TORONTO'S NEW PRONT.

ronto and We-t Torento Ju ction may expect to be greatly benefitted in this respect by the new line. The latter point is fast becoming an important railway centre, being it a point of union of the old Credit Valley and the new line between Toronto and Ottawa, and having close at hand stations of all the other lines running into the city. In about a week the new station of the Untario and Quebec will be completed and will be a fine and commodious building with ample accommodation for the traveling traffic on the company's servants. The erection of the roundhouse and other workshops will aford employment to a large number of men who will reside in the new subur, which has already grown to a very considerable e tent. I welve months ago there was only Harrie' hotel and two or three liveling houses, while at resent there are between forty or fifty dwellings already up or in the course of erection. A congregational church is about to be erected at a cost of \$15,000, on a ste given by Mr. Clarke on the corner of Annette street and Quebec arenue. Among the improvements to be noticed is a sidewalk along, undas street from Harris' hotel to M. John's church, and another is to be laid along Kee e street to the new railway station. We st Foronto contains a new postoffice and two stores, with a third in the course of erection for W. W. Rosebush of Scarboro. Mr. W. Cornish has a planing mill up and in operation. Those and other feats show that this new and rising suburb is bound to go shead both from the enterprise within itself and because of the fact that many citizens of Toronto will find it to their advanta e to go there to reside. At present there are five trains daily on the Credit Valley between the city and West Toronto, and with the opening of the new line on wonday that number will be increased by four trains daily, making the means of gutting into the city very ample and convenient. A good point in a two good of the new line on wonday that number will be increased by four trains daily, making the means of gutting i

SATURDAY MORNING, JULY 16, 1884. The Outlook for Business.

The commercial situation is influenced just now by two main considerations, namely, the condition of the crops and the financial position of our greatest corpora tion, the Canadian Pacific railway.

With frantic efforts the church endeavors to destroy the young science, but in vain. Then she attempts to reconcile the facts of geology with the fables of Genesis, and sails again. Now she is ready to admit that the story of creation as told in Genesis is only an allegorical fiction. The evolution theory is promulgated. A million priests array themselves against it. From nearly every pulpit comes the cry of "Darwin" or "monkey," accompanied by an idiotic sneer, that more than half reveals the "missing link." But evolution triumphs. To day the theory is accepted by every eminent scholar and scientist. In regard to the crops, favorable reports have been received from all parts, not only of Ontario, but from the other provhay has been large, and a splendid grain encouraging, and what is good for the by every eminent scholar and scientist throughout the world. The church has again been vanquished, and now her repre-sentatives are coming forward and declar-ing that henceforth christianity and evofarmers must be good for the merchants, for the store-keepers and for the manu-

As to the condition of the Pacific railway : For some time back rumors have been going about that the syndicate was in a rather bad financial way, and that it would not be able, notwithstanding the additional grant that it lately received, to western railway crossing in King street.

But though marriage a blind prejudice can prevent Victoria without love is terrible, love only will not owing in her lot with Toronto. It do. If the man is dishonorable to other may be that opposition from a few may retard the new movement, but the declaration they indulge in is not argument; and it is now about time that they should but love making; but the days of life are many, and the husband must be a guide to inform us how it is proposed to carry out successfully what is called the 'traditional sed to carry out | but lov be trusted—a companion, a friend, as well as lover. Many a girl has married a man policy" of the methodist church. The plan of a great methodist university in Ontario is a mere dream, which financial considerations slope should dispel. The annual expenditure should be a fair measure of the strength and efficiency of a university; and certainly no university can be considered great which has not at least \$100,003 a year for its arts department. Michigan spends unwards of \$250,000 annually on spends upwards of \$250,000 annually on -Mr. H. McCaw, Custom House, To-ronto, writes: "My wife was troubled with Dyspepsia and Rheumatism for a its university; Toronto is confessedly incomplete in its staff and equipment, although it spends about \$60,000 on the arts department alone. On \$16,000 although it spends about \$60,000 on the arts department alone. On \$16,000 on the long time; she tried many different medicines, but did not get any relief until she used Northrop & Lyman's Vegetable Disposers, and a streng manage to exist at Victoria! than into it for the support of methodist institutions. How then is the traditional policy to be made more successful than before the union? That policy has not prevented a majority of the methodists in western Ontario from going to Toronto university. Prominent methodists are to be found on the senate and faculty of the every dollar so invested has doubled itself in five years, some in three. A REW INVENTION.

From the Philadelphia Press. One of the newest adaptations of electric illumination is in the shape of a very small laptern, which can be introduced into the stomach, for the purpose of aiding surgical and dental operations which cannot be carried on without light and for which it has been extremely difficult here. Closing September 15th. tofore to obtain light by mirrors or other means. The lamp primarily consists of a delicate glass bulb, from which the air has been withdrawn and as nearly s perfect vacum created as possible. The bub varies in shape, being spheroidal, flat and compass-shaped, and also cylindrical, with a conical termination.

Through the thin walls of the lantern run ovlindrical, with a conical termination. Through the thin walls of the lantern run the conducting wires, connected by a carbon arc, on which the electricity centres, and which thus becomes the place of light. The glass lantern is very small, the cylindrical shaped being scarcely half an inch in length, and with a diameter not nearly so great as that of an ordinary lead pencil. The compass-shaped lamp is about one quarter of an inch thick, and has a diameter of three-quarters of an inch to an inch, while the spheroidal seems scarcely larger than a good-sized pea. The lamp is attached to a handle, from seven to nine inches long, and about half an inch thick, through which run the wires connecting with the battery. The handle and the lamp can be separated, and thus but one handle is necessary for use with the different forms of the lamps. The intensity of the power, and hence the brilliancy of the arc of light, can be regulated by moving along the handle a ring which connects with the wires. The handle has several joints and its position can be arranged in almost any way so as to adapt it to the above of the connects with the wires. sweek old, and little chicks have command of all their faculties as soon as they break the shell; but a numan baby is urterly he pless for months, hence nature gave the baby a soul-racking pair of lungs.

—A lady writes: "I have used Ayer's Saraparilla in my family for many years, and would not keep house without it. For the relief of the pains consequent upon female weaknesses and irregularities, I consider it without an equal."

An exchange says a man begins to occupy half a seat when he gets married. This is true, and after the first baby comes he begins to occupy half of the outside bed-rail. And sometimes, when the baby is particularly reacless, he is glad to grab a quilt and s'eep on the floor.

—Mr. Peter Vermett. Hochelsga, P. Q., writes: "Dr. Thomas' Eelectric Oit cured me of rheumatism after I tried many medicines to no pupose. It is a good medicine." Just think of it—you can relieve the twinges of rheumatism, or the most painful attack of neuralgia—you can check a cough, and heal bruised or broken skin, with a bottle of Dr. Thomas' Eelectric Oit cesting only 25 cents.

Yes, a baby is the most dependent of the animal creation. He is unable to help himself to everything he can lay hand to. Sometimes he wants the earth and tries very hard to get it.

—Not a particle of calomel or any other deleterious substance enters into the composition of Ayer's Cathartic Pills. On the contrary they prove of special service to those who have u-ed calomel and other mineral poisons as medicines, and feel their injurions effects. In such cases Ayer's Pills are invaluable.
