It is, therefore, the con- tinuous duty of those in charge of the hatching houses to pick off the infected egg as soon as it shows itself. In the case of the salmon fry, of which the egg is as large as a pea, this is quite a practicable task, but in the case of the whitefish fry, the egg of which is no larger than a grain of partridge shot, and where several mil- lions of them have to be scanned, and the bad ones picked out one by one with a wooden pincers, the task was almost im- practica ble. Thus in the hatchery at</th> <th>is considerably in excess of last year's number. There is, likewise, being estab- lished on the Restiguouhe River, New Brunswick, a salmon hatchery, which will be much the largest in the Dominion. This building will be not less than 100 feet by 40 teet. It is also proposed to erect a breeding-house for salmon at some convenient point in British Columbia REMEDYING BAD PRACTICES AT MIRAMICHI, During next season it is decided to re- move the cause of complaint on the Mira- michi, N. B., respecting the alleged tak- ing of breeding salmon off the spawning beds for the hatcheries, by catching the fish on the common fishing grounds in- stead, and keeping them in ponds prepared in conjunction with the hatchery there. It is the intention now to take for the house about 200 female and 100 male salmon; which allowing 7,000 eggs to</th> <th>been toid, Melville and 10 men were met by three Yakuts. The Yakuts are good- natured nomads, very skilful in caring for disorders and maladies, caused by cold. The party could not have fallen into better hands. It must be remembered, however, from Barchoi, where they were discovered, to Yakutsk, is a distance of 2,000 versts, or 1,400 miles, with no regular means of transport. At least 20 days are required to get there, but as those who went to the rescue startled three days ago the time necessary to find the party and to bring them back to Yakutsk will be about two months. Nor should it be forgotten that, although the whereabouts of Melville and party is pretty well know, that of Delong, who sent forward Nendeman and Noras out of his party of thirteen, is not known, and that for succoring expeditions to reach him will take a long time over a country where there are no roads. The distance from Yakutsk will hampered postal roads, which will require at least 13 days to transport 24 persons. The Governor of Yakutsk, Gen Tohernaieff (not Gen. Tchernaiff, of Servia), will receive instruc- tions of the Governor ad erders for</th>	to which he devotes himself. The <i>Telegraph</i> says "the best medical ex- perience" does not approve of closing schools in the country when diphtheria prevails. Perhaps it will name its best medical experience. Until it does so we shall continue to believe its authority is not the best. The <i>Telegraph</i> also says special and prompt means should be taken to see that no person attends the school from a household affected with the disease. If it can show the public how this can be done in a practical way, it will do something that has been tried and found impracticable heretofore in some places. In these matters it is not well to pay too much attention to the va-	and tar greater by reason of the full force of the sun upon the river. Thus there is a superabundance of organic matter in the river now on the one hand, and a lesser volume of water on the other; hence in the summer heat in such a river will the salmon die. * * The same fungoid that attacks the fish. it is that the unsound egg develops. It is, therefore, the con- tinuous duty of those in charge of the hatching houses to pick off the infected egg as soon as it shows itself. The <i>Telegraph</i> says "the best medical ex- perience" does not approve of closing schools in the country when diphteria prevails. Perhaps it will name its best medical experience. Until it does so we shall continue to believe its authority is not the best. The <i>Telegraph</i> also says special and prompt means should be taken to see that no person attends the school from a household affected with the disease. If it can show the public how this can be done in a practical way, it will do something that has been tried and found impracticable heretofore in some places. In these matters it is not well to pay too much attention to the va- garies and theories of ignorant, inex- perienced, or half-informed persons who set themselves up as "authorities." We prefer the advice of men who have established themselves in the confidence of other experts as qualified to advise even the "best authorities." We may add that we realise the gravity of a diphtheria epidemic quite as much as	and tar greater by reason of the full force of the sun upon the river. Thus there is a superabundance of organic matter in the river now on the one hand, and a lesser volume of water on the other; hence in the summer heat in such a river will the salmon die. * * The same fungoid that attacks the fish. it is that the unsound egg develops. It is, therefore, the con- tinuous duty of those in charge of the hatching houses to pick off the infected of the salmon fry, of which the egg is as large as a pea, this is quite a practicable task, but in the case of the whitcfish fry, the egg of which is no larger than a grain of partridge shot, and where several mil- lions of them have to be scanned, and the bad ones picked out one by one with a wooden pincers, the task was almost im practica ble. Thus in the hatchery at Sandwich it was found necessary to em- ploy from thirty to forty little boys and girls to pick the eggs, and corresponding numbers for similar work in the other establishments. Chiefly to get rid of this difficulty a NEW MEHOD OF HATCHING WHITEFISH has been lately adopted in the hatching	is considerably in excess of last year's number. There is, likewise, being estab- lished on the Restigouche River, New Brunswick, a salmon hatchery, which will be much the largest in the Dominion. This building will be not less than 100 feet by 40 teet. It is also proposed to erect a breeding-house for salmon at some convenient point in British Columbia. REMEDYING BAD PRACTICES AT MIRAMICHI. During next season it is decided to re- move the cause of complaint on the Mira- michi, N. B., respecting the alleged tak- ing of breeding salmon off the spawning beds for the hatcheries, by catching the fish on the common fishing grounds in- stead, and keeping them in ponds prepared in conjunction with the hatchery there. It is the intention now to take for the house about 200 female and 100 male salmon; which allowing 7,000 eggs to each female fish would give 1,400,000. The number of eggs which will be used in the Restigouche house will be largely in excess of the fisheries from all these eggs and all this culture, several practical fisherman, perhaps because they do not	been toid, Melville and 10 men were met by three Yakuts. The Yakuts are good- natured nomads, very skilful in caring for disorders and maladies, caused by cold. The party could not have failen into better hands. It must be remembered, however, from Barchoi, where they were discovered, to Yakutsk, is a distance of 2,000 versts, or 1,400 miles, with no regular means of transport. At least 20 days are required to get there, but as those who went to the rescue started three days ago the time necessary to find the party and to bring them back to Yakutsk will be about two months. Nor should it be forgotten that, although the whereabouts of Melville and party is pretty well known, that of Delong, who sent forward Neudeman and Noras out of his party of thirteen, is not known, and that for succoring expeditions to reach him will take a long time over a country where there are no roads. The distance from Yakutsk to Irkutsk is 2,818 versts, or 1,900 miles, with hampered postal roads, which will require at least 13 days to transport 24 persons. The Governor of Yakutsk, Gen Tohernaieff (not Gen. Tchernaiff, of Servis), will receive instruc- tions of the Government and enders for fresh expeditions in eight days by a courier extraordinary, travelling 250 miles a day. There will be no further news here from the Jeannette party themselves in less than three months, as the telegraph wire does not extend beyond Irkutsk. From Irkutsk to St. Petersburg will take them probably a month travelling as rapidly as possible. They will probable be at St.
