ILLUSTRATED ANNUAL, 1875.

EDITED AND COMPILED BY

JAMES W. SMITH, Toronto, Ont.

CONTENTS.

 Music with Words—Pages 9, 14, 18 and 21.
Poetry—Pages 1, 11, 15 and 19.
Postal Information, &c.—Page 24.
Standard Preparations—Pages 8, 12, 17 and 22.

If thou would'st view fair Melrose aright, Go visit it by the pale moonlight; For the gay beams of lightsome day Gild, but to flout, the ruins grey. When the broken arches are black in night,

And each shafted oriel glimmers white; When the cold light's uncertain shower Streams on the ruin'd central tower, When buttress and buttress, alternately, Seem framed of ebon and ivory; When silver edges the imagery, And the scrolls that teach thee to live and die:

When distant Tweed is heard to rave, And the owlet to hoot o'er the dead man's grave,

grave,
Then go—but go alone the while—
Then view St. David's ruin'd pile;
And, home returning, soothly swear,
Was never scene so sad and fair!

BOLIPSES.

In the year 1875 there will be two Eclipses, both of the Sun,

I.—A Total Eclipse of the Sun, April 5th, 1875. Visible in portions of Africa and Asia, and the intermediate Indian Ocean.

The Sun's risings and settings are given for the Sun's centre, corrected for refraction.

The Moon's rising is given from full to change, and the setting from change to full.

HYPOPHOSPHITES, first discovered by Dr. Churchill, of Faris, so far back as 1853, as the Remedy for Consumption, Threat, Broachial and Chest Diseases; compounded according to his recipe, still stands unrivalled, year by year adding fresh proofs to its curative effects. It is recommended by the leading Physicians of Europe and throughout the Colonies; is platable improves digestion, creates healthy blood, and, restores the phosphorus originally existing in the system. A fuller reference, however, to the action of this invaluable preparation will be found on page 8. The Victoria Hypophosphites, so well known throughout the country, is prepared according to the Formula of the Original Discovers hands, and is obtainable at any Jrug Store in Canada.

SPRING.

White, through the neighboring fields the sower stalks.

With measured step, and liberal, throws the grain

With measured step, and liberal, throws the grain Into the faithful bosom of the ground; The harrow follows harsh, and shuts the scene. Be gracious, Heaven! for now laborious man Has done his part. Ye fostering breezes, blow! Ye softening dews, yo tender showers, descend! And temper all thou world reviving sun, Into the perfect year! Nor ye who live In luxury and ease, in pomp and pride, Think these lost themes unworthy of your car. In ancient times the sacred plough employd The kings and awful fathers of mankind; And some, with whom compared your insect tribes Are but the beings of a summer's day, Have held the scale of empire, ruled the storm. Of mighty war, then with victorious hand, Disdahning little delicacies, seized The plough, and greatly independent scorn'd All the vile stores corruption can bestow.

BAISING A CAPITAL

RAISING A CAPITAL.

About fifty years back, two young fellows, brothers, went to Jamaica; they were by trade blackmiths. Finding, soon after their arrival, that they could do nothing without a little money to begin with, but that with £60 or £70 they might be able to realise a fortune, they hit upon the following novel and ingenious expedient. One of them stripped the other maked, shaved him close, and blackened him from head to foot. This ceremony being performed, he took him to one of the negro dealers, who was so pleased with the appearance of the young fellow, that he advanced £50 currency upon the bill of sale; and prided himself much upon the purchase, supposing this manufactured negro made his escape to his brother, washed himself clean, and resumed his brother, washed himself clean, and adiscovery, by care and precaution, rendered impracticable. The brothers with the money commenced business, and actually returned to England, not many years since, with a fortune of £20,000. Previous, however, to their departure from the island, they waited upon the gentleman from whom they had received the money, and recalling the circumstance of the negres to his recollection, paid him the principal and interest with thanks.

CURIOUS MODE OF BARTER.

OURIOUS MODE OF BARTER.

At Temenhint, in Northern Africa, the linhabitants have a curious mode of barter. The person who has any goods to sell mentions what he wholes to exchange for certain commodities, whether oil, liquid, butter, or shahm, which is a kind of salted fat, much resembling bed tallow in taste and smell. If liquids, it pours water into a pot, in proportion to the quantity of oil or butter he requires: if solid, he brings a stone of the size of the shahm or other article demanded. The buyer pours out water, or sends for smaller stones until he thinks a far equivalent is offered. The thinks a far equivalent is offered. The thinks a far equivalent is offered. The unsuffules then agreed for are smade up to the size of the stone or the depth of the water.

Salva for Horses, &c.,—The best Head discovered for the perfect and rapid cure cuts, Bruise, and the perfect and rapid cure described in full on page 12; the parts affec-carefully washed with Carboll Soop and apply the Salve, when the healing process mencia and, rapidly completed.—For was or Dogs, the Carbolle Soap is proved to be or any other Mandal Polit Mess articles, the

THE CLOSE OF AUTUMN.

The melancholy days are come, the saddest of the The melancholy days are come, the saddest of the year,
Of wailing winds and naked woods and meadows brown and sere.

Heaped in the hollows of the grove the withered leaves lie dead,
They rustle to the eddying gust and to the rabbit's tread.

The robin and the wren are flown, and from the shrubs the jay,
And from the wood top calls the crow, through all the gloomy day. Where are the flowers, the fair young flowers, that lately sprung and stood.

In brighter light and softenairs, a beauteous sisterhood?

Alas! they all are in their graves—the gentle race of flowers

Are lying in their lowly beds, with the fair and good of ours:

The rain is falling where they lie—but the cold November rain

Calls not from out the gloomy earth the lovely ones again.

—Bryant.

WINTER.

O Winter! ruler of the inverted year,
Thy scatter'd hair with sieet like ashes fill'd,
Thy breath congeal'd upon thy lips, thy cheeks
Fringed with a beard made white with other snows
Thau those of age, thy forehead wrapp'd in clouds,
A leafless branch thy seepter, and thy throne
A sliding car, indebted to no wheels,
But urged by atorns along its slippery way;
I love thee, all unlovely as thou seem's,
And dreaded as thou art. Thou hold'st the sun
A prisoner in the yet undawning east,
Shortening his journey between mors and noon,
And hurrying him, impatient of his stay,
Down to the row west; but kindly still
Compensating his loss with added hours
of social converse and instructive ease,
And gathering, at short notice, in one group
The family dispersed, and fixing thought,
Not less dispersed by daylight and its cares.

HYPOPHOSPHITES

The discovery by Dr. Churchill, after years of patient research and experiment, of a SPECIFIC REMEDY FOR CONSUMPTION, marked a new and important Era in the Progress of Medical Science, The announcement of this discovery was made in the year 1857, to the *Imperial Academy of Medicine, Paris. Since that time the truth of his Theory: that the Immensize, or Proximara, Gauss or Consumption was the deficiency, or undue weats, of the Caydizable Phosphorus normally existing in the seconomy; and that the SPRUITE REMEDY for the disease consisted in supplying the deficiency, or undue weats, by means of a Preparation at once Caydizable and Assimilable has been established by an array of facts, "UN PARALLELED IN THE ANNALS OF MEDICINE."

The Curability of Consumption.

We believe the question as to the CURABILITY OF COMMUNITION has been conclusively settled in the affirmative by the results which have attended the administration of the Hyrophosphires since the discovery of their therapeutic properties was announced to the world. And this fact can hardly fall to convey hope to thousands who are fishle to, or are suffering from, this insidious and hitherto dreaded malady, that ARMEDY HAS BEEN FOUND, which, under definite conditions, renders "Cure the RULE, and death the wavesperior."

The action of the Hypophosphites upon the animal economy, when administered in the prescribed manner, is to restore by means of an Assimilable and Oxydisable preparation, the deficiency or undue waste of the Oxydisable prosphorus normally existing, and the deficiency of which, however produced, is the immediate or proximate cause of Consumption.

Immediate or proximate cause of Consumption.

They have also other effects, the importance of which can hardly be over-estimated:—I.—That of stimulating and increasing the NEBYOUS ENERGY to its maximum force. 2.—Increasing the quantity and improving the quality of the NEON, 3.—Strengthening the nutritive functions: thus maintaining these three conditions of robust health at their highest degree of intensity compatible with physical enloyment.

Causes of Consumption.

Every kind of activity—intellectual, passional, locomotive or generative; all causes of depression, such as grief, overwork, axcesses, fretting, insufficient food, rapid growth pregnancy, nursing, long illness, wasting from fevers, protracted convalencence, &c.—is followed by an undus voxets of the shosphorus of the system, as is proved by an increase in the excretions, of the "phosphates." If this nexts is not arrested by rest, nurrition and a re-supply of the element, Kervous Debility and An infoversiblement? Of the short are inevitable consequences: Nort OF WHICH ARE MARKED CHARACTERISTICS OF FULMONARY DIBEASE.

Effects of the Treatment.

On the Nervous System.—One of the first effects is an increase of the Menvous or vital enemer, followed by a feeling of unusual comfort and strength. This is more marked, and earlier manifested, in proportion to the degree of weakness and nervous debitive previously existing.

The nervousness, or irritability, is allayed; the patient experiences a pleasant calm; and the sleep becomes profound and refreshing.

On the Blood System.—The effect upon the Blood System is equally marked. The quantity and color are rapidly increased; the countenance becomes fuller and fresher; the lips red and the eyes brighter; the superficial veins are swelled out; and according to the doses employed and the duration of the treatment, the patient shows striking evidence of PLETHOSE OF TRIBES OF TRIBES.

The HYPOPHOSPHITES, then, possess a TWO-FOLD and SPECIFIC ACTION; on the one hand, they increase the principle, whatever it may be, that CONSTITUTES NERVOUS ENERGY; and on the other, are the MOST POWERFUL BLOOD GENERATORS KNOWN.

On the Nutritive Function.—The appetite is increased often in an extraordinary manner; the patient gains flesh; and the features, especially after the first two or three weeks, show a marked improvement in appearance. The remedy acts beneficially in all cases of impaired nutrition.

of impaired nutrition.

The COMPOUND SYRUP OF HYPHOPHOSPHITES is the most important Agent
nown to Medical Science, from 175 POWER
TO RELIEVE EVERY FORM OF MERYOUS DISEASE, it is emphatically a NERYFOOD; restoring the Vital Force, and reigorating all the Functional Processes of Lifetigorating all the Functional Processes of Lifetigorating all the Functional Processes of Lifetigorating all the Functional Processes of LifeNOVATING SLEEP. It should be used
promptly in every case of LOSS OF NERYOUS FORCE from whatever cause, as the
BASHEET, MOST DIRECT, AND MOST APPROPRIATE REMEDY.

The Purity of the Hypophosphites absolutely essential,

THE ABSOLUTE CHEMICAL PURITY of the HYPOPHOS-PHIPES IS THE FIRST CONDITION OF TIEIR CURATIVE ACTION; when impure, they create a feeling of uneasiness and constriction in the epigastrium, which REVER OCURS, IN ANY INSTANCS, WITT CHEMICALLY PURE SALTS. The manufacture of the HYPOPHOSPHIPES requires great delicacy of manipulation, and a large experience, which few chemists

THE VICTORIA

COMPOUND SYRUP OF

HYPOPHOSPHITES

being Pure, contains nothing injurious to the constitution, and is the ONLY GRNDING and REALBLE form of DR. (HURGHILL'S GRRAT REMEDY. It is made strictly in accordance with his Forkula and Directions, and is certified to be chemically pure, having been analyzed at the Laboratory of the Toronto University, by Professor Croft, one of the highest authorities in Canada. See the certificate of that gentleman on page 22 of this book.

THE VICTORIA HYPOPHOSPHITES

is also highly recommended, and is eminently beneficial in the treatment of Dyspepsia, Bronchitis, Asthma, Anemia, Loss of Appetite, General Debility, &c.

NUMBERLESS TESTIMONIALS

Have been accorded to its curative effects in the above diseases. We have selected one only out of the many, and this may be found on page 12, our limit of space precluding the insertion of more.

N.B.—This invaluable medicine is for sale by Druggists generally throughout the Dominion. Price \$1 per bottle. Full directions inside.

"He heard that it was Jesus of Nazareth."—MARK x. 47.

What means this eager, anxious throng, Which moves with busy haste along— These wondrousgatherings day by day? What means this strange com—— motion, pray?

In ac-cents hush'd the throng re-ply: "Je-sus of Na-za-reth pas-seth by."

In accents hush'd the throng re-ply: "Je-sus of Na-za-reth pas-seth by."

2 Who is this Jesus? Why should He The city move so mightily? A passing stranger, has He skill "To move the multitude at will? Again the stirring notes reply: "Jesus of Nazareth passeth by."

3 Jesus! 'tis He who once below
Man's pathway trod, 'mid pain and woe;
And burdened ones, where'er He came,
Brought out their sick, and deaf, and lame.
The blind rejoiced to hear the cry:
"Jesus of Nazareth passeth by."

4 Again He comes! From place to place His holy footprints we can trace. He pauseth at our threshhold—nay,

The following extract from a letter weetved from Edinburgh will serve to show of what importance the singing of the above and similar hymns by Mr. Sankey, during the recent revival services, has been felt to be:—

"The movement has been a check upon much frivolity, a new tone has been given to conversation, and, what is very important, a new era has been introduced into the Christian Musical Crick.

"Mr. Sankey's singing was a wonderful accompaniment—so tine, so true from the heart, that it brought in many to get something higher; then it enlivened the meetings so much. He has really taught the people to sing, and they can sing now He enters—condescends to stay.— Shall we not gladly raise the cry— "Jesus of Nazareth passeth by"?

5 Ho! all ye heavy-laden, come! Here's pardon, comfort, rest, a home. Ye wanderers from a Father's face, Return, accept His proffered grace. Ye tempted ones, there's refuge nigh: "Jesus of Nazareth passeth by."

6 But if you still this call, refuse,
And all His wondrous love abuse,
Soon will He sadly from you turn,
Your bitter prayer for pardon spurn.
"Too late t too late !" will be the cry—
"Jesus of Nazareth has passed by."

without the Harmonium. I can hardly give you an idea of the music, but sometimes it seemed as if we were not far from the Halleuljahs of Heaven. These sweet hymns, when Joined in by perhaps a,oo volces, one can scarcely conceive how overpowering it was. 'Hold the Fort,' another favorite, which was frequently sung at the close of the noon meeting, and the effect was intensified by the zo'clock gun booming through the Hall and reininding us that we were very near the Stronghald. Young ladies now are consecrating their volces and fingers to the service of praise, and Christian workers have been greatly strengthened.'

MINING IN BRITISH COLUMBIA.

The district of Carlboo is the richest portion of the British Columbian gold field, and here the geologic disturbance has been the greatest. Carlboo is a sea of mountains and pine-cald hills, the former rising to a height of 7,000 or 8,000 feet, surrounded by a confused congeries of the latter. Everywhere the surface has been disturbed, so that hardly a foot of level ground been disturbed, so that hardly a foot of level ground can be found, except at the bottom of the narrow gullier running between these hills. Strita are tilted on end, and beds of streams heaved up to the tops of hills. Round this centre of wealth, poured up from the depths below, the inain branch of the Fraser wraps itself in a semi-circular course, and has received from thence, by numerous tributaties, the gold found in its sands. The extraordinary yield of the Carlboo mines may be interred from the fact that in 1861 the whole of the colonies of British Columbia and Vancouver Jsland were almost entirely supported by the gold obtained from Antier Creek alone; and from that time to the vear 1865, or for four vears in succession, William's

from Antier Creek alone; and from that time to the year 1865, or for four years in succession, William's Creek has alone sustained more than 16,600 people, some of whom have left, the country with large for tunes. And yet William's Creek is a mere marrow rather, worked for 'little more than two miles of its length, and that in the roughest manner. The miners are destituted of steam power, and many requisites for efficient mining; and all that has been done nitherto has been mere scratching in the dark.

In the mines we visited at Cameron Town the "payditt." as the stratum of clay and gravel above the

has been mere scratching in the disk.

In the mines we visited at Gameron Town the "paydirt," as the stratum of clay and gravel above the "bed-rock," in which the gold lies is called, was from thirty to fifty feet below the surface. A shaft is sink to the required depth, and the "dist" carried up by a bucket raised by a windlass. This is emptied into a long box, called the dump-box or "long-tom," having a false bottom of parallel bars, with narrow spaces between them, raised a few inches above the true bottom, across which several cross pieces are placed? A stream of water, brought in a series of troughs called "funnes," sometimes for a considerable distance, pours into the dump-box at one end, and runs out by another series of troughs at the other. As the dirt is emptied in, a man armed with a large many-pronged fork strist to prominically, and removes the larger stones. The smaller particles and the clay are carried down the stream, while the gold, from its greater weight, falls through the spaces between the parallel bars of the false bottom, and is arrested by the transverse ones or "riffle" of the true one. The "pay-dirt" is generally not more than from three to five feet thick, and the galleries of the mines are consequently very low, the galleries of the mines are consequently very low, the galleries of the mines by a water wheel and chain pump, but these are quite useless in winter, and become covered with enromous icicles.

At noon, each day, the dump-boxes are emp-tied, and the gold sepa-rated from the black sand which is always rated from the black sand which is always mixed with it. At the "washing up" of one shart of the Raby Olaim, which we saw, the gold filled one of the tin cases used for preserved meets, holding nearly a quart, the value of about £1,000 for fifteen hours' work. Amongst the gold work. Amongst the gold were several shillings and quarter dollars, which had dropped out of the men's pockets, and turned up again in the dump-box.

CORAL ISLANDS.

CORAL ISLANDS.

These islands exist most abundantly in the tropical and sub-tropical parts of the Pacific Ocean. The formation of coral goes on, in favourable circumstances, with wonderful rapidity, for masses of rock bave been found to increase in height several feet in a few months. It was at one time supposed that coral polypes began their labours at the bottom of the ocean and reared their pile from its greatest depths; but it has been ascertained that none of them live at depths of more than twenty or thirty fathbons, and most of them are inhabitants of much shallower water. It appears, therefore, that the foundation of their still marvellous structures must be upon rocks that do not reach the surface; probably in most cases volcanic focks similar to those which, being further upheaved, form the volcanic and other mountainous islands of Polynesia.

Sometimes a volcanic upheaval seems to have taken place after the coral was formed and this is supposed to have been the origin of the islands, composed of the volcanic place after the coral rock more or less modified by the action of air, water, and other agents. Islands of this class sometimes rise to an elevation of 560, feet, and other exhibit precipitous cliffs, and contain extensive carents. True Coral Islands, or atolks, consist merelyof a narrow seed of coral surrounding a central lagoon, and very often a narrow reaf, perhaps half a mile in breath, clothed with luxuriant vegetation, forming an arc. Many coral islands of considerable extent and population are nowhere more than a few feet above the level of the sea. Reefs also sometimes extend to a great length in a straight line, generally parallel to a coast, the submergence of which they are supposed to indicate, There is such a reef on the cast coast of New Holland, extending not less than \$50 miles without being broken by a channel.

THE WRECK OF THE HESPERUS,

It was the schooner Hesperus, That sailed the wintry sea; And the skipper had taken his little daughter, To bear him company.

Blue were her eyes as the fairy-flax, Her cheeks like the dawn of day, And her bosom white as the hawthorn buds That ope in the month of May.

The skipper he stood beside the helm, His pipe was in his mouth, And he watched how the veering flaw did blow The smoke now West, now South.

Then up and spake an old sailor,

Had sailed the Spanish Main,

"I pray thee put into yonder port,

For I fear a hurricane.

"Last night the moon had a golden ring, And to-night no moon we see!" The skipper, he blew a whiff from his pipe, And a scornful laugh laughed he.

Colder and louder blew the wind,
A gale from the North-east;
The snow fell hissing in the brine,
And the billows frothed like yeast.

Down came the storm, and smote amain.
The vessel in its strength;
She shuddered and paused like a frighted steed,
Then leaped her cable's length.

"Come hither! come hither! my little daughter, And do not tremble so; For I can weather the roughest gale That ever wind did blow."

He wrapped her warm in his seaman's coat,
Against the stinging blast;
He cut a rope from a broken spar,
And bound her to the mast.

"O father! I hear the church-bells ring, O say what may it be?" "Tis a fog-bell on a rock-bound coast!" And he steered for the open sea.

"O father! I hear the sound of guns,
O say what may it be?"
"Some ship in distress, that cannot live
In such an angry sea!"

"O father! I see a gleaming light, O say what may it be?" But the father answered never a word, A frozen corpse was he.

Lashed to the helm, all stiff and stark,
With his face turned to the skies,
The lantern gleamed through the gleaming snow
On his fixed and glassy eyes.

Then the maiden clasped her hands and prayed That sayed she might be: And she thought of Christ, who stilled the wave On the Lake of Galllee.

And fast through the midnight dark and drear, Through the whistling sleet and snow, Like a sheeted ghost the vessel swept Towards the reef of Norman's Woe.

And ever the fitful gusts between
A sound came from the land;
It was the sound of the trampling surf,
On the rocks and the hard sea-sand.

The breakers were right beneath her bows, She drifted a dreary wreck, And a whooping billow swept the crew Like icides from her deck.

She struck where the white and fleecy waves
Looked soft as carded wool,
But the cruel rocks, they gored her side
Like the horns of an angry bull.

Her ratting shrouds, all sheathed in ice, With the masts went by the board; Like a vessel of glass, she stove and sank, Ho! ho! the breakers roared.

At daybreak, on the bleak sea-beach, A fisherman stood aghast. To see the form of a maiden fair, Lashed close to a drifting mast.

The salt sea was frozen on her breast, The salt tears in her eyes; And he saw her hair, like the brown sea-weed, On the billows fall and rise,

Such was the wreck of the Hesperus, In the midright and the snow! Christ save us all from a death like this, On the reef of Norman's Woe!

BUCHU AND UVA URSI.

BUCHU AND UVA URSI.

"Buchu" Is an extract prepared from the leaves of plants growing at the Cape of Good Hope; they are collected there by the Rottentota, who value them greatly for she ir medicinal qualities, and, have long used them. It is gently stimulate, and a given chiefly in complaints connected, with the Bladder, such as Gravel, Chronic Catarth, Morbid Irritation, Disease of the Prottate Gland, &c.

"Uva Ursi," or trailing bearberry, is chiefly indigenous to high institutes, to the Pyrenese and to the Alps; it was known to sand much used by the ancient. It has sequired reputation as an Antilitate, and has undoubtedly been serviceable in developing the indigenous to high institutes, which is a sundoubtedly been serviceable in the Advance of the Bladder, and has undoubtedly been serviceable in the Service, partly by direct action on the Kindeys, partly by giving tone to the Digestive Organs, and preventing the accumulation of principles calculused to produce a secretion or precipitation of calculous matter.

The Compound Fluid Strick, is a combination of these two ingredients prepared from the Formula of Tra UBINI, and is a Specific Remedy for all diseases of the Bladder or Kindeys, and all affections of the Organs, appertaining thereot, from whatever causes arising. The eminent and learned European Physician Dr. RUBINI, or many years was celebrated for his somderful causes of Diseases of Dr. RUBINI Security and the service of the Buches and Service of Dr. RUBINI Security and the service of Dr. RUBINI Security and the service of the Buches and Islands of the Buches was ingredients with contained from his Formula; and wherever used the Victoria Buchu and Uva Ursi, and wherever used the Victoria Buchu and Uva Ursi has invarnably given the most decided, and unquivous satisfaction.

This Medicine (now so well known) is prepared only by the Victoria Chemical Co., Toronto, bears the name of the Company with their trade mark as shown nages "11," and is for as fair.

VICTORIA

CARBOLIC SALVE.

This remarkable curative and healing SALVE is greatly superior to all other external applications whatever, as it possesses all the wonderfully cleansing and heating, virtues of CARBOLIG ACID, which has been found by the whole Faculty to possess GUAATVES and Heating and Heating, which has been found by the whole Faculty to possess GUAATVES AUALITIES not discovered in any other chemical preparation, and which was so extensively and successfully used by Surgeons in the Army Hospitals during the American and Franco-German Wars, as a dressing for Wourse and Sorass of every description.

This SALVE is the most wonderful Healing Compound ever discovered for the rapid and perfect cure of every description of breach of integument, from a simple Scretch or Bruise to the most Aggravated Ulfer, and of all Affections or chronic Dissesses of the Skin, of every description.

chronic Diseases of the Skin, of every description.
It quickly aliays inflammation and aubdues pain, destroys proud fiesh, cleanest thoroughly, removes, all impurity and suppuration in obstinate cores and wounds, and heals rapidly solitoid a seen? It never drives the Disease inward, to take effect on the internal organs. Its properties, when applied, go directly to the diseased part, attract the virus to the surface, and heal the sore from the bottom. Its use renders poulticing unrecessary, as the parts sifected need only to be carefully washed with Castille or Carbolic Soap and warm water, by a soft sponge before its application. It should be kept in every household, ready for use at all times.

This Salve is for sale everywhere. Price, 25 cents per box.

May See article, Carbolle Acid, on page 22, for reports of the healing properties of this invaluable preparation.

VICTORIA HYPOPHOSPHITES

The following is one out of the Numberless Testi-monials received, certifying to the great efficacy of this valuable preparation.

ST. THOMAS, ONT., May 28, 1874.

Victoria Chemical Co., Toronto.

Gentlamm: Please forward me another 2 gross of the VIOTORIA HYPOPHOSHHITES by first train. In sending you this order it gives me much pleasure to state from personal observation that this is an invaluable medicine. I have prescribed it in numberless instances and also used it in my own family, and the results have even exceeded my expectations. I can safely say that for all Throat, Bronchiat or Lung Diseases, your Hypophosphites is superior to any other that I have used.

Yours truly,

WM. E. SHITE, M.D.

These Hypophosphites, more fully described on page 17, are for sale by all the leading chemists and Druggiets in the Dominion. Price \$1 per bottle.

N. B. -Ask for The Victoria Hypophos phites.

THE ELECTRIC LINIMENT.

This Sovereign Preparation—the King of all Liniments—is for the quick Relief and Cure of every description of PAIN for which a genuine Liniment is required. It is a specific Remedy for Rheumatism, Gout, Neuragies, Lumbago, Sciatica, Wandering Pains, Stiffness in the Limbs or Joints, Sprains, Bruises, Numbness, Swellings, Headache, &c., &c.

Swellings, Headsche, &c., &c.

The experience of Physicians has fully demonstrated the skill of its composition, and its superiority for all the purposes for which it is recommended—hence its rapidly increasing sale.

On account of the rapidity with which it relieves Pain, it received the name "ELECTRIC." All who have tried it endorse the appropriateness of the name, and testify to its superiority over all other Liniments. Try it for Pairs of any description where a Liniment can be used, applying it freely to the part affected, with warmth and friction by the hand, and you will soon be convinced that there is no, preparation for the relief of Pain that can at all approach the VICTOBIA ELECTRIC LINIMENT. It should be kept in every Family. Price 25 cents per bottle. Soid by all Druggistes.

AT Be sure you obtain the ELECTRIC LINIMENT (not OIL), and see that the Manufacturers' Trade Mark, as shown on page 17, is stamped on the Label.

EMINENTLY THE LADIES' FAVORITE

For Beautifying the Complexion, and for removing Tun, Sumburn, Freckles, Pimples, &c., also for Chapped Hands, Chilblains, Freat Bites, and Sore Lips.

Risk

Among the most imposing and grand of the many wonders of the ocean world, are the fixed and floating leebergs, the "palaces of nature," which assume extraordinary and fantastic shapes, and more than realize the most sublime conceptions of the imagination." Well, indeed," observes. Snow in his "Journal of the Arctic Seas." "may the mind become awe-struck and the heart aimost cease to beat as the lips exclaim, "Wonderful Thou art in all Thy works! Heaven and earth are full of the majesty of Thy glory! on beholding these mighty and surpassing works of the great Greator. East and west, and north and south, the Arctic regions present a picture of grandeur and magnificence nowhere to be equalled—great beyond conception—impossible to be truly portrayed."

These icebergs are described by Arctic navigators as mimicking, every style of architecture on earth; esthedrals with pillars, arches, portals and towering pinnacles, overhanging cliffs, the ruins of a marble city, palaces, pyramids, and obelisks; astless with towers, walls, bastions, fortifications, and bridges; a fleet of colossal men-of-war under full sall; trees, salmals, and human being: one is described as an enormous balloon lying on its side in a collapsed state. A number of iesbergs seen at the distance of a few miles presented the appearance of a mountainous country, described the appearance of the early style. It was outjous to see how all that mimicry of a grand sudden transformations and the changing tints of locbergs. "One resembled, at first, a cluster of Chinese buildings, then a Gothic exthedral of the early style. It was outjous to see how all that mimicry of a grand religious pile was soon to change to another like the Coliseum, its wast interior now a delicate blue, and then a greenish white. It was only necessary to run on half a mile to find this icy theatre split saunder. An age of ruin seemed to have passed over it, leaving only to the view inner cities, one a glistening winto, and the other blue, soft and airy as the July heaven."

Fearfully

phire, crossed the mass.

Fearfully appalling are the dangers arising from these icebergs on their floating voyages, and we cannot wonder at the terror excited by their appearance among the early navigators among these ice-bound seas. In the expedition of Capatan James Hall, under Danish auspices, for exploring Greenland, in 1605, we learn that the sailors were in sight of the south point of that country, and, to avoid the ice which encompassed the shore, they stood to the westward, and fell in with "mighty islands of ice, being very high, like huge mountains of ice, making a hideous and wonderful noise," and on one of them was observed "a huge

rockstone of the weight rockstone of the weight of three hundred pounds or thereabouts." Finding nothing but ice and fog from the lat to the 10th of June, the "Lion's" people halled the admiral, "salling very fearfully, and dearing the pilot to alter his course, and return homeward."

The altern supports

homeward."

The alarm spread to the admiral's ship, and they had determined to put shout had not Cunningham (the would stand by the admiral." as long as his blood was warme, for the good of the Kinge's majestie." This pacified the seamen for a moment, but the next floating island of ice renewed the terrors of

THE LADY OF THE LAKE. And now, to issue from the glen, No pathway meets the wanderer's ken, Unless he climb, with footing nice, No pairway meets the wanderer's ken, Uniess he climb, with footing nice,
A far projecting precipice.
The broom's tough roots his ladder made,
The hasel saplings leat their aid;
And thus an airy point he won,
Where, gleaming with the setting au,
One burnished sheet of living gold,
Looh Katrine lay beneath him roll'd,
In all her length far sunding lay,
With promontory, creek, and bay,
With promontory, creek, and bay,
With promontory, creek, and bay,
High promontory, creek, and bay,
High promontory, creek, and bay,
With grant he sould be a compared to the compar

From the steep promontory gazed
The stranger, raptured and amazed,
And, "What a scene were here," he cried,
"For princely pomp, or churchman's pride!
On this bold brow, a lordly tower;
In that soft vale, a lady's bower;
On yonder meadow, far away,
The turrets of a cloister grey;

How blithely might the bugle-horn
Chide, on the lake, the lingering morn!
How sweet, at eve, the lover's lute
Chime, when the groves were still and mute!
And, when the midnight meon should lave
Her forehead in the silver wave,
How solemn on the ear would come
The holy matins' distant hum,
While the deep peal's commanding tone
Should wake, in yonder islet lone,
A sainted hermit from bis cell,
To drop a bead with every knell—
And bugle, lute, and bell, and all,
Should each bewilder'd stranger call
To friendly feast, and lighted hall."

To friendly feast, and lighted hall."

But scarce again his horn he wound,
When lo I forth starting at the sound,
From underneath an aged oak,
That slanted from the silet rock,
A damsel guider of its way,
A little skiff shot to the bay,
That round the promontory steep
Led its deep line in graceful sweep,
Eddying in almost viewless wave,
The veeping willow-twig to lave,
And kiss, with whispering sound and slow,
The boach of pubbles bright as snow.
The boat had touch'd this silver strand,
Just as the Hunter left his stand,
And stood conceal'd amid the brake,
To view this Lady of the Lake.
The malden paused, as if again
She though to catch the distant strain.
With head up-raised, and look intent,
And eye and ear attentive bent,
And locks flump back, and lips apart,
Like monument of Grecian art,
In listening mood, she seem'd to stand,
Like guardian Naind of the strand.

And ne'er did Greetan chisel trace
An Nymph, a Natad, or a Grace,
Of finer form, or lovelier face (
What though the sun, with ardent frown,
Had slightly tinged her check with brown,—
The sportive toil, which, short and light,
Had dyed her glowing hue so bright,
Served too in hastier swell to show
Short glimpses of a breast of snow:
What though no rule of courtly grace
To measured mood had train'd her pace,—
A foot more light, a step more true,
Ne'er from the heath-flower dashed the dew;
Een the slight harobed Ir alsed it head;
Elastic from her airy tread;
What though upon her speech there hung
The accents of the mountain tongue,—
Those silver sounds, so soft, so dear;
The listener, held his breath to hear!

A Chieftain's daughter seem'd the maid ; Her satin snood, her silken plaid, Her golden brooch, such birth betray'd. Her skin snood, her silken plaid,
Her golden brooch, such birth betray'd.
And seldom was a snood amid.
Such wild fuxurinat ringlets hid,
Whose glossy black to shame might bring.
The plumage of the fraven's wing;
And seldom o'er a breast so fair,
Mantled a plaid with modest care,
And never brooch the folds combined.
Above a heart more good and kind.
Her kindness and her worth to spy,
You need but gaze on Ellen's sy;
Not Ratrine, in her mirror blue,
Gives back the shaggy banks more true,
Than every free-born glance confess'd.
The guillelss movements of her breast;
Whether joy danced in her dark eye,
Or woe or pity claim'd a sigh,
Or flifal love was glowing there,
Or meek devotion pour'd a prayer,
Or tale of injury call'd forth
The indignant spirit of the North.
One only passion unreveald,
With maiden pride the maid conceal'd,
Yet not less purely felt the flame;
O need I tell that passion's name!

LUMBERING ON THE OTTAWA.

The lumber trade is carried on to a greater or less extent on almost all the American rivers; but on the Mississippi and the St. Lawrence it affords employment to a vast number of persons. The choief rafsmen, un-The lumber trade is carried on to a greater or less extent on almost all the American rivers; but on the Mississippi and the St. Lawrence it affords employment to a vast number of persons. The chief ratismen, under whose directions the timber expeditions are conducted, are generally persons of great intelligence, and often of considerable wealth. Sometimes these men, for the purpose of obtaining wood, purchase a piece of land, which they sell after it has been cleared, but more frequently they purchase only the timber from the proprietors of the land on which it grows. The chief ratisman, and his detachment of workmen, repair to the forest about the month of November, and are occupied during the whole of the winter months in felling trees, dressing them into logs, and dragging them by teams of xen to the nearest stream, over the hardened snow, with which the country is then covered. They live during this period in huts formed of logs. Throughout the whole of the nearest stream, over the hardened snow, with which the country list from the formation of the nearest stream of the properties of the month of the nearest stream, over the hardened anow, with which the country is then covered. They live during this period in huts formed of logs. Throughout the whole of the nearly-leaved list of the hut, and their ends are shalf-checked into each other; in such a manner as to allow of their coming into contact nearly, throughout their whole length, and the small interstices which remain are filled up with clay. About the sounds of May, when the ice leaves the rivers, the logs of timber that have been prepared, and hauled down during the winter, are launched into the numerous small streams in the neighborhood of which they have been out, and are floated down to the larger rivers, where their progress is stopped by what is called a boom." The boom consists of a line of logs, extendible and the propers is stopped by what is called a boom." The boom consists of a line of logs of the wood, which must remain within it till all

downward progress of the wood, which must remain within it till all the timber has left the forest. After this every raftsmansearches out his own timber, which he recognizes by the mark he puts on it, and, having formed is into a raft, floats it down theriver to its destination. The boom is generally owned by private individuals, who levy a toll on all the wood collected by it. The toll on the Penobesot River is at the rate of three per cent. on the value of the timber. The rafts into which the timber is formed, previous to being floated down the largerivers, are strongly put to good the timber is formed, previous to being floated down the largerivers, are strongly put to good the same and the strong the strong the same and the same and

The most hazardous part of the lumberer's business

is that of bringing the rafts of wood down the large rivers. If not managed with great skill, they are apt to go to pieces in descending the rapids; and it not unfrequent-ly happens that the whole labor of one, and sometimes of two and sometimes of two years, is in this way lost in a moment. An old raftsman with whom I had some conversation on board of one of the steamers, on the St. Lawrence, informed me thateach informed me thateach of the rafts brought down that river con-tains from 15,000 to 25,000 dollars' worth of timber, and that he, on one occasion, lost 12,500 dollars by one raft, which groundraft, which ground-ed in descending a rapid, and broke up.

cd in descending a rapid, and broke up. The safest size of a raft, he said, was from 40,000 to 0,000 square feet surface; and when of that size they require about five men to manage them. Some are made, however, which have an area of no less than 300,000 square feet. These unwieldy craft are brought to Quebee in great numbers from distances varying from one to twelve hundred miles; and it often happens that six months are occupied in making the passage. They are broken up at Quebee, where the timber is out up for exportation, into planks, deals and battens, at the numerous saw-mills with which the banks of the 8t. Lawrence are studded for many miles in the neighborhood of the town. Sometimes the timber is shipped in the form of logs. The timber-ratts of the Rhine are, perhaps, the only ones in Europe that can be compared to shoes of the American rivers; but none of those which I have seen on the Rhine were nearly so large as those on the St. Lawrence, although the contraction of the contraction of the results of the street in the contraction rendered by a greater pulsaps, by the more Intricate navigation of the river. The principal woods exported from the St. Lawrence are white oak, white pine, red pine, elm, and white ash.

THE SPHINX.

This term, derived from the Greek, is applied to certain symbolical forms of Egyptian cript the Creek is applied to certain symbolical forms of Egyptian cript the Creek is applied to Creek in State of Egyptian Cript and two rings, although to light, principally in Upper Egypt. They are supposed to have been ercied to the memories of the Egyptian Kings. The most remarkable of these is the great Sphins at Gissh, a cologast form, hewn out of the natural rock, and lying 300 feet east of the second pyramid. Get 6 inches long, by 56 feet bigh. Immediately in front of the breast was found a small chaptel, formed of three tablets, on which the Sphins was dedicated to Hamarchia, &c., the Sun on the Horizon. Votive inscriptions of the Roman period, some as late at the of century were discovered on the walls and constructions. To the south of the Sphins was found a dronous grantic. While the beauty and grandeur of the Great Sphins have often attracted the admiration of travellers, its age has always remained a subject of doubt. Latest discoveries place it as contemporary with the pyramids.

GLYCERINE JELLY

(CARBOLATED.)

This now celebrated JELLY is highly recommended to Ladies as the most delightful and invaluable Acquisition to the Toilet,

As a delicate "BEAUTIFIER" it is unrivalled, rendering the Complexion Clear, Soft, Brilliant and Beautiful.

It is distinguished for its Cooling and Soothing Properties, and is admirably adapted to all unnatural conditions of the Skin, quickly removing REDNESS, ROUGHNESS, TAN, SUNBURN, FREGKLES, PIMPLES, and other imperfections, and rendering it White, Clear, and Free from Dryness.

For FRECKLES this Preparation stands alone and unrivalled. It can and does remove them.

For CHAPPED HANDS, CHILBLAINS, FROST-BITES, and SORE LIPS, this invaluable JELLY is pre-eminent, being for these purposes the most rapid Healing Agent known.

Its application causes no inconvenience whatever, and leaves no unpleasant greasiness. It is rendered agreeable by possessing a Rich, Delicate, and most Fragrant Perfume.

This is the only CABBOLATED GLYCERINE JELLY manufactured, and as CARBOLIC ACID possesses HIGH CURATURE QUALITIES, it is consequently far superior to any other Preparation of Glycerine in the Market

The finest Glycerine only is used in this JELLY it is not diluted with any other substance for the sake of cheapness—and it is Carbolated with the purest CRYSTAL CARBOLIC ACID.

It contains nothing deleterious to the Skin, and therefore does not produce any of the injurious effects emanating from most other Cosmetics.

Every Ludy who desires SOFT HANDS, and a BEAUTHFUL COMPLEXION, should try this Recherche JELIY, and after once doing so it will always find a place on her Toilet Table. Price 25 Cents per Toilet Bottle. Sold by Drugyists in every Town and City in the Dominion

THE DEATH OF THE OLD YEAR.

Full knee-deep lies the winter snow,
And the winter winds are wearily sighing
Toll ye the church-bell sad and slow,
And tread softly and speak low,
For the old year lies a-dying,
Old year, you must not die:
You came to us so readily,
You lived with us so steadily,
Old year, you was all not die.

He lieth still : he doth not move ; He will not see the dawn of day. He hath no other life above. He nath no other life above.

He gave me a friend, and a true true-love,
And the New-year will take 'em away.
Old year, you must not go:
So long as you have been with us,
Such joy as you have seen with us,
Old year, you shall not go.

He froth'd his bumpers to the brim;
A joilier year we shall not see.
But tho' his eyes are waxing dim,
And tho' his foes speak ill of him,
He was a friend to me.
Old year, you shall not die;
We did so laugh and cry with you,
I've half a mind to die with you,
Old year, if you must die.

He was full of joke and jest, But all his merry quips are o'er.

To see him die, across the waste His son and heir doth ride post-haste, But he'll be dead before. Every one for his own. The night is starry and cold, my friend, And the New-year blithe and bold, my friend, Comes up to take his own.

How hard he breathes! over the snow I heard just now the crowing cock. The shadows flicker to and fro:
The cricket chirps: the light burns low: The nearly twelve o'clock.
Shake hands, before you die.
Old year, we'll dearly rue for you;
What is it we can do for you?
Speak out before you die.

His face is growing sharp and thin.
Alack! our friend is gone.
Close up his eyes: it eu phis chin:
Step from the corpse, and let him in
That standesh there alone,
And waiteth at the door.
There's a new foot on the floor, my
friend,
And a new face at the door, my friend,
A new face at the door.

Alfred Tennyson.

WOODS IN WINTER.

When winter winds are piercing chill, And through the white-thorn blows the gale, With solemn feet I tread the hill.

That overbrows the lonely vale.

O'er the bare upland, and away Through the long reach of desert woods, The embracing sunbeams chastely play, And gladden these deep solitudes.

On the gray maple's crusted bark, Its tender shoots the hear-frost nips; Whilst in the frozen fountain—hark!— His piercing beak the bittern dips.

Where, twisted round the barren oak, The summer vine in beauty clung, And summer winds the stillness broke,-The crystal icicle is hung.

Where, from their frozen urns, mute springs Pour out their river's gradual tide, Shrilly the skater's iron rings, And voices fill the woodland side.

Alas! how changed from the fair scene, When birds sang out their mellow lay; And winds were soft, and woods were green, And the song ceased not with the day!

But still wild music is abroad, Pale, desert woods, within your crowd; And gather'd winds, in hoarse accord, Amid the vocal reeds pipe loud.

Chill airs, and wintry winds, my ear
Has grown familiar with your song;
I hear it in the opening year...
I listen, and it cheers me long.

BAY OF NAPLES AND VESUVIUS.

Vesuvius is one of the largest and most active vo cances in the world. It has been burning and smoking and committing devastations on the surrounding cour-try for at least two thousand years, and probably for many centuries before. Situated within a few miles the sea, its ravages have extended across the intermediate space, laying waste vineyards and fields, and de stroying the villages and cities which lie in the cours of its eruptions.

of its cruptions.

The earliest cruption of Vesuvius on record, and one of the most fatal, took place in the year 79 of the Christian era, being the first year of the reign of the Emperor Titus. All the southern part of Italy was alarmed by its violence; and Campania, as the adjoining district is called, was devastated to a great distance.

On this occasion the cities of Herculaneum and Pomental Company of the control of the cities of the control of the cities of the control of the cities of the control of the control of the cities of the peil were overwhelmed and lost, and the greater part of their inhabitants killed.

So extensive and thick was the cloud of smoke and ashes which filled the atmosphere, that it was visible in Africa and Syria, and at Rome turned the light of day into the darkness of night, to the consternation of the inhabitants.

In June, 1794, an exceedingly violent eruption occur-red, and overwhelmed the town of Torre del Greeo. This cruption was vividly described by Sir William Hamilton in a letter to Sir Joseph Banks, and from this source we draw the following particulars. Early in June, the wells of Torre del Greeo and its neighborhood began to dry up, a usual signal of an approaching eruption, and the shock of an earthquake was felt at roution, and the shock of an carthquake was felt at Naples and for many miles around. On the night of the 15th, after another shock, Yesuvius sent forth clouds of black smoke, and with a loud noise there issued from its sides streams of red-hot laws, which poured down the fianks of the mountain. "It is impossible," asys Sir William, "for any description to give an idea of this fiery scene, or of the horrid noises that attended this great operation of nature. It resembled the loudest thunder, accompanied by a continued hollow murmur, like that of the roaring of the ocean during a violent storm; and added to these sounds was another blowing, storm; and added to these sounds was another blowing, and scories, like that of the going up of a large flight of sky-rockets. The frequent falling of the lungs stones and scories, which were thrown up to an incredible height from some of the new mouths, and one of which, having been since measured, was ten feet high and thirty-five in circumference, contributed undoubt-ty-five in circumference, contributed undoubt-edly to the concussion of the earth and air, which kept baving been since measured, was ten reet aign and thirty-five in circumference, contributed undoubtedly to the concussion of the earth and air, which kept all the houses at Naples for several hours in a constant tremor, every door and window shaking and rattling incessantly, and the bells ringing. This was an awful moment! The sky, from a bright full moon and starlight, began to be obscured; the moon had presently the appearance of being in an eclipse, and soon after was totally lost in obscurity. The murmur of the prayers and lamontations of a numerous populace, forming various processions, and parading the streets, added likewise to the horror. added likewise to the horror.

The lava ran but slowly at Torre del Greco after it had reached the sea; a on the 17th of June, in the morning, when I went in my boat to visit that unfortunate town, its course fortunate town, its course was stopped, excepting that at times a little rivulet of little and the smoking scories into the sea, and caused a hissing noise and a white vapour smoke; at other times a quantity of large scories was pushed off the surface of the holy of the times a quantity of large scorie was pushed off the surface of the body of the lava into the sea, discover-ing that it was red-hot under that surface; and even to this day the centre of the thickest part of the lava that covers the town rotains its red heat. I ob-served that the sea-water weak-filling a in a california was boiling as in a caldron, where it washed the foot of

where it washed the foot of a new-formed promontory; and although I was at least near my boat, I put my hand into, the water, which was literally scalded; and by this time my boatmen observed that the pitch from the bottom of the boat was melting fast, and floating on the surface of the sea, and that the boat began to leak; we therefore retired hastily from this spot, and landed at some distance from the hot lava."

GRACE DARLING.

GRACE DARLING,

A name famous in the annals of heroism, was the daughter of William Darling, lighthouse-keeper on Longstone, one of the Farce Islands off the Coast of Northumberiand. On the morning of the 7th Sept., 1833, the Forfarskire, which, with 63 persons on board, 1835, the Forfarskire, which, with 63 persons on board, had been wrecked among the Farce Islands, was seen by Darling, about a mile from the lighthouse, lying broken on the rocks. So fearfully had the waves beaten against the rock, that the boatmen refused to push off, and Darling himself shrank from the peril. Not so his heroic daughter. At her solicitation he pysledde; and, the mother heiping to launch the boat, the father and daughter each took an oar; and so they rowed this fearful mile, at each instant in danger of being swamped by the waves. By wonderful strength and skill, they, brought their boat to the sufferers, rescued them, and bore them in safety to Longstone. Such an undertaking, so daring in itself, and so successfully carried out, filled every one with the warmest admiration. The lighthouse of Longstone, no longer solitary and peaceful, was visited by the many and great. Presents, testimonials and money were heaped at the feet of the heroine. But the noble girl who rompted the generous action did not long survive. She died of consumption, after a year's illness, on the 20th October, 1842. name famous in the annals heroism, was

 To meet one another again.

CARBOLIC ACID

ITS PROPERTIES AND USES.

CARBOLIC ACID acts powerfully as an antiseptic and disinfecting Agent. It operates with wonderful efficiency in preventing putrefaction, which it entirely suppresses, and offensive matter consequently ceases to smell, because it ceases to putrefy; whereas it is only by the constant presence of other disinfectants that noxious odor is prevented, while the putrefaction trace on suchecked.

At the Morgue, in Paris, a solution containing one-twentieth of one per cent. of carbolic acid sprinkled over the bodies arrested putrefaction over according

over the bodies arrested putrefaction even during the heat of Summer. Chlorine had previously proved in-effectual to disinfect the atmosphere of the deadhouse. The Wiener Medical Wochenschrig's tastes that Dr. A. Loeffler, of Stockenau, has treated successfully more than forty cases of small-pox by the external cop-ous application of a solution of carbolic acid. The acid was its of diffused through the atmosphere of the sick rooms, and unvaccinated children inhabiting the same rooms generally escaped the disease.

rooms generally escaped the disease.

The use of Carbolio Acid as a disinfectant and The use of Carroll ACID as a disinfectant and Curative Agent in small-pox, and other contagious diseases, should be undersally known. De Burgers, of San Francisco, says in the Boston Journal of Ohematry, "In the late fearful epidemic of Small Pox I have tested the disinfectant and prophylactic power of Carbolic Acid in a way that leaves no doubt in my mind of its superior merit. Indeed, during the latter part of the course of the opidemic, I trusted to the course of the opidemic, I trusted to the course of the spidemic of the exclusive that THE SPREAD IS, BUT ONE, and that was in a toult of a voice "filtry, bablis" where cleanliness and family of very filthy habits, where cleanliness and proper nursing were unattainable."

As a cleaner and purifier, this valuable drug has been remarkably distinguished. It has been used with marked success by the keepers of livery stables, and those who have cattle subject to infectious diseases. and those who have cattle subject to infectious diseases. Many reports of such cases have been given, showing its disinfecting power: and it is believed that the use of Carbotho Acm proved effectual in limiting the prevalence of the Eripsen Carruz Disrass, which was so destructive in Europe. It is, however, as a wash for running sores, carbuncles, and boils, that the efficacy of this article is particularly distinguished; and where it has been once tried, in any of this kind of complaints, its use; will never be willingly relinquished.

Carboile Add is now nut up in a great warker of Carboile Add is now nut up in a great warker of

Carbolic Acid is now put up in a great variety of forms. A finely perfumed Glycerine Jelly containing a per centage of acid, has become a great favorite for Sore Lips, Chapped Hands, and for removing Freckler, &c. See page 17, where such Jelly is more fully described

Carbolic Salve has proved to be one of the best healing compounds ever discovered, for Cuts, Sores, or Wounds of any description. For fuller mention of

or Wounds of any description. For fuller mention of this see page 12.

A powder is also prepared with the Acid, for disin-facting sick rooms, outbuildings, &c., and for this is invaluable; while Carbolic Soap is largely used in Hospitals, and in private families is gradually super-seding the ordinary toilet soaps; it being a preventive as well as a curative agent.

AFRICAN VEGETATION.

SKETCH OF LIVINGSTONE'S LIFE.

David Livingstone was born at Biantyre, near Glasgow, in 1818, of humble parents, whose simple piety and worth were however noticeable even in a community which, in those days, ranked above the average for all those manly and self-denying virtues which a few generations ago were characteristic of the lower classes of Scotland.

classes of Scotland.

At the time of his birth his father was a small grocer in Blantyre, and, as Livingstone himself says, "though too conscientious ever to grow rich as a small tea dealer, yet by his winning ways he made the heartstrings of his children twine around him as firmly as if he could have bestowed upon them every worldly advantage.

At ten years old, young David was sent to the cot-ton mills as a piecer, where he was employed from six in the morning till eight at night, with intervals for breakfast and dinner. These close hours did not for breakfast and dinner. These close hours did not prevent him in his endeavors to alter his circumstances, for with a portion of his first week's wages he purchased a Latin Grammar, and by the age of 16 had, simply during the intervals for meals and a short time each night, read many of the classical authors. It was by this means that the young piecer bore and conquered the cruel circumstances of his boyhood, and made for himself a name, which is known and respected throughout the civilized world, and is accepted by the savage inhabitants of Central Africa as conveying to their minds all that is best in the character of "the white man." white man.

His reading in the factory was carried on by placing the book on a portion of the spinning jenny, so that he could catch sentence after sentence as he passed at his work. Notwithstanding the limited leisure at his dis-posal, he made himself thoroughly acquainted with the senercy, botany, and geology of the surrounding dis-trict.

When 19 years of age, Livingstone was promoted to be a cotton spinner, and while the heavy toil pressed hard upon the poor lad, he was cheered by the reflec-tion that the wages he now earned during the summer months would enable him to support himself in Glas-gow during the winter, while attending medical and other classes in Glasgow University, to reach which he walked daily to and from his father's house, a distance of 6 miles. of 9 miles.

of 9 miles.

Upon completing his medical curriculum, he had hoped to be sent to China, but as the opium war was then raging this was deemed hexpedient, so he was mduced to direct his steps to South Africa, and, after spending two years of close training, was sent out, in 1860, by the "London Missionary Society." The next sixteen year, 1840-56, he spent in missionary and medical labours in Africa, often having to endure the most severe hardships, and run great dangers, both from the unfriendly natives and the wild animals. Livingstone gives this pleasing picture of his first

station in Africa. "This station is about 700 miles from Cape Town, and has been established nearly 30 years by Hamilton and Moffat. The missionary houses and church are built of stone. The gar-dens, irrigated by a riv-ulet, are well stocked with fruit-trees and vines, and yield European vegeta yield European vegetables and grain readily. The pleasantness of the place is enhanced by the con-trast it presents to the surrounding scenery, and the fact that it owes all its beauty to the manual labour of the missionaries.

light of Christianity through the neighbouring region."
But space will not allow us to go closely into LivIngstone's life. The two most important results
achieved by him in this period were the discovery of
Lake Ngami (August 1, 1849) and his crossing the continent of South Africa, from Zambest to the Congo,
and thence to Loando, the capital of Angols, which
took him about eighteen months (January, 1883, to
June, 1854). During the following winter he retraced
his steps, and in May, 1856, took ship for England,
where he was received with great honour, and where
he remained till 1858. Returning then, he visited the
Zambezi, and spants several years in exploring that
region. A narrative of the discoveries made at this
time was published during a visit he paid to England,
1864-96. With a view to a solution of the problem of
the true source of the Nile, Livingstone entered the
heart of Africa again in 1866, and nothing was heard
of him for several years. He was baffied by hundations, the hostility of thave dealers, and by the want

of supplies, which, though forwarded from Zanzibar, were habitually delayed and plundered by those who conveyed them. Still he continued his search unduanted. Little was heard of him until, in 1872, Mr. H. M. Stanley, Commissioner of the N. Y. Herald, boldly pushed his way from Zanzibar to Ujlji, where he found the traveller in great destitution.

What the result of his exploration was, since Mr. Stanley left him, we do not at present know. His records, kept by him with his diary, will shortly be is-

Stanley left him, we do not at present know. His records kept by him with his diary, will shortly be issued from the press.

The press of this great man are well known. When every eye was looking, expecting to see him return in health, a departed came from the Consul at Zaandhar with the news of his death. Far from dvillised habitation, amongst the natives for whom he had worked so long. Dr. Livingshous euccumbed to an attack of dysentery, which carried him off after an illness of ten days. His men embalismed the cornes is well as they were accorded, the remains were conveyed to London, where they were accorded, the remains were conveyed to London, where they were land and Scotland. A simple inscription marks the spot of his chast in Africa, while his body reposes in Westimater Abie, where, on the 18th April, 1874, it was laid, in the sight of thousands of spectators. The confirm was covered by wreaths and Thus rose, and thus passed away, one of the greatest knewless, manufactures, and thus passed away, one of the greatest knewless, manufactures, and thus passed away, one of the greatest knewless, manufactures, and thus passed away, one of the greatest knewless, and the lather potate, and withal one of the knewless and most single-hearted men England has ever seen.

POSTAL RATES, STAMP DUTIES, &.

DOMINION OF CANADA.

Postage on Letters.

Postage on Letters.

The rate of Postage on letters to all parts of the Dominion of Canada is 3 cents per j. oz., and 3 cents for every fraction of j. oz. Unpaid letters are charged 6 cents per j. oz. Postal Cards are issued at l cent each; which can also be posted to any part of the United States on affixing a l cent Stamp on the Card. The rate of Postage to Newfoundland is 6 cents per j. oz., which must be prepaid.

The Postage on letters between Canada and the United States is 6 cents per j. oz., if prepaid, and 10 cents if not prepaid; and no allowance is made for any stamps on letters representing less than the amount of Postage for which such letters are liable.

The rate for letters between any place in Canada and any part of the United Kingdom is, by the Canadian Steamship Line, salling on Saturdays, 6 cents per half oz., and by the Cunard Steamer from New York on Wednesdays. 8 cents per j. oz. These letters must be prepaid or they will be charged a fine of 3d. sterling on delivery.

Letters for British Colonies and Possessions beyond Sea, and for Foreign Countries, via England, must be prepaid.

prepaid.

Newspapers.

Newspapers posted otherwise than from the office of publication, and American or transient British papers posted or re-posted in Canada, must be prepaid 2 cents each, by stamp, or they cannot be forwarded.

Book Post.

One cent per 2 ox., is the rate for Books (bound or unbound), Handbills, Pamphlets, Circulars when in parcels, and occasional Publications, also Book and Newspaper Manuscript, Printers' Proof, Printed Mat-ter of the same character as Circulars, Handbills, &c., all which must be prepaid by Stamp. Circulars sent singly 1 cent each, must be open and prepaid—if scaled, they are liable to letter rates.

Parcel Post.

Parcels may be forwarded betwixt any offices in Canada, at 12c cents for every 8 oz.; weight not be exceed 4 lbs, and the Postage must be prepaid by Stamp. The parcel should have the words "By Parcel Post" plainly written on the address.

Registration.

The following are the fees which, as well as the dinary postage, must be prepaid at the office at hich posted:—

The following are the very continuous postage, must be prepaid at the office at which posted:

On letters to Canada, Newfoundland, or Prince Edward Island, 2 cents; on letters to any place in the United States, 5 cents; on letters to any place in the United States, 5 cents; on letters to any place in the United Kingdom, 8 cents; on parcels, packets, &c. and newspapers, to the United Kingdom, 8 cents.

When letters are registered for whatever destination, both postage and registration fees on letters should be prepaid by Stamps. The postage and registration fee on letters addressed to the United Kingdom, the United States, and places abroad, must be paid wholly in stamps or money.

A Registered letter can only be delivered to the party addressed or to his or her order. The registration does not make the Post Office responsible for its affective control of the producing the producing the prediction does not make the Post Office responsible for its safe delivery, its simply makes its transmission more secure, by rendering it practicable to trace it when passing from one place to another in Canada, and at least to the frontier or port of despatch.

Money Ordegs.

Post Office Savings Banks.

These Savings Banks, having the direct security of the Dominion to every depositor for re-payment of all moneys deposited, with the interest due thereon, are now established at the principal Offices; and full information as to rates of interest, &c., may be obtained at any Post Office in the Dominion.

Stamp Duties.

Stamp Duties.

The Stamps required by the Act, and which must be affixed to any Note, Draft or Bill, at the time of drawing the same, are as follows:—
On every Promissory Note, Draft, or Bill of Exchange, not less than \$25, 1 cent; over \$25 and not exceeding \$100, 3 cents; over \$50 and not exceeding \$100, 3 cents; and for every additional \$100 or fraction of \$100, 3 cents, on every part or Bill of Exchange excented in duplicate, for the first \$100, 2 cents on each part thereof; for every additional \$100, or fraction thereof, 2 cents. On every Draft or Bill of Exchange exceuted in more than two parts, for each part for the first \$100, 1 cent; for every additional \$100 or fraction thereof, 1 cent. Interest payable at maturity, to be counted in all cases as part of the principal sum.

Each stamp must be cancelled by the party using it, either by writing or stamping his name or initials on which it is affixed.

The penalty imposed for making, drawing, accept-

which it is affixed.

The penalty imposed for making, drawing, accepting, endorsing signing, becoming a party to, or paying an improperly stamped instrument, or putting as wrong date on any Stamp, is \$100; and for affixing Stamps aiready used, \$500.

The fourth clause of the Stamp Act enacts that any cheque upon a chartered Bank or licensed Banker, or on any Savings Bank, if the same shall be payable on demand, also any Post Office money order and any municipal debenture, or coupon of such debenture, shall be free of duty under the Act.
