THE OLD RELIABLE

**"Giant"****Portland Cement**

Used exclusively on the NIAGARA FALLS TUNNEL and POWER HOUSE of the Niagara Falls Power Co. After five years the tunnel was recently inspected—32,400,000 cubic feet of water had rushed through every hour for five years. From one end of the tunnel to the other it was as strong as the day when it was finished. Not one of the 19,000,000 bricks used was out of place.

The verdict was "PRACTICALLY ABSOLUTELY PERFECT."

**DUTY ON CEMENT.**

The Department of Customs, Ottawa, has issued the following announcement affecting the duty on cement :

Item 187 is repealed, and the following substituted :

187. Cement, Portland and hydraulic or water lime, in barrels or casks, the weight of the package to be included in the weight for duty, twelve and one-half cents per one hundred pounds ; in bags, twelve and one-half cents per one hundred pounds, together with twenty-five per cent. ad valorem on the bag.

The loss of temperature of superheated steam in mains is liable to be overlooked by engineers accustomed only to saturated steam. Dr. Berner, of Berlin, has found that the drop in well-lagged pipes will range from 0.3° to 1° Fahr. per running foot. The drop varies inversely as the diameter and steam velocity.
