The copy filmed here has been reproduced thanks to the generosity of:

Stauffer Library
Queen's University

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaît sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

**SOME OPINIONS OF THE PRESS REGARDING THE FIRST EDITION
OF THE CONCISE DICTIONARY.**

"The *Concise Dictionary* stands first—and by a long interval—among all the one-volume English Dictionaries hitherto published."—*The Academy*.

"We have tested this dictionary by use, which is the only way to form a fair judgment on a work of the kind, and our first impression of its clearness of definition, arrangement, and type, and of its comprehensiveness and general handiness and usefulness has been steadily confirmed. . . . We can heartily recommend this neat and handy volume to all who want a copious and trustworthy English dictionary of reasonable dimensions."—*Athenaeum*.

"In clearness of type, in size, shape, and arrangement, the volume leaves nothing to be desired. Till Dr. Murray's great work is completed it is not likely to be superseded."—*Journal of Education*.

"The best of its kind that has yet been published."—*Newcastle Journal*.

"Merits the most cordial reception. The *Concise Dictionary* will rank as one of the best popular lexicons yet brought out."—*London Daily Chronicle*.

"For the execution of his arduous task Dr. Annandale deserves unlimited praise. The *Concise English Dictionary* is, for all general purposes, complete and stamped with authenticity."—*Civil Service Gazette*.

"Cannot be too highly praised."—*Newcastle Chronicle*.

"A better dictionary for ordinary use need not be desired—at all events such a desire would not be likely to be gratified."—*Birmingham Daily Post*.

"Stands towards other dictionaries of the smaller character in the relation of the 'Imperial' to rival lexicons—in other words it holds the 'premier' place."—*Spectator*.

P R E F A C E.

THE name of **CONCISE DICTIONARY** has been adopted for this work in order to express the fact that it has been compiled on the principle of compressing a very great quantity of matter into a very moderate compass, and to convey some idea of its relation to the large and comprehensive dictionary on which it is based. Conciseness, however, is merely relative, and this dictionary, though it contains hardly a fourth of the quantity of matter contained in the *Imperial Dictionary*, will be found to give a greater amount of information than might be expected from its bulk. In particular, words and terms connected with the various arts and sciences, and with all the common topics of the time, are here explained more fully than is usual in dictionaries of similar compass, this being the sort of information for which the majority of readers most commonly consult a dictionary. The vocabulary also is very ample, the definitions precise and clear, and as a whole, the book, it is believed, will form a handy and trustworthy work of reference for all who are content—or have to content themselves—with a dictionary of moderate compass and moderate price.

The present work is not to be regarded as a mere abridgment, since, in order to produce a dictionary of the extent and character which this possesses, much of the matter of the *Imperial Dictionary* had to be condensed, re-written, or re-arranged, while a certain proportion of the entries had to be omitted altogether, some new matter also being incorporated. The words thus omitted are not such as the great majority of readers would be likely to miss, being mainly obsolete words, provincial words, and words of rare occurrence or of little importance generally. Obsolete words and meanings when considered to be of importance are given; more especially when they are to be met with in the Bible, Shakspeare, Milton, and other eminent writers. The words that make up the bulk of the vocabulary of this dictionary, however, mainly belong to modern literature, science, and art, and comprise many of quite recent origin, and such as are yet hardly to be met with except in colloquial usage and in newspapers or periodicals.

In order to carry out the work on the principle of conciseness and to condense the matter as much as possible, the method of grouping certain words together in one paragraph, instead of giving each a separate paragraph to itself, has been adopted. Only such words as are closely connected in origin, form, and meaning are thus grouped—the group very often consisting of a primary word followed by a number of derivatives, compounds also being grouped under the word that forms their first element. Besides economizing space, this plan often shows the meaning of the words grouped more satisfactorily than could be done if each were explained by itself. As it is sometimes difficult to decide how far the principle of grouping should be carried, or where to set the limits of a group, no hard-and-fast line has been drawn, convenience and facility of reference being generally

v

allowed to decide the matter. The alphabetical arrangement is disturbed as little as possible; but when a word is shifted to any great extent from its natural alphabetical position a cross reference is given from this position to the leading word under which it may be found. Hence no intelligent reader need have any difficulty in finding the word he wants.

In the definition and explanation of words and phrases great care has been taken to use clear and unambiguous language, and to give what is really information. And as the *Imperial Dictionary* has the character both of an encyclopedia and of a dictionary, so also the present work—so far as consistent with its size and scope—retains a good deal of the same character, there being many words and terms that require the encyclopedic mode of treatment for their full elucidation. In explaining such terms it has been a special aim to avoid undue technicality and to employ scientific terminology no further than is desirable for the sake of brevity and scientific accuracy. To make clear the different meanings or shades of meaning with which words are used in literature is often extremely difficult without the aid of examples or quotations. Accordingly brief examples or typical phrases are often introduced in the definitions of this dictionary for the sake of precision; to give illustrative quotations from standard authors, as is done by the *Imperial Dictionary* and other large lexicons, was of course quite beyond the scope of this work. For the sake of saving space the more unimportant abstract nouns ending in *-ness*, and adverbs ending in *-ly*, have often been left without a definition, their meaning being made sufficiently clear by the definition of the word from which they are derived. As bearing on the subject of definition it may be mentioned that throughout the book will be found a considerable number of notes in regard to the meaning and usage of synonyms. These had to be limited both in number and in extent, but it is hoped that they will be of considerable service in leading to the more correct employment in composition of such synonymous words. Examples of the notes here spoken of may be found under ABRIDGMENT, ACCUSE, ACQUIRE, ACTION. The grammatical construction of words is frequently indicated also; as when it is pointed out that verbs are followed by *from, on, to, with, &c.*; when they are followed by reflexive pronouns, and the like.

Many words being used with a special force or meaning in certain phrases that require to be treated as a whole, it was deemed advisable to include and explain a large number of these phrases or verbal aggregates under the main word with which they are respectively connected. The phrases referred to are such as *to bring about, to come about, to come to pass, to set on foot, to stand fire, to take place, &c. &c.* So also a large number of such compound terms (apart from compound words) as *accommodation bill, accommodation ladder, account current, &c.*, have been included and explained, since a knowledge of their meaning is not to be obtained from that of the individual words of which they consist.

On the etymological department of the work such an amount of care and pains has been bestowed as the great importance of the subject demands. The etymologies are necessarily brief, but it is hoped they will be found sufficiently full and clear for the needs of most inquirers. In drawing them up the principal recent works treating of or throwing light on the etymology of English words have been consulted, and special recognition of

assistance must be made to Ed. Müller's *Etymologisches Wörterbuch der englischen Sprache*, to Professor Skeat's *Etymological Dictionary of the English Language* and his *Concise Etymological Dictionary*, and to Kluge's *Etymologisches Wörterbuch der deutschen Sprache*. It will be observed that in a great many of the etymologies other connected English words are mentioned in addition to the one whose origin is being dealt with, or a direct reference is given to some other word or words akin in origin. By turning up the various words thus connected any one who cares to do so may obtain a better knowledge of their respective origins and of their bearing etymologically to one another. The hints on etymology and the lists of prefixes and suffixes at the beginning of the book will also be found useful by those who are interested in the derivation of words.

The method adopted for exhibiting the proper pronunciation of the words is extremely simple, and will indeed be understood at a glance, the key-words for the different rounds being shown at the foot of every page. The pronunciation will be found to be in accordance with the best usage; and where the usage cannot be said to be definitely settled alternative pronunciations are given. It has not been thought necessary to show the pronunciation of compound words when both their elements are pronounced independently and neither of them receives special emphasis.

In order to meet the wants of a large number of readers an Appendix is given containing a pronouncing list of Greek, Latin, Scriptural, and other Ancient Names, similar lists of modern Geographical and Biographical Names, an explanatory list of Foreign Words and Phrases, besides several other useful lists.

C. ANNANDALE.

NOTE TO NEW EDITION.

In introducing to the public the present edition of the Concise Dictionary, attention may be drawn to the fact that while the price of the book has now been reduced to a third of what it originally was, the matter contained in it has been considerably increased, and the whole work has been carefully revised and corrected where necessary. The added matter consists partly of a Supplement giving definitions of additional words, partly of several appendices, lists, or tables useful for general reference. The Supplement contains, as is natural, a number of words that have come into use or prominence in quite recent times, and among them are certain vocables not hitherto entered in any English dictionary. The longest and most important of the added lists is the one intended to form a sort of key to literary allusions, being an explanatory list of such names connected with mythology, fiction, &c., as are most likely to be met with in general literature. The list of authors and their dates, the table showing the formal modes of addressing persons of title or official rank, and the conspectus of the moneys of the world, will also be found widely useful.

HINTS ON ENGLISH ETYMOLOGY.

THE English language is one of a group of closely allied languages which are known by the general name of the Teutonic or Germanic tongues. The other languages of the group, some of which are more closely connected with English than the rest, are Dutch, German, Danish, Icelandic or Old Norse, Swedish, and Gothic; to which may be added, as of less importance and having more the character of dialects, Norwegian, Frisian, the Plattdeutsch or Low German of Northern Germany, and Flemish, which differs little from Dutch. The evidence that all these languages are closely akin is to be found in the great number of words that they possess in common, in the similarity of their structure, their inflections, their manner of compounding words—in short, in their family likeness. This likeness can only be accounted for by supposing that these languages are all descended from one common language, the primitive Teutonic, which must have been spoken at a remote period by the ancestors of the present Teutonic peoples, there being then only one Teutonic people as well as one Teutonic tongue. In their earliest form, therefore, and when they began to be differentiated, these languages must have had the character of mere dialects, and it is only in so far as each has had a history and literature of its own that they have attained the rank of independent languages. The rise of dialects is a well-known phenomenon, taking its origin in the perpetual change to which all languages are subject. A language that comes to be spoken over a considerable area and by a considerable number of persons—more especially when not yet to some extent fixed by writing and literature—is sure to develop dialects, and each of these may in course of time become unintelligible to the persons using the others, if the respective speakers have little intercourse with each other, being separated by mountain ranges, arms of the sea, or merely by distance. In this way is the existence of the different Teutonic tongues to be accounted for. A similar instance of several languages arising from one is seen in the case of Italian, French, Spanish, and Portuguese, all of which are descended from the Latin. Of the common origin of these we have, of course, direct and abundant evidence.

The Teutonic tongues are often divided into three sections, based on closeness of relationship: the *High German*, of which the modern classical German is the representative; the *Low German*, including English, Dutch, Frisian, and Gothic; and the *Scandinavian*, including Danish, Swedish, and Icelandic. Another division is into: *East Germanic*, which includes only the Gothic; *North Germanic*, which includes Danish, Swedish, and Icelandic; and *West Germanic*, which includes English, Dutch, and German. Some authorities again make only two divisions: *East Germanic*, including Gothic and Scandinavian; and *West Germanic*, including the others.

The Gothic language presents us with the earliest specimens of any Teutonic speech that we possess. This tongue, which has long been extinct, is known to us almost solely from fragments of a translation of the Bible made by Bishop Ulfilas or Wulfilas, about A.D. 380. These remains, scanty as they are, are of the highest importance to the student of Teutonic philology. Next to Gothic in the antiquity of its literary remains comes English. The earliest form of English, say English as used up to A.D. 1100, is usually called Anglo-Saxon, though many now call it Old English. In this dictionary Old English is applied to a later stage of the language than what belongs to the Anglo-Saxon period, yet it must never be forgotten that Anglo-Saxon is really Old English, and that there has been no break in the life of the English language since it was introduced into Britain by the

Saxons, Angles, and Jutes. Anglo-Saxon, however, is very different from modern English. It possesses many inflections long since lost and many words long since gone out of use, and, indeed, has to be studied by a modern Englishman as if it were a foreign tongue. Old Saxon is the name given to the form of speech anciently in use among the Continental Saxons and preserved in a poem on our Saviour belonging to the ninth century.

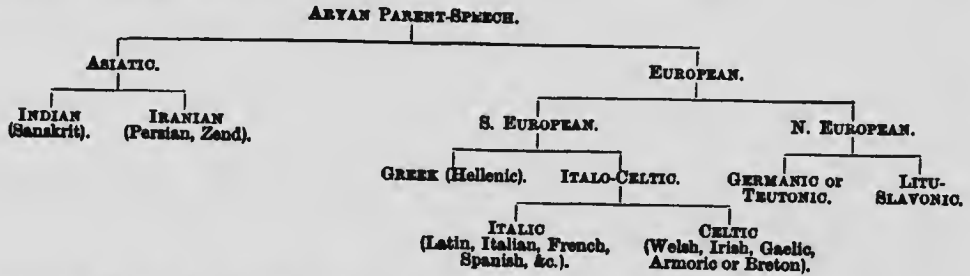

The Teutonic tongues, with the primitive or parent Teutonic from which they are descended, have been proved by the investigations of philologists to belong to a wider group or family of tongues, which has received the name of the Aryan, Indo-European, or (especially in Germany) Indo-Germanic family. The chief members of this family are the Teutonic, Slavonic (Polish, Russian, Bohemian), Lithuanian, Celtic (Welsh, Irish, Gaelic, &c.), Latin (or Italic), Greek (or Hellenic), Armenian, Persian, and Sanskrit. Just as the Teutonic tongues are believed to be the offspring of one parent Teutonic tongue, so this parent Teutonic and the other members of the Aryan family are all believed to be descended from one primitive language, the Aryan or Indo-European parent-speech. The people who spoke this primeval Aryan language, the ancestors (linguistically at least) of the Aryan races of Europe and Asia, are believed by many to have had their seat in Central Asia to the eastward of the southern extremity of the Caspian Sea. This, however, is very problematical, and some philologists see reason to think that Europe may rather have been the original home of the Aryan race.

How remote the period may have been when the ancestors of the Teutons, the Celts, the Slavs, the Greeks, Romans, Persians, and Hindus were living together and speaking a common language is uncertain. Yet the general character of their language is approximately known, and philologists tell us with some confidence what consonant and what vowel sounds the Aryan parent-speech must have possessed, what were the forms of its inflections, and what, at the least, must have been the extent of its vocabulary, judging from the words that can still be traced as forming a common possession of the sister tongues of the family. In investigating and deciding on matters of this kind, however, hypothesis must always play a great part, and thus what has been accepted for fact at one time has been discarded as baseless at another. Hence it is not improbable that many of the so-called Aryan or Indo-European roots that modern philologists have established to account for the various words and forms in the Aryan tongues may have to be abandoned as a result of further investigations. Such roots have at best but a shadowy existence, since they can only be regarded as mere abstractions, having no life apart from the words in which they are presumed to exist.

The Aryan tongues, ancient and modern, are entitled to claim the first rank among the languages of the globe, both for richness, harmony, and variety, and more especially as embodying a series of literatures to which no other family of tongues can show a parallel. Next in importance come the Semitic tongues—Hebrew, Chaldee, Syriac, Arabic, &c. These, like the Aryan tongues, form a well-marked family, one notable peculiarity of which is the possession of 'trilateral' roots, or roots of which three consonants form the basis and give the general meaning, while inflection or modification of meaning is indicated by internal vowel-change. Thus the vowels play a subordinate part to the consonants, and do not, as in the Aryan tongues, associate with them on equal terms. Other important linguistic families are the *Hamitic*, which includes the ancient Egyptian and the Coptic; the *Turanian*

or *Ural-Altai*, which includes Turkish, Finnish, Hungarian, Mongolian, &c.; and the *Monosyllabic* or *South-Eastern Asiatic*, which includes Chinese, Siamese, &c. All these families form groups, so far as is known, quite separate from and independent of each other; and attempts to connect any two of them, as Aryan and Semitic for instance, have met with no success. Formerly etymologists had no hesitation in deriving English words from Hebrew roots, but this was in the days when there was no science of comparative philology. That all languages are descendants of one original tongue, as is believed by many, linguistic science can neither affirm nor deny.

The exact relationship which the different Aryan languages bear to each other has been much discussed, and the question is not yet settled. It has been maintained, for instance, that Latin and Greek are more closely akin to each other than to any other languages of the family. Some, on the other hand, have insisted that Latin is more nearly akin to Celtic than to Greek. It is generally admitted that Sanskrit and Persian are closely akin. The following scheme, in the form of a genealogical table, exhibits the most commonly accepted theory as to their relationship:—

By those who have learned something vaguely of the antiquity and linguistic importance of Sanskrit, this language is sometimes supposed to be the parent-speech of English and other European tongues. The above table shows how erroneous such a notion is, Sanskrit being only a collateral relative.

Though English is a Teutonic language it has admitted into its vocabulary a vast number of non-Teutonic words—more especially words of Latin origin that have passed through the French. If we consider merely the vocabulary, therefore, English may be said to be a composite language. But in structure it is entirely Teutonic; in its grammar, its inflections, its formative elements, &c., it remains true to its origin. And we must remember that the Franco-Latin, or foreign portion of its vocabulary, has a very different character from the Teutonic. The latter is indispensable, the former is not. Without the Teutonic portion of our vocabulary communication is impossible; but a conversation of some length could be carried on, or a composition of some extent written, without the use of a single Franco-Latin word. The Lord's Prayer, for example, is almost entirely Teutonic, and might easily be made wholly so. Even when the language, whether written or spoken, is made up to the largest possible extent of non-Teutonic elements, these are still forced into the Teutonic mould; the verbs are conjugated as English verbs, the adjectives are compared after the native model, and the whole is welded together by the indispensable native particles *a, an, the, of, with, to, and, &c.*, and by verbs and verbal forms that are peculiarly the property of the Teutonic tongues.

It is probably the fact of our language containing so many extraneous elements, combined with the idea of Anglo-Saxon being a separate language from English, that has led to the popular notion that all English words are 'derived' from some foreign source. It is to be feared there are too many persons who, when they learn, for example, that the German *Aas* means the same as English *Acas*, think that in some mysterious way the English word is derived from the German. But this word, and the same of course is the case with a great many others, belongs to the earliest period of the language (Anglo-Saxon); and the reason why similar forms appear in the German and the rest of the Teutonic tongues is because they all have these slightly varying forms as a common inheritance from the primitive Teutonic. Even when the original of a modern English word cannot be found in Anglo-Saxon the word is not necessarily borrowed or derived from any other language. If it clearly has Teutonic relatives its absence from Anglo-Saxon may be accounted for by the imperfection of the records; for there

can be little doubt that words were used in Anglo-Saxon times that we do not find in the literary remains of the period. The same must be the case also in regard to the other Teutonic tongues, and thus the history of some of our common words is very defective. In the etymologies of this dictionary the Anglo-Saxon original of any English word is always given when it is known, and the form the word assumes in the other Teutonic tongues is added for the sake of comparison, and to show how widely the word is spread. Sometimes only certain words supposed to be connected with the one in hand are all that can be given.

The Teutonic portion of our vocabulary then is mainly of native origin and not derived from any foreign source. Certain Teutonic words, however, we must admit to have been borrowed into the English language. These are chiefly Dutch in origin, and are mostly connected with maritime or commercial affairs. A large number of distinctively Scandinavian words also exist in the language, but most of these are to be regarded as not, strictly speaking, borrowed, but as having been introduced by the Scandinavians (Danes) who settled in the country before the Norman Conquest, and formed an important element of the population, more especially in the northern districts.

In order to understand how it is that many words in the different Aryan tongues are really of the same origin, though superficially they may appear very different, it is necessary to know something of *Grimm's Law*. This law, which, like a natural law, is simply a statement of observed facts, is so named from the great German philologist who first definitely laid it down as the result of observation and comparison of the relative linguistic phenomena. It concerns the so-called 'mute' consonants and takes effect more especially when these are initial. According to it, in words and roots that form a common possession of the Aryan tongues, being inherited by them from the parent-speech, where in English (more especially Anglo-Saxon) and in most of the Teutonic tongues we find *t, d, or th*, we find in Latin, Greek, and Sanskrit, not these letters, but respectively *d* instead of *t*, an aspirated sound instead of *d*, and *h* instead of *th*. That is, an English *t* corresponds to a Latin, Greek, and Sanskrit *d*, as is seen in *tame* compared with L. *damare*, Gr. *damactin*, Skr. *dam*, to tame; an English *d* corresponds to Latin *f*, Greek *th*, Sanskrit *dh*, as in E. *door*, L. *foras*, Gr. *thura*, Skr. *dhvra* (for original *dhvra*), a door; an English *th* corresponds to Latin, Greek, and Sanskrit *t*, as in *thin*, compared with L. *tenuis*, Gr. *tanais*, Skr. *tauu*, from root *tan*, to stretch. If we next take the gutturals we find that English *k* (or *c* hard), *g, h*, correspond respectively in the above languages to *g, k* (*ch, kh*), *k, as is*

seen in E. *kin*, L. *genus*, Gr. *genos*, Skr. *janas* (where *j* is for original *g*); E. *goose* (modified from original *genus*), compared with L. *anser* (for older *anasser*), Gr. *âên*, Skr. *ânesa*; E. *head* (A. Sax. *heafod*), L. *caput*, Gr. *kephale*, Skr. *kapâla*. Similarly *b* in English corresponds to *f* in Latin, *ph* in Greek, and *bh* in Sanskrit, as in *brother*=L. *frater*, Gr. *phrater*, Skr. *bhratrâ*, a brother; *f* in English to *p* in Latin, Greek, and Sanskrit, as in *father*=L. *pater*, Gr. *patêr*, Skr. *pitrî*, father. German exhibits certain letter changes peculiar to itself, and for this reason is placed, in any full statement of Grimm's law, apart from the other Teutonic tongues. In German, for instance, *t* takes the place of an English *d*, as in G. *tag*, E. *day*, G. *teuf*, E. *devil*; *d* the place of *th*, as in G. *dîng*, E. *thing*, G. *drei*, E. *three*, &c. In some cases the law does not operate in consequence of the influence of other letters; thus the *s* of *stand* prevents the *t* from becoming *th*, as it ought to do to correspond with L. *stare*, to stand. Similarly *taks* and L. *tango*, to touch, are believed to be allied words though both have the consonant *t*, because they are considered to be both from the root *stag* (the *s* in *tango* being inserted as is often the case). Certain exceptions to the law are accounted for by a subsidiary law of more recent discovery than Grimm's law, known as *Verner's Law*, and formulating certain facts connected with the original accentuation of Aryan words.

The correspondence of English words with cognate words is often fully seen only when we take them in their earliest or Anglo-Saxon form or when we note their spelling and know what their original pronunciation was. Thus the verb to *lean* corresponds to L. *clinô* (in *inclînâ*), Gr. *klînô*, but we might not have been sure of this had we not had the A. Sax. *Alinian*, to lean, in which the *l* (afterwards lost) represents the Latin and Greek *k* as Grimm's law demands. Similarly *know*, which is now pronounced *nô*, duly corresponds (apart from the suffix) to L. *gnosco*, Gr. *(g)gnôskô*; and *night* (*nîht*), A. Sax. *nîht*, to the root of L. *nox*, *noctis*. The older sounds are often better preserved in the dialects (as in that of Scotland) than in the modern pronunciation of the educated; thus, while in England *wright* is now pronounced as *rite*, in Scotland it is uttered so as to let the *w* and the guttural be very distinctly heard.

It may be useful here to give the Anglo-Saxon alphabet with the sounds of the various letters so far as can be ascertained.

The vowels are as follows:

- a, like *a* in *far* or *ask*.
- â or â, similar but longer.
- æ, like *a* in *glad* or *man*.
- ê, ê, similar but long (printed *ee* in this dictionary).
- e, like *e* in *met*.
- ô or ô, like *o* in *there* or *at* in *hair*.
- î, like *i* in *sin*, or rather like French *i* short.
- ï or i, like *ee* in *seem* or *i* in *machine*.
- o, like *o* in *on* or *not*.

ô or ô, like *o* in *corn* or *on* in *moon*.

u, like *u* in *full*.

û or û, like *oo* in *fool* or *oo* in *route*.

y, like French *y*, German *ü*.

ÿ or ÿ, the same sound lengthened.

The consonants are b, c, d, f, g, h, l, m, n, o, p, q, r, s, t, th (two characters for this), w, x. With regard to the pronunciation of these it must be noted that *c* was always sounded like *k* (which is used in some MS.), and was heard in such words as *knée*, *knée*, *knif*, *knif*; *ow*=*gu* (as in *queen*, A. Sax. *cwên*). *G* was always like *g* in *go*, or sometimes perhaps nearly like *y* consonant; it was sounded when initial before *s* (as in *gnagan*, to *gnaw*). *H* was always heard; when medial and final (as in *nîht*, *nîht*, *burh*, *city*) it was strongly guttural like Scotch or German *ch*. It was common as *h* initial and distinctly pronounced before *l*, *n*, and *r*, a position from which it has since disappeared. *Hw* was written where we now write *wh* (*hwit*=white). In *wh*, *wh* initial, the *w* was pronounced, as also in such words as *adw*, *soul*, *treoweth*, *truth*, *andw*, *snow*, being then a semi-vowel.

In their transition to modern English Anglo-Saxon words undergo various changes, some of which take place with great regularity; thus *ð* becomes *f* or *th*, as in A. Sax. *ðem*, E. *them*, A. Sax. *ðc*, E. *ch*, A. Sax. *ðat*, E. *that*; *ô* becomes *oo* or *oo* (with name sound), as *ôit*, E. *oil*, *clôpan*, E. *to sleep*, *ôd*, E. *od*; *d* becomes *ee* or *ea*, as in *filan*, to feel, *clêpan*, to keep, *grûn*, green, *rdêan*, to read; *ô* becomes *oo* or its equivalent, as A. Sax. *lô*, E. *lo*, *loo*, A. Sax. *dôm*, E. *doom*, A. Sax. *môd*, E. *mood*; *ô* becomes *ou*, as in A. Sax. *ful*, E. *ful*, A. Sax. *mûth*, E. *mouth*, A. Sax. *hûs*, E. *house*, &c. Among consonantal changes may be noted the softening of the *k* sound to the palatal *ç*, as in *churc*, *birch*, *watech*, *wretch*, &c.; and the softening of *g* into the *j* sound, *w* or *y*, as in A. Sax. *egg*, E. *edge*, A. Sax. *hrycg*, E. *ridge*, A. Sax. *gnagan*, E. *gnaw*, A. Sax. *dag*, E. *day*, A. Sax. *gêr*, E. *year*.

Since there are so many words of French origin in English it may be as well to state that in early French there was a declension in substantives and adjectives based on the Latin declension, and with special forms for the nominative and accusative. Afterwards when only one form was retained for the noun as subject and as object it was the old accusative (based on the Latin accusative) that as a rule determined this general form; so that such a word as *motion*, for example, does not come from the Latin nominative *motio*, but from the accusative *motionem*; such a word as *flavour* is not from L. *favor*, but from *favorem*. It is customary, however, in etymologies to give the nominative as the typical form of the noun, and to say that *motion* is from *motio*, *motionis*, the genitive being given to show the declensional character. Besides, many French words, being taken directly in modern times from the Latin dictionary, are not as a matter of fact based on the accusative though formed after the same model as those that are historically so.

THE PRONUNCIATION.

In showing the pronunciation the simplest and most easily understood method has been adopted in this Dictionary, that of *re-writing* the word in a different form. In doing so the same letter or combination of letters is made use of for the same sound, no matter by what letter or letters the sound may be represented in the word whose pronunciation is shown. The key to the pronunciation by this means is greatly simplified, the reader having only to bear in mind one mark for each sound. Sounds and letters, the reader must bear in mind, are often very different things. In the English language there are over forty sounds, while in the English alphabet there are only twenty-six letters to represent them. Our alphabet is, therefore, very far from being adequate to the duties required of it, and very different from a perfect alphabet, which would have a distinct letter for each sound, so that the same sound would always be represented by the same letter. The principal vowel sounds (including diphthongs) are as shown in the following table, which gives also the characters that are used in the Dictionary to show the pronunciation, most of them distinguished by diacritical marks.

| | |
|----------------------------|-------------------------------------|
| a, as in fate. | 3, ... as in note. |
| ä, " far. | o, " not. |
| â, " fat. | ô, " move. |
| â, " fall. | û, " tube. |
| â, " me. | ü, " tub. |
| â, " met. | ü, " ball. |
| â, " her. | û, " Sc. abene (Fr. u). |
| l, " pine. | ol, " oil. |
| l, " pin. | ou, " pound |

The vowel which is heard in the key-word *fate* is heard also in the words *mail, pray, pear, feign, prey, and there*, although it is written by different means in each. In the Dictionary the reader is directed to give to each of those words, the vowel *a* of *fate*, by the following notation, *mäl, prä, pä, fän, prä, thär*. Thus the same letter, with the same mark to distinguish it, is adopted to denote the same sound, whatever the orthography of the word may be. It must be observed, however, that the sameness of the sound is all that is intended to be expressed, for the sound may be rather longer or rather shorter in duration than that of the key-word.

Strictly speaking the vowel sound heard in *pear, there*, and similar words, differs slightly from that heard in the other words given in being absolutely simple or pure in character. The vowel in the word *fate*, on the other hand, is a compound sound, the ending being slightly different from the initial part of it. The initial part is a vowel-sound of a specific character, which gradually changes until it becomes similar to the *e* of *me* or the *i* of *pie*, when it completes the vowel. The compound character of the vowel, and the transition from the first to the last part of it, are to be noticed in a very long syllable, such as the word *gräse*, which may be uttered in a slow and drawing manner for the purpose.

Besides the sound just noticed the letter *a* has three other very distinct sounds; and it also sometimes takes sounds better represented by *e* or *o*, as in *any, quality*. The letters *e, o, and u* have each three separate sounds, and *i* has two. The fourth sound of *e* which is used in the key is not an English sound, though very common in Scotch and French, as also in German, &c.

The compound vowel-sounds are named diphthongs, that is double sounds, whether they be written with one or more letters. Six of the vowel-sounds in English are diphthongs, of which three, viz. those in the key-words *fate, pine, and oil*, end in *e* of *me*, and those in *note, tube, and pound*, end in *e* of *move*. The remaining vowels are simple sounds, and are named monophthongs, that is single sounds, whether they be written with one or more letters (as in *fault, meet, four, &c.*).

The consonant sounds in English may be said to be twenty-five in number, as given below. Some of them, it will be noticed, are represented by two letters, this clumsy method being necessary from the imperfection of the alphabet. In any perfect alphabet *ea, ch, ng, &c.*, would have each a single character. The consonants may be divided into various classes according to their character. Two important divisions, into one or other of which they are all arranged, are the voice-consonants and the voiceless consonants, otherwise called respectively sonant and surd consonants.

| Voice-Consonants. | Voiceless Consonants. |
|--------------------------|-----------------------|
| B.—bed, ebb | P.—pin, up. |
| D.—do, add | T.—to, at. |
| G.—go, egg | K.—kin, ark. |
| L.—lo, all. | |
| M.—man, am. | |
| N.—no, an. | |
| R.—roo, far. | |
| V.—vest, have | F.—far, of. |
| W.—we | Wh.—why. |
| Y.—you. | |
| Z.—east, haze | S.—so, pass. |
| NG.—sing. | |
| ZH.—azure | Sh.—shed, ash. |
| TH.—this, lath | Th.—thin, path. |
| J.—jew, judge | Ch.—church. |
| | H.—hope. |

Neither *c* nor *q* requires to be given, the former having no characteristic sound of its own, being always equivalent to *s* or *k*; the latter, which is always followed by *e*, having the sound of *k* (*quæ—kwæ*).

The voice-consonants are uttered with voice, the voiceless consonants with mere breath, as any one may learn by carefully studying his own pronunciation of them. A syllable is formed by the utterance of one or more of the elementary sounds in one issue of voice. A syllable can only have one simple or compound vowel in it; thus the word *view* has only one vowel-sound in it, that of the *i* of *tube*, written by the trigraph *iew*. Some syllables have no vowel, a consonant alone being sufficient to form the syllable, as in the finals of *schle, little, garden, maiden*, in which, though the *e* appears in the spelling, it is really silent. As many consonants may go to form a syllable as there is a possibility of pronouncing.

The special key-words for the consonants as used in showing the pronunciation throughout the Dictionary are given immediately below. It will be understood that *ch* always represents the sound it has in *chaïn*, never that which it has in *machinæ*; *g* has always its so-called hard sound, *f* being used for the corresponding soft. The only foreign sound represented in the key is that of the French *s*, as in *don*. This is a sound that requires to be heard properly pronounced before it can be correctly acquired.

| | |
|-----------------------------------|----------------------------|
| ch, .. as in .. chaïn. | ww, as in Sen. |
| ch, .. " .. Sc. loch, Ger. nacht. | th, " thin. |
| j, .. " .. job. | w, " wig. |
| g, .. " .. go. | wh, " whig. |
| h, .. " .. Fr. ton. | sh, " assure. |
| ng, .. " .. sing. | |

The application of this key to the pronunciation of foreign words can as a rule only represent approximately the true pronunciation of those words. It is applicable, however, to Latin and Greek words, as those languages are commonly pronounced in England.

In order to the correct pronunciation of words their accent must be known. In words consisting of more than one syllable one or more of the syllables is uttered with a certain stress or emphasis, called an accent, as the first syllable of the word *labour*, the second of *delay*, and the third of *comprehension*. The accented syllable is the most prominent part of the word,

being made so by means of the accent. In this Dictionary, as in most others, it is denoted by the mark '. This mark, also called an accent, is placed above and beyond the syllable which receives the accent, as in the words *la'bour*, *de'lay*, and *compre'hension*.

Many polysyllabic words are pronounced with two accents, the primary and the secondary accent, as the word *econ'omisation*, in which the third, as well as the fifth syllable

is commonly accented. The accent on the fifth syllable is the primary or tonic accent, while that on the third is a mere euphonic accent, and consists of a slight resting on the syllable to prevent indistinctness in the utterance of so many unaccented syllables. Where both accents are marked in a word, the primary accent is thus marked ', and the secondary, or inferior one, by this mark ' , as in the word *econ'omisation*.
