The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol $\longrightarrow$ (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole $\longrightarrow$ signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

LIGHT HOUSES.

Hon. Peter Mitchell, Minister of Marine and Fisheries. G. Washington Smith, Agent for New Brunswick, of Light Houses, Marine Hospitals, Signal Stations, Steam Fog Alarms, and Buoys and Beacons. John Harley, Engineer, Inspector of Light Houses, Marine Hospitals, Signal Stations, Steam Fog Alarms, and Buoys and Beacons, for New Brunswick. Fisheries' Department—W. H. Venning, Inspector for Nova Scotia and New Brunswick.

Cape Sable Seal Island Light.—The first Light in approaching the Bay of Fundy is on the South Point of the Seal Island. This is a plain White Light, elevated about eighty feet above high water mark, and may be seen on approaching the Island from any point of the compass. A very dangerous rock, under water, but upon which the sea always breaks, called *Blonde Rock*, lies about 3½ miles S. by W. by compass, from the Light House. Between this rock and the Island, there are some dangers—the ground is rocky throughout, and large vessels, therefore, ought not to attempt passing between them.

Brier Island Light.—In advancing up the Bay, the next Light is situated on Brier Island, about half a mile N. E. from the N. W. point thereof—a plain white light.

Digby Gut Light.—The next light on the coast of Nova Scotia, is placed on the West side of Digby Gut—from Brier Island North Eastward. The coast is very bold, and not indented; the light is therefore chiefly intended as a guide into Digby Basin—a white light.

Gannet Rock Light.—This light is intended to warn vessels of their approach to a very dangerous range of shoals and ledges, which extend from the Old Proprietor to the Seal Islands, off Machias, a dis-

tance of about twenty miles. It is a light of the Fourth order, Holophotal system—fixed *white* light 15 seconds, eclipse $5\frac{1}{2}$, flash $5\frac{1}{2}$, eclipse $5\frac{1}{2}$. The Light House is painted in stripes, vertical, black and white.

Bearings and Distance by Compass from the Gannet Rock Light House.

This Light bears from the Light House on Brier Island, N. N. W. $\frac{1}{2}$ W., 22 miles.

From the Gannet Rock to the Old Proprietor, E. $\frac{1}{2}$ S., distance 7 miles.

From the Gannet Rock to the Black Rock, off White Head Island, N. E. $\frac{1}{2}$ E., 7 miles.

From the Gannet Rock to the South West Head of Grand Manan, N. N. W., $8\frac{1}{2}$ miles.

From the Gannet Rock to the Northernmost of the Murr Ledges, N. W. $\frac{1}{2}$ N., $2\frac{1}{2}$ miles.

To the Southernmost of ditto, called Saint Mary's Ledge, W. S. W. 2 miles.

From the Gannet Rock to Machias Seal Island, W. and by N., $\frac{1}{2}$ N., 12 miles.

NOTE.—Between the Northernmost and Southernmost of the Murr Ledges, there is a range of dangerous rocks and shoals, many of them always above water, and which extends ~~westward~~ from the Light House about four miles; from this range, farther ~~westward~~ about six miles from the Gannet Light, lies a dangerous breaker, called the Bull. This may be avoided by keeping three remarkable headlands near the S. W. end of Grand Manan, open.

From Brier Island Light to the Old Proprietor, N. and by W. $\frac{1}{2}$ W., $18\frac{1}{2}$ miles.

The Blonde Rock from the Southernmost point of the Cape Sable Seal Islands S. and by W., $8\frac{1}{2}$ miles distant.

A new Tower is now being erected in place of the one on the present Tower, on which will be placed a Fifth Order French Dioptric Lighting apparatus. Fixed *white* light, visible twenty-five miles.

Machias Seal Island Lights.—There are two fixed *white* lights upon the Machias Seal Islands, elevated about forty-five feet above high water, and bear from each other E. S. E. and W. N. W., distant about 200 feet, by which circumstance of two Light Houses at the same station, they will be immediately distinguished from all other lights upon the coast (British or American.) Both the buildings are painted white. The following are the bearings from them, viz.:

To the Southernmost Murr Ledge (St. Mary's) E. S. E., easterly.

" Gannet Rock Light, E. by S. $\frac{1}{2}$ S., 13 miles.

" Southern Head of Grand Manan, E. by N. $\frac{1}{2}$ N.

" Northern Head of Grand Manan, N. E. $\frac{1}{2}$ E.

" N. E. Rock, distant 2 miles, N. E. by N.

" Little River Head, N. by W.

" Libby Island Light House (American), N. W. by W.

Vessels standing to the Northward, between these Lights and the Gannet Rock, should tack or haul off the moment they bring these Lights in one, as they will not then be more than three-fourths of a mile from the Murr Ledges, if more than five miles to the East of the Lights.

[It is recommended that the Ships' Compasses should be well compared and adjusted particularly in new ships, before they leave Partridge Island, as serious errors have frequently occurred from want of attention on this point; and as the variation in the Bay of Fundy is seventeen degrees Westerly, (or $1\frac{1}{2}$ points), it will be found by the latest published Admiralty Charts, that the course

from Partridge Island down the Bay, South Channel, between the Old Proprietor and N. W. Ledge, is S. W. $\frac{1}{2}$ S.; but the course to be steered must depend on the direction of the wind on leaving Partridge Island.]

This Light, together with the one on Escuminac (now being put up), will be the finest Lights in the Province of New Brunswick.

Head Harbour Light.—Next in order, after passing Grand Manan and the plain white Light (American), on West Quoddy Point, is Head Harbour Light. This is placed on the North East extremity of Campobello, and is a guide to vessels entering the main channel to West Isles, Moose Island, and the inner Bay of Passamaquoddy; it enables vessels also at all times to enter Head Harbour—it is a fixed *white* light. The building is painted white, with a red cross on it.

Point Le Preaux Lights.—Upon this projecting head land, two lights are placed, one above the other, in the same house, and distant 28 feet. Both lights can be seen from every point of the compass, where they may be useful—both are fixed, and *white*. The Light House is painted red and white, in stripes of five feet broad each, horizontally.

A Steam Fog Alarm has been placed in this Station, which will sound twice in each minute.

Partridge Island Light.—This Light at the entrance of the River and Harbour of Saint John, having been established upwards of forty years, requires no particular notice, further than that it is a fixed *white* light, and that the Light House is red and white, in vertical stripes. The Steam Whistle on this island is sounded ten seconds in every minute during foggy or thick weather.

Beacon Light.—Within Partridge Island, and upon a Spit or Bar, which extends about half a mile S. S. E. off Sand Point, and which dries at two-thirds ebb, stands the Beacon Tower. Upon this Tower a Fourth Order Dioptric Light, visible ten miles, is established, which is eminently useful to the coasting trade of Saint John, and to all other vessels having pilots on board, as it enables them to enter the harbour at all hours of the night. A fixed *white* light. The house is white and black, in stripes vertically.

Quaco.—A revolving *white* light is placed on a small rock off Quaco Head, showing twice full and twice dark in a minute. This light can be seen from any quarter where a vessel can approach. The Light House is painted white and red, in horizontal stripes.

Cape Enrage Light.—On the Point of that name, in Westmorland, nearly opposite Apple River Harbour, N. S. A plain *white* light. The house is painted white, and is about 120 feet above tide mark.

West Quoddy Light.—This is an American Light, and is placed on the West side of the entrance into the St. Croix by Lubec and Eastport.

Cape Forchu Light.—On Cape Forchu, on the Western side of the entrance to Yarmouth (Nova Scotia), in lat. 43° 39', N. long. 66° 8', W. It exhibits a plain, revolving light—visible one minute and a quarter, and invisible half a minute. The building is painted white, and is elevated 235 feet above the level of the sea.

Grindstone Island Light.—An Octagonal Tower, 60 feet above the level of high water on Grindstone Island, in Chignecto Bay, in lat. 45° 43' 13" N. Long. 64° 37' 25" W. The Tower is painted white, as is also the Keeper's House, one story, situate about 50 feet to the Eastward of the Tower.

Solid Vulcanite Emery Wheels, at Kears's.

Bearings and distances of several places from the above Light House are as follows:

Cape Enrage Light, by compass, S. 61½ W., 10 1-7 miles.

Highest Point of St. Mary's Ledge, by compass, N. 40 W., 6-10 mile.

The point of low water off the Light House, by compass, S. 78 W., 2-10 mile.

Jones' Ledge, N. 10 W., 8-10 mile—it dries at low springs, and has about 2½ fathoms on it at half tide.

A Sand Bank, S. 15 W., 6-10 mile; it has 1½ fathoms on its shoalest part at low water springs.

Grand Manan.—There is a Light House and Keeper's house at the "Swallow Tail," on the North Eastern part of the Island of Grand Manan, in the Bay of Fundy. The Light is 45 feet from Base to Deck; the point on which it stands is 108 feet above high water, making 148 feet elevation. This is a conspicuous mark in the South Channel between Briar Island and Grand Manan. Both houses are painted white.

Richibucto Head Light.—This is a fixed White Light, situated on Richibucto Head, Northumberland Strait, in the Gulf of Saint Lawrence. The light is placed at an elevation of 70 feet above high water, and should be seen in clear weather from a distance of 14 miles. The illuminating apparatus is dioptric or by lenses of the fourth order. The tower is square, about 50 feet high from base to vane, painted white, and stands in lat. 46° 39' 40" N., long. 64° 43' 30" W. of Greenwich.

Cape Jourmain.—A new Light House is now in course of erection at Cape Jourmain. Character of light not yet determined on.

Point Escuminac Light.—This Light House is situated in Miramichi Bay, north latitude 47° 4' 30"; west longitude, 64° 50' 30". It is a fixed bright light, elevated seventy feet above high water. A Third Order French Dioptric lighting apparatus is now being placed on this Tower, which will be visible for twenty-five miles.

Miscoon Island Light.—This Light House is situated on Birch Point, north latitude 48° 1' 00"; west longitude, 64° 30' 00". It is a fixed red light, elevated seventy-nine feet above high water.

Shediac Lights.—On Point DuChene Wharf, in the summer, north latitude 46° 14' 6"; west longitude 64° 31' 5". It is a fixed light.

Two Fixed White Beacon Lights on Shediac Island, erected the present summer.

Miramichi River.—Light House on Portage Island, now in course of erection.

Two Beacon Lights on "Preston's Beach," about five miles above Escuminac Light. Two Beacon Lights at Oak Point. Two Beacon Lights at "Grant's." All fixed *white* Lights.

River St. John Lights.—Green Head, Sand Point, Oak Point, No Man's Friend, Oromocto Shoals, and Wilmot's Bluff.

The freedom of *all* the enslaved negroes is mainly owing to the moral and material efforts of England, who, by purchase in her own dominions, and by efforts and treaties, has at length accomplished that object. Even the United States is not an exception in this view.

In the winter of 1609 in England, the cold was very severe. Frost commenced in October, and lasted four months. The Thames became a highway for the heaviest vehicles. In 1614 was the longest snow storm in Great Britain—began on January 5th, and lasted till March 12th. An immense number of human lives and of cattle were lost.

FROST BITTEN FEET.—This is one of the cases in which an ounce of prevention is better than a pound of cure. But if the ounce has not been taken, and the frost has, much depends upon timely remedies. The feet should be put immediately into cold water, and thawed out very gradually. The sudden thawing does more injury than the frost. Apply sweet oil to the injured parts, and keep quiet until the system has time to repair damages.

The best thing to give your enemy is forgiveness; to your opponent tolerance; to your friend, your heart; to your child, a good example.

POULTRY MANURE—HOW TO SAVE AND USE IT.—Poultry manure, one of the most valuable fertilizers made upon the farm, is too often allowed to go to waste. The hens and turkeys roost upon trees, under the shed, in the waggon-house, or wherever it happens. To save the manure, these birds must be taught to roost in one place. Turkeys readily take to elevated poles near the house or barn, and these should always be provided for them. Sweep up their droppings every few days, and put it in a box or barrel, and keep dry. Hens will roost under cover, and a hen-house should always be one of the farm buildings. The floor, if not of boards in a loft, should be such that it can be cleaned easily and frequently. It is well to keep plaster or dried peat under the floors. Put the sweepings in old barrels as fast as they accumulate. In a dry state they will keep a long time without much loss. It is customary to mix these droppings with wood ashes, withor much attention to definite proportions, at the time of planting, and drop them in the hill for corn and potatoes. If care is taken to keep the seed from contact with the manure, they produce very satisfactory results. But this is not the best way of using it. Two or three weeks before planting, mix the contents of the barrels with about three times their bulk of moist loam or peat under cover. When the mass is well heated, shovel it over, and mix with it as much more loam or peat, and let it lie until wanted. This may be worked into beds prepared for garden seeds, or dropped, a handful to the hill, for field crops, and will always tell a good story at harvest time.

CARE OF PIGS IN WINTER.—It is bad for the swine that the city societies to prevent cruelty to animals do not extend their offices into the country. We wonder how some pigs survive the winter treatment they often receive. They are fed at irregular intervals and with unequal supplies in quantity and quality. They have no suitable shelter, and are often confined in muddy pens without any opportunity to keep themselves dry and clean. The pig is a luxurious liver, if you give him a chance, and will keep himself clean and comfortable. No animal will pay better for warm quarters and plenty of straw. This can usually be had in any quantity and at small cost about the farmer's premises. The sty should have its full share, and as often as it gets worked up fine, it should be thrown out, and be replaced. Then it is exceedingly profitable that the feeding trough be kept under cover. Swine do not enjoy eating in the snow and rain more than other animals. Give them a chance to follow their instincts, and then see just how much they love snow banks and rain storms. Then the feeding should not simply be the refuse of the family, but substantial food, at regular intervals, and in quantities adapted to their weight. All pigs want to be kept in good thriving condition until they are put up for fattening. Money is sunk in trying to make pork out of stunted pigs.

TO PREVENT STOVES FROM RUSTING.—A correspondent asks how to prevent stoves from rusting. One who speaks from long experience recommends common stove blacking, and no kind of oil but elbow grease. Much depends upon the condition in which stoves are put away, and upon the place of deposit. If thoroughly polished—the elbow grease not spared—and set in the garret or upper chamber, they will ordinarily go through without damage.
