Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

Thomas Fisher Rare Book Library,
University of Toronto Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Thomas Fisher Rare Book Library,
University of Toronto Library

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

A SURVEY OF CANADIAN INDUSTRIES

TORONTO,
OCTOBER, 1901

ISSUED BY
THE CANADIAN MANUFACTURERS' ASSOCIATION
AND PRESENTED AS A
SOUVENIR TO THE JOURNALISTS ACCOMPANYING
THEIR ROYAL HIGHNESSES THE DUKE AND DUCHESS
OF CORNWALL AND YORK
ON THE OCCASION OF THEIR VISIT
TO CANADA

A decorative border with intricate floral and scrollwork patterns, framing the text. The border is composed of several interconnected scroll-like elements, some resembling acanthus leaves and others simple curls, arranged in a roughly rectangular shape with rounded corners.

“THERE be three things
which make a nation
great and prosperous:
a fertile soil, busy work-
shops, and easy conveyance
for man and goods from
place to place.”—Bacon.

ARCH ERECTED BY THE MANUFACTURERS OF TORONTO IN HONOR OF THE
DUKE AND DUCHESS OF CORNWALL AND YORK.

Introductory

THE Canadian Manufacturers Association, by which the following brief sketch of Canadian Industries is

issued, is an organization of all classes of manufacturers banded together to promote their common interests and to advance the general industrial prosperity of Canada. One of the particular objects aimed at is the promotion of foreign trade, in which connection correspondence is solicited from all parts of the world relating to the manufacturing industry of Canada. Foreign buyers are assured that their inquiries will receive prompt attention and all information, including catalogues and price lists of particular lines of goods will be gladly sent them free of charge. Attention is also called to the following publications of the Association which contain much information of interest concerning Canadian manufacturers and their manufactures.

"INDUSTRIAL CANADA"

The official monthly organ of the Association, published at the Head Office, Toronto.

"CANADIAN TRADE INDEX"

A classified directory of the members of the Association, distributed free of charge to interested parties, on application.

Industrial Canada

CANADA is fast advancing to the front rank as an industrial nation. To enable her, however, to take her full and rightful place she has need of three principal things: Capital, Population and Markets.

Capital and population are the first requisites in order to develop the rich natural resources of the Dominion, while the comparative smallness of the present home market compels Canadians to seek outlets for their surplus products in foreign fields.

Hitherto the development of this country has been handicapped by want of knowledge in foreign countries of the industrial possibilities of Canada. Even in Great Britain, with which the greater part of our foreign trade is done, much is left to be desired in this respect. It seems hard for the British public to realize that the world over no better field for investment of capital and for emigration is to be found than here, and that, as the numerous prizes to Canadians at Chicago, Paris, Buffalo and Glasgow emphasize, many lines of Canadian products are equal, if not superior, in quality to those of other competitors.

The present is particularly opportune for calling special attention to this matter, for there is no doubt whatever that Canadians are willing and anxious to arrange for the fullest possible trade with the motherland and sister nations within the Empire. Public sentiment is alive to the fact that after all commerce is the great nation and empire builder.

The following very brief resumé of Canadian industries is presented with the hope that the few facts and figures therein contained may assist in giving a clearer knowledge of this important unit of the British Empire.

Material Development

For the length of time over which the industrial history of Canada may be said to extend the progress made is in many respects very satisfactory. A few of the chief elements of growth may here be noted as affording a striking evidence to the substantial basis on which the prosperity of the country rests.

Population

First, as to the population. The following table shows the total population of Canada at decennial periods since 1831.

Comparative Table of Population

	1831	1841	1851	1861	1871	1881	1891	1901
Total population	1,101,685	1,562,772	2,364,419	3,176,838	3,635,024	4,324,810	4,833,239	5,338,883

From this table it will be seen that the population has increased five times in 70 years.

As Canada is now entering on an era of greater industrial prosperity than ever before the next decade will probably see a much more rapid increase in the population than the one which has just closed.

Expansion of Trade

The steady expansion of Canada's foreign trade affords a strong proof of her increasing prosperity. This will be seen from the following tables of imports and exports since the Confederation of 1867.

Comparative Table of Exports

	1868	1878	1888	1901
Produce of Mine	1,446,857	2,869,363	4,339,488	39,982,573
“ of Fisheries	3,357,510	6,929,366	7,871,105	10,720,382
“ of Forest	18,262,170	20,054,829	22,880,291	30,003,857
Animals and their products	6,893,167	11,577,086	25,620,369	55,499,527
Agricultural products	12,871,055	27,281,089	20,875,435	24,977,662
Manufactures	1,572,546	4,715,776	4,616,953	16,012,502
Miscellaneous	302,280	477,503	897,503	44,642
Value of ships built at Quebec	837,592
Estimate of unreported exports	4,866,168
Coin & bullion & short returns	4,196,821	168,989	17,534	398,077
Foreign products	2,961,722	2,249,666	3,084,322	20,379,212
	57,567,888	79,323,667	90,203,000	198,018,404

Comparative Table of Imports

WHENCE	1868	1878	1887	1900
Great Britain	36,663,695	37,431,180	44,962,233	44,789,750
North American Colonies	1,634,414	672,665	354,342	660,678
West Indies	1,396,553	1,033,849	1,942,182	800,499
United States	26,315,052	48,631,739	45,107,066	109,844,378
France	1,365,295	1,385,003	2,073,470	4,368,502

Other Foreign Countries	1,615,770	1,489,275	7,189,699	9,811,935
Free Goods	2,477,646
	71,985,306	91,199,517	105,639,428	180,804,316

Railways and Canals

The settlement and material development of such a vast interior as Canada possesses receives its stimulus from the growth of transport facilities. In this respect also Canada has made rapid strides of recent years.

The first railroad was built in 1837, from St. John's to Laprairie, and was only 15 miles long. In 1849 Canada had only 50 miles, while the United States had 9,021 miles. In 1853 the first locomotives in Upper Canada (Ontario) were run over the Northern Railway from Toronto to Bradford. At the present time Canada has greater railroads, as compared with her population, than any country in the world. A glance at the following statistics will show the progress of this development:

Railway Progress

	1837	1849	1856	1860	1875	1885	1900
Miles	16	51	850	1880	4,856	15,977	17,657
Passengers	5,190,416	9,672,599	21,500,175
Tons of Freight	5,670,836	11,659,271	35,916,183
Earnings	\$6,722,666	\$19,170,539	\$32,227,469	\$70,740,270

Canals have always played an important part in the commerce of Canada. The opening of the Lachine Canal dates back as far as 1825. The Welland Canal was opened in 1829, and the Rideau Canal in 1832. There are now eight canals between Lake Superior and tide water, while the total expenditure on canal building up to June 30th, 1900, amounts to \$79,043,784.

The development of Canadian railways and canals by lessening the cost of transportation has had a most wonderful effect on trade and in opening new territory. The cost of living in the West is now not much higher than in the older provinces in the East, and products from the interior are being conveyed to the coasts at an ever diminishing cost.

Great improvements however are still contemplated in the present systems, and vast tracts of the Dominion have yet to be opened up. The next few years will doubtless see a large expenditure of capital in this work.

The industries of Canada fall into five leading groups: fisheries, mining, lumbering, agriculture and manufacturing. Each of these may be referred to separately.

Canadian Fisheries

The fisheries of Canada are the most extensive in the world, embracing over 5,600 miles of sea coast besides innumerable inland lakes and rivers. The salt water area is estimated at more than 1,500 square miles, the fresh water area at no less than 72,700 square miles. In 1900, 79,863 men were employed in the fishing industry using 5,506,760 fathoms of nets and other fishing gear, representing a capital of \$10,000,000. Nearly twelve hundred schooners and tugs manned by 8,080 sailors as well as 70,893 other fishermen using over 38,000 boats found occupation in this vast industry.

Statistics are not yet to hand for 1901 or 1900, but the total value of the catch of fish in Canada for the year 1899 amounted to \$21,861,706, being an increase of about two and a quarter million dollars over that of the preceding year.

The lobster plant alone is estimated at \$1,334,180, comprising 858 canneries, dispersed on the sea board of the Maritime Provinces. No less than 18,708 persons found employment in this branch of the fishing industry, using over 1,360,000 traps.

The salmon preserving industry of British Columbia, comprising 60 canneries and representing a capital of \$1,380,000, gives employment to 18,977 hands.

From the year 1869 to 1899 inclusive, the five principal commercial fishes yielded the following enormous total values:—

Cod,	\$17,523,126
Herring,	60,664,916
Lobsters,	59,210,127
Salmon,	59,103,171
Mackerel,	39,683,427

Forest Wealth

A source of enormous wealth to Canada is her forests. The principal woods are maple of several varieties, white and black ash, white and rock elm, hickory, red and white birch, white and red oak, beech, aspen, poplar, walnut, white and red cedar, white and red and black pine, white and black menzies and engelmann spruce, hemlock, Douglas fir and larch. The greater number of these varieties are, however, confined to a comparatively small area. In the great forests of the north, which form the main source of supply, the principal trees are cedar, balsam fir and poplar, aspen, white birch, tamarac or larch, banksian pine, and white and black spruce.

The dimensions of these northern forests are so vast that they seem almost incredible. They may be said to extend in a forest belt, the central line of which starts from the Straits of Belle Isle, and following a west, south-westerly course till it passes to the south of James Bay, turns north west and follows this course all the way to Alaska, opposite the mouth of the Mackenzie River. The total length of this belt, according to Dr. Robert Bell, the Assistant Director of the Geological Survey, is 3,700 miles, while its average width is 700 miles, giving an approximate total area of 2,590,000 square miles.

In view of the vastness of these resources, it may be safely said that no country affords a better field for investment in the lumber industry or in the manufacture of wood products.

Statistics are not available to show the value of lumber produced for home consumption, but the following table, containing values of exports for the years 1891, 1894, 1897 and 1900, shows the importance of the business in Canada:

	1891	1894	1897	1900
Logs, elm	\$ 155,503	\$ 152,221	\$ 77,978	\$ 74,721
Logs, pine	313,281	2,459,354	1,832,352	494,311
Logs, spruce	158,334	107,282	102,399	63,078
Deals, pine	2,891,798	2,751,069	3,266,087	3,276,516
Deals, spruce and others	4,817,322	5,567,631	7,094,885	8,287,960
Planks and boards	8,626,912	7,337,001	10,817,912	9,611,278
Total lumber	\$17,574,840	\$18,551,518	\$23,808,562	\$23,646,761
Shingles	438,929	754,743	1,201,366	1,131,506
Sleepers and railroad ties	310,676	131,795	229,780	221,906
Shooks, box	201,716	105,329	80,626	251,357
Total timber	\$ 3,084,200	\$ 2,590,542	\$ 2,289,068	\$ 2,013,746
Wood, blocks and other, for pulp	188,998	393,260	711,152	902,772
Total forest	\$24,282,015	\$26,355,448	\$31,258,729	\$29,663,668

In addition to the above are the manufactures of wood, the exports of which in 1891 were valued at \$1,024,448, in 1894 at \$1,348,199, in 1897 at \$1,652,717, and in 1900 at \$3,127,442. Of the above heavy increase a great part is due to the increased exportation of wood pulp, which leaped from a value of \$742,000 in 1897 to \$1,210,000 in 1898 and \$1,816,016 in 1900.

The Mining Industry

Canada as a field for mining investment has been recently attracting world-wide attention. The result is a greatly increased production of minerals, especially in the Yukon, British Columbia, Northern Ontario and Nova Scotia.

In 1900 the value per capita of the mineral income of the community based on an estimate of the population amounted to \$11.84 as compared with about \$8.00 in 1800 and \$2.23 in 1885.

The following table will show at a glance the mineral production of Canada for the year 1900:

Mineral Production in 1900

PRODUCT	QUANTITY	VALUE	PRODUCT	QUANTITY	VALUE
METALLIC—			Phosphate (apatite), tons	1,415	\$ 7,105
Copper, lbs.	18,919,820	\$ 3,063,119	Pyrites, tons	40,031	155,164
Gold, Yukon		22,275,000	Salt, tons	62,055	279,458
Gold, all other		5,441,752	Soapstone, tons	420	1,365
Pig Iron, tons	35,387	583,158	Talc, tons	1,000	5,000
Lead, lbs.	63,169,821	2,760,521	Tripolite, tons	336	1,950
Nickel, lbs.	7,080,227	3,327,797	Structural Materials and		
Silver, ounces	4,446,505	2,730,598	Clay Products—		
Zinc, lbs.	212,800	9,342	Cement, natural rock, bbls.	125,428	99,994
Total metallic		\$40,391,197	Cement, Portland, bbls.	283,124	545,826
Non-Metallic—			Flagstones		5,250
Arsenic, lbs.	606,000	\$ 22,725	Granite		80,000
Asbestos and asbestic, tons	30,641	763,431	Pottery		200,000
Chromite, tons	2,335	27,000	Sewer pipe		231,525
Coal, tons	5,332,197	12,568,475	Slate		12,100
Coke, tons	157,134	649,140	Terra cotta, pressed brick, etc.		259,450
Fire clay, tons	1,245	4,130	Building material, including		
Graphite, tons	1,922	30,940	bricks, building stone, lime,		
Grindstones, tons	5,549	53,450	sands and gravel, tiles, etc.		
Gypsum, tons	252,001	259,009			1,850,000
Limestone for flux, tons	52,966	39,332	Total structural materials and		
Mica, tons		166,000	clay products		\$ 6,284,145
Mineral Pigments—			Total all other non-metallic		16,799,748
Baryta, tons	1,331	7,575	Total non-metallic		\$23,083,893
Ochres, tons	1,966	15,398	Total metallic		40,391,197
Mineral water		75,000	Estimated value of mineral pro-		
Natural gas		417,094	ducts not returned		
Petroleum, bbls.	710,498	1,152,007			300,000
			Total, 1900		\$63,775,090

This splendid total of \$63,000,000 for 1900 compares strikingly with \$10,000,000 produced in 1886, 16,000,000 in 1890 and \$20,600,000 in 1895.

As has been said, however, the opening up of the mineral wealth of Canada has hardly more than begun. There is untold wealth of gold in British Columbia and the Yukon with smaller deposits in other parts of the country. The coal areas are estimated at 100,000 square miles, the workable seams being in some districts 60 to 70 feet wide. Iron, nickel, copper and silver among metals and asbestos, petroleum and mica among non-metallic minerals are also found in large quantities in different parts of the Dominion.

Rich returns, therefore, await the capitalist in this direction and capital is rapidly flowing in to avail itself of them.

Agriculture

About 45 per cent. of the population of Canada are supported by farming. In addition to these there is a large class employed in industries arising out of farming, such as flour and oatmeal milling, pork and beef packing and cheese and butter manufacturing.

Agriculture is thus the paramount industry in Canada, which has become famous for the excellence of its agricultural products. The chief reasons for this preponderance are the fertility of the soil, the diversity of the climate and the prevailing levelness and low attitude of the greater portion of the country.

According to the census of 1891 the total number of acres occupied was 60,870,000; improved lands, 28,537,000; under crop, 19,905,000; gardens and orchards, 465,000; pasture, 15,284,000. The census just taken will show a very large increase on these figures.

The export commerce in most of the farm products is rapidly increasing. The following comparative statement of the value of the exports of some of the farm products of Canada during the years 1897 to 1900 shows the growth in that short period and indicates somewhat of the great possibility for expansion of this trade.

**Value of Some Canadian Farm Products Exported in Years
1897, 1898, 1899, 1900 and 1901.**

(Years ending June 30th.)

	1897	1898	1899	1900	1901

	\$42,331,285	\$65,810,778	\$57,251,076	\$67,871,206	\$72,931,705

Manufacturing

In no industry has Canada made more striking progress than in that of manufacturing.

While the exports of products of the farm, the fisheries, the forest and the mine have increased by 253 per cent., from \$42,830,759 to \$161,184,001, since 1868, the exports of manufactured articles have increased by 918 per cent., from \$1,572,546 to \$16,012,502, in the same period.

The census returns of 1891 show that the number of mechanical and manufacturing establishments increased from 49,722 in 1881 to 75,968 in 1891; the capital invested increased from \$165,000,000 to \$354,000,000, and the value of the product increased from \$310,000,000 to \$470,200,000. The present year's returns will no doubt show a still greater growth.

The chief advantage of Canada as a manufacturing country consists of course in its abundant supply of raw material, the four great productive industries of which have been outlined above.

Cheap motive power is another essential for manufacturing, with which this country is particularly well equipped. In addition to extensive deposits of coal in the Eastern and Western extremities of the Dominion, almost unlimited supplies of water power are scattered throughout the older provinces, and in British Columbia. With electrical transmission of power almost an accomplished fact, the importance of these water powers would be hard to calculate.

Food Products

Space allows of special mention to only a few of the most important manufacturing industries. In this list that of food products, which is closely bound up with the agricultural industry, ranks very high.

GROWTH OF EXPORT MANUFACTURING IN CANADA
FROM 1868 TO 1901

Flour and Oatmeal—Although vast quantities of wheat are exported from Canada, a large and ever increasing amount is converted into flour in our huge milling establishments. Canadian flour has won for itself a splendid name in foreign markets where on account of its excellent quality it is often mixed with flour from other countries. In 1901 the amount exported was \$4,046,121, the greater part of which went to Great Britain and Newfoundland. Oatmeal is also milled extensively, the exports last year amounting approximately to half a million dollars.

Butter and Cheese. The making of butter and cheese has passed from the farmers' fires into the hands of creameries and cheese factories. A higher quality is thus produced, as better appliances are used and more expert workmen employed. The establishment of a government system of cold storage has greatly facilitated export. In 1901 the total value of butter exported was \$3,355,191, and of cheese \$21,120,870; in both cases, nearly all going to Great Britain.

Bacon and Dressed Meat. The packing industry in Canada is also conducted on a large scale. A peculiar kind of hog product is obtained which finds a ready sale in the British market. The total exports in 1901 of pork, bacon and hams amounted in value to \$11,894,982.

The value of dressed beef exported in 1901 was \$1,030,090. This is an industry which is being greatly extended at the present time. Mutton, dressed poultry and canned meats also form important items of export.

Canned Vegetables. A considerable amount of capital is employed in the canning of vegetables and fruits. The output of these goods is now more than sufficient for the home demand and Canadian canners are turning their attention to the British market. Here it is gratifying to know that they are finding a good sale as the superior excellence of their product becomes known.

The canning of fruit in British Columbia is another important industry, the exports in 1901 amounting to \$2,283,930.

Manufactures of Wood

Statistics have already been given to show the importance of the lumber industry in Canada. A few of the leading manufactures of wood may now be noted.

Wood Pulp—Chief among these is wood pulp, in the production of which about twenty million dollars are at present invested, and this amount is continually increasing. The superior quality of Canadian spruce, its unlimited quantity, and the abundant supply of water power all combine to make Canada one of the best equipped countries in the world for the manufacture of this article. The exports last year reached the sum of \$1,983,246.

Paper—Closely associated with the manufacture of wood pulp is that of paper. Up to the present time almost the entire output of Canadian paper mills has been required for home consumption; but with the greatly increased production of wood pulp the manufacture of paper has also rapidly advanced and paper is beginning to figure prominently in the list of exports. With the help of capital and skilled labor Canada is bound to become one of the most extensive producers of paper and paper wares in their many forms, such as envelopes and the various kinds of commercial and legal stationery.

Furniture—The manufacture of furniture is now being carried on in Canada on a large scale. The wants of different countries are being studied and highly skilled workmen employed to produce the styles in demand. A large foreign trade is sure to develop as this is an industry peculiarly well adapted to Canada owing to the value and variety of the woods available for raw material.

Agricultural Implements—Canadian implements by their superior quality have won for themselves an enviable position in the markets of the world. The growth of the industry in Canada has gone hand in hand with the agricultural progress of the country. The result is that there is hardly an important market in the world where Canadian agricultural implements are not used.

Musical Instruments Canadian organs have won the highest awards at the world's expositions and are finding a ready sale in foreign markets. The manufacture of pianos has also advanced rapidly of late years. In the year 1901 the total value of organs and pianos exported amounted to \$549,201.

Vehicles—The vehicle industry is conducted by large firms which are now branching out in export trade. Canadian carriages are noted for their elegance and strength, and have excited very favorable comment at both the Paris and the Glasgow Exhibitions. The bicycle industry, which is a branch of the vehicle industry, has assumed large dimensions. Being in control of a few large concerns, it is carried on in the most economical manner, and a high grade of bicycles is produced. The exports in 1901 amounted to \$350,315.

Other Manufactures of Wood A few of the other important articles of manufacture from wood may be enumerated. Doors and Sash are produced in large quantities and shipped to Great Britain, South Africa and Australia. Matches are also made economically, both from paper and wood. Large factories are employed in the making of interior decorations and house-furnishings, considerable quantities of which are exported. Woodenware, such as pails and churns is a profitable line and so are wood specialties, which consist of odd ends of good lumber utilized for such purposes as skewers, handles, dowells, etc. Bent goods in the form of hubs, spokes, rims, etc., are produced both for the home market and for export trade.

Manufactures from Minerals

Iron and Steel Industries--At the present time many millions of Anglo-American capital are being expended in establishing iron and steel plants in Ontario and the maritime provinces, to utilize Canada's rich deposits of iron ore. The Government has been encouraging the establishing of such plants by generous bonuses on the output, a policy which has met with very encouraging results. In a recent address delivered under the auspices of the Canadian Manufacturers' Association, Mr. A. J. Moxham, General Manager of the Dominion Iron and Steel Co., pointed out that it was possible to manufacture steel in Canada at a cost two or three dollars less than in Pittsburg, which now so largely dominates the markets of the world. It has been said that industrial supremacy belongs to that country which controls the world's supply of coal and steel. If that be so, the future of Canada is exceedingly bright.

Manufactures of Iron--Canada is noted for her manufactures of heating apparatus. These comprise all classes of wood and coal stoves, hot air furnaces, and hot water and steam furnaces. Machinery is also manufactured in large quantities and exported to the United States, Australia, British East Indies, Belgium, Russia and other countries. Some of the producers are practically independent of the Canadian market altogether. Other iron and steel goods which we can only mention are, sewing machines, steel rails, engines and boilers, corrugated iron for roofing, interior metal furnishings and fire-proof fittings. The manufacture of all these articles will no doubt be greatly stimulated by the increased production of iron and steel within the Dominion.

Other Important Industries

Leather Goods—In 1901 Canada exported only \$2,178,604 worth of hides of skins while her import amounted to over \$4,000,000. From the latter and similar products of local supply are made the various leathers and leather goods for home consumption and for export. The total volume of leather exported in 1901 amounted to \$2,365,222, of which the greater part went to Great Britain. In boots and shoes Canada is doing a large and increasing foreign trade. Harness and saddlery is also manufactured in large quantities, the latter being the more important for export. Leather sales in England and Australia have been growing rapidly during the last few years, and the future is full of promise.

Textiles—The woollen industry occupies an important place among Canadian manufactures. About \$15,000,000 capital is represented and employment given to at least 12,000 people. Tweeds, flannels, knitted goods, cloths, carpets and underwear are among the articles manufactured.

The cotton industry is in a flourishing condition, the exports in 1901 amounting to \$654,541. Trade in Canadian cotton promises to develop very rapidly.

Tinware and Enameled Ware—The manufacture of enameled, agate and granite ware, etc., for kitchen and household utensils, is an important industry in Canada. The companies engaged in it are well established, and are now successfully catering to the foreign market. The most attractive designs and convenient patterns are used to suit the tastes of customers abroad.

Miscellaneous—Other manufacturers in which the beginnings of a successful export trade are being made are rubber goods, jewellery, drugs, explosives, oil cake, soap and cordage.

In conclusion, Canadian manufacturers have grown beyond producing merely to satisfy the home market of five and a half million people. They are now looking out upon the world as their market and are equipping themselves to enter the world competition in an intelligent and progressive manner.

Awards to Canadians at Chicago and Paris

A strong proof of the high quality of Canadian products of all kinds is afforded by the large number of prizes awarded to Canadians at the world's expositions. At Chicago the official report gives the total number of these awards as 2,126, of which 658 fell to the Department of Agriculture, 963 to Live Stock, 24 to Fisheries, 65 to Mines and Mining, 23 to Machinery, 28 to Transportation, and 121 to Manufactures. At Paris Canada received 268 awards including 31 grand prize diplomas, 63 gold medal diplomas, 90 silver medal diplomas, 52 bronze medal diplomas and 32 honorable mention diplomas. 139 of these were for manufactures. At the Glasgow and the Pan-American Exhibitions Canada has been making an excellent showing. In the department of fruit at the Pan-American, for instance, Canadian exhibits captured all the prizes awarded.

Transportation, Shipping &c.

Reference has been made to the development of transportation facilities in Canada. Of the 165 railroads now in existence, the two most important are the Canadian Pacific and the Grand Trunk, the former stretching from ocean to ocean, the latter covering the Eastern provinces and connecting with Chicago and the Western United States. The extensive canal service also enables Canada to utilize the magnificent highway of water afforded by the inland lakes, ocean navigation for lighter bottoms being now established with Sault Ste. Marie and Chicago.

There are some 30,000 miles of telegraph line in operation, of which some 3,000 miles are controlled by the government. The telegraph accommodation afforded is equal to that of any country, Canada having a telegraph office for each group of 2,026 persons, while the United States has one for each group of 3,349, Great Britain one to every 3,834, France one to every 3,273, and Germany one to every 2,842.

The shipping required to carry on the whole marine trade of Canada is nearly 61,000,000 tons. Formerly, quite a number of vessels were built in Canada, but owing to the change from wood to iron and steel ships the industry has fallen away materially. Now that the steel industry in Canada is coming forward, that of steel shipbuilding will in all probability follow closely after it.

The post office system of Canada is one of the most efficient in the world. In 1900 the number of post offices amounted to 9,627, and the total number of letters was over 200,000,000. It may not be amiss to recall here the fact that Canada was the first to adopt the Imperial penny postage.

Field for Settlement

There still remain in this country immense areas of splendid farming lands open for settlement. The allotment of these is in the hands of the Dominion and the several Provincial Governments. Under the Dominion Government regulations any person who is the sole head of a family, or any male of 18 years of age or older may obtain 160 acres of land in Manitoba or the North-West Territories on payment of a fee of \$10. Leases of grazing lands are granted at an annual rental of 2 cents per acre.

The vast extent of these unsettled areas may be imagined when it is learned that in Manitoba alone only about one tenth of the agricultural land is now under cultivation. Population is, however, rapidly flowing in, and a prominent western citizen has recently predicted that the day is not very far distant when Manitoba will be producing as much wheat as the entire spring crop of the United States.* The Ontario Government is also putting forth strenuous efforts to colonize the fertile agricultural district lying in Northern Ontario.

Conclusion

The foregoing sketch will serve to furnish some idea, however inadequate, of the natural resources and industrial possibilities of Canada. The extent of these well warrants a belief in the continuance of the present prevailing good times as well as a much larger development in the future. As was remarked at the outset, what is required to enable Canada to work out her "manifest destiny" of a strong and prosperous member of the British Empire, is capital, population and markets, for all three of which she turns most naturally to the mother-land.

*T. W. Thompson, general manager of the W. W. Ogilvie Milling Co., Winnipeg at the opening of the Western Fair, 1901.
