anything, you are good for a great deal. Be energetic, put your manners into your besiness; look as well as act with alacrity; appear to feel an interest; make your master's success your overs, if you have an honest one. Let your eye light up at his request, and your feet be nimble; there are some who looks and all and heavy, and go with he solw and lazy a pace, that it is irknew this request, and your feet be nimble; there are some who look and land heavy, and go with he solw and lazy a pace, that it is irknew the property of the demand of them; he not like these. Be the arch upon which your employer may rest with safety; let, and the property of the demand of them; he not like these cases of cased lett. LAND, with a new SAW MILL, with all that is your right to demand of them; he not like these cases your own, if you have an honest one. Let your eye light up a book and lazy a pace, that it is irkney that it is irkney that it is given in the property of Journal of the property of Journa

Valuable Pasture Lot for Sale.

Peculiar Habits.—A man may have virtae, capacity, and good conduct, and yet be insupportable. The air and manner which we neglect as little things, are frequently what the world judges us by, and makes them for or against us. There are many little maters of personal bearing and conduct, which must be managed discreetly, if we wish to be at all agreeable to our fellow-creatures. It is in vain to say that such a man, though dirty as a pig, is a good and habe man, and ought therefore to be delighted in. His goodness and his ability are very well in their own way; but 'twere as possible to hold a firebrand in one's hand by thinking on the frosty Caucasus, as to enders the personal justaposition of such a man upon a mere consideration of such abstract properties. For all the personal intercutars the personal justaposition of such a man upon a mere consideration. Not that it is necessary, that every man should be externally elegant, or an adept in the rules which constitute good breeding. The want of positively bad-ones. The most fastidious will find no difficulty in enduring a man who is little skilled in the nice formalities of the drawing-room and dinner table. If such a man is anobtrusive, he will pass very well, though it is certainly desirable, that all should be to a certain extent, prepared to act according to those laws which the mass of refined society have found to be conductive to their happiness. But no main c'an expect to be much liked, who is addicted to certain habits of a conspicuous kind, the direct tendency of which is to inspire painfal feelings in those around him.

SENERIELE.—Professor Fairchild, of Oberlin, read a paper the conducting the property of the part of the part of the property can be viewed at any time on application. The property can be viewed at any time on application. The property can be viewed at any time on application to John Nicholl on the Frenies.

An unquestionable Title will be made to the purchaser, and possible to the late of the Lands belo

SENSIBLE.—Professor Fairchild, of Oberlin, read a paper before the Teachers' Convention, on the education of boys and gives in the same school. He contended that they should not to divorced while obtaining an education. They were bred together in the family—Nature his never separated themand the establishment of separate schools for the aexes is productive of gress evils. The family is the first form of society, and all other forms are perfect in proportion as they conform to the order of the family. The usion of the sexes would promote order in the school, and stimulate exertion, for the respect of the sexes for each other would impose beautiful moral restraints, and incite to excellence. He attributed many of the hasty and unhappy marriages to the divorce of the sexes in school; for their union would moderate the inconsiderate passion which is often enkindled by that distance which lends enchantment.—Home Journal.

Septimentally, that he has opened a Mercantile Business in the Store recently occupied by Mr. Hoartio Webster. Hoartio Head, a poper of the school and hopes to give general satisfaction to any who may favour him with a call. N. B. A large supply of Gig Harness, &c. always on hand, be give general satisfaction to any who may favour him with a call. N. B. REMOVAL Mrs. SELDON

RATEFULLY acknowledges the liberal patronage received from her friends, and begs to inform them, that she has removed to that commedious House, opposite the New TEMPERANCE HALL, where she trusts, by keeping on hand a supply of the best GINGER BEER, LEMON SYRUP, &c., to merit a continuance of their favors. Families, Picnic OTAGER BEER, LE.MON STRUP, &c., to merit a continuance of their favors. Families, Pienic Parties, &c., supplied with any quantity. A few respectable BOARDERS can be accommodated.

To the Tenants on Lots 9 & 61. To the Tenants on Lots 9 & 61.

THE Subscriber having, by Power of Attorney, dated the 6th day of Varch, 1851, been appointed Agent to take charge of LOTS 9 & 61, in this Island, the Property of Lawrence Sulivan Esq., notifies the Tenants on those Townships, that all rents, and Arrears of Rent, due on the said Property, are-required to be paid to him forthwith, he alone being authorized to receive the same.

Part Hill April 9 1851.

PATIENT ARTHFIOTAL SLATES
And Unchangeable Metallic Paints: PROOF AGAINST FIRE & WATRIE Manufactured by the Patentee, in Colchester, Nova Scotia.

Manufactured by the Patentee, in Colchester, Nova Scotia.

F. HE ARTIFICIAI. SLATE is the product of a mixture of L mineral substances known to be the best non-conductors of heat as well as the most indestructible; the Chemical affinity of which conducts the surface of materials covered, into a Coaling of Actua-State—Proof against FIRE and WATER. Thus the laws of nature are made to accomplish results as surprising as they are useful, by rendering Wooden fabrics as durable as brick or Stone, and less pervious to moisture, and consequently preventing decay and destruction from corroding influences hitherto supposed unattainable.

and destraction from corroding influences hitherto supposed unattainable.

The principal ingredients are Alumina, Silica and the Oxides of Iron. The adhesive quality of the latter not only binds and attracts the particles together, but the substance covered also. The longer exposed to the weather the more powerful the attraction, and consequently the harder the State. As various shades of colour are obtained, Brick buildings may be made impervious to moisture, and the fashionable colours of either Free Stone or Granite. The oil must be evaporated by the action of the weather before it is Fire proof, which will take from nine to twelve months.

The METALLIC PAINTS, Purple and Red, are offered as Weather and Water Proof solely. Their base being Iron, secures them from Galvanic action so fatal to lead and other Paints on Iron work—and their chemical combination makes it impossible, that any change should take place from atmospheric influence or the action of Salt Water and Sulphureted hydrogen so prevalent in Sea Ports and Tidal Harbours. They surpass all Paints yet discovered in Cheapness and Durability, which render them pre-eminently

Ports and Tidal Harbours. They surpass all Paints yet discovered in Cheapness and Durability, which render them pre-eminently adapted to the covering of all kinds of Iron work, such as Shipping, Mills, Bridges, Steam Mackinery, Railway Cars, and Iron Railing. The METALLIC PAINTS have been analysed by Professor Hays of Boston. The following is an extract from his Certificate:—"As a permanent pigment, this mineral must rank with the most indestructible and unchangeable bases. For covering Metallic Ware, its composition shows that it is eminently fitted.

(Signed) AUGT. A. HAYS, State Assayer."

Directions.—Artificial State. Mis the powder with pure Boiled Linssed Oil and a little Spirits Turpentine to the consistency of very thick Paint, and apply with a common Brush, being careful to keep the mixture well stirred while putting it on. One pound will cover ten square feet with two Coats.

the mixture well stirred while putting it on. One pound will cover ten square feet with two Coals.

If Shingles have been on for years, it will be necessary to sweep off the moss and lint with a stiff broom; two or three coats of this material will make a perfect Slate Roof, proof against Fire and Water.

FREDERICTON, N. B., Nov. 13, 1850.

FREDERICTON, N. B., Nov. 13, 1850.

Mr. J. W. IRISH.

DEAR SIR,—Please send us two more barrels of your Artificial Slate. We have seen some of the good effects of it at the last fire. Some of the Roofs covered with it did not catch at all, and when the walls were burnt some of the roofs came down in one piece, and others were the means of saving the building, especially one roof alongside of the Bank B. N. A., which also was one means of saving the Bank.

Please see that it is on board of the first boat, as it might be neglected and stored.

Your obedient Servants, STEWART & NEILL.

St. John, N. B., July 20, 1850. John Ross, Esq., Patentee of the Purple Metallic Iro

Paint.

Sra,—I have just painted a new Ship with your Metallic Iron Paint, and I have much pleasure in stating that I never painted a Ship with so small a quantity of Paint and Oil, and look so well. From its adhesive qualities and the manner it covers the wood, I have no doubt but it will be more durable and much cheaper than any other paint used for such purposes, and would recommend it to the public generally.

Yours Sc.

Yours, &c. ROBERT G. MORAN.

Rosa' METALLIC PAINTS.—We have already called public attention to the high estimation in which the Metallic Paints, manufactured by John Ross, Esq. Truro, are held by those who have had occasion to use them. Certificates of a highly satisfactory character in praise of these articles of Provincial manufacture appear elsewhere, in this issue, and from information afforded by perties who have similarly applied them, we can wafely endorse the opinious therein contained.—Halifas Sus.

3.7 The METALLIC PAINTS are mixed and put on like an ordinary paint.

HERE IS YOUR REMEDY! HOLLOWAY'S OINTMENT.

A MOST MIRACULOUS CURE OF BAD LEGS, AFTER
43 YEARS' SUFFERING.

Extract of a Letter from Mr. William Galpin, of 70, Saint
Mary's Street, Weymouth, dated May 15, 1851.

To Prolessor Hollowar,
Sin,—At the age of 18 my wife (who is now 61) caught a violent
cold, which settled in her legs, and ever-since that time they have been
more or less sore, and greatly inflamed. Her agonies were distracting,
and for months together she was deprived entirely of rest and sleep.
Every remedy that medical men advised was treed, but without effect;
her health suffered severely, and the state of her legs as sterrible. I had
often read your Advertisements, and advised her to try your Fills and
Outment; and, as a last resource, after every other reneely had proved
useless, she consented to do so. She commanced six weeks age, and,
strange to relate, is now in good health. Her legs are painless, without
seam or sear, and her sleep sound and undisturded. Could you have
witnessed the suffic ings of my wife during the last 42 years, and constrast
them with her present enjoyment of health, you would indeed feel delightcel in having been the means of so greatly adeviating the sufferings of a
PFERSON 70 YEARS GF AGE CUEED ON A NATARY.

them with her prevent enjoyment of health, you would indeed field dighted in having been the means of so greatly alevinting the sufferings of a fellow creature.

(Signed) WILLIAM GALPIN.

A PERSON 70 YEARS OF AGE CURED OF A BAD LEG, OF THIRTY YEARS' STANDING.

Copy of a Letter from Mr. Wm. Alois, Builder of Gas Ovens, of Rushclife, near Huddersfield, dated May 31, 1851.

To Prolessor Hollowar.

Sin,—I suffered for a period of thirty years from a bad kg, the result of two or three different accidents at Gas Works; accompanied by scorbutic symptoms. I had recourse to a variety of n-buileal advice, without deriving any benefit, and was even told that the leg must be amputated; yet, in opposition to that opinion, your Pills and Ointment have effected a complete case in so short a time, that few who had not witnessed it would credit the fact.

(Signed) WILLIAM ABBS.

The truth of this state ment can be verified by Mr. W. P. England Chemist, 13, Market Street, Huddersfield.

A DREADFUL BAD BREAST CURED IN ONE MONTH.

Extract of a Letter from Mr. Prederick Turner, of Penshurat, Kent, dated December 13, 1850.

To Professor Holloway,

DEAR Sin,—My wife had suffered from Bad Breasts for more than six months, and during the whole period had the best medical attendance, but all to no use. Having before healed an awful wound in my own leg by your unrivalled medicine, I determined again to use your Pills and Ointment, and therefore gave them a trial in her case, and fortunate it was, I date on, for in less than a month a perfect cure was effected, and the benefit that various other branches of my family have derived from their mes is really astonishing. I now strongly recummend them to all my friends.

(Signed)

FREDRICK TURNER.

their use is really astonishing. I now strongly recommend them to all my friends.

(Signed) FREDRICK TURNER.

A WONDERFUL CURE OF A DANGEROUS SWELLING OP THE KNEE.

Copy of a letter from John Forfar, an Agriculturist, residing at Newborough, near Hexham, dated May 15, 1850.

To Professor Holloway,

Sirk,—I was afflicted with a swelling on each side of the leg, rather above the knee, for nearly two years, which increased to a great size. I had the advice of three eminent Surgeous here, and was an immate of the New rastle infimury for four weeks. After various modes of treatment had been treed, I was discharged as incurable. I rlaving heard so much of your Pills and Ointment, I determined to try them, and in less than a month, I was completely cured. What is more remarkable I was engaged twelve hours a day in the Hay Harvest, and although I have followed my laborious occupation throughout the winter, I have had no return whatever of my complaint.

(Signed) JOHN FORFAR.

(Signed) JOHN FORFAR.
AN INFLAMMATION IN THE SIDE PERFECTLY CURED. Copy of a Letter from Mr. Francis Arnot, of Breaks Lothian Road, Edinbro', dated April 29th, 1851.

Lothian Road, Edinbro', dated April 29th, 1951.

To Professor HOLLOWAY,
Sin,—For more than twenty years my wife has been subject, from time to time to attacke of inflammation in the side, for which she was bled and blistered to a great extent; still the pain could not be removed. About four years ago, she saw in the papers, the wonderful cures effected by your l'ills and Omment, and thought she would give them a trial. To her great astonishment and delight, she got insaediate relief from their use, and after presevering for three weeks, the pain in her side was completely cured, and she has enjoyed the best of bealth for the last four years.

(Signed) FRANCIS ARNOT.

With this New and ENLARGED EDITION of MANHOOD, which ranslated into five languages, will be given, the Author's tion of a Diginfecting Lotion for the prevention of all Secret

At home for consultation daily, from 10 till 3, and 6 to 8.

At home for consultation draily, from 10 till 3, and 6 to 8.

REVIEWS OF THE WORK.

"MANHOOD, by J. L. CURTIS—We agree with the Author, that
so far from works of this class being objectionable in the hands of
youth, or difficulties being opposed, every facility should be given to
their circulation; and to strengthen our opinion, we need but refer
to the recent distressing events at our Military and Scholastic Academies at Carabalton and Woolwich."—Naval and Military Gazette,
Ech. 1. 1851.

demies at Carshanon and Feb. 1, 1851.

"We feel no hesitation in saying, that there is no member of society by whom the book will not be found useful—whether such person hold the relation of a parent, preceptor, or a clergyman.—Sun, Ecening Paper.
"Curris on Manhoop.—Fortunate for a country would it be, did its youth put into practice, the philanthropic and aciontific maxima here laid down—one cause of matrimonial misery might then be banished from our land, and the race of the enervate, he succeeded by a renewal of the hardy, vigorous spirits of the olden time."—Chronicle.

Published by the AUTHOR; who begs to inform patients in the East and West Indies, the Mediterranean and the British Colonies, that their cases can be successfully treated by correspondence only, if the usual fee be enclosed, and the most inviolable accreey may be

ERICSSON'S CALORI

ERICSSON'S CALORD

(From the Newbranswick (
We hast week promised to lay before
this flw, invention, which promises to a
use unctive power. The articles descwifs published in Hunt's Merchant's J
sphinted in New York.

After mentioning several circumstant
the course pursued by Captain Ericsson,
tion to public examination, until he cor
conclusive, as to satisfy the judgment
trample down that carping, susering
and rivalry sometimes seek to strangle
genius; which is the opinion of the wri
the article proceeds:—

We have, with great care, examined
ples and construction of which were fu
distinguished inventor. It is alike
of conception and simplicity of de
mure, its operations, although might
chines upon this plan are now in
Blesers. Hogg & Delaunater—one of fivhorse power.

The latter is the most extraordinary.

horse power.

The latter is the most extraordinary ever seen. It has four cylinders. Twe diameter, stand side by side. Over et much smaller. Within these are piest pactive cylinders, and so connected the upper cylinders move together. Under lower cylinders, a fire is applied. No Neither boilers nor water are used. Ting cylinder; the upper the supply cyli supply cylinder moves down, valves pleacomes filled with cold air. As the valves close, and the air within, an passes through another set of valves, if it is to pass into the working cylinder, ton within it. As it leaves the receip passes through what is called the regue explain, where it becomes heated to a degrees, and spon entering the workis ed by the fire underneath. We have i much larger in diameter than the supperson of illustration merely, suppose it it cold air which entered the upper cylin fill the lower one. In the course however, we have said, that it passes let us suppose, that as it enters the come heated to about four hundred a temperature, atmospheric air expandisame atmospheric air, therefore, white supply cylinder, is now capable of fillithis enlarged capacity, it enters the villed the supply cylinder above, to cost in presses upon this with a mean fore eleven pounds to each square inch weight of 5,500 pounds. Upon the sileated air is, however, pressing upwach of its pistons is made, and it contins long as sufficient heat is supplied to e cylinder to the extent stated; for so histons is made, and it contins long as sufficient heat is supplied to e cylinder to the extent stated; for so histons is made, and it contins long as sufficient heat is supplied to e cylinder to the extent stated; for so histons is made, and it contins long as sufficient heat is supplied to e cylinder to the extent stated; for so histons in another, as a two-pound weight the bequite sure to bear down one pound need hardly say, that after the air forced up the

power from that sustaining source, tence of all animate life.

We have endeavoured to explain ine. . Its most strikin engine. Its most striking feature or inventor, the regenerator. Before the grand idea upon which it is base that the power of the steam-engine ployed to produce steam within that from the very nature of site duce it, amounting to about 1,20 condensation the moment it has one duce it, amounting to about 1,20 condensation the moment it has once ton. If, instead of being so lost, all steam employed could, at the mount wayed to the furnace, there again to bollers, but a very little fuel would except just enough to supply the hea is obvious. Let us suppose the stea has entered the cylinder, has drive about to pass into the condenser. This uncondensed, passesses all the heat of the boiler. It has driven the pist uncondensed, passesses all the heat of the boiler. It has driven the pist has lost no heat. That source of pt. Let it be supposed that the heat of the moment it is converted into u saved, and by some device be agat water within the boiler, with what power of the steam-engine be emplified to the converted to the moment in the converted into u saved, and by some device be against the converted into u saved, and by some device be against the converted the converted into u saved, and by some device be against the converted to the con

thus to re-employ the heat of steam thence every effort to economize in ing.

The propositions we have here at that twenty-five years since familitain Ericsson. He was at that twith their importance; and eega of motive power, was auxious which it could be so employed, it chinery, it should be returned to a same purpose. But little reflection that steam was not this element. I nent gas, and atmospheric air ese purpose. Accordingly it was empl In a work entitled 'A Dictionar, lization,' published in London in Phillips, mentions an engine which operation in that city, as, 'his applied the performance of these power have been made to depend on the its steam.' The author further a pressible delight, esce the first more twork. With a handful of fuch dium of atmospheric air, and a metential powers, he beheld a read capable of extension to as gent for most type of the commencement, is restranter, and thereby made to act these in the teacommencement, is restranter, and thereby made to act

gine at the commencement, is rec gine at the commencement, is rec transfer, and thereby made to act being, as in the steam-engine, threa-atmosphere, as so much waste for During the last ninoteen years, much of his time, and expended h
