There is not in any other country in the world a more valuable or more enlightened body of labour laws than those now upon the statute book of this progressive colony. They cover almost every risk to life, limb, health, and interest of the industrial classes. They send the law, as it were, everywhere a worker is employed for duty wages to fling the shield of the state over him or her in the labour of livelihood. The bare enumeration of these laws will indicate the far-reaching ground they cover.—The Coal Mines Act, the Master and Apprentices Act, the Conspiracy Law Amendment Act, the Trade Union Act, the Servants Registry Offices Act (for the protection of servant girls against the risks of dishonest officers of that kind), Contractors and Workmen's Lien Act, three amended Employers Liability Acts, three amended Shipping and Seamen's Acts, two Shops and Shop-assistants Acts, the Factories Act, and the Industrial Conciliation and Arbitration Act of 1891.

The Industrial Conciliation and Arbitration Act passed in 1891 has attracted much attention outside New Zealand. An Act with a similar purpose, but permissive in its operations, was passed in the New South Wales Legislature in 1892. It was limited in duration to four years, and was not a success. The New Zealand bill was more skillfully drawn, and, possessing the element of a gentle compulsion, has so far achieved its aim. The Act begins by inviting all parties to join in lawful association for the purpose of protecting or furthering the interests of employers or workmen in, or in connection with, any industry in the colony. Such parties as accept the legal invitation are allowed to register themselves as 'an industrial union,' and this step once taken they are entered on through a network of solicitations, provisions, and safeguards, and they find themselves almost without knowing it, agreeing to everything that follows. Trades Unions, or any other labour organization or any combination of employers, can register as individual bodies without a mixed association of workers and employers. Once registered they are in the network of arbitration.

The effect of registration shall be to render the industrial union and all persons who may be members of any society or trade union, so registered as an industrial union at the time of registration, or who after such registration may become members of any society or trade union so registered, subject to the jurisdiction by this Act given to the Board and the Court respectively, and liable to all the provisions of this Act, and all such persons shall be bound by the rules of the industrial union during the continuance of the membership. Every industrial agreement duly made and executed shall be binding on the parties thereto and on every person who at any time during the term of such agreement is a

member of any industrial union or is an association party thereto, and on every person who shall in the prescribed manner be notified by the Registrar of the Supreme Court that an agreement is filed containing thereon, and such employer shall be entitled to sue for breach thereof, and be deemed to be a party.

In and for every district there shall be established a Board of Conciliation and Arbitration for the settlement of industrial disputes occurring in such district, which may be referred to it by one or more of the parties to any such dispute, or by industrial agreement.

The Board shall consist of such equal number of persons as the Governor may determine, but not more than six, nor less than four, persons. Two shall be chosen by the industrial associations of employers and of workmen in the industry, and respectively, such unions voting separately, and electing an equal number of such members. Should this body itself be unable to reach a satisfactory decision it may refer the matter in question to a small committee of persons fairly representing each side.

If such committee fails to reach a reconciliation, the matter shall be referred to the party to the dispute can appeal to the Central Arbitration, which is constituted by the Governor.

There shall be one Court of Arbitration for the whole colony for the settlement of industrial disputes pursuant to this Act.

The Court shall consist of three members to be appointed by the Governor, one to be so appointed by the recommendation of the councils of a non-industrial industry in the colony, and one to be so appointed by the recommendation of the councils of a non-industrial industry in the colony, and one to be so appointed by the recommendation of the councils of a non-industrial industry in the colony.

No recommendation shall be made as to the third member, who shall be a Judge of the Supreme Court, and shall be appointed from time to time by the Governor, and shall be President of the Court. Mr. Hyatt, *Life and Progress in Australasia*, 1898.

Hon. W. P. Reeves, lately Agent-General for New Zealand in England, but who was Minister of Education and Labor in New Zealand from 1891 to 1896, and who is looked upon as the principal author of the industrial arbitration laws of that colony, wrote, during the summer of 1896, on the working of those laws, in an article contributed to the *London Express* as follows:

"The arbitration law has been in operation in New Zealand for about four years and during that time there has never been a case when there has not been a dispute pending before one or other of the Conciliation Boards or the Central Arbitration Court. Writing as I am some distance from London, I cannot say from memory what the exact number of disputes finally adjusted has been, but, so far as I can judge, it has not been less than sixty or seventy. Most of these have been carried on appeal from some Conciliation Board, to the Arbitration Court and some of these. In about two cases out of seven the Conciliation Boards have been able successfully to arrange the disputes. Even where they have not done so, it by no means follows that the Arbitration Court is merely on one or two cases out of many involved, and the advice of the Conciliation Board is accepted on the other side, but most of the parties to a dispute have been ready to accept a board's suggestions, and thus

pose that any kind of compulsion should be applied to either the Commonwealth or New Zealand, it merely empowers them to make such arrangements as may be deemed mutually advantageous. At present it seems more than doubtful whether either the Commonwealth or the Colony has the power to make simple, binding and effective arrangements which would involve operations and expenditure outside their own boundaries, and under which each would have to act so as to affect colonists not subject to their respective jurisdictions. Recent events have clearly shown that the time has passed by for regarding the military forces of a colony as something never to be employed outside of its own boundaries. I need not point out that such a cooperation would be of value not only to Australia and New Zealand, but to the Empire which both are so anxious to serve.

The reply of the Colonial Office to this Memorandum set forth that its suggestions had been submitted to the delegates of the federating colonies, and did not meet their approval. They pointed out that during the period of great stress to be allowed circumstances might arise which would cause grave embarrassment to the Commonwealth if it were open to New Zealand to claim admission on the same terms as the original States, and that Article 121 of the draft Bill passed sufficiently for the admission of New Zealand at any time upon such conditions as might be found mutually acceptable to the Colony and the Commonwealth. It was added that the suggested amendments to the appeal from New Zealand Courts to the High Court of Australia and the arrangements for mutual defence, which it undertaken now, led to great delay and involve a transfer from the people of the Federating Colonies, while there does not appear to be any probability that the Federation would not favourably entertain any proposals of the kind if put forward after Federation."

In the Constitution Act as passed, however, New Zealand is mentioned specifically among the "States" to which its provisions may apply, though not included in what relates to the "Original States." See in this vol. CONSTITUTION OF AUSTRALIA: *Great Britain, Parliaments of, Papers by Command*, C. 1898, pp. 10, 11, 12, 13, 14, and 15.

A. D. 1900, October. Annexation of the Cook Islands. A correspondent of the *London Times*, writing from Rarotonga, the largest of the Cook or Hervey Islands, on the 10th of October, 1900, reported the arrival there of the Earl of Kimberley, Governor of New Zealand, for the purpose of effecting the annexation of the islands to that colony in accordance with the expressed wish of the natives. Lord Kimberley, he writes, "in the afternoon, and as the representative of Her Majesty, addressed the Arikis or high

chiefs, on the question of annexation, which they had asked. This is his second visit to the island, and he congratulated the people on finding such a satisfactory condition of affairs at Rarotonga. He expressed pleasure in the readiness of the natives to accept the offer of annexation, and the relief of those families who had been at the war in South Africa might find support, and in sending one of the representative residents to represent them on the battle. All this and much more, he said, was the best they took in the British Empire, and he was aware of, and their petition to the Government had been laid at the feet of the Throne, and he considered. He urged them, however, to consider carefully their decision in this matter, and further, that it should be arrived at in a free and untrammelled will. He had heard from the British Resident that the high chiefs of the people wanted annexation, but he had not heard it from their own lips. It was his duty to lay it before them to perform the duty of their Majesty, and for him to announce to the group, hoisting the British flag, and claiming that from henceforth they were part of the British Empire, whose prestige and power they would from that moment share. The chiefs unanimously agreed to annexation. There are 2,300 Maoris on this island and 1,000 Europeans. All are intensely loyal to the Victoria. The island was discovered by James Cook, Messrs. Williams and Bouma, two of the London Mission Society, which for many years has had its headquarters for the Eastern Islands located here. The volcanic soil of the island is marvellously fertile, coffee, sugar, oranges, limes, coconuts and many other fruits and trees growing without elaborate cultivation. A British protectorate was proclaimed over the group by Captain Bouke, C. B., at Havannah in 1888. Since 1892 the islands of the protectorate have been guarded and administered by a British Resident, paid by the New Zealand Government, so that the islands will eventually be included within the boundaries of the colony. Nearly the whole of the islands of New Zealand. There are six islands, the largest of which is 700 miles southeast of Sydney, and a population of which is about 400,000. The *Times*, commenting on the annexation, remarked: "The New Zealand Government has passed resolutions expressing its desire to annex Swireff Island, to the north of the Cook Islands, and about half way to the Penhryn Islands, which also be annexed to the colony. These islands, though thinly inhabited, is said to possess the best ports in that part of the Pacific, the only quarter from which any protest against the acquisition of the Cook Islands has come. It seems to be New South Wales, which has the influence of the introduction of the New Zealand tariff on its trade with that place."

NIGERIA: A. D. 1882-1899. History of the formation of the Niger Coast Protectorate. Conventions of Great Britain with

longitude east of Greenwich (43° 40' Paris), shall run thence to the southern limits of the 24th degree of longitude east, with a 21° 00' east of Paris, and shall run the 24th degree until it meets to the east a line parallel of latitude, the latitude of which shall be mutually fixed.

24 The two Governments agree to appoint Commissioners, who shall be charged on the spot a further line in accordance with indications given in paragraph 2 of the Convention. The result of their work shall be the basis for the appreciation of their respective claims.

It is agreed that the provisions of Article 1 of the Convention of the 14th June 1908 shall apply equally to the territories north and south of the 14° 20' parallel of latitude to the north of the 5th parallel of latitude between the 14° 20' meridian of longitude and Greenwich 12th degree east of 14th course of the Upper Nile. The text of the *English* by *Cameroon* and *Lebanon* States.

of the territorial partitioning of Africa, which this important treaty has first determined, and of the magnitude of which it conformed to France. A striking view was given at the time in the *Revue*. "Though we are perfectly satisfied with the agreement, and though we believe in the policy which will be perfectly satisfied to disengage from ourselves the factious and centrifugal France, receives the benefit for the most magnificent piece of work of this century by any European nation, and which, though important this time, will not easily reach of both the western and southern shores of France." We call France the great possession that we have founded off and consolidated on the other. We are glad to see it in her hands, and want no reply, either in trade or in war. We see, however, no good in proceeding. She has not obtained the most magnificent security for overseas development which has to any Power within recent times. The way of understanding the Convention is what it is that France now possesses in Africa. Let our readers look at a map of Africa, and first fix their eyes on Algeria, and with their rich soil and splendid landscape, their numbers of an ancient and splendid Phoenician, Greek, Roman, and Arab. Then let them allow their eyes to travel downwards to the right bank of the Nile, to the heart of Africa, the Congo. From Congo, with its great memories and its secret of European charm and splendour, to the Nile and Stanley Pool, with their tropical and savage life, there is a continuous, uninterrupted stretch of French territory. They say in our country districts, the President might now ride on his own horse from Tunis to Douro. The French *Revue* of West Africa says in an official column, "The Paris Press with very natural exultation looks over a space as great as that of Moscow." From Algeria to the Congo, and to Lake Chad, is a distance of 1,000 miles. Africa straddles this vast tract of territory. At the present moment, it is a work of the most unique and valuable of the African colonies—Algeria, Tunis, Senegal.

On the 1st of March 1899 the 13th and 14th Amendments were added to the Constitution and the 15th Amendment to the following effect:—The 14th Amendment to the Constitution of the 19th June 1868 shall be subject to the following provisions, which shall be considered as forming an integral part thereof:

Article 11. The Republic of Madagascar engages not to acquire either territory or political influence to the west of the line of frontier defined in the following paragraph, and the Government of the French Republic engages not to acquire either territory or political influence to the east of the same line.

10. The line of contact shall start from the point where the boundary between the Congo Free State and French territory meets the water-parting between the watershed of the Nile and that of the Congo and its affluents. It shall follow a principle that water parting up to its intersection with the 11th parallel of north latitude. From this point it shall be drawn as far as the 16th parallel in such manner as to separate, in principle, the Kingdom of Wadai from what constituted in 1888 the Province of Darfur. The line of course be so drawn as to pass to the westward of the 21st degree of longitude east of Greenwich, 18.40 east of Paris or to the east of the 21st degree of longitude east of Greenwich, 19.40 east of Paris.

It is understood in principle that the French zone shall be divided into the northern and east by a line running from the point of intersection of the 49th and 50th parallels to the 49th degree of

penus pitted indignantly, and if once their highnesses were to be thoroughly roused they would prove most formidable foes. We do not envy the French their task if they attempt to conquer Warr. *The Statesman, March 25, 1890.*

A. D. 1897: Massacre of British officials near Benin. Capture of Benin. An intended expedition from the Niger Coast Protectorate, going on a peaceful mission to the Kingdom of Benin, led by Acting Consul General Phillips, was attacked on the way and the whole party massacred, excepting two, who were wounded, but who saved themselves in the bush and contrived to make their way back. The Consul General had been warned that the king would not allow the expedition to enter Benin, but persisted in going. A punitive expedition was sent against the town the following month and the town was captured and taken on the 18th, but the king fled.

The city was a most appalling sight, particularly the King's quarters, from which four roads lead to the compounds of the city, the city being very scattered in the open spaces. The latest victims of the Benin raid were counted, and one of the corpses was placed in a space to prevent putrefaction. The bodies and bones and teeth were scattered all over. Within the walls of the city were four towers, each 20 feet high, each 2 feet square, and at the end wall in each tower a roof was covered with an earthen, conical, bowl about 50 feet long close against the wall on which were placed the gods to whom sacrifice is made, mostly being carved ivory tusks standing upright, mounted at base in indurated constructed bronze heads. In front of each ivory god was a small earthen mound on which the victim's forehead would apparently be placed. The altars were covered with streams of dried human blood and the

stench was too frightful. It was the people, sat at ground in two pounds while the British priests sacrificed for their edification. The sacrifice compounds were found covered with human bodies giving forth foul odours. The first night several deaths and sickness occurred owing to the stench was equally bad everywhere. The puts partially under other bodies. A victim still living who had been sent out to be a servant of Mr. Good, a member of Mr. Phillips' staff. At the doors and gates of houses were staking goats and fowls, slain only to prevent the white man from entering. The four going is but a feeble attempt to describe the horrors of this most terrible raid after five days' continuous fighting, with about 1,000 natives still present, and frightful sights. In the city the same sights are not seen, the expenditure of human life in sacrifice has been enormous. Most of the walls have been filled with human bodies. *The Statesman, April 1, 1897.*

THE NINETEENTH CENTURY.

The date of the ending of the Century.—Controversy as to whether the Nineteenth Century came to its end at the ending of the year 1899 or the year 1900 seems nearly incomprehensible to one who takes the trouble to begin a counting of years from the beginning of the Christian Era, and so reaches in his reckoning the fact that the first century did not end until the 100th year was ended. That seems to clear up the question, since the 200th, 300th, 400th, and so on up to the 1900th, must be the last years of the successive centuries, just as the 100th is the last year of the first century. Arithmetically, there is no doubt about it, but some minds refuse to recognize the fact as a merely arithmetical fact. The date of the century, a time with which the counting of years has little to do. The same view is set forth in the following quotation from a communication that appeared in the "New York Times":

The centennial figures are the symbol, and

the only symbol, of the centuries. In the hundred years there is a change of time, and this great secular event is of significance. What more natural than to mark the century into harmony with its mark? What more consistent way to make each group of a hundred years correspond with a single centennial emblem? It is noticed that, apart from the centennial, there is absolutely nothing to give it any form. The initial figures 18 stand at the end of the century, which the earth carries with 100 years around the sun. Then a new 19 is put up. Shall we wait now for 1900, at the behest of the calendar, will not pass over the significance of the year, is stamped with the great seal of the century with cheers we will welcome it as the century. The 1900 men, who compose the majority of the people say to themselves, "We freely admit that the century is in your mind, the artificial century."

Of course these numbers are not absolute. They may be increased or diminished by the discovery of other countries as of equal importance, or by striking out some which may be considered as below the grade of an important epoch in the steps of science or civilization. But the difference between the two lists is so but a that probably no competent judge would bring them to an equality. Again, it is noteworthy that nothing like a regular graduation is perceptible during the last three or four centuries. The eighteenth century, instead of showing some approximation to the wealth of discovery in our own age, is less remarkable than the seventeenth, having only about half the number of really great advances. A. R. Wallace, *The Nineteenth Century, A History*, 1880, pp. 100-101, *Mod. Hist.*, *Mod. Hist.*, *A. Y. Spectator*, *per* *per*.

Difference of the Century from preceding ages.—In the last 100 years the world has seen great wars, great national and social upheavals, great technical inventions, great economic changes. Literature and art have had their triumphs and have periodically enriched the intellectual inheritance of mankind. Yet large as the progress made in these fields is, it is not the progress of thought as such, as they are compared to the future horizon it is not that, then, that is the most important and the most fruitful of the changes which open to the present century. Rather it is to be found in the cumulative products of scientific research to which no other period offers a parallel. No stage of history, if it is to be so called, is so pregnant with the grandest of all discoveries, the grandest of all inventions, the grandest of all revolutions. No other period in the history of the human race has seen the rapid increase of knowledge, but the growth which it has been patient to witness. The growth of industrial invention is not a fact we are permitted to forget. We do, however, sometimes forget how much of it is due to the close connection between theory and knowledge and its utilitarian application, which in its degree is a factor of no small importance in the history of mankind. I suppose that at this moment if we were allowed a vision of the other half of the forces which are predestined most powerfully to affect the future of mankind, we should have to look for them not in the Legislature, nor in the Press, nor on the platform, nor in the schemes of practical statesmen, nor in the dreams of political theorists, but in the laboratory, the office of the students who cannot smile, but like the necessities of men who cannot them selves forget the results of their own labors, in whose theories could scarcely be under food by those whom they will be likely to benefit.

"What does it is the variety and quantity of modern industrial methods, they almost all depend on the last recent invention, the application of the power, and our supply of useful power is principally provided for us by machines which supply us with so many different kinds of all principles, and steadily little in detail, save the days of Watt. And as we all know, the great reservoir of energy from which the world of present draws, and from which we in this century must always draw, but our main engine for utilizing it is the steam engine, and by its essential nature, the steam engine is

extravagantly wasteful. So that, if it is to be something to be this is the age of steam, we may say, but our heavily laden sails, have in truth been little better than spendthrifts. Every now and then we throw a new strain upon the vast hidden resources of nature. And we are quite about our supply of oxygen, say Crookes about our supply of uranium. If our coal supply is now low, sooner or later the stored-up resources would be exhausted. Human energy, used or squandered his capital, which have to depend upon such current, be derived from that stored heat, the rotation of the earth till, in the end, the ages, these also begin to fall.

After all, however, it is not the material and obvious results of science, which are of the deepest importance, have affected changes more subtle and less obvious which are at least as worthy of consideration and at least as important to the civilized world. No one so great a change in our mental conception of the world in which we live, while point of view has changed, the framework in which we arrange our facts in the world of men and things, new framework. The spectacle of the products of science, now in a wholly different way. We not only see more, but we see it differently. The discoveries in physics, chemistry, which have borne themselves upon the human mind, are in the process of giving us a new conception of the inner nature of that matter which the world is traversing, insight and path. Differences of thought, of all nature are constant, but the differences of motion are constant. What were once regarded as the known to be movement. The have been made to reduce the play with its infinite variety, its glory, its form, its significance, and its substance, homogeneous medium in which the distances to be discovered, but the movement of stress. And with this hypothesis can I suppose, be a groupings of physicists after this, not less, and less, indication of the, think, to a new world with success. The view, which I have endeavored to purely scientific, but its consequences, confined to science. How will they themselves in other regions of human, in literature, in art, in religion? A. R. Wallace, *The Nineteenth Century, A History*, 1880, pp. 100-101, *Mod. Hist.*, *Mod. Hist.*, *A. Y. Spectator*, *per* *per*.

The intellectual and social trend of the Century.—"The two influences which made the nineteenth century what it is, were the scientific spirit and the social spirit. Thus the nineteenth century is, enough, is the great interpretative, of nature and of the past, and at the same time, the century of incessant and unceasing, in all that relates to the current life of the world, is also the century of national systems of education, and at the same time of national

The lengthened average of human life.—What has been the chief characteristic of the nineteenth century? No two critics agree, nor can they, because each prizes a different quality. One singles out science, another, invention, as the dominant trait. A third, who looks mainly at the political aspect of life, says democracy. Others, again, say pessimism, philanthropy, doubt or toleration. So many features, so much diversity, argue at least for many-sidedness.

There is one characteristic, however, which distinguishes the nineteenth century from all previous centuries, a characteristic which has become too common to attract the attention it deserves, although it really measures all the rest: this is longevity. During the past one hundred years the length of life of the average man in the United States and in the more civilized parts of Europe has increased from a little over 30 to about 40 years. A multitude of causes, mostly physical, have contributed to this result. Foremost among these should be placed (1) whatever may be included under the general term sanitation; (2) improved methods in medicine; and (3) the more regular habits of living which are the direct outcome of industrial life on a large scale.

These are some of the evident means by which life has been lengthened. Inventions, which have made production cheap and the transportation of all products both cheap and easy, have had an influence too great to be computed. And no doubt much has been due to a general improvement in methods of government, although in the main, there has been much less progress in practical government than is commonly supposed. No great railroad company or banking house or manufacturing corporation could prosper if its officers and employees were chosen and kept in office according to the system by which political offices, almost everywhere, are filled. "None but experts wanted," is the sign written over the entrance to every profession, trade, and occupation—except government.

But whatever governments have done or left undone, the fact to be insisted on here is, that the average man to-day lives almost ten years longer than his grandfather lived.—W. R. Thayer, *Longevity and Degeneration* (Boston, R. C., 1900).

The Musical Century.—"Music is the only one of the fine arts of which it can be said that it reached its highest development in the nineteenth century. It is the modern art par excellence, and while everybody has been told that it is the youngest of the arts, few realize how

much is implied in that assertion."—H. T. Finck, *The Musical Century* (N. Y., G. P. Put., Jan. 12, 1901).

The Woman's Century.—"A well-dictated that the nineteenth century, known as Woman's Century. The women of the women of 1800 and the women of 1900 offers abundant proof of the correctness of the prophecy."—Mrs. Carrie C. Catt, *Women, Industries and Professions* (N. Y., J. P. Put., Jan. 12, 1901).—"In 1900 a third of the college students in the United States were women. Sixty per cent of the pupils in the secondary schools, both public and private, are women. More girls are preparing for a college education. Women having in general more leisure time, there is reason to expect that there will be more women than men in our colleges and normal schools. The time, too, has passed when girls went to college to prepare the way for teaching or for other liberal professions. In considerable numbers they are using their intellectual resources and the enrichment of private lives. Thus far between 50 and 60 per cent of women college graduates have entered the teaching profession. In the country at large, 70 per cent of the teaching is done by women. In the North Atlantic portion over 80 per cent. Even in the secondary schools, public and private, more women than men are teaching. In all other countries the advanced preparation of boys is exclusively in the hands of men. No before has a nation intrusted all the schooling of the vast majority of its future people to men as well as women, to women alone."—Alice F. Palmer, *The Higher Education of Women* (in the same).

The Age of Steel succeeding the Age of Iron.—"The age of iron, which passed away during the last century, was succeeded by the age of Bessemer steel, which enjoyed a reign of thirty-six years, beginning, as it did, in 1856, is in turn now passing away to bessemerize the age of Siemens open hearth steel. As the product of open hearth is far beyond that of Bessemer in Britain, and such the wide range of the product will soon be the case in the United States."—Andrew Carnegie, *The Development of Steel Manufacture* (N. Y., Evening Post, Jan. 12, 1901).

NIUCHWANG.—"Ninchiwang, while a comparatively small city of but 60,000 population, is of especial importance to the United States as a treaty port. It is located at the extreme north of the Gulf of Pechili, considerably farther north than Tientsin and is of especial importance to the United States because of the demand for goods from this country in that section. The proposed Russian railway line, which is projected through Manchuria and the province of Shingking to the port of Port Arthur, passes near Ninchiwang and is to be connected by a short line.

Another line, to be built by British capital, will connect Ninchiwang with Shanghai, and there is already a railway connection with Peking, the capital of the Empire."—*United States Department of Statistics, Monthly Summary* (Mar., 1899), p. 2196.

CANAL. A. D. 1891-1896. (FAYETTEVILLE was the site of the Legislature in 1896) and several bills were secured. Local legislation to the effect of 1899, but attempts to carry a general law for the State were defeated.

A. D. 1898. **Race war in Wilmington.**—Wilmington, N. C., was the scene, in November, of a riot which was called a "race" revolution. The government, dominated by the "white" party, which outnumbered the "colored" party, was overturned by the latter. The riot was precipitated by an article in a newspaper, edited by a negro, which was in the honor of some of the white people. The riot was followed by a series of murders and evictions among the "colored" population. The offending newspaper office was destroyed. Resistance being offered, a series of killings occurred, in which a considerable number of negroes were killed, many were injured, and hundreds were driven by terror from the city. White Republican officials were accused of having taken to flight and their opposition to the control of city affairs.

A. D. 1900. **Constitutional amendment for the qualification of the suffrage.**—By a constitutional amendment adopted in August, 1900, the qualification of the suffrage was changed.

Section 1. Every person presenting himself for election shall be able to read and write any language in common use in the English language. Before he shall be entitled to vote, he shall be able to read and write any language in common use in the English language. On or before the 1st day of May next, in which he proposes to vote, he shall be able to read and write any language in common use in the English language. But no person who was, on January 1, 1867, or before that date, entitled to vote under the constitution of the United States shall be disqualified, and no lineal descend-

ant of any such person, shall be denied the right to register and vote at any election in this State by reason of his inability to possess the educational qualification herein prescribed, provided he shall have resided in the State with the term of this section prior to December, 1908. The said clause shall provide for the registration of all persons entitled to vote within the election district and shall, on or before November 1, 1908, provide for the making of a permanent record of such registration and all persons so registered shall forever thereafter have the right to vote in all elections by the people in this State unless disqualified under section 2 of this article. Provided, such person shall have paid his poll tax as above required.

OTTAWA: A. D. 1900.—Great fire.—The city of Ottawa, capital of the Dominion of Canada, and the lumber manufacturing town of Hull on the opposite side of the Ottawa River, were both devastated, on the 29th of April, by one of the most destructive fires of the century. It originated in the upsetting of a lamp in a dwelling in Hull. This was at half past ten o'clock in the morning. A big gale blowing from the northeast made quick work of the in-

flammable houses in Hull, and in a few minutes the flames had reached the river, crossing across to the Ottawa side. The fire then took 18 steps in Hull, and destroyed a great many stories. It blazed a crescent-shaped path, five miles long and a mile wide, destroying on its journey the public buildings and the greater part of Hull, the industrial area of the city, the diere, and the suburbs of the city, the classes at Mechanicsburg, Rockaway, and Hintonburg. Fully 15,000 people were made homeless, and \$15,000,000 worth of property was annihilated."—*Canadian Magazine*, 1900.

PAPACY.

A. D. 1894.—Conference with Eastern Patriarchs.—A conference of Eastern Patriarchs to consider the reunion of the Eastern Churches (Armenian, Maronite, Melchite, etc.) with the Church of Rome was opened at the Vatican, in October, under the presidency of the Pope. The meeting had no result.

A. D. 1896 (March).—Resumption of authority over the Coptic Church.—The authority of the Pope over the Coptic Church was resumed on the 30th of March, 1896, after a suspension of four centuries, by the reestablishment of the Catholic Patriarchate of Alexandria. Bishop Macarius was appointed Patriarch and two Bishops were appointed for Upper and Lower Egypt.

A. D. 1896 (September).—Decision on the invalidity of Anglican orders.—In September, 1896, the final decision of the Vatican on a reopened question as to the validity of ordinations under the ritual of the Church of England, was

announced by Pope Leo XIII. in a Bull which declares: "After long study, I must confirm the decree of my predecessors, that all orders made under the Anglican rite are absolutely invalid." Soon after the decision was announced, a writer in the "Contemporary Review" gave the following account of circumstances connected with it:

"The question of Anglican Orders was first raised in connection with the appeal for union made by Leo XIII. in the Encyclical 'Præsepe' of 1894, and more particularly in his letter to the Anglican people. The group of Anglicans of whom Lord Halifax is the spokesman took this opportunity seriously, and ever since that time negotiations have been going on more or less continuously between them and the Vatican. . . . The idea of a corporate union, so dear to Lord Halifax, could only be carried out in the first instance by the admission that the Anglican Church had no existence as a Church, and was therefore incompetent to discuss a union with the Roman Church. Once recognised the validity of her Orders, and

the two conferences as to the
theology of each the two churches.
The meeting to meagrement. It is
said that Pope entered heartily into
the views of Pichone as a condi-
tionate assent to the validity of the
Council. I was well aware that in
my opinion would be very well re-
ceived by the Pope was put at
Benedict College at Rome. He
soon arrived at the conclusion
to send his report to the
cardinals and Rampolla
and sought it out. Together
they decided when the Holy Father
expressed his satisfaction and per-
mission. This happened in the winter

of 1890 the idea of union was in the air. The Vatican, then ever "Catholic," encouraged the foundation of the *Anglo-American Journal*, devoted to the relations of Catholics and Protestants concerning the union of the churches, and particularly the reunion of the Anglicans, and edited by the Abbot Porcellana, a priest, and a personal friend of the Pope. This movement in favour of union was regarded by the Catholics in England as the apprehension and misrepresentation alone would have sufficed to wreck it for the time being. A group viewed the idea of incorporate Anglicanism but treated the efforts to do so as a danger. — Lee, who would not entertain an attitude of judicial impartiality, pointed out that he must take a stand. He dared firmly encourage the Protestants. At the same time, he must do some thing to allay the fears of the Catholics. He said that if we except the Pope and Curia, there is no one who for a long time fondly believed that they could make this policy of union successful. They had accomplished very large results, but the Curia was adverse to the validity of the union. He asked, decisions of the Sacred Congregation which settled the dispute? There was no spite of them all the Pope was not against this policy. Compelled at last to give sanction, he named a Commission of Cardinals, which sat at Rome in the spring of 1896, under the presidency of Cardinal Vannetti. The theologians set forth the objections which they raised their respective views were written, and, after a series of conferences, a report was placed in the hands of the Pope. No conclusion was arrived at. The Pope had become to in this preliminary stage by the materials for a judgment. He had not, in case his Holiness should have pronounced a decision. — The Pope's decision by the Bull *Apostolica Cura*, which was a final examination of the question of the reunion of cardinals, called "Supremacy of the Holy See," met on July 16, 1896, the authority of the Pope. All the cardinals were present, and they expressed their opinion that the matter had been well considered and that the debates in the Congregation had served to show how important the matter was. The Bull declares that it is null and void was published on the 14th of September. — Catholics, *The American*, *The Ph. Ph. of the* *Anglo-American Journal*, Dec. 1, 1896.

A. D. 1899 January. Encyclical Letter of Pope Leo XIII, condemning certain opinions "called by some 'Americanism.'" The following passages are from the English translation of the encyclical letter addressed on the 29th of January 1899 by Pope Leo XIII. to the bishops and clergy of the Catholic Church in America.

To Our Beloved Son, James, Cardinal Gibbons, Cardinal Priest of the Holy Spirit Mary, Beyond the Fiber, Archdiocese of Baltimore. We have often considered and admired the noble gifts of your nation which enable the American people to live to every good work and promote the good of humanity and the sphere of civilization. Although the situation is not ideal, as preclerics, we repeat the words of peace so often spoken, but rather to call attention to some things to be avoided and corrected. We believe it is conveyed in that same spirit that is true charity which has inspired the world. We shall expect that you will take it as the proof of our love, the more so because it is intended to suppress certain contents which have arisen lately among you to the detriment of the peace of many souls.

It is known to you, beloved son, that the biography of Isaac Thomas Hale is rapidly, through the action of those who undertake to translate or interpret it into French, becoming less and less a faithful representation of the original. It has excited not a little controversy, and a number of certain opinions brought forward concerning the way of leading Christianity. We do not on account of our apostasy, or the danger to guard the integrity of the Faith, have the society of the Faithful, are desirous to write to you more at length concerning this matter.

"The underlying principle of these new opinions is that, in order to more fully protect those who differ from her, the Church should shape her teachings more in accord with the spirit of the age and relax some of her ancient truths and make some concessions to new ideas. Many think that these concessions should be made not only in regard to issues of faith, but even in regard to doctrines which define the deposit of the faith. They contend that you'd be opportune, in order to win those who differ from us, to omit certain parts of the teaching which have of lesser importance, and to retain only the meaning which the Church has always attached to them. I do not intend my words, beloved son, to grow the fabric of the faith of the nature and origin of the doctrine of the Church proposes no temptation to us. The Vatican Council says concisely, in this point: 'For the doctrine of faith which God has revealed has not been proposed, like human principles, to be improved by perfection by human intelligence, but has been delivered as a divine deposit to the Spouse of Christ to be faithfully kept and undeviatingly declared.' Hence that man who got the sacred dogmas is perpetually to be retained as such, or Holy Mother, the Church, has once declared that it is

that meaning ever to be departed from under the pretense or pretext of a deeper comprehension of them?—*Constitutio de Fide Catholica*, Chapter iv.

"Let it be far from anyone's mind to suppress for any reason any doctrine that has been handed down." Such a policy would tend rather to separate Catholics from the Church than to bring in those who do. There is nothing closer to our heart than to have those who are separated from the fold of Christ return to it, but in no other way than the way pointed out by Christ.

The rule of life laid down for Catholics is not of such nature that it cannot accommodate itself to the exigencies of various times and places. The Church has, guided by her Divine Master, a kind and merciful spirit, for which reason from the very beginning she has been what St. Paul said of himself: "I became all things to all men that I might save all."

History proves clearly that the Apostolic See, to which has been intrusted the mission not only of teaching but of governing the whole Church, has continued, in one and the same doctrine, one and the same sense, and one and the same judgment.—*Const. de fide*, Chapter iv.

But in regard to ways of living she has been accustomed to so yield that, the divine principle of morals being kept intact, she has never neglected to accommodate herself to the character and genius of the nations which she embraces. Who can doubt that she will act in this same spirit again if the salvation of souls requires it? In this matter the Church must be the judge, not private men who are often deceived by the appearance of right. In this, all who wish to escape the danger of schism, Pius the Sixth, must condemn. He condemned as injurious to the Church and the spirit of God who guides her the doctrine contained in proposition lxxviii of the Synod of Pistoia, "that the discipline made and approved by the Church should be submitted to examination, as if the Church could frame a code of laws useless or heavier than human liberty can bear."

But beloved son, in this present matter of which we are speaking, there is even a greater danger and a more manifest opposition to Catholic doctrine and discipline in that opinion of the lovers of novelty, according to which they hold such liberty should be allowed in the Church that her supervision and watchfulness being in some sense lessened, allowance be granted the faithful each one to follow out more freely the leading of his own mind and the trend of his own proper activity. They are of opinion that such liberty has its counterpart in the newly given civil freedom which is now the right and the foundation of almost every secular state.

In the apostolic letter concerning the constitutional states addressed by us to the bishops of the whole Church, we discussed this point at length, and there set forth the difference existing between the Church, which is a divine society, and all other social human organizations which depend simply on free will and choice of men. It is well, then, to particularly direct attention to the opinion which serves as the argument in behalf of this greater liberty sought for and recommended to Catholics.

It is alleged that now the Vatican decree concerning the infallible teaching authority of the Roman Pontiff having been proclaimed that nothing further on that score can give any solid-

ride, and accordingly, since that law is guarded and put beyond question, the truth is held both for thought and action by each one. But such reasoning is faulty, since, if we are to come to any conclusion from the infallible teaching authority of the Church, it should rather be taken as a warning not to wish to depart from it and modify the minds of all being heavenly and thereby, greater security from private error be enjoyed by all. And further, if we are to ourselves of such a way of reasoning, we should depart seriously from the overruling authority of the Most High—which wisdom is pleased to set forth by most solemn teaching authority and supreme teaching of the Apostolic See, willed that depositions should be in order to safeguard the minds of the faithful children from the dangers of the present age.

These dangers, viz., the constant opposition to liberty, the passion for despotic pouring contempt upon any possible assumption of the right to hold whatever pleases upon any subject and to set it forth in print to the world, have so wrapped up in a thick darkness that there is now a greater of the Church's teaching office than ever before. The people become unimpaired by the science and of duty.

We indeed, have no thought of opposing everything that modern industry and science produced, so far from it that we would like the patrimony of truth and to an ever wider scope of public well being whatsoever toward the progress of learning and virtue. All this, to be of any solid benefit, must have a real existence and growth, can only be in condition of recognizing the wisdom and authority of the Church.

From the foregoing it is manifest the reason that we are not able to give approval to those views which, in their collective sense, are called by some "Americanism." But if you name are to be understood certain principles of mind which belong to the American people just as other characteristics belong to various other nations, and if, moreover, by it is admitted your political condition and the laws and customs by which you are governed, then reason to take exception to the name. But this is to be so understood that the doctrine which have been adverted to above are not indicated, but exalted, there can be no room of doubt that our venerable brethren of the United States of America, would be the first to repudiate and condemn it as being most injurious to themselves and to their country. For it would give rise to the suspicion that there are among us some who conceive and would have the United States of America to be different from what it is in the rest of the world.

But the true church is one, as by its doctrine, so by unity of government and its catholicity also. Since God has placed the Church and foundation of unity in the chair of St. Peter, she is rightly called, the Roman Church, for where Peter is, there is the Church. Wherefore, if anybody wishes to be a Catholic, a real Catholic, he ought to be able to say with his heart the self same words which John addressed to Pope Damasus: "I acknowledge no other lord than Christ, no bond but the relationship with Your Holiness: that is, with the chair

that the church was built
and that whosoever built
thereon should be

A. D. 1900 1901 Proclamation of the Uni-
versal Jubilee of the Holy Year Nineteen
Hundred. Its extension for six months. The
Holy Year. Text of the Papal Proclamation
in its English translation. In its English transla-

tion in the *Annuaire Catholique*.
The papal bull of Christ who shall read
the Holy and Apostolic Proclamation
which by the grace of God we
are about to inaugurate
in the Holy Year. Willingly have
the most illustrious of our predecessors
the popes that they may redound in
the hearts of the Christian people, and which may
be the first proof of our care to
the Sovereign Pontiff.
The Great Jubilee introduced in
the Christian customs and ob-
servances of our predecessors, who have
celebrated the Holy Year
was used for such a year to be
the most precious of holy ceremonies,
the most copious means of help
to the souls of men and the leading of
the Christian people.

As we see with our own eyes
the celebration of the last solemn celebration
of the Holy Year. It was in the Pontificate
of Alexander VII. we were yet in the years of our
youth. It is a grand sight to see them
the thousands of religious fervor in Rome.
When it is if the same were still to be
the same is a concourse of pilgrims, the
which flowed processionally to the
the most illustrious of the city resounding with
the voices of the people. The Sovereign Pontiff him-
self, the generous souls of Cardinals and in
the people, gave a noble example
of what they should do.

As we turn with our thoughts as these we turn with
our hearts to the times in which we now
live, we see the practices of piety, when we think
of the times when they were fulfilled under the eyes of all
the people, we are amazed at the fervor and
the devotion of the people, but now, on account
of the changed condition of Rome it is impossible
for us to do so. In order to do so in any
manner we must depend upon the imagination.
But however that may be, God, who
is the source of all graces, will concede
to the people the same to this our design,
the glory of Him and for His glory. At
the same time we must remember, the way of
the souls of the faithful to us, and
the infirm of spirit
has pleased our Lord
to place in our hands. This solemn
celebration is not a duty of our age.

It is a duty which is particularly neces-
sary to our times. The present age, however
cannot be said to be sterile, either in regard to
good works or to Christian virtues. There is be-
lieved to be examples of both in deed and
not in word, however, the practice of the
virtues of piety and practice, in which many
are not found to realize themselves because of
a poverty proper to the Christian life. In many
houses of the church and perpetration of the
most virtuous. Yet a sting of conscience
we see, on the other hand, with that blindness
with which perfect error, whose people are
learning to eternal ruin. And the sting of
conscience is bitter to our hearts. In many Chris-
tians led away by the demons of the heart, and
those led astray with vanity the most virtuous
errors of false doctrine, go on day by day de-
stroying and destroying the grand edifice of the faith.
Hence arise, to the Christian people, the
that insatiable appetite for the things of this
world, and hence errors and thoughts generated
from God and rooted in the world. It is almost
impossible to express in words the danger which
has already become in this magnificent society
to the very foundation of society. The minds
of men ordinarily religious, the blind fervor
of popular credulity, hidden perils, the real
crimes, are nothing more to those who seek their
source and cause than the unrestrained strife to
possess and enjoy the goods of this world.

It is of supreme importance, therefore, to
public no less than private life, to admonish men
as to the duties of their state, to arouse souls
sleeping in forgetfulness of duty, to recall to the
thought of their own salvation, the danger of an
imminent risk of perishing and of losing through
their negligence and pride, those eternal and
unchangeable rewards for the possession of which
we are born. This is the aim of the Holy Year.
The Church, indelible only of her intense be-
lief and mercy as a most tender Mother,
studies at this time, with love and by every
means within her ample power, to reconduct
souls to better counsels and to promote in each
works of expectation by means of penance and
expiation of life. To this end, multiplying
prayers and augmenting the fervor of the faith-
ful, she seeks to appease the outraged majesty
of God and to draw down His copious and cele-
stial gifts. She opens with the rich treasury of
indulgences, of which she is the appointed dis-
penser, and exhorts the whole of Christianity to
the firm hope of pardon. She is particularly intent
upon vanquishing with unquenched love and
sacrifice the most rebellious wars. How then
may we not hope to obtain, with God's help, rich
fruits and produce and salaries are most adapted
to the present needs?

Several extraordinary solemnities, the fruits
of which we believe to be already sufficiently
diffused, and which will serve in some manner
to consecrate the end of the nineteenth century
and the beginning of the twentieth, greatly be-
cause the advantage of the opportunity is now
given. We speak of the honors to be rendered
at this time in every part of the world to Jesus
Christ as our Redeemer. On this subject we
were profuse in our appellation and praise of a
people which had its source in the poverty of the
poor individuals, and in fact, what could be
more holy and salutary? All that we can
should hope for and desire is contained in the

only begotten Son of God, our Salvation, Life, and Resurrection. To die to abandon Him is to desire eternal perdition. We could never silence adoration, praise, thanksgiving due to our Lord Jesus Christ, and without intermission they should be repeated everywhere, for in every place, no thanksgiving, no honor, can be so great but that it may be increased. Our age produces perhaps many men who are forgetful and ingrateful, who continually respond to the mercy of their Divine Saviour with disdain and to His gifts with offences and injuries. Certainly the lives of many are so far removed from His laws and His precepts as to argue in themselves ungrateful and malicious souls. And what shall we say to so renewed egotism in these times and not once alone, the blasphemous of the Arian heresy regarding the Divinity of Jesus Christ. Courage, then, and work all you who with this new and most beautiful proposition seek to excite the piety of the people to new fervor. Do what you can in such manner that you impede not the course of the jubilee and the appointed solemnities. Let it be held that in the forthcoming manifestations of faith and religion this special intention shall be kept in view—hatred of all that which within our memory has been impiously said or done, especially against the Divine Majesty of our Lord Jesus Christ, and to satisfy publicly for the injuries publicly inflicted upon Him. Now if we are really in earnest, we must know that to repent of evil done, and having implored peace and pardon of God, to exercise ourselves with great diligence in the duties necessary to virtue, and to assume those we have cast aside is the means of satisfaction most desirable and assured and which bears upon it the impress of truth. Since the Holy Year offers to all the opportunities which we have touched on in the beginning, it is a necessary provision that the Christian people enter upon it full of courage and of hope.

For which reason, raising our eyes to heaven and praying from our heart that God, so rich in mercy, would vouchsafe to concede benignly His blessing and favor to our desires and works, and would illuminate with His Divine light the minds of all men, and move their souls to conform with His holy will and inestimable goodness. We, following in this the example of the Roman Pontiffs, our predecessors, with the assent of the Cardinals of the Holy Roman Church, our Venerable Brethren, in virtue of these letters, with the authority of Christ, of the blessed Peter and Paul, and with our own authority, order and promulgate from this hour the great and universal jubilee, which will commence in this holy city of Rome at the first Vespers of the Nativity of our Lord Jesus Christ of the Year 1899, and which will close at first Vespers of the Nativity of our Lord of the year 1900. May all redound to the glory of God, the salvation of souls, and the good of the Church. During this year of jubilee we concede and impart mercifully in our Lord full indulgence, remission and pardon of sin to all faithful Christians of either sex, who, being truly penitent, shall confess and communicate, visiting devoutly the Roman basilicas of SS. Peter and Paul, St. John Lateran, and St. Mary Major, at least once a day for twenty days continuously or at intervals, that is, the obligation is to be fulfilled between the first Vespers of each day and the last Vespers of the day following, whether the faithful be citizens of Rome or not, if they are

residing permanently in Rome. If they are passing Rome as pilgrims, then they must visit the basilicas in the same manner for the same purpose, being devoutly to God for the exaltation of the Church, for the extirpation of heresy, for the concord amongst Christian peoples, and for the salvation of the whole Christian people.

And since it may happen to many that all their good will they cannot or cannot carry out the above, being either weak, or on their journey, impeded by some legitimate causes, we, taking into account their good will, can, when they are truly contrite and have duly confessed and communicated, concede to them the participation in the indulgences and remission of sins as if they had actually visited the basilicas on the days appointed. Rome, therefore, invites you, her beloved bosom, beloved children, from all parts of the world, who have means of visiting her. It is also that to a good Catholic in this jubilee it is fitting that he come to Rome and apply to Christian faith, and that he should especially the satisfaction of sight, something vile or profane, turning his soul rather to things which predispose him to more piety. And that which tends greatly to improve his character if he look within, the character of the city, a certain character is impressed upon her, and not to be changed by human means, nor by any act of violence. Jesus Christ, the Saviour of the world, is only, amongst all its cities, that of Rome, the centre of an action more than any other, creating it to Himself. Here He placed Himself without long and careful preparation, the centre of His own empire; here He came to see the face of His Vicar should be raised to the immensity of time; here He willed that the revealed truth should be jealously guarded, and that from here light should be diffused throughout the whole earth in such manner that those who are alienated from the light of Rome are alienated from Christ. The monuments raised by our fathers, the splendor of her temples, the touch of the Apostles, the Catacombs of the martyrs, all serve to increase the aspect of holiness and to improve those who visit her in the spirit of faith. Who ever knows the voice of such monuments feels that he is no pilgrim in a foreign city, but a citizen of his own, and by God's grace he will realize the fact at his going, more forcibly than at his coming.

We wish, in order that these present letters may be brought more easily under the hand of all, that printed copies, signed by a person of free and furnished with the seal of some ecclesiastical dignitary, shall be received with the same faith as would be given to the original by those who have heard or read it.

To no one will it be lawful to alter any word of this our disposition, promulgation, concession, and will, or to rashly oppose it. If any should presume to make any such attempt, let him know that they incur thereby the indignation of God Almighty and of His Apostles Peter and Paul.

Given at St. Peter's, Rome, on the 22d of May, in the year of the Incarnation of our Lord 1899, and the 22d of our Pontificate. CARD. ALONSI-MASELLA, Pro-Datary. L. CARD. MACCHI.

of life, the law of God helps to be abolished, provided that man's conscience and even the organization of the powers of the Church are not. But Christ and the Church as Christ and the Church ought to have as their foundation the principles laid down by divine truth, lay more and more, to the four persons of the Holy Spirit, the lower orders, but designating them with their minds for the enjoyment of this as offered. Accordingly, to Christian Democracy, let there be nothing more sacred than lay and right, let it hold the right of having and holding to be kept inviolate, let it maintain the diversity of ranks, which properly belong to a well-ordered state, in time let it prefer for human association that form and character which itself and nature has imposed upon it. Clearly, therefore, Social and Christian Democracy can have nothing in common, the difference between them is such that that between the secularism of socialism and the profession of the Christian law.

It is not for any one to pervert the name of Christian Democracy to political ends. For although democracy by its very name and by philosophical usage denotes popular rule, yet in this application it must be employed altogether without political significance, so as to denote nothing whatever besides this beneficent Christian action upon the people. For natural morality and the precepts of the Gospel for the very reason that they transcend the chances of human existence must necessarily be independent of any particular form of civil government and adapt themselves to all, so long as there is nothing to conflict with virtue and right. They are therefore and remain in themselves absolutely external to all conflict of parties and vicissitudes of occurrence, so that, under whatever kind of government people may and ought to abide, by these precepts which aid them love God above all and their neighbors as themselves. This has ever been the morality of the Church, by it Roman Pontiffs have constantly dealt with states whatever might be their executive government. And this being so the mind and action of Catholics, when devoted to promoting the good of the lower orders, cannot by any possibility admit embracing and introducing any one form of government in preference to another.

Just in the same way must Christian Democracy repudiate the other ground of offense, which arises from paying so much regard to the interests of the lower classes as to seem to pass over the higher, who are nevertheless of equal importance to the preservation and development of the State. The Christian law of charity, which we have just mentioned, forbids this. It is large enough to embrace all ranks, as the aim and task of those who would have the common people in a Christian spirit on the one hand satisfy the poor, and on the other, preserved against the contagion of socialism.

We have recalled these various topics on which we have before this found occasion to dilate, in order that you might, and we trust that all dispute over the name of Christian Democracy may now be laid as dead, as well as my suspicion of their serious significance attaching to it. This trust we are fully justified. For making exception of the ideas of certain persons regarding the force and virtue of this kind of Christian Democracy, ideas which are not free from extraneous gains or error, surely there will be no single

person to find fault with an order which is fully to the law of nature and of God, this to make the lives of the more tolerable, and to make the opportunity of self-culture so that in the world they may truly find the means of virtue and religion, and to be men, and not mere animals, and not pagans, and so strive with earnestness to attain that true and that good, for which we are in the world. This is belonging to one family, the offspring of the same Father, redeemed by one Saviour, and the same eternal inheritance.

God forbid that under the name of democracy should lie the attempt at throwing off all obedience and law from those in lawful authority. Therefore, no less than that of Christianity for all such as in their several homes in the State, and further on in the lawful commands. This is the duty of a man and a Christian to be taken up heartily and is a duty for conscience's sake, as the Apostle has admonished, when he ordained that soul be subject to the highest power.

We spoke just now advisedly of the religion. For it is the opinion of the Church as they call it is, economy, and the precise opposite is the truth, that all moral and religious, and for the solution is to be expected mainly from the law and the precepts of the Gospel. Without the instincts which Christianity implants and keeps alive, without self-control, thrift, endurance and other qualities, you may try your hardest, but you cannot provide. This is why we have never encouraged Catholic associations for the assistance of the poor, to introduce other schemes of the kind, at the same time warning them that such must not be attempted without the sanction of religion, without its inclusion and approval. It is a laudable charity not merely to meet the temporary needs of the poor, but to organize a system of relief, this will be a more and reliable assistance. It must be still more laudable to desire to reach the minds of the mechanic and of the laborer of thrift and prudence, so that they may in part make provision for their dearest ones. It is an aim which not only relieves the wealthy, but it is a moral step towards themselves, it encourages them to appreciate their position, while it keeps them away from dissipation, checks self-indulgence, and leads them to virtuous behavior.

Finally, we again enjoin with you, that whatever schemes people may propose to the popular cause, whether the voluntary association, they should remember that they must be entirely submissive to the principles of the Church. Do not let them be beguiled by the sive order for charitable enterprise, which induces any relaxation of discipline, and the impracticable of solid beneficence, and to God. Those who please God are ready to give up their own interests, and listen to the bidding of the rulers of the Church.

PARIS. A D. 1897.—Burning of the Char-
ev-Barrat. A great destruction of life was
caused in the city of Paris by the breaking out in
the night of the fire in the Rue de la Compe,
which spread to the structures had been erected,
and to other combustible materials, to
the effect of Old Paris shops, and the
passing through them like wildfire. The
fire was attended with people, mostly of the
lower class and more than 200 are said to
have perished.

PAUNCEFOTE. Sir Julian: British Commissioner to the Peace Conference at The Hague. See also in this volume: PROCEEDINGS OF THE PEACE CONFERENCE, 1894.

PEACE CONFERENCE.

On the 24th of August, 1894, without previous knowledge or intimation, Count Mouravieff, the Russian Minister for Foreign Affairs, placed before the following momentous proposal from the hands of all the foreign representatives attending his weekly reception at St. Petersburg: "The maintenance of universal peace, and a possible reduction of the excessive armaments which weigh upon all nations, to resort in the present condition of affairs all over the world, the ideal towards which the efforts of all Governments should be directed. This view fully corresponds with the humane and more and more intensified His Majesty the Emperor, my august Master. Being convinced that this high administration with the most essential interests and a genuine aspiration of all the Powers, the Imperial Government considers the present moment a very favourable one for seeking, through international discussion, the most effective means of assuring to all peoples the blessings of real and lasting peace, and above all of limiting the progressive development of existing armaments. During the last twenty years aspirations towards general pacification have particularly asserted themselves in the consciences of civilized nations. The present plan of peace has been made the main of international policy. For the sake of peace the Great Powers have formed powerful alliances and for the purpose of establishing a better guarantee of peace they have developed their military forces in an unprecedented degree, and continue to develop them without hesitating at any sacrifice. All these efforts, however, have not yet led to the beneficial results of the desired pacification. The ever increasing financial burdens strike at the root of public prosperity. The physical and intellectual forces of the people, labour and capital, are diverted for the greater part from their natural application and wasted unproductively. Hundreds of millions are spent in acquiring terrible engines of destruction which are regarded today as the latest inventions of science, but are destined tomorrow to be rendered obsolete by some new discovery. National culture, economical progress, and the production of wealth are either paralysed or developed in a wrong direction. Therefore, the more the armaments of each Power increase, the less they answer to the objects aimed at by the Governments. Although its armaments are increased in great measure by this system of excessive armaments, and the constant being involved in this accumulation of war material renders the armed peace of today a crushing burden, increased more and more difficult for the nations to bear. It consequently seems evident that if this situation be prolonged, it will inevitably lead to that very disaster which it is feared to avoid, and the horrors of which make every humane mind shudder by anticipation. It is the supreme duty, therefore, at the present moment of all States to put some limit to these increasing armaments, and to find means of averting the calamities which threaten the whole world. Deeply impressed by this feeling, His Majesty the Emperor has been pleased to com-

mand me to propose to all Governments to have Representatives at the Imperial meeting of a Conference to discuss this problem. Such a Conference would be a happy inquiry for the humanity. It would concentrate the efforts the strivings of all States which wish to bring about the triumph of the idea of universal peace over the trouble and discord. It would give time to cement their agreement by a confirmation of the principles of law, which rest the security of States upon the rights of peoples." *Great Russian Paper, The Russian Paper, 24th August, 1894.*

Having all week his supreme mission, I then to start before the world, during a period of four months, received from almost every governing formal expression of willingness. The Conference recommended the sovereign Emperor his grand design, on the 19th of 1894, by the following communication to foreign representatives at his court. In the month of August, not having been instructed me to propose to the Great Powers, which have Representatives in St. Petersburg, the meeting of a Conference with the seeking the most efficacious means for all peoples the blessings of real and lasting peace, and above all, in order to put a stop to the progressive development of the present armaments, there appeared to be no obstacle to the realization at no distant date of this pacification scheme. The cordial reception, by nearly all the Powers to the step taken by the Imperial Government could not but confirm this expectation. While highly appreciative of the sympathetic terms in which the advice of the Powers were expressed, the Emperor has not been able to collect, without exception, evidence of the warmest approval, has reached it, and continues to be convinced that all classes of society in various parts of the world. Notwithstanding the strong current of opinion which set in in favour of the idea of pacification, the political horizon has not undergone a sensible change. Several Powers have undertaken fresh armaments, strengthening further their military forces, and the presence of this uncertain situation has asked whether the Powers considered the present moment opportune for the International discussion of the ideas set forth in the Circular of the 24th of August. In the hope, however, the elements of trouble nagating political will so give place to a calmer disposition, the nature to favour the success of the proposed conference, the Imperial Government is that it would be possible to proceed to a preliminary exchange of ideas between Powers, with the object — on a of some — out delay means for putting a halt to the excessive increase of military and naval armaments, a question the solution of which

PEACE CONFERENCE

is clearly more and more urgent in view of the fresh reason given to these arguments, and of preparing the way for a discussion of the

possibility of preventing armed conflicts by the pacific means at the disposal of governments and diplomacy. In the event of the Great Powers considering the present moment favorable for the meeting of a Conference on this subject, it would certainly be useful for the nations to come to an understanding on the subject of the programme of their labours. The subjects to be submitted for international discussion at the Conference could, in general terms, be summarized as follows:—

1. An understanding not to increase for a fixed period the present effective of the armed forces and armed forces, and at the same time not to increase the Budgets pertaining thereto; and a preliminary examination of the means by which a reduction might even be effected in future in the forces and Budgets above mentioned.

2. To prohibit the use in the armies and fleets of any new kind of firearms whatever and of explosives or any powders more powerful than those now in use either for rifles or

3. To restrict the use in military warfare of any new kind of explosives already existing, and to prohibit the throwing of projectiles or explosives of any kind from balloons or by any similar means.

4. To prohibit the use in naval warfare of automatic torpedoes or plungers, or other weapons of destruction; to give an undertaking not to construct vessels with mines in the bottom.

5. To apply to naval warfare the stipulations of the Geneva Convention of 1864, on the basis of the Additional Articles of 1868.

6. To neutralize ships and boats employed in carrying those overboard during or after an engagement.

7. To revise the Declaration concerning the laws and customs of war elaborated in 1874 by the Conference of Brussels, which has remained unratified to the present day.

8. To accept in principle the employment of good offices, of mediation and facultative arbitration in cases leading themselves thereto, with the object of preventing armed conflicts between nations, to come to an understanding with respect to the mode of applying these good offices, and to establish a uniform practice in this respect.

It is well understood that all questions concerning the political relations of States and the stipulations established by Treaties, as general questions which do not directly fall within the programme adopted by the Cabinets, must be absolutely excluded from the deliberations of the Conference. In requesting you, Sir, to be good enough to apply to your Government representations on the subject of my present invitation, I beg you at the same time to remember that in the interest of the great cause of human progress, the interest of the great cause of human progress has so much at heart.

His Imperial Majesty considers it advisable that the Conference should not sit in the capital of one of the Great Powers, where so many political interests are entered which might perhaps, in the progress of a work in which all the States of the universe are equally interested, the final assent being given to the suggestions

PEACE CONFERENCE

here offered, the next step toward realization of the grand project was taken, by an arrangement with the government of the Kingdom of the Netherlands in accordance with which an invitation was addressed from The Hague, in April, to many governments, both the greater and the less of the political world, in the following terms:—

"For political reasons the Imperial Russian Government considered that it would not be desirable that the meeting of the Conference should take place in the capital of one of the Great Powers, and after securing the assent of the Government interested, it addressed the Cabinet of The Hague with a view of obtaining its consent to the choice of that capital as the seat of the Conference in question. The Minister for Foreign Affairs at once took the orders of Her Majesty the Queen in regard to this request, and I am happy to be able to inform you that Her Majesty, my august Sovereign, has been pleased to authorize him to reply that it will be particularly agreeable to her to see the proposed Conference meet at The Hague. Consequently, my Government, in accord with the Imperial Russian Government, charges me to invite [the Government named] to be good enough to be represented at the above-mentioned Conference, in order to discuss the questions indicated in the second Russian Circular of the 30th December, 1898 (11th January, 1899), as well as all other questions connected with the ideas set forth in the Circular of the 12th (24th) August, 1898, excluding, however, from the deliberations everything which refers to the political relations of States or the order of things established by Treaties. My Government trusts, that [the Government named] will associate itself with the great humanitarian work to be entered upon under the auspices of His Majesty the Emperor of All the Russias, and that it will be disposed to accept this invitation, and to take the necessary steps for the presence of its Representatives at The Hague on the 18th May next for the opening of the Conference, at which each Power, whatever may be the number of its Delegates, will only have one vote."—*Great Britain, Parliamentary Publications (Papers by Command: Miscellaneous, No. 1, 1899, pp. 3-4 and 8).*

In response to this definite invitation, the governments of Austria-Hungary, Belgium, Bulgaria, China, Denmark, France, Germany, Great Britain, Greece, Italy, Japan, Luxembourg, Mexico, Montenegro, the Netherlands, Persia, Portugal, Rumania, Russia, Servia, Spain, Sweden and Norway, Switzerland, Turkey, and the United States of America, appointed representatives who met at The Hague on the 18th of May, 1899, and organized the Conference by electing M. de Staal, Russian Ambassador, to preside. The United States was represented by the Hon. Andrew D. White, Ambassador to Berlin, the Hon. Seth Low, President of Columbia University, the Hon. Stanford Newell, Envoy Extraordinary, &c., to The Hague, Capt. Alfred T. Mahan, U. S. N., Capt. William Crozier, U. S. A., and the Hon. Frederick W. Hille, of New York. The representatives of Great Britain were Sir Julian Pauncefote, Ambassador to the United States, Sir Henry Howard, Envoy Extraordinary, &c., to The Hague, Vice-Ambassador A. Fisher, Major General Sir J. C. Aspinall, and Lieutenant Colonel C. A. Court.

"The Conference at The Hague was a Parlia-

PEACE CONFERENCE.

ment of Man representing, however imperfectly, the whole human race. The only independent ones not represented at the Huis ten Bosch were the South American republics, the Emperor of Morocco, the King of Abyssinia, and the Grand Lama of Tibet. That the South American republics were not represented is not the fault of the Russian Emperor. Mexico received and accepted an invitation. Brazil received, but rejected, the invitation to be present, and so did one other South American republic. The original Russian idea was to assemble representatives from every independent government in the world, nor did they even confine themselves to the secular governments. They were very anxious that the Pope should also be directly represented in this supreme assembly. Even with the Pope and South America left out, the Congress represented more of the world and its inhabitants than any similar assembly that has ever been gathered together for the work of international legislation. That circumstance in itself is sufficient to give distinction to the Conference at The Hague, which, it is expected, will be the forerunner of a series of conferences, each of which will aim at being more and more universally representative. On the eve of the twentieth century the human race has begun to federate itself. That is the supreme significance of the assembly which has just spent two months in the capital of Holland."—W. T. Stead, *The Conference at The Hague* (Forum, Sept., 1899).

To systematize and facilitate the discussions of the Conference, three Commissions or Committees were appointed, between which the several subjects suggested in the Russian circular of January 11 (as given above), and agreed to by the several governments, were distributed. The 1st, 2d, 3d and 4th propositions of the programme were referred to the First Commission, the 5th, 6th and 7th to the Second, the 8th (concerning mediation and arbitration) to the Third. This was done on the 23d of May, after which the general Conference was held only at intervals, to receive and consider reports from the several Commissions, of agreements reached or disagreements ascertained. This went on until the 29th of July, when the several Conventions, Declarations, and Recommendations agreed upon for submission to the governments represented were summarized in the following "Final Act," signed by all: "In a series of meetings, between the 18th May and the 29th July, 1899, in which the constant desire of the Delegates above mentioned has been to realize, in the fullest manner possible, the generous views of the august Initiator of the Conference and the intentions of their Governments, the Conference has agreed, for submission for signature by the Plenipotentiaries, on the text of the Conventions and Declarations enumerated below and annexed to the present Act:—

"I. Convention for the pacific settlement of international conflicts.

"II. Convention regarding the laws and customs of war by land.

"III. Convention for the adaptation to maritime warfare of the principles of the Geneva Convention of the 22nd August, 1864.

"IV. Three Declarations:—1. To prohibit the launching of projectiles and explosives from balloons or by other similar new methods. 2. To prohibit the use of projectiles, the only object

PEACE CONFERENCE.

of which is the diffusion of asphyxiating and other poisonous gases. 3. To prohibit the use of balloons, which expand or flatten easily in the human body, such as bullets with a hard envelope which the envelope does not entirely cover the core, or is pierced with incisions.

"These Conventions and Declarations shall form so many separate Acts. These Acts shall be dated this day, and may be signed up to the 31st December, 1899, by the Plenipotentiaries of the Powers represented at the International Peace Conference at The Hague.

"Guided by the same sentiments, the Conference has adopted unanimously the following Resolution:— 'The Conference is of opinion that the restriction of military budgets, which are at present a heavy burden on the world, is extremely desirable for the increase of the material and moral welfare of mankind.'

"It has, besides, formulated the following wishes:—

"1. The Conference, taking into consideration the preliminary steps taken by the Swiss Federal Government for the revision of the Geneva Convention, expresses the wish that steps may be shortly taken for the assembly of a Special Conference having for its object the revision of that Convention. This wish was voted unanimously.

"2. The Conference expresses the wish that the questions of the rights and duties of neutrals may be inserted in the programme of a Conference in the near future.

"3. The Conference expresses the wish that the questions with regard to rifles and naval guns, as considered by it, may be studied by the Governments with the object of coming to an agreement respecting the employment of new types and calibres.

"4. The Conference expresses the wish that the Governments, taking into consideration the proposals made at the Conference, may examine the possibility of an agreement as to the limitation of armed forces by land and sea, and of war budgets.

"5. The Conference expresses the wish that the proposal, which contemplates the declaration of the inviolability of private property in naval warfare, may be referred to a subsequent Conference for consideration.

"6. The Conference expresses the wish that the proposal to settle the question of the bombardment of ports, towns, and villages by a naval force may be referred to a subsequent Conference for consideration.

"The last five wishes were voted unanimously, saving some abstentions.

"In faith of which, the Plenipotentiaries have signed the present Act, and have affixed their seals thereto. Done at The Hague, 29th July 1899, in one copy only, which shall be deposited in the Ministry for Foreign Affairs, and of which copies, duly certified, shall be delivered to all the Powers represented at the Conference."—*Great Britain, Parliamentary Publications (Papers by Command: Miscellaneous, No. 1, 1899, pp. 3-4, 8 and 288-9).*

The accompanying Conventions and Declarations were in no case unanimously signed, several delegations, in each case, claiming time for the governments they represented to consider certain questions involved. The most important of the proposed Conventions, namely, that for the

PEACE CONFERENCE.

"*Pacific Settlement of International Disputes*," was signed at The Hague by the delegates from Belgium, Denmark, Spain, the United States of America, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Roumania, Russia, Siam, Sweden and Norway, and Switzerland, but not by Austria-Hungary, Germany, Italy, Japan, Great Britain, Luxembourg, Switzerland, Serbia, Turkey, or China. Ultimately, however, the great Treaty of Arbitration was signed by every one of the Powers represented. The signature of the delegates of the United States was given under a reserve of a declaration which will be found in the following excerpt from the general report of the American Commission. The full text of each of the Conventions is given below.

The entire plan for the tribunal and its use is voluntary, so far as sovereign States are concerned. The only seeming exceptions to this rule are contained in Article 1, which provides that the Signatory Powers agree to employ their efforts for securing the pacific regulation of international differences; and Article 27, which says that the Signatory Powers consider it to be a duty in the case where an acute conflict threatens to break out between two or more of them, to demand those latter that the permanent court is open to them. The obligation thus imposed is a legal or diplomatic in its nature. These articles merely express a general moral duty for the performance of which each State is accountable to itself. In order, however, to make assurance doubly sure and to leave no doubt whatever of the meaning of the Convention, as affecting the United States of America, the Commission made the following declaration in the final session of the Conference, held July 25:—
"The Delegation of the United States of America, in signing the Convention regulating the peaceful adjustment of international differences, as proposed by the International Peace Conference, make the following declaration:—Nothing contained in this Convention shall be so construed as to require the United States of America to depart from its traditional policy of not intruding upon interfering with, or entangling itself in the political questions or policy or internal administration of any foreign State; nor shall anything contained in the said Convention be construed to imply a relinquishment by the United States of America of its traditional attitude toward purely American questions." Under the reserve of this declaration the United States delegates signed the Arbitration Convention itself. Article 8 of the Convention, providing for a special form of Arbitration, was proposed individually by Mr. Hubert of the United States Commission. . . . It is held that in particular crises, when the other means provided by the Convention for keeping or restoring peace have failed, it may prove to have a real and practical value. It is certain that, by the Continental States of Europe, it has been exceedingly well received."—*General Report of the American Commission*.

Objection has been made to [the International Court of Arbitration] on the ground that submission to it is purely voluntary and that no executive authority has been provided to carry out its decisions. The answer to all such objections is simply that the power of enlightened public opinion is relied upon to be amply sufficient for the purpose of insuring obedience to

PEACE CONFERENCE.

every just mandate of this Court. In the case of the United States of America the judgments of the Court, according to the decisions now in force, will have a peculiarly binding force. An agreement to submit a case to the Court cannot be made by the United States except by way of a treaty, which, when ratified by the Senate, becomes the supreme law of the land. In the case of *La Nina*, *Whitlaw v. The United States*, 75 Fed. Rep., 543, it was decided by the United States Circuit Court of Appeals in California that by virtue of the treaty the judgment of the Court of Arbitration provided for by the terms of the treaty has all the force of a federal statute, and it is itself the supreme law of the land binding upon every individual citizen of the United States, including all federal and State authorities. For us, at least, the International Court of Arbitration at The Hague will, if this view prevails, in reality be the highest possible tribunal with an authority binding even on our own United States Supreme Court.

Article 27 aims, in a measure, to supply the deficiency of the provision for obligatory arbitration, in that it declares it to be the duty of all Signatory Powers to remind any one or more of themselves, in case of a threatened dispute, that the permanent Court of Arbitration is open to them. What particular effect this particular article will have must be left to the future. With out modification or reservation the article, when ratified by the United States, would have constituted a complete abandonment of the time honored Monroe Doctrine. Accordingly the representatives of the United States declined to sign the treaty, except under a reservation or declaration, which was solemnly accepted by the Peace Conference, thus materially modifying the jurisdiction of the Court [see above]. By this declaration the Monroe Doctrine was not only self guarded, but it was stated and vindicated more emphatically than ever before in our history, and the people of this country are therefore, in a position to cordially support the International Court of Arbitration, without the fear that the Court itself, or the fact of its establishment, may ever be used against this country, or to the embarrassment of its diplomacy and traditional policy.

"The effect of the establishment of the Court upon European diplomacy is necessarily surrounded by great uncertainty. In a recent review of the work of the Peace Conference I ventured to use this language: 'It is most encouraging and of the highest importance that upon the whole Continent the governments are apparently in advance of public opinion upon the entire subject of the Peace Conference.' The reason is not far to seek. No man who is fit for the position can today hold a place involving the direction of his country's international policy without feeling an almost intolerable pressure of responsibility. To him every remote chance of a lightening of his burden comes as a promise of blessed relief. It is a historical fact that none of the obstacles to success which the Peace Conference had to overcome originated in the mind of any sovereign or of any high minister of State. In every case they were raised by underlings without responsibility and anxious to show superior wisdom by finding fault. So long as this favorable governmental attitude continues there is every reason for encouragement."—*Continental*

PEACE CONFERENCE.

public opinion, especially in questions of foreign policy, seems more pliable than ever before, and is as clay in the hands of a potter, so far as alliances and sympathies are concerned, when following a popular monarch or foreign minister. I have since been assured by the highest officials of at least two great European Powers, that this statement meets with their unqualified approval. The sneers of irresponsible journals and politicians cannot and will not affect the deliberate purposes of a high minded and serious minister of State."—F. W. Holls, *The International Court of Arbitration at The Hague; a paper read before the N. Y. State Bar Association, Jan. 15, 1901.*

Convention for the Pacific Settlement of International Disputes.

TITLE I.—On the Maintenance of the General Peace.

ARTICLE I. With a view to obviating, as far as possible, recourse to force in the relations between States, the Signatory Powers agree to use their best efforts to insure the pacific settlement of international differences.

TITLE II.—On Good Offices and Mediation.

ARTICLE II. In case of serious disagreement or conflict, before an appeal to arms, the Signatory Powers agree to have recourse, as far as circumstances allow, to the good offices or mediation of one or more friendly Powers.

ARTICLE III. Independently of this recourse, the Signatory Powers recommend that one or more Powers, strangers to the dispute, should, on their own initiative, and as far as circumstances may allow, offer their good offices or mediation to the States at variance. Powers, strangers to the dispute, have the right to offer good offices or mediation, even during the course of hostilities. The exercise of this right can never be regarded by one or the other of the parties in conflict as an unfriendly act.

ARTICLE IV. The part of the mediator consists in reconciling the opposing claims and appeasing the feelings of resentment which may have arisen between the States at variance.

ARTICLE V. The functions of the mediator are at an end when once it is declared, either by one of the parties to the dispute, or by the mediator himself, that the means of reconciliation proposed by him are not accepted.

ARTICLE VI. Good offices and mediation, either at the request of the parties at variance, or on the initiative of Powers strangers to the dispute, have exclusively the character of advice and never have binding force.

ARTICLE VII. The acceptance of mediation can not, unless there be an agreement to the contrary, have the effect of interrupting, delaying, or hindering mobilization or other measures of preparation for war. If mediation occurs after the commencement of hostilities it causes no interruption to the military operations in progress, unless there be an agreement to the contrary.

ARTICLE VIII. The Signatory Powers are agreed in recommending the application, when circumstances allow, for special mediation in the following form:—In case of a serious difference endangering the peace, the States at variance choose respectively a Power, to whom they intrust the mission of entering into direct communication with the Power chosen on the other side,

PEACE CONFERENCE.

with the object of preventing the rupture of pacific relations. For the period of this mandate, the term of which, unless otherwise stipulated, cannot exceed thirty days, the States in conflict cease from all direct communication on the subject of the dispute, which is regarded as referred exclusively to the mediating Powers, who must use their best efforts to settle it. In case of a definite rupture of pacific relations, these Powers are charged with the joint task of taking advantage of any opportunity to restore peace.

TITLE III.—On International Commissions of Inquiry.

ARTICLE IX. In differences of an international nature involving neither honour nor vital interests, and arising from a difference of opinion on points of fact, the Signatory Powers recommend that the parties, who have not been able to come to an agreement by means of diplomacy, should as far as circumstances allow, institute an International Commission of Inquiry, to facilitate a solution of these differences by elucidating the facts by means of an impartial and conscientious investigation.

ARTICLE X. The International Commissions of Inquiry are constituted by special agreement between the parties in conflict. The Convention for an inquiry defines the facts to be examined and the extent of the Commission's powers. It settles the procedure. On the inquiry both sides must be heard. The form and the periods to be observed, if not stated in the inquiry Convention, are decided by the Commission itself.

ARTICLE XI. The International Commissions of Inquiry are formed, unless otherwise stipulated, in the manner fixed by Article XXXII of the present Convention.

ARTICLE XII. The powers in dispute engage to supply the International Commission of Inquiry, as fully as they may think possible, with all means and facilities necessary to enable it to be completely acquainted with and to accurately understand the facts in question.

ARTICLE XIII. The International Commission of Inquiry communicates its Report to the conflicting Powers, signed by all the members of the Commission.

ARTICLE XIV. The Report of the International Commission of Inquiry is limited to a statement of facts, and has in no way the character of an Arbitral Award. It leaves the conflicting Powers entire freedom as to the effect to be given to this statement.

TITLE IV.—On International Arbitration.

CHAPTER I.—On the System of Arbitration.

ARTICLE XV. International arbitration has for its object the settlement of differences between States by judges of their own choice, and on the basis of respect for law.

ARTICLE XVI. In questions of a legal nature, and especially in the interpretation or application of International Conventions, arbitration is recognized by the Signatory Powers as the most effective, and at the same time the most equitable, means of settling disputes which diplomacy has failed to settle.

ARTICLE XVII. The Arbitration Convention is concluded for questions already existing or for questions which may arise eventually. It may embrace any dispute or only disputes of a certain category.

PEACE CONFERENCE.

ARTICLE XVIII. The Arbitration Convention implies the engagement to submit loyally to the Award.

ARTICLE XIX. Independently of general or special treaties expressly stipulating recourse to arbitration as obligatory on the Signatory Powers, these Powers reserve to themselves the right of concluding, either before the ratification of the present Act or later, new Agreements, general or private, with a view to extending obligatory arbitration to all cases which they may consider it possible to submit to it.

CHAPTER II. On the Permanent Court of Arbitration.

ARTICLE XX. With the object of facilitating an immediate recourse to arbitration for international differences, which it has not been possible to settle by diplomacy, the Signatory Powers undertake to organize a permanent Court of Arbitration, accessible at all times and operating, unless otherwise stipulated by the parties, in accordance with the Rules of Procedure inserted in the present Convention.

ARTICLE XXI. The Permanent Court shall be competent for all arbitration cases, unless the parties agree to institute a special Tribunal.

ARTICLE XXII. An International Bureau, established at The Hague, serves as record office for the Court. This Bureau is the channel for communications relative to the meetings of the Court. It has the custody of the archives and conducts all the administrative business. The Signatory Powers undertake to communicate to the International Bureau at The Hague a duly certified copy of any conditions of arbitration agreed at between them, and of any award concerning them delivered by special Tribunals. They undertake also to communicate to the Bureau the Laws, Regulations, and documents eventually showing the execution of the awards given by the Court.

ARTICLE XXIII. Within the three months following its ratification of the present Act, each Signatory Power shall select four persons at the most, of known competency in questions of international law, of the highest moral reputation, and disposed to accept the duties of Arbitrators. The persons thus selected shall be inscribed, as members of the Court, in a list which shall be notified by the Bureau to all the Signatory Powers. Any alteration in the list of Arbitrators is brought by the Bureau to the knowledge of the Signatory Powers. Two or more Powers may agree in the selection in common of one or more Members. The same person can be selected by different Powers. The Members of the Court are appointed for a term of six years. Their appointment can be renewed. In case of the death or retirement of a member of the Court, his place shall be filled in accordance with the method of his appointment.

ARTICLE XXIV. When the Signatory Powers desire to have recourse to the Permanent Court for the settlement of a difference that has arisen between them, the Arbitrators called upon to decide the competent Tribunal to decide this difference must be chosen from the general list of members of the Court. Failing the direct agreement of the parties on the composition of the Arbitration Tribunal, the following course shall be pursued.—Each party appoints two Arbitrators, and these together choose an Um-

PEACE CONFERENCE.

pire. If the votes are equal the choice of the Empire is entrusted to a third Power, selected by the parties by common accord. If an agreement is not arrived at on this subject, each party selects a different Power and the choice of the Empire is made in concert by the Powers thus selected. The Tribunal being thus composed, the parties notify to the Bureau their determination to have recourse to the Court and the names of the Arbitrators. The Tribunal of Arbitration assembles on the date fixed by the parties. The Members of the Court, in the discharge of their duties and out of their own country, enjoy diplomatic privileges and immunities.

ARTICLE XXV. The Tribunal of Arbitration has its ordinary seat at The Hague. Except in cases of necessity, the place of session can only be altered by the Tribunal with the assent of the parties.

ARTICLE XXVI. The International Bureau at The Hague is authorized to place its premises and its staff at the disposal of the Signatory Powers for the operations of any special Board of Arbitration. The jurisdiction of the Permanent Court, may, within the conditions laid down in the Regulations, be extended to disputes between non-Signatory Powers, or between Signatory Powers and non-Signatory Powers, if the parties are agreed on recourse to this Tribunal.

ARTICLE XXVII. The Signatory Powers consider it their duty, if a serious dispute threatens to break out between two or more of them, to remind these latter that the Permanent Court is open to them. Consequently they declare that the fact of reminding the conflicting parties of the provisions of the present Convention, and the advice given to them, in the highest interests of peace, to have recourse to the Permanent Court, can only be regarded as friendly actions.

ARTICLE XXVIII. A Permanent Administrative Council, composed of the Diplomatic Representatives of the Signatory Powers accredited to The Hague and of the Netherlands Minister for Foreign Affairs, who will act as President, shall be instituted in this town as soon as possible after the ratification of the present Act by at least nine Powers. This Council will be charged with the establishment and organization of the International Bureau, which will be under its direction and control. It will notify to the Powers the constitution of the Court and will provide for its installation. It will settle its Rules of Procedure and all other necessary Regulations. It will decide all questions of administration which may arise with regard to the operations of the Court. It will have entire control over the appointment, suspension or dismissal of the officials and employees of the Bureau. It will fix the payments and salaries, and control the general expenditure. At meetings duly summoned the presence of five members is sufficient to render valid the discussions of the Council. The decisions are taken by a majority of votes. The Council communicates to the Signatory Powers without delay the Regulations adopted by it. It furnishes them with an annual Report on the labours of the Court, the working of the administration, and the expenses.

ARTICLE XXIX. The expenses of the Bureau shall be borne by the Signatory Powers in the proportion fixed for the International Bureau of the Universal Postal Union.

CHAPTER III. On Arbitral Procedure.

ARTICLE XXX. With a view to encourage the development of arbitration, the Signatory Powers have agreed on the following Rules which shall be applicable to arbitral procedure, unless other Rules have been agreed on by the parties.

ARTICLE XXXI. The Powers who have recourse to arbitration sign a special Act ("Compromis"), in which the subject of the difference is clearly defined, as well as the extent of the Arbitrators' powers. This Act implies the undertaking of the parties to submit loyally to the award.

ARTICLE XXXII. The duties of Arbitrator may be conferred on one Arbitrator alone or on several Arbitrators selected by the parties as they please, or chosen by them from the members of the Permanent Court of Arbitration established by the present Act. Failing the constitution of the Tribunal by direct agreement between the parties, the following course shall be pursued: Each party appoints two Arbitrators, and these latter together choose an Umpire. In case of equal voting, the choice of the Umpire is entrusted to a third Power, selected by the parties by common accord. If no agreement is arrived at on this subject, each party selects a different Power, and the choice of the Umpire is made in concert by the Powers thus selected.

ARTICLE XXXIII. When a Sovereign or the Chief of a State is chosen as Arbitrator, the arbitral procedure is settled by him.

ARTICLE XXXIV. The Umpire is by right President of the Tribunal. When the Tribunal does not include an Umpire it appoints its own President.

ARTICLE XXXV. In case of death, retirement, or disability from office of one of the Arbitrators, his place shall be filled in accordance with the method of his appointment.

ARTICLE XXXVI. The Tribunal's place of session is selected by the parties. Failing this selection the Tribunal sits at The Hague. The place thus fixed cannot, except in case of necessity, be changed by the Tribunal without the assent of the parties.

ARTICLE XXXVII. The parties have the right to appoint delegates or special agents to attend the Tribunal, for the purpose of serving as intermediaries between them and the Tribunal. They are further authorized to retain, for the defense of their rights and interests before the Tribunal, counsel or advocates appointed by them for this purpose.

ARTICLE XXXVIII. The Tribunal decides on the choice of languages to be used by itself, and to be authorized for use before it.

ARTICLE XXXIX. As a general rule the arbitral procedure comprises two distinct phases: preliminary examination and discussion. Preliminary examination consists in the communication by the respective agents to the members of the Tribunal and to the opposite party of all printed or written Acts and of all documents containing the arguments invoked in the case. This communication shall be made in the form and within the periods fixed by the Tribunal in accordance with Article XLIX. Discussion consists in the oral development before the Tribunal of the arguments of the parties.

ARTICLE XL. Every document produced by

one party must be communicated to the other party.

ARTICLE XLI. The discussions are under the direction of the President. They are only public if it be so decided by the Tribunal with the assent of the parties. They are recorded in the "procès-verbaux" drawn up by the Secretary appointed by the President. These "procès-verbaux" alone have an authentic character.

ARTICLE XLII. When the preliminary examination is concluded, the Tribunal has the right to refuse discussion of all fresh Acts or documents which one party may desire to submit without the consent of the other party.

ARTICLE XLIII. The Tribunal is free to take into consideration fresh Acts or documents on which its attention may be drawn by the agents or counsel of the parties. In this case the Tribunal has the right to require the production of these Acts or documents, but is obliged to make them known to the opposite party.

ARTICLE XLIV. The Tribunal can, besides require from the agents of the parties the production of all Acts, and can demand all necessary explanations. In case of refusal, the Tribunal takes note of it.

ARTICLE XLV. The agents and counsel of the parties are authorized to present orally to the Tribunal all the arguments they may think expedient in defence of their case.

ARTICLE XLVI. They have the right to raise objections and points. The decisions of the Tribunal on those points are final, and cannot form the subject of any subsequent discussion.

ARTICLE XLVII. The members of the Tribunal have the right to put questions to the agents and counsel of the parties, and to demand explanations from them on doubtful points. Neither the questions put nor the remarks made by members of the Tribunal during the discussions can be regarded as an expression of opinion by the Tribunal in general, or by its members in particular.

ARTICLE XLVIII. The Tribunal is authorized to declare its competence in interpreting the "Compromis" as well as the other Treaties which may be invoked in the case, and in applying the principles of international law.

ARTICLE XLIX. The Tribunal has the right to issue Rules of Procedure for the conduct of the case, to decide the forms and periods within which each party must conclude its arguments, and to arrange all the formalities required in dealing with the evidence.

ARTICLE L. When the agents and counsel of the parties have submitted all explanations and evidence in support of their case, the President pronounces the discussion closed.

ARTICLE LI. The deliberations of the Tribunal take place in private. Every decision is taken by a majority of members of the Tribunal. The refusal of a member to vote must be recorded in the "procès-verbal."

ARTICLE LII. The award, given by a majority of votes, is accompanied by a statement of reasons. It is drawn up in writing and signed by each member of the Tribunal. Those members who are in the minority may record their dissent when signing.

ARTICLE LIII. The award is read out at a public meeting of the Tribunal, the agents and counsel of the parties being present, or duly summoned to attend.

PEACE CONFERENCE.

ARTICLE LIV. The award, duly pronounced and signed by the agents of the parties at various points, and to the dispute definitely and without appeal.

ARTICLE LV. The parties can reserve in the "Compromis" the right to demand the revision of the award. In this case, and unless there be an agreement to the contrary, the demand must be addressed to the Tribunal which pronounced the award. It can only be made on the ground of the discovery of some new fact calculated to exercise a decisive influence on the award, and when at the time the discussion was closed, was unknown to the Tribunal and to the party demanding the revision. Proceedings for revision can only be instituted by a decision of the Tribunal expressly recording the existence of the new fact, recognizing in it the character described in the foregoing paragraph, and declaring the demand admissible on this ground. The "Compromis" fixes the period within which the demand for revision must be made.

ARTICLE LVI. The award is only binding on the parties who concluded the "Compromis." When there is a question of interpreting a Convention to which Powers other than those concerned in the dispute are parties, the latter notify to the former the "Compromis" they have concluded. Each of these Powers has the right to intervene in the case. If one or more of them are themselves of this right, the interpretation contained in the award is equally binding on them.

ARTICLE LVII. Each party pays its own expenses and an equal share of those of the Tribunal.

General Provisions.

ARTICLE LVIII. The present Convention shall be ratified as speedily as possible. The ratification shall be deposited at The Hague. A "procès-verbal" shall be drawn up recording the receipt of each ratification, and a copy duly certified shall be sent, through the diplomatic channel, to all the Powers who were represented at the International Peace Conference at The Hague.

ARTICLE LIX. The non-Signatory Powers who were represented at the International Peace Conference can adhere to the present Convention. For this purpose they must make known their adhesion to the Contracting Powers by a written notification addressed to the Netherlands Government, and communicated by it to all the other Contracting Powers.

ARTICLE LX. The conditions on which the Powers who were not represented at the International Peace Conference can adhere to the present Convention shall form the subject of a subsequent Agreement among the Contracting Powers.

ARTICLE LXI. In the event of one of the High Contracting Parties denouncing the present Convention, this denunciation would not take effect until a year after its notification made in writing to the Netherlands Government, and by it communicated at once to all the other Contracting Powers. This denunciation shall only affect the notifying Power. In faith of which the Plenipotentiaries have signed the present Convention and affixed their seals to it. Done at The Hague, the 29th July, 1899, in a single copy which shall remain in the archives of the Netherlands Government, and copies of it, duly

PEACE CONFERENCE.

certified, be sent through the diplomatic channel to the Contracting Powers. — *United States Sixth Cong., 1st Sess., Senate Doc. 159*

The Permanent Court of Arbitration.—The following is the membership of the Permanent Court of Arbitration as finally organized, in January, 1901, and announced to be prepared for the consideration of any international dispute that may be submitted to it. Fifteen of the greater nations of the world are represented in this most august tribunal that has ever sat for judgment of the disputes of men.

Austria-Hungary. His Excellency Count Fred. eric Schonborn, LL. D., president of the Imperial Royal Court of Administrative Justice, former Austrian Minister of Justice, member of the House of Lords of the Austrian Parliament, etc. His Excellency Mr. D. de Szilagyi, ex Minister of Justice, member of the House of Deputies of the Hungarian Parliament, Count Albert Apponyi, member of the Chamber of Magnates and of the Chamber of Deputies of the Hungarian Parliament, etc. Mr. Henri Lammasch, LL. D., member of the House of Lords of the Austrian Parliament, etc.

Belgium. His Excellency Mr. Beernaert, Minister of State, member of the Chamber of Representatives, etc. His Excellency Baron Lambert, Minister of State, Envoy Extraordinary and Minister Plenipotentiary, Secretary General of the Ministry of Foreign Affairs. The Chevalier Descamps, Senator. Mr. Rodin Jacquemyns, ex Minister of the Interior.

Denmark. Professor H. Matzen, LL. D., Professor of the Copenhagen University, Counselor Extraordinary of the Supreme Court, President of the Landsting.

France. M. Leon Bourgeois, Deputy, ex President of the Cabinet Council, ex Minister for Foreign Affairs. M. de Laboulaye, ex Ambassador, Baron Destournelles de Constant, Minister Plenipotentiary, Deputy. M. Louis Renault, Minister Plenipotentiary, Professor in the Faculty of Law at Paris, Law Officer of the Department of Foreign Affairs.

Germany. His Excellency Mr. Blugner, LL. D., Privy Councillor, Senate President of the Imperial High Court at Leipzig. Mr. von Frantzius, Privy Councillor, Solicitor of the Department of Foreign Affairs at Berlin. Mr. von Martitz, LL. D., Associate Justice of the Superior Court of Administrative Justice in Prussia, Professor of Law at the Berlin University. Mr. von Bar, LL. D., Judicial Privy Councillor, Professor of Law at the Göttingen University.

Great Britain. His Excellency the Right Honorable Lord Pauncefoot of Preston, G. C. B., G. C. M. G., Privy Councillor, Ambassador at Washington. The Right Honorable Sir Edward Baldwin Malet, ex Ambassador. The Right Honorable Sir Edward Fry, member of the Privy Council, Q. C. Professor John Westlake, LL. D., Q. C.

Italy. His Excellency Count Constantin Nigra, Senator of the Kingdom, Ambassador at Vienna. His Excellency Commander Jean Baptiste Pagano Guarnaschelli, Senator of the Kingdom, First President of the Court of Cassation at Rome. His Excellency Count Tornelli Braschi di Vergano, Senator of the Kingdom, Ambassador at Paris. Commander Joseph Zanardelli, Attorney at Law, Deputy to the National Parliament.

PEACE CONFERENCE.

Japan. Mr. I. Motono, Envoy Extraordinary and Minister Plenipotentiary at Brussels. Mr. H. Willard Benson, Law Officer of the Minister for Foreign Affairs at Tokio.

Netherlands. Mr. T. M. C. Asser, LL. D., member of the Council of State, ex Professor of the University of Amsterdam. Mr. F. B. Coninck Liefsting, LL. D., President of the Court of Cassation. Jonkheer A. F. de Savornin Lohman, LL. D., ex Minister of the Interior, ex Professor of the Free University of Amsterdam, member of the Lower House of the States General. Jonkheer G. I. M. H. Ruis de Beerenbroeck, ex Minister of Justice, Commissioner of the Queen in the Province of Limbourg.

Portugal. Conde de Macedo, Peer of the Realm, ex Minister of Marine and Colonies, Envoy Extraordinary and Minister Plenipotentiary at Madrid.

Romania. Mr. Theodore Rosetti, Senator, ex President of the High Court of Cassation and Justice. Mr. Jean Kallinderu, Administrator of the Crown Domain, ex Judge of the High Court of Cassation and Justice. Mr. Eugene Statseu, ex President of the Senate, ex Minister of Justice and Foreign Affairs. Mr. Jean N. Lahovari, Deputy, ex Envoy Extraordinary and Minister Plenipotentiary, ex Minister of Foreign Affairs.

Russia. Mr. N. V. Mouravieff, Minister of Justice, Active Privy Councillor, Secretary of State of His Majesty the Emperor. Mr. C. P. Pobedonostzeff, Attorney General of the Most Holy Synod, Active Privy Councillor, Secretary of State of His Majesty the Emperor. Mr. E. V. Frisch, President of the Department of Legislation of the Imperial Council, Active Privy Councillor, Secretary of State of His Majesty the Emperor. Mr. de Martens, Privy Councillor, permanent member of the Council of the Ministry of Foreign Affairs.

Spain. His Excellency the Duke of Tetuan, ex Minister of Foreign Affairs, Senator of the Kingdom, Grande of Spain. Mr. Bienvenido Oliver, Director General of the Ministry of Justice, ex Delegate of Spain to the Conference on Private International Law at The Hague. Dr. Manuel Torres Campos, Professor of International Law at the University of Granada, associate member of the Institute of International Law.

Sweden and Norway. Mr. S. R. D. K. D'Ollveerom, member of the International Law Institute, ex Associate Justice of the Supreme Court of the Kingdom of Sweden, Doctor of Laws and Letters at Stockholm. Mr. G. Gram, ex Minister of State of Norway, Governor of the Province of Hamar, Norway.

United States. Mr. Benjamin Harrison, ex President of the United States. Mr. Melville W. Fuller, Chief Justice of the United States. Mr. John W. Griggs, Attorney General of the United States. Mr. George Gray, United States Circuit Judge.

First Secretary of the Court—J. J. Rocuissen.
Second Secretary of the Court—Jonkheer W. Roell.

The Administrative Council consists of the Minister of Foreign Affairs of the Netherlands and the diplomatic representatives at The Hague of the ratifying Powers.

Secretary General—Mr. R. Melvil, Baron Van Leyden, Judge of the District Court of Utrecht and a member of the First Chamber of the States-General.

PEACE CONFERENCE.

Convention with respect to the Laws and Customs of War on Land.

ARTICLE I. The High Contracting Parties shall issue instructions to their armed forces, which shall be in conformity with the "Regulations respecting the Laws and Customs of War on Land" annexed to the present Convention.

ARTICLE II. The provisions contained in the Regulations mentioned in Article I shall be binding on the Contracting Powers in any war between two or more of them. These provisions shall cease to be binding from the moment when, in a war between Contracting Powers, a non-Contracting Power joins one of the belligerents.

ARTICLE III. The present Convention shall be ratified as speedily as possible. The ratifications shall be deposited at The Hague. A "procès verbal" shall be drawn up recording the receipt of each ratification, and a copy duly certified shall be sent through the diplomatic channels to all the Contracting Powers.

ARTICLE IV. Non-Signatory Powers are allowed to adhere to the present Convention. For this purpose they must make their adhesion known to the Contracting Powers by means of a written notification addressed to the Netherlands Government, and by it communicated to the other Contracting Powers.

ARTICLE V. In the event of one of the High Contracting Parties denouncing the present Convention, such denunciation would not take effect until a year after the written notification has been communicated to the Netherlands Government, and by it communicated to all the other Contracting Powers. This denunciation shall affect only the notifying Power.

In faith of which the Plenipotentiaries have signed the present Convention and affixed their seals thereto.

[Signed by representatives of Belgium, Denmark, Spain, Mexico, France, Greece, Montenegro, the Netherlands, Persia, Portugal, Romania, Russia, Siam, Sweden and Norway, and Bulgaria.]

REGULATIONS.

SECTION I.—On Belligerents.—CHAPTER I.—On the qualifications of Belligerents.

ARTICLE I. The laws, rights, and duties of war apply not only to armies, but also to militia and volunteer corps, fulfilling the following conditions:—1. To be commanded by a person responsible for his subordinates; 2. To have a fixed distinctive emblem recognizable at a distance; 3. To carry arms openly; and 4. To conduct their operations in accordance with the laws and customs of war. In countries where militia or volunteer corps constitute the army, or form part of it, they are included under the denomination "army."

ARTICLE II. The population of a territory which has not been occupied who, on the enemy's approach, spontaneously take up arms to resist the invading troops without having time to organize themselves in accordance with Article I, shall be regarded as belligerent, if they respect the laws and customs of war.

ARTICLE III. The armed forces of the belligerent parties may consist of combatants and non-combatants. In case of capture by the enemy

PEACE CONFERENCE

shall have a right to be treated as prisoners of war.

CHAPTER II.—On Prisoners of War

ARTICLE IV. Prisoners of war are in the power of the hostile Government, but not in that of the individuals or corps who captured them. They must be humanely treated. All their personal belongings, except arms, horses, and military papers, remain their property.

ARTICLE V. Prisoners of war may be interned in a camp, fortress, camp, or any other locality, and need not to go beyond certain fixed limits, but they must be confined as an indispensable measure of security.

ARTICLE VI. The State may utilize the labour of prisoners of war according to their rank and aptitudes. Their tasks shall not be excessive, and shall have nothing to do with the military operations. Prisoners may be authorized to work for the Public Service, for private persons, or on their own account. Work done for the State shall be paid for according to the tariffs in force for soldiers of the national army employed on similar tasks. When the work is for other branches of the Public Service or for private persons, the conditions shall be settled in agreement with the military authorities. The wages of such prisoners shall go towards improving their position. The balance shall be paid them at the time of their release, after deducting the cost of their internment.

ARTICLE VII. The Government into whose hands prisoners of war have fallen is bound to protect them. Pending a special agreement between the belligerents, prisoners of war shall be treated as regards food, quarters, and clothing, on the same footing as the troops of the Government into whose hands they are captured.

ARTICLE VIII. Prisoners of war shall be subject to the laws, regulations, and orders in force in the army of the State into whose hands they have fallen. Any act of insubordination warrants the adoption, as regards them, of such measures of severity as may be necessary. Escaped prisoners, recaptured before they have succeeded in rejoining their army, or before quitting the territory occupied by the army that captured them, are liable to disciplinary punishment. Prisoners who, after succeeding in escaping, are again taken prisoners, are not liable to any punishment for the previous flight.

ARTICLE IX. Every prisoner of war, if questioned, is bound to declare his true name and rank, and if he disregards this rule, he is liable to deprivation of the advantages accorded to the prisoners of war of his class.

ARTICLE X. Prisoners of war may be set at liberty on parole if the laws of their country authorize it, and in such a case, they are bound, on their personal honour, scrupulously to fulfil, both towards their own Government and the Government to whom they were made prisoners, the engagements they have contracted. In such cases, their own Government shall not repeat the receipt from them any service incompatible with the parole given.

ARTICLE XI. A prisoner of war cannot be forced to accept his liberty on parole, similarly the Government is not obliged to assent to the prisoner's request to be set at liberty on parole.

ARTICLE XII. Any prisoner of war, who is

PEACE CONFERENCE

liberated on parole and recaptured, bearing arms against the Government to whom he had pledged his honour, or against the allies of that Government, forfeits his right to be treated as a prisoner of war, and can be brought before the Courts.

ARTICLE XIII. Individuals who follow an army without directly belonging to it, such as newspaper correspondents and reporters, sailors, contractors, who fall into the enemy's hands, and whom the latter think fit to detain, have a right to be treated as prisoners of war, provided they can produce a certificate from the military authorities of the army they were accompanying.

ARTICLE XIV. A Bureau for information relative to prisoners of war is instituted on the commencement of hostilities in each of the belligerent States and, when necessary, in the neutral countries on whose territory belligerents have been received. This Bureau is intended to answer all inquiries about prisoners of war, and is furnished by the various services concerned with all the necessary information to enable it to keep an individual return for each prisoner of war. It is kept informed of internments and changes, as well as of admissions into hospital and deaths. It is also the duty of the Information Bureau to receive and collect all objects of personal use, valuables, letters, &c., found on the battlefields or left by prisoners who have died in hospital or ambulance, and to transmit them to those interested.

ARTICLE XV. Relief Societies for prisoners of war, which are regularly constituted in accordance with the law of the country with the object of serving as the intermediary for charity, shall receive from the belligerents for themselves and their duly accredited agents every facility within the bounds of military requirements and Administrative Regulations, for the effective accomplishment of their humane task. Delegates of these Societies may be admitted to the places of internment for the distribution of relief, as also to the halting places of repatriated prisoners, if furnished with a personal permit by the military authorities and on giving an engagement in writing to comply with all their Regulations for order and police.

ARTICLE XVI. The Information Bureau shall have the privilege of free postage. Letters, money orders, and valuables, as well as postal parcels destined for the prisoners of war or despatched by them, shall be free of all postal duties, both in the countries of origin and destination, as well as in those they pass through. Gifts and relief in kind for prisoners of war shall be admitted free of all duties of entry and others, as well as of payments for carriage by the Government railways.

ARTICLE XVII. Officers taken prisoners may receive, if necessary, the full pay allowed them in this position by their country's regulations, the amount to be repaid by their Government.

ARTICLE XVIII. Prisoners of war shall enjoy every latitude in the exercise of their religion, including attendance at their own church services, provided only they comply with the regulations for order and police issued by the military authorities.

ARTICLE XIX. The wills of prisoners of war are received or drawn up on the same conditions as for soldiers of the national army. The same rules shall be observed regarding death certifi-

PEACE CONFERENCE.

cutes, as well as for the burial of prisoners of war, due regard being paid to their grade and rank.

ARTICLE XX. After the conclusion of peace, the repatriation of prisoners of war shall take place as speedily as possible.

CHAPTER III.—On the Sick and Wounded.

ARTICLE XXI. The obligations of belligerents with regard to the sick and wounded are governed by the Geneva Convention of the 22d August, 1864, subject to any modifications which may be introduced into it.

SECTION II.—On Hostilities.—CHAPTER I.—On means of injuring the Enemy, Sieges, and Bombardments.

ARTICLE XXII. The right of belligerents to adopt means of injuring the enemy is not unlimited.

ARTICLE XXIII. Besides the prohibitions provided by special Conventions, it is especially prohibited:—(a.) To employ poison or poisoned arms; (b.) To kill or wound treacherously individuals belonging to the hostile nation or army; (c.) To kill or wound an enemy who, having laid down arms or having no longer means of defence, has surrendered at discretion; (d.) To declare that no quarter will be given; (e.) To employ arms, projectiles, or material of a nature to cause superfluous injury; (f.) To make improper use of a flag of truce, the national flag, or military ensigns and the enemy's uniform, as well as the distinctive badges of the Geneva Convention; (g.) To destroy or seize the enemy's property, unless such destruction or seizure be imperatively demanded by the necessities of war.

ARTICLE XXIV. Rules of war and the employment of methods necessary to obtain information about the enemy and the country, are considered allowable.

ARTICLE XXV. The attack or bombardment of towns, villages, habitations or buildings which are not defended, is prohibited.

ARTICLE XXVI. The Commander of an attacking force, before commencing a bombardment, except in the case of an assault, should do all he can to warn the authorities.

ARTICLE XXVII. In sieges and bombardments all necessary steps should be taken to spare as far as possible edifices devoted to religion, art, science, and charity, hospitals, and places where the sick and wounded are collected, provided they are not used at the same time for military purposes. The besieged should indicate these buildings or places by some particular and visible signs, which should previously be notified to the assailants.

ARTICLE XXVIII. The pillage of a town or place, even when taken by assault, is prohibited.

CHAPTER II.—On Spies.

ARTICLE XXIX. An individual can only be considered a spy if, acting clandestinely, or on false pretences, he obtains or seeks to obtain information in the zone of operations of a belligerent, with the intention of communicating it to the hostile party. Thus, soldiers not in disguise who have penetrated into the zone of operations of a hostile army to obtain information are not considered spies. Similarly, the following are not considered spies:—Soldiers or civilians, carry-

PEACE CONFERENCE.

ing out their mission openly, charged with the delivery of despatches destined either for their own army or for that of the enemy. The same class belong likewise individuals sent in balloons to deliver despatches, and generally to maintain communication between the various parts of an army or a territory.

ARTICLE XXX. A spy taken in the act can not be punished without previous trial.

ARTICLE XXXI. A spy who, after renouncing the army to which he belongs, is subsequently captured by the enemy, is treated as a prisoner of war, and incurs no responsibility for his previous acts of espionage.

CHAPTER III.—On Flags of Truce.

ARTICLE XXXII. An individual is considered as bearing a flag of truce who is authorized by one of the belligerents to enter into communication with the other, and who carries a white flag. He has a right to inviolability, as well as the trumpeter, bugler, or drummer, the flag bearer and the interpreter who may accompany him.

ARTICLE XXXIII. The Chief to whom a flag of truce is sent is not obliged to receive it under circumstances. He can take all steps necessary to prevent the envoy taking advantage of his mission to obtain information. In case of abuse, he has the right to detain the envoy temporarily.

ARTICLE XXXIV. The envoy loses his rights of inviolability if it is proved beyond doubt that he has taken advantage of his privileged position to provoke or commit an act of treachery.

CHAPTER IV.—On Capitulations.

ARTICLE XXXV. Capitulations agreed on between the Contracting Parties must be in accordance with the rules of military honour. When once settled, they must be scrupulously observed by both the parties.

CHAPTER V.—On Armistices.

ARTICLE XXXVI. An armistice suspends military operations by mutual agreement between the belligerent parties. If its duration is not fixed, the belligerent parties can resume operations at any time, provided always the enemy is warned within the time agreed upon in accordance with the terms of the armistice.

ARTICLE XXXVII. An armistice may be general or local. The first suspends all military operations of the belligerent States; the second only those between certain fractions of the belligerent armies and in a fixed radius.

ARTICLE XXXVIII. An armistice must be notified officially, and in good time, to the competent authorities and the troops. Hostilities are suspended immediately after the notification or at a fixed date.

ARTICLE XXXIX. It is for the Contracting Parties to settle, in the terms of the armistice, what communications may be held, on the theatre of war, with the population and with each other.

ARTICLE XL. Any serious violation of the armistice by one of the parties gives the other party the right to denounce it, and even, in case of urgency, to recommence hostilities at once.

ARTICLE XLI. A violation of the terms of the armistice by private individuals acting on their own initiative, only confers the right of demanding the punishment of the offenders, and if necessary, indemnity for the losses sustained.

PEACE CONFERENCE.

SECTION III.—On Military Authority over Hostile Territory

ARTICLE XLII. Territory is considered occupied when it is actually placed under the authority of the hostile army. The occupation extends only to the territory where such authority is established, and in a position to assert itself.

ARTICLE XLIII. The authority of the legitimate power having actually passed into the hands of the occupant, the latter shall take all steps in his power to re-establish and insure, as far as possible, public order and safety, while respecting, unless absolutely prevented, the laws in force in the country.

ARTICLE XLIV. Any compulsion of the population of occupied territory to take part in military operations against its own country is prohibited.

ARTICLE XLV. Any pressure on the population to compel it to take the oath to the laws in force is prohibited.

ARTICLE XLVI. Family honour and rights, individual lives and private property, as well as religious convictions and liberty, must be respected. Private property cannot be confiscated.

ARTICLE XLVII. Pillage is formally prohibited.

ARTICLE XLVIII. If, in the territory occupied, the occupant collects the taxes, dues, and contributions for the benefit of the State, he shall do so as far as possible, in accordance with the rules in existence and the assessment in force, and will in consequence be bound to defray the expenses of the administration of the occupied territory on the same scale as that by which the legitimate Government was bound.

ARTICLE XLIX. If, besides the taxes mentioned in the preceding Article, the occupant levies other money taxes in the occupied territory, these can only be for military necessities or the administration of such territory.

ARTICLE L. No general penalty, pecuniary or otherwise, can be inflicted on the population on account of the acts of individuals for which it cannot be regarded as collectively responsible.

ARTICLE LI. No tax shall be collected except under a written order and on the responsibility of a commander-in-chief. This collection shall only take place, as far as possible, in accordance with the rules in existence and the assessment of taxes in force. For every payment a receipt shall be given to the taxpayer.

ARTICLE LII. Neither requisitions in kind nor services can be demanded from communes or inhabitants except for the necessities of the army of occupation. They must be in proportion to the resources of the country, and of such a nature as not to involve the population in the obligation of taking part in military operations against their country. These requisitions and services shall only be demanded on the authority of the commander in the locality occupied. The contributions in kind shall, as far as possible, be paid for in ready money; if not, their receipt shall be acknowledged.

ARTICLE LIII. An army of occupation can only take possession of the cash, funds, and property liable to requisition belonging strictly to the State, depôts of arms, means of transport, stores and supplies, and generally all movable property of the State which may be used for military operations. Railway plant, land telegraphs,

PEACE CONFERENCE

telephones, steamers and other ships apart from cases governed by maritime law, as well as depôts of arms and generally all kinds of war material, even though belonging to companies or to private persons, are likewise material which may serve for military operations, but they must be restored at the conclusion of peace, and indemnities paid for them.

ARTICLE LIV. The plant of railways coming from neutral States, whether the property of those States, or of Companies, or of private persons, shall be sent back to them as soon as possible.

ARTICLE LV. The occupying State shall only be regarded as administrator and usufructuary of the public buildings, real property, forests, and agricultural works belonging to the hostile State, and situated in the occupied country. It must protect the capital of these properties, and administer them according to the rules of contract.

ARTICLE LVI. The property of the communes, that of religious, charitable, and educational institutions, and those of arts and science, even when State property, shall be treated as private property. All seizure of real destruction, or intentional damage done to such institutions, to historical monuments, works of art or science, is prohibited, and should be made the subject of proceedings.

SECTION IV.—On the Internment of Belligerents and the Care of the Wounded in Neutral Countries.

ARTICLE LVII. A neutral State which receives in its territory troops belonging to the belligerent armies shall intern them as far as possible, at a distance from the theatre of war. It can keep them in camps, and even confine them in fortresses or localities assigned for this purpose. It shall decide whether officers may be left at liberty on giving their parole that they will not leave the neutral territory without authorization.

ARTICLE LVIII. Failing a special Convention, the neutral State shall supply the interned with the food, clothing, and relief required by humanity. At the conclusion of peace, the expenses caused by the internment shall be made good.

ARTICLE LIX. A neutral State may authorize the passage through its territory of wounded or sick belonging to the belligerent armies, on condition that the trains bringing them shall carry neither combatants nor war material. In such a case, the neutral State is bound to adopt such measures of safety and control as may be necessary for the purpose. Wounded and sick brought under these conditions into neutral territory by one of the belligerents and belonging to the hostile party, must be guarded by the neutral State, so as to insure their not taking part again in the military operations. The same duty shall devolve on the neutral State with regard to wounded or sick of the other army who may be committed to its care.

ARTICLE LX. The Geneva Convention applies to sick and wounded interned in neutral territory.

The Convention establishing these regulations was not signed by the delegates from the United States, nor by those of Great Britain. The reasons for abstention on the part of the latter were stated in a communication from the British War Office, as follows: "Lord Lansdowne considers it essential that the revised Articles,

together with the Principle and final dispositions, should be submitted to the most careful examination by the high military authorities and by the legal advisers of Her Majesty's Government, before he can pronounce a definitive opinion on the three points raised. Subject to such reserves as may result from this examination, Lord Lansdowne is of opinion that the Project of Convention is in general of such a nature that it may, in principle, be accepted as a basis of instructions for the guidance of the British army, but he is unable, until that examination has been completed, to offer an opinion as to whether it is desirable to enter into an international engagement. Lord Lansdowne would therefore suggest, for Lord Salisbury's consideration, that instructions should be given to Sir Julian Pauncefote to reserve full liberty for Her Majesty's Government, to accept only such Articles as, after mature examination by their military and legal advisers, they may approve of. Probably the delegates from the United States were similarly instructed by their government.

Added to the Convention relative to Laws and Customs of War were three Declarations, separately signed, as follows:

1. "The contracting powers agree to prohibit, for a term of five years, the launching of projectiles and explosives from balloons, or by other new methods of a similar nature."
2. "The contracting parties agree to abstain from the use of bullets which expand or flatten easily in the human body, such as bullets with a hard envelope which does not entirely cover the core, or is pierced with incisions."
3. "The contracting parties agree to abstain from the use of projectiles the object of which is the diffusion of asphyxiating or deleterious gases."

The first of these Declarations was signed by the delegates from the United States, but not by those from Great Britain. The second and third were signed by neither British nor American representatives. In the discussion that preceded the adoption of the second Declaration by a majority of the Conference, Captain Crozier, of the American delegation, presented the objections to it, on which he and his colleagues were in agreement with the British representatives. He said "there was a great difference of opinion as to whether the bullets of small calibre rifles sufficed to put men hors de combat," which was admitted on all sides to be the object which rifle fire was expected to achieve. He considered the proposition before the Conference to be unsatisfactory, since it limited the prohibition to details of construction which only included a single case, and left all others out of consideration. He would not enter into a recapitulation of all the advantages of small calibre rifles, since they were perfectly well known; but he felt sure that certain Powers might adopt calibres even smaller than those at present in use, and, in this case, he maintained that they would be compelled to secure increased shock by some new method of construction of the projectile. He considered that it would be perfectly easy to devise such projectiles while keeping within the terms of the proposed interdiction, and he thought that the result might be the ultimate adoption of a bullet of an even less humane character than those aimed at by the Resolution. He declared that

he had nothing to say for or against the Dum-Dum bullet (see, in this vol., Dum-Dum bullet), of which he knew nothing except what he had stated during the meetings of the Conference, but that he was not disposed to pronounce a condemnation without proof, and that proof had not been forthcoming.

As for the third Declaration, it was signed by Captain Mahan, who spoke for the Americans, because "he considered the employment of submarine boats and the employment of submarine boats had been interdicted by the Conference (in the Declaration mentioned with that object in the Minutes). In favour of the use of asphyxiating gases, the original ground that the United States Government was averse to placing any restriction on the inventive genius of its citizens in covering and providing new weapons of war."

Convention for the adaptation to maritime warfare of the principles of the Geneva Convention of August 22, 1864.

ARTICLE I. Military hospital ships, whether any, ships constructed or assigned by States specially and solely for the purpose of assisting the wounded, sick, or shipwrecked, and the crews of which shall have been communicated to the belligerent Powers at the commencement of the course of hostilities, and in any case before they are employed, shall be respected and cannot be captured while hostilities last. These ships, moreover, are not on the same footing as men-of-war as regards their stay in a neutral port.

ARTICLE II. Hospital ships, equipped wholly or in part at the cost of private individuals or officially recognized relief societies, shall likewise be respected and exempt from capture provided the belligerent Power to whom they belong has given them an official commission and has notified their names to the hostile Power at the commencement of or during hostilities, and in any case before they are employed. These ships should be furnished with a certificate from the competent authorities, declaring that they had been under their control while fitting out and on final departure.

ARTICLE III. Hospital ships, equipped wholly or in part at the cost of private individuals or officially recognized societies of neutral countries, shall be respected and exempt from capture if the neutral Power to whom they belong has given them an official commission and notified their names to the belligerent Powers at the commencement of or during hostilities, and in any case before they are employed.

ARTICLE IV. The ships mentioned in Articles I, II, and III shall afford relief and assistance to the wounded, sick, and shipwrecked of the belligerents independently of their nationality. The Governments engage not to use these ships for any military purpose. These ships must in no way hamper the movements of the combatants. During and after an engagement they will act at their own risk and peril. The belligerents will have the right to control and visit them; they can refuse to help them, order them to make them take a certain course, and put a Commission on board; they can even detain them if important circumstances require it. As far as

sick, who are landed at a neutral port with the
consent of the local authorities, in case of failing a
contrary arrangement between the neutral State
and the belligerents, be guarded by the neutral
State, so that they cannot again take part in the
military operations. The expenses of entertain-
ment and internment shall be borne by the State
to which the shipwrecked, wounded, or sick
belong.

Article XI. The rules contained in the above
Articles are binding only on the Contracting
Powers, in case of war between two or more of
them. The said rules shall cease to be binding
from the time when in a war between the Con-
tracting Powers, one of the belligerents is joined
by a non-Contracting Power.

Article XII. The present Convention shall
be ratified as soon as possible. The ratification
shall be deposited at The Hague. On the receipt
of each ratification a procès-verbal shall be
drawn up, a copy of which, duly certified, shall
be sent through the diplomatic channel to all
the Contracting Powers.

Article XIII. The non-Signatory Powers
who accepted the Geneva Convention of the 24
August, 1864, are allowed to adhere to the present
Convention. For this purpose, they must make
their adhesion known to the Contracting Powers
by means of a written notification addressed to
the Netherlands Government, and by it communi-
cated to all the other Contracting Powers.

Article XIV. In the event of one of the
High Contracting Parties denouncing the present
Convention, such denunciation shall not take
effect until a year after the notification made in
writing to the Netherlands Government, and forth-
with communicated by it to all the other Con-
tracting Powers. This denunciation shall only
affect the notifying Power.

In faith of which the respective Plenipoten-
tiaries have signed the present Convention and
affixed their seals thereto.

PERU: A. D. 1894-1899.—Overthrow of an unconstitutional government.—Legitimate authority restored. The death of President Bermudez in March 1894, brought about a revolutionary movement in the interest of ex-President Caceres. Constitutionally, the First Vice-President, Dr. del Solar, would have succeeded the deceased President, until a new election was held, but the Second Vice-President, who was a partisan of Caceres, and who had the army with him, seized control of the government. In May, Caceres was proclaimed Provisional President, and in August it was claimed for him that he had been elected by Congress; but the election was not recognized by his opponents. A formidable rebellion was organized, under the lead of ex-President Pierola, who had been in exile and now returned. Civil war raged for nearly a year, Pierola gaining steadily. In February, 1895, his forces reached the capital and laid siege to it. On the 15th of March they entered the city, and there was desperate fighting in the streets of Lima for three days, nearly 2,000 of the combatants being killed and more than 1,500 wounded. Chiefly through the efforts of the Papal delegate, the bloody conflict was finally stopped and terms of peace arranged. A provisional government, made up from both parties, was formed, under which a peaceable election was held in the following July. Pierola was then elected President. Caceres and his partisans attempted a rising the next year (1896), but it had no success. In the northern department of Loreto, on the border of Ecuador, an abortive movement for independence was set on foot by an ambitious official, who gave the government considerable trouble, but accomplished nothing more. In 1899, President Pierola was succeeded by Eduardo L. de Romana elected in May. A rebellion attempted that year by one General Durand was promptly suppressed.

PHILADELPHIA: A. D. 1897.—Opening of the Commercial Museum.—A Commercial Museum which has acquired great prominence was opened in Philadelphia on the 1st day of June 1897. In both aim and results the institution is unique. Other countries also have commercial museums, which are doing excellent work. Their scope, however, is much more limited, the Museum of Philadelphia deriving from them in that it is an active institution, passive, aid to the prospective exporter. In foreign museums, situated in London, Bonn, Hamburg, Stuttgart, Vienna, Havre, Brüssel, and various other commercial centres, are to be found active aid, but content themselves with more or less complete displays of samples of domestic and foreign competitive goods and export markets. The theory of their organization is that the manufacturer, contemplating a foreign business campaign, will be crisscrossed by the initiative is left to the exporter himself, who must discover what opportunities exist for him abroad; and it is also left to him to take advantage of his opportunities in the way that may seem best to him. The display of manufactured samples is only a small part of the work of the Philadelphia Museum. This institution shows not only what goods are sold in foreign markets, but also where those markets are, what commercial conditions obtain in connection with them, what particular kinds of goods are in demand, how these markets may be best competed for, and where the raw material may be most profitably purchased. It furnishes information, furthermore, as to business connections, as well as the credit ratings of the agents or firms recommended. To secure specific information is not necessary to visit the institution itself. Reports of trade opportunities abroad are distributed by the Museum to its members, and these reports are provided with photographs of many of the articles which, at that particular time, are in demand, in certain parts of the world. Under these circumstances, the exporter is practically provided with a staff of experienced foreign representatives, without any expense himself beyond the merely nominal fee for membership. While its activities are dependent to a certain extent upon the income derived from subscribers, the Museum is not a money-making institution. Indeed, its income from this source does not cover half the expenditures. It is enabled to carry on its work only by reason of the generous annual appropriation provided for it by the City Councils of Philadelphia. But a very large income is required to maintain a staff of 150 employees in Philadelphia, as well as 500 regular and several thousand occasional correspondents scattered throughout the world. The only advantage which the city itself derives from the Museum is that resulting indirectly from the presence of foreign buyers attracted to Philadelphia by the Museum's work. —W. P. Willson, *The Phila. Commercial Museum* (Form, Sept., 1899).

PHILIPPINE ISLANDS.

Number, area, shore line, and population.

and the number and areas of the islands. It is, however, necessary to be careful in making these statements, for the group has never been completely surveyed, and the only method of determining number and areas is by counting and measuring in the charts. The following figures are the best ever compiled. They are taken from enumeration and measurement made recently obtained by the United States Coast and Geodetic Survey. The following is quoted from the instructions to those maps which are published by the United States Coast and Geodetic Survey: "All the islands or groups having an area of over 20 square miles have been

measured, and the areas are here given in square miles and square kilometers. Many different statements have been made as to the number of the islands composing the archipelago. The cause for this must be attributed to the scale of the charts on which the count was made and the difficulty of distinguishing between rocks and formations of sufficient size to dignify them by the name of islands. Thus on a small scale Spanish chart of the entire group 418 islands were counted; on various large scale charts of the same area there were found 1,724. The principal islands, with the extent of shore line of some of them and their area, are given on the following lists. The areas were carefully measured, but are subject to the inaccuracy of the charts.

"The following [as to population] is a quotation from an article by W. F. Wilcox, of the United States Census Bureau. It is well to notice that the last official census was in 1887 and that the figures of that census, though probably underestimating the population of the islands, are the ones which, in default of better, we are obliged to take as final. It is probable that these are an understatement of the true population of the Philippines for several reasons, among which is one not observed by Mr. Wilcox, and which is therefore mentioned. It is, of course, only supposition, but is at least suggestive. For every adult counted in the census, the officials were obliged to return a poll tax. Thus, for instance, if 100,000 persons were counted, 100,000 pesos would have to be returned to the treasury. It has therefore been supposed that the official counted, say, 150,000 and returned only 100,000 pesos and 100,000 names. Mr. Wilcox says (Am. Statistical Assoc. Publ., Sept., 1896): 'The population of the islands in 1872 was stated in a letter to Nature (6 162), from Manila, by Dr. A. B. Meyer, who gives the latest not yet published statistics as his authority. The letter gives the population of nine islands, as follows:

Luzon	4,167,111
Panay	1,052,584
Cebu	427,436
Leite	285,195
Bohol	283,515
Negros	276,873
Samar	250,062
Mindanao	191,802
Mindoro	70,926

"It also gives the population of each of the 43 provinces of the islands. The population was not counted, but estimated. The number who paid tribute was stated as 1,232,511. How this was ascertained we are not informed. The total population, 7,451,352, was approximated 'on the supposition that about the sixth part of the whole has to pay tribute.' In reality this population is 6.046 times the assigned tribute-paying population. But Dr. Meyer adds: 'As there exist in all the islands, even in Luzon, independent tribes and a large number in Mindanao, the number of 7,451,352 gives no correct idea of the real population of the Philippines. This is not known at all and will not be known for a long time to come.'

"Since 1872 there have been actual enumerations of the Philippines, but authorities differ as to the time when they occurred and the detailed results. These enumerations were usually confined to the subject and Catholic population, and omitted the heathen, Mohammedan and independent tribes. Four reports of the entire population have been printed: 1. A report made

by the religious orders in 1876 or 1877, among the nationalities and creeds of the population were distinguished. 2. A manuscript report by Professor Blumentritt of the enumeration made by the religious orders in December, 1877. 3. The official report of the civil census of December 31, 1877, contained in *Resolución del Real C. de España*, 1888, p. 1079. 4. The report upon the census taken by the religious orders, December 31, 1887, and printed in the *Anuario de Censo de la Población de España*, Madrid, in 1891. The first two may be compared, and tend somewhat to corroborate each other, as follows:

1. Tribute-paying natives	1,232,511
2. Army	10,000
3. Navy	10,000
4. Religious officers, ecclesiastical	10,000
5. Civil officers	10,000
6. Other Spaniards	10,000
Total Spaniards	50,000

Total Catholics	5,200,000
Heathen and Mohammedan natives	600,000
Foreigners in 1876 there were:	
British, 176; German, 100;	
Americans, 42; French, 30	
Chinese	300,000
Total	6,113,632

"The third enumeration reported 5,567,684 as the tribute-paying population. To this number should be added the estimated number of independent tribes, 'Indios no sometidos,' according to the missionaries' count was about 600,000, making a total of 6,167,684. Most experts agree that this official report is trustworthy and involves serious omissions, but believe that the facts are so imperfectly known that they are unable to correct it. One writer, Dr. Pac, writing in 1882, started from the missionaries' census of 1876-77, viz., 6,173,632, and held that this omitted as many as 600,000 members of independent tribes and that the population of 1876-1882 would be 7,100,000. In this way he got 7,513,632. A second writer, S. M. de la Cruz, estimated the population in 1881 as 10,200,000. The missionaries made an estimate of their own in 1885 which showed 9,529,841.

"The fourth enumeration of those reported above showed a population of 5,985,100 in 1887, and the totals both for the groups as well as for the fifty odd provinces tend to corroborate each other, but the civil count of 1877, which number, however, represents only the Catholic or tribute-paying population. The

SEAT OF WAR IN THE ISLAND OF LUZON.

W. L. CHAMBERLAIN, ESQ. 1897

must be called the Mohammedan or heathen population, as shown by clerical authorities as about 600,000. Perhaps the highest authority in this respect, Professor Blumentritt, is confident that this number does not include all the independent peoples, and that those in the mountains who have been arranged freeing them from all the tribes of the subject tribes. On the whole, therefore, Prof. H. Wagner is inclined to estimate the numbers of independent or non-Christian peoples at about 1,000,000 and the population of the whole at about 7,000,000. This result is indicated by the latest German authority, Hübner's *Geographisch-statistische Tabellen für 1898*, which gives the population as 5,985,124 + 1,000,000 = 6,985,124, as follows:

	Spanish census.	Estimated number not counted.
Large and adjacent islands . . .	3,443,000	150,000
Minor islands and Moslems . . .	1,200,000	100,000
Visayan Archipelago	2,181,000	200,000
Malacca	299,000	400,000
Cebu and Palawan	22,000	50,000
Other small islands	4,000	100,000
Total	5,985,000	1,000,000

"Personally I am disposed to suspect that this number, although called by Professor Wagner a conservative estimate, is below rather than above the truth. In favor of this position it may be urged that Professor Wagner's estimate makes no allowance either for the natural increase of population 1887-1898, or for the fact that the most fertile census of densely populated regions, such as India and Japan, usually reveals a larger population than had been previously estimated. The analogy might reasonably be applied to Luzon and the Visayas."—*United States, 56th Congress, 1st Sess., Senate Doc. No. 171, pp. 4-7.*

The native inhabitants.—"The inhabitants of the Philippines belong to three sharply distinct races, the Negrito race, the Indonesian race, and the Malayan race. It is universally conceded that the Negritos of to-day are the disappearing remnants of a people which once populated the entire archipelago. They are, physically, weaklings of low stature, with black skin, closely-curling hair, thick noses, thick lips, and large, clumsy feet. In the matter of intelligence they stand at or near the bottom of the human series, and they are believed to be incapable of any considerable degree of civilization or advancement. Centuries ago they were driven from the coast regions into the wilder interior portions of the islands by Malay invaders, and from that day to this they have steadily lost ground in the struggle for existence, until but a few scattered and numerically insignificant groups of them remain.

It is believed that not more than 25,000 of them exist in the entire archipelago, and the race seems doomed to early extinction.

So far as is at present known, the Philippine peoples belonging to the Indonesian race are confined to the great island of Mindanao, the surface of which constitutes about one-third of the total surface of the archipelago. . . . The Philippine representatives of this race are physically superior only to the Negritos, but to the more numerous Malayan peoples as well. They are tall and well developed, with high foreheads, aquiline

noses, wavy hair, and often with abundant beards. The color of their skins is quite light. Many of them are very clever and intelligent. Some of the tribes have been Christianized. Some of them have grown extremely fierce and warlike as a result of their long struggle with hostile Malayan peoples. Others, more happy in their surroundings, are pacific and industrious.

The great majority of the inhabitants of the Philippines are of Malay in extraction, although the race is not found pure in any of the islands, but is everywhere more or less modified through intermarriage with Chinese, Indonesians, Negritos, Arabs, and, to a limited extent, Spaniards and other Europeans. The individuals belonging to these Malayan tribes are of medium size, with straight black hair. As a rule the men are beardless, and when they have a beard it is usually straggling, and appears late in life. The skin is brown and distinctly darker than that of the Indonesians, although very much lighter than that of the Negritos. The nose is short and frequently considerably flattened. The representatives of these three races are divided into numerous tribes, which often differ very greatly in language, manners, customs, and laws, as well as in degree of civilization.

Any estimate of the total population must manifestly depend on the number of inhabitants assigned to the various wild tribes, of which there are no less than 69. For the purposes of this report the commission has adopted as the total figure 8,000,000, considering this a conservative estimate. Bannerman, whose figures are believed to be carefully prepared, places the total at 9,000,000. The extent of territory occupied in whole or in part by each of the more important civilized tribes can be estimated with a greater degree of accuracy, and is approximately as follows: Visayans (occupying 28,000 square miles) 2,601,600; Tagalogs (15,380 sq. miles) 1,663,000; Bicolos (9,900 sq. miles) 518,100; Ilocos (6,170 sq. miles) 441,700; Pangasinans (1,950 sq. miles) 365,500; Pampangas (1,950 sq. miles) 337,900; Moros (12,880 sq. miles) 268,000; Cagayans (11,560 sq. miles) 166,300. All of these peoples, although ignorant and illiterate, are possessed of a considerable degree of civilization, and, with the exception of the Mohammedan Moros, are Christianized."—*Philippine Commission, Report, Jan. 31, 1900, p. 1, pp. 11-15.*

A. D. 1896-1898.—The Katipunan and the rising against Spanish rule.—Appearance of Aguinaldo as a leader.—Dr. José Rizal.—The Treaty of Biac-na-bato.—Departure of Aguinaldo and his return with the American forces.—The Philippine Islands, discovered in 1521 by Magellan (or Magalhães or Magallanes), and occupied by the Spaniards in 1565, seems, for a long period, to have interested that people more as a missionary than as a commercial field. Indeed, the doings of the church and of the religious orders, and the acceptance of Roman teachings of Christianity by the greater part of the native population, make up the essential history of the Philippines until quite recent times. If the islands had offered gold mines, or pearl fisheries, or spice forests to their European discoverers, the story would certainly have been different. As it was, the Spaniards were not moved to much eagerness in exploiting such resources of commerce as they found; and so, through fortunate circumstances, the

natives were made converts instead of slaves. By missionaries, more than by soldiers, they were subdued by the church, more than by the Spanish state; they were ruled. It is certain that there were great corruptions and oppressions in the government, and it follows that a large share of responsibility for them rests on those who controlled the affairs of the church. For the past hundred years, at least, the more spirited part of the native population has been restive under the misrule and its burdens, and frequent attempts at insurrection have been made. Such an outbreak in 1872 was suppressed and punished with a vengeance, in executions and banishment, which rankled ever afterwards in the hearts of the people.

A secret society, called the "Katipunan," or League, was then formed, which became a revolutionary organization, and from which sprang the most serious of Filipino rebellions. In 1896. The province of Cavite was the center of revolt, and it was there that Emilio Aguinaldo, then the schoolmaster at Silan, came into prominence as a leader. Mr. John Foreman, who was in the Philippines at the time of the insurrection, states that Aguinaldo was personally humane, but fearful atrocities were committed in the first months of the rising by some of the insurgents of his band. One captured priest, according to Mr. Foreman's account, "was cut up piecemeal; another was saturated with petroleum and set on fire; and a third was bathed in oil and fried on a bamboo spit run through the length of his body." The Spaniards, on their side, were equally inhuman in their treatment of captured rebels and "suspects." Says Mr. Foreman: "About 600 suspects were confined in the dungeons of Fort Santiago at the mouth of the Pasig River. Then occurred a frightful tragedy. The dungeons are below water mark at high tide; the river filtered in through the crevices in the ancient masonry; thus twice a day these unfortunates were up to their waists or necks in water, according to the height of the men. The Spanish sergeant on duty threw his ring over the only light and ventilating shaft, and, in a couple of days, carts were seen by many citizens carrying away the dead, calculated to number 70. Provincial governors and parish priests seemed to regard it as a duty to supply the capital with batches of 'suspects' from their localities. In Vigan, where nothing had occurred, many of the heads of the best families and monied men were arrested and brought to Manila in a steamer. They were bound hand and foot, and carried like packages of merchandise in the hold. I happened to be on the quay when the steamer discharged her living freight, with chains and hooks to haul up and swing out the bodies like bales of hemp."

"Thousands of peaceful natives were treated with a ferocity which would have shocked all Europe. . . . Within three months of the outbreak, hundreds of the richest natives and half-breeds in Manila were imprisoned for a few days and released conditionally"—the condition being a payment of ransom, sometimes said to be as high as \$40,000. But General Blanco, the then Governor General, was not vigorous enough in his measures to satisfy the all-powerful clerical party in the Islands, and he was replaced by General Polaveja, who received large reinforce-

ments from Spain, and who succeeded in breaking the strength of the rebellion to a great extent. But the character of Polaveja's administration is thus described by Mr. Foreman: "Apart from the circumstances of legitimate warfare, in which probably neither party was more merciful than the other, he initiated a system of striking terror into the non-combating population by barbarous tortures and wholesale executions. . . . Men were escorted to the prisons by pure caprice and subjected to horrible and cruel treatment. Many of them were liberated in the course of a few days, declared innocent, but doomed for life and forever unable to get on. . . . The only apparent object in all this was to disseminate broadcast living examples of Spanish vengeance." The most notable victim at this period was Mr. Jose Rizal, a physician, highly educated in Europe, distinguished as an oculist, and the author of certain novels in which the condition of things in his native country was set forth. On his return to the Islands, Mr. Rizal incurred the enmity of the friars by opposing them, and was pursued by their hostility. From 1893 to 1896 he was kept in banishment, closely watched, at a small town in the Island of Mindanao. Then he sought and obtained permission to go to Cuba in the medical staff of the Spanish army; but, just as he arrived at Manila, on his way to Spain, the insurrection of 1896 broke out, and though he was suffered to depart, his enemies pursued him with accusations of complicity in the rising and caused him to be brought back. Says Mr. Foreman, who was an eye witness of what occurred: "Not a few of us who saw the vessel leave wished him 'God speed.' But the clerical party were eager for his extermination. . . . The lay authorities always had to yield to the monks, and history herein repeated itself. Dr. Rizal was cabled for to answer certain accusations, and so on his landing in the Peninsula he was incarcerated in the celebrated fortress of Montjuich (the scene of so many horrors), pending his re-shipment by the returning steamer. He reached Manila as a state prisoner in the Colon, isolated from all but his jailors. It was materially impossible for him to have taken any part in the rebellion, whatever his sympathies may have been." Nevertheless, he was tried by court martial for sedition and rebellion, condemned and shot; and his memory is cherished in the Islands as that of a martyred patriot. "The decree of execution was one of Polaveja's foulest acts."

Having scotched but not killed the insurrection, Polaveja went home, with broken health. In the spring of 1897, and was succeeded by General Primo de Rivera, who, after some months of continued warfare, opened negotiations with Aguinaldo, the recognized leader of the revolt. The result was a treaty, known as the "Pacto de Biac-na-bato," signed December 14. By this treaty "the rebels undertook to deliver up their arms and ammunition of all kinds to the Spaniards; to evacuate the places held by them; to conclude an armistice for three years for the application and development of the reforms to be introduced by the other party, and not to conspire against Spanish sovereignty in the Islands, nor aid or abet any movement calculated to counteract the reforms. Emilio Aguinaldo and 34 other leaders undertook to

the Philippine Islands, and not to return to them, and so authorized by the Spanish Government. On behalf of the Spanish Government it was agreed to pay, through the medium of Pedro A. Paterno, to the rebels the sum of \$500,000 and to the families who had sustained loss by reason of the war \$700,000, in instalments and conditionally—the condition being that no renewal of rebellion or conspiracy occur. Aguinaldo and other chiefs of the insurrection left the Islands accordingly, but they are said to have been utterly duped. The instalment only \$100,000, of the promised money was ever paid, the promised reforms were not carried out, and persecution of those who had been in sympathy with the rising was renewed.—J. Foreman, *The Philippine Islands*, ch. 26. V. Y. *Chas. Scribner's Sons*.

Aguinaldo and his associates went to Hongkong and Singapore. A portion of the money, \$100,000, was deposited in banks at Hongkong, and a lawsuit soon arose between Aguinaldo and one of his subordinate chiefs named Artacho, which is interesting on account of the very honorable position taken by Aguinaldo. Artacho asked for a division of the money among the insurrectionists according to rank. Aguinaldo claimed that the money was a trust fund, and was to remain on deposit until it was seen whether the Spaniards would carry out their promised reforms, and if they failed to do so, it was to be used to defray the expenses of a new insurrection. The suit was settled out of court by paying Artacho \$5,000. No steps have been taken to introduce the reforms, more than 2,000 insurgents, who had been deported to Fernando Po and other places, are still in confinement, and Aguinaldo is now using the money to carry on the operations of the present insurrection.—F. V. Greene, *Memorandum concerning the Situation in the Philippines*, Aug. 30, 1898 (*Treaty of Peace and Accompanying Papers*: 55th Cong., 3d Sess., Senate Doc. No. 62, pt. 1, p. 421).

A. D. 1898 (August–December).—The state of things following the occupation of Manila by American forces. Growing distrust and unfriendliness of the Tagalos. General Otis's report.—Of the state of things which followed the departure of General Merritt. August 30, General Otis, who succeeded him in command, reported subsequently as follows.

“Until October 11 (1898), the United States troops in the Philippines remained stationed at Manila and Cavite, as provided in General Merritt's orders of August 23, with very slight exceptions. Major General Anderson retaining supervision of the district of Cavite and Major General MacArthur of the troops stationed in Manila, the three organizations composing the provost guard continuing, however, under the control of Brigadier General Hughes. They were most bountifully supplied with subsistence and medicines, but light clothing suited to the climate and facilities necessary for occupying and messing in barracks were needed. These were soon obtained through contract and purchase from the merchants of Hongkong and Manila and by shipment from the United States. The troops received tactical instructions daily, but the weather was too hot for much physical exertion, and time being heavily upon them. They entertained the impression that the Spanish war had terminated, and the volunteers appeared to believe that they should be recalled to the United States at once and regular troops sent out to perform the monotonous garrison duties which were about to follow the victory of Manila. Many became ill from too free indulgence in the fruits and manufactured drinks of the country, and indifference to that care and attention of person which a tropical climate makes necessary. Homesickness alone produced illness in numerous cases, so that early in September the hospitals began to be rapidly filled. This led to the adoption of judicious precautionary measures. In November improvement was noticeable, and in January the health of this army would compare favorably with those of any concentrated army of like proportions in existence. To be sure the men had become by this time fairly acclimatized, and new troops arriving here will be obliged to pass through this period of acclimatization before they become properly efficient for prolonged service in the field.

“During my first weeks of duty here I was impressed with the spirit of suspicion and partially concealed unfriendly feeling manifested by the Tagalos toward the American forces. That they either had very little confidence in our promises or were then forming conclusions to oppose any establishment of United

States authority in Luzon was apparent, how ever loudly they might disclaim hostile intent or declare an excuse for their attitude, fear of the return of Spain. I saw, however, with satisfaction, their ablest men by education and mental equipment taking part in their authoritative deliberations, and I had considerable confidence in the efficacy of their suggestions and advice. Still, after carefully weighing conditions, I was unable to arrive at any satisfactory conclusions.

Measures were being applied constantly to improve the sanitary condition of the city, to increase the efficiency of the troops, and to meet any emergency which might develop from an uprising of the inhabitants, or from hasty action by any portion of our or the insurgent forces, which, though maintaining amicable intercourse, were, in fact, in an attitude of resistance and hostility upon all questions involving the right of armed occupation of the suburbs and defenses of Manila. The insurgent soldiers had looted extensively the portions of the city to which they gained access, and were greatly disappointed that this privilege over other parts of the same was not accorded them. Their enforced withdrawal to outer lines was the cause of discontent, and augmented any desire which they may have formerly entertained to resist or attack the American troops. This growing discontent was observable among the lower classes of the city's inhabitants, from whom a considerable share of Aguinaldo's army was drawn, and was undoubtedly increased by the reprehensible conduct and illegal actions of some of our own men, who were severely punished for their misdeeds when detected. Outwardly, however, relations of the most friendly character were maintained. The officers and enlisted men of the two armies mingled in friendly social intercourse. To the casual observer the only discordant element in this dense complex population, made up of every nation and tongue in existence, were the hated Spanish prisoners, whom the Filipinos still longed to persecute and kill, and who were obliged to keep within the walls of Old Manila for safety. Repeated conferences were held with influential insurgents, whose chief aim appeared to be to obtain some authoritative expression on the intent of the United States with regard to the Philippines, and complained that they were unable to discover anyone who could speak ex cathedra. They asserted that their Malolos arrangement was a government de facto, which had the right to ask an expression of intent from the United States Government.

"My own confidence at this time in a satisfactory solution of the difficulties which confronted us may be gathered from a dispatch sent to Washington on December 7, wherein I stated that conditions were improving and that there were signs of revolutionary disintegration, that I had conferred with a number of the members of the revolutionary government and thought that the most of them would favor peaceful submission to United States authority. I had strong reasons for this expressed confidence from assurances made to me by some of the ablest Filipinos who had occupied positions of importance in the insurgent government and had signified their intention to withdraw from it."—*Report of General Otis, Aug. 31, 1899 (Mes-*

sage and Documents: Abridgment, 1899-1900, c. 2, pp. 1048-52).

A. D. 1898 (August—December).—The state of things following the occupation of Manila, as represented by English witnesses. The writer of the following remarks, in an interesting book on "The Inhabitants of the Philippines," published here in 1900, is an English civil engineer, who had resided in Luzon for thirteen years and knew the country and people thoroughly well. "Personally, I think that if a sympathetic and conciliatory attitude had been adopted, had the local government established been recognized, had Aguinaldo and his staff been given commissions in the Native Army or Civil Service, and the flower of the Tagal Army taken into the service of the United States, a peaceful settlement could have been made on the lines of a Protectorate. I therefore look upon the war as unnecessary, and consider the lives already sacrificed, and that will have to be sacrificed, as absolutely thrown away. The tragical side of American unpreparedness is manifest in the state of anarchy in which the whole Archipelago has been plunged by the American unreadiness to occupy the military posts as soon as they were vacated by the Spanish garrisons. A hideous orgy of murder, plunder and shambolling has prevailed in Visayas, and especially in Mindanao.

"Three conditions were essential to peaceful settlement: First—A broad minded and sympathetic representative of America, fully authorized to treat and a lover of peace. Second—A strict discipline amongst the American forces. Third—The principal aim and object of the Tagal insurrection must be secured.

"General Otis does not seem to me to fulfil the first condition, he lacked prestige and patience, and he showed that he had an instantaneous conception of the magnitude of his task by occupying himself with petty details of all kinds and by displaying an ill timed parsimony. Apparently he had no power to grant anything; all, and only dealt in vague generalities which the Tagals could not be expected to accept.

"As regards the second point, I regret that I am not personally acquainted with the gentlemen from Nebraska, Colorado, Dakota and other states serving in the United States Army or volunteers. I have no doubt that they are good fighting men, but from all I can hear about them they are too conspicuous for strict military discipline, and too many of them have erroneous ideas as to the most suitable drink for a tropical climate. Manila was in the time of the Spaniards a most temperate city; a drunken man was a very rare sight, and would usually be a foreign sailor. Since the American occupation, some hundreds of drinking saloons have been opened, and daily scenes of drunkenness and debauchery have filled the quiet natives with alarm and horror. When John L. Motley wrote his scathing denunciation of the army which the great Duke of Alba led from Spain into the Low Countries, to enforce the high religious purposes of Philip II., he could not foresee that his words would be applicable to an American Army sent to subjugate men struggling to be free for their welfare, not our gain, nor that this army, besides bringing in its train a flood of cosmopolitan bacchetry, would be allowed by its commander to bring anarchy amongst a strictly temperate people a mad saturnalia."

of frankness that has scarcely a parallel since, however, is undoubtedly the case, and I cannot think that these occurrences have caused any of the English in their resolve rather than being for their independence than to be ruled over by such as these."—F. H. Sawyer, *The Philippines*, p. 113-114 (A. Y. C. Serpenter's Sonnet).

Substantially the same account of things at Manila during this period has been given in a magazine article by Mr. John Foreman, the well known writer on the Philippine Islands. "The condition," he declares, "of the boisterous, undisciplined individuals who formed a large percent of the first volunteer contingents sent to Manila had had an ineffaceably demoralizing effect on the proletariat, and has inspired a feeling of terror and lawful contempt in the affluent and educated classes who guide the Philippine public opinion. From the outset it was a mistake to treat the Christian Philippine population like savages ignorant of western civilization, considering that there are thousands of Filipinos morally equal to the invading forces, and comparable in intellectual training with the average middle class Europeans."

Within a fortnight after the capitulation of Manila the drinking saloons had increased fourfold. According to the latest advices, there are at least twenty to one existing in the time of the Spaniards. Drunkenness, with its consequent evils, is rife all over the city among the new urban population. The orgies of the new comers, the incessant street brawls, the insults offered with impunity to natives of both sexes, the entry with violence into private houses by the soldiery, who maltreated the inmates and laid hands on what they chose, were hardly calculated to arouse in the natives submission for their new masters. But they were absolutely prohibited under the Spanish rule, but since the evacuation there has been a great influx of women of ill fame, whilst native women have been pursued by lustful tormentors. During a certain period after the capitulation there was indiscriminate shooting, and to peaceable native's life was safe in the suburbs. Adventurers of all sorts and conditions have flocked to this centre of vice, where the sober native is not even spoken of as a man by many of the armed rank and file, but, by way of contempt, is called a yuyu. A few miles from Manila, the villages of Mandalayan and Sant Ana were looted by the victors, much of the spoil being brought up to the capital and included in auction sales or sold to the Chinese. In Tinal the houses of families, with whom I have been long acquainted, were ransacked, effects of little value, or too difficult to transport, being carelessly thrown about from sheer wantonness. And presumably no greater respect for private property was shown in the other numerous villages overrun by the invaders.

The situation then during this period was somewhat as follows: The Filipinos, aided by Dewey's victory, had driven the Spaniards from practically the whole Archipelago except the city of Manila, they had established a government of their own, and they looked upon the country as belonging both by nature and by right of conquest to them. We upon the other hand, having destroyed the Spanish fleet and captured the city of Manila, and being in the process of acquiring by treaty the Spanish title

to the whole country regarded it as belonging to us. The situation was therefore critical. J. Foreman, *With the United States at Manila from the Philippines*, (National Rev., Sept. 1900).

A. D. 1898 (September-December). Instructions from the President of the United States to the Commissioners for the negotiation of peace with Spain concerning the Philippine Archipelago.—Cession of the Islands to the United States. See (in this vol.) I SAILED STATES OF AM. A. D. 1898 (July-December).

A. D. 1898 (October-November). State of the country under the native government of Aguinaldo, as witnessed by two U. S. naval officers who traversed it.—Conflicting opinions as to the fitness of the Filipinos for self-government.—During October and November, 1898, while the only authority in Luzon, outside of Manila and Cavite, was that exercised by the native government organized under Aguinaldo, two American naval officers—Paymaster W. B. Wilcox and Cadet Leonard R. Sargent, with permission from Admiral Dewey, made a tour of observation through seven provinces of the island, and rendered a report of what they saw and what they experienced, which Admiral Dewey sent to Washington, commending it to the attention of the government as containing "the most complete and reliable information obtainable in regard to the present state of the northern part of Luzon Island." Subsequently Mr. Sargent wrote articles descriptive of the journey, which were published in "The Outlook" and "The Independent," and which were reprinted, with the official report, in a document compiled for the U. S. Senate. The following is from the article in "The Outlook," September 2, 1899:

"Although this government has never been recognized, and its full probability will go out of existence without recognition, yet it cannot be denied that in a region occupied by many millions of inhabitants, for nearly six months it stood alone between anarchy and order. The military forces of the United States held control only in Manila, with its environs, and in Cavite, and had no authority to proceed further, while in the vast remaining districts the representatives of the only recognized power on the field were prisoners in the hands of their despised subjects. It was the opinion at Manila during this anomalous period in our Philippine relations, and possibly in the United States as well, that such a state of affairs must breed something akin to anarchy. I can state unreservedly, however, that Mr. Wilcox and I found the existing conditions to be much at variance with this opinion. During our absence from Manila we travelled more than 600 miles in a very comprehensive circuit through the northern part of the island of Luzon, traversing a characteristic and important district. In this way we visited seven provinces, of which some were under the immediate control of the central government at Manila, while others were remotely situated, separated from each other and from the seat of government by natural divisions of land, and accessible only by lengthy and arduous travel. As a tribute to the efficiency of Aguinaldo's government and to the law abiding character of his subjects, I offer the fact that Mr. Wilcox and I pursued our journey throughout in perfect security, and returned to Manila with only the most pleasant recollections

of the quiet and orderly life which we found the natives to be leading under the new regime."

The following is from the official report, jointly made by Captain Sargent and Paymaster Wilcox:

The Philippine officers, both military and civil, that we have met in all the provinces we have visited, have, with very few exceptions, been men of intelligent appearance and conversation. The same is true of all those men who form the upper class in each town. The education of most of them is limited, but they appear to seize every opportunity to improve it. They have great respect and admiration for learning. Very many of them desire to send their children to schools in the United States or Europe. Many men of importance in different towns have told us that the first use to be made of the revenues of their government, after there is no more danger of war, will be to start good schools in every village. The poorer classes are extremely ignorant on most subjects, but a large percentage of them can read and write.

"Of the large number of officers, civil and military, and of the leading townspeople we have met, nearly every man has expressed in our presence his sentiment on this question [of independence]. It is universally the same. They all declare that they will accept nothing short of independence. They desire the protection of the United States at sea, but fear any interference on land."

"There is much variety of feeling among the Philippines with regard to the debt of gratitude they owe the United States. In every town we found men who said that our nation had saved them from slavery, and others who claimed that without our interference their independence would have been recognized before this time. On one point they are united, however, viz., that whatever our Government may have done for them it has not gained the right to annex them. They have been prejudiced against us by the Spaniards. The charges made have been so numerous and so severe that what the natives have since learned has not sufficed to disillusion them. With regard to the record of our policy toward a subject people, they have received remarkable information on two points,—that we have mercilessly slain and finally exterminated the race of Indians that were natives of our soil, and that we went to war in 1861 to suppress an insurrection of negro slaves, whom we also ended by exterminating. Intelligent and well-informed men have believed these charges. They were rehearsed to us in many towns in different provinces, beginning at Malolos. The Spanish version of our Indian problem is particularly well known."—*United States, 56th Congress, 1st Sess., Senate Doc. 66.*

In the third number of the first series of its publications, the Philippine Information Society—see below, A. D. 1899 (JANUARY)—FEBRUARY—has brought together a number of conflicting opinions expressed by various persons concerning the capacity of the Filipinos for self government, among them the following:

"The population of Luzon is reported to be something over 3,000,000, mostly natives. These are gentle, docile, and under just laws and with the benefits of popular education would soon make good citizens. In a telegram sent to the department on June 23 I expressed the opinion that 'these people are far superior in their

intelligence and more capable of self government than the natives of Cuba and I am familiar with both races.' Further intercourse with them has confirmed me in this opinion."—Admiral Dewey, *Letter, Aug. 29, 1898, replying to inquiry of War Dept.*

"They [the natives] would have to be educated up to it [self government]. They want a protectorate, but they do not exactly understand what that means. Their idea is that they should collect the revenues and keep them in their treasury, and that we should be at the expense of maintaining an army and a navy, even for their protection, which is the kind of a protectorate they would like very much."—Colonel Merritt, *statement before U. S. Peace Commission at Paris, Oct. 1, 1898.*

"If the United States should evacuate these islands, anarchy and civil war will immediately ensue and lead to foreign intervention. The insurgents were furnished arms and the moral support of the navy prior to our arrival, and we cannot ignore obligations, either to the insurgents or to foreign nations, which our own acts have imposed upon us. The Spanish Government is completely demoralized, and Spanish power is dead beyond all possibility of resurrection. On the other hand, the Filipinos cannot govern the country without the support of some strong nation. They acknowledge this themselves, and say their desire is for independence under American protection, but they have only vague ideas as to what our relative positions would be, what part we should take in collecting and expending the revenue, and administering the government."—General F. V. Greene, *Memorandum, received the Philippine Islands, made Aug. 27, 1898.*

"The capability of the Filipinos for self government cannot be doubted. Such men as Aguinaldo, Aguinado, and many others whom I might name are highly educated; nine tenths of the people can read and write, all are skilled artisans in one way or another, they are industrious, frugal, temperate, and, given a fair start, could look out for themselves infinitely better than our people imagine. In my opinion they rank far higher than the Cubans or the uneducated negroes to whom we have given right of suffrage."—General Charles King, *Letter to Milwaukee Journal, June 22, 1899.*

"Concerning the capacity of the Filipinos to govern themselves I regret to say that I see no reason to change the opinion previously expressed, that they are unfit. I wish my opinion might be otherwise, for I prefer to believe them capable of self government. There are a number of Filipinos whom I have met, among them General Aguinado and a few of his henchmen, whom I believe thoroughly trustworthy and fully capable of self government, and the main reliance for small official positions and many larger ones would be upon people who know no standard of government other than that the Spaniards have furnished. Their sense of equity and justice seems not fully developed, and their readiness to coerce those who come under their power has been strongly illustrated in this city since our occupation. A regularly organized system of blackmail has been instituted under the guise of making subscriptions to the insurgent cause."—Major J. F. Bell [of Engineers on "secret service"], *Letter to General Merritt Manila, Aug. 29, 1898.*

The people are the most enlightened and vigorous branch of the Malay race and have been Christians for centuries. In fact longer than the Christians of the Reformation were established in Great Britain and are the nearest akin to the Spaniard people of any alien race, and it is simply the wisest to imagine that eight to ten millions of such people can be brought and soiled as a branch of commerce without first obtaining the consent of all those who are greedy for a share of the archipelago ponder well over this before turning their fingers."—H. W. Bray [not dated] and plunder in the Islands for fifteen years]. *Latent Singapore Free Press, June 8, 1898.*

The native has no expansive ideas; he cannot go far enough to understand what it is to risk matters for the benefit of the common weal; he cannot go past his own most personal interest in his town, at the most. I think the greatest length he would go would be his own town. But constructing laws, and obeying them, for the benefit of the commonwealth, I do not think he is capable of it at all. I think an attempt at a native government would be a fiasco altogether."—John Foreman, *Testimony before U. S. Police Commission at Paris.*

"The excuse that they [the Filipinos] are not ripe for independence is not founded on facts. The Filipinos number more educated people than the kingdom of Servia and the principalities of Bulgaria and Montenegro. They have fewer illiterates than the states of the Balkan peninsula, Russia, many provinces of Spain and Portugal, and the Latin republics of America. There are provinces in which few people can be found who cannot at least read. They pay more attention to education than Spain or the Russian states do. There is no lack of trained men fit to govern their own country, and indeed in every branch, because under the Spanish rule the official business was entirely transacted by the native subalterns. The whole history of the Katipunan revolt and of the war against Spain and America serves to place in the best light the capability of the Filipinos for self government."—F. Blumentritt, *The Philippine Islands*, p. 61.

A. D. 1898-1899 (December-January).—Instructions by the President of the United States to General Otis, Military Governor and Commander in the Philippines.—Their proclamation to the people of the Islands as modified by General Otis.—The effect.—On the 25th of December, 1898, the following instructions, dated Dec. 21, and signed by the President, were enabled by the Secretary of War to General Otis in command of the United States forces in the Philippines. They were not made public in the United States until the 5th of January following, when they appeared in the newspapers of that day: "The destruction of the Spanish fleet in the harbor of Manila by the United States naval squadron commanded by Rear Admiral Dewey, followed by the reduction of the city and the surrender of the Spanish forces practically effected the conquest of the Philippine Islands and the suspension of Spanish sovereignty therein. With the signature of the treaty of peace between the United States and Spain by their respective plenipotentiaries at Paris on the 10th inst., and as the result of victories of the American arms, the future control, disposition and government of the Philippine Islands are ceded to the United States. In ful-

filment of the offices of the sovereignty there acquired and the responsible administration of government thus assumed, the actual occupation and administration of the entire group became immediately necessary, and the military government heretofore maintained by the United States in the city, harbor and bay of Manila is to be extended with all possible dispatch to the whole of the ceded territory. In performance of this duty, the military commander of the United States is enjoined to make known to the inhabitants of the Philippine Islands that in accordance to the sovereignty of the islands, in severance of the former political relations of the inhabitants and in establishing a new political power, the authority of the United States is to be exerted for the security of the persons and property of the people of the Islands and for the secure enjoyment of all their private rights. It will be the duty of the commander of the forces of occupation to announce and proclaim in the most public manner that we come, not as invaders or conquerors, but as friends, to protect the natives in their homes, in their employments and in their personal and religious rights. All persons who, either by active aid or by honest submission, cooperate with the government of the United States to give effect to these beneficent purposes, will receive the reward of its support and protection. All others will be brought within the least demands we have assumed, with firmness it need be, but without severity so far as may be possible."

"Within the absolute domain of military authority, which necessarily is and must remain supreme in the ceded territory until the government of the United States shall otherwise provide, the municipal laws of the territory in respect to private interests and property and the repression of crime are continued in force, the authority to be administered by the ordinary tribunals so far as practicable. The operations of civil and municipal government are to be performed by such officers as may accept the supremacy of the United States by taking the oath of allegiance, or by officers chosen as far as may be practicable, from the inhabitants of the islands. While the control of all the public property and the revenues of the state passes with the cession, and while the use and management of all public means are of necessity reserved to the authority of the United States, private property, whether belonging to individuals or corporations, is to be respected except for cause duly established. The taxes and duties heretofore payable by the inhabitants to the late government become payable to the authorities of the United States, unless it be seen fit to substitute for them other reasonable rates or modes of contribution to the expenses of government, whether general or local. If private property be taken for military use, it shall be paid for when possible in cash at a fair valuation, and when payment in cash is not practicable receipts are to be given."

"All ports and places in the Philippine Islands in the actual possession of the land and naval forces of the United States will be opened to the commerce of all friendly nations. All goods and wares not prohibited for military reasons by due announcement of the military authority will be admitted upon payment of such duties and other charges as shall be in force at the time of their importation. Finally, it should be the earnest

and paramount aim of the military administration to win the confidence, respect, and affection of the inhabitants of the Philippines by assuring to them in every possible way that full measure of individual rights and liberties which is the heritage of free peoples and by proving to them that the mission of the United States is one of benevolent assimilation, substituting the mild sway of justice and right for arbitrary rule. In the fulfillment of this high mission, supporting the temporary administration of affairs to the greatest good of the governed, there must be sedulously maintained the strong arm of authority to repress disturbance and to overcome all obstacles to the bestowal of the blessings of good and stable government upon the people of Philippine Islands under the free flag of the United States. WILLIAM McKINLEY.

On receiving President McKinley's proclamation, as the instructions of December 21 were commonly described, General Otis promptly forwarded a copy to General Miller, who had been sent to occupy the city of Manila, and the latter made it public. Meantime General Otis had studied the document with care and arrived at conclusions which he sets forth in his subsequent annual report as follows: "After fully considering the President's proclamation and the temper of the Tagalos with whom I was daily discussing political problems and the friendly intentions of the United States Government toward them, I concluded that there were certain words and expressions therein, such as 'sovereignty,' 'right of cession,' and those which directed immediate occupation, etc., though most admirably employed and tersely expressive of actual conditions, might be advantageously used by the Tagalo war party to incite widespread hostility among the natives. The ignorant classes had been taught to believe that certain words, as 'sovereignty,' 'protection,' etc., had peculiar meaning disastrous to their welfare and significant of future political domination, like that from which they had recently been freed. It was my opinion, therefore, that I would be justified in so amending the paper that the beneficent object of the United States Government would be brought clearly within the comprehension of the people, and this conclusion was the more readily reached because of the radical change [a change of cabinet] of the past few days in the constitution of Aguinaldo's government, which could not have been understood at Washington at the time the proclamation was prepared."

The amended proclamation of January 4 appeared in the English, Spanish, and Tagalo languages, and was published in Manila through newspapers and posters. The English text is as follows: "To the people of the Philippine Islands: Instructions of His Excellency the President of the United States relative to the administration of affairs in the Philippine Islands have been transmitted to me by direction of the honorable the Secretary of War, under date of December 28, 1898. They direct me to publish and proclaim, in the most public manner, to the inhabitants of these islands that in the war against Spain the United States forces came here to destroy the power of that nation and to give the blessings of peace and individual freedom to the Philippine people; that we are here as friends of the Filipinos, to protect them in their homes, their employments, their individual and religious

liberty, and that all persons who either by force, and or honest endeavor, cooperate with the Government of the United States to give effect to these beneficent purposes, will receive the aid of its support and protection. The President of the United States has assumed that the laws of the country in respect to private rights and property and the repression of crime shall be considered as continuing in force, in so far as they be applicable to a free people, and shall be administered by the ordinary tribunals of justice presided over by representative of the people, and those in thorough sympathy with them, their desires for good government, that the functions and duties connected with civil and military administration are to be performed by such officers as wish to accept the assistance of the United States, chosen in so far as it may be practicable from the inhabitants of the islands, and while the management of public property and revenues and the use of all public means of transportation are to be controlled by military authorities, until such authorities can be replaced by civil administration, all private property, whether of individuals or corporations, must be respected and protected. If private property be taken for military uses it shall be paid for at a fair valuation in cash if possible, and when payment in cash is not practicable at the time, receipts therefor will be given to be taken up and liquidated as soon as cash becomes available. The ports of the Philippine Islands shall be open to the commerce of all foreign nations, and goods and merchandise not prohibited for military reasons by the military authorities shall be admitted upon payment of such duties and charges as shall be in force at the time of importation. The President concludes his instructions in the following language: "Finally, it should be the earnest and paramount aim of the Administration to win the confidence, respect, and affection of the inhabitants of the Philippines by insuring to them in every possible way the full measure of individual rights and liberty which is the heritage of a free people, and by proving to them that the mission of the United States is one of benevolent assimilation, which will substitute the mild sway of justice and right for arbitrary rule. In the fulfillment of this high mission, while upholding the temporary administration of affairs for the greatest good of the governed, there will be sedulously maintained the strong arm of authority to repress disturbance, and to overcome all obstacles to the bestowal of the blessings of good and stable government upon the people of the Philippine Islands."

"From the tenor and substance of the above instructions of the President, I am fully of the opinion that it is the intention of the United States Government, while directing affairs generally, to appoint the representative men now forming the controlling element of the Filipinos to civil positions of trust and responsibility, and it will be my aim to appoint thereto such Filipinos as may be acceptable to the supreme authorities at Washington. It is also my belief that it is the intention of the United States Government to draw from the Filipino people so much of the military force of the islands as is possible and consistent with a free and well constituted government of the country, and it is my desire to inaugurate a policy of that character. I am also convinced that it is the intention of the

'Military Governor in the Philippines,' and I protest once and a thousand times, with all the energy in my soul, against such an authority. I solemnly proclaim that I have never had, either at Singapore or here in the Philippines, any verbal or written contract for the recognition of American sovereignty over this cherished soil.

Our countrymen and foreigners are witnesses that the land and naval forces of the United States existing here have recognized by act the belligerency of the Philippines, not only respecting but also doing public honor to the Filipino banner, which triumphantly traversed our seas in view of foreign nations represented here by their respective consuls.

"As in his proclamation General O'Callaghan to some instructions issued by His Excellency the President of the United States relating to the administration of affairs in the Philippines, I solemnly protest in the name of God, root and source of all justice and all right, who has visibly needed me the power to direct my dear brethren in the difficult task of our regeneration, against this intrusion of the United States Government in the administration of these islands. In the same manner I protest against such an unexpected act which treats of American sovereignty in these islands in the face of all antecedents that I have in my possession referring to my relations with the American authorities, which are unequivocal testimony that the United States did not take me out of Hong Kong to make war against Spain for their own benefit, but for the benefit of our liberty and independence to which end said authorities verbally promised me their active support and efficacious cooperation. So that you all may understand it, my beloved brothers, it is the principle of liberty and absolute independence that has been our noble ambition for the purpose of obtaining the desired object, with a force given by the conviction, now very widespread, not to retrace the path of glory that we have passed over."—*United States, 56th Congress, 1st Sess., Senate Doc. 208, p. 103.*

A. D. 1899 (January).—Appointment of the First Commission to the Philippines and the President's instructions to it.—On the 20th of January, 1899, the President of the United States addressed the following communication to the Secretary of State: "My communication to the Secretary of War, dated December 21, 1898, declares the necessity of extending the actual occupation and administration of the city, harbor, and bay of Manila to the whole of the territory which by the treaty of Paris, signed on December 10, 1898, passed from the sovereignty of Spain to the sovereignty of the United States, and the consequent establishment of military government throughout the entire group of the Philippine Islands. While the treaty has not yet been ratified, it is believed that it will be by the time of the arrival at Manila of the commissioners named below. In order to facilitate the most humane, pacific, and effective extension of authority throughout these islands, and to secure, with the least possible delay, the benefits of a wise and generous protection of life and property to the inhabitants, I have named Jacob G. Schurman, Rear Admiral George Dewey, Maj. Gen. Elwell S. Otis, Charles Denby, and Dean C. Worcester to constitute a commission to aid in the accomplishment of these results. In

the performance of this duty, the commissioners are enjoined to meet at the earliest possible date in the city of Manila and to announce, by a public proclamation, their presence and the mission entrusted to them, carefully setting forth, while the military government already prevailing is to be maintained and continued so long as necessity may require, efforts will be made to alleviate the burden of taxation, to establish industrial and commercial prosperity, and to provide for the safety of persons and of property by such means as may be found conducive to these ends.

"The commissioners will endeavor, without interference with the military authorities of the United States now in control of the Philippines, to ascertain what amelioration in the condition of the inhabitants and what improvements of public order may be practicable, and for any purpose they will study attentively the existing social and political state of the various populations, particularly as regards the forms of local government, the administration of justice, the collection of customs and other taxes, the means of transportation, and the need of public improvements. They will report through the Department of State, according to the form customary or hereafter prescribed for transmitting and preserving such communications, the results of their observations and reflections, and will recommend such executive action as may from time to time seem to them wise and useful. The commissioners are hereby authorized to confer authoritatively with any persons residing in the islands from whom they may believe themselves able to derive information or suggestions valuable for the purposes of their commission, whom they may choose to employ as agents, as may be necessary for this purpose.

"The temporary government of the islands is entrusted to the military authorities, as already provided for by my instructions to the Secretary of War of December 21, 1898, and will continue until Congress shall determine otherwise. The commission may render valuable services by examining with special care the legislative needs of the various groups of inhabitants, and by reporting, with recommendations, the measures which should be instituted for the maintenance of order, peace, and public welfare, either as temporary steps to be taken immediately for the perfection of present administration, or as suggestions for future legislation. In so far as immediate personal changes in the civil administration may seem to be advisable, the commissioners are empowered to recommend suitable persons for appointment to these offices from among the inhabitants of the islands who have previously acknowledged their allegiance to this Government.

"It is my desire that in all their relations with the inhabitants of the islands the commissioners exercise due respect for all the ideals, customs, and institutions of the tribes which compose the population, emphasizing upon all occasions the just and beneficent intentions of the Government of the United States. It is also my wish and expectation that the commissioners may be received in a manner due to the honored and authorized representatives of the American Republic, duly commissioned on account of their knowledge, skill, and integrity as bearers of the good will, the protection, and the richest bless-

pages of a liberating rather than a conquering nation. WILLIAM McKINLEY. — *Report of the Philippine Commission, June 31, 1900, v. 1, c. 1, p. 170.* 1870

A. D. 1899 (January–February).—Causes of and responsibility for the outbreak of hostilities between the Americans and the Filipinos. The Philippine Information Society, "created for the purpose of 'placing within reach of the American people the most reliable and the most convincing evidence attainable in regard to the people of the Philippine Islands and our relations to them'" has published in No. VII of the First Series of its pamphlets a carefully made and most interesting information, from official and other sources, relative to the circumstances in which hostilities between the American and Filipino forces came about. On this as on other subjects we have pursued its inquiries with no aim but to have presented the truth. Its conclusions, resting on the evidence which it submits, are stated in an introduction to the pamphlet as follows:

"It will presumably be admitted that the important question with regard to the Outbreak of Hostilities February 4, 1899, is not, who fired the first shot, but who was responsible for the conditions that made it evident to every observer weeks before the clash came that a single shot might bring on war. The situation may be briefly explained as follows: The Philippine Archipelago was and ought to be ours, and we were moving to take possession as rapidly as possible. The Filipinos, or at least Aguinaldo's government and followers, believed that the country was theirs and they resented every effort on our part to occupy it. We considered it ours through cession from Spain and right of conquest. They claimed that Spain no longer held possession of the country and therefore had no right to cede it to us; moreover, that by right of conquest we were entitled only to temporary occupation of Manila. We wished to extend our sovereignty throughout the Archipelago with all possible dispatch. They desired independence, or at least a protectorate which, while securing them from foreign aggression, should leave them in control of their internal affairs. While a discussion of the justice of either position does not come within the limits of the present inquiry, it is important to remember that from the first a minority in this country urged that the Filipinos were entitled to a promise of ultimate independence, and that a resolution of Congress, similar to that passed in the case of Cuba, would avert all occasion for war. This course having been rejected by our country, the question arises, did the assertion of United States sovereignty render war inevitable?"

"No doubt most Americans believe that left to themselves the Filipinos would soon have lapsed into anarchy, while a few maintain that with temporary assistance in international affairs they would have developed a government better suited to their peculiar needs than we can ever give them. Still others who are familiar with the Filipinos and kindred races believe that their aspiration for an independent national existence was not deep rooted, that had we adopted an affectionate, admiring tone to their leaders, had we recognized their government and approved of it, we could soon have made their government our

government, could have been as sovereign as we pleased and had the people with us. Whichever view one may hold it must be admitted that if we were to establish our sovereignty by peaceful methods it was essential to win the confidence and affection of the Filipinos. There is every indication that the Filipinos were prepared, at first, to treat us as friends and liberators. General Anders tells the following interesting story: The prevailing sentiment of the Filipinos towards us can be shown by one incident. About the middle of July the insurgent leaders in Cavite invited a number of our army and navy officers to a banquet. There was some prearranged speech making, the substance of the Filipino talk being that they wished to be annexed but not conquered. One of our officers in reply assured them that we had not come to make them slaves, but to make them free men. A singular scene followed. All the Filipinos rose to their feet, and Buencamino, taking his wine glass in his hand, said, 'We wish to be baptized by that sentiment. Then he and the rest poured the wine from their glasses over their heads. After the very first, however, the cultivation of intimate relations with the Filipino leaders seems to have been considered unimportant or inadvisable. General Merritt states that he never saw Aguinaldo. Social intercourse between our officers and the Filipinos was discouraged by General Otis. In fact after the surrender of Manila General Whittier seems to have been the only one of our superior officers who ever had a personal interview with Aguinaldo.

"Certainly after the proclamation of January 4, [see above, A. D. 1898, 1899, JANUARY, FEBRUARY] war could only have been avoided by a decisive action of Congress promising ultimate independence to the Filipinos. That proclamation of January 4 raised the issue and provoked the counter proclamation of January 5, which so stirred the people against us, a proclamation in which Aguinaldo once and a thousand times and with all the energy of his soul protested against American sovereignty, and which closed with the words, 'upon their heads be all the blood which may be shed'."

"Aguinaldo's proclamation was followed by a series of conferences of which General Otis reports 'It was one continued plea for some concession that would satisfy the people'. On January 16th he cabled to Washington: 'Aspiration Filipino people is independence with restrictions resulting from conditions which its government agree with American when latter agree to officially recognize the former'. Finally on January 25th he sent word to the insurgent commissioners that 'To this dispatch no reply has been received'. From this time General Otis states, the insurgents hurried forward preparations for war. Contemporaneous with these events in the Philippines the Treaty of Peace was pending in the United States Senate where it had been assigned for a vote on February 6th.

"With regard to the actual outbreak of hostilities, there is a sharp difference of opinion. The United States press dispatches announcing the outbreak, and the contemporaneous newspaper statements by the Filipinos, are of interest as evidence that from the very first each side claimed the other to be the aggressor. As to which of these opposing claims is borne out by the facts, the editors would say that after

careful study of all the accessible evidence they find that according to the most authoritative statements the outbreak occurred as the result of a trespass by four armed Filipinos on territory admitted by the Filipino in command to be within the jurisdiction of the United States. The number of Filipinos has been variously estimated. The editors follow the report of General MacArthur in command of the division in which the firing began, which agrees with the report of Second Lieutenant Wheeler of the First Nebraska U. S. Volunteer Infantry, stationed at Santa Mesa. The action of the Filipino trespassers seems to have been an instance of bad discipline in the insurgent army. Certainly it was not ordered on that date by the insurgent leaders, although there are some indications that the leaders had planned to attack in a few days. The claim that our forces instigated the attack for the purpose of securing the votes necessary to ratify the treaty is absolutely unsupported by any evidence which has come to the attention of the editors."—*Philippine Information Society, Publications, First Series, VII, Introduction.*

A. D. 1899 (January–November).—Attack on American forces by the Tagalos.—Continued hostilities. Progress of American conquest.—No definite date had been set for the attack [by the hostile Tagalos], but a signal by means of rockets had been agreed upon, and it was universally understood that it would come upon the occurrence of the first act on the part of the American forces which would afford a pretext, and in the lack of such act, in the near future at all events. Persistent attempts were made to provoke our soldiers to fire. The insurgents were insolent to our guards and made persistent and continuous efforts to push them back and advance the insurgent lines further into the city of Manila. . . . With great tact and patience the commanding general had held his forces in check, and he now made a final effort to preserve the peace by appointing a commission to meet a similar body appointed by Aguinaldo and to confer with regard to the situation of affairs and to arrive at a mutual understanding of the intent, purposes, aims, and desires of the Filipino people and of the people of the United States. Six sessions were held, the last occurring on January 29, six days before the outbreak of hostilities. No substantial results were obtained, the Filipino commissioners being either unable or unwilling to give any definite statements of the intent, purposes, and aims of their people. At the close of the last session they were given full assurances that no hostile act would be inaugurated by the United States troops. The critical moment had now arrived. Aguinaldo secretly ordered the Filipinos who were friendly to him to seek refuge outside the city. The Nebraska regiment at that time was in camp on the east line at Santa Mesa, and was guarding its front. For days before the memorable 4th of February, 1899, the outposts in front of the regiment had been openly menaced and assaulted by insurgent soldiers; they were attempting to push our outposts back and advance their line. They made light of our sentinels and persistently ignored their orders. On the evening of the 4th of February, an insurgent officer came to the front with a detail of men and attempted to pass the guard on the San Juan Bridge, our guard being stationed at the west end of the bridge. The

Nebraska sentinel drove them back without firing, but a few minutes before 9 o'clock that evening a large body of insurgent troops made an advance on the South Dakota outposts, which they met back rather than fire. About the same time the insurgents came in force to the east end of the San Juan Bridge, in front of the Nebraska regiment. For several nights prior thereto a lieutenant in the insurgent army had been coming regularly to our outpost No. 2, of the Nebraska regiment, and attempting to force the captain back and insisting on posting his guard within the Nebraska lines; and at this time and in the darkness he again appeared with a detail of about six men and approached Private Graves of Company D, First Nebraska Volunteers, the sentinel on duty at outpost No. 2. He then halting them three times without effort, fired, killing the lieutenant, whose men returned the fire and then retreated. Immediately rockets were sent up by the Filipinos, and they commenced firing all along the line, . . . and continued to fire until about midnight; and about 4 o'clock on the morning of February 5 the insurgents again opened fire all around the camp, kept it up until the Americans charged them and drove them with great slaughter out of their trenches."—*Philippine Commission, Preliminary Report (Exhibit 1.—Report, January 31, 1900, p. 1, pp. 174–5).*

They [the insurgents] were promptly repulsed in a series of active engagements which extended through the night of the 4th and the 5th, 6th, and 10th days of February. Our lines were extended and established at a considerable distance from the city in every direction. On the 22d of February a concerted rising of the Tagalos in the city of Manila, of whom there are about 200,000, was attempted, under instructions to massacre all the Americans and Europeans in the city. This attempt was promptly suppressed and the city was placed under strict control. The troops composing the Eighth Army Corps under General Otis's command at that time were of regulars 171 officers and 5,201 enlisted men and of volunteers 667 officers and 14,831 enlisted men, making an aggregate of 88 officers and 20,032 enlisted men. All of the volunteers and 1,650 of the regulars were, or were about to become, entitled to their discharge, and their right was perfected by the exchange of ratifications of the treaty on the 11th of April. . . .

The months of the most intense heat, followed by the very severe rainy season of that climate, were immediately approaching, and for any effective occupation of the country it was necessary to await both the close of the rainy season and the supply of new troops to take the place of those about to be discharged. Practically all the volunteers who were then in the Philippines consented to forego the just expectation of an immediate return to their homes, and to remain in the field until their places could be supplied by new troops. They voluntarily subjected themselves to the dangers and casualties of numerous engagements, and to the very great hardships of the climate. They exhibited fortitude and courage, and are entitled to high commendation for their patriotic spirit and soldierly conduct. . . .

No attempt was . . . made to occupy the country, except in the vicinity of Manila, and at

such points as were important for the protection of our lines. Such movements as passed beyond this, they were designed primarily to break up the organized concentrations of insurgent troops, and to prevent undue annoyance to the positions which we occupied. On the 11th of February the 3d Battalion of the island of Panay, the second of the Philippines in importance, was captured. After the capture of Iloilo the navy captured the city of Cebu, on the island of Luzon. On the 26th of February a battalion of the 1st Infantry was dispatched to that port for the protection of the inhabitants and property, and the use of Marcha military district comprising the islands of Panay, Negros, and Cebu, and such other Visayan islands as might be thereafter added, to be known as the Visayan Military District, was established and placed under the command of Brig. Gen. Marcus P. Miller, commanding 1st Separate Brigade, Eighth Army Corps, with headquarters at Iloilo. The 3d Battalion of the 1st California Volunteer Infantry was then ordered to the island of Negros, under the command of Col. (now Brig. Gen.) James P. Smith and took possession of the city of Davao, on that island, without resistance, on the 10th of May. Brig. Gen. James P. Smith assumed temporary command of the Visayan Military District, and on the 25th of May Brig. Gen. R. P. Hughes, United States Volunteers, was assigned to the command of the district. On the 19th of May the Spanish garrison at Jolo, in the Sulu Archipelago, was replaced by American troops. By the 31st of August the number of troops stationed at Jolo and the Visayan Islands, including a small guard at the Cavite Arsenal, amounted to 4,145.

All of the forces who were entitled to be discharged as above mentioned have now (Nov. 29, 1899) been returned to this country and mustered out. The new troops designed to take the place of those returning to this country, and to constitute the effective army for the occupation of the Philippines, have been transported to Manila.

The troops now in the Philippines comprise 90,000 officers and 30,578 men of the regular force, and 500 officers and 15,388 men of the volunteer force, making an aggregate of 1,499 officers and 45,966 men, and when the troops on the way have arrived the total force constituting the Eighth Army Corps will be 2,051 officers and 63,181 men.

By the 10th of October the process of changing armies and the approach of the dry season had reached a point where an advance toward the general occupation of the country was justified. At that time the American lines extended from the Bay of Manila to Laguna de Bay, and included considerable parts of the provinces of Cavite, Laguna, and Morong to the south and east of Manila, substantially all of the province of Manila and the southern parts of Bulacan and Pampanga, dividing the insurgent forces into two widely separated parts. To the south and east of our lines in Cavite and Morong were numerous bands occasionally concentrating for attack on our lines, and as frequently dispersed and driven back toward the mountains. On the 8th of October the insurgents in this region having again gathered and attacked our lines of communication, General Selwan with a column of 1,726 men commenced a movement from Bacoor, in the province of Cavite, driving the enemy through

Old Cavite, Noveleta, Santa Cruz, San Francisco de Malabon, Suban, and Pico das Marinas, punishing them severely, scattering them, and destroying their organized forces, and returning on the 15th to Bacoor. On the 14th of our lines stretched the great plain of central Luzon extending north to Manila about 120 miles. This plain comprises parts of the provinces of Manila, Pampanga, Bulacan, Tarlac, Nueva Ecija, and Pangasinan. It is roughly square, bounded on the south by the Bay of Manila, on the east and west by high mountain ranges separating it from the sea coasts, and on the north by mountains and the Gulf of Lingayen. The main north-east and central portion flows into the Bay of Manila, and near the western extremity the only railroad on the island of Luzon runs in a general southeasterly direction from Pagsanjan, in the Bay of Lingayen, to Manila. In this form Aguinaldo exercised a military dictatorship, with a so-called cabinet imitating the forms of civil government, having his headquarters at Tarlac, which he called his capital, and which is situated near the center of the western boundary of the plain.

The operations commenced in October involved the movement of three separate forces: (1) A column proceeding up the Rio Grande and along the northeastern borders of the plain and bending around to the westward across the northern boundary toward the Gulf of Lingayen, capturing the towns and occupying the mountain passes which gave exit into the northern division of the island. (2) An expedition proceeding by transports to the Gulf of Lingayen, there to land at the northwestern corner of the plain and occupy the great coast road which from that point runs between the mountains and the sea to the northern extremity of the island, and to proceed eastward to a junction with the first column. (3) A third column proceeding directly up the railroad to the capture of Tarlac, and thence still up the road to Dagupan, driving the insurgent forces before it toward the line held by the first two columns. These movements were executed with energy, rapidity, and success, notwithstanding the exceedingly unfavorable weather and delays of rain, which rendered the progress of troops and transportation of subsistence most difficult. On the 12th of October a strong column under General Lawton, with General Young commanding the advance, commenced the northerly movement up the Rio Grande from Arayat, driving the insurgents before it to the northward and westward. On the 18th the advance reached Cabiao. On the 19th San Isidro was captured, and a garrison established, on the 27th Calamba was occupied, and a permanent station established there. On the 1st of November Alibaga and Talavera were occupied. In the meantime detachments, chiefly of Young's cavalry, were operating to the west of the general line of advance, striking insurgent parties wherever they were found and driving them toward the line of the railroad. By the 14th of November the advance had turned to the westward and our troops had captured San Jose, Layan, Hangan, San Quintin, Tayug, and San Nicolas. By the 18th of November the advance had occupied Asingan and Rosales, and was moving on Pozorubio, a strongly entrenched post about 12 miles east of San Fabian. General Lawton's forces now held

a line of posts extending up the eastern side of the plateau curving around and across the northern end to within a few miles of the Gulf of Lingayen.

On the 6th of November a force of 2,500, under command of General Wheaton, sailed from Manila for the Gulf of Lingayen, convoyed by ships of the Navy, and on the 7th the expedition was successfully landed at San Fabian with effective assistance from a naval convoy against spirited opposition. On the 12th the 33d Volunteers, of Wheaton's command, under Colonel Hare, proceeded southeastward to San Jacinto, attacked and routed 1,200 intrenched insurgents, with the loss of the gallant Maj. John A. Logan and 6 enlisted men killed, and one officer and 11 men wounded. The enemy left 81 dead in the trenches and suffered a total loss estimated at 300. In the meantime, on the 5th of November a column under General McArthur advanced up the railroad from Angeles to Magalang, clearing the country between Angeles and Arayat, encountering and routing bodies of the enemy at different points, and capturing Magalang. On the 11th it took Bumban, Capas, and Concepcion, and on the 12th of November entered Tarlac, from which the enemy fled on its approach. Meantime parties, mainly of the 36th Volunteers, under Col. J. E. Bell, cleared the country to the right of the line of advance as far east as the points reached by General Lawton's flanking parties. On the 17th of November McArthur's column had occupied Gerona and Panique, to the north of Tarlac. On the 19th, Wheaton's troops, and on the 20th, McArthur's troops, entered Dagupan.

On the 21st of November General Otis was able to telegraph to the Department as follows: "Claim to government by insurgents can be made no longer under any fiction. Its treasurer, secretary of the interior, and president of congress in our hands; its president and remaining cabinet officers in hiding, evidently in different central Luzon provinces; its generals and troops in small bands scattered through these provinces, acting as banditti, or dispersed, playing the rôle of 'Amigos,' with arms concealed." Since that time our troops have been actively pursuing the flying and scattered bands of insurgents, further dispersing them, making many prisoners, and releasing many Spanish prisoners who had been in the insurgents' hands. On the 23d General Young's column had reached Namacpacan, 30 miles north of San Fernando, in the province of Union, and passed north into the mountains; and on the 24th Vigan, the principal port of the northwest coast, was occupied by a body of marines landed from the battle ship Oregon. Wherever the permanent occupation of our troops has been introduced in the Philippine Islands civil law has been immediately put in force. The courts have been organized and the most learned and competent native lawyers have been appointed to preside over them. A system of education has been introduced and numerous schools have been established.—"Annual Report of the Secretary of War, 1899 (*Message and Documents: Abridgment*, 1899-1900, v. 2, pp. 735-41).

General Young, whose movement is referred to above, reported to General Otis from Pozorubio, on the 17th of November: "Aguinaldo is now a fugitive and an outlaw, seeking security in escape to the mountains or by sea. My cav-

alry have ridden down his forces wherever encountered, utterly routing them in every instance, some, capturing and liberating many prisoners, and destroying many arms, ammunition, and other war impediments." On the 30th Major March was sent by General Young, as he expresses it, "on Aguinaldo's trail" and encountered the forces of the Filipino General during the Tila Pass. The following is Major March's report of the fight which then occurred and which the Filipino commander told "The trail winds up the Tila Mountains in a sharp zigzag. The enemy had constructed a stone barrier across the trail at a point where it commanded the turns of the zigzag for a considerable distance. The barricade was loopholed for rifle, snipe, and machine-gun fire and afforded good cover for the insurgents. On passing on beyond Lingay the advance was checked by a heavy fire from this barricade which killed and wounded several men without having its position revealed. I brought up the remainder of the command at double time, firing two men wounded during the run up. On arriving at the point, I located the insurgents' position with my glasses—their fire being entirely Mauser and smokeless powder—by the presence of the insurgent officer who showed himself freely and directed the fire. On pushing forward, the number of my men who were hit increased so rapidly that it was evident that the position could not be taken by a front attack, when the trail only allowed the men to pass one at a time. On the left of the barricade was a gorge several hundred feet deep. On its right, as we faced it, was a precipitous mountain which rose 1,500 feet above the trail. Across the gorge and to the left front of the barricade was a hill which, while it did not permit of flank fire into the barricade, commanded the trail in its rear, and this point I occupied with ten sharpshooters in command of Sergeant Major McDougall. He lost one man wounded in getting to the top, and when there rendered most effective assistance. I then ordered Lieutenant Tompkins to take his company (11) and proceeding back on the trail to ascend the slope of the mountain under cover of a slight ridge which struck the face of the mountain about 150 feet from the summit. From there he had a straight-up climb to the top, where the men pulled themselves up by twigs and by hand. The ascent took two hours, during which the enemy kept up an incessant and accurate fire, which they varied by rolling down stones on our heads. When Tompkins' men appeared upon the crest of the hills over their heads, he had the command of the two other trenches which were constructed in rear of the barricade, I have described, around a sharp turn in the trail, and which were also held by the insurgents. He opened fire upon them and I charged the first barricade at the same time, and rushed the enemy over the hill. We found eight dead bodies on the trail, and the bushes which grew at the edge of the gorge were broken and blood-stained where dead or wounded men fell through. Among the dead bodies was that of Gregorio del Pilar, the general commanding the insurgent forces. I have in my possession his shoulder straps; French field glasses, which gave the range of objects; official and private papers, and a mass of means of identification. He was also recognized personally by Mr. McCutcheon and Mr. Keene, two newspaper corre-

spondents who had met him before. The insurgents' part of their loss in this fight is 52 killed, and after it reached Cervantes. My loss was 2 killed and 19 wounded. I reached the summit at 1000 m. and camped there for the night.

A Cervantes I learned that the force at Tila Pass was a picked force from Aguinaldo's body-guard, and that it was wiped out of existence. Aguinaldo with his wife and two other women and a handful of men were living in a convent at Cervantes, perfectly secure in his belief that Tila Pass was an impregnable position. It was the insurgents' Thermopylae. — *Report of Lieutenant General Commanding the Army, 1899, p. 4, p. 381.*

Mr. McCord, one of the newspaper correspondents referred to by Major March, gave to the *Chicago Record* a graphic account of the fight at Tila Pass, and wrote feelingly of the death of the young Filipino General Pilar:

"Gen. Gregorio del Pilar," wrote Mr. McCord, "was the last man to fall. He was striving to escape up the trail and had already received a wound in the shoulder. A native was leading his horse for him and just as he was preparing to mount a Krag Jorgensen bullet caught him in the neck, and passing through came out just below his mouth. The men of Company E, rushing up the trail, caught the native, who was endeavoring to secure the papers which the general had in his pockets, and a moment later captured the horse. At that time no one knew who the dead man was, but from his uniform and insignia they judged that he was an officer of high rank. The souvenir hunt was at once at work and the body was stripped of everything of value from the diamond ring to the boots. . . . Many letters were found, most of them from his sweetheart, Dolores Jose, who lived in Dagupan. A handkerchief bearing her name was also found in his pocket. One letter was found from the president of Lingay and gave the exact number of soldiers in March's command. Pilar's diary, which ran from November 19 on to the day of his death, was of remarkable interest, for it detailed many things regarding the wild flight of himself and Aguinaldo's party up the coast. The last words written in it were pathetic and indicated something of the noble character of the man. The passage, which was written only a few minutes previously, while the fight was on and while death even then was before him, said: 'I am holding a difficult position against desperate odds, but I will gladly die for my beloved country.'

"Pilar alive and in command, shooting down good Americans, was one thing, but Pilar lying in that silent mountain trail, his body half denuded of its clothes, and his young, handsome, boyish face discolored with the blood which saturated his blouse and stained the earth, was another thing. We could not help but feel admiration for his gallant fight, and sorrow for the sweetheart whom he left behind. The diary was dedicated to the girl, and I have since learned that he was to have married her in Dagupan about two weeks before. But the Americans came too soon. Instead of wedding bells there sounded the bugle calls of the foe and he was hurriedly ordered to accompany his chief, Aguinaldo, on that hasty retreat to the mountains. The marriage was postponed, and he carried out his orders by leaving for the north. Pilar was one of

the best types of the Filipino soldier. He was only 23 years old, but he had been through the whole campaign in his capacity as brigadier general. It was he who commanded the forces at Quingua the day that Col. Stensberg was killed and he may be remembered that the engagement that day was one of the most bloody and desperate that has occurred on the island. He was a handsome boy, and was known as one of the Filipinos who were actuated by honestly patriotic motives, and who fought because they believed they were fighting in the right and not for personal gain or ambition." — *Chicago Record & Stories of Filipino War, p. 14.*

A. D. 1899 (March July). The establishment of a provisional government in the island of Negros. — Negros was the first island to accept American sovereignty. Its people unreservedly proclaimed allegiance to the United States and adopted a constitution looking to the establishment of a popular government. It was impossible to guarantee to the people of Negros that the constitution so adopted should be the ultimate form of government. Such a question, under the treaty with Spain and in accordance with our own Constitution and laws, came exclusively within the jurisdiction of the Congress. The government actually set up by the inhabitants of Negros eventually proved unsatisfactory to the natives themselves. A new system was put into force by order of the Major General Commanding the Department [July 22, 1899], of which the following are the most important elements:

"It was ordered that the government of the island of Negros should consist of a military governor appointed by the United States military governor of the Philippines, and a civil governor and an advisory council elected by the people. The military governor was authorized to appoint secretaries of the treasury, interior, agriculture, public instruction, an attorney general, and an auditor. The seat of government was fixed at Bacolod. The military governor exercises the supreme executive power. He is to see that the laws are executed, appoint to office, and fill all vacancies in office not otherwise provided for, and may, with the approval of the military governor of the Philippines, remove any officer from office. The civil governor advises the military governor on all public civil questions and presides over the advisory council. He, in general, performs the duties which are performed by secretaries of state in our own system of government. The advisory council consists of eight members elected by the people within territorial limits which are defined in the order of the commanding general. The times and places of holding elections are to be fixed by the military governor of the island of Negros. The qualifications of voters are as follows: (1) A voter must be a male citizen of the island of Negros. (2) Of the age of 21 years. (3) He shall be able to speak, read, and write the English, Spanish, or Visayan language, or he must own real property worth \$500, or pay a rental on real property of the value of \$1,000. (4) He must have resided in the island not less than one year preceding, and in the district in which he offers to register as a voter not less than three months immediately preceding the time he offers to register. (5) He must register at a time fixed by law before voting. (6) Prior to such registration he shall have

paid all taxes due by him to the Government. Provided, that no native person shall be allowed to register or vote. The military governor has the right to veto all bills or resolutions adopted by the advisory council, and his veto is final if not disapproved by the military governor of the Philippines. The advisory council discharges all the ordinary duties of a legislature. The usual duties pertaining to said offices are to be performed by the secretaries of the treasury, interior, agriculture, public instruction, the attorney general, and the auditor. The judicial power is vested in three judges, who are to be appointed by the military governor of the island. Inferior courts are to be established. Free public schools are to be established throughout the populous districts of the island, in which the English language shall be taught, and that subject will receive the careful consideration of the advisory council. The burden of government must be distributed equally and equitably among the people. The military authorities will collect and receive the customs revenue, and will control postal matters and Philippine inter-island trade and commerce. The military governor, subject to the approval of the military governor of the Philippines, determines all questions not specifically provided for and which do not come under the jurisdiction of the advisory council." — *Message of the President, Dec. 5, 1899 (Message and Documents: Abolishment, 1899-1900, v. 2, p. 45).* Also in: *Report of General Otis (Message and Documents, v. 2, pp. 113-137).*

A. D. 1899, May, August.—Agreement of terms with the Sultan of Jolo, concerning the Sulu Archipelago.—On the 19th of May, a detachment of U. S. troops took the place of the Spanish garrison at Jolo, the military station in the Sulu Archipelago. On the 3d of July, General Otis, Military Governor of the Philippines, issued orders as follows to General J. C. Bates, U. S. V.: "You will proceed as soon as practicable to the United States military station of Jolo, on the island of that name, and there place yourself in communication with the Sultan of Jolo, who is believed to be at Sassi, where he was sojourning when the last information concerning him was received. You are hereby appointed and constituted an agent on the part of the United States military authorities in the Philippines to discuss, enter into negotiations, and perfect if possible, a written agreement of character and scope as hereinafter explained, with the Sultan, which upon approval at these headquarters and confirmation by the supreme executive authority of the United States, will prescribe and control the future relations, social and political, between the United States Government and the inhabitants of the archipelago. . . . In your discussions with the Sultan and his datos the question of sovereignty will be forced to the front, and they will undoubtedly request an expression of opinion thereon, as they seem to be impressed apparently with the belief that the recent Spanish authorities with whom they were in relationship have transferred full sovereignty of the islands to them. The question is one which admits of easy solution, legally considered, since by the terms of treaties or protocols between Spain and European powers Spanish sovereignty over the archipelago is conceded. Under the agreement between Spain and the Sultan and datos of July, 1878, the latter acknowledged

Spanish sovereignty in the entire archipelago of Jolo and agreed to become loyal Spanish subjects, receiving in consideration certain Spanish payments in money. The sovereignty of Spain thus established and acknowledged by a treaty in interest, was transferred to the United States by the Paris treaty. The United States succeeded to all the rights which Spain held in the archipelago, and its sovereignty over the same is an established fact. But the inquiry arises to the extent to which that sovereignty is to be applied under the agreement of 1878 with the Moros. Sovereignty, of course, implies the power of political control, but it is not incompatible with concessionary grants to a foreign and subject. The Moros acknowledge through their accepted chiefs Spanish sovereignty, and their subjection thereto, and that recognition conferred upon their chiefs certain powers of supervision over them and their affairs. The kingly prerogatives of Spain, thus abridged by solemn concession, have descended to the United States, and conditions existing at the time of transfer should remain. The Moros are entitled to enjoy the identical privileges which they possessed at the time of transfer, and to continue to enjoy them until abridged or modified by future mutual agreement between them and the United States, to which they owe loyalty, and it becomes necessary to invoke the exercise of the supreme powers of sovereignty to meet emergencies. You will therefore acquaint yourself thoroughly with the terms of the agreement of 1878, and take them as a basis for your direct negotiations. . . .

"It is greatly desired by the United States for the sake of the individual improvement and social advancement of the Moros, and for the development of the trade and agriculture of the islands in their interests, also for the welfare of both the United States and Moros, that mutual friendly and well defined relations be established. If the Sultan can be made to give credit to and fully understand the intentions of the United States, the desired result can be accomplished. The United States will accept the obligations of Spain under the agreement of 1878 in the matter of money annuities, and in proof of sincerity you will offer as a present to the Sultan and datos \$10,000, Mexican, which you will be supplied before leaving for Jolo—the same to be handed over to them, respectively, in amounts agreeing with the ratio of payments made to them by the Spanish Government for their declared services. From the 1st of September next, and thereafter, the United States will pay to them regularly the sums promised by Spain in its agreement of 1878, and in any subsequent promises of which proof can be furnished. The United States will promise, in return for the concessions to be hereinafter mentioned, not to interfere with, but to protect the Moros in the free exercise of their religion and customs, social and domestic, and will respect the rights and dignities of the Sultan and his advisers."

Of the results of the mission of General Bates, General Otis reported subsequently as follows: "General Bates had a difficult task to perform and executed it with tact and ability. With a number of the principal datos were favorably inclined, the Sultan, not responding to negotiations, kept aloof and was represented by his son

parent was prosecuted with vigor and success, under conditions of extraordinary difficulty and handicaps, and resulted in the better and prompt accomplishment of the mission of the insurgent troops to clear the region in the rescue of nearly all the American prisoners and the greater part of the Spanish prisoners held by the insurgents, in the capture and destruction of large quantities of arms, ammunition, and supplies, in the dispersal of a large force of insurgents from Cavite and the adjacent provinces south of Manila, and in a considerable force to the east of the Rio Grande de Pangasinan, chiefly in the province of Bulacan, while in the extreme southern portions of Luzon, and in the Visayan Islands, except the island of Negros, armed bodies of Tagalogs had taken possession of the principal seacoast towns and were exercising military control over the peaceful inhabitants. Between the insurgent troops in Bulacan and the mountains to the north, and the insurgents in the south, communication was maintained by road and trail, running along and near the eastern bank of the Marikina River, and through the towns of Marikina, San Mateo, and Montalban and the province of Marang. This line of communication, passing through rough and easily defended country, was strongly fortified and held by numerous bodies of insurgents.

"On the 18th of December, 1899, a column, under the command of Maj. Gen. Henry W. Lawton, proceeded from Manila, and between that date and the 29th of December captured all the fortified posts of the insurgents, took possession of the line of communication, which has ever since been maintained, and destroyed, captured or dispersed the insurgent force in that part of the island. In the course of this movement was sustained the irremediable loss of General Lawton, who was shot and instantly killed while too fearlessly exposing his person in supervising the passing of his troops over the river Marikina at San Mateo.

"On the 14th of January, 1900, Gen. J. C. Bates, U. S. V., was assigned to the command of the First Division of the Eighth Army Corps, and an active campaign under his direction was commenced in Southern Luzon. The plan adopted was to confront and hold the strong force of the enemy near Iloilo and to the west of Bacoor by a body of troops under General Wheaton, while a column, under General Schwan, should move rapidly down the west shore of the Laguna de Bay to Piling, thence turn southwesterly and seize the Silang, Imbang, and Nide road, capture the enemy's supplies supposed to be at the towns of Silang and Imbang, and arrest the retreat of the enemy, when he should be driven from northern Cavite by our troops designated to attack him there, and thus prevent his reassembling in the mountains of southern Cavite and northern Batangas. This plan was successfully executed. General Schwan's column moved over the lines indicated with great rapidity, marching a distance of over 600 miles, striking and defeating numerous bodies of insurgents and capturing many entrenched positions, taking possession of and garrisoning towns along the line, and scattering and demoralizing all the organized forces of the enemy within that section of country. From these operations and the simultaneous attacks by

our troops under General Wheaton in the north, the rebel forces in the Cavite region promptly disappeared, the members either being captured or returning to their homes as citizens, and a few scattered parties of insurgents through General Schwan's line to the south. On the 8th of February the organized forces of the insurgents in the region mentioned failed to exist. In large portions of the region the inhabitants were returning to their homes, resuming their industries, and active operations about Manila were resumed. In the course of operations about 600 Spanish prisoners were released from the insurgents, leaving about 1,000 still in their hands in the extreme southern provinces of Camarines and Albay, many of whom were afterwards liberated by our troops. In the meantime an expedition was organized under the command of Brig. Gen. William A. Kobbé, U. S. V., to expel the Tagalogs who had taken possession of the principal hemp ports of the islands situated in Albay, the extreme southern eastern province of Luzon, and in the islands of Leyte, Samar, and Catanduanes. This expedition sailed from Manila on the 18th of February and accomplished its object. All of the principal hemp ports were relieved from occupation by the insurgents, garrisoned by American troops, and opened to commerce by order of the military governor of the islands on the 29th of February and the 10th and 14th of February. The expedition met with strong resistance at Iloilo, but an entrenched force under the Chinese general Panai. He was speedily overcome and won to the interior. After a few days he persuaded his forces and threatened the garrisons which had been left in Albay and Legaspi, whereupon he was attacked, and defeated, and surrendered. Thirty pieces of artillery, a large quantity of ammunition, a good many rifles, and a considerable amount of money were captured by this expedition.

"On the 15th of February an expedition, under the supervision of Major General Bates and under the immediate command of Brig. Gen. James M. Bell, U. S. V., sailed from Manila to take possession of the North and South Camarines provinces and Western Albay, in which the insurgent forces had been swelled by the individuals and scattered bands escaping from operations in various sections of the north. The insurgent force was defeated after a sharp engagement near the mouth of the Bicol River, pursued, and scattered. Large amounts of artillery and war material were captured. The normal conditions of industry and trade relations with Manila were resumed by the inhabitants. On the 20th of March the region covered by the last described operations was created a district in southeastern Luzon, under the command of Brig. Gen. James M. Bell, who was instructed to proceed to the establishment of the necessary customs and internal revenue service in the district. In the meantime similar expeditions were successively made through the mountains of the various islands of the Visayan Group, striking and scattering and severely punishing the bands of warriors and insurgents who infested those islands. In the latter part of March General Bates proceeded with the Fortieth Infantry to establish garrisons in Mindanao. The only resistance was of a trifling character at Cagayan, the insurgent general in northern Mindanao surrendering without

the United States in his possession. With the removal of these movements, all formal resistance to American authority in the Philippines terminated, leaving only an excited, lawless, and annoying guerrilla warfare to be crushed by a costly and protracted campaign requiring time, patience, and good fortune to suppress. As rapidly as possible, the policy of inviting the natives to return to their peaceful vocations and to assist in the re-establishment of their governments has been followed, and the policy of the United States has been pronounced to be "the giving of this protection [to the native population] in the Philippine Islands over four different posts, with the consequent administration and supply. The Government of the posts involves the continued employment of a large force, but as the Filipinos, who are in rebellion have deliberately rejected the policy of murdering, so far as they are concerned, their countrymen who are friendly to the United States, the maintenance of garrisons is at present necessary to the protection of the peaceful and unarmed Filipinos who have submitted to our authority; and if we are to discharge our obligations in that regard their reduction must necessarily be gradual." *United States Secretary of War, Annual Report, November 1900, pp. 7-10.*

A. D. 1900 (January).—Report of the First Philippine Commission.—The First Commissioners of the Philippines returned to the United States in the autumn of 1899, and then submitted to the President a brief preliminary statement of proceedings in the Islands and the opinions of the commissioners had formed, concerning the spirit and extent of the Tagalo revolt, the general disposition of the people at large, their capacity for independent self government, etc. On the 31st of January following the commissioners presented a report which deals extensively with the subjects of investigation and deliberation. In Part I it sets forth the efforts made by the commission "toward conciliation and the establishment of peace," through interviews with representatives of Aguinaldo, and others, and the issuance of a proclamation to the people. In Part II it gives an extended account of the natives of the Islands, "which the native population of the Islands is composed." In Part III, it describes the province which has heretofore been made a reservation, and states the conclusions of the commission as to the capacity of the people and their fitness for a popular government. In Part IV, it gives full account of the Spanish organization of government in the Philippines, general, provincial and municipal, is given, and the reforms that were desired by the Filipino people ascertained. From this the commission proceeds to consider the question of a plan of government for the Islands under the sovereignty of the United States, and concludes that the Territorial system of the United States offers all that can be desired. "What Jefferson and the founders did for Louisiana," says the report, "we propose to do free to-day to do for the Philippines. The fact that Bonaparte had provided in the treaty that Louisiana should in due time be admitted as a State in the Union, and that in the meantime its inhabitants should have protection under the enjoyment of their liberty, property, and religion, made no difference in the relative

[illegible][illegible]

A. D. 1900, March.—Institution of municipal governments.—By General Orders, on the 29th of March, 1900, the Military Governor of the Islands promulgated a law providing for the election and institution of municipal governments, the provisions of which law had been framed by a board appointed in the previous January, under the presidency of Don Cayetano Arellano, chief justice of the Philippines. The first chapter of the law reads as follows:

"ART. 1. The towns of the Philippine Islands shall be recognized as municipal corporations with the same limits as heretofore established, upon reorganizing under the provisions of this order. All property vested in any town under its former organization shall be vested in the same town upon becoming incorporated hereunder.

"ART. 2. Towns so incorporated shall be designated as 'municipios' and shall be known respectively by the names heretofore adopted. Under such names they may, without further authorization, sue and be sued, contract and be contracted with, acquire and hold real and personal property for the general interests of the town, and exercise all the powers so conferred.

confirmed. The city of Manila is exempt from the provisions of this order.

"ART. 12. The municipal government of each town is hereby vested in the alcalde and municipal council. The alcalde and councilors, together with the municipal lieutenant, shall be chosen at large by the qualified electors of the town, and their term of office shall be for two years, to end after the first Monday in January next after their election and until their successors are duly chosen and qualified. Provided, That the alcalde and municipal lieutenant elected in 1900 shall hold office until the first Monday in January, 1902, only, and that the councilors elected in 1900 shall divide themselves, by lot into two classes, the first of those of the first class shall be vacated on the first Monday of January, 1901, and those of the second class one year thereafter, so that one-half of the municipal council shall be chosen annually.

"ART. 13. Incorporated towns shall be of four classes, according to the number of inhabitants. Towns of the first class shall be those which contain not less than 25,000 inhabitants and shall have 18 councilors; of the second class those containing 18,000 and less than 25,000 inhabitants and shall have 14 councilors; of the third class those containing 10,000 and less than 18,000 inhabitants and shall have 10 councilors; of the fourth class, those containing less than 10,000 inhabitants and shall have 8 councilors. Towns of less than 2,000 inhabitants may incorporate under the provisions of this order, or may, upon petition to the provincial governor, signed by a majority of the qualified electors thereof, be attached as a barrio to an adjacent and incorporated town, if the council of the latter consents.

The qualifications of voters are defined in the second chapter as follows:

"ART. 14. The electors charged with the duty of choosing elective municipal officers must be male persons, 23 years of age or over, who have had a legal residence in the town in which they exercise the suffrage for a period of six months immediately preceding the election, and who are not citizens or subjects of any foreign power, and who are comprised within one of the following three classes: 1. Those who, prior to the 13th of August, 1898, held the office of municipal captain, gobernadorcillo, lieutenant or catezu de barangay; 2. Those who annually pay 30 pesos or more of the established taxes; 3. Those who can read and write English or Spanish."

Successing articles in this chapter prescribe the oath to be taken and subscribed by each elector before his ballot is cast, recognizing and accepting "the supreme authority of the United States of America"; appoint the times and places for holding elections, and set forth the forms to be observed in them. In the third chapter, the qualifications of officers are thus defined:

"ART. 15. Alcalde, municipal lieutenant, or councilor must have the following qualifications: 1. He must be a duly qualified elector of the municipality in which he is a candidate, of 26 years of age or over, and have had a legal residence therein for at least one year prior to the date of election. 2. He must correctly speak, read and write either the English language or the local dialect.

"ART. 16. In no case can there be elected or

appointed to municipal office ecclesiastics, persons in active service, persons receiving from municipal, provincial or government salaries, debtors to said funds, whatever the nature of the funds, contractors of public works, bondsmen, clerks and functionaries of the municipality or government while in the city, bankrupts, until discharged by a competent tribunal.

"ART. 17. Each and every person appointed to a municipal office under the provisions of this order shall, before entering upon the duties thereof, take and subscribe an oath of fidelity to the constitution and laws of the United States and to that required from the electors.

Further articles in this chapter appoint and define the duties of the alcalde, the municipal lieutenant, municipal attorney, municipal secretary, municipal treasurer and the municipal councilors. The fifth chapter relates to the organization and finances, the sixth and seventh chapters contain provisions as follows:

"ART. 18. The governor of the province shall be ex officio president of all municipalities within the province and shall have the general supervisory charge of the municipalities of the several towns and cities thereof, and under the provisions of this order and of his supervisory capacity may inspect or cause to be inspected, at such times as he may determine, the administration of municipal affairs in each and every department thereof, and may also determine all appeals against the acts of municipal corporations or their officers. He may, when he may designate in writing for that purpose, shall at all times have free access to all books, papers, moneys, and property of the several towns and cities of the province, and may call upon the officers thereof for information of the receipts and expenditures, or for a general or special report of the official acts of the several municipal councils or of any and every of them, or of any and every of the officers thereof, at any time, and as often as he may consider necessary to inform himself of the state of the affairs of the administration of municipal affairs, and such requests when made must be complied with without excuse, pretext, or delay. He may suspend or remove municipal officers, either individually or collectively, for cause and appoint substitutes therefor permanently, for the time being or pending the next general election. He may call a special election to fill the vacancies caused by such suspension or removal, reporting the cause thereof with a full statement of his action in the premises to the governor of the islands without delay. He shall forward all questions or disputes that may arise as to the boundaries or jurisdictional limits of the towns, or municipalities to the governor of the islands for final determination, together with his report and recommendations relative to the same. He may, with the approval of the governor of the islands, authorize the cities and towns to contract among themselves, associations, or companies, for determined ends, such as the construction of public works, the erection and foundation of beneficent, charitable, or educational institutions, for the better encouragement of public interests or the use of communal property.

"ART. 19. It shall be the duty of commanding officers of military districts, immediately after the publication of this order, to take municipal

in the United States is such that the entire Indian population may slowly be transferred from military to civil control. They were afraid that some reaction would come with their political concessions as to the form of central government to be established for the purpose of taking over the control.

By an order with the date of September 1, 1900, the authority over the islands was submitted for my approval through the Secretary of War, that part of the power of government in the Philippine Islands which is of a legislative nature is to be transferred from the Military Governor of the Islands to the commission, to be thereafter exercised by them in the place and stead of the Military Governor, and such rules and regulations as you shall prescribe until the establishment of the civil central government for the islands continue in place in the last foregoing paragraph of said Congress shall authoritatively provide. Exercise of this legislative authority will include the making of rules and orders, having the effect of law, for the raising of revenue by taxes, customs duties and imposts, the appropriation and expenditure of public funds of the islands, the establishment of an educational system throughout the islands, the establishment of a system to secure an efficient civil service, the organization and establishment of courts, the organization and establishment of municipal and departmental governments, and all other matters of a civil nature for which the Military Governor is to be competent to provide by rules or orders of a legislative character. The commission will also have power during the same period to appoint to office such officers under the judicial, educational and civil service systems and in the municipal and departmental governments as shall be provided for. Until the complete transfer of control the Military Governor will remain the chief executive head of the Government of the islands, and will exercise the executive authority now possessed by him and not heretofore expressly assigned to the commission, subject, however, to the rules and orders enacted by the commission in the exercise of the legislative powers conferred upon them. In the meantime the municipal and departmental governments will continue to report to the Military Governor and be subject to his administrative supervision and control, under your direction, but that supervision and control will be confined within the narrowest limits consistent with the requirement that the powers of government in the municipalities and departments shall be honestly and effectively exercised and that law and order and individual freedom shall be maintained. All legislative rules and orders, establishments of government, and appointments to office by the commission will take effect immediately or at such time as it shall designate, subject to your approval and action upon the recommendations of the commission's reports, which are to be made from time to time as its action is taken. Wherever civil Governments are considered under the direction of the commission, such military posts, garrisons, and forces will be continued for the suppression of insurrection and banditry and the maintenance of law and order as the military commander shall deem requisite and the military forces shall be at all times subject under his orders to the call of the civil authorities for the maintenance of law and order and the enforcement of their authority.

"In the establishment of Municipal Govern-

ments the commission will take as the basis of its work the Governments established by the Military Government under his order of May 1890 and under the report of the board established by the Military Government by his order of Jan. 20, 1900 to formulate and report on the Municipal Government, of which his Excellency, Cayetano Arellano, President of the Assembly, was Chairman, and it will give to the suggestions of that board the weight and consideration which the high character and distinguished abilities of its members justify. In the course of the Territorial or Provincial Government it will give especial attention to the existing Government of the Island of Negros, and will, with the approval of the people of that island, under the order of the Military Government of May 22, 1890, and after verifying so far as may be practicable, the reports of the successful working of that Government, they will be given the experience thus acquired, so far as it may be applicable to the conditions existing in the portions of the Philippines. It will endeavor to the fullest degree practicable of the results reached by the previous commissions in the Philippines. In the distribution of powers among the Governments organized by the commission, the Government is always to be supreme of the smaller sub-division, so that all the powers which can properly be exercised by the Municipal Government shall be vested in that Government and all the powers of a more general character which can be exercised by the Provincial Government shall be vested in that Government and so that in the governmental structure which is the result of the process, the local Government of the Islands, following the example of the States and the National Government of the United States, shall have no direct administration except of matters of purely general character, and shall have only such supervision and control over local Governments as may be necessary to secure and enforce faithful and efficient administration by local officers.

"The many different degrees of civilization and varieties of custom and capacity among the people of the different islands preclude definite instruction as to the part which the people shall take in the selection of the governors, but these general rules are to be observed. That in all cases the native-born officers administer the local affairs of the people to be selected by the people, and that where officers of more extended jurisdiction are selected in any way, natives of the islands are to be preferred, and if they can be found capable and willing to perform the duties, they are to receive the offices in preference to any others. It will be necessary to fill some offices at present with Americans which afterwards may well be filled by natives of the islands. As it is practicable a system for ascertaining the capacity and fitness of candidates for civil offices should be put in force. An indisputable qualification for all offices and positions of trust and authority on the islands must be absolute and unreserved loyalty to the United States, and absolute and unimpeded authority and power to punish any officer or subject from that status must at all times be retained in the hands of the central authority of the islands. In all matters of government and administrative process

people; that they should affect the fewest practicable subjects of taxation which will serve for the general distribution of the burden.

"The main body of the laws which regulate the rights and obligations of the people should be maintained with as little interference as possible. Changes made should be mainly in procedure, and in the criminal laws to secure speedy and impartial trials, and at the same time effective administration and respect for individual rights. In dealing with the uncivilized tribes of the islands the commission should adopt the same course followed by Congress in permitting the tribes of our North American Indians to maintain their tribal organization and government, and under which many of those tribes are now living in peace and contentment, surrounded by a civilization to which they are unable or unwilling to conform. Such tribal governments should, however, be subjected to wise and firm regulation; and, without undue or petty interference, constant and active effort should be exercised to prevent barbarous practices and introduce civilized customs. Upon all officers and employees of the United States, both civil and military, should be impressed a sense of the duty to observe not merely the material but the personal and social rights of the people of the islands, and to treat them with the same courtesy and respect for their personal dignity which the people of the United States are accustomed to require from each other. The articles of capitulation of the City of Manila on the 13th of August, 1898, concluded with these words: 'This city, its inhabitants, its churches and religious worship, its educational establishments, and its private property of all descriptions, are placed under the special safeguard of the faith and honor of the American Army.' I believe that this pledge has been faithfully kept. As high and sacred an obligation rests upon the Government of the United States to give protection for property and life, civil and religious freedom, and wise, firm, and unselfish guidance in the paths of peace and prosperity to all the people of the Philippine Islands. I charge this commission to labor for the full performance of this obligation, which concerns the honor and conscience of their country, in the firm hope that through their labors all the inhabitants of the Philippine Islands may come to look back with gratitude to the day when God gave victory to American arms at Manila and set their land under the sovereignty and the protection of the people of the United States. WILLIAM McKINLEY."

A. D. 1900 (May).—Filipinos killed, captured and surrendered from the breaking out of hostilities with them to May, 1900.—Losses of American army.—In response to a resolution of the United States Senate, May 17, 1900, the following report, by cable, from Manila, was made by General MacArthur: "Filipinos killed, 10,780; wounded, 2,101; captured and surrendered, 10,125, number prisoners in our possession, about 2,000. No systematic record Filipino casualties these headquarters. Following, compiled from large number reports made

immediately after engagements, is as close an approximation as now possible, owing to the distribution of troops. More accurate figures would take weeks to prepare. Number of men killed probably in excess of accurate figures. Number reported wounded probably much less, as Filipinos managed to remove most wounded from field, and comparatively few fell near our lands. Officers high rank and dangerous suspicious men have been retained as prisoners; most other men discharged on field as sick or disarmed. Propose to release all but very few prisoners at early date."—56th Congress, 1st Sess. *Senate Doc.* 435.—For returns of casualties in the American army during the same period, see (in this vol.) UNITED STATES OF AM.: A. D. 1900 (JUNE).

A. D. 1900 (July).—Appeal of citizens of Manila to the Congress of the United States.—An appeal "to the Congress of the United States," dated at Manila, July 15, 1900, and signed by 2,006 of the inhabitants of the city, who were led by Senator Hoar and Senator Teller to be "the leading people of that section of country—lawyers and bankers and professional men generally" was presented to the Senate on the 10th of January, 1901. It opens as follows:

"The undersigned, Filipinos and persons of other nationalities, inhabitants of this city, in their own name, and in the name of the misnamed 'freemen of the city,' respectfully present themselves and submit to the worthy consideration of the Congress of the United States of America the following appeal:

"The people of the Philippine Islands in view of their calamitous condition, demand in the name of her sons, in the name of all races, in the name of humanity, that an end be put to the misfortunes which afflict them which, while they distress and agonize her, compel her to struggle for the rights that are hers, and for the maintenance whereof she must, if necessary, continue to pour out her blood as she has so constantly and generously done on battlefields, in the woods, on the mountains, in the city, everywhere. The blood which has been shed and that is still being shed, and which will continue to be shed until she has secured her rights, is not shed because of the intrigues of a few who, according to the formed persons, desire to exploit the people and enrich themselves at the cost of their brother's blood. It has, gentlemen, sprung from the hearts of the people, who alone are the true strength of nations, the sovereign king of races, the producers of the arts, of science, of commerce, of wealth, of agriculture, of civilization, of progress, and of all the productions of human labor and intelligence, in all of which the people of the Philippine Islands had made great progress. The Filipinos were not sunk in lethargy, as some untruthfully assert. They suffered, but the hour to break their chains came to them in August, 1898, and they proclaimed to the world their emancipation."

The paper proceeds to review the circumstances of the revolt against Spanish rule which broke out in 1896, and the later circumstances of the conflict between Filipinos and Americans, such length that it cannot be given in full. Its aim and its spirit may be sufficiently shown by

of the following passages from the text of the appeal: "Even supposing that America should force us to submit, and endure years of war the country should submit to lesser evil, to the proclamation of an ample autonomy, that autonomy would not preclude a bond of friendship between the two peoples, because, having sacrificed herself for independence, the country could not look with pleasure upon those who would be the only obstacle to her happiness. She would always resist aspirations, so that autonomy would not be an interregnum which the country would use to make advantage of to regain new states which used in the attainment of her high political ideals, happen what may, and perhaps perhaps a hour of peril strike a fatal blow at a despotic oppressor." In giving this warning we do not forget the good Americans whom we have respected, we are mindful of the rupture of our relations with the United States, we are mindful of the blood which will again run on the soil of our country. We see in that autonomy a sad and sorrowful page in the history of the Philippines, and therefore we can not but look upon it with horror. Our people have had too much suffering. They steadily believe that their independence is their only salvation. Could they obtain it, they would be indebted to whomever shall have helped them in their undertaking; they would consider him their redeemer, and his name will be engraved in bright letters in the national history, for the generations to come may read it with admiration. American, consistent with the principle is the only one which could play a part in the present and future of the Philippines. If she recognizes their independence, she could offer her a part of the revenues of the Philippine state, according to the treaty which is stipulated; the protection in the commerce of the merchandise of the United States; a territorial and material guarantee for American capital all over the archipelago, finally, what ever brings greater prosperity to America, the happiness to the country will, we doubt not, be taken into account in the treaty which shall be concluded.

For the independence of the country will be secured with anarchy is asserted only by those who, abandoning the truth and forgetting their duty, represent the Filipinos under horrible names, comparing them to beasts. Their assertion is not backed by isolated acts of pillage and robbery. What revolution of the world was free from such deeds? At this epoch passions are unbridled, vengeance finds opportunity to satisfy itself, private ambitions are often favored by the confusion. Could such criminal deeds be justified? Pythagoras said: 'If you like to see monsters travel through a country during a revolution.'

In order to end our appeal we will say, with the noted lawyer, Senor Mabini: 'To govern is to study the wants and interpret the aspirations of the people, in order to remedy the former and satisfy the latter.' If the natives who know the customs, and aspirations of the people, are unable to govern them, would the Americans, who are not able to do with the Filipinos, be able to govern the latter? We have, therefore, already proven—1. That the revolution was the exclusive work of the public; 2.

That in preparing it they were moved by a great ideal, the ideal of independence; 3. That they are ready to sacrifice their whole existence in order to realize their just aspirations; 4. That in spite of the serious difficulties through which they are passing they still expect from America that she will consider them with impartiality and justice and will recognize what by right belongs to them, and thus give them an opportunity to show their boundless gratitude; 5. That the annexation of the Philippines to America is not feasible; 6. That the American sovereignty is not favored by the Philippine people; 7. That an ample autonomy can not be imposed without violating the Filipino will; 8. That the Filipinos are firm for self government.

From this it results that the only admissible solution for the present difficulties is the recognition by America of the independence of the Philippines. In saying this we do not forget either the nullity or the legality of the Paris treaty on our country, but the well known doctrine of the immortal Washington, and of the sons of the United States of America, worthy champions of oppressed people. Their voices in the name of justice and with all the energies of our souls demand: 1. That the independence of the Philippines be recognized; 2. That all the necessary information regarding the events which are taking place, concerning the peace, the laws and places which are supporting the arms of the revolution, be obtained from Filipinos who by their antecedents and by their actual conduct, deserve the respect and confidence of the Filipino people.—*Congressional Record*, Jan. 10, 1901, p. 850.

A. D. 1900 (September). Adoption of civil service rules. See (in this vol.) CIVIL SERVICE REFORM, A. D. 1900.

A. D. 1900 (September–November). Civil government of the Islands by the President's Commission. Legislative measures. **Report of the Commission.** In April of this year the Second Philippine Commission, of which Hon. William H. Taft, of Ohio, Prof. Dean C. Worcester, of Michigan, Hon. Luke L. Wright, of Tennessee, Hon. Henry C. Ide, of Vermont, and Prof. Bernard Moses, of California, were members, sailed for Manila with the powers of civil government prescribed in the instructions of April 7, 1900 [see above]. After devoting several months to familiarizing themselves with the conditions in the islands, this commission on the 1st of September, 1900, entered upon the discharge of the extensive legislative powers and the specific powers of appointment conferred upon them in the instructions, and they have since that time continued to exercise all that part of the military power of the President in the Philippines which is legislative in its character, leaving the military governor still the chief executive of the islands, the action of both being duly reported to this Department for the President's consideration and approval. Once consultation with the commission, and with the President's approval, a note of amnesty was issued by the military governor, dated June 21, 1900, and supplemented by a public statement by the military governor, under date of July 2, 1900, based in the main, upon the instructions to the commission. In pursuance of them something over 5,000 persons, of all grades of the civil and military service of the insurrection, presented themselves and

took the following oath: "I hereby renounce all allegiance to any and all so-called revolutionary governments in the Philippine Islands and recognize and accept the supreme authority of the United States of America therein; and I do solemnly swear that I will bear true faith and allegiance to that government; that I will at all times conduct myself as a faithful and law-abiding citizen of said Islands, and will not, either directly or indirectly, hold correspondence with or give intelligence to an enemy of the United States, neither will I aid, abet, harbor, or protect such enemy. That I impose upon myself this voluntary obligation without any mental reservation or purpose of evasion, so help me God." This number included many of the most prominent officials of the former Tagalog government.

The commission in its legislative action is following the ordinary course of legislative procedure. Its sessions are open, and its discussion and the proposed measures upon which it is deliberating are public, while it takes testimony and receives suggestions from citizens as if it were a legislative committee. Its first legislative act was the appropriation, on the 12th of September, of \$2,000,000 (Mexican), to be used in the construction and repair of highways and bridges in the Philippine Islands. The second act, on the same day, was an appropriation of \$5,000 (Mexican) for a survey of a railroad to the mountains of Benguet, in the Island of Luzon. The proposed railroad, about 45 miles in length, extending from the Manila and Dagupan road, near the Gulf of Lingayen, to the interior, will open, at a distance of about 170 miles from Manila, a high tableland exceedingly healthy, well wooded with pine and oak, comparatively dry and cool, and where the mercury is said to range at night in the hottest season of the year between 59° and 60° F. The value of such a place for the recuperation of troops and foreign residents will be very great. The third act of the commission was an appropriation for the payment of a superintendent of public instruction. They have secured for that position the services of Frederick W. Atkinson, recently principal of the high school of Springfield, Mass., who was selected by the commission for that purpose before their arrival in Manila.

Before the 1st of September a board of officers had been engaged upon the revision of the tariff for the islands in the light of such criticisms and suggestions as had been made regarding the old tariff. The commission has considered the report of this board, and after full public hearings of business interests in the island has formulated a tariff law which has been transmitted to the Department. A civil service board has been constituted by the commission (see, in this vol., CIVIL SERVICE REFORM: A. D. 1900). They have secured from the United States Civil Service Commission the experienced and capable services of Mr. Frank M. Higgins, and a civil service law has been enacted by the commission providing for the application of the merit system to appointments in the island.—*United States, Secretary of War, Annual Report, Nov. 30, 1900, pp. 25-27.*

A report by the Commission, dated November 30, was received at Washington late in January, 1901. Of the legislative work on which it entered September 1st, and which, at the time of report ing, it had prosecuted during three months, the

Commission speaks as follows: "It adopted the policy of passing no laws, except in cases of emergency, without publishing them in the daily press after they had passed a second reading, and giving to the public an opportunity to come before the Commission and suggest objections or amendments to the bills. The Commission has likewise adopted as part of its regular procedure the submission of all proposed bills to the Military Governor for his consideration and comment before enactment. We think that the holding of public sessions furnishes instructive lessons to the people, as it certainly secures to the Commission a means of avoiding mistakes. . . . The Commission has now passed forty-seven laws of more or less importance. . . . A municipal code has been prepared and forwarded to you for the consideration of one or two critical matters, and has not yet been adopted, pending your consideration of it. A tariff bill . . . has been prepared. . . . A judicial and civil procedure bill is nearly completed. The same thing is true of a bill for provincial government organization. A new internal tax law must then be considered. The wealth of this country has largely been in agricultural lands, and they have been almost exempt. This enabled the large landowners to escape any other taxation than the informal tax which was imposed upon the rental value of the buildings only, and the celula tax, which can not in any case exceed \$37.50 (Mexican) a piece. We think that a land tax is to be preferred, and of this there will be found more detailed discussion below. . . .

"The only legislation thus far undertaken by the Commission which bears directly on the conduct of municipal affairs in the city of Manila is a law regulating the sale of spirituous, vinous or fermented liquors. It is provided that none of the so-called native 'wines' [said to be concocted by mixing alcohol with oils and flower-lug extracts] shall be sold except by holders of native wine licenses, and that such holders shall not be allowed to sell intoxicants of any other sort whatever. . . . The selling of native wines to soldiers of the United States under any circumstances is strictly prohibited, because the soldiers are inclined to indulge in those injurious beverages to excess, with disastrous results. . . . The Filipino ordinarily uses them moderately, if at all. Fortunately, he does not, to any considerable extent, frequent the American saloon. With a view to preventing his being attracted there, the playing of musical instruments or the operation of any gambling device, phonograph, slot machine, billiard or pool table or other form of amusement in saloons, bars or drinking places is prohibited."

The report of the Commission urged strongly the establishing of a purely civil government in the Islands, for reasons thus stated: "The restricted powers of a military government are patently apparent in respect to mining claims and the organization of railroad, banking and other corporations and the granting of franchises generally. It is necessary that there be some body or officer vested with legislative authority to pass laws which shall afford opportunity to capital to make investment here. This is the true and most lasting method of pacification. Now the only corporations here are of Spanish or English origin with but limited concessions, and American capital finds itself completely obstructed. Such

which would all be removed by the passage of the Spooner bill (see below : A. D. 1901 (P. N. 100)). A feeling now pending in both houses. The prevailing effect upon the feeling of the people is changing the military government to a civil, with the Army as merely auxiliary to the administration of civil law, cannot be over-emphasized. Military methods in the quasi-civil government, however successful in securing efficiency and subordination, are necessarily abrupt and in many cases arbitrary, even when they are those of the Army of the Republic; and until a civil government is established here it will be impossible for the people of the Philippine Islands to realize the full measure of the difference between a government under American sovereignty and one under that of Spain.

A subject of great importance dealt with in the November report of the Commission was that concerning the employment of native troops and the question which it was said: "The question is whether native troops and a native constabulary are at present practicable has received the most careful and a careful investigation by the Commission. We have sought and obtained the opinions of a large number of Regular and volunteer officers of all rank, having their fields of vision in all parts of the islands, and there has been a general consensus of opinion among them that the time is ripe for these organizations and this is also our conclusion. As the next Congress at its next session will have to take into consideration of the Regular Army, it follows that a large part thereof will be stationed here permanently, and the question of public policy and economy will be a very important one, nor in our judgment is it necessary.

While the American soldier is unsurpassed in his ability as it is understood among civilized people, he does not make the best policeman, especially among people whose language and customs are new and strange to him, and in our opinion should not be put to that use when, as we have a better substitute at hand. We earnestly urge the organization of ten regiments of native troops of infantry and cavalry in proportion between the two arms of the Service as fixed by competent military judges. These troops should in the main be officered by Americans. Certainly this should be the case in the case of officers and company commanders. Lieutenants might be Filipinos, judiciously selected and provision might be made for their promotion in the event of faithful or distinguished service.

We further recommend that a comprehensive scheme of police organization be put in force as rapidly as possible; that it be separate and distinct from the army, having for its head a chief of rank and pay commensurate with the importance of the position, with a sufficient number of assistants and subordinates to exercise thorough direction and control. This organization should embrace every township in the islands and should be so constituted that the police of several contiguous townships could be easily mobilized. The chief officers of this organization should be Americans, but some of the subordinate officers should be natives, with proper provision for their advancement as a reward for loyal and efficient services. The main

duty of the police would, of course, be to preserve the peace and maintain order in their respective townships, but occasion would, no doubt, frequently arise when it would be necessary to utilize the force of several townships against large bands of bandits.

With regard to the organization of municipal government in the townships, the Commission says, in part: "The 'pueblos' of these islands sometimes include a hundred or more square miles. They are divided into so-called 'barrios' or wards, which are often very numerous and widely separated. In order that the interests of the inhabitants of each ward may be represented in the Council, on the one hand, and that the body may not become so numerous as to be unwieldy, on the other, it is provided that the Councils shall be few in number, eighteen to eight, according to the number of inhabitants, and shall be elected at large, that where the wards are more numerous than the Councils the wards shall be grouped into districts, and that one Councilor shall be in charge of each ward or district, with power to appoint a representative from among the inhabitants of every ward thus assigned to him, so that he may the more readily be in touch with conditions in that portion of the township which it is his duty to supervise and represent."

In order to meet the situation presented by the fact that a number of the pueblos have not as yet been organized since the American occupation, while some two hundred and fifty others are organized under a comparatively simple form of government and fifty five under a more complicated form on which the new law is based, the course of procedure which must be followed in order to bring these various towns under the provisions of the new law has been prescribed in detail, and every effort has been made to provide against unnecessary friction in carrying out the change.

In view of the disturbed conditions which still prevail in some parts of the archipelago it has been provided that the military government should be given control of the appointment and naming of the municipal police and that in all provinces where civil provincial government has not been established by the Commission the duties of the Provincial Governor, Provincial Treasurer and Provincial "Fiscal" (prosecuting attorney) shall be performed by military officers assigned by the Military Governor for these purposes. It has been further provided that in these provinces the Military Governor shall have power through such subordinates as he may designate for the purpose to inspect and investigate at any time all the official books and records of the several municipalities, and to summarily suspend any municipal officer for inefficiency, misconduct or disloyalty to the United States. If upon investigation it shall prove that the suspended officer is guilty, the Military Governor has power to remove him and to appoint his successor, should he deem such a course necessary in the interest of public safety. It is thought that when the necessity still exists for active intervention on the part of the Military Governor it will ordinarily be desirable to allow the towns to retain their existing organization until such time as conditions shall improve, but, should it prove necessary or desirable in individual instances to put the new

law into operation in such provinces, it is felt that the above provisions will give to the Military Governor ample power to deal with any situation which can arise, and he has expressed his satisfaction with them.

"There are at the present time a considerable number of provinces which, in the judgment of the Commission, are ready for a provincial civil government. It is believed that in the majority of cases it will be possible to organize all the municipalities of a province, creating at the same time a civil provincial government. So soon as civil government is established in any province, power to remove officials for inefficiency, misconduct or disloyalty, and, should public safety demand it, to fill the offices thus made vacant, is vested in the civil authorities. The law does not apply to the city of Manila or to the settlements of non-Christian tribes, because it is believed that in both cases special conditions require special legislation. The question as to the best methods of dealing with the non-Christian tribes is one of no little complexity. The number of these tribes is greatly in excess of the number of civilized tribes, although the total number of Mahometans and pagans is much less than the number of Christianized natives. Still, the non-Christian tribes are very far from forming an insignificant element of the population. They differ from each other widely, both in their present social, moral and intellectual state and in the readiness with which they adapt themselves to the demands of modern civilization."

A. D. 1900 (October).—United States military forces in the Islands.—"At the date of my last annual report there were in the Philippine Islands 971 officers and 31,344 enlisted men; and there were en route for service in those Islands 546 officers and 16,553 enlisted men—the latter force being principally in California. Since that time an additional force ordered to China was diverted to the Philippine Islands, making a total of 18,668 men sent to the archipelago. Of this number 15,000 volunteers, first sent to that country in 1898, together with the sick and disabled, have been returned to the United States, leaving at the present time in the Islands, according to last report, 2,367 officers and 69,161 enlisted men. Fifteen hundred men have been left in China to act as a guard for the American legation in that country and for other purposes."
—*United States Annual Report of Lieut.-Gen. Commanding the Army, Oct. 29, 1900.*

A. D. 1900 (November).—The problem of the Spanish Friars.—Two contradictory representations of their work and influence.—Views and recommendations of the United States Commission.—"Of the character, work and influence of the Spanish religious orders in the Philippine Islands there are two diametrically opposite accounts given by different writers. Both are represented in two of the quotations below, and those are followed by extracts from a report made by the U. S. Commission, November 30, 1900, on the subject of the problem they present to the new government of the Islands. The first writer is condemnatory. He says:

"The better classes [of the Filipinos] have absorbed much of Spanish civilization in their three century old apprenticeship. They show extraordinary talent for music. The church of the mother land of Spain is much in evidence among them. It brought to them its blessings,

but also incidentally a terrible curse. The mendicant orders—the Franciscans, the Dominicans, the Augustinians, no longer poor preachers, thinking only of serving, blessing, loving, but grown rich, domineering, and, in many cases, sadly corrupt in morals—ate up the land. They added field to field, house to house, till there was but little space left for the people. They charged enormous rents to those who to put bread on their months must till their fields. Just such a cause for revolt existed as that which in France aroused the storm of the great revolution; the people taxed without mercy, the clergy untaxed, reaping the benefit. Had the Christ-like St. Francis of Assisi been endowed with the gift of prophetic vision to see this gross degeneracy of his followers, more than ever would he have to the soundness of his intuition which made him set his face like flint against the acquisition of any property by his order. His beloved fair Lady Poverty would have seemed to him more beautiful than ever. He would have been fraught with the knowledge of the cruel rapacity of monks bearing his name, who, nevertheless, grossly oppressed the Philippine peasantry, rents and taxes,—the very poor whom St. Francis founded his order to serve."

"Perhaps the most deep-seated cause of Filipino insurrection against Spanish authority was this unchecked growth of ignorant, cruel and oppressive ecclesiasticism. It was this which weighed most heavily upon the people. From the mere question of gaining a livelihood difficult, but especially did it strangle intellectual and moral growth. It not only oppressed the Filipinos, but it overawed and dominated the Spanish authorities. It was the power of the mendicant orders which drove out the just God of Caspe, and later the well-disposed and energetic Blanco, which stimulated and supported the frightful atrocities of the cruel Polavieja during the revolution of 1896. Archbishop Norcia, a Spanish monk of the Dominican order, was a leader in urging wholesale and often wholly unjustifiable arrests, which were succeeded by the torture and execution of hundreds of persons. It is difficult for a mind reared in the freedom and culture of modern Europe, or still less America, to realize the horrible excesses and actual medieval cruelties which were committed in the prisons of Manila and elsewhere in the Islands upon Filipino insurgents, or those accused of being in league with them, during the revolution of 1896. The actual story of these things as it unfolded, not only from Filipino sources but from the Spanish archives of Manila, is like a scene evoked from the long buried and forgotten past in the middle ages. Indeed, the only intelligible interpretation of events which cast shame on the name of Spanish authority and Spanish Christianity is found by reflecting that during the Philippines, just previous to the birth of Manila, were controlled by ideas and forces which existed generally in Europe previous to the Reformation,—ideas which slowly retreated before the dawn of the new learning and the liberation of the individual conscience."—H. Welsh, *The Other Man's Country*, ch. 1 (*Phil. J. R. L. & Co.*).

In the other view there is an appeal to reason, which cannot easily be divided of force. They are set forth in the following:

"The ideals of civilization for the Spanish

and the priests in the Philippines were substituted by the same as those of Bacon and the founders of New England and the Puritans of New York. In the mind of all, a civilized people was one which lived under set laws, worked by steady labor, which was more or less concerned with the material progress made by the races of Europe, and, as all would agree, was Christian. The Spanish friars saw the task of giving such a civilization to the Malays of the Philippines, and no other race of any race or any faith have accomplished what they have done. A task of similar kind has been attempted by some of our own day in the name of Christianity, but not the Catholic Church. It was not under control of missionaries from New England for seventy-five years more compared to the Philippines were ever under the control of the Spanish friars. The native kings accepted the new creed and enforced its adoption on their subjects by vigorous corporal punishment. The missionaries were abundantly supplied with such resources of civilization as money and they have grown wealthy on their possessions. But what has been the fate of the natives? They have dwindled in numbers to a fraction of what they were when Messrs. Bingham and Burton entered their islands; their lands have been taken by brute force, and the scanty remnants have dropped the religion imposed on them. In the Philippines in a hundred and forty years a nation of Catholic natives has grown sevenfold. In Hawaii under missionaries of the world's religions are a hundred and forty thousand of the same race has shrunk to thirty-eight thousand. Have the promises of the Spanish friars to those of the American ministers been the most faithfully kept? The actual condition of the Catholic population formed by the work of the missionaries should not be judged by the excesses which have marked the present revolution. Many old Christian nations have gone through similar experiences. It would be as unreasonable to judge the Christianity of France by the Reign of Terror as to condemn the Filipinos for the atrocities sanctioned by Aguinaldo. The mass of the country population has taken no part in these deeds of blood which are the work of a small number of political adventurers and aspirants for office by any means. The lately revolutionary disturbance was unknown in the Philippines. During three centuries there was only one serious Indian rebellion, that of Silan, in the province of Iloilo, at the time of the English invasion. The Spanish military force was always too small to hold the islands had there been any real disaffection to the Government. The whole force at Manila in the present war, as given by General Otis, was only five hundred, and about as many more represented the entire Spanish force among a population of seven millions.

The disposition of the Catholic Filipinos is essentially law-abiding. One of the friars lately driven from the islands by the revolution assured the writer that in Panay, an island with a population of half a million, a murder did not occur more often than once or twice in a year. In our own country last year the proportion was more than fifty times as great. There is no forced labor as in the Dutch Indian colonies to compel

the native Filipinos to work yet they support themselves in content without any of the conditions so common in India under the heaviest rule of civilized England. A sure evidence of material prosperity is the growth of the population, and of its religion a fair test is the proportion of Catholic marriages, baptisms and religious interments to the whole number. The proportion of marriages in 1898 to the population among the natives administered by the friars was one to every hundred and twenty, which is higher than England, Germany, or any European country. The number of baptisms exceeded the deaths by more than two and a half percent, a greater proportion than in our own land. Compare this with Hawaii and one feels what a force is the promise of increased prosperity held out by the American Press as the result of the expulsion of the Spanish friars. It is not easy to compare accurately the intellectual development of the Catholic Filipinos with American or European standards. The ideals of civilization of the Catholic missionaries were different from those popular with English statesmen and their American admirers. The friars did not believe that the accumulation of wealth was the end of civilization, but the support of a large population in fair comfort. There are no trusts and few millionaires in the islands, but their population is six times greater than that of California after fifty years of American government. The test so often applied of reading and writing among the population finds the Filipinos fairly up to the standard of Europe. Of highly educated men the proportion is not so large as in Europe, but it is not inconsiderable, and neither in science nor in literature are the descendants of the Malay pirates unrepresented in their remote islands. The native languages have developed no important literature of their own, but they have a fair supply of translations from Spanish works in history, poetry, and philosophy. In that they are superior to the Hindus of British India, though spoken by nearly a hundred millions. These are facts that throw a strange light on the real meaning of civilization as planted by the Spanish friars among a barbarian race. Compare them with the fate of the Indian races on our own territory and say what benefit the Filipinos may expect from the advent of "Anglo-Saxon" civilization." — Bryan J. Clinch (*American Catholic Quarterly Rev.*, v. 24, p. 15).

These opposing views are suggestive of the seriousness of the problem which the subject offers to the new authority in the Philippines. The American Commission now studying such problems in those islands has presented its first views concerning the Spanish friars in a lengthy report, written by Judge Taft, and transmitted to Washington as part of the general report of the Commission, bearing date November 30, 1900. The passages quoted below contain what is most essential in the interesting document: "Ordinarily, the Government of the United States and its servants have little or no concern with religious societies or corporations and their members. With us, the Church is so completely separated from the State that it is difficult to imagine cases in which the policy of a Church in the selection of its ministers and the assignment of them to duty can be regarded as of political moment, or as a proper subject of comment in the report of a public officer. In the

pacification of the Philippines by our Government, however, it is impossible to ignore the very great part which such a question plays. Excepting the Moros, who are Moslems, and the wild tribes, who are pagans, the Philippine people belong to the Roman Catholic Church. The total number of Catholic souls shown by the Church registry in 1898 was 6,559,998. To care for these in that year there were in the archipelago 716 regular parishes, 105 mission parishes and 116 missions, or 937 in all. Of the regular parishes all save 150 were administered by Spanish monks of the Dominican, Augustinian, or Franciscan orders. Natives were not admitted to these orders. There were two kinds of Augustinians in these islands, the shod and the unshod. The latter are called Recoletos, and are merely an offshoot from the original order of St. Augustine.

By the revolutions of 1890 and 1898 against Spain, all the Dominicans, Augustinians, Recoletos, and Franciscans acting as parish priests were driven from their parishes to take refuge in Manila. Forty were killed and 103 were imprisoned, and were not all released until by the advance of the American troops it became impossible for the insurgents to retain them. Of the 1,134 who were in the islands in 1896, only 172 remain. The remainder were either killed or died, returned to Spain, or went to China or South America. There were also in the islands engaged in missions and missionary parishes, 42 Jesuits, 16 Capuchins, and six Benedictines, and while many of these left their missions because of disturbed conditions they do not seem to have been assaulted or imprisoned for any length of time. In addition to the members of the monastic orders, there were 150 native secular clergymen in charge of small parishes who were not disturbed. There were also many native priests in the larger parishes who assisted the friar curates and they have remained, and they have been and are acting as parish priests. The burning political question, discussion of which strongly agitates the people of the Philippines, is whether the members of the four great orders of St. Dominic, St. Augustine, St. Francis, and the Recoletos shall return to the parishes from which they were driven by the revolution. Colloquially the term 'friars' includes the members of these four orders. The Jesuits, Capuchins, Benedictines, and the Paulists, of whom there are a few teachers here, have done only mission work or teaching, and have not aroused the hostility existing against the four large orders to which we are now about to refer.

"The truth is that the whole government of Spain in these islands rested on the friars. To use the expression of the Provincial of the Augustinians, the friars were 'the pedestal, or foundation, of the sovereignty of Spain in these islands,' which being removed, 'the whole structure would topple over.' . . . Once settled in a parish, a priest usually continued there until superannuation. He was, therefore, a constant political factor for a generation. The same was true of the Archbishop and the bishops. The civil and military officers of Spain in the island were here for not longer than four years, and more often for a less period. The friars, priests, and bishops, therefore, constituted a solid, powerful, permanent, well organized political force in the islands which dominated policies. The stay of

those officers who attempted to pursue a course at variance with that deemed wise by the friars was invariably shortened by monastic influence. Of the four great orders, one, the Franciscans, is not permitted to own property, except convents and schools. This is not true of the other three. They own some valuable houses and property in Manila, and have large amounts of land to lend. But the chief property of these orders is in agricultural land. The total amount owned by the three orders in the Philippines is approximately 103,000 acres. Of this 121,000 acres in the Province of Cavite alone. The land is distributed as follows: Cavite, Province of Luzon, 121,747 acres; Laguna, Province of Luzon, 62,172 acres; Manila, Province of Luzon, 6,445; Bulacan, Province of Luzon, 39,341; Misamis, Province of Luzon, 4,910; Batavia, Province of Luzon, 1,000; Cagayan, Province of Luzon, 400; Island of Cebu, 16,413; Island of Mindanao, 58,455. Total, 403,713.

"It cannot admit of contradiction that the autocratic power which each friar curate exercised over the people and civil officials of his parish gave them a most plausible ground of belief that nothing of injustice, of cruelty, of oppression, of narrowing restraint of liberty was imposed on them for which the friar was entirely responsible. His sacerdotal functions were not in their eyes the important ones, except as they enabled him to church and make more complete his civil and political control. The revolutions against Spain's sovereignty began as movements against the friars.

Having reviewed these circumstances, the statement of the bishops and friars that the mass of the people in these islands, except only a few of the leading men of each town and the native clergy, are friendly to them cannot be accepted as accurate. All the evidence derived from every source, but the friars themselves shows clearly that the feeling of hatred for the friars is well nigh universal and permeates all classes. In the provinces of Cavite, Laguna, and Bulacan, as well as in the country districts of Manila, the political feeling against the friars has in it also an element of agrarianism. For generations the friars have been lords of these immense manors, upon which since 1880, they have paid no taxes, while every 'hombre' living on them paid his cedula, worked out a road tax, and, if he were in business of any kind, paid his industrial impost.

"In the light of these considerations it is not wonderful that the people should regard the return of the friars to their parishes as a return to the conditions existing before the revolution. The common people are utterly unable to appreciate that under the sovereignty of the United States the position of the friar is quite different from that under Spain. This is not a religious question, though it concerns the selection of religious ministers for religious communities. The Philippine people have the Catholic Church. . . . The depth of their feeling against the friars may be measured by the fact that it exists against those who until two years ago administered the sacraments of the Church upon which they feel so great dependence and for which they have so profound a respect. The feeling against the friars is solely political. The people would gladly receive as ministers of the Roman Catholic religion any save those who are to them the embodiment of all that is Spanish.

is hateful. If the friars return to the islands, though only under the same system which the American Government has extended to any other Spanish islands, the people will regard them as the Government. They have been used to have every phase of their Government by governmental order that the friars will be accepted. The friars will be accepted by the people and to them to return to the islands with their old all-absorbing influence. It is likely to have the same effect as the return of General Weyler to the American Commission as Governor of the islands have had on the people of that island.

Those who are charged with the duty of governing these islands may therefore properly be concerned in a matter which, to the masses, is only ecclesiastical, is, in the most important phase of it, political, and involves the most critical consequences to the peace and good order of the country, in which it is their duty to set up civil government. It is suggested that the friars, if they return, will uphold American sovereignty and support instruments in securing peace and order, whereas the native priests who are the enemies are, many of them, active opponents or in strong sympathy with them. It is probably true that a considerable number of the Filipino priests are hostile to American sovereignty, largely because they regard the Catholic Church will deem it necessary to the restoration of complete peace, to send back the friars or to elevate the moral character of priesthood by introducing priests from America or elsewhere. But it is certain that the animosity among the people against the American Government caused by the return of the friars would far outweigh the advantage of order to come and preserve the allegiance of the people to American Sovereignty which might be made by priests who are still subjects of Spain. With which the American Government has been lately at war, and who have the slightest sympathy with the political purposes of civil liberty which the American Government represents.

We have set forth the facts upon this important issue because we do not think they ought to be ignored. We earnestly hope that those who control the policy of the Catholic Church on these islands with the same sagacity and wisdom which characterize all its important policies, will see that it would be most unwise for the Philippine Islands, for the Catholic Church and for the American Government, to attempt to send back the friars, and that some other solution of the difficulties should be found. The friars have large property interests on these islands which the United States Government is bound by treaty obligations and the policy of its being to protect. It is natural to suppose that the friars should feel a desire to retain where so much of their treasure is. It would avoid some very troublesome agrarian disturbances between the friars and their quoniam, because if the Insular Government could buy these large haciendas of the friars, and sell them in small holdings to the present tenants who are given for the rent due during the two years of war, would recognize the title of

the Government without denouncing and thereby accept an opportunity, by payment of the price in small instalments, to become absolute owners of that which they and their ancestors have so long cultivated. With the many other lands upon the insular treasury a large tract of land like this could probably not be sold for a successful issue without the aid of the United States Government, either by a direct loan or by a grant of lands to be issued for the purpose. The lands of lands could be made available from the revenues of the islands, which the proceeds of the land which would be sold, could be used to constitute a fund for this object, it declared would make the point most popular because the desire for it is shared by the Filipinos of all tribes is very strong, and gives encouraging promise of the future rapid development of a new and educated and energetic people. The provisions of the order were understood in their evidence to indicate a willingness on the part of the owners to sell their agricultural holdings at a satisfactory price should be paid. What such a price would be we are unable without further investigation to state. If an agreement could not be reached it is probable, though upon this we express no definite opinion, that there would be a resort to the circumstances for a resort to a judicial proceeding.

A. D. 1901. Act of the United States Congress increasing army and authorizing the enlistment of native troops. Rejection of the proviso of Senator Hoar. See also this vol. UNITED STATES OF AM. A. D. 1901 FEBRUARY.

A. D. 1901 (February March Congressional grant of military, civil and judicial powers for the government of the Islands to persons whom the President may appoint. — The so called "Spencer Amendment." During the first session of the 56th Congress the following bill was introduced in the U. S. Senate by Mr. Spencer of Wisconsin, but received no action: "Be it enacted, etc., That when all or a portion against the sovereignty and authority of the United States in the Philippine Islands, as implied from Spain by the treaty concluded at Paris on the 10th day of December 1898, shall have been completely suppressed by the military and naval forces of the United States, all military, civil and judicial powers necessary to govern the said islands shall, until otherwise provided by Congress, be vested in such persons and persons, and shall be exercised in such manner as the President of the United States shall direct for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion."

Half the following session of Congress passed before any disposition to take the action proposed by Senator Spencer was shown. Then the matter was brought to notice and passed by the following communication to the Secretary of War, from the Commission in the Philippines: "If you approve, ask transmission to proper Senators and Representatives of following: Passage of Spencer bill at present session greatly needed to secure best result from improvement conditions. Until its passage no purely civil government can be established, no public franchises of any kind granted, and no substantial investment of private capital in industrial improvements possible." This was repeated soon after.

would more urgently by cable in the message following: "Sell public lands and allowance of mining claims—possible until Spooner bill. Hundreds of American miners on ground awaiting law to perfect claims. More coming. Good element in population. Urgently recommend amendment Spooner bill so that its operation be not postponed until complete suppression of all insurrection, but only until in President's judgment civil government may be safely established."

The request of the Philippine Commission, endorsed by the Secretary of War, was communicated to Congress by the President, who said in doing so: "I earnestly recommend legislation under which the government of the islands may have authority to assist in their peaceful industrial development. Thereupon the subject was taken up in Congress, not as formulated in Senator Spooner's bill of the previous session, but in the form of an amendment to the Army Appropriation Bill then pending in the Senate. The amendment, as submitted to discussion in the Senate on the 25th of February, 1901, was in the following terms:

"All military, civil, and judicial powers necessary to govern the Philippine Islands, acquired from Spain by the treaties concluded at Paris on the 10th day of December, 1898, and at Washington on the 7th day of November, 1900, shall, until otherwise provided by Congress, be vested in such person and persons and shall be exercised in such manner as the President of the United States shall direct. For the establishment of civil government and for maintaining and protecting the inhabitants of said islands in the free enjoyment of their liberty, property, and religion: Provided, That all franchises granted under the authority hereof shall contain a reservation of the right to alter, amend, or repeal the same. Until a permanent government shall have been established in said archipelago full reports shall be made to Congress, on or before the first day of each regular session, of all legislative acts and proceedings of the temporary government instituted under the provisions hereof, and full reports of the acts and doings of said government and as to the condition of the archipelago and its people shall be made to the President, including all information which may be useful to the Congress in providing for a more permanent government."

Strenuous opposition was made, firstly to the hasty grafting of so profoundly important a measure of legislation on an appropriation bill, and secondly to the measure itself, as being a delegation of powers to the President which did violence to the Constitution and to all the precedents and principles of the American government and also as having objects which would not only do a great wrong to the people of the Philippine Islands, but bring dishonor on those of the United States. The military authority already exercised by the President in the Philippines, although fully, it was contended, for every purpose of temporary or provisional government there, except in its lack of ability to grant franchises and to dispose of the public lands. Hence it was truly charged that the controlling influences which pressed this measure on the government came from capitalists and speculators who were reaching after valuable franchises, mining rights and land grants in the archipelago. Said

Senator Daniel in the debate: "So far as legislation which looks forward to the establishment of the way to civil government may be concerned, the softening of the conditions which are the amelioration of the distresses which oppress the Philippine people, I would give my very grateful acquiescence. But because we desire these things in a good spirit, in a reasonable and patriotic spirit, let us not permit the passage of difficult conditions to lead us into making any kind of provision of law that is contrary to these ends. Let us not undertake to give to the President of the United States any power of disposing of the permanent assets of the Philippine people, let us not put him in the attitude of being a franchise giver or a franchise seller or a franchise lessor. The franchisees of these islands—their rivers, their ferries, their streets, their roads, the thousand and one privileges which are granted by public authority, ideas important and as valuable to that people as the permanent association with their happiness and their prosperity as are their fields or their mines or their fisheries or anything else which belongs to their country. . . . It is true there is the reservation of the right to alter, amend, or repeal, but while that is legally broad enough for any remedial legislation whatsoever to feel, we know that practically it is of very small consequence. If capital goes in and invests itself in improvements which are in themselves of permanent nature, if railroads are constructed, telegraph lines run, telephones established, ferries built, steamers and boats, gas establishments, electrical establishments—if those things are disposed of, the man who once gets in will never be gotten out. In all such affairs possession is nine points of the law before they get into court where it is generally made the tenth."

Senator Hear called attention "to the fact that the report of the Taft commission urges that power be given to sell the public lands at once, as it is necessary for their development, and a large amount of capital is there now clamoring to be invested," and he remarked: "I suppose that one of the chief purposes of this is that the public lands in the Philippine Islands may be sold before the people of the islands have any chance whatever to have a voice in their sale." He then quoted the following passages from the report of the Taft commission: "The commission has received a sufficient number of applications for the purchase of public land to know that large amounts of American capital are only awaiting the opportunity to invest in the rich agricultural field which may here be developed. In view of the decision that the military government has no power to part with the public land belonging to the United States, and that the power rests alone in Congress, it becomes very essential, to assist the development of these islands and their prosperity, that Congressional authority be vested in the government of the islands to adopt a proper public-land system, and to sell the land upon proper terms. There should, of course be restrictions preventing the acquisition of too large quantities by any individual or corporation, but those restrictions should only be imposed after giving due weight to the circumstances that capital can not be secured for the development of the islands unless the investment may be sufficiently great to justify the expenditure of

large amounts for expensive machinery and equipment. Especially is this true in the cultivation of sugar land. Restricted powers of a military government referred to in discussing the public lands are also painfully apparent in respect to mining claims and the organization of railroad, banking, and other corporations, and the granting of franchises generally. It is necessary that there be some body or officer vested with legislative authority to pass laws which shall afford opportunity to capital to make investment here. This is the true and most lasting method of pacification. "In other words," said Senator Hoar, "the lending, principal, bald proposition in which this amendment rests is that before those 10,000,000 people are allowed any share in their own government whatever their property is to be sold by Americans to Americans in large quantities, as on the whole the best means of pacification—that the best way to pacify a man is to have one foreign authority to sell his property and another to buy it."

An amendment to the amendment, offered by Senator Bacon, reserving to Congress the right to amend any grant or concession made, or any law enacted, by any governmental authority created under the powers proposed to be conferred on the President; another offered, by Senator Vest, providing that "no judgment, order, nor act by any of said officials so appointed shall conflict with the Constitution and laws of the United States," and still others of somewhat kindred aims, were voted down; but the influence of Senator Hoar prevailed with the Senate so far as to induce its acceptance of the following important modification of the so-called "Spooner Amendment":

"Provided, That no sale or lease or other disposition of the public land, or the timber thereon, or the mining rights therein, shall be made; And provided further, That no franchise shall be granted which is not approved by the President of the United States, and is not, in his judgment, clearly necessary for the immediate government of the islands and indispensable for the interests of the people thereof, and which can not, without great public mischief, be postponed until the establishment of a permanent civil government, and all such franchises shall terminate one year after the establishment of such civil government."

With this proviso added, the "Spooner amendment" was adopted by the Senate on the 26th of February (yeas 45, nays 27, not voting 16), and agreed to by the House on the 1st of March (yeas 161, nays 130, not voting 50).—*Congressional Record, Feb. 25—March 1, 1901.*

A. D. 1901 (March).—Organization of provincial governments.—Establishment of a department of public education.—Proposed tariff.—Date fixed for cessation of military régime.—On the 3d of March, the President of the Philippine Commission, Judge Taft, addressed a cable despatch to the U. S. Secretary of War in which he reported: "Commission has last three weeks organized five provincial governments.—Pampanga, Pangasinan, Tulae, Bulacan, Iloiloan.—last two are Tagalog provinces. Attended each provincial capital in a body; met by appointment Presidents, Councillors, and principal men of towns; explained provisions general provision act and special bill for particular province and invited discussion natives present of both

bills. Conventions thus held very satisfactory, amendments suggested, considered, special bills enacted, appointments followed. In three large provinces natives appointed provincial Governors. In Batavia on petition eight out of nine towns volunteer officer appointed. In Iloilo feeling between loyal factions required appointment American. In compliance with urgent native invitations leave March 11 for south to organize provinces Pampanga, Bulacan, Iloilo, Cuzco, Zamboanga, such others are ready. Returning shall organize Zambales, Union, Cagayan, Ilocos Norte. Military Governor has recommended organization Batangas, Cavite, Iloilo, Nueva Ecija, but shall delay action as to these until return from northern and southern trips."

On the 18th of March it was announced from Washington that a number of recent Acts of the Philippine Commission had been received at the War Department, among them one which establishes a general department of public instruction, with a central office at Manila, under the direction of a general superintendent to be appointed by the commission, at a salary of \$6,000 a year. "Schools are to be established in every pueblo in the archipelago where practicable, and those already established shall be reorganized where necessary. There are to be ten school divisions in the archipelago, each with a division superintendent, and there is to be a superior advisory board, composed of the general superintendent and four members to be appointed by the Philippine Commission, to consider the general subject of education in the islands and make regulations. The English language, as soon as practicable, shall be made the basis of all public instruction, and soldiers may be detailed as instructors until replaced by trained teachers. Authority is given to the general superintendent to obtain from the United States 1,000 trained teachers, at salaries of not less than \$15 nor more than \$100 a month, the exact salary to be fixed according to the efficiency of the teacher. The act provides that no teacher or other person shall teach or criticize the doctrine of any church, religious sect or denomination or shall attempt to influence the pupils for or against any church or religious sect in any public school. Violation of this section is made punishable by summary dismissal from the public service. It is provided, however, that it may be lawful for the priest or minister of the pueblo where the school is situated to teach religion for half an hour three times a week in the school building to pupils whose parents desire it. But if any priest, minister or religious teacher use this opportunity for the purpose of arousing disloyalty to the United States or of discouraging the attendance of pupils or interfering with the discipline of schools, the division superintendent may forbid such offending priest from entering the school building thereafter. The act also provides for a normal school at Manila for the education of natives in the science of teaching. It appropriates \$100,000 for school buildings, \$220,000 for text books and other supplies for the current calendar year, \$25,000 for the normal school, \$15,000 for the organization and maintenance of a trade school in Manila and the same amount for a school of agriculture.

The new tariff for the Islands, which the Commission had been long engaged in framing, was

submitted, in March, to the government at Washington for approval. In his letter of transmittal Judge Taft says that the proposed bill follows largely the classification of the Cuban tariff, but has been considerably expanded by the introduction of articles requiring special treatment here by reason of different surroundings and greater distance from the market. Judge Taft says also that the disposition of the business interests of the islands is to accept any tariff the commission proposes, provided only that the duties are specific and not ad valorem. The question of revenue was kept steadily in view in the preparation of the schedules, but it was not the only consideration. Raw materials of Philippine industries, tools, implements and machinery of production, materials of transportation, the products and transmitters of power and food products are taxed as lightly as possible.

Export duties are levied on only six articles—benign, indigo, rice, sugar, coconuts, fresh or as copra, and tobacco. The free list admits natural mineral waters, trees, shoots and plants, gold, copper and silver ores, fresh fruits, garden produce, eggs, milk, ice and fresh meat, except poultry and game. There is also a list of articles conditionally free of duty. The importation of explosives is prohibited, but that of firearms is not.

It is announced from Washington that "Judge Taft and General MacArthur have agreed upon July 1 as the date for the establishment of civil government in the Philippines. The military régime in the islands will therefore cease on June 30, when General Chaffee will relieve General MacArthur of the command, and Governor Taft will be inaugurated the next day with considerable ceremony."

A. D. 1901 (March—April).—Capture of Aguinaldo. His oath of allegiance to the United States.—His address to his countrymen, counselling peace.—A stratagem, executed with great daring by General Funston of the American forces, accomplished the capture of the Filipino leader, Aguinaldo, on the 23d of March. From intercepted correspondence, it had been learned that Aguinaldo, then occupying his headquarters at Palanan, Isabela Province, was expecting to be joined by some rifleman, whom his brother had been ordered to send to him from central Luzon. On this, General Funston conceived the plan of equipping a number of native troops who should pass themselves off as the expected reinforcements, several American officers going with them ostensibly as prisoners, the hope being that Aguinaldo might thus be reached and taken by surprise. Gen. MacArthur approved the scheme, and it was carried out with success. The party was made up of 78 Macabebe scouts, four Tagalogs who had formerly been officers in the insurgent army, and General Funston, Captain Newton, Lieutenants Hazzard and Mitchell, who acted the part of prisoners. They were taken by gunboat from Cavite to a point above Bahr, whence they made their way on foot, sending a message in advance that the expected reinforcements were on the way and had captured some prisoners en route. The following brief narrative of what occurred subsequently is taken from a newspaper account of the expedition:

"For six days the expedition marched over an exceedingly difficult country, covering 90 miles.

When the men reached a point eight miles from Aguinaldo's camp they were almost exhausted from lack of food and the fatigue of the march. They stopped at this place and sent a messenger to Aguinaldo, requesting him to send food to them. The messenger had worked with the greatest success, and on March 23d, when Aguinaldo sent provisions, it was seen that he did not have the slightest suspicion. With the food he sent a message that the Americans were not wanted in the camp, but instructing their supposed captives to pass them kindly. On March 24d the march was resumed, the Macabebe officers starting in the vanguard of the main body of the expedition. The 'prisoners,' under guard, followed them. When the party arrived at Aguinaldo's camp, a bodyguard of 50 riflemen was posted and no officers were received at Aguinaldo's house, which was situated on the Paluman River. After some conversation with him, in which they gave the details of their supposed engagement with the American force, they made excuses and quietly left the house. They at once gave orders in undertone for the Macabebes to get in position, and fire on the bodyguard. The order was given with the greatest rapidity and three volleys were delivered. The insurgents were panic-stricken by the sudden turn in affairs, and they broke and ran in consternation. Two of them, however, were killed and eighteen wounded. Simultaneously with the delivery of the volleys the American officers rushed into Aguinaldo's house. Maj. Alumbra, one of Aguinaldo's staff, had been shot in the face. He, however, was determined not to be captured and he jumped from a window into the river and disappeared. Two captains and four lieutenants made their escape in some haphazard manner. Aguinaldo, Col. Villa, his chief of staff, and Santiago Barcelona, the insurgent treasurer, did not have time to make an attempt to get away before Gen. Funston and the others were upon them, demanding their surrender. Seeing that the situation was hopeless, they gave themselves up. Aguinaldo was furious at having been caught, but later he became philosophical and declared that the ruse by which he had been captured was the only one which would have proved successful if the Americans had tried for 20 years. One of the Macabebes was wounded. The party stayed two days at the camp and then marched overland to the coast, where the Vicksburg, whose arrival was excellently timed, picked them up and brought them back to Manila.

On the 2d of April, a despatch from General MacArthur to the War Department announced that Aguinaldo, on the advice of Chief Justice Arellano, had taken the following oath of allegiance to the United States: "I hereby renounce all allegiance to any and all so-called revolutionary governments in the Philippine Islands, and recognize and accept the supreme authority of the United States of America therein; I do solemnly swear that I will bear true faith and allegiance to that government; that I will at all times conduct myself as a faithful and law-abiding citizen of the said Islands, and will not, either directly or indirectly, hold correspondence with or give intelligence to an enemy of the United States; nor will I abet, harbor or protect such enemy; that I impose upon myself these voluntary obligations without any mental reservations or purpose of evasion, so help me God."

On the 19th of April, Aguinaldo issued the fol-

address to his countrymen. I believe I was correct in presuming that the unhappy fate which my adverse fortune has led me to witness is to those who have been hitherto with me, crossed the war. The lessons taught with this meaning, and which have recently come to my knowledge, suggest with irresistible force the complete termination of hostilities and that peace is not only desirable, but also necessary to the welfare of the Philippine Islands. The Filipinos have never been idle, but their weakness, nor have they failed in following the path pointed out by their former conquerors. The time has come, however, when they find that their advance along this path is being impeded by an irresistible force, which when it overwhelms them, yet enlightens their minds and opens to them another course, presenting the true cause of peace. This cause has been fully embraced by the majority of my fellow countrymen who already have united around the common sovereign banner of the United States.

PILLAGER INDIAN OUTBREAK. See in this vol. *INDIANS, AMERICAN: A D 1898*.

PLAGUE, The Bubonic.—For years the plague has continued to reel in various inner parts of Asia, and in 1894, coming from the Chinese province of Yunnan, it invaded Canton, taking there 60,000 victims in a few weeks. Thence it spread to Hong Kong, reached next year the island of Hainan and Macao, invaded Penang in 1896, and in the autumn of the same year appeared at Bombay. In the big city of India it found all necessary conditions for breeding, unchecked for several months in succession, famine, overcrowding, and the absence of all preventive measures, and from Bombay it was carried by rail and road, to different parts of India. Happily enough, the plague is no longer the mysterious, revengeful being which it used to be for our ancestors. Its cause and modes of propagation are well known. It is an infectious disease with a short period of incubation. From four to six days after infection takes place, a sudden loss of forces—often a full prostration accompanied by a high fever—sets in. A fever appears, and soon grows to the size of an egg. Death soon follows. If not—there is a chance of slow and painful recovery, but that chance is very small, because even under the best conditions of nursing, the mortality is seldom less than four out of each five cases of illness. As to the means of propagation of the plague, they are many. The poison may infect a wound or a scratch. It may be ingested in food; it may be simply inhaled. Dust from an infected house was sufficient to infect healthy rats; and when healthy rats were shut up in one cage with unhealthy ones, all caught the disease and died. Already in 1881 Notten Reelcliffe and Dr. Pichon indicated that before the plague attacks men it descends mice and rats. This was fully confirmed in 1894 by the Japanese and French bacteriologists Kitasato and Yersin, at Hong Kong, and by Dr. Romie, of the Chinese Customs, at Canton. Masses of dead rats were seen in the streets of the infested parts of Hong Kong, and the

In this manner they repose their trust and believe that under its protection the Filipino people will attain all those promises and liberties which they are beginning to enjoy. The country has shown unmistakably in its road of peace. Such a state of affairs has been enough to set enough hearts and enough desolation. This wish cannot be ignored by the men still in arms if they are animated by a desire to serve our noble people, which has thus clearly manifested its will. So, I respect this will, now that it is known to me. After mature deliberation, I resolutely proclaim to the world that I cannot refuse to heed the voice of a people longing for peace, and the lamentations of their thousands of families yearning to see their dear ones enjoying the liberty and the promised generosity of the great American Nation. By acknowledging and accepting the sovereignty of the United States throughout the Philippine Archipelago, as I now do, and without any reservation whatsoever, I believe that I am serving their may be loved country. May happiness be thine.

keeper of the west gates of Canton collected and buried 24,000 of these animals. Dr. Romie also pointed out that among those inhabitants of Canton who lived in boats on the river there were no cases of plague, except a few imported from town, so that even rich Cantonese took to living in boats, and he explained the immunity of the boat dwellers by the absence of infection through rats. The worst is, however, that swine, and even goats and buffaloes, snakes and jackals are attacked by the plague.

As soon as the plague broke out at Hong Kong, the great Japanese bacteriologist Kitasato and the French doctor Yersin, whose well-known for his work with Roux on the serum treatment of diphtheria were already on the spot. Yersin obtained from the English authorities permission to erect a small straw hut in the yard of the chief hospital, and there he began his researches. Both Kitasato and Yersin had no difficulty in ascertaining that the plague bacteria formed with special bacteria, which had the shape of tiny microscopic sticklets, thickened at their ends. To isolate these bacteria, to cultivate them in artificial media, and to ascertain the deadly effects of these cultures upon animals, was soon done by such masters in bacteriology as Kitasato and Yersin. The cause of the plague was thus discovered. It was evident that infected rats and swine—especially swine with the Chinese, who keep them in their houses—were spreading the disease, in addition to men themselves. The same bacteria formed in the dead animals. As to men, the discharges from their bladders, and even, in many cases, their expectorations were full of plague bacteria. Besides, Yersin soon noticed that in his laboratory, where he was dissecting animals killed by the plague, the flies died in numbers. He found that they were infested with the same bacteria, and carried them about. Inoculations of bacteria obtained from the flies at once provoked the plague in guinea pigs. Ants, goats and other insects may evidently spread infection in the same way, while in and round the infested houses the soil is impregnated with the same bacteria. As soon as the pest microbe became known, experiments were begun, at the Paris Institut Pasteur, for finding the means to combat it, and in July 1895 Yersin, Calmette, and Bordet already

announces that some very promising results had been obtained."—P. Kropotkin, *Recent Science* (Nineteenth Century, July, 1897).

Of the first appearance of the plague in India, at Bombay, and the early stages of its spread in that country, the Viceroy Lord Elgin, made the following report to the Secretary of State for India on the 27th of January, 1897: "The first official intimation of the outbreak which reached us was in a telegram from the Government of Bombay, dated the 29th September 1896. The disease was then reported to be of a mild type, and at first it showed no tendency to increase.

Throughout the months of October and November the disease made little or no progress, and the number of deaths reported a day averaged nine. Early in December there was a marked increase, and the number of deaths reported daily from the 2nd to the 23rd (inclusive) was about 32. From the 24th December onwards there was another marked increase, and the number of deaths reported from that date to the 14th January (inclusive) averaged about 51. The next week shows a further increase; the reported number of deaths averaging 74 a day. The total number of deaths reported during October was 276, during November, 268, during December, 1,160, and from the 1st to the 25th January, 1,414. The total number of deaths reported from the beginning of the outbreak thus amounts to 3,118. We have reason to fear that all deaths from the plague have not been reported as such, and that the true mortality from the disease is higher than is shown by the above figures.

For a considerable time, except for a few imported cases in some towns in Gujarat, the outbreak was confined to Bombay itself, but on the 23rd of December we learnt from the Government of Bombay that the plague had broken out in Karachi. The total number of deaths that have been reported in Karachi, from the beginning of the outbreak up to the 24th January, is 608. It will be observed that the disease has been very malignant in Karachi, and that almost all the cases reported have been fatal. As soon as the Surgeon General with the Government of Bombay reported to that Government that he had seen cases of a mild type of bubonic plague in the city, preventive measures were adopted and a Committee of medical experts were appointed to report on the disease and the situation. The Municipal Corporation have from the outset required the infected quarters to undergo a thorough and systematic cleaning and disinfection; and they have also pushed on vigorously other sanitary measures, such as the improvement of house connections and the construction of surface drains in quarters where the drainage was defective. A house-to-house visitation by medical officers has also been instituted. The Corporation have sanctioned liberal measures towards these ends, and the executive officers have displayed great energy in carrying them out. We have informed the Government of Bombay that we consider it necessary that the plan of removing all persons from infected houses, and thoroughly cleansing and disinfecting the buildings, should be carried out, and we have asked His Excellency in Council, if he agrees, to report the measures that are adopted to bring the plan into general effect."

To the above suggestion that all persons be removed from infected houses, the government

of Bombay replied, on the 12th of February: "His Excellency is advised that, to give effect to such a proposal, at the lowest estimate, 30,000 persons belonging to different castes, and creeds would need to be provided with temporary dwellings. There is no room within the limits of the Bombay municipality which would accommodate a tenth of this number. Great difficulty has attended all attempts at the segregation of healthy inmates of infected houses hitherto made, and very limited success has been achieved. From the beginning of the outbreak of this disease it has been found that the native inhabitants of the city are very reluctant to leave their houses or to allow any member of their family afflicted with the disease to be taken away. Indeed, their dread of the disease itself appears to be hardly so powerful as their horror of being removed from their homes. Ignorance and superstition prevent the infirm from coming either that removal to a hospital is good for the sick or removal [from] infected dwellings good for the healthy, and they are far more easily moved by fear of the municipality police authorities than by any realisation of the benefits that will accrue from a systematic course of action. It is estimated that not less than 300,000 persons have already fled from Bombay, moved so to do, not only by fear of the plague, but quite as much, if not more, by an irrational and unreasonable fear of what might happen to them at the hands of the police and municipality authorities were they to remain."

Contending with such obstacles to the execution of the most effective measures for checking the spread of the disease, the authorities at Bombay and elsewhere, who seem to have worked with energy, saw little to encourage their efforts for some time. In a second report to the Secretary of State for India, made February 10, 1897, Lord Elgin was compelled to write: "We much regret that we are unable to report that the plague shows any signs of abating. In both Bombay and Karachi there has been an increase in the daily number of seizures and deaths since the beginning of the current month." But, a month later, on the 10th of March, the Viceroy reports that "the position of affairs in Bombay is distinctly better. There has been a decrease in the reported number of plague seizures and deaths, and the total daily mortality from all causes shows a marked diminution. During the week ending the 22nd February, the average daily number of seizures and deaths was 115 and 117 respectively; during the following week the daily average fell to 107 and 99, whilst during the period March 2nd to March 8th it has been 99 and 84. . . . Persons are now returning to the quarters of Bombay, which are comparatively free from plague, from the more infected outlying suburbs, and the Government of Bombay have therefore found it necessary to ward persons entering as well as those leaving Bombay. In the suburbs of Kurli, Bandra and Bhiwandi the plague continues to be severe. Outside Bombay in the Presidency proper the number of indigenous cases has increased, and the disease shows a tendency to spread especially in the Thana and Surat districts. Outside Karachi the plague shows no tendency to spread in Sind, and Sukkur is the only one place from which indigenous cases have been reported."—*Great Britain, Parliamentary Papers*

PL 86-11

From that time there appears to have been a fairly steady subsidence of the disease until the latter end of September, when it showed renewed activity, and began to be widely spread. It was particularly destructive in the Punjab and elsewhere in the Bombay Presidency. By the latter of November Poona was substantially cleared of inhabitants, except those stricken with cholera, and those who bravely cared for the sick and dying. In December there was a fresh

Again in 1899, there was a revival of the disease in India, especially at Bombay, during the winter with a decline in April and fresh virulence in September. At the end of the year the estimated total mortality from plague in India since the beginning was 250,000.

tion the fact is cited that 20 vessels have been reported arriving at various ports and separating to different parts of the world in which plague was discovered on arrival, but had not manifested itself during the voyage. As heretofore discussed, ravages have been in India where preventive measures have been hindered by religious fanaticism. In India during the year there were 66,204 deaths. Notable outbreaks of the disease occurred in Kailash and Formosa, Japan, at Opatz, Santos, Brazil, Japan, Hong Kong, Sydney, Mauritius, Hong Kong and Calcutta.

The antitoxin or serum first prepared by Professor Haffkine's plague inoculation called Haffkine's prophylactic, is now being used in Bombay and western India with remarkably results. This prophylactic is prepared by first taking the plague bacilli or the young germs, from a person affected with the plague and cultivating them. These microbes are killed by artificial means and a high degree of heat. From these dead germs and their poisonous excrements is produced a fluid that is believed to have acquired the power, when injected into the human system, to render the blood immune from the attack of plague germs and to neutralize their effect. The injection of such a poison has the effect of an antitoxin and prevents the system from nourishing plague. A dead plague germ being inoculated into a person, plague will not follow. A person after having one attack of the disease is rarely liable to a second. The person first inoculated is subject to symptoms of the plague. In vaccination for smallpox a living germ is dealt with, whereas in plague inoculation

dead seed only are injected Inoculation is exceedingly unpopular among the natives. The government has had great labor in persuading the Hindoo mind of the efficacy of Haffkine's prophylactic against plague and at the same time of its utter harmlessness in every other respect. The Hindoo is suspicious that the dead germs and their toxic excreta may be of animal rather than vegetable substance, which would make the injection of the fluid into their body a religious offense."—*United States Consular Reports, Jan., 1900, p. 101.*

"In the present epidemic, plague spots are scattered over the whole face of the globe from Sydney to Santos and Hongkong, and recently from San Francisco suspicious cases have been reported. The annual pilgrimage of Moslems to worship at the shrines of Mecca and Medina is now as in the past, of all human agencies the most active in spreading the pest. Since Egypt is nearest, plague first appears there in the seaport towns, particularly Alexandria. Sanitary conditions have improved vastly, like economics, under British control, and, last year, what in other times might have been a devastating epidemic was limited to relatively a few scattered cases. Recognizing the danger to themselves, the European powers have been led to take steps, under the Venice Convention, for their own protection. An international quarantine, under the control of the Egyptian Sanitary, Maritime, and Quarantine Council, in which the powers have one vote each and Egypt three, has established stations at two points on the Red Sea."—*American Review of Reviews, May, 1900.*

POET LAUREATE.—To the line of English Poets Laureate (see, in vol. 3, *LAUREATE, ENGLISH POETS*), there was added on the 1st of January 1896 the name of Alfred Austin, succeeding Tennyson, who died October 6, 1892.

POLAND, Russian: Relaxation of oppressions. See (in this vol.) *RUSSIA*, A. D. 1897.

POLAR EXPLORATION, Arctic and Antarctic: A chronological record.—Until quite recent years, the antarctic region had had few explorers. In 1598-9 Dirk Gerritz was carried south by a storm and found land, probably the South Shetlands, at 61° S. lat. Capt. Cook made two antarctic voyages, in the second one reaching lat. 71° 10' S. at long. 106° 54' W., sailing entirely around the southern ocean in a high latitude, and discovering many islands. In a Russian expedition, 1819-21, Bellinghausen discovered Peter I. Island and Alexander I. Land. Enderby Land was discovered by John Biscoe in 1831-2. In 1840-3 the great English expedition under Capt. afterward Sir James Ross, in the Erebus and Terror, discovered and named Victoria Land, and reached lat. 78° 11', Feb. 23, 1842. The continent which Capt. Charles Wilkes claimed to have discovered in 1840 has not been found by

later explorers. In 1874 the Challenger was turned back by the ice in lat. 66° 43' S.

1892-1893.—Whaling voyage of the Norwegian vessels, the Bakken, Active, Denmark, and the Star, equipped for geographical observation by the Royal Geographical Society and commanded by the Danish whaler, carrying Wm. S. Brice, C. W. Dyer, and W. G. Burn Murdoch. Accompanied by the Norwegian sloop Jansen, under Capt. Larsen, South Shetlands and Graham Land were reached, valuable observations made.

1893-1900.—Scientific exploration of Labrador by A. P. Low. Operations still in progress.

1894-1895.—Commercial voyage of the Norwegian whaler Antaretic, under Capt. Knutsen, sent by Capt. Svend Foyn, titled by H. J. Bull, and carrying the scientist L. E. Ruge, grevink. The valuable right whale was found, but large beds of guano were discovered. In Victoria Land, where a landing was made near Cape Adare.

1895.—Return of Peary relief expedition, with Lieut. Robert E. Peary and his companions. In spite of great difficulties Lieut. Peary had again crossed the ice sheet to Independence Bay, determined the northern limits of Greenland (about 1,000 miles of the west coast, discovered new islands and the famous Iron Mountain, the great meteorites, and obtained much knowledge of the natives. The purely scientific results of the expedition are of great value. The relief expedition was organized by Mrs. Peary.

1895.—Cruise of Mr. Pearson and Lieut. Feilden in Barents Sea.

1895.—Return of Martin Ekroff from Spitzbergen after a winter's study of the ice conditions there. Convinced that his plan of reaching the pole by a sledge journey had little chance of success.

1895.—Survey of the lower Yenesei River and Obi Bay by Siberian hydrographic expedition.

1895.—Commercial expedition of Capt. Wiggins from England to Godechka, at the mouth of the Yenesei.

1895.—Russian geological expedition to Nova Zembla.

1895.—Russian expedition under the geologist Bogdanovich to the Sea of Okhotsk and Kamchatka.

1895-1896.—Two scientific voyages of the Danish cruiser Ingolf in the seas west and east of Greenland.

1896.—Summer expedition of naturalists and college students to the northern coast of Labrador.

1896.—Attempt of Lieut. Peary to remove the great meteorite discovered by him at Cape York, Greenland. After dislodging it he was compelled by the ice to leave it. Small parties from Cornell University and Massachusetts Institute of Technology and one under Mr. George Bartholomew left by Peary at different points to make scientific observations and collections, returned with him.

1896.—Hydrographical survey of the Danish waters of Greenland and Iceland.

1896.—Nansen sent to Siberia to look for traces of Nansen.

1896.—Return of Dr. Nansen from voyage begun in 1893. After skirting the coast of Siberia almost to the Lena delta the Fram was enclosed by the ice and drifted with it north and northwest. On March 14, 1895, in 84° 4' N. lat.,

POLAR EXPLORATION.

102° E. long. Nansen and Johannsen left the Fram and pushed northward with dogs and sledges across an ice floe till they reached lat. 84° 10' N. at about 95° W. long. on April 8, within 264 statute miles of the pole. With great difficulty they made their way to Franz Josef Land, where they wintered, and in June met explorer Jackson. Returning on the Jackson supply steamer Wanderer, they reached Vardø Aug. 13. The Fram drifted to lat. 85° 57' N., 66° E. long., then southwestward, reaching Tromsø Aug. 20, 1896. Nansen demonstrated the existence of a polar sea of great depth, comparatively warm below the surface, apparently with few islands, though he did not find it. As polar current he

1896. Spitzbergen crossed for the first time, by Sir W. Martin Conway and party.

1896. Many parties visit the northern coast of Norway and Nova Zembla to view the aurora of the sun, Aug. 8-9.

1896. Expedition sent by Russian Hydrographic Department to find site for a sealers' refuge in Nova Zembla. Bielusha Bay, on the southwest coast, chosen.

1897. Expedition sent by Canadian government to investigate Hudson Bay and Strait as a route to Central Canada. Passage found to be navigable for at least sixteen weeks each summer.

1897. Seventh Peary expedition to Greenland. Accompanied by parties for scientific research. Preliminary arrangements made with the Eskimos for the expedition of 1898, and food stations established. Relics of Greeley's expedition found on Cape Sabine, and the great meteorite at Cape York brought away at last.

1897. Second expedition of Sir Martin Conway for the exploration of Spitzbergen.

1897. A summer resort established on west coast of Spitzbergen, with regular steamer service for tourists during July and August.

1897. Cruise of Mr. Arnold Pike and Sir Savile Crossley among the islands east of Spitzbergen.

1897. Cruise of Mr. Pearson and Lieut. Fell-Jen in the Laura in the Kara Sea and along the east coast of Nova Zembla, for the purpose of studying the natural history of the region.

1897. Expedition of F. W. L. Popham with a fleet of steamers through Yugor Straits to the Yenesei.

1897. Hydrological and commercial expedition, comprising seven steamers, under Rear Admiral Makaroff, sent by the Russian government to the north Siberian sea.

1897. Balloon voyage of Salomon August Andree and two companions, Mr. Strindberg and Mr. Fraenkel, starting from Danes' Island north of Spitzbergen, in the hope of being carried to the pole. Four buoys from the balloon have been found. The first found in Norway in June, 1899, and containing a note from Andree, was thrown out eight hours after his departure. The "north pole buoy," to be dropped when the pole was passed, was found empty on the northeast of King Charles Island, north east of Spitzbergen, Sept. 11, 1899. A third buoy, also empty, was found on the west coast of Iceland July 17, 1900. Another, reported from Norway, Aug. 31, 1900, contained a note showing that the buoy was thrown out at 10 p. m., July 11, 1897, at an altitude of 250 metres (820 ft.), moving N

POLAR EXPLORATION.

45 E., with splendid weather. Many search expeditions, some equipped at great expense, have returned unsuccessful. In spite of many rumors nothing definite is known of the fate of any of the party. One message from Andree was brought back by a carrier pigeon. It was dated July 13, 12.30 p. m., in lat. 82° 25', long. 12° 5' E., and stated that the balloon was moving eastward.

1897. New islands on the southern coast of Franz Josef Land discovered by Capt. Robertson of the Dundee whaler Balena.

1897. Return of Jackson Harnsworth expedition from three years' exploration of Franz Josef Land and the region north of it. Franz Josef Land was resolved into a group of islands and almost entirely mapped. Small parties journeying northward over the ice, establishing depots of supplies, the most northern in latitude 81° 21', discovered and named Victoria Sea, the most northern open sea in the world.

1897. Anglo-Australasian antarctic conference in London.

1897-1899. Journey of Andrew J. Stone through the Canadian Rockies down Mackenzie River and along the arctic coast in search of rare mammals and information concerning the native tribes. Mr. Stone often had only one companion. He traveled rapidly, in one period of five months covering 3,000 miles of arctic coast and mountains, between 70° and 72° N. lat. and between 117° and 149° W. long.

1897-1899. Belgian antarctic expedition under Capt. Adrien de Gerbache to lands south of America. Sailed from Antwerp to explore and chart coast line, expecting to leave party to winter at Cape Adare and explore interior. Near Alexander I. Land the Belgians caught in the ice pack and held for a year, drifting as far south as lat. 71° 36', in long. 87° 39' W. Finally released by the cutting of a canal through the ice. This dreary winter the first spent by men far enough south to lose sight of the sun. The continent found to be mountainous, glaciated, and without land animals except a few insects, though sea fowl abounded. One flowering grass, and a few mosses, rock lichens, and fresh water alga constitute the flora. Some 500 miles of coast chartered.

1898. Expedition of Dr. K. J. V. Stenstrup to Greenland to study the glaciers of Disko Island.

1898. Completion by Dr. Thoroldsen of his systematic exploration of Iceland, begun in 1881.

1898. Spitzbergen circumnavigated and surveyed by Dr. A. G. Nathorst. Coast mapped and important scientific observations made.

1898. Pendulum observations made in Spitzbergen by Prof. J. H. Giese, with instruments of the United States Coast and Geodetic Survey, for the determination of the force of gravity in that latitude.

1898. Cruise of Prince Albert of Monaco on coast of Spitzbergen, for the purpose of making scientific observations.

1898. Some claim to Spitzbergen made by Russia. Never before claimed by any nation.

1898. German arctic expedition under Theodor Lerner to the islands east of Spitzbergen, for scientific purposes and to obtain news of Andree if possible.

1898. Andree search expedition under J. Stalling sent to the Lena delta, the mouth of the Yenesei and the islands of New Siberia by

POLAR EXPLORATION.

the Swedish Anthropological and Geographical Society.

1898.—Conference on antarctic exploration held in the rooms of the Royal Society, London, Feb. 24.

1898-1899.—Reconnoitring expedition by Danish party under Lieut. G. C. Amdrup, to east coast of Greenland. Coast explored and mapped from Angmagssalik, 65½° N. lat., to 67° 22'. Remains of a small extinct Eskimo settlement found.

1898-1899.—Second attempt by Walter Wellman to reach the north pole. Wintered in Franz Josef Land, establishing an outpost, called Fort McKinley, in lat. 81° N. In February Mr. Wellman, with three companions, started northward and seemed likely to succeed in their undertaking, but a serious accident befalling Mr. Wellman, and an icequake destroying many dogs and sledges, a hurried return to headquarters was necessary. Here important scientific observations were made. The 82d parallel was reached by the explorer.

1898-1899.—German expedition for deep-sea exploration in antarctic waters, in charge of Prof. Carl Chun, on the *Valdivia*. Southern ocean found to be of great depth.

1898-1900.—British antarctic expedition under Borchgrevink to Victoria Land; the finds provided by Sir George Newnes. Lat. 78° 50' S. reached, and the present position of the southern magnetic pole determined.

1898.—Carefully planned expedition of Lieut. Peary, purposing to advance toward the pole by west coast of Greenland, establishing food stations and depending upon picked Eskimos for co-operation with his small party. In the last dash for the pole, supply sledges to be sent back as emptied, and the returning explorer, with two companions only, to be met by a relief party of Eskimos. The Windward was presented by Mr. Harnsworth for this expedition. Lieut. Peary was disabled for several weeks in 1898-9 by severe frost-bites, causing the loss of seven toes. The Greeley records were found at Fort Conger and sent back by the annual supply vessel. Sextant and record of the Nares expedition found and sent back; presented by Lieut. Peary to the Lords of the Admiralty of Great Britain and placed in the museum of the Royal Naval College at Greenwich. Vessel sent to Greenland each summer to carry supplies and bring back letters, carrying also small parties of explorers, scientists, university students and hunters, to be left at various points and picked up by the vessel on its return.

1898.—Expedition of Capt. Sverdrup to northern Greenland—Lieut. Peary's especial field. Having planned a polar expedition similar to Peary's he sailed up the west coast, but the Fram was frozen in near Cape Sabine. Sverdrup therefore explored the western part of Ellesmere Land, then sailed again in an attempt to round the northern coast of Greenland.

1899.—International conference held at Stockholm in June recommended a program for hydrographical and biological work in the northern parts of the Atlantic ocean, the North Sea, the Baltic, and adjoining seas.

1899.—Scientific expedition of Edward Bay, a Dane, to Melville Bay, Greenland.

1899.—Swedish expedition under Dr. A. G. Nathorst to search for Andrée in eastern Green-

POLAR EXPLORATION.

land. Valuable observations made and flood systems of King Oscar Fjord and Kaiser Franz Josef Fjord mapped.

1899.—Explorations in Iceland by F. W. W. Howell and party.

1899.—Hydrographic surveys on the coasts of Iceland and the Faroe Islands by MM. Heimann and Hammer in the Danish guard ship *Diana*.

1899.—Joint Russian and Swedish expedition to Spitzbergen, for the measurement of a degree of the meridian. Owing to the condition of the ice, the northern and southern surveying parties unable to connect their work.

1899.—Explorations in Spitzbergen by the Prince of Monaco, with a scientific staff.

1899.—Successful experimental voyage of the Russian Vice-Admiral Makaroff in his ice-breaking steamer, the *Yermak*, north of Spitzbergen.

1899.—Russian government expedition, to cost £5,400, to explore northern shores of Siberia to months of the Obi and Yenesei.

1899-1900.—Arctic expedition of the Duke of the Abruzzi. His ship, the *Stella Polare*, was left at Crown Prince Rudolf Land during the winter. The Duke became incapacitated by a fall and by the loss of two joints from the fingers of his left hand, incurably frost-bitten, but a small party under Capt. Cagni pushed northward till provisions were exhausted. Nansen's record was beaten, the Italian party reaching lat. 86° 33', at about 56° E. long. No land was found north or northwest of Spitzbergen. Three men were lost from Cagni's party.

1899.—Exploration of Ellesmere Land, Greenland, by Dr. Robert Stein, of the United States Geological Survey, Dr. Leopold Kunn of Cornell, and Samuel Warnbach of Harvard, who took passage in the Peary supply ship *Diana*, trusting to chance for conveyance home. Their totally inadequate outfit was generously augmented by Peary's friends of the *Diana*. Dr. Kunn returned in 1900, leaving Dr. Stein.

1900.—Sewall peninsula, the most westerly extension of Alaska, explored and surveyed by five government expeditions.

1900.—Exploration of the interior of northern Labrador by a party from Harvard University. Soundings along the coast by schooner *Brave*.

1900.—Second Danish expedition under Lieut. Amdrup to east Greenland, completing the work of 1898-9 by mapping the coast between 67° 20' N. and Cape Gladstone, about 79° N., and making valuable scientific collections.

1900.—Swedish expedition, under Gustav Kolthoff, to eastern Greenland, for study of the arctic fauna.

1900.—Swedish scientific expedition of Prof. G. Kolthoff to Spitzbergen and Greenland.

1900.—Exploration of Spitzbergen by a Russian expedition under Kuipovich.

1900.—Russian expedition to east coast of Nova Zembla by Lieut. Borissoff to complete survey of the islands.

1900.—Dr. Nansen's expedition under the leadership of Dr. J. Hjort, for the physical and biological examination of the sea between Norway, Iceland, Jan Mayen and Spitzbergen.

1900.—German expedition, under Capt. Bode, to explore East Spitzbergen, King Charles Land and Franz Josef Land, and to look for traces of Andrée.

1900.—Attempt of a German, Capt. Balan-dahl, to reach the north pole, leaving his vessel

POLAR EXPLORATION.

in the ice north of Spitzbergen and travelling over the ice with provisions for two years, weighing ten tons.

1900.—Scientific expedition of Baron E. von Toll to the unexplored Samikoff Land, sighted by him in the northern coast islands of New Siberia. Preceded by a party which established food depots at various places months before.

1901.—Three exploring parties sent to Alaska by the United States Geological Survey.

1901.—Expedition sent by the Duke of the Abruzzi to Franz Josef Land to search for the three men lost from his party in 1900.

1901.—North polar expedition under Mr. Evelyn Baldwin of the United States Weather Bureau, splendidly equipped by Mr. Wm. Ziegler of New York. Mr. Baldwin, who has had arctic experience with Lieut. Peary and Mr. Wellman, will probably proceed by way of Franz Josef Land.

1901.—Several expeditions to cooperate in exploration of the antarctic region and to reach the south pole if possible. The British expedition, led by Sir John Scott, is given for by the Royal Geographical Society and the Royal Society and made possible by L. W. Longstaff's contribution of £25,000, to be under the command of Capt. Robert Scott and to explore the Victoria (90°-180° E.) and Ross (180°-90° W.) quadrants. In the main the region south of the Pacific. The Weddell (90° W. or Greenwich) and Enderby (90°-90° E.) quadrants assigned to the duly equipped German expedition, under Drygalski, which will first explore south of the Indian Ocean. The Swedish expedition under Dr. Nordenskiöld to explore the lands south of America. A private Scottish expedition under Wm. S. Bruce to explore the Weddell Sea region south of the Atlantic Ocean. An Argentine expedition to visit the South Shetlands.

1901.—Projected expedition of Capt. J. E. Brainerd of Quebec, on Nansen's principle, with a specially built vessel, to sail through Bering Strait, coast Siberia to long. 170° or 165° E., then enter the ice. Shedding parties to push toward the pole, marking the route with hollow signal poles of aluminum packed with records and provisions, and maintaining communication with the ship by wireless telegraphy. This is one of two plans which he lays before the Canadian government. The other contemplates a movement, with dogs and reindeer, from Franz Josef Land, coming back to Spitzbergen, taking 12 or 14 men, all scientists.

PORTO RICO.

1901.—Projected expedition of Herr Anschutz Kämpfe, of Munich, to the north pole, in a submarine boat capable of carrying five men and remaining under water for fifteen hours at a time.

1901.—As this goes to press (April 1901), a national antarctic expedition is being fitted out, jointly, by the Royal Geographical Society and the Royal Society of Great Britain, assisted by a subsidy of £45,000 from the British government. A steamer named the "Discovery," built especially for the expedition, at Dundee, was launched in March, and is being equipped with remarkable completeness. Special arrangements, says "The Times," will be made for magnetic work, while meteorology, geology and biology will be well cared for. "The staff of navigating officers and of scientific specialists has been carefully selected, and under Commander Robert Scott, R. N., who will be in command of the expedition, their work, we may be sure, will be so well organized that nothing of importance will be neglected. There will be five navigating officers, three of them belonging to the Royal Navy and two others to the Royal Naval Reserve, while the special scientific staff, including the two medical officers, will be of equal strength. . . . Captain Scott is at present investigating the question of the utility of balloons."

PORTO RICCO.

Area and Population.—In the testimony given Jan. 13, 1900, before the U. S. Senate Committee on Pacific Islands and Porto Rico, General George W. Davis, Military Governor of Porto Rico, gave the following information: "The island of Porto Rico has an area of about 3,500 square miles, according to the best information that now exists, but that area has to be verified, and it is doubted if the area is quite so large. It has a population of about a million, perhaps—certainly one of the most densely populated areas of 3,000 or 4,000 square miles on the face of the earth, approximating the density of population of Belgium, I think, and considerably greater than that of any of our thickly settled agricultural

regions in the United States. New England has about 200 to the square mile while Puerto Rico has nearly 300. The inhabitants are mostly of Spanish origin—emigrants from Spain during the last 400 years and their descendants. There is a large representation from the Canary Islands and the Balearic group in the Mediterranean, a large number of Corsicans and their descendants, and consequently they are French subjects, a few Germans, a few English, and very few Americans, before the occupation, a few Venezuelans, a few from Santo Domingo, and a few Cubans, but the most of the population is Spanish. Included in that million are about 300,000 negroes and mulattoes, approximately a little

more than that number. About one-third of the entire population is of the negro or mixed race, what would be called in the United States 'colored' people. Of pure blood negroes there are about 70,000; the remainder mulattoes, and all speaking Spanish and largely the slaves liberated in 1871. The number of slaves liberated at that time was considerably less than the number of negroes in Porto Rico, the number being only about 30,000, for whom some \$11,000,000 was paid the owners. That statement gives a fair idea of the character of the population as respects numbers and race. Several small adjacent islands are regarded as belonging to Porto Rico and were included in the cession to the United States. One of these, named Velequez, about 15 miles long and 3 or 4 miles wide, is very fertile, and has about 7,000 inhabitants. On another, called Culebra, there are some 600 or 700 people. The remaining islands are smaller and unimportant.—56th Congress, 1st Sess., Senate Doc. No. 147, pp. 1-2.

The government as it was under Spanish rule.—"The civil government of the island was the Governor General, and the Governor General was the civil government. All power was lodged in his hands and he was accountable only to Madrid. He was at once the executive, the legislative, and the judicial head. As Captain General, he had chief command of the military forces, and made such disposition of them as he chose; as Governor General, he conducted civil affairs, whether insular or municipal, according to his own pleasure. . . . If, as occasionally happened, he was a wise and good man, seeking the welfare of the people rather than his own personal enrichment or the advancement of his political friends, there was less cause for complaint from the people, who were completely ignored. As the position was one of great power and of large opportunities for pecuniary profit, it not infrequently went to those who were prepared to exploit it in their own interests. . . .

"The system of autonomy, which was proclaimed November 25, 1897 [see, in this vol., CHINA: A. D. 1897 (NOVEMBER)], was never fully installed. The war intervened, and the provincial legislature, which was its most important feature, was dissolved when Sampson's fleet appeared, and the Governor General conducted the government practically on the old plan, except that the ministry, as provided by the autonomistic law, was retained as follows: Secretary of government or of state, secretary of the treasury, secretary of the fomento or interior, including public works, public instruction, public lands, mines, etc., agriculture and commerce, and secretary of justice and worship. The last three secretaries were subordinate to the secretary of government through whom all orders from the Governor General and all communications to or from him must pass. The autonomist law allowed the secretaries or ministers to be members of one or the other of the two legislative chambers. The Governor General with his council constituted the executive power. No act of his was valid unless approved by one of the secretaries, and the secretaries could issue no order which he had not countersigned. He had the power to convolve or dissolve the chambers, to refer objectionable bills to Madrid for approval or disapproval, and to appoint or remove the secretaries. All matters of a diplomatic character

were in his hands exclusively, and, constituted by the Pope patronato real, he was the head of the church in the island and practical director of ecclesiastical affairs. The legislature consisted of two chambers, the council and the house of representatives. The council was composed of fourteen members, eight of whom were elected and six appointed by the Crown; the house of representatives of one representative for each 25,000 inhabitants, elected by the people. The liberality of this law is further indicated by the fact that it gave the right of suffrage to all males of 25 years of age and over. The two chambers were empowered to legislate on all insular questions, such as the estimates, which must be adopted by the Cortes at Madrid, public instruction, public works, sanitation, charities, etc. It will be seen that the reforms granted by this autonomistic decree were large in the letter, taking powers which the Governor General had exercised unquestioned and giving them to the people, who had never been allowed to participate in the government of their own country. Whether it would have proved liberal in practical operation is not so certain. The Government invariably discriminated against Porto Ricans in favor of Spaniards, and it is also to be remembered that Spanish laws as written and Spanish laws as administered are not always identical. H. K. Carroll (Special Commissioner), *Report on Porto Rico*, 1899, pp. 15-16.

A. D. 1898-1899 (August—July).—Popular feeling in the island on the American occupation.—Welcome to the Stars and Stripes.—Expectations and desires of the people.—Their character.—Extent of illiteracy.—The Peones.—"All classes of natives of the island welcomed the American Army, American occupation, and American methods, and accepted without hesitation the Stars and Stripes in place of the red and yellow bars. They had not been disloyal to the old flag; but it had come to represent to them, particularly during the present century, in which a class feeling developed between the insular and the peninsular Spaniard, partiality and oppression. In the short war, some of the natives occupying official positions made demonstrations of loyalty to the Crown of Spain, as was perfectly natural, but they were among the first to submit to American rule when the protocol promised cession of the island to the United States. On the other hand, as the commissioner is informed, a Porto Rican who had hoped and prayed for American intervention for fifty years enrolled himself as a Spanish citizen some months after the war was concluded, and his hopes had been realized. Porto Ricans generally complained that the former Government discriminated in favor of the Spaniard, who, in the distribution of the offices, was preferred to the native, and who, aided by the powerful influence of the authorities, prospered in business as

PORTO RICO.

Porto Rico is a small island in the Caribbean Sea, located between the Atlantic Ocean and the Gulf of Mexico. It is the largest of the Lesser Antilles and is known for its beautiful beaches, historic sites, and vibrant culture. The island was first discovered by Christopher Columbus in 1493 and was later colonized by Spain. In 1898, it was ceded to the United States under the terms of the Treaty of Paris. Today, Porto Rico is a U.S. territory and is known for its unique blend of Spanish and American influences.

banker, merchant, manufacturer, agriculturist. They insist that the material improvement of the island was neglected; that agriculture received more than its share of the burden of taxation; that the assessments were very inequitable and unequal; that education was not fostered; and that in general the welfare of the people was not the first concern of their rulers.

They expect under American sovereignty the wrongs of centuries will be righted, and they will have an honest and efficient government, the largest measure of liberty as citizens of the great Republic under the Constitution, home rule as provided by the Territorial system, free access to the markets of the United States and no customs duties on goods coming from our ports, a school system modeled after that of the United States, the adoption of the English language in due time and the general adoption to the island of all those institutions which have contributed to the prosperity, progress and happiness of the American people. The largest and most representative gathering, since American occupation, was held in San Juan, October 30, 1898, without distinction of party or class with the object of consultation and formulation of a programme for the future. Most of the propositions of the congress as submitted to the commissioner for presentation to the President of the United States were these: Immediate termination of military and inauguration of civil government; establishment of the Territorial system with laws common to other Territories of the Union; a legislature in two branches; suffrage for all male citizens of 21 years of age or over, the right to be surrendered at the end of the first two years by those who do not then know how to read and write; radical reform; introduction of the jury system; autonomy for municipal governments; taxation on the basis of valuation; free and reciprocal commerce with the ports of the United States; aid for agriculture; obligatory and universal education; trade schools; savings banks. This programme of reforms seems to have very general support, although there is a difference of opinion on certain points. Many Porto Ricans urged the commissioner to represent them as desiring that the military régime be made as short as possible, not because the military governments were in any way objectionable or their rule oppressive, but because the civil status of the island should be fixed with no unnecessary delay. There was no other opinion except among foreign subjects, many of whom thought that the people were not yet ready for self government, and that the firm hand of military power would be needed for probably two years.

If the desire to assume the burdens of local self government may be taken as indicating some degree of capacity for self government, the people of Porto Rico certainly have the tests. They may be poor, but they are proud and sensitive, and would be bitterly disappointed if they found that they had been delivered from an oppressive yoke to be put under a tutelage which proclaimed their inferiority. Apart from such qualifications as general education and experience constitute, the commissioner has no hesitation in affirming that the people have good claims to be considered citizens of self government. Education and experience, although too high a value can hardly

be set upon them, do not necessarily make good citizens.

The unswerving loyalty of Porto Rico to the Crown of Spain, as demonstrated by the truth of history, is no small claim to the confidence and trust of the United States. The people were obedient under circumstances which provoked a revolt after revolt in other Spanish colonies. The habit of obedience is strong among them. Their respect for law is another notable characteristic. They are not inclined to violent crime. Riots are almost unknown in the island, so is organized resistance to law. Brigandage flourished only for a brief period after the war and its object was revenge rather than rapine. They are not a criminal people. The most violent crimes are by no means common. Burglary is almost unknown. There are many cases of homicide, but the number in proportion to population is not as large as in the United States. The very is the most common crime, and petty cases make up a large part of this list of offenses. The people as a whole are a moral, law-abiding class, mild in disposition, easy to govern, and possess the possibilities of developing a high type of citizenship. R. K. Carroll (special Commissioner) *Report, Porto Rico, 1899*, pp. 55-57.

On the 25th day of July, 1899, an election was held in Adjuntas for municipal officers, and the registration was made in conformity with General Orders, No. 112, of S. Headquarters Department of Porto Rico. The order imposed the following qualifications for electors: Men over 21 years old, able to read and write or who were taxpayers of record, who had been actual residents of the island for at least two years and of the municipality for six months preceding the date of the election. The number who proved these qualifications before the board of registration was 906, out of a population according to the census of 1897 of 18,705, that is, less than 5 per cent could vote under the conditions stated.

There was much public interest in this election, and it is believed that about all who were eligible were registered. This incident indicated that in the whole island there may be approximately 45,000 who could vote under the conditions of the order above referred to. The class who can not fulfill these conditions say 75 per cent of the males over 21 years of age, are usually in a state of abject poverty and ignorance, and are assumed to include one fifth of the inhabitants. They are of the class usually called *peones*. This word in Spanish America, under old laws, defined a person who owed service to his creditor until the debt was paid. While these laws are obsolete, the condition of these poor people remains much as before. So great is their poverty that they are always in debt to the proprietors or merchants. They live in huts made of sticks and poles covered with thatches of palm leaves. A family of a dozen may be huddled together in one room, often with only a dirt floor. They have little food worthy of the name and only the most scanty clothing, while children of less than 7 or 8 years of age are often entirely naked. A few may own a machete or a hoe, but more have no worldly possessions whatever. Their food is fruit and if they are wage-earners, a little rice and codfish in addition. They are without ambition and see no incentive to labor beyond the least that will provide the barest sustenance. All over the island they can

be seen to-day sitting beside their ruined huts, thinking naught of to-morrow, making no effort to repair and restore their cabins nor to replant for future food.

"The remarks of Mr. James Anthony Froude in his work on 'The English in the West Indies' apply with full force to these people: 'Morals in the technical sense they have none, but they can not be said to sin because they have no knowledge of law, and therefore they can commit no breach of the law. They are naked and not ashamed. They are married but not parsoned. The women prefer the looser tie, that they may be able to lose the man if he treats her unkindly. Yet they are not licentious. . . . The system is strange, but it answers. . . . There is evil, but there is not the demoralizing effect of evil. They sin, but they sin only as animals, without shame, because there is no sense of doing wrong. They eat the forbidden fruit, but it brings with it no knowledge of the difference between good and evil. . . . They are innocently happy in the unconsciousness of the obligations of morality. They eat, drink, sleep, and smoke, and do the least in the way of work they can. They have no ideas of duty, and therefore are not made uneasy by neglecting it.' Between the negro and the peon there is no visible difference. It is hard to believe that the pale, sallow, and often emaciated beings are the descendants of the conquistadores who carried the flag of Spain to nearly all of South America, and to one third of North America." General George W. Davis, *Report on the Civil Government of Puerto Rico*, Sept. 30, 1899 (*Message and Documents: Abridgment*, 1899-1900, p. 2, pp. 1393-4).—"The educated class of Puerto Ricans are as well educated and accomplished as the educated men of any country. They have had the benefit of a liberal education a few in the United States, a good many in France, and a great many in Madrid and Habana where they have passed through the universities. The lawyers and doctors are all graduates of either the university in Habana or some university in Spain, with very few exceptions. The merchants are largely Spanish, most of whom will probably preserve their nationality under the provision of the Treaty of Paris which gives them that right. A few may adopt American citizenship, and ultimately possibly all will, but many of the merchants who conduct the largest part of the business of Puerto Rico will retain their Spanish citizenship. There are a number of merchants who are natives, a few Germans, and a few English. I do not remember any American merchant in business there before the occupation. The schools in Puerto Rico conducted under the Spanish system were few in number. The amount allotted for education by the insular budget was something like 300,000 pesos a year, as I now recall the figures. The teachers were officers of the government, holding life positions and receiving pensions when superannuated. They belong to a civil service class which is not dependent upon any change of administration, only being removed for cause. The lawyers, or judges, rather, of the island, occupy a similar position."—General George W. Davis, *Testimony before Senate Com. 56th Cong., 1st Sess., Senate Doc. No. 117*.

A. D. 1898-1899, October—October.—The military government instituted by the United

States.—"The government of the island, its various civil institutions, its codes and regulations, the systems of taxation, etc., have been made in very important particulars since the American occupation began, October 18, 1898. It was, perhaps, to indicate the more important changes, Under General John R. Brooke, in command of the Department, October 18 to December 5, 1898, orders were issued directing:—(1) That the political relations of Puerto Rico with Spain were at an end, that provincial and municipal laws were in force in so far as not incompatible with the changed conditions, and that they would be enforced substantially as they were before. (2) Abolishing the use of all stamped paper and stamps of every kind for documents, public and private. (3) Exempting all conveyances and contracts from the payment of royal dues. (4) Discontinuing the diputation provincial, and distributing its duties among the secretaries or ministers. (5) Directing that appeals should not be sent to the supreme court in Madrid, but should be heard by the superior court at San Juan. (6) Abolishing the subdelegation of pharmacy which gave degrees to pharmacists. (7) Making the fisheries free to all. Appropriations for the support of the church ceased with American occupation, and the Government lottery was discontinued.

"Under the military government of Gen. Gay V. Henry [December 6, 1898 to May 8, 1899], orders were issued—(1) Appointing military commissions to try cases of arson and murder which had accumulated in the civil courts. (2) Closing public offices on Sunday, as far as possible. (3) Suspending the municipal tax on fresh beef for use of the Army. (4) Making Christmas and New Year's holidays. (5) Forbidding grants or concessions of public or corporate rights or franchises without the approval of the commanding general and the Secretary of War. (6) Abolishing the municipal consumo tax on articles of food, fuel, and drink, and providing for additional assessments on the sale of liquors and tobacco. (7) Separating the collection of customs duties from that of direct taxes. (8) Establishing a new system of land taxation, by which agricultural lands should be taxed according to the several classes instituted, from 1 peso down to 25 centavos per cuerda, and levying 50 per cent additional on lands whose owners reside abroad. (9) Providing for the free vaccination of the people of the island. (10) Prohibiting the exhumation of bodies in the cemeteries, regularizing the right of priests to control burials in consecrated grounds, and requiring municipalities to keep cemeteries in repair. (11) Reducing notarial fees from \$1.88 to \$1, from \$1.50 to \$1, from \$1.10 to \$1, and from \$1 to 50 cents, according to class of document, and amending others. (12) Reorganizing the cabinet, so as to make all the secretaries directly responsible to the governor general. (13) Suspending the foreclosure of mortgages on agricultural property and machinery for one year. (14) Appointing February 22 a holiday. (15) Prohibiting the sale of liquor to children under 14 years of age. (16) Modifying the civil marriage law. (17) Declaring that eight hours shall constitute a day's work. (18) Creating an insular police.

"Under the military government of Gen. George W. Davis [May 8, 1899 to May 1, 1900], orders were issued—(1) Modifying the order

General Henry concerning hours of labor, so as to make arrangements between employer and employee for longer or shorter hours. (2) Naming May 30 as a holiday. (3) Allowing the writ of *habeas corpus* to be issued. (4) Constituting a board of prison control and pardon. (5) Continuing the observance as a holiday of June 24. (6) Creating a provisional court on the basis of civil and district courts of the United States for the hearing of cases not falling within the jurisdiction of local insular courts. (7) Creating a superior board of health for the island. (8) Reorganizing the bureau of public instruction and the system of education. (9) Relieving the judiciary from all control by the department of justice, discontinuing the office of secretary of justice, and appointing a solicitor general. (10) Abolishing the sale at auction of the privilege of slaughter of cattle, and making it free. (11) Reorganizing the judicial system of the island with a supreme court in San Juan and district courts in San Juan, Ponce, Mayaguez, Arcebo, and Humacao, and with modifications of civil and criminal procedure. (12) Discouraging the departments of state, treasury, and interior, and creating bureaus of state and municipal affairs of internal revenue, and of agriculture, to be placed under the direction of a civil secretary responsible to the governor general, and continuing the bureaus of education and public works, with an insular board of nine members to advise the governor general on matters of public interest referred to them.

The reductions in the budget of expenditures have been extensive. That of 1898-99 adopted in June, 1898, amounted to \$1,781,920, native money. The appropriations for general obligations, which went to Madrid, \$198,502, for the clergy, \$197,015; for the army, \$1,252,378, for the navy, \$322,668, making a total of \$2,171,493, ceased to be obligations, leaving \$2,610,428 for the fiscal year. A new budget was adopted for the calendar year 1899, which still further reduces expenditures, calling only for \$1,462,276. This budget, if carried out, would have involved a reduction from the proposed budget of 1898-99 of \$3,319,641, but a new budget was formed, as already stated, for 1899-1900, which appears to call for an increase over this very moderate sum. The revenues were reduced by the abolition of stamped paper, personal passports, export duties, royal dues on conveyances, the lottery system, and other sources of income, amounting, all told, to less probably than a million of pesos.—H. R. Carroll, Special Commissioner, *Report on Porto Rico*, October 6, 1899, pp. 53-55.

A. D. 1899 (August).—Destructive cyclone.—On the morning of the 7th of August, 1899, the United States Weather Bureau, through its branch establishment here, announced the approach of a cyclonic disturbance, and the danger signal was ordered to be hoisted at substations of the Bureau at Ponce and Mayaguez. At the same time I directed that the danger be reported to all commanding officers of posts throughout the island. There had been no serious or destructive storm in Porto Rico since 1867, and the inhabitants had ceased to feel great concern on account of tropical tempests. Except at sea, little heed was given to the caution, and in some cases the telegraph operators failed to endeavor to promptly deliver the warning message. The vortex of the cyclone appears to

have traversed the island throughout its whole length, from about Humacao to Mayaguez, and its path was a scene of very great devastation.

The gale struck the island at Humacao about midnight of August 7, and furiously blew all the rest of that night and well into the next day, while at Mayaguez the violence was not great until 9 o'clock on the morning of the 8th. But as the latter town was under the lee of high mountains it suffered much less than it would have done had it been higher or not thus protected. Most of the habitations in the track of the center of the cyclone were entirely smashed and the debris strewn all over the country. The full reports of the loss of life bring the number of deaths up to 2,700. The wind worked dreadful havoc with nearly everything as to man.

Besides the mortality, which was appalling, the material damage was almost beyond belief. But the greatest loss of life resulted not from the wind, but from the terrible downpours of rain that immediately followed. Added to the horror of the situation there came with the gale on the southern coast a tidal wave, which submerged large areas with sea water and swept away what the wind and rain had spared in some places completing the destruction. Every river bed at bottom of a hard depression was a roaring torrent. The wind uprooted myriads of trees, and the ruin, entering and permeating these, loosened it, and on steep declivities resulted in avalanches of earth, mud and water, covering wide areas and piling up the debris in the ravines and gorges. The material loss to the coffee growers can as yet only be estimated, but the most conservative figures received place this year's crop at one third of the normal. regard being had to the fact that five years must elapse before the coffee trees and their shade can be replanted and reach a normal bearing condition, the total loss can not be safely placed below 25,000,000 pesos for Porto Rico on account of this hurricane.—Gen. George W. Davis, *Report (Message and Documents)*, Washington, 1899-1900, v. 2, pp. 1343-44.

A. D. 1899 (October). Census of the Island taken under the direction of the War Department of the United States. The population of Porto Rico shown by the schedules of the present census taken with reference to the date of October 16, 1899, was 954,243. This was about nine tenths of the population of Maryland in 1890, the State whose population is nearest to that of Porto Rico. If the figures for earlier censuses may be accepted, it appears that the population of Porto Rico has been growing through the last twelve years with greater rapidity than before since 1860. Its present rate of increase is about the same as that of Ohio, Tennessee, or the Carolinas during the decade between 1880 and 1890. It appears that the average increase of population in the interior has been more rapid than that on the coast. If the figures for the coast cities of San Juan, Ponce, and Mayaguez had been excluded, the difference would be yet more marked. The depressed condition of sugar cane growing in the West Indies of recent years may have played an important part in producing this difference, for the growing of sugar cane is prevalent in the coast plains of Porto Rico.

The area of Porto Rico, including the adjacent and dependent islands of Vieques, Culebra,

Mona and Muñitos has been measured in connection with this census and found to be 3,600 square miles. But owing to the imperfect surveys on which all maps of Porto Rico are based there must be a considerable and indeterminate margin of possible error in any such measurement. The island is about three times the size of Long Island, which was in 1890 perhaps the largest insular division of the United States. It is also slightly greater than the eastern shore of Maryland of 141 square miles. . . . Porto Rico has 261 persons to a square mile. This density of population is about the same as in Massachusetts twice that in New York State, and thrice that in Ohio. It is more than seven times that of Cuba and not much less than twice that of Habana province.

"The people of Porto Rico are, in the main, a rural community. There are no large cities in the island, the two largest being San Juan, which, regarding the entire municipal district as a city, had a population of 32,048, and Ponce, which with its port constituted practically one city, with a population of 27,952. These are the only two cities exceeding 25,000 inhabitants. The next city of magnitude is Mayaguez, on the west coast, with a population of 15,187. The only other city exceeding 8,000 inhabitants is Arecibo, with a population of 8,008. The total urban population of the island contained in cities exceeding 8,000 inhabitants each is 83,195, or only 8.7 per cent of the population of the island. This is a much smaller proportion than in Cuba, where the corresponding figures are 22.3 per cent, or in the United States, where the corresponding proportion in 1890 was 29.2 per cent. There are in Porto Rico 57 cities, each having a population of 1,000 or more. The total urban population of the island, under this definition, numbers 203,792, or 21.4 per cent of the total number of inhabitants of the island. Similar figures for Cuba show 47.1 per cent of the population of that island."—*Census of Porto Rico, Bulletin No. 1*.

A. D. 1899-1900.—The question of the tariff treatment of its new Territory by the United States Government.—Writing in "The Forum," November, 1899, Mr. H. K. Carroll, who had investigated the conditions in Porto Rico as a Special Commissioner of the United States government, described the obligation which, in his view, they imposed on the latter as follows: "The only free market the Puerto-rican has for his products is the island market. All the rest of the world is closed to him. He cannot even buy in a free market, everything he buys as well as everything he sells being subject to duties. This is the penalty of independence; but Porto Rico is not, and does not want to be, independent. She wants such commercial relations with us as Alaska, New Mexico, and Arizona have, and desires a territorial form of government. I am of the opinion that we cannot refuse these reasonable requests without doing great injustice to Porto Rico. It must be remembered that we sought Porto Rico; for Porto Rico did not seek us. We wrested her from the sovereignty of Spain, without asking her if she desired to change her allegiance. We were of the opinion that she was not justly treated by Spain; that she was governed in the interests of the mother country solely; that she was oppressed and overtaxed and denied a proper

measure of home rule; and that in consequence we were serving the cause of humanity by taking the chains that bound her. This was the Puerto-rican thought also. They wanted our troops and our control. They were to turn their backs on the history of the past and begin under the glorious Republic of the United States a new and more prosperous career. They are disappointed, perhaps unreasonably; but their new life has not already begun. They are disappointed. They look to the President for recommendation, and to Congress to adopt a system of government which will make the island a Territory, equal in rank and rights and privileges to existing Territories. They ought not to be disappointed without the best and strongest reasons. Three reasons are mentioned in opposition to the granting of territorial government to Porto Rico. First, admission as a Territory implies ultimate admission to statehood, and the likelihood for Islands separated as Hawaii and Porto Rico are by from 1,200 to 2,500 miles from the United States is not to be thought of for a moment. Second, territorial organization involves the relinquishment of customs duties, and the cane and tobacco growers of our West India possession would have free access to the markets of the United States, and thus come into increasing competition with our own farmers. Third, the people of Porto Rico are not competent for the measure of self government which the territorial system provides."

This most reasonable and just view of the duty of the American people to their new fellow citizens received strong endorsement from higher official authority in the subsequent annual report of the Secretary of War, who said: "It is plain that it is essential to the prosperity of the island that she should receive substantially the same treatment at our hands as she received from Spain while a Spanish colony, and that the markets of the United States should be opened to her as were the markets of Spain and Cuba before the transfer of allegiance. Congress has the legal right to regulate the customs duties between the United States and Porto Rico as it pleases; but the highest considerations of justice and good faith demand that we should not disappoint the confident expectation of sharing in our prosperity with which the people of Porto Rico so gladly transferred their allegiance to the United States, and that we should treat the interests of this people as our own; and I would most strongly urge that the customs duties between Porto Rico and the United States be removed."—*Message and Documents, Abridgement, 1899-1900, v. 2, p. 757*.

And, finally, the President of the United States, in his Message to Congress December 5, 1899, gave his high authority to the declaration that this duty of his government to Porto Rico was "plain". "It must be borne in mind," he said, "that since the cession Porto Rico has been denied the principal markets she had long enjoyed and our tariffs have been continually shut her products as when she was under Spanish sovereignty. The markets of Spain are closed to her products except upon terms to which the commerce of all nations is subjected. The island of Cuba, which used to buy her cattle and tobacco without customs duties, now imposes the same duties upon these products as before on other country entering her ports. She is there-

free status, free intercourse with Spain and Cuba, without any compensating benefits in this respect. It is a life was little known and not in the hands of the people and therefore there was no incentive for this one of her chief products. The masses of the United States should be protected against the products. Our plain duty is to protect our customs tariffs between the United States and Porto Rico, and give her products free access to our markets." *Manning and Johnson, The Government of P. R., p. 24.*

Notwithstanding all which high official acknowledged and declarations of obligation and duty on the part of the Republic of the United States to the people of the island which could be wrested from Spain certain interests in the former that subjected to competition from the latter were able to secure legislation which declared the performance of the "plain duty" required. An Act of Congress which the President approved on the 12th of April, 1900, "temporarily to provide revenues and a civil government for Porto Rico and for other purposes," enacted as follows:

SEC. 3. That on and after the passage of this Act all merchandise coming into the United States from Porto Rico and coming into Porto Rico from the United States shall be entered at the several ports of entry upon payment of fifteen per centum of the duties which are required to be levied, collected and paid upon like articles of merchandise imported from foreign countries, and in addition thereto upon articles of merchandise of Porto Rican manufacture coming into the United States and withdrawn for consumption or sale upon payment of a tax equal to the internal revenue tax imposed in the United States upon the like articles of merchandise of domestic manufacture, such tax to be paid by means of revenue stamps or stamps to be purchased and provided by the Commissioner of Internal Revenue and to be procured from the collector of internal revenue at or most convenient to the port of entry of said merchandise in the United States, and to be affixed under such regulations as the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury shall prescribe, and on all articles of merchandise of United States manufacture coming into Porto Rico in addition to the duty above provided upon payment of a tax equal in rate and amount to the internal revenue tax imposed in Porto Rico upon the like articles of Porto Rican manufacture. Provided, That on and after the date when this Act shall take effect, all merchandise and articles except coffee, not dutiable under the tariff laws of the United States and all merchandise and articles entered in Porto Rico prior to that date under orders heretofore made by the Secretary of War, shall be admitted into the several ports thereof, when imported from the United States free of duty, all laws or parts of laws to the contrary notwithstanding; and whenever the legislative assembly of Porto Rico shall have enacted and put into operation a system of local taxation to meet the necessities of the government of Porto Rico, by this Act established, and they by resolution duly passed so notify the President he shall make proclamation thereof, and thereupon all tariff duties on merchandise and articles going into Porto Rico from the United States or coming into the United States from Porto Rico shall cease, and from and after

such date all such merchandise and articles shall be entered at the several ports of entry free of duty, and in no event shall any duties be collected after the first day of March, next on hundred and twenty million merchandise and articles going into Porto Rico from the United States or coming into the United States from Porto Rico.

SEC. 4. That the duties and taxes collected in Porto Rico in pursuance of this Act, less the cost of collecting the same, and the gross amount of all collections of duties and taxes in the United States upon articles of merchandise coming from Porto Rico shall not be conveyed to the general fund of the Treasury, but shall be held as a separate fund, and shall be placed at the disposal of the President to be used for the government and benefit of Porto Rico, until the government of Porto Rico herein provided for shall have been organized, when all moneys therein so collected under the provisions hereof then expended shall be transferred to the local treasury of Porto Rico, and the Secretary of the Treasury shall designate the several ports and sub-ports of entry in Porto Rico and shall make such rules and regulations and appoint such agents as may be necessary to collect the duties and taxes authorized to be levied, collected, and paid in Porto Rico by the provisions of this Act, and he shall fix the compensation and provide for the payment thereof of all such officers, agents, and assistants as he may find it necessary to employ to carry out the provisions hereof. Provided, however, That as soon as a civil government for Porto Rico shall have been organized in accordance with the provisions of this Act and notice thereof shall have been given to the President he shall make proclamation thereof and there after all collections of duties and taxes in Porto Rico under the provisions of this Act shall be paid into the treasury of Porto Rico to be expended as required by law for the government and benefit thereof instead of being paid into the Treasury of the United States.

A. D. 1900 (April). Act to provide temporarily for the civil government of the island.

The fundamental provisions of the Act of the Congress of the United States to provide temporarily for the civil government of Porto Rico, which the President approved April 12, 1900 are the following:

SEC. 6. That the capital of Porto Rico shall be at the city of San Juan, and the seat of government shall be maintained there.

SEC. 7. That all individuals continuing to reside therein who were Spanish subjects on the eleventh day of April, eighteen hundred and ninety-nine, and then resided in Porto Rico, and their children born subsequent thereto, shall be deemed and held to be citizens of Porto Rico, and as such entitled to the protection of the United States, except such as shall have elected to preserve their allegiance to the Crown of Spain on or before the eleventh day of April, nineteen hundred, in accordance with the provisions of the treaty of peace between the United States and Spain entered into on the eleventh day of April, eighteen hundred and ninety-nine, and they together with such citizens of the United States as may reside in Porto Rico shall constitute a body politic under the name of The People of Porto Rico with governmental powers as hereinafter conferred and with power to sue and be sued as such.

"SEC. 8. That the laws and ordinances of Porto Rico now in force shall continue in full force and effect, except as altered, amended, or modified hereinafter or as altered or modified by military orders and decrees in force when this Act shall take effect, and so far as the same are not inconsistent or in conflict with the statutory laws of the United States not locally inapplicable, or the provisions hereof, until altered, amended, or repealed by the legislative authority hereinafter provided for Porto Rico or by Act of Congress of the United States. Provided, That so much of the law which was in force at the time of cession, April eleventh, eighteen hundred and ninety nine, forbidding the marriage of priests, ministers, or followers of any faith because of vows they may have taken, being paragraph four, article eighty three, chapter three, civil code, and which was continued by the order of the secretary of justice of Porto Rico, dated March seventeenth, eighteen hundred and ninety nine, and promulgated by Major General Guy V. Henry, United States Volunteers, is hereby repealed and annulled, and all persons lawfully married in Porto Rico shall have all the rights and remedies conferred by law upon parties to either civil or religious marriages. And provided further, That paragraph one, article one hundred and five, section four, divorce, civil code, and paragraph two, section nineteen, of the order of the minister of justice of Porto Rico, dated March seventeenth, eighteen hundred and ninety nine, and promulgated by Major General Guy V. Henry, United States Volunteers, be, and the same hereby are, so amended as to read: 'Adultery on the part of either the husband or the wife.'

"SEC. 14. That the statutory laws of the United States not locally inapplicable, except as hereinbefore or hereinafter otherwise provided, shall have the same force and effect in Porto Rico as in the United States, except the internal-revenue laws, which, in view of the provisions of section three, shall not have force and effect in Porto Rico.

"SEC. 15. That the legislative authority hereinafter provided shall have power by due enactment to amend, alter, modify, or repeal any law or ordinance, civil or criminal, continued in force by this Act, as it may from time to time see fit.

"SEC. 16. That all judicial process shall run in the name of 'United States of America, vs: the President of the United States,' and all criminal or penal prosecutions in the local courts shall be conducted in the name and by the authority of 'The People of Porto Rico'; and all officials authorized by this Act shall before entering upon the duties of their respective offices take an oath to support the Constitution of the United States and the laws of Porto Rico.

"SEC. 17. That the official title of the chief executive officer shall be 'The Governor of Porto Rico.' He shall be appointed by the President, by and with the advice and consent of the Senate; he shall hold his office for a term of four years and until his successor is chosen and qualified unless sooner removed by the President; he shall reside in Porto Rico during his official incumbency, and shall maintain his office at the seat of government; he may grant pardons and reprieves, and remit fines and forfeitures for offenses against the laws of Porto Rico, and reprieves for offenses against the laws of the United

States, until the decision of the President be ascertained; he shall commission all officers; he may be authorized to appoint and remove any legislation enacted, as hereinafter provided; he shall be the commander in chief of the militia, and shall at all times faithfully execute the laws, and he shall in that behalf have all the powers of governors of the Territories of the United States that are not locally inapplicable; and he shall, annually, and at such other times as he may be required, make official report of the transactions of the government in Porto Rico to the Secretary of State, to the President of the United States. Provided, That the President may, in his discretion, delegate and assign to him any executive duties and functions as may be performed with law be so delegated and assigned.

"SEC. 18. That there shall be appointed by the President, by and with the advice and consent of the Senate, for the period of four years, unless sooner removed by the President, a secretary, an attorney general, a treasurer, an auditor, a commissioner of the Interior, and a commissioner of education, each of whom shall reside in Porto Rico during his official incumbency, and have the powers and duties hereinafter provided for them, respectively, and who, together with five other persons of good repute, to be appointed by the President for a like term of four years, by and with the advice and consent of the Senate, shall constitute an executive council, at least five of whom shall be native inhabitants of Porto Rico, and, in addition to the legislative duties hereinafter imposed upon them as a body, shall exercise such powers and perform such duties as are hereinafter provided for them, respectively, and who shall have power to employ all necessary deputies and assistants for the proper discharge of their duties as such officers and as such executive council.

"SEC. 27. That all local legislative powers hereby granted shall be vested in a legislative assembly which shall consist of two houses, one the executive council, as hereinbefore constituted, and the other a house of delegates, to consist of thirty five members elected biennially by the qualified voters as hereinafter provided; and the two houses thus constituted shall be designated 'The legislative assembly of Porto Rico.'

"SEC. 28. That for the purposes of such elections Porto Rico shall be divided by the executive council into seven districts, composed of contiguous territory and as nearly equal as may be in population, and each district shall be entitled to five members of the house of delegates.

"SEC. 29. That the first election for delegates shall be held on such date and under such regulations as to ballots and voting as the executive council may prescribe. At such elections all citizens of Porto Rico shall be allowed to vote who have been bona fide residents for one year and who possess the other qualifications of voters under the laws and military orders in force on the first day of March, 1900, subject to such modifications and additional qualifications and such regulations and restrictions as to registration as may be prescribed by the executive council.

"SEC. 32. That the legislative authority hereby provided shall extend to all matters of a legislative character not locally inapplicable, including power to create, consolidate, and reorganize the municipalities, so far as may be necessary, and to provide and repeal laws and ordinances there-

and the power to alter, amend, modify, repeal, or annul all laws and ordinances of the island now in force in Porto Rico or any city or district thereof, not inconsistent with the provisions hereof. Provided, That all grants of franchises, rights, or concessions of a public or quasi-public nature shall be made by the executive power, with the approval of the governor, and no franchises granted in Porto Rico shall be subject to Congress, which hereby reserves the power to alter or modify the same.

Section 11. That the judicial power shall be vested in the courts and tribunals of Porto Rico already established and now in operation, in the municipal courts.

Section 12. That Porto Rico shall constitute a district to be called "the district of Porto Rico," and the President, by and with the advice and consent of the Senate, shall appoint a district attorney and a marshal for said district, each for a term of four years, unless sooner removed by the President. The district attorney and marshal shall be called the district attorneys of the United States for Porto Rico.

Section 13. That writs of error and appeals from the decisions of the supreme court of Porto Rico and the district court of the United States may be allowed and may be taken to the Supreme Court of the United States in the same manner and under the same regulations and in the same cases as from the supreme courts of the States of the United States.

Section 14. That the qualified voters of Porto Rico shall on the first Tuesday after the first Monday of November, anno Domini nineteen hundred and one, and every two years thereafter, choose a district commissioner to the United States, who shall be entitled to official recognition as such in all Departments, upon presentation to the Department of State of a certificate of election of the governor of Porto Rico, and who shall be entitled to salary, payable monthly by the United States at the rate of five thousand dollars per annum. Provided, That no person shall be eligible to such election who is not a born citizen of Porto Rico, who is not thirty years of age, and who does not read and write the English language.

Section 15. That a commission, to consist of three members at least one of whom shall be a native-born citizen of Porto Rico, shall be appointed by the President, by and with the advice and consent of the Senate, to compile and revise the laws of Porto Rico, also the various codes of procedure and systems of municipal government now in force, and to frame and report such legislation as may be necessary to make a simple, harmonious, and economical government, establish justice, and secure prompt and efficient administration, and create a general system of education and public instruction, provide buildings and funds for the organization and simplification of all the methods of raising revenue, and make all other provisions that may be necessary to secure and extend the benefits of a republican form of government to all the inhabitants of Porto Rico.

A. D. 1900. May. Organization of civil government. Appointment of Governor Allen. Under the Act to establish civil government in Porto Rico, Hon. Charles H. Allen, formerly a representative in Congress from Massachusetts, and lately Assistant Secretary of the

Navy, was appointed Governor of Porto Rico, and on May 1st, 1900, he took possession of the island.

THE EDUCATIONAL SYSTEM

At the time of the American occupation of Porto Rico, the educational system was in a very backward state. There were only a few schools, and the teachers were poorly paid. The American government, upon taking possession of the island, immediately set to work to improve the educational system. It established a normal school for the training of teachers, and it provided for the payment of salaries to the teachers. The result has been a rapid improvement in the educational system of Porto Rico.

In 1898 there were 47 Americans in the teaching force of the island. Since October 1, 1900, the number has increased to 100. The commissioner estimates a class of teachers who are "seekers after novelty and new experiences," who imposed upon the administration of the school, and who used the salary and position of teacher solely to seek a new country for a year and then return. The people of Porto Rico have patiently borne with these adventures, and quietly longed for their departure. This class of teachers is now gone and the newly selected American teachers have some knowledge of Spanish and are graduates of universities and colleges and normal schools in the States, and are for the most part young men and women of ability and discretion. The salaries of American teachers were fixed by law at \$10 per month for nine months in cities of less than 5,000 population. In cities of larger population the salary was \$20 per month for nine months and \$10 for the remainder of the year. The salary was inadequate although at the time the salaries were fixed the War Department provided free transportation from and to the United States. This transportation may now be withdrawn at any time, and the small inducement held out by the meager salary offered to teachers is not calculated to invite the best class of them to the island.

The new normal and industrial school at P. A. Jardo, which was to have been established by the joint efforts of the local municipality and the American Government, was only so far advanced that the land had been purchased by the end of September, 1900. The normal department was opened October 1, in a rental building, while the industrial department cannot be opened until suitable quarters are provided. The commissioner recommends that the United States make this place the site of an agricultural experiment station for which it is pre-eminently fitted. On account of the industries of the country—coffee, sugar, tobacco, and fruit—agriculture could be well studied here, and free boarding, lodging, and tuition would be given the students, who would be for the most part poor boys and girls.

As to the school accommodation, the commissioner states that there are no public school buildings in Porto Rico. The schools are conducted in rental houses or rooms which are often unfit for the purpose, and the hygienic conditions are bad. There is a wide field for rather a demand for improvement in this direction, as well as in the school equipment and material.

RAILWAY, Cape to Cairo.—A line now [1899] runs northward from Cape Town to Bulawayo in Rhodesia, a distance of 1,360 miles and is being pushed still farther northward. From Bulawayo to Lake Tanganyika is about 1,000 miles, and this Mr Rhodes hopes to reach by 1900. Lake Tanganyika is 400 miles long, and it is likely that its waters will be utilized for a time at least for transferring northwardly the freight and passengers reaching its southern end. Mention the railroad from Cairo is being pushed southwardly to meet the line which is coming from the Cape northwardly. It has already nearly been constructed to Athara, where American contractors have just pushed the steel bridge across the river which British bridge-builders considered impassable, and the line is being pushed forward to reach them from that point. Khartoum is 1,500 miles from Cairo, so that when completed the section from Athara to Khartoum is completed, as it will be within a few months the two separate lines will be from Khartoum to the north end of Lake Tanganyika a distance of 4,000 miles, and the 950 miles from the southern end of Lake Tanganyika to Bulawayo, for 2,500 miles made. Thus of the necessary

land length assuming that at least the 1,000 length of Lake Tanganyika will be utilized, about one half will be finished at completion of the section from Athara to Khartoum within the next few months. The 2,500 miles will, it is estimated, cost \$60,000,000 and Mr Rhodes confidently predicts completion before the year 1910. D. P. Ans. *Present and Future of Africa* (Dec. 1899) is also in this vol., AFRICA. A D 1899. Of course, the plans and calculations of Mr Cecil Rhodes have been seriously retarded by the South African War. He may have anticipated the war, but not the length and cost of it.

RAILWAY, The Intercontinental, or "Three Americas." One of the results of the International American Conference held in Washington in 1890-91 was its recommendation that an International Commission be created to ascertain the feasibility, the available location for a railroad connecting the countries of South and Central America with Mexico and the United States. The recommendation was cordially endorsed by the United States, and was submitted to the President in submitting the report of Mr Harrison, who transmitted it to Congress, that an appropriation be made to conduct surveys. In the same act which authorized the establishment of the Bureau of the

NEW WAY

the Diplomatic and Consular Appointments Act of 14 August 1890, the International Commission was created. It comprised 14 members, three Commissioners from the United States and 11 from the other American Republics, for a term of 2 years, subject to re-election by the International American Commission on General Demographic Statistics, about the expiring of its term, to make the necessary extension. The United States on the Commission were to participate

A. J. Cassel, Harry G. Davis, and eleven other Republicans joined in the Commission. The report of March, 1890, is in two volumes, of maps and profiles exhibiting a summary of the country from Mexico through Central America to Ecuador and Panama, South America to the present observation. The officers making the expedition from the best local information derived and then returning to Bolivia, Argentina, Brazil, Paraguay, Chile and Venezuela. The purpose of distances as follows: Division from Ayacucho, Central Mexico border to Rio Grande, 500 miles; from Rio Grande to Argentina, 544.60 miles; from Rio Grande to New York, 1,000 miles; and from that point to the Atlantic Ocean, 1,644.3 miles. Total, 3,149.9 miles. The distance from Rio Grande to the Atlantic Ocean, by the shortest way to be constructed, is 1,000 miles, but 544.60 miles is given the cost of travel, and the cost of that portion of the route constructed to compare the amounts to \$174,290,214.84.

Afghanistan was on foot among the Russians. From Tblis, it was said, their plans contemplated a line of rail to Teheran; thence to be extended by one branch, southward, via Isfahan, to the Persian Gulf, and by another branch westward to Herat, in Afghanistan. From their Central Asian acquisitions they had advanced their railway to within 70 miles of Herat, and were said to be confidently expecting to push it on, through Kandahar and through Baluchistan, to the Arabian Sea. If these extensive plans could be carried out, and if Russian influence in Persia, said to be growing fast, should become actually controlling, the Muscovite Power would have made an enormous gain, by planting itself on the shores of the Indian Ocean. How far Russia can continue to press forward in this line of policy without collision with Great Britain and with Germany—which seems to have aims in the same

direction, through Asiatic Turkey—is an interesting question for the future.

The following is from a despatch to the "London Times" from its correspondent at Moscow, Feb. 24, 1901: "According to trustworthy information from Teheran, Russia is preparing to be active just now in Persia and the Persian Gulf. . . . The road from Rosht to Teheran, which has been built by a Russian company, is of great value for European trade in the absence of agreement with Russia respecting the transit of goods through that country. European commerce dependent upon the long and expensive caravan routes via Trebizond, Bashiire, Baghdad, Mecca, &c. These occupy from four to six months.

SAKHALIN.—"Of late years . . . its increasing importance as a place of exile for Russian political and criminal offenders has invested Sakhalin with a certain interest, derived, perhaps, more from penal associations than physical resources, which latter may, when fully developed, materially affect trade and commerce in the far East. The island of Sakhalin is 584 miles in length, its breadth varying from 18 to 94 miles. The southern extremity is separated from the island of Yezo, twenty miles distant, by the Straits of La Perouse, and its western coast by the shallow Gulf of Tartary at one point barely five miles across from the mainland of Siberia. Although Dutch explorers are said to have landed here in 1633, the first reliable survey of the island was probably obtained in the year 1787 by La Perouse. Russian fur traders followed in the early part of the present century, but it was only in 1853 that disturbances having occurred with the natives, a score or so of Cossacks were stationed at Uda on the west coast. In 1867 negotiations were entered into by the Russian and Japanese Governments for joint occupation of Sakhalin, but the subsequent discovery of coal, and consequent influx of Russian convicts, rendered this arrangement highly unsatisfactory. Further negotiations, therefore,

ensued, with the result that, in 1875, the island was formally ceded to Russia, Japan receiving in exchange, the entire Kurile Archipelago.

"Sakhalin is by no means easy of access. Even during the open season (from May to September) but very few vessels visit the island, and, with the exception of the monthly arrival of convict ships from Europe, and a few small Russian trading steamers, there is no regular service with Vladivostok, which, with the exception of Nikolaevsk, is the only Siberian port whence Sakhalin may, in three days, be reached. During the winter months the island is completely ice-bound and unapproachable. Communication with the mainland is therefore maintained by means of dog sledges, and the mails for Europe are dispatched across the frozen Gulf of Tartary—a journey, under favourable circumstances, of about three months.

"Sakhalin is, for administrative purposes, divided into three districts, viz.: Kozlovsky, Kozlovsky Post in the south, Tsimovsk in the north, and Alexandrovsky Post on the western coast. The latter, which is situated in the centre of the island, is a picturesque, struggling town of 7,000 inhabitants, consisting almost entirely of officials and convicts. This is the most important port and settlement on the island, contains the largest prison, and is, moreover, the residence of the Governor of Sakhalin, a subordinate of the Governor-General of Eastern Siberia. Alexandrovsky is garrisoned by about 1,500 men, and contains large foundries and workshops for convict labour, but most of the prisoners are employed in the adjacent coal mines of Dabovsk. Kozlovsky Post, on the south coast, is the next largest settlement, containing about 1,000 convicts who are chiefly employed in agricultural pursuits. Although it may seem a paradox, the remaining prisons in the interior of the island, Derbyskaya, Rykovskaya, and Ononovskaya, are prisons in all, but huge wooden barracks in part of bolts and bars. Here, also, the only thing done is solely agricultural."—Harry de Winton, *The Island of Sakhalin* (Fortnightly Review, May, 1897).

SALVATION ARMY, The: Secession of the American Volunteers. Late account of the Army's work.—Much feeling in the American mind toward the Salvation Army, and among these feelings, and its work, was caused in January, 1880, by a murder from the London headquarters. John A. Wood, a travelling Mr. Ballington Booth, who was an American commander for nine years, was shot by Booth and Mrs. Booth had been very successful in their organization and did much for the Salvation Army work, and had won the esteem, not only of their own country, but of the American public at large. A strong movement of protest against the shooting from the field failed to change the action, which was said to be made in the necessary rule of the Army against any man in any one post. Miss Eva Booth, daughter of her father, General Booth, with her husband, General Booth, and Commandant John Booth from Canada, came to New York City, endeavoring to heal a threatened rupture of the ranks, but their mission failed. When Ballington Booth resigned his office, he came to the Salvation Army service to return to London. After a time he and Mrs. Booth became the heads of a new organization of the "Volunteers of America" to do the work not in rivalry with that of the Salvation Army, but directed more towards the interests of the interest of the working people. Mrs. Booth was succeeded as Commandant in America by a son-in-law of General Booth, Commissioner Frederick St. Clair Tucker. This account of the origin and growth of the Salvation Army seen under that heading, in the Supplement, Vol. 5 of the original edition of the work, in Vol. 4 of the revised edition.

work has been accomplished in that part of the programme of the Salvation Army known as the "Poor St. England Scheme." General Booth, in 1900, an extended account in the "St. England Strand." He stated that the public had been misled altogether for his scheme about 80 years ago. "It is a deformed piglet," he wrote, "and no intelligent admirers of the scheme and its followers are aware of its progress, whether the scheme has benefited the wretched classes for whom it was originated have been greater within the last 80 years than hitherto. The copies of our programme have been taken both at home and abroad, and have been sold." The representatives of the scheme have been specially charged with the duty of making the poorest classes have been made to appreciate the principles of the scheme and to show the necessity of co-operation in 21st 2. It is a chance to do this in two ways. It is a chance

SAMOAN ISLANDS

ing similar tasks themselves. The results of a study synthesizing the literature demonstrate how a teacher may overcome these barriers. The study found various institutions, such as a university, could offset the cost of dealing with different classes of the subject.

The following is a summary of the agencies which have been at work for the past year: "We have now 158 shelters and food depots for homeless men and women, 117 Sanitariums, each with its own slim sisters, 42 labor homes, 11 labor factories for the unemployed, 43 labor centers, 91 rescue homes for women, 11 labor homes for ex-convicts, several nursing institutions, 2 maternity hospitals, 1 tuberculosis home, a 250-tubing with 16 inches in forty-five minutes and 1 colored children's hospital and nursing hospital, together with a host of day and night refuges, which I can not allude to separately. The 116 numbered institutions named above, now 446, under the care of more than 2,000 trained officers and others, wholly devoted to the work of helping the poorest and most unfortunate of their fellows, and all in more or less expert of their work."

Nearly 20,000 destitute men and women are in some way or other included by the operation of the scheme every day. No one is left out, watched and otherwise humiliated, kept isolated and run to the very limit of his needs met at least in part, with some prayer and the opportunity to help others. More than 3000 ex-convicts are housed in the houses of reformation, having lost the other chance for this life, and many of the first they have ever had for redemption, but they are coming. More than 5000 women are rescued from lives of darkness and shame, are set to work in our houses each year, and the vast majority abundantly proved in the course of their respect of a large proportion of them, and the respect of virtue, goodness, and a permanent and men are employed in the trades of the State of the State working out their own redemption, and at the same time helping to solve the most difficult problems of our cities, and proving that many of the helpless, ignorant and great evils can be made into a power for the good. Over the last six years, the thousands of the State, labor, factories, and homes that might be written. No one is allowed to starve or beg or perpetrate any crime or commit suicide. It will not be long, I believe, that there is hope for all. — General Heath tells that he has always 2,000 women in the houses of the city.

[illegible]

and Germany to establish and maintain Malietoa Laupepe as King of Samoa. The treaty provided for a foreign court of justice, a municipal council for the district of Apia, with a foreign president thereof, authorized to advise the King; a tribunal for the settlement of native and foreign land titles, and a revenue system for the King's domain. It entailed upon the three powers that part of the cost of the new Government not met by the revenue of the islands. Early in the life of this triple protectorate the native dissensions it was designed to quell revived. Rivals defied the authority of the new King, refusing to pay taxes and demanding the election of a ruler by native suffrage. Mataafa, an aspirant to the throne and a large number of his native adherents were in open rebellion on one of the islands. Quite lately, at the request of the other powers and in fulfillment of its treaty obligation, this Government agreed to unite in a joint military movement of such dimensions as would probably secure the surrender of the insurgents without bloodshed. The war ship Philadelphia was accordingly put under orders for Samoa, but before she arrived the threatened conflict was precipitated by King Malietoa's attack upon the insurgent camp. Mataafa was defeated and a number of his men killed. The British and German naval vessels present subsequently secured the surrender of Mataafa and his adherents. The defeated chief and two of his principal supporters were deported to a German island of the Marshall group, where they are held as prisoners under the joint responsibility and cost of the three powers. This incident and the events leading up to it signally illustrate the impolicy of entangling alliances with foreign powers.—*United States, Message and Documents (Monthly), 1893-4.*

In his next annual Message, December 3, 1894, the President thus summarized the later situation in the islands: "The suppression of the Mataafa insurrection by the powers and the subsequent banishment of the leader and eleven other chiefs, as recited in my last message, did not bring lasting peace to the islands. Formidable uprisings continued, and finally a rebellion broke out in the capital island, Upolu, headed in Anua, the western district, by the younger Tamasese, and in Atua, the eastern district, by other leaders. The insurgents ravaged the country and fought the Government's troops up to the very doors of Apia. The King again appealed to the powers for help, and the combined British and German naval forces reduced the Atuaans to apparent subjection, not, however, without considerable loss to the natives. A few days later Tamasese and his adherents, fearing the ships and the marines, professed submission. Reports received from our agents at Apia do not justify the belief that the peace thus brought about will be of long duration. It is their conviction that the natives are not hostile to the present Government, that such of them as profess loyalty to it do so from fear of the powers, and that it would speedily go to pieces if the war ships were withdrawn. . . .

The present Government has utterly failed to correct, it indeed it has not aggravated, the very evils it was intended to prevent. It has not stimulated our commerce with the islands. Our participation in its establishment against the wishes of the natives was in plain defiance of the conservative teachings and warnings of the wise and patriotic men who laid the foundations of

our free institutions, and I invite an expression of the judgment of Congress on the propriety of steps being taken by this Government to secure the withdrawal from its engagements with the other powers on some reasonable terms, and to restore judicial to any of our existing rights."—*United States, Message and Documents (Monthly), 1894-5.*—In the Message of 1895 the subject was again pressed on the attention of Congress with a result.

In August, 1898, Malietoa Laupepe died. By the Berlin Treaty of 1899 "it was provided that in case any question should arise in Samoa respecting the rightful election of King, or of any other Chief claiming authority over the islands, or respecting the validity of the powers when the King or any Chief might claim in the exercise of his office, such question should be referred to war, but should be presented for decision to the Chief Justice of Samoa, who should decide by his writing, conformably to the provisions of the Final Act, and to the laws and customs of Samoa, in case of conflict therewith, and that the Signatory Governments would accept and abide by such decision. After the death of Malietoa the election of views took place between the Powers, and it was agreed that there should be no interference with the right of the Samoans to elect a King, and that the election should proceed smoothly in accordance with the provisions of the Final Act. Some time elapsed before any action was taken, pending the completion of certain ceremonial usages customary in Samoa on the death of a High Chief. . . . As soon as the ceremonial usages were at an end, deliberation and discussion among the Chiefs ensued. There were for the first instance several candidates for the succession. Their number was eventually reduced to two: 1, Malietoa Tamu, the son of the late King; 2, The High Chief Mataafa. The latter had been in rebellion against Malietoa in 1894, but had suffered defeat, and with other Chiefs had been deported, by agreement between the three Powers, to the Marshall Islands. . . . The recommendation of the Consular officers to the Powers, in July 1898, concurred with the latter. . . . On the 19th September, Mataafa and the other exiled Chiefs landed in Samoa. It does not appear that he took any overt steps to claim the vacant throne, but a section of the natives pronounced in his favour and announced on the 12th November to the Consuls and to the Chief Justice that he had been duly elected King. . . . On the 13th November the opposing faction declared that the real election of a King had not taken place, and on the following day announced that their choice had fallen upon Malietoa Tamu. Both parties appealed to Mr. Chambers, the Chief Justice, who considered himself then in position to take cognizance of the matter, according to the provisions of the Final Act, a question having arisen 'in Samoa respecting the right of election or appointment of King.'—*Great Britain, Parliamentary Publications (Papers by Command of the House of Commons), No. 1, 1899.*

The decision of the Chief Justice was in favour of Malietoa Tamu, and the adherents of Mataafa took up arms, defeating those of the latter candidate and driving many of them to take refuge on British and German ships. Subsequent events were related by the President of the United States in his Message to Congress, Dec. 5, 1899, as follows: "In this conflict the

A joint commission of representatives of the United States, Germany, and Great Britain was sent to Samoa to investigate the situation and provide a temporary remedy. By its active efforts a peaceful solution was reached for the time being, the kingship being abolished and a provisional government established. Recommendations unanimously made by the commission for a permanent adjustment of the Samoan question were taken under consideration by the three powers parties to the General Act. But the more they were examined the more evident it became that a radical change was necessary in the relations of the powers to Samoa. The inconveniences and possible perils of the tripartite scheme of supervision and control in the Samoan group by powers having little interest in common in that quarter beyond commercial rivalry had been more emphatically by the recent events. The suggested remedy of the Joint Commission, like the scheme it aimed to replace, amounted to what has been styled a "tridominium," being the exercise of the functions of sovereignty by an amicable agreement of three powers. The question had become far more intricate and embarrassing from every point of view than it was when my predecessor, in 1894, summed up its perplexities and condemned the participation in it by the United States. The arrangement under which Samoa was administered had proved impracticable and unacceptable to all the powers concerned. To withdraw from the agreement and abandon the islands to Germany and Great Britain would not be compatible with our interests in the archipelago. To relinquish our rights in the harbor of Pago Pago, the best anchorage in the Pacific, the occupancy of which had been leased to the United States in 1878 by the first foreign treaty ever concluded by Samoa, was not the thought of either as regards the needs of our Navy or the interests of our growing commerce with the East. We could not have considered any proposition for the abrogation of the tripartite control which did not confirm us in all our rights and safeguard all our national interests in the islands. Our views commended themselves to the other powers. A satisfactory arrangement was concluded between the Governments of Germany and of England, by virtue of which England retired from Samoa in view of compensations in other directions, and both powers renounced in favor of the United States all their rights and claims over and in respect to that portion of the group lying to the east of the one hundred and seventy-first degree of west longitude, embracing the islands of Tutuila, Ofu, Olosega, and Muniua.—*United States, Message and Documents (Abridgment), 1899-1900*, 1.

The compensations to England "in other directions" were given by Germany, in the following provisions of a treaty signed at London, November 11, 1899:

"Art. II. Germany renounces in favour of Great Britain all her rights over the Tonga Islands, including Vavau, and over Savage Island including the right of establishing a naval station and coaling station, and the right of extra-territoriality in the said islands. . . . She recognizes as falling to Great Britain those of the Solomon Islands, at present belonging to Germany, which are situated to the east and southeast of the island of Bougainville, which

latter shall continue to belong to Germany, together with the island of Buka, which forms part of it. The western portion of the neutral zone in West Africa as defined in Article V of the present Convention, shall also fall to the share of Great Britain.

"Art. IV. The arrangement at present existing between Germany and Great Britain and concerning the right of Germany to freely engage labourers in the Solomon Islands belonging to Great Britain shall be equally extended to those of the Solomon Islands mentioned in Article II, which fall to the share of Great Britain.

"Art. V. In the neutral zone the frontier between the German and English territories shall be formed by the River Dakaas, far as the point of its intersection with the 9th degree of north latitude, thence the frontier shall continue to the north, leaving Mozozu to Great Britain, and shall be fixed on the spot by a Mixed Commission of the two Powers, in such manner that Gambia and all the territories of Mamprusi shall fall to Great Britain, and that Yendi and all the territories of Chakosi shall fall to Germany.

"Art. VI. Germany is prepared to take into consideration, as much and as far as possible, the wishes which the Government of Great Britain may express with regard to the development of the reciprocal Tariffs in the territories of Togo and of the Gold Coast.

"Art. VII. Germany renounces her rights of extra-territoriality in Zanzibar, but it is at the same time understood that this renunciation shall not effectively come into force till such time as the rights of extra-territoriality enjoyed thereby other nations shall be abolished."

To the treaty was appended the following "Declaration": "It is clearly understood that by Article II of the Convention signed today, Germany consents that the whole group of the Howe Islands, which forms part of the Solomon Islands, shall fall to Great Britain. It is also understood that the stipulations of the Declaration between the two Governments signed at Berlin on the 19th April, 1886 respecting freedom of commerce in the Western Pacific apply to the islands mentioned in the aforesaid Convention. It is similarly understood that the arrangement at present in force as to the engagement of labourers by Germans in the Solomon Islands permits Germans to engage those labourers on the same conditions as those which are or which shall be imposed on British subjects nonresident in those islands."—*Great Britain, Parliamentary Publications (Papers by Command): Treaty Series, No. 7, 1900*.

Article III of the general treaty between the United States, Germany and Great Britain stipulated: "It is understood and agreed that each of the three signatory Powers shall continue to enjoy, in respect to their commerce and commercial vessels, in all the islands of the Samoan group, privileges and conditions equal to those enjoyed by the sovereign Power in all ports which may be open to the commerce of either of them."—*United States, 56th Cong., 1st Sess., Senate Doc. No. 157*.

On the 17th of April, 1900, an "instrument of cession" was signed by the marks of twenty-two chiefs, conveying to the United States the islands of the Samoan group lying east of the 171st degree of west longitude, and the American flag was raised over the naval station at Pago Pago.

From Pago Pago, March 27, 1901 a Press despatch announced: "The natives under the United States Government number 5,800, according to a census just taken, while the natives in the other Islands under German rule number 32,000. The population has increased very slightly in the last thirty years, and the main cause of this failure to increase is the infant mortality, due to the violation of the simplest health principles in the care and diet of children. . . . Reports from the six islands under United States control show that the natives are improving in general conditions, and that they show a desire to keep their houses neat and to educate their children. Not a single native has been arrested for drunkenness since the Americans assumed control of Tutuila Island."

SAN FRANCISCO: A. D. 1898.—New city charter.—A city charter of a quite new and experimental character was adopted by popular vote in May, to go into effect at the beginning of the year 1900. Its main features were described at the time by the "New York Tribune," as follows: "The formation of this charter is an advanced example of the exercise of municipal home rule. The constitution of California gives the cities of the state the uncommon privilege of framing their own charters subject simply to the veto power of the legislature. Exercising that right, the people, acting through fifteen freeholders, elected for that purpose, have drawn up the new charter. . . . If the legislature approves, it will become the local constitution. The charter provides for its own amendment by the people without appeal to the legislature. So the present provisions of that instrument may be only a form to be entirely remodeled by the city at its own pleasure until it has no resemblance to the laws to which the state authorities gave approval. That is an extreme delegation of powers, such as we think has never before been made in an American state. The mayor has large powers of appointment and removal. He can suspend all elected officers except the supervisors—the city legislators—who may remove those whom he suspends, and he may remove at any time for cause all appointive officers. The elective list is large, for, though there are only eighteen supervisors, the number of places filled by election each year is thirty. This is a great departure

from the charter-making practice recently prevalent, which has tended to the election of a few administrative officers who are responsible for the selection of agents in different departments. Attempt is made to centre responsibility in the mayor, but the supervisors and the people both can pass ordinances likely to interfere with that responsibility. So the charter is as far as possible from inaugurating the one-man rule which has been much advocated as the cure of the ills which spring from a municipal administration unlimited by no uniform purpose or intelligence."

Chemistry and Physics: Acetylene Gas.—A new gas has been known since 1832, when it was discovered by Edmund Davy; but it remained a mere laboratory product until 1892, when, accidentally on the production, in an electric furnace, of calcium carbide, which water decomposes readily yielding the gas in question, the American discoverer was Mr. Thomas Wilson, a Canadian electrician, residing at Spray, North Carolina; his French rival was Professor H. Moissan, of Paris. The priority of Mr. Wilson in the discovery, or in the announcement of it, is most generally recognized, and he secured patents in the United States and elsewhere. Electrical developments since 1892 have economized the manufacture of calcium carbide, by electric heat acting on a mixture of lime and coke, and it has become an important commercial product, at Niagara Falls and other seats of electric power, being used acetylene gas into extensive use as an illuminant. There have been dangers and difficulties in the use, however, not easily overcome.

Chemistry and Physics: Discovery of Argon and Helium.—After Lord Rayleigh, in 1892, had proved that nitrogen obtained from chemical combinations was about one half per cent lighter than that obtained from the atmosphere, a determination that was again verified in 1894, Lord Rayleigh and Professor Ramsay separated from atmospheric nitrogen an element, a gas of great density which, by reason of its chemical indifference, they called argon. They proved that this gas formed about 0.8 or 0.9 per cent of the volume of nitrogen, from which it could be separated either by incandescent magnesium or by the continued action of the electric spark. It was established beyond doubt that Cavendish produced this gas a hundred years ago by the use of the electric spark. Argon, either alone or accompanied by helium, has also been found in natural waters as well as in minerals. Its discovery in a meteorite of Augusta County, Virginia, United States of America, may perhaps lead us to ascribe to it an extra-terrestrial origin.

The physical properties of argon are very distinct, and its characteristic spectrum enables us to at once distinguish it with certainty from any other substance, but from a chemical point of view this gas is most extraordinarily inactive, and we have not yet succeeded in making it form combinations as the other elements do. This peculiarity, and also the impossibility of giving a place in the periodic system for a simple body having the molecular weight of argon, have given rise to all sorts of hypotheses relative to the nature of this gas.

Another most interesting discovery was that of helium, made by Professor Ramsay. In 1891 H. J. M. showed that uranium ore and ores of the same family when dissolved in acids or fused with alkali carbonates, or even merely heated in vacuum, may give off as much as 3 per cent of nitrogen. Professor Ramsay obtained this gas from cleveite and by means of spectroscopic

examination demonstrated the presence of argon, and in the course of his experiments. In March, 1895, he observed beside the spectrum of argon another bright yellow line that did not belong to that spectrum, and which Crookes recognized as identical with the line D that Lockyer had already observed in 1868 in the spectrum of the solar chromosphere, and which he had attributed to an element as yet unknown upon the earth—helium. The same line had also been distinguished in the spectra of other fixed stars, particularly in the spectrum of Orion, so that it may be admitted that helium exists in large quantities extra-terrestrially. On our planet it appears, on the contrary, to be very rare, and may be ranked among the rarest of elements.

Helium is the lightest of all the gases except hydrogen; Stoney deduces from this fact an explanation of the existence of these two elements in but very small quantities in a free state upon the face of the earth, while they are distributed in enormous masses throughout the universe. The comparatively small force of the earth's gravitation does not form a sufficient counterpoise to the velocity of their molecules, which therefore escape from the terrestrial atmosphere unless restrained by chemical combination. They then proceed to rotate around great centres of attraction, such as the fixed stars, in whose atmospheres these elements exist in large quantities."—C. Winkler, *The Discovery of new Elements within the last twenty five years* (Annual Report of Smithsonian Institution, 1897, p. 237, trans. from *Revue Scientifique, 4th ser.* vol. 81).

Chemistry and Physics: Liquefaction of Oxygen, Hydrogen and Air.—The most remarkable recent work in refrigeration is that of Professor James Dewar, of the Royal Institution in London. The feat of liquefying oxygen by a succession of approaches to its critical temperature has been thus described by him, in an interview which appeared in *McClure's Magazine*, November, 1893. "The process of liquefying oxygen, briefly speaking, is this: Into the outer chamber of that double compressor I introduce, through a pipe, liquid nitrous oxide gas, under a pressure of about 1,400 pounds to the square inch. I then allow it to evaporate rapidly, and thus obtain a temperature around the inner chamber of -90°C . Into this cooled inner chamber I introduce liquid ethylene, which is a gas at ordinary temperatures, under a pressure of 1,800 pounds to the square inch. When the inner chamber is full of ethylene, its rapid evaporation under exhaustion reduces the temperature to -135°C . Running through this inner chamber is a tube containing oxygen gas under a pressure of 750 pounds to the square inch. The critical point of oxygen gas—that is, the point above which no amount of pressure will reduce it to a liquid—is -115°C , but this pressure, at the temperature of -135°C , is amply sufficient to cause it to liquefy rapidly."

In May 1898, Professor Dewar, by the use of liquid oxygen, succeeded in liquefying hydrogen, producing a liquid having but one fourteenth the specific gravity of water; this exploit brought him within 21 of the absolute zero of

centigrade. He afterward reduced the liquid to solid form, attaining a temperature estimated at four to five degrees lower. Faraday and other investigators of an earlier day surmised that hydrogen, when solidified, would prove to be a metal, now that the feat of solidification has been accomplished, hydrogen astonishes the physicist by displaying itself as non-metallic.

For some years the plan was to employ a series of chemical compounds, each with a lower boiling point than its predecessor in the process, and all troublesome and hazardous in manipulation. A better method has been developed by keeping to simple air from first to last, as in the apparatus of Dr. Linder, of Dr. Thompson, and of Mr. Charles E. Tripler.

As the Tripler machine does its work on a boiler scale than either of the others, let its operation be briefly outlined: Air is first compressed to 65 pounds pressure to the square inch; through a second pump this pressure is exalted to 400 pounds, and with a third pump the pressure is carried to 2,500 pounds. After each compression the air flows through jacketed pipes where it is cooled by a stream of water. At the third condensation a valve, the secret of whose construction Mr. Tripler keeps to himself, permits part of the compressed air to flow into a pipe surrounding the tube through which the remainder is flowing. This net of expansion severely chills the imprisoned air, which at last discharges itself in liquid form—much as water does from an ordinary city faucet.—G. H. S. *Flame, Electricity and the Camera*, ch. 6 (N. Y.: Doubleday, Page & Co.).

Chemistry and Physics: Smokeless Powders.—In recent years smokeless powders have largely superseded all others. These contain usually nitrocellulose (gun cotton), or nitro glycerine, or both, made up into a plastic, coherent, and homogeneous compound of a gluey nature, and fashioned into horn-like sticks or rods by being forced under pressure, through a die plate having small holes, through which the plastic material is strained into strings like macaroni, or else is molded into tablets, pellets, or grains of cubical shape. Prominent among those who have contributed to this art are the names of Turpin, Abel and Dewar, Nobel, Maxim, Munroe, Du Pont, Bernadon and others. In the recent years of the Nineteenth Century great activity has been manifest in this field of invention. In the United States more than 600 different patents have been granted for explosives, the larger portion of them being for ultra-compounds which partake in a greater or less degree of the qualities of gun cotton or nitro glycerine.—E. W. Byrn, *Progress of Invention in the 19th Century*, p. 419.

Chemistry and Physics: X Rays.—The Discovery of Professor Röntgen.—Fresh proofs await us of the supreme rank of both electricity and photography as resources of art and science as we observe the transcendent powers evoked by their union. From this union no issue is more extraordinary, more weighty with meaning and promise, than the X-ray pictures due to Professor Wilhelm Konrad Röntgen. In these pictures he has but crowned labours which began when Sir John Herschel noticed that a peculiar blue light was diffused from a perfectly colourless solution of quinine sulphate. Professor now Sir George Stokes explained the phenomenon by showing that this blue light consists

of vibrations originally too rapid to be perceptible as they pass through the eye.

One path of approach to the discovery of Professor Röntgen was opened by Sir John Herschel, another, as important was broadened by Professor now Sir William Crookes. In 1874 and 1875 he was engaged in the researches which gave the world the Crookes tube, the tiny mill whose vanes rotate under the action of light or heat. The action of this tube upon its being placed in a glass bulb in various positions. When such a bulb incloses rubber, phosphor, or other suitable objects, and electrical discharges are directed upon them, they glow with the most brilliant luminescence known to art. Excited by a cathode ray, that is, a ray from the negative pole of an electrified Crookes bulb itself shines with a violet light, a green ray which reminds the onlooker of the fluorescence of earlier experiments.

Year by year the list of substances susceptible to luminosity in a Crookes bulb has been lengthened, and in 1894 it was the good fortune of Professor Philipp Lenard to discover a wonderful power of such a bulb. Emerging from a Crookes cathode ray which passed nearly as freely through a thin plate of aluminium as through sunshine does through a pane of glass. He had, a few years previously, discovered that metals in very thin sheets were entirely transparent (or, to use Mr. Hyndman's term, radiably) to his electric waves. This property was found by Professor Lenard to extend to the cathode ray and in a much higher degree.

The ultra-violet ray of ordinary light has the singular power of causing the gases which it traverses to become conductors of electricity, and the effect of discharging an electrified metal plate; this property is shared by cathode rays. Associated with them are the rays of still higher extraordinary powers, discovered by Professor Röntgen. In his own words let his achievement be recounted, as published in *Mr. Clark's Magazine*, April, 1896.

"I have been for a long time interested in the problem of the cathode rays from a vacuum tube as studied by Hertz and Lenard. I had followed their and other researches with great interest, and determined, as soon as I had the time, to make some researches of my own. This time I found at the close of last October. I had been at work for some days when I discovered something new. 'What was the date?' 'The 8th of November.' 'And what was the discovery?' 'I was working with a Crookes tube covered by a shield of black cardboard. A piece of barium platino-cyanide paper lay on the bench there. I had been passing a current through the tube, and I noticed a peculiar black line across the paper.' 'What of that?' 'The effect was one which could only be produced, in ordinary parlance, by the passage of light. No light could come from the tube, because the shield which covered it was impervious to any light known, even that of the electric arc.' 'And what did you think?' 'I did not think; I investigated. I assumed that the effect must have come from the tube, since its character indicated that it could come from nowhere else. I tested it. In a few minutes there was no doubt about it. Rays were coming from the tube which had a luminescent effect upon the paper. I tried it

successfully at greater and greater distances, even at two metres. It seemed at first a new kind of fluvial light. It was clearly something new, something unrecorded. 'Is it light?' 'No.' 'Is it electricity?' 'I don't know.' And the discoverer of the X rays thus stated ascidmly his conviction of their essence as has everybody else who has written on the phenomena thus far.

Having discovered the existence of a new kind of rays, I of course began to investigate what they would do. He took up a series of camera-sized photographs. It soon appeared from tests that the rays had penetrative power to a hitherto unknown. They penetrated paper, wood, and cloth with ease; and the denseness of the substance made no perceptible difference, within reasonable limits. He showed photographs of a box of laboratory weights of platinum, aluminum, and brass, they and the brassings all having been photographed from a closed box, without any indication of the box. Also a photograph of a coil of fine wire, wound on a wooden spool, the wire having been photographed and the wood omitted.

"The rays," he continued, "passed through all the metals tested, with a facility varying, roughly speaking, with the density of the metal. These phenomena I have discussed carefully in my report to the Würzburg Society, and you will find all the technical results therein stated." He showed a photograph of a small sheet of zinc. This was composed of smaller plates soldered laterally with solders of different metallic proportions. The differing lines of shadow caused by the difference in the solders were visible evidence that a new means of detecting flaws and chemical variations in metals had been found. A photograph of a compass showed the needle and dial taken through the closed brass cover. The markings of the dial were in red metallic paint, and thus interfered with the rays, and were reproduced. "Since the rays had this great penetrative power, it seemed natural that they should penetrate flesh, and so it proved in photographing the hand, as I showed you."

"Provided with a Röntgen bulb, the photographer passes from the exterior to the interior of an object, almost as if he were a sorcerer with power to transmute all things to glass. Equipped with a simple X ray apparatus, dislocations and fractures are detected by the surgeon, diseases of bones are studied, and shot, needles, and bits of glass or corroding wire within the muscles of a patient are located with exactitude. Thanks to the work of Mr. Mackenzie Davidson, the like detection of renal calculi can be looked forward to with a fair degree of certainty. The same means of exploration offers equal aid to medicine: it demonstrates the calcification of arteries, and aneurisms of the heart or of the first part of the aorta, with improved methods it may be possible to study fatty degenerations of the arteries and larger blood vessels. Dr. C. M. Monllin, addressing the Röntgen Society of London as its president, states that the fluorescent screen has now reached such a degree of perfection that the slightest movement of the heart and lungs, and the least change in the action of the diaphragm, can be watched and studied at leisure in the living subject. He considers it probable that the examination of a patient's chest with this screen

may become as much a matter of common routine as with the stethoscope today.

"Manifestly, the unseen universe, which enfolds us, is steadily being brought to the light of day. The investigations of Hertz established that the light waves which affect the eye are but one octave in a gamut which sweeps indefinitely far both above and below them. In his hands, as in those of Joseph Henry long before, electric waves found their way through the walls and floors of a house; in the Marconi telegraph these waves pass through the earth on a fog or mist or a rain storm with little or no hindrance. What does all this mean? Nothing less than that given its accordant ray, any substance whatever is permeable, and that, therefore, to communicate between any two places in the universe is simply a question of providing the right means."—G. H. S. *Flame, Electricity and the Camera*, ch. 24 (N. Y.: Doubleday, Page & Co.).

In an article made public in the "New York Tribune" of January 6, 1901, Professor John Trowbridge, of Harvard University, expressed his anticipations from the further improvement of the use of the X rays as follows: "At present all of the great hospitals of the world examine injuries of the extremities of the human body by means of these rays. In some cases the thicker portions of the body can be studied by their means. There is, however, much to be desired in the method, for in general the rays exhibit only the shadows of the bones of the extremities, or reveal at most the regions of greatest density in the body. If the muscles and tendons or the veins and arteries could be studied by means of these rays, an immense aid to surgery would result. Some experiments I have conducted with currents of great strength, lead me to believe that much can be done in this direction, for I have in certain cases obtained unmistakable traces of muscles and tendons, and the direction in which to advance is becoming clearer. The use of the X rays is not confined to the examination of the body. Together with the ultra violet rays, the X rays are used to cure cutaneous disorders. We are realizing that electricity is an important factor in health and disease. The investigations which have resulted from the discovery of these rays have opened wide vistas in the molecular world."

Electrical Science: Power.—Lighting.—Electro-chemical and Electro-metallurgical works.—The development at Niagara Falls.

"There were perhaps not more than twenty trolley cars in actual service in 1887, and these were of doubtful success. There were no regularly constituted electric railways worthy of the name. The telephone and electric lighting wires were largely overhead, and frequently the construction was of the most imperfect and temporary character. . . . Within the past eight or ten years much has been done in the perfection of thoroughly practical forms of meters and other instruments for the measurement of electric forces and quantities. While such work resides in its delicacy that demanded by watch mechanism, on the other hand the large station dynamos are examples of the heaviest machine construction. . . . A few years ago a dynamo was large if it demanded 100 or 200 horse-power to drive it, while now such machines are diminutive when compared with those of 2,000 horse-power commonly constructed. Dynamos are in

use at Niagara of 5,000 horse-power capacity. A single one of these would supply more than 50,000 incandescent lights such as are ordinarily used, or would give motion to 500 trolley cars. The period since 1887 has been marked by great extension in electric lighting by both arc and incandescent lamps. One of the chief factors in this great extension has been the application of alternating electric currents, or currents of wave-like nature, reversing their direction many times in each second. The direct or continuous current had previously occupied the field alone. But the alternating current possessed the advantage of readily permitting the sending out over a long distance of a high pressure current with but little loss and by means of comparatively small and inexpensive lines. This current, relatively dangerous, could then be exchanged for a safe low pressure current on the house wires for working the lights. The device which makes the exchange is called a transformer. It is in reality a modified induction coil—a simple structure of copper wire, sheet-iron, and insulating materials, with no moving parts to need attention or to get out of order. The properties and use of the transformer in an alternating current system were comparatively unknown before 1887, but since that time it has played a part in electric development the importance of which cannot easily be overestimated. It has been, furthermore, brought to a high degree of perfection by the persistent and painstaking effort of numerous workers. In transforming a current of high pressure to one of lower pressure, or the reverse, only a very slight loss of power or energy is suffered. On a large scale, this loss is barely 3 per cent of the energy of the transformed current. The larger sizes of transformers now in use have capacities equivalent to considerably over 1,000 horsepower. Some of these structures are employed at Niagara and others at Buffalo. As in the case of the apparatus just mentioned, the effort spent in the perfection of the huge dynamo-electric generators used in lighting and power stations has resulted in machines so perfect as to leave but little chance of further increase of effectiveness. They waste only a small percentage in converting mechanical power into electrical energy, and run for years with but little attention or need of repairs. Along with all this improvement has gone a like betterment in the thousand and one details and minor devices which go to make up an electric system.

Perhaps no better example of the varied application of electric energy exists than at Niagara. Certainly no grander exemplification of the way in which electric forces may be called into play, to replace other and unlike agencies, can be cited. Here at Niagara we may forcibly realize the importance of cheap and unflinching power developed from water in its fall. We find the power of huge water wheels delivered to the massive dynamos for giving out electric energy. This energy is variously employed. The electric lighting of the city of Niagara and surroundings and the electric railways naturally depend upon the water power. Besides these, which may be termed the ordinary applications of electricity, there are clustered at Niagara a number of unique industrial establishments, the importance of which will undoubtedly increase rapidly. In the carborundum factory we find

huge furnaces heated by the passage of a strong current, and attaining temperatures far above those of the ordinary combustion of fuel. These electric furnaces produce uniform diamonds, an abrasive nearly as hard as the diamond itself, a combination of carbon and silicon which, before the electric furnace gave it birth, sand and coke are the raw substances for its production, and these are acted upon by the excessively high heat necessary to form the new product already in extensive use for grinding hard materials. The metal aluminum, which but many years ago cost \$2 an ounce, is now produced in a large scale at Niagara, and sold at a price which makes it, bulk for bulk, cheaper than brass. Here, again, electricity is the agent. But in this case its power of electrolyzing or breaking up strong chemical unions is employed. Work for the production of metallic sodium and other metals similarly depend upon the decomposition effected by the electric current. So too, an ordinary salt or brine are electrolyzed on a large scale in extensive works established for the purpose. . . . The very high temperature which exists in an electric arc, or between the contacts of an arc lamp, has in recent years found application in the manufacture of another important compound, which was formerly but slightly known as a chemical difficult to prepare. Carbide of calcium is the compound referred to, and large works for its production exist at Niagara. Here, again, as in the carborundum works, raw materials of the simplest and cheapest kind are acted upon in what may be termed an electric arc furnace. Coke, or carbon, and lime are mixed and charged into a furnace in which an enormous electric arc is kept going. . . . The importance of carbide of calcium rests in the fact that in contact with water, it produces acetylene gas. The illuminating power of this gas, when burned, is its remarkable property.

It will be seen that the metallurgical and chemical developments at Niagara are the direct outgrowth of electrical utilization of water power. With many water powers, however, the outlet for the application of the electrical energy exists many miles away from the place at which the water power is found. Even at Niagara there is an example of the beginning of long distance transmission, by a high pressure line extending to Buffalo and delivering electric energy to an electric station there. In this case 'step-up' transformers, as they are called, are employed at the Niagara power plant to step up or raise the electrical pressure or potential from that given by the dynamos to that required for the transmission to Buffalo. This transmission is from about 2,500 up to 10,000 volts. At the Buffalo end the reverse process is carried on by 'step-down' transformers, and the energy is delivered to the trolley lines at about 500 volts. The whole Niagara plant has grown into existence within the past five years, and as a consequence of the technical advances within the period of the past ten years. There are, however, in active operation, besides the Niagara power plant, several other water power installations, some of them far exceeding in distance that between Niagara and Buffalo, and some in which the amount of power conveyed, as well as the pressure of the current used upon the line, is much greater than is yet to be found at Niagara. . . . No fault can as yet be detected in

at the distance which can be covered in an hour of transmission. . . . It may be said that at present the range of distances is between 40 and 50 miles.

Electricity seems destined at no distant day to take an important part in revolutionizing passenger travel between large centers of population. The facility with which electric service may be superposed on ordinary steam roads will greatly further this development. The work with the railroad system undertaken by one of our prominent railway organizations has abundantly demonstrated the practicability of such superposition. The future will witness the growing substitution of either single motor cars or two or three coupled cars for long, heavy trains drawn by locomotives and a more frequent service will result. There is an eventual possibility of higher average speeds, since stops will not consume much time, and the time required to recover the speed after a stop will be much less than at present.

The heating power of the electric current is now utilized in a variety of ways. Electric welding machinery has been put into service either for accomplishing results which were not possible to be obtained before its development, or to improve the work and lessen the cost. — *Edwin Thomson, Electrical Advance in Ten Years, (F. & J. Co., 1898).*

Electrical Science: Development of Power at Niagara Falls.—The following description of the engineering work by which Niagara was harnessed to turbines and dynamos, for an enormous development of electrical power, is taken from a paper read by Mr. Thomas Commerford Martin at New York, at a meeting of the Royal Institution of Great Britain, June 19, 1896, and printed in the Proceedings of the Institution, Vol. 15, reprinted in the Annual Report of the Smithsonian Institution, 1896, p. 223. "Niagara is the point at which are discharged, through two narrowing precipitous channels, only 3,500 feet wide and 160 feet high, the contents of 6,000 cubic miles of water, with a reservoir area of 30,000 square miles, draining 300,000 square miles of territory. The ordinary overflow of this Atlantic set on edge has been determined to be equal to about 75,000 cubic feet per second, and the quantity passing is estimated as high as 100,000,000 tons of water per hour. The drifting of a ship over the Horse Shoe Fall has proved it to have a thickness at the center of the crescent of over 16 feet. Between Lake Erie and Lake Ontario there is a total difference of level of 300 feet, and the amount of power represented by the water at the falls has been estimated on different bases from 675,000 horsepower up to not less than 16,800,000 horsepower, the latter being a rough calculation of Sir William Siemens, who, in 1877, was the first to suggest the use of electricity as the modern and feasible agent of converting into useful power some of this majestic but squandered energy. . . .

It was Mr. Thomas Evershed, an American civil engineer, who unfolded the plan of diverting a part of the stream at a considerable distance above the falls, so that no natural beauty would be interfered with, while an enormous amount of power would be obtained with a very slight reduction in the volume of the stream at the crest of the falls. Essentially scientific and correct as the plan now shows itself to be, it found

prompt criticism and condemnation. But not less quickly did it rally the able and energetic support of Messrs. W. B. Rankine, Francis P. Smith, Jackson, Felt and A. W. Weeks, and F. and T. Adams, who organized the Niagara Ministry, that, with an expenditure of \$1,000,000 in five years, have carried out the present work. So many engineering problems arose early in the enterprise that after the survey of the property, in 1890, an International Niagara Commission was established in London with power to investigate the best existing methods of power development and transmission and to select from among them, as well as to award prizes of an aggregate of \$1,000. This body included men like Lord Kelvin, Mascart, Tolson, Scott, Furness, and Dr. Lawrie, and its work was of the utmost value. Besides these, the Niagara Company and the allied Cataract Construction Company employed the direct aid of other experts, such as Prof. George Forbes, of considerable capacity, while it was necessary to recognize that the manufacturers of the machinery to be used threw upon their work the highest inventive and constructive talent at their command.

The time honored plan in water power utilization has been to string factories along a canal of considerable length with but a small fall race. At Niagara the plan now brought to notice is that of a short canal with a very long tail race. The use of electricity for developing the power allows the factories to be placed away from the canal, and in many locations that now appear specially desirable or advantageous. The perfected and concentrated Evershed scheme comprises a short surface canal 250 feet wide at its mouth 14 miles above the falls, far beyond the outlying Three Sisters Islands, with an intake inclined obliquely to the Niagara River. This canal extends inwardly 1,700 feet, and has an average depth of some 12 feet, thus holding water adequate to the development of about 100,000 horse power. The mouth of the canal is 600 feet from the shore line proper and considerable work was necessary in its protection and excavation. The bed is now of clay and the side walls are of solid masonry 17 feet high, 8 feet at the base and 3 feet at the top. The northeastern side of the canal is occupied by a power house, and is pierced by ten inlets guarded by sentinel gates, each being the separate entrance to a wheel pit in the power house, where the water is used and the power is secured. The water as quickly as used is carried off by a tunnel to the Niagara River again. . . .

The wheel pit over which the power house is situated is a long, deep, cavernous slot at one side under the floor, cut in the rock, parallel with the canal outside. Here the water gets a fall of about 140 feet before it strikes the turbines. The arrangement of the dynamos generating the current up in the power house is such that each of them may be regarded as the screw at the end of a long shaft, just as we might see it if we stood on a ocean steamer on its nose with its bow in the air. At the lower end of the dynamo shaft is the turbine in the wheel pit bottom just as in the case of the steamer shaft we find attached to it the big triple or quadruple expansion marine steam engine. The wheel pit which contains the turbines is 178 feet in depth, and connects by a lateral tunnel

with the main tunnel running at right angles. This main tunnel is no less than 7,000 feet in length, with an average hydraulic slope of 4 feet in 1,000. It has a maximum height of 21 feet and a width of 18 feet 10 inches, its net section being 386 square feet. The water rushes through it and out of its mouth of stone and iron at a velocity of 204 feet per second, or nearly 20 miles an hour. More than 1,000 men were employed continuously for more than three years in the construction of this tunnel.

"The American company has also precipitated the great utilization of the Canadian share of Niagara's energy. The plan for this work proposes the erection of two power houses of a total ultimate capacity of 125,000 horse-power. With both the Canadian and American plants fully developed, no less than 350,000 horse-power will be available."

"Within the last five years," said the "Electrical Review," in a "historical number" issued at the beginning of 1901, "there have been built in many parts of the world electrical installations of great magnitude, transmitting the power of catenets for considerable distances. The longest of these, in California, operates over a distance of 115 miles. Perhaps the largest of them is that at Niagara, where 105,000 horse-power is developed, and much of it transmitted . . . to the city of Buffalo"—20 miles.

The first transmission of power from Niagara Falls to Buffalo was made at midnight, November 15-16, 1890, when 1,000 horse-power was sent over the wires to the power house of the Buffalo Railway Company. The important event was signalled to the citizens by the firing of cannon, the ringing of bells and sounding of steam whistles.

Electrical Science: The rotary magnetic field.—Polyphased currents.—Nikola Tesla's inventions.—"At about the same time [1888], Galileo Ferraris, in Italy, and Nikola Tesla, in the United States, brought out motors operating by systems of alternating currents displaced from one another in phase by definite amounts and producing what is known as the rotating magnetic field. This invention seems destined to be one of the most important that has been made in the history of electricity. The result of the introduction of polyphase systems has been the ability to transmit power economically for considerable distances, and, as this directly operated, to make possible the utilization of water power in remote places and the distribution of power over large areas, the immediate outcome of the polyphase system was power transmission; and the outcome of power transmission almost solely will be the gradual supersession of coal as the harnessing of the waste forces of Nature to do useful work."—*Electrical Review*, Jan. 12, 1901.

The following description of Tesla's invention was given by N. W. Perry in the "Engineering Magazine": "If the north and south poles of a small horseshoe magnet be suspended over a bar of soft iron free to revolve in a horizontal plane, or be placed over an ordinary compass-needle, the latter will be attracted at either end by the poles of the magnet and take up a position parallel to a straight line drawn between the two poles of the magnet. Now if the latter be revolved through any angle the soft iron or needle will follow, being dragged around by the magnet, and if the magnet be caused to revolve regularly

the iron will also revolve, being pulled by the full force of the magnet. It was, however, to cause the magnet to revolve in one way, and Tesla's invention consisted just in this trouble and in fact greatly simplified the problem. He conceived the idea of placing an iron ring and used two alternating currents, one of which had its maximum value at the instant that the other had a zero value. In other words, two currents whose periods were such that one waxed as the other increased, and produced in that iron ring by winding fine coils in alternate coils surfaces that would cause the mechanical movement of the parts would be around that ring with a rapidity equal to the number of changes of direction of the currents employed. He thus had a ring the north and south poles of which were rapidly revolving, as would the poles of the horseshoe magnet when it tied at its middle to a twisted string, and allowed to revolve. A piece of non-pivoted iron, middle placed concentric with this ring, would therefore be dragged around by the changing poles of the ring. He had thus discovered what is somewhat awkwardly expressed by the expression, 'the rotary magnetic field' and the use of what have been termed 'polyphase currents'—the one referring to the magnetism and the other to the combination of currents, which this changing magnetism was produced. This discovery is undoubtedly one of the most important that has ever been made within the domain of alternating currents."—*Electrician Magazine*, v. 7, p. 780.

Another of Tesla's inventions or discoveries which excited greater popular interest was his which produced what were called "high frequency effects," first publicly shown in connection with a lecture at Columbia College, New York, in the spring of 1890. "Mr. Tesla started with the idea of setting matter into vibration at a rate approximating that of light (some two and a half millions a second), with the expectation that under such violent molecular agitation it would emit light. He has not as yet succeeded in obtaining so high a rate, but a much lower one produced some very surprising luminous effects. The dynamo method for getting very high frequencies was soon abandoned as inadequate, and the satisfactory discharge of a Leyden jar or plate condensers was substituted. . . . Perhaps the most surprising of the new facts elicited from his investigations is that the shock due to these very high voltage and high frequency currents could be supported by a person without any serious inconvenience. He passes a current of two hundred thousand volts through his body with perfect impunity."—F. J. Patten, *New Science Review*, v. 1, p. 84.

Electrical Science: Development of the Telephone System.—"The annual report of the American Telephone and Telegraph Company (by which the property and business of the American Bell Telephone Company were taken over at the close of the year 1896) for the year ending December 31, 1900, contains the following brief review of the development and growth of the telephone system, especially in the United States: "The year just passed rounds out the quarter century, within which is compressed the discovery and application of the art of transmitting speech by telephone. A brief review of the development and growth of this new science,

has become so important a factor in commercial and social life, seems appropriate at this time. Five years ago the wonderful invention of Alexander Bell was made known to the world. Twenty-three years ago the first telephone exchange in the world was established in Boston, and from that beginning has grown up the great system of exchanges and connecting lines over which communication is held between points over a thousand miles apart. Twenty years ago there were 1,000 telephone subscribers in the United States and 200,000 miles of wire in use for telephonic purposes. At the end of last year, there were 800,000 exchange stations equipped with our subscribers and 1,000,000 miles of wire were employed for exchange and toll line service. The United States has, from the beginning, held the leading place among nations in respect not only of the extensive development of the business but in the employment of modern and improved appliances, tending to greater efficiency of service.

In comparison with the record of development of telephonic service in this country, some comparison of the systems of foreign countries is of interest. The latest reports that can be obtained, partly of which are for the year 1900, others to the end of 1900 show the countries next in order after the United States, as respects the development of the phone service, to be the German Empire, having 229,391 stations; Great Britain, 171,060; Canada, 73,500; France, 59,927; Switzerland, 58,841; Austria, 32,255; Russia, 31,376; Norway, 20,440.

As before stated, there were, at the close of last year, more than 800,000 stations connected with the exchanges of our licensee companies, which exceeds the aggregate number of subscribers in all the countries of Continental Europe. In addition to this, there were over 40,000 private exchange stations equipped with our telephones. The number of exchange and toll line connections in the United States now reaches almost two hundred millions yearly.

More detailed and precise statistics of the telephone service in the United States are given in the report as follows:

	Jan. 1, 1892.	Jan. 1, 1901.
Exchanges	798	1,444
Branch offices	599	1,427
Miles of wire on poles	180,139	627,897
Miles of wire on buildings	14,954	16,833
Miles of wire underground	76,634	705,291
Miles of wire submarine	1,029	4,261
Total miles of wire	261,756	1,354,282
Total subscribers	186,492	800,000
Total long lines	8,076	32,837
Total stations	205,917	832,837

The estimated number of exchange connections in the United States, made up from actual data in most of the exchanges, is 5,608,086. Or a total per year of about 1,825,000,000. The number of daily calls per station varies in different exchanges from 1 to 15, the average throughout the United States being 7½. The average cost to the subscriber varies according to the size of the exchange and character of the service, from less than 1 to 9 cents per connection.

Electrical Science: Dr. Pupin's revolutionary improvement in long-distance telephony.—The most important advance in telephonic science that has been made since the invention of

the Bell instrument was made at about the beginning of the new century, as the result of studies pursued by Dr. Michael Pupin of Columbia University, New York. Mathematical and experimental investigations which Dr. Pupin had been carrying on for several years led him to a determination of the precise nature of what whole of inductive circuits are inserted in a conductor, and of the nature of the traveling of the wave. He is said to have taken about 18 months in his investigations. Pupin's method is strengthened by his theory, which is that certain exact points, determined by the wave length, this is probably correct, of suitable induction as being in a definite relationship of the points in a long telephone circuit, at which to send the electric current in it, and the precise loading to be applied.

In a paper published in the "Western Electrician" describing his new system, mathematically, Dr. Pupin says: "It is in the use in efficiency of wave transmission over a cord thus loaded is to be obtained. It is evident that the load must be properly subdivided and the fractional parts of the total load must be placed at proper distances apart along the cord, otherwise the detrimental effect due to the resistance arising from the discontinuities thus introduced will more than neutralize the beneficial effect derived from the increased mass." The insertion of inductance coils at periodic recurring points along the wave conductor produces the same effect upon electrical wave transmission as the distribution of the small resistance of the stretched cord produces upon mechanical wave transmission along the cord.

The result is said to be that conversation by telephone over a distance of 1,000 miles is made not only practicable but easy, and that it is believed to be as practicable through submarine cables as through overhead wires. It does not make the telephone a common instrument of communication from continent to continent, it will, at least, improve our telegraphy beyond measure. According to newspaper report, Dr. Pupin's invention has been sold to the Bell Telephone Company for a very large sum.

Electrical Science: Wireless Telegraphy.—In 1864 Maxwell observed that electricity and light have the same velocity, 186,000 miles a second, and he formulated the theory that electricity propagates itself in waves which differ from those of light only in being longer. This was proved to be true by Hertz in 1888, who showed that where alternating currents of very high frequency were set up in an open circuit, the energy might be conveyed entirely away from the circuit into the surrounding space as electric waves.

He demonstrated that electric waves move with the speed of light and that they can be reflected and refracted precisely as if they formed a visible beam. At a certain intensity of strain the air insulation broke down and the air became a conductor. This phenomenon of passing quite suddenly from a non-conductive to a conductive state is also to be noted when air or other gases are exposed to the X ray.

Now for the effect of electric waves such as Hertz produce, when they impinge upon substances reduced to powder or blings. Conductors, such as the metals, are of inestimable service to the distribution of equal value are non-

conductors, such as glass and gutta-percha, as they strictly fence in an electric stream. A third and remarkable vista opens to experiment when it deals with substances which, in their normal state, are non-conductive, but which, agitated by an electric wave, instantly become conductive in a high degree. As long ago as 1866 Mr. S. A. Varley noticed that black lead, reduced to a loose dust, effectually intercepted a current from fifty Daniell cells, although the battery poles were very near each other. When he increased the electric tension four to sixfold, the black lead particles at once compacted themselves so as to form a bridge of excellent conductivity. On this principle he invented a lightning-protector for electrical instruments, the incoming flash causing a tiny heap of carbon dust to provide it with a path through which it could safely pass to the earth. Professor Temistocle Calzecchi Onesti of Fermo, in 1885, in an independent series of researches, discovered that a mass of powdered copper is a non-conductor until an electric wave beats upon it; then, in an instant, the mass resolves itself into a conductor almost as efficient as if it were a stout, unbroken wire. Professor Edouard Branly of Paris, in 1891, on this principle devised a coherer, which passed from resistance to invitation when subjected to an electric impulse from afar. He enhanced the value of his device by the vital discovery that the conductivity bestowed upon filings by electric discharges could be destroyed by simply shaking or tapping them apart.

"The coherer, as improved by Marconi, is a glass tube about 14 inches long and about $\frac{1}{2}$ of an inch in internal diameter. The electrodes are inserted in this tube so as almost to touch; between them is about $\frac{1}{16}$ of an inch filled with a pinch of the responsive mixture which forms the pivot of the whole contrivance. This mixture is 90 per cent. nickel filings, 10 per cent. hard silver filings, and a mere trace of mercury; the tube is exhausted of air to within $\frac{1}{100000}$ part. . . . The coherer, when unexcited, forms a link which obstructs the flow of a current eager to leap across. The instant that an electric wave from the sending station impinges upon the coherer it becomes conductive; the current instantly glides through it, and at the same time a current, by means of a relay, is sent through [a] powerful voltaic battery, so as to announce the signal through an ordinary telegraphic receiver.

"An electric impulse, almost too attenuated for computation, is here able to effect such a change in a pinch of dust that it becomes a free avenue instead of a barricade. Through that avenue a powerful blow from a local store of energy makes itself heard and felt. No device of the trigger class is comparable with this in delicacy. An instant after a signal has taken its way through the coherer a small hammer strikes the tiny tube, jarring its particles asunder, so that they resume their normal state of high resistance. We may well be astonished at the sensitiveness of the metallic filings to an electric wave originating many miles away, but let us remember how clearly the eye can see a bright lamp at the same distance as it sheds a sister beam. Thus far no substance has been discovered with a mechanical responsiveness to so feeble a ray of light; in the world of nature and art the coherer stands alone.

"An essential feature of this method of etheric

telegraphy, due to Marconi himself, is the suspension of a perpendicular wire at each terminus, of length twenty feet for stations a mile apart, forty feet for four miles, and so on, the telegraphic distance increasing as the square of the length of suspended wire. In the Kingstown regatta, July, 1898, Marconi sent from a yacht under full steam a report to the shore, with the loss of a moment from start to finish. This feat was repeated during the protracted contest between the 'Columbia' and the 'Shamrock' yachts in New York Bay, October, 1899. On March 28, 1899, Marconi signals put Wm. A. two miles north of Boulogne, in communication with the South Foreland Light-house, thirty-two miles off. In August, 1899, during the maneuvers of the British navy, similar successes were sent as far as eighty miles.

"A weak point in the first Marconi apparatus was that anybody within the working radius of the sending instrument could read its message. To modify this objection secret codes were at times employed, as in commerce and diplomacy. A complete deliverance from this difficulty is promised in attuning a transmitter and a receiver to the same note, so that one receiver, and no other, shall respond to a particular frequency of impulses. The experiments which indicate success in this vital particular have been conducted by Professor Lodge."—G. H. S. *Flaming, Electricity and the Camera*, ch. 16 (N. Y.: Doubleday, Page & Co.).

"Shall we not," said Professor John Trowbridge, in an article published in the New York Tribune, January 6, 1901, "in the next hundred years dispense with the limitations of wires and speak boldly through space, reaching some expectant human ear hundreds of miles away with the same ease that we now converse in a room? It is already possible to send messages by dots and dashes sixty to seventy miles without the use of wires. In the early days of the telephone this was the practical limit of that instrument, and we are all familiar with the immense extension which has taken place. Shall we not see a similar extension in the field of wireless telegraphy? Some late experiments which I have made lead me to be optimistic in regard to a possible great extension of the methods of wireless telegraphy.

"In the first place, I believe that these experiments prove that wireless telegraphy is not necessarily or merely accomplished through the air, but, on the contrary, that the earth plays the controlling part, and that the message flows so to speak, through the earth or over its surface rather than through the air. The most striking experiment was as follows: The poles of a storage battery of twenty thousand cells were connected with the ground at the Jefferson Laboratory, and I was enabled to receive the message in a room three quarters of a mile from the laboratory without the use of masts or wires of any sort. The earth was the medium of communication, and it seems possible, by arranging the sending and receiving apparatus suitably in connection with the electrical capacity of the earth, that we may dispense with lofty masts and overcome in this way the curvature of the earth."

Extensive experiments in wireless telegraphy are being conducted by the United States Weather Bureau, of which the following is a recent report: "Recognizing the advantage that would result to commerce and navigation by the establishment

of wireless electrical communication between vessels at sea and exposed points on our lake and shores, and also between islands along said coasts and the mainland, the Weather Bureau was directed to systematically investigate the various methods of electrical communication with wire. The progress made is eminently satisfactory. New appliances have been devised for the transmission of signals, and receivers have been constructed that probably are more delicate than any heretofore made. Messages already have been successfully transmitted and received over 50 miles of land, which presented a rough and irregular surface, conditions most unfavorable for the transmission of electro-magnetic waves. It is believed that the efficiency indicated by such transmits overland is sufficient to operate successfully over several hundred miles of water. The apparatus used is capable of further improvement. I hope the time is near at hand when the great number of craft employed in the coastwise commerce of the United States and over its great inland seas will be placed in instantaneous communication with the numerous stations of our Weather Bureau, which are located at all important ports. The matter is one of such great importance to our commerce that I have authorized extensive experimentation, which, from the success so far attending our efforts, will be vigorously prosecuted."—*United States, Annual Report of the Secretary of Agriculture, Nov. 21, 1900, p. 12.*

On the 12th of March, 1901, the chief of the Weather Bureau, Professor Moore, gave to the Press the following statement as to experiments in progress along the Virginia and North Carolina coast: "The most efficient method of long distance transmission has been found to be from wire cylinders. The new coast stations are being equipped with cylinders of sixteen wires each and 140 feet in length. From these cylinders it is expected to cover a magnetic field of not less than five hundred miles. The stations now in operation are at Hatteras and at Roanoke Island, in Pamlico Sound, North Carolina. Workmen are beginning the construction of a station at Cape Henry, which will be the third station. When this is finished the two remote stations will be 125 miles apart."

Mechanics Steam turbines.—The latest form of steam-engine recalls the first. The steam turbines of De Laval and of Parsons turn on the same principle as the aeolipile of Hero. That simple contrivance was a metallic globe mounted on axes, and furnished through one of its trunnions with steam from a boiler near by. As steam rushed out from two nozzles diametrically opposite to each other, and at tangents to the globe, there resulted from the relieved pressure a swift rotation which might have done useful work. . . . Before the steam-turbine could be invented, metallurgists and mechanics had to become skilful enough to provide machinery which may with safety rotate 10,000 times in a minute. Watt had to invent the separate condenser, means had to be devised for the thorough expansion of high pressure steam; and the crude device of Hero had to be supplanted by wheels suggested by the water turbine.

The feature which gives the Parsons steam-turbine its distinction is the ingenious method by which its steam is used expansively. In a piston-engine the cylinder is filled to one-twelfth or

one-fifteenth of its capacity with high pressure steam, when communication with the boiler is cut off, during the remainder of its stroke the piston is urged solely by the steam's elasticity. In the Parsons turbine, by arranging what is practically a series of wheels on the same shaft, the steam passes from one wheel to the next, and at each wheel parts with only a fraction of its pressure and velocity.

The "Turbina," a torpedo boat of 144 tons displacement, 100 feet in length and 9 feet in beam, driven by this turbine, has consumed but 144 pounds of steam an hour per indicated horse-power. The "Viper," a torpedo boat destroyer of 325 tons, and provided with a turbine capable of developing as much as 12,000 horse-power, ran at the rate of 37 knots in a rough sea during her trial trip in November, 1899. Medical and Surgical: The determination of germ diseases. Since 1880 it has been proved that anthrax, Asiatic cholera, cerebro-spinal meningitis, diphtheria, one form of dysentery, erysipelas, glanders, gonorrhea, influenza, certain epidemics of meat poisoning, pyæmia and suppuration in general, pneumonia, tetanus, relapsing fever, tuberculosis, typhoid plague, and typhoid fever are due to minute vegetable or gaseous known as bacteria, that malarial fevers, Texas cattle fever, and certain forms of dysentery are due to forms of microscopic animal organisms known as microzoa, and for most of these diseases the mode of development and means of introduction of the micro-organism into the body are fairly well understood. To the information thus obtained we owe the triumphs of antiseptic and aseptic surgery, a great increase of precision in diagnosis, the use of specific antitoxins as remedies and as preventives, and some of the best practical work in public hygiene."—Dr. John S. Billings, *Progress of Medicine in the Nineteenth Century* (N. Y. Evening Post, Jan. 12, 1901).

Medical and Surgical: Antitoxine.—Treatment of diphtheria.—"In the early study of germs and their relation to disease it was supposed that the symptoms of the disease depended directly upon the germs themselves. This, however, has been proven to be false with reference to most of the infectious diseases studied. Thus, in diphtheria, the bacilli were found, as a rule, only in the throat or upper air passages while the effects of the disease were far reaching, involving the heart, the nerves, and other distant parts of the body. This and other like observations, led to the careful study of the products produced by the growth of bacteria. As the result of the work of Roux in Paris and Brieger in Berlin, the exact nature of the toxic products of the diphtheria bacillus was discovered. It was found that this bacillus produces in its growth a poison which is known as the diphtheria 'toxine.' This was isolated and injected into animals with the reproduction of all the symptoms of diphtheria excepting the membrane in the throat."

"In his early work upon 'spotted fever' and chicken cholera Pasteur having established the causes of these diseases set himself the task of discovering means of preventing them. After very many experiments he found that animals inoculated with the germs of spleen fever, when these germs had been cultivated at a relatively

high temperature, were protected against the disease itself, while these inoculations themselves were harmless. . . . These methods of producing immunity have been extensively used in Europe for the past twenty years and have been of immense practical value.

With the discovery that it was not the bacteria themselves which produced most of the symptoms, but their poisonous products or toxins, new experiments in immunity were made by injecting these toxins into animals. It was found that if the quantity of the diphtheria toxin introduced was at first so small as not to kill the animal, the dose could gradually be increased until finally such a tolerance was established that the animal could resist enormous doses of it. Many theories were advanced as to the manner in which this tolerance was established. The conclusion was finally reached that it was due to the gradual production in the blood of larger and larger quantities of some substance which neutralized the toxin, i. e., an 'antitoxine.' . . . Later experiments showed that if some of the blood of an animal, which in this way had been made insusceptible to diphtheria, was injected into another animal, the latter likewise became to a certain degree and for a certain time insusceptible; that is to say, became 'immunized.' . . .

The present plan of producing antitoxine is somewhat as follows. Large animals, such as the horse or cow, are usually employed for purposes of injection. In the beginning a large quantity of the toxin of diphtheria is injected as the animal will bear without danger to life. . . . It is found that the dose of the toxin can gradually be increased with each injection until enormous quantities can be tolerated. When this point is reached at which the injection of large amounts of the toxin produces no reaction, the animal is said to possess a high degree of immunity. At this time the blood-serum contains a very large amount of the antitoxine. A long time is required for the production of this condition, the period being from three to twelve months, according to the size of the animal, its susceptibility, and many other conditions. . . . The antitoxine is obtained from the blood of the animal, generally by bleeding from the jugular vein. . . . After standing for a few hours this blood separates into a clot and a clear portion above which is known as the serum. The antitoxine is contained in the blood-serum."—L. E. Holt, *The Antitoxine Treatment of Diphtheria* (Forum, March, 1895).—See, also (in this vol.), PLAGUE.

Medical and Surgical: Discovery of the secret of malaria.—Detection of the mosquito as a carrier of disease.—Twenty-five years ago the best informed physicians entertained erroneous ideas with reference to the nature of malaria and the etiology of the malarial fevers. Observation had taught them that there was something in the air in the vicinity of marshes in tropical regions, and during the summer and autumn in semi-tropical and temperate regions, which gave rise to periodic fevers in those exposed in such localities, and the usual inference was that this something was of gaseous form—that it was a special kind of bad air generated in swampy localities under favorable meteorological conditions. It was recognized at the same time that there are other kinds of bad air, such as the

offensive emanations from sewers and the products of respiration of man and animals, but the term malaria was reserved especially for the kind of bad air which was supposed to give rise to the so-called malarial fevers. In the light of present knowledge it is evident that this term is a misnomer. There is no good reason for believing that the air of swamps is any more deleterious to those who breathe it than the air of the sea coast or that in the vicinity of marshes and ponds. Moreover, the stagnant pools which are covered with a 'green scum' and from which bubbles of gas are given off, have lost interest for the well-informed man, except in so far as they serve as breeding places for mosquitoes of the genus *Anopheles*. The green scum is made up of harmless algae such as *Spirogyra*, *Zygnema*, *Protococcus*, *Euglena*, etc.; and the gas which is given off from the mud at the bottom of such stagnant pools is for the most part a well-known and comparatively harmless compound of hydrogen and carbon-methane or 'marsh gas.'

In short, we now know that the air in the vicinity of marshes is not deleterious because of any special kind of bad air present in such localities, but because it contains mosquitoes infested with a parasite known to be the specific cause of the so-called malarial fevers. This parasite was discovered in the blood of patients suffering from intermittent fevers by Laveran, a surgeon in the French army, whose investigations were conducted in Algiers. This famous discovery was made toward the end of the year 1880; but it was several years later before the profession generally began to attach much importance to the alleged discovery."—G. M. Sternberg, *Malaria* (Pope's Science Monthly, Feb., 1901).

It was the French doctor Laveran who, after a stay in a deadly malarial region of Africa, discovered the malaria parasite in 1880. That pigment cells, which we should now describe as malaria-parasites, were observed in human blood as early as 1835, among others by Virchow; but their relation to the disease was not known. In 1881, Laveran embodied his researches in a book, but its importance was overlooked. Bacteria attracted then general attention, and Laveran's parasite, not being a bacterium, was little thought of. He stuck nevertheless, to his discovery, and was soon joined in his researches by Golgi (the Italian professor to whom we owe the method that led to the discovery of the neurons), as also by Marchiafava, Celli, Councilman, Sternberg, and the Viennese doctor Mannaberg who published in 1893 a full compendium of these researches. Dr. Mannaberg proved in this book that the real cause of malaria is Laveran's parasite, and he told its most interesting life-history so far as it was then known.

The parasite of malaria is not a bacterium. It is one of the protozoa—namely, as it appeared later on, a coccidium, which, like all other members of that family, undergoes in its development a series of transformations. . . . Laveran saw that some parasites (corps à flagelles) would send out thin and long flagella which separated company with the mother body, and owing to a proper helicoidal movement, disappeared in the plasma of the blood. This never happened, however, in the body of man, but only when a drop of his infected blood was drawn and placed on the glass plate under the

microscope. Laveran noticed, moreover, minute crescent-shaped bodies, which adhered to the red corpuscles and looked very much like cysts, protected by a harder envelope. From fifteen to twenty minutes after these bodies had been placed under the microscope, they also gave forth a great number of 'flagella'; and this, Laveran too, he remarked, seemed to be accomplished only when the cysts were taken out of the human body.

It was only natural to conclude from these observations that the further development of the parasite may take place in the body of some other animal than man, and this consideration brought Laveran, in a book which he published in 1884, to the idea that, taking into consideration the quantities of mosquitoes in malarial countries, they may be the agents of transition of malaria. This remark passed, however, unperceived. Many had the suspicion that gnats may play some part in the inoculation of malaria, and the Italian peasants always thought so, and in the medical literature an American doctor, Mr. King, had advocated the same idea. But the complete life-history of the malaria parasite being not yet known fifteen years ago, the necessity of the mosquito or of some other living being serving as a host for the completion of the reproduction cycle was not understood."—P. Knapik, *Recent Science (Nineteenth Century Review)*, 1900.

Dr. Patrick Manson, of London, is credited with the final formulation of the mosquito malarial theory, but the proofs by which it has been established have come from a number of investigators, who have patiently traced the singular life-history of the parasite, throughout its passage from man to the mosquito and from the mosquito back to man, as a vehicle of disease. Among the latter, prominence is given to Major Ronald Ross, who lectured on the subject in London in September, 1900, and was reported in 'The Times' as follows:

They first carried on their life in man—the intermediary host—and later in the mosquito, the definitive host. These Hemunoblasts began as spores which entered a blood corpuscle, grew and became merozoites. The nuclear matter divided the corpuscle containing it burst, the spores scattered, and each spore then attached itself to a fresh corpuscle. The access of the typical fever began with this scattering of the spores, and thus the periodicity of the fever was accounted for. Besides this neutral proliferation there was proliferation by gametes. The blood of a fever patient exhibited the first forms of the gametocytes. The spore grew inside the blood corpuscle, and in that species which caused malarial fever it grew until it had almost eaten the whole of the host. It was then technically called a crescent. If this crescent were examined under the microscope a wonderful development might be observed to take place in a few moments. The crescent swelled and became first oval, then spherical, and in about 15 minutes after the drawing of the blood the microgametes made their escape and were to be seen wriggling about in the 'liquor sanguinis.' Ultimately they covered the macrogametocytes and produced zygotes, which was nothing but a perfect example of the sperm and the ovum process.

The whole process could be watched under the microscope. The mosquito, having bitten a

person in whose blood these gametocytes were present, would take perhaps 100 of them into its own system, where the zygotes acquired a power of movement, edging towards the walls of the mosquito's stomach. About 12 hours afterwards they would be found adhering to the walls of the stomach, through which they passed and to which they finally attached themselves on the outside. This process was accomplished in about 36 hours. The zygotes then grew until they had increased to about eight times their original diameter and were almost visible to the naked eye. As the zygote increased it divided into masses containing nuclear matter which went to the surface. The process here seemed to be closely similar to spermatogenesis, and Professor R. V. Rankin declared that the process was the first known example of androgenesis, parthenogenetic. When the final development was reached the cells burst and the blasts escaped and were immediately carried into all parts of the insect. They made their way to the salivary gland with the evident purpose of seeking the blood of a fresh human host, and the inception of the secretion of the mosquito's salivary gland caused the lump which marked the mosquito's bite. A very large series of experiments had shown conclusively that malarial infection was caused by the bite of the mosquito.

The parasites which infested human blood were carried only by one genus of mosquito—'Anopheles', the genus 'Culex' was harmless. The two genera could be readily distinguished. For example, 'Anopheles' rested on walls with their tails stuck out perpendicular to the wall; 'Culex' attached themselves with tails hanging downwards. 'Culex' bred in the water in pots and tubs, 'Anopheles' in pools. The larvæ of 'Culex', if disturbed, sank to the bottom; the larvæ of 'Anopheles' skimmed along the surface. It was doubtful whether the eggs of 'Anopheles' would live for more than a few days after deposition. The eggs were laid in an equilateral triangular pattern, they were soon hatched, and the larvæ then began to feed on the green scum in the water. A still evening just before or after rain, was the time most favourable for the hatching out from the pupæ. As to the adults, he believed that they could live for a year, at any rate, they had been kept alive in tubes for more than a month, and it was certain that in England and Italy they hibernated. The female of 'Anopheles' alone was the biter and though the favourite feeding time was at night, in West Africa the insects had been found to bite all day. While 'Culex' could be detected by its humming, 'Anopheles' was silent, and it was possible to be bitten without knowing of it at the moment. He had found that a blood diet was always necessary to the maturing of the eggs. He had kept many thousands of mosquitoes under observation and had never known one to lay eggs except after a meal of blood. Malarial infection was derived chiefly from the native children, who swarmed everywhere, and whose blood was full of the infecting parasite.

An expedition sent out to West Africa by the Liverpool School of Tropical Medicine to pursue investigations there, reported in December, 1900, that its observations confirm the conclusion that the blood parasite which gives rise to malarial fever in man is carried by the mosquito from the native to the European—and more especially

from the native children. The examination of the blood of hundreds of native children revealed the interesting fact that between 50 and 80 per cent of those under five years, between 20 and 30 per cent of ages between five and ten years, and a small percentage over ten years contained malarial parasites, often in very large numbers. The breeding places of the 'Anopheles' were found to be chiefly the dug out native canoes in the regions of the mangrove swamps, claypits and puddles in the forested district, and at Lokoja puddles and ditches on and alongside the roads and footpaths. It was particularly noticed everywhere how carelessness in the construction of roads and footpaths, and more especially in the laying out of the areas surrounding the factories of the European traders, was accountable for the production of a large number of breeding places for mosquitoes, which could easily have been avoided. In fact, it is certain that in West Africa such conditions are far more dangerous and more common than the proximity of a marsh or swamp, which is often noted as a cause of fever. . . . The two methods upon which alone any reliance can be placed as measures for prevention are—(1) segregation of Europeans from natives of all sorts, at a distance of about half a mile; and (2) complete and efficient surface drainage of the whole district in the immediate neighbourhood of European quarters."

The detection of the mosquito as a carrier of one disease drew suspicion on the pestilent insect of other kindred crimes, and strong evidence of its agency in propagating yellow fever has been gathered already. A board of medical officers, which went from the United States to Cuba in the summer of 1900 to study the matter, reported in October that their investigations tended quite positively to this conclusion. The board was composed of Dr. Walter Reed, surgeon, United States Army, and Dr. James Carroll, Dr. A. Agroniente, and Dr. Jesse W. Lazear, all netting assistant surgeons of the United States Army. Two months later, so much confirmation had been obtained that Major-General Wood, Military Governor of Cuba (himself a medical man) was reported, on the 29th of December, to have issued a general order directed to his post commanders, "reciting that the chief surgeon of the Department of Cuba has reported that it is now well-established that malaria, yellow fever and filarial infection are transmitted by the bites of mosquitoes. Therefore the troops are enjoined to observe carefully two precautions: First—they are to use mosquito bars in all barracks, hospitals and field service whenever practicable. Second—They are to destroy the 'wiggers,' or young mosquitoes, by the use of petroleum on the water where they breed. Permanent pools or puddles are to be filled up. To the others is to be applied one ounce of kerosene to each fifteen square feet of water twice a month, which will destroy not only the young but the old mosquitoes. This does not injure drinking water if drawn from below and not dipped out. Protection is thus secured, according to the order, because the mosquito does not fly far, but seeks shelter when the wind blows, and thus each community breeds its own mosquitoes."

This was followed in April, 1901, by an order from the chief surgeon at Havana, approved by Surgeon-General Sternberg, U. S. A., which says: "The recent experiments made in Havana

by the Medical Department of the Army have proved that yellow fever, like malarial fever, is conveyed chiefly, and probably exclusively, by the bite of infected mosquitoes. Important changes in the measures used for the prevention and treatment of this disease have become necessary. So far as yellow fever is concerned, infection of a room or building simply means that it contains infected mosquitoes, that is mosquitoes which have fed on yellow fever patients. Disinfection, therefore, means the employment of measures aimed at the destruction of these mosquitoes. The most effective of these measures is fumigation, either with sulphur, formaldehyde, or insect powder. The fumes of sulphur are the quickest and the most effective insecticide, but are otherwise objectionable. Formaldehyde gas is quite effective if the infected rooms are kept closed and sealed for two or three hours. The smoke of insect powder has also been proved useful; it readily stupefies mosquitoes, which drop to the floor and can then be easily destroyed. The washing of walls, floors, ceiling, and furniture with disinfectants is unnecessary."

Medical and Surgical: Recent advances in surgery.—"In no department of surgery has greater progress been made than in the treatment of diseases of the abdominal organs. At the present time no abdominal organ is sacred from the surgeon's knife. Bowels riddled with bullet holes are stitched up successfully; large pieces of gangrenous or cancerous intestine are cut out; the ends of the severed tube being brought in continuity by means of ingenious appliances. The stomach is opened for the removal of a foreign body, for the excision of a cancer, or for the administration of nourishment to a patient unable to swallow; stones are extracted from the substance of the kidneys, and these organs when hopelessly diseased are extirpated; the spleen, when enlarged or otherwise diseased, is removed bodily; gall-stones are cut out, and even tumours of the liver are excised. The kidney, the spleen and the liver, when they cause trouble by unusual mobility, are anchored by stitches to the abdominal wall; and the stomach has been dealt with successfully in the same way for the cure of indigestion. Besides all this, many cases of obstruction of the bowels, which in days not very long gone by would have been doomed to inevitable death, are now cured by a touch of the surgeon's knife. The perforation of the intestine, which is one of the most formidable complications of typhoid fever, has in a few cases been successfully closed by operation; and inflammation of the peritoneum, caused by the growth of tuberculous masses upon it, has been apparently cured by opening the abdominal cavity. Among the most useful advances of this department of surgery must be accounted the treatment of the condition known as 'appendicitis,' which has been to a large extent rescued from the physician, with his policy of 'laissez faire,' and placed under the more resolute and more efficient government of the surgeon. A New York surgeon not long ago reported a series of 100 cases of operation for appendicitis, with only two deaths."

"That surgery could ever deal with the abdominal organs in the manner just described would have seemed to our predecessors in the earlier part of the Queen's reign the basest fabric of a vision. But the modern surgeon, clad in antiseptics, as the Lady in 'Comus' was clothed

and with elasticity, defies the 'rabble rout' of barbarians and dares things which only a short time ago were looked upon as beyond the wildest dreams of scientific enthusiasm. It is scarcely twenty years since the late Sir John Erichsen declared in a public address that operative surgery had only reached its furthest possible limits of development. He pointed out that there were certain regions of the body into which the surgeon's knife could never penetrate, naming the brain, the heart, and the lung as the most obdurate examples of such inviolable sanctuaries of life. Within the last fifteen years the surgeon has brought each of these organs, which constituted what he called the 'tripod of life,' within his sphere of conquest. . . . It must, however, be admitted that the results of brain surgery, though brilliant from the operative point of view, have so far been somewhat disappointing as regards the ultimate cure of the disease. In certain forms of epilepsy, in particular, which at first seemed to be curable by removal of the 'cortical discharging centre' in the brain which is the source of the mischief, the tendency to fits has been found to return after a time, and the last stage of the patient has been worse than the first. Still the mere fact that the brain has been proved to be capable of being dealt with surgically with perfect safety is in itself a very distinct progress.

Other parts of the nervous system have been brought within the range of surgical art. The vertebral column has been successfully trephined, and fragments of bone pressing on the cord have been taken away in cases of fractured spine; tumours have also been removed from the spinal cord by Mr Horsley and others. There is a steadily increasing record of cures of intractable neuritis, especially of the face, by division or removal of the affected nerve trunks. . . . The ends of cut nerves have also been re-united, and solutions of their continuity have been filled up with portions of nerve taken from animals. . . . The heart naturally cannot be made so free with, even by the most enterprising surgeon, as the brain or the lung. Yet within the past twelve months a Norwegian practitioner has reported a case which encourages a hope that even wounds of the heart may not be beyond surgical treatment. . . . Tuberculous and inflammatory diseases of bones and joints, formerly intractable except by the 'ultima ratio' of the amputating knife, are now cured without mutilation. Deficiencies are corrected by division of tendons, the excision of portions of bone, and the physiological exercise of muscles, without complicated apparatus. The healing of large wounds is assisted by the grafting of healthy skin on the raw surface; wide gaps in bones and tendons are filled up with portions of similar structures obtained from animals. . . . Scientific Literature: International cataloguing.—On the 22d of March, 1894, the Secretaries of the Royal Society of London addressed the following communication to various institutions and societies: "The Royal Society of London, as you are probably aware, has published the quarto volumes of 'The catalogue of scientific papers,' the first volume of the decade 1874-83 having been issued last year. This catalogue

is limited to periodical scientific literature, i.e., to papers published in the transactions etc. of societies and in journals; it takes no account whatever of monographs and independent books, however important. The titles moreover are arranged solely according to authors' names, and though the Society has long had under consideration the preparation of, and it is hoped may eventually issue as a key to the volumes already published, a list in which the titles are arranged according to subject matter, the catalogue is still being prepared according to authors' names. Further, though the Society has endeavored to include the titles of all the scientific papers published in periodicals of acknowledged standing, the catalogue is, even as regards periodical literature, confessedly incomplete, owing to the omission of the titles of papers published in periodicals of little importance, or not easy of access.

Owing to the great development of scientific literature, the task of the Society in continuing the catalogue, even in its present form, is rapidly increasing in difficulty. At the same time it is clear that the progress of science would be greatly helped by, indeed, almost demands, the compilation of a catalogue which should aim at completeness, and should contain the titles of scientific publications, whether appearing in periodicals or independently. In such a catalogue the titles should be arranged not only according to authors' names, but also according to subject matter, the text of each paper and not the title only being consulted for the latter purpose. And the value of the catalogue would be greatly enhanced by a rapid periodical issue, and by publication in such a form that the portion which pertains to any particular branch of science might be obtained separately. It is needless to say that the preparation and publication of such a complete catalogue is far beyond the power and means of any single society.

Led by the above considerations, the president and council of the Royal Society have appointed a committee to inquire into and report upon the feasibility of such a catalogue being compiled through international co-operation."—*Library Journal, March, 1895*.

The movement thus initiated received cordial support and led to the convening of an International Conference in London, in 1896. The Conference was opened on Tuesday, July 14, at Burlington House. The 42 delegates, representing nearly all the governments of civilized countries and most of the leading scientific societies of the world, were welcomed by Sir John Gorst, as provisional president. It was decided that English, German and French should be the official languages of the conference. The conference closed on Friday, July 17, the need of an international catalogue having been fully recognized, and a plan for its preparation mapped out. It was decided that it is desirable to compile and publish by means of some international organization a complete catalogue of scientific literature, arranged according both to subject-matter and to authors' names. That in preparing such a catalogue regard shall, in the first instance, be had to the requirements of scientific investigators, to the end that these may, by means of the catalogue, find out most easily what has been published concerning any particular subject of inquiry.

"The preparation of the catalogue is to be in charge of an international council, to be appointed, and the final editing and publication shall be conducted by a central international bureau, under the direction of the international council. Any country that is willing to do so shall be entrusted with the task of collecting, provisionally classifying, and transmitting to the central bureau, in accordance with rules laid down by the international council, all the entries belonging to the scientific literature of that country. In indexing according to subject-matter regard shall be had, not only to the title (of a paper or book), but also to the nature of the contents. The catalogue shall comprise all published original contributions—periodical articles, pamphlets, memoirs, etc.—to the mathematical, physical, or natural sciences, . . . to the exclusion of what are sometimes called the applied sciences—the limits of the several sciences to be determined hereafter."

"The central bureau shall issue the catalogue in the form of 'slips' or 'cards,' the details of the cards to be hereafter determined, and the issue to take place as promptly as possible. . . . It was also decided that the central bureau shall be located in London, and that the Royal Society appoint a committee to study all undecided questions relating to the catalogue and to report later."

"No system of classification was adopted and the subject was turned over for consideration to the committee of organization, which should also suggest such details as will render the catalogue of the greatest possible use to those unfamiliar with English. . . . January 1, 1900, is fixed as the date for the beginning of the catalogue."—*Library Journal*, August, 1896.

A second international conference, to consider further the plans previously outlined, was held Oct. 11-13, 1898, at Burlington House, London. "The attendance was a representative one, including delegates from Austria, Belgium, France, Germany, Hungary, Japan, Mexico, Netherlands, Norway, Sweden, Switzerland, the United Kingdom, the United States (represented by Dr. Cyrus Adler), Cape Colony, India, Natal, New Zealand, and Queensland. . . . Russia, Spain and Italy were the only large continental countries unrepresented."

"Professor Forster having formally presented the report of the Committee of the Royal Society, copies of which were forwarded in April last to the several governments represented at the conference, the discussion of the recommendations was opened, and it was resolved: 'That the conference confirms the principle that the catalog be published in the double form of cards and books. That schedules of classification shall be authorized for the several branches of science which it is decided to include in the catalog. That geography be defined as limited to mathematical and physical geography, and that political and general geography be excluded. That anatomy be entered on the list as a separate subject. That a separate schedule be provided for each of the following branches of science: Mathematics, Astronomy, Meteorology, Physics, Crystallography, Chemistry, Mineralogy, Geology (including Petrology), Geography, mathematical and physical, Paleontology, Anatomy, Zoölogy, Botany, Physiology (including Pharmacology and Experimental Pathology), Bacteriology, Psychology, Anthropology. That each of the sci-

ences for which a separate schedule is provided shall be indicated by a symbol.' Resolutions were then adopted providing for the catalogue to be observed in the preparation of slips, and for the organization of the work through Regional Bureaus."

"The following recommendations of the Royal Society providing for international co-operation in connection with the catalog were adopted: 'Each region in which a Regional Bureau is established, charged with the duty of preparing and transmitting slips to the Central Bureau, the compilation of the catalog, shall be called a constituent region. In 1905, in 1910, and every tenth year afterwards, an international convention shall be held in London (in July, if possible), and, if necessary, revise the regulations for carrying out the work of the catalog, authorized by the international convention. . . . Such an international convention shall consist of delegates appointed by the respective governments to represent the constituent regions; no region shall be represented by more than three delegates. The rules of procedure of the international convention shall be the same as those of the international convention of 1898. The decisions of an international convention shall remain in force until the next convention meets.'

"The following recommendations of the Royal Society relating to the constitution of an International Council, which shall be the governing body of the catalog, were adopted. 'Each Regional Bureau shall appoint one person to serve as a member of a body to be called The International Council. The International Council shall within the regulations laid down by the international convention, be the governing body of the catalog. The International Council shall appoint its own chairman and secretary. It shall meet in London once in three years at least and at such other times as the chairman, with the concurrence of five other members, may specially appoint. It shall, subject to the regulations laid down by the convention, be the supreme authority for the consideration of and decision concerning all matters belonging to the Central Bureau. It shall make a report of its doings, and submit a balance sheet, copies of which shall be distributed to the several Regional Bureaus, and published in some recognized periodical or periodicals in each of the constituent regions.'—*Library Journal*, December, 1898.

The third international conference on a new plan of scientific literature was held in London June 12, 1900, under the auspices of the Royal Society. "Unfortunately the United States had no place in the list [of delegates]. This was owing to the failure to secure from Congress the necessary appropriation enabling the United States to join in the enterprise; and as the call to the conference required that delegates be charged with full powers it was impossible for any representative of the United States to be in attendance."

"The general results of the conference, reviewed by Prof. Henry E. Armstrong, of 'Nature,' as follows: 'There can be little doubt that the ultimate execution of this important enterprise is now assured. . . . Every one was of opinion that if a fair beginning can only be made, the importance of the work is so great that

will be of such use to scientific workers at large; that it will rapidly grow in favor and soon secure that wide support which is not yet given too simply because its character and value are but imperfectly understood. Therefore, all were of opinion that a beginning should be made.

It has been estimated that if 300 sets of the catalogue are sold the expenses of publication will be fully met. As the purchase of more than 100 of this number was guaranteed by France, Germany, Italy, Norway, Switzerland, and the United Kingdom, the conference came to the conclusion that the number likely to be taken by other countries would be such that the subscriptions necessary to cover the cost of the catalogue would be obtained. The resolution arrived at after this opinion had been formed, that the catalogue include both an author's and a subject index, according to the schemes of the Provisional International Committee, must, in fact be read as a resolution to establish the catalogue.

Of the countries represented at the various conferences, excepting Belgium, not one has expressed any unwillingness eventually to co-operate in the work. Unfortunately, neither the United States nor Russia was officially represented on the present occasion. The attempts that have been made to induce the government in the United States to directly subsidise the catalogue have not been successful; but that the United States will contribute its fair share, both of material and pecuniary support, cannot be doubted. There is here private or corporate enterprise must undertake much that is done under government auspices in Europe. As to Russia, the organization of scientific workers there has been so little developed that it is very difficult to secure their attention, and probably our Russian colleagues are as yet but very imperfectly aware of what is proposed. . . . A Provisional International Committee has been appointed, which will take the steps now necessary to secure the adhesion and co-operation of countries not yet pledged to support the scheme.

Originally it was proposed to issue a card as well as a book catalogue, but on account of the great additional expense this would involve, and as the Americans in particular have not expressed themselves in favor of a card issue, it is resolved to publish the catalogue, for the present, only in the form of annual volumes.

SCOTLAND: A. D. 1900.—Union of the Free and United Presbyterian Churches.—

In the ecclesiastical world only one event of the first importance has happened [in Scotland, in 1900], the consummation of the union between the Free and United Presbyterian Churches, which has been the subject of negotiation for six years past. The May meetings of the leading representative courts of the two denominations were occupied almost exclusively with the final arrangements for the formal act of union, which was fixed to take place on October 31. An attempt to have a number of lay office-bearers of the Free Church to postpone the final step, on the ground that the congregations had not been directly and fairly consulted, failed of its object, in October 30 the General Assembly of the Free Church and the Synod of the United Presbyterian Church held their last meetings in Edinburgh as independent bodies. On the following

day they formally constituted themselves the United Free Church of Scotland in the Waverley Market, the largest public hall in Scotland, in presence of an audience computed to number 6,000 persons. The union has, as is the rule in Scotland, been accompanied by a 'disruption.' The minority of the Free Church, which on October 30 resolved to remain outside the United Free Church, is very small in number and is financially weak, but it claims to be the true Free Church of Scotland, it is asserting itself vigorously in the Highlands and islands, where Free Church restorationism has always been strongest, and it has taken the first step in a process of litigation for the purpose of discovering whether it or the United Free Church is legally entitled to the property of the original Free Church founded in 1843. But for this secession, the strength of which is not accurately estimable, the new denomination would, accord-

From the outset great stress has been laid on the preparation of subject indexes which go behind the titles of papers and give fairly full information as to the nature of their contents. Both in the first and the second International Conference this view met with the fullest approval. Meanwhile the action of the German government has made it necessary to somewhat modify the original plan. In Germany, a national bureau will be established, supported by a government subvention, and it is intended that the whole German scientific literature shall be catalogued in this office, no assistance will be asked from authors or editors or corporate bodies. In such an office it will for the present be impossible to go behind titles, consequently, only the titles of German papers will be printed in the catalogue. In the first instance, some other countries may prefer to adopt this course on the ground of economy. But in this country, at least, the attempt will be made to deal fully with the literature, and the co-operation of authors and editors will be specially invited.

The catalogue is to be published annually in seventeen distinct volumes. The collection of material is to commence from January 1, 1901. As it will be impossible to print and issue so many volumes at once, it is proposed to publish them in sets of four or five at quarterly intervals."—*Library Journal*, September, 1900. The fourth Conference was held at London, December 12-13, 1900, when "all arrangements were completed for the definitive commencement of the work on January 1, 1901. The responsibility for publication and for the initial expenditure is undertaken by the Royal Society. . . . A comprehensive and elaborate system of classification has been devised with the assent of all the countries interested. This uniformity in a region where diversity of a perplexing kind has hitherto ruled is in itself a great boon to scientific workers everywhere. It may be anticipated that the scheme will by degrees be adopted in all collections of scientific works. As to the nothing aspects of this important undertaking, larger more need be said at present than that the scientific cataloguing of all scientific work most appropriately celebrates the opening of the twentieth century."—*London Times*, Dec. 14, 1900.

SERVIA. A. D. 1894-1901.—Abolition of the constitution by royal proclamation.—Final exile and death of ex-King Milan. See (in this vol.) BALKAN AND DANUBIAN STATES (SERVIA).

A. D. 1901 (April).—Promulgation of a new constitution.—A new constitution for Servia was promulgated by King Alexander, at Belgrade, on the 19th of April, 1901. Of the character of the instrument, the King had previously given intimations in an interview conceded to the editor of the "Revue d'Orient," the amount of which, translated for the "London Times," is partly as follows: "Our three Constitutions of 1869, 1888, and 1901 differ from each other in important matters of principle. That of 1869 practically amounted to absolutism, if I may thus qualify my Constitution. It is true that the executive power retained but few prerogatives, but that was deceptive, as the rights of the Legislature were surrounded by exceptions and restrictions which made it easy to paralyse and annihilate them at any moment. The Constitution of 1888 had the contrary defects. It subordinated the executive power to that of the Legislature, only leaving to the former an altogether insufficient sphere of action. It had another great fault. It was excessively doctrinaire and theoretic, affecting to foresee everything and to regulate everything, so that the legislative power was bound hand and foot and could not legislate freely. The Constitution which will be promulgated on April 19, the anniversary of the day when the fortress of Belgrade was finally evacuated by the Turks in 1867, is a charter similar to those which organize the public powers in several countries of Europe, as, for instance, in England and in France. It settles the form of government, the powers of the King and of the State, the rights of subjects, the working of the national representation, &c. But it leaves to the Legislature the settlement of all details. What more particularly distinguishes the Constitution of 1901 from that of 1869 is that it prevents the use and abuse of ordinances by the Executive, which will be obliged to frame special laws in

every case—that is to say, laws accepted and approved of by the King, the Senate, and the Chamber of Deputies. Thus legality will be forth by the regulating wheel in the machinery of government. The Chamber of Deputies will be much better organized, as the members will be much more numerous, and more represented. The Constitution of 1901 will present great advantages over that of 1888. The Legislature will control the acts of the Government as far as can possibly be desired. At the same time the constitutional regime established in the new Constitution will give the King all the power that he ought to retain in a country that is still new, like Servia, with a diminishing any of the inviolable liberties of a nation.

"I attach very great importance to the political institution with which I am endowing Servia—namely, an Upper Chamber. Considering that it already exists, not only in monarchical countries, but also in most Republics, as, for instance, in France and the United States, I cannot admit that it should be regarded as involving the slightest aristocratic tendency or idea. I know my country well enough to be sure that I shall find a sufficient number of high class politicians to recruit the Senate, and I am enough will remain for the Chamber of Deputies. I am likewise fully persuaded that the legislative task of the Parliament will be more better performed when the Chamber of Deputies is conscious that above it there exists a Senate, whose business it is to revise and improve the laws which it has elaborated, of course for the greater benefit of the nation. Then, again, the Senate will form a moderating element which was much wanting in our Legislature. While Servia is suffering from is not my lack of legislation, but from the circumstances that the existing laws were hastily framed or were the outcome of party rancour. If we had formerly had a Senate composed of men of experience and good patriots, they would never have consented to the conclusion of so many onerous loans, the application of so many iniquitous measures, nor to the convocation of the special tribunal, 'le tribunal extraordinaire,' of 1899.

"At first the Radical party was not favourable to the institution of an Upper Chamber, but it now recognizes the great advantages it will offer and has rallied to my project. The Progressive party has always been favourable to it. The majority of the Liberal party has also adhered to it. I therefore believe that this new institution will be of the greatest service to the country. All that is required, and with a little good will it can be easily done, is that the members of the two Chambers should endeavour honestly, sincerely, and loyally to work for the good of the State and of the nation. If I have not thought right to raise the qualification for the suffrage, as desired by some people, it is because I did not wish to disfranchise any of those who have enjoyed the right of voting during the last 35 years. I do not wish to restrict any of the rights of the nation.

"The application of the new Constitution will be the great task of my Government, in which I have every confidence. The Prime Minister, Dr. Vukitch, has the sympathy and support not only of his own party but of all who would like to see the country governed in a liberal spirit.

At the head of the Ministry is a man of active and sincere cooperation of the ruler and progress. As soon as the constitution has been promulgated, the government will invite the co-operation of the people, which will invite the co-operation of the people, which will invite the co-operation of the people. A strong and free party will thus be formed, and the requisite power and authority will be secured for the purposes of government for the upbuilding of the constitution and for the establishment of the political and economic laws necessary for the progress of the country.

As to the question of the succession to the throne, I wanted to settle it finally, as the interests of the reigning dynasty are not numerous, and the remote collateral lines be in the end, which is not possible. Moreover, every man should be free to take in this matter such views as I might think proper in view of the future continuation of the Servian Monarchy. The first thing to be done was to save the principles of the direct line without seeking to settle it ourselves by the Salic Law, which is not really a reason to apply in our country. I should have said that there are no anti-dynastic feelings in Serbia, with the exception, perhaps, of a few uneducated individuals who really do not know the account. My people are profoundly attached to the reigning dynasty, and never forget the opportunity of showing me their loyalty. I am in sympathy with all the political parties.

When promulgating the Constitution I designated as the most influential members of the cabinet in office. They agreed with me, and I gave them time to assist harmoniously in the work. I have also consulted the leading members of the Liberal party, and with two or three exceptions they have given me the same assurance. Such being the case, I may say that the constitution of 1901 is not a production of my will, but of my good pleasure, but that it is the result of an understanding between the sovereign and the leaders of the three political parties. I consequently reckon upon their sincere and active co-operation, and I trust they will not fail me. I am firmly convinced that the new constitution will act as a fresh and vigorous stimulus to my country, and that it will bring it to calm and stability which it only needs. I sincerely regard it as a source of peace and welfare for Serbia.

SHANGHAI.—Shanghai is the New York

of China. It occupies a position of great importance similar to that of New York on the eastern coast, and its port is one of the largest in China, is about the same in size as New York on the United States coast. The share of the foreign trade of China which Shanghai accounts for is probably the largest in the mouth of the great artery through which the goods flow to and from China, the Yangtze River. Transportation in China is at the present time having been almost exclusively by water, and the Yangtze River is the great steamer and junk line of the country, thus rendering the most populous, richest, and wealthy sections of the country naturally a very large share of the foreign commerce entering or leaving that country passes through Shanghai, where land in one hundred trade representatives, trade firms, consulates, and dockings, and steamship companies exist. The lines of no less than eight great steamship companies center at Shanghai, where they land freight and passengers from the great foreign vessels which are counted by hundreds, and the smaller vessels for river and coast trade are in the thousands. The Yangtze from Shanghai extends westward to Hankow, a distance of 700 miles, and is navigable for very large steamships that are capable of carrying as well as 10,000 tons. Hankow, which with its suburbs has a population of a million people, is the most important of the interior cities, being a great distributing center for trade to all parts of central and western China, and thus the river trade between Shanghai and Hankow is of itself enormous, while the riverwise trade from Shanghai, both to the north and south, and that by the Grand Canal to Peking, the most important city of northern China, is also very large. *United States Pacific Mail Service, Monthly Summary, May 1, 1899*, p. 2190.

When the English chose it as a position in 1842 for their mercantile settlement, it seemed difficult to believe that they would ever succeed in making the place a rival of Canton and Amoy. It is true that Shanghai possessed important commercial relations already, and the geographical advantage of commanding the entrance to the navigable river which traverses the whole empire from west to east, but the children of the city there had to struggle with enormous difficulties of soil and climate. They had to solidify and drain the land, dig out and dry up marshes, cleanse the air of its miasmas, beset incessantly dreading and clearing the channels to keep it open for their ships. The first European merchants established at Shanghai were favored in fortune by the national disasters of China. The Taiping war drove fugitives in multitudes to the territory now called the provinces, and when the town of South China was destroyed in 1860, Shanghai soon took its place as the great city of the country. *E. Reclus, Nouvelle Géographie Universelle*, p. 7, p. 455.

SIAM: A. D. 1896-1899.—Declaration between Great Britain and France with regard to Siam.—A declaration of agreement, in part as follows, between Great Britain and France, was signed at London, January 15, 1896: "I. The Governments of Great Britain and France engage to one another that neither of them will, without the consent of the other, in any case, or under any pretext, advance their armed forces into the region which is comprised in the basins of the Petcha-

Bouri, Meklong, Menam, and Bang Pa Kung (Petchon) Rivers and their respective tributaries, together with the extent of coast from Mueang Bang Tapan to Muong Pasa, the basins of the rivers on which these two places are situated and the basins of the other rivers, the estuaries of which are included in that coast; and including also the territory lying to the north of the basin of the Menam, and situated between the Anglo-Siamese frontier, the Mekong River and the eastern watershed of the Me Luang. They further engage not to acquire within this region any special privilege or advantage which shall not be enjoyed in common by, or equally open to, Great Britain and France, and their nationals and dependents. These stipulations, however, shall not be interpreted as derogating from the special clauses which, in virtue of the Treaty concluded on the 3rd October, 1893, between France and Siam, apply to a zone of 25 kilom. on the right bank of the Mekong and to the navigation of that river. II. Nothing in the foregoing shall hinder any action on which the two Powers

SIAM.

may agree, and which they shall think necessary to uphold the independence of the Kingdom of Siam. But they engage not to conclude any separate Agreement permitting other Power to take any action from which they would exclude the present Declaration themselves. III. From the mouth of the Nam Pakong onwards as far as the Chinese frontier territory of the Mekong shall form the limit of the possessions or spheres of influence of Great Britain and France. It is agreed that the interests and dependencies of each of the two Powers shall not exercise any jurisdiction or authority within the possessions or sphere of influence of the other."

I send a dispatch to the British Ambassador at Paris, written on the same day. Lord Salisbury expresses the intent and purpose of the agreement as it follows: "It might be thought that because we have engaged ourselves, and have received the engagement of France, not under any circumstances to invade this territory, that therefore we are throwing doubt upon the complete external rights of the Siamese to the remainder of their kingdom, or, at all events, treating those rights with disregard. Any such interpretation would entirely misrepresent the intention with which this arrangement has been signed. We have secured a particular area for the application of the stipulations of this Treaty, not because the right of the King of Siam to other portions of his dominions is less valid, but because it is the area which affects our interests as a commercial nation. The valley of the Menam is eminently fitted to receive a high industrial development. Possibly in course of time it may be the seat of lines of communication which will be of considerable importance to neighbouring portions of the British Empire. There seems every prospect that capital will flow into this region. If such an opportunity is offered for its investment, and great advantage would result to the commerce and industry of the world, and especially of Great Britain, if capitalists could be induced to make such an application of the force which they command. But the history of the region in which Siam is situated has not in recent years been favourable to the extension of industrial enterprise, or to the growth of that commerce which is the first condition of material improvement. A large territory to the north has passed from the hands of the Burmese Government to those of Great Britain. A large territory to the east has passed from the hands of its predecessors to those of France. The events of its recent history certainly have a tendency to encourage doubts of the stability of the Siamese dominion, and without in any degree sharing in those doubts, or admitting the possibility, within our future with which we have to deal, of our Siamese independence being compromised, Her Majesty's Government could not but feel that there would be an advantage in giving some security to the commercial world that, in regard to a region where the most active development is likely to take place, no further disturbances of territorial ownership are to be apprehended."

*—The British, Parliamentary Publications
Publicly Communicated: France, No. 2, 1896, pp. 1-3.*

Perhaps the above explanation can be better understood after reading the following: "In the early sixties France commenced the subjugation

SIBERIAN ARCTIC EXPLORATION

of Tonquin. It was not till 1890 France openly broke the ground. The Siamese Government, on the other hand, the French Republic, and the Kingdom of Annam. It was not till 1890 that France, in Annam, for perhaps a quarter of a century, whereas Siam could show, and still does, the disputed territory of the Mekong River, which had at least twenty years' possession by France, and more than twenty years' possession by Siam. In March 1890, the French sent the ship *Tan Tan* to Bangkok, and she remained for months a stationary force. A rigorous blockade of the Siamese coast followed, resulting in a few short days of complete interruption of the dispute territory, and the payment of a heavy war indemnity. The Anglo-French Convention of last year has given above the King of Siam's position before, today the least slight advantage. That agreement practically amounted to the French shore between France and England, of the whole of Siam save that portion situated in the territory of the Mekong, whose autonomy they had undertaken to preserve.

France holds her position to the long coasted port of Chantabon, the port of the province of Lueang Phrabong, which sitsuate upon the right bank of the Mekong. The Siamese King is, and so far as the Oriental monarchs as a progressive ruler. A fate has been unkind to him, which he has encouraged English customs and the French gauge for all the means in his power. He made the kindest possible interest in the introduction of electric light, electric tramways. As a capital, has endeavored to add his army and navy, his prison and other systems, upon the English method, and has in person opened the first railway that connecting Bangkok with Pnom Penh in Siam. It is, indeed, one of the strangest and most interesting sights as you stroll through the streets of the capital, to witness the richness and glory of comparative barbarism traveling in juxtaposition to the electric tramway and the bicycle. And for his broad and enlightened views the King of Siam has been rewarded by the wholesale and utterly unjustifiable plunder of his most fertile lands. Percy Cross Standing, *The Significance of the Siamese Last Century, 1897*.

Frequent collisions between French and Siamese in the second neutral zone, on the right bank of the Mekong continued until the convention was agreed upon in May, 1899. This gave to France the province of Lueang Phrabong, in return for which she agreed to withdraw entirely from the neutral territory and from the port of Chantabon.

SIERRA LEONE PROTECTORATE. Extension of British authority over the Hinterland of the Colony of Sierra Leone.

The hut tax. Insurrection of natives. Im-
mediately adjoining the Colony of Sierra Leone,
lying to the northward and eastward, is the
Hinterland, the boundaries of which were defined
by the Agreement between Great Britain and
France, which was concluded 21st January 1893.
The extreme depth from south to north is about
200 miles, lying between 7° and 10° north lati-
tude, and 180 miles from east to west, lying
between 10° 40' and 14° 20' of west longitude.
The estimated area is rather more than 30,000
square miles, about the size of Ireland.

In the many regions on the west coast of Africa,
the country is for the most part well watered
by rivers and running streams. The population
of the Hinterland has not been ascertained. It
has been variously estimated, before the present
troubles, at from about 750,000 up to about
1,000,000. The trade and revenue of the Col-
ony depend almost entirely on the Hinterland.
A very large proportion of the goods imported
into the Colony are carried into and consumed
in the Hinterland. These goods are paid for by
means of the products of the Hinterland, which
are exported, and the profits derived from the
exchange enable the merchants to pay the Custom
duties, which constitute the bulk of the
Colonial revenue. The territories forming the
Hinterland are, according to the native organi-
sation, ruled over by a large number of Chiefs
or *Kings*, as they are called, and still in native
possession are called. The portions of country
under each Chief are well ascertained and recog-
nised by the various Chiefs and their sub-
jects.

The relations between the English Govern-
ment and the Chiefs at the time of the conclu-
sion of the Agreement between France and Eng-
land in 1893 was that some of the Chiefs
whose territories lay most adjacent to the Colony
of Sierra Leone had contracted with the English
Crown certain treaties of cession, and treaties
directed to definite objects of utility and good
offices. In addition there had sprung up by
usage a limited consensual and advisory juris-
diction, under which Chiefs as well as persons
not Chiefs, could bring their differences readily
as to territorial boundaries before the Gov-
ernor of Sierra Leone as a sort of arbitrator, and
implicitly follow his awards. This jurisdiction
was exercised over an area of no defined limits,
so far as any rules were concerned. As a fact,
it was limited by conditions of distance and
facility of travel, so that whilst the usage was
most established in the countries nearest to Free-
town, there was none in the more distant regions,
or if there was any it was at most secundum
us to be purely of no account. I have not
been able to trace any instance in which, either
under treaty or any other form of consent, or
without consent, the English Government has
imposed, or endeavoured to impose any direct
taxation upon the Chiefs or people of the Hinter-
land prior to 1896.

The agreement between France and Great
Britain delimited the respective spheres of inter-
est of the two countries south and west of the
Middle or Upper Niger, and thus defined for
England in the Hinterland of Sierra Leone a ter-
ritory within which, so far as concerned any

question between France and England, it
was at liberty to exercise whatever
extent of jurisdiction she might.

It made of course, no alteration in the
native organisation, nor upon the rela-
tions between England and the natives,
who were not parties to the agree-
ment.

On 31st August 1896, a Proclamation
was published setting forth that the
Governor of Sierra Leone had assumed a Protectorate over
the Hinterland of the Colony of Sierra Leone.
Her Majesty had acquired possession of the
Hinterland for purposes of administration,
and had divided into five districts, each
being of about equal size, avoiding as far
as possible the district boundaries of the
tribes of Paramount Chiefs. The
districts have been named as the Kono, Koina,
dajuma, Panguma, and Koina.
In anticipation of the arrangements
became necessary for the governing of the
Protectorate, an Order of the Queen in Council
had been made on 24th August 1896,
whereby.

Her Majesty was pleased to order
that it should be lawful for the Governor of
Sierra Leone, by Ordinance or Ordinance, to
provide for giving effect to the provisions
then as Her Majesty may at any time
after the passing of the Order in Council
acquired in the said territories, and in the
Colony of Sierra Leone.

The Order of the Queen in Council
entitled 'An Ordinance to Define the
of exercising Her Majesty's authority
Territories adjacent to the Colony of Sierra
Leone,' was passed by the Legislative
and Governor of Sierra Leone, in the
ment of the Protectorate, on 16th September
1896.—"Great Britain, Report and
on Insurrection in the Sierra Leone
Parliamentary Publication, London,
Command, 1896, C. 9388, pp. 10-17."

The Ordinance above mentioned, which was
enacted, with some changes, in September 1896,
provided, among other things, for the imposition
of a house tax, or hut tax, upon the natives.
This proved to be the main cause of the
native revolt in the Protectorate. It was
asserting the Crown's ownership of the land,
whether in use and occupation or not, and
of attempting to make the people dependent
of governing them by methods they resented.
The Protectorate Ordinance imposes a house tax of
five shillings a year, and, in the case of houses
with four rooms or more, of ten shillings a year,
on every 'householder'; the sum to be paid in
'sterling coin' once after the 1st day of January
year, or, in default of payment on demand, to be
distrainted for with so much additional as will
defray the cost of removing the property to the
possession of it for 'the price current at the open
market'. The absurdity of thus importing the
mechanism of civilisation into 'house tax' levied
among these ignorant savages, not to speak of the
injustice of the tax itself. The land which
he taxed are rarely worth more than the value
of two or three shillings apiece, and 'sterling
or other 'sterling coin' are rarely seen in the
land by the natives, such wages as they are
being generally paid in kind, and such wages
they carry on being nearly always in the way of

"SOUND MONEY" DEMOCRATS.

SOUTH AFRICA.

Cape Colony: A. D. 1881-1888.—Organization of the "Afrikaner Bond."—The "Afrikaner Bond" or National Party was formed in Cape Colony in 1881, but held its first Congress, or convention in 1888, at which meeting the following platform, or formal statement of objects, was adopted: "1. The Afrikaner National party acknowledge the guidance of Providence in the affairs both of lands and peoples. 2. They include, under the guidance of Providence, the formation of a pure nationality and the preparation of our people for the establishment of a United South Africa." 3. To this they consider belong: (a) The establishment of a firm union between all the different European nationalities in South Africa, and (b) The promotion of South Africa's independence. 4. They consider that the union mentioned in Art. 3 (a) depends upon the clear and plain understanding of each other's general interest in politics, agriculture, stock breeding, trade, and industry, and the acknowledgment of every one's special rights in the matters of religion, education, and language; so that all national jealousy between the different elements of the people may be removed, and room be made for an unmistakable South African national sentiment. 5. To the advancement of the independence mentioned in Art. 3 (b) belong: (a) That the sentiment of national self-respect and of patriotism toward South Africa should above all be developed and exhibited in schools, and in families, and in the public press, (b) That a system of voting should be applied which not only acknowledges the right of minorities, but also that of ownership and the development of intelligence, and that is opposed, as far as possible, to bribery and compulsion at the poll. (c) That our agriculture, stock breeding, commerce, and industries should be supported in every lawful manner, such as by a conclusive law as regards masters and servants, and also by the appointment of a prudent and advantageous system of Protection. (d) That the South African Colonies and States, either each for itself or in conjunction with one another, shall regulate their own native affairs, employing thereto the forces of the land by means of a satisfactory burgher law; and (e) That outside interference with the domestic concerns of South Africa shall be opposed. 6. While they acknowledge the existing Governments holding rule in South Africa and intend faithfully to fulfil their obligations in regard to the same, they consider that the duty rests upon those Governments to advance the interests of South Africa in the spirit of the foregoing articles; and whilst, on the one side, they watch against any unnecessary or frivolous interference with the domestic or other private matters of the burgher, against any direct meddling with the spiritual development of the nation, and against laws which might hinder the free influence of the Gospel upon the national life, on the other hand they should accomplish: If the positive duties of a good Government, among which must be reckoned:—(a) In all their actions to take account of the Christian character of the people. (b) The maintenance of freedom of religion for every one, so long as the public order and honor are not injured thereby. (c) The acknowledgment and expression of religious, social, and bodily needs of the people, in

the observance of the present weekly day of rest. (d) The application of an equal and simple system of taxation. (e) The formation of a free and impartial and, as far as possible, nonpartisan administration of justice. (f) The watching over the public honor, and the prevention of the adulteration of the necessaries of life, and the defiling of ground, water, or air, as well as the spreading of infectious diseases. 7. They stand forward as an independent party, except the co-operation of other parties, and the same can be obtained with the unimpairment and maintenance of these principles.

The Transvaal: A. D. 1884-1894. The restored independence of the Boers and their dissatisfaction with its terms. Frustration of their desire for extended territory. The London Convention of 1884.—After the Boer War of 1880-81 (see, in vol. 4, S. 4, Africa: A. D. 1806-1881), which had been caused by an arbitrary annexation of the Transvaal State to the dominions of the British, the sense of justice in Mr. Gladstone led to the restoration to the Transvaal Boers (by the Convention or Treaty of Pretoria, 1881) their right of internal self-government, with a reservation of "the suzerainty of Her Majesty," supposed relative to nothing but foreign affairs. The Boers were not satisfied with that concession, and began at once to strive for the complete independence they had previously possessed in the Convention agreed upon and signed at Sand River, 1852, which guaranteed (quoting its precise terms) "in the fullest manner, on the part of the British Government, to the emigrant farmers (Boers) beyond the Vaal River, the right to manage their own affairs and to govern themselves without any interference on the part of Her Majesty the Queen's Government." To regain that status of complete independence became the first object of the Boers. They went far toward success in this endeavor, as early as 1884 when the British Colonial Secretary, Lord Derby, was induced to agree to a new Convention with the South African Republic (as it was then styled), which superseded the Convention of 1852. The terms of the later instrument are given below.

The second aim of the Boers appears to have been the widening of their territory, by advancing in the first instance, southward into Zululand and westward into Bechuanaland. In the former movement they had success; in the latter they were thwarted. English missionaries complained of their treatment of the natives, and stirred up the British government to take the Bechuanaland tribes under its protection. Their eastern frontier they succeeded, after long controversies with Great Britain, in stretching beyond Swaziland, but they were not allowed to push it to the sea. Northward, they would probably have done far, had it not been for the appearance, at this time of Mr. Cecil Rhodes, who came upon the scene of South African politics with imperious ambitions, with great energies and capabilities, with few apparent hesitations, and with a vast fortune acquired in the Kimberley diamond mines. He organized the British South Africa Company under a royal charter, got some settlers into the country north of the Limpopo and set up a government there, in 1890, just in time, it appears

"A few days later the delegates submitted a draft treaty, in which the following clause stood first: 'It is agreed that Her Britannic Majesty recognises and guarantees by this treaty the full independence of the South African Republic, with the right to manage its internal affairs according to its own laws, without any interference on the part of the British Government, it being understood that this system of non-interference is binding on both parties.' To the letter enclosing this draft treaty Lord Derby replied that the proposed treaty was 'neither in form nor in substance such as Her Majesty's Government could adopt.' Meanwhile the discussion between the British Government and the Boer delegates seems to have turned mainly upon the extension of the territories of the Transvaal and the relations between the Republic and the native chiefs, subjects which had only an indirect bearing on the question of suzerainty. It was only on the 25th of January, 1881, that the Colonial Office wrote to the delegates stating that if a certain compromise with regard to the frontier line were accepted, the British Government would be prepared 'to proceed at once with the consideration of the other proposals for the modification of the Treaty of Pretoria.' The delegates replied on the next day virtually accepting the proposed frontier compromise, and requested the British Government to proceed at once with the substitution of a new Convention. . . . The draft treaty was signed on the 27th of February, 1881.

"The Convention of London did not repeat the preamble of the original Convention in which the words 'subject to the Suzerainty of Her Majesty' are to be found. Nor is the word 'Suzerainty' mentioned in the Convention of 1881, which declares that the articles contained therein, if endorsed by the Volksraad, 'shall be substituted for those of the Convention of 1881.' No formal withdrawal, however, of the Queen's Suzerainty is to be found in the Convention of 1881. On the contrary, it is distinctly affirmed in Article 4 of the modified Convention that 'the South African Republic will conclude no treaty or engagement with any State or nation, other than the Orange Free State, until the same has been approved by Her Majesty the Queen.'—Edward Dicey, *British Suzerainty in the Transvaal (Nineteenth Century)*, 1897.

In its preamble, the Convention of 1881 recites that—"Whereas the Government of the Transvaal State, through its Delegates, consisting of [Kruger, Du Toit and Smitt], have represented that the Convention signed at Pretoria on the 3rd day of August, 1881, and ratified by the Volksraad of the said State on the 25th of October, 1881, contains certain provisions which are inconvenient, and imposes burdens and obligations from which the said State is desirous to be relieved; and that the south western boundaries fixed by the said Convention should be amended with a view to promote the peace and good order of the said State, . . . now, therefore, Her Majesty has been pleased to direct," &c.—substituting the articles of a new Convention for those signed and ratified in 1881.

Article I. of the new Convention describes the lines of boundary as amended. Article II. binds the two governments, respectively, to guard said boundaries against all trespassing. Article III. provides for the reception and protection, at Pre-

toria, of a resident British officer, "to discharge functions analogous to those of a consular officer."

Article IV. reads as follows:—"The South African Republic will conclude no treaty or engagement with any State or nation, other than the Orange Free State, nor with any nation to the eastward or westward of the Republic, until the same has been approved by Her Majesty the Queen. Such approval shall be given only after it shall have been granted by Her Majesty's Government, and shall not, within six months, after the receipt of a copy of such Treaty (which shall be submitted to them immediately upon its completion), be withheld that the conclusion of such Treaty shall not conflict with the interests of Great Britain or of any of Her Majesty's possessions in South Africa."

Articles V. and VI. relate to public order. Article VII. guarantees the non-interference of persons in the South African Republic, who remained loyal to Her Majesty during the hostilities. Article VIII. is a declaration against slavery in the Republic. Article IX. is in language as follows:—"There will continue to be complete freedom of religion and protection from molestation for all denominations, provided the same be not inconsistent with non-disturbance and order; and no disability shall attach to any person in regard to rights of property by reason of the religious opinions which he holds." Article X. relates to graves of British soldiers. Article XI. relates to the determination of boundary places outside of the Republic; XII. to the independence of the Republic; XIII. to non-discrimination in importations on both sides.

Articles XIV. and XV. read thus:—"Article XIV. 'All persons, other than natives, residing themselves to the laws of the South African Republic, (a) will have full liberty with their families, to enter, travel or reside in any part of the South African Republic; (b) they will be entitled to hire or possess houses, shops, offices, warehouses, shops and premises, and to carry on their commerce either in person or by any agents whom they may think fit to employ; (c) they will not be subject, in respect of their persons or property, or in respect of their commerce or industry, to any taxes, whether national or local, other than those which are or may be imposed upon citizens of the said Republic.' Article XV. 'All persons, other than natives, who establish their domicile in the Republic, between the 12th day of April, 1877, and the 31st day of August, 1881, and who within six months after such last mentioned date have had their names registered by the British Government, shall be exempt from all compulsory military service whatever.' Article XVI. provides for a future extradition treaty; XVII. for the payment of debts in the same currency in which they were contracted; XVIII. establishes the ownership of certain land grants; XIX. secures certain rights to the natives; XX. nullifies the Convention if not ratified by the Volksraad within six months from the date of its signature. The date, 27, 1881.

With considerable reluctance, the Convention was ratified by the Volksraad of the South African Republic in the following month. The Volksraad having considered the new Convention concluded between its deputation and the British

African element, consisting of young colonists from the Cape Colony and Natal—members of families well known in South Africa—and many of them old schoolfellows or in some other way known to each other. Then the British contingent, self-reliant, full of enterprise and energy—Americans, for the most part skilled engineers, miners, and mechanics—French, Germans, and Hollanders. A band of emigrants, of adventurers, and constituted, as I think all emigrants are, of two great classes—the one who, lacking neither ability nor courage, are filled with an ambition, characteristic particularly of the British race, to raise their status in the world, who find the conditions of their native environment too arduous, the competition too keen, to offer them much prospect, and who seek a new and more rapidly developing country elsewhere; and another, a smaller class who sometimes through mistake, sometimes through their own fault, or perhaps through both, have failed elsewhere. "Adventurers all, one must admit; but it is the adventurers of the world who have founded States and Kingdoms. Such a class as this has been assimilated by the United States and absorbed into their huge fabric, of which to-day they form a large and substantial portion. What should the Transvaal Boers have done with this new element so full of enterprise and vigour? This had been for the last ten years the great question for them to solve. . . . Enfranchisement, participation in the political life of the State by the Uitlander,—this means, they said, a transference of all political power from our hands to those of men whom we do not trust. 'I have taken a man into my coach,' said President Kruger, 'and as a passenger he is welcome; but now he says, Give me the reins; and that I cannot do, for I know not where he will drive me.' To the Boer it is all or nothing; he knows no mean, no compromise. Yet in that very mean lies the vital spirit of republicanism. What is the position of the Boers in the Cape Colony? Are they without their share, their influence, their Africander beal in the political affairs of the country? And so it is throughout the world to-day,—in the United States, in England, in France, in the British Colonies, wherever the individual thrives and the State is prosperous—the compromise of divided political power among all classes, all factions, is the great guarantee of their well-being. . . . That the enfranchisement of the Uitlander would mean a complete transference of political power into his hands involves two assumptions: the first is that the Uitlanders would form a united body in politics; the second is that their representatives would dominate the Volksraad. The most superficial acquaintance with the action of the inhabitants of the Witwatersrand district on any public matter will serve to refute the first of these. . . . The second of these assumptions—though it is continually put forward—almost answers itself. The number of representatives from the Uitlander districts under a scheme of redistribution of seats which the Boers could reasonably be expected to make would fall considerably short of those returned from the Boer constituencies. Such was the attitude of the Boers on this vital question which led to the Reform Movement of 1895; and I have stated what I believe to be the injustice of it as regards the Uitlanders and the unwisdom of it in the true interests of the Boers."—A. P.

Hillier, *Raid and Reform*, pp. 24-29 (London: Macmillan & Co.).

Portuguese Possessions: A. D. 1891.—Delagoa Bay Railway question. See also this vol. DELAGOA BAY ARBITRATION.

The Transvaal: A. D. 1894.—Estimated population.—In October, 1894, the British High Commissioner at Pretoria, J. A. de Wet, estimated the population of the Transvaal on the basis of a census taken in 1880 as follows: "Transvaal and Orange Free Staters, 70,861; British subjects, 62,509; other foreigners, 15,538;" total, 148,908.

The Transvaal: A. D. 1894.—The "Commandeering" question.—Visit of the British High Commissioner to Pretoria.—Demonstration of British residents.—The first question which came to a sharp issue between the government of the South African Republic and the British subjects resident in the gold fields related to the claim which the former made on the latter for military service in the wars of the Republic with neighboring native tribes. The demand for such service was made, in each case, by what was called a "commando," the commando being defined in the military law of the Boers as follows: "By *commando* is understood a number of armed burghers and subjects of the state called together to suppress rebellion amongst the natives, or disturbances amongst the white population." British residents protested against the requirement of this service from them, and the British government, in 1894, opened negotiations with that of the Boer Republic to obtain their exemption from it. It was acknowledged that there is "nothing contrary to international comity in the application of such a law as the *commando* law to a foreigner"; but, said the British Colonial Secretary, in a despatch dated 8, 1894, giving instructions to the British High Commissioner in South Africa, "Her Majesty's Government consider that a special reason for now claiming exemption for our people is afforded by the fact that treaties have been concluded by the South African Republic under which, as they understand, the subjects of no less than seven Powers—Portugal, Holland, Belgium, Germany, France, Italy, and Switzerland—are now exempt from this liability; and they consider that they can hardly be expected to acquiesce in a state of things under which Her Majesty's subjects, whose interests in the South African Republic are greater and more intimate than those of any other Power, should remain in a position of such marked disadvantage. I have therefore to instruct you to address in moderate and courteous terms, a friendly representation to the Government of the South African Republic on the subject."

Negotiations on the subject were then opened, which led to a visit to the Boer capital by the British High Commissioner, Sir H. B. Loch, an invitation from President Kruger. His arrival at Pretoria (June 25) gave occasion for a demonstration on the part of British residents who showed the state of feeling existing more fully, no doubt, than it had appeared before. The circumstances were reported a few days later by the High Commissioner, as follows: "When I entered the carriage with President Kruger, two men got on to the box with a *finion* jack, and the crowd, notwithstanding the President's remonstrances, took the horses out and dragged the carriage to the hotel, a distance of nearly a mile,

degluged the way 'God save the Queen,' and 'Rule Britannia.' On arrival at the hotel, the address was presented to which I briefly replied, and then called for three cheers for the President, which were heartily given. He was then dragged into the Government Office. I am glad that no personal insult was intended, by this demonstration, to the President, and any animosity with which he viewed the occurrence seemed to be caused from the fact of the arrangements for keeping order having been so defective. The political atmosphere, however, was charged with such an amount of electricity that every moment an explosion was imminent. The Legislative and Executive enactments which press heavily on the great industry which contributes upwards of £1,000,000 annually out of a total revenue of little more than a million and a quarter, without the population that produces this wealth possessing any franchise rights, or voice in the government of the country, has created a deep-seated feeling of dissatisfaction, shared alike by the English, American, German, and other foreign residents in the country. The compulsory commandeering was the last straw that broke down the patience they had hitherto exhibited. The Transvaal Government were, upon my arrival, seriously alarmed at the state of feeling at Johannesburg, but when they came to consider the real meaning of the demonstration on my arrival at Pretoria, which showed to them how general the dissatisfaction was amongst all classes of British subjects, who formed the majority of the whole population of the Republic, they for the first time, realised the imminent danger of the situation, and told me of their dread of a collision that at any moment might occur between the Boer burghers, who were in considerable numbers in the town, and the English and foreign residents.

To avoid any further excitement of feeling, the Commissioner declined to visit Johannesburg which he had intended to do. During his stay at Pretoria, he submitted to President Kruger the draft of a Convention stipulating that the subjects of Her Majesty the Queen whilst residing within the limits of the South African Republic, and the citizens of the South African Republic whilst residing within the dominions of Her Majesty the Queen, shall enjoy the same rights and privileges as the subjects of the most favoured nation with regard to military service and all obligations of a like nature, and he received from President Kruger a counter proposition, for the negotiation of a new agreement, to take the place of the London Convention of 1884, embodying the desired provision concerning military service, along with other amendments of the old Convention. To this proposal, President Kruger added: "In order however to meet the request of Her Majesty's Government, the Government will, in the meantime provisionally, no more commandeer British subjects for personal military service." Practically, this assurance disposed of the commanding grievance, but no Convention on this subject was attained. — *Great Britain, Parliamentary Publications (Papers by Command), C. 8470.*

A great mass meeting was held at Johannesburg, July 14, for the purpose of demanding that the franchise should be extended to all races, and insisting that the Constitution should

be amended and made more genuinely democratic. In consequence of this meeting the Volksraad passed at one sitting two resolutions, the first restricting severely the right of public meetings. No outdoor meetings or addresses were to be allowed, and an assize of 1856 persons would be considered a public meeting. The police were given power by this bill to order those present to disperse, and every one attending was made liable to imprisonment for two years, while the rulers of any meeting that the police might consider to be against the public peace might be fined £500 or sentenced to two years hard labour. On the other hand, the 'recommended' non-franchise was [with the rebellious chief Matabele, President Kruger welcomed them and said that need not be the Volksraad would bestow on them the rights of full citizenship. The effect of the Franchise Act passed in June, however, was to prevent any citizen from obtaining the franchise unless his father was born in the State, or had been naturalized. The formation of committees by aliens for the support of political candidates was rendered penal. The Volksraad postponed for one year the consideration of the Government proposal to grant the franchise to the foreign residents who had recently served in the various 'commandos' against the 'Kaffir' rebels. — *Annual Register, 1894, p. 360.*

British South Africa Company: A. D. 1894-1895. — Extended charter and enlarged powers of the Company. Its master spirit, Mr. Cecil J. Rhodes. Attitude towards the South African Republic. — The British South Africa Company, royally chartered in 1889 for the promotion of "trade, commerce, civilization, and good government" in "the region of South Africa lying immediately to the north of British Bechuanaland, and to the north and west of the South African Republic, and to the west of the Portuguese dominions," was now in full possession, both politically and commercially, not only of the great domain of the Matabele, and the Mashonas, stretching to the Zambesi River, but likewise of a vast territory beyond that stream. Its charter had been extended in 1891, to cover the whole sphere of British influence north of the Zambesi, except the strip of country called Nyassaland, which borders the western shore of Nyassa Lake. It had subjugated the Matabeles, exterminated their kingdom, driven its native sovereign, Lo Bengula, to exile and death (see in vol. I, SOUTH AFRICA, A. D. 1885-1890). By a new agreement with the British Government, signed on the 23d of May, 1891, it had received political authority over this imperial domain, in addition to the powers and privileges which its broad charter gave.

The administration of the government of the region was to be conducted by the Company, under an Administrator and a Council of four members composed of a Judge and three other members. The Administrator to be appointed by the Company, with the approval of the Colonial Secretary, and to be removable either by the Secretary or by the Company, with the approval of the Secretary. The Judge, appointed by the Company, with the approval of the Colonial Secretary, and removable only by the Secretary, was to be a member of the Council ex officio. The other members of the Council other than the Judge, to be appointed by the Company, with the approval of

the Secretary, and to be removable by the Company. The Administrator should, as representative of the Company, administer the government, but must take the advice of his Council on all questions of importance. In cases of emergency when he found it impracticable to assemble a quorum, the Administrator might take action alone, but must report such action to the Council at its next meeting. Moreover, he might overrule the Council, but must, in that case, report the matter forthwith to the Company, with the reasons for his action; and the Company might rescind the decision of the Administrator, whether made with, or without, or against, the advice of the Council. With the concurrence of at least two members of the Council, and with the approval of the British High Commissioner for South Africa, the Administrator was empowered to frame and issue regulations, which should have the force of law—but the Colonial Secretary or the Company could veto any such regulation at any time within twelve months of the date of approval by the High Commissioner. This power of making ordinances included the power to impose such taxes as might be necessary, and the right to impose and to collect customs duties. The armed forces of the Company were expressly forbidden to act outside the defined limits of its territory without the permission of Her Majesty's Government.

The master spirit of the Company which exercised these imperial powers of government over so great a dominion in Africa was Mr. Cecil J. Rhodes, Premier of Cape Colony, organizer and chief of the De Beers Consolidated Mining Co. in the diamond fields,—millionaire projector and manager of everything stupendous in the enterprises of the African world. He seemed, in fact, to be more than a master spirit in the Company. Apparently he had created it as an instrument of his ambitions, and it moved in his shadow throughout. Its Administrator, Dr. Leander S. Jameson, was his closely confidential friend. Presently it stamped his name on the broad empire which bore already the stamp of his personality and will, by proclaiming (May 1, 1895), "The territories now or hereafter placed under the control of the British South Africa Company shall be named collectively Rhodesia. The provinces at the present time included in the territory of Rhodesia are Mashonaland, Matabeleland, and Northern Zambezia." Great ambitions—imperial ambitions—had thus come to be powerfully embodied in a corporation which practically served the will of one remarkably able man. They were ambitions which had been in conflict from the beginning with the interests as well as the ambitions of the Boers of the South African Republic, and the conflict was not to be ended by the triumph which the Rhodesians had won. Naturally the Boer was jealous and distrustful of the energetic men who had seized lands which he desired and humbled his republic in. Naturally, too, the bold adventurers of Rhodesia, arrogant in their success and as little scrupulous as "empire builders" are apt to be, looked with contempt and impatience at the plodding Boer, as an obstacle to their booming development in Africa of a civilization "up to date." Between the two incongruous neighbors rose the cry of the angry Uitlanders at Johannesburg, threatening the one and appealing to the sympathy of the other. The consequences soon appeared.

The Transvaal: A. D. 1895 July. Opening of Delagoa Bay Railway. The opening of the railway to Delagoa Bay was a blow with much economy at Pretoria on the 28th July.

The Transvaal: A. D. 1895 September-December.—Closing of Vaal River "drifts" (fords) as ports of entry. Anger in Cape Colony.—A threatening situation. The Cape Government of the South African Republic adopted a measure, for the benefit of its railway, connecting Delagoa Bay with Pretoria, and for the development of commerce with Delagoa Bay rather than through Cape Colony, which raised a storm of indignation in the Cape, giving forth four grievances, there while existing for a time more threatening than the grievances of the Uitlanders of the Rand. The measure in question was one that closed the "drifts" or fords of the Vaal River, between Cape Colony and the Transvaal, as ports of entry for the importation of over-sea goods. As stated by the British High Commissioner, in a despatch (number 7) to Mr. Chamberlain, the British Colonial Secretary, the history of the case is as follows:

"In the year 1891 the Cape Government came to an agreement with the Transvaal Government and the Netherlands Railway Company to advance the latter £200,000 towards the construction of the railway from the Vaal river to Johannesburg, receiving in exchange 4 per cent. advance Netherlands Railway Company 4 per cent. bonds at £93 guaranteed by the Transvaal Government. It was stipulated in the agreement that the Cape Government should fix the traffic rates on the Transvaal extension from the close of 1894, or until the completion of the railway from Delagoa Bay to Pretoria if such completion should take place before that date. The railway extension from the Vaal river, provided for was opened in September 1892, and the Cape Government secured thereby during the continuance of the agreement, practically the monopoly of the Johannesburg traffic. The agreement terminated on the 31st December 1894, the Delagoa Bay to Pretoria Railway having shortly before been completed and commenced working. Up to the close of the agreement the through traffic rates from the coast to Johannesburg had been fixed by the Cape at the average rate of about 2 1/2d. per ton per mile. After the close of the agreement the Netherlands Railway Company raised the rates on its 52 miles of railway, from the Vaal river to Johannesburg, to an average of nearly 8d. per ton per mile. Upon this importers began to remove a portion of their goods from the railway at the Vaal river, and to send them on by road and bullock waggon to their destination in the Transvaal, instead of by the Netherlands Railway to Johannesburg and elsewhere as before. This move has recently been met by the Transvaal Government issuing a Proclamation closing the drifts on the Vaal river alongside the railway as ports of entry for over-sea goods, leaving them open for other goods, the produce of South Africa. Importers of over-sea goods have thus only the choice between making use of the Netherlands line from the Vaal to Johannesburg or the enhanced traffic rates imposed on the line of importing via Delagoa Bay or Durban."

Vigorous remonstrances against this measure were made instantly by the government of the

settling in the Transvaal, could become a citizen and a voter after a residence of two years. The required residence was then raised to five years, and in 1887 it was carried up to fifteen. By this time the immigrant population was growing numerous, and its complaints of disfranchisement and nonrepresentation in the Volksraad, or Legislature, soon took on angry tones. In 1891 a nominal concession was made to the discontented Uitlanders, by the creation of a second Volksraad (see, in this vol., CONSTITUTION OF THE SOUTH AFRICAN REPUBLIC—the bracketed amendments or added articles following Article 29), to which they could elect representatives. The suffrage in elections to this new chamber was given after two years' residence, and the taking of an oath of allegiance to the Republic, and qualification for sitting in it was acquired after a residence of four years. But the Second Volksraad had no independent power. It could act only on certain specified subjects, taxation not included, and all that it did was subject to overruling by the First Volksraad, while the enactments of the latter were entirely valid without its consent. The Second Volksraad, in fact, was no actual branch of the national legislature, but a powerless appendage to it, where no appearance of representation in the government could be given to the Uitlander population without the reality.

Naturally, this aggravated rather than pacified the discontent of the new comers. They were a rapidly increasing multitude, congregated, for the most part, in one district, where it was easy for them to feel and act in combination. By 1895 there was said to be 100,000 of them in the Witwatersrand, and some 60,000 natives were working in their mines. They were being heavily taxed, and they complained that they could get nothing adequate in return for the taxation,—neither an efficient police, nor decent sanitary regulations, nor a proper water supply, nor a safe restraint upon the sale of liquors to their native work people. At the same time it was charged that corruption prevailed in the omnipotent First Volksraad, and among public officials; and that, on the whole, the Republic was in bad as well as in ignorant hands. This was not alone the view of the complaining foreign residents, but was shared more or less by unprejudiced visitors to the country, including Mr. James Bryce, who travelled in the Transvaal in 1895, and who wrote of the grievances of the Uitlanders in quite a sympathetic vein.

Until the gold-seekers came into it, the Republic had been poor and its revenues small. Their coming gave it a full treasury. They were the principal consumers of the imported goods on which its tariff was laid. Their large use of dynamite and other explosives in mining gave the government an opportunity to make a highly profitable monopoly of the manufacture, afterwards exchanged for an equally profitable concession to a monopolistic company. Their mines were the proper subject of a tax which yielded large returns. In fact, the Republic was taking much to itself from the Uitlanders—no more, perhaps, than it had a fair right to take,—but, according to what seems to be trustworthy testimony, it was giving them far less in return for it than they had a just right to demand, and it was offering them no prospect of anything better in time to come.

It seems to be certain that responsibility for whatever was hostile and unjust in the treatment of the foreign population rested largely upon the President of the Republic, M. J. Kruger, who had been at the head of the government for many years. He exercised influence and authority that had scarcely a limit. The Volksraad was obedient to him, and most of its legislation was undoubtedly emanate from him and from those whom he took. There can be little doubt that he practically shaped the whole policy of the Republic in its dealing with the Uitlanders, and that it expressed the attitude of his mind toward foreigners. In general and Englishmen in particular. He distrusted even the Dutch of Cape Colony, and sought Hollanders for the police service when he needed qualifications which his own people did not possess.

While within the Transvaal there was growing discontent, matters were so shaped elsewhere as to still further complicate the situation. The idea of a Confederation of British South Africa and the extension of British sphere to the Zambesi, had long been the dream of Imperialists, and the ruling classes of the Cape had persistently urged this upon the home government. . . . After the consolidation of the diamond companies, Mr. Cecil Rhodes became the Imperialist leader in South Africa, and marshalled behind him all the corporate interests, and combined influence of his many associates. The Boer Republics stood in the way of the success of Imperialist enterprise. Then came the 'scramble for Africa,' which began with the efforts of the King of Belgium to consolidate the native tribes of central Africa under Belgian rule and which resulted in the carving out of the Congo Free State, the assertion of German protection over Damaraland and Namaland, and the joint effort of European powers to check the British sphere, all lent zest to ambition and brought the English popular mind into temper for concerted action. Under such circumstances the 'little England' party lost its standing and an Imperial policy gained fullest support. With such an atmosphere surrounding the Transvaal the grievances of the 'aliens' within could not long be disregarded without serious trouble.—F. A. Cleveland, *The South African Conflict* (*The American Academy of Political and Social Science*, No. 265), pp. 19-22.

The Transvaal: A. D. 1895-1896.—Revolutionary conspiracy of disaffected Uitlanders at Johannesburg with Rhodesians.—The Jameson Raid and its results. In the fall of 1895, certain of the disaffected Uitlanders at Johannesburg, leaders of an organization called the Transvaal National Union, abandoned attempts to obtain what they sought from the President and the Volksraad by petition and agitation, and either invited or accepted proposals of assistance from the armed forces of the British South Africa Company, with a view to some kind of a revolutionary undertaking. The story of the plot has been told with great fearlessness by one of the actors in it, Mr. Alfred P. Hillier, who writes: "Mr. Cecil Rhodes . . . accustomed as he was to success, quick movement and rapid developments, in his great error had . . . watched with impatient eyes the sailing back of the clock within the South African Republic. His chief lieutenant, Dr. Jameson, who

valued twice him the labour of reclaiming the land and developing Rhodesia and the Transvaal was no less than his superiors. The plan, however, the desirability of some form of self-protection, and between them was known as the Jameson plan. Mr. Rhodes, the most largely interested member of the Rand, and financial controller of the De Beers, was in the De Beers, and in the establishment of the plan, he put both his influence and his money to work. Overtures were made to Mr. Lionel Phillips, who was a member of the Chamber of Mines and Mr. Leonard, the chairman of the National Union.

The plan at this early stage was in a very attractive form. A force of Dr. Jameson was to be quietly gathered together. The Johannesburg agitation, relying on the support of the British, was to be steeled forward. Rifles and ammunition were smuggled into Johannesburg. Both the Chamber of Mines and the Colonial Office were asked to support a movement for reform. Mr. Leonard, sick and weary of the Boer, and Mr. Leonard, sick and weary of the Boer, of an unsupported constitutional movement, the continent set back in Boer politics, and the coming round in their minds for a new departure, and from that point on, the development of the Jameson

plan. In October, 1895, a meeting took place at Mr. Schreiner's residence near Cape Town, which were present, in addition to Mr. Rhodes, Mr. Lionel Phillips, Mr. Hamlyn, Mr. Charles Leonard, and Colonel Frank Buller. At this meeting the plan was more fully discussed and matured, and in November, 1895, when Dr. Jameson visited Johannesburg, the details were finally settled. The letter of invitation was written, signed and handed to Dr. Jameson, and the date of combined action proposed for the end of December. Dr. Jameson's force was to be about 1,000 strong, and the start was to be made when finally summoned by the signatories of the letter. In the meantime the Johannesburg leaders were to have sent out about 4,500 rifles and 1,000,000 rounds of ammunition, and were, if possible, to arrange for an attack on the Pretoria Arsenal simultaneously with the move from outside. With regard to the letter of invitation which was subsequently used by Dr. Jameson as a justification for his start, Mr. Leonard, Colonel Rhodes, and Mr. Phillips have all distinctly stated that this letter was never intended as an authority to Dr. Jameson to enter the Transvaal, unless and until he received a further summons from them. Such was in brief the history of the Jameson plan as far as concerned Johannesburg. And it is necessary here to refer to the position with regard to the bulk of the men who subsequently constituted the Reform Committee. The committee, with the exception of a few members, of which I personally was one, consisted of a group of what was going on.

The Johannesburg leaders, relying on the general sentiment of the community, assumed the responsibility of arranging a basis of operations. It was the plan when it was gradually revealed to the men had either to be accepted by

them in its entirety or rejected. Mr. de Villiers, and received assurance that the movement was to be a popular one, and the only way to be an attempt on the independence of the country. A sufficient number of rifles were also to be furnished by the High Commission, and was to be on the spot to expect the attainment of matters immediately stipulated for. A. P. Hillier, *Reform and the Rand*, 1896.

The practical working of the conspiracy proved less easy than the plan, and the arms and ammunition were not so readily forthcoming as had been expected. The time of action had been fixed for the 28th of December. When it came near there were only 2,000 rifles at hand, instead of the 10,000 that were wanted. A scheme for the surprising of the Boer Arsenal at Pretoria was proposed at the last moment, impracticable. Still more disconcerting to many was a report which came from Cape Town that Jameson would require the rising to be made under and in favour of the British flag. "The movement within the Transvaal," says Mr. Hillier, "had from its outset been one in favour, not of a British colony, but of a sound Republic."

Many Americans and South Africans had accepted their support only on this understanding. "Until a clearer arrangement with the Rhodesians on this point could be reached," the leaders in Johannesburg determined not to act. Accordingly on the 26th of December, two days before the appointed date of insurrection, they telegraphed to Jameson to postpone the rising which he understood that it was absolutely necessary to postpone the rising. On the following day they issued a lengthy manifesto, setting forth all their grievances, and deferring until the 6th of January a general meeting of the National Union which had been called for the 27th of December. The manifesto included as follows: "We have now only two questions to consider: (1) What do we want? (2) How shall we get it? I have stated plainly what our grievances are, and I shall answer with a plain directness the question, 'What do we want?' We want: (1) the establishment of this Republic as a true republic; (2) a Grundwet or Constitution which shall be framed by competent persons selected by representatives of the whole people and framed on lines laid down by them—a constitution which shall be safeguarded against hasty alteration; (3) an equitable franchise law and fair representation; (4) equality of the Dutch and English languages; (5) responsibility of the Legislature to the heads of the great departments; (6) removal of religious disabilities; (7) independence of the courts of justice, with adequate and secured remuneration of the judges; (8) liberal and comprehensive education; (9) efficient civil service, with adequate provision for pay and pension; (10) free trade in South African products. That is what we want. There now remains the question which is to be put before you at the meeting of the 6th January, viz. 'How shall we get it?'—*Great Britain: Pictorial Yearbook, 1896* C.—7933.

Acting, as appears, on his own responsibility, Dr. Jameson refused to be stopped by the postponement at Johannesburg, and on the evening of December 29 he entered the Transvaal territory, from Pretoria, in Bechuanaland, with a force of about 500 men. His movement

created consternation in all the circles of the conspiracy, and received no effective support. It was promptly disavowed and condemned by the British authorities, and by the home officials of the British South Africa Company. Cecil Rhodes could do nothing but tacitly acknowledge his responsibility for what his lieutenant had done, though the precipitation of the raid was evidently a surprise and a trouble to him by resigning the jointership of Cape Colony. Meantime, the invaders had learned that the Boers were not to be ridden over in the easy fashion they supposed. Hasty levies had intercepted their march, had repulsed them at Krugersdorp, with a heavy loss in killed and wounded, surrounded them at Doornkop, and forced them to surrender on New Year's day. A few days later, the Uitlanders at Johannesburg, some of whom had made a confused and ineffectual attempt to take arms, proclaiming a provisional government, and around whose town the excited Boers had gathered in large force, were persuaded by the British High Commissioner to submit to the Transvaal authorities, and more than fifty of the leaders were placed under arrest.

With great difficulty, President Kruger overcame the desire of his people that Jameson and his officers should be brought to trial and punished in the country they had outraged by their invasion, and they were handed over to the British government for removal to England and trial by an English court. The trial took place in July (20-28), before the Lord Chief Justice (Lord Russell of Killowen), Baron Pollock, and Justice Hawkins, with a special jury. The charge on which the prisoners were tried was that of having fitted out a warlike expedition against a friendly state, in violation of the Foreign Enlistment Act. The charge of the Lord Chief Justice gave the following questions to the jury: "Were preparations for a raid made by the defendants? Did they aid, abet, counsel, or procure such preparation? Were they employed in the actual expedition? Did the Queen exercise dominion and sovereignty in Pitsani Pitlogo? The jury returned affirmative answers, which were held to constitute a verdict of "guilty," and sentence was pronounced,—fifteen months of imprisonment for Dr. Jameson, and terms varying from five to ten months for his four subordinate officers. During the trial and after there were many demonstrations of popular sympathy with the prisoners. Meantime, in April, the Transvaal authorities had brought the imprisoned leaders of the Johannesburg "reform committee" to trial at Pretoria on charges of treason and had convicted them all. Four, namely, Colonel Rhodesbrother of Cecil, Lionel Phillips, George Farrar, and John Hays Hammond (an American), were sentenced to death; the remainder to a payment of heavy fines. The death sentences were soon commuted, first to imprisonment for fifteen years, and subsequently to fines of \$125,000 on each of four prisoners.

The Transvaal: A. D. 1896 (January).—Message of the German Emperor to President Kruger, relative to the Jameson Raid.—The critical situation of affairs produced by the Jameson raid was dangerously complicated at the beginning by the publication of the following telegram, sent to President Kruger, on the 31 of January, by the German Emperor: "I express my sincere congratulations that, supported

by your people and without appealing to any friendly powers, you have successfully repelled on your own energy action against the armed invasion which invaded your country as disturbers of peace, and have thus been enabled to preserve peace and safeguard the independence of your country against attacks from within." President Kruger replied: "I testify to you, my very deep and heartfelt thanks for your Majesty's sincere congratulations. With God's help we hope to do everything further that is necessary for the holding of our dearly bought independence and the stability of our beloved Republic. This kindled a white heat of indignation in my hand. It was supposed to signify recognition on the part of the German Emperor of the absolute independence which the South African Republic claimed, and to threaten peace once as between Great Britain and the Boers. A powerful 'flying squadron' was assigned to Delagoa Bay. For some time the relations between Great Britain and Germany were seriously strained, but various influences gradually cooled the excited feeling in England, and not a little distrust of German intentions had remained.

The Transvaal: A. D. 1896 (January-April).—Urgency of the British Colonial Secretary for redress of Uitlander grievances.—Invitation to President Kruger to visit England. His requirement that Article IV of the London Convention shall be discussed.—Deadlock of the parties. The complaints of the Uitlanders, effectively silenced by the coming of the Boers, were now taken up by the British Secretary of State for the Colonies, Mr. Chamberlain, and pressed in strenuous despatches to the High Commissioner in South Africa, Sir Hercules Robinson. On the 4th of January, 1896, four days after the surrender of Jameson, and four days before the insurgent Uitlanders at Johannesburg had laid down their arms, a long despatch was called by Mr. Chamberlain, the High Commissioner, instructing him to make "friendly representations" to President Kruger on the subject of those complaints. "I am aware," wrote the Colonial Secretary, "that the story of Transvaal Government over Administration of Mashonaland may possibly find them willing to make any concessions. If this is the attitude they adopt, they will, in my opinion, make a great mistake; for danger from which they have just escaped was real, and one which the causes which led up to it are not far removed may recur, although in a different form. I have done everything in my power to undo and minimise the evil caused by late unwarranted raid by British subjects into the territory of the South African Republic, and it is not likely that such action will be ever repeated, but the state of things of which complaint has been made will not continue forever. If those who are a majority of inhabitants of the Transvaal are excluded from all participation in its government, were of their own initiative, and were any interference from without, to attempt to reverse that state of things, they would, without doubt, attract much sympathy from all the communities who themselves live under the Government, and I cannot regard the present state of things in the South African Republic

matters are open to friendly discussion. Her Majesty's Government hope that your Honour will come as the guest of the British Government. Where this invitation was being considered, and before it could have been made to the British Colonial Secretary, occupied his own discussion of the questions at issue. February 14, a deep day of work and thought, reviewing the whole history of the relations of the United Kingdom to the Government of the South African Republic, and of the recent occurrences which had been consequent upon their disavowal. It praised the spirit of wisdom and moderation shown by President Kruger, who kept within bounds the natural suspicion of his burghers, and it gave especial attention to a proclamation which President Kruger had addressed to the inhabitants of Johannesburg on the 10th of January, in which he had said: "It is my intention to submit a draft law at the first ordinary session of the Volksraad, whereby a Municipality with a Mayor at its head will be appointed for Johannesburg, to whom the whole municipal government of this town will be entrusted."

On this the Secretary made the following suggestions:—Basing myself upon the expressed desire of Johannesburger to grant municipal government to Johannesburg, I suggest, for his consideration, as one way of meeting the difficulty, that the whole of the Rand-district, from end to end, should be erected into something more than a municipality, as that word is ordinarily understood; that in fact it should have a modified local autonomy, with powers of legislation on purely local questions and subject to the veto of the President and Executive Council; and that this power of legislation should include the power of assessing and levying its own taxation, subject to the payment to the Republic Government of an annual tribute of an amount to be fixed at once and revised at intervals so as to meet the case of a diminution or increase in the mining industry. As regards judicial matters in such a scheme, the Rand, like the Eastern Provinces and the Kimberley District of the Cape Colony, might have a superior court of its own. It would, of course, be a feature of this scheme that the autonomous body should have the control of its civil police, its public education, its mining management, and all other matters affecting its internal economy and well-being. The Central Government would be entitled to maintain all reasonable safeguards against the fermenting of a revolutionary movement, or the storage of arms for treasonable purposes within the district. Those living in, and there-enjoying a share in the government of, the autonomous district, would not, in my view, be entitled to a voice in the general Legislature or the Central Executive, or the presidential election. The burghers would thus be relieved of what is evidently a burning fear to many of them—although I believe an unfounded one—that the first use which the enfranchised newcomers would make of their privileges would be to upset the republican form of government. Relieved of this apprehension, I should suppose that there would not be many of them who would refuse to deal with the grievances of the comparatively few Uitlanders outside the Rand on those liberal principles which characterized the earlier legislation of the Republic. The President may rest assured that in making the above suggestions

am only actuated by friendly feelings towards himself and the South American Republics, and are not actuated by direct or indirect interest, at least as the sincere and founded conviction that Mexico's Government has been guilty of a question which has threatened the tranquillity of the Republic, and the progress of the whole of South America, and proper settlement of the question involves so many matters of international equity and satisfaction, so that I should be very glad to have the opportunity of discussing the subject with the President if it suited his convenience, and were it possible for him to come to this purpose. Should this be impracticable, I am sure that you will be disposed to urge upon you to make my views known, and to carry on the negotiations.

[illegible]

At the commencement I wish to state that the object of this letter is to present for a friendly discussion of the matters mentioned in order to arrive at a satisfactory solution, and further that although I desire no positive and direct assent to the views expressed herein I would nevertheless avoid a misunderstanding, desiring to assure that they will be taken into the most careful consideration with the earnest and sincere desire to comply with any reasonable desire to rectify this assurance will be given by your Excellency and Her Majesty's Government as reasonable, when I say that especially my advanced age and the long delay, owing to my absence, in the consideration of matters affecting the highest State policy would, with difficulty, be able to make me able in going only to discuss matters without arriving at the desired result, and I am sure that if the assurance referred to by me can be given by Her Majesty's Government, and probably the Honourable Volksraad will grant its consent and commission. As I have already said, the Government could not interfere in its internal matters or in the official discussion of affairs with the State, requiring changes therein will have to be made on the other hand I wish it to be understood that private hints given by statement of experience in the true interest of the country and independence will always be warmly appreciated, from whatever side they may come.

Going over to a summing up of the points which, in my opinion, should be brought before discussion, I wish to mention in the next place the Superintending of the Convention, I think

recognition of the friendly interest of Her Majesty's Government in its security, and in the general welfare of South Africa. The President would be, of course, at liberty to accept or to reject any advice that might be tendered to him by Her Majesty's Government, but in the latter case the responsibility for the result would naturally rest wholly with him. Her Majesty's Government have already expressed a willingness to give full consideration to any representations which his Honour may wish to make on the other points named in his letter, although some of them are matters wholly in jurisdiction of Her Majesty's Government. But unless the President is satisfied with the explanations I have now given, Her Majesty's Government are reluctantly obliged to come to the conclusion that no good purpose can be served by the proposed visit."

In return to this despatch, President Kruger, on 17th of March, expressed his "deep disappointment" at its contents, by reason of which, he said, "it is not possible for me to proceed to convene a special session of the Volksraad at once" for the purpose of action upon the invitation of the British Government. Thereupon (April 27), the Colonial Secretary called to the High Commissioner in South Africa: "Her Majesty's Government have no alternative but to withdraw the invitation, which it appears from the President's message was given under a misapprehension of the facts." Thus the two parties were at a deadlock.—*Great Britain, Papers by Command*: 1896, C. 7933, pp. 19-91; and C. 8063, pp. 11-17.

Rhodesia: A. D. 1896 (March—September).

—**Matabele revolt.**—Taking advantage of the confusion in affairs which followed the Jameson raid, and its removal of part of the police force from the country, the Matabele rose in revolt. The main provocation of the rising appears to have been from severe measures that were adopted for stamping out rinderpest in the country. Many whites were killed in the regions of scattered settlement, and Bulawayo and Gwelo, where considerable numbers had taken refuge, were in much danger for a time. But prompt and vigorous measures were taken by the colonial and imperial authorities, as well as by the officers of the South Africa Company. Troops were sent from Cape Colony, Natal, and England, and Major-General Sir Frederick Carrington was ordered from Gibraltar to take command. Cecil Rhodes hastened to Salisbury on the first news of the outbreak and organized a force of volunteers for the relief of the beleaguered towns. The Transvaal government offered help. By June, when General Carrington arrived, and Lord Grey had succeeded Dr. Jameson as Administrator, the insurgent natives had been put on the defensive and had nearly ceased their attacks. They were driven into the Matoppo hills, where their position was formidably strong. At length, in August, Mr. Rhodes opened negotiations with some of the chiefs, and went, with three companions, unarmed, into their stronghold. He there made an agreement with them, which the British military authorities and many of the Matabele warriors refused to be bound by. But the revolt had been practically broken and soon came to an end.

British South Africa Company: A. D. 1896 (June).—Resignation of Mr. Rhodes.—On the

26th of June the resignations of Cecil J. Rhodes and Mr. Beit from the Board of Directors of the British South Africa Company, and of Mr. Bedford Harris as its Secretary, were accepted by the Board.

Cape Colony: A. D. 1896 (July).—Investigation of the Jameson Raid.—Responsibility of Cecil J. Rhodes.—On the 15th of July, a Select Committee of the Cape Colony House of Assembly, appointed in the previous May, came into the circumstances, as affecting this country, in connexion with the preparations for the raiding out of the recent armed invasion into the territory of the South African Republic. The report, rehearsing at length the facts as given with evidence in full, and submitting a series of "conclusions," among them the following:—"Your Committee are of opinion that Cecil Rhodes, of the then Colonial Government with the sanction of the then Prime Minister [Mr. Cecil Rhodes], had any knowledge whatever of the intention to send an armed force across the border of the South African Republic. Your Committee are convinced that the stores and workshops of the De Beers Consolidated Mines were for some time previous to the invasion used for the storage and for the unlawful exportation of arms destined for the South African Republic. In connexion with this invasion, and also that men were sent from De Beers to Johannesburg who were afterwards allowed to remain in those positions. The evidence is clear, and leaves no room for doubt on this point. The board of directors give an emphatic denial to any guilty knowledge on their part, and your Committee must acquit them of anything beyond negligence, which, looking to the magnitude of the transaction and the length of time over which they extended, must have been very marked. It is not conceivable that such proceedings could have been permitted without the knowledge and approval of the Chairman and Life Governor, Mr. Cecil Rhodes. With regard to the Chartered Company, your Committee find that the principal directors in Cape Town either knew, or were in a position to have known, the existence of this plot. Two at least of the directors, Mr. Beit and the Right Hon. C. J. Rhodes, were, together with the Administrator, Dr. Jameson, and Dr. Harris, the South African Secretary of the Company, active as promoters of the moving spirits throughout, and they were from time to time kept informed of the preparations. . . . The whole movement was largely financed and engineered from outside, and in both cases by directors and officials of the Chartered Company of British South Africa were active thereabout. As regards the Right Hon. C. J. Rhodes, your Committee came to no other conclusion than that he was thoroughly acquainted with the preparations that led to the invasion. That in his capacity as controller of the three great joint stock companies, the British South Africa Company, the De Beers Consolidated Mines, and the Gold Fields of South Africa, he directed and controlled the combination which rendered such a proceeding as the Jameson raid possible. . . . It would appear that Mr. Rhodes did not direct or approve of Dr. Jameson's entering the territory of the South African Republic at the precise time when he did so, but your Committee cannot find that that fact releases Mr. Rhodes from responsibility for the movement, or the occurrences which took place. Even if Mr.

Jameson be primarily responsible for the last and step. Mr. Rhodes cannot escape the responsibility for a movement which had been arranged, while his concurrence, to take place at the precise time and, if circumstances had been favourable, "the Johannesburg" — *Great Britain, Papers by the Times*, 1896, p. 3880, pp. 7-9.

British South Africa Company: A. D. 1896 July. — **Parliamentary movement to investigate its administration.** — In the British House of Commons, on the 30th of July, Mr. Chamberlain, Secretary of State for the Colonies, made a motion for the appointment of a select committee to inquire into the administration of the British South Africa Company, and the motion was adopted.

The Transvaal: A. D. 1896-1897 (May-April). — **Continued controversies between the British Colonial Secretary, Mr. Chamberlain, and the Government of the South African Republic.** — **Complaints and counter complaints.** — **Alien Immigration Law, etc.** — For some time after the abandonment of the proposed issue of President Kruger to England, the older question of issue between Great Britain and the Transvaal fell into the background; but new ones were constantly rising. Each party watched the other with suspicious and critical eyes, sharply questioning things that would hardly have been noticed in ordinary times. The Boer authorities, on their side, were naturally disturbed and made aggressive by every movement of troops or arms in the surrounding British territory, both of which movements were being some that increased by the revolt of the Matabeles. They were impatient too for some action on the part of the British government against the chief authors of the recent invasion, — the officials of the British South Africa Company, — and against the Company itself. On the 11th of May, 1896, the same Secretary of the Transvaal government addressed to the British High Commissioner as follows: "The newspapers of the last few days state that Her Majesty's Government still continue to take the part of the Directors of British South Africa Company, especially Mr. Rhodes. This Government will not believe the accuracy of these reports, but it is of opinion that the Chartered Company as administering the Government up to now is a source of danger to whole of South Africa. The trouble into this Republic was made by officers, troops, and arms of that Chartered Company, and even the explicit prohibition of Her Majesty's Government was unable to restrain them, notwithstanding the Chartered Company had taken upon itself the international obligations of Great Britain. The behaviour of the persons who knew of the scheme of the invasion beforehand and supported it is, as we see, defended by saying that they acted thus in the interests of and for the extension of Imperialism in South Africa. This Government does not believe that the end justifies the means, and is convinced that Her Majesty's Government does not wish to be served by misdeeds."

When this had been communicated to the British Colonial Secretary, Mr. Chamberlain, he replied May 15th that the President of the South African Republic "has been misinformed if he supposes that Her Majesty's Government have taken the part of any of British South Africa Company Directors, including Mr. Rhodes, with regard to any connexion which they may be here-

after proved to have had with the recent raid. On the contrary, while appreciating Mr. Rhodes's services in the past, Her Majesty's Government have condemned the raid, and the conduct of the parties implicated by the reports recently published. Her Majesty's Government have promised a full Parliamentary inquiry, as soon as legal proceedings against Dr. Jameson and his officers have been concluded, to examine the Charter granted to British South Africa Company and the operation of its provisions, and to consider whether any improvements are desirable. Such an inquiry will be conducted on a whole subject, not only of recent events, but of the whole administration. Her Majesty's Government cannot be expected to make any decision as to the future of the Company until the Parliamentary Committee has made its recommendations."

On the 15th President Kruger replied: "This Government is very pleased at receiving the assurance that a searching inquiry is being instituted against British South Africa Company and its Directors, and will follow the course with interest." But the following month, and the authorities at Pretoria still insisted, as to the intention of the British government, that Mr. Rhodes and the South Africa Company were not for what they had done. On the 10th of June, the then Acting High Commissioner, Sir Hercules Robinson having gone to England, he transmitted to Mr. Chamberlain a copy of a telegram just received by him from the Government of the South African Republic. The telegram was as follows: "Acting under instructions, I have the honour to acquaint your Excellency with the information of Her Majesty's Government that, with a view to the welfare and progress of South Africa, this Government is convinced that the proofs in the possession and at the disposal of Her Majesty's Government now completely justify and compel the bringing to trial of Messrs. Cecil Rhodes, Alfred Beit, and Dr. J. H. R. Hofstadter Harris, as has already been done with Doctor Jameson and his accomplices. In the interests of all South Africa, this Government feels itself obliged to press the taking of this step upon Her Majesty's Government. I have the honour to request your Excellency to communicate this despatch by cable to Her Majesty's Government in London."

The second was in this language: "This Government regards with great concern the delay in the matter of the inquiry with respect to the complicity and responsibility of British South Africa Company in connection with the raid of Doctor Jameson and his band upon the territory of this Republic. This Government considers it its right and duty to press for the speedy holding of the inquiry, not merely because it is the injured party but also because it is a just and share in the well-being of South Africa, whose interests, as repeatedly affirmed, are dear to Her Majesty the Queen. This Government is also convinced that it is urgent and necessary that the entire control and administration of British civil as military be taken out of the hands of British South Africa Company and transferred to Her Majesty's Government, and I am directed to press this point on behalf of the Government. I have further the honour to request your Excellency to cable this despatch to Her Majesty's Government in London."

To these communications Mr. Chamberlain made a somewhat haughty response. "I inform the Government of the South African Republic," he cabled on the 25th of June, "that Her Majesty's Government have received their telegrams of the 19th June, which were published in London almost simultaneously with their receipt by me. Her Majesty's Government do not require to be reminded of their duty in regard to the recent invasion of the South African Republic, and they cannot admit the claim of the Government of the Republic to dictate the time and manner in which they shall fulfil their obligations. I am unable to understand the reasons which have suddenly influenced the Government of the South African Republic to make representations which are inconsistent with their previous statements. On 15th April and on 15th May the Government of the Republic appeared to be satisfied with the assurances given them by Her Majesty's Government, from which there has never been any intention of departing. It would not be in accordance with English ideas of justice to condemn the British South African Company and deal with its powers as proposed in the telegrams before an enquiry had been made, and before the Company had been heard in its own defence. With regard to the demand of the Government of the South African Republic that the three gentlemen specifically named shall now be placed on their trial, you will remind them that Her Majesty's Government can only act in this matter upon the advice of the Law Officers of the Crown, and in accordance with the principles of English law."

But Mr. Secretary Chamberlain, on his side, was equally—perhaps more than equally—watchful and critical of the doings and omissions of the government of the South African Republic. He kept an eye upon them that was especially alert for the detection of infractions of the London Convention of 1884 (see above: A. D. 1884-1894), with its provisions very strictly construed. He found treaties negotiated with foreign powers in contravention of Article IV. of that Convention, and laws passed which he deemed an infringement of its Article XIV. He arraigned the government of the Republic upon each as it came to his knowledge, and then, on the 6th of March, 1897, went back over the record of his complaints and summed them up, as follows: "It will be convenient if I recapitulate briefly the occasions for such complaint, beginning with the cases relating to Article IV. of the Convention"

“1.—*Netherlands Treaty.* On the 9th November 1895, an Extradition Treaty between the South African Republic and the Netherlands was signed at the Hague, and the ratifications were exchanged on the 19th June last, without the Treaty being submitted for the approval of Her Majesty. The case was therefore one of a clear infraction of the Convention, inasmuch as the Treaty had not been submitted to Her Majesty's Government on its completion, and had been concluded by the exchange of ratifications without obtaining the previous approval of the Queen. The Government of the South African Republic, on their attention being called to the infraction, did not deny that there had been a departure from the general practice, but urged that they had made no publication of the Treaty in anticipation of the approval of Her Majesty. The

Trenty had, however, been published in the 'Netherlands Gazette' of the 2nd July 1814, and it was observed that when the Treaty was signed, it was in the 'Staats Courant' of the South African Republic after Her Majesty's approval. The official notice merely stated that the Treaty was signed and ratified, and no reference being made to the approval of the Government.

—The Accession of the South African Republic to the Geneva Convention. As a result of Jameson's raid, owing to a report that the St. John's Ambulance Association, Her Majesty's Government determined to invite the South African Republic to accede to the Geneva Convention, and the necessary instructions were given to Sir J. de Wet, who, however, cannot report them out. The South African Republic, on the 30th September, formally communicated to the Swiss Government, through their Representatives at the Hague, their act of accession to the Geneva Convention. Her Majesty's Government, in the circumstances, did not hesitate to convey the Queen's approval, but the action of the Government of the Republic none the less constituted a breach of the London Convention.

"3.—Portuguese Treaty.—An Agreement of Friendship and Commerce between the South African Republic and Portugal was signed on the 3rd November 1890, but, contrary to the usual practice, has not yet been submitted for the Queen's approval. Although two years have elapsed since its signing, in His Despatch of the 25th February 1896, I requested your predecessor to call the attention of the President to the omission to communicate this Convention to Her Majesty's Government under the provisions of Article IV of the London Convention. . . . I now pass to the consideration of some of the recent legislation of the Volksraad in its relation to Article XIV. It may be found that it involves in more than one case actual or possible breaches of the Convention. Article XIV. runs as follows:— All persons, other than natives, conferring themselves with the laws of the South African Republic, will have full liberty, with their families, to enter, travel, or reside in any part of the South African Republic; (b) they will be entitled to hire or possess houses, manufactories, warehouses, ships and premises; (c) they may carry on their commerce either in person or by any agents whom they may think fit to employ; (d) they will not be taxed in respect of their persons or property, or in respect of their commerce or industry, to any taxes, whether general or local, other than those which are or may be imposed upon citizens of the said Republic."

§ 4.—The Aliens Immigration Law. This law imposes upon aliens conditions of a new and burdensome character in excess of the simple requirement that they must conform to the laws of the Republic. . . . 2. The Aliens Expulsion Law. This law empowers the President, with the advice and consent of the Executive Council, after consulting the State Attorney, to expel, without an appeal to the Congress, any foreigner who, by word or writing, exercises disobedience or transgression of the law, or takes any steps dangerous to public peace and order. . . . Her Majesty's Government . . . do not admit that the Government of the Republic have a right to expel foreigners who are not shown to have failed to conform to the laws of the Republic, and they reserve the right to object to

the Government of South Africa
The laws complained of by Mr Chamberlain relating to immigrant aliens had raised the most violent protest, because of its requirement that all persons who were permitted to enter and remain in the country must carry "travelling papers of official passes" to be shown on demand. The British Government had not Mr Chamberlain's first remonstrance on this subject, in January, by saying: "It is an evident fact that, especially during the last time, the immigration of slaves of the lowest class and without any means of subsistence has been increasing in a disquieting manner. These persons are dangerous to the peace of the inhabitants and of the State. It is, in the opinion of this Government, the country whatever it may be obliged to admit such a class of persons. The regulation of immigration, as it at present takes place, is thus from the point of view of police requirements, not only necessary but also entirely justified and constitutes no infringement of Article 13 of the Convention. This Government does not wish to express any opinion on the suggestion that under the circumstances mentioned it should have approached Her Britannic Majesty's Government with a view to arriving at a mutual understanding. In case, however, the Government of Her Britannic Majesty has another practical measure to propose whereby its above-mentioned subjects, whose presence here is not desired for the reasons stated, can be prevented from seeking an outlet on the soil of the South African Republic, and that measure can be found applicable to the subjects of other Powers, we should since the law makes no distinction in that respect will be ready, with gratitude, to give fullest consideration to such measure."—*Great Britain, Papers by Command: 1897, C. 8423.*

The Transvaal: A. D. 1897 January
March. Conflict of the Judiciary with the
Executive and the Volksraad. The case of
R. E. Brown. In January 1897 a decision
was rendered by the High Court of the Republic
which brought in into conflict with President
Kruger and the Volksraad. This decision was
given in connection with a suit brought against
the government of the South African Republic
by an American engineer Mr R. E. Brown, and
the claim of Mr. Brown had arisen out of cir-
cumstances which were subsequently related by
a speaker in the United States Senate as fol-
lows: "Mr R. E. Brown, a young American
mining engineer, living and operating in the
Cout d'Alene district in the State of Idaho,
about eight years ago at the invitation of Eng-
lish capitalists, left this country to go to the
South African Republic for the purpose of assist-
ing in the development of the rich mines of that
country. It is about that time that Hammond
Clements, and other American engineers went
there, and it is not too much to say that the en-
ergies and the energy of those young Americans
more than anything else made that country a
great gold producer and has made the most val-
uable of any in the world. At that time most
of the mines were held by English capitalists
or Germans. The laws were very simple, but
some respects appear to have been drawn to the
interest of the wealthy syndicates. Upon the
discovery of new mines, the President of the Re-
public by proclamation opened them to mining
locations, fixing a day and a place at which they
would be opened to such location. Then after
persons desiring to locate mines had taken out
of the office of their responsible agent of the district
in which the mines were located the neces-
sary application for licenses to locate the mines, and there-
after they were authorized either a person or
by deputy, to go on the ground and make min-
ing locations. Under this system most of the

valuable mines of the country had been absorbed, as I said, by English and German syndicates. The mode in which they operated to absorb the mines was to place their men upon the newly opened ground and at the earliest possible moment apply for licenses to locate the mines, and then by means of couriers with swift horses, or by signals from mountain to mountain where that was possible, to convey information to their men and cause the mines to be located before their rivals could get on the ground. Mr. Brown had not been in the country very long before he learned of this antiquated system, and he determined on the next opening of mines to apply to their location some of the snip and go of American methods.

"In June, 1895, President Kruger by proclamation opened the mines on the Witfontein farm, district of Potchefstroom, the responsible clerk for which resided at Doornkop, in that district. Mr. Brown determined that he would acquire some of these mines, at least, and as large a number of them as possible. Witfontein was only 30 miles from Doornkop. The mines were known to be very valuable, because they had been prospected on each side and it was found that valuable gold bearing reefs ran through them from end to end. Accordingly he purchased heliographic instruments and employed expert heliographic operators, and without the knowledge of his rivals established heliographic communication between Doornkop and Witfontein. Then he placed his men upon the ground, and on the 19th day of July, 1895, the earliest period at which he was permitted to do so, he appeared at the office of the responsible clerk and sought licenses to locate 1,200 mines upon this ground. However, on the day before the opening of the mines his rivals had found out about the heliographic communication, but they were beaten in the race. In that extremity they communicated with President Kruger by wire and induced him on the night of the 18th to issue a second proclamation, withdrawing the mines of Witfontein from the privilege of mining locations, and when Mr. Brown appeared at the office of the responsible clerk and tendered his money he was met with the information of this action on the part of the President of the South African Republic, and his application was refused. But nothing daunted he caused his agents on the ground to locate the mines the same as if the licenses had been granted to him, and then he brought suit before the high court of justice of the South African Republic against the Republic, alleging the facts substantially as I have stated them and praying that the authorities be compelled to issue to him licenses for the mines located, or in lieu thereof that compensation be made to him in the sum of £372,400, amounting to about \$1,850,000. While this suit was pending it was sought to re-enforce the action of the President in withdrawing these lands, and the Volksraad [passed a resolution approving the withdrawal and declaring that no person should be entitled to compensation on account of it]."—*U. S. Congressional Record*, Jan. 21, 1901, p. 3370.

On Mr. Brown's suit, the High Court of the Republic decided that the claimant's right to the land was good, and could not be set aside by ex post facto measures of the Executive or the Legislature. The President and the Volksraad

refused to submit to this decision, and passed a law to overrule it, on the ground that under the Grondwet (constitution), the Volksraad is the highest power in the state. In a public statement of the matter, Mr. Kruger, the Chief Justice, explained the issue, and thus raised between his court and the President, and also related the circumstances of a compromise by which it was settled temporarily as follows: "This so-called Law No. 1 of 1897 seeks to deprive the judges of the testing right, and obliges the President to put a certain question to the members of the bench that they will not arrogate to themselves the so-called testing power, and empowers him to instantly dismiss the judge or judges from whom he receives no answer, or, in his opinion, an unsatisfactory answer. The judges for the future are also subjected to a humiliating form of oath. This measure, it seems almost superfluous to say, is no law. It alters the constitution of the country without any previous reference to the people, and for the reasons given in the Brown case it is devoid of all legal validity. The two judges on March 1, 1897, manfully issued a declaration, stating that by this so-called Law No. 1 of 1897 a vital violation of the independence of the bench had taken place, and that the judges were exposed in future to the suspicion of bribery. In fact, the nature and tendency of this measure is so immoral that one of the judges boldly said that no honorable man can occupy a seat on the bench while Law No. 1 of 1897 remains on the statute book.

"The question above referred to was duly put by the President to the judges, who had unanimously signed a letter to the effect that they did not feel themselves at liberty to give any answer, when the chief justice of the Cape Colony arrived in Pretoria, and through his mediation a written understanding was proposed by the judges on March 19, and accepted with all my qualification by the President on March 22, 1897. By the terms of this compact the judges undertook not to test laws and resolutions of the Volksraad on the distinct understanding that the President would as soon as possible submit a draft Grondwet to the Volksraad providing how alone the Grondwet can be altered by special legislation in a manner analogous to the provisions contained in the constitution of the Orange Free State on the subject, and incorporating the guarantees for the independence of the judiciary. By these means the judges intended to protect both the constitution and the bench against sudden surprises and attacks, such as, for instance, the oft quoted measure known as Law No. 1 of 1897. They did this to avert a crisis, and, in order to help the Government and Volksraad out of a difficulty of their own creation, placed themselves under a temporary obligation upon the faith of the President as speedily as possible complying with his portion of the understanding."—*United States, 56th Congress, 1st Sess., House Doc. No. 618*.

The promised amendment of the Grondwet was not made, and the issue concerning it was brought to a crisis in the next year. See below A. D. 1898 (JANUARY—FEBRUARY).

A. D. 1897 (February): Appointment of Sir Alfred Milner.—In February, Sir Alfred Milner was appointed High Commissioner for South Africa and Governor of Cape Colony, to succeed

ser Hercules Robinson, retired, and raised to the peerage as Lord Rosmead.

The Transvaal: A. D. 1897 (February).—The franchise.—The government of the Transvaal extended the full franchise to 8621 holders who supported it at the time of the Jameson Raid.

The Transvaal: A. D. 1897 (February).—Indemnity claimed by the South African Republic for the Jameson Raid.—On the 16th of February, 1897, the State Secretary of the South African Republic, Dr. W. J. Leyds, presented to the British High Commissioner the following specification of the compensation to which the Government of the South African Republic lay claim for and in connexion with the compensation of the Territory of the South African Republic by Dr. Jameson and the Troops of the Chartered Company at the end of December 1895 and the beginning of January 1896.

	£	s.	d.
1. Expenditure for military and commando services in connexion with the incursion of the South African Republic into the Transvaal, and the cost of the South African Republic's Company for making good the incursion with the concession granted to that Company, of the railway which had been destroyed by the incursion of Dr. Jameson and his followers.	136,733	4	3
2. Compensation for the loss of the property of the surviving relatives of those who were killed, and of the property of the wounded.	9,500	0	0
3. Compensation for the loss of the property of the wounded, and of the property of the wounded, and of the property of the wounded.	234	13	6
4. For the loss of the property of the wounded, and of the property of the wounded, and of the property of the wounded.	28,243	0	0
5. Expenses of the telegraph department for the time being, and of the telegraph department for the time being, and of the telegraph department for the time being.	4,692	11	9
6. Hospital expenses for the care of the wounded and sick men, and of the families of the wounded and sick men.	225	0	0
7. Compensation to be paid to the wounded and sick men, and of the families of the wounded and sick men.	177	8	8

"Moral or intellectual compensation to which the Government of the South African Republic lay claim for and in connexion with the incursion into the Territory of the South African Republic by Dr. Jameson and the Troops of the Chartered Company at the end of December 1895 and the beginning of January 1896. One million pounds sterling (£1,000,000)."

To this claim the British colonial secretary, Mr. Chamberlain, replied on the 10th of April, saying, with reference to the specification under the second head, "for moral or intellectual damage," that "Her Majesty's Government . . . regret that they do not feel justified in presenting it to the British South Africa Company"; and adding:

"Her Majesty's Government fear that they may be compelled to take similar exception to certain of the items composing the first head, especially in view of the very short period which elapsed between the crossing of the frontier by Dr. Jameson's force and its surrender; but as it is apparent from the nature of the figures that the Government of the South African Republic have proceeded on very precise data in arriving at the various sums to which they lay claim, Her Majesty's Government, before offering any observations on this part of the claim, would ask

his Honour to be so good as to furnish them with full particulars of the way in which the various items comprised in the first head have been arrived at." (*Great Britain: Papers by Command*, C. 8404, 1897, and C. 8721, 1898.)

The Transvaal: A. D. 1897 (February July).—British parliamentary investigation of the Jameson Raid.—A Committee of the British House of Commons, appointed to inquire into the origin and circumstances of the incursion into the South African Republic by an armed force, and into the administration of the British South Africa Company, began its sittings on the 16th of February, 1897. Among the members of the Committee were the Chancellor of the Exchequer, the Attorney General, Mr. Chamberlain, the Secretary of State for the Colonies, Sir William Harcourt, Sir John Lubbock, Sir H. Campbell-Bannerman, Mr. Labouchere, Mr. John Ellis, Mr. Buxton, Mr. Byles, and others. Mr. Rhodes, who was first examined by the Committee, made a statement of the circumstances leading up to the raid, in which he said that, as one largely interested in the Transvaal, he felt that the unfriendly attitude of the Boer Government was the great obstacle to common action among the various states in South Africa, and that, therefore, he had assisted the movement in Johannesburg with his purse and influence. "Further," he said, "during winter my rights, in the autumn of 1895 I placed a body of troops under Dr. Jameson, prepared to act in the Transvaal in certain eventualities." Subsequently Mr. Rhodes declared: "With reference to the Jameson raid, I may state that Dr. Jameson went in without my authority." He concluded his statement by declaring that in what he did he was greatly influenced by his belief that the policy of the Boer Government was to "introduce the influence of another foreign Power into the already complicated system of South Africa." Mr. Rhodes was kept under examination before the Committee for four days, and then "almost the next thing heard of him was that he had started for South Africa on his way back to Rhodesia." Another witness examined was Sir Graham Bower, Secretary to the High Commissioner at the Cape. His evidence was certainly most startling, and at the same time of great importance. He stated that late in October, 1895, Mr. Rhodes came into his office and said: "I want you to give me your word of honour that you will not say a word to any one about what I am going to tell you." Sir Graham Bower—who, as he said, had a great many Cape secrets in his possession—pledged his word, and soon found he was in possession of a secret which it was his official duty to disclose to the High Commissioner and his private duty not to disclose. Mr. Rhodes then said that he was negotiating about the Protectorate, that there was going to be a rising in Johannesburg, and that he wished to have a police force on the border. He added in substance: "If trouble comes I am not going to sit still. You fellows are infernally slow." It further transpired that on the fateful Sunday (Dec. 28) Mr. Rhodes had told him that Jameson had gone in, but that he hoped that the message he had sent would stop him. When Dr. Jameson was examined he fully acknowledged his conspiracy with the Johannesburg revolutionists, and stated that he had given information of it to Mr. Rhodes, adding: "His

agreed, and we arranged that when the rising took place he should go to Johannesburg or Pretoria with the High Commissioner and Mr. Hofmeyr to negotiate between the Transvaal Government and the Uitlanders. With these matters settled, I left Cape Town and joined my camp at Pitsani. I required no orders or authority from Mr. Rhodes, and desired neither to receive nor to send any messages from or to Cape Town."

In the course of the inquiry, Mr. Chamberlain, the Colonial Secretary, desired to give testimony, and related that Dr. Harris, the Secretary in South Africa to the British South Africa Company, said to him, "I could tell you something in confidence," or "I could give you some confidential information"; but that he (Chamberlain) stopped him at once, saying, "I do not want to hear any confidential information. I am here in my official capacity, and I can only hear information of which I can make official use"; and adding, "I have Sir Hercules Robinson in South Africa. I have entire confidence in him, and I am quite convinced he will keep me informed of everything I ought to know." In concluding his testimony, Mr. Chamberlain said: "I desire to say, in the most explicit manner, that I did not then have, and that I never had, any knowledge or—until, I think it was, the day before the raid took place—the slightest suspicion of anything in the nature of a hostile or armed invasion of the Transvaal." The Committee having called upon Mr. Rhodes' solicitor, a Mr. Hawksley, to produce telegrams which had passed between Mr. Rhodes and himself, refused to do so.

"The proceedings which ensued were not to the credit of the Committee, for instead of reporting the matter to the House at once in a special report, they decided to refer to it in the interim report on the raid. Mr. Labouchere and Mr. Blake alone opposed this course, which was either a confession of unwillingness to reach the bottom of the business, or the suggestion that somebody was to be shielded. . . . Having devoted two days to hearing counsel on behalf of Mr. Rhodes, Mr. Beit and Dr. Harris, the Committee adjourned to consider its report. The general feeling was that the proceedings had been conducted with singular laxity or want of skill. Those interested in keeping secret the true history of the raid were entirely successful, and it was generally by the merest chance that any fact of importance was elicited from the witnesses. The representatives of the Opposition, Sir William Harcourt, Sir H. Campbell Bannerman and Mr. Buxton, were, after Mr. Rhodes had been unaccountably permitted to quit England, willing to allow the breakdown of the proceedings; and what was even more surprising in so strict a parliamentarian as Sir William Harcourt, a witness was allowed to treat the Committee with defiance, and to pass unchecked. To a very great extent the inquiry had been obviously fictitious, but in whose interest concealment was considered necessary remained undivulged. It was surmised that reasons of State had been found which outweighed party considerations, and that the leaders of the Opposition had been privately convinced that the alleged grounds were sufficient for the course adopted."

The report of the majority of the Committee, signed by all of its members except Mr. Labouchere and Mr. Blake (the former of whom submitted a minority report), was made public on

the 13th of July. The results of this day were summed up under the following headings:—I. "Great discontent had, for some time, existed in the Transvaal, and this discontent had been fanned by the grievances of the Uitlanders." II. "Mr. Rhodes occupied a great position in South Africa. He was Prime Minister of the Cape Colony, and beyond all other persons, should have been careful to abstain from such a course of action as that which he adopted." As manager of the British South Africa Company, and as Secretary of the De Beers Consolidated Mines, he was in the fields of South Africa. Mr. Rhodes, by the great combination of interests, he used his position and those interests to promote and carry out his policy. "Whatever justification there might have been for action on the part of the people of Johannesburg, there was none for the conduct of a person in Mr. Rhodes' position in subverting the law, organising, and stimulating an armed rebellion against the Government of the South African Republic, and employing the forces and resources of the Chartered Company to support such a revolution. He seriously embarrassed both the Imperial and Colonial Governments, and his proceedings resulted in the invasion of the territory of a State which was in friendly relations with Her Majesty in breach of the obligation respecting the right to self government of the South African Republic under the conventions between Her Majesty and that State. Although Dr. Jameson 'went in' without Mr. Rhodes' authority, it was always part of the plan that these forces should be used in the Transvaal in support of his rebellion. Nothing could justify such a use of such a force, and Mr. Rhodes' heavy responsibility remains, although Dr. Jameson at the moment invaded the Transvaal without his sanction. III. Such a policy once embarked upon inevitably involved Mr. Rhodes in grave breaches of duty to those to whom he owed allegiance. He deceived the High Commissioner representing the Imperial Government, he concealed his plans from his colleagues in the Colonial Ministry and from the board of the British South Africa Company, and led his subordinates to believe that his plans were approved by his superiors. IV. Your committee have heard the evidence of all the directors of the British South Africa Company, with the exception of Lord Carnarvon. Of those who were examined, Mr. Beit and Mr. Maguire alone had cognisance of Mr. Rhodes' plans. Mr. Beit played a prominent part in the negotiations with the Reform Union; he contributed large sums of money to the revolutionary movement, and must share full responsibility for the consequences. V. There is not the slightest evidence that the late High Commissioner in South Africa, Lord Rosmead, was made acquainted with Mr. Rhodes' plans. The evidence, on the contrary, shows that there was a conspiracy to keep all information on the subject from him. The committee must, however, express a strong opinion upon the conduct of Sir G. Dalmeida Bouver, who was guilty of a grave dereliction of duty in not communicating to the High Commissioner the information which he received in his knowledge. Mr. Newton failed in his duty in a like manner. VI. Neither the Secretary of State for the Colonies nor any of the officials of the Colonial Office received any information in which made them, or should have made them or any of them, aware of the plot during its development.

and declination of proposal to arbitrate disagreements.—On the 10th of May, 1897, the Acting State Secretary of the South African Republic addressed to the British Agent at Pretoria a communication of great length, reviewing the positions taken by Mr. Chamberlain in his several arraignments of the government of the Republic for alleged violation of the London Convention of 1884, and proposing an arbitration of the questions involved. "The complaint," he wrote, "which Her British Majesty's Government has advanced in an unmistakably pronounced manner over an actual or possible breach of the Convention has deeply grieved this Government, as it thinks that it has fulfilled its obligations. It sees in the fulfilment of the mutual obligations under the Convention one of the best guarantees for the maintenance of a mutual good understanding and for the promotion of reciprocal confidence. To this good understanding and that confidence, however, severe shocks have been given by events which cannot be lightly forgotten. And if it were not that this Government wishes to guard itself against adopting a recriminating tone, it might put the question whether, for example, the incursion of Dr. Jameson, whether considered as a breach of the Convention or a grievance, is not of immeasurably greater importance than the various matters adduced by Her British Majesty's Government would be, even if the contention that they constitute breaches of the Convention could be accepted. There should, in the view of this Government, be a strong mutual endeavour to restore the shocked confidence and to calm the excited spirit which this Government with sincere regret sees reigning throughout almost the whole of South Africa. This Government is anxious to co-operate for this end, for the desire of the Republic, with the maintenance of its independence and rights, is for peace, and where, for the reasons given it has been unable to entertain the proposal of Her British Majesty's Government in the matter of the Aliens Law,—and it appears very difficult to arrive at a solution of the question by means of correspondence,—it wishes to come to a permanent good understanding along a peaceful course, not only with respect to its undisturbed right to make an alien law, but also with regard to all points touching the Convention which are referred to in the two Despatches under reply by Her British Majesty's Government. While it respects the opinion of Her British Majesty's Government, it takes the liberty, with full confidence in the correctness of its own views, to propose to Her British Majesty's Government the principle of arbitration with which the honourable the First Volksraad agrees, in the hope that it will be taken in the conciliatory spirit in which it is made.

"Although this Government is firmly convinced that a just and impartial decision might be obtained even better in South Africa than anywhere else, it wishes, in view of the conflicting elements, interests, and aspirations, which are now apparent in South Africa, and in order to avoid even the appearance that it would be able or desire to exercise influence in order to obtain a decision favourable to it, to propose that the President of the Swiss Bondstätt, who may be reckoned upon as standing altogether outside the question, and to feel sympathy or antipathy neither for the one party nor for the other, be

requested to point out a competent arbitrator who has already often been done in respect of international disputes. The Government would have no objection that the arbitrator be given a limitation of time and gives the assurance that already that it will willingly submit to any decision if such should contain a just reprobation, be given against it. The Government repeats the well known wish that this case may find favour with Her British Majesty's Government, and inasmuch as the Convention has branches of the Convention and entered into even in South Africa, and bring and keep feelings more and more in a state of suspense, this Government will be pleased if it could learn the decision of Her Majesty's Government as soon as possible."

Mr. Chamberlain's reply to this proposal was not written until the 16th of the following October, when he, in turn, reviewed point by point the matters dealt with in the despatch of Mr. Van Boschoten. With reference to the Jameson raid he said: "Her Majesty's Government note with satisfaction that the Government of the South African Republic see in the fulfilment of the mutual obligations under the London Convention one of the best guarantees for the maintenance of a mutual understanding and for the promotion of reciprocal confidence. Her Majesty's Government have uniformly fulfilled these obligations on their part, and they have strongly protest against what appears to have been implied in the Note under consideration that the incursion of Dr. Jameson can be considered as either a breach of the Convention by Her Majesty's Government or a grievance against them. That incursion was the act of private individuals unauthorised by Her Majesty's Government, and was repudiated by them immediately it became known. The immense importance to the Government of the South African Republic of that repudiation, and of the proclamation issued by the High Commissioner in his instructions from Her Majesty's Government is recognised throughout South Africa. Her Majesty's Government maintain strongly that since the Convention of 1884 there has never been any breach or even any allegation of a breach on their part of that of the subsequent Convention, and, as the subject has been raised by the implied accusation contained in the Note under consideration, Her Majesty's Government feel constrained to contrast their loyal action in the case of the Jameson raid with the cases in which they have had cause to complain that the Government of the South African Republic failed to interfere with it. If they did not countenance, invasions of the adjacent territories by its burghers in violation of the Convention, and they feel bound to remind the Government of the Republic that in one of these cases Her Majesty's Government were compelled to maintain their rights by an armed expedition at the cost of about one million sterling, for which no compensation has ever been received by them."

Concerning the proposal of arbitration, the reply of the British colonial secretary was as follows: "In making this proposal the Government of the South African Republic appear to have overlooked the distinction between the Conventions of 1884 and 1884 and an ordinary treaty between two independent Powers, questions arising upon which may properly be the

By the Pretoria Convention of 1881 Her Majesty, as Sovereign of the Transvaal, consented to the inhabitants of that Colony a complete self-government subject to the sovereignty of Her Majesty, but holds the Colony upon certain terms and conditions, subject to certain reservations and limitations set forth in 33 articles, and by the London Convention of 1884 Her Majesty, while maintaining the preamble of the earlier instrument, declared that certain other articles embodied therein should be substituted for the articles embodied in the Convention of 1881. The articles of the Convention of 1881 were repealed by the Volksraad of the Transvaal, and those of the Convention of 1884 were accepted by the South African Republic. The two Conventions, therefore, Her Majesty regards the South African Republic as a sovereign who has accorded to the people of that Republic self-government upon certain conditions, and it would be incompatible with that position to submit to arbitration the question of the conditions on which she grants self-government to the Republic. One of the main objects which Her Majesty's Government had in view was the prevention of the intervention of any foreign Power between Her Majesty and the South African Republic, a matter which they then held, and which Her Majesty's present Government still hold, to be essential to British interests, and this object would be defeated by the course now proposed. The Government of Her Majesty's Government at the time of the London Convention, that question of arbitration should not be submitted to arbitration is shown by the fact that when the delegates of the South African Republic, in the negotiations which preceded that Convention, submitted to Her Majesty's Government in the first instance on a letter of the 26th of November 1881, which will be found on page 9 of the Parliamentary Paper C. 3917 of 1884) the draft of a treaty or convention containing an arbitration clause, they were informed by the Earl of Derby that it was neither in form nor in substance such as Her Majesty's Government could accept. See *Britain, Papers by Command*: C. 3821, 1895.

Cape Colony: A. D. 1898.—The position of political parties. The Progressives and the Afrikaander Bond.—The present position of parties at the Cape is as unfortunate and as precarious as any that the severest critic of Parliamentary institutions could have conjured up.

The Cape has always had the curse of republicanism to contend with. Time might have been much to soften, if not to expunge it, if the moderate stipulations had not always been followed up to good to fresh rancour. The facts and well-known to the repetition. It is true that the Transvaal, that 'the trek has been their sin,' and up to the time of even, after and since, every conceivable mistake has been committed by those in authority. Thus, when the breach was, to all appearances, partly healed, the fatal winter of 1895 put back the hands of the clock to the old point of departure. As Englishmen, our sympathies are naturally with the party that is prevalently English,

and against the party that is prevalently Dutch, but to find a real line of parting between them, between them other than that of race, is to require the drawing of a line between the two types of character, both Boers and Afrikaners, and Progressives and Conservatives of a different type. The party that is prevalently English, protective duties, on so many things, as to the degree they differ, for whilst the Bond would have imposed as they are the Progressives wish to reduce the duties on food stuffs to meet the grievances of the urban population, and might be induced to accept preferential treatment for British goods. On the native question neither party adopts what would be regarded as a compromise, but each has its own policy. The Bond has not made a campaign party, and they would equally like it possible to extend the application of the Glen Grey Act, which by levying a tax on the young Kaffirs who have not a clear certificate, forces them to serve as labour to the community before exercising their right of putting the spade as the plough is, for the party put. Neither party wishes to interfere with the rights of property or the disabilities to be found under the Roman Dutch law. A tax on the output of diamonds at Kimberley has been advocated by some members of the Bond as a financial expedient, but it is and is not to have been put forward rather as a threat against Mr. Rhodes personally than as a means to deal with practical politics. Questions of franchise are the party left to deal with, for no responsible politicians wish to go back upon the enactment which restricted the Kaffir vote to safe and inconsiderable limits. The redistribution of seats was the subject of a Bill upon which the last House was dissolved, after the rebuff that the Ministry received upon a financial division, but it has been dealt with rather for practical than theoretical reasons. Two schemes of redistribution have been formulated, and each has been proposed and opposed with arguments directed to show the party advantage to be derived. For political reform in the abstract, with or without an extension of the suffrage, there is no sort of enthusiasm in any quarter. Railway administration furnishes, no doubt, an occasional battle-field for the two sides of the House. Roughly, the Progressives favour the northern extension and are willing to make concessions in rates and charges to help on the new trade with Rhodesia, whilst the Bond declare themselves against special treatment of the new interests, and would spend the money that could be devoted to railway construction in the farming districts of the colony itself. Mr. Rhodes, however, has warned the Cape that any hostile action would be counteracted by a diversion of traffic to the East, and it is unlikely that any line of policy will be pursued that is likely to injure the carrying trade of the southern ports. Between the followers of Mr. Rhodes and the followers of Mr. Hofmeyr there is no wide divergence of principle on public affairs, of the near future, so far as they have been or are to be the subject of legislation, where the difference comes in is in the attitude they severally assume towards the two republics and the fortunes of the north, but when talk has to yield to action it is improbable that there will be much in their disagreement.—N. L. W. Lawson, *Cape, Past and Colonial Policy*, *Fortnightly Review*, N. S. 1898.

The Transvaal: A. D. 1898 January—Feb.

ruary Re-election of President Kruger. Renewed conflict of the Executive with the Judiciary. Dismissal of Chief Justice Kotze.

The President's term in the South African Republic was for six years, and February the president was re-elected for the fourth month of the year. President Kruger was re-elected for a fourth term of five years, by nearly 13,000 votes against less than 1,000 divided between Mr. Steyn, Burger and General J. J. van Rensburg, who were the principal candidates. Soon afterwards the conflict of 1897 between the Judiciary and the Executive (see above, A. D. 1897, JANUARY, MARCH) was reopened by a communication in which Chief Justice Kotze of the High Court called the attention of the President to the fact that nothing had been done in fulfillment of an agreement that the independence of the Court and the stability of the Grundwet should both be protected by law against arbitrary interference, and giving notice that he considered the compromise then arranged to be ended. Thereupon (February 16) President Kruger removed the judge from his office and placed the State Attorney in his seat. Justice Kotze denied the legality of the removal and adjourned his court sine die. In a speech at Johannesburg, some weeks afterwards, he denounced the action of President Kruger with great severity, saying: "I charge the President as head of the State, with having violated both the constitution and the ordinary law of the Land, with having interfered with the independence of the High Court, and invaded and trampled the rights and liberties of every one in the country. The guarantees provided by the constitution for the protection of individual personal rights have disappeared, and these are now dependent on the 'arbitrium' of President Kruger."

Rhodesia and the British South Africa Company: A. D. 1898, February Reorganization. In February, the British government announced the adoption of plans for a reorganization of the British South Africa Company and of the administration of its territories. The Company, already deprived of military powers, was to give up, in great part, but not wholly, its political functions. It was still to appoint an Administrator for Rhodesia south of the Zambezi, and to name the majority of members in a council assisting him, so long as it remained responsible for the expenses of administration; but, by the side of the Administrator was to be placed a Resident Commissioner, appointed by the Crown, and over both was the authority of the High Commissioner for South Africa, to whom the Resident Commissioner made reports. At home the status of the Board of Directors was to be considerably altered. The life directorships were to be abolished, and the whole Board of Directors in future to be elected by the shareholders—any official or director removed by the Secretary of State not being eligible without his consent. The Board of Directors was to communicate all minutes, etc., to the Secretary of State, and he to have the power of veto or suspension. Finally, the Secretary of State was to have full powers to inspect and examine all documents; Colonial Office officials named by him were, in effect, to exercise powers like those of the old Ind. in Board of Control.

**Cape Colony: A. D. 1898, March—October.
—Election in favor of the Afrikaner Bond.**

—Change in the government.

The Upper House of the Cape Parliament gave the party called the Progressives, led by Mr. Rhodes, a small majority. The Afrikaner Bond, more commonly called the Bond, won the election. The Parliament opened in May, and the Progressive Ministry, under Sir Alfred Waterhouse, defeated in the Lower House a bill to elect a new government. The Ministry dissolved Parliament, and the constituents, with the hope of a change in that appeal. The Bond party won the elections by a majority of two-thirds, and enabled it to carry a resolution of confidence in the government when Parliament reassembled, in October. The Ministry, under Sir Alfred Waterhouse, resigned, and a new government formed with Mr. Schreiner at its head.

The Transvaal: A. D. 1898-1899. Continued dispute with the British Government concerning Suzerainty.

During 1898 a new dispute, raised by Mr. Chamberlain's optimistic assertion of the suzerainty of Great Britain over the South African Republic, went on between the British Government and the government at Pretoria. The question at issue seemed to lie between fact and a fact, and the difference between the two parties was the difference between the fact that they had severally drawn from the word "suzerainty" from the Convention of 1884. On one side could be quoted the fact that the Transvaal deputation of 1884, which had made to their Volksraad, had brought the treaty back and had been told that it be approved. The treaty, they said, "is entirely bilateral [meaning that the two sides in the making of it] who are representatives were not placed in the position of merely having to accept a suzerain Government, a one-sided arrangement, its rule and regulation but whereby they recognized us a free contracting party." On the other side, also an end of the British Government with the official recognition of her name, restores her full self government to the South African Republic, excepting one stipulation regarding the conclusion of treaties with foreign powers (Article 4). With these words the various provisions and limitations of the Pretoria Convention which Her Majesty's Government as suzerain had retained have, of course, lapsed.

On the other side, Mr. Chamberlain, in a speech with effect from a speech which Lord Derby then the British Colonial Secretary, who had initiated the Convention of 1884 with the Afrikaners, made on the 17th of March that year in the House of Lords. As reported in Hansard Lord Derby had then dealt with the very question of suzerainty, as involved in the new convention, and had set forth his own understanding of the effect of the latter in the following words: "Then the noble Earl (Earl of Kimberley) said that the object of the Convention had been to abolish the suzerainty of the British Crown. The word 'suzerainty' is a very vague word, and I do not think it is capable of any precise legal definition. Whatever we may understand by it, I think it is not very easy to do so. But I apprehend, whether you call it a prerogative or a suzerainty, or the recognition of British paramount Power, the fact is that a certain

A. C. Phillips, Editor

There are a considerable number of open questions between Her Majesty's Government and the Government of the South African Republic in which there is at present no sign of agreement. On the contrary, disagreements seem to increase as time goes on. . . . In my personal opinion the cause of many of the points of difference and the most serious ones, arises out of the policy pursued by the Government of the South African Republic towards the Uitlander population of that Republic among whom many thousands are British subjects. This policy, the

"President: I shall be brief. I have come with my commission, in the trust that Your Excellency is a man capable of convincing me to go into all points of difference. I should like this Excellency to go point by point, as I have discussed so that we can discuss each point that he thinks requires attention not with a view to our coming to a decision but to hear each side, and we can go back on any point necessary and see if we can arrive at an understanding. I would like to give commissions as far as possible and practically but I want to speak openly so that this Excellency may be able to understand. I should like to say that the memorials placed before Her Majesty's Government came from those who do not speak the truth. I mean to convey that we do give commissions whenever we think it practicable to do so and after we have discussed it in a friendly way Your Excellency will be able to judge whether I or the memorialists are right. I have said that if there are any mistakes on our side we are willing to discuss them. Even to any matter concerning Ireland all the I would like him to listen to his advice if he said it could be removed.

In this way or that way. But when I show him that by the point we may be discussing our independence may be touched, I trust he will be open to accept of that object.

His Excellency.—I think the point which it would be best to take first of the President agrees would be the Franchise. There are a number of questions more or less resting upon that. I should like to know a little more about the President's views. I want to know more because if I were to begin and say I want this, that, and the other, I know I shall be told this was dictation. I do not want to formulate a scheme of my own, but I can, if necessary.

President.—As long as I understand that it is meant in a friendly manner and you mean to give hints, I won't take it that they are commands. It has already been arranged that you give me friendly hints and advice, and I will not take it as dictation even though it should be on points on which I should consider you have no right to interfere.

I would like you to bear one point in view, namely, that all kinds of nations and languages, of nearly all powers, have rushed in at the point where the gold is to be found. In other countries there are millions of old burghers, and the few that come in cannot out-vote the old burghers, but with us, those who rushed in to the gold fields are in large numbers and of all kinds, and the number of old burghers is still insignificant, therefore we are compelled to make the franchise so that they cannot all rush into it at once, and as soon as we can assure ourselves by a gradual increase of our burghers that we can safely do it, our plan was to reduce the time for anyone there to take up the franchise, and that is also my plan.

As His Excellency doubtless knows, I have proposed to the Volksraad that the time should be reduced by five years, and gradually as more trusted burghers join our numbers we can, perhaps go further. There are a number who really do not want the franchise, but they use it as a pretext to egg on people with Her Majesty.

You must remember also on this subject, that the burghers in our Republic are our soldiers, who must protect the land, and that we have told these men to come and fight when we have had difficulties with the Kaffirs. They wanted the vote, but they would not come and fight. Those who were willing to help obtained the franchise, but it appears that many do not want to have it.

His Excellency.—They did not want to take the obligations without the rights of citizenship, and in that I sympathize with them. If they should obtain that right, then naturally they would have to take those burdens upon them.

President.—Those who want the franchise should bear the burdens.

His Excellency.—Yes. Immediately they get the franchise they take upon themselves the obligations connected therewith.

[From this the talk wandered to the subject of commanding, until the High Commissioner brought it back to the franchise question.]

His Excellency.—If I made a proposal to admit strangers under such conditions as to swamp the old burghers it would be unreasonable. But the new-comers have, at present, no influence on the legislation of the Republic, which makes an enormous difference. They have not got a single

representative. The First Volksraad, 28 members, and not one member of the feelings of the large Uitlander population.

President.—Men from every after two years vote for the S. R., and after two years more sit in the S. R. There are Englishmen who have full franchise in that way, and so the Volksraad. And now I have shortened the last ten years of the plan for the full franchise and make it 15 years.

His Excellency.—There are objections of the gravest kind to a plan which men may now obtain for. First of all before he can begin to gradually securing burgher rights, he completed in 14 years at present 15 years according to the President's plan, swear his own allegiance. Take a British subject, which interests me, he takes the oath, and ceases to be a British subject by the mere fact of taking that oath. All the rights of a British subject he still have to wait for 12 years, and cannot plan 7 years before he can become a citizen of the Republic. British subjects are engaged by such a law from attempting to get the franchise. Even if they want to get the franchise, they could not give up their British citizenship on the chance of becoming citizens of the Republic.

President.—The people are the ones to decide themselves. In 1870 anyone being a British subject for one year had the full franchise.

His Excellency.—That was very liberal.

President.—In 1881, after the war of independence, some of our officials and members of our Raad then said that the British subjects, although they had taken the oath of allegiance, and I had to pay them the £250,000, what I had commenced with them. That was the reason the oath was altered.

His Excellency.—In 1882, after the war happened, there was a franchise law introduced, which demanded five years residence, but it did not require the oath that is now taken. It required a simple declaration of allegiance to the State, though all this that the President does to introduce this alteration then?

President.—The people who had taken the oath, had taken that oath, but had not sworn their nationality, 1887, sent a bill to the Raad, as they are sending lying men and women, say that everybody is dissatisfied.

His Excellency.—I think I must just explain a little more clearly my views on the point, as we are now discussing. I think it is dangerous to ask a man to forswear one citizenship and to go in the vortex of giving up one citizenship, and I think it is also unnecessary to ask a man to do more than take an oath of fidelity to the State of willingness to obey its laws and to defend its independence, when it is known that certain that the taking of that oath does not destroy his existing citizenship. I think the oath should be a simple oath of allegiance, and that it should not be required of a man and that he can get full rights in a new State. That was the position under the law of 1882 and all these reasons which the President has been

made answer. "This power existing, the new voters cannot be expected—I should not recommend one of them—to give up his present citizenship for the mere chance of becoming a citizen of the new country."

"His Excellency.—If the President thinks we are asking too much. . . I must report to Her Majesty's Government that the President rejects our friendly suggestions."

"The President.—I would be misleading you if I should tell you that I can give all the strangers the franchise in a very short time. I would consider that our independence was sacrificed thereby; but I say this, let His Excellency keep impartially in view my points of difficulty, and let him make his proposals and submit them to us, so that we can consider them and judge about them. . . I have already said that perhaps means may be found to alter the form of oath. . . I would now like His Excellency to propose a scheme."

"His Excellency.—What I suggest is this. . . That every foreigner who can prove satisfactorily that he has been resident in the country for five years, and that he desires to make it his permanent place of residence, that he is prepared to take the oath to obey the laws, to undertake all the obligations of citizenship, and to defend the independence of the country, should be allowed to become a citizen on taking that oath. This should be confined to persons possessing a certain amount of property, or a certain amount of yearly wages, and who have good characters. In order to make that proposal of any real use for the new citizens who mostly live in one district in the Republic, and a district which only returns one member in 28 to the First Raad, and one in 28 to the Second Raad, I propose that there should be a certain number of new constituencies created, the number of which is a detail upon the discussion of which I will not now enter. But what is vital from my point of view is that the number of these districts should not be so small as to leave the representatives of the new population in a contemptible minority."

"President.—With us the majority of the enfranchised burghers constitutes the ruling voice, and must be listened to in the Volksraad. If the 60,000 came in immediately, they would swamp the 30,000. . . I mean this, that if they are all enfranchised then they would at once form the majority of the whole population, and the majority of enfranchised burghers, according to our law, must be listened to by the Volksraad; since in a Republic we cannot leave the sovereign voice out of account."

"His Excellency.—This is pure theory, that the Volksraad have to do what the majority of the people desire. The Volksraad does what it considers right in its own eyes; it is elected by the people, and does what it thinks right, and the President has made it quite clear during the last year or two that anything the Volksraad does is law."

At an afternoon meeting on the same day, there was a long discussion of the dynamite grievance of the Uitlanders and the President wished to bring up other points, but the High Commissioner objected.

"His Excellency.—I think the discussion will be of interminable length if we are to proceed in this way, and if we cannot approach one another

on the point on which I have made my suggestions, and which lies outside all the pending questions between the two Governments, these discussions may as well be allowed to follow the usual course. If the President's name will give me an answer on the first I have raised, and then wishes to bring forward grievances, I will consider them to-morrow. I do not want to go on with a long list of grievances until I understand what is the basis on which I stand in regard to what I consider the most important question of all."

"President.—I think it would be as well to return in a little while to discuss our points, but I would like to give His Excellency some things to think over. The first point I would like to mention is my wish that Swaziland should now be handed over to me as a port of call for my land. . . Secondly, the demand made with regard to the damages for the Jameson Raid. Mr. Chamberlain said he was against paying 2 million, but he is not against paying the expenses incurred. Thirdly that differences such as the one now existing between us, should be settled by arbitration, and then no war or quarrel can arise between us. . . These are some of the questions I wish His Excellency to think about."

At the opening of the Conference on the 10th day, the President sought to commit the High Commissioner to an "understanding" that "if we came," he said, "to some agreement on the franchise Her Majesty's Government then will engage not in any way to concern itself with internal affairs in the Republic any longer; and that in future questions that then may arise whether out of the Convention or otherwise Her Majesty would agree to have such questions referred to arbitration." The High Commissioner declined to deal with the subject of the franchise as a matter of "bargain." It was a subject of grievances and discontent, dangerous to the Republic and dangerous to the relations between the Republic and Great Britain, which ought to be dealt with on its merits alone. Nevertheless, after some controversy, he said:

"His Excellency.—As far as the Jameson Indemnity is concerned I know that a despatch is on the way to me at this present moment which forwards a statement from the British South Africa Company examining the details of the claim which has been sent in, and as regards that the question of the amount payable in respect of the Raid may be submitted to them, as I have received a telegram that that despatch is coming. The position is this—the British Government have admitted in principle that the Company must pay what is fairly due on account of that raid; but the question of the amount is still under discussion, and I hope that this proposal will lead to a settlement. As to the question of arbitration, which I think is the matter that interests the President most, I am in so far as I can with him that I want if possible to have in future as few questions to discuss with the Government of the South African Republic, as I now have with the Government of the Orange Free State. I feel that the President will meet, if he accepts my scheme of franchise, or any other similar proposal to have some assurance that there shall not be perpetual controversies between him and England, and that if there are controversies some regular way of dealing with them should be devised. The President once proposed that some

question a number of questions, should be submitted to the President of the Swiss Republic. The British Government refused that on the general principle from which I am sure they will not depart, that they will not have any foreign intervention, or any foreign interference at all, between them and the South African Republic. But some other method can be devised of submitting to an impartial tribunal questions that may in future arise between us, and perhaps even some questions which exist at present—but in any case to provide for the future—if such a plan can be devised and suggested to me, I will lay it before Her Majesty's Government and do what I can personally to assist in a satisfactory solution of the matter. The President must understand that I cannot pledge Her Majesty's Government in any way on this subject. The suggestion has taken me by surprise; I didn't come here contemplating a discussion on it, but I must say if it could be satisfactorily arranged while excluding the interference of the foreigner, it would seem to me to open a way out of many difficulties. But all the same, I adhere firmly to my proposal that we should first try and settle on the scheme which the President would accept as regards the matter which I put forward."

At the close of the morning interview, both parties expressed hopefulness of agreement. On meeting again in the afternoon, the President submitted in writing the following proposals concerning the franchise: "As the purpose I had in view at this Conference principally consists in the removal of existing grounds of disagreement and further to provide for the friendly regulation of the way of settling future disputes by means of arbitration, the following proposals with regard to the franchise must be considered as conditional and dependent on the satisfactory settlement of the first mentioned points, and on the request that my request to incorporate Swaziland in the South African Republic shall be submitted by the High Commissioner to Her Majesty's Government. Subject to the foregoing I undertake to submit without delay to the approval of the Volksraad and the people the following proposals about the franchise:

"1. Every person who fixes his residence in the South African Republic has to get himself registered on the Field-cornets' books within fourteen days after his arrival according to the existing law; will be able after complying with the conditions mentioned under 'A,' and after the lapse of two years to get himself naturalised; and will five years after naturalisation, on complying with the conditions mentioned under 'B,' obtain the full franchise.

"A—1. Six months' notice of intention to apply for naturalisation; 2. Two years' continued registration; 3. Residence in the South African Republic during that period; 4. No dishonouring sentence; 5. Proof of obedience to the laws; no act against Government or independence; 6. Proof of full State citizenship and franchise or title thereto in former country; 7. Possession of unincumbered fixed property to the value of £100 approximately, or occupation of house to the rental of £50 per annum, or yearly income of at least £200. Nothing, however, shall prevent the Government from granting naturalisation to persons who have not satisfied this condition; 8. Taking of an oath similar to that of the Orange Free State.

"B—1. Continuous registration five years after naturalisation; 2. Continuous residence during that period; 3. No dishonouring sentence; 4. Proof of obedience to the laws; 5. Proof that applicant still complies with the condition A."

"11. Furthermore, the full franchise shall be obtained in the following manner:—(a) Those who have fixed their residence in the South African Republic before the taking effect of Act 4, 1890, and who get themselves naturalised within six months after the taking effect of this Act, on complying with the conditions under 1A, shall obtain the full franchise two years after such naturalisation on proof of compliance with the conditions mentioned under 1B, after the five into two years. Those who do not get themselves naturalised within six months under Article 1, (b) Those who have been resident in the South African Republic for two years or more can get themselves immediately naturalised on compliance with the conditions under 1A, and shall five years after naturalisation obtain the full franchise on compliance with the conditions under 1B. (c) Those who have been already naturalised shall five years after naturalisation obtain the full franchise on compliance with the conditions under 1B.

At the meeting next day, the High Commissioner presented to the President a written memorandum in reply to the proposals of the latter. He admitted that "the scheme proposed is a considerable advance upon the existing provisions as to franchise," but said that he could not recommend its acceptance as adequate to the needs of the case. "Under this plan," he continued, "no man who is not already naturalised, even if he has been in the country 13 or 14 years, will get a vote for the First Volksraad in less than 24 years from the passing of the new law. There will be no considerable number of people obtaining that vote in less than five years, that is if they come in and naturalise. But I fear the majority of them will not come in because the scheme retains that unfortunate provision first introduced in 1890, by which, owing to the two stages—first, naturalisation with a partial franchise, and then, after five years, full franchise—a man has to abandon his old citizenship before he becomes a full fledged citizen of his new country. My plan avoided this. My doctrine is that, however long a period of residence you fix before a man becomes a citizen of your State, you should admit him, once for all, to full rights on taking the oath of allegiance. And this is especially important in the South African Republic, because, owing to the facility and frequency with which laws—even fundamental laws—are altered, the man who takes the oath and thereby loses his old country will never feel quite sure that something may not happen in the interval when he is only half a citizen, to prevent his becoming a whole one. The vote for the First Volksraad is the essential point. According to the present constitution of the Transvaal, the First Volksraad and the President really are the State. But under this scheme it will be a considerable time before any number of Englishmen worth mentioning can vote for the First Volksraad, and even then they will only command one or two seats. My point was to give them at once a few representatives. They might be a minority, even a small minority. I have said over and

over again I do not want to swamp the old burghers. But as long as the representatives of the new comers are entirely excluded from the supreme legislative council, they will, as a body, remain an inferior caste. The co-operation and gradual blending of the two sections of the population will not take place. The old separation and hostility will continue. I see no prospect here of that concord to which I had looked both to bring about a more progressive system of government, and to remove causes of friction between the Government of the South African Republic and Great Britain. For these reasons I regret to say the scheme seems to me so inadequate that I think it would be wasting the time of the Conference to discuss its details."

The President rejoined in another memorandum, which added one more to his former proposals, namely this: "I am ready to propose and to recommend to the First Volksraad to increase the number of members of the First Volksraad, whereby the Gold Fields will be represented by five, instead of as now by two, members."

The response to this by the High Commissioner was a review, at length, of all that had been proposed, leading to the conclusion which he expressed as follows: "If I am asked whether I think they will satisfy the Uitlander community, and are calculated to relieve the British Government from further solicitude on the score of its Uitlander subjects, I cannot answer in the affirmative. Still less can I encourage the idea that the British Government can be asked to give something in exchange for such legislation as the President proposes. My own proposal was put forward in no bargaining spirit. I asked myself, in advancing it, what is the smallest measure of reform that will really be of any use, that is to say, which will allay the present unrest and enable the Uitlanders to exercise within a reasonable time an appreciable influence on the Government of the country. It was in that spirit that I suggested the outline of a scheme, intentionally not working it out in detail (for I was ready to listen as to details), but indicating a certain minimum from which I am not prepared to depart."

"When I came here I came in the hope that I might be able to report to Her Majesty's Government that measures were about to be adopted which would lead to such an improvement in the situation as to relieve Her Majesty's Government from pressing for the redress of particular grievances on the ground that the most serious causes of complaint would now gradually be removed from within. I do not feel that what His Honour has seen his way to propose in the matter of franchise or what he indicates as the extreme length to which he might, at some future time, be willing to go in the extension of local government is sufficient to justify me in reporting in that sense."

The Conference was ended by a last memorandum from the President, in which he said: "As it is my earnest wish that this Conference should not be fruitless, I wish to make the following proposal to His Excellency, viz.:—As according to his own admission my proposal about franchise is an important step in the right direction, I shall be prepared to lay my proposal before the Volksraad and to recommend it, even though His Excellency does not fully agree with it. From his side I shall then expect that His Excellency will lay before and recommend to Her Majesty's

Government my request about arbitration of future matters of difference under the Convention. His Excellency will, however, readily understand that if Her Majesty's Government should not meet me so far, so as to grant my acknowledged fair request for arbitration, it could be with difficulty expected that the people of the South African Republic would approve my comprehensive proposal with regard to franchise."—*Great Britain, Papers by Command*, 1899, C. 9404.

The Transvaal: A. D. 1899 (May–August).—**Advice to President Kruger from Cape Afrikaners, and from Holland and Germany.**—Several private letters written at the time of these occurrences by Sir J. H. De Villiers, a leading Afrikaner, Chief Justice of Cape Colony, and one of the Commissioners who negotiated the Convention of 1881, addressed to persons who might have influence with President Kruger, were made public a year later. In the first of these letters, written to President Steyn of the Orange Free State, on the 21st of May, 1899, Justice De Villiers used strong expressions as follows: "On my recent visit to Pretoria I did not visit the President as I considered it hopeless to think of making any impression on him, but I saw Reitz, Smuts, and Schalk Burger who I thought, would be amenable to argument. I fear that either my advice had no effect on them, or else their opinion had no weight with the President. I urged upon them to advise the President to open the Volksraad with promises of a liberal franchise and drastic reforms. It would have been so much better if these had come voluntarily from the Government instead of being gradually forced from them. In the former case they would rally the greater number of the nationalists around them, in the latter case no gratitude will be felt to the Republic for any concessions made by it. Besides, there can be no doubt that as the alien population increases, as it undoubtedly will, their demands will increase with their discontent, and ultimately a great deal more will have to be conceded than will now satisfy them. The franchise proposal made by the President seems to be simply ridiculous. I am quite certain that if in 1881 it had been known to my fellow Commissioners that the President would adopt his retrogressive policy, neither President Brand nor I would ever have induced them to consent to sign the Convention. They would have advised the Secretary of State to let matters revert to the condition in which they were before peace was concluded; in other words, to recommence the war. . . . If I had any influence with the President I would advise him no longer to sit on the boiler to prevent it from bursting. Some safety valves are required for the activities of the new population. In their irritation they assuage the Government, often unjustly, in the press and send petitions to the Queen; but that was only to be expected. Let the Transvaal Legislature give them a liberal franchise and allow them local self-government for their towns and some portion of the discontent will be allayed. The enemies of the Transvaal will not be satisfied; on the contrary, the worst service that can be done to them is the redress of the grievance, but it is the friends of the country who should be considered."

On the 31st of July, the Justice wrote still more urgently and impudently to a Mr. Fischer,

who was in close relations with the Transvaal President. I do not think that President Kruger and his friends realize the gravity of the situation. Even now the State Secretary is doing things which would be almost farcical if the times were not so serious. Some time ago I begged of him to drop the censorship of telegrams because it serves no useful purpose and only delays the publication of news by a few days. His answer was that the Government should not disseminate news by its own wires. He might as well have said Government should not disseminate lies by its own post office. To crown all, I see that he has now gone so far as to stop a private telegram (which had been paid for) because it contained a lie. I really do not know where he is going to stop whether he intends to guarantee that all telegrams allowed to pass contain the truth and nothing but the truth. Could you not induce him to stop such childish nonsense? The Transvaal will soon not have a single friend left among the cultivated classes. Then there is the Franchise Bill, which is so obscure that the State Attorney had to issue an explanatory memorandum to remove the obscurities. But surely a law should be clear enough to speak for itself, and no Government or Court of Law will be bound by the State Attorney's explanations. I do not know what those explanations are, but the very fact that they are required condemns the Bill. That Bill certainly does not seem quite to carry out the promises made to you, Mr. Hofmeyr, and Mr. H. H. Döhl. The time really has come when the friends of the Transvaal must induce President Kruger to become perfectly frank and take the newcomers into his confidence. It may be a bitter pill to have to swallow in yielding to further demands, but it is quite clear to the world that he would not have done as much as he has done if pressure had not been applied. What one fears is that he will do things in such a way as to take away all grace from his concessions. Try to induce him to meet Mr. Chamberlain in a friendly manner and at once remove all the causes of unrest which have disturbed this unhappy country for so many years. As one who signed the Convention in 1881, I can assure you that my fellow Commissioners would not have signed it if they had not been led to believe that President Kruger's policy towards the Uitlanders would have been very different from what it has been.

Three confidential despatches sent to President Kruger, in the same period, by the Minister for Foreign Affairs in the Netherlands government were laid before the States General at The Hague October 25, 1900, and made public through Reuter's press agency, as follows: "In the first despatch, which is dated May 13, 1899, the Minister states that news received from different capitals leads him to believe in the imminence of the danger of a violent solution of the problem in South Africa. As a faithful friend he counsels Mr. Kruger in the true interests of the Republic to show himself as conciliatory and moderate as possible, and adds that he learns from a trustworthy source that the German Government fully shares that opinion. Mr. Kruger replied that he had always been conciliatory and did not desire war, but that he could not sacrifice the independence of the Republic. He was willing enough to grant the suffrage, but he could not tolerate Englishmen remaining subjects

of the Queen while receiving at the same time the right to vote in the Republic. In the second despatch, dated August 1, 1899, the Netherlands Minister for Foreign Affairs advised President Kruger, in the interests of the country, not to refuse prematurely the British proposal for an international commission. Mr. Kruger replied that the commission would not be international, but an Anglo-Transvaal commission. He intended to ask for further information from Great Britain as to the scope and composition of the commission, and did not mean to give a decided refusal. Finally, the Netherlands Minister, in a telegram dated August 15, 1899, stated that the German Government entirely shared his opinion as to the inadvisability of declining the English proposal, adding that the German Government, like himself, was convinced that any appeal to one of the Great Powers at such a critical moment would be barren of result and highly dangerous to the Republic. To this Mr. Kruger replied that the British proposal would result in very direct interference by the English in the internal affairs of the Republic. He added that he had no intention of appealing to a Great Power."

Speaking in the German Reichstag on the 10th of December, 1900, the Imperial Chancellor, Count von Bismarck, referred to the above publications by the Dutch government, and confirmed them, saying that it was in accordance with the views of the German Government that the Dutch Foreign Minister "strongly advised Mr. Kruger to maintain a moderate attitude." In June, 1899, Mr. Kruger was advised by Germany through the Dutch Government to invite mediation, but Dr. Leyds informed the Dutch Minister in Paris that Mr. Kruger did not consider that the moment had yet come for applying for the mediation of America. Some time afterwards Mr. Kruger made the attempt to obtain arbitration, but it being had become too heated, and in August Mr. Kruger complained to the Dutch Government that arbitration could not be arranged. The answer to this complaint is given in the Dutch Yellow book under the date of August 15, 1899, and points out that the German Government would at that date have regarded any appeal to a Great Power as hopeless and as very dangerous for the Republic. The German Government also shared the Dutch view that Mr. Kruger ought not to reject the English proposal then before him."

The Transvaal: A. D. 1899 July - September. - Amendment of the Franchise Law. - After much discussion and many changes an amended Franchise Law was adopted by the First Volksraad of the Republic and published on the 26th of July. It conceded to foreigners who had already been resident in the Republic for seven years a possibility of obtaining full burgher rights simultaneously with the taking of the oath of allegiance, but subjected the proceeding to conditions which would make it, in Uitlander opinion, of service to very few. The judgment of Sir Alfred Milner, the High Commissioner, as expressed to Secretary Chamberlain, was to the effect that "the bill as it stands, leaves it practically in the hands of the Government of the South African Republic to enfranchise or not to enfranchise the Uitlanders as it chooses. If worked in a liberal spirit its clumsy and unreasonable provisions may be got over."

But if it is to be enforced rigidly, there will be practically unlimited opportunities of excluding persons whom the Government may consider undesirable, nor does the tone of the debate in the Raad leave much doubt as to the spirit in which some at least of the authors of the Bill would like to see it worked." His criticism applied especially to the certificate required from every applicant. "The certificate," he said, "which every applicant must obtain from three different officials, as to (a) continuous registration and domicile, (b) obedience to the laws, (c) committing no crime against the independence of the country, is one which these officials, even if well disposed, would be able in hardly any case to give. None of them can have any such knowledge of the Uitlander population as would enable them to give this comprehensive certificate; it is acknowledged that some of the Johannesburg lists have been lost; and the Field cornet has, I believe, held his present office for less than four years." Moreover, a requirement of "continuous" registration "may mean," said the High Commissioner, "(and I cannot understand what else it could mean) registration for seven years in one ward and district; so that a person having resided and been registered in one district and subsequently removed to another would forfeit the benefit of his first period of residence. Even if this were not so, he would doubtless have to get a double set of certificates."

Simultaneously with the publication of the new Franchise Law it was announced that the Executive Council had decided to give the Witwatersrand Gold Fields a representation of five members (out of 31) in the First Volksraad, as well as representation by the same number in the Second Volksraad. To the British Agent at Pretoria, Mr. Conyngham Greene, this seemed to be "so wholly inadequate as not to be worthy of serious consideration."

In view of the complexities and uncertainties involved in the new Franchise Law, the High Commissioner addressed the following communication to the government of the South African Republic, August 1: "Her Majesty's Government authorize me to invite President South African Republic to appoint delegates to discuss with delegates to be appointed by me on behalf of Her Majesty's Government, whether Uitlander population will be given immediate and substantial representation by franchise law recently passed by Volksraad, together with other measures connected with it, such as increase of seats, and, if not, what additions or alterations may be necessary to secure that result. In this discussion it should be understood that the delegates of Her Majesty's Government would be free to make any suggestions calculated to improve measures in question and secure their attaining the end desired."

The reply to this proposal was given by the Boer government to the British Agent at Pretoria in two notes, the first, dated August 19, as follows: "With reference to your proposal for a joint enquiry contained in your dispatches of the 2nd and 3rd August, Government of South African Republic have the honour to suggest the following alternative proposal for consideration of Her Majesty's Government, which this Government trusts may lead to a final settlement. (1.) The Government are willing to recommend

to the Volksraad and the people a 5 years' respective franchise, as proposed by His Excellency the High Commissioner on the 1st day of 1899. (2.) The Government are further willing to recommend to the Volksraad that 8 new seats in the First Volksraad, and, if necessary, also in the Second Volksraad, be given to the population of the Witwatersrand, thus with the 2 seats members for the Goldfields giving to the population thereof 10 representatives in a Raad, and in future the representation of the Goldfields of this Republic shall not fall below the proportion of one fourth of the total. (3.) The new Burgers shall equally with the old Burgers be entitled to vote at the election for State President and Commandant General. (4.) This Government will always be prepared to take into consideration such friendly suggestions regarding the details of the Franchise Law as Her Majesty's Government, through the British Agent, may wish to convey to it. (5.) In putting forward the above proposals Government of South African Republic assumes, on that Her Majesty's Government will agree that the present intervention shall not form a precedent for future similar action and that in the future no interference in the internal affairs of the Republic will take place. (6.) That Her Majesty's Government will not further insist on the assertion of the suzerainty, the controversy on the subject being allowed tacitly to drop. (7.) That arbitration (from which foreign element other than Orange Free State is to be excluded) will be conceded as soon as the franchise scheme has become law. (8.) Immediately on Her Majesty's Government accepting this proposal for a settlement, the Government will ask the Volksraad to adjourn for the purpose of consulting the people about it, and the whole scheme might become law say within a few weeks. (9.) In the meantime the form and scope of the proposed Tribunal are also to be discussed and provisionally agreed upon, while the franchise scheme is being referred to the people, so that no time may be lost in putting an end to the present state of affairs. The Government trust that Her Majesty's Government will clearly understand that in the opinion of this Government the existing Franchise Law of this Republic is both fair and liberal to the new population, and that the consideration that induces them to go further, as they do in the above proposals, is their strong desire to get the controversies between the two Governments settled, and further to put an end to present strained relations between the two Governments and the incalculable harm and loss it has already occasioned in South Africa, and to prevent a racial war from the effects of which South Africa may not recover for many generations, perhaps never at all, and therefore this Government, having regard to all these circumstances would highly appreciate it if Her Majesty's Government, seeing the necessity of preventing the present crisis from developing still further and the urgency of an early termination of the present state of affairs, would expedite the acceptance or refusal of the settlement here offered. (Signed) F. W. REITZ." The second note, which followed on the 21st of August, was in these terms: "In continuation of my dispatch of the 19th instant and with reference to the communication to you of the State Attorney this morning, I wish to forward to you the following

an explanation thereof, with the request that the same may be telegraphed to His Excellency the High Commissioner for South Africa, as forming part of the proposals of this Government contained in the above named despatch. (1) The proposals of this Government regarding question of franchise and representation contained in that despatch must be regarded as expressly contingent on Her Majesty's Government consenting to the points set forth in paragraph 5 of the despatch, viz:—(a) In future not to interfere in internal affairs of the South African Republic. (b) Not to insist further on its assertion of "exclusive sovereignty." (c) To agree to arbitration. (d) Referring to paragraph 6 of the despatch, this Government trusts that it is clear to Her Majesty's Government that this Government has not considered the Volksraad as to this question and will only do so when an alternative reply to its proposals has been received from Her Majesty's Government. (Signed) F. W. REITZ."

The above notes were repeated by cable, in full to the Colonial Secretary, at London, and, on the 25th of August, he returned by the same medium his reply, as follows: "Her Majesty's Government have considered the proposals which the South African Republic Government in their notes to the British Agent of 19th and 21st August have put forward as an alternative to those contained in my telegram of 31st July. Her Majesty's Government assume that the adoption in principle of the franchise proposals made by you at Bloemfontein will not be hampered by any conditions which would impair their effect, and that by proposed increase of seats for the Goldfields and by other provisions the South African Republic Government intend to grant immediate and substantial representation of the Uitlanders. That being so, Her Majesty's Government are unable to appreciate the objections entertained by the Government of the South African Republic to a Joint Commission of Inquiry into the complicated details and technical questions upon which the practical effect of the proposals depends. Her Majesty's Government, however, will be ready to agree that the British Agent, assisted by such other persons as you may appoint, shall make the investigation necessary to satisfy them that the result desired will be achieved and, failing this, to enable them to make those suggestions which the Government of the South African Republic state that they will be prepared to take into consideration. Her Majesty's Government assume that every facility will be given to the British Agent by the Government of the South African Republic, and they would point out that the inquiry will be both easier and shorter if the Government of the South African Republic will omit in any future Law the complicated conditions of registration, qualification and behaviour which accompanied previous proposals and would have entirely nullified their beneficial effect. Her Majesty's Government hope that the Government of the South African Republic will wait to receive their suggestions founded on the report of the British Agent's investigation before submitting a new Franchise Law to the Volksraad and the Burgheers. With regard to the conditions of the Government of the South African Republic: First, as regards intervention, Her Majesty's Government hope that the fulfilment of the promises made and the just treatment of the Uitlanders in future

will render unnecessary any further intervention on their behalf; but Her Majesty's Government cannot of course disengage themselves from their rights under the Conventions nor divest themselves of the ordinary obligations of a sovereign Power to protect its subjects in a foreign country from injustice. Secondly, with regard to sovereignty Her Majesty's Government would refer to the Government of the South African Republic to the second paragraph of my despatch of 13th July. Thirdly, Her Majesty's Government agree to discuss not the time and scope of a Tribunal of Arbitration from which foreigners and foreign influence are excluded. Such a discussion, which will be of the highest importance to the future relation of the two countries, should be carried on between the President and yourself, and for this purpose it appears to be necessary that a further Conference, which Her Majesty's Government suggest should be held at Cape Town should be at once arranged. Her Majesty's Government also desire to remind the Government of the South African Republic that there are other matters of difference between the two Governments which will not be settled by the grant of political representation to the Uitlanders, and which are not proper subjects for reference to arbitration. It is necessary that these should be settled concurrently with the questions now under discussion, and they will form, with the question of arbitration, proper subjects for consideration at the proposed Conference."

On the 2d of September the Boer government replied to this at length, stating that it considered the proposal made in its note of August 19 to have lapsed, again objecting to a joint inquiry relative to the practical working of the Franchise Law, but adding: "If they [the Government] can be of assistance to Her Majesty's Government with any information or explanation they are always ready to furnish this, though it appears to it that the findings of a mixed Commission, especially when arrived at before the working of the law has been fully tested, would be premature and thus probably of little value."

Meantime, on the 31st of August, Sir Alfred Milner had telegraphed to Mr Chamberlain: "I am receiving representations from many quarters to urge Her Majesty's Government to terminate the state of suspense. Hitherto I have hesitated to address you on the subject, lest Her Majesty's Government should think me impatient. But I feel bound to let you know that I am satisfied, from inquiries made in various reliable quarters that the distress is now really serious. The most severe suffering is at Johannesburg. Business there is at a standstill, many traders have become insolvent, and others are only kept on their legs by the leniency of their creditors. Even the mines, which have been less affected hitherto, are now suffering owing to the withdrawal of workmen, both European and native. The crisis affects the trading centres in the Colony. In spite of this the purport of all the representations made to me is to urge prompt and decided action, not to deprecate further interference on the part of Her Majesty's Government. British South Africa is prepared for extreme measures and is ready to suffer much in order to see the vindication of British authority. It is prolongation of the present

tions, endless and indecisive of result, that is dreaded."

On the 8th of September, the High Commissioner was instructed by Mr. Chamberlain to communicate the following to the government of the Transvaal: "Her Majesty's Government are still prepared to accept the offer made in paragraphs 1, 2, and 3 of the note of the 19th August taken by themselves, provided that the inquiry which Her Majesty's Government have proposed, whether joint—as Her Majesty's Government originally suggested—or unilateral, shows that the new scheme of representation will not be encumbered by conditions which will nullify the intention to give substantial and immediate representation to the Uitlanders. In this connection Her Majesty's Government assume that, as stated to the British Agent, the new members of the Raad will be permitted to use their own language. The acceptance of these terms by the Government of the South African Republic would at once remove the tension between the two Governments, and would in all probability render unnecessary any further intervention on the part of Her Majesty's Government to secure the redress of grievances which the Uitlanders would themselves be able to bring to the notice of the Executive and the Raad."

In a lengthy response to this by State Secretary Reitz, September 16, the following are the essential paragraphs: "However earnestly this Government also desires to find an immediate and satisfactory course by which existing tension should be brought to an end, it feels itself quite unable, as desired, to recommend or propose to South African Republic Volksraad and people the part of its proposal contained in paragraphs 1, 2, and 3 of its note 19th August, omitting the conditions on the acceptance of which alone the offer was based, but declares itself always still prepared to abide by its acceptance of the invitation [of] Her Majesty's Government to get a Joint Commission composed as intimated in its note of 2nd September. It considers that if conditions are contained in the existing franchise law which has been passed, and in the scheme of representation, which might tend to frustrate object contemplated, that it will attract the attention of the Commission, and thus be brought to the knowledge of this Government. This Government has noticed with surprise the assertion that it had intimated to British Agent that the new members to be chosen for South African Republic Volksraad should be allowed to use their own language. If it is thereby intended that this Government would have agreed that any other than the language of the country would have been used in the deliberations of the Volksraad, it wishes to deny same in the strongest manner."

Practically the discussion was ended by a despatch from the British Colonial Secretary, September 23d, in which he said: "Her Majesty's Government have on more than one occasion repeated their assurances that they have no desire to interfere in any way with independence of South African Republic, provided that the conditions on which it was granted are honourably observed in the spirit and in the letter, and they have offered as part of a general settlement to give a complete guarantee against any attack upon that independence, either from within any part of the British dominions or from the terri-

tory of a foreign State. They have not asserted any rights of interference in the internal affairs of the Republic other than those which have derived from the Conventions between the two countries or which belong to every one of the two Governments and especially to one which has a largely predominant interest in the peace and stability of the Republic for the protection of its subjects and its adjoining possessions." Referring to a despatch of September 8, the Secretary continued: "The refusal of the Government of the South African Republic to entertain the offer made, coming as it does at the end of nearly six months of protracted negotiations, themselves the climax of an agitation extending over a period of more than five years, makes it useless further pursue a discussion on the lines hitherto followed, and Her Majesty's Government are now compelled to consider the situation afresh, and to formulate their own proposals for a final settlement of the issues which have long vexed South Africa by the policy constantly followed for many years by the Government of the South African Republic. They will communicate to you the result of their deliberations in a later despatch."—*Great Britain, Papers by Command*, 1899, C. 9518, 9521, 9530.

Orange Free State: A. D. 1899: September—October.—The Free State makes common cause with the South African Republic, on the 27th of September, President Steyn communicated to the British High Commissioner a resolution adopted that day by the Orange Free State Volksraad, instructing the government to continue efforts for peaceful settlement of differences between the South African Republic and Great Britain, but concluding with the declaration that "if a war is now begun or occasioned by Her Majesty's Government against South African Republic, this would morally be a war against the whole of white population of South Africa and would in its results be calamitous and criminal and further, that Orange Free State will honestly and faithfully observe its obligations towards South African Republic arising out of the political alliance between the two Republics whatever may happen."

On the 11th of October, the High Commissioner communicated to President Steyn the information that he received from the South African Republic, and asked: "In view of Resolution of Volksraad of Orange Free State communicated to me in Your Honour's telegram of 27th September I have the honour to request that I may be informed at Your Honour's earliest possible convenience whether this action on the part of the South African Republic has Your Honour's concurrence and support." The reply of the Orange Free State President was as follows: "The high handed and unjustifiable policy and conduct of Her Majesty's Government in interfering and dictating in the purely internal affairs of South African Republic, constituting a flagrant breach of the Convention of London, 1884, accompanied at first by preparations, and latterly followed by active commencement of hostilities against the Republic, which no friendly and well-intentioned efforts on our part could induce Her Majesty's Government to abandon, constitute such an undoubted and unjust attack on the independence of the South African Republic that no other course is left to this State than honourably to abide by its Conventional Agreements entered

known that Republic. On behalf of this Government, therefore, I beg to notify that, compliance with the action of Her Majesty's Government, they intend to carry out the instructions of the Volksraad as set forth in the last part of the Resolution referred to by Your Excellency. *British Papers by Command, 1899, pp. 38 and 37.*

The Transvaal and Orange Free State: A. D. 1899 (September–October).—Preparations for war. Troops massed on both sides of the frontiers. Remonstrances of Orange Free State. The Boer Ultimatum.—Before the controversy between Boer and Briton had reached the stage represented above, both sides were facing the prospect of war, both were bringing forces to the frontier, and each was declaring that the other had been first to take that threatening step. Which of them did first begin movement? That here a lack of unanimity seems difficult to learn from official reports. On the 19th of September, the British High Commissioner gave notice to the President of the Orange Free State that "it has been deemed advisable by the Imperial military authorities to send detachments of the troops ordinarily stationed at Cape Town to assist in securing the line of communication between the Colony and the British territories lying to the north of it"; and "as this force, or a portion of it, may be stationed near the borders of the Orange Free State," he wished the burghers of that State to understand that the movement was in no way directed against them. Eight days later, President Steyn, of the Orange Free State, addressed a long despatch to the High Commissioner, remonstrating against the whole procedure of the British government in its dealing with the South African Republic, and alluding to the "enormous and ever increasing military preparations of the British government." On the 21 of October he announced to the Commissioner that he had "deemed it advisable, in order to allay the intense excitement and unrest amongst our burghers, arising from the totally undefended state of our border, in the presence of a continued increase and movement of troops on two sides of this State, to call up our burghers to satisfy them that due precaution had been taken." The High Commissioner replied on the 31: "Your Honour must be perfectly well aware that all the movements of British troops which have taken place in this country since the beginning of present troubles, which have been necessitated by the natural alarm of the inhabitants in exposed districts, are not comparable in magnitude with the massing of armed forces by government of South African Republic on the borders of Natal." Some days previous to this, on the 26th of September, Secretary Chamberlain had cabled from London to Sir Alfred Milner: "Inform President of Orange Free State that what he describes as the enormous and ever increasing military preparations of Great Britain have been forced upon Her Majesty's Government by the policy of the South African Republic, which has transformed the Transvaal into a permanent armed camp, threatening the peace of the whole of South Africa and the position of Great Britain as the paramount State."

On the 9th of October the High Commissioner received another telegram from the President of the Orange Free State, of which he cabled the substance to London as follows: "He demurs to

statement that military preparations of Her Majesty's Government have been necessitated by conversion of South African Republic into an armed camp. Her Majesty's Government cannot be entirely misinformed and it would be reasonable to find, through commonsense understanding, present state of extreme tension were allowed to continue. Therefore Her Majesty's Government may regard precautions taken by South African Republic after Jameson Raid as excessive. Government of South African Republic cannot be blamed for adopting their policy of large but haphazardly increased forces, based upon through hostile press, and based upon by persons and organizations inimical to our people. By interested in overthrowing the Government of Burghers not intended to have put pose of aggression against Her Majesty's dominions. People of South African Republic have since shortly after Jameson Raid been practically as fully armed as now, yet have never committed any act of aggression. It was not till Her Majesty's Government, with excellent intention of enforcing their views on South African Republic in purely internal matters, had greatly augmented their forces and moved them to the borders that a single Burgher was called upon for the purpose, as he truly believed of defending country and independence. If this natural assumption erroneous, not too late to rectify misunderstanding by mutual agreement to withdraw forces on both sides and undertaking by Her Majesty's Government to stop further increase of troops."

But in reality it was already too late. On the same day on which the above message was telegraphed from Bloemfontein, the government of the South African Republic presented to the British Agent at Pretoria a note which ended the possibility of peace. After reviewing the issue between the two governments, the note concluded with a temporary ultimatum as follows:

"Her Majesty's unwelcome intervention in the internal affairs of this Republic in conflict with the Convention of London 1884 caused by the extraordinary strengthening of troops in the neighborhood of the borders of this Republic, has thus caused an intolerable condition of things to arise, whereat this Government feels itself obliged, in the interest not only of this Republic but also of all South Africa, to make an end as soon as possible and feels itself called upon and obliged to press earnestly and with emphasis for an immediate termination of this state of things and to request Her Majesty's Government to give it the assistance in that all points of mutual difference shall be regulated by the friendly course of arbitration or by whatever amicable way may be agreed upon by this Government with Her Majesty's Government. That the troops on the borders of this Republic shall be instantly withdrawn. That all reinforcements of troops which have arrived in South Africa since the 1st June 1899 shall be removed from South Africa within a reasonable time to be agreed upon with this Government, and with a mutual assurance and guarantee on the part of this Government that no attack upon or hostilities against any portion of the possessions of the British Government shall be made by the Republic during further negotiations within a period of time to be subsequently agreed upon between the Governments, and this Government will, on compliance therewith, be prepared to

withdraw the armed Hangers of this Republic from the borders. (d) That Her Majesty's troops which are now on the high seas shall not be landed in any port of South Africa. This Government must press for an immediate and affirmative answer to these four questions, and earnestly requests Her Majesty's Government to return such an answer before or upon Wednesday the 11th October, 1899, not later than 5 o'clock p.m., and it desires further to add that in the event of unexpectedly no satisfactory answer being received by it within that interval [it] will with great regret be compelled to regard the action of Her Majesty's Government as a formal declaration of war, and will not hold itself responsible for the consequences thereof, and that in the event of any further movements of troops taking place within the above mentioned time in the nearer directions of our borders this Government will be compelled to regard that also as a formal declaration of war."

To this ultimatum the British government gave its reply, in a despatch from Mr. Chamberlain to Sir Alfred Milner, October 10, as follows: "Her Majesty's Government have received with great regret the peremptory demands of the Government of the South African Republic conveyed in your telegram of 9th October, No. 3. You will inform the Government of the South African Republic, in reply, that the conditions demanded by the Government of the South African Republic are such as Her Majesty's Government deem it impossible to discuss."—*Great Britain, Papers by Command: 1899, C.—9530.*—Efforts which were being made at the time in Holland to assist the Boer Republic in pacific negotiations with Great Britain were suddenly frustrated by this action. A year later (in November, 1900) it was stated in the States General at The Hague that "in the autumn of 1899 the Netherlands Government offered in London its good offices for the resumption of negotiations with the Transvaal, but these efforts had no result in consequence of the sudden ultimatum of the Transvaal and the commencement of hostilities by the armies of the Republics, actions which surprised the Netherlands Government. When once the war had broken out any effort in the direction of intervention would have been useless, as was shown by the peremptory refusal given by Great Britain to the offer of the United States."

An Englishman who was in the country at the time gives the following account of the Boer preparation for war: "In the towns the feeling was strongly against war; in the country districts war was popular, as the farmers had not the slightest doubt they would be able to carry out their threat of 'driving the English into the sea.' . . . Skilled artillery men were finding their way into the country towards the end of August last [1899]. The Boers themselves did not put much faith in their artillery, but they were reassured by the officers who told them that they would yet learn to respect its usefulness and efficiency—a prophecy which to our cost has been more than fulfilled. . . . General Joubert was always ready and willing, at any time, to inspect and test new guns or military necessities, and no expense was spared to make the Transvaal burgher army a first class fighting machine. . . . Surprise has been expressed at the inaccurate statements made by colonials as to the fighting

strength of the Boers. They had no need of an absolutely reliable source for the war, as it was known in September last that they could field in the field between 50 and 60 thousand men, broken up as follows: Transvaal burghers, 27,000; resident foreigners, etc., 10,000; Free States, 10,000; colonists who would cross the border, 10,000; total, 57,000. . . . As soon as it seemed likely, no time was lost in preparing military arrangements. Before Great Britain had thought of mobilizing a soldier the Boer conscripts were again scouring the colonies of Natal and the Cape, sounding the farmers as they went, and they were prepared to take the first part of the conflict. . . . While people at home were wondering what the next move would be, the Boers were ready to answer the question. In the middle of September all preparations were completed, the Government had had in large quantities of supplies (mainly of flour, bacon, mutton, and tinned foods), which they anticipated would tide them over twelve to eighteen months, and by that time, if they had not beaten the British, they relied on foreign intervention. They had also received large sums of money from Europe, and some additional supplies of arms and ammunition. Ammunition was distributed in large quantities throughout the country, each burgher receiving a sealed packet in addition to his ordinary supply. The last batch of the Mauser rifle was distributed, and the mobilization scheme finally arranged, by which, on given word being telegraphed to the different centres, the first Boer publican army corps would be mobilized within twenty-four hours. This actually took place. . . . The British Government could hardly fail to be aware of the fact that the Transvaal was earnest this time. A visit to the country districts towards the end of August, about the time when the Boer Executive themselves sounded the country through their private agencies, would have revealed the fact that the people were not only perfectly willing to go to war, but that they absolutely wished for it. As one Boer put it to the writer: 'We look on fighting the English as a picnic. In some of the Kaffir wars we had little trouble, but in the Vryheid (during the Boer War of 1881) we simply potted the Boers as they streamed across the veld in their red jackets, without the slightest danger to ourselves.' They had the utmost contempt for Tommy Atkins and his leaders, many of them bragging that the only thing that deterred them from advocating war instantly was the thought that they would have to kill so many of the soldiers, with whom individually they said there was no quarrel. With such a state of things, which should have been perfectly clear to the Intelligence Department and through it to the War Office in London—because no resident would eyes to see could be deceived in the matter—we allowed the present war to find us unprepared."—J. Scoble and H. R. Abercrombie, *The Rise and Fall of Krugerism*, ch. 16 (N. Y.: F. J. Stokes Co.).

The Field of War: A. D. 1899 (October–November).—The Boer advance.—Invasion of Cape Colony and Natal.—The invaders joined by Dutch farmers of the colony.—The British unprepared.—Investment of Kimberley and Mafeking.—In a despatch dated January 16, 1900, Sir Alfred Milner gave particulars of the

THE BOER REPUBLICS AND THEIR SURROUNDINGS.

of the Boer forces from the Orange River south of Cape Colony, and of the extent to which they were opposed by Dutch farmers in the districts south of Orange River. He writes: 'The districts north of that river have been completely cut off, and our accounts of the progress being made on them are so imperfect that the history of their conquest yet to be written. I shall content myself with quoting an extract from a report of the progress of affairs in that region by a gentleman who is a resident in Ayrburg, which sufficiently expresses the truth so far as he is in a position to observe it.' All the districts in the Ayrburg, Kaniun and Eening districts have joined the Boers, and I am sure that you will find ten loyal British soldiers among the Dutch community in the district of Bechuanaland.

The districts in the enemy's hands south of the Orange River are Caledon, Albert, Alwal, North Wodehouse and Barkly East. It was on the 12th October that the enemy committed the first act of open invasion in Ayrburg, on the western border, but it was not till more than a month afterwards, on the 14th November, that they entered Caledon. Apparently they were waiting for reinforcements, for when they actually crossed the frontier they were 1,000 strong. Whether the cause of their delay it was not any discouragement from the people of Ayrburg. The small British garrison then in Ayrburg being engaged elsewhere, and the district being entirely unguarded save by a few Ayrburg people from there continually visiting the river to communicate with the enemy. I received a report that when he left Caledon 1,000 Caledon farmers had already joined the enemy, and that 400 more were expected from the adjoining district of Phillipsburg.

On the 16th November General Buller, the Boer Commandant, addressed the following telegram to Bloemfontein:—'Caledon was occupied by me without opposition.'

I was very well pleased with the conduct of the Ayrburgers. We were everywhere welcomed.

Eastwards along the border the Boer insurrection ran strong. In the closing days of October a Boer force assembled at Bechuanaland Bridge, which was guarded only by a handful of police. As the days passed and the alarm given the Cape police force was withdrawn from Burgersdorp, which lies south of Bethulle, on the line to Stormberg, while, in their turn, the imperial forces abandoned the important position of Stormberg, and retired on Queenstown, thus leaving the district clear for the invaders.

That they did not immediately advance was evidently not owing to any fear of resistance at Burgersdorp, the inhabitants of which fraternized with the commando stationed on the river, and actually passing to and fro. Finally, on the 17th November, the date of the occupation of Caledon, the advance was made, and on the following morning a body of 500 Boers occupied the town. According to the despatch of the Boer commandant dated 16th November, Burgersdorp was occupied, amidst cheers from the Ayrburgers, and the Colonial burghers are very glad to meet us. Commanding at once began throughout the district of Albert, and a

Burgersdorp resident, dated 17th November 1899, farmers were prepared to stand at the 1st. It has leaving the place.

Within a space of less than three weeks from the occupation of Caledon, no less than five great districts, those of Caledon, Albert, Alwal, North Barkly East, and Wodehouse, had gone over without resistance, and so to speak, bodily to the enemy. Throughout that region the Landbosts of the Orange Free State had established their authority, and everywhere in the expressive words of a Magistrate, British loyalists were being herded together like sheep. In the invaded districts, as will be seen from the above, the method of occupation has always been more or less the same. The procedure is as follows:—A commando enters, the Orange Free State flag is hoisted, a meeting is held in the Court house, a number of men and a Proclamation is read, and a vote is taken. The Commandant then makes a speech in which he explains that the people must now obey the Free State laws generally, though they are at present under martial law. A list of the names of the population, and of all subjects, is given, and the days or hours in which the population is compelled to serve against their country. The number of rebels who have actually taken up arms and joined the enemy during the process is brought out, the five invaded districts are then the present only be matter of concern. I had, however, been on the safe side in reckoning that during November it was a number not less than the total of the invading commandos, that is 2,000, while it is probable that of the invading commandos themselves a certain proportion were volunteers who had crossed the border before the invasion took place. And the number, whatever it was, which joined the enemy before and during November has been increased since. A well-informed refugee from the Albert district has estimated the total number of Caledon Boers who have joined the enemy in the invaded districts south of the Orange River at 1,000 to 1,500. In the districts north of that river, to which I referred at the beginning of this despatch, the number can hardly be less. Adding to these the men who became burghers of the Transvaal immediately before or just after the outbreak of war, with the view of taking up arms in the struggle, I am forced to the conclusion that, in all, and figures not less than 10,000 of those now fighting against us in South Africa, and probably some what more either are or till quite recently were subjects of the Queen.—*Great Britain, Papers by Command*, Vol. 264, 1900, pp. 1-5.

The above refers to movements from the Orange Free State into Cape Colony, where the most of reinforcement from Ayrburg inhabitants of British soil was to be got. From the Transvaal, the movement of Boer forces across the frontiers, both eastward and westward, was equally prompt. Early on the morning of the 12th they were in Natal, advancing in three strong columns, under General Joubert, upon Newcastle, threatening the only two posts of the British at Dundee and Glenore, some 10 miles northeast of Ladysmith, where valuable and nimble channell defence. At the same time another Boer army, under General Cronje, had passed the western border and was moving upon Mafeking, where Colonel (afterwards General)

Baden Powell, with an irregular force of about 1,200 men, was preparing for a siege. The inhabitants of the town, including refugees, numbered about 2,000 whites and 7,000 blacks. A few days later Boer forces were skirmishing with the defenders of the diamond mines at Kimberley, where Colonel Kekewich commanded about 1,000 men, and where Cecil Rhodes was among the beleaguered citizens. The population of Kimberley was 33,000, more than half blacks.

It is plain that the British were wholly unprepared for so vigorous an opening of hostilities on the part of the Boers. A military writer in the "London Times," discussing the "Lessons of the War," at the end of a year after its beginning, made the following statements and comment:—"There was no difficulty in obtaining the fullest information as to the resources of the Transvaal and the Free State, and we have been officially informed that 'the armed strength of the Boers, the number of their guns, with their character and calibre,' as laid down in the report of the Director of Intelligence, 'corresponds exactly with our recently ascertained knowledge of what the enemy has put into the field.' Whether or not these reports ever travel from Queen Anne's gate to Pall mall seems uncertain, since the Commander in Chief publicly stated that 'We have found that the enemy . . . are much more powerful and numerous than we expected.' The report of the Intelligence Department seems, therefore, to have been as valueless for practical purposes as were those transmitted to Paris by Colonel Stoffel prior to the outbreak of the Franco-German war, and Lord Wolsley was apparently as little aware of the fighting resources of the Boers as was Marshal Leboucq of those of the Germans. When, early in September, 1899, it became a pressing necessity to reinforce the troops in South Africa, it was painfully realized that not a single unit at home was ready to take the field. One weak battalion and three field batteries, hastily compounded by wholesale drafting from others, represented the available contribution from a standing army at home whose nominal effectives considerably exceeded 100,000. The reinforcements, totally inadequate to meet the crisis, were made up by drawing upon India and the colonial garrisons."—*London Times*, Nov. 22, 1900.

Another writer in "The Times," reviewing, at nearly the same time, the previous year of the war, gave this account of its opening circumstances:—"If the organization of the British Army had permitted the despatch at short notice of 30,000 troops from Great Britain, the whole course of the war would have been different. It was a prevailing illusion that Mr. Kruger would yield to diplomatic pressure not backed by available force, and political expediency, overriding military considerations, led to a compromise. It was tardily decided to bring the forces in South Africa up to a total of about 22,000 by drawing on India and the colonial garrisons; mobilization was deferred till October 7. Thus the first reinforcements arrived barely in time to prevent Natal from being over-run by the Boers, and the expeditionary force did not begin to reach Durban [the port of Natal] till after Ladysmith had been closely invested. . . . There were advisers of the Cabinet who held that the military strength of the Boers was a bubble easily pricked. Thus it was widely believed that a severe repulse in

Northern Natal would suffice to break up the Boer forces, and, knowing only that a body of 4,000 British troops was assembled at Dundee and another somewhat larger at Ladysmith, we hastily assumed that these places were naturally well suited and had been specially prepared for defence. When, on the 26th, the concentration at Ladysmith was accomplished, after a painful and a hazardous march, it was imagined that our forces occupied an intrenched camp which, if necessary, could be held with ease. Later it became clear that Ladysmith was exceedingly ill-adapted for defence, that it was practically unfortified when invested, and finally that if the attacking force had been composed of trained troops, it must have fallen, in spite of every effort on the part of the garrison. The occupation of Dundee, it was discovered, was maintained against the military judgment of Sir G. White.

When at length the army corps and the cavalry division began, early in November, to arrive in South Africa, we believed that the bulk of this large force, which was apparently ready to take the field, would invade the Orange Free State and strike for Bloemfontein, clearing Cape Colony and inevitably drawing Boer forces away from the investments of Kimberley and of Ladysmith. This was another illusion. At least one-half of the expeditionary force was despatched to Durban and the rest was frittered away between three separate lines of advance. There were thus four separate groupings of British troops, spread over an immense front, and incapable of affording each other mutual support. Moreover, the Commander in Chief, being involved in difficult campaign in Natal, there was no responsible head in Cape Colony, where partial chaos soon supervened. . . . Finally, as was the strategy which substituted scattered efforts with insufficient force for a primary object that of the Boers was happily even more ill-conceived. In place of attempting to occupy our troops in Natal and throwing their main strength into Cape Colony, where a Dutch rising on a large scale would inevitably have occurred, they also preferred to fritter away their strength, devoting their main efforts against Ladysmith, Kimberley, and Mafeking, and contenting themselves with the occupation of Colesberg and Stormberg in small force, which, however, was quickly swelled by local rebels."—*London Times*, Nov. 5, 1900.

The Field of War: A. D. 1899 (October-December).—The early battles.—British reverses.—Siege of Ladysmith.—The serious fighting of the war began in Natal, as early as the 20th of October, when three columns of the Boer forces closed in on the British advance post at Glencoe. The first of the Boer columns to arrive opened a precipitate attack, and in the hard battle which ensued on Tulana Hill the British could claim the final advantage, though at very heavy cost. Their commander, General Sir W. Penn Symonds, received a mortal wound and died three days afterwards, kindly cared for and buried by the enemy, his successor in the command, General Buller, having found it necessary to retreat from Glencoe and Dundee to Ladysmith. The Boers were already striking at the railroad between Glencoe and Ladysmith and sharp fighting had taken place on the 21st at Elandsbaarte, a station on the line only seven miles from the latter town. The Boers in that encounter, had been driven from the neighboring

But the British had again suffered greatly, and began to realize the quality of the foe with which they had to deal. A graphic account of the battle of Elandshagte was written by the famous newspaper correspondent, G. W. Steevens, who died shortly afterwards at Ladysmith. Two days after Elandshagte there was another engagement at Reibfontein, still nearer to Ladysmith, for the purpose of keeping the Boers from intercepting the retreat of General Buller. The British forces defending Natal were now concentrated at Ladysmith, which they had chosen for their main position, and in which they had been collecting large quantities of military stores. General Sir George White was there in command.

The Boers, with General J. B. M. de la Rey in command, were rapidly closing upon the town, and, on the 28th, they had a 6-inch French six inch gun on a neighboring hill within range, ready to drop shells into its streets. That night General White made an attempt to break their lines which ended in sore disaster. One column, which marched far out, to a hill called Nicholson's Nek, for a flanking attack on the enemy, lost most of its ammunition and its battery, by a stampede of mules, and then was caught in so helpless a position that it had to lay down its arms. "The cursed white flag," said Mr. Steevens, "was up again over a British force in South Africa. The best part of a thousand British soldiers, with all their arms and equipment and four mountain guns, were captured by the enemy. The Boers had their revenge for Dundee and Elandshagte in war, for they took it full measure in kindness. As Atkins had tended their wounded and succoured their prisoners there, so they tended and succoured him here. One commandant wished to send the wounded to Pretoria; the others, more prudent as well as more humane, decided to send them back into Ladysmith. They gave the whole men the water out of their own bottles; they gave the wounded the blankets off their own saddles and slept themselves on the naked earth. They were short of transport, and they were mostly armed with Martinis; yet they gave captured mules for the hospital panniers and captured Lee-Metfords for splints." It is consoling to come on a bit of incident like this in the generally horrid story of war.

A few days later the communications of Ladysmith southward were cut off, and the forces commanded by General White, about 10,000 in number, were hemmed in by superior numbers of the Boers. British reinforcements were now beginning to arrive in South Africa, and great numbers were at sea, not only imperial troops, coming from England, India, Ceylon and elsewhere, but colonial troops, offered by Canada, New Zealand and the Australian colonies, and accepted by the Imperial Government. The first operations of the British campaign were planned with three objects more or less distinct, namely, to rescue General Buller's army, at Ladysmith, to relieve Kimberley, and to expel the Boers from northern Cape Colony. They were conducted on three fronts from the Natal port of Durban, towards Ladysmith, under General Clery at the beginning, from Cape Town towards Kimberley, under General Lord Methuen, from Port Elizabeth and East London to Queenstown and the Cape districts occupied by the Boers, under General Gatacre.

In the early battles of General Methuen's campaign, fought at Belmont, November 23d, at Enslin, or Graspan, on the 25th, and at Modder River, only 25 miles from Kimberley, on the 28th, he carried his point, and kept up his advance, but at a heavy sacrifice of men. The battle with Cronje's forces at Modder River was a desperate struggle of ten hours duration, in which the British lost nearly 500 men and gained little. The Boers withdrew to an equally strong position, behind fortified lines which extended, some six miles in length, on hills between two points which bore the names of Spytfontein and Majesfontein. There General Methuen attacked them again, December 11, and met with a terrible repulse. His Highland Brigade, advancing in the darkness, before daybreak, was in the midst of the enemy's intrenchments before it knew them to be near, and was horribly cut to pieces, losing 53 officers, including its commander, General Wainwright, and 650 men. The British fell back to Modder River leaving not less than 1,000 men behind. Just one day before this catastrophe, on the 10th, another of like nature, but little less serious, was sustained by General Gatacre's column, moving from Queenstown. He, too, attempted a night march and an early morning attack on the Boers in a fortified position at Stormberg, was misled by guides, miscalculated the distance, neglected to send scouts ahead, and so took his men to the very muzzles of waiting guns. From the storm which then opened on them there were more than 500 who did not escape. Besides the dead and wounded, many went as prisoners to Pretoria. Before the week of these defeats reached its end, another, far worse, had been added in the Natal campaign. General Sir Redvers Buller, appointed to the chief command in South Africa, had arrived at Cape Town on the last day of October, and, after some general study of the field at large, had taken personal direction of the operations in Natal for the relief of Ladysmith. His movements were undoubtedly hurried by urgent appeals from General White. On the 15th of December he felt prepared to attempt the passage of the Tugela River, near Colenso, and did so with his full force, at two drifts, or fords, some two miles apart. Like Methuen and Gatacre, he seems to have been strangely misinformed as to the location and strength of the intrenchments of the Boers. The latter had succeeded again and again in concealing lines of deadly rifle pits and batteries until their assailants fairly stumbled against them, within fatally close range. This happened at Colenso, as at Stormberg and Majesfontein, and the ill-managed attempt to begin an advance upon Ladysmith cost 165 men and officers killed, 670 wounded, 337 prisoners and missing besides 11 guns.

The Field of War: A. D. 1900. Fighting qualities of the Boers.—Take a community of Dutchmen of the type of those who defended themselves for fifty years against all the power of Spain at a time when Spain was the greatest power in the world. Intermix with them a strain of those intrepid French Huguenots who gave up home and fortune and left their country forever at the time of the revocation of the Edict of Nantes. The product must obviously be one of the most rugged, virile, uncomparable races ever seen upon earth. Take this formidable people and train them for seven generations in

constant warfare against savage men and ferocious beasts in circumstances under which no winking could survive, place them so that they acquire exceptional skill with weapons and in horsemanship, give them a country which is eminently suited to the tactics of the huntsman, the marksman and the rider. Then, finally, put a finer temper upon their military qualities by a dour fatalistic Old Testament religion and an ardent and consuming patriotism. Combine all these qualities and all these impulses in one individual, and you have the modern Boer—the most formidable antagonist who ever crossed the path of Imperial Britain.”—A. C. Doyle, *The Great Boer War, ch. I*.—Count Adalbert von Sternberg, a German officer who served with the Boers, and who has since related his experiences in a book, writes to the same effect. “The Boers,” he remarks, “were mounted, whilst the English were on foot, a matter of considerable importance in these hot countries. Given the same or even slightly superior forces, no Continental army would have played its part better than the English, and I even doubt whether, in regard to practical equipment and technical smartness and efficiency the Continent would have done as well. The fact is the Boer is an enemy of quite exceptional character, such as never has been met before, or is likely to be met again. Mounted sharpshooters, armed with the very best of weapons, acclimatized, tactical, and accustomed to habits of war, are terrible opponents, and cannot be dealt with off hand as if they were hordes of savages. One must not forget that the Boers have the keenest eyes imaginable, and that they understand better than any one else how to get the fullest advantage of cover. All these are advantages which go far towards compensating defective landing and the weakening of moral due to being always on the defensive. . . . The Boers would have had much greater successes if they had not abandoned all idea of taking the offensive. They could not be brought to that, for that they lacked courage, and to that lack of courage they owe their destruction.”

The Field of War: A. D. 1900 (January—February).—Continued British disasters on the Tugela.—Lord Roberts and Lord Kitchener in the field.—Invasion of Orange Free State.—Capture of General Cronje and army.—Relief of Kimberley and Ladysmith.—The dark and heavy clouds of disaster which overhung the British in South Africa at the close of the year shadowed England with anxiety and gloom. For the first time, the seriousness of the task of war in which the country had become engaged was understood, and energies corresponding to it were roused. Field Marshal Lord Roberts, of Indian and Afghan renown, was sent out to take supreme command, with the equally famous Lord Kitchener, subjugator of the Egyptian Sudan, for his chief of staff. Immense reinforcements of troops were provided for with haste. On the 1st of January it was estimated that 30,000 fresh troops were afloat or on the point of embarkation, and that Lord Roberts would have 200,000 men at command when all then assigned to South Africa should have reached Natal and the Cape. Lord Roberts landed at the Cape on the 10th of January, and was occupied for a month in organizing and preparing for new movements in the field.

Meantime, General Buller had made a second attempt to turn the strongly fortified position of his opponent on the Tugela between two army and the beleaguered force at Ladysmith, and had failed more discouragingly than before. Crossing the Tugela, some miles west of Ladysmith, on the 17th, he pressed a hard advance, and hill advance, from one to another of the kopjes (hills called kopjes) of the region, for several days. On the 23d his troops stormed the fortifications of the Boers on Spion Kop, a spur of the Drakenberg mountains, and carried them with heavy loss, only to find that they were commanded from other heights and could not be held. Again he drew back to the southern bank of the Tugela, on the 29th, but only for a few days. On the 5th of February his army was once more pushed beyond the river and entrenched in a position among the hills, which it held until the 9th, and was then, for the third time, withdrawn. This third movement was supposed to have been a feint, intended to detain the Boer forces in his front, either from some assault feared at Ladysmith or from interference with the campaign which Lord Roberts was about to open. The besieged at Ladysmith was holding out with grim resolution, but they were known to be in sore straits. Occasional messages by the heliograph told of much sickness and fast approaching starvation in the town. Food was killing more than the shells from the long-barding guns; and the chances of relief seemed to have almost disappeared.

But a sudden change in the whole military situation was about to be made. Lord Roberts and Lord Kitchener had organized arrangements of transportation and supplies for landing the immense force now at their command, and were ready to execute their plans. The former arrived at Modder River on the 9th of February, two days later his columns were set in motion, and the Boer forces, under General Cronje, were too greatly outnumbered to withstand the avalanche which fell upon them. General French led a cavalry expedition to Kimberley, reaching the town on the 15th and raising the siege. The next day General Cronje was in retreat towards Bloemfontein, the Free State capital, harassed by British cavalry, and with the main army of Lord Roberts straining every nerve to strike him before he reached it. On the 18th he was brought to bay, at a point on the Modder River near Paardeberg, where he defended himself for nine days, in a situation that was impossible to assault, but terribly exposed to artillery fire from surrounding heights. He was expecting help from the forces in Natal and elsewhere, and several attempts were made by his associates to reach him; but the British were too strong to be driven from their prey. After suffering to such a degree that his men would endure no more, the brave and stubborn Boer surrendered on the 27th, his army, reduced to about 4,000, laying down their arms. Since he had been taken in the previous fighting and considerable numbers in the last days of the siege, were said to have deserted and found means to slip through the enemy's lines. The prisoners were sent, for convenience of custody, to the island of St. Helena, the general being accompanied by his whole family, and treated with much respect.

While these operations were being carried to

access by Lord Roberts, General Buller was again attacking the formidable fortifications of the enemy in his front. From the 14th of February until the 24th he sacrificed great numbers of men in assaults which failed to break a passage through the kopjes defended by Boer guns. But Lord Roberts's invasion of the Free State had, by this time, caused large withdrawals of Boers from the line of the Tugela, and they were preparing to raise the siege of Ladysmith. Consequently, when the British attack was renewed, on the 25th, it achieved success, at last. The Boers were driven from their main position and abandoned their whole line. Ladysmith was reached by a swift advance of cavalry the next day, and the half-starved garrison and citizens were soon receiving supplies.

The Field of War: A. D. 1900 (March).—Overtures of peace from Presidents Kruger and Steyn.—The reply of Lord Salisbury.—Death of General Joubert.—On the 5th of March, the Presidents of the South African Republic and the Orange Free State addressed the following telegram, jointly, to Lord Salisbury:

"The blood and tears of the thousands who have suffered by this war, and the prospect of all the moral and economic ruin with which South Africa is now threatened, make it necessary for both Governments to ask themselves dispassionately, and as in the sight of the Triune God, for what they are fighting, and whether the aim of each justifies all this devouring misery and devastation. With this object, and in view of the assertions of various members of the British Parliament to the effect that this war was begun and is being carried on with the set purpose of undermining Her Majesty's authority in South Africa, and of setting up an Administration over all South Africa independent of Her Majesty's Government, we consider it our duty solemnly to declare that this war was undertaken solely as a defensive measure for securing the threatened independence of the South African Republic, and is only continued in order to secure the incontestable independence of both Republics as sovereign international States, and to ensure that those of Her Majesty's subjects who have taken part with us in this war shall suffer no harm whatever in person or property. On these conditions, but on these conditions alone, are we now, as in the past, desirous of seeing peace re-established in South Africa, and of putting an end to the civil war now reigning over South Africa; while if Her Majesty's Government is determined to destroy the independence of the Republics there is nothing left to us and our people but to persevere to the end in the course already begun, in spite of the overwhelming pre-eminence of the British Empire, confident that the God who lighted the unextinguishable fire of the love of freedom in the hearts of our fathers will not forsake us, but will accomplish His work in us and in our descendants. We hesitated to make this declaration earlier to Your Excellency, as we feared that as long as the advantage was always on our side, and as long as our forces held defensive positions far in Her Majesty's colonies, such a declaration might hurt the feelings of honour of the British people; but now that the prestige of the British Empire may be considered to be assured by the capture of one of our forces by Her Majesty's troops, and that we are thereby forced to evacuate other positions

which our forces had occupied, that difficulty is over, and we no longer hesitate clearly to inform your Government and people in the sight of the whole civilised world why we are fighting, and on what conditions we are ready to restore peace."

On the 11th Lord Salisbury replied as follows: "I have the honour to acknowledge Your Honours' telegram, dated the 5th of March, from Bloemfontein, of which the purport is principally to demand that Her Majesty's Government shall recognise the 'incontestable independence' of the South African Republic and Orange Free State 'as sovereign international States,' and to offer, on those terms, to bring the war to a conclusion. In the beginning of October last peace existed between Her Majesty and the two Republics under the Conventions which then were in existence. A discussion had been proceeding for some months between Her Majesty's Government and the South African Republic, of which the object was to obtain redress for certain very serious grievances under which British residents in the South African Republic were suffering. In the course of those negotiations, the South African Republic had, to the knowledge of Her Majesty's Government, made considerable armaments, and the latter had, consequently, taken steps to provide corresponding reinforcements to the British garrisons of Cape Town and Natal. No infringement of the rights guaranteed by the Conventions had, up to that point, taken place on the British side. Suddenly, at two days' notice, the South African Republic, after issuing an insulting ultimatum, declared war upon Her Majesty; and the Orange Free State, with whom there had not even been any discussion, took a similar step. Her Majesty's dominions were immediately invaded by the two Republics, siege was laid to three towns within the British frontier, a large portion of the two colonies was overrun, with great destruction to property and life, and the Republics claimed to treat the inhabitants of extensive portions of Her Majesty's dominions as if those dominions had been annexed to one or other of them. In anticipation of these operations the South African Republic had been accumulating for many years past military stores on an enormous scale, which by their character could only have been intended for use against Great Britain. Your Honours make some observations of a negative character upon the object with which these preparations were made. I do not think it necessary to discuss the questions you have raised. But the result of these preparations, carried on with great secrecy, has been that the British Empire has been compelled to confront an invasion which has entailed upon the Empire a costly war and the loss of thousands of precious lives. This great calamity has been the penalty which Great Britain has suffered for having in recent years acquiesced in the existence of the two Republics. In view of the use to which the two Republics have put the position which was given to them, and the difficulties which their unprovoked attack has inflicted upon Her Majesty's dominions, Her Majesty's Government can only answer Your Honours' telegram by saying that they are not prepared to assent to the independence either of the South African Republic or of the Orange Free State."—*Great Britain, Papers by Command Africa, No. 2, 1900.*

On the 27th of March, the Boer cause experienced a great loss, in the sudden death, from peritonitis, of General Joubert, the Commandant-General and Vice President of the South African Republic.

Orange Free State: A. D. 1900 (March).—Proclamation to the burghers by the British commander.—Soon after entering the Orange Free State, Lord Roberts issued a proclamation addressed to the burghers, assuring them that the British government did not believe them to be responsible for the aggressive act of war committed by the government of the Orange Free State, and bore them no ill-will. "I therefore," his proclamation continued, "warn all Burghers to desist from any further hostility towards Her Majesty's Government and the troops under my command, and I undertake that any of them, who may so desist and who are found staying in their homes and quietly pursuing their ordinary occupations, will not be made to suffer in their persons or property on account of their having taken up arms in obedience to the order of their Government. Those, however, who oppose the forces under my command, or furnish the enemy with supplies or information, will be dealt with according to the customs of war. Requisitions for food, forage, fuel, or shelter, made on the authority of the officers in command of Her Majesty's troops, must be at once complied with; but everything will be paid for on the spot, prices being regulated by the local market rates. If the inhabitants of any district refuse to comply with the demands made on them, the supplies will be taken by force, a full receipt being given. Should any inhabitant of the country consider that he or any member of his household has been unjustly treated by any officer, soldier or civilian attached to the British Army, he should submit his complaint, either personally or in writing, to my Headquarters or to the Headquarters of the nearest General Officer. Should the complaint on enquiry be substantiated, redress will be given. Orders have been issued by me, prohibiting soldiers from entering private houses, or molesting the civil population on any pretext whatever, and every precaution has been taken against injury to property on the part of any person belonging to, or connected with, the Army."

After the occupation of Bloemfontein, Lord Roberts issued a second proclamation, announcing that he had received authority from his government to offer the following terms to those "who have been engaged in the present war": "All Burghers who have not taken a prominent part in the policy which has led to the war between Her Majesty and the Orange Free State, or commanded any forces of the Republic, or commandeered or used violence to any British subjects, and who are willing to lay down their arms at once, and to bind themselves by an oath to abstain from further participation in the war, will be given passes to allow them to return to their homes and will not be made prisoners of war, nor will their property be taken from them."—*Great Britain, Papers by Command: Ctd.* 261, 1900, pp. 62-3.

The Transvaal and the Free State: A. D. 1900 (March).—Boer Peace Commissioners to Europe and America.—In March, three commissioners, Messrs. Fischer, Wolmerians and Wessels were sent to Europe and America by the

two Boer governments to solicit intervention in their behalf. They visited several European countries and proceeded thence to the United States, in May. There were many demonstrations of popular sympathy in their reception, on both sides of the ocean, but they failed to obtain official recognition.

The Field of War: A. D. 1900 (March-May).—The British in Bloemfontein and Kroonstad.—The relief of Mafeking. From the scene of the surrender of General Orange Lord Roberts moved quickly on the Free State capital. His advance was resisted by considerable forces of the Boers, but he was able to win most of their positions, and fought only one severe battle, at Driefontein, on the 10th of March. On the 12th his cavalry was in possession of Bloemfontein, and the Field Marshal entered the city on the following day, receiving from the municipal officers a formal surrender of the keys of the public buildings and being welcomed by some part of the population with demonstrations of joy. President Steyn and most of the members of the government of the Republic had retired to Kroonstad and established the seat of authority there. The fighting and the forced marches of a single month since he began his advance, had now exhausted the mobility of Lord Roberts's army, worn out the means of transportation which Lord Kitchener had hastily organized for it,—while his troops were being stricken with fever,—and he was compelled to suspend his campaign for some weeks. The situation at that time was probably described with accuracy by a military contributor to "Blackwood's Magazine" for June 1900, who wrote: "Lord Roberts found himself at Bloemfontein with the wreck of an army and a single narrow gauge line of railway between himself and his base, upwards of 700 miles distant. It was very soon known in Boer headquarters at Kroonstad that he could not move beyond Bloemfontein for some weeks. The triumphal march of Generals Gatacre and Clements through the recently captured territory, accepting submissions, hoisting union jacks and picking up rifles of antique date, afforded much amusement to the Boers, who saw their opportunity and streamed down in large numbers on the small British posts which were scattered east and south of the railway."

There was a good deal of riding and fighting on a minor scale, with a number of mortifying mishaps to the British arms; but little of importance occurred in the military field until near the end of April, when Lord Roberts had reinforced and mobilized his army sufficiently to move forward again, towards Pretoria. On the 12th of May he entered Kroonstad, and the Free State government was again in flight. He paused at Kroonstad for some days, and while he paused there came news of the relief of Mafeking which caused a wilder joy in England than any other event of the war. There had been painful anxiety on account of the besieged in that remote town, in the far corner of Bechuanaland, on the border of the Transvaal,—so far from help, and so stoutly defended for seven weary months by a very small force. From a point near Kimberley, a flying column of mounted men, mostly colonial troops, commanded by Colonel Mahon had been started northward on the 4th of May taking a route east of the railway, to avoid, as

much as possible, the Boers. On the 15th they were 20 miles west of Mafeking, and there they were joined by another detachment, under Colonel Hunter, which had been operating in the northern region for some weeks without being able to break up the siege. The two advanced on the works of the besiegers, drove them out by hard fighting, and entered the town on the 18th of May. Meantime, another column, under General Hunter, had been securing and opening the railway, to bring up the sorely needed supplies for the famished and worn out garrison and people of the town. The defense of Mafeking was one of the finest performances of the war, and gave distinction to Colonel Baden Powell.

Cape Colony: A. D. 1900 (April-June).—The question of the treatment of Cape Colonists who had taken part with the Boers in the war.—Resignation of Premier Schreiner.

On the 28th of April, the Ministers of Cape Colony addressed to the Governor, Sir Alfred Milner, a Minute upon the subject of the treatment of those inhabitants of the Colony who had joined or given aid to the Boers in the war, and who had thus made themselves liable to the pains and penalties of high treason. "Ministers submit," they said, "that the ends of justice would be served by the selection of a certain limited number of the principal offenders, whose trials would mark the magnitude of their offence, and whose punishment, if found guilty, would act as a deterrent. For the remainder, Ministers believe that the interests both of sound policy and of public morality would be served if Her Gracious Majesty would be moved to issue, as an act of grace, a Proclamation of amnesty under which, upon giving proper security for their good behaviour, all persons chargeable with high treason, except those held for trial, might be enlarged and allowed to return to their avocations. Ministers urge such a course not only on the ground of that natural desire for clemency towards her erring subjects which they feel sure would spring from Her Gracious Majesty, but from a deep sense of the importance of such a step upon the future well being of this country."

The substance of the Minute was transmitted by cable to Mr. Chamberlain, and he replied to it on the 5th of May, objecting to the proposed proclamation of a broad amnesty, saying: "Clemency to rebels is a policy which has the hearty sympathy of Her Majesty's Government, but justice to loyalists is an obligation of duty and honour. The question is how can these two policies be harmonized. It is clear that in the interest of future peace it is necessary to show that rebellion cannot be indulged in with impunity, and above all that if unsuccessful it is not a profitable business for the rebel. Otherwise the State would be offering a premium to rebellion. The present moment, therefore, while the war is still proceeding, and while efforts may still be made to tempt British subjects into rebellious courses, is in any case not appropriate for announcing that such action may be indulged in with absolute impunity. And if, as has been suggested, a great many of the Queen's rebellious subjects are the mere tools of those who have deceived them, it is important that these should be made aware individually that whatever their leaders may tell them rebellion is a punishable offence." This attitude of the Imperial Government on the subject of amnesty occasioned differ-

ences in the Ministry of Cape Colony which led to the resignation of the Premier Mr. W. P. Schreiner, on the 13th of June, and the appointment of a new Ministry under Sir Gordon Sprigg.—*Great Britain, Papers by Command July, 1900, Cape Colony, 61-264.*

The Field of War: A. D. 1900 (May).—The British army stricken with fever.—The losses of the British army in battle during this campaign of Lord Roberts had not been severe, but it had encountered a worse enemy than the Boers and was being terribly thinned and shattered by the ravages of enteric or typhoid fever. The sanitary condition of the army in May, and the lack of due provision for dealing with the dreadful epidemic, have been graphically described by the writer already quoted in "Blackwood's Magazine." Referring to the outset of the campaign, in February, he wrote:

"The movement of men and cattle depends on flesh and muscle—it cannot go on for ever, the strain of incessant marching on insufficient food and forage will find out the weak spot even in the most willing. General French started on his memorable ride with 4,000 horses, of which 900 dropped by the way, though the loss in the ranks, exclusive of Paardeberg, was only fifty men, the brunt of the battle for life lay with the horses. But not for long. The men with worn out boots, tattered clothes, hurrying through scorching days and frosty nights, with half a biscuit and water tainted with dead Boers, to satisfy an appetite and thirst compelled by hard work at an altitude of 4,000 feet, who marched in as soldiers, proud of the victory they had won, staggered and fell out, victims to the curse that creeps in, unnoticed, wherever camps are crowded—enteric. . . . Of all things on which we prided ourselves was the care and the money we had lavished to provide comforts for our sick soldiers. The foremost surgeons of the day had volunteered, military hospitals had been arranged on the latest plan; private benevolence had provided as many more; ladies of every rank in life had gone out to nurse; the soldiers, at all events, would be looked after. Letters from the front had come from patients to say how well they had been treated. Mr. Treves at the Reform Club made a speech eulogizing the perfection of the hospitals in Natal, and Sir W. MacCormac spoke of the medical arrangements as admirable—our minds rested content. All this was so long ago as the 10th March, but what happened in March, for all we knew, was happening in May. Then Mr. Burdett Coutts told us that hundreds of men were lying in the worst stages of typhoid, with only a blanket to cover them, a thin water proof sheet (not even that for many) between them and the ground, no milk and hardly any medicines, without beds, stretchers, or mattresses; without pillows, without linen of any kind, without a single nurse amongst them, with a few private soldiers as orderlies, and only three doctors to attend on 350 patients; their faces covered with flies in black clusters, the men too weak to brush them off, trying in vain to dislodge them by painful twitching of the features—there was no one to do it for them. And this a mile from Bloemfontein, where the army had been for six weeks. It is true that a terrible epidemic had followed it from Paardeberg, to break out when it halted. Lord Roberts tells us that before he left on May 3rd the sick gradually increased to

2,000, reaching on June 4th the appalling number, in Bloemfontein, of over 5,000 suffering from typhoid alone. Such were the bare facts as stated on either side—a sudden and devastating epidemic with totally inadequate hospital arrangements to meet it. . . . Yet typhoid has always been the scourge of armies in the field,—in South Africa the water supply, invariably surface drainage fouled by dead animals, is proverbial—that at least was known. The medical authorities on the spot were repeatedly warned by local medical men that from February onwards ten men would be down with typhoid for one with wounds. Ladysmith is in evidence of the persistent presence of typhoid—every one who has visited South Africa bears witness to the same—it can hardly be urged that an outbreak was unreasonable to expect; yet when it did occur it seems to have been taken by the medical administration at the base as an unwarrantable intrusion.”—*The War Operations in South Africa* (*Blackwood's Magazine*, Aug., 1900).

The Transvaal: A. D. 1900 (May).—Speech of President Kruger to the Volksraads.—The following translation of a speech addressed to both Volksraads by President Kruger, in May, 1900, was published in England some months later: “It is known to you,” said the President, “how, before the war started, pressure was brought to bear to obtain the franchise. It is known to you that the Government conceded, after the Raad had consented, although this body saw the difficulty in the matter, till even the burghers made petitions to the effect that we had parted with all our rights. The Government had in view the prevention of shedding blood. The Raad then consented to a seven years' franchise, and also to grant immediately the franchise to people resident here longer than seven years. There were then nearly 30,000 who would obtain the franchise immediately, and so much was conceded that when these had obtained the franchise they would have been able to out-vote the old burghers. We consented to this solely to prevent the shedding of blood. Yet they were not satisfied and they wanted the franchise after five years' residence. Our burghers were against this, and there were also members of the Raad who would not agree to this, yet, nevertheless, the Government made a proposition about it, because they had discovered that it was not about the franchise, but that it was a pretence full of Pharisaic hypocrisy, because documents had been found that in 1896 it was decided that the two independent Republics should not be allowed to exist any more. I cannot express myself otherwise than to call it a devilish fraud. Peace was spoken of while a resolution had already been passed to annihilate us. Even if we had conceded more, yea, even if we had said that the franchise could be obtained after one year, then that would not have been accepted. It was proved by documents that, as this nation could not be allowed to be a free nation, as was pointed out in the address, the Government, to prevent the further shedding of blood, made a proposition to Chamberlain and Salisbury about this matter, and what was the reply? You have, doubtless, read the paper, and, although I cannot verbally repeat the contents of the said document, it amounts to this. That they were annoyed ever to have acknowledged us as an

independent nation, and that, notwithstanding all conventions made, they would never acknowledge this nation as self supporting. Hon. gentlemen, I had to express that which was in my mind. Psalm 83 speaks of the assault of the evil ones on the Kingdom of Christ. That must not exist. The self same words of Salisbury also appear because he says ‘this nation must not exist,’ and God says, ‘this nation shall exist.’ Who will be victorious? Certainly the Lord. Yet so therein the deceit which they then already practised, even they, for though our nation did not wish to part with any rights, the Executive Council conceded so far that we nearly lost the country. The intention was not to obtain these rights. They wanted our country not to be independent any longer. Every other proposition was unsatisfactory to them.

“Let us look this matter in the face and see the cunning deceit enveloped therein. They wrote to the Orange Free State that they had nothing against them, but that they had some grievance against this Republic. Their intention was to tear the two Republics asunder, and it has been proved by documentary evidence that neither of them would be allowed to remain. You see the deception which lies therein. The documents prove that this was already decided in 1896, from the time of Jameson's invasion, and yet they maintain that if the Orange Free State had laid down their weapons that that country would remain in existence. The Orange Free State decided not to lay down their arms, and we started together. We were 40,000 men, but everywhere we had to watch the Kaffirs, and even the commander of Mafeking informed us that certain Kaffir chiefs would assist him. We know that these numbered 30,000 able-bodied men. The number of Kaffirs nearly equalled the number of our forces. Besides them, more than 200,000 English troops arrived, and against these we have to fight. Now, gentlemen, look on God's government. Is it not wonderful that 40,000 men baying to fight these thousands, besides the coloured people, still live? Acknowledge therein the hand of God. The matter I wish to impress is this. It is remarkable that when we meet the enemy we stand in the proportion of 10 to 100. Yet the Lord hath spared us thus far. I do not wish to prophesy, but I wish to point out that our guidance is in the word of God. It is extraordinary, but this war is a sign of the times. What it amounts to is this. That the power of the Beast is an obstinate power to persecute the Church and will continue this until the Lord says, ‘Thus far and no further,’ and why? Because the Church must be tried and purified as there is so much iniquity among us. That is why the war is extraordinary and is a sign of the times. Every one will be convinced that the word of God can be plainly traced in this matter. They say that the people ‘shall not exist,’ but God says, ‘it shall exist and be purified.’ In my mind it lies clear and discernable that the day of grace is not far off. The Lord will prove to be ruler, and nothing shall take place without His will. When He allows chastisement to come upon us we must bend ourselves and humble ourselves, confess our sins and turn again to the Lord. When the whole nation has been humbled, and it is seen that we can do nothing ourselves, the Lord will help us and we shall have peace immediately. This

family has not grasped our hearts sufficiently at present, and we must perform our earnest duty as Peter says in I Peter, chapter v., v. 7 and 8: "casting all your care upon Him, for He careth for you"; but in the eighth verse it states: "Be sober, be vigilant, because your adversary the devil, as a roaring lion, walketh about, seeking whom he may devour." That is the point now, how we must be careful. If we fall into a snare then we lower ourselves.

Ask you, brothers, but is their behaviour? Upon our better Kaffirs are called up by them as proof, and women and children are mentioned. The English assert that no Kaffirs were obtained against us, but only coloured people, but it is a fact that Montsion with his Kaffirs are in Mafeking, and are employed to fight against us. Now, gentlemen, you must not come to the conclusion that every one who fights against us belongs to the Beast (vide Revelations chap. 13). There are certainly hundreds of God's children with them who, however, through fear are the Beast's, and are forced to go with them, but God knows all hearts. We did not seek to spill the blood which lies strewn upon the earth, as we conceded nearly all our rights, but when they wanted to murder us, we could not give way any more. How did it fare with Abah? The mighty foe came on to the walls of the city, and they lost heart. Then the prophet of God came and said, Fear nothing. Then God arose, and in that God we must put our trust, because He is the same God. Let us say, therefore, live as if no God existed; He reigns. In the beginning was the Word, and the Word was God, and the Word became flesh and lived amongst us. Look at history, it must be an example to us. He is still the same God who led out Israel and hardened the heart of Pharaoh to the end, until finally all the first-born of the Egyptians died, whereupon Pharaoh allowed the Israelites to go. He is still the same God who calmed the winds and storms on the sea and His arm is not shortened. Some ask, Does not this only have reference to the Church in the two Republics? No. See the three youths in the burning oven. Did these rejoice alone? No; but God's people of the whole earth. Was it solitary for Daniel in the lions' den? No, but all Christians on the whole earth rejoiced. So the Lord often chooses a small body to whom He shows His miracles as an example for the whole Christian world. Look upon the blood which has been spilt upon this earth. Who is the cause of it? We have wanted peace and our freedom since 1830, and the Lord has given it us, and will the Lord ever give anything and then withdraw? No. But let us humble ourselves before the Lord. There is no doubt about it that eventually the Lord will lead us to victory. The day of grace is not far from His people. Do not let us doubt but remain true to God's word and fight in His name. When the cup of humiliation is brought to our lips and we expressly humble ourselves before the Lord, then the day of grace has arrived. Let each one then acknowledge that it is the hand of God which makes us free and nothing else, then we shall not be lost. Yet He uses man as His instrument.

I have had my address before you, and I hope that the Rand will not sit over it longer than tomorrow morning. There are several members of the Rand who are burghers or mili-

tary officers in the field, so there will be no time to treat ordinary subjects. I trust that you will only treat such subjects as I lay before you. I have appointed an acting Commandant General since I have lost my right hand man, although I do not infer that I have not more such men. The late most noble Commandant General Messrs. Keck and Wolmarans, members of the executive council, are lost to me. The State Secretary is a newly appointed one, and I am the only one remaining of the old members of the executive council, yet I have experienced much assistance and support from the present members, and God will also support us. The Lord is still our Commander in Chief. He gives orders and He knows when to say, "Thus far and no further." It is surprising how other Powers are unanimously with us and how the whole of Europe prays for us, and will the Lord lend a deaf ear to those prayers? Oh, no! Trust in the Lord and let us stand by Him, and He will perform miracles. Even if I have to go to St. Helena, the Lord will bring His people back and make them free, and the same judgment will fall on the present Babylon, the cause of all the spilt blood. We fight for the freedom which God granted to us. I say again, should any brothers from this Rand and private persons fall by the sword, they fought in the name of the Lord and believed, and they, so says the word of the Lord, are sacrificed on the altar for the glorification of His name and of the glorious Church, which, at this time, is to be revealed. The Church must be tried and purified, and that is why I cannot see that this extraordinary war will be allowed to destroy us. This war will be continued until the Lord says, "Thus far and no further," remain at that, abide by that, and fight with me. I give myself in the hands of the Lord, whatever He has destined for me, I shall kiss His rod with which He chastizes me because I am also guilty. Let every one humble himself before the Lord, I have said.

Orange Free State: A. D. 1900 (May).—Annexation by proclamation of Lord Roberts to the Dominions of the Queen.—"In view of Lord Robert's opinion that early annexation would tend towards the pacification of the country, by removing a feeling of uncertainty as to the return of President Steyn's government," the following commission by the Queen to Lord Roberts was issued on the 21st of May: "Victoria R. I., by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India. To Our Right Trusty and Well-beloved, Counsellor Frederick Seleigh Baron Roberts of Kandahar, Field Marshal of Our Forces, Knight of Our Most Illustrious Order of Saint Patrick, Knight Grand Cross of Our Most Honourable Order of the Bath, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Grand Commander of Our Most Eminent Order of the Indian Empire, upon whom We have conferred the Decoration of the Victoria Cross. Greeting. Whereas the territories in South Africa heretofore known as the Orange Free State have been conquered by Our forces, and whereas it is expedient that such territories should be annexed to and should henceforth form part of Our Dominions. Now know you that We, reposing especial trust and confidence in you the said Frederick Seleigh Baron Roberts of Kandahar,

do hereby authorize and empower you in Our name to annex the said territories and to declare that the said territories shall henceforth form part of Our Dominions. And We do hereby constitute and appoint you to be thereupon Administrator of the said territories provisionally and until Our pleasure is more fully known. And We do authorize and empower you as such Administrator to take all such measures, and to make and enforce such laws as you may deem necessary for the peace, order, and good government of the said territories. And we do strictly charge and command all Our officers, civil and military, and all other Our faithful subjects, that in their several places, and according to their respective opportunities, they do aid and assist you in the execution of this Our Commission, and for so doing this shall be your Warrant. Given at Our Court at St James's, this 21st day of May, One thousand nine hundred, in the Sixty third Year of Our Reign." The commission was executed by a public reading of the proclamation of Lord Roberts at Bloemfontein on the 24th of May.—*Great Britain, Papers by Command: 1900, Cd. 261, pp. 136, 144.*

A counter-proclamation, referring to that of the British commander, was issued by President Steyn, from Reitz, on the 11th of June, declaring: "Whereas an unjust war was forced on the people of the Orange Free State and of the South African Republic by Great Britain in the month of October 1899, and whereas these two small Republics have maintained the unequal struggle with the powerful British Empire for more than eight months and still maintain it;

Whereas the forces of the Orange Free State are still in the field and the Orange Free State has not been conquered and whereas the aforesaid proclamation is thus in contradiction with International Law; Whereas the independence of the Orange Free State has been acknowledged by nearly all the civilised Powers; Whereas it is notorious that the British authorities have lately recognised that the Orange Free State is governed in an exemplary manner, and that it is both a violation of the laws of civilization and a denial of the fundamental rights of such people to rob it on what a pretence soever, of its rebellion, and whereas I consider it desirable to make known to all whom it may concern that the aforesaid Proclamation is not recognised by the Government and the people of the Orange Free State. So, therefore, I, M. T. Steyn, State President of the Orange Free State, in consultation with the Executive Council, and in the name of the independent people of the Orange Free State, do hereby proclaim that the aforesaid annexation is not recognised and is hereby declared to be null and of no avail. The people of the Orange Free State is and remains a free and independent people, and refuses to submit to British rule."—*Great Britain, Papers by Command: Cd. 261, 1900, p. 155.*

Cape Colony: A. D. 1900 (May).—Opposition of Cape Colony Afrikaners to the annexation of the Republics.—A "People's Congress" of the Afrikaners, or Bondmen, of Cape Colony, was held at Graaff-Reinet, on the 30th of May, to protest against the annexation of the Boer Republics. The following resolution was adopted by acclamation: "Whereas, were the Republics to be annexed the majority of Cape Colonists would feel themselves bound morally

to work unceasingly by every right and law means for the restoration of independence to the Republics, and to make that end their principal object; And whereas from our knowledge of the history and character of the Republics we are convinced they would never become the willing subjects of the Empire, but would seize every opportunity which might offer itself to recover their independence, possibly by the use of arms, once they were to be deprived thereof. And whereas instead of the annexation of the Republics tending to promote the welfare of their people, as has been claimed, it would be successfully maintained for any long period tending to degrade those people and their offspring, by making them the servitude of a self-governing body, as is degrading to its people as the medieval form of personal slavery. And whereas the annexation of the Republics by Great Britain would be as great a wrong morally as the theft by a rich man of a poor man's hard-earned savings; On that general ground alone it is not believable that permanent good could result from such a policy. Therefore be it resolved now that we, on behalf of the majority of Cape Colonists, do hereby declare our solemn and profound conviction that the annexation of the two South African Republics would be disastrous to the peace and welfare of South Africa and of the Empire as a whole." Also the following: "Be it resolved that it is the opinion of the people in Congress here-assembled that a settlement of the South African question on the following basis would prove a blessing to South Africa and the Empire, namely, that the two Republics should have their unqualified independence, that the Colonies should have the right to enter into treaties of obligatory arbitration with the Republics for the settlement of all disputes affecting the internal affairs of the South African Continent, and that this colony, and any other colony so deserving it, should have a voice in the selection of its Governors. Be it further resolved that a settlement on the above basis would make the majority of the people who have made South Africa their home their warm friends and staunch allies of the British Empire, and that in no other way known to us can that end now be attained."

In transmitting a report of this meeting to Secretary Chamberlain, the High Commissioner, Sir Alfred Milner, wrote: "I do not myself take a very gloomy view of the prospect of racial relations in the Colony, much less in South Africa generally. If it is true, as the reconcilers are never tired of threatening us, that race hatred will be eternal, why should they make such furious efforts to keep it up at the present moment? The very vehemence of their declarations that the Afrikaners will never forgive, nor forget, nor acquiesce, seems to me to indicate a considerable and well-justified anxiety on their part lest these terrible things should after all happen."—*Great Britain, Papers by Command: Cd. 261, 1900, South Africa, Cd. 261, pp. 182 ss.*

The Field of War: A. D. 1900 (May).—June.—**The British invasion of the Transvaal.**—**Occupation of Johannesburg and Pretoria.**—**Expulsion of the Boers from Natal.**—**Discussion of terms of surrender.**—On the 23rd of May Lord Roberts resumed his forward movement from Kroonstad, with a strong column of cavalry under General French in advance on the west, and another, of mounted infantry, under General

Ian Hamilton, on the east. The Boers, under General Botha, had prepared defensive works on the Bloemfontein River, but were too much endangered by the flanking column of General Hamilton to make a stand there, and fell back. Again at the Vaal River, their fortifications were untenable, against an invasion of such numbers with so large a mounted force. With little resistance the British army crossed the Vaal on the 26th and 27th and entered the territory of the South African Republic. On the 30th it was at Johannesburg, and the town was surrendered on the following day. Thence the loyal army moved upon Pretoria, meeting some opposition, but evidently none that was hopefully made, and the capital was surrendered unconditionally to Lord Roberts on the 5th of June. President Kruger and the officials of his government had left the town, with their archives and their treasure, and movable offices had been prepared for them in railway cars, which were trusted for the time being to Middelburg, at some distance eastward. Most of the armed burghers had escaped from the town, and they had been able to remove about 900 of their British prisoners, but a large number of the latter were set free. General Botha gathered up his broken and discouraged forces and intrenched them in a strong position on the Lorenzo Marquay railway, only 15 miles eastward from Pretoria. Lord Roberts moved against him on the 11th and compelled him to retreat, after hard fighting for five hours. This ended important operations in that part of the field.

In Natal General Buller, since early in May, had been pushing his army northward, in a movement co-operative with that of Lord Roberts. He had turned the flank of the Boer forces in the positions they had fortified against his advance, regained Glenke and Dundee, and moved on to Newcastle. Then, with more serious fighting, he forced Botha's Pass through the mountains, compelled the Boers to evacuate their strongholds on Laing's Neck and Majuba Hill, and was substantially in possession of Natal.

On the 30th of May, General Buller sent word to General Chris Botha that Lord Roberts had crossed the Vaal, and suggested surrender, further resistance appearing useless. This led to a meeting of the opposed commanders, at which Botha asked what terms Lord Roberts would offer. Buller immediately referred the question to Lord Roberts, saying, "Can you let me know your terms of peace for individual and separate commandos? . . . I think they are inclined to give in, and that I have in front of me about half the Transvaal forces now in the field. If you think it worth while please let me know if I may mention any terms of peace to them. I think even if assisted from the Orange Free State, it will cost me about 5000 men killed and wounded to get out of Natal." The reply of Lord Roberts, dated June 2, 1900, was as follows:

Your telegram of yesterday. My terms with the Transvaal Government are unconditional surrender. With regard to troops, those who deliver up their arms and riding animals are allowed to go to their homes on signing pledge that they will not fight again during present war. The exceptions to this rule are those who have commanded portions of the Republican forces, or who have taken an active part in the policy which brought about the war, or who have been

guilty of or been parties to wanton destruction of property, or guilty of acts contrary to the usages of civilized warfare. Principled officers should remain with you on parole until you receive instructions regarding their disposal. General Botha declined the terms.

Nine days later (June 12) Lord Roberts opened correspondence on the same subject with General Louis Botha, Acting Commandant General of the Boer forces, endeavoring to persuade him, "in the cause of humanity, to refrain from further resistance." The Commandant General wrote in return: "For the purpose of arriving at a decision, it is not only absolutely necessary for me to call a General Council of War of my Officers and to consult them, but above all it is necessary for me to consider the subject with my Government. I trust that for the sake of humanity your Excellency will give me the opportunity for such consideration and consultation. As some of my Officers are near the Natal Border and I am also on long way separate from my Government, this will require some time. I ask your Excellency kindly, therefore, for an armistice for six days, beginning from to-morrow morning at sunrise, during which time no forward movement will be made on either side within the territory of the South African Republic."

Lord Roberts replied: "I am anxious to meet your wishes and to enable your Honour to communicate with the Government of the South African Republic, but as the movement of my troops in that Republic are intimately connected with operations in progress in other parts of South Africa, it is impossible for me to accede to your Honour's request that there should be an armistice for 6 days, during which time no forward movement will be made on either side within the territory of the South African Republic. I am willing, however, to refrain from making further movements in the district to the east of the Elands River Railway Station, our present most advanced post in that direction, and also in the district north of the Volksrust and Johannesburg Railway, for a period of five (5) days, commencing at dawn on the 15th June, on the condition that no movement westward or southward is made by the Army of the South African Republic during that same period. This will, I trust, give your Honour the opportunity you desire of consulting your Officers and conferring with your Government, and I sincerely hope that the result will be of such satisfactory nature as to prevent further unnecessary loss of life."

The proposal was declined by General Botha, in the following note (June 15). In answer to your letter, dated 14th June, just received by me, wherein your Excellency consents to an armistice for five days, but with the reservation of the right to your Excellency to move your Army in all directions within the South African Republic, except east of Elands River Station and north of the Volksrust-Johannesburg Railway line, I must, to my great regret, inform your Excellency that this reservation makes it impossible for me to accept this armistice, which I have so much desired."

The Field of War: A. D. 1900 (June-December).—Continued resistance of the Boers in guerilla warfare.—An outline of the events of seven months.—A British view of the later situation.—After the occupation of Pretoria,

exhaustion of the mounted forces and of the transport again supervened and Lord Roberts was preoccupied with the double task of bringing up large numbers of horses and masses of stores by a railway exposed to attack along a distance of 200 miles, and at the same time of dealing, as best he could, with scattered bodies of the enemy, nowhere formidable in a military sense, but capable of much mischief. The period beginning with the occupation of Bloemfontein, during which the Boers developed and maintained warfare of guerilla type, imposed highly responsible duties upon British officers in charge of scattered posts and convoys. In some cases those duties were not adequately discharged, and for a time the defences of the important line of communications appeared to be somewhat imperfectly organized and supervised. There were signs of the tendency to relax precautions after a conspicuous success, which has been shown by British armies on other occasions. It was clear that the main centre of Boer activity was in the Bechuanaland district, and at the end of June Lord Roberts despatched a strong column south under Lieutenant General Hunter to co-operate with Major Generals Macdonald, Clements, and Paquet from the west. Bechuanaland was captured on July 7, and by the end of the month Commandant Prinsloo, caught in the Brandwater Basin between the forces of Lieutenant Generals Hunter and Rundle, surrendered with more than 4,000 men and a large number of horses and wagons. Meanwhile, Lord Roberts, who had driven back the Boers along the Lorenzo Marques line, in two actions near Eerste Fabriek, on June 11 and 12, began an advance eastward on July 23, and on August 7 Sir R. Buller moved northwards from Paarde Kop. On August 25 the Commander in Chief met Sir R. Buller and Generals French and Pole Carew at Belfast, and after the fighting of the 24th the resistance of the Boers in this district practically collapsed. Starting from Mafeking on September 1, Sir R. Buller moved slowly towards Spitzkop, driving the enemy before him through a difficult mountainous region, and General French pressed on to Barberton, which was occupied on the 13th without opposition. On the 24th the Guards reached Komati Poort. The rugged hill country east of Belfast offered great opportunities for the tactics in which the Boers appeared to excel; but the "natural fortress surrounded by a glacis of about 1,500 yards absolutely without cover" near Bergendal Farm was not defended with the tenacity shown on previous occasions, and the subsequent British advance led to a wholesale destruction of artillery material and to the surrender of some 3,000 men to the Portuguese. This, the third great disaster which has befallen the Boers, left them without any centre of resistance or any considerable gathering of fighting men.

"Before the outbreak of war we estimated their available strength at about 45,000, to which must be added some 10,000 colonial rebels and perhaps 5,000 mercenaries. It is doubtful whether the force actually in the field at any one time reached 45,000, and the total loss in killed, wounded and prisoners, cannot be much less than 30,000. . . . Exhaustion of supplies and of ammunition must soon begin to tell heavily upon the Boers; but it cannot be said that they have at present given evidence of personal demoralization. Comparatively small bodies, lightly

equipped, still hold the field and show no activity over a wide area. It is impossible to provide British garrisons for every town, station, and wherever the roving bands of the enemy appear there is a crude sense of local hostility, even in districts which have been apparently tranquil for months. Large mobile columns are employed in pursuit, but the Boers avoid general engagements and attack only when there appears to be a chance of surprising or overpowering small detachments. . . . The forces, marching as light as possible and expertly commanded, are the principal requirements of the situation. It is necessary to give the Boers command no rest and to make every effort to capture their leaders. The work is not easy, and it requires great energy and sound military judgment; but it will be successfully accomplished, and the scale of the operations will steadily expand into measures of police. Meanwhile, gradual withdrawal of troops from South Africa, taking place, and progress is doubtless being made with the new organization under Lieutenant General Baden Powell, which will be specially fitted for the work that now lies before us.

"The total casualties of the war up to the date are estimated at about 40,000 and the reduction of the military forces due to campaigns of more than a year is returned at 12,500, which total 11,750 are accounted for by death, including 6,482 victims to disease. It is impossible to rank the Boer war among the great campaigns of the British Army, but the peculiar difficulties must never be forgotten. The closest parallel is probably that of the American Civil war in which an armed people long resisted far superior forces and carried invasion into the territory of the stronger Power. The military potentiality of the Southern States was at first as little realized in Washington as was that of the Boers in London, and disasters therefore resulted. In both cases the issue was certain as soon as adequate force in strong hands was available. The Southern leaders, like the Boers, hoped and strove for foreign intervention in vain; but the former were far less prepared for war than the latter. On the other hand the Boers, though able in a limited sense, have produced no commanders with a genius for war comparable to that of Lee and of Jackson, nor have they shown the discipline and the cohesion which characterized the Southern armies when at their best. Desultory and irregular warfare may still be prolonged for a time, great activity and ample vigilance will still be required."—*London Times*, Nov. 7, 1900.

At the end of the year the "Times" summed up the later features of the situation as follows: "The spirit of the Boers remained unbroken, and small mobile commandos, scattered over the vast area of the countries which we had undertaken to occupy, perfectly familiar with the ground and in close touch with the civil population, have succeeded up to the present time in making the task of the British Generals one of extraordinary difficulty. The Boer resistance has centered chiefly in three men, Commandants Louis Botha in the north east, De la Rey to the west of Pretoria, and De Wet in the Orange Free State. The first, who since the death of General Joubert was in chief command in Natal, and afterwards in the Eastern Transvaal, has not been conspicuously

active since September, but the other two have suffered a great deal with their very limited resources, and have earned enduring fame as guerilla fighters. The Wet, especially, after having been routed and surrounded times without number, has succeeded in 'wing' occupation to several British Generals and their forces up to the present time, has kept the eastern part of the Orange Colony in continual ferment, and till now has defied the energetic efforts of General Buller's army. Delany, after retreating for several weeks, suddenly advanced through the Magaliesburg in the middle of the present month with a force variously estimated at 1,500 or 3,000 men, surrounded and captured a position held by four companies of the Northumberland, and compelled the retreat of General Clements and the evacuation of his camp. It is true that these things are but the episodes of the later stages of a war in which there will be no more great battles, but they are exhausting, costly, and sometimes humiliating to the British forces. (The 31, 1900.)

The Field of War: A. D. 1900 (August—December). Farm-burning by the British troops. Under proclamations issued by Lord Roberts in August and September, aimed at the suppression of irregular warfare, a punitive policy was adopted, which included the burning of farmhouses where guerilla bands were sheltered, or whose inmates acted with such bands, and which soon came to be denounced as one of shameful barbarity. Such different representations have been made, as to the manner in which the orders of Lord Roberts were carried out, and as to the measure of devastation and suffering produced, that it seems to be impossible to judge whether the British farm burning, in the Transvaal and Orange Free State has or has not gone beyond the usual brutalities that belong to the very nature of war. Mr Kruger, in speeches made after he went to Europe, represented it as monstrous beyond example. "The war waged against us," he said, on landing at Marseilles, "is a war of barbarians. I have witnessed wars of barbarians and never have I seen committed barbarities so monstrous as those committed daily against us. Our farms, which we had had so much difficulty to construct, are burned. The women whose husbands are at the war are hunted down and brutally separated from their children, who are deprived of bread and necessities." The Afrikaners of Cape Colony held similar language. Men of conscience and heart in England were troubled by such accusations. Mr Trevelyan, M. P., wrote to "The Times," on the 24th of November: "What so many of us feel, in the first place, is that we are not in a position to form a fair judgment from sheer lack of the most elementary reliable information of what has been done and is still doing. An officer returned from the war about two months ago me the other day that he supposed only about 20 farms had been burnt. I read in the 'Westminster Gazette' from an equally honourable gentleman that it would not be an exaggeration to say that one third of the farms in the Orange River Colony were in ashes. Clearly it is impossible for the nation to make out the truth from such contradictory statements are necessarily current. . . . One thing we do know for certain that on September 2 Lord Roberts regarding the war as having degenerated

into guerilla fighting, proclaimed that all farms would be burnt within a radius of ten miles of any point upon the railway held by the Boers. It is now November 24. We know that many people innocent of any dealing with the War have lost all they possess owing to his unbridled energy. Has it diminished sensibly the Boer forces in the field? If not, what is its utility? If the resistance of the Boers is being lessened by these destructions, let us at least have the poor consolation of knowing it. Again, we want to know what really happens to the women and children whom our soldiers conduct, I believe, generally to the nearest town after their homes have been burned. People whose property has been totally destroyed in a country where war has stopped all not-strive obviously cannot keep themselves."

When Parliament met in December the subject was brought up there by Mr Trevelyan and others, and debated at length without much clearer light on it being gained. The government could give no definite information as to what was being done, but strongly upheld the course which the military leaders had taken. Mr Balfour said: "The ordinary laws of war as practised by civilized countries depend essentially upon drawing a sharp distinction between combatant and non-combatant. The combatant has his particular privileges, the non-combatant has his particular privileges. What has been universally found intolerable is that a man should oscillate, according to his convenience, from one category to the other—he be a peaceful agriculturist when it suits him and an effective combatant when circumstances seem to be favourable. That practice is so intolerable that I believe all nations have laid down the severest rules for repressing it. I have in my hands the instructions to the army of the United States in the field dated 1808. I should like to read to the House two extracts from this document. Rule 72 says: 'If a people of a country, or a portion of same already occupied by the arms, rises against it, they are violators of the laws of war, and are not entitled to their protection.' The 82nd Rule is to the effect that men, or a body of men, who take part in raids of any kind without permission, and without being part or portion of an organized hostile army, are not public enemies, and therefore if captured are not entitled to be treated as prisoners of war, but shall be treated as highway robbers or pirates."

Mr Chamberlain said: "Lord Roberts's proclamation was to the effect that in the first instance general officers were authorized to burn down farmhouses as a punishment in cases in which they were used as fortified places or places for the concealment of arms or in which the white flag had been improperly used, or where they had been the scenes of gross treachery and of acts contrary to the laws of war. As a matter of right and morality the Government are prepared to sustain Lord Roberts absolutely. Lord Roberts was placed in the most difficult position in which a general could possibly be placed. He had his base 1500 miles away at least from his front, through a most difficult country, and he was served only by a single line of railway, and any catastrophe to the railway might have meant a catastrophe to the whole army. It is an very well to talk of humanity, but you must take first account of our

own people. Now Sir, it was of the first importance, it was the clear duty of Lord Roberts, to take any steps in his power to prevent the cutting of the line and the danger which would thereby accrue to his force, and he accordingly issued a proclamation that in the case of the destruction of the line persons in the vicinity would be held responsible, and that farmhouses in the vicinity might be destroyed. We understood his proclamation to mean that he would require evidence of some complicity on the part of the persons whose farmhouses were destroyed. We inquired the other day, when the matter assumed greater importance, whether the construction we placed upon the proclamation was true, and we have a reply from Lord Kitchener, who has now taken the place of Lord Roberts, that we are perfectly right in that assumption. According to the proclamation of Lord Roberts, whose humanity is proverbial, and who therefore could not under any circumstances be accused of unnecessary cruelty, cattle are always to be paid for by the troops, or a receipt given, which is as good as payment, except in those cases in which the owner of the cattle has been guilty of acts of war, of outrages which are punishable by all civilized nations who are at war. Therefore the taking of cattle does not mean necessarily that the owner of the cattle is placed in the impossibility of continuing his occupation. If he has not got the cattle he has got the money for them except in the cases in which destruction has taken place as a punitive measure. In all other cases the instructions are precise, and I believe from all the information we have obtained from the reports of the generals in the field they have been strictly carried out. Never in the history of war has war been carried out with so much humanity on the part of the officers and of the soldiers concerned as in the present war. The hon. member also spoke of the deportation of women. That sounds like something serious, but I believe it will be found that it is only for their own protection. If we are unable in this vast country to occupy and garrison every bit of it, when our troops are removed, if women and children are left alone they remain there in some danger—in danger from those marauding bands of which I have spoken and also from the vast native population. And, Sir, this native population is answerable, I believe, for every case of proved outrage either upon women or children. I believe, and the last reports we have received confirm that belief, that in no case has a British soldier been justly accused of such an outrage.

The following proclamation, issued by Lord Roberts, November 18, seems to indicate that there had been practices in farm burning, before that time, which he could not approve: "As there appears to be some misunderstanding with reference to burning of farms and breaking of dams, Commander in Chief wishes following to be lines on which General Officers Commanding are to act:—No farm is to be burnt except for act of treachery, or when troops have been fired on from premises, or as punishment for breaking of telegraph or railway line, or when they have been used as bases of operations for raids, and then only with direct consent of General Officer Commanding, which is to be given in writing, the mere fact of a burgher being absent on commando is on no account to be used as reason for

burning the house. All cattle, wagons and household furniture are to be removed from the farm, that is found to be impossible, they are to be destroyed, whether owner be present or not." (*Great Britain, Papers by Command*, 1900, p. 23)

Rhodesia: A. D. 1900 (September). **Protectorate over Barotsiland.**—The *Times* of September 19, 1900, stated that the Government Gazette Extraordinary had issued containing an Order in Council proclaiming a protectorate over Barotsiland, North Western Rhodesia. "The limits of the country included in the protectorate are the parts of Africa bounded by the River Zambesi, the Tormae, South West African Protectorate, the Portuguese possessions, the Congo Free State, and the Kafue or Loangwi River. The Order provides that the British South Africa Company may nominate officials to govern the territory, and that these are to be confirmed by the High Commissioner. The High Commissioner may amongst other things, from time to time by proclamation provide for the administration and the raising of revenue by the imposition of taxes (which may include a tax in respect of the occupation of native huts), and Customs duties, otherwise, and generally for the peace, order, and good government of all persons within the limits of the order, including the prohibition and punishment of acts tending to disturb the peace. The expenses of the administration of this country, if not entirely borne by the revenues of the country, will be borne by the British South Africa Company, and if the revenues more than meet the expenses, the excess will be paid to the Chartered Company."

The Transvaal: A. D. 1900 (September). **Leave of absence to President Kruger.** **His departure for Europe.**—Proclamation of Lord Roberts.—The following proclamation by the Executive Council of the Boer government was issued from Nelspruit on the 10th of September, 1900: "Whereas the advanced age of His Honour the State President makes it impossible for His Honour further to accompany the Commandos; and whereas the Executive Council is convinced that the highly-valued services of His Honour can still be usefully applied in the interest of Land and People, the Executive Council hereby determines to grant His Honour leave of absence to Europe for the period of six months in order still to advance our cause there, and Mr. S. W. Burger, Vice-President, takes his place according to law. [Signed] S. W. Burger, Vice-President. F. W. Retz, State Secretary."

Lord Roberts seems to have regarded the acceptance of this "leave of absence" by President Kruger as equivalent to a resignation of his office; for he published, on the 14th of September, a proclamation in the following words: "The late President, Mr. Kruger and Mr. Retz with the archives of the South African Republic have crossed the Portuguese frontier, and arrived at Lourenço Marques with a view to sailing for Europe at an early date. Mr. Kruger has formally resigned the position he held as President of the South African Republic, thus severing his official connection with the Transvaal. Mr. Kruger's action shows how hopeless in his opinion is the war which has now been carried on for nearly a year, and his desertion of the Boer cause should make it clear to his fellow burghers that

helpless for them to continue the struggle any longer.

It is probably unknown to the inhabitants of the Transvaal and Orange River Colony that 17,000 of their fellow subjects are engaged in a war, not one of whom will ever see his home again. The burghers, therefore, are cognizant of the fact that no action on their behalf can come from the Great Powers, and, further, that England is determined to complete the war which has already cost her so many millions and to carry to its conclusion the war waged against her by the late Governments of the South African Republic and Orange Free State, a war to which there can be but one ending. If any further doubts remain in the minds of the burghers as to Her Britannic Majesty's intentions, they should be dispelled by the permanent manner in which the country is gradually being occupied by Her Majesty's Forces, and by the issue of the Proclamations signed by me on the 24th May and 1st September 1900, annexing the Orange Free State and the South African Republic respectively. In the name of Her Majesty,

I take this opportunity of pointing out that, except in the small area occupied by the Boer army, under the personal command of Commandant-General Botha, the war is degenerating, and has degenerated, into operations carried on in an irregular and irresponsible manner by small, and in very many cases, insignificant bodies of men. I should be failing in my duty to Her Majesty's Government and to Her Majesty's Army in South Africa if I neglected to use every means in my power to bring such irregular warfare to an early conclusion. The means which I am compelled to adopt are those which the customs of war prescribe as being applicable to such cases. They are rigorous to the country, and entail endless suffering on the burghers and their families, and the longer this guerrilla warfare continues the more vigorously must they be enforced."—*Great Britain Papers by Command*: 1900, *Col.* 420, p. 78, and *Col.* 420, p. 17.

The Transvaal: A. D. 1900 (October).—Proclamation of annexation to the British Dominions.—In terms similar to those used in proclaiming the annexation of the Orange Free State (see above: May) the annexation of the Transvaal to the Dominions of Her British Majesty was proclaimed with great ceremony at Pretoria on the 25th of October.

The Field of War: A. D. 1900 (November). Return of Lord Roberts to England, leaving Lord Kitchener in command.—Having been appointed Commander-in-Chief of the British Army, in the place of Lord Wolseley, Field Marshal Lord Roberts, on the 29th of November, delivered the command in South Africa to Lord Kitchener and returned to England. At the same time, Lord Kitchener was raised to the rank of Lieutenant-General.

Cape Colony and the Transvaal: A. D. 1900 (December).—Afrikaner Congress.—Lord Kitchener to the burghers of Pretoria.—"From 6,000 to 8,000 persons were reported to be in attendance at an 'Afrikaner Congress,' held at Worcester, in Cape Colony, December 8, which adopted the following resolutions:—

1. We men and women of South Africa assembled and represented here, having heard the

deputation to England, and the consideration of the state of the people of the colony, and the grave situation in which our highest interests of the termination of the termination of the state of misery and the extermination of the treatment to which we are subjected, which will but increase and hatred, and further relations and barbarism in South Africa, hereby solemnly pledge ourselves to maintain. 2. The Congress desires full recognition of the right of the people of this colony under its Constitution to settle and manage their own affairs and to express grave disapproval of the policy pursued and the attitude adopted in this matter by the Governor and High Commissioner, his Excellency Sir Alfred Milner. 3. The Congress solemnly pledges itself to labour in a constitutional way unceasingly for the above resolutions and resolves to send a deputation to his Excellency Sir Alfred Milner asking him to bring the resolutions officially to the notice of her Majesty's Government."

On the 21st of December Lord Kitchener addressed a meeting at Pretoria of burghers who had surrendered to the British and who desired to bring about peace. In his remarks he was reported to have said: "The Boers had fought a good fight, but they were overpowered. There would be no dishonour in the leaders recognizing this fact. The proclamations that had been issued were of little use as men were adopted to prevent them from reaching the burghers. He trusted that the committee would endeavour to acquaint the Boers in the field with the true position. He desired to give them every chance to surrender voluntarily, and to finish the war by the most humane means possible. If the conciliatory methods now being adopted failed he had other means which he would be obliged to exercise. He would give the committee notice. If the time arrived to consider conciliation as a failure. The principal difficulties were that burghers desirous of surrendering were afraid they would not be allowed to remain in their own districts or that they would be punished for violating their oath of neutrality. Gen. Kitchener declared that he had issued instructions that burghers who surrendered would, with their families and stock, be protected in their own districts. Those who had broken the oath of neutrality under compulsion would be accorded the same treatment. Deserted women and children would be kept in hangers where their friends could freely join them. It was essential to clear the country. While food remained the commandos were enabled to continue in the field. Gen. Kitchener added that it must be understood that the British would not be responsible for stock unless it was brought in and kept within protected limits. In conclusion Gen. Kitchener said that he had come to speak to the burghers personally in order that they might be able to tell their friends what they had heard from his own lips."

The Field of War: A. D. 1900 (December).—Numbers of British troops employed in the war from the beginning, and their losses. See in this vol. ENGLAND, A. D. 1900 (Dec.).

British Colonies: A. D. 1901 (January).—New heads of the Colonial Governments.—The following appointments were announced by the British Colonial Office on the 4th of January, 1901: Sir Alfred Milner to be Governor of the Transvaal and British High Commissioner. The Hon. Sir Walter Francis Hely Hutchinson (Governor of Natal and Zululand since 1893) to be Governor of Cape Colony. Lieutenant Colonel Sir Henry C. McCullum (Governor of Newfoundland since 1898, and aide de camp to the Queen) to be Governor of Natal. Major Hamilton John Good Adams (Resident Commissioner of the Bechuanaland Protectorate) to be Lieutenant Governor of the Orange River Colony.

Cape Colony: A. D. 1901 (January).—Boer invasion.—Declaration of martial law.—On New Year's Day, 1901, the Cape Town correspondent of the "London Times" was compelled to write: "The immediate aspect of affairs in Cape Colony at the opening of the new year is scarcely less gloomy than at the beginning of 1900. The number of Boers invading the country to-day may be less than it was a year ago, but they have penetrated further south, and their presence near such centres of hostile Dutch feeling as Graaf Reinet constitutes an element of danger which was not present last January. The proclamation issued this morning by the High Commissioner calling for volunteers to defend the lines of communication proves that the military authorities are at last alive to the critical nature of the situation, but the measure comes very late in the day."

On the 17th of January a cable message from Cape Town announced: "An extraordinary gazette issued this afternoon contains a proclamation placing the whole of the Cape Colony under martial law, with the exception of the Cape Town, Wynberg, Simonstown, Port Elizabeth and East London districts and the territories of the Transkei, Tembuland, Grikwaland and East Pondoaland. The gazette also states that the peace preservation act will be enforced in the Cape Colony, Wynberg and Simonstown districts. Under this act all the civil population will be called upon to deliver up their arms."

Orange Free State: A. D. 1901 (January).—Peace movement.—Condition of country described.—Defiant proclamation of Steyn and De Wet.—Early in January, a "Central Peace Committee," formed at Kroonstad, addressed an open letter to their fellow citizens, appealing for submission and peace, saying: "The country is literally one vast wilderness. The farmers are obliged to go to the towns for protection, and huge refugee camps have been formed by the British for them and their families. These people have lost everything, and ruin and starvation stare them in the face. All this misery is caused by a small and obstinate minority, who will not bow to the inevitable and who make the majority suffer. Any encouragement to the men still on command to continue the hopeless struggle can only injure us and cause us further misery. We have done our best and fought to get Africa under one flag, and we have lost. Let there be no mistake about this. England has

spent millions and sacrificed thousands, and no reasonable being can believe that she will now give up the fruits of her victory. It is, therefore, a duty for us, for the sake of our country, to accept the terms offered by England. . . . We appeal to you and ask you to meet another congress, and nominate men to sit out of your midst to visit Mr. Steyn and General De Wet, and try to persuade them to accept the terms offered by England. These two men are the only obstacles to peace. We ask you to believe us when we say that Mr. Kruger and the late Transvaal Government have been twice already to accept British terms, but Mr. Steyn refused to have anything to do with a surrender. He continued the war and encouraged the burghers in the hope that we should get European assistance. To-day he is cut off from all communication with the outside world. You know and we know how unfounded this hope is, and it is your duty to assist us to make him understand this. We appeal to you to help us to put an end to this unhappy state of affairs, which plunging everybody into poverty and despair."

As if in response to this cry for peace, Steyn and De Wet issued the following proclamation, a few days later: "Be it known to all that the war, which was forced on the Republic by the British Government still rages in the Orange Free State and in the South African Republic, and that the customs of civilized warfare and also the conventions of Geneva and The Hague have not been observed by the enemy, who has not scrupled, contrary to the Geneva Convention, to capture doctors and ambulances and to deprive them of their order to prevent our wounded from getting medical assistance. He has seized and destroyed material appertaining thereto, and has, in addition, contrary to the recognized principles of warfare, and contrary to his solemn agreements at The Hague, to arrest neutrals and shipwrecked and to send out marauding bands to plunder, burn, and damage the burghers' private property. He has armed Kaffirs and natives and made use of them against us in war. He has been continually busy capturing women and children, and sickly men. Many women's deaths have been occasioned because the so-called Christian enemy had no consideration for women captured, or for those whose state of health should have protected them against rough treatment. Honourable women and tender children have not only been treated roughly, but also in an insulting manner by the soldiers, by order of their officers. Moreover old mothers and wives have been raped, even wives and children the property of prisoners of war, and even the burghers, has not been respected. In many instances the mother and father have been taken from the house, which was thus left unprotected, and all have been left to their fate, an easy prey to the savage. The world has been informed by the enemy that he was obliged to carry out this destruction because the Boers blew up the line and cut the wires, or raised the white flag. Nearly all the houses in the Republic have been destroyed, whether in the neighbourhood of the railway line or not, and that is simply a continuance of the cruel and cowardly calumny against which the Afrikaners have striven since God brought him into contact with Englishmen. Robbing his opponent of his goods

has not satisfied him, he will not be satisfied till he has secured him of his good name also.

Those who wish to inform the world that the Republics are conquered and the war ended, and that the plundering bands can be found when out on the strife in a more peaceful manner. It is an untruth. The Republics are not yet conquered. The war is not finished. The burgher forces of the two Republics are still led by responsible leaders, as from the commencement of the war under the supervision of the Governments of both Republics. The fact that Lord Roberts and Lord Kitchener chose to form the burgher forces marauding bands does not make them such. Similarly, saying that the war is over does not put an end to it while fighting still continues. When was this war over? After the battle of Spion Kop or after the occupation of Bloemfontein or Potchefstroom? Or perhaps after the battles of Paardeburg or Commando Nek, in both of which regulars were captured and the enemy totally vanquished. The burghers would be less than men if they allowed the enemy to go unpunished after ill treating their wives and destroying their homes from sheer lust of destruction. Therefore a portion of our burghers have again been sent into the Colony, not only to wage war, but to be in a position to make reprisals, as they have already done in the case of the ambulances.

Therefore we again warn the officers of her Majesty's troops that unless they cease the destruction of property in the Republics, we shall wreak vengeance by destroying the property of her Majesty's subjects who are unkindly disposed to us. But at the same time, to avoid being misunderstood, we hereby openly declare that the women and children will always remain unmolested despite anything done to ours by her Majesty's troops. We ask for nothing from our brothers in the Colony, but we call upon them, as well as upon the civilized world, to assist on behalf of civilization and humanity in putting an end to the barbarous manner of the enemy's warfare. Our prayer will always be that the God of our fathers will not desert us in this unrighteous strife.

On the 10th January 11.

By W. F. F.

The Field of War: A D 1901 February.
—Report of British military forces in South Africa from the beginning of the war, with the number of killed and wounded and the deaths from wounds and disease. A Parliamentary paper issued on the 20th of February, 1901, contained the following table showing the strength of the garrison in South Africa on the 1st of August, 1899, before the beginning of the war, with the subsequent reinforcements and casualties, and the total strength of forces on the 1st of February, 1901.

	OFFICERS	NON-COMMISSIONED OFFICERS AND MEN					TOTAL
		Cavalry	Artillery	Infantry and Mounted Infantry	Others	Total	
I. Garrison on Aug. 1, 1899	318	1,127	1,038	1,118	1,062	4,355	4,673
II. Reinforcements, Aug. 1, 1899, to Oct. 11, 1900, outbreak of war							
1. From Home	280		711	1,220		2,211	2,491
2. From India, some of these did not reach South Africa until after the outbreak of hostilities	250	1,544	620	177		2,541	2,791
	530	1,544	1,356	1,397		4,897	5,282
III. Further reinforcements from Oct. 11, 1900, to end of July, 1901							
Regulars							
1. From Home and Colonies	5,715	11,003	11,115	10,075	11,417	49,325	55,035
2. From India	1,132	714	376	1,000		2,220	2,332
	5,880	11,716	11,491	11,075	11,417	51,549	57,367
Colonials							
1. From Colonies other than South African	520	287	662	1,788	8	3,265	3,783
2. Raised in South Africa	1,987					1,987	1,987
	2,507	287	662	1,788	8	5,252	5,770
Imported Yeomanry	526					526	526
Volunteers from United Kingdom	312		28	1,000	434	1,874	2,186
Militia	861		61	1,000	2	1,924	2,785
Total all arms sent to, and raised in, South Africa up to Aug. 1, 1901, the existing garrison on Aug. 1, 1899	10,981					56,801	67,782
IV. Further reinforcements from Aug. 1, 1901, to Feb. 1, 1901							
Regulars	820	3,213	652	1,111		5,806	6,626
Militia	7					7	7
	827	3,213	652	1,111		5,813	6,633

	OFFICERS	NON-COMMISSIONED OFFICERS AND MEN				
		Cavalry	Artillery	Infantry and Mounted Infantry	Others	Total
V. Numbers.						
(1) Killed to Jan. 31, 1901	134					
(2) Wounded to Jan. 31, 1901	1,212					
(3) Died of disease or wounds or accidentally killed in South Africa to Jan. 31, 1901	301					
(4) Disbanded and discharged in South Africa	299					
(5) In hospital in South Africa on Dec. 25, 1900 (latest returns)	415					
VI. Numbers left South Africa.						
(1) For England—sick, invalids	1,214					
(2) For England—sick, wounded, and died en passage	1,701					
(3) Returned to be retrained from South Africa	20					
(4) Returned to Colonies—direct from South Africa						
(a) Regulars, including two battalions to Ceylon	96					
(b) Colonials	177					
VII. Present strength of Forces in South Africa, Feb. 1, 1901						
(1) Regulars	4,305	12,600	1,000	29,700	12,885	59,490
(2) Colonials	1,831					1,831
(3) Imperial Yeomanry	435					435
(4) Volunteers	200					200
(5) Militia	725					725
	7,096					7,096
						10,885

* Exclusive of recently raised Colonials whose numbers have not yet been reported.

On the 9th of February the following announcement was issued officially from the British War Office:—"In view of recent Boer activity in various directions His Majesty's Government have decided in addition to the large forces recently equipped locally in South Africa to reinforce Lord Kitchener by 30,000 mounted troops beyond those already landed in Cape Colony. The recruiting for Imperial Yeomanry has proceeded so rapidly that it is anticipated not less than 10,000 will be shortly available. The South African Mounted Constabulary, including those enlisted in the colonies, may be relied upon to the extent of 8,000. The new colonial contingents to replace those withdrawn will probably reach 5,000. The remainder of the force will be made up by cavalry and mounted infantry from the home establishment. The enlistment of Volunteer companies to replace those who have served a year in South Africa is also being proceeded with. Arrangements have been made for the prompt equipment and transportation of the force."

In reply to a question in Parliament the 18th of February, 1901, Mr. Brodick, the Secretary of State for War, stated that the total number of cases of typhoid or enteric fever in the British army, from the beginning of the war to the end of December, 1900, had been 19,101, deaths 4,233, invalided and sent home 10,975.

The Field of War: A. D. 1901 (February).
—The declared policy of the British Government.—Speaking in the House of Commons on the 18th of February, 1901, the Colonial Secretary, Mr. Chamberlain, declared the government policy of dealing with the Boers with strong emphasis in the following words:—"From the moment when the invasion took place, and the

first shot was fired by the Boers, from that moment we declared our policy, that our policy of the independence which the Boers claimed, we should ever again be compelled to meet. That was the policy stated by the Prime Minister in his answer to the representations which were made to him by the Presidents of the Orange Free State. That was the policy, is the policy, will be the policy of His Majesty's Government to the end. Let there be no mistake about it. It is no use arguing with us on the subject of independence. That, as far as we are concerned, is a closed question. Raise it if you wish, raise it, not in speeches, but by amendment. We are quite ready. We challenged you at the last election. You have never come to the plain of the challenge. We challenge you in the House of Commons. If you believe in independence, then we have unbounded ought to be repeating if you think with the head and heart of a man who has just spoken, that we ought to restore the independence of these two Republics in any form, it is for you to say so in a motion or amendment. It is for you to put the issue before the House of Commons and the country. We are perfectly prepared to meet you. Assuming that we are all agreed that our policy may not be uniform, then the policy of the Government is to establish equality and protection for the native population and to secure fuller liberties involved in our definition of a government as soon as that can safely be decided. The Boers knew perfectly well that we have been told again and again, directly and indirectly, and it has been repeatedly stated in the House that at the earliest possible moment will be granted self-government."

The Liberal leader interpreted the

for all bona fide acts of war committed during the recent hostilities, as well as to move the Government of Cape Colony and Natal to take similar action but qualified by the disfranchisement of any British subjects implicated in the recent war." Sir Alfred Milner proposed to amend the latter clause as follows: "British subjects of Cape Colony or Natal, though they will not be compelled to return to those Colonies, will, if they do so, be liable to be dealt with under the laws of those Colonies, specifically passed to meet the circumstances arising out of the present war and which greatly mitigate the ordinary penalties of rebellion." While willing, he said, "to concede much in order to strengthen Botha in inducing his people to submit, the amnesty of rebels, in my opinion, a point which His Majesty's Government can afford to concede. I think it would have a deplorable effect in Cape Colony and Natal to obtain peace by such a concession."

Mr. Chamberlain agreed with the High Commissioner, writing in reply: "His Majesty's Government feel that they cannot promise to ask for complete amnesty to Cape and Natal rebels who are in totally different position to burghers who went out unjustly to those who have remained loyal under great provocation, and they are prepared substantially to adopt your words, but you must consider whether your last line is strictly applicable to Natal."

Mr. Chamberlain made numerous other criticisms of Lord Kitchener's suggested letter, and amended it in many particulars, the most important of which related to the form of government under which the future republics would be placed. Lord Kitchener would have said: "Military law will cease, and be at once replaced by a civil administration, which will at first consist of a Governor and a nominated Executive with or without an advisory elected Assembly, but it is the desire of His Majesty's Government as soon as circumstances permit, to establish representative Government in the Transvaal and Orange River Colony."

His political superior instructed him to change the statement as follows: "For 'military law will cease' say 'military administration will cease.' It is possible that there may be disturbed districts for some time after terms have been accepted, and Governor of Colonies cannot abandon right of proclaiming martial law where necessary. In the same sentence omit the words 'at the same time, and 'at once' and substitute at the beginning the words 'at the earliest practicable date.' For 'consist of a Governor' down to 'Assembly' read 'consist of a Governor and an Executive Council composed of the principal officials with a Legislative Council consisting of a certain number of official members to whom a nominated unofficial element will from the first be added. In place of the words 'to establish representative government' substitute 'to introduce a representative element, and ultimately to concede to the new Colonies the privilege of self government.' It is desirable at this stage to be quite precise in order to avoid any charge of breach of faith afterwards."

Out of the instructions he received, Lord Kitchener finally framed the following letter to Commandant Botha sent to him on the 7th of March: "With reference to our conversation at Middelburg on 28th February, I have the honour to inform you that in the event of a general and complete cessation of hostilities and the surrender of all rifles, ammunition, cannon,

and other munitions of war in the hands of burghers or in Government depots, where, His Majesty's Government propose to adopt the following measures:

"His Majesty's Government will grant an amnesty in the Transvaal and Orange River Colonies for all bona fide acts of war committed during the recent hostilities. Burghers belonging to Natal and Cape Colony will not be compelled to return to those Colonies, will, if they do so, be liable to be dealt with under the law of those Colonies, specifically passed to meet the circumstances arising out of the present war. As you are doubtless aware, the law in the Cape Colony has provided for the ordinary penalties for high treason in the present cases."

"All prisoners of war now in South Africa, or elsewhere, will, on the completion of the surrender, be brought back to their homes as quickly as arrangements can be made for their transport."

"At the earliest practicable date, military administration will cease, and will be replaced by civil administration in the form of a Governor and Government. There will therefore be, for the first instance, in each of the new Colonies, a Governor and an Executive Council, composed of a certain number of official members, and a nominated unofficial element will be added."

But it is the desire of His Majesty's Government as soon as circumstances permit, to introduce a representative element in the new Colonies, to concede to the new Colonies the privilege of self-government. Moreover, on the cessation of hostilities a High Court will be established in each of the new Colonies to administer the law of the land, and this Court will be composed of the land and this Court will be composed of the Executive."

"Church property, public trusts, and other funds will be respected."

"Both the English and Dutch languages will be used and taught in public schools, and parents of the children desire it and the Courts of Law."

"As regards the debts of the late Republics, His Majesty's Government cannot undertake any liability. It is, however, proposed, as an act of grace, to set aside a sum not exceeding £1,000,000 to repay inhabitants of the Transvaal and Orange River Colonies the debts requisitioned from them by the late Republics, Governments, or, subsequent to annexation, to Commandants in the field being in a position to enforce such requisitions. But such sums can only have to be established to the satisfaction of a Judge or Judicial Commission appointed by the Government to investigate and assess the claims, if exceeding in the aggregate £1,000,000, and will be liable to reduction pro rata."

"I also beg to inform your Honour that the new Government will take into immediate consideration the possibility of assisting by loan the occupants of farms who will take the oath of allegiance to repair any injury sustained by destruction of buildings or loss of stock during the war, and that no special war tax will be imposed on farmers to defray the expense of the war."

"When burghers require the protection of fire arms such will be allowed to them, and on condition of registration, provided they take the oath of allegiance. Licences also will be issued."

carrying rifles, guns, &c., but military fire-arms would only be allowed for means of protection.

As regards the extension of the franchise to voters in the Transvaal and Orange River Colonies, it was the intention of His Majesty's Government to give such franchise before representative government is granted to these Colonies, though given it will be so limited as to secure the pre-eminence of the white races. The position of coloured persons will, however, be similar to that which they hold in Cape Colony.

My commission I must inform your Honour that the terms now offered are not accepted, and the delay for consideration they have been allowed is cancelled.

On the 28th of March the following reply came from the Boer Commandant: "I have the pleasure to acknowledge receipt of your Excellency's letter, stating what steps your Excellency's Government is prepared to take in the event of a general and total cessation of hostilities. I have advised my Government of your Excellency's said letter, but, after the mutual exchange of views at our interview at Middelburg on 28th February last, it will certainly not surprise your Excellency to know that I do not feel disposed to recommend that the terms of your said letter shall have the earnest consideration of my Government. I may add also that my Government and my chief officers here are in agreement to my views." This ended the negotiations.

A discussion of the negotiations in Parliament on the 28th of March when Mr. Bryce, I think, said they were agreed that the Government took an onward step when they allowed the negotiations to be entered into and it was important to observe that, not only Lord Kitchener, but Sir Alfred Milner was persuaded by General Botha to meet his terms. It was possible there were causes at work with which the House were not acquainted which caused the negotiations to be broken off. General Botha wrote to Lord Kitchener:—"You will not be surprised to hear that my answer is in the negative." One of two things must have happened either Lord Kitchener heard from General Botha something that the House had not heard of, or else General Botha was so much struck by the difference between the terms as Lord Kitchener had discussed and the ones contained in the letter that he conceived a doubt of his altogether and believed that his Government would not accept what Lord Kitchener had offered. He thought the Government were right in asking that the oath of allegiance should be taken, that they were entitled to insist upon the provision that all hostilities must cease, and that they could not pledge themselves as to the precise time when they would bring back the prisoners. But there were three points on which there were substantial differences between the terms Lord Kitchener appeared to have offered and the ones in the final letter. The first is the question of amnesty for the Cape rebels. Lord Kitchener and General Botha appeared to have come to an agreement on that subject. General Kitchener had objected to the disfranchisement of the Cape rebels, and Lord Kitchener did not appear to have conveyed any suggestion what-

ever of anything except disfranchisement. He could conceive nothing more serious than that the pacific desires of the Boers had been that they found that, instead of the Cape rebels having nothing but disfranchisement to fear, they were to be held subject to the Cape laws as to treason. He was not arguing whether that was right or wrong. The question was what the Boers would think, and he put it to the House that it was the most absurd thing that they should be struck by the contrast between the terms which Lord Kitchener appeared to offer and the terms which were offered when the final letter came, and that that was just the point upon which brave men looking for their comrades would be inclined to stand out. They would be told that they would displease the Boers at the Cape if they did not exact all the penalties for treason. He hoped they would never in that House consider any part of their business to satisfy the vindictive feeling of the colonists at the Cape.

As to the difference between the terms of future government for the inhabitants of the future republics proposed by Lord Kitchener and those laid down by the Colonial Secretary, Mr. Bryce said: "He should like to have known what the proposals were that General Botha made with regard to a modified independence. For he thought it was quite possible that it might turn out in the long run that some kind of what was called modified independence, protection, would be a great desideratum for this country to work them in a system of Crown colony government. He thought the contrast between the elective assembly which Lord Kitchener offered and the purely arbitrary and despotic system which the final letter conveyed must at once have struck the Boers as indicating the difference between the views which the military man on the spot entertained and the proposal which they might expect from the Government. Of course there were objections to the immediate grant of self-government. So also there were objections to any course, and that course should be chosen which was open to the fewest objections. But the proposal of Crown colony government was of all courses the worst that could be suggested. It had been suggested that members of the Liberal party had asked for full grown representative and responsible government, but they never had suggested that. What they had objected to was Crown colony government. They admitted that when the war ended there must be an intermediate period of administration, military or civil, but there was all the difference in the world between an admittedly provisional administration understood to be provisional and the creation of the whole apparatus of Crown colony government. The Boer population had an aversion to Crown colony administration associated in their minds with the days of Sir Owen Lanyon, and an arbitrary form of government it was known to be. Of course it was arbitrary, but members who questioned that could not know what Crown colony administration was. The existence of a nominated council did not prevent it being arbitrary inasmuch as the members were obliged to vote as they were directed by the Governor. He could not help thinking that Lord Kitchener might, if he were asked to do so, throw some light on a remarkable expression in the letter from General Botha in which he said, after the

mutual interchange of views at their meeting. Lord Kitchener would not be surprised to learn that he was not disposed to recommend the terms proposed."

The noblest Mr. Labouchere was sharper in his criticism. "It held that it was nonsense to call the terms offered to the Boers liberal and lenient; they were neither. We had burnt their farms and desolated their country, and then we offered them a small gift of money to put them back on their farms while we took away their independence and their flag. He honoured the men who resisted, no matter at what cost, when the question was the independence of their native land. How right General Botha was in distrusting the alterations made by the Secretary for the Colonies in the matter of the gift was shown by the right hon. gentleman himself, when he said that, whereas the gift was to be limited to a certain sum, the loyalists were to be paid first. In that case what would remain to the burghers of the two colonies? The position of the Boers in the Empire under the terms of the Colonial Secretary would be little better than that of Kaffirs. As far as ultimate self government was concerned, they were to put their faith in the Colonial Secretary. If he might offer them a word of advice it would be—Put no faith in the Colonial Secretary, get it in black and white. We had lost a great opportunity of ending the war and settling South Africa. Peace won by sword would create a dependency in which the Dutch funds would go on and the minority would be maintained over the majority by a British garrison. The Dutch majority was certain to increase every decade. The Transvaal farmers lived in a poor, rude manner which English people would not accept."

He did not particularly admire the Boers. To his mind they had too much of the conservative element in them; but, judging between the Afrikaners and the English who went to South Africa, whilst fully recognizing that among the latter there were many respectable men, he thought, taking them collectively, the Boers were the better men. If we wanted to maintain our rule in South Africa the Boers were the safest men with whom to be on good terms. What were the Boers ready to do? As he read the correspondence, they were ready to enter the area of the British Empire, but only upon terms. Surely our problem was to find terms honourable to us and to them, which would lead to South Africa becoming one of those great commonwealths connected with the Empire such as existed in Australia and Canada. He suggested that, in the first place, we should offer a full and absolute amnesty. He urged that the Orange State and the Transvaal should as soon as possible be made self governing colonies. The Orange State was regarded by every Englishman who had written about it as a model State. As to the Transvaal, he admitted there was a difficulty, but he would suggest that the main area of the country should be separated from the Rand. The Rand might be administered by a governor, a military governor if they liked, while in the rest of the country the Dutch would have a majority. If this course were adopted, instead of our giving some sort of pecuniary aid to the Transvaalers, they might be paid a reasonable rent for the Rand district, of which they would be deprived. . . . They on that side of the House

would be perfectly ready to agree to the establishment of a provisional government, military or civil—he should himself prefer the latter—to Sir Alfred Milner—to carry on the war while they were arranging for the establishment of self governing. They were anxious to see the war told that Sir Alfred Milner was a sensible, practical, and a most honourable man, and very much to be trusted in many walks of life, but the truth was that he began life as an Oxford don and then became an official in the Treasury, facts which were against his success in practical politics. He believed that a man like Lord Dufferin was doing more for the cause of peace in South Africa than all our soldiers.

The Field of War: A. D. 1901. February, April.—The High Commissioner, Sir Alfred Milner, on the situation and prospects. **Leave of absence obtained by Sir Alfred.** A British Blue Book, made public on 12th of the 18th of April, contains an interesting dispatch from Sir Alfred Milner, frankly reviewing the general situation in South Africa as it appeared to him on the 6th of February, when he wrote, from Cape Town, and giving his forecast of future prospects. The following are some more important passages of the same report.

"A long time has elapsed since I have attempted to send to you any general review of South African affairs. The reason is twofold. In the first place, I am occupied very heavily, passes from morning till night by business of which is urgent, and the amount of spare time of which you are doubtless able to judge, the communications on a great variety of subjects, which are constantly passing before me. In the next place, I have always hoped that some definite point would be reached at which it might be possible to sum up that chapter of history which contained the war, and to set on foot the work of administrative reconstruction. I must succeed it. But I am reluctantly forced to the conclusion that there will be no such defining line. I have not the slightest doubt as to the ultimate result, but I foresee that the work will be slower, more difficult, more harassing, and more expensive than was at one time anticipated. At any rate, it is idle to wait more long, with the hope of being able to describe a critical and acute situation. Despite the many others who, at any time, and despite the confused character of the present position, I think it better, so far as to describe, however roughly and inadequately, the state of things as it exists to-day."

"It is no use denying that the last fifteen months has been one of retrogression. Six months ago this Colony was perfectly quiet, except so far as the Orange River. The southern part of the Orange River Colony was rapidly set up and down, and even a considerable portion of the Transvaal, notably the south western portion, seemed to have definitely accepted British authority, and to rejoice at the opportunity of returning to orderly government, and the prospect of peace. To-day the scene is completely altered. It would be superfluous to dwell on the increased losses to the country caused by the prolongation of the struggle, and by the fact which it has recently assumed. The Boer army, the enemy are now broken up into a great number of small forces, hiding in every corner, and that our troops are similarly broken up, and

whole of the western Transvaal, and practically the whole of the Orange River Colony, its effect upon the Cape Colony also became very marked. There was a time, about the middle of last year, when the bulk of the Dutch population in the Cape Colony, even those which had been most bitter against us at the outset, seemed disposed to accept the fait accompli and were prepared to acquiesce in the union of all South Africa under the British flag. Some of them even began to see certain advantages in such a consummation. The irreconcilable line taken in the Cape Parliament during its recent Session from July to October, was a desperate effort to counteract this tendency. But I doubt whether it would have succeeded to the moderate extent to which it has, had it not been for the recrudescence of the war on the borders of the Colony, and the undeterred character which it assumed. Every act of harshness, however necessary, on the part of our troops, was exaggerated and made the most of, though what principally inflamed the minds of the people were alleged instances of needless cruelty which never occurred. Never in my life have I read of much less expedient, such a curtailment of expediency as that which accompanied the proclamation in this Colony at the end of last year. And these habits still continue to make themselves felt.

The present position of affairs alike in the new territories and in a large portion of the Cape Colony, if by no means the most critical, is possibly the most puzzling that we have had to confront since the beginning of the war. Naturally enough the public are impatient and those who are responsible for the government of the country are bombarded with most conflicting advice. On the one hand there is the outcry for greater severity and for a stricter administration of Martial Law. On the other hand, there is the expression of the fear that strict measures would only exasperate the people. Personally I am of the opinion which I have always held, that reasonable strictness is the proper attitude in the presence of a grave national danger, and that exceptional regulations for a time of invasion, the necessity of which every man of sense can understand, if clearly explained and firmly adhered to, are not only not incompatible with, but actually conducive to, the avoidance of injustice and cruelty. I am satisfied by experience that the majority of those Dutch inhabitants of the Colony who sympathize with the Republics, however little they may be able to resist giving active expression to that sympathy, when the enemy actually appear amongst them, do not desire to see their own districts invaded, or to find themselves personally placed by the awkward dilemma of choosing between high treason and an unfriendly attitude to the men of their own race from beyond the border. There are extremists who would like to see the whole of the Cape Colony overrun. But the bulk of the farmers, especially the substantial ones, are not of this mind.

The inherent vice, if I may say so, of almost all public discussion of our South African difficulties is the tendency to concentrate attention too exclusively upon the Boers. Say what we will, the controversy always seems to relapse into the old rut, it is the British Government on the one hand, and the Boers on the other. The question how a particular policy will affect, not merely our enemies, but our now equally

numerous friends, seems seldom to be considered. And yet it would seem that policy alike should lead us to consider the feelings and to retain the loyalty of those who are on our side, as to disarm the present and the future enmity of those who are against us. And this principle is the easier to adhere to because the thing which the great body of the loyalists desire, which it is not to the advantage of the Mother Country, of vindictiveness, or desire to punish. Of vindictiveness, or desire to punish, there is, except in hastily uttered exuberance in the heat of the conflict, no permanent significance, or none are wholly devoid of influence. The attitude of almost all leading active men, and the general trend of feeling among the loyalists, even in the struggle, is dead against anything but exclusiveness or domination. If that it would be impossible for a section of Afrikaners, small no doubt in numbers, but weighty in character and position, to draw a strong line which they do not regard as the views of the majority of their own people, as these are, and as they know them to be, misconceptions of our policy and intentions. These men are among the most devoted of our Imperial cause, and would regret with as much favour and alarm than any one the British nation to carry out its policy in the most complete manner. They are convinced that the unimpaired establishment of the British supremacy, and the consequent political system from Cape Town to the north, is after all that has happened the best thing for men of their own race, as well as for the British nation to carry out its policy. I believe, of the South Africans at present, that on our side entirely approve. There is, however, an extreme section who would adopt a hostile attitude on our part. But they are a small number, and their feelings are not lastingly affected by Lord Kitchener, who, in his stance, identical with reported statements of policy on the part of His Majesty's Government, are generally regarded as a generous and manlike offer, as one which, if finally accepted, will ultimately be accepted, but which we cannot afford to endanger. On the other hand, there is a very general desire that the Government be spared to make the generous change of intention widely known, and to express a disposition on the part of the enemy to come to the object of making them better acquainted with the terms on which we are prepared to accept their submission.

If I might sum up the predominant feeling of the almost unanimous feeling of those South Africans who sympathize with the Imperial Government, I should describe it as follows: "I am sick to death of the war, which has done ruin to many of them, and imposed enormous sacrifices on almost all. But they will not see the war continue for an indefinite period, run the risk of any compromise which may leave even the remotest chance of the return of so terrible a scourge in the future. They are prepared to fight and suffer on behalf of South Africa, indissolubly and for ever, under one flag, with one system of

SOUTH DAKOTA

framed especially to accomplish a purpose for the benefit of the larger part of the population, which is that the people be educated qualitatively to a high point of attainment. Until the time of the act permitted the enrollment of voters, a man or who could explain to the pollster the meaning of a section of the constitution had to be a qualified citizen before that date were to be qualified thereafter. But subsequent to the act, no one could be registered except to read and write any required part of the constitution or else to prove the use of such property and taxpayers on real estate. Such a list to be conducted by county appointed by the governor. See also, Vol. 1, Mississippi.

Speaking in the United States Senate on introduction of this measure, Senator Lee of South Carolina said: "We took the wrong way. We stuffed ballot boxes. We stole. We are not ashamed of it. The Supreme Court of Wisconsin would have done the same thing, if it had seen it in his eye right now. If we could see it in his eye right now, we would do it all over again. With that system of stuffing the ballot boxes, we would do it all over again."

I want to call your attention to the noble alliance that has come over the speaker around the Republicans, to remind you of the men from the North that your slave is just brotherhood of man and the goal have gone glimmering down. The brotherhood of man exists in the cause your shoed negroes in Illinois come in competition with your laborers in the South-Carolina when they come in competition with us in the matter of farming. I do not love them any better than we do. I used to pretend that you did. But you no longer pretend it except to get their votes.

deal with the Philippine just as we deal with the
negroes, only you treat them a little worse.
Congressional Record, 58th Congress 1st Sess.
2643 (1904)

A. D. 1899.—Adoption of the Dispensary System.—A constitutional amendment providing for a dispensary system of regulated liquor traffic (see, in this vol., *Social and Political History*, A. D. 1892-1899), was adopted in 1899 by a majority of 1,017 votes. The new constitution reads as follows: "The manufacture and sale of intoxicating liquors shall be under exclusive State control, and shall be conducted by duly authorized agents of the State, who shall be paid by salary and not by commission."

SPAIN A D 1868-1885 Affaire in Cuba

The Federal Ministry under Senor Weyler in Madrid apparently to control those provinces assigned office and a conservative political was formed by Senor Camprovis del Cas. The new Ministry had many difficulties in the fresh outbreak of revolt in Cuba and in the Canary A.D 1895 being the worst. But student rioting at Barcelona caused by the dismissal of a professor whose views were condemned at Rome became known to require the sending of the General Weyler to the scene and to suppress the elements in Madrid, growing out of the corruption in the municipal council. Two of the colleagues of Camprovis from the Canary in January 1896 Weyler was sent to the Canaries in that unhappy island a poor and depressed conditions that horrified the people. In the Vol C. 191 A.D 1896 1897 and 1898 the Cuban War in Elections held in April, 1898, gave the government of Camprovis an overwhelming majority in the

A. D. 1899.—Abolition of the Ministry of the Colonies.—Resignation of the Sagasta Cabinet.—Ratification of the Treaty of Peace.—The new conditions in Spanish government resulting from the loss of Cuba, Porto Rico, and the Philippines were promptly acknowledged. In January, by the abolition of the Ministry of Colonies, for which no sufficient duties remained. On the 20th of February the Cortes was summoned, and on the same day the "state of siege," declared during the war, which had practically suspended constitutional rights, was removed by proclamation. The Treaty of Peace with the United States was laid before the Cortes; but the military party, led by General Weyler, opposed the approval of the Treaty, evidently for the purpose of embarrassing and weakening the government. They were so far successful that Señor Sagasta and his cabinet were forced to resign, on the 28th of February, and a Conservative Ministry, under Señor Silvela, was formed. But the Cortes, which declined to support the government in accepting the Treaty of Peace, was dismissed a few days later by the Queen-Regent, who signed the Treaty on her own responsibility, March 11. The Silvela Ministry proved inharmomious, made so especially by the Minister of War, General Polavieja, and in September it was reconstructed, with Polavieja dropped out.

A. D. 1900 (October—November).—Weyler appointed Captain-General of Madrid.—Resignation of the Silvela Ministry.—The army in control.—The army won control of the government in October, when General Linares, Minister of War, without consulting his colleagues of the cabinet—if report be true—appointed General Weyler to be Captain-General of Madrid. Several members of the cabinet resigned in protest, and the Premier, Señor Silvela, found it necessary to place the resignation of the Ministry as a whole in the hands of the Queen-Regent (October 21). A new cabinet

was formed, with General Azorruza for chief, General Linares retaining the portfolio of the War Office, and Weyler holding the military command in Madrid. The military party appears to be fully in power, and a token of the spirit it has carried into the government was given within ten days after the formation of the new Ministry, by the promulgation of a decree suspending the guarantees of the constitution and establishing martial law throughout the kingdom. Some movements of Carlists, and insurrection furnished a pretext for this measure, but they appear to have had no serious character.

It is probable that the military reaction in Madrid will stimulate a revival of the independent aspirations of the Catalonians, who have been showing of late many signs of new life. The desire for separation from Spain has never died out in Catalonia, and a resolute effort to accomplish it may easily appear among the incidents of the near future.

A. D. 1900 (November).—Spanish-American Congress.—At the instance of the "Social Union Ibero-Americana," an unofficial organization which has been in existence for more than 15 years, a congress was held in Madrid in November, 1900, with the object of strengthening the relations between Spain and those American peoples who are of Spanish origin. The proposal of the "Union Ibero-Americana" met with the approval of the Spanish Government, and on April 16 a Royal decree was issued appointing Señor Silvela, the Prime Minister, to be president of a congress to be held in Madrid. The Government of Spain then issued invitations to the Spanish American Republics, asking them to send representatives, which invitations were accepted by the governments of Mexico, the Argentine Republic, Chile, Uruguay, Peru, and other States. The list of subjects for discussion included proposals of treaties of commerce, international arbitration, the harmonizing of the civil, penal, and administrative legal codes of the various countries represented, emigrating, the international validity of professional diplomas, the establishment of Ibero-American banks, and others. The most important result of the Congress was the voting of a plan of compulsory arbitration by the South American republics. The motion was introduced by Peru, which has the most to gain by arbitration. Chile was the sole dissenting voice. "This," remarks "The Nation," of New York, "recalls the fact that Chile consented to take part in the Pan American Congress at the City of Mexico, only on condition that any arbitration there provided for should not concern her own disputed boundaries."

A. D. 1901.—Anti-clerical agitation, directed especially against the Jesuits.—Marriage of the Princess of the Asturias.—A movement in Madrid in February produced movements of feeling against the Jesuits which spread to all parts of the country, and were the cause of serious political demonstrations and riots in many cities. A wealthy young lady, Señora Uchao, had been persuaded by her confessor, a priest of the Jesuit order, to enter a convent against the wish of her family. The family applied to the High Court for a mandamus for her release. The prominence of the case drew universal attention to the case, and it was

SPAIN, 1901.

passed with passion throughout Spain, stirring up as it did, it is to be evident, a latent anti clerical feeling which only waited to be moved. It was moreover, to have served as an occasion for demonstrations of the republicanism that continues to be strong in Spain. Students of the universities were active promoters of the excitement, and set examples of disorder which were followed by rougher mobs. In Madrid, Zaragoza, Valencia, Valladolid, Santander, Granada, Malaga, Barcelona, and other towns the excitement ran high and was not quieted by a decision of the High Court on the 19th of February, restoring Santa Fe to her friends. At Barcelona, on the last day of March, a meeting of 9,000 citizens, held in the bull ring, is reported to have passed resolutions in favor of the separation of Church and State, advocating the prohibition of religious orders, and expressing a desire that their property should be taken possession of by the State. The meeting voted messages congratulating Francisco Portugal on their Anti Clerical attitude. The meeting was followed by a riotous attack on the Jesuit convent, and by a conflict of the mob with the civil guard, in which blood was shed. From various parts of the country, demands for the expulsion of the religious orders were reported, in April, to be reaching the Government.

A royal wedding which occurred in the early days of this anti clerical agitation added something to the disturbance of the public mind. Dona Maria de las Mercedes, eldest of the children of the late King Alphonso XII and his second wife, was married on the 14th of February to Prince Charles, of the Neapolitan Bourbon family, son of the Count of Caserta. The Princess was Queen of Spain, in her infancy, for a few months after her father's death, until the posthumous birth of her brother, in 1866, and presumably she may again inherit the crown. In spite of the marriage does not seem to have been unpopular; but, for some reason, the Count of Caserta was odious to the public of Madrid, and became the object of unpleasant attentions from the mob, while the bride and bridegroom, and other members of the family of the latter, were treated with respect.

STONEHENGE: Fall of two stones.—“The last night of the nineteenth century was marked, as a correspondent pointed out in our issue of yesterday, by a serious injury to what remains of the majestic monument of Stonehenge. One of the great uprights of the outer circle of stones, as well as the cross piece mortised to it on the top, fell to the ground, thus destroying still further the most striking effect of this gigantic temple or sepulchre. The fall was probably caused by the torrents of rain and the violent winds that closed the troubled record of the year 1900. One of the uprights was brought to the ground, where it lies like so many other of the stones that formed this vast megalithic structure, and the capstone has been broken in pieces. The continuous exterior circle of which these formed a part was originally about one hundred feet in diameter, and though the masses were less imposing individually than those of the great trilithons around the centre, the effect of the mighty round of uprights, sixteen feet high with huge capstones resting on them, must have been wonderful in its noble simplicity.”

"The solicitude of the present age has placed Stonehenge, like other great national monuments, under the permissive protection of the law, but the law itself cannot prevent the ravages of weather and the gradual subsidence of the foundations on which these masses stand. Little, we fear, can be done to keep the remaining uprights standing. They will fall when their time comes and will be where they fall like those that have already succumbed to their fate. It is better, perhaps, for the dignity of this venerable monument that it is in no serious danger of that restoration which is at work on so many later structures, more splendid as triumphs of art, but less stubborn in their strength."—*London Times*, Jan. 4, 1901.

SUGAR BOUNTIES.—An extremely complicated and irrational state of things, connected with the production and consumption of sugar throughout the world, has been experienced for many years, as a consequence of the system of bounties on exportation, by which a number of European countries have stimulated the production of beet sugar, in competition with the sugar produced from cane. The system was carried to its extreme development in 1896-7, in consequence of action taken in Germany, for an account of which see (in this vol.) GERMANY: A. D. 1896 (MAY). The legislation in other countries which followed the German measure of 1896 was set forth briefly in a memorial from

the Belgian beet-root sugar makers, February 1897, to the Belgian Chamber of Representatives, a translation of which was transmitted at the time to the State Department at Washington by the United States Consul at Ghent, and that memorial: "The fiscal system applicable to sugar factories in force [previously] in the various countries mentioned [was] chiefly established by the following laws: Germany, law of May 31, 1891; Austria, law of May 20, 1888; France, law of July 20, 1884; Russia, law of July 13, 1891; Belgium, law of April 16, 1887; Holland, law of April 15, 1891, and previous legislation. Since the dates above mentioned the basis established in these various countries had undergone only secondary modifications, rather local than international, and generally of a nature to diminish the fiscal favors instead of increasing them. From the point of view of competition among the countries of Europe, a sort of peaceful stability was thus acquired, resulting in a corresponding equilibrium in the interior relations of each country between the rural and industrial systems, as well as between the cultivator and owner. This situation slowly established, thus, during the last year suffered the most serious disturbances. Important modifications have been adopted by all countries, Russia excepted; the latter, employing a special system, suffices almost entirely for itself without having much to export, it is therefore not necessary to give it special consideration.

The modifications to which we allude are the following: In Germany, the law of May 27, 1896, increased the export bounties in the following proportions: (1) For raw sugar, from 30 cents to 60 cents per 220 pounds; (2) for white sugar, from 41 cents to 72 cents; (3) for refined sugar, from 48 cents to 89 cents. This is not meant to interfere with other measures, notably the imposition of supplementary taxes, and the provision by which a factory, under the penalty of having its proportion of export bounties reduced, is, so to speak, obliged to increase its output or at least to maintain it at the same level, even under the most unfavorable circumstances. Immediately afterwards, Austria, by the law of July 7, 1896, took corresponding protective and defensive measures, especially increasing from about \$2,000,000 to \$3,600,000 the amount of public funds destined for export bounties. In France, the Chamber of Deputies has just voted export bounties even more important than those of other countries, amounting to: (1) raw sugar, 68 cents per 220 pounds; (2) white sugar, 77 cents; (3) refined sugar, 87 cents. As these export bounties are independent of the interior advantages accorded in Germany and Austria, in various forms less tangible, although not less real, and in France in the form of fees upon the manufacture, which, in the official French statistics, appear for sums varying from \$1.16 to \$1.54 per 220 pounds, and which may be normally fixed at \$1.35 per 220 pounds. Holland, in turn, has just revised its system, giving from the beginning to its producers a bounty of \$1.06 per 220 pounds on raw sugars. It is at an economic war to the finish between rival nations each desiring the ruin of the others, which these measures maintain on the sugar interests of Europe."—*U. S. Consular Reports*, June, 1897, p. 304.

The effect of bounty payments is to enable the

SUGAR BOUNTIES

sugar-makers of the country which pays them a bounty to foreign buyers at a lower price than they could obtain at home. Consumers in such a country as England, where no sugar is produced, and where no duties on imported sugar are levied, reap an enormous gain from them, at the expense of the sugar consumers of the bounty-paying countries. At the same time, the cane-sugar growing colonies of England, especially those in the West Indies, suffer from the competition which is to be maintained by this method of governmental support. England, therefore, has conflicting interests in the matter. The mass of her home population, who are great consumers of "sweets," delight in the continental bounties, which give them cheap sugar; while her West India colonists, and the English sugar-owners, are groaning under the hard competition they maintain.

In the bounty-paying countries, the same conflict of interest exists between beet-growers and sugar-consumers, and governmental attitudes on the question of adhering to the bounties seem to depend on the relative strength, or political weight, of the two bodies. Repeated attempts have been made to come to an international agreement for their abolition or modification. A general conference on the subject was held with out result in London, 1887; and another was undertaken in June, 1898, at Brussels, on the invitation of the Belgian government. The latter made manifest a strong desire to be rid of the bounty-paying system, on the part of Germany, Austria-Hungary, Belgium and the Netherlands. France was willing to withdraw her direct bounties on the exportation of sugar, but insisted on maintaining an internal system of taxes which was said to have the real effect of bounty. Russia, likewise, would adhere to a protective system of regulations which had that effect. Great Britain declined to engage herself to impose a duty on what was called "bounty-fed" sugar, for the purpose of neutralizing the bounty, and so placing that commodity on a footing of equality with its rivals in her markets. Hence no agreement of common action could be reached, and the Conference adjourned without result. Continental consumers of sugar continue to pay a high price for the prosperity of their beet-growers and sugar-makers, but Englishmen, who have revelled in cheap "jams" at foreign expense, are probably to lose that privilege since the exigencies of their Boer war expenditure have forced the Chancellor of the Exchequer at last, to introduce a duty of 4s. 2d. per cwt. on refined sugar in his budget for 1901. But in his speech on introducing the budget, in the House of Commons (April 18, 1901), the Chancellor expressed hopefulness that the foreign sugar bounty might save England from a rise in price for sugar, notwithstanding the tax. His remarks were as follows: "What is likely to be the effect on the price of sugar of the imposition of a duty? In my opinion that is a very doubtful question, because the price of sugar is not governed solely by the ordinary conditions, but it is governed largely by the bounty system. The great bulk of our imports of sugar come from bounty giving countries; and what is that system? Why, Sir, it amounts to this that the country giving the bounty encourages the production of sugar within its borders, and at the same time does its best to

SUGAR BOUNTIES

restrict the consumption of sugar by its own people by every possible means so that the result is that there is an enormous surplus of sugar produced which must find a foreign market, and which under present circumstances can only find a market here. Therefore, it is quite conceivable, unless, of course, a bounty giving country either reduced the area of their sugar production or lowered their own excise duties on sugar for the benefit of their own population, both of which would mean the abolition of the bounty system, it is quite conceivable that the result of the imposition of a tax on sugar here might be that, though at first the price might go up and the consumption of sugar might be conspicuously decreased, there would be such an influx into this country of bounty paid sugar that could not go anywhere else, that the price might be brought down. I merely put the hypothesis to the Committee, because I think it is one that ought to be considered by any one who looks into this question. *London Times, April 19, 1901.*

The geographical poles of the sugar trade are now Great Britain and the United States, and the two great areas of production are the beet-sugar countries of the continent of Europe and the cane-growing countries of the American and the Asiatic tropics. These two areas of production have been in active rivalry for the past thirty years, and out of this rivalry have come some striking results. The first is that beet-sugar controls the world's sugar market, for of the 8,000,000 tons that constitute the commercial supply of sugar about 5,000,000 are produced from the beet, and the price of this portion of the supply practically determines the price of the 3,000,000 tons of cane-sugar also. Still more significant results are the removal of Great Britain from her once dominant position in tropical sugar production and the diminution of France and Spain from the struggle for leadership in the same line of enterprise, as economic conditions have centered the cane-sugar trade in industry in America. To-day the continental beet-sugar countries supply the United Kingdom with seventy-five per cent. of its annual sugar imports (2,500,000 tons), leaving only one quarter to come from the tropics. The United States, on the other hand, has become the chief market for tropical sugar.

India and the United States exclude bounty-fed beet-sugar, and the reciprocity treaties with the United States, by favoring tropical sugar with a minimum duty, put a narrower limit to beet-sugar development, now prospering under a protective tariff and state bounties. The general effect of these positive aids to trade, as well as of the negative restraints, has been to encourage tropical enterprise in which sugar plays a leading role.

As things stand now, Germany continues to control the world's sugar situation, not because of any superiority over the tropics in machinery, nor because of the advantages of fiscal bounties over tropical resources of the soil, but because all the natural advantages under the prevailing slipshod methods of tropical cane cultivation are more than counterbalanced by the scientific methods of European agriculture applied to beet farming. When the tropics apply to the cultivation of canes which covers half of the cost of producing sugar, the same degree of scientific

SUGAR BOUNTIES.

attention that has been given to the methods of manufacturing the cane into sugar, then—and not until then—need the beet sugar interests of Europe look to their laurels, under the present conditions of the trade."—J. F. Crowell, *The Sugar Situation in the Tropics* (Pol. Science Quarterly, Dec., 1899).

In the United States, the Dingley Tariff law of 1897 required the Secretary of the Treasury to levy a special countervailing duty on all bounty fed sugar equal to the benefit derived by the manufacturers of it from the bounty systems under which it was produced. German and French sugars have had to bear such countervailing duty, and it was exacted on Russian sugar for a time after the passage of the Dingley Act; but the Russian government succeeded in bringing about a suspension of it, pending negotiations for a commercial treaty, which came to nothing. It was the Russian contention, that the system operating in that country for the benefit of the sugar producers, by means of internal taxes which are not collected on exported sugar, and by paternal regulations which control prices in the domestic market, is not a bounty system, within the meaning of the American law. (The full text of the Russian law on the subject may be found translated in the "Congressional Record," February 26, 1901, p. 3335.) By these arguments and by protracted negotiations the Russians succeeded in keeping the door of the American market open to their sugar, with no extra levy of duties, until February, 1901, when the Secretary of the Treasury of the United States arrived at the decision that he is required by the law to levy and collect a countervailing duty or tax of 32 cents on each pound (about 36 pounds) of Russian sugar imported into the United States. The order to that effect, issued on the 12th of February, gave great satisfaction to the American sugar trust, and more than equal dissatisfaction to other important interests in the country, which are threatened by the danger of retaliatory tariffs on the Russian side. The situation produced is thus described in a Washington letter to the "Tribune" of New York: "The iron and steel manufacturers have been clamoring for the continued suspension of the countervailing duty on Russian sugars. They have begun, they say, to build up a market in Russia for American steel products, and that market will be lost to them if Russia in retaliation imposes maximum instead of minimum duties on steel and iron manufactures. The steel industry all over the world is threatened with a glut in production, and the American manufacturers especially are keenly looking about for every possible opportunity to dispose of an increasing surplus. They deplore, therefore, the reimposition of the sugar duty, and will help to fight for a reversal of Secretary Gage's action by the Board of General Appraisers or by the courts. The Secretary contends that the Russian scheme of encouraging the sugar interest should be submitted for judgment to some legal tribunal, and that in such an evident case of doubt it is his duty to favor the Government to the extent of reimposing the disputed duty. The case will go to the Board of General Appraisers in New York, and then to the Federal courts, and a final decision is, perhaps, two years off. Meanwhile the German, French and other Continental governments have been somewhat appeased, and

SWEDEN AND NORWAY

the Sugar Trust has won a substantial victory at the expense of the iron and steel industry. Russia is disposed to resort to retaliation, and the whole horizon is more or less darkened with threats of commercial warfare."

The immediate consequence of the Russian order by M. De Witte, the Russian Minister of Finance, issued four days later (Feb. 16), directing the collection of an additional tariff of 30 per cent net upon American hardware, iron, steel, boilers, pipes, bearings, lings, tools, gas and water meters, stoves, sewing machines, when such articles are of American manufacture. This includes motors and machinery of all kinds.

SWEDEN AND NORWAY: Norwegian discontent with the union.—"The question of representation in foreign countries has now convulsed Scandinavia for some years. A race of democratic tendencies, usually thick more of its Consular than of its Diplomatic service, and Norway, in demanding immediate permission to appoint her own Consuls, announce

SWEDEN AND NORWAY.

that she is willing to leave for future consideration the idea of separate Ambassadors for the two countries. Professor Harald Hjärne crystal- lizes the reply of Sweden in the words: "By granting such a request we run the risk of our granting, and with it also our satisfactory fulfilment, to foreign Powers, in fact, the whole independence of our country, becoming a mere pretext for the Norwegian parties during their contests for power." However, the King, who is ever ready to grant privileges to his Norwegian subjects even when acting against his better judgment, declared himself willing to accede to the petition as to the Consuls, and to allow the sister country to have the direct voice in the negotiation of foreign affairs which she has so long demanded, but only on condition that she would contribute to the defence of the two Kingdoms in proportion to her population.

Many leading Norwegians declare that those who dissent so loudly for a revision of the Constitution are, after all, in the minority. They argue that claims on Sweden are for the most part, merely advanced as a party cry, and that if a general appeal were made to the country, the majority would pronounce, without hesitation, in favor of a continuation of the Union to the state which has given Norway, for the first three centuries of her history, a period of nearly a century of peace and uninterrupted prosperity.

The Left support their idea for separate navies by pointing out that the mercantile navy of Norway is far larger than that of Sweden; they claim for it, in fact, that it is the third largest in the world. A reply to this is that a large proportion of this navy consists of old wooden sailing boats, unfit for any purpose but that of carrying timber, that Norway has increased her mercantile navy at the expense of her warships, and that in time of war she would have to depend exclusively on the splendid modern warships of Sweden for the defence of her harbours and her shipping, since she cannot rely herself the owner of one single modern ironclad. It may be mentioned, in connection with this matter, that the exports and imports of Sweden are nearly treble those of Norway, the timber trade of the former country alone being the largest in Europe, and that it is in consequence of Sweden leaving so much of her carrying trade in the hands of the sister country, thereby contributing no little to her prosperity, that she has been encouraged and enabled to increase her merchant navy to such an extent. Sweden has throughout the century made enormous sacrifices for her navy, and especially has this been the case since King Oscar came to the throne. She is, therefore, so far as can be judged, in a position to defend both her own ports and her merchant vessels. She does not, however, profess to be equal to the task of protecting the long coast line of Norway and the vast fleet of merchant vessels, of which the largest named is justly proud, without any aid whatever from the sister country, and statistics prove that, however willing in an emergency Norway might be, she would be unable to offer for this purpose help that would be of any practical use.

In March, 1895, during the Consular crisis, King Oscar went over to Christiania and did his utmost to effect a compromise. Demands were made on him by the Extreme Left, to which he

SWITZERLAND.

could not consent, and he referred the Storting to the Act of Union, proving that should he agree to the claim he would himself be guilty of a violation of the Constitution. Some pointed scenes ensued, and the King left Norway almost at once. On his arrival in Stockholm he received an ovation such as few Swedish monarchs can ever have had before. Every distinguished man in the country seemed to have assembled at the railway station to greet him, each public body was represented by its leading member, the whole of the Swedish Parliament was present, and the fervent and enthusiastic with which he was greeted, shewed a description. The Press without exception took the King's side, praising His Majesty's action in most lavish terms, thus proving more effect than anything in Norway, where the Left had counted on the support of the Radical Press in Sweden, not realising that when once there was question of attacks on the Union and the Constitution, all parties were equally prepared to rally round the King.

In view of the strained relations between Sweden and Norway, it may be said that Russia's encroachment on the liberties of Finland is extremely ill timed if, as is probable, she contemplates offering her protection to Norway as she did to the neighbouring country at the beginning of the century. Even if no such extreme step on the part of Russia be necessary, should those among Norway's two million inhabitants who demand separation have their way, the country would be able to offer the Imperial Government a splendid baize as the price of its non-intervention to the north of the territory of Norland lies the Varanger Fjord, an inlet including several fine harbours, which is practically free from ice throughout the year. This bay, so much coveted by the greater power, is only separated from the Czar's dominions by a narrow strip of Norwegian soil which has already been crossed by a railway constructed by Russia with the permission of Norway. The value of this food to the Empire in time of war would be incalculable, and to have this magnificent gift at its disposal is a perpetual temptation to Norway to win the suffrages of the only European Power she has reason to fear should she ever hoist the flag of revolt. She has so long held half-unfurled in her hand. Constance Sutcliffe, *Switzerland and her King* (Edinburgh, 1897).

In 1899 an Act directing the removal of the emblem of union from the flag of Norway was passed by the Norwegian Storting for the third time over the veto of the King, and became law, under the provisions of the Constitution.

A. D. 1899 (May July). Representation in the Peace Conference at The Hague. See in this vol. PEACE CONFERENCE.

SWITZERLAND: A. D. 1894-1898.—The Initiative and the Referendum in practice.—Three times during the year 1894, with a conservative result in each instance, important questions of legislation were submitted to the vote of the Swiss people. In one instance they were asked to demand that a portion of the federal customs dues should be assigned to the cantons for cantonal use, the avowed aim of the proposition being to weaken the Confederation. They rejected the scheme by a vote of 317,491 against

SWITZERLAND.

TARIFF LEGISLATION

145,270. A still heavier majority was given against Socialist proposals for a constitutional article guaranteeing the right of every Swiss citizen to remunerated work. This was supported by only 75,880 votes, against 308,280. For another Socialist proposal, of gratuitous medical attendance, the necessary petition (with 50,000 signatures) in order to bring it to a popular vote, could not be obtained. A third, for extending factory regulations to all shops in which manual work is done, and for establishing obligatory trade syndicates, to fix salaries, prices, number of apprentices, was lost by a vote of 135,713 against 158,192.

Again, in 1895, the result of appeals made to the Referendum seemed to show that the disposition of the people was more conservative than that of the government. An Army Reform Bill, which enlarged the federal control of military administration, was rejected by 270,000 votes, against 195,000. Two or three other proposals of less moment were voted down by considerable majorities, and it appeared unmistakably that changes dependent on the popular will were not to be easily made.

In 1896 a proposal from the Federal Council to make the head of the War Office commander-in-chief of the army in time of peace was voted down, on a referendum, by 310,092 against 77,169. During that year there was much agitation of a project for the establishment of a State Bank, which the Chambers had sanctioned; but, on being submitted to the people, early in 1897, it was defeated by a majority of about 60,000.

Another measure, supported by the Federal Council and adopted in the Chambers, for the purchase of the five principal railways of the republic, was submitted to the decision of the Referendum in February, 1898, and carried by 384,272 votes against 176,002. Accordingly, the five railways known as the Swiss Central, the Union, the Northeastern, the St. Gothard, and the Jura Simplon, about 1,650 miles in total length, became the property of the state. The general plan of the government was to purchase the rail-

ways at twenty five times the average net earnings for the past ten years, provided the cost was not less than the actual cost. The railways were to have the privilege of doing so, plus capital, but to turn over the surplus to the class condition.

A. D. 1897. Constitutional amendments. Consul Germain wrote from Zurich, Jan. 1, 1897: "Constitutional amendments were voted on July 11. The first amendment related to the power and gives the Federal Government control and power to enact uniform laws for the Swiss forests. The second amendment relates to manufacture, sale, and importation of food products under federal control. These two amendments will relieve the cantons from vexatious legislation, heretofore differing in each of the twenty cantons and four half cantons, and give the whole of Switzerland uniform laws of forestry and the manufacture, sale, and importation of food products."—*U. S. Consular Reports, for 1897, p. 290.*

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See this vol.) **PEACE CONFERENCE.**

A. D. 1900.—Rejection of new electoral proposals.—On the 4th of November the Swiss nation gave its decision regarding two important proposals which under the name of the "double initiative" had been causing great excitement among the population of the Confederation. One of these proposals had for its object the election of members of the National Council on the system of proportional representation, the other the election of the Federal Council by the people. Both proposals were rejected, the first by 242,000 popular votes to 163,548, and by 114 cantonal votes to 104, and the second by 261,087 popular votes to 134,167 and by 14 cantonal votes to 8.

TELEGRAPH, Cape to Cairo.—For the projected line of telegraph from the southern to the northern extremity of Africa, Mr Cecil Rhodes has undertaken to find most of the needed money. He began construction from the north, and has pushed the line northward through Rhodesia to Umtali. In March, 1901, which is 1,800 miles from the Cape, and splicing it on through Nyassaland to the southern end of Lake Tanganyika, another 700 miles farther north. The total distance to be covered is 6,600 miles. At the same time the Egyptian government, under British auspices, was pushing its telegraph system southward from Wady Halfa. Its advance was intermittent, the erection of the telegraph poles being necessarily dependent upon the pushing back of the hordes of the Dervishes. Last autumn, however, the destruction of the power of the Khaddat at Omdurman enabled the Anglo-Egyptian authorities to reopen the long closed telegraph office at Khartoum. Khartoum being 1,000 miles from Cairo, this reduces the distance to be spanned by the telegraph wire to 3,500 miles. If we reckon Aberdeen, on Lake Tanganyika, as its northern terminus, only 2,800 miles. It is being rapidly eaten into at both ends, more rapidly in the south than in the north. Still nearly one-half of the continent, and the most difficult part, remains to be covered. W. T. Stead in *McClure's Magazine*, June, 1899.—Soon after this was written, the South African War stopped the progress of the work.

TELEGRAPHS, Submarine.—“The submarine telegraphs of the world number 1,500, and aggregate length is 179,000 miles; their cost is estimated at \$250,000,000, and the number of messages annually transmitted over them 6,000,000. All the grand divisions of

TELEPHONE SYSTEM

the earth are now connected by their wires, and from every city, town, and island to reach the others by land wires. The land wires are contained in a vast network. Adding to the submarine lines to land telegraph systems by which they are connected, and through which they bring news to points of the world's continents interminable communication, the total length of telegraph lines of the world is 850,000 miles, the length of their single wires or conductors 1,600,000 miles, and the total number of messages annually sent over them 160,000,000, or an average of 1,000,000 messages each day. In the short last century since the practicability of submarine telegraphy was demonstrated, the electric wires have involved every one of except the Pacific. Nearly a score of wires have been laid across the Atlantic, of which no less than thirteen now successfully operate between the United States and Europe, while three others span the comparatively short distance between South America and the African and south European coast lines. Throughout the Indian Ocean, lines connect the far East with Europe and America by way of the Red Sea, the Mediterranean, the western coast of Europe, and the great trans-Atlantic lines. The Mediterranean is crossed and recrossed in its entire length and breadth by numerous cable lines, and the Mediterranean of America, the Gulf of Mexico and the Caribbean Sea, is traversed in all directions by lines which bring its islands and colonies into speaking relations with each other and with South America, Central America, the United States, and thence with Europe, Africa, Asia, the whole world. Along the eastern coast of Asia, cable lines loop from port to port and island to island, receiving messages overland from eastern Europe by way of the Russia Siberian land lines and forwarding them to Japan, China, Australia, New Zealand, the Straits Settlements, Hongkong, and the Philippines, and receiving others in return. South America is skirted with cable lines along its entire border save the extreme south, where they are brought into intercommunication by land lines. Along the entire coast of Africa cables loop from place to place and from colony to colony, stretching along the entire circumference and penetrating the interior by land lines at various points. Every body of water lying between the inhabited portions of the earth, with the single exception of the Pacific Ocean, has been crossed and recrossed by submarine telegraph lines. Even that vast expanse of water has been invaded along its margin submarine wires stretching along its western border from Siberia to Australia, while its eastern borders are skirted with lines which stretch along the western coasts of the two Americas. Several adventurous pioneers in Pacific telegraphy have ventured to considerable distances and depths in that great ocean, one cable line running from Australia to New Zealand, a distance of over 1,000 miles, and another extending from Australia to the French colony of New Caledonia, 800 miles seaward.—*U. S. Bureau of Statistics, Monthly Summary, Jan., 1899.*

TIENTSIN. "Tientsin is the most important city of northern China, being located at the head of the Gulf of Pechili and but 80 miles from the capital, Peking, with which it is connected by water and by a railway line. Another completed railway line runs northeasterly to Shanghai-kwan, and an elaborate railway system is projected southward from this point through the populous provinces of Shantung and Kiangsu to connect Tientsin with Shanghai. In addition to these, the Grand Canal, the most important of the great artificial waterways of China, has for centuries connected Tientsin with the Yangtze-Kiang and Shanghai. Its population is in round numbers 1,000,000."—*United States, Bureau of Statistics, Monthly Summary, March, 1899, p. 2194.*

"Tientsin is situated at the junction of the Hui River (sometimes called the Grand Canal) with the Peiho River, in latitude 39° 3' 55" north and longitude 117° 3' 55" east. It is distant from Peking by road about 80 miles. Formerly, it was a military station only, but towards the end of the seventeenth century became a city of great importance. To-day, it is the home of 1,000,000 people, with an annual import and export trade aggregating 65,000,000 taels* (\$12,250,000). . . . The growth of Tientsin within the past few years is most astonishing. The mud holes and swamps of a few years ago have been tilled in; one, two, three, and even four story brick buildings erected; streets macadamized, trees planted, gas works constructed, and now pipes (from New York) for a very elaborate and perfect water system are being laid—all due to foreign enterprise. On the other hand, the Chinese authorities have been seized with the spirit of progress, and to them is due the building and furnishing of the Imperial Military College, the Imperial University, arsenals for the manufacture of guns and ammunition, a mint for the coinage

of silver, and, last but not least, 320 miles of splendid railway.

The Imperial University was established in 1895 by its president, Mr. C. T. Teng, on the request of His Excellency Sheng Hsiao, viceroy, and approval of the Emperor. His Excellency Wu Tingfang, present Chinese minister at Washington, and Mr. Tsai Sheng-chang, one of Viceroy Wang's staff, were the first students. The university is divided into three departments, viz., collegiate, preparatory, and technical. The preparatory course covers four years, during which the students enter the collegiate department where they remain another four years. At the end of the first year in the collegiate department the students are drafted into special departments, viz., collegiate, preparatory, and technical. Each special branch is in charge of foreign professors, assisted by Chinese professors. The railway department was organized for the purpose of providing men for subordinate positions in the railway service—draftsmen, engineers, station masters, etc. The students are admitted to the various departments by competitive examinations. The government of the university is solely in the hands of the president and does not the former being responsible for the character of the work of the institution. Thirty students in each class are supported by the Government and are bound to Government service after graduation. The present number of students is 3,000 and the annual expenses are 60,000 taels, wholly borne by the Government. The president and four of the five professors are citizens of the United States.

The Imperial Military College was established by His Excellency Li Hung Chang, viceroy of Chihli, in the year 1884. At the beginning, it was simply intended to give employment to the German officers under contract to the Government, but the necessity of training men in the arts of war led the viceroy to materialize the dream in behalf of a permanent military college. A suitable building was erected at a cost of 50,000 taels (\$32,500), and the annual expense of maintenance is about the same amount. The students are drafted from the different military camps, and they are supported by the generals under whom they were serving. After two years' course, they return to their respective commands as instructors. The school is under the directorship of Tsoai Yint Chang, a Manch who received his military education in Germany and held a commission of lieutenant in the Prussian army. All the principal instructors are Germans, most of them being noncommissioned officers."—*U. S. Consular Reports, Dec. 1897, pp. 550-52.*

TOLEDO, O.: A. D. 1899-1901. The election of Mayor Jones. Importance was given to the municipal election of April, 1899, in Toledo, Ohio, by the character of the chosen Mayor, Samuel M. Jones. He had first made himself known as a manufacturer in the city, by his dealings with his employees. The Golden Rule was posted in his shops as the law by which he expected his own conduct and that of the men who served him to be governed, and it was found that he consistently obeyed the rule. In 1897, the Republican party, needing a candidate for Mayor, put him forward and elected him. In effect, he served the people as well and the politicians and the monopoly interests so little to their satisfaction that his party, obedient to the latter, cast him aside and nominated to the Mayor's office a more "practical" man. Mr. Jones thereupon was induced to present himself as an independent candidate, on a platform denigrated as "socialistic," and was elected by more than double the total vote cast against him, over the regular candidates of the Republican and Democratic parties. In the following November Mr. Jones was put forward as an independent candidate for Governor of Ohio, and was not elected, but received something over 100,000 votes.

On the 1st of April, 1901, Mr. Jones was re-elected Mayor of Toledo for a third term, again as an independent, and as a champion of municipal ownership for all public utilities.

Industrial combinations in the United States.—An "Industrial Commission," created by Act of Congress in June, 1898—see in this vol. **UNITED STATES OF AM.** A. D. 1898 (JUNE)—has published a preliminary report on the 1st of March, 1900, on the subject of "Trusts and Industrial combinations," from which the following historical information is taken.

The form of organization that has given them [industrial combinations] their name 'trusts' was first started by the Standard Oil Trust in 1882, afterwards followed by the Whisky combination—the Distillers and Cattle Feeders' Trust—and by the Sugar Trust—the American Sugar Refining company. The plan of that organization

was as follows. The stockholders of the different corporations entering the combination assigned their stock in trust to a board of trustees without the power of revocation. That board of trustees then held the voting power of the stocks of the different companies, and was thus enabled, through the election of directors, to control them absolutely. In place of the stock thus received the trustees issued trust certificates upon which the former holders of the stock drew their dividends, these being paid upon the certificates regardless of what disposition was made of the plants of the different corporations. Owing largely to hostile legislation and to the bitter feeling against the trusts above named, these

trusts after some adverse decision of the courts, went out of existence, reorganizing as single corporations in most cases and none at the present time remain. A somewhat similar form of organization is, however, the voting trust. Its found at times. In this form of trust the holders of at least a majority of stock of a single corporation put their stock into the hands of trustees for the purpose of voting it, retaining for themselves all the privileges of drawing dividends and making transfers. Such a voting trust has been formed. It is claimed in the case of the Pure Oil Company — an organization of the independent oil interests — for the sake of protecting a majority of the stock against purchase by the Standard Oil Company.

As a form of corporate combination for the sake of securing monopolistic control, the voting trust does not seem to be now in vogue.

The form of organization that seems most common at the present time is that of the single large corporation, which owns outright the different plants. A combination of this kind is formed by the purchase of all of the plants of the different corporations or individuals who enter into it, the corporations then dissolving as separate corporations. Often payments for the plants are made largely in stock of the new corporation, so that many of the former owners maintain their interest in the business. The affairs are then managed entirely by the stockholders of the one corporation through their board of directors, elected in the ordinary way. It is usual for these larger corporations to choose a very liberal form of charter.

A third form of organization, which is in many particulars quite like the original trust form, is that which has been taken by the Federal Steel Company, by the Distilling Company of America, and others. In this form the central company, instead of purchasing the plants of the different corporations which it is proposed to unite, simply buys a majority of the stock, or possibly the entire stock of each one of the corporations. The separate corporations keep in separate corporate existence, but a majority of the stock being held by the one larger corporation, its officers, of course, elect the boards of directors of all of the separate corporations, and in this way hold ultimately complete control. It is usually true that the separate corporations manage their own affairs practically independently, although they are furnished information regarding the workings of the other establishments in the combination through the central officers, and are doubtless largely directed in their policy in this way.

In the case of the Standard Oil Company, when the original trust was dissolved, there were issued to the holders of trust certificates proportional amounts of stocks of each of the constituent companies, and since the trustees themselves had held a majority of the certificates, they retained as individuals a majority of the stock in each one of the companies that had formerly been in the trust. The separate corporations were named as separate corporations, but the majority of the stock of all being held in the same hands, the directors of the different companies were largely the same men, and their affairs were managed in unison in substantially the same way as had been the case before. The new Standard Oil Company of New Jersey has recently been formed with the intention of transferring the stocks of

the different corporations into the new company, so that when the transfer has been finally made, one single corporation, the Standard Oil Company of New Jersey, will own outright the property now owned by the constituent companies which are commonly known as the Standard Oil Company. This combination has no formal unity. It is a practical unity, as it will have probably after the change into the New Jersey company.

As most of the large corporations within the last few years, both in New Jersey it will be worth while to consider the special advantages given by the corporation of that State. The advantages that have been brought out most clearly are: First, the organization tax is considerably less than that of most of the States, while the rate is fixed upon the amount of capital paid up, that it is an absolutely certain special advantage, being determined by anyone, thus leaving no opportunity for corruption on the part of the corporation itself or of State officials. The rate of the tax is moderate, and decreases as the amount of capital increases. Second, Political expediency advantage is to be found in the liberal form of the New Jersey charter. The amount of capital is unlimited, the period of organization is unlimited, the amount of indebtedness is unlimited, the powers that are granted to corporations are also practically unlimited, with the exception that an ordinary business corporation is forbidden to engage in banking. The Federal Steel Company would have found it impossible to organize for the purpose of engaging in various enterprises which it has undertaken if incorporated in the State of Kansas or Pennsylvania. The same thing holds as to the convenience to the American Steel and Wire Company. Third, There is less liability on the part of the stockholders than in several other States. Fourth, The directors have no less liability. In case of the issuance of stock for property the judgment of the directors is conclusive as to the value of the property taken, unless there is evidence of fraud. Stock issued thus for property is considered fully paid up, and the stockholders cannot be held further liable in case the property proves to have been taken at less than its cash value. The directors are not personally liable for the debts of the corporation if they fail to file a report conforming with certain other requirements.

During the past few years the total capitalization of the new industrial combinations has reached an enormous sum, well into the billions, and in many cases at least the nominal capitalization of the corporations far exceeds the cash value of their property. . . . Regarding most of the combinations concerning which testimony has been taken the facts appear quite clear. None of the witnesses believe that the Standard Oil Company is on the whole overcapitalized, as compared with the present value of the plants. Its opponents believe that its profits are enormous on capitalization. The witnesses representing Standard Oil Company itself, while admitting very large profits and presenting no very definite facts regarding the capitalization, still give the same impression from their testimony. The American Sugar Refining Company seems to be beyond question, capitalized at a sum twice as large at least as the cost of reconstruction of

view. The capitalization was shown to be the original capitalization of the company.

The charted testimony on this subject came from the witnesses concerning the iron and steel company. The witnesses in making the iron company a substantial statement stating that the assets of most of the plants gave an estimate of value although owing to the fact that in many cases the prices were quite prosperous the prices were then given by the price of the iron and steel company. They were then given by the price of the iron and steel company. They were then given by the price of the iron and steel company.

The system seems to have been followed in the case of the National Biscuit Company, the National Steel Company and the American Steel Hoop Company. In all these cases there was a clear understanding that the common stock represented simply bonus or anticipated profits.

In the case of the American Tin Plate Company there was also added ten millions of common stock which was issued to the promoter for his services and for the cost of organization. It is pointed out, of course, that not a title of this ten millions was paid out in commissions etc. to those who aided in securing the required amount of capital, including cash furnished for working capital. The amount of extra common stock issued for purposes of promotion in the American Steel Hoop Company and in the National Steel Company was \$5,000,000 in each case. (U. S. Industrial Commission, *Preventive Report with Copy, Art. 28, Hoop Iron, No. 156*, p. 11, pp. 14-15.)

Standard Oil Company.—As the rise of the Standard Oil Company seems to have marked the beginning of the movement towards combination in productive industries, on the great sea of recent times, the following passages from testimony concerning the history of the Company and the oil business is especially interesting. It is from the examination of Mr. John D. Rockefeller.

Q. What was the first combination in which you were interested of different establishments in the oil industry?—A. The first combination of different establishments in the oil industry in which I was interested was the union of William Rockefeller & Co., Rockefeller & Andrews, Rockefeller & Co., S. V. Harkness, and H. M. Fowler, about the year 1867.

Q. What were the causes leading to its formation?—A. The cause leading to its formation was the desire to unite our skill and capital in order to carry on a business of some magnitude and importance in place of the small business that each party had theretofore carried on. As time elapsed and the possibilities of the business became apparent, we found further capital to

be necessary, obtained the required persons and capital and organized the Standard Oil Company with a capital of \$1,000,000. Later we found more capital and the Standard Oil Company with capital to interest the reserves with us and increased our capital to \$1,000,000. As the business grew and markets were obtained at home and abroad more persons and capital were added to the business, and new companies and others were obtained or organized, the capital being always the same, to extend our business by furnishing the best and cheapest products.

Q. Did the Standard Oil Company or other affiliated interests at any time before 1887 receive from the railroads rebates on freight shipped for other special advantages?—A. The Standard Oil Company or other affiliated interests did not receive rebates from the railroads prior to 1887, but received no special advantages for which it did not give full compensation. The reason for rebates was that such was the railroads' method of business. A public rate was made and collected by the railway companies, but so far as my knowledge extends was never really retained in full a portion of it was repaid to the shippers as a rebate. The Standard Oil Company of Ohio being situated at Cleveland, had the advantage of different carrying lines as well as of water transportation in the summer and taking advantage of these facilities made the best bargains possible for its freights. All other companies did the same, their success depending largely upon whether they had the choice of more than one route. The Standard sought also to offer advantages to the railways for the purpose of lessening rates of freight. It offered freights in large quantities, car loads and train loads. It furnished loading facilities and discharging facilities. It exempted railways from liability for time. For these services it obtained contracts for special allowances on freights. These never exceeded to the best of my present recollections, 10 per cent. But in almost every instance it was discovered subsequently that our competitors had been obtaining no good, and, in some instances, better rates of freight than ourselves.

Q. About what percentage of the profits of the Standard Oil Company came from special advantages given by the railroads when these were greatest?—A. No percentage of the profits of the Standard Oil Company came from advantages given by railroads at any time. Whatever advantage it received in its constant efforts to reduce rates of freight was deducted from the price of oil. The advantages to the Standard from low freight rates consisted solely in the increased volume of its business arising from the low price of its products.

Q. To what advantages, or favors, or methods of management do you ascribe chiefly the success of the Standard Oil Company?—A. I ascribe the success of the Standard to its consistent policy to make the volume of its business large through the merits and cheapness of its products. It has spared no expense in finding, securing and utilizing the best and cheapest methods of manufacture. It has sought for the best superintendents and workmen and paid the best wages. It has not hesitated to sacrifice old machinery and old plants for new and better ones. It has placed its manufacturing at the points where they could supply markets at the least expense. It has not

only sought markets for its principal products, but for all possible by products, sparing no expense in introducing them to the public. It has not hesitated to invest millions of dollars in methods for cheapening the gathering and distribution of oils by pipe lines, special cars, tank steamers, and tank wagons. It has erected tank stations at every important railroad station to cheapen the storage and delivery of its products. It has spared no expense in forcing its products into the markets of the world among people civilized and uncivilized. It has had faith in American oil, and has brought together millions of money for the purpose of making it what it is, and holding its markets against the competition of Russia and all the many countries which are producers of oil and competitors against American oil."—*The same*, pt. 2, p. 794.

Against the testimony of Mr. Rockefeller that the Standard Oil Company obtained no exclusive advantages from railway companies, other witnesses contended that such advantages were given to it. On this point, the Commission say in their report: "It was charged by most of the leading opponents of the Standard Oil Company that the chief reason for the rapid growth of the Standard, and its apparent great success in underselling rivals and winning markets, was the special advantages that it had received from the railroads. It was claimed that the company not merely received discriminating rates on its own shipments, but that it was frequently paid rebates on the shipments of its competitors. It was conceded by representatives of the Standard Oil Company that before the passage of the interstate-commerce act special freight rates and rebates were frequently received. It was asserted, however, that this was the usual custom on the part of all railroads with all large shippers, and that competitors of the Standard had received similar favors. . . .

"Much greater differences of opinion exist with reference to the condition of affairs since the passage of the interstate-commerce act. It has been charged as a matter of general belief on the part of almost all of the opponents of the Standard Oil Company that these discriminations in various forms have been continually received even up to date. On the other hand, these charges have been denied in toto and most emphatically by every representative of the Standard Oil Company with reference to all cases excepting one, which they claim was a mistake, the amount of freight due being promptly paid on discovery of the error. . . . Certain opponents of the company claimed that the Standard Oil Company received commissions for shipping freight over railroads, which commissions amounted to rebates. This charge is emphatically denied by the Standard Oil Company and no positive proof on the subject has been offered."—*The same*, pt. 1, p. 25.

Of testimony on the subject of pipe-line consolidations in the oil business, the report says: "Mr. Boyle [publisher of the 'Oil City Derrick'] gives a somewhat detailed history of the development of pipe-line transportation in the oil business. The first successful pipe lines were established in 1864 from Pithole to the Miller farm. Others were soon constructed in the same district. These were usually short, scarcely over 5 miles in length, and at first did not even connect directly with the wells themselves, although

this practice was soon established. Numerous lines soon grew up in different parts of the region, but the first more extended system was from 1869, when the Mutual Pipe Line was more or less throughout Clarion County. A. A. Dergrift and Fornum later established a system through Butler County which became a part of what is now known as the United Pipe Line System. The original pipe lines were not transporters of oil, but the nature of their work soon led them to purchase oil, although at first it was not in the name of the company itself. . . .

"Mr. Emery [of Bradford] also in his statement of the early history of pipe lines states that the first attempt to combine separate pipe lines into a more complex system was made by William H. Abbott and Henry Harley beginning about 1860. By 1869 they had acquired nearly 82,000,000, and 500 miles of pipe existing in the Miller farm. The concern was then known as the Pennsylvania Transportation Company. . . .

"Several witnesses describe the process by which the Standard Oil Company gradually secured control of the various pipe lines throughout the oil regions. The opponents of the Standard attribute the success of the Standard Oil Company in this movement to the railway discriminations upon oil received from pipe lines controlled by that company. It appears that for a considerable period a rebate of 22 cents per barrel was allowed on oil from pipe lines meeting the agreed rates of pipeline. Other opponents of the combination ascribe its success to driving out competing pipe lines largely by the practice of paying premiums upon oil in the territory of such competing lines. . . .

"Mr. Boyle gives the fullest statement of growth of the pipe line consolidation during the seventies and attributes it to the natural advantages arising from large capital and from skillful organizing. He testifies that during the latter part of that decade very numerous pipe lines had been established. These were at first constructed on a small scale by separate oil producers, but having entered the business, many producers were inclined to extend their lines and become a system. There thus arose an excessive number of competing lines, and the solvency and integrity of some of them became a matter of doubt. This excessive competition was the cause of driving the pipe lines into a more complete organization. As early as 1873 or 1874 a pooling arrangement was made by some of the pipe lines, and rebates were paid by railway on oil received from such lines. The United Pipe Line Company was established in 1877, with capital at first of \$3,000,000, and acquired and purchased a large number of lines. The company included many producers and stockholders of the smaller companies, but it is stated that the persons controlling the Standard Oil Company had somewhat more than a half interest in the United Pipe Line Company. National Transit Company is the present name of the United Pipe Line System, and the Standard Oil Company controls the National Transit Company. . . .

"It was pointed out by several witnesses that the almost complete control of the pipe system by the Standard Oil Company gave it great power in fixing the prices of crude

steel producers can dispose of their product only through the pipe lines, especially in view of the artificial tariff, which is alleged, that railway rates are fixed by agreement kept at least as high as, and not higher than the pipe line charges. The pipe line system also gives the combination the power to charge over other refiners, who must pay for the cost of pig-iron fixed by the Standard, and who are claimed to be excessively high, or the artificial cost of freight. — *The same*, pt. 1, p. 100.

Sugar Trust. The following is from the testimony of Mr. Henry O. Havemeyer:

Q. The history and organization of the sugar refining company has been gone over so many times in testimony before that it is not worth while to dwell on it at length, but in order that we may have the record somewhat complete, will you give a brief sketch of its development going back to the conditions of the old sugar trust? (1887)—A. There were about twenty-five different firms or corporations in the sugar business. I think the evidence before some one of the Congressional committees was that for a period of 5 or 6 years before the formation of the trust, 18 of those failed or went out of business.

Q. Eighteen out of 25?—A. Not out of 25; 18 out of about 40. It occurred to some one to consolidate the others, and 18 out of 21, I believe, went into the trust, leaving 3 or 4 outside, who remained, I think, 30 per cent. Then Spreckles had a refinery in Philadelphia, and, 2 or 3 years after the formation of the trust, the trust or its successor bought the Philadelphia refineries.

Q. Will you explain in a word or two the difference between the trust and its successor and the reason for its going into this other form?

—A. The trust was attacked, and the courts decided it was illegal, and a company was organized in New Jersey which bought outright and put together the different companies, which were the constituent companies of the trust. They then consolidated, I think, over 90 per cent of the capital, then other refineries began to be constructed until now I think they would represent 90 per cent of the consumption.

Q. The condition before the formation of the trust was about this: When these 18 different companies failed, business was in such a condition as a whole, that it was considered unprofitable?—A. Very unprofitable—ruinous.

Q. Now, can you tell what special advantages, if you can give this in some detail I shall be glad to come from this organization, and in what way you make your savings?—A. The greatest advantage is in working the refinery full and uninterrupted. Of course, if you have a capacity of 140,000,000 and can only melt 100,000,000 somebody has got to cut down materials. The moment you cut down you increase the cost, by buying up all the refineries, . . . and concentrating the meltings in four refineries and working them full, you work at a minimum cost, and enables us to pay a dividend on the common stock.

Q. So the chief advantage in the combination was concentrating the production and destroying the poor refineries?—A. Precisely.—*The same*, pt. 2, p. 100.—See, also, (in this vol.), UNITED STATES OF AMERICA, D. 1897 (MARCH—)

The earlier combinations in steel produc-
tion. Mr. Reis, president of the National Steel

Company, states that that company was organized in February, 1899, under the laws of New Jersey, with a capital of \$50,000,000, \$27,000,000 of 7 per cent cumulative preferred stock and \$23,000,000 of common stock. The company includes six steel plants located at New Castle, Youngstown, Sharon, Mingo Junction, Reda, and Columbus. These plants are engaged in producing steel billets and slabs, which are the raw materials for making tin plates and various other products. The plants include blast furnaces. The company also owns iron mines in northern Michigan at Iron Mountain and Ishpeming. These are expected to produce from 1,250,000 to 1,400,000 tons of ore annually, the total amount required for the use of the steel plants in the combination being about 3,000,000 tons. The National Steel Company also owns nine lake boats for transporting ore, capable of carrying about 1,000,000 tons annually.

Mr. Reis testifies that the National Steel Company is not a "trust" in the ordinary sense, since it makes no attempt to secure control of a large proportion of the output of steel. Its economies are sought in the combination of steel plants with sources of raw materials. The National Steel Company produces only about 18 per cent of the Bessemer steel made in this country. The other chief concerns engaged in steel production are the Carnegie Steel Company, Federal Steel Company, the Maryland, Jones & Laughlin Steel Company, Wheeling Steel and Iron Company, and the Lorain Steel Company.

Mr. Reis states that the tariff, so far as it is placed upon steel billets, bars, and sheets, is no longer necessary for the protection of the industry. No steel is imported, and during the past 8 or 10 years the tariff has cut no figure. But if the tariff should be removed from tin plate or from certain other branches of the iron and steel industry there would be an indirect effect upon the making of steel.

Mr. Gary states that the Federal Steel Company owns all the capital of the Minnesota Iron Company, the Illinois Steel Company, the Lorain Steel Company, and the Elgin, Joliet and Eastern Railroad Company. The Minnesota Iron Company is the owner of 150,000 acres of iron ore property on the Vermilion and Mesaba ranges. It owns the Duluth and Iron Range Railroad Company, connecting its mines with Lake Superior at Two Harbors and Duluth. It owns large ore docks and also 22 steel lake vessels capable of carrying 2,000,000 tons per annum. The product of the Minnesota Iron Company will probably be 3,500,000 tons in 1900. The Lorain Steel Company manufactures chiefly steel rails for street railways, and to some extent steel billets. It produces about 500,000 tons of pig iron per year. The Illinois Steel Company has plants at North Chicago, West Chicago, South Chicago, Milwaukee, and Joliet. It produces about 1,500,000 tons of pig iron per year, and also manufactures steel rails, billets, plates, etc. It owns the Chicago Lake Shore and Eastern Railway, which connects its plants in the neighborhood of Chicago. It also owns large tracts of coal property in Pennsylvania and West Virginia, and makes there about 1,500,000 tons of coke per year. This company also owns iron mines in Wisconsin and Michigan.

Mr. Stetson, a lawyer, who drafted the charter and conducted the legal arrangements in the

organization of the Federal Steel Company, testified that it was organized in September, 1898, with an authorized capital of \$100,000,000 6 per cent noncumulative preferred stock and \$100,000,000 common stock. Of this, \$98,000,000 in all was originally issued. . . . Mr. Gary states that the Federal Steel Company is not a trust in any sense. It has not sought to restrict competition and has not brought together companies which were competing with one another, as is the case with most so-called trusts. The company has bought the stocks of companies doing different lines of business, just as an individual might do. . . .

The American Steel and Wire Company operates iron mines in the Lake Superior region. It controls, perhaps, one-sixth or one-seventh of the output of that region. It owns and operates coal mines and burns coke. It operates 8 or 9 blast furnaces, 17 open hearth furnaces, from 22 to 25 rod rolling mills, and from 20 to 30 wire mills. Its finished product is plain wire, barbed wire, wire fencing, rope, etc., wire nails, and all kindred articles. . . . Mr. Gates, chairman of the American Steel and Wire Company of New Jersey, testified concerning the formation of that company. It was organized on January 12, 1899. A gradual process of consolidating wire plants had been going on previously. As early as 1890 companies in which Mr. Gates was interested practically controlled the manufacture of barbed wire in this country. In December, 1897, and January, 1898, J. P. Morgan & Co. investigated the value of the various wire plants throughout the country with a view to further consolidation. The American Steel and Wire Company of Illinois, formed in March, 1898, seems to have resulted from this effort. . . . The combination into the American Steel and Wire Company was not rendered necessary by excessive competition and consequent losses among the wire companies. The Consolidated Steel and Wire Company, for example, made between 27 and 28 per cent during the last three years of its existence. It was believed, however, that more profit would be made through better management under consolidation."—*The same*, pt. 1, p. 190.

Tin Plate Industry.—The American Tin Plate Company was incorporated under the laws of New Jersey on January 6, 1899. Its authorized capital is \$20,000,000 of 7 per cent cumulative preferred stock and \$20,000,000 of common stock. Of this \$18,000,000 of preferred and \$28,000,000 of common stock has been issued.

It is made clear by the evidence of all the witnesses that the tin plate industry in the United States has been built up practically since the McKinley tariff of 1890, which raised the duty on tin plates from 1 to 2.2 cents per pound. Without the protection, all the witnesses agree, the industry could not have been profitably established. Having once been established, it was able to submit to the reduction of the duty to 1.2 cents by the Wilson tariff of 1894, and is now sufficiently protected by the duty of 1.5 cents under the Dingley tariff of 1897."—*The same*, pt. 1, pp. 173 and 187.

The climax of consolidation in steel industries.—**Formation of the United States Steel Corporation.**—In February, 1901, the climax was reached in movements of industrial combination, so far as concerns the production and greater uses of iron and steel, by the formation

of one gigantic corporation, to embrace nearly all the companies named above, but to preserve the enormous interests of the Carnegie Company, on the right, and to take in several other companies of more than considerable magnitude. This combination was effected by the Federal Steel Company, Morgan & Co., New York, as "syndicate managers," and an official statement of its terms was published in a circular from the company on the 24 of March, addressed to the stockholders of the Federal Steel Company, National Steel Company, National Tube Company, American Steel and Wire Company of New Jersey, American Tin Plate Company, American Steel Works Company, American Sheet Steel Company, whom the following announcement was made:

"The United States Steel Corporation has been organized under the laws of the State of New Jersey, with power, among other things, to acquire the outstanding preferred stocks and common stocks of the companies above named, of the outstanding bonds and stock of the Carnegie Company. A syndicate, comprising leading financial interests throughout the United States and Europe, of which the undersigned are managers, has been formed by subscribers to an amount of \$200,000,000, including among its subscribers the undersigned and many large stockholders of the several companies. . . . The arrangement hereinafter stated will provide the sum in cash and the financial support required for that purpose. Such support, through the undersigned, has made a contract with the United States Steel Corporation, under which the latter is to issue and deliver its preferred stock and its common stock and its 6 per cent gold bonds, in consideration for stock of the above named companies and bonds and stock of the Carnegie Company and the sum of \$25,000,000 in cash.

"The syndicate has already arranged for the acquisition of substantially all the bonds and stock of the Carnegie Company, including Mr. Carnegie's holdings. The bonds of the United States Steel Corporation are to be used to acquire bonds and 60 per cent of the stock of the Carnegie Company. The undersigned, on behalf of the syndicate, and on the terms and conditions hereinafter stated, offer in exchange for the preferred stocks and common stocks of the companies above named, respectively, certificates for preferred stock and common stock of the United States Steel Corporation, upon the basis stated."

Details relating to the terms and the prices of exchange are then given, and several statements of public interest are made among these: "The authorized issue of capital stock of the United States Steel Corporation is provided for in said contract is \$800,000,000, which one half is to be seven per cent cumulative preferred stock and one half is to be common stock. The company will also issue 60 per cent gold bonds to an aggregate amount exceeding \$300,000,000. In case less than half of the bonds and stock of the Carnegie Company or less than all of the stocks of the other companies above referred to shall be acquired, amounts of bonds and stocks to be issued will be reduced as provided in said contract. . . . The of the new bonds and of the interest on the same, and of the certificates for the new preferred and common shares, and the other

TRUSTS.

of organization and management of the United States Steel Corporation, shall be determined by J. P. Morgan & Co. Every depositor shall accept in full payment and exchange for his deposited stock the shares of the capital stock of the United States Steel Corporation, to be delivered at the rates above specified; and no depositor or holder of any receipt issued hereunder shall have any interest in the disposition of any other of the shares of stock, or of the bonds of the United States Steel Corporation, by it to be issued and delivered to or for account of the syndicate or of any proceeds thereof. All shares of the United States Steel Corporation deliverable to or for account of the syndicate, which shall not be required for the acquisition of the stock of the Carnegie Company or for delivery to depositors under the terms of this circular, are to be retained by and belong to the syndicate. . . . It is proper to state that J. P. Morgan & Co. are to receive no compensation for their services as syndicate managers beyond a share in any sum which ultimately may be realized by the syndicate.

Subsequently the American Bridge Company and the Lake Superior Consolidated Iron Mines were taken into the consolidation, and, on the 1st of April, 1901, the United States Steel Corporation filed with the Secretary of State at Trenton, N. J., amended articles of incorporation increasing its authorized capital stock to \$1,100,000,000. The stock is equally divided into 7 per cent cumulative preferred stock and common stock. The total is greater by \$250,000,000 than the amount stated in the circular issued by J. P. Morgan & Co., on March 2, as "presently provided for," and with the 5 per cent, gold bonds, not exceeding \$304,000,000, brings the security of the great steel combination up to \$1,404,000,000.

Industrial combinations in European countries.—Trusts of the magnitude and influence of those now so numerous in the United States are as yet rare in the Old World. . . . It is in Germany. . . . of all European countries, that trusts have spread most extensively and have been most successful. . . . The German technical journals for 1897 enumerate about 180 trusts, of which, it is true, only a few would correspond to American ideas, but all of which demonstrate a capacity for wider combination and fuller development. . . . As regards great industrial combinations, the most striking advance has been made in the German coal industry; the most prominent organization in this department being the Rheinisch-Westfälische Kohlensyndikat, which is distinguished by the characteristics of a genuine trust, exercising within its sphere of activity almost unlimited power. Like the American Standard Oil Company, it directly controls the sales, leaving the matter of production entirely to the separate companies. Under the innocent title of "eines Vereins zum Ankauf und Verkauf von Kohlen" (a society for the buying and selling of coal), this trust has, for the past two years, completely controlled the West German coal industry, and dictated prices. . . .

In Austria and Hungary trusts have not yet extended so rapidly. Nevertheless, on various occasions several of them have given rise to such unfavorable comment that the sentiment in favor of a legislative restriction of the movement is

TRUSTS

today much more pronounced in the Austrian than in the German Parliament.

As far as England is concerned, it must be admitted that, notwithstanding her 200 industrial activities and a competitive warfare not less pronounced than that of other states, the Trust system has as yet found but tardy acceptance in that country. This is doubtless due in some degree to the thorough application of the principle of Free Trade, for it is well known that the largest trusts are powerless unless their interests are secured by a protective tariff excluding from the home market the products of foreign countries. Furthermore, we should remember that in England the principle of individual freedom is regarded as inviolable. There, it still obtains more widely than in most other countries, and the majority of British merchants consider the principle involved in the formation of trusts as a serious menace to the freedom of the individual.

France is a country in which the Trust system has long flourished and assumed extensive proportions. In the iron trade, great trust companies—local in their character, it is true—have existed for the last twenty years; and the most powerful of these, like those of Germany, limit their activity to the establishment of sales depots. The chemical industry of France, like that of Germany, is now controlled almost exclusively by combinations. . . . Several international trusts, such as the Zinc Trust, also have their headquarters at Paris. Belgium, like France, is interested in most of the international trusts; and there, as in France, the Trust system has been successful largely in those enterprises which, in other industrial countries, have hitherto maintained a stubborn resistance to the inroads of the Trust. . . .

In respect to the economic value of trusts in Europe, it may be said that the influence exerted by them, both for good and for evil, is, in its essential features, similar to that exerted by the trusts of America"—W. B. Dowd, *Trusts in Europe* (London, May 1899).

Industrial combinations in England.—

England no longer enjoys that immunity from monopoly which was the boast of its own economists and the object lesson of American free-traders. While the position of trusts has not greatly changed in the United States during the past ten years, except to develop on the same lines, a commercial revolution is taking place in England. The country is becoming honey-combed with combinations and trusts; and, what is more and perhaps worse, there is no agitation against the system. No effort is made to check trusts or control them. . . . There are a large number of informal combines in England which give some advantages of monopoly without unity of control or financial association. Thus the railroad corporations have long ceased to compete as regards rates. It is perfectly well understood, and has been admitted over and over again by railroad men before Parliamentary committees, that the railroad companies combine. They agree in their rates, but compete in facilities, speed, etc. If it were not that the railroad companies are strictly regulated by the Board of Trade, this system of concerted action would be a very serious factor. As it is, the railroads represent the most powerful interest in Parliament. . . . Similarly, the . . .

shipping companies have fixed rates for freight, to stop under cutting, competing only in speed and facilities. . . . There are various understandings and agreements in the coal trade. . . .

"Until a few years ago, England was not ripe for trusts. The early efforts failed either through the overcapitalization of the concerns, opposition from outsiders, or defective management. . . . The monopoly that has been most prejudicial to public interests—the National Telephone Company—is now being undermined. . . .

The agitation against this monopoly on the part of municipalities became so strong that in 1898 the House of Commons appointed a committee to investigate the question. The result was that last year an act was passed giving municipalities the right to establish telephones, and authorizing the post office to spend \$10,000,000 in creating a competitive system in London. . . .

"During the last three years, there has been a prolific crop of amalgamations—half way houses

to trusts. . . . There is one kind of amalgamation taking place that deserves special notice. Great mining, iron, engineering, and shipbuilding firms have come together. Instead of dealing between the raw material and the completed ship or engineering work, the intermediate profits of the iron ore miner, the converter of the iron master, the steel maker, the iron foundry, the forger, the marine engine builder, and so forth,—all these middlemen are got rid of, and the whole business placed, as it were, under one roof. . . .

"Consumers in England have not so much to fear from combines regulated by the Companies' Act, and held in check by free trade as consumers in the United States."—R. D. BROWN: *Trusts in England (Review of Reviews, Nov. 1900)*.

TUNIS: A. D. 1881-1898.—During the French Protectorate.—In 1881, under prettexts which were much condemned at the time, the government of France compelled the Bey of Tunis to sign a treaty by which he ceded himself and country to the Protectorate of France (see, in vol. 2, FRANCE: A. D. 1870-1889). This action gave bitter offense to the Italians, who had been intending to lay their own hands on Tunis, and it is to be counted among the causes of the entrance of Italy into the Dreikönig or Triple Alliance with Germany and Austria-Hungary in 1882. But time had so far worn away the grievance that the Tunisian protectorate was practically recognized by the Italian government in a treaty with France, signed in September, 1896. In 1898, the general results produced in Tunis by seventeen years of French control were described in an elaborate report to the British government by its representative in the Protectorate, or Regency, Sir H. Johnston. The following is quoted from that report: "The protectorate of Tunis is nominally an Arab Kingdom, ruled by a prince of Turkish descent under the guidance and control of a French Minister Resident-General and a staff of French officials. The present Bey of Tunis, Sidi Ali Pasha-Bey, is, I believe, the most aged ruler living, having been born in the year 1817. He was *Hair Apparent* at the time of the French treaty of protection, concluded with his elder brother, Sidi Sadok Bey. Sidi Ali at his accession to the throne in 1882 accepted the inevitable with a good grace, and has from the very first lent himself unreservedly to the French efforts for the regeneration of his country. Two of his ministers are Arabs (the Prime Minister and the Minister of the Pen), the remainder of the Council are French officials. M. René Millet, the Resident-General of France, is at the same time Minister for the Foreign Affairs

of the Tunisian Government and President of the Council. . . . The personal staff of the Resident-General consists of about nine members. In addition, the French Government is more or less directly represented throughout the Regency by officials corresponding almost exactly to our vice-consuls, collectors and assistant-collectors in our African Protectorates with this difference, that the collectors are called *contrôleurs*. . . .

"The whole of Tunisia is now under civil administration, except the Sahara district to the south of Gabes, which still remains under military control. . . . In the districts which I visited, the natives, talking to me freely, said that they would sooner be under the rule of any Frenchman than under that of their own keds. The French are face to face here with the same problem that we find so difficult in other oriental countries—that of creating amongst the native body of public officials who will keep their hands from picking and stealing, and their tongues from evil speaking, lying and slandering. No man is so cruel to an Arab as an Arab; no one is harder on Muhammadans than their co-religionists. Justice is administered to Europeans, and to the protected subjects of European powers, by French tribunals, which equally deal with cases arising between Europeans and Tunisians. . . . Justice is administered to natives, in cases where natives alone are concerned, by Arab courts depending directly on the Tunisian Government, but with a Frenchman at the head of each principal department. At all the centres of population there are Arab courts of justice. The Court of Appeal for the French courts in Tunis is the Supreme Court of Algiers; the appeal from the Arab courts is to the Bey. . . . Public works are entirely under French control, though Tunisians are employed in minor posts. . . .

"Public education is under French and Arab direction. The schools and colleges more or less directly supported by the Government in the city of Tunis are the following:—'Lycée Carnot,' the Collège Sadiki, the secondary school for girls, the Alawi College, two day schools for boys, a school for Jewish children of the Israelite Alliance, a Jewish agricultural school, and schools for Jewish girls, three schools for boys under the direction of friars, and a primary

TUNIS

and the little girls. There is a Muhammadan school near the Great Mosque in Tunis, and also the 113 primary Muhammadan schools in the town. In the interior there are about 100 primary schools for boys and girls, supported by Government and mainly under French direction. There are also about 500 Muhammadan schools in the interior, either private or assisted by Government funds. In addition to Government primary schools, a large number of private establishments have sprung up at Tunis and Sfax, wherein surprisingly good teaching is given even in such subjects as music.

The progress of education is having very marked effects on the indigenous population of the country. The general good results in the dissipation of Muhammadan fanaticism and prejudice, respect for life, however, when the recipient of civilization is turned out a creature with no religion, with no principles, and a contempt for manual labour.

In 1880 life and property were thoroughly insecure. The property of Europeans, perhaps, was so provided they were the subjects of a power due to coerce the Government of Tunis, and their lives were not in any great danger in the principal towns, but it would have been impossible for any European to have travelled

TURKEY, 1895

about many parts of the Regency without considerable escort, and it would be possible to go to some parts of the Regency at all times, at the head of an army.

It was as difficult and dangerous and expensive to travel about the Regency 15 years ago as it is now to visit the interior of Morocco. I spent eight months in Tunisia at that time, but never succeeded in visiting Kairwan, the Holy City.

Now I can go from Tunis to Kairwan in a few hours by rail way, see all the sights unhindered, enter the mosques without offence and sleep at an excellent hotel and be back again at my work in Tunis the next day. I may further add that I have just traversed much of the Tunisian Sahara and a good deal of the desert country with no other escort than my servant and a native cavalryman to act as guide. I should have been equally safe had I been alone. The whole Regency of Tunis is now as safe for tourists as France. *Great Britain, Parliamentary Publications, Papers by Command, 1895, C. 8649-48, pp. 10-15 and 2-30.*

TURKEY.

A. D. 1895.—Revolt and massacres in Armenia.—Atrocities on both sides.—A horrible condition of things in Armenia was beginning to cause excitement throughout the world on one hand, the Armenians were in revolt against the foul Turkish government, and avenging it themselves savagely upon their oppressors whenever they found the opportunity; on the other hand the Turks were making the revolt an excuse for the atrocities that are habitual to them in every such case. A special correspondent sent by Reuters news agency to investigate the situation reported his conviction "that both Turk and Armenian are in the wrong, and that as very often happens, it is the innocent who have suffered for the wrong doings of the guilty. When it is asserted on behalf of the Turks that they are engaged in suppressing a revolutionary movement in Armenia, the statement is fully justified by the facts of the case. There does exist in Armenia an extremely vigorous revolutionary movement, and it is equally beyond question that the methods of some of the leaders of this movement are no less shocking than the barbarity of the Turk in suppressing it. At every step," he added, "I became more and more convinced that the inhuman ferocity displayed in this terrible struggle for the mastery has been in the least exaggerated in the reports of the massacres already published in England. At Rilis I heard the story of a Turkish soldier who boasted, as one who had achieved a glorious feat that he had taken part in the disemboweling of thirty pregnant women. Two lives in was the rallying cry of the armed men who carried out this butchery. Another soldier, who took part in a massacre in a church, described, setting upon every ghastly detail, how he had stepped and slid along the blood-washed floor while the inhuman work proceeded. Un-

fortunately, something very like a counterpart of these atrocities is presented by the methods of some of the leaders of the Armenian revolutionary movement. I believe there is no doubt of the fact that certain of these Armenian conspirators arranged to murder the Rev. Dr. Edward Riggs and two other American missionaries at Marsovan, and fasten the blame upon the Turks in order that, as they imagined, the United States might inflict summary punishment upon the Turkish Government, thereby rendering Armenian independence possible. The missionaries only escaped through a timely warning which they received from an Armenian friend. Dr. Riggs has devoted his life to the education of the Armenian youth in the missionary schools, but the conspirators, in their blind fanaticism, gave this fact little heed."

There could be no denial, however, that the treatment of Armenians and the Armenians by their Turkish political masters was horribly bad. In May, the governments of Great Britain, France and Russia met in proposing certain reforms for Armenia over which there were evasive and dilatory negotiations carried on by the Porte for several months. Meanwhile, the Armenians became more aggressive and threatening and a secret society called the "Hiutluk," which had been in existence among them since 1887, assumed great activity. Connected with the Hiutluk there was said to be an organization of spies and "executioners," the latter of whom carried out deeds of assassination, arson and bomb explosion which the society had pronounced. Finally on the 15th of October, an imperial irade (edict) or decree was issued approving and adopting the project of reform which the British, French and Russian Ambassadors had submitted to the Porte. But the appearance of the sultan's irade did not make any

speedily followed by fresh reports of frightful massacres of Armenians, at Trebizond, Erzeroum, Bitlis, Zeitoun, and elsewhere, with outraging of women and destruction of property, which increased rather than diminished as time went on. There was no sign that anything had been done towards carrying out the promised reforms, though the sultan wrote personally to Lord Salisbury to remonstrate against an expression of skepticism concerning them, which the latter had let fall in a speech, and to say to the British Premier: "I will execute the reforms." This is my earnest determination, as to which I give my word of honour." But nothing came of it all, and the Powers which had received the Sultan's promises could agree on no steps further, except to demand and obtain permission to bring, each, an additional gunboat into the Bosphorus.

— *Annual Register*, 1895, pp. 284-91 and 190-433.

In response to a resolution of the Senate of the United States asking for information relative to the treatment of the Armenian subjects of the Turkish government, the Secretary of State, Mr. Olney, on the 19th of December, 1895, communicated the following among other statements of fact: "Of the massacres at Sassoun, which occurred in August, 1894, the Department of State has little trustworthy information. . . . Since that time appalling outbreaks against the Armenians have occurred in many other parts of Asia Minor, where these unfortunate people form but a small minority of the population. At first they were scarcely more than local riots, as at Tokat, in the vilayet of Sivas, in March last, where one Armenian was killed outright and more than 30 wounded by the Turkish soldiery. In June last an attempted rising of Armenians in the province of Aleppo in the mountains of Kozar Daghi and Zeitoun was thwarted without bloodshed by the arrest of the alleged conspirators. . . . In July a band of armed Armenians crossing into the vilayet of Erzeroum from Russia was dispersed, several being killed or captured. By August the Moslem feeling against Armenians had become so far aroused that rumors of intended massacres came from several independent quarters, Harpoot, Marsovan, and Bitlis among them, which led to urgent demands by the United States minister for adequate measures looking to the due protection of American citizens in those places.

"On the 30th of September grave disturbances began at Constantinople itself. Several hundred Armenians, who had gathered for the purpose of going in a body to the Sultan's palace and demanding redress for the grievances of their countrymen, were dispersed by the police after a severe conflict in which a number of Turks and Armenians were killed and wounded. Mob violence followed, the Armenians resident in various quarters of the capital being assailed by an excited Turkish rabble, and over 50 were slain. The rioting continued the next day, October 1, in Constantinople and its suburbs. Some 800 or 1,000 Armenians were captured or arrested, many of them being armed with new revolvers of a uniform pattern. By the third day order was restored, and the Armenians who had sought refuge in their churches returned to their homes. The effect of this outbreak at the national capital was most disastrous in the provinces. The danger of a general massacre of Christians in the vilayets of Adana and Aleppo seemed so immi-

nent, that renewed orders for the effective protection of American citizens in those provinces were demanded and obtained. Fears for the safety of American citizens at Hadjin, Mersine, and Marash were also felt, and the cruiser *Marblehead* was promptly ordered to Iskanderoun (Alexandrette), the nearest seaport.

"On October 8 a Turkish uprising broke out at Trebizond, due, it is reported, to an attempt to assassinate the late Vali of Van as he was about to leave for Constantinople, the Turks claiming that the act was done by an Armenian and that they were in danger of a general Armenian attack. On the 9th the disturbance was renewed, many Armenians being killed and their houses and shops looted by the mob. The authorities attempted to quell the riot, but being only some 400 soldiers and policemen at command were powerless, and murder and pillage went on as long as an Armenian was in sight. The official Turkish reports give the number of Armenians slain as 182, of Turks 11, but a general estimate places the total number at 500. Reinforcements of troops soon arrived and quiet was restored. No injury to American citizens or property occurred.

"From this time the reports of conflicts between Turks and Armenians, with great loss of life, became frequent and confused. At Adana, some 60 miles from Smyrna, 50 Armenians were killed October 9. Koordish raids terrorized many parts of the Armenian provinces. At Adana over 500 were reported killed, the Turks accounting alleging that the Armenians attacked the Moslem mosques during the hour of prayer. At Diarbekir 5,000 are said to have lost their lives, of which 2,000 were Mussulmans, but the Turkish authorities pronounce this estimate exaggerated. From Mahatia comes the report of a 'great massacre' early in November, where every adult male Christian is said to have perished. Another sanguinary outbreak, with great slaughter, is reported from Sivas on November 12; some 800 Armenians and 10 Koords are said to have been killed. At Hadjin and Oerba 10 of life is reported, the American missionaries, those places being protected by Turkish garrisons under orders from the Porte.

"The Kaimakan of Hadjin is credibly said to have announced that he would destroy the town and sow barley on its site. There being an American school at that place, directed by American teachers, the United States minister thereupon notified the Porte that if one of the American ladies received injury from the conduct of the populace, he would demand the name of the United States, 'the head of the Kaimakan.' That officer has since been removed. Later reports allege massacres at Marsovan and Amasia. The consular agent at Aleppo telegraphs that a severe conflict occurred at Aintab, and that great fear prevailed at Aleppo. The burning of the American buildings at Harpoot took place during a bloody riot and many persons are said to have perished in the province of that name. At Kurumluke are reported. Particulars of the recent conflict at Marash, on November 19, in which American missionary property was destroyed, have not been received.

"These scattered notices, for the most part received by telegraph, are given, not as a statement of the facts stated, but as showing

alarming degree to which racial prejudice and fanatic passions have been roused throughout Asia Minor. As above said, the Department of State has no official knowledge regarding the number of these reported massacres, and therefore up to the early part of December the Turkish minister estimated the number of the killed as exceeding 30,000; it is more than likely that the figures are greatly exaggerated. As yet violence has not been checked, or at least to have partially subsided. The Turkish Government has been emphatic in assurances of its purpose and ability to restore order in the affected localities. Many governors have been appointed in many of the provinces, troops have been sent to the scene of recent or apprehended disorders, and forces have been massed to subdue the Armenians who had gained the ascendant in Zian.

Of the American missionary establishments in Turkey and of the extent to which they suffered during the outbreaks, the same report gave the following account:

The number of citizens of the United States resident in the Turkish Empire is not accurately known. According to latest advices there are 172 American missionaries, dependents of various mission boards in the United States, scattered over Asia Minor. There are also numbers of our citizens engaged in business or practicing professions in different parts of the Empire. Besides these, more or less persons, originally subjects of Turkey and since naturalized in the United States, have returned to the country of their birth and are temporarily residing there. The whole number of persons comprising these several classes can not be accurately estimated, but the families of such citizens being considered can hardly be less than five or six hundred, and may possibly exceed that total.

Outside of the capital and a few commercial support towns, the bulk of this large American element is found in the interior of Asia Minor and Syria, remote from the few consular establishments maintained by this Government in that quarter, inaccessible except by difficult journeys, and isolated from each other by the broken character of the mountain country and the absence of roads. Under these circumstances and in the midst of the alarming agitation which for more than a year past has existed in Asia Minor, it has been no slight task for the representative of the United States to follow the interests of those whose defense necessarily falls to his care, to demand and obtain the measures indispensable to their safety, and to get instantly upon every appeal for help in view of real or apprehended peril. It is, however, gratifying to hear testimony to the energy and promptness of the minister in dealing with every grievance brought to his notice, and his foresight in anticipating complaints and securing timely protection in advance of actual need. The efforts of the minister have had the moral support of the presence of naval vessels of the United States on the Syrian and African coasts from time to time as occasion required.

While the physical safety of all citizens of the United States appears up to the present date to have been secured, their property has, on at least two recent occasions, been destroyed in the course of local outbreaks at Harpoot and Ma-

rash. The details of the Harpoot destruction have so far been only merely reported, and though it took place about the middle of November. It is stated that the buildings in that place were set on fire separately by Kurdish tribesmen in the presence of the Turkish soldiers, and an Armenian mob. Besides the chapel, and theological school and seminary building, the ladies' house, boarding house, and residences of three American missionaries were burned, the aggregate loss on the buildings, personal property, stock, fixtures, and apparatus being estimated in the neighborhood of \$100,000. The United States minister has notified the Porte that the Turkish Government will be held responsible for the immediate and full restoration of all injuries on the score. The American Missionary School of Science at Marash was burned during a revolutionary outbreak on November 19. The value of the property destroyed has not been ascertained, but after prompt investigation the minister will make a demand for adequate indemnity. *United States, MPA, Commerce, Int. Section, South Division, N. 33.*

On November 10th of the Foreign Consuls arrived at Constantinople from Erzeroum on leave, and he reported the scene on his journey as heartrending. The whole country between Trebizond and Erzeroum was devastated. He counted 100 dead bodies lying by the road near one town. Nearly all the villages were burnt, and in many cases the whole population entirely wiped out. At 1.58 on December 16, 1895, Lord Salisbury received the following telegraphic despatch from Sir Philip Currie: "It may be roughly stated that the recent disturbances have devastated, as far as the Armenians are concerned, the whole of the provinces to which the scheme of returns was intended to apply, that over an extent of territory considerably larger than Great Britain all the large towns with the exception of Van, Samsun and Moussh have been the scene of massacres of the Armenian population, while the Armenian villages have been almost entirely destroyed. A modest estimate puts the loss of life at 100,000. The survivors are in a state of absolute destitution and in many places they are being forced to turn Mussulmans. The charge against the Armenians of having been the first to offer provocation cannot be sustained. Non-Armenian Christians were spared, and the comparatively few Turks who fell were killed in self-defense. The participation of the soldiers in the massacres is in many places established beyond doubt."

"Of the appalling horror of this crime I wish it were needless to speak. [It] would be none the less horrible if the whole of the people massacred and outraged, ruined and starved, and driven to the snowy mountains in the middle of winter, had been all the poorest villagers of the most rustic village communities. But when we know that many thousands of the victims have been people educated at Christian schools and colleges, and who had acquired there, in addition to the inalienable virtues of their native and ancestral faith, much also of the refinements and activities of civilized life, we may reach some true conception of the tragedy which have been inflicted on such a people in the face of Europe and of the world by the cruelty and brutality of the Turks. It is indeed right that our first indignation should be directed against the

Infamous Government of Turkey. Let us remember that this is not a Government with which we have had nothing to do, or for which we have had no responsibility, but a Government which the European Powers, and we especially, have been protecting and nursing for half a century.

Then we may indeed begin to think, with remorse and shame, of our handiwork, and of its results. In this particular case, indeed, the immediate blame lies almost alone with Russia. By a complete departure from all her previous great traditions she deliberately refused to join the other Powers of Europe for the purpose of compelling the Sultan to get with decent humanity to those of whom she had been the declared defender. She had the physical power and the geographical opportunity which others had not; and there can be no doubt whatever that a joint occupation of the waters of Constantinople by the fleets of the European Powers would have secured the very moderate demands that Europe made upon the Porte.—The Duke of Argyll, *Our Responsibility for Turkey*, pp. 116-122.

A. D. 1896.—Conflict in Crete between Christians and Mussulmans, and its preceding causes.—In 1868, the Cretans, for the second time, were thrust under the Turkish yoke. "By way of seduce the Powers exerted themselves feebly in inducing the Porte to concede the so-called 'Organic Statute' [or 'Organic Regulation,'—see in vol. 3b GREECE: A. D. 1862-1884].

As the Charter remained a dead letter, the Cretans seized the next favourable opportunity to rise in 1877. Their case was brought before the Congress of Berlin; but the only relief the Powers could extend to them was a fresh promise on the part of the Porte, recorded in the XXIII Article of the Treaty, to observe scrupulously that Organic Statute, which had been proved to be unworkable. Meanwhile, the Cretans had remained under arms during the whole of 1878, the island being again almost completely devastated by the half-starved and famishing troops which had survived the Russo-Turkish War. Ultimately, through the mediation of England, the Porte was induced, in November of that year, to concede the Pact of Halepa, so named after the village near Cana where it was negotiated, and signed under the supervision of the British Consul, Mr. T. B. Sandwith—this fact being expressly recorded in the preamble of the document. The arrangement was accepted by the Cretans as a compromise, in spite of its many and manifest drawbacks. Nevertheless, it brought about, at the outset, certain beneficial results. Political parties were formed in which the Mohammedan Cretans banded, irrespective of religious differences, with their Christian countrymen; and the unprecedented phenomenon of a Christian Vali completing his four years' tenure of governorship was witnessed in the person of Photiades Pasha.

But this tendency to conciliation of the conflicting elements in the island was by no means to the liking of the Porte. The presence of a Mussulman military governor was therefore discovered to be necessary, and as his grade was usually superior to that of the Vali, and the Mussulman sub-governor was the official whose recommendations were of weight with the Porte, nothing was easier than to create insuperable difficulties for the Christian Vali. Thus succes-

sive Valis were compelled—often by payment from Constantinople—to tender their resignation, while, at the same time, the Porte refused not to fulfil the demand on the ground that it was brought about under the Government of Sattinski Pasha in Ploie, in 1889, when a certain plan of deception and treachery was carried out by the Porte with consummate success.

The Cretans, as it is but natural, were in critical contingencies by the advice of Russia at Athens. The Porte therefore promised the Greek Government, as soon as things would assume a threatening aspect in Crete, to meet the demands of the islanders, provided they prevailed upon to abstain from occupying important positions. In spite of the transparency of the proposal, M. Trikoupi, the Greek Premier, fell into the snare. When the Cretans were held back, troops were posted to the island, and the strategical point of Cana was seized, the Greek Government and the troops were defied. An Imperial firman issued in November of that year, abrogated the Pact of Halepa and the British Government, in whose auspices it was concluded, was now powerless to exact respect for what was virtually an international arrangement. There was no longer any question of a Christian Vali with a fixed tenure of office, or of an Assembly of Cretan representatives. Shukir Pasha, the commander of the Turkish troops, was invested with absolute and full military authority; Mussulman Albanians occupied the Christian villages as gendarmes, and Crete continued to submit to this kind of martial law up to 1891. When, however, Mahmut Djelaleddin Pasha, the then Mussulman Vali, surpassed even his predecessors in arbitrariness, and actually dictated to the tribunals decisions in favour of Mohammedan litigants, the Cretans began to lose patience and another outbreak appeared imminent. It was only then that the Great Powers moved in the matter and prevailed upon the Porte to revert partly to the previous order of things, by appointing Alexander Karatheodory Pasha, a Christian and a Greek, as Governor. Beyond this, however, the Pact of Halepa was not observed. True to its traditional tactics, the Porte took with one hand what it had given with the other. The Mussulman Deputy Governor and the military commander frustrated every effort of the Vali, the very funds necessary for the maintenance of the gendarmes being denied him. Karatheodory was consequently forced to resign. Complete anarchy now reigned in the island.—Ypsilouritis, *The Situation in Crete* (*Contemporary Review*, Sept., 1896).

Occasional skirmishes between the Christian inhabitants and the soldiers kept the excitement smouldering and ushered in the sanguinary scene that finally followed. Turkish Pasha, taking time by the forelock, armed the Cretan M. S. for the combat with the approval of the commander of the troops, and the city of Cana prepared for a blood bath. The Mohammedan festival (Ramazan) was drawing to a close, and the three days of rejoicing which invariably follow Ramadan were supposed to be fixed for the attack on the Christians. These anticipations were duly realised, and on the 24th May, 1896, at Fodebar, the Turks fired the first shots, blowing to the brains of several Christians to make the Moslem holiday. Forearmed, however, by the

warmed, and the Christians defended themselves by the use of their ability on that day and the 27th, and during which every house but one was burned, and neighbours living on opposite sides of the desirably narrow streets met at each other from behind stone heaps piled up in the windward of their hut-towns. The streets were so full of the people suspended, and it was not until the 27th that the thirty Christian corpses and the twenty-five women and four children and the twenty-five Turks were removed for burial.

These events provoked a new administrative change at Scio. Turkhan Pasha was recalled, and Mehmed Pasha, at the head of four battalions from Salonica, came to take his place. These troops had wasted the villages and fields of the provinces of Apollonia, Cydonia, and Kissamon, burning houses, huts, and churches on the way. The best soldiers in the world, however, run for their lives in the interior of Crete, and Mehmed Pasha was repulsed with the loss of two hundred men in the town of Vamou. The foreign consuls at Scio, having verified these facts, strongly blamed his conduct in a joint verbal note, and the Porte shortly afterwards recalled him, and appointed Berovitch Pasha [Primer of Samos] in his place. This was the beginning of the end.

The Christians of the island meanwhile met, and through their delegates formulated certain demands, which the foreign consuls referred to their plenipotentiaries at Constantinople, and the famous "Allocutions of the Convention of Halepa" were framed in consequence. The Sultan, too, yielded to early pressure, graciously conceded the nomination of a Christian governor-general in the person of Berovitch, the summoning of the National Assembly, and other demands. The questions of the tribunals and the gendarmerie for the enforcement of peace and order in the island were to be arranged by international commissions, but weeks and months passed away before they were even appointed. At last the commissions arrived and began their work in December [1896]. — E. J. Dillon *Crete and the Crisis* (Fortnightly Rev., May, 1897).

A. D. 1896. January — March. — Turkish opposition to English and American measures for relief to Armenian sufferers. — Work of Miss Clara Barton and the Red Cross Society. For some time the distribution of supplies from England and America to the sufferers in Armenia was forbidden by the Turkish government for reasons stated by the Turkish minister at Washington as follows: "The collections are made on the strength of speeches delivered in public meetings by irreconcilable enemies of the Turkish race and religion, and on the basis of false accusations that Turkey repudiates. Besides, the Sublime Porte is mindful of the true interests of its subjects, and, distinguishing between the real state of things and the calumnies and will exaggerations of interested or fanatical parties, will under its own legitimate control alleviate the wants of all Turkish subjects, irrespective of creed or race." The Red Cross Society of which the American branch had prepared to send its President, Miss Clara Barton, with a small corps of assistants, to the scene of the suffering, was especially excluded, by the order of the Porte. Miss Barton and her staff sailed, however, from New York, in January, and Mr. Perrell, the American minister at Constantinople, succeeded in obtaining permission for

them to do their humane work, as private individuals, not in the name of the Red Cross Society, and with all displaying its insignia. The such a readiness of the Porte to permit the energy with which Miss Barton pursued her object of relieving the victims, and the complete absence of opposition and all obstructions, so that in April she was able to report:

"The way is all made clear for sending supplies. The sensible reports of doing the work are now known, and have been entered with for service, so that heavy supplies can be sent at any and all times, and no more needed. I feel my breath come lighter, as I think of these poor suffering and to very strange to my work of one doctor, when one's strength is needed, and men, with twenty-five or thirty of the supplies, shall carry some of the supplies and help into their right of helplessness. I am happy to be able to say for the benefit of the consuls, that I hold the written word of the Porte, officially given through the minister of foreign affairs, from the 21st of April, that not the slightest interference with any distribution within the province will be had. The dated document was of the 21st of April, and I have to Sir Philip Currie, the British ambassador, and by him passed to me. The document is general and final, without question of reservation, and settles all doubt."

In September Miss Barton returned home for rest, and to be at her testimony to America of the immensity of the need still existing in the Armenian provinces and calling for help. Her departure from Constantinople was reported by the newspapers to have been the occasion of a remarkable demonstration, by cheers, flags and salutes, from ship and shore of the estimate put upon the work she had done.

A. D. 1896. August. — Attack of Armenian revolutionists on the Ottoman Bank at Constantinople. Turkish massacre of Armenians in the city. In the spring of 1896 the Armenian revolutionists, encouraged by the outbreak in Crete, made fresh appeals for attention to the sufferings of their country, with threats of some desperate action if no heed was given. In August, the desperate act was undertaken, at Constantinople, by 30 or 40 madly devoted men. This reckless little band of misguided patriots made a sudden attack on the Ottoman Bank, a British institution which controls finance in the Turkish empire, and possession of the building made prisoners and hostages of two of its directors and some 80 of its clerks, and were fully prepared with dynamite to destroy everything within its walls, including themselves, if certain reforms which they set forth were not instantly decreed. Their theory was that the Ambassadors would force the Sultan to grant the reasonable reforms which they demanded for the Armenians, rather than permit the destruction of the Bank and its staff. It was a home-borrowed from the theory of the anarchists, and made ridiculous by the way in which they failed to carry it out. They went in bravely, and nothing hindered their destroying the Bank, but they allowed themselves to be talked out of it by Mr. Maximoff, the Russian dragoman, and would have been the laughing-stock of the world if its attention had not been absorbed by the massacre which followed.

"The real heroism of that day was displayed

In another quarter of the city by another small party of Russian Armenians men and women, who took possession of two stone houses and fought the Turkish troops to the death the survivors killing themselves when they could fight no longer. There was no serious fighting anywhere else, although dynamite bombs were thrown from the windows of houses and khans upon the troops in a number of places, showing that some preparation had been made for a more extended outbreak. There is nothing to be said in justification of this attempt of the revolutionists. They had proved strong enough to justify anything in reason, but there was nothing reasonable in this plan, nothing in it to attract the sympathy of the Powers or to conciliate public opinion, and if the statements are true which have been made by Armenians as to certain unexecuted parts of the plan, it was diabolical. This only can be said on behalf of these revolutionary committees. They are the natural outcome of the treatment of the Armenians by the Turkish Government during the last twenty years. When oppression passes a certain limit men can become desperate, such revolutionary organisation always appears. They are the fruit and not the cause of the existing state of things in Turkey, and if we can judge by the experience of other countries, the worse things become here, the more violent will be the action of these committees, whether Europe enjoys it or not.

Revolutionists are the same all the world over, but the Turkish Government is unique, and it is not the attack on the Bank which interests us but the action of the Government which followed it. As we have said, the authorities had full information of what was to be attempted and did nothing to prevent it, but they made every preparation for carrying out their own plan. Bands of ruffians were gathered in Stamboul, Galata, and Pera, made up of Kurds, lazies, and the lower class of Turks, armed with clubs, knives or firearms; and care was taken that no one should kill or plunder in the quarter to which he belonged, lest he should be recognised and complaint made afterwards by the Embassies, with a demand for punishment. A large number of carts were in readiness to carry off the dead. The troops and police were in great force to prevent any resistance, and to assist the mob if necessary. It was a beautiful day, the streets were crowded, and few had any idea of what had happened at the Bank, when suddenly, without any warning, the work of slaughter and plunder began, everywhere at once. European ladies on the way to the Bosphorus steamers suddenly found themselves surrounded by assassins, and saw men beaten to death at their feet. Foreign merchants saw their own employes cut to pieces at their doors. The streets in some places literally ran with blood. Every man who was recognised as an Armenian was killed without mercy. In general, the soldiers took no part in the slaughter and behaved well, and this somewhat reassured those in the streets who were not Armenians; but in a few moments the shops were closed and a wild panic spread through the city. The one idea of every one was to get home; and as the foreigners and better classes live out of the city in summer they had to go to the Galata bridge to take the steamers, which run as usual all through the three

days of massacre. This took them to the streets where the slaughter was going on, and consequently we have the testimony of eye-witnesses as to what took place. The work of death and plunder continued for two days. On Friday there were no outbreaks and occasional lulls in the massacre up to Tuesday.

The number killed will never be known. The Ambassadors put it at 5,000, but the official report to the palace at Stamboul says these thrown into the sea. Thousands of shops and offices were plundered, and a large number belonging to Greeks and Armenians. Everything was done in the most systematic way, and there was not a moment of anarchy, not a moment when the army and police lost perfect control of the city during those days.

The majority of those massacred belonged to the working class, especially the lower porters, but a large number of gentlemen, merchants and other wealthy men, were taken together with about fifty women and children. The savage brutality of the Moslem is always something beyond all imagination, and in many cases the police joined in beating men, women and children to death with knives, and the very face of Europeans. In many cases European officials appealed to the officers in command of the troops, who were looking on at the slaughter of helpless, unarmed men to interfere and put a stop to it. The reply was, 'We have orders.' It was an officer who killed the clerk of the British Post office on the steps. And some of the most cold blooded and horrible murders took place in front of the guard house at the Galata end of the bridge. In the presence of officers of the Sultan's household of the highest rank. They also had their orders.

Happily for the honour of the Turkish people, there is another side to the story. It was the Government and not the people that conducted this massacre. And although the volunteers employed were told that they were acting in the name of the Prophet, and freely used his name, and are boasting today of what they did for Islam, the Sheikh ul Islam forbade the Sofias taking any part in the slaughter and many a pious Turk did what he could to protect his neighbours. It is not the people, not even the mob, who are responsible for this great crime. It was deliberately committed by the Government. The Ambassadors of the six Powers have declared this to be an unquestonable fact in the Joint Note addressed to the Porte.

Since the massacre this same Government has been carrying on a warfare against the Armenians which is hardly less inhuman than beating out their brains with clubs. There were from 150,000 to 200,000 Armenians in Constantinople. They were merchants, shopkeepers, confidential clerks, employes in banks and offices of every kind—the chief business men of the city. They were the makers of the city, they had charge of the khans and lazars and the wealth of the city; they were the porters, house servants and navvies. . . . Now the Government has undertaken to ruin this whole population. They are hunted about the city and over the hills like wild beasts. . . . Thousands have been sent off at once to the Black Sea ports, to find their way as best they can without money or food to their desolated villages in the interior. . . . Thousands

in the foreign countries. *The Constantinian*
Message (Contemporary Review, etc.).

A.D. 1897, January February. Fresh
 conducts in Crete. Attitude of Christians
 and Mussulmans towards each other. Re-
 ports of the British Consul-General and
 others. Early in January, 1897, while proceed-
 ing to the organization of the new gendarmerie
 at Suda Bay, and while the discussion of
 the National Assembly, to be
 held at Athens, was rife, Turkish hostilities be-
 came more and more frequent. The Christians
 and Mussulmans looked out
 on each other with a good evidence in the fol-
 lowing words: "Sir Alfred Biliotti, the British
 Consul-General at Crete, that responsibility for
 the disturbances in Crete should be charged
 upon the party hardly more than upon the
 other. The speech of the Consul-General to
 the British House of Commons, January 9, 1897, is
 very instructive."

On the morning of the 3rd instant a great
 party of Christians in the town, owing to a wounded
 Christian having been conveyed to the hospital,
 were gathered in the square near the hospital, and
 were told that two Mussulmans had been
 killed and wounded at the same time on the road
 between Canea and Suda Bay. All the shops
 were shut up as usual, but there was no general
 excitement. Christians especially having
 congregated in the square near the hospital in
 the hope of finding out further information.
 Hoping to be in the town, I took a carriage
 and drove towards Suda. When at about a
 mile from Canea I came upon a number
 of Mussulmans, who told me that four Christians
 were at Apokorona had, without any provo-
 cation, discharged their revolvers on
 the Mussulmans, two of whom had been se-
 verely wounded. I saw one of them in his cot-
 tage, and by the road with a bullet wound in
 the forehead; the other had been conveyed on
 a mule to the village of Tsikalaria (south-
 east of Suda Bay), 2 miles from where he had
 been wounded, of which he was a native. The
 Christians fled across the fields, leaving on
 the road a horse and an overcoat, and took to the
 mountains.

Between half and a quarter of an hour after
 this, about another Christian, a native, like the
 first, at Tsikalaria, was passing on the road
 when he was fired upon by Mussulmans in retal-
 iation for the wounding of their two co-religion-
 ists. Not having been hit, the Christian jumped
 from his mule, and ran for his life along the Suda
 road being pursued by armed Turks. He was
 overtaken by three of them about half a mile fur-
 ther down and was shot at and mortally wounded
 in front of Commander Shortland, of
 His Majesty's ship "Nile," who was coming on
 from Suda Bay to Canea. The wounded
 man was taken charge of by the Albanian
 captain stationed in a Christian monastery close
 by, and was subsequently put in a carriage by
 the Russian Consul, who was returning from
 Suda Bay at that moment, and sent to the town
 where he died. While I was making
 my way on the road a brisk fusillade was heard
 at Suda Bay, and as I was about to return
 to the town a young Turk was seen at a distance
 of a few rods with a letter in his hand. It
 was a message sent by the Albanian corporal
 stationed at Tsikalaria asking for assistance.

This message had hardly arrived when a great
 demonstration was seen coming down the road.
 He said that the fight between the Christians
 and Mussulmans having become so serious, and
 being very near to the town, the Christian
 armed assistance was immediately required. I
 took both the same mule and conveyed them
 to the gate of the town, from whence I drove
 to Harpeta to protect the village with what was
 taking place. It was getting dark when I met
 on the road two Christians accompanied by the
 Albanian corporal, and I took a horse
 and conveyed them to the town, and I drove back
 with them. The purpose was rather perplexing.
 There was no evidence of any danger, and
 they could be sent on their way. I there-
 fore upon by the Christian.

Later on the day I saw that the
 Albanian corporal, who was at the village of
 Tsikalaria, had taken the mule and conveyed
 it in order to be on the road with regard
 to the numerous reports which were being cir-
 culated since the proceeding evening. It would
 seem that on hearing of this, some having been
 killed on the Canea-Suda road, the father of the
 wounded Mussulman, posted late in the Chris-
 tians. Other Christians maintain that this
 wounded Mussulman, after having shot at the
 Christian on the road, fled to Tsikalaria
 and together with his father, being among the
 Christians. In a very short time all the Chris-
 tians rushed towards the point, and the Mus-
 sulmans towards the point. During this exodus
 from a Christian was killed, as is said, by the
 father of the wounded Mussulman, who had
 been arrested and is in prison. The same night
 the women and children took refuge in the vil-
 lages on the mountains, while a contingent of
 150 armed Christians and down from Canea
 and Ierapetra in order to assist the male popu-
 lation of Tsikalaria to defend their property. On
 the other hand, armed Mussulmans flocked from
 all parts of the plain to defend their co-religion-
 ists. The Mussulmans at Pnychia, when they
 are of nearly equal number to the Christians
 round the Christians in order to keep them as
 hostages for the safety of their co-religionists in
 other villages where the Christians are more
 numerous. In so doing they shot down a Chris-
 tian, on whom the value of the numerous knife
 strokes finally cutting his throat. This was fol-
 lowed by an emigration to, and armed assistance
 from, the mountain villages as at Tsikalaria.

In the village of Varpetro the Mayor as-
 sisted by the corporal of gendarmerie, a Mussul-
 man Albanian, was doing his utmost to prevent
 a conflict between its Christian and Mussulman
 inhabitants, when a Christian from Iakko,
 whose brother had been murdered two years
 ago by a native Mussulman, standing behind the
 corporal, shot him dead. The Christians of Va-
 rpetro, with whom the corporal was popular,
 having tried to arrest his murderer, the Iakki-
 otes, who had come there in order to defend
 their co-religionists, turned their arms against
 them, and prevented them from carrying out
 their intention. In consequence of this murder
 all the Christians of Varpetro emigrated to the
 mountains, and all the Mussulmans to the town
 of Canea. Nearly 1,000 Christians from the
 plains of Cydonia and Kissamos came to defend
 the inhabitants of Gahia and Darazzo, and for a
 time blockaded the Turks in the village of Kito.

made Agha Ali. But the inhabitants of Galata, who are all Christians, have so much confidence in the Mussulman Albanian Lieutenant called Elam, who is stationed in their village, that they refused their co-religionists to withdraw, which they did not.

As is always the case, each party claims to have been attacked by the other party, and the truth is not likely to be ever discovered. Be this as it may, both Christians and Mussulmans remain under the unshaken conviction that they are wronged by the other party; this increases the animosity of one sect against the other, and each member of the two races will act on this conviction. This is the inevitable consequence of the absolute want of confidence between the two elements, and there is not the least hope that this feeling will disappear, nor even slightly decrease, so long as they are left to themselves. In the present instance it may be that the Mussulmans or some of them may have considered themselves bound to retaliate for recent murders committed by their co-religionists by Christians.

The Christians are convinced, and all their proceedings are marked by that conviction, that all the incidents which trouble the public peace are devices of the native Mussulmans to prevent the execution of the promised reforms. I have denied that the attitude of the authorities at Constantinople may have such an effect on the low class of Cretan Mussulmans, but it is far from being so with the educated class who are as if not more, anxious than the Christians that the intended reforms should be carried out without delay. In fact they know that they have nothing to hope from Constantinople, and that the only protection of the minority to which they belong lies in the promised reforms. On the other hand, I have observed with the greatest pleasure that the Christians laid down their arms at the first recommendation of the Consuls to do so, which proves a sincere desire on their part to live in peace. When the Christians were taking up arms in former times they used to remain for weeks, even for months, on the mountains in spite of the entreaties of the Consuls. Therefore, the Christians and the Mussulmans are respectively well disposed, but there is such an insuperable distrust on both sides, that they can never come to a mutual understanding. Whether the incidents which cause disturbances or disorders on the island are the work of the Turks or of the Christians or of both is quite immaterial to me. The important fact to be taken into consideration is that an exchange of a few shots between one or two Christians and as many Mussulmans is sufficient to cause several districts, four in the present instance (Canea, Apokorena, Sphakia, and Kissamos), to take up arms, and also that there can be no doubt that such scenes will be repeated on every recurrence of such incidents.

To the same effect, Captain Custance, of the British ship *Bulleur*, reported on the 15th to Admiral Hopkins. "The general situation, as I understand it, is that the Cretan Christian leaders, urged on by certain interested people at Athens, have been preparing for some time to make an attempt to drive the Turkish authorities out of the island in the spring, if a favourable opportunity offers. The Mussulmans would not be sorry to see the last of the Turkish Government if they could only be sure that their lives

and property would be safe from the new regime, which, owing to the uncertainty existing between the European Powers, cannot be expected. The two parties, to five, armed to the teeth with swords and wrongs and with no other means than their own strength, are not then capable of maintaining order."

On the 25th of January the news, reported by telegram to Lord Salisbury, of an outburst of terror, such as has not occurred in Candia, has been caused by the murder of a fresh immigration of Mussulmans to the town, and by the murder of two men of that faith, and a few others, and by the murder of seven Christians. On the next day he reported graphic news from Candia, dated 1st February, of the murder of a Mussulman, and of others, and murder of seven Christians, and of further Mussulmans is running. The Mussulman Military Commission, headed by the Military Attaché, now in Candia, reported they met about 1,000 armed Mussulmans on the island, and numbers of Mussulmans were going towards the town. Again, on 21st February: "Murder of four Mussulmans at night, following on the wounding of a Mussulman on the 31st January. A panic ensued in Canea and Souda. Bazaar closing. Shops all closed. Shots fired at Halapi, which resulted in death of two Mussulmans. Four mixed villages, including a village, and several farms in one of the flames." On the 1th Colonel Chamberlain, of the regular military command sent the following telegram to Lord Salisbury: "The incidents which have been able to attempt to night, a cordon to separate Christian and Mussulmans. Patrolling was tried, but the heavy Christians was too heavy to maintain. Several Turkish soldiers have been killed, wounded." (*Great Britain, Press and Telegraphic Communications (Papers by Command)*, London, A. 1897, pp. 15-45).

A. D. 1897 (February—March.—Greek interference in Crete.—Greek forces in the island.—Demands for annexation of Crete to Greece.—Action of the Powers in the Concert of Europe.)—Pacific blockade of Crete.—Early in February, the difficulties of the attempt which the leading European Powers, being in what was known as "the Concert of Europe," were making to settle affairs by reforming its Turkish government, were complicated by interference from Greece. The Greeks, in ardent sympathy with their countrymen, were eager to take up the cause of the Christian inhabitants of the island, and the government was driven into independence, to that end, hoping that Christian sentiment in Europe would constrain the Powers to act in a free hand. A Greek squadron was sent to Crete, to bring away fugitives, women and children especially—and to prevent the landing of Turkish reinforcements. This was followed by an expedition of 2,000 men, 600 Vessels in command. As instant stimulus to the insurrection occurred, and declarations demanding the annexation of Crete to the Kingdom of Greece began to appear; when the government represented in a note to the Powers that no possible solution of the Cretan problem could be found without concession to the demand. The Greek troops, considerably more

in number, were landed on the island, joining the regular garrisons, and beginning operations against the rebels.

On the 10th of February the admirals commanding the foreign naval forces at Canea joined the Greek commodore, and, according to the Greek commodore, began to insist from all hostile acts against the island with international law. On the 15th, a force of British, French, Russian, Austro-Hungarian, and American troops landed on the island. On the same day, the British Admiral, Lord Vassier, the Greek Admiral, and a proclamation, saying: "In the name of His Majesty, George I, King of the Hellenes, I occupy the Island of Crete, and promise to its inhabitants without distinction of race or nationality, I promise in the name of His Majesty that I will protect the honour, life, and property, and will respect the religious convictions of its inhabitants, bringing them peace and public rights." On the 17th the Turkish fleet was attacked by the Greeks and the attack was renewed on the 21st, whereupon, after warnings from the foreign powers, in the harbor the Russian, German, Austrian and British ships opened fire on the attacking troops. In the meantime, considerable numbers of Mohammedans were being held by the superior forces at other points in the island with great danger of massacre if overpowered.

On the 21st of March, the representatives of Great Britain, Austria-Hungary, France, Germany, Italy, and Russia, at Constantinople, arrived at an agreement of action, and jointly addressed notes to the governments of Turkey and Greece. To the Porte they wrote: "The Great Powers, animated by the desire to assure the maintenance of peace and to see the integrity of the Ottoman Empire respected, have sought the means of ending the disorders that have led to their armed intervention in Crete, as well as to putting an end to the presence of the Greek forces in the island. They have recognized that in consequence of the delay in applying them, the reforms contemplated in the Arrangement of August 25, 1896, no longer correspond to the requirements of the present situation, and they have agreed upon the following points:—1. Crete can in no case be annexed to Greece in the present circumstances. 2. The island will be governed by the Powers with an autonomous administration (régime). In notifying these decisions to the Sublime Porte by order of their Governments, the Representatives of the Great Powers at Constantinople think it their duty to communicate the resolution which has been taken by their Governments to address to Greece a summons to withdraw her troops and naval forces from Crete."

To the Greek government the same announcement was made, that "Crete can in no case, in the present circumstances, be annexed to Greece," and the communication was more explicit in the further statements, as follows: "In view of the delays caused by Turkey in the application of the reforms agreed upon in connection with the Powers, and which now make it impossible to adapt those reforms to a changed condition of affairs, the Powers are resolved, while maintaining the integrity of the Ottoman Empire to endow Crete with an absolutely effective autonomous administration (régime), in

tended to secure to it a separate government, and to the high sovereignty of the Sultan. The Powers are convinced that these views can only be realized by the withdrawal of the Greek ships and troops now in the waters and on the territory of the island which is occupied by the Powers. We accordingly confidently expect this decision from the wisdom of His Majesty's Government, which cannot possibly persist in a course opposed to the decision of the Powers, who are determined to carry out an early pacification which is as necessary for Crete as it is for the maintenance of general peace. I will not, however, conceal from your Excellency that I am instructed to warn you that, because of a refusal of the Royal Government, the Great Powers have arrived at the irrevocable decision not to shrink from any measure of compulsion, if on the expiration of six days the recall of the Greek ships and troops from Crete has not been effected.

The Turkish government replied on the 6th. "The Sublime Porte has had the honour to receive the note which the Ambassadors of the Great Powers were good enough to address to it on the 2nd of March relative to Crete. The Imperial Government takes note with satisfaction of the assurances which the Great Powers are good enough to give it as to their desire to respect the integrity of the Empire, and of the decision which they have taken to effect the withdrawal of the Greek ships of war and troops from Crete. Relying upon their friendly sentiments and upon their firm resolve not to impair the Sultan's rights of sovereignty, the Sublime Porte, which is itself desirous of assuring the maintenance of peace, accepts the principle of an autonomy to be accorded to Crete, while reserving to itself liberty to discuss with the Ambassadors the form and the details of the administration (régime) with which the island is to be endowed."

Two days later, the Greek government replied at greater length, imploring the Great Powers "not to insist upon the system of autonomy decided on, but to give back to Crete what it already possessed at the time of the liberation of the other provinces which form the Hellenic kingdom and to restore it to Greece, to which it already belonged in the time of the Presidency of Capodistria," and appealing against the demand for the withdrawal of the Greek military forces from the island. "Since, in our opinion," wrote M. Skoufas, the Greek minister, "the new autonomous administration (régime) condition could not fulfil the noble object of the Powers, it is clear what would be the condition of the unfortunate island from now until the establishment of that administration, if the Great Powers decided to persist in their resolve."

In this connection, and in the name of humanity, as also in the interest of the pacification of the island—a pacification which is the sole object of the solicitude of the Great Powers—we do not hesitate to appeal to them in regard to the other measure relative to the withdrawal of our military forces. The presence in the island of the Greek army is demanded by the dictates of humanity, and is necessary in the interest of the definitive restoration of order. It is above all, our duty not to leave the Cretan people at the mercy of Mussulman fanaticism and of the Turkish army, which has always intently, and by connivance been a party to

the acts of aggression of the populace against the Christians.

"Above all, if our troops in the island, who are worthy of the full confidence of the Great Powers, were intrusted with the mandate of pacifying the country, their wishes and intentions would at once be completely satisfied. It would then be possible, after order had been restored, to obtain a free expression of the wishes of the Cretan people, with a view to decide their lot. Not only are the horrors which during several decades have occurred periodically in Crete, not committed without profoundly agitating the Hellenic people, but they also interrupt the social activity, and seriously disturb the economy and finances of the State. Even if it were possible for us to forget for a moment that we are co-religionists of the Cretan people, that we are of the same race, and allied by blood, we cannot conceal from the Great Powers that the Hellenic State is unable to resist such shocks any longer. We therefore appeal to the generous sentiments which animate the Great Powers, and beg them to allow the Cretan people to declare how it desires to be governed."—(*Great Britain, Parliamentary Publications (Papers by Command: Turkey, Nos. 4 and 5, 1897).*)

The position taken by the Greek government in this reply was firmly maintained. Its troops were not withdrawn from Crete, and the Powers of "the Concert," thus practically defied, had difficulty in agreeing upon the next steps they would take. France, England, and Italy would not consent to strong measures of coercion proposed by Russia, Germany and Austria, and the decision reached finally was to establish what is known as a "pacific blockade" of the Cretan coast, to begin on the 21st of March. This was announced on the 18th by the admirals commanding on that coast, who gave notice: "The blockade will be general for all vessels flying the Greek flag. Vessels of the Six Powers or of neutral Powers will be allowed to enter the ports in the occupation of the Powers and land their merchandise there, but only if it is not intended for the Greek troops or for the interior of the island. The ships of the international fleets may visit these vessels." The Greek government was notified to recall its men-of-war still in Cretan waters, with the warning that "they will be retained there by force if they have not left by 8 A. M. on the 21st March."

On the day previous to this announcement of blockade the same admirals had published a proclamation as follows: "The undersigned, Commanders-in-chief of the naval forces of Germany, Austria-Hungary, France, Great Britain, Italy, and Russia, in Cretan waters, acting under instructions from their respective Governments, solemnly proclaim and announce to the people of the island that the Great Powers have arrived at the irrevocable decision to secure the complete autonomy of Crete, under the suzerainty of the Sultan. It is well understood that the Cretans are to be free from all control on the part of the Sublime Porte as regards their internal affairs. The principal aim of the Powers being to provide a remedy for the evils which have afflicted the country, and to prevent their recurrence, they are drawing up in concert a scheme of measures intended to regulate the working of the autonomous régime, to restore peace, to assure to every one, without distinction of race or

religion, liberty and security of property, and to facilitate, by the resumption of agriculture, commerce and trade, the progressive development of the resources of the country. Such is the aim of the Powers. They wish this to be understood by all. A new era is commencing for Crete, and they lay down their arms. The Powers desire peace and order. They will, if it be required, have the necessary authority to make their decisions respected. They count on the co-operation of all the inhabitants of the island, Christian and Mussulman, to assist them in accomplishing work which promises to secure concord and prosperity to the Cretans."

To the promise of an autonomous government for Crete the insurgent Christians appear to have given no heed; but a great number of the Mohammedan inhabitants of the island are sending telegrams to the British minister at Constantinople, which were all of the tenor of the following: "Your Excellency knows that the Christians of Crete, forming the numerical majority of the population, but incapable of properly administering the former privileges they enjoyed, have now again been emboldened to massacre, destroy, and ruin, in the same way that in the past they have always made ill use of the liberties in the country by the treachery and destruction and ruin of their Moslem fellow countrymen. Therefore, if the people are left irresponsible for the government of the country, which is the very breath of human life, it will follow the completion of their bloodthirsty designs and hasten the ruin of the Mussulmans. We are quite sure that this state of things will not commend itself to the sympathy of the Great Powers, the propagators of civilization."

"We therefore beg, in the name of the Mussulman population, that the internal affairs of the Christian inhabitants of Crete who have yet reached even the first step on the path of civilization, and are led away by the solid designs of Greece, may not be removed from the direction of the Sublime Porte; if this be impossible, we beg that the internal affairs of the land may be placed under the continual control of the Great Powers in conjunction with the Porte; and we finally beg that the necessary measures may be taken for the protection of life, honour, and property, as well as the rights of the 20,000 Mussulman inhabitants now living in Turkey, whose interest in property is greater in value than that of the Christians, and who, occupied with commerce and other pursuits, besides those who live in the island, who, if necessary, are prepared to undergo a census, and exceed 100,000."

The situation of the Moslem population of the island was represented a little later by Col. Chermiside, in a despatch to Lord Salisbury, as follows: "Over 40,000 Moslems are assembled in Canthia and within a cordon area, comprising 25 square miles, viz., about two-thirds of the Moslem population of Crete. Of these, 20,000 are refugees from central and eastern districts of the island. Doles of flour are issued to 30,000 persons; issue up to date 48 lb. per head, no food issued. The mass of the people have no buying power and no work, but since arrival of British troops, armed individuals are rare in the streets, distress is supported with great patience, in spite of insufficient food and ravages of small pox. Population hopes for future

den protection against Christian compatriots."—*Great Britain, Papers by Command: Turkey*, No. 10 1897, pp. 153-178.

A. D. 1897 (March—September).—War with Greece.—Success of the Turkish arms.—Peace sought by the Greek Government.—

Notwithstanding the opposition of the Great Powers the Greeks were rashly bent upon war with the Turks, and, when balked in Crete, began hostile demonstrations along the Turkish frontier in their own peninsula. The events that followed have been thus described by an eye witness who wrote immediately afterwards: "When I arrived in Athens," says this writer, "early in March [1897], although the Cretan insurrection was being openly supported by Greek arms, war had not been declared against Turkey. It was what I think was once described in Parliament as 'a condition of war,' but not war. King George and his advisers rashly decided to attempt to hasten matters in their own fashion. Agitation was begun without and within the Turkish frontier, and the Ethniki Hetairia manœuvres, alarms and disturbances in Macedonia and Epirus. Attempts were made in other directions, but though money and emissaries were sent, nothing came of it. Meanwhile the mobilization of the Greek army was begun, and later as reserves were called out. Knowing a good deal about the relative condition of preparedness for war of both Turkey and Greece, I spoke without reserve on the subject to the King and, later on, to the Prince. I told them nearly every military intelligence department in Europe knew that Turkey had been getting her troops ready for a year past to deal with insurrection everywhere along the Macedonian frontier. With the Salonica military district she had nearly 10,000 men under arms, all well trained and possibly equipped. Besides infantry she had nearly 6,000 cavalry, and within a month could place a further force of 70,000 infantry in the field. Against these the Greeks could not bring more than 60,000 regulars. There no doubt might be mustered twice that number of men, but they would be untrained irregulars and volunteers who would take a month at least before they could be of much use, and Turkey would have her hands of irregulars out also to offset their value. It was notorious besides that the Greek army was indifferently organized, that it had no transport, no commissariat department, no medical department, and was without anything like a sufficiency of trained officers."

Prepared or not, the Greeks clamoured for war, never doubting latterly but that they would win. They protested that the Hellenes were aroused and would fight and die, if need be, to the last man. Greece would not waive an iota of her demands. We were told that the Greeks sought throughout the Turkish Empire would spring to arms and paralyze the enemy's hands. There were to be fearful outbreaks in Macedonia, Epirus, and Albania, and tumults and burnings of all the chief cities under Turkish rule where Greeks dwelt—Smyrna, Constantinople, Salonica, and so on. I was informed that insurrectionary bands were being got ready to invade Macedonia and Epirus, and I was introduced to several of the leaders of these new expeditions. I saw many of these Greek filibusters at Kalabak and other places. By order from Athens the local commandants supplied them with stores, trans-

port, and trenching tools, and sent guides to direct them, so that they should slip across into Macedonia at the most suitable points for conducting their operations.

The Greeks had a fairly long innings carrying on the war within Turkish territory, whilst disingenuously disbanding responsibility for the acts of their own levies. Finally, in April the Sultan declared war and set his forces in motion. Prior to that date the Greeks had moved up the whole of their available strength close to the Thessalian frontier. The army numbered no more than sixty thousand, of all ranks. Before war was declared the Crown Prince Constantine arrived in Larissa, and took over the command of the Greek army in Thessaly. He had no military experience, and, as events disclosed, was neither of a martial disposition nor of a firm temperament. He showed subsequently that he felt keenly his false position and he tried to excuse the awful failures made in the conduct of the campaign of panic and flight.

Independence Day having passed without a general invasion of Macedonia by the Greeks, it is likely that the Turks had thought the danger over, when suddenly firing began in a night along the frontier from Nezeros to Ravenna. For a day or two the Greeks carried all before them, capturing many block houses and taking a number of prisoners. They succeeded in penetrating Turkish territory in some places for two or three miles. The Turks were in immediate danger of being outflanked in one part of the field of operations, and separated from their main force at Elassona. It was midday, the 19th of April, when at a critical moment for the safety of a portion of Edhem's forces an order arrived from the Crown Prince to cease firing and retire, the whole Greek army back upon their own side of the frontier. . . . After an interval of three hours, during which there was little or nothing of a message arrived from headquarters that a blunder had been made and the army was to readvance and engage the enemy. It was a lost opportunity, for the Turks followed up the Greeks and reoccupied the lines from which they had been driven.

The cost of the blunder was a serious one to the Greeks, for in a futile attempt on the following day, to retake Grevena, General Mavromikhalis lost 2,000 men.

On the 21st of April, without any of the pictorial display or reputed hand-to-hand fighting some 40,000 Turks, not less, accompanied by three cavalry regiments and half a score of batteries, quietly streamed down the zigzag paved way in the steep Moloia pass into Thessaly. They occupied the village of Legaria and positions among the lowest foot hills at the outlet of the pass. The Greeks were not able to embarrass them as they deployed, although an attempt was made to find the range with artillery. . . . For two days there was a fierce artillery duel, interspersed occasionally with sharp rifle fire as the infantry became engaged on the right and left of the line.

All had ended in favour of the Greeks when the sun set on the 22nd April, and the battle of Mati was over. It was the same night that the Crown Prince ordered the army to retreat upon Larissa, twenty-five miles distant by road. About 8 P. M. the men were roused from their first sleep and commanded to fall in. They did so very orderly and quietly, thinking it was intended to deliver a surprise attack upon the

Turks. The whole army was on the march, and had got five or six miles from the battle field, or close to Tarnaves, when the unaccountable mad panic seized them. Some say it originated one way, some another. . . . The army broke into pieces, and became a furious rabble, which fled by road and fields south as hard as most could run. Arms and ammunition and baggage were cast aside wholesale. The Greek officers, as a rule, behaved worse than the men, for they led the fleeing mob, and many of them never stopped until they reached Pharsala or Volo. . . . The wilder Greek army was a mob convinced that the Turkish cavalry was upon their heels, though it never was near them. It gave them the strength of despair, and so they covered afoot fifty to sixty miles within twenty-four hours. The inhabitants of Larissa and all the surround- ing country, terrified at the sudden calamity, were left by the military and civic authorities, without hint or warning, to shift for themselves.

The women and children of Larissa had to carry what they wished to save upon their own backs. Thousands of these helpless creatures, to- gether with sick and wounded soldiers, were left around the railway station, whilst officers rode off upon the early or later special trains, to fly, as some of them did, as far as Athens. The troops had gone hours before I left Larissa, and even then there were no signs of the enemy to be seen."—Bennet Burleigh, *The Greek War, as I saw it* (Fortnightly Review, July, 1897).

Not until several hours after the departure of the last Greek, did a few Turkish cavalrymen cautiously enter the town [Larissa], some dis- tance ahead of the Turkish army. . . . It was the design of the Greeks to save Volo, a wealthy town, and the haven of refuge of many of the peasants. Accordingly, a line was formed from two miles beyond Pharsala to the pass which was the doorway to Volo. About three miles from this pass was the village of Velesino; and on the hills back of it were the headquarters of Col. Smolenske, commander of this, the right wing of the Greek army. The Greek fleet, with decks cleared for action, was in the Bay of Volo; hav- ing gone there after the defeat of Mati, hoping that, in case the army failed, its heavy guns would protect the town. After four days, the Turks, having digested their victory with ciga- rettes and coffee, were ready to renew fighting. Meanwhile, the Greeks had put themselves in a sort of order. Evidently, the first intention of the Turks was to force their way through Smol- enske's line and on to Volo. Accordingly, they attempted to storm Smolenske's rifle-pits; but they were driven back for the first time, and with the greatest loss that any such movement had yet encountered in the campaign. . . . The Turks, after a slight resistance, withdrew from the villages in front of Velesino, which they had taken, and were soon moving over to the left. Their plan of cutting the Greek line in two was executed with energy. On the morning of May 7, Edhem Pasha sent his fearless infantry, under heavy fire, up the hollows between the mountain ridges which ran at right angles to the Turkish line across the plain. They intrepidly scaled the ridges, and forced the Greeks from the position. Smolenske's force was flanked and separated from the Crown Prince's force; and he retreated in an orderly manner to Ahnyro. The Crown Prince's force had been flanked on its

left; at the same time it was being flanked on its right by the force that had the road to Smolenske. The Crown Prince, then, took his retreat to the heights of Domoko.

So apparent was now the helplessness of the Greek cause that even the new minister, who had been buoyed up into almost an aggressive spirit by the 'victory' of Velesino, begged for the intervention of the Powers. It was granted in the form of a demand on the Sultan for an armistice. As there are six Powers, each having a formal foreign office, this took some time. The Sultan, as usual, was more deliberate than his six tormentors, whom he in return tormented. Being truly Greek, the Greek Cabinet scarcely believe that articles of peace would be made at the moment the necessity of peace appeared in the ministerial mind. . . . Two days after Phar- sala, the Turkish army appeared on the plain, some ten miles from Domoko. There it rested quietly for more than a week, busily celebrat- ing the important feast of Bairam. This con- firmed the belief of the Greek generals that the war was at an end. The morning of May 17 found the Crown Prince's force more than ex- ceedingly convinced of an armistice, and quite unpre- pared for an attack. At nine o'clock the whole Turk- ish army began to advance upon the astonished Greeks—most astounded of them all were the Crown Prince and Gen. Maquis—in such a man- ner as to leave no doubt as to its intention.

The battle of Domoko which followed was the most sanguinary of the campaign. For three hours, that is, until sundown, the attack having begun at four o'clock, the Greeks steadily returned the hot fire of the Turks, who soon ceased to advance, and doggedly hung on to the ground that they had gained. . . . During this attack in front the Turks were making a more important movement, strategically on the right. . . . With amazing intrepidity, during the hot action on the centre, the Turks had fought their way over the mountains at the Greeks' far right. Some reserves were sent around at sunset—but too late. The Turkish left wing was already even with the town of Domoko. Military experts maintain that the Crown Prince, by readjusting his forces over- night, could have given the phlegmatic enemy a surprise in the morning, and held him in check for several days. The retreat over the pass, Lamia began at ten o'clock in the evening, and the next morning the battalions covering the re- treat were under heavy fire. The Greeks re- stand was to be at Thermopylae. Should the Turks advance spiritedly, Smolenske's army would be cut off from that of the Crown Prince and forced to surrender. But the Sultan, be- ing somewhat appeased by more blood having been bowed before a letter from him whom the Greeks called 'a vile enemy,'—the Czar,—who for the act, saw his influence at Constantinople re- planted by that of Germany, though the fear Russia was undiminished. At last the armistice came,—none too soon for the demoralized army of Greece. The war had lasted just thirty days."—F. Palmer, *How the Greeks were defeated* (Forum, November, 1897).

The preliminary treaty of peace signed September 18, required Greece to pay to Turkey indemnity of nearly eighteen millions dollars, arrangements for securing the pay- ment of which were to be controlled by an inter-

national commission composed of one representative of each of the mediating Powers. The same Powers were likewise to settle with Turkey a partition of the Greek frontier. Greece, in fact, was helplessly in their hands.

A. D. 1897-1899.—Prolonged anarchy in Crete.—The inharmonious "Concert of Europe," the final departure of Turkish troops and officials from the island.—Organization of government under Prince George of Greece.

The autonomous régime promised to this unfortunate island—the Cuba of Europe—is still at the end of 1897 apparently far from realization. In the meantime a most distressing condition, amounting to practical anarchy, prevails everywhere except at some ports where the international gendarmerie maintain a fair semblance of order. So completely have the houses and property of the Mahometan population been destroyed by the insurgents that the coming of winter has brought no prospect to the former but one of desolation and famine. Considerable pillaging of Christian houses by Mahometan refugees was also reported from Candia, Kydonia and other points. In Candia the Turkish gendarmerie—recruited from the worst class of Bashi Bazzouks—have proved worse than useless for keeping order; they connive with the marauders and share in the pillage. The British occupation is said to be only nominal.

A strange satire upon the concert of Europe and the pretences of Western civilization was the circular letter addressed by the Sultan to the powers, about mid-October, urging upon them "in firm language" the necessity of promptness in restoring tranquillity to the disordered island, and warning them of the dangers of procrastination in this matter. . . . To accomplish the pacification of Crete, the Sultan, in the letter referred to, suggested that the entire population, Christian and Mahometan, should be disarmed; that the disarmament should be carried out by Ottoman troops; that the international troops should cooperate in the work if the powers so desired; that the entire force should be commanded by a European general in the Turkish service; that an Ottoman garrison should be permanently maintained; that the governor should be a Christian and an Ottoman subject; and that a corps of gendarmerie should be formed. . . . Toward the end of October it was announced that the powers had finally chosen for the post of governor general of Crete Colonel Charles Schaeffer, a native of the grand duchy of Luxembourg, and a man of extended experience in the Turkish and Egyptian services. . . . related to several of the principal houses of the aristocracy at St. Petersburg, as well as to some of the most influential personages in the entourage of the Sultan. . . . The Porte, however, protested, with the support of Germany, against the appointment of Colonel Schaeffer, who appears to have been suspected of English sympathies. Russia, too, it was said, objected, insisting that the appointee must be of the Orthodox Greek faith. Thus, on the question of selecting a governor general for Crete, the concert of the powers broke down as it did at other points during the long crisis. At the end of November the name of Prince Francis Joseph of Battenberg was prominently mentioned as a prospective candidate of favor. The Cretan assembly proposed, unless a suitable gov-

ernor were speedily chosen by the powers, to offer the post to a candidate of its own selection."—*Concert History*, 1897, pp. 865-6.

Months went on, while the Powers still discussed the Cretan situation and no agreement was reached. In January, 1898, the Turkish government appointed Edhem Pasha governor of Candia, but, in the face of the admiral's of the blockading squadrons, who exercised an indefinite authority, he seems to have had practically little power. Presently a new attempt was made to select a Christian Governor general. France and Russia proposed Prince George of Greece, but Austria and Turkey opposed. In April, Austria and Germany withdrew from the blockade and from the "Concert." . . . Great Britain, Russia, France and Italy, . . . deal with Cretan affairs alone. The admiral of these Powers, acting under instructions, . . . divided the Cretan coast among themselves, each directing the administration of such government as could be conducted in his own part. The British admiral had Candia, the capital town, and there trouble arose which brought the whole Cretan business to a crisis. He attempted to take possession of the customs house (September 6) and landed for that purpose a small force of 60 men. They were attacked by a Turkish mob, with which they fought desperately for four hours, losing 12 killed and some 40 wounded, before they could make their retreat to the shore and regain their ship. At the same time a general massacre of Christians in the town was begun and some 800 perished before it was stopped. Edhem Pasha, with about 4,000 Turkish troops at his command, was said to have waited long for the mob to do its work before he intervened.

This outbreak brought the four Powers to a decisive agreement. They joined in imperatively demanding the withdrawal of Turkish troops and officials from the island, and enforced the demand. Guarantees for the safety of the Mohammedan population in life and property were given; it was conceded that the Sultan's sovereignty over Crete should be maintained, and he was allowed to hold one military post in the island for a sign of the fact. On these terms the Turkish evacuation of Crete was carried out in November, and Prince George of Greece was appointed, no Governor general, but High Commissioner of the four Powers, to organize an autonomous government in the island and administer it for a period of three years. The appointment was accepted, and Prince George was received with rejoicing in Crete on the 21st of December. The blockade had been raised on the 5th, and on the 26th the admiral's departed.

During the following two years (1899-1900) there seems to have been a generally good condition of order restored and preserved. A constitution was framed by a national assembly, which conferred the executive authority on Prince George, as High Commissioner, with responsible councillors, and created a Chamber of Deputies, elected for the most part by the people, but containing ten members appointed by the High Commissioner. Equal rights for all religious beliefs was made a principle of the constitution.

A. D. 1899 (May—July).—Representation in the Peace Conference at The Hague. See in this vol. PEACE CONFERENCE.

A. D. 1899 (October).—Concessions to the Armenians.—In October an article was published

by the Sultan which withdrew restrictions on the movements of Armenians in the provinces, except in the case of suspects, granted pardon or commutation of sentence to a number of Armenian prisoners; ordered payment of sums due to Armenian government officials who had been killed or expelled at the time of the massacres; directed assistance to be given in the repairing and rebuilding of churches, schools, and monasteries which had been injured or destroyed, and also gave direction for the building of an orphan age near Constantinople.

A. D. 1899 (November).—Railway to the Persian Gulf.—A German Bank Syndicate obtained from the Sultan, in November, 1899, a concession for the extension of the Anatolian Railway from Konieh in Asia Minor, to Basra, or Bassorah, on the Persian Gulf. The line, which will pass through Baghdad, and along the valleys of the Tigris and Euphrates, is to be completed within eight years from the date of the grant. "The concession is regarded as a startling proof of German influence in Constantinople, and a defeat both for Russian and British diplomacy. It is certainly a defeat for the former, and will greatly increase suspicion at St. Petersburg as to the ultimate ends of Germany in Turkey; but we suspect that Indian statesmen will perceive considerable compensations in the arrangement. Not to mention that all railways which approach India develop Indian trade, the railway may secure us a strong ally in Asia. It is not of much use for Russia to be running a line from the Caspian to Bushire if when she gets there she finds Britain and Germany allied in the Persian Gulf, and able by a railway through Gedrosia to Sind to throw themselves right across her path."—*Spectator* (London), Dec. 2, 1899.

"The opposition of the French company owning the Smyrna-Kassaba road, which extends east as far as Ation Karahissar, was removed by granting this company 40 per cent of the shares in the extension, and the local objection was obviated by a provision in the concession giving the Turkish Government the right to purchase the line at any time. Few railroad lines can be of greater prospective importance than this 2,000 miles of railroad uniting the Persian Gulf with Europe, forming a rapid transit to and from the East, opening up large tracts of agricultural country, and paving the way for German commercial supremacy in Asia Minor and Mesopotamia. It is not difficult to see how Germany, with preferential rates for goods on German lines, will be able to control the chief markets of Asia Minor and invade the East. . . . Germans purchased the Constantinople-Ismid Railroad from an English company and extended it to Angora. They also checkmated the French and English by extending their line from Eski Sher to Konieh, thus preventing extension of both the Smyrna Ation Karahissar and the Smyrna-Aidin-Diarr roads. The two great distributing points—Constantinople and Smyrna—are thus controlled by Germans, and German goods may enter the interior of Asia Minor and the great valley of the Tigris and Euphrates on German-controlled roads at a decided advantage. Germans have obtained the right to build docks and warehouses at Haifa Pasha, the terminus of the Anatolian railroads, and with through rates for German goods on German lines, German freight

cars may be sent across the Bosphorus and thence to Mesopotamia and the confines of India and Persia without change."—*United States Consular Reports*, April, 1900, p. 497.

Professor Hilprecht has remarked, in the "Sunday School Times" that "a new era in Near Eastern archeology will begin when the railway from Koniah to Baghdad and Bassorah has been constructed. It will then take about a week from London to the ruins of Babylon, where, doubtless, a railway station (Hillah) will be established. At present the traveler needs at the best six weeks to cover this route. This railroad, says the Professor, "has now become a certainty."

A. D. 1899-1901.—Impending outbreak in Macedonia.—The state of things in Macedonia, where the people have long been on the brink of revolt against Turkish rule, excited to it from Bulgaria and encouraged from Greece, and warned otherwise by Russia and Austria, is thus described by the "Economist," in an article quoted in "Littell's Living Age," March, 1900: "It is improbable, for reasons stated below, that Macedonia will rise in insurrection this year (1899), but, nevertheless, there is great danger in that quarter, which is evidently disturbing both Vienna and St. Petersburg, and exciting apprehensions in Constantinople. The Austrian and Russian Foreign Offices are both issuing intimations that if a revolt occurs (and it will be allowed to put it down by Turkish methods) and the Sultan is raising more troops, sending Asiatic levies to Macedonia, and despatching some of his ablest officers to control the hill districts. Severe warnings have also been sent both to Belgrade and Sofia, and the Greeks are warned that if their active party moves the Government of Athens will not again be saved by Europe from the worst consequences. All these symptoms imply that there is grave fear among those who watch Macedonia, that the patience of her sorely oppressed people has given way, and that they have resolved to risk everything rather than remain longer under the rule of Pashas from whom no man's life and no woman's honor is safe for twelve hours together. It is known, moreover, that the course of events in Crete and the appearance of the Tsar's Rescript have greatly stirred the population. The former is held by them to show that if a Christian population in Turkey were risk massacre, Europe will not allow them to be exterminated, while the latter has made submission more difficult by putting an end to hope for the next five years. . . .

"Turkish subjects must be driven to desperation before they will rise against the Turks, and if they can even hope to be left alone, the Macedonians will wait, rather than encounter so dreadful a risk. They have, it is true, the example of the Cretans to encourage them, but the country is not an island, and they have the warning of the Armenians and the Thessalians, who warn them that on the mainland the Turk cannot be resisted by half-drilled forces.

"It seems almost a truism to say that Europe is foolish to allow such a source of danger. Macedonia presents to continue without action, but there is something to be said on the other side. The Powers sincerely desire peace, and the Macedonian magazine cannot be filled without a war, if it be only a war between Russia and the Sultan. Nobody knows to what su-

a war would lead or in what condition Eastern Europe might emerge from it. Moreover, how ever much the Macedonians may excite the sympathies of philanthropists, they have done everything to alienate those of politicians. They are neither Austrian nor Russian. They have for years to be aided by Greece, and when Greece declared war on Turkey they refused to rise behind Edhem Pasha, whom they could have cut away from his supports. They now ask aid from Bulgaria, but they are most unwilling to submit to Sofia, and so make of Bulgaria a fairly strong State. They wish, they say, to make of Macedonia a Principality, but if it were so made the Slavo-Macedonians would begin fighting the Greco-Macedonians, until both had been nearly ruined. They must join one party or the other if they wish to be free, and stick to the one they join, and fight for it with a valour which they have never yet displayed.

On the 7th of January, 1901, a correspondent of the "London Times" wrote on the same subject from Vienna, as follows: "The situation in Macedonia, as described in trustworthy accounts coming from different directions, testifies to the increasing danger of trouble. Things have gone so far that an outbreak may occur this year. In diplomatic circles it is considered impossible that in any case it can be delayed for longer than a twelvemonth. In Constantinople, Athens, and all the capitals of the Balkan states the expectancy of a Macedonian rising has been expected for several years past, and in more than one instance preparations have been made accordingly. To what extent the Macedonian committees have received official patronage in Bulgaria is now of secondary interest. The mischief has been done, and the agitation in Macedonia is at present beyond the control of the Bulgarian authorities, even if they wished to keep it in check, which is not certain. All that can be said with confidence is that last summer Austria and Russia made a vigorous and successful effort to put an end to the almost open encouragement extended to the Macedonian committees at Sofia, which was within an ace of involving the Principality in a war with Rumania. The Austro-Russian 'entente' [an understanding or agreement between Russia and Austria, in 1897, to act together in keeping peace in the Balkan peninsula] has, in fact, done excellent service wherever diplomatic pressure can be brought to bear. But, unfortunately, that does not include Macedonia. If the Slavophony element in that province of the Ottoman Empire sets at defiance the imposing Turkish forces concentrated on the spot, it is not likely that it will be influenced by what is probably regarded as the remote contingency of the direct armed intervention of Austria and Russia. All the warnings and scoldings in the world will not suffice to preserve peace in Macedonia.

It is difficult to say what foundation there may be for the statement that the Sultan himself seeks to take advantage of the disturbed condition of Macedonia for purposes of his own. It is alleged that he wishes to prevent any change in the existing régime in Crete by exciting the opposition in Athens and elsewhere that attempt to modify the status quo in that island would cause a massacre of the Hellenic population in Macedonia. This view of the case finds

expression in the following extracts from a letter addressed to the "Romanian" one of the leading organs at Bukharest. The thoroughly bad policy pursued by the Sublime Porte in Macedonia, which consists in allowing that unhappy province to remain a prey to Bulgarian intrigues so as in case of need to terrify diplomacy by the spectre of a revolution, has contributed to open the eyes of the Powers. On the other hand, the irresistible attraction exercised by the Kingdom of Greece not only on the Cretans themselves but also on all the royales of the Ottoman Empire, is an indisputable fact. See also in this vol. BALKAN AND DANUBIAN STATES.

A. D. 1901. - The Cretan question. The provisional arrangement of government for Crete, administered by Prince George of Greece as High Commissioner for the Powers, expires by limitation in December 1901. What shall then be done with the island is a question that was referred, by the several Powers of the Concert, in the early part of the year to their ambassadors at Rome, in conference with the Italian Minister of Foreign Affairs. The administration of Prince George appears to have been quite remarkably satisfactory to all concerned, and its continuation was evidently desired, as much by the Cretans as by the protecting Powers, but the former sought to have it placed on a basis of permanency, in some form that would be practically tantamount to the long craved annexation to Greece. Prince George naturally looks in the same direction, and he is said to have made it known that he would decline to hold his post provisionally beyond the term of three years for which he accepted it in 1898. The ambassadorial conference at Rome decided, however, that the time has not come for a permanent settlement of the Cretan question, and that the provisional arrangement for its government must be renewed. A Press despatch from Athens on the 22d of March, 1901, announced the decision and indicated the circumstances of the situation as follows:

"The Cretan Assembly meets at the end of next month and its probable attitude towards the question of union with Greece is already the subject of speculation here. The decision of the conference of Ambassadors at Rome is embodied in a memorandum which has been handed to Prince George by the Consuls at Chania, while a copy of the document has been unofficially presented to King George. (A titre d'information.) The Ambassadors express their opinion that any manifestation on the part of the Cretans in favour of union with Greece would be inappropriate at the present moment and they propose a prolongation of the present provisional system of government without assigning any definite term to the High Commissioner's mandate.

"Whether Prince George, who is an enthusiastic advocate of union with Greece, will accept the new arrangement unconditionally remains to be seen. Meanwhile the islanders are occupied with preparations for the elections.

"It appears that at a recent sitting of the Prince's Council one of the most prominent of Cretan politicians advocated the institution of an autonomous Principality on the lines already

TURKEY, 1901.

laid down by the existing Constitution. The proposal provoked a violent outburst on the part of the Athenian Press, which denounces its author as a traitor to the cause of Hellenism. The opinion apparently prevails here that the estate-

A. D. 1897-1898.—Native insurrection and mutiny of Sudanese troops.—A train of serious troubles in the Uganda Protectorate began in May, 1897, with an insurrection of some of the chiefs, instigated by the king, Mwanga, who was restive under British control. The revolt was suppressed after some sharp fighting, especially at Kiango, on the 24th of July, and King Mwanga escaped into German territory. In August he was formally deposed by a council of chiefs, and his infant son, Chua, was elected king in his place, under a regency of three of the chiefs. But a more serious trouble followed, from the mutiny of a part of the Sudanese troops which had been serving in Uganda. These troops were being sent to join an expedition, under Major Macdonald, for the exploration of the districts adjacent to the Italian sphere of influence, and were not permitted to take their women with them. This seems to have been their chief grievance. They also complained of being overworked, underpaid, insufficiently fed, and commanded by young officers who would not listen to their complaints. They seized Fort Lubas, on the frontier between Uganda and Usoga, made prisoners of several of their officers, whom they finally murdered, and held the fort against repeated attacks until early in January, 1898, when they made their escape. They were pursued and attacked (February 24) at Kabagumbe, on Lake Kioja, where they had built a fort. Many were killed, the remainder much scattered. A considerable party got away to the eastern side of the Nile and continued to give trouble there throughout the year.

Meantime, the deposed king, Mwanga, had escaped from the Germans and effected a new rising among his late subjects; and another deposed king, Kabarega, of Unyoro, had also reappeared, to make trouble in that region. After the suppression of the Sudanese mutiny these risings were overcome, with the help of some 1,100 troops brought from India for the emergency. In March, there was news of Kabarega's death, and the British Acting Commissioner and Consul General issued the following proclamation: "Whereas Kabarega, the deposed King of Unyoro, is reported to have deceased, and whereas the present disordered state of affairs in that country has proved that, for the maintenance of

good government and good will, it is expedient to provide for the succession to the kingdom, a member of the Royal House, it is hereby publicly proclaimed that Karukala, son of Kabarega, is now appointed King of Unyoro, under the protection of Her Britannic Majesty. The Kingdom of Unyoro comprises the provinces of Busindi, Shifalu, Magungu, Kibera, Buzuma, Bugahinobele. This appointment is in accordance with the general conditions by which countries in British African Protectorates are governed and regulated, and it secures to the Kingdom of Unyoro all the advantages which accrue from being an integral part of such a Protectorate. The local government of the country will be administered, under the guidance of Her Majesty's Representative, by a Council of Regency, of either two or three Chiefs, to be appointed by Her Majesty's Commissioner. This Council of Regency will, subject to the approval of Her Majesty's Commissioner, select and appoint the Katikiro and the other Chiefs of the first rank required in accordance with local custom. These Chiefs, on their appointment being confirmed, will select and appoint in full Council the lower grade Chiefs, until the system of local administration is complete."—*Great Britain, Parliamentary Publications (Papers by Command: Army No. 7, 1898, p. 42).*

UGANDA RAILWAY, The.—On the 30th of April, 1900, the British Parliament voted £1,930,000 for the completion of the railway under construction from Mombasa, on the Indian Ocean, to Lake Victoria-Nyanza, officially known as the Mombasa-Victoria Railway. Previous expenditure had been about £3,000,000. On the 30th of October it was reported that rails were laid down to the 452d mile from Mombasa, at that advance gangs were working about 40 miles beyond that point.

A. D. 1894. Legislation to promote the reclamation of arid lands.—The following measure of legislation to promote the reclamation of arid lands was carried through Congress as an amendment to the appropriation bill for Sundry Civil Expenditures, and became law August 18, 1894.

Sec. 4. That to aid the public land States in the reclamation of the desert lands therein, and the settlement, cultivation, and sale thereof to small tracts to actual settlers, the Secretary of the Interior with the approval of the President, he and hereby is, authorized and empowered, upon proper application of the State to contract a lease, from time to time, with each of the States in which there may be situated desert lands as defined by the Act entitled "An Act to provide for the sale of desert land in certain States and Territories," approved March 3d, 1877, and the Act amendatory thereof approved March 3d, 1891, binding the United States to donate grant and patent to the State free of cost for survey or price such desert lands, not exceeding one million acres in each State, as the State may cause to be irrigated, reclaimed, occupied, and not less than twenty acres of each one hundred and sixty-acre tract cultivated by actual settlers within ten years next after the passage of this Act, as thoroughly as is required of citizens who may enter under the said desert land law.

Before the application of any State is allowed or any contract or agreement is executed or any segregation of any of the land from the public domain is ordered by the Secretary of the Interior the State shall file a map of the said land proposed to be irrigated which shall exhibit a plan showing the mode of the contemplated irrigation and which plan shall be sufficient to thoroughly irrigate and reclaim said land and prepare it to raise ordinary agricultural crops and shall also show the source of the water to be used for irrigation and reclamation, and the Secretary of the Interior may make necessary regulations for the reservation of the lands applied for by the States to date from the date of the filing of the map and plan of irrigation, but such reservation shall be of no force whatever if such map and plan of irrigation shall not be approved. That any State contracting under this section is hereby authorized to make all necessary contracts to cause the said lands to be reclaimed, and to induce their settlement and cultivation in accordance with and subject to the provisions of this section; but the State shall not be authorized to lease any of said lands or to use or dispose of the same in any way whatever, except to secure their reclamation, cultivation and settlement.

"As fast as any State may furnish satisfactory proof according to such rules and regulations as may be prescribed by the Secretary of the Interior, that any of said lands are irrigated, reclaimed and occupied by actual settlers, patents shall be issued to the State or its assigns for said land so reclaimed and settled. Provided, That said States shall not sell or dispose of more than one hundred and sixty acres of said land to any

one person, and any surplus of money derived by any State from the sale of said lands in excess of the cost of their reclamation, shall be held as a trust fund for and be applied to the reclamation of other desert lands in such State. That to enable the Secretary of the Interior to examine any of the lands that may be selected under the provisions of this section, there is hereby appropriated out of any moneys in the Treasury, not otherwise appropriated, one thousand dollars." *16th 53d Cong. 2d Sess. ch. 304.*

A. D. 1895. Re-survey of Mexican boundary. See (in this vol.) MEXICO. A. D. 1892-1895.

A. D. 1895. January-February. The monetary situation. Contract for replenishing the gold reserve in the Treasury. The alarming situation of the Treasury of the United States at the beginning of the year 1894 was clearly described by the President in his special Message to Congress, January 28, 1894, in Vol. 5. UNITED STATES OF AMERICA. A. D. 1894. By the operation of what had been aptly called "the endless chain" of the greenback currency issues of the government (paid out with one hand to be redeemed with the other in gold, which the declining value of silver brought more and more into demand the gold reserve in the Treasury was fast being exhausted and the hour was approaching when, without some effective relief, the obligations of the nation would have to be paid in depreciated silver coin, and its credit lost. The appeal of the President to Congress had no effect. The Senate was controlled by a majority of men who desired precisely the result which he wished to avert. The state of things in that body was described by Senator Sherman of the Committee on Finance, in the following words:

"The Committee on Finance is utterly helpless to deal with this vast question. We are quite divided upon it. We are not allowed to propose a measure to this Senate which all can approve, unless there is attached to it a provision for free coinage of silver. The attitude of the House was different, but almost equally hostile to the President's views. Its Republican majority was not favorable to the aims of the free silver purists, but held that the relief needed for the Treasury was to be sought in a return to higher import duties, as a means of obtaining increased revenue. Hence, a bill to carry out the recommendations of the President was rejected in the House, on the 7th of February, by a vote of 162 against 135.

On the following day, the Secretary of the Treasury, Mr. Carlisle, exercising authority which he possessed to sell certain four per cent thirty year bonds contracted with August Belmont & Co., who represented the Rothschilds of London, and with the house of J. P. Morgan & Co., of New York, on behalf of J. S. Morgan & Co., London, and themselves, for supplying 3,500,000 ounces of standard gold coin of the United States, at the rate of \$17.80441 per ounce, in exchange for such bonds. It was a condition of the contract that one half of the coin supplied should be brought from Europe, also that the contracting syndicate should use its influence to protect the Treasury against withdrawals of gold. At the same time, the Secretary of the Treasury reserved the right to substitute three

per cent gold bonds, if Congress would authorize such an issue, to be taken by the syndicate at par, in place of the four per cents to which his existing authority was restricted. It was shown that the consequent saving in interest would be \$539,000 per annum, amounting to \$16,171,770 in thirty years; but the proposal was rejected in the House of Representatives by 167 votes against 120. The contract was accordingly carried out in its original form, with success so far that the withdrawals of gold from the Treasury dropped for a considerable period to a low point. It appeared that when this emergency break was put upon the working of the "endless chain," the sub-treasury in New York was believed to be within twenty-four hours of a suspension of gold payments. But the contract was loudly condemned, nevertheless, by the opponents of the administration.

A. D. 1895 (February).—Renewed insurrection in Cuba. See (in this vol.) CUBA: A. D. 1895.

A. D. 1895 (April—May).—Decision of the Supreme Court against the constitutionality of the income tax.—Cases testing the constitutionality of the income tax which Congress had attached to the Tariff Act of 1894 (see, in vol. 1 of original edition, or in vol. 5 of revised edition, *TARIFF LEGISLATION, UNITED STATES: A. D. 1894*), were brought to a partial decision in the Supreme Court in April, and finally in May, 1895. The cases in question were "Pollock v. Farmers' Loan and Trust Company," and "Hyde v. Continental Trust Company." On the first hearing, the illness and absence of one of the justices, Mr. Jackson, of Tennessee, left but eight members in attendance, and they divided equally on several points which were vital to the decision of the question of constitutionality in the tax. The appellants accordingly filed a petition for a rehearing, submitting, among other reasons, the following: "The question involved in these cases was as to the constitutionality of the provisions of the tariff act of August 15, 1894 (sections 27 to 37), purporting to impose a tax on incomes. The Court has held that the same are unconstitutional, so far as they purport to impose a tax upon the rent or income of real estate and income derived from municipal bonds. It has, however, announced that it was equally divided in opinion as to the following questions, and has expressed no opinion in regard to them: (1) Whether the void provisions invalidate the whole act. (2) Whether, as to the income from personal property as such, the act is unconstitutional as laying direct taxes. (3) Whether any part of the tax, if not considered as a direct tax, is invalid for want of uniformity."

"The court has reversed the decree of the Circuit Court and remanded the case, with directions to enter a decree in favor of complainant in respect only of the voluntary payment of the tax on the rents and income of defendant's real estate and that which it holds in trust, and on the income from the municipal bonds owned or so held by it. While, therefore, the two points above stated have been decided, there has been no decision of the remaining questions regarding the constitutionality of the act, and no judgment has been announced authoritatively establishing any principle for interpretation of the statute in those respects."

The rehearing asked for was granted by the

Court on the 6th of May, when Justice Brandeis was able to take his seat on the bench, which, on the 20th of May, by the presence of its members of the Court against four, pronounced null, so far as concerned the imposition of a tax on incomes. The judgment of a majority was delivered by Chief Justice Brandeis, who said, in part:

"The Constitution divided Federal taxes into two great classes, the class of direct taxes and the class of duties, imposts and excises, and prescribed two rules which qualified the power of Congress as to each class. The power of direct taxes apportioned among the several States in proportion to their representation in the popular branch of Congress, a representation based on population as ascertained by the census, was plenary and absolute, but no direct taxes without apportionment was laid. The power to lay duties, imposts, and excises was subject to the qualification that the imposition must be uniform throughout the United States."

"Our previous decision was confined to a consideration of the validity of the tax on income from real estate and on the income from municipal bonds. We are now permitted to broaden the field of inquiry, and to determine to which of the two great classes a tax upon a person's entire income, whether derived from rents, or products, or otherwise, of real estate or from bonds, stocks, or other forms of personal property, belongs; and we are authorized to conclude that the enforced subtraction from the yield of all the owner's real or personal property in the manner prescribed, is so different from a tax upon the property itself, that it is not a direct, but an indirect tax in the meaning of the Constitution."

"The words of the Constitution are to be taken in their obvious sense, and to have reasonable construction. In *Gibbons v. Ogden*, Mr. Chief Justice Marshall, with his usual facility, said: 'As men, whose intentions require concealment, generally employ the words which most directly and aptly express the things they intend to convey, the enlightened patriots who framed our Constitution, and the people who adopted it must be understood to have employed words in their natural sense, and to have intended what they have said.' 9 Wheat 1, 19. And in *Rhode Island v. Massachusetts*, when the question was whether a controversy between two States over the boundary between them was within the grant of judicial power, Mr. Justice Baldwin, speaking for the Court, observed: 'The solution of this question must necessarily depend on the words of the Constitution, the meaning and intention of the convention who framed and proposed it for adoption and ratification to the conventions of the people of and the several States; together with a reference to such sources of judicial information as are resorted to by all courts in construing statutes, to which this court has always resorted in construing the Constitution.' 12 Pet 657, 731. We know of no reason for holding otherwise, and that the words 'direct taxes,' on the one hand, and 'duties, imposts and excises,' on the other, were used in the Constitution in their natural and obvious sense. Nor in arriving at these terms embrace do we perceive any ground for enlarging them beyond or narrowing them."

tion are to be made and to have a bonus system. His usual 6.6 per cent bonus is reduced to 5.5 per cent when the 100,000 paid patrollers, the people who have employed and to have it. When I, 188, closed it, where controversy between them was over, Mr. Justice, observe, must necessarily constitute the convention which, in principle of and a national referendum as described in the statistics and results of the 1967-1971. We otherwise would have the 1967-1971, in the other, in their nature, arriving at what give any ground narrowing them.

In the light of the struggle previously mentioned as to whether or not the new bill would be empowered to levy taxes on Negroes, the individual until after the States had responded to requisitions, a struggle which continued until the amendment to the bill proposed by Massachusetts and Connecticut, South Carolina, New Hampshire, New York, and Rhode Island, had been reported — was it not beyond reasonable question that the taxation taking the place as it did of property was purposely restrained to agriculture according to representation, and that the former system as to ratio might be retained while the mode of collection was altered? This is forcibly illustrated by a letter

This is forcibly illustrated by a recent letter from M. Mahon of January 29, 1879, recently published, written before the ratification of the Constitution and before the organization of the government and the submission of the proposed amendment to Congress, which, while opposing the amendment as calculated to impair the power of the States to be exercised in extraordinary circumstances, assigns adequate ground for its rejection, and is admirably unnecessary, since, he says, every State which chooses to collect its own taxes may always prevent a Federal collection, and may in fact be beforehand in its finances and make its payment at once into the Federal treasury.

however small, in the same was required for

[illegible]

Our conclusions may therefore be summarized as follows:

"First. We object to the principle, already announced, that taxes on real estate, including putatively direct taxes, taxes on the rents or the profits of real estate, are essentially direct taxes.

"Second. We are of opinion that taxes on personal property and on the income of personal property, are likewise direct taxes.

Third, The tax imposed by sections twenty-seven to thirty-seven, inclusive, of the act of 1901, so far as it falls on the income of real estate and of personal property, being addressed within the meaning of the constitution, and, therefore, unconstitutional and void because not apportioned on an equal representation in all these sections, constituting one entire scheme of taxation, are necessarily invalid.

Four dissenting opinions were prepared by Justices Harlan, Brown, Jackson and White. In that of Mr. Justice Harlan he said: "What are 'direct taxes' within the meaning of the Constitution? In the convocation of 1787 Rufus King asked what was the precise meaning of 'direct' taxation, and no one answered." Madison Papers, 5 Elliott's Debates, 431. The debates of that famous body do not show that any delegate attempted to give a plain, succinct definition of what, in his opinion, was a direct tax. Indeed the report of these debates upon the question now before us, is very meagre and unsatisfactory. An illustration of this is found in the case of *Gouverneur Morris*. It is stated that on the 12th of July 1787 he moved to add to a clause empowering Congress to levy representation according to the principles of "wealth and numbers of inhabitants," a proviso that taxation shall be in proportion to representation. And he is reported to have remarked on that occasion, that while some objections lay against his motion, he supposed they would be removed by restricting the rule and not taxation. Elliott's Debates, 202. But on the 5th of August, 1787, the work of the Committee on Detail being before the convocation, Mr. Morris is reported to

have remarked: "Let it not be said that direct taxation is to be proportioned to representation." 5 Elliott's Debates, 393. If the question propounded by Rufus King had been answered in accordance with the interpretation now given, it is not at all certain that the Constitution, in its present form, would have been adopted by the convention, nor, if adopted, that it would have been accepted by the requisite number of States."

The following is from the dissenting opinion of Mr. Justice Brown: "In view of the fact that the great burden of taxation among the several States is assessed upon real estate at a valuation, and that a similar tax was apparently an important part of the revenue of such States at the time the Constitution was adopted, it is not unreasonable to suppose that this is the only undoubted direct tax the framers of the Constitution had in view when they incorporated this clause into that instrument. The significance of the words 'direct taxes' was not so well understood then as it is now, and it is entirely probable that these words were used with reference to a generally accepted method of raising a revenue by tax upon real estate. . . . But, however this may be, I regard it as very clear that the clause requiring direct taxes to be apportioned to the population has no application to taxes which are not capable of apportionment according to population. It cannot be supposed that the convention could have contemplated a practical inhibition upon the power of Congress to tax in some way all taxable property within the jurisdiction of the Federal government, for the purposes of a national revenue. And if the proposed tax were such that in its nature it could not be apportioned according to population, it naturally follows that it could not have been considered a direct tax, within the meaning of the clause in question."

Mr. Justice Jackson concluded his dissenting opinion as follows: "The practical operation of the decision is not only to disregard the great principles of equality in taxation, but the further principle that in the imposition of taxes for the benefit of the government the burdens thereof should be imposed upon those having the most ability to bear them. This decision, in effect, works out a directly opposite result, in relieving the citizens having the greater ability, while the burdens of taxation are made to fall most heavily and oppressively upon those having the least ability. It lightens the burden upon the larger number in some States subject to the tax, and places it most unequally and disproportionately on the smaller number in other States. Considered in all its bearings, this decision is, in my judgment, the most disastrous blow ever struck at the constitutional power of Congress. It strikes down an important portion of the most vital and essential power of the government in practically excluding any recourse to incomes from real and personal estate for the purpose of raising needed revenue to meet the government's wants and necessities under any circumstances."

"I am therefore compelled to enter my dissent to the judgment of the court."

The opinion delivered by the majority of the Court was criticised with severity by Mr. Justice White, who said: "The injustice of the conclusion points to the error of adopting it. It takes invested wealth and reads it into the Con-

stitution as a favored and privileged property, which cannot be taxed without apportionment, whilst it leaves the mechanic, the minister, the doctor, the professor, the lawyer, the inventor, the author, the merchant, the mechanic, and all other forms of industry, which the prosperity of a people must depend upon, subject to taxation without that apportionment. A rule which works out this result, which, as it seems to me, stultifies the Constitution, and makes an instrument of the most grave consequences should not be adopted, especially when it is to do so, the decisions of this court, the views of the law writers and publicists, the settled policy, and the settled policy of the government must be overthrown."

"To destroy the fixed interpretation of the Constitution, by which the rule of apportionment according to population is confined to direct taxes on real estate, seems to me to include indirect taxes on real estate and taxes whether direct or indirect, on movable property, stocks, bonds, etc., leads into the institution the most flagrantly unjust, oppressive, and wrongful system of taxation known to any civilized government. This strikes me as very clear for argument. I can conceive of no greater injustice than would result from imposing on one million of people in one State, having only ten millions of invested wealth, the same amount of taxes that imposed on the like number of people in another State having fifty times that amount of invested wealth. The application of the rule of apportionment by population to invested personal wealth would not only work out this wrong, but would ultimately prove a self-destructive process, from the fact, among which such property changes its shape, that all property of this character would be transferred to the States where the same accumulated wealth was greatest in proportion to population, and where therefore the burden of taxation would be lightest, and thus a mighty wrong resulting from the very nature of the extension of the rule would be suggested. It is clear then, I think, that the admission of the power of taxation in regard to invested personal property, coupled with the restriction that the tax must be distributed by population, and not by wealth, involves a substantial denial of the power itself, because the condition upon its exercise is practically impossible. To say that anything can only be done in a way which necessarily brings about the grossest wrong is to conclusively admit the existence of the power while substantially denying it. And the gross results sure to follow from any attempt to adopt such a system are so obvious that no mind cannot fail to see that if a tax on movable personal property were imposed by the rule of population, and there were no other means of preventing its enforcement, the red specter of revolution would shake our institutions to their foundation. . . ."

"It is, I submit, greatly to be deplored that after more than one hundred years of our national existence, after the government has witnessed the stride of foreign wars and the ordeal of civil strife, and its people have become united and powerful, this court should compel itself compelled to go back to a long-repudiated and rejected theory of the Constitution, which the government is deprived of an ability

Article 1, including a necessary power of tax.
— *U. S. Reports*, 1898, pp. 601-715.

A. D. 1895, July-November.— **Correspondence with the Government of Great Britain on the Venezuela boundary question.** See in *U. S. VENEZUELA*, A. D. 1895, CLIV and V, CLXIII.

A. D. 1895, September.— **Executive order for the improvement of the consular service.** *U. S. MESS.*, to Congress, December 2, 1895. Passed in England made the following statement of reasons adopted for the improvement of the consular service of the country:

In view of the growth of our interests in foreign countries and the encouraging prospects for a general expansion of our commerce, the system of appointment in the consular service has increased in importance and urgency. It is manifest that the great body of consular officers are rendering valuable services to the trade and industries of the country, the need of some plan of appointment and control which would tend to secure a higher average of efficiency has led the Executive to consider that it should properly be taken without delay and legislation to answer the need of a better system of consular appointments. The matter has been committed to the consideration of the Secretary of State, in pursuance of his recommendation, an Executive order was issued on September 18, 1895, by the terms of which it is provided that after that date any vacancy in consular or commercial agency with compensation salary or compensation from official fees of more than \$2,500 or less than \$1,000 shall be filled either by transfer, promotion from some other position under the department or by the appointment of a person not under the department of State, but having previously served abroad and shown his capacity and fitness for consular duty, or by the appointment of a person who, having been selected by the President and sent to a board for examination, is found, upon such examination, to be qualified for the position. Posts which pay less than \$1,000 being usually, on account of their small compensation, filled by selection from residents of the locality, it was not deemed practicable to put them under the new system.

The compensation of \$2,500 was adopted as the maximum limit in the classification for the reason that consular officers receiving more than that sum are, from charges with functions and duties more important in city and importance to those of diplomatic agents, and it was therefore thought best to continue their selection in the discretion of the Executive without subjecting them to examination before a board. Excluding seventy-one places with compensation at present less than \$1,000, and fifty-three places above the maximum in compensation, the number of positions remaining within the scope of the order is one hundred and ninety-six. This number will undoubtedly be increased by the inclusion of consular officers whose remuneration in fees, now less than \$1,000, will be augmented with the growth of our foreign commerce and a return to more favorable business conditions. In execution of the Executive order referred to, the Secretary of State has designated as a board to

conduct the prescribed examinations the Third Assistant Secretary of State, the Secretary of the Department of State, and the Chief of the Consular Bureau, and has specified the subjects on which such examinations shall be held.

It is not assumed that this system will prove a full measure of consular reform. It is quite probable that actual experience will show particulars in which the order already issued may be amended, and it is manifest that for the best results appropriate legislation by Congress is imperatively required. In any event, these efforts to improve the consular service must be immediately supplemented by legislation providing for consular inspection. This has the priority been subject of Executive recommendation, and I urge such action by Congress as will permit the frequent and thorough inspection of consular officers, appointed for that purpose, or by persons directly in the application of consular service. The expense attending such a plan would be insignificant compared with its usefulness, and I hope the legislation necessary to set our foot will be speedily forthcoming.

I am the more fully convinced that in addition to their salaries our ambassadors, ministers, and foreign courts should be provided by the Government with official residences. The salaries of these officers are comparatively small and, in most cases, insufficient to pay, with other necessary expenses, the cost of maintaining household establishments in keeping with their important and delicate functions. The usefulness of a minister's diplomatic representation, and his standing depends upon the appropriateness of his attire and living, and a country like ours, while avoiding unnecessary ostentation and show, should be certain that it does not suffer in its relations with foreign nations through parsimony and shabbiness in its diplomatic outfit. These considerations and the other advantages of having fixed and somewhat permanent locations for our embassies would abundantly justify the moderate expenditure necessary to carry out this suggestion. *— The Case of the President at 54th Cong., 1st Sess., House Doc. 11.*

A. D. 1895, December.— **Message of President Cleveland on the boundary dispute between Great Britain and Venezuela.** Prompt response from Congress. On the 17th of December, 1895, the country was startled and the world at large excited by a message from President Cleveland to Congress, relating to the disputed boundary between British Guiana and Venezuela, and the refusal of the British government to submit the dispute to arbitration. See, in this vol. *VENEZUELA*, A. D. 1895, CLV, CLXIII. The tone in which the President recommended the appointment of a commission to ascertain the true division line between Venezuela and British Guiana, with a view to determining the future action of the United States, was peremptory and threatening enough to awaken all the barbaric passions which wait and watch for signals of war, and Congress in both branches, and the wisest of the President with the singular alacrity that so often appears in the action of legislative bodies when a question arises which carries the scent of war. The House refused to wait for any reference of the matter to its Committee on Foreign Relations, but framed and passed at once (December 18) without debate or division, an act authorizing

the suggested commission and appropriating \$500,000 for the expenses of its work. In the Senate there were some voices raised against needless and unseemly haste in the treatment of so grave a proposition. Senator Teller, of Colorado, was one who spoke to that effect, saying:

"I do not understand that our great competitor in commerce and trade, our great English speaking relative, has ever denied our right to assert and maintain the Monroe doctrine. What they claim is that the Monroe doctrine does not apply to this case. Whether it applies to this case depends upon the facts, which are unknown to us. It appears, if I know what the facts are, as an international lawyer I would have a difficulty in applying the law. As a believer in the American doctrine of the right to say that no European power shall invade American soil, either of North or South America, I should have no trouble in coming to a conclusion. Is it an invasion of American soil? I do not know that. I repeat, I thought I did. I have found that I do not."

"If the President of the United States had said that in the Department of State they had determined what was the true line between the British possessions and Venezuela, and if he had said, 'We are confident that the British Government, instead of attempting to arrange a disputed line, is attempting to use this disputed line as a preface for territorial acquisition,' no matter what may be the character of the Administration, whether Democratic or Republican, I would have stood by that declaration as an American Senator, because there is where we get our information upon these subjects, and not from our own judgment. We must stand by what the Department says upon these great questions when the facts are ascertained by it. The President says that he needs assistance to make this determination. We are going to give it to him. Nobody doubts that. The only question is, how shall we give it to him? I am as firm a believer in the Monroe doctrine as any man who lives. I am as firm a believer as any one in the maintenance of the honor of the American people, and do not believe it can be maintained if we abandon the Monroe doctrine."

"Mr. President, there is no haste in this matter. The dispute is one of long standing. Great Britain is not now taking any extraordinary steps with reference to the control of the territory in dispute. They took it, it is said, five months to answer our Secretary's letter of July 20. Mr. President, the time was not excessive. It is not unreasonable in diplomatic affairs that there should be months taken in replying to questions of so much importance. We may properly take months, if we choose, to consider it before we plant ourselves upon what we say are the facts in this case. I repeat, so far as the American people are concerned, the Monroe doctrine is not in dispute, is not in doubt, whatever may be the doubt about the facts in this case. If the facts are not ascertained, we must, before we proceed further, ascertain them."

"This is a very important question. It is not a question of party politics. It is not a question that any political party ought to take advantage of to get votes. The political party that attempts to make capital out of this question will find that it is a loser in the end. The American people will not be trifled with on a

question of this kind. If the President's Chamber, or the Administration, attempts to make capital out of it, that they will lose in the end. I am on our side if we should be asked to take it out of it in any way."

"I know we are not to attempt to take it out of it in any way. It is of so much importance that I do not think if the bill goes to the Committee on Foreign Relations and lies there a month, it will impress the world with our sentimentality on this question by any means. Let this proceeding be a dignified proceeding. Let the bill go to the committee. Let the committee take their time on it. Let the committee here and say what is the best way in which we can strengthen the hands of the President of the United States in his effort to maintain this American doctrine."

"Mr. President, I am not one of those who want war. I do not want war. In this case Great Britain is a great power. She said she would not arbitrate and I am not enough in the love of justice and right to pervade the people of Great Britain to say that on second thought they would give this question to arbitration, as many of the representative men have declared they would. I submit all questions of this character to the committee. Let the committee consider. If the committee wants a week, a day, or two weeks, or a month, let the committee take it. Nothing will be lost. The people will not misunderstand our attitude. She will not misunderstand it now. She knows as well how we feel upon these subjects as when we pass this bill. She has had more in her ears again and again from our Secretary of State that we were not going to abandon the Monroe doctrine, nor was we to difference the improper interference of European power with any existing American Government, whether such interference is a violation of the Monroe doctrine or not. — *Congressional Record*, Dec. 19, 1893, p. 246."

Senator Call made a similar appeal, saying: "As to all this talk about war, in my opinion there is no possibility of war. There is no possibility of it. The lightened sentiment of the nations of the world would forbid that there should be a war between this country and England upon this question. Nevertheless, it would be the duty of this country to maintain by force of arms the principle that there shall be no forcible establishment of European institutions and European Governments over any portion of this territory. We can entertain the idea that war can be made by Great Britain, and that the people of the British Empire will permit that Government to wage war upon a question of boundaries which is not sustained by the facts of the case, for aggression, and that the peace of mankind will be disturbed by it."

"I agree with the Senator from Ohio (Sherman) that there is no necessity for hastening this action and that it comports better with the dignity of Congress for the Senate of the United States and the House of Representatives to declare that this Government will firmly maintain as a definite proposition, that Venezuela will not be forced to cede any portion of her territory to Great Britain or to recognize a boundary

was caused in the North and West of America by the attitude of our wealthy class during the Civil War. But that attitude was not the attitude of the British nation. Our press, whose tone often exasperates Continental nations, is almost uniformly respectful and friendly to America. What can we have done to provoke in the United States feelings so unlike those which we ourselves cherish?

"In thus summing up what one has been hearing on all sides in Britain during the last fortnight, I am not exaggerating either the amazement or the regret with which the news of a threatened breach between the two countries was received. The average Englishman likes America far better than any foreign nation; he admires the 'go' as he calls it, of your people, and is soon at home among you. In fact, he does not regard you as a foreign nation, as any one will agree who has noticed how different has been the reception given on all public occasions to your last four envoys, Messrs. Welsh, Lowell, Phelps, and Lincoln (as well as your present ambassador) from that accorded to the ambassadors of any other power. The educated and thoughtful Englishman has looked upon your Republic as the champion of freedom and peace, has held you to be our natural ally, and has even indulged the hope of a permanent alliance with you, under which the citizens of each country should have the rights of citizenship in the other and be aided by the consuls and protected by the fleets of the other all over the world. The sentiments which the news from America evoked were, therefore, common to all classes in England. . . . Passion has not yet been aroused, and will not be, except by the language of menace."—J. Bryce, *British Feeling on the Venezuelan Question* (*North American Review*, Feb., 1896).

The writer who described American feeling, or opinion, in the same magazine, was Mr. Andrew Carnegie, who said: "In the United States, East, West, North and South, from which divergent voices were at first heard, there is but one voice now. Public opinion has crystallized into one word—arbitration. In support of that mode of settlement we now know the nation is unanimous. The proofs of this should not fail to carry conviction into the hearts of Britons. The one representative and influential body in the United States which is most closely allied with Britain not only by the ties of trade, but by the friendships which these ties have created, is the Chamber of Commerce of New York. If that body were polled by ballot, probably a greater proportion of its members than of any other body of American citizens would register themselves as friendly to England. So far did the feeling extend in this body, that a movement was on foot to call a meeting to dissent from the President's Message. Fortunately, wiser counsels prevailed, and time was given for an examination of the question, and for members to make up their minds upon the facts. The result was that at the crowded meeting subsequently held, there was passed a resolution, with only one dissenting voice, in favor of a commission for arbitration. In the whole proceedings there was only one sentiment present in the minds of those assembled: 'this is a question for arbitration.' . . .

"Every nation has its 'Red Rag,' some nations have more than one, but what the 'Right of

Asylum' is to Great Britain, the Monroe Doctrine is to the United States. Each has gone deep in the national heart. Few suppose that Great Britain do not share the opinion of Mr. Salisbury, which he has not feared to express, that the 'Right of Asylum' is abused and should be restricted, but there has not arisen in Britain sufficiently powerful to deal with. The United States never had, and has not, a statesman who could restrain the American people from an outburst of passion and the extreme consequences that national passion is likely to bring, if any European power undertakes to extend its territory upon this continent or decide in case of dispute just where the boundary of present possessions stand. Such differences must be arbitrated.

"In his speech at Manchester Mr. Balfour said he trusted and believed the day would come when better statesmen in authority, and more fortunate than even Monroe, would settle the doctrine between the English-speaking people under which war would be impossible. The day has not to come, it has arrived. The British Government has had for years in its archives an invitation from the United States to enter into a treaty of arbitration which realizes this hope, and Mr. Balfour is one of those who from the great position, seem most responsible for the rejection of the end he so ardently longs for. It is time that the people of Great Britain understood that if war be still possible between two countries, it is not the fault of the Republic but of their own country, not of President Cleveland and Secretary of State Olney, but of Prime Minister Salisbury, and the leader of the House of Commons, Mr. Balfour, who do not accept the offered treaty which would banish war forever between the two nations of our race. The invitation was sent by the same President Cleveland, who is now denounced as favoring war. It was my office to introduce to Mr. Cleveland then President of the United States, as he is now the delegation from the British Parliament to inaugurate arbitration. In the conferences I had with him previous to his receiving the deputation, I found him as strong a supporter of that policy as I ever met. I do not wonder at his enthusiasm knowing how deeply this man feels upon the question; it is to him precious, it constitutes so great an advance for arbitration by treaty—that even if we had to fight, that any man rejecting it may survive—I believe he feels that it would be our duty to do so, believing that a nation which rejects arbitration in a bound dispute deserves the execration of mankind."—A. Carnegie, *The Venezuelan Question* (*North American Review*, Feb., 1896).

A. D. 1895-1896 (December—February). The gold reserve in the Treasury again perilously low.—**Refusal of any measures of relief by the Senate.**—In his annual Message to Congress, December 21, 1895, President Cleveland described at length the stress of circumstances under which in the previous February the Treasury had contracted with foreign bankers and financiers to replenish and meet the reserve of gold in the Treasury redemption of United States notes (see above) and added: "The performance of this could not only restore the reserve, but check at once the withdrawals of gold and bring about a period of restored confidence and such peace

the Government has incurred a bonded indebted-

" If it is said that these notes if held by the Government can be used to obtain gold for our reserve, the answer is easy. The people draw gold from the Treasury on demand upon United

States notes and Treasury notes, but the proposition that the Treasury can on demand draw gold from the people upon them would be regarded in these days with wonder and amusement, and even if this could be done there is nothing to prevent these thus parting with their gold from regarding it the next day or the next hour by the presentation of the notes they received in exchange for it. The Secretary of the Treasury might use such notes taken from a surplus revenue to buy gold in the market. Of course he could not do this without paying a premium. Private holders of gold, unlike the Government, having no parity to maintain, would not be restrained from making the best bargain possible when they furnished gold to the Treasury; but the moment the Secretary of the Treasury bought gold on any terms above par he would establish a general and universal premium upon it, thus breaking down the parity between gold and silver, which the Government is pledged to maintain, and opening the way to new and serious complications. In the meantime the premium would not remain stationary, and the absurd spectacle might be presented of a dealer selling gold to the Government and with United States notes or Treasury notes in his hand immediately clamoring for its return and a resale at a higher premium.

"It may be claimed that a large revenue and redundant receipts might favorably affect the situation under discussion by affording an opportunity of retaining these notes in the Treasury when received, and thus preventing their presentation for gold. Such retention to be useful ought to be at least measurably permanent; and this is precisely what is prohibited, so far as United States notes are concerned, by the law of 1878, forbidding their further retirement. That statute in so many words provides, that these notes when received into the Treasury and belonging to the United States shall be 'paid out again and kept in circulation.'—*United States Message and Documents (Abridgment)*, 1895-6, p. 27.

"The difficulty which had been anticipated in keeping gold in the treasury became acute as a result of the president's Venezuelan message of December 17. The 'war scare' which was caused by that document was attended by a panic on the London Exchange, which communicated itself to the Continental exchanges and produced at once serious consequences in New York. Prices fell heavily, some failures were reported, and the withdrawal of gold from the treasury assumed great proportions. On the 20th the reserve had gone down to \$39,650,000, ten millions less than three weeks earlier, with future large reductions obviously near at hand. The president accordingly on that day sent to Congress a special message, stating the situation, alluding to the effect of his recently announced foreign policy, and declaring that the result conveyed a 'warning that even the patriotic sentiment of our people is not an adequate substitute for a sound financial policy.' He asked Congress to postpone its holiday recess until something had been done to reassure the apprehensive among the people, but declared that in any case he should use every means in the power of the executive to maintain the country's credit. The suggestion was acted upon.

"On December 26 two bills were introduced

in the House of Representatives by Charles Dingley of the ways and means committee. Adopting the view maintained by the Republicans, that the chief cause of the difficulty in maintaining the gold reserve was the pressure in the revenue, he proposed first a bill to temporarily increase the revenues. This provided that until August 1, 1898, the customs duties on most varieties of wool and woollen manufactures, on lumber, should stand at 60 per cent of the duties imposed by the McKinley Act of 1890, and that the duties in all the other schedules of the tariff except sugar, should, with slight exceptions, be increased by 15 per cent over those now existing law. This bill passed the House on the 27th by a party vote of 205 to 81. On the following day the second bill, 'to maintain and protect the coin redemption fund' was passed, 170 to 136,—47 Republicans in the majority. This bill authorized the secretary of the treasury to procure coin for redeeming legal tender, and the sale of three per cent five year bonds, and to provide for temporary deficiencies by the issue of three year three per cent certificates of indebtedness in small denominations. The administration was as little satisfied with this bill as that changing the tariff, and proceeded with a bond issue.

"The failure of the bills in the Senate was seen, but the precise form in which it was manifested excited some surprise. On February 1 [1896], the bond bill was transformed by the adoption of a substitute providing for the recoinage of silver, and this was passed by a vote of 42 to 35. On the 14th the House refused, 215 to 90, to concur in the Senate's amendment, and the whole subject was dropped. Meanwhile the Senate finance committee had reported a coinage substitute for the House tariff bill. But after this further exhibition of their strength the silver senators refused to go further, and on February 25 joined with the Democrats in voting, by 33 to 22, a motion to take up the bill for consideration. This vote was recognized as finally disposing of the measure."—*Political Science Quarterly*, June, 1896.

A. D. 1895-1896 (December—December)
Plans for coast defense.—In his annual report to the President, 1895, the Secretary of War wrote as follows of pending plans for coast defense, and of the progress of work upon them: "In your annual message transmitted to Congress in December, 1886, attention was directed to the urgent necessity for seacoast defense in the following words: 'The defenseless condition of our coast and lake frontier is perfectly palpable; examinations made must convince us all that our cities should be fortified and that work on the most important of these fortifications should be commenced at once.' Since that time the condition of these defenses has been under grave consideration by the people and this Department. Its inadequacy and imperfections have been so evident that the intelligence of the country long since ceased to discuss that humiliating phase of the subject, but has addressed itself to the more practical undertaking of securing more rapid progress in the execution of the plan of defense devised by the Engineer Board in 1877, with subsequent slight modifications. That contemplated a system of fortifications at 27 points, of which Puget Sound was subsequently added, requiring 677 guns and 824 mortars of no

A. D. 1896 (June - November). The Presidential election. The silver question at issue. - Party Platforms and Nominations. - A national convention held at Washington, in March, 1895, may be looked upon as the beginning of a widely and powerfully organized movement to force the demand for a true and limited coinage of silver on equal terms as legal tender money, with gold into the front of the issues of the presidential canvass of 1896. The agitation then projected was carried on with extraordinary ardor and skill and had astonishing success. It was helped by the general depression of business in the country, and especially by the long continued ruling of low prices for the produce of the farms, - for all of which efforts the gold standard of values was held to be the more lawless cause. In both political parties the free silver propaganda was pushed with startling effect and there seemed to be doubt, for a time, whether the controlling politicians in either would take an opposing stand. Southern influences proved decisive of the result in the Democratic party, eastern influences in that of the Republicans. The ranks of the former were swept rapidly into the movement for free silver, and the party chiefs of the latter were driven to a conflict with it not wholly by convictions or will of their own. During the spring and early summer of 1896, the Democratic Party in State after State became committed on the question, by declarations for the unlimited free coinage of silver at the ratio of 16 to 1, until there was tolerable certainty, some weeks before the meeting of the national convention, that its nominee for President must be one who represented that demand. How positively the Republican Party would champion the gold monetary standard was somewhat less as

sured, though his stand on that side had been taken in a general way.

Republican Platform and Nominations.—

The Republican national convention was held at St. Louis on the 16th, 17th and 18th of June. The platform reported by the committee on resolutions was adopted without amendment on the 18th named date. Its declarations were as follows:

The Republicans of the United States, assembled by their representatives in National Convention, appealing for the popular and historical justification of their claims to the matchless and earnestly and confidently address themselves to science of their countrymen in the following declaration of facts and principles:

For the first time since the civil war the American people have witnessed the calamitous consequences of full and unrestricted Democratic control of the Government. It has been a record of unparalleled incapacity, dishonor, and disaster. In administrative management it has ruthlessly sacrificed indispensable revenue, entailed an encumbering deficit, eked out ordinary current expenses with borrowed money, piled up the public debt to \$262,000,000 in time of peace, forced an adverse balance of trade, kept a perpetual menace hanging over the redemption fund, pawned American credit to loan syndicates and reversed all the measures and results of successful Republican rule.

"In the broad effect of its policy it has precipitated panic, blighted industry and trade with prolonged depression, closed factories, reduced work and wages, halted enterprise, and crippled American production while stimulating foreign production for the American market. Every consideration of public safety and individual interest demands that the Government shall be rescued from the hands of those who have shown themselves incapable to conduct it without disaster at home and dishonor abroad, and shall be restored to the party which for thirty years administered it with unequalled success and prosperity, and in this connection we heartily endorse the wisdom, patriotism, and the success of the administration of President Harrison.

"We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity. This true American policy taxes foreign products and encourages home industry; it puts the burden of revenue on foreign goods; it secures the American market for the American producer; it upholds the American standard of wages for the American workman; it puts the factory by the side of the farm, and makes the American farmer less dependent on foreign demand and price; it diffuses general thrift, and founds the strength of all on the strength of each. In its reasonable application it is just, fair, and impartial, equally opposed to foreign control and domestic monopoly, to sectional discrimination, and to individual favoritism.

• We denounce the present Democratic tariff as sectional, injurious to the public credit, and destructive to business enterprise. We demand such an equitable tariff on foreign imports which come into competition with American products as will not only furnish adequate revenue for the

necessary expenses of the Government protect American labor from degrading wage level of other lands. We are not to any particular schedule. The rates is a practical question to be determined by the conditions of the time and place, ruling and uncompromising policy for the protection and development of American industry. The country demands a government, and then it wants rest.

We believe the repeal of these trade agreements negotiated by the last presidential administration [see, in Vol. 5, *Trade Agreements with the United States*, A.P. 1980, 1981] was a national calamity, and we demand their renewal and extension on such terms as will maximize our trade with other nations, remove all restrictions which now obstruct the export of American products in the ports of other nations, and secure enlarged markets for the products of our farms, forests, and factories.

"Protection and reciprocity are twin engines of Republican policy and go hand in hand." The protective rule has recklessly stricken what both must be re-established. Protection builds we produce; free admission for the products of life which we do not produce; reciprocal agreements of mutual interests which enable markets for us in return for our opening markets for others. Protection builds up domestic prices and trade and secures our own market for ourselves; reciprocity builds up foreign markets and finds an outlet for our surplus. We have a present administration for not keeping out of the sugar producers of this country. The Republican party favors such protection as will help the production on American soil of all the sugar which the American people use, and for which they pay other countries more than \$70,000,000 annually. To all our producers: both sugar, mine and the fields as well as to those of the shop and the factory—to hemp, to wool, to the product of the great industry of sheep husbandry, as well as to the finished wools of the home—promise the most ample protection.

"We favor restoring the early American policy of discriminating duties for the upbuilding of our merchant marine and the protection of shipping in the foreign carrying trade, so that American ships—the product of American labor employed in American shipyards, sailing under the Stars and Stripes, and manned, owned and operated by Americans—may regain the carrying of our foreign commerce.

"The Republican party is unswervingly sound money. It caused the enactment of the law providing for the resumption of specie payments in 1875; since then every dollar has been as good as gold. We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are, therefore, opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world which pledge ourselves to promote, and such an agreement can be obtained the existing standard must be preserved. All our silver paper currency must be maintained at par with gold, and we favor all measures designed to maintain inviolably the obligations of the United States and all our money, whether coin or paper at the present standard, the standard of the enlightened nations of the earth.

The members of the Union Army deserve and are entitled to the same treatment and generous recognition. As far as ever practicable, they should be given preference in the matter of employment. They are entitled to the enactment of laws which shall be calculated to secure the full payment of the pledges made to them in the darkest hour of our country's peril. We denounce the mismanagement of the Pension Bureau, so recklessly and carelessly carried on by the present administration, the granting of pensions and arbitrarily dropping names from the rolls as deserving the severest reprobation of the American people.

Our foreign policy should be at all times wise, dignified, and all our international relations should be carefully watched and guarded. The Hawaiian Islands should be maintained by the United States, and no foreign power should be permitted to interfere with them. The Panama Canal should be built, owned, and operated by the United States; and by the purchase of the Danish Islands we should secure a proper and much needed naval station in the West Indies.

The massacres in Armenia have aroused the sympathy and just indignation of the American people, and we believe that the United States should exercise all the influence it can properly exert to bring these atrocities to an end. In Turkey American residents have been exposed to the gravest dangers and American property has been endangered. The reward everywhere American citizenship and American property must be absolutely protected at all hazards and at any cost.

We assert the Monroe doctrine in its full extent, and we reaffirm the right of the United States to give the doctrine effect by responding to the appeal of any American State for friendly protection in case of European encroachment. We have not interfered with and shall not interfere with the existing possessions of any European power in this hemisphere, but these possessions must not on any pretext be extended. We look forward to the eventual withdrawal of European powers from this hemisphere and to the ultimate union of all the English-speaking parts of the continent by the free consent of its inhabitants.

From the hour of achieving their own independence the people of the United States have regarded with sympathy the struggles of other American people to free themselves from European domination. We watch with deep and ardent interest the heroic battle of the Cuban people against cruelty and oppression, and our best hopes go out for the full success of their determined contest for liberty. The Government of Spain having lost control of Cuba, and being unable to protect the property or lives of resident American citizens, or to comply with its treaty obligations, we believe that the Government of the United States should actively use its influence and good offices to restore peace and give independence to the island.

The peace and security of the Republic and the maintenance of its rightful influence among the nations of the earth demand a naval power commensurate with its position and responsibility. We therefore favor the continued enlargement of the navy and a complete system of harbor and seacoast defenses.

For the protection of the quality of our American citizenship and of the wages of our

workmen against the fatal effects of the law of competition, we demand that the Government should be authorized to regulate and control the labor market, and to exclude from entrance into the United States those who are neither real nor white.

The civil-service law was placed in the statute book by the Republican party, which has always sustained it, and we firmly support the declaration that it shall be the basis of a just and honestly conducted and extended system of public employment.

We demand that every citizen of the United States shall be allowed to vote in the election of a restricted ballot, and that such ballot shall be counted and returned as cast.

We proclaim our unqualified condemnation of the unhygienized and filthy practices well known as lynchings or hangings, and of those suspected or charged with complicity in the process of law. We favor the enactment of a National board of arbitration to settle and adjust all disputes which may arise between employers and employed engaged in interstate commerce.

We believe in an immediate return to the free homestead policy of the Republican party, and urge the passage by Congress of a satisfactory free homestead measure such as has already passed the House and is now pending in the Senate.

We favor the admission of the western Territories in the earliest practicable manner, according to the interests of the respective Territories and of the United States. All Federal officers appointed for the Territories should be selected from bona fide residents thereof, and the right of self-government should be accorded as far as practicable.

We believe the citizens of Alaska should have representation in the Congress of the United States, to the end that their legislation may be intelligently enacted.

We sympathize with all wise and legitimate efforts to lessen and prevent the evils of intemperance and promote morality.

The Republican party is indelible of the rights and interests of women. Protection of American industries includes equal opportunities, equal pay for equal work, and protection in the home. We favor the admission of women to wider spheres of usefulness and welcome their cooperation in rescuing the country from Democratic and Populist mismanagement and misrule.

Such are the principles and policies of the Republican party. By these principles we will abide and these policies we will put into execution. We ask for them the considered judgment of the American people. Confident as is the history of our great party and in the justice of our cause, we present our platform and our candidates in the full assurance that the elect will bring victory to the Republican party and prosperity to the people of the United States.

Before the adoption of this platform resolution to amend its currency "plans" by substituting a declaration in favor of "the use of both gold and silver as equal standard money," was adopted by a vote of 818 to 165. A petition from delegates representing Colorado, Idaho, Nevada, Utah, Montana and South Dakota was then read and twenty-two withdrew from the convention, as a sign of secession from the party.

Immediately following the adoption of the

platform, the Hon. William McKinley, ex Governor of Ohio, and of fame in his connection with the tariff act of 1890, was nominated on the first ballot for President of the United States by 661½ votes against 240½ divided among several opposing candidates, and the nomination was then made unanimous. For Vice President, the Hon. Garret A. Hobart of New Jersey, was named, and similarly by the first voting.

Democratic Platform and Nominations.—The Democratic national convention was held in Chicago, July 7-11. The delegates who came to it from the Southern States, and from most of the States west of Ohio, were arrayed with a close approach to solid ranks for free silver, while those from New England and the Middle States opposed them in a phalanx almost equally firm. The "Gold Democrats" or "Sound Money Democrats," as the latter were called, ably led by ex Governor Hill, of New York, fought hard to the end, but without avail. The financial resolution they strove to place in the platform was the following:

"We declare our belief that the experiment on the part of the United States alone of free silver coinage, and a change in the existing standard of value independently of the action of other great nations, would not only imperil our finances, but would retard or entirely prevent the establishment of international bimetalism, to which the efforts of the government should be steadily directed. It would place this country at once upon a silver basis, impair contracts, disturb business, diminish the purchasing power of the wages of labor, and inflict irreparable evils upon our nation's commerce and industry.

"Until international co-operation among leading nations for the coinage of silver can be secured, we favor the rigid maintenance of the existing gold standard as essential to the preservation of our national credit, the redemption of our public pledges, and the keeping inviolate of our country's honor. We insist that all our paper currency shall be kept at a parity with gold. The democratic party is the party of hard money, and is opposed to legal tender paper money as a part of our permanent financial system; and we therefore favor the gradual retirement and cancellation of all United States notes and treasury notes, under such legislative provisions as will prevent undue contraction. We demand that the national credit shall be resolutely maintained at all times and under all circumstances."

This resolution was rejected by 626 votes against 393. Another resolution from the same source, commending "the honesty, economy, courage and fidelity" of the "democratic national administration" of President Cleveland, was voted down by 564 to 357. Resolutions to protect existing contracts against a change of monetary standard, and to provide for a suspension of silver free coinage, at the ratio of 16 to 1, after trial for one year, if it failed to maintain parity between silver and gold, were similarly voted down. The declarations then adopted, for the "platform" of the party, were as follows:

"We, the Democrats of the United States, in National Convention assembled, do reaffirm our allegiance to those great essential principles of justice and liberty upon which our institutions are founded, and which the Democratic party

has advocated from Jefferson's time to ours—freedom of speech, freedom of the press, freedom of conscience, the preservation of rights, the equality of all citizens before the law, and the faithful observance of contracts and limitations.

"During all these years the Democratic party has resisted the tendency of sectional interests, the centralization of governmental power, and has steadfastly maintained the integrity of the scheme of government established by our forefathers of this Republic of republicans. Under the guidance and teachings the great principles of local self government has found its best expression in the maintenance of the rights of the States and in its assertion of the necessity of confining the General Government to the exercise of the powers granted by the Constitution of the United States.

"Recognizing that the money question has amounted to all others at this time, we have attention to the fact that the Federal Constitution names silver and gold together as the legal metals of the United States, and that the coinage law passed by Congress under the Constitution made the silver dollar the national unit, and admitted gold to free coinage at a rate based upon the silver dollar unit.

"We declare that the act of 1873 demonetizing silver without the knowledge or approval of the American people has resulted in the appreciation of gold and a corresponding fall in the price of commodities produced by the people, which has increased the burden of taxation and of debts, public and private; the curtailment of money lending class at home and abroad; the stagnation of industry and impoverishment of the people.

"We are unalterably opposed to gold monometallism, which has locked fast the prosperities of an industrial people in the paralysis of times. Gold monometallism is a British policy, and its adoption has brought other nations into financial servitude to London. It is entirely American but anti American, and it can be tolerated in the United States only by the spirit of that spirit and love of liberty which proclaimed our political independence in 1776 and won it in the war of the Revolution.

"We demand the free and unlimited coinage of both gold and silver at the present legal ratio of sixteen to one, without waiting for the consent of any other nation. We demand that the standard silver dollar shall be a full legal tender, equally with gold, for all debts, public and private, and we favor such legislation as will prevent for the future the demonetization of any kind of legal tender money by private contract.

"We are opposed to the policy and practice of surrendering to the holders of the obligation of the United States the option reserved by the Government of redeeming such obligations in either silver coin or gold coin.

"We are opposed to the issuing of interest-bearing bonds of the United States in the peace, and condemn the trafficking with the syndicates which, in exchange for bonds, at an enormous profit to themselves, supply the Federal Treasury with gold to maintain the policy of gold monometallism.

"Congress alone has the power to coin and issue money, and President Jackson alone

that this power could not be delegated to corporations or individuals. We therefore demand that the power to issue notes to circulate as money be taken from the National banks, and that a paper money shall be issued directly by the Treasury Department, be redeemable in coin, and receivable for all debts, public and private.

We hold that the tariff duties should be levied for purposes of revenue, such duties to be levied as to operate equally throughout the country and not discriminate between class or section, and that taxation should be limited by the needs of the Government honestly and economically administered.

We denounce, as disturbing to business, the Republican threat to restore the McKinley law, which has been twice condemned by the people in national elections, and which, enacted under a plea of protection to home industry, proved a prolific breeder of trusts and monopolies, enriched the few at the expense of the many, restricted trade, and deprived the producers of the great American staples of access to our natural markets. Until the money question is settled we are opposed to any agitation for further changes in our tariff laws, except such as are necessary to make the deficit in revenue caused by the adverse decision of the Supreme Court on the income tax.

There would be no deficit in the revenue but for the annulment by the Supreme Court of a law passed by a Democratic Congress in strict pursuance of the uniform decisions of that court for nearly 100 years, that court having sustained constitutional objections to its enactment which had been overruled by the ablest judges who have ever sat on that bench. We declare that it is the duty of Congress to use all the constitutional power which remains after that decision, which may come by its reversal by the court, as it may hereafter be constituted, so that the burdens of taxation may be equally and impartially laid, to the end that wealth may bear its due proportion of the expenses of the Government.

We hold that the most efficient way to protect American labor is to prevent the importation of foreign pauper labor to compete with it in the home market, and that the value of the home market to our American farmers and artisans is greatly reduced by a vicious monetary system, which depresses the prices of their products below the cost of production, and thus deprives them of the means of purchasing the products of our home manufacture.

We denounce the profligate waste of the money wrung from the people by oppressive taxation and the lavish appropriations of recent Republican Congresses, which have kept taxes high, while the labor that pays them is unemployed, and the products of the people's toil depressed in price till they no longer repay the cost of production. We demand a return to that simplicity and economy which best befitted a Democratic Government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

We denounce arbitrary interference by Federal authorities in local affairs as a violation of the Constitution of the United States and a crime against free institutions, and we especially object to government by injunction as a new and highly dangerous form of oppression, by

which Federal judges, in contempt of the laws of the States and rights of citizens, become at once legislators, judges, and executioners, and we approve the bill passed at the last session of the United States Senate and now pending in the House, relative to contempt in Federal courts, and providing for trials by jury in certain cases of contempt.

No discrimination should be indulged by the Government of the United States in favor of any of its debtors. We approve of the refusal of the Fifty-third Congress to pass the Pacific Railroad funding bill, and denounce the effort of the present Republican Congress to enact a similar measure.

Recognizing the just claims of deserving Union soldiers, we heartily endorse the rule of the present Commissioner of Pensions that pensions shall be arbitrarily dropped from the pension roll, and the fact of an applicant's service should be deemed conclusive evidence against disease or disability before retirement.

We extend our sympathy to the people of Cuba in their heroic struggle for liberty and independence.

We are opposed to life tenure in the public service. We favor appointments based upon merit, fixed terms of office, and strict administration of the civil service laws, as will afford equal opportunities to all citizens of a certain fitness.

We declare it to be the unwritten law of this Republic, established by custom and usage of 100 years, and sanctioned by the examples of the greatest and wisest of those who founded and have maintained our Government, that no man should be eligible for a third term of the Presidential office.

The absorption of wealth by the few, the consolidation of our leading railroad systems, and formation of trusts and pools require a stricter control by the Federal Government of those arteries of commerce. We demand the enlargement of the powers of the Interstate Commerce Commission, and such restrictions and guarantees in the control of railroads as will protect the people from robbery and oppression.

We favor the admission of the Territories of New Mexico and Arizona into the Union as States, and we favor the early admission of all the Territories giving the necessary population and resources to entitle them to Statehood; and while they remain Territories we hold that the officials appointed to administer the government of any Territory, together with the District of Columbia and Alaska, should be bona fide residents of the Territory or District in which their duties are to be performed. The Democratic party believes in home rule, and that all public lands of the United States should be appropriated to the establishment of free homes for American citizens.

We recommend that the Territory of Alaska be granted a Delegate in Congress, and that the general land and timber laws of the United States be extended to said Territory.

The Federal Government should care for and improve the Mississippi River and other great waterways of the Republic so as to secure for the interior people easy and cheap transportation to tidewater. When any waterway of the Republic is of sufficient importance to demand aid of the Government, such aid should

be extended upon a definite plan of continuous work until permanent improvement is secured.

"Confiding in the justice of our cause and the necessity of its success at the polls, we submit the foregoing declaration of principles and purposes to the considerate judgment of the American people. We invite the support of all citizens who approve them, and who desire to have them made effective through legislation for the relief of the people and the restoration of the country's prosperity."

In the course of the debate upon the silver question, a speech of impassioned eloquence was made by William J. Bryan, of Nebraska, who had represented his district in Congress for two terms, 1891-4, and who was rising to prominence among the leaders of the free silver Democracy of the west. The speech excited an enthusiasm and an admiration which led to the nomination of Mr. Bryan for the presidency. That unexpected choice was reached after four ballots, in each of which the votes for the Nebraska orator rose steadily in number. At the fifth ballot they had passed the requisite two thirds, and his nomination was declared to be unanimous, though protests were made. The entire delegation from New York and many delegates from New England and New Jersey cast no votes, refusing to take any part in the nomination of a candidate on the platform laid down. The chosen candidate for Vice President was Arthur Sewall, of Maine.

The National Silver Party.—The considerable body of Republicans who desired an unlimited free coinage of silver, and were prepared to quit their party on that issue, had made efforts to persuade the Democratic convention at Chicago to accept their leader, Senator Teller, of Colorado, for its presidential candidate. Failing in that, they assembled a convention of delegates at St. Louis, July 22-24, and, under the name of the "National Silver Party," took the alternative method of uniting the free silver Republican vote with that of the free silver Democracy, by accepting the Democratic nominations as their own. William J. Bryan and Arthur Sewall were duly nominated for President and Vice President, and a "platform" set forth as follows:

"The National Silver Party in Convention assembled hereby adopts the following declaration of principles:

"First. The paramount issue at this time in the United States is indisputably the money question. It is between the gold standard, gold bonds, and bank currency on the one side and the bimetallic standard, no bonds, and Government currency on the other.

"On this issue we declare ourselves to be in favor of a distinctively American financial system. We are unalterably opposed to the single gold standard, and demand the immediate return to the constitutional standard of gold and silver by the restoration by this Government, independent of any foreign power, of the unrestricted coinage of both gold and silver into standard money at the ratio of sixteen to one, and upon terms of exact equality, as they existed prior to 1873; the silver coin to be a full legal tender equally with gold for all debts and dues, private and public, and we favor such legislation, as will prevent for the future the demonetization of any kind of legal tender money by private contract.

"We hold that the power to coin money is a power to coin money, and hence we are unalterably opposed to the issuance of paper money, and its volume controlled by the Government only, and should be legal tender.

"We are unalterably opposed to the demonetization of the United States of interest-bearing bonds at any time of peace, and we denounce as a crime worse than a crime the present financial panic, incurred in by a Republican House, the country in debt by hundreds of millions, and the vain attempt to maintain the gold standard by borrowing gold and we demand the redemption of all coin obligations of the United States, provided by existing laws, free of charge, in gold, at the option of the Government, and at the option of the creditor.

"The demonetization of silver has not only enormously increased the demand for gold, but has also increased its purchasing power and lowered its price, measured by that standard, and so that the just and indetensible net prices of American products have fallen upon an average of fifty per cent., carrying down with them proportionately the money value of all other forms of property. Such fall of prices has destroyed the profits of legitimate industry, and has driven the producer for the benefit of the non-producer, increasing the burden of the debtor, saving the gains of the creditor, paralyzing the productive energies of the American people, reducing idleness vast numbers of willing workers, and throwing the shadows of despair into the home of the poorest toiler, filling the land with tramps and beggars, and building up colossal fortunes at money centres.

"In the effort to maintain the gold standard the country has, within the last two years, incurred a time of profound peace and plenty, been laid down with \$262,000,000 of additional paper-bearing debt, under such circumstances as to allow a syndicate of native and foreign banks to realize a net profit of millions on such a debt.

"It stands confessed that the gold standard can only be upheld by so depleting our paper currency as to force the prices of our goods below the European and even below the Asiatic level to enable us to sell in foreign markets, thus aggravating the very evils our people so often complain of, degrading American labor, and striking at the foundations of our civilization itself.

"The advocates of the gold standard presently claim that the cause of our distress is overproduction; that we have produced so much that we cannot consume it—which implies that the remedy is to close the factory, abandon the land, and throw a multitude of people out of employment, a doctrine that leaves us unmoved, disheartened, and absolutely without hope for the future.

"We affirm it to be unquestioned that there can be no such economic paradox as overproduction, and at the same time tens of thousands of our fellow citizens remaining half clothed, half fed, and who are pitiously clamoring for the common necessities of life.

"Second. That over and above all other considerations of policy we are in favor of restoring to the people of the United States the true meaning of the Constitution—gold and silver coin, but both—the money of Washington.

We found that the mean diameter of the average of seven adults that we present for a set of sixteen to six, with the water, that the set of sixteen to six.

We demand that the exchange of currencies in the medium be speedily resumed to enable the country to be able to meet its demands of the business population of this country and to restore the present level of prices of food and products.

We deny, and the state of bonds and the increase of the public interest bears witness, that made by the present marketing restrictions are necessary and without authority of law. And we demand that the state bonds be issued except by specification of Congress.

We demand that the Government, in payment of its obligations, shall use its ordinary to the kind of lawful money in which they are to be paid, and we denounce the present and preceding administrations for transacting business with the holders of Government securities.

rent decision of the Supreme Court relative to the income tax laws is a misinterpretation of the Constitution and an invasion of the judicial powers of Congress over the subject of taxation. We demand that the Court and Congress both

"Transportation being a means of exchange and a public service to the Government should own and operate the railroads in the interest of the people and on a non-partisan basis, to the end that there be accorded the same treatment

500

gradually, in a manner consistent with sound public policy.

"The interest of the United States in the public highways built with public moneys and the proceeds of extensive grants of land to the Pacific railroads should never be alienated, mortgaged or sold, but granted and protected for the general welfare, as provided by the laws organizing such railroads. The foreclosure of existing loans of the United States on these roads should at once follow default in the payment of the debt of the companies, and at the foreclosure sales of said roads the Government should purchase the same if it becomes necessary to protect its interests therein, or if they can be purchased at a reasonable price, and the Government should operate said railroads as public highways for the benefit of the whole and not in the interest of the few, under suitable provisions for protection of life and property, giving to all transportation interests and privileges and equal rates for fares and freight.

"We denounce the present infamous schemes for refunding these debts and demand that the laws now applicable thereto be executed and administered according to their true intent and spirit.

"The telegraph, like the post-office system, should be owned and operated by the Government in the interest of the people.

"The true policy demands that the National and State legislation shall be such as will ultimately enable every prudent and industrious citizen to secure a home, and therefore the land should not be monopolized for speculative purposes.

"All land now held by railroads and other corporations in excess of their actual needs should by lawful means be reclaimed by the Government and held for actual settlers only, and private land monopoly, as well as alien ownership, should be prohibited.

"We condemn the frauds by which the land grant to the Pacific Railroad Companies have, through the connivance of the Interior Department, robbed multitudes of bona fide settlers of their homes and miners of their claims, and we demand legislation by Congress which will enforce the exemption of mineral land from such grants after as well as before patent.

"We demand that bona fide settlers on all public lands be granted free homes, as provided in the National homestead law, and that no exception be made in the case of Indian reservations when opened for settlement, and that all lands not now patented come under this demand.

"We favor a system of direct legislation through the initiative and referendum under proper constitutional safeguards.

"We demand the election of President, Vice-President, and United States Senators by a direct vote of the people.

"We tender to the patriotic people of Cuba our deepest sympathy in their heroic struggle for political freedom and independence, and we believe the time has come when the United States, the great Republic of the world, should recognize that Cuba is and of right ought to be a free and independent State.

"We favor home rule in the Territories and the District of Columbia and the early admission of the Territories as States.

"All public salaries should be applied in proportion to the price of labor and to the cost of living.

"In times of great industrial depression, labor should be employed on public works, as practicable.

"The arbitrary course of the courts in refusing to imprison citizens for non-payment of taxes and ruling by injunction should be corrected by proper legislation.

"We favor just pensions for Union soldiers.

"Believing that the elective franchise, the untrammelled ballot are essential to the preservation of, for and by the people, the Republic, we condemn the wholesale system of disfranchisement adopted in some States as un-American and undemocratic, and we declare it the duty of the several State legislatures to take such action as will secure a full, free, equal ballot and an honest count.

"While the foregoing propositions comprise the platform upon which our party stands for the vindication of which it is, and will be maintained, we recognize that the most pressing issue of the pending campaign is which the present Presidential election settles, is the financial question, and upon this, and specific issue between the parties, we cordially invite the aid and co-operation of all organizations and citizens agreeing with us on this vital question."

National Democratic Platform and Nominations.

"An extensive revolt in the Democratic Party against the declarations and resolutions of the party convention at Chicago had been long made manifest, and steps were soon taken towards giving it an organized form. Those to the assembling of a convention in Indianapolis, on the 2d and 3d of September, which, in the name of the "National Democratic Party," repudiated the platform and the candidates put forward at Chicago, and declared the same false to the historic party name which they assumed. General John M. Palmer, of Illinois, was put in nomination for President and General Simon Bolivar Buckner, of Kentucky, for Vice-President, of the United States, and a declaration of Democratic principles adopted, the fundamental passages of which are quoted as follows: "This convention has assembled to uphold the principles upon which depend the honor and welfare of the American people, in order that democrats throughout the Union unite their patriotic efforts to avert disaster from their country and ruin from their party."

"The democratic party is pledged to apply exact justice to all men of every creed and color; to the largest freedom of the individual consistent with good government; to the preservation of the federal government in its constitutional vigor, and to the support of the same in all their just rights; to economy in the public expenditures; to the maintenance of the public debt and sound money; and it is opposed to paper money and all class-legislation. The declaration of the Chicago convention attack individual freedom, the right of private contract, the independence of the judiciary, and the authority of the president to enforce federal laws. They took a reckless attempt to increase the price of money by legislation, to the debasement of our monetary standard; and threaten unlimited issues of paper money by the government. They aimed a

heated conflict of beliefs there was little violence of any kind, from first to last. The critical election day (November 3) passed with no serious incidents of disorder. The verdict of the people, pronounced for the preservation of the monetary standard which the world at large has established in general use, was accepted with the equanimity to which self-governing citizens are trained. Nearly fourteen millions of votes were cast, of which the Republican presidential electors received 7,104,244; electors representing the various parties which had nominated Mr. Bryan received, in all, 6,596,835; those on the National Democratic ticket received 134,652; those on the Prohibition ticket, 144,606; those on the Socialist Labor ticket, 36,416. In the Electoral College, there were 271 votes for McKinley, and 176 for Bryan. The States giving their electoral votes for McKinley were California (excepting 1 vote cast for Bryan), Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky (except 1), Maine, Maryland, Massachusetts, Michigan, Minnesota, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Vermont, West Virginia, Wisconsin. The States which chose electors for Bryan were Alabama, Arkansas, Colorado, Florida, Georgia, Idaho, Kansas, Louisiana, Mississippi, Missouri, Montana, Nebraska, Nevada, North Carolina, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, Wyoming, besides the single votes won in California and Kentucky. For Vice-President, Hoar received 271 electoral votes—the same as McKinley; but Sewall received 27 less than Bryan, that number being cast for the Populist candidate, Watson. This was consequent on fusion arrangements between Democrats and Populists in 28 States.

In some States, the majority given against silver free coinage was overwhelming, as for example, in New York, 268,000 plurality for McKinley, besides 19,000 votes cast for the "Gold Democratic" candidate; New Jersey, 87,000 Republican plurality and 6,000 votes for General Palmer; Pennsylvania, 295,000 and 11,000; Massachusetts, 173,000 and 11,000. On the other hand, Texas gave Bryan a plurality of 202,000, and Colorado 135,000.

A. D. 1896-1897.—Immigration Bill vetoed by President Cleveland.—On the 17th of December, 1896, a bill to amend the immigration laws, which had passed the House of Representatives during the previous session of Congress, passed the Senate, with amendments which the House refused to accept. By conference between the two branches of Congress an agreement was finally reached, in which the House concurred on the 9th of February and the Senate on the 17th. But the President disapproved the measure, and returned it to Congress on the 2d of March, with his objections set forth in the following Message.

"I herewith return without approval House bill No. 7864, entitled 'An act to amend the immigration laws of the United States.'

"By the first section of this bill it is proposed to amend section 1 of the act of March 3, 1890, relating to immigration by adding to the class of aliens thereby excluded from admission to the United States the following: 'All persons physically capable and over 16 years of age who can not read and write the English language or some other language; but a person not so able to read and write who is over 50 years of age and is the parent or grandparent of a qualified immigrant over 21 years of age and capable of supporting such parent or grandparent may accompany such immigrant, or such a parent or grandparent may be sent for and come to join the family of a child or grandchild over 21 years of age similarly qualified and capable, and a wife or minor child not so able to read and write may accompany and be sent for and come and join the husband or parent similarly qualified and capable.'

"A radical departure from our national policy relating to immigration is here presented. Heretofore we have welcomed all who came to us from other lands except those whose moral or physical condition or history threatened danger to our national welfare and safety. Relying upon the zealous watchfulness of our people to prevent injury to our political and social fabric, we have encouraged those coming from foreign countries to cast their lot with us and join in the development of our vast domain, securing in return a share in the blessings of American citizenship. A century's stupendous growth, largely due to the assimilation and thrift of millions of sturdy and patriotic adopted citizens, attests the success of this generous and free-handed policy which, while guarding the people's interests, exacts from our immigrants only physical and moral soundness and a willingness and ability to work. A contemplation of the grand results of this policy can not fail to arouse a sentiment in its defense, for however it might have been regarded as an original proposition and viewed as an experiment its accomplishments are such that if it is to be uprooted at this late day its disadvantages should be plainly apparent and the substitute adopted should be just and adequate, free from uncertainties, and guarded against difficult or oppressive administration.

"It is not claimed, I believe, that the time has come for the further restriction of immigration on the ground that an excess of population overcrowds our land. It is said, however, that the quality of recent immigration is undesirable. The time is quite within recent memory when the same thing was said of immigrants who with their descendants, are now numbered among our best citizens. It is said that too many immigrants settle in our cities, thus dangerously increasing their idle and vicious population. This is certainly a disadvantage. It can not be shown, however, that it affects all our cities; nor that it is permanent; nor does it appear that the condition where it exists demands as its remedy the reversal of our present immigration policy. The claim is also made that the influx of foreign laborers deprives of the opportunity to work the who are better entitled than they to the privilege of earning their livelihood by daily toil. An unfortunate condition is certainly presented when any who are willing to labor are unemployed; but so far as this condition now exists among our people it must be conceded to be a result of phenomenal business depression and the stagnation of our national life.

tion of all enterprises in which labor is a factor. With the advent of settled and wholesome than child and economic governmental policies and consequent encouragement to the activity of capital the most serious of unemployed labor should, to a great extent at least, be remedied. If it comes to its natural consequences must be to check the further immigration to our cities of foreign laborers and to deplete the ranks of those already there. In the meantime those most willing and best entitled ought to be able to secure the advantages of such work as there is to do.

It is proposed by the bill under consideration to meet the alleged difficulties of the situation by establishing an educational test by which the right of a foreigner to make his home with us shall be determined. Its general scheme is to prohibit from admission to our country all immigrants physically capable and over 18 years of age who can not read and write the English language or some other language, and it is provided that this test shall be applied by requiring immigrants seeking admission to read and afterwards to write not less than twenty nor more than twenty five words of the Constitution of the United States in some language, and that any immigrant failing in this shall not be admitted, but shall be returned to the country from whence he came at the expense of the steamship or railroad company which brought him.

The best reason that could be given for this radical restriction of immigration is the necessity of protecting our population against degeneration and saving our national peace and quiet from imported turbulence and disorder. I can not believe that we would be protected against these evils by limiting immigration to those who can read and write in any language twenty five words of our Constitution. In my opinion, it is infinitely more safe to admit a hundred thousand immigrants who, though unable to read and write seek among us only a home and opportunity to work than to admit one of those unruly agitators and enemies of governmental control who can not only read and write, but delights in agitating by inflammatory speech the illiterate and peacefully inclined to discontent and tumult. Violence and disorder do not originate with illiterate laborers. They are, rather, the victims of the educated agitator. The ability to read and write, as required in this bill, in and of itself affords, in my opinion, a misleading test of contented industry and supplies unsatisfactory evidence of desirable citizenship or a proper appreciation of the benefits of our institutions. If any particular element of our illiterate immigration is to be feared for other causes than illiteracy, these causes should be dealt with directly, instead of making illiteracy the pretext for exclusion, to the detriment of other illiterate immigrants against whom the real cause of complaint cannot be alleged.

The provisions intended to rid that part of the proposed legislation already referred to from objectionable hardship appear to me to be indefinite and inadequate. A parent, grandparent, wife, or minor child of a qualified immigrant, though unable to read and write, may accompany the immigrant or be sent for to join his family, provided the immigrant is capable of supporting such relative. These exceptions to the general rule of exclusion contained in the bill were made to prevent the separation of families, and yet

neither brothers nor sisters are provided for. In order that relatives who are provided for may be admitted, those still in foreign lands must be sent for to join the immigrant here. What formality is necessary to constitute this prerequisite, and how are the facts of relationship and that the relative is sent for to be established? Are the illiterate relatives of immigrants who have come here under prior laws entitled to the advantage of these exceptions? A husband who can read and write and who determines to abandon his illiterate wife abroad will find here under this law an absolutely safe retreat. The illiterate relatives mentioned must not only be sent for, but such immigrant must be capable of supporting them when they arrive. This requirement proceeds upon the assumption that the foreign relatives coming here are in every case, by reason of poverty, liable to become a public charge unless the immigrant is capable of their support. The contrary is very often true. And yet if unable to read and write, though quite able and willing to support themselves and their relatives here besides, they could not be admitted under the provisions of this bill if the immigrant was impoverished, though the aid of his fortunate but illiterate relative might be the means of saving him from pauperism.

The fourth section of this bill provides: "That it shall be unlawful for any male alien who has not in good faith made his declaration before the proper court of his intention to become a citizen of the United States to be employed on any public works of the United States or to come regularly or habitually into the United States by land or water for the purpose of engaging in any mechanical trade or manual labor for wages or salary, returning from time to time to a foreign country." The fifth section provides: "That it shall be unlawful for any person, partnership, company, or corporation knowingly to employ any alien coming into the United States in violation of the next preceding section of this act."

The prohibition against the employment of aliens upon any public works of the United States is in line with other legislation of a like character. It is quite a different thing, however, to declare it a crime for an alien to come regularly and habitually into the United States for the purpose of obtaining work from private parties, if such alien returns from time to time to a foreign country, and to constitute any employment of such alien a criminal offense. When we consider these provisions of the bill in connection with our long northern frontier and the boundaries of our States and Territories, often but an imaginary line separating them from the British dominions, and recall the friendly intercourse between the people who are neighbors on either side, the provisions of this bill affecting them must be regarded as illiberal, narrow, and un-American. The residents of these States and Territories have separate and special interests which in many cases make an interchange of labor between their people and their alien neighbors most important, frequently with the advantage largely in favor of our citizens. This suggests the inexpediency of Federal interference with these conditions when not necessary to the correction of a substantial evil affecting the general welfare. Such unfriendly legislation as is proposed could hardly fail to provoke retaliatory measures, to the injury of many of our

citizens who now find employment on adjoining foreign soil. The uncertainty of construction to which the language of these provisions is subject is a serious objection to a statute which describes a crime. An important element in the offense sought to be created by these sections is the coming "regularly" or "habitually" into the United States. These words are impossible of definite and certain construction. The same may be said of the equally important words "returning from time to time to a foreign country."

"A careful examination of this bill has convinced me that for the reasons given and others not specifically stated its provisions are unnecessarily harsh and oppressive, and its defects in construction would cause vexation and its operation would result in harm to our citizens." **GUO-VER CLEVELAND.**

In the House of Representatives, the Bill was passed again, over the veto, by the requisite vote of two thirds; in the Senate it was referred to the Committee on Immigration, and no further action was taken upon it. Therefore, it did not become a law.

A. D. 1896-1898.—Agitation for monetary reforms.—The Indianapolis Commission.—Secretary Gage's plan.—The Senatorial block in the way.—On November 18, 1896, the Governors of the Indianapolis Board of Trade invited the Boards of Trade of Chicago, St. Louis, Cincinnati, Louisville, Cleveland, Columbus, Toledo, Kansas City, Detroit, Milwaukee, St. Paul, Des Moines, Minneapolis, Grand Rapids, Peoria, and Omaha to a conference on the first of December following, to consider the advisability of calling a larger convention from commercial organizations throughout the country for the purpose of discussing the wisdom of selecting a non-partisan commission to formulate a sound currency system. This preliminary conference issued a call for a non-partisan monetary convention of business men, chosen from boards of trade, chambers of commerce, and commercial clubs, to meet in Indianapolis, on January 12, 1897. At the convention there were assembled, with credentials, 299 delegates, representing business organizations and cities in nearly every State in the Union. The result of its deliberations was expressed in resolutions which opened as follows:

"This convention declares that it has become absolutely necessary that a consistent, straightforward, and deliberately planned monetary system shall be inaugurated, the fundamental basis of which should be: First, that the present gold standard should be maintained. Second, that steps should be taken to insure the ultimate retirement of all classes of United States notes by a gradual and steady process, and so as to avoid the injurious contraction of the currency, or disturbance of the business interests of the country, and that until such retirements provision should be made for a separation of the revenue and note issue departments of the Treasury. Third, that a banking system be provided, which should furnish credit facilities to every portion of the country and a safe and elastic circulation, and especially with a view of securing such a distribution of the loanable capital of the country as will tend to equalize the rates of interest in all parts thereof."

Recognizing the necessity of committing the formulation of such a plan to a body of men

trained and experienced in these matters, a commission was proposed. In case no commission should be authorized by Congress in the first of 1897, the Executive Committee of the convention was authorized to select a commission of eleven members, "to make thorough investigation of the monetary affairs and needs of the country, in all relations and aspects, and make appropriate suggestions as to any evils that exist, and the remedies therefor."

Congress did not authorize the appointment of a monetary commission; and the Executive Committee of the Convention selected a commission of eleven members, which began its session in Washington, September 22, 1897. The Commission was composed as follows: George F. Edmunds, Vermont, chairman; George E. Leighton, Missouri, vice chairman; T. G. Bass, Alabama; W. B. Dean, Minnesota; Charles Fairchild, New York; Stuyvesant Fish, New York; J. W. Fries, North Carolina; Louis A. Garnett, California; J. Laurence Laughlin, Illinois; C. Stuart Patterson, Pennsylvania; Robert S. Taylor, Indiana; and L. Carroll Bag and H. Parker Willis, secretaries. Early in January, 1898, the report of the Monetary Commission was made public, and a second convention of delegates from the boards of trade and other commercial organizations of leading cities in the country was called together at Indianapolis, January 20-26, to consider its recommendations. The measures proposed by the Commission were approved by the convention, and were submitted to Congress by a committee appointed to urge their enactment in law. The Secretary of the Treasury, Mr. Gage, had already, in his first annual report and in the draft of a bill which he laid before the House committee on banking and currency, made recommendations which were in principle with those of the Commission, differing somewhat in details. Both plans, with some proposals from other sources, were taken in hand by the House committee on banking and currency, and a bill was prepared which the committee reported to the House on the 1st of June. But the other branch of Congress, the Senate, had already declared itself in a way which forbade any hope of success. By a vote of 47 to 32, that body had resolved, on the 2nd of January, that "all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, payable, principal and interest, at the option of the government of the United States in silver dollars, of the coinage of the United States containing 412 1-2 grains each of standard silver, and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of public faith, nor in derogation of the rights of the public creditor." The House, by 187 to 100, had rejected this resolution; but the Senate had demonstrated the evident uselessness of attempting legislation in the interest of a monetary reform. Accordingly the House bill, having been reported and made public for discussion outside, was withdrawn by the committee, the subject rested in Congress, while action in the country went on.

A. D. 1897.—The Industrial Revolution.—In 1865 the problem presented was this: The United States could certainly exceed any European nation in economic competition, and p

by the whole Continent combined. If it could utilize its resources. So much was admitted; but it questioned the capacity of the people to organize a system of transportation and industry to attain that end. Failure meant economic bankruptcy. Unpalled by the magnitude of the speculation, the American people took the risk. What that risk was may be imagined when it is grasped that in 1865, with 35,000 miles of road already built, this people entered on the construction of 160,000 miles more, at an outlay probably in excess of \$10,000,000,000. Such figures convey no impression to the mind, any more than a statement of the distance of a star. It was the imagination, perhaps, to say that Mr. Gillen estimated the cost to France of the war of 1870, including the indemnity and Alsace and Lorraine, at less than \$3,500,000,000, or about one third of this portentous mortgage on the future.

As late as 1870 America remained relatively poor for America, so far as her export trade went, relied on agriculture alone. To build her roads she had to borrow, and she expected to pay dear; she did not calculate on having to pay twice as much as she borrowed, estimating that capital in the only merchandise she had to sell. Yet this is exactly what occurred. Agricultural prices fell so rapidly that between 1890 and 1897, when the sharpest pressure prevailed, it took something like twice the weight of wheat or cotton to repay a dollar borrowed in 1873, that would have paid to satisfy the creditor when the debt was contracted. Merchandise enough could not be shipped to meet the emergency, and balances had to be paid in coin. The agony this people endured may be measured by the sacrifice they made. At the moment of severest contraction, in the single year 1893, the United States parted with upwards of \$87,000,000 of gold, when to lose gold was like draining a living body of its life.

What America owed abroad can never be computed; it is enough that it reached an enormous sum, to refund which, even under favorable circumstances, would have taken years of effort, actually forced payment brought the nation to the brink of a convulsion. Perhaps no people ever faced such an emergency and paid without recourse to war. America triumphed through her inventive and administrative genius. Brought to a white heat under oppression, the industrial system of the Union suddenly fused into a homogeneous mass. One day, without warning, the gigantic mechanism of mines, foundries, railroads, and steamship companies, centralized at Pittsburgh, began producing steel rails at \$18 the ton, and at a bound America bestrode the world. She had won her great wager with fate. . . . The end seems only a question of time. Europe is doomed not only to lose her raw material abroad, but to pay the cost of transport. And Europe knew this instinctively in March, 1897, and nerved herself for a struggle. Her best hope, next to a victorious war, lay in imitating America, and in organizing a system of transportation which would open up the East.

America achieved the new industrial revolution in March, 1897. Within a twelvemonth the rival nations had emptied themselves upon the

shore of the Yellow Sea. In November Germany seized Kiaochow, a month later the Russians occupied Port Arthur and the following April the English appropriated Weihaiwei, but the fact to remember is that just 100 miles inland, due west of Kiaochow, lies Tszechow, the centre, according to Richtofen, of the richest coal and iron deposits in existence. There with the rude methods used by the Chinese, coal actually sells at 13 cents the ton. Thus it has come to pass that the problem now being attacked by all the statesmen, soldiers, scientific men, and engineers of the two eastern continents—whether Russia, Germany, France, England and Japan, combined or separately, can ever bring these resources on the market in competition with the United States.—B. Adams, *The New Industrial Revolution*, Atlantic Monthly, Feb., 1901.

A. D. 1897 (January-May). Arbitration Treaty with Great Britain rejected by the Senate. The correspondence which took place between the governments of the United States and Great Britain, on the subject of an arbitration of the Venezuela Boundary dispute, having led to the reviv of a project for the negotiation of a general treaty of arbitration, which the late American Secretary of State, Mr. Fish, had broached to the British government in the spring of 1895, the terms of such an arrangement were carefully and fully discussed between Secretary Olney and Lord Salisbury during the year 1896, and an agreement was reached which took form in a solemn compact for the settlement by arbitration of all matters in difference between the two countries, signed at Washington on the 11th of January, 1897. The treaty thus framed was as follows:

"ARTICLE I. The High Contracting Parties agree to submit to Arbitration in accordance with the provisions and subject to the limitations of this Treaty all questions in difference between them which they may fail to adjust by diplomatic negotiation.

"ARTICLE II. All pecuniary claims or groups of pecuniary claims which do not in the aggregate exceed £100,000 in amount, and which do not involve the determination of territorial claims, shall be dealt with and decided by an Arbitrated Tribunal constituted as provided in the next following Article. In this Article and in Article IV the words 'groups of pecuniary claims' mean pecuniary claims by one or more persons arising out of the same transactions or involving the same issues of law and fact.

"ARTICLE III. Each of the High Contracting Parties shall nominate one arbitrator, who shall be a jurist of repute, and the two arbitrators so nominated shall within two months of the date of their nomination select an umpire. In case they shall fail to do so within the limit of time above mentioned the umpire shall be appointed by agreement between the Members for the time being of the Supreme Court of the United States and the Members for the time being of the Judicial Committee of the Privy Council in Great Britain, each nominating body acting by a majority. In case they shall fail to agree upon an umpire within three months of the date of an application made to them in that behalf by the High Contracting Parties or either of them, the umpire shall be selected in the manner provided for in Article X. The person so selected shall

be the President of the Tribunal and the award of the majority of the Members thereof shall be final.

"ARTICLE IV. All pecuniary claims or groups of pecuniary claims which shall exceed £100,000 in amount and all other matters in difference, in respect of which either of the High Contracting Parties shall have rights against the other under Treaty or otherwise, provided that such matters in difference do not involve the determination of territorial claims, shall be dealt with and decided by an Arbitral Tribunal, constituted as provided in the next following Article.

"ARTICLE V. Any subject of Arbitration described in Article IV shall be submitted to the Tribunal provided for by Article III, the award of which Tribunal, if unanimous, shall be final. If not unanimous either of the High Contracting Parties may within six months from the date of the award demand a review thereof. In such case the matter in controversy shall be submitted to an Arbitral Tribunal consisting of five jurists of repute, no one of whom shall have been a member of the Tribunal whose award is to be reviewed and who shall be selected as follows, viz.:—two by each of the High Contracting Parties, and one, to act as umpire, by the four thus nominated and to be chosen within three months after the date of their nomination. In case they shall fail to choose an umpire within the limit of time above-mentioned, the umpire shall be appointed by agreement between the Nominating Bodies designated in Article III acting in the manner therein provided. In case they shall fail to agree upon an umpire within three months of the date of an application made to them in that behalf by the High Contracting Parties or either of them, the umpire shall be selected in the manner provided for in Article X. The person so selected shall be the President of the Tribunal and the award of the majority of the Members thereof shall be final.

"ARTICLE VI. Any controversy which shall involve the determination of territorial claims shall be submitted to a Tribunal composed of six members, three of whom (subject to the provisions of Article VIII) shall be Judges of the Supreme Court of the United States or Justices of the Circuit Courts to be nominated by the President of the United States, and the other three of whom (subject to the provisions of Article VIII) shall be Judges of the British Supreme Court of Judicature or Members of the Judicial Committee of the Privy Council to be nominated by Her Britannic Majesty, whose award by a majority of not less than five to one shall be final. In case of an award made by less than the prescribed majority, the award shall also be final unless either Power shall, within three months after the award has been reported, protest that the same is erroneous, in which case the award shall be of no validity. In the event of an award made by less than the prescribed majority and protested as above provided, or if the members of the Arbitral Tribunal shall be equally divided, there shall be no recourse to hostile measures of any description until the mediation of one or more friendly Powers has been invited by one or both of the High Contracting Parties.

"ARTICLE VII. Objections to the jurisdiction of an Arbitral Tribunal constituted under this Treaty shall not be taken except as provided

In this Article. If before the close of the hearing upon a claim submitted to an Arbitral Tribunal constituted under Article III or Article IV either of the High Contracting Parties shall require such Tribunal to decide, and thereupon it shall decide that the determination of such claim necessarily involves the decision of a dispute in question of principle of grave general importance affecting the national rights of such party, it shall be distinguished from the private rights when merely the international representative character of the decision of such Arbitral Tribunal over such dispute shall cease and the same shall be dealt with by arbitration under Article VI.

"ARTICLE VIII. In cases where the question involved is one which concerns a part of the State or Territory of the United States, it shall be open to the President of the United States to appoint a judicial officer of such State or Territory to be one of the Arbitrators under Article III or Article V or Article VI. In like manner, in cases where the question involved is one which concerns a British Colony or possession, it shall be open to Her Britannic Majesty to appoint a judicial officer of such Colony or possession to be one of the Arbitrators under Article III or Article V or Article VI.

"ARTICLE IX. Territorial claims in a Treaty shall include all claims to territory, all claims involving questions of servitudes, rights of navigation and of access, fisheries, and rights and interests necessary to the complete enjoyment of the territory claimed by either of the High Contracting Parties.

"ARTICLE X. If in any case the Nominating Bodies designated in Articles III and V shall fail to agree upon an Umpire in accordance with the provisions of the said Articles, the Umpire shall be appointed by His Majesty the King of Sweden and Norway. Either of the High Contracting Parties, however, may at any time give notice to the other that, by reason of material changes in conditions as existing at the date of this Treaty, it is of opinion that a substitute for His Majesty should be chosen either for a dispute to arise under the Treaty or for a particular specified case already arisen, and thereupon the High Contracting Parties shall at once proceed to agree upon such substitute to act either in all cases to arise under the Treaty or in the particular case specified as may be indicated by said notice; provided, however, that such notice shall have no effect upon an Arbitration already begun under the constitution of an Arbitral Tribunal under Article III. The High Contracting Parties shall also at once proceed to nominate a substitute for His Majesty in the event that His Majesty shall at any time notify them of his desire to be relieved from the functions graciously accepted by him under this Treaty either for all cases to arise thereunder or for any particular specified case already arisen.

"ARTICLE XI. In case of the death, absence or incapacity to serve of any Arbitrator or Umpire, or in the event of any Arbitrator or Umpire omitting or declining or ceasing to act as such, another Arbitrator or Umpire shall be forthwith appointed in his place and stead in the manner provided for with regard to the original appointment.

"ARTICLE XII. Each Government shall provide its own agent and provide for the proper remuneration of the counsel employed by it in

the Arbitrators appointed by it and for the expense of preparing and submitting his case to the Arbitral Tribunal. All other expenses connected with the Arbitration shall be defrayed by the governments in equal moieties. Provided, however, that, if in any case the essential matter of difference submitted to arbitration is the right of one of the Contracting Parties to receive damages or compensation for acts or defaults of the other not resulting in substantial pecuniary injury, the Arbitral Tribunal finally disposing of the said matter shall direct whether any of the expenses of the successful party shall be borne by the unsuccessful party, and if so to what extent.

Article XIII. The time and place of meeting of the Arbitral Tribunal and all arrangements for the hearing and all questions of procedure shall be decided by the Tribunal itself. Each Arbitral Tribunal shall keep a correct record of its proceedings and may appoint and employ all necessary officers and agents. The decision of the Tribunal shall, if possible, be made within six months from the close of the arguments on both sides. It shall be made in writing and the final shall be signed by the Arbitrators who may assist it. The decision shall be in duplicate, a copy whereof shall be delivered to each of the High Contracting Parties through their respective agents.

Article XIV. This Treaty shall remain in force for five years from the date at which it shall come into operation, and further until the expiration of twelve months after either of the High Contracting Parties shall have given notice to the other of its wish to terminate the same.

Article XV. The present Treaty shall be duly ratified by the President of the United States, of America, by and with the advice and consent of the Senate thereof, and by Her Britannic Majesty; and the mutual exchange of ratifications shall take place in Washington or in London within six months of the date hereof or earlier if possible."—*United States, 54th Cong., 2d Sess. Senate Doc. No. 63.*

Public feeling in both countries gave joyful welcome to this nobly conceived treaty when it was announced. All that was best in English sentiment and American sentiment had been gathering at the thought of possible war between the kindred peoples, and thanked God for what promised some certitude that no dispute would be pushed to that barbarous appeal. Only deep-seated thought and temper of either country was provoked to opposition; but, unhappily, the narrower temper and the narrower and more ignorant opinion on one side of the sea had been getting so strong a representation in the United States Senate as to prove capable of much mischief there on this and other matters of most serious public concern. When the great covenant of peace went to that body for approval, there were senators who found it offensive to them because it came from the hands of President Cleveland and Secretary Olney; and there were other senators whose dignity was hurt by the eager impatience with which the public was carried out for their ratifying vote; and still others there were who looked with official jealousy at the project of an arbitral tribunal which might sometimes take something from senatorial functions in foreign affairs. And the

combination of pitiful motives had strength enough to battle the high hopes and defeat the will of the American people.

Of the public feeling thus outraged the following is one expression of the time, among many which it would be possible to quote. Many people "are represented by influential papers like the *St. Paul Pioneer Press* and the *Minneapolis Journal*, the latter declaring that it is humiliating to think that, widely as the treaty is favored throughout the country, a few ill-natured men in the Senate have the power to delay ratification. In the Central West the feeling is generally strong for arbitration if we may judge from the *Chicago Times Herald*, the *St. Louis Republic*, the *Indianapolis Journal* and the *Cleveland Leader*. In the South there are such cheering reports as this from the *Memphis Scimitar*: 'If the treaty now under consideration in the Senate Committee on Foreign Relations should be ratified, public opinion in this country would demand that the incoming Administration provide another embodying the same vital principle. In the East the sentiment in favor of immediate ratification of the original draft has been almost universal, the only two exceptions of note differing from this being the *New York Sun* and the *Washington Post*. The trend of opinion is shown in the adoption by the Massachusetts House of Representatives of an endorsement by a vote of 111 to 41. An important meeting took place last week in Washington in favor of ratification. The speakers were: ex-Secretary of State Foster, Mr. G. G. Hubbard, Professor B. E. Whitman, ex-Senator J. B. Henderson, ex-Governor Stanford and Justice Brewer of the Supreme Court. The last name I said: 'I do not believe in saying to the gentlemen charged with the duty of considering carefully that treaty, that 'you must vote for it.' There is something in my own nature which, when anybody says to me, 'you must,' causes something to run up my spinal column which says 'I won't.' It is the Senate's duty to consider that treaty carefully, and when I say that, I say it is no trespass upon their rights for American citizens to express their views of that treaty. What are the errors and losses incidental to arbitration compared to the horrors of war? What are a few million dollars of wrongful damages in comparison to the sacrifice of thousands of human lives?'—*The Outlook, Feb. 6, 1897.*

This treaty was greeted with widespread favor in the press, but was antagonized at once in the Senate by the jingo element and by the personal adversaries of the administration. The committee on foreign relations reported the draft favorably, but with certain amendments on February 1. The ensuing debate soon revealed that a vote on ratification could not be obtained before March 4, and the whole matter was dropped. At the opening of the new Congress the Senate Committee again considered the treaty and reported it, with amendments, on March 18. During two weeks discussion the Senate adopted the committee's amendments and also others, with the result that the draft was radically transformed. Instead of the general reference of all disputes to the tribunals, it was provided that any difference, which, in the judgment of either power, materially affects

its honor or its domestic or foreign policy,' should be submitted to arbitration only by special agreement; that no question should be submitted save with the consent of the Senate in its treaty-making capacity; and that no claim of a British subject against a state or territory of the United States should be submitted under any circumstances. The first of these changes was due mainly to the objection that without it the Monroe Doctrine might be subjected to arbitration; the second to the sensitiveness of senators as to their constitutional functions in foreign relations; and the third to a desire to protect states against claims on their defaulted bonds. Other changes modified materially the method of appointing the arbitrators for the United States, and struck out entirely the designation of the King of Sweden as umpire. Even with these amendments, the opposition to the treaty was not overcome; and the final vote on ratification, taken May 5, resulted in its rejection, the vote standing 43 to 26, less than two thirds in the affirmative. Thirty Republicans and 13 Democrats voted for the treaty; 8 Republicans, 12 Democrats and 6 Populists against it." — *Political Science Quarterly*, June, 1897.

A. D. 1897 (March).—Inauguration of President McKinley.—Leading topics of the inaugural address.—The President's Cabinet.—The inauguration of President McKinley was performed with the customary ceremonies on the 4th of March. In his inaugural address, the new President laid some what less emphasis than might have been expected on the need of measures for reforming the monetary system of the country, but strongly urged that instant steps be taken to increase the revenues of the government by a return to higher tariff charges. "With adequate revenue secured," he argued, "but not until then, we can enter upon such changes in our fiscal laws as will, while insuring safety and volume to our money, no longer impose upon the government the necessity of maintaining so large a gold reserve, with its attendant and inevitable temptations to speculation. Most of our financial laws are the outgrowth of experience and trial, and should not be amended without investigation and demonstration of the wisdom of the proposed changes. We must be both 'sure we are right' and 'make haste slowly.'"

"The question of international bimetalism will have early and earnest attention. It will be my constant endeavor to secure it by coöperation with the other great commercial powers of the world. Until that condition is realized, when the parity between our gold and silver money springs from and is supported by the relative value of the two metals, the value of the silver already coined, and of that which may hereafter be coined, must be kept constantly at par with gold by every resource at our command. The credit of the government, the integrity of its currency, and the inviolability of its obligations must be preserved. This was the commanding verdict of the people, and it will not be unheeded.

"Economy is demanded in every branch of the government at all times, but especially in periods like the present of depression in business and distress among the people. The severest economy must be observed in all public expenditures, and extravagance stopped wherever it is found, and prevented wherever in the future it may be

developed. If the revenues are to remain as now, the only relief that can come must be from decreased expenditures. But the present must not become the permanent condition of the government. It has been our uniform policy to retire, not increase, our outstanding obligations, and this policy must again be resumed and vigorously enforced. Our revenues should always be large enough to meet with ease and promptness not only our current needs and the principal interest of the public debt, but to make proper and liberal provision for that most deserving body of public creditors, the soldiers and sailors and the widows and orphans who are the pensioners of the United States."

"A deficiency is inevitable so long as the expenditures of the government exceed its receipts. It can only be met by loans or an increased revenue. While a large annual surplus of revenue may invite waste and extravagance, inadequate revenue creates distrust and undermines public and private credit. Neither should be encouraged. Between more loans and more revenue there ought to be but one opinion. We should have more revenue, and that with delay, hindrance, or postponement. A surplus in the treasury created by loans is not a permanent or safe reliance. It will suffer while the debt it cannot last long while the outlays of the government are greater than its receipts as has been the case during the last two years. The best way for the government to maintain credit is to pay as it goes—not by resorting to loans, but by keeping out of debt—thus an adequate income secured by a system of taxing external, or internal, or both. It is the sound policy of the government, pursued from its beginning and practiced by all parties and administrations, to raise the bulk of our revenue by taxes upon foreign productions entering the United States for sale and consumption, thus avoiding, for the most part, every form of direct taxation except in time of war.

"The country is clearly opposed to any needless additions to the subjects of internal taxation and is committed by its latest popular vote to the system of tariff taxation. There can be no misunderstanding either about the principle upon which this tariff taxation shall be levied. Nothing has ever been made plainer at a general election than that the controlling principle in raising of revenue from duties on imports is zealous care for American interests and American labor. The people have declared that such taxation should be had as will give ample protection and encouragement to the industries and development of our country. . . . The primary duty of congress is to stop deficiencies by restoration of that protective legislation which has always been the firmest prop of the treasury. The passage of such a law or laws will strengthen the credit of the government at home and abroad, and go far toward stopping the drain upon the gold reserve held for redemption of our currency, which has been heavy and well-nigh constant for several years. In the revision of the tariff, especial attention should be given to the re-enactment and extension of the reciprocity principle of the law of 1890, under which so great a stimulus was given our foreign trade in new and advantageous markets for our surplus agricultural and manufactured products."

With that effect, the incoming President urged denunciation of the treaty of arbitration with Great Britain, negotiated by his predecessor and still pending in the Senate. In concluding his address he announced his intention to convene Congress in extra session, saying: "The condition of the public treasury demands the immediate reorganization of congress. It alone has the power to provide revenue for the government. No other body can convene it under such circumstances. I can do in no other sense than the neglect of a country."

On the day following his inauguration, the President sent to the Senate the following nominations for his Cabinet, which were confirmed: Secretary of State, John Sherman of Ohio; Secretary of the Treasury, Lyman J. Gage of Illinois; Secretary of War, Russell A. Alger of Michigan; Attorney General, Joseph McKenna of California; Postmaster General, James A. Gary of Maryland; Secretary of the Navy, John D. Long of Massachusetts; Secretary of the Interior, Charles N. Bliss of New York; Secretary of Agriculture, James Wilson of Iowa.

A. D. 1897 (March—July).—Passage of the Dingley Tariff Act.—Carrying out an intention announced in his Inaugural Address, President McKinley called Congress together in extra session on the 15th of March, asking for immediate action to increase the revenue of the government by increased duties, "so levied upon foreign goods as to preserve the home market, so far as possible, to our own producers." In his Inaugural Address the President had expressed the understanding of his party as to the chief meaning of the late election, by saying that "the country is . . . committed by its latest popular expression to the system of tariff taxation."

The people have declared that such legislation should be had as will give ample protection and encouragement to the industries and development of our country. . . . The paramount duty of Congress is to stop deficiencies by the restoration of that protective legislation which has always been the firmest prop of the treasury."

To the majority in both Houses of Congress these views were entirely acceptable, and they were acted upon at once. The Ways and Means Committee of the House of Representatives in the previous Congress had already prepared a comprehensive new tariff bill, which it passed on to its successor. This ready-made bill was reported to the House on the first day of the session, by Mr. Dingley, chairman of the newly appointed committee, as he had been of the one before it. Debate on the measure began a week later, and was controlled by a novel programme, which required it to be ended on the 31st of March. The bill was then passed by a vote of 205 against 121. Of the action of the Senate upon it, and of the main features of the bill as it was finally shaped and became law, the following is a succinct account:

"The bill, referred at once to the Senate Committee on Finance, was reported after a month, on May 8, with important amendments. There was an attempt to impose some purely revenue duties and, as to the protective duties, the tendency was towards lower rates than in the House bill, though on certain articles, such as wools of low grade, hides, and others of which more will be said presently, the drift was the other way. The Senate, however, paid much less respect than the House to the recommendations

of the committee in charge. In the course of two months from May 4 to July 7 it went over the tariff bill item by item amending without restraint, often in a pertinacious manner, and not infrequently with the outcome settled by the accident of attendance on the particular day. On the whole, with a tendency to retain the higher rates of the House bill. As passed finally by the Senate on July 7, the bill, though it contained some 872 amendments, followed the plan of the House Committee rather than that of the Senate Committee. As usual it went to a Conference Committee. In the various compromises and adjustments in the Senate and in the Conference Committee there was little sign of the deliberate plan and method which the House had shown, and the details of the act were settled in a less judicious fashion than has been the case with other tariff measures. As pushed up by the Conference Committee, the bill was promptly passed by both branches of Congress and became law on July 24. In what manner these political conditions affected the character of the act will appear from a consideration of the more important specific changes.

"First and foremost was the reimposition of the duties on wool. As the reported loss of duties had been the one important change made by the act of 1894, so their restoration was the salient feature in the act of 1897. Clothing wool was subjected once more to a duty of 11 cents a pound; combing wool to one of 12 cents. On carpet wool there were new graded duties heavier than any ever before levied. If its value was 12 cents a pound or less the duty was 4 cents; if over 12 cents, the duty was 7 cents. The duties on carpet wool, as has already been noted, were much higher than ever before. In the House, the rates of the act of 1890 had been retained, but in the Senate new and higher rates were inserted. . . . They were demanded by the Senators from some States in the Far West, especially from Idaho and Montana. They [the Senators in question] needed to be protected, and they succeeded in getting higher duties on the cheap carpet wools, on the plea of encouragement for the comparatively coarse clothing wool of their ranches. . . . The same complications that led to the high duty on carpet wool brought about a duty on hides. This rawest of raw materials had been on the free list for just a quarter of a century, since 1872, when the duty of the war days had been repealed. But here, again, the Senators from the ranching States were able to dictate terms. . . . In the Senate a duty of 20 per cent. was tacked on. The rate was reduced to 15 per cent. in the Conference Committee, and so remains in the act. The restored duties on wool necessarily brought in their train the old system of high compensating duties on woollens. . . . In the main, the result was a restoration of the rates of the act of 1890. There was some upward movement almost all along the line; and the ad valorem duty alone, on the classes of fabrics which are most largely imported, crept up to 55 per cent.

"On cotton goods the general tendency was to impose duties lower than those of 1890. This was indicated by the drag net rate, on manufactures of cotton not otherwise provided for, which had been 50 per cent. in 1890 and was 45 per cent. in 1897. On two large classes of textile goods new and distinctly higher duties were im-

posed—on silks and linens. . . . The mode of gradation was to levy the duties according to the amount of pure silk contained in the goods. The duties were fixed by the pound, being lowest on goods containing a small proportion of pure silk, and rising as that proportion became larger, with the proviso that in no case should the duty be less than 50 per cent. . . . Thus, the duty on certain kinds of silks was \$1.30 cents per pound. If they contained 45 per cent in weight of silk; but advanced suddenly to \$2.25, if they contained more than 45 per cent. . . . On linens another step of the same kind was taken, specific duties being substituted here also for ad valorem. . . . Linens were graded somewhat as cottons had been graded since 1891, according to the fineness of the goods as indicated by the number of threads to the square inch. If the number of threads was 60 or less per square inch, the duty was 14 cents a square yard; if the threads were between 60 and 120, the duty was 22 cents; and so on,—plus 50 per cent ad valorem duty in all cases. But finer linen goods, unless otherwise specially provided for, were treated leniently. If the weight was small (less than 14 ounces per yard), the duty was but 35 per cent. On the other hand, linen laces, or articles trimmed with lace or embroidery, were dutiable at 60 per cent.,—an advance at 10 per cent. over the rate of 1890.

It was inevitable, under the political conditions of the session, that in this schedule something should again be attempted for the farmer, and accordingly, we find a substantial duty on flax. The rate of the act of 1890 was restored,—3 cents a pound on prepared flax, in place of the rate of 14 cents imposed by the act of 1894. . . . On chinaware the rates of 1890 were restored. The duty on the finer qualities which are chiefly imported had been lowered to 35 per cent. in 1894, and was now once more put at 60 per cent. On glassware, also, the general ad valorem rate, which had been reduced to 35 per cent. in 1894, was again fixed at 45 per cent. as in 1890. Similarly the specific duties on the cheaper grades of window-glass and plate glass, which had been lowered in 1894, were raised to the figures of 1890. . . . The metal schedules in the act of 1897 showed in the main a striking contrast with the textile schedules. Important advances of duty were made on many textiles, and in some cases rates went considerably higher even than those of 1890. But on most metals, and especially on iron and steel, duties were left very much as they had been in 1894. . . . On steel rails there was even a slight reduction from the rate of 1894—\$6.72 per ton instead of \$7.84. On coal there was a compromise rate. The duty had been 75 cents a ton in 1890, and 40 cents in 1894; it was now fixed at 67 cents. On the other hand, as to certain manufactures of iron and steel further advanced beyond the crude stage, there was a return to rates very similar to those of 1890. Thus, on pocket cutlery, razors, guns, we find once more the system of combined ad valorem and specific duties, graded according to the value of the article. . . . Copper remained on the free list, where it had been put in 1894. . . . For good or ill the copper duty had worked out all its effects years before. On the other hand, the duties on lead and on lead ore went up to the point at which they stood in 1890. Here we have once more the signs of concession to the silver

Republicans of the far West. . . . The tin plate, a bone of contention under the act of 1890, was disposed of, with little or no delay, by imposition of a comparatively moderate duty.

A part of the act which aroused most attention and which had an important bearing on its financial yield was the sugar schedule. Duties on sugar, raw and refined. . . . The act of 1890 had admitted raw sugar free, while the act of 1891 had imposed a duty of 40 per cent. ad valorem. . . . The price of raw sugar had continued its downward tendency, and the rate of 40 per cent. had been equivalent in 1896 to more than one cent a pound. In the act of 1897 a duty was made specific, and was put at 14 cents a pound. . . . The duty was doubled. Beginning with a rate of 7 cents a pound on sugar tested to contain 75 per cent. advanced by stages until on sugar tested to contain 90 per cent. the usual content of commerce it reached 14 cents a pound. The higher rate thus imposed was certain to yield a considerable increase of revenue. Much was said about protection now afforded to the beet sugar industry of the West. That industry, however, was so small in dimensions and uncertain in future that refined sugar, the duty was made 14 cents a pound, which, as compared with raw sugar, being 100 per cent., left a protection for the refiner,—i. e., for the Sugar Trust,—of only one cent a pound. Some intricate calculations would be necessary to make out whether a 'differential' for the refining interest was more or less than in the act of 1891, but having regard to the effect of the substitution of specific ad valorem duties, the Trust was certainly favored by the act of 1897 than by its predecessor, and even somewhat less favored.

Changes which this part of the tariff act went in the two Houses are not without significance. In the bill passed by the House, so called differential, or protection to the refiner, was one eighth of a cent per pound. In the Senate there was an attempt at serious amendment. The influence of the Sugar Trust in the Senate had long been great. How secured, whether through party contributions, entangling alliances, or coarse bribery, the public could not know, certainly great, as the course of legislation amply demonstrated. The Senate attempt to make an entire change in the schedule of duties, which would give the Trust a 14th cent per pound of protective differential, instead of an eighth; but the House resisted more success than in 1894, and the sincere friends of the Sugar Trust had to give way. See, also (in this vol.), TRUSTS: UNITED STATES AND SUGAR BOUNTIES.

The tariff act of 1891 had repealed the provisions as to reciprocity in the act of 1890 and rendered nugatory such parts of the treaties under the earlier act as were inconsistent with the provisions of its successor. The act of 1897 now revived the policy of reciprocity, and in some ways even endeavored to enlarge the scope of the reciprocity provisions" (see below, 1890-1901).—F. W. A. D. 1897 (November). Refusal to negotiate with the insurgent republic of the Philippine Islands. On the 31 of November, 1897, Mr. B. S. Wildman, the U. S. Consul at Hongkong, addressed the following to the State Department: "Since my arrival in Hongkong, I have been called upon several times by Mr. F. Agoncilla, foreign agent and high commissioner of the new republic of the Philippines. Mr. Agoncilla holds a commission, signed by the members of cabinet and general in chief of the public of Philippines, empowering him fully with power to conclude treaties with foreign governments. Mr. Agoncilla offers to place his government alliance offensive and defensive with the United States when the United States declares war on Spain, which, in Mr. Agoncilla's judgment, will be very soon. In consequence he wishes the United States to supply him with 20,000 stand of arms and 200,000 rounds of ammunition for his government, to be paid for on the account of his government by the United States. He pledges us security two provinces and a custom house at Manila. He is not particular about the price—is willing the United States should make 25 per cent or 30 per cent profit. He is a very earnest and attentive diplomat and a great admirer of the United States. On his last visit he surprised me with the information he had written his government that he had hopes of inducing the United States to supply him with the much needed guns, etc. In case Mr. Agoncilla's dispatch should fall into the hands of an unfriendly power and find its way into newspapers, I have thought it wise to advise the State Department of the nature of Agoncilla's proposals. Señor Agoncilla has telegraphed me by cable that he will proceed to Washington to conclude the proposed treaty. I advise. I shall not advise and stop as instructed by the State Department."

For communication, the Third Assistant Secretary of State, Mr. Crider, returned the following reply, Dec. 15, 1897: "I have to acknowledge the receipt of your dispatch No. 19 of November 3, 1897, in which you announce the arrival of your post of Mr. F. Agoncilla, who you describe as foreign agent and high commissioner of the new republic of the Philippines and who holds full power to negotiate and conclude treaties with foreign powers. Mr. Agoncilla offers an alliance offensive and defensive with the United States when the United States declares war on Spain, which, in Mr. Agoncilla's judgment, will be very soon, and suggests that 20,000 stand of arms and 200,000 rounds of ammunition be supplied to his government by that of the United States. You may briefly advise Mr. Agoncilla, in case he should call upon you, that the Government of the United States does not negotiate such treaties and that it is not possible to forward the desired arms and ammunition. You should not encourage advances on the part of Mr. Agoncilla, but should courteously decline to communicate with the Department further regarding his proposed mission."—*Treaty of Peace and Amity between the United States and Spain*, Senate Doc. No. 62, pt. 1, pp. 333, 334.

A. D. 1898 (February-March). American sympathy with the Cubans and indignation against Spain. Destruction of the United States battle-ship "Maine" in Havana harbor. Investigation and findings of the American and Spanish courts of inquiry. Policy of the United States, exerted by the state of suffering not only resulting from Spanish methods of dealing with insurrection in that island. See on this vol. 1, CUBA. A. D. 1896-1897 and 1897-1898, had been gathering intensity for months past, and the denouement of peaceful relations between the United States and Spain. A sudden crisis in the situation was produced, on the morning of the 15th of February, 1898, by news that the United States battle-ship "Maine" while paying a visit of courtesy to the harbor of Havana, had been totally destroyed, on the previous evening, by an explosion which killed most of her crew. The subsequent message on the subject to Congress. President McKinley noted the circumstances of the catastrophe and the proceedings adopted to ascertain the cause, with the conclusions reached in the following words: "For some time prior to the visit of the 'Maine' to Havana Harbor our consular representatives pointed out the advantages to flow from the visit of national ships to the Cuban waters, in encouraging the people to the presence of our flag as the symbol of good will and of our ships in the fulfillment of the mission of protection to American interests, even though the immediate need there for might exist. Accordingly on the 21st of January in a conference with the Spanish minister in which the renewal of visits of our war vessels to Spanish waters was discussed and accepted, the particular authorities at Madrid and Havana were advised of the purpose of this Government to resume friendly naval visits at Cuban ports, and that in that view the 'Maine' would forthwith call at the port of Havana. This announcement was received by the Spanish Government with appreciation of the friendly character of the visit of the 'Maine' and with notification of intention to return the courtesy by sending Spanish ships to the principal ports of the United States. Meanwhile the 'Maine' entered the port of Havana on the 25th of January, her arrival being marked with no special incident besides the exchange of customary salutes and ceremonial visits.

"The 'Maine' continued in the harbor of Havana during the three weeks following her arrival. No appreciable excitement attended her stay, on the contrary a feeling of relief and confidence followed the resumption of the long interrupted friendly intercourse. So noticeable was this immediate effect of her visit that the consul general strongly urged that the presence of our ships in Cuban waters should be kept up by retaining the 'Maine' at Havana, or in the event of her recall, by sending another vessel there to take her place. At forty minutes past 9 in the evening of the 15th of February the 'Maine' was destroyed by an explosion, by which the entire forward part of the ship was utterly wrecked. In this catastrophe 2 officers and 261 of her crew perished, those who were not killed outright by her explosion being perished between decks by the tangle of wreckage and drowned by the immediate sinking of the hull. Prompt assistance was rendered by the neighboring vessels anchored in the harbor, aid being especially given by the boats of the Spanish cruiser 'Alfonso XII' and the Ward Line steamer 'City of Washington,' which lay not far distant. The wounded were generously cared for by the authorities of Havana, the hospitals being freely opened to them, while the earliest recovered bodies of the dead were interred by the municipality in a public cemetery in the city. Tributes of grief and sympathy were offered from all official quarters of the island.

"The appalling calamity fell upon the people of our country with crushing force, and for a brief time an intense excitement prevailed, which in a community less just and self-controlled than ours might have led to hasty acts of blind resentment. This spirit, however, soon gave way to the calmer processes of reason and to the resolve to investigate the facts and await material proof before forming a judgment as to the cause, the responsibility, and, if the facts warranted, the remedy due. This course necessarily recommended itself from the outset to the Executive, for only in the light of a dispassionately ascertained certainty could it determine the nature and measure of its full duty in the matter. The usual procedure was followed, as in all cases of casualty or disaster to national vessels of any maritime State. A naval court of inquiry was at once organized, composed of officers well qualified by rank and practical experience to discharge the onerous duty imposed upon them. Aided by a strong force of wreckers and divers, the court proceeded to make a thorough investigation on the spot, employing every available means for the impartial and exact determination of the causes of the explosion. Its operations have been conducted with the utmost deliberation and judgment, and while independently pursued no attainable source of information was neglected, and the fullest opportunity was allowed for a simultaneous investigation by the Spanish authorities. The finding of the court of inquiry was reached, after twenty-three days of continuous labor, on the 21st of March, instant, and, having been approved on the 22d by the commander in chief of the United States naval force on the North Atlantic Station, was transmitted to the Executive. It is herewith laid before the Congress, together with the voluminous testimony taken before the court. Its purport is, in brief, as follows:

"When the 'Maine' arrived at Havana, was conducted by the regular Government tug, tugboat No. 4, to which she was moored in 54 to 6 fathoms of water. The state of the harbor on board, and the condition of her magazines, boilers, coal bunkers, and stores, were all in excellent order, with the exception of a few minor defects, which are passed in review, with the exception of an excellent order prevailed and that no part of any cause for an internal explosion existed in any quarter. At 8 o'clock in the evening of February 15 everything had been done, and all was quiet. At forty minutes past 9 o'clock the vessel was suddenly and violently exploded. There were two distinct explosions, with an interval between them. The first explosion, in the forward part of the ship very perceptible, and second, which was more open, produced a greater volume, is attributed by the court to a partial explosion of two or more of the forward magazines. The evidence of the divers establishes that the after part of the ship was practically intact and sank in that condition, even moments after the explosion. The forward part was completely demolished. Upon the evidence of a concurrent external cause the finding of the court is as follows:

"At frame 15 the outer shell of the ship, at a point of 114 feet from the middle line of the ship and 6 feet above the keel when in normal position, has been forced up so as to be about 4 feet above the surface of the water, therefore about 31 feet above where it would have had the ship sunk uninjured. The outside of the ton plating is bent into a reverse L shape, the after wing of which, about 15 feet long and 32 feet in length from frame 13 to frame 25, is doubled back upon itself against the continuation of the same plating extending forward. At frame 18 the vertical keel is bent in two and the flat keel bent into a ring similar to the angle formed by the outside ton plates. This break is now about 6 feet below the surface of the water and about 30 feet above its normal position. In the opinion of the court this effect could have been produced only by the explosion of a mine situated under the bottom of the ship at about frame 18 and somewhat on the port side of the ship."

"The conclusions of the court are: That the loss of the 'Maine' was not in any respect due to fault or negligence on the part of any officers or members of her crew; That the ship was destroyed by the explosion of a submarine mine, which caused the partial explosion of two or more of her forward magazines; and that evidence has been obtainable fixing the responsibility for the destruction of the 'Maine' upon any person or persons."

"I have directed that the finding of the court of inquiry and the views of this Government thereon be communicated to the Government of Her Majesty the Queen Regent, and I do not permit myself to doubt that the sense of justice of the Spanish nation will dictate a course of action suggested by honor and the friendly relations of the two Governments. It will be the duty of the Executive to advise the Congress the result, and in the meantime deliberation and consideration is invoked."—*Congressional Record*, March 28, 1898.

A Spanish naval board of inquiry, composed by the maritime authority at Havana and investigating the matter with haste, arrived

opposite to that stated above. On the 23d of March that "an explosion of some kind in the forward magazine of the *Albatross* caused the destruction of a large part of the ship and its total sinking in the same place in this bay of Cuba, where it was anchored."

That the important facts connected with the explosion in its character and progress at every moment of its duration are fully described by witnesses, and the able summary of circumstances which necessarily accompanied the explosion of a torpedo having been given by these witnesses and experts, it can be justly asserted that the catastrophe was of an internal cause.

That the character of the proceedings undertaken and respect for the facts which established the absolute extrajurisdiction of a foreign war vessel have prevented any determination, even by conjecture, of the internal origin of the disaster, to which the impossibility of establishing the necessary communication either with the crew of the wrecked vessel or the officials of their home port, has been committed to investigate the causes of the said event, or with those subsequently connected with the issue, has contributed

to that interior and exterior examination of the *Albatross*, "Maine," whenever it is possible, from the bottom of the ship and then of the place in the bay where it is sunk are altered by the work which is being carried on for the complete recovery of the vessel, will prove the truth of all that is said in this report, but it must not be understood to mean that the nature of these present conclusions requires such proof." *U. S. Senate Report No. 227, Vol. 1, p. 27, Sec. 1, p. 135.*

A D 1898 February—December.—In the Chinese "battle of concessions." See in this vol. CHINA. A D 1898 (February—December).

A D 1898 March.—Account by Senator Proctor of the condition of the "reconcentration" in Cuba. See in this vol. CUBA. A D 1898 (December—March).

A D 1898 March—April.—Continued discussion of Cuban affairs with Spain. Unsatisfactory results.—Message of the President asking Congress for authority to terminate hostilities in Cuba.—On the 11th of April, 1898, Mr. McKinley addressed another special message to Congress, setting forth the unsatisfactory results with which Cuban affairs had been further discussed with the government of Spain, and formally asking to be authorized and empowered to take measures for securing a "full and complete termination of hostilities" in the open sea and land. He said:

"I am silent to that precept of the Constitution which commands the President to give from time to time to the Congress information of the state of the Union and to recommend to their consideration such measures as he shall judge necessary and expedient. It becomes my duty now to address your body with regard to the grave crises that have arisen in the relations of the United States to Spain by reason of the war, for the first time more than three years has raged in the neighboring island of Cuba. I do so because of the intimate connection of the Cuban question with the state of our own Union, and the grave need in the course which it is now incumbent upon the nation to adopt must needs bear to the

traditional policy of our Government. It is in accord with the precept laid down by the founders of the Republic and reiterated by the successive Administrations to the present day.

The present revolution has led the government of other similar insurrections which have occurred in the magazines of the island of Spain, extending over a period of nearly half a century, each of which during its progress has endeavored to the United States to great effect and expense, a enforcing its sovereignty over a rebellious colony, to secure American trade and commerce, and to maintain a navy and a military force, and by the ever so distant, but, however, and undiminished, principles of warfare, shocked the sensibilities of the people and the sympathy of our people. Since the present revolution began in February, 1896, this country has seen the fearful drama of bloodshed, agony, and sorrow, the cause of which is the unequalled in the history of the island and truly paralyzed us to the numbers of our soldiers and the bitterness of the conflict, and the revolution of modern times which had people striving to be free have been exposed to the power of the sovereign state. Our people have believed once prosperous community reduced to comparative want. Its lucrative commerce virtually paralyzed, its exceptional prosperity almost diminished, its lands laid waste, its cities ruined, and its people perishing because of the famine from hunger and destitution. We have turned ourselves constrained by the observation of that strict neutrality which our laws command, and which the law of nations commands to place our own waters and to watch our own coasts, in prevention of any unlawful interference with the Cubans. Our trade has suffered, the equipment of our citizens in Cuba has been seriously lost, and the temper and faith of our people have been seriously tried as to their support of our cause among our own citizens, which has inevitably found its expression in the fact that in the National Congress, so that it is wholly external to our own body politic, and its attention and stand in the way of that which is devoted to domestic advancement, that he comes to self-contained communities in whose political system has been the avoidance of all foreign entanglements. All this must needs awaken and has, indeed, aroused the utmost concern on the part of this Government, as well of our own predecessors as in my own.

In April, 1896, the crisis from which our country suffered through the Cuban war became so serious that my predecessor made an effort to bring about a peace through the mediation of this Government in any way that might tend to an honorable adjustment of the contest between Spain and her revolted colony, on the basis of some effective scheme of self-government for Cuba and the flag and sovereignty of Spain. It failed through the refusal of the Spanish Government then in power to consider any form of mediation or, indeed, any plan of settlement which did not begin with the actual submission of the insurgents to the mother country, and then only on such terms as Spain herself might see fit to grant. The war continued unchecked. The resistance of the insurgents was in no wise diminished. The efforts of Spain were increased, both by the dispatch of fresh troops to Cuba and by the addition of the horrors of the strife of a

new and unknown phase happily unprecedented in the modern history of civilized Christian peoples. The policy of devastation and reconcentration, inaugurated by the captain general's decree of October 24, 1896, in the province of Pinar del Rio, was thence extended to embrace all of the island, in which the power of the Spanish arms was able to reach by occupation or by military operations. The peasantry, including all dwellers in the open agricultural interior, were driven into the garrison towns or isolated places held by the troops. The raising and movement of provisions of all kinds were interrupted. The fields were laid waste, dwellings unroofed and fired, mills destroyed, and, in short, everything that could desolate the land and render it unfit for human habitation or support was commandeered by one or the other of the contending parties and executed by all the powers at their disposal.

By the time the present Administration took office a year ago, reconcentration—so called—had been made effective over the better part of the four central and western provinces—Santa Clara, Matanzas, Habana, and Pinar del Rio. The agricultural population to the estimated number of 300,000 or more was herded within the towns and their immediate vicinage, deprived of the means of support, rendered destitute of shelter, left poorly clad and exposed to the most unwholesome conditions. As the scarcity of food increased with the devastation of the depopulated areas of production, destitution and want became misery and starvation. Month by month the death rate increased in an alarming ratio. By March, 1897, according to conservative estimates from official Spanish sources, the mortality among the reconcentrateds, from starvation and the diseases thereto incident, exceeded 50 per centum of their total number. No practical relief was accorded to the destitute. The overcrowded towns, already suffering from the general dearth, could give no aid. So-called 'zones of cultivation' established within the immediate areas of effective military control about the cities and fortified camps proved illusory as a remedy for the suffering. The unfortunates, being for the most part women and children, with aged and helpless men, enfeebled by disease and hunger, could not have tilled the soil without tools, seed, or shelter for their own support or for the supply of the cities. Reconcentration adopted avowedly as a war measure in order to cut off the resources of the insurgents, worked its predestined result. As I said in my message of last December, it was not civilized warfare; it was extermination. The only peace it could beget was that of the wilderness and the grave.

Meanwhile the military situation in the island had undergone a noticeable change. The extraordinary activity that characterized the second year of the war, when the insurgents invaded even the hitherto unharmed fields of Pinar del Rio and carried havoc and destruction up to the walls of the city of Habana itself, had relapsed into a dogged struggle in the central and eastern provinces. The Spanish arms regained a measure of control in Pinar del Rio and parts of Habana, but under the existing conditions of the rural country, without immediate improvement of their productive situation. Even thus partially restricted the revolutionists held their own, and their conquest and submission, put

forward by Spain as the essential condition of peace, seemed as far distant as ever. In this state of affairs my Administration took its stand in regard to the government's duty. My message of last December, in the situation, and narrated the steps taken in view to relieving its acute suffering, and the way to some form of honorable peace. The assassination of the president, followed by a change of government, and the former administration, pledged to the people without concession, gave place to a new liberal party, committed long and firmly to the policy of reform involving the withdrawal of Spanish rule from Cuba and Porto Rico.

The overtures of this Government through its new envoy, General Weyler, looking to an immediate and effective relief of the condition of the island, which were accepted to the extent of admitting that any shape were not by assurances of the new rule, in already named phrase, would be offered to Cuba without waiting for the end, and that more humane methods than the harshness prevail in the conduct of the Government of Spain continued and the policy already begun by its predecessor, testifying friendly regard for this nation, releasing American citizens held under duress, or another connected with the business, that by the end of November not a single prisoner be held in any way to our national policy remained in a Spanish prison.

While these negotiations were in progress the increasing destitution of the nation's reconcentrateds and the alarming mortality among them claimed earnest attention. The Government, which had attended the limited measure extended to the suffering Americans among them by the judicious expenditure through the consular agencies of the nation, appropriated expressly for their succor by the resolution approved May 24, 1897, promptly humane extension of a similar scheme to the great body of sufferers. A similar measure this end was accomplished in by the Spanish authorities. On the 24th of December last I issued an appeal to the American people, soliciting contributions in money or in kind for the succor of the starving sufferers in Cuba. On the 8th of January by a similar announcement of the formation of a Cuban relief committee, with headquarters in New York City, composed of three men representing the American National Board and the religious and business elements of the community. The efforts of that committee have been untrifling and have accomplished arrangements for free transportation, which have greatly aided the charitable work of the president of the American Red Cross and representatives of other contributory organizations have generously visited Cuba and conferred with the general and the local authorities to make effective distribution of the relief collected through the efforts of the committee. Nearly \$200,000 in money and supplies has already reached the sufferers, and more is forthcoming. The supplies are adequate, free, and transportation to the interior has been arranged, so that the relief, at first confined to Habana and the larger cities,

[illegible][illegible][illegible][illegible]

lished, but until the danger of their being again subjugated had entirely passed away. Then, and not until then, were they recognized. Such was our course in regard to Mexico herself. . . . It is true that with regard to Texas the civil authority of Mexico has been expelled, its invading army defeated, the chief of the Republic himself captured, and all present power to control the newly organized government of Texas annihilated within its confines; but, on the other hand, there is, in appearance at least, an immense disparity of physical force on the side of Texas. The Mexican Republic, under another Executive, is rallying its forces under a new leader and menacing a fresh invasion to recover its lost dominion. Upon the issue of this threatened invasion the independence of Texas may be considered as suspended; and were there nothing peculiar in the relative situation of the United States and Texas, our acknowledgment of its independence at such a crisis could scarcely be regarded as consistent with that prudent reserve with which we have hitherto held ourselves bound to treat all similar questions.

"Thereupon Andrew Jackson proceeded to consider the risk that there might be imputed to the United States motives of selfish interest in view of the former claim on our part to the territory of Texas, and of the avowed purpose of the Texans in seeking recognition of independence as an incident to the incorporation of Texas in the Union, concluding thus: 'Prudence, therefore, seems to dictate that we should still stand aloof and maintain our present attitude, if not until Mexico itself or one of the great foreign powers shall recognize the independence of the new government, at least until the lapse of time or the course of events shall have proved beyond cavil or dispute the ability of the people of that country to maintain their separate sovereignty and to uphold the government constituted by them. Neither of the contending parties can justly complain of this course. By pursuing it we are but carrying out the long-established policy of our Government, a policy which has secured to us respect and influence abroad and inspired confidence at home.'

"These are the words of the resolute and patriotic Jackson. They are evidence that the United States, in addition to the test imposed by public law as the condition of the recognition of independence by a neutral state (to wit, that the revolted state shall 'constitute in fact a body politic, having a government in substance as well as in name, possessed of the elements of stability,' and forming de facto, 'if left to itself, a state among the nations, reasonably capable of discharging the duties of a state'), has imposed for its own governance in dealing with cases like these the further condition that recognition of independent statehood is not due to a revolted dependency until the danger of its being again subjugated by the parent state has entirely passed away. This extreme test was, in fact, applied in the case of Texas. The Congress, to whom President Jackson referred the question as one 'probably leading to war,' and therefore a proper subject for 'a previous understanding with that body, by whom war can alone be declared, and by whom all the provisions for sustaining its perils must be furnished,' left the matter of the recognition of Texas to the discretion of the Executive, providing merely for

the sending of a diplomatic agent when the President should be satisfied that the Republic of Texas had become 'an independent state.' It was so recognized by President Van Buren, who commissioned a chargé d'affaires March 1, 1845, after Mexico had abandoned an attempt to reconquer the Texan territory, and when there was at the time no bona fide contest going on between the insurgent province and its former sovereign.

"I said in my message of December 4, 1845, 'It is to be seriously considered whether the Cuban insurrection possesses beyond dispute the attributes of statehood which alone can demand the recognition of belligerency in its favor.' The same requirement must certainly be no less seriously considered when the graver issue of recognizing independence is in question, for no less positive test can be applied to the greater than to the lesser, while, on the other hand, the influences and consequences of the struggle upon the internal policy of the recognizing State, which form important factors when the recognition of belligerency is concerned, are somewhat if not rightly eliminable, factors when the question is whether the community claiming recognition is or is not independent beyond peradventure.

"Nor from the standpoint of expediency do I think it would be wise or prudent for this Government to recognize at the present time the independence of the so-called Cuban republic. Such recognition is not necessary in order to enable the United States to intervene and pacify the island. To commit this country now to the recognition of any particular government in Cuba might subject us to embarrassing conditions of international obligation toward the organization so recognized. In case of intervention our conduct would be subject to the approval or disapproval of such government. A vote would be required to submit to its direction and to assume to it the mere relation of a friendly ally. When it shall appear hereafter that there is within the island a government capable of performing the duties and discharging the functions of a separate nation, and having, as a matter of fact, the proper forms and attributes of nationality, such government can be promptly and readily recognized and the relations of interests of the United States with such nation adjusted.

"There remain the alternative forms of intervention to end the war, either as an impartial neutral by imposing a rational compromise between the contestants or as the active ally of one party or the other. As to the first it is to be forgotten that during the last few years the relation of the United States has virtually been one of friendly intervention in many ways, each not of itself conclusive, but all tending to the exertion of a potential influence toward ultimate pacific result just and honorable to the interests concerned. The spirit of all our hitherto has been an earnest, unselfish desire for peace and prosperity in Cuba untrammelled by differences between us and Spain and maintained by the blood of American citizens. The bare intervention of the United States as a neutral to stop the war, according to the large demands of humanity and following many historical precedents where neighboring states have intervened to check the hopeless sacrifices of life by

needing conflicts beyond their borders, is justified on rational grounds. It involves, however, a strict constraint upon both the parties to the contest as well to enforce a truce as to guide the eventual settlement.

The grounds for such intervention may be briefly summarized as follows: First. In the name of humanity and to put an end to the barbaries, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is not another country, belonging to another nation, and is therefore none of our business. It is especially our duty, for it is at our door. Second. We owe it to our citizens in Cuba to afford them that protection and indemnity for their property which no government there can or will afford, and to that end to terminate the conditions that deprive them of legal protection. Third. The right to intervene may be justified by the very serious injury to the commerce, trade, and business of our people and by the wanton destruction of property and devastation of the island. Fourth, and which is of the utmost importance. The present condition of affairs in Cuba is a constant menace to our peace, and entails upon this Government an enormous expense. With such a conflict waged for years in an island so near us and with which our people have such trade and business relations—when the lives and liberty of our citizens are in constant danger and their property destroyed and themselves ruined—when our trading vessels are liable to seizure and are seized at our very door by warships of a foreign nation, the expeditions of filibustering that we are powerless to prevent altogether, and the irritating questions and entanglements thus arising, all these and others that I need not mention, with the resulting strained relations, are a constant menace to our peace, and compel us to keep on a semi-war footing with a nation with which we are at peace.

These elements of danger and disorder already pointed out have been strikingly illustrated by a tragic event which has deeply and justly grieved the American people. I have already transmitted to Congress the report of the naval court of inquiry on the destruction of the battleship 'Maine' in the harbor of Habana during the night of the 15th of February. The destruction of that noble vessel has filled the national heart with inexpressible horror. Two hundred and fifty-eight brave sailors and marines and two officers of our Navy, reposing in the fancied security of a friendly harbor, have been hurled to death, grief and want brought to their homes and sorrow to the nation. The naval court of inquiry, which, it is needless to say, commands the unqualified confidence of the Government, was unanimous in its conclusion that the destruction of the 'Maine' was caused by an exterior explosion, that of a submarine mine. It did not assume to place the responsibility; that remains to be fixed. In any event the destruction of the 'Maine' by what our exterior cause, is a potent and impressive proof of a state of things in Cuba that is intolerable. That condition is thus shown to be such that the Spanish Government cannot assure safety and security to a vessel of the American Navy in the harbor of Habana on a mission of peace, and rightfully there.

Further referring in this connection to recent

diplomatic correspondence, a dispatch from our minister to Spain, of the 26th ultimo contained the statement that the Spanish minister for foreign affairs assured him positively that Spain will do all that the highest honor and justice require in the matter of the 'Maine'. The reply above referred to of the 31st ultimo, also contained an expression of the readiness of Spain to submit to an arbitration all the differences which can arise in this matter, which is subsequently explained by the note of the Spanish minister at Washington of the 10th instant, as follows: 'As to the question of fact which springs from the diversity of views between the reports of the American and Spanish boards, Spain proposes that the facts be ascertained by an impartial investigation by experts, whose decision Spain accepts in advance.' To this I have made no reply.

President Grant, in 1875, after discussing the phases of the contest as it then appeared, and its hopeless and apparent indurable prolongation, said: 'In such an event, I am of opinion that other nations will be compelled to assume the responsibility which devolves upon them and to seriously consider the only remaining measures possible—mediation and intervention. Owing, perhaps, to the large expanse of water separating the island from the peninsula, the contending parties appear to have within themselves no depository of common confidence, to suggest wisdom when passion and excitement have their sway, and to assume the part of peacemaker. In this view in the earlier days of the contest the good offices of the United States as a mediator were tendered in good faith, without any selfish purpose, in the interest of humanity and in sincere friendship for both parties, but were at the time declined by Spain, with the declaration, nevertheless, that at a future time they would be indispensable. No intimation has been received that in the opinion of Spain that time has been reached. And yet the strife continues with all its dread horrors and all its injuries to the interests of the United States and of other nations. Each party seems quite capable of working great injury and damage to the other, as well as to all the relations and interests dependent on the existence of peace in the island, but they seem incapable of reaching any adjustment, and both have thus far failed of achieving any success when by one party shall possess and control the island to the exclusion of the other. Under these circumstances, the agency of others, either by mediation or by intervention, seems to be the only alternative which must sooner or later be invoked for the termination of the strife.'

In the last annual message of my immediate predecessor during the pending struggle it was said: 'When the inability of Spain to deal successfully with the insurrection has become manifest, and it is demonstrated that her sovereignty is extinct in Cuba for all purposes of its rightful existence, and when a hopeless struggle for its re-establishment has degenerated into a strife which means nothing more than the useless sacrifice of human life and the utter destruction of the very subject matter of the conflict, a situation will be presented in which our obligations to the sovereignty of Spain will be superseded by higher obligations, which we can hardly hesitate to recognize and discharge.'

In my annual message to Congress, December

last, speaking to this question, I said: "The near future will demonstrate whether the indispensable condition of a righteous peace, just alike to the Cubans and to Spain, as well as equitable to all our interests so intimately involved in the welfare of Cuba, is likely to be attained. If not, the exigency of further and other action by the United States will remain to be taken. When that time comes that action will be determined in the line of indisputable right and duty. It will be faced, without misgiving or hesitancy, in the light of the obligation this Government owes to itself, to the people who have confided to it the protection of their interests and honor, and to humanity. Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic considerations, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring. If it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization, and humanity to intervene with force, it shall be without fault on our part, and only because the necessity for such action will be so clear as to command the support and approval of the civilized world."

"The long trial has proved that the object for which Spain has waged the war cannot be attained. The fire of insurrection may flame or may smoulder with varying seasons, but it has not been and it is plain that it cannot be extinguished by present methods. The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests which give us the right and the duty to speak and act, the war in Cuba must stop."

"In view of these facts and of these considerations, I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government, capable of maintaining order and observing its international obligations, insuring peace and tranquillity and the security of its citizens as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes. And in the interest of humanity and to aid in preserving the lives of the starving people of the island I recommend that the distribution of food and supplies be continued, and that an appropriation be made out of the public Treasury to supplement the charity of our citizens."

"The issue is now with the Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action."

"Yesterday, and since the preparation of the foregoing message, official information was received by me that the latest decree of the Queen Regent of Spain directs General Blanco, in order to prepare and facilitate peace, to proclaim a suspension of hostilities, the duration and details of which have not yet been communicated to me. This fact with every other pertinent considera-

tion will, I am sure, have your just and careful attention in the solemn deliberations upon which you are about to enter. If this means a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will be only another justification for our contemplated action."—*Congressional Record*, April 11, 1898.

A. D. 1898 (April).—Action of Congress empowering the President to expel Spanish authority from the island of Cuba, and its result in a state of war with Spain.—On the 10th of April, two days after receiving the President's Message, as above, the House of Representatives adopted the following resolution, by a vote of 324 against 19: "Resolved, That the President is hereby authorized and directed to intervene at once to stop the war in Cuba, to the end and with the purpose of securing permanent peace and order there and establishing by the free action of the people thereof a stable and independent government of their own in the island of Cuba; and the President is hereby authorized and empowered to use the land and naval forces of the United States to execute the purpose of this resolution."—*Congressional Record*, April 13, 1898, pp. 4192-3.

Three days later the Senate adopted the following, by 27 votes against 21: "Resolved by the Senate and House of Representatives of the United States of America in Congress assembled: First. That the people of the Island of Cuba are and of right ought to be, free and independent, and that the Government of the United States hereby recognizes the Republic of Cuba as a true and lawful Government of that island."

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the Island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters."

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect."

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said land except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of the island to its people."—*Congressional Record*, April 18, 1898, pp. 4386-7.

The two Houses were in conflict. It will be seen, on the question of the recognition of what was claimed to be the government of the Republic of Cuba, organized by the insurgents. A majority of the House shared the doubts expressed by the President in his message, as to the existence of such a government in Cuba as could be recognized without embarrassment; a majority of the Senate shut its eyes to that doubt. After 10 days of heated controversy, the Senate gave way and the following resolution, recommended by conference committees, was adopted in both Houses,—in the Senate by 42 yeas to 35 nays (12 not voting); in the House by 311 yeas to 6 nays (not voting):

Resolved, etc.
 "First. That the people of the Island of Cuba are and of right ought to be free and independent."

"Second. That it is the duty of the United States to demand, and the Government of the United States does hereby demand, that the Government of Spain at once relinquish its authority and government in the Island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters."

"Third. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry these resolutions into effect."

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said island except for the pacification thereof, and asserts its determination when that is accomplished to leave the government and control of Cuba and its people."—*Congressional Record*, April 18, 1898, pp. 4121-22, and 4161-62.

Two weeks later, on the 25th of April, the President communicated to Congress an account of his action in accordance with this joint resolution, and its result in a state of war between the United States and Spain as follows:

"I have communicated to the Spanish minister at Washington the demand which it became the duty of the Executive to address to the Government of Spain in obedience to said resolution, the answer asked for his passports and withdrew. The United States minister at Madrid was informed by the Spanish minister for foreign affairs that the withdrawal of the Spanish representative from the United States had terminated all public relations between the two countries, and all official communications between their respective representatives ceased therewith."

"I recommend to your special attention the note addressed to the United States minister at Madrid by the Spanish minister for foreign affairs on the 1st instant, whereby the foregoing notification was received. It will be perceived therefrom that the Government of Spain, having cognizance of the joint resolution of the United States Congress, and in view of the things which the President is thereby required and authorized to do, responds by treating the reasonable demands of this Government as measures of hostility, following with that instant and complete severance of relations by its action which, by the usage of nations, accompanies an existent state of war between sovereign powers."

"The position of Spain being thus made known, and the demands of the United States being denied with a complete rupture of intercourse by the act of Spain, I have been constrained, in exercise of the power and authority conferred upon me by the joint resolution aforesaid, to proclaim under date of April 22, 1898, a blockade of certain ports of the north coast of Cuba lying between Cardenas and Bahra Honda and of the port of Cienfuegos on the south coast of Cuba, and further, in exercise of my constitutional powers and using the authority conferred upon me by the act of Congress approved April 22, 1898, to issue my proclamation dated April 23, 1898, calling forth volunteers in order

to carry into effect the said resolution of April 20, 1898."

"In view of the measures taken and with a view to the adoption of such other measures as may be necessary to enable me to carry out the expressed will of the Congress of the United States in the premises, I now recommend to your honorable body the adoption of a joint resolution declaring that a state of war exists between the United States of America and the Kingdom of Spain, and I urge speedy action thereon, to the end that the definiteness of the international status of the United States as a belligerent power may be made known, and the assertion of its rights and the maintenance of all its duties in the conduct of a public war may be assured."—*Congressional Record*, April 25, 1898, p. 4671.

The recommendation of the President was carried out, on the same day, by the passage in both Houses, unanimously, of an amendment, "First. That war be, and the same is hereby, declared to exist and that war has existed since the 21st day of April, A. D. 1898, in and to said day, between the United States of America and the Kingdom of Spain." Second. That the President of the United States be, and he hereby is, directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as may be necessary to carry this act into effect."—*Congressional Record*, April 25, pp. 4674 and 4691.

A. D. 1898 (April). Cabinet changes.—Two resignations from the President's cabinet occurred in April, both occasioned by failing health. Hon. James A. Garfield was succeeded as Postmaster General by Hon. Charles Emory Smith, and Hon. John Sherman was followed in the Secretaryship of State by his First Assistant in that office, Judge William R. Day.

A. D. 1898 April May.—War with Spain.—Military preparations. Regular and Volunteer armies.—"The Rough Riders."—At the outbreak of the war, the Regular Army of the United States numbered but 28,000 officers and men. Under authority given by acts of Congress it was rapidly increased, and returns for May, 1898, show 2,194 officers and nearly 42,000 men in the ranks. At the same time a Volunteer Army was being speedily raised and equipped. By proclamation of April 25th, the President called for 125,000 volunteers, to be apportioned, as far as practicable, among the States and Territories according to population. On the 25th of May he called for 75,000 more. Before the end of May, 118,000 enlisted volunteers, with 6,224 officers, were reported to have been mustered in. These were assembled in various camps and prepared for service in a more or less hasty way. At the beginning, six army corps were constituted, embracing both the Regular and Volunteer branches of the army. The First Corps, under Maj. Gen. John R. Brooke, and the Third and Fourth, Maj. Gen. James P. Wadsworth, were organized at Camp Thomas, Ga. The Second was organized under Maj. Gen. William M. Graham at Camp A. C. near Falls Church, Va. The organization of the Fourth Corps, Maj. Gen. John M. Coplin, commanding, was begun at Mobile, Ala. The Fifth Corps was organized at Tampa, Fla., under Maj. Gen. William R. Shafter. A Sixth Corps, which had been provided for, was never

organized, but the Seventh was formed, at Tampa, Fla., under Maj. Gen. Fitzhugh Lee. Subsequently an Eighth Corps was concentrated at San Francisco, and transported to the Philippine Islands. Tampa, Fla., was the port chosen for the shipment of troops to Cuba, and extensive preparations were made for the transport service from that point. The movement waited, first, for the preparation of newly raised troops, and, secondly, for naval operations to make the voyage of transports to Cuba safe from attack.—*Annual Rept. of the Adjutant-General to the Major-General Commanding the Army, 1898.*

Among the Volunteer regiments organized, one known as that of 'the Rough Riders' excited public interest in the greatest degree. "The moment that the newspapers sent broadcast the tale that such a regiment was contemplated, excitement began in nearly every State in the Union, and did not end until the announcement was made that the regiment was complete. As it stood, finished, the troops which made it up, theoretically came from the following sections, although men from the East and from other States and Territories were scattered through each troop. Troops A, B, and C, from Arizona; Troop D, from Oklahoma; Troops E, F, G, H, and I, from New Mexico; Troop K, from Eastern colleges and cities; Troops L and M, from Indian Territory.

Senator Warren, of Iowa, is responsible for the idea of the Rough Riders. He introduced and carried through Congress, aided by Senators Kyle, Carter, and others, a bill authorizing the enrollment of three regiments, to be made up of expert hunters, riflemen, cow men, frontiersmen, and such other hardy characters as might care to enlist from the Territories. Captain Leonard Wood, of the Medical Corps, was the President's chief medical adviser, and had had much experience in Indian fighting in the West. Theodore Roosevelt was Assistant Secretary of the Navy, and had had some knowledge of men and things on the frontier, through his life on his own and other ranches. It was the President's intention to offer to Wood the colonelcy of one regiment, to Roosevelt the colonelcy of a second, and to Griggsby, of Montana, the colonelcy of a third. Wood and Roosevelt received their offers at about the same moment. Roosevelt promptly declined his, on the theory that he had not had sufficient military experience to warrant him in taking command of a regiment. He asked that he might be given the second place in the regiment commanded by Wood, which was done. Thus the Rough Riders began.

Alexander Brodie, who afterwards became major of the regiment, was probably the first man to systematically start towards the organization of this particular regiment. . . . It was on the 3d of May that the Arizona men started for San Antonio. It was on the 8th of May that the very last men of all—those of K Troop—left Washington for San Antonio. These were the 'dude warriors,' the 'dandy troopers,' the 'gilded gang.' When their train pulled into San Antonio, and they started stragglingly to march into camp, they encountered a contingent of 340 cowboys from New Mexico. Oil and water are not further removed than were the everyday natures of these two groups of men.

Yet, instantly they fraternized, and from that moment—through the hardships of it all—these men were brothers. . . . Probably no military organization has ever been made up of men selected from so large a number of applicants, or of men so carefully selected. . . . A large delegation of men from Harvard College called upon Roosevelt one day in Washington and offered their services in a body. Indeed, delegations of that kind from most of the Eastern Colleges went to him, but went to him in vain. His secretary answered more than five thousand individual applications for places in the regiment, and answered ninety-nine per cent of them with declinations."—E. Marshall, *The Story of the Rough Riders*, ch. 1 (copyright by W. Dillingham & Co., N. Y.).

A. D. 1898 (April—May): Cuba—War with Spain.—Blockade of Cuban ports. On the 21st of April, the following instructions were despatched by the Secretary of the Navy to Rear Admiral Sampson, appointed that day to the command of the naval force on the Atlantic Station: "You will immediately institute a blockade of the north coast of Cuba extending from Cardenas on the east to Bahía Honda on the west; also, if in your opinion your force warrants, the port of Cienfuegos, on the south side of the island. It is considered doubtful if the present force at your command would warrant a more extensive blockade. It should be borne in mind that whenever the Army is ready to embark for Cuba the Navy will be required to furnish the necessary convoy for its transports. For this reason it does not seem desirable that you should undertake at present to blockade any more of the island than has been indicated. It is believed that this blockade will cut off Havana almost entirely from receiving supplies from the outside. The Navy Department is considering the question of occupying the port of Matanzas by a military force large enough to hold it and to open communications with the insurgents, and this may be done at an early date, even before the main party of the Army is ready to embark. If this operation is decided upon, you are directed to cooperate with the Army and assist with such vessels as are necessary to cover and protect such a movement."—*Report of Secretary of Navy, 1898*, 2, p. 175.

In previous confidential orders to the commander of the North Atlantic squadron, issued April 6, in anticipation of hostilities, the Department had directed as follows: "In the event of hostilities with Spain, the Department wishes you to do all in your power to capture and destroy the Spanish war vessels in West Indian waters, including the small gunboats which are stationed along the coast of Cuba.

"2. The Department does not wish the vessels of your squadron to be exposed to the batteries at Havana, Santiago de Cuba, or other strongly fortified ports in Cuba, and the more formidable Spanish vessels should be driven to refuge within those harbors. Even in this case the Department would suggest that a blockade and employment of our torpedo boats might accomplish the desired object, viz., the destruction of the enemy's vessels, without subjecting unnecessarily our own men of war to the fire of the land batteries. There are two reasons for this: First. There may be no United States

troops to occupy any captured stronghold, or to protect from riot and arson, until after the dry season begins, about the first of October. Second. The lack of docking facilities makes it particularly desirable that our vessels should not be crippled before the capture or destruction of Spain's most formidable vessels.

"3. The Department further desires that, in case of war, you will maintain a strict blockade of Cuba, particularly at the ports of Havana, Matanzas, and if possible, of Santiago de Cuba, Manzanillo, and Cienfuegos. Such a blockade may cause the Spaniards to yield before the rainy season is over."—*Same Report*, p. 171.

The prudent policy here set forth restricted the action of the fleet to blockading duty so closely, during the early weeks of the war, that no serious demonstrations against the Spanish land batteries were made. Admiral Sampson had been urgent for permission to force the entrance to Havana harbor, before its defenses were strengthened, expressing perfect confidence that he could silence the western batteries, and reach a position from which the city would be at the mercy of his guns; but he was not allowed to make the attempt. The projected occupation of Matanzas was not undertaken.

A. D. 1898 (April—May: Philippines).— Statements of the circumstances in which Aguinaldo, the head of the insurrectionary movement in the Philippines, went to Manila, to co-operate with the American forces.—On the 4th of May, 1898, the following was published in the "Singapore Free Press":

Gen. Emilio Aguinaldo, accompanied by his aide de camp, Col. Marcelo H. del Pilar, and his private secretary, Mr. J. Leyba, arrived incovertly in Singapore from Saigon on April 21, 1898. In Saigon, where Aguinaldo had remained for one week, he had interviews with one or two old Filipino friends now resident there. The special purpose of Aguinaldo's visit to Singapore was to consult other friends here, particularly Mr. Howard W. Bray, an old and intimate English friend, for fifteen years resident in the Philippines, about the state of affairs in the islands generally—particularly as to the possibility of war between the United States and Spain, and whether, in such an event, the United States would eventually recognize the independence of the Philippines, provided he lent his co-operation to the Americans in the conquest of the country. The situation of the moment was this, that the conditions of the honorable peace concluded on December 14, 1897, between President Aguinaldo, on behalf of the Philippine rebels, and H. E. Governor General Primo de Rivera, on behalf of Spain had not been carried out, although their immediate execution had been vouchsafed for in that agreement. These reforms would have provided protection to the people against the organized oppression and rapacity of the religious fraternities, would have secured improved civil and criminal procedure in courts, and have guaranteed, in many ways, improvements in the moral and social conditions of the people. The reputation by the Spanish Government of these conditions, made by General Primo de Rivera, now left the rebel leaders, who had for the most part gone to Hongkong, free to act. And it was in pursuance of that freedom of action that Aguinaldo began to seek counsel of his friends in Saigon and Singapore, with a view to the im-

mediate resumption of operations in the Philippines.

"Meantime Mr. Bray, whose assistance to this journal on matters connected with the Philippines has been very considerable as our readers will have seen, was introduced by the editor of the Singapore Free Press to Mr. Spencer Pratt, consul general of the United States, who was anxious in view of contingencies to learn as much as possible about the real condition of the Philippines. It was a few days after this that Aguinaldo arrived incovertly in Singapore, when he at once met his friends, including Mr. Bray. Affairs now becoming more warlike Mr. Bray, after conversation with Mr. Spencer Pratt, eventually arranged an interview between that gentleman and General Aguinaldo, which took place late on the evening of Sunday, the 24th April at 'The Mansion,' River Valley road. There were present on that occasion Gen. Emilio Aguinaldo y Famy, Mr. E. Spencer Pratt, consul general United States of America, Mr. Howard W. Bray, Aguinaldo's private secretary, Mr. J. Leyba, Col. M. H. del Pilar, and Mr. Marcelo Santos.

"During this conference at which Mr. Bray acted as interpreter, General Aguinaldo explained to the American consul general, Mr. Pratt, the incidents and objects of the late rebellion and described the present disturbed state of the country. General Aguinaldo then proceeded to detail the nature of the cooperation he could give, in which he, in the event of the American forces from the squadron landing and taking possession of Manila would guarantee to maintain order and discipline amongst the native troops and inhabitants in the same humane way in which he had hitherto conducted the war, and prevent them from committing outrages on defenceless Spaniards beyond the inevitable in fair and honorable warfare. He further declared his ability to establish a proper and responsible government on liberal principles, and would be willing to accept the same terms for the country as the United States intend giving to Cuba.

"The consul general of the United States, coinciding with the general views expressed during the discussion, placed himself at once in telegraphic communication with Admiral Dewey at Hongkong, between whom and Mr. Pratt a frequent interchange of telegrams consequently took place. As a result another private interview was arranged at the American consular residence at the Raffles Hotel between General Aguinaldo, Mr. Spencer Pratt, Mr. Howard Bray, and Mr. Leyba, private secretary to Gen. Aguinaldo. As a sequel to this interview, and in response to the urgent request of Admiral Dewey, General Aguinaldo left Singapore for Hongkong by the first available steamer, the Peninsular and Oriental Malacca, on Tuesday, the 26th April, at noon accompanied by his aide de camp, Captain del Pilar, and Mr. Leyba, his private secretary.

"Throughout the whole stay of General Aguinaldo in Singapore the editor was kept fully informed daily of the progress of affairs. Naturally, however, all statement of what occurred has been withheld until what has been deemed the fitting moment has arrived. The substance of the whole incident in its relations to the recent course of affairs in the Philippines has been very fully telegraphed by the editor both to New York and London."

Mr. Pratt, the U. S. Consul General at Singapore, had already, under date of April 28, given his own official report of the interview with General Aguinaldo, to the Department at Washington, as follows: "I have the honor to report that I sent you on the 27th instant, and confirmed in my dispatch No. 211 of that date, a telegram which deciphered read as follows: 'General Aguinaldo gone my instance Hongkong arrange with Dewey co-operation insurgents Manila. PRATT'."

"The facts are these: On the evening of Saturday the 23d instant, I was confidentially informed of the arrival here, incognito, of the supreme leader of the Philippine insurgents, General Emilio Aguinaldo, by Mr. H. W. Bray, an English gentleman of high standing, who, after fifteen years' residence as a merchant and planter in the Philippines, had been compelled by the disturbed condition of things resulting from Spanish misrule to abandon his property and leave there, and from whom I had previously obtained much valuable information for Commodore Dewey regarding fortifications, coal deposits, etc., at different points in the islands. Being aware of the great prestige of General Aguinaldo with the insurgents, and that no one, either at home or abroad, could exert over them the same influence and control that he could, I determined at once to see him, and, at my request, a secret interview was accordingly arranged for the following morning, Sunday, the 24th, in which, besides General Aguinaldo, were only present the General's trusted advisers and Mr. Bray, who acted as interpreter."

"At this interview, after learning from General Aguinaldo the state of mind and object sought to be obtained by the present insurrectionary movement, which, though absent from the Philippines, he was still directing, I took it upon myself, whilst explaining that I had no authority to speak for the Government, to point out the danger of continuing independent action at this stage; and, having convinced him of the expediency of co-operating with our fleet, then at Hongkong, and obtained the assurance of his willingness to proceed thither and confer with Commodore Dewey to that end, should the latter so desire, I telegraphed the Commodore the same day as follows through our consul-general at Hongkong: 'Aguinaldo, insurgent leader, here. Will come Hongkong arrange with Commodore for general cooperation insurgents Manila if desired. Telegraph. PRATT'."

"The Commodore's reply reading thus: 'Tell Aguinaldo come soon as possible. DEWEY.'"

"I received it late that night, and at once communicated to General Aguinaldo, who, with his aide-de-camp and private secretary, all under assumed names, I succeeded in getting off by the British steamer 'Malacca,' which left here on Tuesday, the 26th. Just previous to his departure, I had a second and last interview with General Aguinaldo, the particulars of which I shall give you by next mail. The general impressed me as a man of intelligence, ability, and courage, and worthy the confidence that had been placed in him."

"I think that in arranging for his direct co-operation with the commander of our forces, I have prevented possible conflict of action and facilitated the work of occupying and administering the Philippines. If this course of mine

meets with the Government's approval as I trust it may, I shall be fully satisfied. To Mr. Bray, however, I consider there is due some special recognition for most valuable services rendered. How that recognition can best be made I leave to you to decide."

Two days later (April 30), Mr. Pratt reported further, as follows: "Referring to my dispatch No. 212, of the 28th instant, I have the honor to report that in the second and last interview I had with Gen. Emilio Aguinaldo, on the eve of his departure for Hongkong, I explained upon him the necessity, under Commodore Dewey's direction, of exerting absolute control over the forces in the Philippines, as no excesses on their part would be tolerated by the American Government, the President having declared that the present hostilities with Spain were to be carried on in strict accord with modern principles of civilized warfare. To this General Aguinaldo fully assented, assuring me that he intended and was perfectly able, once on the field, to hold his followers, the insurgents, in check and lead them as our commander should direct. The general further stated that he hoped the United States would assume protection of the Philippines, at least long enough to allow the inhabitants to establish a government of their own, in the organization of which he would desire American advice and assistance. These questions I told him I had no authority to discuss."

Of the arrival of Aguinaldo at Hongkong and his conveyance thence to Manila, the following account was given by Mr. Wildman, the U. S. Consul at Hongkong, in a communication to the State Department at Washington, which bears date July 18: "On May 2 Aguinaldo arrived at Hongkong and immediately called on me. I was May 16 before I could obtain permission from Admiral Dewey to allow Aguinaldo to be taken by the United States ship 'McCulloch,' and put him aboard in the night so as to avoid complications with the local Government. Immediately on the arrival of Aguinaldo at Cavite he issued a proclamation, which I had outlined for him before he left, forbidding pillage, and making it a criminal offense to maltreat neutrals. He, of course, organized a government of which he was dictator, an absolutely necessary step, and from that date until the present time he has been uninterruptedly successful in the field, dignified and just as the head of his government. According to his own statements to me by letter he has been approached by both the Spaniards and the Germans, and has had tempting offers made him by the Catholic Church. He has been watched very closely by Admiral Dewey, General Williams, and his own junta here in Hongkong, and nothing of moment has occurred which would lead any one to believe that he was carrying out to the letter the promises made me in this consulate. The insurgents are fighting for freedom from the Spanish rule, and rely on the well-known sense of justice that controls the actions of our Government as to their future."

In reply to Consul Pratt's report of his interviews with General Aguinaldo, and of his proceedings in connection with the departure of the personage from Singapore to Hongkong, the United States Secretary of State, Mr. Day, on June 16, as follows: "The Department also that you informed General Aguinaldo that

had no authority to speak for the United States; and in the absence of the fuller report which you promise it is assumed that you did not attempt to commit this Government to any alliance with the Philippine Insurgents. To obtain the unconditional personal assistance of General Aguinaldo in the expedition to Manila was proper if he so doing he was not induced to form hopes which it might not be practicable to gratify. This Government has known the Philippine Insurgents only as discontented and rebellious subjects of Spain, and is not acquainted with their purposes. While their contest with that power has been a matter of public notoriety, they have neither asked nor received from this Government any recognition. The United States, in entering upon the occupation of the Islands, as the result of its military operations in that quarter, will do so in the exercise of the rights which the state of war confers, and will expect from the inhabitants, without regard to their former attitude toward the Spanish Government, that obedience which will be lawfully due from them. If, in the course of your conferences with General Aguinaldo, you acted upon the assumption that this government would cooperate with him for the furtherance of any plan of his own, or that, in accepting his cooperation, it would consider itself pledged to recognize any political claims which he may put forward, your action was unauthorized and cannot be approved."—*Treaty of Peace, and Accompanying Papers* (53th Congress, 2d Sess., Senate Doc. No. 62, pt. 2, pp. 337-354)—See, also (in this vol.), PHILIPPINE ISLANDS: A. D. 1898-1899.

A. D. 1898 (April-June).—The War with Spain. Movements of the Spanish squadron under Admiral Cervera, and the blockading of it in the harbor of Santiago de Cuba.—Lieutenant Hobson's exploit.—The sinking of the collier "Merrimac" in the channel.—The opening of hostilities found a Spanish squadron of four armored cruisers (the "Cristobal Colon," the "Almirante Oquendo," the "Vizcaya," and the "Infanta Maria Teresa,") with three torpedo boat destroyers (the "Pluton," "Furor," and "Terror") and some lighter craft, assembled at the Cape Verde Islands, under Rear-Admiral Pascual Cervera. They were in Portuguese waters, and Portugal, though friendly to Spain, was forced to issue a proclamation of neutrality, on the 29th of April, which required the Spanish fleet to depart. Some of the vessels then returned to Spain; but the seven named above sailed westward, and their destination became a mystery, very exciting for some time to the American mind. They might attempt to surprise some American coast city; they might intercept the battle-ship "Oregon," then making her way from the Pacific coast, by the long circuit around Cape Horn; they might have some plan for breaking the Cuban blockade. Acting on the latter conjecture, and surmising that Porto Rico would be chosen for the Spanish naval base, Admiral Sampson moved in that direction to seek them. He attacked the forts at San Juan (May 12), and satisfied himself that no fleet was in the bay.

The truth was that Cervera was then just entering the Caribbean Sea, considerably to the south of Sampson's search. He touched at the French Island of Martinique, and at the Dutch island of Curaçoa, and then slipped across to

Santiago de Cuba, where he was to be overtaken by his fate. In the long hill sheltered bay, with a narrow entrance which forms this excellent Cuban harbor, the Spanish fleet was so hidden that nearly a fortnight passed before its whereabouts could be fully ascertained. It was not until May 20 that a blockade of Santiago was established by a flying squadron of the American fleet, under Commodore Schley, with certainty that the squadron of Cervera was harbored there. On the 1st of June, Admiral Sampson arrived on the scene, with a stronger naval force, and took command. To attempt to force the narrow entrance of the harbor, strongly fortified and thickly mined as it was, and attack the Spanish fleet in the bay, was not deemed practicable. The course resolved upon was to hold the enemy fast in the shelter he had sought until Santiago could be taken, by a land attack. In pursuance of this plan, an exploit of splendid daring was performed, in the early morning of June 3, by a young officer, Lieutenant Richmond Pearson Hobson, with a crew of seven volunteers, who placed and sank a huge coal-barge, the "Merrimac," in the channel that leads into Santiago Bay. The following is Admiral Sampson's report of the undertaking and its achievement.

"Before coming here I decided to make the harbor entrance secure against the possibility of egress of the Spanish ships by obstructing the narrow part of the entrance by sinking a collier at that point. Upon calling upon Mr. Hobson for his professional opinion as to a sure method of sinking the ship, he manifested a most lively interest in the problem. After several days' consideration he presented a solution which he considered would insure the immediate sinking of the ship when she had reached the desired point in the channel. This plan we prepared for before we reached Santiago. This plan included ten electric torpedoes on the outside of the ship, each of 75 pounds of gunpowder, sinking the ship partially before going in, cutting the sea valves, and opening the cargo ports. The plan contemplated a crew of only seven men and Mr. Hobson, who begged that it might be intrusted to him. The anchor chains were ranged upon deck for both the anchors, forward and aft, the plan including the anchoring of the ship almost automatically. As soon as I reached Santiago and had the collier to work upon the details were commenced and diligently prosecuted, hoping to complete them in one day as the moon and tide served best the first night after our arrival. Notwithstanding every effort, the hour of 1 o'clock in the morning arrived and the preparations were scarcely completed. After a careful inspection of the final preparations I was forced to relinquish the plan for that morning, as dawn was breaking. Mr. Hobson begged to try it at all hazards.

"This morning proved more propitious, as a prompt start could be made. Nothing could have been more gallantly executed. We waited impatiently after the firing by the Spaniards had ceased. When they did not reappear from the harbor at 6 o'clock I feared they had all perished. A steam launch, which had been sent in charge of Naval Cadet Powell to rescue the men, appeared at this time, coming out under a persistent fire from the batteries, but brought none of the crew. A careful inspection of the harbor from this ship showed that the 'Merrimac' had

been sunk in the channel somewhat farther in than had been intended. This afternoon the chief of staff of Admiral Cervera came out under a flag of truce with a letter from the Admiral extolling the bravery of the crew in an unusual manner. I can not myself too earnestly express my appreciation of the conduct of Mr. Hobson and his gallant crew. I venture to say that a more brave and daring thing has not been done since Cushing blew up the "Albatross." The sunken ship did not actually block the channel; but that fact takes nothing from the gallantry of the exploit. Why the intended spot in the channel was missed was explained by Lieutenant Hobson in a statement which he afterwards made. "When the 'Merrimac' poked her nose into the channel," says the Lieutenant, "our troubles commenced. The deadly silence was broken by the swash of a small boat approaching us from the shore. I made her out to be a picket boat. She ran close up under the stern of the 'Merrimac' and fired several shots from what seemed to be 3 pounder guns. The 'Merrimac's' rudder was carried away by this fire. That is why the collier was not sunk across the channel. We did not discover the loss of the rudder until Murphy [the volunteer assigned to that duty] had cast anchor. We then found that the 'Merrimac' would not answer to the helm and were compelled to make the best of the situation. . . . Submarine mines and torpedoes were exploded all around us, adding to the excitement. The mines did no damage, although we could hear the rumbling and feel the ship tremble. We were running without lights, and only the darkness saved us from utter destruction. When the ship was in the desired position and we found that the rudder was gone, I called the men on deck. While they were launching the catamaran I touched off the explosives. At the same time two torpedoes, fired by the 'Reina Mercedes,' struck the 'Merrimac' amidships. I can not say whether our own explosives or the Spanish torpedoes did the work, but the 'Merrimac' was lifted out of the water, and almost rent asunder."

What followed, in the experience of the crew, when their vessel went down, is described as follows by Lieut. Hobson, in a narrative of "The Sinking of the Merrimac," which he published at a later day: "The stricken vessel now reeled to port. Some one said 'She is going to turn over on us, sir,' to which I replied: 'No; she will right herself in sinking, and we shall be the last spot to go under.' The firing suddenly ceased. The vessel lowered her head like a faithful animal, proudly aware of its sacrifice, bowed below the surface, and plunged forward. The stern rose and heeled heavily. It stood for a moment, shuddering, then started downward, righting as it went. A great rush of water came up the gangway, seething and gurgling out of the deck. The mass was whirling from right to left 'against the sun'; it seized us and threw us against the bulwarks, then over the rail. Two were swept forward as if by a momentary recession, and one was carried down into a coal-bunker—luckless Kelly. In a moment, however, with increased force, the water shot him up out of the same hole and swept him among us. The bulwarks disappeared. A sweeping vortex whirled above. We clung about with corks, cans, and spars, the incomplete stripping

having left quantities on the deck. The preservers stood us in good stead, preventing chests from being crushed, as well as being on the surface, for spars came and on the entering rams, and the sharp corners of the stricken us heavily. . . . When we looked for the life boat we found that it had been carried away. The catamaran was the largest piece of floating debris; we assembled about it. The loss of the catamaran from the cargo boom held and anchored us to the ship, though barely long enough to reach the surface, causing the water to rise over and set us scrambling as the line came up."

The firing had ceased. It was evident the enemy had not seen us in the general mass of moving objects, but soon the tide began to ebb these away, and we were being left alone with the catamaran. The men were directed to crouch close in, bodies below and only heads up, close under the edges, and were directed not to speak above a whisper, for the destroyer was near at hand, and boats were passing near. We waited; all were present, and direction was given to remain as we were till further orders. I was sure that in due time after daylight a responsible officer would come out to reconnoiter. It was evident that we could not swim; just the tide to reach the entrance. Moreover, the shore were lined with troops, and the small boats were looking for victims that might escape from the vessel. The only chance lay in remaining uncovered until the coming of the reconnoitering boat, to which, perhaps, we might succeed without being fired on. . . . The air was cold, and the water positively cold. In less than ten minutes our teeth were chattering, so cold did it, did they chatter that it seemed the destroyer or the boats would hear. . . . We remained there probably an hour."

At daylight a steam launch approached and was hailed by Lieutenant Hobson, who judged that there must be officers on board to whom we would be safe to surrender. He was more than right. The commander of the launch was Admiral Cervera, in person, who took the nearly exhausted men from the water and treated them with great kindness, admiring the bravery of their exploit, and sending a flag of truce to Admiral Sampson to announce their safety. They were taken under the 'Reina Mercedes,' and, as prisoners of war, were confined at first in Morro Castle and afterwards in the city. It so happened that they were locked in the Morro during a bombardment of the Spanish coast defenses and fleet by our vessels on June 6th, when about 1,500 projectiles were fired; and much anxiety and indignation were expressed in this country in view of that circumstance; but Mr. Ramsden, British consul at Santiago, explained in a despatch that they were removed as soon as hostages could be prepared in the barracks—actually on June 7th. They were released on July 6th in exchange for prisoners captured by our forces.

A. D. 1898 (April—July).—War with Spain.—Destruction of the Spanish fleet in Manila Bay.—Despatches of Admiral Dewey.—Relations with Aguinaldo, the insurgent chief.—Arrival of American troops for the occupation of the city.—Commodore George Dewey commanding the Asiatic Squadron, then awaiting orders at Hongkong, received on the 26th of April the following despatch, by cable from the Secretary of the Navy: "War has commenced."

between the United States and Spain. Proceed
ance to Philippine Islands. Commence opera-
tions at once, particularly against the Spanish
fleet. You must capture vessels or destroy
the most valuable." On the sixth day after
receiving these orders, namely on May 1st, he
was able to report from Manila by telegraph
that Don Hongkong on the 5th. The squadron
arrived at Manila at daybreak this morning. Im-
mediately engaged enemy and destroyed the fol-
lowing Spanish vessels: Reina Christina, Cas-
tro, Don Antonio de Bola, Don Juan de
Austria, Isidro Latorre, Isla de Cuba, Gen-
eral Lozo, Marques del Duero, El Curro,
Ayuso, one transport, Don de Mahabul,
water battery at Cavite. I shall destroy Cavite
as well as necessary. The squadron is unimpaired.
Few men were slightly wounded. I request the
Department will send immediately from San
Francisco fast steamer with ammunition. The
only means of telegraphing is to the American
consul at Hongkong.

In the time the post brought participants of the action in the following report from Commodore Dewey, dated May 4: "The squadron left Manila Bay (Philina) on April 27, immediately on the arrival of Mr. O. F. Williams, United States Consul at Manila, who brought important information and who accompanies the squadron. Arrived off Bolinao on the morning of April 30 and, finding no vessels there, proceeded down the coast and arrived off the entrance to Manila Bay on the same afternoon. The 'Boston' and 'Concord' were sent to reconnoiter Port Subic, I having been informed that the enemy intended to take position there. A thorough search of the port was made by the 'Boston' and 'Concord,' but the Spanish fleet was not found, although, from letters afterwards found in the arsenal discussed with translation, it appears that it had seen their intention to go there. Entered the Boca Grande, or south channel, at 11:30 p. m., steaming in column at distance at 8 knots. After half the squadron had passed, a battery on the south side of the channel opened fire, none of the shots taking effect. The 'Boston' and 'Manila' returned the fire. The squadron then sailed across the bay at slow speed, and arrived off Manila at daybreak, and was fired upon at 5:15 a. m. by three batteries at Manila and two at Cavite and by the Spanish fleet anchored in an approximately east and west line across the mouth of Baker Bay, with their left in shoal water in Camarao Bay. The squadron then proceeded to the attack, the flagship 'Olympic' under my personal direction, heading, followed at distance by the 'Baltimore,' 'Raleigh,' 'Petrel,' 'Concord,' and 'Boston,' in the order named, which formation was maintained throughout the action. The squadron opened fire at 5:44 a. m. While advancing to the attack, two mines were exploded ahead of the flagship, too far to be effective. The squadron maintained a continuous and precise fire at ranges varying from 5,000 to 2,000 yards, continuing in a line approximately parallel to that of the Spanish fleet. The enemy's fire was vigorous but generally ineffective.

"Early in the engagement two launches put out toward the 'Olympia' with the apparent intention of using torpedoes. One was sunk and the other disabled by our fire and beached before an opportunity occurred to fire torpedoes. At 7

[illegible]

"At 11 P. M. finding that the report of scarcity of ammunition was correct, I decided with the squadron to the attack. By three times the flagship and almost the entire Spanish fleet were in flames, and at 12:30 p. m. the Spanish ceased firing, the batteries being smashed and the ships sunk, burnt and deserted. At 12:40 p. m. the squadron returned and anchored off Manila, the 'Perla' being left behind to complete the destruction of the smaller gunboats, which were behind the point of Cavite. This duty was performed by Commander E. P. Wood in the most expeditious and complete manner possible. The Spanish lost the following vessels: Sunk—'Rea', 'Christina', 'Castilla', 'Don Antonio', 'Catala', 'Barral', 'Don Jacobo Austria', 'Isabel', 'Catala', 'Isabel de Cuba', 'Vicente Lopez', 'Munoz', 'El Duque', 'El Varro', 'Velasco' and 'Isabel Maldonado', transports; captured—'Rafael', 'El Heracles', frigates; and several small launches. I am unable to obtain complete accounts of the enemy's killed and wounded, but believe their loss to be very heavy. The 'Rea' Christian alone had 150 killed (including the captain) and 90 wounded.

"I am happy to report that the damage done to the squadron under my command was not irreparable. There were none killed, and only 7 wounded, the squadron very slightly wounded. As a result, seen by the reports of the commanding officers, which are here with me, several of the vessels were struck and even penetrated, but the damage was of the slightest and the squadron is in good condition now as before the battle. I beg to state to the Department that I doubt if any commander in chief under similar circumstances was ever served by more loyal efficient and valiant captives than those of the squadron now under my command." (10) May 2, the day following the engagement, the squadron again went to Cavite, where it remains. A landing party was sent to destroy the guns and magazines of the batteries there. On the 24 the military forces occupied the Cavite Arsenal, which was taken possession of by a landing party.

Promptly in response to this report of his victory, a joint resolution of thanks to General George Dewey and his officers and men, by the two

Houses of Congress, was despatched to them, with announcement to the former of his promotion to the rank of rear-admiral. The admiral replied, on the 13th, from Cavite, making due acknowledgments and adding: "I am maintaining strict blockade of Manila by sea, and believe rebels are hemming in by land, although they are inactive and making no demonstrations. Great scarcity of provisions in the city. I believe the Spanish Governor General will be obliged to surrender soon. I can take Manila at any moment. To retain possession and thus control Philippine Islands would require, in my best judgment, a well equipped force of 5,000 men."

On the 20th he reported, further: "Aguinaldo, the rebel commander in chief, was brought down by the 'McCulloch' [from Hongkong]. Organized forces near Cavite, and may render assistance that will be valuable." On the 27th of June, in reply to inquiries from the Navy Department, he explained his relations with Aguinaldo, as follows: "Aguinaldo, insurgent leader, with thirteen of his staff, arrived May 19, by permission, on 'Naushon'. Established self Cavite, outside arsenal, under the protection of our guns, and organized his army. I have had several conferences with him, generally of a personal nature. Consistently I have refrained from assisting him in any way with the force under my command, and on several occasions I have declined requests that I should do so, telling him the squadron could not act until the arrival of the United States troops. At the same time I have given him to understand that I consider insurgents as friends, being opposed to a common enemy. He has gone to attend a meeting of insurgent leaders for the purpose of forming a civil government. Aguinaldo has acted independently of the squadron, but has kept me advised of his progress, which has been wonderful. I have allowed to pass by water recruits, arms, and ammunition, and to take such Spanish arms and ammunition from the arsenal as he needed. Have advised frequently to conduct the war humanely, which he has done invariably. My relations with him are cordial, but I am not in his confidence. The United States has not been bound in any way to assist insurgents by any act or promises, and he is not, to my knowledge, committed to assist us. I believe he expects to capture Manila without my assistance, but doubt ability, they not yet having many guns. In my opinion these people are far superior in their intelligence and more capable of self government than the natives of Cuba, and I am familiar with both races."—*Report of the Secretary of the Navy*, 1898, v. 2, pp. 67-72 and 103.

On the 30th of June, troops sent from San Francisco, to the number of 2,500 officers and men, commanded by Gen. T. M. Anderson, arrived in Manila Bay, to co-operate with the navy in taking Manila and occupying the city, when taken. They were followed by a second expeditionary force, under Gen. F. V. Greene, which arrived July 17, and by a third, July 25 and 31, with which came Gen. Merritt, commanding the corps and the Department of the Pacific. Gen. Merritt's army then numbered nearly 11,000 men, and it was increased during the next few weeks to more than 15,000.—*Reports of the War Dept.*, 1898, v. 1, pt. 2, p. 499.

An English officer, Major Younghusband, who visited Manila at this time remarked: "It may,

perhaps, with some confidence be prophesied, when the cold fit, which will in due season follow the warmth of the present enthusiasm, has blown on the nation, America will discover that the parting of the ways was. In leaving Manila, Admiral Dewey to do more than defeat the Spanish fleet and exact a heavy indemnity from the city of Manila before sailing away. It may seem to be more true, however, to say that the parting of the ways was when a military expedition was sent from San Francisco. Manila to be landed, for the capture of the city and the occupation of the islands. It is a good reason that Admiral Dewey could not sail away," after the destruction of the Spanish ships, because he needed the harbor he had captured, the fleet having lost most of the privileges formerly been using in neutral ports, which became the fleet of a belligerent power. The possession of Manila Bay while it was held by the American fleet was clearly a means of conducting legitimately with the general conduct of the war against Spain. But it is also true that the handling of soldiers on the island of Luzon and the capture of the city of Manila, anything to the security with which he has held for the purposes of Admiral Dewey, or that it contributed at all to the winning of Spain in the war and to the rescue of Cuban Spanish misrule. For two months from the day of May until the last day of July, 1898, soldier arrived, and for six weeks longer before Manila surrendered, Admiral Dewey appears to have been as fully and as conveniently in possession of all the advantages that harbor could give him, as he was after the Spanish had been lowered in the city and on the island. Therefore, the American conquest of the Philippines does not readily connect itself with war for the liberation of Cuba as a part of it, but presents itself to the mind as a somewhat supplementary enterprise, undertaken with objects of its own.

A. D. 1898 (May—August).—Conduct of English and German naval officers at Manila.—While Admiral Dewey was holding Manila Bay, before the taking of the city, there were many rumors and exciting stories about offensive behavior towards the Americans by commanders of German war ships that sent to the scene. As far as possible, they were officially suppressed, in order to avoid quarrel between the two countries and a authoritative account of what occurred could be found. But some incidents obtained publication which are probably true in the main. The unpleasant happening appears to have been the arrival in Manila Bay of a German navy vessel, which stemmed in with entire disregard of the blockading fleet, as though the port was open. Thereupon Admiral Dewey sent a formal reminder to the captain that he was intruding on a blockade, by firing a shot across his bow, ordering him to leave to. The German captain, in a rage, is said to have called on the commanding officer of a British squadron that was in the Bay, for advice as to what he should do, and was told that he owed the Americans an apology for his violation of naval customs, well settled for such circumstances as this in Manila Bay. According to the British commander, Captain Sir E. C. Chester, himself on the last of the

Admiral Dewey, visited the latter on behalf of the German officer, and made the matter smooth by either through indiscretion of his own, or because he had instructions to interfere as much as possible with the proceedings of the Americans. The German commander continued to pursue an offensive course. According to report, he went so far as to stop a movement which Admiral Dewey then a recognized ally of the United States was making, to take possession of a certain island and to capture some Spaniards who were on it. This provoked Admiral Dewey to a demonstration against him so threatening that he was back in haste, and the island was occupied.

According to all accounts, Admiral Dewey showed unsurpassed wisdom and dignity in meeting and checking these offensive proceedings without allowing them to become a cause of international quarrel, and he was happily aided in doing so by the hearty support of the British naval commander. According to still another report of the time, a German admiral, who had come upon the scene, meditated an interference to forbid the bombardment of Manila, when the city was about to be attacked, and, calling upon Sir Edward Cliehoester to ascertain what action the latter would take, was significantly told, "That is only known to Admiral Dewey and myself,"—which convinced him that his project was not wise. An English warship has related with much satisfaction, that when Sir Edward's ship, the "Immortalité," finally steamed out of Manila Bay, returning to Hong Kong, "every ship in the American fleet manned her yards and gave the British man of war three cheers as she passed along, and she with the answering signal, 'thank you,' flying at her mast head, went on her way."

A. D. 1898 (June).—Act creating the United States Industrial Commission.—An Act "authorizing the appointment of a non-partisan Commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital," was passed by Congress and approved by the President June 18, 1898. It provided: "That a commission is hereby created, to be called the 'Industrial Commission,' to be composed as follows: Five members of the Senate, to be appointed by the presiding officer thereof; five members of the House of Representatives, to be appointed by the Speaker, and nine other persons, who shall fairly represent the different industries and employments, to be appointed by the President, by and with the advice and consent of the Senate. . . . That it shall be the duty of this commission to investigate questions pertaining to immigration, to labor, to agriculture, to manufacturing, and to business, and to report to Congress and to suggest such legislation as it may deem best upon these subjects."

That it shall furnish such information and suggest such laws as may be made a basis for uniform legislation by the various States of the Union, in order to harmonize conflicting interests and to be equitable to the laborer, the employer, the producer, and the consumer. . . . That the commission shall give reasonable time for hearings, if deemed necessary, and if necessary it may appoint a subcommission or subcommissions of its own members to make investigation in any part of the United States, and it

shall be allowed such necessary expenses for the same. It shall have the authority to send for persons and papers and to administer oaths and affirmations. . . . That it may report from time to time to the Congress of the United States, and shall at the conclusion of its labors submit a final report."

The Commission thus contemplated was duly appointed by the President and organized by the election of Senator Kyle for its chairman. For the scope and plan of its investigations a committee on procedure made the following recommendations, which were adopted by the Commission and which have been followed in what it has done. The main work of the Commission may be said to be to study and compare existing laws bearing upon industrial conditions here and elsewhere, to ascertain by competent testimony where in they are deficient, defective, inequitable, or oppressive, and to recommend such remedial statutes as will tend not only to make the conditions of industry more uniform as between the several States, but to remove such existing sources or causes of discontent, inequality and injustice as can be remedied and regulated through legislation. . . . In order to secure satisfactory results, it appears to your committee imperatively necessary that the work shall be confined strictly to the main purpose, viz., of ascertaining the nature and effects of existing legislation, and the nature of remedial legislation which may be necessary or desirable to equalize conditions in industry and to remove any just grounds of complaint on the part of either labor or capital, or of the people at large.

To facilitate the progress of the work we recommend the division of the Commission into four sub-commissions of five members each, to be severally charged with the investigation of present conditions and the formulation of remedial suggestions in the following branches of industry: 1. On agriculture and agriculture labor. 2. On the conditions of labor and capital employed in manufacturing and general business. 3. On the conditions of labor and capital employed in mining. 4. On transportation. In addition we recommend a fifth sub-commission, to be known as the sub-commission on statistics, in the membership of which there shall be one representative of each of the above sub-commissions.

The committee also suggests that there are certain subjects of inquiry which appertain equally to all the groups into which it has recommended that the Commission be segregated. The subjects of immigration, of education of combinations and trusts, and of taxation at once suggest themselves as belonging in this category. It is therefore recommended that these subjects, one or more of them be excluded from the full Commission pending the organization of the several sub-commissions.

The subject to which the Commission gave earliest attention was that of Trusts and Industrial combinations, for which it submitted a preliminary report on the 1st of March, 1900. See in this vol. Trusts.

A. D. 1898 (June).—Act providing for the arbitration of disputes between employers and employees in inter-state commerce. The following are the main sections of a very important Act of Congress, approved June 1, 1898, which provides for the arbitration of disputes between

railway and other employees engaged in interstate commerce and the companies or individuals employing them:

"That the provisions of this Act shall apply to any common carrier or carriers and their officers, agents and employees, except masters of vessels and seamen, engaged in the transportation of passengers or property wholly by railroad, or partly by railroad and partly by water, for a continuous carriage or shipment, from one State or Territory of the United States or the District of Columbia, to any other State or Territory of the United States, or the District of Columbia, or from any place in the United States to an adjacent foreign country, or from any place in the United States through a foreign country to any other place in the United States."

"Sec. 2. That whenever a controversy concerning wages, hours of labor, or conditions of employment shall arise between a carrier subject to this Act and the employees of such carrier, seriously interrupting or threatening to interrupt the business of said carrier, the chairman of the Interstate Commerce Commission and the Commissioner of Labor shall, upon the request of either party to the controversy, with all practicable expedition, put themselves in communication with the parties to such controversy, and shall use their best efforts, by mediation and conciliation, to amicably settle the same; and if such efforts shall be unsuccessful, shall at once endeavor to bring about an arbitration of said controversy in accordance with the provisions of this Act."

"Sec. 3. That whenever a controversy shall arise between a carrier subject to this Act and the employees of such carrier which can not be settled by mediation and conciliation in the manner provided in the preceding section, said controversy may be submitted to the arbitration of a board of three persons, who shall be chosen in the manner following: One shall be named by the carrier or employer directly interested; the other shall be named by the labor organization to which the employees directly interested belong, or, if they belong to more than one, by that one of them which specially represents employees of the same grade and class and engaged in services of the same nature as said employees so directly interested. Provided, however, That when a controversy involves and affects the interests of two or more classes and grades of employees belonging to different labor organizations, such arbitrator shall be agreed upon and designated by the concurrent action of all such labor organizations; and in cases where the majority of such employees are not members of any labor organization, said employees may by a majority vote select a committee of their own number, which committee shall have the right to select the arbitrator on behalf of said employees. The two thus chosen shall select the third commissioner of arbitration; but, in the event of their failure to name such arbitrator within five days after their first meeting, the third arbitrator shall be named by the commissioners named in the preceding section. A majority of said arbitrators shall be competent to make a valid and binding award under the provisions hereof. The submission shall be in writing, shall be signed by the employer and by the labor organization representing the employees, shall specify the time and place of meeting of said board of arbitration, shall state the ques-

tions to be decided, and shall contain specific provisions by which the respective parties shall stipulate, as follows:

"First. That the board of arbitration shall commence their hearings within ten days after the date of the appointment of the arbitrator, and shall find and file the award as provided in this section, within thirty days after the date of the appointment of the third arbitrator, and that pending the arbitration the employees shall continue immediately prior to the dispute shall be changed. Provided, That no employee shall be compelled to render personal service without his consent."

"Second. That the award and the papers thereto, including the testimony taken thereon, shall be certified under the hands of the arbitrators and which shall have the force and effect of a bill of exceptions, shall be filed in the office of the district court of the United States in the district wherein the controversy arises, and a writ of enforcement shall be entered into, and shall be enforceable upon both parties, unless set aside by error of law apparent on the record."

"Third. That the respective parties to an award will each faithfully execute the same, and that the same may be specifically enforced in equity so far as the powers of a court of law permit. Provided, That no injunction or other legal process shall be issued which shall compel the performance by any laborer against his will of a contract for personal labor or service."

"Fourth. That employees dissatisfied with the award shall not by reason of such dissatisfaction quit the service of the employer before the expiration of three months from and after making of such award without giving thirty days' notice in writing of their intention so to quit. Nor shall the employer dissatisfied with such award dismiss any employee or employees on account of such dissatisfaction before the expiration of three months from and after the making of such award without giving thirty days' notice in writing of his intention so to discharge."

"Fifth. That said award shall continue in force as between the parties thereto for the period of one year after the same shall go into practical operation, and no new arbitration of the same subject between the same employer and the same class of employees shall be had after the expiration of said one year if the award is not aside as provided in section four. That as individual employees not belonging to the labor organization or organizations which shall be taken into the arbitration, the said arbitration and award made therein shall not be binding on the said individual employees shall give notice in writing to become parties to said arbitration."

"Sec. 7. That during the pendency of arbitration under this Act it shall not be lawful for employer, party to such arbitration, to discharge the employees, parties thereto, except for non-performance, violation of law, or neglect of duty, for the organization representing such employees to order, nor for the employees to unite in, or abet strikes against said employer, nor during a period of three months after an award under such an arbitration, for such an employer to discharge any such employees, except for causes aforesaid, without giving thirty days' written notice of an intent so to discharge for any of such employees, during a like period."

any person, or any officer, agent, or employee of said employer, without just cause, or without just excuse, shall be liable to said employer, thirty days in advance of an intent so to do, not to be construed as a limitation on the right of any person to advise otherwise. Any person who shall violate the provisions of this section shall be liable to the employer, or to the person to whom he is liable, for damages. Provided, that the provisions of this section shall be construed to apply only to any employer, party to such arbitration, who is reducing the number of its or his employees, or who is reducing his or his judgment business.

SEC. 10. That any employer, subject to the provisions of this Act and any officer, agent, or employee of such employer who shall require any person, or any person seeking employment, as a condition of such employment, to enter into an agreement, either written or verbal, not to be employed by any member of any labor corporation, association, or organization, or shall threaten any employee with loss of employment, or shall make any declaration against any employee because of his membership in such a labor corporation, association, or organization, or who shall require any employee or any person seeking employment, as a condition of such employment, to enter into a contract whereby such employee shall agree for employment shall agree to contribute to any fund for charitable, social or benevolent purposes, to release such employee from any liability for any personal injury by reason of any contract received from such fund beyond the proportion of the benefit arising from the contribution to such fund, or who shall, by threatening to discharge an employee, attempt or conspire to prevent such employee from obtaining employment, or who shall, after the quitting of an employee, attempt or conspire to prevent such employee from obtaining employment, is hereby declared to be guilty of a misdemeanor, and shall be liable to conviction thereof in any court of the United States of competent jurisdiction in the district in which such offense was committed, shall be punished for such offense by a fine of not less than one hundred dollars and not more than one thousand dollars.—*U. S. Statutes at Large*, p. 220, p. 221.

A. D. 1898 (June).—The War with Spain.

—**Seizure of the island of Guam.**—The following order, dated May 10, 1898, was addressed by the Secretary of the Navy to the Commander of the U. S. S. "Charleston": "Upon the receipt of this order, which is forwarded by the steamship 'City of Pekin' to you at Honolulu, you will proceed with the 'Charleston' and 'City of Pekin' in company, to Manila, Philippine Islands, en route you are hereby directed to stop at the Spanish Island of Guam. You will use such force as may be necessary to capture the port of Guam, making prisoners of the governor and other officials and any armed force that may be there. You will also destroy any fortifications on said island and any Spanish naval vessels that may be there, or in the immediate vicinity. These operations at the Island of Guam should be completed, and should not occupy more than one or two days. Should you find any road at the Island of Guam, you will make such use of it as you consider desirable. It is left to your discretion whether or not you destroy it. From the Island of Guam, proceed to Manila and report to Rear Admiral George Dewey, U. S. N., for duty in the squadron under his command."

On the morning of May 10, 1898, the U. S. S. "Charleston" and the U. S. S. "City of Pekin" sailed from Honolulu for Manila. On the morning of May 11, 1898, the U. S. S. "Charleston" and the U. S. S. "City of Pekin" arrived at the port of Agaña, the capital of Guam, and of the Mariana group, and found the vessels of the Spanish fleet, including the Spanish battleship "Pelayo", and a number of other vessels, in the harbor. The U. S. S. "Charleston" and the U. S. S. "City of Pekin" were met by the Spanish fleet, and a battle ensued. The U. S. S. "Charleston" and the U. S. S. "City of Pekin" were victorious, and the Spanish fleet was destroyed. The U. S. S. "Charleston" and the U. S. S. "City of Pekin" then proceeded to Manila, and reported to Rear Admiral George Dewey, U. S. N., for duty in the squadron under his command.

8:30 a. m. on June 21 Lieut. William Braumersreuther was sent ashore under flag of truce, with a written demand for the immediate surrender of the defenses of the Island of Guam and all of its officials and persons in the military service of Spain. Mr. Braumersreuther was directed to wait half an hour only for a reply, to bring the governor and other officials on board as prisoners of war in case of surrender, or in case of refusal or delay beyond the time given, to return and take command of the landing force, which he would find in readiness, and proceed to Agaña. At 12:15 p. m. Mr. Braumersreuther returned to the ship, bringing off the governor and three other officers, his staff, and handed me a letter from the governor acceding fully to my demand. Having received the surrender of the Island of Guam, I took formal possession at 2:45 p. m., hoisting the American flag on Fort Santa Cruz and saluting it with 21 guns from the "Charleston." From a personal examination of Fort Santa Cruz I decided that it was entirely useless as a defensive work, with no guns and in a partly ruinous condition, and that it was not necessary to expend any mines in blowing it up. The forts at Agaña, San Luis D'Apra, and Unai are of no value and no guns remain in the island except four small cast-iron guns of obsolete pattern at Agaña, formerly used for saluting, but now condemned as unsafe even for that purpose. No Spanish vessel of war has visited Guam during the last eighteen months. No coal was found on the island. — *Annual Report of the Navy Dept. 1898, v. 2, pp. 151-3*

A. D. 1898 (June-July). War with Spain. — Expedition of the army under General Shafter against Santiago de Cuba. — Battles of El Caney and San Juan Hill. — To co-operate with the navy in operations for the capture of Santiago de Cuba, and of the Spanish fleet blockaded in the harbor of that town, orders were issued from Washington on the 31st of May, by Major General Miles, Commanding the Army, "with the approval of the Secretary of War," which directed General Shafter, commanding the forces assembled at Tampa, Florida, to place them on transports and proceed with them, under convoy of the navy, to Santiago. Owing to an extreme lack of both railway and harbor facilities at Tampa, an entire week was consumed in the embarkation of the troops and supplies. When on shipboard, the expedition was delayed another week by false reports of the appearance of Spanish cruisers on the Cuban coast, which seemed to the Washington authorities to call for a stronger naval convoy to guard the transport fleet. It was not until the 14th of June that the fleet was permitted to sail, with 16,000 men. It arrived off Guantánamo, near Santiago, on the morning of the 20th.

Meantime, the blockading fleet had bombarded the forts at Santiago twice, on the 6th and on the 16th, and had silenced them, for the time being, on both occasions, but apparently with no permanent effect. With more success two vessels from the fleet had entered the harbor of Guantánamo on the 7th and taken possession of the lower bay, where a marine battalion was landed on the 10th and established in camp to hold ground until the army arrived. Meantime, also, communication with General García, commanding the Cuban forces, had been opened, and arrangements made, the results of which were subse-

quently acknowledged by General Miles in his annual report, as follows: "General García regarded my requests as his orders, and promptly took steps to execute the plan of operations. I sent 3,000 men to check any movement of the 12,000 Spaniards stationed at Holguín. A portion of this latter force started to the relief of the garrison at Santiago, but was successfully checked and turned back by the Cubans, under General Ferri. General García also sent 2,000 men, under Peréz, to oppose the 6,000 Spaniards at Guantánamo, and they were successful in their object. He also sent 1,000 men, under General Ríos, against the 6,000 men at Manzanillo. Of this garrison 3,500 started to reinforce the garrison at Santiago, and were engaged in no less than thirty combats with the Cubans on their way before reaching Santiago. With an additional force of 5,000 men, General García besieged the garrison of Santiago, taking up a strong position on the west side and in close proximity to the harbor, and afterwards received General Shafter and Admiral Sampson at his camp near that place. He had troops in the rear, as well as on both sides, the garrison at Santiago before the arrival of the troops." — *Annual Report of the War Dept. 1898, v. 1, pt. 2, p. 16*

The troops from Tampa, under General Shafter, arriving on the 20th, were disembarked on the 22d, 23d and 24th, at Daiquiri, and advanced to Siboney. The first resistance encountered was at La Guasima, three miles from Siboney, on the Santiago road, where the Spaniards were drawn from strong entrenchments by a party of Young's brigade of General Wheeler's cavalry division (dismounted). The brigade thus first in the fighting was composed of the 1st and 4th regiments of regular cavalry and the 1st U. S. Vol. cavalry, commonly called the "Rough Riders." At the engagement at La Guasima, six days were occupied in concentrating the army, including the Cuban auxiliaries of General García, who was at Sevilla, a short distance beyond La Guasima on the same road, and in overcoming great difficulties of transportation for supplies.

On June 30, General Shafter reconnoitered the country around Santiago and made his plan of attack. "From a high hill," says his subsequent report, "from which the city was in plain view I could see the San Juan Hill and the country about El Caney. The roads were very poor. Indeed, little better than bridlepaths until the San Juan River and El Caney were reached. The position of El Caney, to the northeast of Santiago, was of great importance to the enemy as hobbling the Guantánamo road, as well as affording shelter for a strong outpost that might be used to assail the right flank and rear of a force operating against San Juan Hill. In view of this I decided to begin the attack next day at El Caney with one division, while sending other divisions on the direct road to Santiago, partly by El Poso House, and, as a diversion, to send a small force against Aguadores from Siboney along the railroad by the sea with a view to attracting the attention of the Spaniards in that direction and of preventing them from tackling our left flank."

"During the afternoon I assembled the senior commanders and explained to them the general plan of battle. Lawton's division composed of Chaffee's, Miles' and Ludlow's

ades], assisted by Capron's light battery, was ordered to move out during the afternoon toward El Cane. To begin the attack there early the next morning. After carrying El Cane, Lawton was to move by the Cane road toward Santiago and take position on the right of the line. Wheeler's division of dismounted cavalry [embracing Sumner's brigade—3d, 6th and 9th regular cavalry, and Young's brigade—mentioned above], and Kent's division of infantry [Wikoff's, Hawkins's and Pearson's brigades] were directed on the Santiago road, the head of the column resting near El Poso, toward which heights Grimes's battery moved on the afternoon of the 30th, with orders to take position thereon early the next morning and at the proper time prepare the way for the advance of Wheeler and Kent on San Juan Hill. The attack at this point was to be delayed until Lawton's guns were heard at El Cane, and his infantry fire showed he had become well engaged.

The remainder of the afternoon and night was devoted to cutting out and repairing the roads and to other necessary preparations for battle. These preparations were far from what I desired them to be, but we were in a shabby climate, our supplies had to be brought forward by a narrow wagon road, which the rains might at any time render impassable, fear was entertained that a storm might drive the vessels containing our stores to sea, thus separating us from our base of supplies, and lastly it was reported that General Pando, with 8,000 reinforcements for the enemy, was en route from Manzanillo and might be expected in a few days. Under these conditions I determined to give battle without delay.

Early on the morning of July 1, Lawton was in position around El Cane. Chaffee's brigade [7th, 12th and 13th U. S. Infantry] on the right, across the Guantamano road; Miles's brigade [1st, 4th, and 25th U. S. Infantry] in the center, and Ludlow's [8th and 22d U. S. Infantry and 2d Mass. Vols.] on the left. The duty of cutting off the enemy's retreat along the Santiago road was assigned to the latter brigade. The artillery opened on the town at 6.15 a. m. The battle here soon became general and was hotly contested. The enemy's position was naturally strong and was rendered more so by blockhouses, a stone fort, and entrenchments cut in solid rock, and the loopholing of a solidly built stone church. The opposition offered by the enemy was greater than had been anticipated, and prevented Lawton from joining the right of the main line during the day, as had been intended.

After the battle had continued for some time Bates's brigade of two regiments [3d and 20th U. S. Infantry] reached my headquarters from Siboney. I directed him to move near El Cane, to give assistance if necessary. He did so and was put in position between Miles and Chaffee. The battle continued with varying intensity during most of the day and until the place was carried by assault, about 4.30 p. m. As the Spaniards endeavored to retreat along the Santiago road, Ludlow's position enabled him to do very effective work and to practically cut off all retreat in that direction.

After the battle at El Cane was well opened and the sound of the small arms fire caused us to believe that Lawton was driving the enemy before him, I directed Grimes's battery to open

fire from the heights of El Poso, and to destroy the blockhouse, which could be seen from the enemy's entrenchments overlooking the heights of San Juan Hill. This fire was so effective that the enemy could be seen running in the vicinity of the blockhouse. The fire from El Poso was soon returned by the artillery. They evidently had the heights of San Juan Hill, and their first shells killed and wounded several men. As the Spaniards used smokeless powder it was very difficult to locate the muzzles of their pieces, while on the other hand the smoke caused by our black powder powder indicated the position of our battery.

At this time the cavalry division [Wheeler] under General Sumner was temporarily in consequence of the success of General Wheeler, who returned to duty that day, which was lying concealed in the general vicinity of the El Poso House, was ordered to proceed with directions to cross the San Juan River and deploy to the right on the Santiago road. Kent's division was to follow close in the rear and deploy to the left. These troops moved forward in compliance with orders, but the road was so narrow as to render it impracticable to retain the column of fours formation at points, while the undergrowth on either side was so dense as to preclude the possibility of employing skirmishers. It naturally resulted that the progress made was slow, and the long barrels of the enemy's infantry killed and wounded a number of our men, while marching along the road and before there was any opportunity to return this fire. At this time General Kent and Sumner were ordered to push forward as far as possible, and place their troops in position to engage the enemy. General Kent, who was in view, forced the head of his column alongside of the cavalry column as far as the narrow trail permitted, and thus having the river at the San Juan and the formation of that stream. A few hundred yards before reaching the San Juan the road forks, a fact that was discovered by Lieutenant Colonel Derby of our staff, who had approached well to the front of our balloon. This information he furnished to the troops, resulting in Sumner moving on the right hand road, while Kent was enabled to utilize the road to the left. After crossing the stream, the cavalry moved to the right, with a view of connecting with Lawton's left, while he should come up and with their left resting near the Santiago road. In the meanwhile Kent's division, with the exception of two regiments, Hawkins's brigade, being thus uncovered, moved rapidly to the front from the forks previously mentioned in the road, utilizing both roads, more especially the one to the left and across the creek formed for attack in the front of San Juan Hill. — *Annual Report of the War Department, 1898, p. 147.*

The particulars of this gallant attack were won the hill and decided the fate of San Juan. The details are given with more clearness in the report of General Kent, who commanded the division, which had most of the fighting to do, than that of General Shafter. Wikoff's brigade, under the command of General Shafter, consisting of the 13th, 9th, and 24th U. S. Infantry, speedily crossed the stream and were quickly deployed to the left of the lower ford. While preparing to superintend this movement Colonel W.

...I am now having talked to a second person who is threatening my line to hold their position. I thought: At ten minutes past 3 P.M. I was told that I should immediately request a meeting with Wood. I am making a copy of this and giving it to General Sander. I am asking him for the copy to be given to my right hand man and pressed. I immediately sent the copy to the factory, who promptly was informed of the situation, despite the heavy traffic. The report sustained. Great credit is

to the Rough Lick, a small town in the
border West, where he had been
the story of the "rough" life.

tersely in his report. After crossing the river at the ford, says the Lieutenant Colonel, "we were moved along and up its right bank under fire, and were held in reserve at a sunken road. Here we lost a good many men, including Captain Nelson, killed, and Lieutenant Haskell, wounded. We then received your order to advance and support the regular cavalry in the attack on the intrenchments and blockhouses on the hills to the left. The regiment was deployed on both sides of the road, and moved forward until we came to the rearist lines of the regulars. We continued to move forward until I ordered a charge, and the men rushed the blockhouse and rifle pits on the hill to the right of our advance. They did the work in fine shape, though suffering severely. The gunboats of Troops E and G were first planted on the summit, though the first men up were some A and B troopers who were without me.

We then opened fire on the intrenchments on a hill to our left which some of the other regiments were assaulting, and which they carried a few minutes later. Meanwhile we were under a heavy rifle fire from the intrenchments along the hill to our front, from whence they also shelled us with a piece of field artillery until some of our marksmen silenced it. When the men got their wind we charged again, and carried the second line of intrenchments with a rush. Swinging to the left we then drove the Spaniards over the brow of the chain of hills fronting Santiago. By this time the regiments were much mixed, and we were under a very heavy fire, both of shrapnel and from rifles from the batteries, intrenchments, and forts immediately in front of the city. On the extreme front I now found myself in command with fragments of the six cavalry regiments of the two brigades under me. The Spaniards made one or two efforts to retake the line, but were promptly driven back.

Both General Sumner and you sent me word to hold the line at all hazards, and that night we dug a line of intrenchments across our front, using the captured Spaniards' intrenching tools. We had nothing to eat except what we captured from the Spaniards, but their dinners had fortunately been cooked, and we ate them with relish, having been fighting all day. We had no blankets and coats, and lay by the trenches all night. The Spaniards attacked us once in the night, and at dawn they opened a heavy artillery and rifle fire. Very great assistance was rendered us by Lieutenant Parker's Gatling battery at critical moments, he fought his guns at the extreme front of the firing line in a way that repeatedly called forth the cheers of my men. One of the Spanish batteries which was used against us was directly in front of the hospital so that the red cross flag flew over the battery, saving it from our fire for a considerable period. The Spanish Mauser bullets made clean wounds, but they also used a copper-jacketed or brass-jacketed bullet which exploded making very bad wounds indeed.

Since then we have continued to hold the ground, the food has been short, and until today (July 4) we could not get our blankets, coats, or shelter tents, while the men lay all day under the fire from the Spanish batteries, intrenchments, and guerrillas in trees, and worked all night in the trenches, never taking off their shoes. But they are in excellent spirits, and

ready and anxious to carry out any orders they receive. At the end of the first day the regular troops were commanded, two by captains, two by first lieutenants, two by second lieutenants, and one by the sergeant whom you named as lieutenant. We went into the fight at 7:40 a. m., strong, 80 were killed or wounded, and there are about half a dozen missing. The men were prostrated nearly 30 miles some of them being the best in the regiment. (*General Sumner's War Dept. 1898, v. 1, pt. 2, p. 684.*)

There have been much contradictions and discrepancy concerning some of the orders relating to the battle of San Juan was directed. The following are the conclusions on that subject from an observer who seems to have seen the battle investigated with impartiality. The orders under which the battle of San Juan was fought were given by Adjutant General McClernagh to General Kent, commanding the Infantry Division, consisting in addition to the organization already mentioned (Wickoff's and Parker's regiments) of the First Brigade, including the Sixty-first and Sixty-fourth U. S. Infantry and the Sixty-first New York, under General Hawley, at about nine o'clock in the morning. There is a question, fortunately as to the exact wording of the orders. A little green knoll to the west of Santiago road and half a mile short of San Juan Heights was pointed out as the point to which was to be the extreme limit of the advance of the Infantry Division. The orders for further order would be given. The orders under which General Sumner advanced from the city would appear to have been more specific, certainly more clear than the orders which General Kent received for the Infantry Division a few minutes later. At the same time, it is probable that these orders were also based on a complete misconception of the situation and ignorance of the Spanish position in the country beyond El Pozo. General Sumner's orders were to advance along that line to Aguiñeros Creek which runs parallel to the Santiago road from El Pozo until it reaches the stream of the Aguiñeros at the angle known as the bloody angle, where the road makes a sharp turn to the left, and then to follow a general southerly course toward the town of Aguiñeros and the sea. This creek General Sumner was instructed to hold until the morning. Lawton's attack upon Camuy became known, he received further orders. Once the creek was reached, Sumner, under the most unfavorable circumstances of a heavy fire and the most pathless jungles, which his men had to penetrate, deployed his whole division, and then, in answer to McClernagh, the adjutant general of the corps, in acquainting him with the fact that by which he was confronted and asked to retreat, his orders contemplated an attack upon the enemy's intrenched position, setting forth at the same time the utter impossibility of the men being inactive for a long time under such a fire as was being poured upon them.

Had it been proposed to carry out the plan as discussed and agreed upon at General Sumner's headquarters the night before, it would have been along the right flank of the Spanish position, keeping in touch with Lawton's division, the two divisions or a large part of them would have been ordered to take the direct route, running north from El Pozo to Maricao, and then

for many weeks previous. While the attending soldiers, realizing how serious for their wounded comrades it would be to have to lie in the howdahs uncovered to wind and weather, made great efforts to find their packs, these efforts were not often successful, and a great majority of the wounded reached the hospital half naked, and had thereafter only the covering and the bedding which their comrades and the hospital attendants were able to rustle for them, and this was little enough and not seldom nothing at all.

Had this expedition been provided with a larger number of surgeons and hospital attendants, had the ambulances been at hand which were left in Tampa or upon the transports, ambulances without which it is reasonable to suppose at least we had supposed—no civilized power could enter upon an aggressive war, much less a campaign in which we had the advantage of choosing both our own time and the field of operations, the outrageous treatment which our wounded suffered, and the barbarous scenes which we were called upon to witness upon this and the following days would never have occurred.

General Shafter, The Fight for Santiago, p. 108.
General Shafter, The Fight for Santiago, p. 108.
 The first of these which had carried San Juan Hill, and the others which had taken El Caney, were in connection with them. Lawton's brigade on their right and Bates's brigade on their left.

The battle was renewed by the Spaniards soon after daylight on the morning of the 2d. It raged with more or less fury through out the day. That evening about midnight a fierce attempt was made to break through the American lines, but without success. Again, on the morning of the third, the Spaniards reopened battle, but with less vigor than before. General Shafter then sent the following letter to General Toral, the Spanish commander: "I shall be obliged, unless you surrender, to shell Santiago de Cuba. Please inform the citizens of foreign countries, and all women and children, that they should leave the city before 10 o'clock to-morrow morning." In reply, General Toral wrote: "It is my duty to say to you that this city will not surrender, and that I will inform the foreign consuls and inhabitants of the contents of your message." Several of the foreign consuls at Santiago then came into the American lines and persuaded General Shafter to delay the shelling of the town until noon of the 5th, provided that the Spanish forces made no demonstration meantime against his own. This established a truce which was renewed, in a series of negotiations until the 10th. "I was of the opinion," reported General Shafter, "that the Spaniards would surrender if given a little time, and I thought this result would be hastened if the men of their army could be made to understand they would be well treated as prisoners of war. Acting upon this presumption I determined to offer to return all the wounded Spanish officers at El Caney who were able to bear transportation and who were willing to give their paroles not to serve against the forces of the United States until regularly exchanged. This offer was made and accepted. These officers, as well as several of the wounded Spanish privates, 27 in all, were sent to their lines under the escort of some of our mounted cavalry. Our troops were received with honors, and I have every reason to believe the return of

the Spanish prisoners produced a great impression on their comrades. The cessation of the battle about noon on the 3d practically terminated the battle of Santiago." General Shafter says that when the battle was fought on the 1st, he probably had no more than 12,000 men in the firing line, not counting a few cavalry who assisted in the attack on El Caney, and who fought with valor. They were confronted by about equal numbers of the enemy in strong entrenched positions. Our losses in the battles were 22 officers and 208 men killed, 81 officers and 1,203 men wounded, and 1,000 missing, with few exceptions never recovered. "Up to this time," General Shafter has been unable to complete the investment of the town with his own men, and had to depend on General Garcia with his Cubans, placed on the extreme right of the American line, to support and intercept reinforcements. "To be able to do so, and 2,800 Spaniards under General Escario, entered the city on the night of the 3d. The American commander now extended his lines as rapidly as possible and completed the investment of the town." *Annual Report of the War Dept., 1898, c. 1, pt. 2, p. 175.* And above, permission was given on the 4th for combatants to leave the city. "They were in the following days to the number of 20,000, filling the neighboring villages with destitute people, mostly women and children. It then seemed to fall to our lot that these people did not starve in our country, and to be as much our duty as to those of these people, whom our policy had driven from their homes, as it was for Spain to reconcentrate, whom they drove from their homes under their war policy. The task was insignificant."—*Report of Inspector-General Annual Reports of the War Dept., 1898, c. 1, pt. 2, p. 596.*

A. D. 1898 (July—August: Philippines).—Correspondence between the General commanding United States forces at Cavite and Manila, and Aguinaldo, the Filipino leader.

—On the 4th of July, General Thomas M. Anderson, then commanding the "U. S. Expeditionary Forces" at Cavite Arsenal, addressed the following communication to "Señor Don Emilio Aguinaldo Famy, Commanding Philippine Forces":

"General, I have the honor to inform you that the United States of America, whose land forces I have the honor to command in this vicinity, being at war with the Kingdom of Spain, has entire sympathy and most friendly sentiments for the native people of the Philippine Islands. For these reasons I desire to have the most amicable relations with you, and to have you and your people co-operate with us in military operations against the Spanish forces. In our operations it has become necessary for us to occupy the town of Cavite as a base of operations. In doing this I do not wish to interfere with your residence here and the exercise by yourself and other native citizens of all functions and privileges not inconsistent with military rule. I would be pleased to be informed at once of any misconduct of soldiers under my command as it is the intention of my Government to maintain order and to treat all citizens with justice, courtesy, and kindness. I have therefore the honor to ask your excellency to instruct your officials not to interfere with my officers in the performance of their duties and not to assume that they cannot visit Cavite without permission."

On the following day Aguinaldo replied: "General, Interpreting the sentiments of the Philippine people, I have the honor to express to your excellency my most profound gratefulness for the sympathy and amicable sentiments with which the natives of these islands inspire the great North American nation and your excellency. I also thank most profoundly your desire of having friendly relations with us, and of treating us with justice, courtesy, and kindness, which is also our constant wish to prove the same, and special satisfaction whenever occasion represents. I have already ordered my people not to interfere in the least with your officers and men, orders which I shall reiterate to prevent their being unfulfilled; hoping that you will inform me of whatever misconduct that may be done by those in my command, so as to reprimand them and correspond with your wishes."

To this communication General Anderson returned the following on the 6th: "General, I am encouraged by the friendly sentiment expressed by your excellency in your welcome letter received on the 5th instant to endeavor to come to a definite understanding, which I hope will be advantageous to both. Very soon we expect a large addition to our forces, and it must be apparent to you as a military officer that we will require much more room to camp our soldiers and also storeroom for our supplies. For this I would like to have your excellency's advice and co-operation, as you are best acquainted with the resources of this country. It

must be apparent to you that we do not expect to remain here inactive, but to move forward against our common enemy. But for the time we must organize and build supplies, and also retain a place for storing them in our transports. I am solicitous to avoid any conflict of authority which may result from having two sets of military officers exercising command in the same place. I am also anxious to avoid sickness by taking sanitary precautions. Your own medical officers have been making voluntary inspections with mine, and there are no epidemic diseases if the vicinity is not ruled by them. Would it not be well to have prisoners taken to this end under the advice of the surgeons?"

On the 9th of July General Anderson replied to the War Department at Washington: "General Aguinaldo tells me he has about 1,000 fighting men, but only 11,000 armed with guns, which mostly were taken from the Spaniards. He claims to have in all 4,000 prisoners. When we first landed he seemed very suspicious and not at all friendly, but I have now a much better understanding with him and he is becoming more friendly and seems willing to co-operate. But he has declared himself dictator and independent, and is trying to take Manila without our assistance. This is not probable, but it may effect his purpose he will. I apprehend we cannot organize any attempt on our part to establish a provisional government."

On the 17th the American commander sent another communication to be addressed to "General Emilio Aguinaldo" as follows: "General, General Anderson wishes me to say that, the expedition having arrived, he expects to have 10,000 men in the vicinity of Paramague from 5,000 to 6,000 men. To do this, supply this army and its operations will require certain assistance from the Filipinos in this neighborhood. We will want horses, buffaloes, carts, etc., for transportation; food for shelter, wood to cook with, etc. For this we are willing to pay a fair price, but no more. We find so far that the native population is willing to give us this assistance as promptly as required. But we must have it, and if it becomes necessary we will be compelled to send out parties to seize what we may need. We would regret very much to do this, as we are here to befriend the Filipinos. Our nation has spent millions of money to send forces here to expel the Spaniards and to give good government to the whole people, and the return we are asking is comparatively slight. General Aguinaldo wishes you to inform your people that we are here for their good, and that they must supply us with labor and material at the prevailing market prices. We are prepared to pay 500 horses at a fair price, but can not expect to bargain for horses with each individual. I regret very much that I am unable to do so personally, as it is of the utmost importance that these arrangements should be made as soon as possible."

To this communication there seems to have been no written reply until the 24th of July, when the Chief Quartermaster reported to General Anderson "that it is impossible to procure transportation except upon Señor Aguinaldo's order, in this section, who has a monopoly of everything. The natives have hidden their wheels and hid them." On the 25th General Anderson repeated his request, as follows:

General. When I came here three weeks ago I was of your excellency to give what assistance I could to procure means of transportation for the American Army, as it was to fight against your people. So far we have received no response. As you represent your people I now have the honor to make requisition for you for 500 horses and 50 oxen and ox carts. If you can not secure these, I will have to pass you and make requisition directly on the Spaniards. I beg leave to request an answer at your earliest convenience."

The next day Aguinaldo replied: "I have the honor to manifest to your excellency that I am surprised beyond measure at that which you say to me in it, lamenting the nonreceipt of any response relative to the needs, or adds that you have asked of me in the way of horses, bullocks, ox carts, because I replied in a precise manner, to the bearer, that I was disposed to give you all the orders whenever you advised me of the number of these with due anticipation of time. I have circulated orders in the provinces for the proximity that in the shortest time possible horses be brought for sale, but I cannot assure your excellency that we have the number that is needed, because horses are not abundant in these vicinities, owing to deaths caused by epidemic diseases in January and March last. Whenever we have them united or ordered I shall have the pleasure to advise your excellency. I have also ordered to be placed at my disposal 50 carts that I shall place at your disposal whenever necessary, always (pre-arranging that you afford me a previous advice of 15 days in anticipation."

Meanwhile, General Anderson had written to the War Department, on the 18th: "Since reading of President's instructions to General Merritt, I think I should state to you that the establishment of a provisional government on our part will probably bring us in conflict with insurgents now in active hostility to Spain. The insurgent chief, Aguinaldo, has declared himself dictator and self-appointed president. He has declared martial law and promulgated a minute method of rule and administration under it. We have observed all official military courtesies, and he and his followers express great admiration and gratitude to the great American Republic of the north, yet in many ways they obstruct our purposes and are using every effort to take Manila without us. I suspect also that Aguinaldo is secretly negotiating with the Spanish authorities as his confidential aid is in Manila. The city is strongly fortified and hard to approach in the rainy season. If a bombardment fails we should have the best engineering ability here."

And again on the 21st, he had written: "Since I wrote last, Aguinaldo has put in operation an elaborate system of military government, under his assumed authority as dictator, and has prohibited any supplies being given us, except by license. As to this last I have written to him that our requisitions on the country for horses, ox carts, fuel and bamboo to make sailing lad- dles must be filled, and that he must aid in having them filled. His assumption of civil authority I have ignored, and let him know exactly that I could, and would, not recognize it, while I did not recognize him as a military leader. It may seem strange that I have made a formal protest against his proclamation as

dictator, his declaration of martial law, and proclamation and execution of a despotic form of government. I wrote such a protest, but did not publish it, at Admiral Dewey's request, and I also for fear of wounding the susceptibilities of Major General Merritt. But I have let it be known in every other way that we do not recognize the dictatorship. These people only respect force and firmness. I submit, without deference, that we have heretofore underrated the natives. They are not ignorant, savage tribes, but have a civilization of their own, and although insignificant in appearance, are nevertheless, and for a tropical people they are industrious. A small detail of natives will do more work in a given time than a regiment of volunteers."

On the 24th General Anderson received from the Philippine leader a very clear and definite statement of his attitude towards the "Type 1" military forces of the United States, and the intentions with which he and the people whom he represented were acting. "I came," he wrote, "from the going to prevent my countrymen from making common cause with the Spaniards, as the North Americans, pledging before my word. Admiral Dewey, to not give place to all we have in our internal discord. Being a native of our desires, I feel the strong conviction that I will succeed in both objects, establishing a government according to the wishes of the people. In the beginning I proposed the dictatorship, and afterwards, when I saw the provinces had already liberated themselves from Spanish domination, I established a revolutionary government that today exists, giving it a democratic and popular character as far as the actual circumstances of war permitted, in order that they [the provinces] might be justly represented, and administered to their satisfaction. It is true that my government has not been acknowledged by any of the foreign powers, but we expected that the great North American nation, which struggled just for its independence, and afterwards for the abolition of slavery, and is now actually struggling for the independence of Cuba, would look upon it with greater benevolence than any other nation. Because of this we have always acknowledged the right of preference to our attitude."

Debtor to the generosity of the North Americans, and to the favors we have received through Admiral Dewey, and being more desirous than any other person of preventing any conflict which would have as a result foreign intervention, which must be extremely prejudicial, not alone to my nation but also to that of your excellency, I consider it my duty to notify you of the undesirability of disembarking North American troops in the places occupied by the Filipinos from the Spanish, without previous notice to this government. Because as no formal agreement yet exists between the two nations, the Philippine people might consider the occupation of its territories by North American troops as a violation of its rights."

I comprehend that without the destruction of the Spanish squadron the Philippine revolution would not have advanced so rapidly. Because of this I take the liberty of indicating to your excellency the necessity that, before disembarking, you should communicate in writing to this government the places that are to be occupied and also the object of the occupation, that

the people may be advised in due form and [thus] prevent the commission of any transgression against friendship. I can answer for my people, because they have given me evident proofs of their absolute confidence in my government, but I can not answer for that which another nation whose friendship is not well guaranteed might inspire in it [the people]; and it is certain that I do this not as a menace, but as a further proof of the true and sincere friendship which I have always professed for the North American people, in the complete security that it will find itself completely identified with our cause of liberty."

In the same strain, on the 1st of August, Aguinaldo wrote to U. S. Consul Williams, as to a "distinguished friend": "I have said always, and I now repeat, that we recognize the right of the North Americans to our gratitude, for we do not forget for a moment the favors which we have received and are now receiving; but however great these favors may be, it is not possible for me to remove the distrust of my compatriots. These say that if the object of the United States is to annex these islands, why not recognize the government established in them, in order in that manner to join with it the same as by annexation? Why do not the American generals operate in conjunction with the Filipino generals and, making the forces, render the end more decisive? Is it intended, indeed, to carry out annexation against the wish of these people, distorting the legal sense of that word? If the revolutionary government is the genuine representative by right and deed of the Filipino people, as we have proved when necessary, why is it wished to oppress instead of gaining their confidence and friendship?"

"It is useless for me to represent to my compatriots the favors received through Admiral Dewey, for they assert that up to the present the American forces have shown not an active, only a passive, cooperation, from which they suppose that the intentions of these forces are not for the best. They assert, besides, that it is possible to suppose that I was brought from Hongkong to assure those forces by my presence that the Filipinos would not make common cause with the Spaniards, and that they have delivered to the Filipinos the arms abandoned by the former in the Cavite Arsenal, in order to save themselves much labor, fatigue, blood, and treasure that a war with Spain would cost. But I do not believe these unworthy suspicions. I have full confidence in the generosity and philanthropy which shine in characters of gold in the history of the privileged people of the United States, and for that reason, invoking the friendship which you profess for me and the love which you have for my people, I pray you earnestly, as also the distinguished generals who represent your country in these islands, that you entreat the Government at Washington to recognize the revolutionary government of the Filipinos, and I, for my part, will labor with all my power with my people that the United States shall not repent their sentiment of humanity in coming to the aid of an oppressed people."

"Say to the Government at Washington that the Filipino people abominate savagery; that in the midst of their past misfortunes they have learned to love liberty, order, justice, and civil life, and that they are not able to lay aside their own wishes when their future lot and history are

under discussion. Say also that I and my people know what we owe to our unfortunate country, and that we know how to admire and imitate the disinterestedness, the abnegation, and the patriotism of the grand general Aguinaldo, among whom stands preeminent the name of General Washington."—*United States, for the press, 1st Sen., Senate Doc. No. 208.*

In an article published in the "North American Review," February, 1900, General Aguirre discussed his relations with Aguinaldo, very frankly, in part as follows: "On the 1st of August 1898, I called on Aguinaldo with Admiral Dewey. He asked me at once whether 'the United States of the North' either had recognized or would recognize his government—I am not quite sure as to the form of his question, whether it was 'had' or 'would.' In either form it was quite embarrassing. My orders were, in substance, to effect a landing, establish a base, not to go beyond the zone of naval cooperation, and to wait for Admiral Dewey and to wait for Merritt. Aguinaldo had proclaimed his government only a few days before (June 28), and Admiral Dewey had no instructions as to that assumption. I felt as to the situation at that time I believe like these: Consul Williams states in one of his letters to the State Department that several thousand Tagals were in open insurrection before our declaration of war with Spain. I do not know as to the number, yet I believe the statement has foundation in fact. Whether Admiral Dewey and Consul Pratt, Willman and Williams did or did not give Aguinaldo assurance that a Filipino government would be recognized, the Filipinos certainly thought so, probably transferring this from their acts rather than from their statements. If an incipient revolution was already in progress, what could be inferred from the fact that Aguinaldo and thirteen other Tagals were brought down on a Spanish vessel and landed in Cavite? Admiral Dewey gave them arms and ammunition, as I did subsequently, at his request. They were permitted to gather up a lot of arms which the Spaniards had thrown into the bay; and, with the thousands of rifles taken from Spanish prisoners, and two thousand purchased in Hong Kong, they proceeded to organize three brigades and also arm a small steamer they had captured. I was the first to tell Admiral Dewey that there was any disposition on the part of the American people to hold the Philippines, if they were captured. The current of opinion was setting the way when the first expeditionary force left San Francisco, but this the Admiral had had means to surmise."

"But to return to our interview with Aguinaldo. I told him I was acting only in a military capacity; that I had no authority to recognize his government; that we had come to whip the Spaniards, and that, if we were successful, the indirect effect would be to free the Philippines from Spanish tyranny. I added that as we were fighting a common enemy, I hoped we would get along amicably together. He felt very much pleased with this answer. The fact is, he hoped and expected to take Manila with Admiral Dewey's assistance, and he was very disappointed when our soldiers landed at Cavite. A few days thereafter, he made a call, coming with cabinet and staff and a band of music. On that occasion he handed me an

...hile for an autonomous government which had received from some Filipinos in Manila a written statement that they had in fact agreed that Spain would grant them such a form of government. With this was an open letter addressed to the Philippine people from Pedro Aguirre, Paterno, advising them to put their trust in Spain rather than America. The day before two German officers had called on Aguirre and Padilla they had brought him these papers. I asked him if the scheme was agreed upon. He did not answer, but asked if the North Americans, as he called us, in Manila, the Philippines, had any objections.

the North Americans, as in the case of the Philippines, as dependencies, I could not answer that, but that in our history and twenty years we had established no colonies. He then made this remarkable statement: "I have studied attentively the Constitution of the United States, and I find in it no authority for colonies and I have no fear." It seems that my answer was somewhat over-estimated. I was at the time trying to contract with a farmer for horses, carts, fuel and to engage a few laborers, but my friends and country-

the "theater" of our controversies and conflicts with the Filipinos can be traced back to 1892, when we refused to recognize the political authority of Aguinaldo. Our first serious break with them came from our refusal to let them cooperate with us. About nine o'clock on the evening of April 12, I received from General Merritt an order to inform Aguinaldo to forbid the Filipino forces under his command from entering Manila. This notification was delivered to him by my adjutants just ten that night. The people had made every preparation to assail our Spanish lines in their front. Certainly, they would have given up part of their line to us, if they thought they were to fight with us. They therefore, reviled General Merritt's order with anger and indignation. They considered the war as their war, and Manila as their capital and Iloilo as their country, etc. At seven o'clock I received an order from General Merritt to remove the Filipinos from the city.

I therefore took the responsibility of telegraphing Don Aquinaldo, who was at Barcear, ten days below, requesting him to withdraw his troops and intimating that serious consequences would follow if he did not do so. I received his answer at eleven, saying that a Commission would come to me the next morning with full powers. Accordingly the next day Señors Buena Vista, Lagranga, Araneta and Sandoz came to Davao Headquarters in Manila and stated that they were authorized to order the withdrawal of their troops, if we would promise to reinstate them in their present positions on our making peace with Spain. The reason I took them overboarded Merritt. Upon their repeating their demands, he told them he could not give such a promise, but that they could rely on the honor of the American people. The General then read to them his proclamation he intended to issue to the Filipino people.

There is a great diversity of opinion as to whether a conflict with the Filipinos could not have been avoided if a more conciliatory course had been followed in dealing with them. I believe we came to a parting of the ways when we rejected their request to leave their military force in a good strategic position on the coast to help us in our making peace with Spain without a sacrifice of our independence.—T. M.

Anderson, H. *et al.* *R² in PLS regression*. *N. Am. J. Stat.* 1999; **20**: 1373-1383.

A. D. 1893 July August: **Porto Rico Occupation of Porto Rico.** With the capture of Santiago the occupation of Porto Rico became the next strategic necessity. Gen. Miles had previously been assigned to organize an expedition for that purpose. Preparation was already at Santiago when the information of the 11th of July with reinforcements for Gen. Shafter's army. With these troops consisting of 3,445 infantry and artillery, 2,000 mules, 1,000 horses and a company of the steam troops, Gen. Miles left Guantanamo on July 21st having 10 transports, conveyed by the fleet under Rear Admiral Higginson, with the "Massachusetts," the "Texas," the "Conestoga," "Cass," and "Albatross," two latter carrying torpedoes. The expedition sailed at Guantanamo on July 25th, which port was reached with little opposition. The fleet was followed by the "Atenas" and the "Washington," the "Punjab" and "Albatross" went to San Juan and joined the New Orleans, which were in the harbor looking that port. The next day the landing mending was subsequently the 2nd and 3rd United Scharw's Brigade of the Third Army Corps, by Gen. Wilson with a part of his division, followed by Gen. Brooke with a part of his corps, the 25th being in all 16,973 effectives and more, on July 25th he entered Ponce, one of the strongest ports in the island, to which he directed the first directed operations for the capture of the island. With the exception of the troops with the "Albatross" at Guayama, Humacao, Pinar del Rio, Ponce, Caguas, and Yaguey and an attack on the island at Cape San Juan there was no serious resistance. The campaign was planned to be 20 to 30 days and by the 12th of August the island was in our possession and the remainder of the month was only a matter of short time. At most of the places where our troops were, the Spanish were not in the fortifications of by day to the the night and the delivery from Spanish into our hands was made at every stage. *Memoirs of the Philippine War.*

A. D. 1898 (July--September) The War
with Spain. Capture of Manila. Relations
with the Filipino insurgents. General Merritt's report. Aguinaldo declared President of
the Philippine Republic. Immediately after
my arrival (July 24) I visited General Greene's
camp and made a reconnaissance of the position
held by the Spanish and the opposing lines of

the insurgent forces, hereafter to be described. I found General Greene's command encamped on a strip of sandy land running parallel to the shore of the bay and not far distant from the beach, but owing to the great difficulties of landing supplies, the greater portion of the force had shelter tents only, and were suffering many discomforts, the camp being situated in a low, flat place, without shelter from the heat of the tropical sun or adequate protection during the terrific down-pours of rain so frequent at this season. I was at once struck by the exemplary spirit of patient, even cheerful, endurance shown by the officers and men under such circumstances, and this feeling of admiration for the manner in which the American soldier, volunteer and regular alike, accept the necessary hardships of the work they have undertaken to do, has grown and increased with every phase of the difficult and trying campaign which the troops of the Philippine expedition have brought to such a brilliant and successful conclusion.

"I discovered during my visit to General Greene that the left or north flank of his brigade camp extended to a point on the 'Calle Real' about 3,200 yards from the outer line of Spanish defenses of the city of Manila. This Spanish line began at the powder magazine, or old Fort San Antonio, within a hundred yards of the beach and just south of the Malate suburb of Manila, and stretched away to the Spanish left in more or less detached works, eastward, through swamps and rice fields, covering all the avenues of approach to the town and encircling the city completely. The Filipinos, or insurgent forces at war with Spain, had, prior to the arrival of the American land forces, been waging a desultory warfare with the Spaniards for several months, and were at the time of my arrival in considerable force, variously estimated and never accurately ascertained, but probably not far from 12,000 men. These troops, well supplied with small arms, with plenty of ammunition and several field guns, had obtained positions of investment opposite to the Spanish line of detached works throughout their entire extent; and on the particular road called the 'Calle Real,' passing along the front of General Greene's brigade camp and running through Malate to Manila, the insurgents had established an earthwork or trench within 800 yards of the powder magazine fort. They also occupied as well the road to the right, leading from the village of Pasay, and the approach by the beach was also in their possession. This anomalous state of affairs, namely, having a line of quasi-hostile native troops between our forces and the Spanish position, was, of course, very objectionable, but it was difficult to deal with, owing to the peculiar condition of our relations with the insurgents, which may be briefly stated as follows:

"Shortly after the naval battle of Manila Bay, the principal leader of the insurgents, Gen. Emilio Aguinaldo, came to Cavite from Hongkong, and, with the consent of our naval authorities, began active work in raising troops and pushing the Spaniards in the direction of the city of Manila. Having met with some success, and the natives flocking to his assistance, he proclaimed an independent government of republican form, with himself as president, and at the time of my arrival in the islands the entire edifice of executive and legislative departments and

subdivision of territory for administrative purposes had been accomplished, at least on paper, and the Filipinos held military possession of many points in the islands other than the vicinity of Manila. As General Aguinaldo did not visit me on my arrival nor did he receive me as a subordinate military leader, and my instructions from the President fully contemplated the occupation of the islands by the American land forces, and stated that the powers of the military occupant are absolute and should be immediately operative upon the political condition of the inhabitants, I did not consider it wise to hold my direct communication with the insurgent leader until I should be in possession of the city of Manila, especially as I was to be in a position to issue orders and enforce my authority, in the event that the pretensions should clash with my designs.

"For these reasons the preparations for an attack on the city were pressed and military operations conducted without reference to the situation of the insurgent forces. The wisdom of this course was subsequently fully established in the fact that when the troops of my command reached the Spanish intrenchments, extending from the sea to the Pasay road on the extreme Spanish right, we were under no obligations to prepare or execute plans of mutual attack, for the Spanish right and clear front still held against the insurgents, but were able to move forward and occupy the city and suburbs.

"To return to the situation of General Greene's brigade as I found it on my arrival, it was seen that the difficulty in gaining an advance approach to the Spanish line lay in the fact of my disinclination to ask General Aguinaldo to withdraw from the beach and the 'Calle Real' so that Greene could move forward. To overcome this, by instructions to General Greene to arrange, if possible, with the insurgent commander in his immediate vicinity, to take the right and allow the American forces to have strict control of the roads in their mutual front. No objection was made, and accordingly General Greene's brigade threw forward an outpost line on the 'Calle Real' and the beach and constructed a trench, in which a portion of the guns of the Utah batteries was placed. The Spanish, observing this activity on our part, made a very sharp attack with infantry and artillery on the night of July 31. The behavior of our troops during this night attack was what could be desired, and I have, in cablegrams to the War Department, taken occasion to commend by name those who deserve special mention for good conduct in the affair. Our position was extended and strengthened after this and after successfully repeated night attacks, our troops suffering, however, considerable loss in wounded and killed, while the losses of the enemy, owing to the darkness, could not be ascertained.

"The strain of the night fighting and heavy details for outpost duty made it imperative to re-enforce General Greene's troops. General MacArthur's brigade, which had arrived in transports on the 31st of July. The difficulties of this operation can hardly be estimated. The transports were at anchor in Cavite, 5 miles from a point on the beach. It was desired to disembark the men and supplies, accompanied by floods of rain and high after day, and the only way to get the troops

supplies ashore was to land them from the ship's side. The native lighters, called "cascos," or small sampans, move them to a point opposite the pier, and then disembark them through the sides of small boats, or by running the lighters ashore to the beach. The landing was finally accomplished after days of hard work and hard fighting. I desire here to express again my admiration for the fortitude and cheerful willingness of the men of all commands engaged in this task. Upon the assembly of MacArthur's brigade in support of Greene's, I had about 8,500 men in position to attack, and I deemed the time favorable for final action. During the time of the first attacks I had communicated my desire to Admiral Dewey that he would allow his ships to operate on the right of the Spanish line of intrenchments, believing that such action would stop the night firing and loss of life, but the admiral declined to order it unless we were in danger of losing our position by the assaults of the Spanish, for the reason that, in his opinion, it would precipitate a general engagement for which he was not ready. Now, however, the brigade of General MacArthur was in position and the "Monterey" had arrived, and on the 19th of August Admiral Dewey agreed to my suggestion that we should send a joint letter to the captain general notifying him that he should retire from the city all non-combatants within forty-eight hours, and that operations against the defenses of Manila might begin at any time after the expiration of that period.

This letter was sent August 7, and a reply was received the same date, to the effect that the Spanish were without plans of refuge for the increased numbers of wounded, sick women, and children now lodged within the walls. On the 9th a formal joint demand for the surrender of the city was sent in. This demand was based upon the hopelessness of the struggle on the part of the Spaniards, and that every consideration of humanity demanded that the city should not be subjected to bombardment under such circumstances. The captain general's reply, of same date, stated that the council of defense had declined that the demand could not be granted; but the captain general offered to consult his Government if we would allow him the time strictly necessary for the communications by way of Hongkong. This was declined on our part for the reason that it could, in the opinion of the admiral and myself, lead only to a continuance of the struggle, with no immediate result favorable to us, and the necessity was apparent and very urgent that decisive action should be taken at once to compel the enemy to give up the town, in order to relieve our troops from the trenches and from the great exposure to unhealthy conditions which were unavoidable in a bivouac during the rainy season.

The seaward batteries in defense of Manila are so situated that it is impossible for ships to engage them without firing into the town, and as the bombardment of a city filled with women and children, sick and wounded, and containing a large amount of neutral property, could only be resorted to as a last resort, it was agreed between Admiral Dewey and myself that an attempt should be made to carry the extreme right of the Spanish line of intrenchments in front of the positions at that time occupied by our troops, which, with its flank on the seashore, was entirely open to the

fire of the navy. It was not my intention to press the assault at this point, in case the enemy should hold it strong, for, in that case, the navy had made, particularly trenches in the water, and should have been able to bring them into play, and to take by the attack alone, owing to the absence of shore guns. It was believed, however, as most desirable, and in accordance with the principles of civilized warfare, that the attempt should be made to drive the enemy out of his intrenchments before resorting to the bombardment of the city.

All the troops were in position on the 14th of an early hour in the morning. About 9 a. m. on that day our fleet steamed toward the city, and before 10 a. m. opened a bombardment of heavy shells and rapid fire projectiles, the sea being thick with the Spanish intrenchments, the pay for magazine fort, and at the same time the United States, in position in our trenches near the "Cerro Real," began firing with great accuracy. At 10:25, on a prearranged signal from the navy, the navy ceased firing, and the United States line of skirmishers from the "Cerro Real" and Greene's brigade passed over the trenches and deployed rapidly forward, and at the same time the same regiment from the left flank advanced, the works advancing swiftly up the hill in complete order. Both these lines took the position in the magazine fort and the trenches flanking the sea, but as they passed over the Spanish works they were met by a sharp fire from the batteries situated in the streets of Malate, by which a number of men were killed, and wounded, and others the soldier who pulled down the Spanish works still lying on the fort and in the town.

The works of the second line were very close to the determined advance of our troops, and that officer pushed his brigade up the north Malate and over the bridges to occupy the "Cerro" and San Miguel, as contemplated in his instructions. In the meantime the United States General MacArthur, advancing southward, on the Pasay road, encountered a very sharp fire coming from the blackhouses, trenches, and works in his front, positions which it was very difficult to carry, owing to the swampy condition of the ground on both sides of the roads and the heavy undergrowth concealing the enemy. With much gallantry and excellent judgment on the part of the brigade commander and the troops overcame these difficulties were overcome with minimum loss, and MacArthur advanced and held the bridges and the town of Malate, as was contemplated in his instructions.

The city of Manila was now in our possession, excepting the walled town of Intramuros, after the entry of our troops into Malate, where the flag was displayed on the walls, whereupon Lieutenant C. A. Whittier, United States Army, second of my staff, and Lieutenant Brantley, United States Navy, representing Admiral Dewey, were sent ashore to communicate with the Captain General. I soon personally followed these officers into the town, and after a conference with the Governor General, and there, after a conversation with the Spanish authorities, a preliminary agreement of the terms of capitulation was signed by the Captain General and myself. This agreement was subsequently incorporated into the formal terms of capitulation as arranged by the officers representing the two forces, a copy

of which is hereto appended and marked. Immediately after the surrender the Spanish colors on the sea front were hauled down and the American flag displayed and saluted by the guns of the navy. The Second Oregon Regiment, which had proceeded by sea from Cavite, was disembarked and entered the walled town as a provost guard and the colonel was directed to receive the Spanish arms and deposit them in places of security. The town was filled with the troops of the enemy driven in from the intrenchments, regiments formed and standing in line in the streets, but the work of disarming proceeded quietly and nothing unpleasant occurred.

"In leaving the subject of the operations of the 13th, I desire here to record my appreciation of the admirable manner in which the orders for attack and the plan for occupation of the city were carried out by the troops exactly as contemplated. I submit that for troops to enter under fire a town covering a wide area, to rapidly deploy and guard all principal points in the extensive suburbs, to keep out the insurgent forces pressing for admission, to quietly disarm an army of Spaniards more than equal in numbers to the American troops, and finally by all this to prevent entirely all rapine, pillage, and disorder, and gain entire and complete possession of a city of 300,000 people, filled with natives hostile to the European interests, and stirred up by the knowledge that their own people were fighting in the outside trenches, was an act which only the law-abiding, temperate, resolute American soldier, well and skillfully handled by his regimental and brigade commanders, could accomplish.

"The amount of public funds and the numbers of the prisoners of war and small arms taken have been reported in detail by cable. It will be observed that the trophies of Manila were nearly 800,000, 15,000 prisoners, and 22,000 arms. Immediately after the surrender my headquarters were established in the ayuntamiento, or city office of the Governor General, where steps were at once inaugurated to set up the government of military occupancy. . . . On the 16th a cablegram containing the text of the President's proclamation directing a cessation of hostilities was received by me, and at the same time an order to make the fact known to the Spanish authorities, which was done at once. This resulted in a formal protest from the Governor General in regard to the transfer of public funds then taking place, on the ground that the proclamation was dated prior to the surrender. To this I replied that the status quo in which we were left with the cessation of hostilities was that existing at the time of the receipt by me of the official notice, and that I must insist upon the delivery of the funds. The delivery was made under protest.

"After the issue of my proclamation and the establishment of my office as military governor, I had direct written communication with General Aguinaldo on several occasions. He recognized my authority as military governor of the town of Manila and suburbs, and made professions of his willingness to withdraw his troops to a line which I might indicate, but at the same time asking certain favors for himself. The matters in this connection had not been settled at the date of my departure. Doubtless much dissatisfaction is felt by the rank and file of the insur-

gents that they have not been permitted to enjoy the occupancy of Manila, and there is some ground for trouble with them owing to this, but, notwithstanding many rumors to the contrary, I am of the opinion that the leaders will be able to prevent serious disturbances. I am sufficiently intelligent and educated to know that to antagonize the United States would destroy their only chance of future peace and improvement.

"On the 28th instant I received a cablegram directing me to transfer my command to Major General Oils, United States Volunteers, who proceeded to Paris, France, for conference with the peace commissioners. I embarked on the steamer 'Chim' on the 30th instant and gave the instructions."—*Report of General Wesley Merritt (Annual Reports of the War Department, 1898, p. 1, pp. 30-45).*

"Aguinaldo . . . retired to Manila about 25 miles to the northward, leaving his troops entrenched round Manila, and there with considerable pomp and ceremony on September 19, 1898, he was declared First President of the Philippine Republic, and the National Congress was opened with Pedro Paterno as President of that assembly."—*G. J. Younghusband, The Philippines and Round About, p. 27.*

A. D. 1898 (July-December).—War with Spain. Suspension of hostilities.—Negotiation of Treaty of Peace.—Instructions to American Commissioners.—Relinquishment of Spanish sovereignty over Cuba and cession of Porto Rico, the island of Guam and the Philippine Islands to the United States. In his message to Congress, December 8, 1898, President McKinley gave the following account of his reception of overtures from Spain for termination of the war, and of the negotiations which resulted in a treaty of peace: "The capitulation of Admiral Cervera's fleet, following the capitulation of Santiago, having brought to the Spanish Government a realizing sense of the hopelessness of continuing a struggle in which it came wholly unequal, it made overtures of peace through the French Ambassador, who, with the assent of his Government, had acted as the friendly representative of Spanish interests during the war. On the 26th of July Mr. Cambon presented a communication signed by the Duke of Almodovar, the Spanish Minister of State, inviting the United States to state the terms upon which it would be willing to make peace. On the 30th of July, by a communication addressed to the Duke of Almodovar and handed by Mr. Cambon, the terms of this Government were announced, substantially as in the protocol afterwards signed. On the 10th of August the Spanish reply, dated August 5th, was handed by Mr. Cambon to the Secretary of State. It accepted unconditionally the terms imposed as to Cuba, Porto Rico and an island of the Ladrone group, but appeared to seek to introduce inadmissible reservations in regard to our demand as to the Philippine Islands. Conceiving that discussion on this point could neither be practical nor profitable, I directed that, in order to avoid misunderstanding, the matter should be formally closed by proposing the embodiment in a protocol of the terms upon which the negotiations for peace were to be undertaken. The vague and inexplicit suggestion of the Spanish note could not be accepted, the only reply being

A virtual ultimatum a draft of the
 the precise terms tendered to
 of July 20th with noble presen-
 the as to the appointment of a
 to attend to the execution of the
 Affairs. On August 12th M. Cambo
 the receipt of all powers to sign the
 proposed. Accordingly, on the 14th
 August 12th M. Cambo as the plen-
 of Spain and the Secretary of State
 of the United States
 the following Article I. Spain
 of sovereignty over and
 Article II. Spain renounces to the
 the island of Porto Rico and other
 and a Spanish sovereignty in the
 and also an island in the Indies
 the United States. Article III.
 States will occupy and hold the city
 of Manila pending the conclusion
 of peace which shall determine the
 disposition and government of the Phil-
 The fourth article provided for the ap-
 of joint commissions on the part of the
 States and Spain, to meet in Havana and
 San Juan respectively for the purpose of ar-
 and carrying out the details of the stip-
 of Cuba, Porto Rico and other
 Spanish islands in the West Indies. The fifth
 provided for the appointment of not more
 two commissioners in each case to meet at
 not later than October 1st, and proceed to
 the negotiation and conclusion of a treaty
 subject to ratification according to the
 constitutional terms of the two coun-
 The sixth and last article provided that
 the signature of the protocol in duplicate
 the two countries should be suspended and
 that to that effect should be given as soon
 as possible by each government to the command-
 of its military and naval forces. Immediately
 upon the conclusion of the protocol it is
 an explanation of August 12th suspending
 in the part of the United States. The
 orders to that end were at once given
 to the fleet. The blockade of the ports of
 Cuba and San Juan de Porto Rico was im-
 mediately raised. On the 18th of August the mis-
 sion of 100,000 Volunteers, or as near that
 number as was found to be practicable, was or-
 dered. On the 1st of December 101,163 officers
 and men had been mustered out and discharged
 from the service and 9,002 more will be mustered
 out by the 10th of this month. Also a con-
 siderable number of general staff officers have
 been honorably discharged from the service.
 The military commissions to superintend the
 evacuation of Cuba, Porto Rico and the adjacent
 islands were forthwith appointed. For Cuba
 Maj. Gen. James F. Wade, Rear Admiral Wil-
 liam T. Sampson, Maj. Gen. Matthew C. Butler
 for Porto Rico, Maj. Gen. John R. Brooke,
 Rear Admiral Winfield S. Schley and Brig.
 Gen. William W. Gordon who soon afterwards
 the Spanish commissioners at Havana and
 San Juan respectively. Pursuant to the fifth
 of the protocol I appointed William R.
 Day, the Secretary of State, Gustavus K. Davis,
 William P. Fiske and George Gray, Senators of
 the United States, and William Rawl to be the
 peace commissioners on the part of the United
 States. Proceeding in due season to Paris they
 there met on the first of October five commis-

gations of our victory is of the greatest. It is undisputed that Spain's authority is permanently destroyed, every part of the Philippines. To leave any part to her feeble control now would be to leave a part of her territory and be opposed to the interests of humanity. The sentiment in the United States is almost universal that the people of the Philippines, whose vessels, islands, must be placed free from Spanish domination. In this sentiment the President fully concurs. Nor can we permit Spain to transfer any of the islands to another power. Nor can we invite another power to powers to in the United States in sovereignty over them. We must either hold them or turn them back to Spain. Consequently grave as are the responsibilities and uncertainties are the difficulties which are before us, the President can see but one path of duty, the acceptance of the independence. Greater difficulties and more serious complications in administrative and international would follow any other course. The President has given to the views of the commission the fullest consideration and in reaching the conclusion above announced in the light of information communicated to the commission and to the President since your departure, he has been influenced by the single consideration of duty and humanity. The President is not unmindful of the distressed financial condition of Spain, and whatever consideration the United States may show must come from its sense of generosity and benevolence rather than from any real or technical obligation. The terms upon which the full cession of the Philippines shall be made must be left largely with the commission.

On the 3d of November, Judge Day called. After a careful examination of the authorities, the majority of the commission are clearly of opinion that our demand for the Philippine Islands cannot be based on conquest. When the protocol was signed Manila was not captured, siege was in progress and capture made after the execution of the protocol. Capture made after execution of the protocol must be disregarded and status be restored as far as practicable. We can require cession of Philippine Islands only as indemnity for losses and expenses of the war. Have in view, also, condition of Islands, the broken power of Spain, anarchy in which our withdrawal would leave the Islands, etc. These are legitimate factors.

On the 4th, Senator Davis added a personal telegram as follows: "I think we can demand cession of entire archipelago on other and more valid grounds than a perfected territorial conquest of the Philippine Islands, such as indemnity or as conditions of peace imposed by our general military success and in view of our future security and general welfare, commercial and otherwise. I think the protocol admits all these grounds and that the ground alone of perfected territorial conquest of the Philippine Islands is too narrow and untenable under protocol."

Secretary Hay replied, for the President, on the 5th: "The President has no purpose to question the commission's judgment as to the grounds upon which the cession of the archipelago is to be claimed. His only wish in that respect is to hold all the ground upon which we can fairly and justly make the claim. He recognizes fully the soundness of putting forward indemnity as the chief ground, but conquest is a

consideration which ought not to be lost. Have our demand shall be placed on grounds upon which you will readily and definitely leaves with the commission. It comes in that a treaty shall be effected which will not only satisfy the public opinion but what is more important, the judgment of posterity."

Discussion followed, in which the Senator Gray reported the views formerly expressed in dissent from the term laid upon by the President and the latter saying: "Believing that a failure to obtain a treaty would be a seizure of the whole Philippine Islands, an event greatly to be deprecated in view of the traditions and civilization of the States I would be willing to take the decision of a treaty of peace, and I that end, make such reasonable compromise would comport with the machinery of a nation dealing with a weak and prostrate. I mean that I would prefer the latter course to the former, not that I have changed as to the policy of taking the Philippines at all."

So far as concerned the demands of the United States (which Spain was powerless to resist) the question was settled on the 13th of November by a telegram from Secretary Hay to Mr. Davis, which he said: "We are clearly entitled to indemnity for the cost of the war. We do not hope to be fully indemnified. We do not wish to be. It would probably be difficult for Spain to pay money. All she has are the archipelago of the Philippines and the Carolines. She cannot expect us to turn the Philippines over and bear the cost of the war and all expenses of citizens for damages to life and property without any indemnity but Porto Rico, which we have and which is wholly inadequate. You are therefore instructed to find the indemnity necessary, pay to Spain ten to twenty millions of dollars, and if you can get cession of the island and telegraph station in the Carolines and several concessions and privileges and territories, so far as supplyable, enumerated in the views of Commissioners Frye and Reid, you can get more."—*United States, 56th Congress, 1st Session, Senate Doc. No. 448 (Papers relating to the Peace with Spain)*.

Discussion between the Spanish and American commissioners at Paris was prolonged until the 10th of December, when the former viewed what they protested against as fair terms. The following Treaty of Peace was signed:

Treaty of Peace.

ART. I. Spain relinquishes all claim of sovereignty over and title to Cuba. And this island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that under international law result from the fact of its occupation, for the protection of life and property.

ART. II. Spain cedes to the United States the island of Porto Rico and other islands now under Spanish sovereignty in the West Indies, and the island of Guam in the Marianas or Ladrones.

ART. III. Spain cedes to the United States

of the Philippine Islands, known as the Philippine Islands, and including the islands lying within the limits hereinafter described. A line running from west to east, and passing through the twentieth parallel of north latitude, and through the middle of the navigable channel of Bacik, from the one hundred and thirty-fourth (134th) degree meridian of longitude east of Greenwich to the one hundred and twenty-seventh (127th) degree meridian of longitude east of Greenwich, thence along the one hundred and twenty-seventh (127th) degree meridian of longitude east of Greenwich to the one hundred and twenty-fourth (124th) degree meridian of longitude east of Greenwich, thence along the parallel of latitude of forty-five minutes (45') north to its intersection with the meridian of one hundred and nineteen degrees and thirty-five minutes (119° 35') east of Greenwich, thence along the meridian of longitude one hundred and nineteen degrees and thirty-five minutes (119° 35') east of Greenwich to the parallel of latitude of seven degrees and forty minutes (7° 40') north, thence along the parallel of latitude of seven degrees and forty minutes (7° 40') north to its intersection with the one hundred and sixty-ninth (169th) degree meridian of longitude east of Greenwich, thence by a direct line to the intersection of the tenth (10th) degree parallel of latitude with the one hundred and thirty-fourth (134th) degree meridian of longitude east of Greenwich, and thence along the one hundred and thirty-fourth (134th) degree meridian of longitude east of Greenwich to the point of beginning. The United States will pay to Spain the sum of twenty million dollars (\$20,000,000) within three months after the exchange of the ratifications of the present treaty.

Art. IV. The United States will, for the term of ten years from the date of the exchange of the ratifications of the present treaty, admit Spanish ships and merchandise to the ports of the Philippine Islands on the same terms as ships and merchandise of the United States.

Art. V. The United States will, upon the signature of the present treaty, send back to Spain, at its own cost, the Spanish soldiers taken as prisoners of war on the capture of Manila by the American forces. The arms of the soldiers in captivity shall be restored to them. Spain will, upon the exchange of the ratifications of the present treaty, proceed to evacuate the Philippine Islands, as well as the island of Guam, on terms similar to those agreed upon by the Commissioners appointed to arrange for the evacuation of Porto Rico and other islands in the West Indies under the Protocol of August 12, 1898, which is to continue in force till its provisions are completely executed. The time within which the evacuation of the Philippine Islands and Guam shall be completed shall be fixed by the two Governments. Stands of colors, unarmamented war vessels, small arms, guns of all calibers, with their carriages and accessories, powder, ammunition, livestock, and materials and supplies of all kinds, belonging to the land and naval forces of Spain in the Philippines and Guam, remain the property of Spain. Pieces of heavy ordnance, exclusive of field artillery, in the fortifications and coast defences, shall remain in their emplacements for the term of six months, to be reckoned from the exchange of ratifications of the treaty; and the United States may, in the meantime, purchase such material from Spain, if a satisfactory agreement between

the two Governments on the subject shall be reached.

Art. VI. Spain will, upon the signature of the present treaty, release all prisoners of war, and all persons detained or imprisoned by the land forces, in connection with the present treaty, in Cuba and the Philippine Islands, and with the United States. The present treaty of the United States will release all persons made prisoners of war by the American forces, and will not make to obtain the release of all Spanish prisoners in the hands of the insurgents in Cuba and the Philippines. The Government of the United States will at its own cost return to Spain, and the Government of Spain will at its own cost return to the United States, Cuba, Porto Rico, and the Philippines, respectively, to the spot of origin of their respective forces, prisoners released or caused to be released by them, respectively, under this article.

Art. VII. The United States and Spain mutually renounce all claims for indemnity, pecuniary and individual of every kind, of citizens, subjects, or of its citizens, or subjects, against the other Government, that may have arisen since the beginning of the late insurrection in Cuba, and prior to the exchange of ratifications of the present treaty, including all claims for indemnity for the cost of the war. The United States will acknowledge and satisfy the claims, if any, against Spain, referred to in this article.

Art. VIII. In conformity with the provisions of Article I, II, and III of this treaty, Spain relinquishes in Cuba, and cedes to the United States, and other islands in the West Indies, in the Gulf of Guayaquil, and in the Philippine Archipelago, the buildings, wharves, barracks, forts, structures, public highways, and other immovable property, which, in conformity with law, belong to the public domain, and as such belong to the Crown of Spain. And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, cannot in any respect impair the property of rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, corporations, or civil bodies, or any other associations, having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be. The effect of such relinquishment or cession, as the case may be, includes all documents exclusively referred to the sovereignty, relinquished or ceded, that may exist in the archives of the Peninsula. Where any document in such archives only in part refers to the sovereignty, a copy of such part will be furnished whenever it shall be requested. The rule shall be reciprocally observed in favor of Spain in respect of documents in the archives of the island is above referred to. In the aforesaid relinquishment or cession, as the case may be, are also included such rights as the Crown of Spain and its authorities possess in respect of the aforesaid archives and records, executive, as well as judicial, in the islands above referred to, which relate to said islands or the rights and property of their inhabitants. Such archives and records shall be carefully preserved, and private persons shall without distinction have the right to peruse them in accordance with law, authenticated copies of the contracts, wills and other instruments forming

part of notarial protocols or files, or which may be contained in the executive or judicial archives, be the latter in Spain or in the islands aforesaid.

ART. IX. Spanish subjects, natives of the Peninsula, residing in the territory over which Spain by the present treaty relinquishes or cedes her sovereignty, may remain in such territory or may remove therefrom, retaining in either event all their rights of property, including the right to sell or dispose of such property or of its proceeds; and they shall also have the right to carry on their industry, commerce and professions, being subject in respect thereof to such laws as are applicable to other foreigners. In case they remain in the territory they may preserve their allegiance to the Crown of Spain by making, before a court of record, within a year from the date of the exchange of ratifications of this treaty, a declaration of their decision to preserve such allegiance; in default of which declaration they shall be held to have renounced it and to have adopted the nationality of the territory in which they may reside. The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress.

ART. X. The inhabitants of the territories over which Spain relinquishes or cedes her sovereignty shall be secured in the free exercise of their religion.

ART. XI. The Spaniards residing in the territories over which Spain by this treaty cedes or relinquishes her sovereignty shall be subject in matters civil as well as criminal to the jurisdiction of the courts of the country wherein they reside, pursuant to the ordinary laws governing the same, and they shall have the right to appear before such courts, and to pursue the same course as citizens of the country to which the courts belong.

ART. XII. Judicial proceedings pending at the time of the exchange of ratifications of this treaty in the territories over which Spain relinquishes or cedes her sovereignty shall be determined according to the following rules: 1. Judgments rendered either in civil suits between private individuals, or in criminal matters, before the date mentioned, and with respect to which there is no recourse or right of review under the Spanish law, shall be deemed to be final, and shall be executed in due form by competent authority in the territory within which such judgments should be carried out. 2. Civil suits between private individuals which may on the date mentioned be undetermined shall be prosecuted to judgment before the court in which they may then be pending or in the court that may be substituted therefor. 3. Criminal actions pending on the date mentioned before the Supreme Court of Spain against citizens of the territory which by this treaty ceases to be Spanish shall continue under its jurisdiction until final judgment; but, such judgment having been rendered, the execution thereof shall be committed to the competent authority of the place in which the case arose.

ART. XIII. The rights of property secured by copyrights and patents acquired by Spaniards in the Island of Cuba and in Porto Rico, the Philippines and other ceded territories, at the time of the exchange of the ratifications of this treaty, shall continue to be respected. Spanish scientific, literary and artistic works, not subversive

of public order in the territories in question, shall continue to be admitted free of duty into such territories, for the period of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty.

ART. XIV. Spain will have the power to establish consular officers in the ports and places of the territories, the sovereignty over which has been either relinquished or ceded by the present treaty.

ART. XV. The Government of each country will, for the term of ten years, accord to the merchant vessels of the other country the same treatment in respect of all port charges, including entrance and clearance dues, light dues, and tonnage dues, as it accords to its own vessels, not engaged in the coastwise trade. This article may at any time be terminated by six months notice given by either Government to the other.

ART. XVI. It is understood that the obligations assumed in this treaty by the United States with respect to Cuba are limited to the period of its occupancy thereof; but it will upon the termination of such occupancy advise the Government established in the island to assume the same obligations.

ART. XVII. The present treaty shall be ratified by the President of the United States, and with the advice and consent of the Senate thereof, and by Her Majesty the Queen of Spain; and the ratifications shall be exchanged at Washington within six months from the date hereof, or earlier if possible. In faith whereof, the respective Plenipotentiaries have signed this treaty and have hereunto affixed their seals. Done in duplicate at Paris the twenty-third day of December, in the year of Our Lord one thousand eight hundred and ninety-eight. Signed: William R. Day, Counselor K. Davis, W. P. Frye, Geo. Gray, Whitelaw Reid, F. J. Montero Rios, B. de Alariza, J. de Guzman, W. R. de Villa Urrutia, Rafael Cerro.

That the treaty would be ratified by the Senate of the United States was by no means certain when it was signed, and remained a question for two months. See below: A. D. 1899 (JANUARY—FEBRUARY).

Some time after the conclusion of the treaty it was discovered that the boundaries of the islands in it for the cession of the Philippine Islands failed to include the islands of Cagayan, Ilocos, and Sibutu, in the southern part of the archipelago. Still later, it was found that several small islands (the Bachi or Bashee Islands and others) belonging to the Spanish possessions in the East were left lying outside of the northern Philippine boundary, as laid down in the treaty of cession. It is said that the Japanese government called attention to this latter fact, desiring to have the islands in question, which are near to Formosa, controlled by the United States, rather than by Spain. By a new treaty with Spain, negotiated in 1900, all these islands were acquired by the United States for the sum of \$100,000.

A. D. 1898 (August).—Losses of the army at Santiago and in the Philippines. See below: A. D. 1900 (JUNE).

A. D. 1898 (August 21).—The War with Spain.—Letter from departing Spanish soldiers to the soldiers of the American army. The following letter, addressed, on the eve of

departure for Spain, by the Spanish soldiers at Santiago to the soldiers of the American army, is surely," says Lieutenant Colonel Miley, who quotes it in his book entitled "In Cuba with Spanish Arms," "the surely the most remarkable letter ever addressed by vanquished soldiers to their conquerors. 'Soldiers of the American Army: We would not be fulfilling our duty as well born men in whose breasts there lives gratitude and courtesy, should we embark for our beloved Spain when it sends you our most cordial and sincere good wishes and farewell. We fought you with ardor and with all our strength, endeavoring to gain the victory, but without the slightest rancor or hate toward the American nation. We have been vanquished by you, so our generals and chiefs judged in signing the capitulation, but our spirits and the blood battles preceding it have found no place for resentment against those who fought us nobly and valiantly. You fought in compliance with the same duty as we, for we all but represent the power of our respective States. You fought us when, face to face, and with great courage, as has been stated—a quality we had not met with during the three years we have carried on this war, must a people without a religion, without a name, without conscience, and of doubtful origin who could not confront the enemy, but shot from behind rocks from ambush and then immediately fled. This was the kind of warfare we had to sustain in this unfortunate land. You have complied exactly with all the laws and usages of war as recognized by the armies of the civilized nations of the world, have given honorable burial to the dead of the vanquished, have cared their wounded with great humanity, have respected and cared for your prisoners and the wounded, and lastly, those whose condition was terrible, you have given freely of food and a vast stock of medicines, and have honored us with distinction and courtesy, for after the fighting the two armies mingled with the utmost harmony. With this high sentiment of appreciation from us all, there remains but to express our farewell, and with the greatest sincerity we wish you all happiness and health in this land, which will no longer belong to our dear Spain, but will be yours. You have conquered it by force and wisdom; with your blood, as your conscience calls for under the demands of civilization and humanity; but the descendants of the Congos and Guineas, mingled with the blood of miscreant Spaniards and of traitors and adventurers—these people are not able to exercise or enjoy their liberty, for they will find it a burden to comply with the laws which govern civilized humanity. From eleven thousand Spanish soldiers (Signed) Pedro Lopez De Castillo, Soldier of Infantry. Santiago de Cuba, August 21, 1898."

A. D. 1898 (August-December).—Situation in the Philippines following the occupation of Manila by American forces.—Growing distrust and unfriendliness of the Tagalos. Report of General Otis. See in this vol.) PHILIPPINE ISLANDS. A. D. 1898 (August-December).

A. D. 1898 (December).—Organization of military government in Cuba. See in this vol.) CUBA. A. D. 1898-1899 (DECEMBER-OCTOBER).

A. D. 1898-1899.—Statistics of the Spanish-American War.—The following military

and naval statistics of the war with Spain compiled from official sources, were submitted to the House of Representatives, during its session in the Army Building, in December, 1900, as part of an appendix to a speech made in support of the Bill by Hon. Charles Dick, of Ohio.

ORGANIZATION AND STRENGTH OF THE ARMY DURING AND AFTER THE WAR.

By an Act of Congress approved April 22, 1898, providing for the temporary increase of the military establishment of the United States, the organized and active land forces were declared to consist of the Regular Army and the militia of the several States which could be so organized, constituting two branches designated, respectively, as the Regular Army and the Volunteer Army of the United States. A later President was authorized to organize the regular army into four principal divisions of the following strength, each brigade to be composed of three regiments, battalions, and where there are more than three regiments present in the same army, to be divided into three army corps, each composed of three regiments, battalions, and where there are more than three divisions. Under the authority conferred upon him by the joint resolution of April 20, 1898, and the act of April 22, 1898, the President issued a proclamation dated April 23, 1898, calling for volunteers to the number of 125,000 men, to be apportioned as far as practicable among the several States, Territories, and the District of Columbia according to population, and to serve for two years unless sooner discharged. Among the several arms of the service the troops were apportioned as follows: Five regiments and 47 troops of cavalry, 16 batteries of light artillery, 1 regiment and 7 batteries of heavy artillery, 10 regiments and 10 batteries of infantry. May 25, 1898, the President issued a proclamation calling for an additional force of 75,000 men. For continuing military needs, it was determined to utilize so much of this additional force as was necessary to bring up the several State organizations in service to the full legal strength, the remainder to be apportioned among the several States and Territories according to their respective quotas as established. The apportionment to the several States for service under this second call was for 16 batteries of light artillery, 3 battalions of heavy artillery, and 21 regiments, ten battalions, and 10 companies of infantry.

The strength of the Regular Army, on the 1st of April, 1898, just before the breaking out of the war, was as follows:

	Officers.	Enlisted Men.
General officers and staff corps	1,000	1,000
Cavalry	1,000	1,000
Artillery	1,000	1,000
Infantry	1,000	1,000
Miscellaneous	1,000	1,000
Total	2,000	2,000

The Regular Army was authorized to be increased to 65,000 men as a war establishment. The legal strength of the armed Regular and Volunteer, at several later dates, was as follows:

UNITED STATES, 1898-1899.

DATE.	Regulars.	Volunteers.	Total.
April 15, 1898	28,183		28,183
May 31, 1898	38,816	124,776	162,592
August 31, 1898	56,962	216,256	273,218
January 31, 1899	65,531	10,741	76,272
June 30, 1899	65,535	10,550	76,085

Maximum force at any one time during Spanish-American war 274,717 officers and men. On the 29th of November, 1898, the Army of the United States consisted of 2,324 officers and 61,444 enlisted men of the regular force, and of 5,216 officers and 110,262 enlisted men of the volunteer force, making an aggregate of 7,540 officers and 171,646 enlisted men.

PAY OF ARMY.

Payments made to Regular and Volunteer armies engaged during Spanish-American war, from April 21, 1898, to April 11, 1899, \$67,065,629.56.

The deaths from all causes (including casualties in action) in the whole Army, regulars and volunteers, for the fourteen months from May 15 to June, 1899, inclusive, were 6,619. This is equivalent to an annual rate of 33.03 per thousand of strength. The deaths from disease during the whole period were at an annual rate of 25.68 per thousand. These were as follows:

STATIONS.	Number of Deaths.	Rate per 1,000.

HOSPITALS.

From the declaration of war with Spain to September 20, 1899, there have been established:

	Beds.
20 field division hospitals, averaging 250 beds each	5,000
general hospitals with a total capacity of about	13,800
street ambulance train	250
4 hospital ships	1,000
Total	20,050

In addition to these over 5,000 cases were treated in civil hospitals. It is difficult even to approximate the number of men treated in these hospitals. During that period somewhat over 100,000 cases were admitted on sick report, a

number equal to 2,147 per 1,000 of strength during the year, or to 179 per 1,000 per month—ratio of admissions to hospital cases being 14.8. Using these data as a basis, and assuming the mean strength of the Army (Regulars and Volunteers) to have been 154,000, it would appear that from May 1, 1898, to September 20, 1899, about 275,000 cases have been treated in the hospitals.

TRANSPORTATION OF SPANISH PRISONERS OF WAR TO SPAIN.

The following is a statement showing the date of embarkation, names of vessels, and number of officers, enlisted men, and others who took passage:

Date of embarkation.	NAME OF VESSEL.	Officers.	Enlisted Men.	Women and children over 5 years of age.	Prisoners of War and others.	Total.

STRENGTH OF THE NAVY, REGULAR AND AUXILIARY.

The number of enlisted men allowed by law prior to the outbreak of hostilities was 12,500. On August 15, when the enlisted force reached its maximum, there were 24,123 men in the service. This great increase was made necessary by the addition of 128 ships to the Navy. The maximum fighting force of the Navy, separated into classes, was as follows:

Battleships, first class	4
Battleships, second class	1
Armored cruisers	2
Cruisers, first class	6

*One accidentally killed. †Accidentally shot.
—*Commissioned Record, Feb. 1, 1901, pp. 1941-62.*

A. D. 1898-1899.—Investigation of the conduct of the War Department in the war with Spain.—Severe criticism of the conduct of the War Department during the war with Spain, including many charges of inefficiency in its service, produced by improper appointments, misdirection, political reasons, and other charges of misdirection in the purchase of supplies, under influences either political or otherwise corrupt, led to the appointment by the President, in September,

UNITED STATES, 1898-1899.

1898, of an investigating commission composed of nine soldiers and civilian members, as follows: General Grenville M. Dodge, President; Colonel James A. Saxton, Colonel Charles D. Bay, Captain Eben P. Howell, Hon. E. A. Wood, Major Brigadier General John M. Wilson, 1. S. A., General James A. Beaver, Major General Alexander McD. Cook, U. S. A., Dr. Francis S. Conner. The report of the Commission, made in the following February, cannot be said to have been a convincing and satisfactory one to the country at large. It was indignantly described as a "whimsical report," even by many journals and writers of the party in power. Its conclusions did not appear to have been keenly and impartially searching. Its conclusions were so slight to be drawn with criticism and fearless hand.

The charges against the War Department which excited most feeling and drew most public attention related to the quality of the fresh beef supplied to the army, which was in two forms, refrigerated and canned. Major General Miles, commanding the Army, had declared that much of the refrigerated beef furnished to the soldiers should be called "embalmed beef," maintaining that it had been "apparently preserved with secret chemicals, which destroy its natural flavor," and which were believed to be detrimental to the health of the troops. He indicated that hundreds of tons of such beef had been contracted for by the Commissary General "under pretense of experiment." In reply to this serious accusation, Commissary General Charles P. Logan read a statement before the Commission, so violent and unmeasured in its vituperation of the commanding general that it was returned to him for correction; many newspapers declined to publish it, and he was subsequently tried by court martial in consequence, as related below. The conclusion of the Commission on the subject of the charge relating to refrigerated beef was stated in its report as follows: "The Commission is of the opinion that no refrigerated beef furnished to the army and issued to the troops during the war with Spain was subjected to or treated with any chemicals by the contractors or those in their employ."

Concerning the canned beef, which had caused much disgust in the army, the Commission reported: "The result of our own testing and of all the analyses made at our instance is that the canned meat which has been brought to our attention is pure, sound, and nutritious. It has not been found to contain any acids or any deleterious substance, but to be unadulterated meat. The testimony before us is that the canned meat is not, in general, intended to be issued to troops except as an emergency ration. The propriety of the use of the beef as that meat on the beef and the refrigerated beef are more acceptable. A number of officers and others have reported that the meat is unpalatable. Its palatability greatly depends upon the mode in which it is cooked. In a tropical climate, carried on the march exposed to heat, the meat so changes in appearance as to become repulsive. In the Navy, where the meat is properly cared for, there has been no complaint, so far as has appeared in evidence before us. After careful consideration we find that canned meat, as issued to the troops, was generally of good quality, was properly prepared, and contained no deleterious substance."

At times probably material of poor quality is issued, in one of the cans sent to us and examined by the chemist a large amount of gristle was found. That it was not issued under pretense of an experiment is indicated by the fact that it has been in use in the Army for more than 20 years.

On the general management of the Quartermaster's Department, with which much fault had been found, the Commission reported: "The conclusions drawn . . . are as follows:

"1. The Quartermaster's Department, a month before war was declared, was neither physically nor financially prepared for the tremendous labor of so heavily equipping and transporting an army over ten times the size of the Regular Army of the United States.

"2. That the department devoted the ability, zeal, and industry of its officers to accomplish the herculean task before it so soon as funds were made available and war was declared.

"3. That it deserves credit for the great work accomplished, for the immense quantity of materials obtained and issued within so short a period, and for its earnest efforts in reference to railroad transportation and in protecting the great interests of the General Government committed to its charge. Its officers, especially those at the headquarters of the department and at its depots, worked earnestly and laboriously day and night, sparing themselves in no possible way.

"4. There appears to have been a lack of system, whereby, even as late as October, troops in camps and in the field were lacking in some articles of clothing, camp and garrison equipment, and hospitals, at least at two important localities in the South—Fort Monroe, Va., and Huntsville, Ala.—lacked stoves, while at Huntsville fuel was wanting.

"5. There appears to have been lack of executive or administrative ability, either on the part of the Quartermaster's Department or the railroad officials, in preventing the great congestion of cars at Tampa and Chickamauga when these camps were first established, which congestion caused delay, annoyance, and discomfort to the large bodies of troops concentrating at those places.

"6. There appears to have been a lack of foresight in preparing and promptly having available at some central locality on the seacoast the necessary fleet of transports which it seemed evident would be required for the movement of troops to a foreign shore, and, finally, when the call came suddenly and the emergency was supreme, the department appears not to have fully comprehended the capacity of the fleet under its command; not to have supplied it with a complete outfit of lighters for the immediate disembarkation of troops and supplies; to have accepted without full investigation the statement that the vessels were capable of transporting 25,000 men, while really they could not and did not transport more than 17,000 with their artillery, equipments, ammunition, and supplies, and lacked sufficient storage room for the necessary amount of wagon transportation—that very important element in the movement of an army in the face of an enemy.

"7. The Quartermaster's Department should maintain on hand at all times a complete supply for at least four months for an army of 100,000 men of all articles of clothing, camp and garrison

equipment, and other quartermaster's supplies which will not deteriorate by storage or which cannot at once be obtained in open market.

"Finally, in the opinion of this commission there should be a division of the labor devolving upon the Quartermaster's Department."

In another part of its report, dealing especially with the Santiago campaign, the Commission makes a statement which seems to throw some additional light on the sixth paragraph of the finding quoted above, relative to the incapacity of the quartermaster's department for the handling of the Santiago expedition. It says:

"The Navy Department, on the 31st of May, 1898, sent the following communication to the honorable the Secretary of War: 'The Department begs leave to inquire what means are to be employed by the War Department for the troops, artillery, horses, siege guns, mortars, and other heavy objects when the pending military expedition arrives on the Cuban coast at Santiago. While the Navy will be prepared to furnish all the assistance that may be required, it is obvious that the crews of the moored ships and of such others as will be called upon to remove the Spanish mines and to engage the Spanish fleet in action can not be spared for other purposes, and ought not to be fatigued by the work incident to hauling of the troops, stores, etc.' This information, so far as can be ascertained, was never communicated to the General Miles or General Shafter; the expedition therefore left Tampa with no facilities for loading other than were afforded by the boats of several transports conveying the expedition, with the exception of several lighters and stores of light draft, such as could be hastily secured.

On the conduct of the Medical Department, which was another matter of investigation, the Commission reported: "To sum up, in brief, the evidence submitted shows:

"1. That at the outbreak of the war the Medical Department was, in men and materials, utterly unprepared to meet the necessities of an army called out.

"2. That as a result of the action, the organization of contracted and contracting methods of administration, it was impossible for the department to operate largely, freely, and with undue regard to cost.

"3. That in the absence of a special representative inspectors, and the apparent infrequency of inspections by chief surgeons, and of official reports of the state of things in camps and hospitals, there was not such investigation of sanitary conditions of the army as is the duty imposed upon the Department by the regulations.

"4. That the nursing force during the months of May, June, and July was neither ample, efficient, reasons for which may be found in the lack of a proper volunteer hospital corps, the failure of Congress to authorize its establishment, and to the nonrecognition in the legislation of the value of women nurses and the extent to which their services could be secured.

"5. That the demand made upon the resources of the Department in the care of sick and wounded was very much greater than had anticipated, and consequently, in like proportion, these demands were imperfectly met.

"6. That powerless as the Department was

have supplies transferred from point to point, except through the intermediation of the Quartermaster's Department, it was seriously crippled in its efforts to fulfill the regulation duty of procuring and medical and hospital supplies."

"That the shortcomings in administration and procedure may justly be attributed in large measure to the hurry and confusion incident to the assembling of an army of untrained officers and men in numbers larger than before, for which no preparations in advance had been or could have been made because of existing rules and regulations."

"Notwithstanding all the manifest errors of commission rather than of omission a vast amount of good work was done by medical officers, high and low, regular and volunteer, and there were unusually few deaths among the wounded and the sick."

"What is needed by the medical department in the future is—

1. A larger force of commissioned medical officers.

2. Authority to establish, in time of war a permanent and hospital corps.

3. A reserve corps of selected trained women nurses ready to serve when necessity shall arise, and in many circumstances, owing to duty of the War Department, except to report resignation at terminated intervals.

4. A closer supply for an army of at least 60,000 men, the actual strength of all such medical supplies, hospital furniture, and stores as are not immediately demanded by keeping, to be held constantly in hand in the medical supply depots.

5. The change of transportation to such extent as to secure prompt shipment and ready delivery of all medical supplies.

6. The simplification of administrative paper work so that medical officers may be able to more thoroughly discharge their sanitary and surgical medical duties.

7. The securing of such legislation as will authorize all surgeons in medical charge of troops, hospitals, transports, trains, and independent commands to draw from the Subsistence Department funds for the purchase of such articles of medicine as may be necessary to the proper treatment of the sick and to the use of the army ration. This would place the place of all commutation of rations of the sick now authorized.

"That desert soldiers traveling on furlough shall be furnished transportation, sleeping quarters, and meals, and \$1.50 per diem for subsistence in lieu of rations, the soldier not to be held accountable or chargeable for this amount."

—*Report of the Commission, p. 1.*

"The opinion of the report, when divested of party prejudice, was probably expressed very fully in the following comments of 'The Nation,' New York: 'The two leading conclusions of the court of inquiry as to the quality of the beef supplied to our troops during the war with Spain, are in accordance with the evidence, and will be accepted as fully just by the country. The court finds that so far as the canned corn beef was concerned, the charges against Miles made against it as an unsatisfactory article are sustained, but that as regards the use of chemicals in the treatment of refrigerated beef no charges were not established. If instead of saying 'not established,' the court had said 'not fully sustained,' its verdict would have

been above criticism on these two points. There was evidence of the use of chemicals, but it was not conclusive and was fully contradicted. There is no doubt whatever that the use of the refrigerated beef was a blunder, but there was very little evidence to sustain a more serious charge than that of carelessness."

"But while the court has found guilty on these points, it is difficult to read its report without feeling that its members did so conscientiously, and that, if left to follow their own path, they would have censured Gen. Miles and covered everybody else concerned for the same. Gen. Miles is the one person involved who, in view of the extraordinary circumstances, to be fair to his report. At every opportunity they seek the worst possible view of his conduct, while almost invariably taking the most favorable view possible of nearly everybody else."

"Such is the findings of the court, apply to the case, could they be condemnatory in general terms, but they do not seek to go behind facts, and do not seek to condemn Gen. Miles' conduct. No attention was given to the evidence of several reputable witnesses that Eggen had told them that he had taken care to take conductors, none is paid for the evidence of Eggen's subordinates, and the court's altered the refrigerated beef contract, and no one could say whether they could have provided for seventy-two hours of delivery. The leniency of this kind is never shown toward Gen. Miles." —*The Nation, May 14, 1899.*

Perhaps a weightier criticism is represented by the following, which was quoted from a note contributed to 'The Independent' by General Wingate, President of the National Guard Association of the United States: "Soldiers of the refrigerated beef was concerned, the truth probably is that there was little if any complaint about it. Soldiers generally were of the belief that it was almost universal, and that Gen. Miles, on the other hand, was unfairly treated in asking that the troops be satisfied with beef cattle on the hoof was a great deal better than the army over any real beef which would keep in good condition on the lines at the bases of Cuba and Porto Rico. This was the system pursued in our Civil War. No one has yet explained why it was abandoned for the experimental handling of this kind of beef to troops in the tropics where it had to be handled in wagons for many hours over muddy roads, and when most of the wagons required to move it promptly had to be left behind for want of water transportation."

"The matter of the refrigerated or so-called 'canned' beef is however a very slight consequence compared with that of the canned corn beef. The use of that beef is an extraordinary thing in this country, at least was so. After the war an officer has testified before the court of inquiry that they never saw it served before the Cuban campaign. It is true that the army, so far as the facilities on ships for curing, for and cooking food are so different and so superior to those of an army in the field that no comparison can justly be made between them. Moreover, as was recently stated in the 'Army and Navy Journal,' the belief is general in the army that the canned beef had received an inspection was afterward sold to the army and accepted by it without inspection. Be this as it may, the evidence is overwhelming that the canned corn beef which was issued to the army was repulsive

in appearance and disagreeable in smell. Governor Roosevelt says in his testimony that "from generals to privates he never heard any one who did not condemn it as an army ration." Its defects appeared on the voyage to Santiago, if not before. It was then so bad that the men would not touch it, and as Governor Roosevelt says in his article in "Scribner's," his Rough Riders, who certainly were not particular, could not eat it, and as it constituted one third of the rations, his men had to go hungry. And yet, in spite of these facts, a million pounds of that beef was purchased from Armour & Co. alone, and its issue was continued not only in Cuba but in Porto Rico. What is worse than all, after its defects were fully known it was issued as a traveling ration to the fever-racked men on their homeward voyage to this country; men who needed and were entitled to receive the most nourishing food and to whom this indigestible stuff was poison. This should never be forgotten or forgiven by the plain people of the country.

"No one in authority has been willing to admit that there was the slightest thing wrong, or the least need for improvement in his department. This is another of the hundreds of examples which have occurred in our past war, and which will continue to take place in the future until the whole staff system of the army has been rectified, of the reign of that hide-bound bureaucratic spirit which induces the head of a department in Washington to decide in his office what should be used by the troops in the field without practical experience on the subject, and to stubbornly close his eyes and ears to every thing which will tend to show that it is possible that his department has made a mistake."

"It is noticeable that so far not an official in any of the supply or medical departments is known to have been court-martialed or even censured. Yet I do not hesitate to say that the summary dismissal from the service, in the beginning, of two or three quartermasters and commissaries, including the gentlemen who were the cause of sending thousands of cans to Tampa without invoices or anything on the outside of them to indicate their contents, would have saved the lives of hundreds of our soldiers. Under these circumstances it is most lamentable to find that the awful experiences which have made so many homes desolate, and so many of our best young men invalids, have borne no practical fruit. Both the army officials and Congress are like the Bourbons, they have learned nothing and forgotten nothing."—G. W. Wingate, *What the Beef Scandal Teaches* (*Independent*, Apr. 6, 1899).

A. D. 1899 (January).—The case of Com-

missary-General Eagan.—A court-martial sitting in January, 1899, for the trial of Com-missary-General Eagan, on the charge that he had been guilty of "conduct unbecoming an officer and a gentleman, and conduct to the prejudice of good order and military discipline," in the use of language that he had applied to the commanding general of the army, in the course of his testimony before the Commission to investigate the conduct of the War Department (see above). A. D. 1899, found the accused officer guilty, and imposed the inevitable penalty of dismissal from service, but recommended executive clemency in his case. The sentence was commuted by the President to suspension from rank, without pay, for six years. This involved no loss of pension at the end of six years, General Eagan was not on the retired list.

A. D. 1899 (January).—Appointment of the First Commission to the Philippines. The President's instructions to the Commission are. See (in this vol.) PHILIPPINE ISLANDS: A. D. 1899 (JANUARY).

A. D. 1899 (January—February).—Treaty of Peace in the Senate.—Its ratification.—The Treaty of Peace with Spain, signed at Paris December 10, 1898, was sent by the President to the Senate on the 4th of January, 1899, and held under debate in that body until the 6th of February following. The opposition to it was very strong, being especially directed against the acquisition of the Philippine Islands, involving, as that acquisition did, the overthrow of the Republic in a colonial or imperial policy, of conquest and of government without the consent of the governed, which seemed to a great number of thoughtful people, not only incongruous with its constitution, but a direct violation of the principles on which its republicanism is founded. But even those most opposed to the acquisition of the Philippine Islands were reluctant to reopen the state of war by rejection of the treaty, and directed their efforts mainly towards the securing of a definite declaration by Congress of the intention of the government of the United States to establish independence in the Islands.

Even before the signing of the treaty at Paris on the 6th of December, when the demand of the American commissioners for cession of the Philippines was known, the opposition expressed in the following resolution, introduced by Senator Vest, of Missouri:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That under the Constitution of the United States no power is given the Federal Government to acquire territory to be held and governed permanently as colonies. The colonial system of European nations can be established under our present Constitution, but all territory acquired by the Government except small amount as may be necessary for coaling stations, correction of boundaries, similar governmental purposes, must be held and governed with the purpose of ultimate organizing such territory into States suitable for admission into the Union."

This resolution became the ground of senatorial debate during the following year. The arguments opposed to it, and supporting the policy of the administration, are represented fairly by the following passage from a

made by Senator Platt of Connecticut on December 16.

I propose to maintain that the United States is a nation—that as a nation it possesses every government power not reserved in its Constitution to the States or to the people; that the right to acquire territory was not reserved, and is therefore a sovereign right, that is a right upon which there is no limitation, and with regard to which there is no qualification, that in certain instances the right may be inferred from specific clauses in the Constitution, but that it exists independent of these clauses; that in the right to acquire territory is found the right to govern it, and is the right to acquire a sovereign and independent right, the right to govern is a sovereign right not limited in the Constitution, and that these propositions are in accordance with the views of the framers of the Constitution, the decisions of the Supreme Court, and the legislation of Congress.

Mr. President, this is a nation. It has been called by various names. It has been called a Confederated Republic, a Federal Union, the Union of States, a league of States, a republic, but during all the time these names have been applied to it it has been a nation. It was so understood by the framers of the Constitution. It was so decided by the great judges of the Supreme Court in the early days of the Constitution. It is too late to deny it, and Mr. President it is also too late to limit it, and not have faith in it. Intellectual assent to the doctrine of Christianity does not make a man a Christian. It is saying faith that makes the Christian. And a mere intellectual assent to the doctrine that we are a nation does not make the true patriot. It is high time that we come to believe without qualification, to believe in our hearts, in the exercise of patriotic faith, that the United States is a nation. When we come to believe that Mr. President, many of the doubts and uncertainties which have troubled men will disappear.

It is time to be heroic in our faith and to assert all the power that belongs to the nation as a nation. The attempt to shroud the United States of a portion of its sovereign power is an attempt which may well be thoroughly and fully discussed. In the right to acquire territory is found the right to govern, and as the right to acquire is sovereign and unlimited, the right to govern is a sovereign right, and I maintain is not limited in the Constitution. If I am right in holding that the power to acquire is the sovereign power without limitation, I think it must be admitted that the right to govern is also sovereign and unlimited. But if it is sought to rest the right to govern upon that clause of the Constitution which gives Congress the power to dispose of or make "all needful rules and regulations" for the government of the territory of the United States, I submit there is no limitation there. There is no qualification there.

On the 4th of January the Senate received the treaty from the President. On the 7th Senator Mason, of Illinois, introduced the following resolution, and, subsequently, spoke with earnestness in its support:

"Whereas all just powers of government are derived from the consent of the governed. Therefore, be it

"Resolved by the Senate of the United States, That the Government of the United States of

America will not attempt to govern the people of any other country in the world without the consent of the people themselves or their representatives in their Council of nation against their will.

On the 9th an impressive speech was made by Senator Henry M. Tilton of Massachusetts in support of Senator Platt. He spoke pathetically as follows:

Mr. President, I am quite sure that we are all who ever lived or will live will read what I say to-day with a feeling that it is the most important thing that we have ever said in our country. I think I have more than most men of my generation with whom I have conversed, I think I have more than most men of my generation who are now in the President's cabinet, who are in the United States, who are in the Republic, I think I have more than most men of my party assembled in this Chamber, with whom I have conversed, I have more than most men of my party who are now in the same path and sought the same goal. I have met those men who believe that the great nation of good or permanent for a free people can be accomplished without the assistance of a party. And I have believed in the great principles and principles of the Republic, and I stand in a humble capacity by its principles. I do not mean if I can help it, if I was to leave I am sure I render it a service. I am sure I help to protect and to prolong the life of the great organization, if I can say or do anything to keep it from forsaking the great principles and doctrines in which alone it can find its true life. I must in this great crisis, I must trust my beloved Commonwealth, I must trust to me according to my sense of duty as I see it. However unpleasant may be that duty as Martin Luther said, "God help me. I can do no otherwise."

"I am to speak for my country, for its whole past and for its whole future. I am to speak to a people whose fate is bound up in the preservation of our great doctrine of a united and free country. I am to speak for the dead who gave their life for liberty that has died, and I stand upon his country's history and glory. I am to speak for the Republican party, and of whose great traditions are at stake, and of whose great achievements are in peril.

"The question with which we are now faced is whether Congress may compact and may govern without their consent and grant that will, a foreign nation, a separate, distinct and numerous people, a territory not hereafter to be populated by Americans, to be turned into American States and to take its part in the Constitution and executing the purposes for which the Constitution was framed, whether it may compact, control, and govern this people, not for the general welfare, common defense, more perfect union, more blessed liberty of the people of the United States, but for some real or fancied benefit to be conferred against their desire upon the people, so governed or in discharge of some fancied obligation to them, and not to the people of the United States.

"Now, Mr. President, the question is whether the men who framed the Constitution, or the people who adopted it, meant to confer that power upon the limited and restricted powers of the sovereign nation that they were creating. Upon that question I take issue with my honorable friend from Connecticut. I declare not, my

that this is not among the express powers conferred upon the sovereignty they created, that it is not among the powers necessarily or reasonably or conveniently implied for the sake of carrying into effect the purposes of that instrument but that it is a power which it can be demonstrated by the whole contemporaneous history and by our whole history since until within six months they did not mean should exist—a power that our fathers and their descendants have ever loathed and abhorred—and that they believed that no sovereign on earth could rightfully exercise it, and that no people on earth could rightfully confer it. They not only did not mean to confer it, but they would have cut off their right hands, every one of them, sooner than set them to an instrument which should confer it.

"The great contemporaneous exposition of the Constitution is to be found in the Declaration of Independence. Over every clause, syllable, and letter of the Constitution the Declaration of Independence pours its blazing torch-light. The same men framed it. The same States ratified it. The same people pledged their lives, their fortunes, and their sacred honor to support it. The great characters in the Constitutional Convention were the great characters of the Continental Congress. There are undoubtedly, among its burning and shining truths, one or two which the convention that adopted it were not prepared themselves at once to put into practice. But they placed them before their countrymen as an ideal moral law to which the liberty of the people was to aspire and to ascend as soon as the nature of existing conditions would permit. Doubtless slavery was inconsistent with it, as Jefferson, its great author, has in more than one place left on record. But at last in the strife of a great civil war the truth of the Declaration prevailed and the falsehood of slavery went down, and at last the Constitution of the United States conformed to the Declaration and it has become the law of the land, and its great doctrines of liberty are written upon the American flag wherever the American flag floats. Who shall haul them down?"

Two days later (January 11) the following resolutions were introduced by Senator Bacon, of Georgia:

"Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, First, That the Government and people of the United States have not waged the recent war with Spain for conquest and for the acquisition of foreign territory, but solely for the purposes set forth in the resolution of Congress making the declaration of said war, the acquisition of such small tracts of land or harbors as may be necessary for governmental purposes being not deemed inconsistent with the same.

"Second. That in demanding and in receiving the cession of the Philippine Islands it is not the purpose of the Government of the United States to secure and maintain dominion over the same as a part of the territory of the United States, or to incorporate the inhabitants thereof as citizens of the United States, or to hold said inhabitants as vassals or subjects of this Government.

"Third. That whereas at the time of the declaration of war by the United States against

Spain, and prior thereto, the inhabitants of said Philippine Islands were actively engaged in a war with Spain to achieve their independence, and whereas said purpose and the military operations thereunder have not been abandoned, and are still being actively prosecuted, therefore, in recognition of and in observance of the vital principle announced in the great declaration that governments derive their just powers from the consent of the governed, the Government of the United States recognizes that the people of the Philippine Islands of a nation to be free and independent, that, with this view, and to give effect to the same, the Government of the United States has required the Government of Spain to relinquish its authority and government in the Philippine Islands, and to withdraw its land and naval forces from the Philippine Islands and from the waters hereof.

"Fourth. That the United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control over said Islands, and assert their determination when an independent government shall have been duly erected therein entitled to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon leave the government and control of the islands to their people."

On the 13th, Senator Mc Laurin, of South Carolina, returned to the question of constitutional power in the government of the United States to hold territory in a permanently subject state, and spoke against the view maintained by Senator Platt, of Connecticut: "To hold," he said, "that there is an inherent power of sovereignty in the nation, outside of the Constitution, is to do something not authorized by that instrument, to place this 'inherent sovereignty' above the Constitution and thus destroy the very foundation upon which constitutional government rests." Judge Gray in the Chinese exclusion case, said: "The United States are a sovereign and independent nation, and are invested by the Constitution with the entire control of international relations and with all the powers of government necessary to maintain that control and make it effective." While holding that the United States are a sovereign and independent nation it was seen that he also holds that the sovereignty of the nation is vested by the Constitution; and if so, it can only be exercised in the manner pointed out in the Constitution and is controlled by the words of the grant of this sovereignty. There was no nation of the United States until the adoption of the Federal Constitution, for before that time there could be no sovereignty in the nation. What conferred this sovereignty? Clearly the States, by and through the Federal Constitution. If so, then there can be no inherent right of sovereignty except that conferred by the Constitution.

"The Senator further contends that we are a sovereign nation, and as such have the same inherent right to acquire territory as England, France, Germany, and Mexico. I controvert that proposition. The sovereignty of the nation of Great Britain and the others is vested in the people, and has never been delegated and limited as in our country. These Governments enjoy sovereignty in its elementary form. What the government wills it may do without considering

the act or its consequences in the light of an exact law of binding obligation. Our Government is in a very different position. The Federal Constitution is the embodiment of the sovereignty of the United States as a nation, and this sovereignty can only be exercised in accordance with the powers contained in its provisions. Great Britain can do anything as a nation in the way of the exercise of governmental functions. There is nothing to prohibit or restrict the full exercise of her sovereignty as a nation. Hence there is no analogy, and the sovereignty of the United States as a nation differs widely from that of Great Britain.

It is further contended that a sovereign right cannot be limited and that all our Constitution enables to prescribe the manner in which it can be exercised. If as already shown the sovereignty of the United States was conferred by the States through the Federal Constitution, it is clear that, in conferring the power and prescribing the manner of its exercise, they did set a limit in the very terms of the instrument itself. I deny, therefore, that the United States as a nation has a sovereign inherent right and control outside of the grant of such power in the Constitution. This is not an essential claim of nationality, so far as our nation is concerned, although it may be in England or Russia, where the nationality and sovereignty incident to it are recognized and limited by a written constitution.

On the 14th of January, Mr. Hoar submitted the following:

Resolved, That the people of the Philippine Islands of right ought to be free and independent, and that they are absolved from all allegiance to the Spanish Crown, and that all political connection between them and Spain is and ought to be totally dissolved and that they have therefore full power to do all acts and things which independent states may of right do, that it is their right to institute a new government for themselves, laying its foundation on such principles and organizing its powers in such forms as to them shall seem most likely to effect their safety and happiness; and that with these rights the people of the United States do not propose to interfere.

On the 18th, Mr. Bacon amended his resolutions, given above, by changing the phrase "an independent government" to "a stable and independent government," and then spoke upon them with force, saying, among other things: "The simple fact that we went to war with Spain did not devolve upon us any obligation with reference to the Philippine Islands. We went to war with Spain not for the purpose of correcting all the evils with which her people were afflicted; we went to war with Spain not to break the chains of tyranny with which she might be binding her different colonies; we did not undertake to be the great universal benefactor and to right all the wrongs of all the world, or to avenge all the wrongs that Spain might be inflicting upon any of her people. We went to war because a particular colony which she was afflicting lay at our doors; we went to war because the disorders of that Government affected the peace of our community and were injurious to our material interest. We said there was a condition of affairs which was unbearable and that we would put an end to it."

To that extent and to that place we are bound and we owed the reason for the declaration of war. So it follows that the mere declaration of war did not affect in any manner our relations with the Philippine Islands except to put us in a state of war with them as a part of the Spanish domain, and in no manner had any obligation upon us as to these islands. We were not charged with the duty of preserving order in Asia. We were not charged with the obligations of seeing that they had a stable and orderly government in any part of that hemisphere. No stability rested upon us. None such was assumed by us. Therefore the simple declaration of war did not lay any obligation upon us as to the Philippine Islands, and it is not that any Senator will put his finger on a point which binds us under any obligations to the Philippine Islands on the basis of the fact that we went to war, which caused us to look those who were the instruments of these results to be our allies and made a claim to cease with them.

Now, Mr. President, all that grows out of that, all that grows out of the fact that we are at war and that alliance is based upon us a single obligation which we must recognize. How far does that obligation go? Does it require that we shall for all time be the guardians of the Philippine Islands? Does that particular obligation lay upon us to-day, hereafter, not only now but for years to come, to maintain an expensive military establishment to burden our people with debt, to make it impossible for our hands upon the Philippine Islands and keep them in proper order, and hereafter? It is impossible to see how the obligation grows out of the fact that they were our allies, can possibly be extended to that degree. No Senator has yet shown any reason why such an obligation rests upon us, and I venture to say that none which is logical will or can be shown.

The practical consideration of this question and expediency, which probably had no other influence than those of law or policy, were strongly urged by Senator Lodge of Massachusetts, who said on the 24th: "Suppose we ratify the treaty. The islands pass from the possession of Spain to our possession without a change in our policy. I believe we can be trusted in a people to deal honestly and justly with the islands and their inhabitants thus given to our care. What our precise policy shall be I do not know, because I for one am not sufficiently informed as to the conditions there to be able to say what it will be best to do next. I may add, do I think it wisest? But I believe that we shall have the wisdom not to attempt to incorporate these islands with our body politic, or make their whole parts part of our citizenship, or set their labor at the disposal of ours and within our tariff to compete with our industry with American workmen. I believe that we shall have the courage not to depart from these islands fearfully, timidly, and cowardly, and leave them to rot and ruin among themselves, to the brief and bloody domination of some self-constituted dictator and to the quick conquest of other powers, who will have no such hesitation as we should feel in crushing them into submission by harsh and repressive methods. It is for us to decide the destiny of the Philippines, not for Europe, and we can do it alone and without assistance."

"During the campaign of last autumn I said in many speeches to the people of my State that I could never consent to hand those islands back to Spain, that I wanted no subject races and no vassal States, but that we had by the fortunes of war assumed a great responsibility in the Philippines, that we ought to meet it, and that we ought to give to those people an opportunity for freedom, for peace, and for self government, that we ought to protect them from the rapacity of other nations and seek to uplift those whom we had freed. From these views I have never swerved, and I believe then, as I believe now, that they met with the approbation of a overwhelming majority of the people of Massachusetts.

"Take now the other alternative. Suppose we reject the treaty or strike out the clause relating to the Philippines. That will hand the Islands back to Spain, and I cannot conceive that any American should be willing to do that. Suppose we reject the treaty—what follows? Let us look at it practically. We continue the state of war, and every sensible man in the country, every business interest, desires the re-establishment of peace as fully as well as in fact. At the same time we repudiate the President and his action before the whole world, and the repudiation of the President in such a matter as this to my mind, the humiliation of the United States in the eyes of civilized mankind and brands us as a people incapable of great affairs or of taking rank where we belong as one of the greatest of the great world powers.

"The President cannot be sent back across the Atlantic in the person of his commissioners, let in hand, to say to Spain, with hated breath, 'I am here in obedience to the mandate of a minority of one third of the Senate to tell you that we have been too victorious, and that you have yielded us too much, and that I am very sorry that I took the Philippines from you.' I do not think that any American President would do that, or that any American would wish him to."

Senator Harris, of Kansas, submitted the following on the 3d of February:

"Resolved by the Senate of the United States of America, That the United States hereby disclaim any disposition or intention to exercise permanent sovereignty, jurisdiction, or control over the Philippine Islands and assert their determination, when a stable and independent government shall have been erected therein entitled to recognition as such, to transfer to said government, upon terms which shall be reasonable and just, all rights secured under the cession by Spain, and to thereupon have the government and control of the Islands to their people."

The following was offered on the 27th of January by Senator Sullivan, of Mississippi:

"Resolved, That the ratification of the pending treaty of peace with Spain shall in no wise determine the policy to be pursued by the United States in regard to the Philippines nor shall it commit this Government to a colonial policy, nor is it intended to embarrass the establishment of a stable, independent government by the people of those islands whenever conditions make such a proceeding hopeful of successful and desirable results."

On the same day a joint resolution was proposed by Senator Lindsay, of Kentucky:

Resolved by the Senate and House of Repre-

Resolved by the Senate and House of Repre-

Resolved by the Senate and House of Repre-

representatives of the United States of America in Congress assembled. That the acquisition of the United States through conquest, treaty, purchase, or of territory, carries with it no international obligation to admit said territory, in whole or in part, into the Federal Union, as a portion thereof, into the Federal Union, as a State or States.

"Sec. 2 That It is against the policy, traditions, and interests of the American people to admit states created out of other than American territory into our Union of American States.

"See 3. That the United States accept to the Spanish the cession of the Philippine Islands with the hope that the people of those Islands will demonstrate their capacity to establish and maintain a stable government, capable of enforcing law and order at home and of discharging international obligations resting on separate and independent States and with no expectation of permanently holding those Islands as a colony; and provides after they shall demonstrate their capacity for self-government, the United States will be the judge of such capacity."

None of the resolutions given above came to favorable consideration in the Senate. On the 10th of February the treaty was ratified by a vote in excess of the two thirds which the constitution requires. It received 57 votes—27, or 61 against 20 if account be taken of the 20 Senators absent and paired. Of the supporters of the treaty, 42 were Republicans, of its opponents, 24 were Democrats. It was signed by President McKinley on the 10th of February, and by the Queen of Spain on the 17th of March.

After the ratification of the treaty, the Senate, by 20 votes against 22, adopted the following resolution, offered by Mr. McNary of Indiana:

"Resolved, That by the ratification of the treaty of peace with Spain it is not intended to incorporate the inhabitants of the Philippine islands into citizenship of the United States; and it is intended to permanently annex said islands as an integral part of the territory of the United States. But it is the intention of the United States to establish on said islands a government suitable to the wants and conditions of the inhabitants of said islands, to prepare them for self government, and in due time to make such disposition of said islands as will best promote the interests of the citizens of the United States and the inhabitants of said islands." *Congressional Record*, Dec. 6, 1898—Feb. 6, 1899.

looked by the President in his Message to

working of the act. It is not to be taken for granted that the advent of the new standard and of a reformed monetary system in this country, whose conditions are so different from those above. At the same time, we must not forget the spring of 1869, when the present standard of the United States, which became law on 11th of March. The private circulation of the Act was abandoned at the same time by the Secretary of the Treasury. Mr. G. has published statements as follows: "The Treasury has to report what is the standard of money fixing of the standard of value and the meaning of a party with that standard. It is of money issued or coined by the United States. It remains that the act of 1869 is the standard of the 1878 group of gold coins. It is not that a party goes to the Treasury of the Secretary of the Treasury in the demand of money, and that a party with this standard. It puts in the hands of the Secretary of the Treasury. For that purpose, the bill provides in the

ury bureaus of issue and redemption and transfers from the general fund of the Treasury's cash \$150,000,000 in gold coin and bullion to redemption fund, that gold to be used for the redemption of United States notes and Treasury notes. That fund is henceforth absolutely cut out of and separated from the cash balance in the Treasury and the available cash balance will hereafter show a reduction of \$150,000,000 from the figures that have heretofore prevailed. This \$150,000,000 redemption fund is to be used for no other purpose than the redemption of United States notes and Treasury notes and those notes so redeemed may be exchanged for the gold in the general fund or with the public, so that the reserve fund is kept full with gold to the \$150,000,000 limit. If redemptions go on so that the gold in this reserve fund is reduced below \$100,000,000, and the Secretary is unable to build it up to the \$150,000,000 mark by exchange for gold in the general fund or otherwise, he is given power to sell bonds and it is made his duty to replenish the gold to the \$150,000,000 mark by such means.

"The 'endless chain' is broken by a provision which prohibits the use of notes so redeemed to meet deficiencies in the current revenues. The act provides for the ultimate retirement of all the Treasury notes issued in payment for silver bullion under the Sherman act. As fast as that bullion is coined into silver dollars Treasury notes are to be retired and replaced with an equal amount of silver certificates. The measure authorizes the issue of gold certificates in exchange for deposits of gold coin, the same as at present, but suspends that authority whenever and so long as the gold in the redemption fund is below \$100,000,000 and gives to the Secretary the option to suspend the issue of such certificates whenever the silver certificates and United States notes in the general fund of the Treasury exceed \$40,000,000. The bill provides for a larger issue of silver certificates, by declaring that hereafter silver certificates shall be issued only in denominations of \$10 and under except as to 10 per cent. of the total volume. Room is made for this larger use of silver certificates in the way of small bills by another provision which makes it necessary as fast as the present silver certificates of high denominations are broken up into small bills to cancel a similar volume of United States notes of small denominations and replace them with notes of denominations of \$10 and upward. Further room is made for the circulation of small silver certificates by a clause which permits national banks to have only one third of their capital in denomination under \$10.

"One clause of the bill which the public will greatly appreciate is the right it gives to the Secretary to coin any of the 1890 bullion into subsidiary silver coins up to a limit of \$100,000,000. There has for years been a scarcity of subsidiary silver during periods of active retail trade, but this provision will give the Treasury ample opportunity to supply all the subsidiary silver that is needed. Another provision that the public will greatly appreciate is the authority given to the Secretary to recoin worn and uncurrent subsidiary silver now in the Treasury or hereafter received.

"A distinct feature of the bill is in reference to refunding the 3 per cent. Spanish war loan.

the 2 per cent. bonds maturing in 1907 and the 5 per cent. bonds maturing in 1904 a total of \$830,000,000, into new 2 per cent. bonds. These new 2 per cent. bonds will not be offered for sale, but will only be issued in exchange for an equal amount, face value, of old bonds. This exchange will save the Government after deducting the premium paid, nearly \$23,000,000. If all the holders of the old bonds exchange them for the new ones. National banks that take out circulation based on the new bonds are to be taxed only one half of 1 per cent. on the average amount of circulation outstanding, while those who have circulation based on a deposit of old bonds will be taxed, as at present, 1 per cent. There are some other changes in the national banking act. The law permits national banks with \$25,000 capital to be organized in places of 3,000 inhabitants or less, whereas heretofore the minimum capital has been \$50,000. It also permits banks to issue circulation on all classes of bonds deposited up to the par value of the bonds, instead of 90 per cent. of their face as heretofore. This ought to make an immediate increase in national bank circulation of something like \$24,000,000, as the amount of bonds now deposited to secure circulation is about \$242,000,000. If the price of the new 2 per cent. bonds is so high in the market that there is a profit left to national banks in taking out circulation, we may also look for an increase in national bank circulation based on national deposits of bonds. National banks are permitted under the law to issue circulation up to an amount equal to their capital. The total amount of all national banks is \$616,000,000. The total circulation outstanding is \$253,000,000. There is, therefore, a possibility of an increase in circulation of \$363,000,000, although the price of the 2 per cent. bonds, as already foreshadowed by market quotations in advance of their issue, promises to be so high that the profit to the banks in taking out circulation will not be enough to make the increase anything like such a possible total."

Upon the working of the Act, during the first nine months of its operation, Secretary Gresham remarked as follows, in his annual report dated December 14, 1900: "The operation of the act of March 14 last with respect to these two important matters of our finances has well exemplified its wisdom. Confidence in the purchasing power of the Government to maintain the gold standard has been greatly strengthened. The result is that gold flows toward the Treasury instead of away from it. At the date of the report the free gold in the Treasury is larger than at any former period in our history. Including the \$150,000,000 reserve, the gold in the Treasury belonging to the Government amounts to over \$242,000,000, while the Treasury holds, besides, more than \$200,000,000 against which certificates have been issued. That provision of the act which liberalized the conditions of bank note issue was also wise and timely. Under it, . . . there has been an increase of some \$77,000,000 in bank notes in use. To this fact may be chiefly attributed the freedom from stress for currency to handle the late harvests of cotton, wheat, and corn. In respect the year has been an exception to the general rule of stringency which for several years has so plainly marked the autumn season."

Nevertheless, the measures referred to, provided as they have been in good results, will yet need reinforcement in some important particulars. Thus, as to the redemption fund provided for in said act, while the powers conferred upon the Secretary are probably ample to enable a zealous and watchful officer to protect fully the gold reserve, there appears to be lacking sufficient mandatory requirement to furnish complete confidence in the continued parity, under all conditions, between our two forms of metallic money—silver and gold. Upon this point further legislation may become desirable. As to the currency, while the liberalizing of conditions has as previously noted, found response in a necessary increase of bank note issues, there is under our present system no assurance whatever that the volume of bank currency will be continuously responsive to the country's needs, either by expanding as such needs require or by contracting when superfluous in amount. The truth is that safe and desirable as is our currency system in many respects, it is not properly related. The supply of currency is but remotely, if at all, influenced by the ever-changing requirements of trade and industry. It is related most largely, if not entirely, to the price of Government bonds in the market."—*Annual Report of the Secretary of the Treasury, 1900, pp. 72-73.*

A. D. 1900 (April).—Speech of Senator Hoar in denial of the right of the government of the United States, under the Constitution, to hold the Philippine Islands as a subject state.—On the 17th of April, the following joint resolution was under consideration in the Senate: "Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, that the Philippine Islands are territory belonging to the United States; that it is the intention of the United States to retain them as such and to establish and maintain such governmental control throughout the archipelago as the situation may demand." Senator Hoar, of Massachusetts, spoke in opposition to the resolution, and some passages from his speech are quoted here, because they are notably representative of the ground and spirit of an opposition which existed within the party controlling the government to the war of subjugation in the Philippine Islands, to which the party and the government were finally committed by the adoption of this Congressional declaration. The attitude and argument of parties on the question are set forth below, in the platforms and manifestos of the presidential election. This speech exhibits a feeling on that question which was overriden in the winning party, and it has an importance both forensic and historical:

"The American people, so far as I know, were all agreed that their victory [in the Spanish American war] brought with it the responsibility of protecting the liberated peoples from the capidity of any other power until they could establish their own independence in freedom and liberty. I stand here to-day to plead with you not to abandon the principles that have brought these things to pass. I implore you to keep to the policy that has made the country great that has made the Republican party great, that has made the President great. I have nothing new to say. But I ask you to keep in the old chan-

nels, and to keep off the old rocks that I saw by the old charts, and to follow the old sailing orders that all the old captains of other days have obeyed, to take your bearings, as of old, from the north star.

Of whose true fixed and resting quality
There is no shadow in the firmament.

and not from this meteoric light of empire.

"Especially if I could, would I persuade the great Republican party to come back again to its old faith to its old religion, before it is too late. There is yet time. The President has said again and again that his is only an interim policy until Congress shall act. It is not yet too late. Congress has rejected, unwisely, as I think, some declarations for freedom. But the two Houses have not as yet committed themselves to despotism. The old safe path, the path alike of justice and of freedom is still easy. It is a path familiar of old to the Republican party. If we have diverged from it for the first time, everything in our history, everything in our own nature calls us back. The great preacher of the English church tells you how easy is the return of a great and noble nature from the first departure from its ideal. For so a taper, when its crown of flame is newly blown off, retains a light so sanctified to light that it will with goodness, gentleness and snatch a ray from the neighbor fire."

"I for one, believed, and still believe that the pathway to prosperity and glory for the country was also the pathway to success and glory for the Republican party. I thought the two things inseparable. If when we made the treaty of peace, we had adhered to the purpose we declared when we declared war, if we had dealt with the Philippine Islands as we promised to deal, have dealt, and expect to deal with Cuba, the country would have escaped the loss of 6,000 brave soldiers, other thousands of wrecked and shattered lives, the sickness of many more, the expenditure of hundreds of millions, and, what is far worse than all the trampling under foot of its cherished ideals. There would have been today a noble republic in the East, sitting docile at our feet, receiving from us civilization, laws, manners, and giving in turn everything the gratitude of a free people could give—love, obedience, trade. The Philippine youth would throng our universities, our Constitution, our Declaration, the lives of Washington and Lincoln, the sayings of Jefferson and Franklin would have been the textbooks of their schools. How our orators and poets would have delighted to contrast America liberating and raising up the republics of Asia, with England subduing and trampling under foot the republic of Africa. Nothing at home could have withstood the great party and the great President who had done these things. We should have come from the next election with a solid North and have carried left the South. You would not have been spared the spectacle of great Republican States rising in revolt against Republican policies. I do not expect to accomplish anything for liberty in the Philippine Islands but through the Republican party. Upon it the fate of these Islands for years to come is to depend. If that party can not be persuaded the case is in my judgment for the present hopeless.

"The practical question which divided the American people last year, and which divides them to-day, is this: Whether in protecting the people of the Philippine Islands from the ambition and cupidity of other nations we are bound to protect them from our own. . . . In dealing with this question, Mr. President, I do not mean to enter upon any doubtful ground. I shall advance no proposition ever seriously disputed in this country till within twelve months. . . . If to think as I do in regard to the interpretation of the Constitution; in regard to the mandates of the moral law or the law of nations, to which all men and all nations must render obedience; in regard to the policies which are wisest for the conduct of the State, or in regard to those facts of recent history in the light of which we have acted or are to act hereafter, be treason, then Washington was a traitor; then Jefferson was a traitor; then Jackson was a traitor; then Franklin was a traitor; then Sumner was a traitor; then Lincoln was a traitor; then Webster was a traitor; then Chay was a traitor; then Corwin was a traitor; then Kent was a traitor; then Seward was a traitor; then McKinley, within two years, was a traitor; then the Supreme Court of the United States has been in the past a nest and hotbed of treason; then the people of the United States, for more than a century, have been traitors to their own flag and their own Constitution.

"We are presented with an issue that can be clearly and sharply stated as a question of constitutional power, a question of international law, a question of justice and righteousness, or a question of public expediency. This can be stated clearly and sharply in the abstract, and it can be put clearly and sharply by an illustration growing out of existing facts.

"The constitutional question is: Has Congress the power, under our Constitution, to hold in subjection unwilling vassal States?

"The question of international law is: Can any nation rightfully convey to another sovereignty over an unwilling people who have thrown off its dominion, asserted their independence, established a government of their own, over whom it has at the time no practical control, from whose territory it has been disseized, and which it is beyond its power to deliver?

"The question of justice and righteousness is: Have we the right to crush and hold under our feet an unwilling and subject people whom we had treated as allies, whose independence we are bound in good faith to respect, who had established their own free government, and who had trusted us?

"The question of public expediency is: Is it for our advantage to promote our trade at the cannon's mouth and at the point of the bayonet?

"All these questions can be put in a way of practical illustration by inquiring whether we ought to do what we have done, are doing, and mean to do in the case of Cuba; or what we have done, are doing, and some of you mean to do in the case of the Philippine Islands.

"It does not seem to me to be worth while to state again at length the constitutional argument which I have addressed to the Senate heretofore. It has been encountered with eloquence, with clearness and beauty of statement, and I have no doubt, with absolute sincerity by Senators who have spoken upon the other side.

But the issue between them and me can be summed up in a sentence or two, and if, as I said, it can not be made clear to any man's apprehension, I despair of making it clear by any elaboration or amplification. I admit that the United States may acquire and hold property, and may make rules and regulations for its disposition. I admit that, like other property, the United States may acquire and hold land. It may acquire it by purchase. It may acquire it by treaty. It may acquire it by conquest. And it may make rules and regulations for its disposition and government, however it be acquired. When there are inhabitants upon the land so acquired it may make laws for them by government. But the question between me and the gentlemen on the other side is this: Is this acquisition of territory, of land or other property, whether gained by purchase, conquest or treaty, a constitutional end or only a means to a constitutional end? May you acquire, hold and govern territory or other property as an end for which our Constitution was framed, or is it only a means toward some other and further end? May you acquire, hold, and govern property by conquest, treaty, or purchase for the sole object of so holding and governing it, without the consideration of any further constitutional purpose? Or must you hold it for a constitutional purpose only, such as the making of new States, the national defense and security, the establishment of a seat of government, or the construction of forts, harbors, and like works, which, of course, are themselves for the national defense and security?

"I hold that this acquisition, holding and governing, can be only a means for a constitutional end—the creation of new States or some other of the constitutional purposes to which I have alluded. And I maintain that you can not hold and govern territory than you can hold and manage cannon or fleets for any other than a constitutional end; and I maintain that the holding in subjection an alien people governing them against their will for any fancied advantage to them, is not only not an end provided for by the Constitution, but is an end prohibited therein. . . . It is an end which the Declaration which framed the Constitution and the Declaration of Independence declared was unjust, righteous and abhorrent. So, in my opinion, we have no constitutional power to acquire territory for the purpose of holding it in subjection, in a state of vassalage or serfdom, against the will of its people.

"It is to be noted just here that we have acquired no territory or other property in the Philippine Islands, save a few public buildings. By every other acquisition of territory the United States became a great land owner. She owned the public lands as she had owned the public lands in the Northwest ceded to her by the States. But you own nothing in the Philippines. The people own their farms and dwellings and cities. The religious orders own the rest. The Filipinos desire to do what our English ancestors did in the old days when Ireland was Catholic. The lady feared that the Church would encross all the land. So they let their statute of mortmain. You have either to let the people of the Philippine Islands settle this matter for themselves, or you must upon you the delicate duty of settling it.

them. Your purchase or conquest is a purchase or conquest of nothing but sovereignty. It is a government over a people who are never to be admitted to exercise it or to share it. In the present case we have not, I repeat, bought any property. We have undertaken to buy more sovereignty. There were no public lands in the Philippine Islands, the property of Spain, which we have bought and paid for. The mountains of iron and the nuggets of gold and the heap-bearing fields—do you purpose to strip the owners of their rightful title? We have undertaken to buy allegiance, pure and simple. And allegiance is just what the law of nations declares you can not buy.

"I have been unable to find a single reputable authority more than twelve months old for the power now claimed for Congress to govern independent nations or territories not expected to become States. The contrary, until this war broke out, has been taken as too clear for reasonable question. I content myself with a few authorities. Among them are Daniel Webster, William H. Seward, the Supreme Court of the United States, James Madison.

"Daniel Webster said in the Senate, March 23, 1845: 'Arbitrary governments may have territories and distant possessions, because arbitrary governments may rule them by different laws and different systems. We can do no such thing. They must be of us, part of us, or else strangers. I think I see a course adopted which is likely to turn the Constitution of the land into a deformed monster, into a curse rather than a blessing; in fact, a frame of an unequal government, not founded on popular representation, not founded on equality, but on the grossest inequality; and I think that this process will go on, or that there is danger that it will go on, until this Union shall fall to pieces. I resist it to-day and always! Whoever falters or who ever flies, I continue the contest!'

"James Madison said in the *Federalist*: 'The object of the Federal Constitution is to secure the union of the thirteen primitive States, which we know to be practicable; and to add to them such other States as may arise in their own bosoms, or in their neighborhood, which we can not doubt will be practicable.'—*James Madison, Federalist, No. 14.*

"William H. Seward said: 'It is a remarkable feature of the Constitution of the United States that its framers never contemplated colonies, or provinces, or territories at all. On the other hand, they contemplated States only, nothing less than States, perfect States, equal States, as they are called here, sovereign States. . . . There is reason—there is sound political wisdom in this provision of the Constitution excluding colonies, which are always subject to oppression, and excluding provinces, which always tend to corrupt and ultimately to break down the parent State.'—*Seward's Works, Volume 1, page 122.* 'By the Constitution of the United States, there are no subjects. Every citizen of any one State is a free and equal citizen of the United States. Again, by the Constitution of the United States there are no permanent provinces or dependencies.'—*Seward's Works, Volume 4, page 167.*

"The Supreme Court of the United States, in the case of *Flaming vs. Page*, said: 'The genius and character of our institutions are peaceful; and the power to declare war was not conferred

upon Congress for the purposes of aggression or aggrandizement, but to enable the Government to vindicate by arms, if it should become necessary, its own rights and the rights of its citizens. A war, therefore, declared by Congress can never be presumed to be waged for the purpose of conquest or the acquisition of territory. Nor does the law declaring the war imply authority to the President to enlarge the limits of the United States by subjugating the enemy's country.'

"Our territories so far have all been places where Americans would go to dwell as citizens, to establish American homes, to obtain honorable employment and to build a State. Will any man go to the Philippine Islands to dwell, except to govern the people, or to make money by a temporary residence?

"When I studied, broke out, February 7, 1899, we had no occupancy of and no title of any kind to any portion of the Philippine territory, except the town and bay of Manila. Everything else was in the peaceful possession of the inhabitants. In such a condition of things Mr. President, international law speaks to us with its awful mandate. It pronounces your proposed action sheer usurpation and robbery. You have no better title, according to the law of nations, to reduce this people to subjection than you have to subjugate Mexico or Haiti or Belgium or Switzerland. This is the settled doctrine as declared by our own great masters of jurisprudence. You have no right, according to the law of nations, to obtain by purchase or acquisition sovereignty over a people which is not actually exercised by the country which undertakes to convey it or yield it. . . . We have not yet completed the acquisition. But at the time we entered upon it, and at the time of this alleged purchase, the people of the Philippine Islands, as appears by General Otis's report, by Admiral Dewey's report and the reports of officers for whom they vouched, held their entire territory, with the exception of the single town of Manila. They had, as appears from these reports, a full organized government. They had an army fighting for independence, admirably disciplined, according to the statement of zealous advocates of expansion.

"Why, Mr. President, is it credible that any American Statesman, that any American Senator, that any intelligent American citizen anywhere, two years ago could have been found to affirm that a proceeding like that of the Paris treaty could give a just and valid title to sovereignty over a people situated as were the people of these islands? A title of Spain, originally by conquest, never submitted to nor admitted by the people of the Islands, with frequent insurrections at different times for centuries, and then the yoke all thrown off, a constitutional government, schools, colleges, churches, universities, hospitals, town governments, a legislature, a cabinet, courts, a code of laws, and the whole island occupied and controlled by its people with the single exception of one city, with taxes lawfully levied and collected, with an army and the beginning of a navy.

"And yet the Senate, the Congress enacted less than two years ago that the people of Cuba—controlling peacefully no part of their island, levying no taxes in any orderly or peaceable way, with no administration of justice, no civil

net—not only of right ought to be, but were, in fact, a free and independent State. I did not give my assent to that declaration of fact. I assented to the doctrine that they of right ought to be. But I thought the statement of fact much calculated to embarrass the Government of the United States, if it were bound by that declaration; and it has been practically disregarded by the Administration ever since. But the question now is a very different one. You not only deny that the Filipinos are, but you deny that they of right ought to be free and independent; and you recognize Spain as entitled to sell to you the sovereignty of an island where she was not at the time occupying a foot of territory, where her soldiers were held captives by the government of the island, a government to which you had delivered over a large number of Spanish prisoners to be held as captives. And yet you come here to-day and say that they not only are not, but they of right ought not to be free and independent; and when you are pressed you answer us by talking about mountains of iron and nuggets of gold, and trade with China.

I affirm that you can not get by conquest, and you can not get by purchase, according to the modern law of nations, according to the law of nations as accepted and expounded by the United States, sovereignty over a people, or title to a territory, of which the power that undertakes to sell it or the power from whom you undertake to wrest it has not the actual possession and dominion. . . . You cannot buy a war. More than this, you cannot buy a tyrant's claim to subject again an oppressed people who have achieved their freedom. . . .

Gentlemen tell us that the bill of the Senator from Wisconsin is copied from that introduced in Jefferson's time for the purchase of Louisiana. Do you claim that you propose to deal with these people as Jefferson meant to deal with Louisiana? You talk of Alaska, of Florida, of California; do you mean to deal with the Philippines as we mean to deal with Alaska and dealt with Florida or California?

I have spoken of the Declaration of Independence as a solemn affirmation of public law, but it is far more than that. It is a solemn pledge of national faith and honor. It is a baptismal vow. It is the bedrock of our republican institutions. It is, as the Supreme Court declared, the soul and spirit of which the Constitution is but the body and letter. It is the light by which the Constitution must be read. . . . There is expansion enough in it, but it is the expansion of freedom and not of despotism; of life, not of death. Never was such growth in all human history as that from the seed Thomas Jefferson planted. The parable of the mustard seed, than which, as Edward Everett said, 'the burning pen of inspiration, ranging heaven and earth for a similitude, can find nothing more appropriate or expressive to which to liken the Kingdom of God,' is repeated again. 'Whereunto shall we liken it, or with what comparison shall we compare it? It is like a grain of mustard seed, which, when it is sown in the earth, is less than all the seeds that be in the earth. But when it is sown it groweth up, and becometh greater than all herbs, and shooteth out great branches, so that the fowls of the air may lodge under the shadow of it.' This is the expansion of Thomas Jefferson. It has covered

the continent. It is on both the seas. It has saved South America. It is revolutionizing Europe. It is the expansion of freedom. It differs from your thimble, pinchbeck, pewter expansion as the growth of a healthy youth differs from the growth of a healthy youth, as a strong man differs from the expansion of an anaconda when he swallows his victim. This is the expansion of Thomas Jefferson. Yours is the expansion of Aaron Burr. It is destined to us short a life and like fate. . . .

There are 1,200 islands in the Philippine group. They extend as far as from Maine to Florida. They have a population variously estimated at from 8,000,000 to 12,000,000. There are wild tribes who never heard of Christ and islands that never heard of Spain. But among them are the people of the island of Luzon, numbering 3,500,000, and the people of the Visayan Islands, numbering 2,500,000 more. They are a Christian and civilized people. They wrested their independence from Spain and established a republic. Their rights are no more to be affected by the few wild tribes in their own mountains or by the dwellers in the other islands than the rights of our old thirteen States were affected by the French in Canada, or the Six Nations of New York, or the Cherokees of Georgia, or the Indians west of the Mississippi. Twice our commanding generals, by their own confession, assured these people of their independence. Clearly and beyond all cavil we formed an alliance with them. We expressly asked them to co-operate with us. We handed over our prisoners to their keeping; we sought their help in caring for our sick and wounded. We were told by them again and again and again that they were fighting for independence. Their purpose was as well known to our generals, to the War Department, and to the President, as the fact that they were in arms. We never deceived them until the time when hostilities were declared in 1899. The President declared again and again that we had no title and claimed no right to anything beyond the town of Manila. Hostilities were begun by us at a place where we had no right to be, and were continued by us in spite of Aguinaldo's disavowal and refusal and offer to withdraw to a line we should prescribe. If we crush that republic, despoil the people of their freedom and independence, and subject them to our rule, it will be a story of shame and dishonor. . . .

But we are told if we oppose the policy of our imperialistic and expanding friends we are bound to suggest some policy of our own as a substitute for theirs. We are asked what we would do in this difficult emergency. It is a question not difficult to answer. I for one am ready to answer it.

"1. I would declare now that we will take these islands to govern them against their will.

"2. I would reject a cession of sovereignty which implies that sovereignty may be bought and sold and delivered without the consent of the people. Spain had no rightful sovereignty over the Philippine Islands. She could not rightfully sell it to us. We could not rightfully take it from her.

"3. I would require all foreign governments to keep out of these islands.

"4. I would offer to the people of the Philippines our help in maintaining order until

have a reasonable opportunity to establish a government of their own.

5. I would aid them by advice, if they desire, to set up a free and independent government.

6. I would invite all the great powers of Europe to unite in an agreement that their independence shall not be interfered with by us, by themselves, or by any one of them with the consent of the others. As to this I am not so sure. I should like quite as well to tell them it is not to be done whether they consent or not.

7. I would declare that the United States will enforce the same doctrine as applicable to the Philippines that we declared as to Mexico and Haiti and the South American Republics. It is true that the Monroe Doctrine, a doctrine based largely on our regard for our own interests, is not applicable either in terms or in principle to a distant Asiatic territory. But, undoubtedly, having driven out Spain, we are bound, and have the right, to secure to the people we have liberated an opportunity, undisturbed and in peace, to establish a new government for themselves.

8. I would then, in a not distant future, leave them to work out their own salvation, as every nation on earth, from the beginning of time, has wrought out its own salvation. Let them work out their own salvation, as our own ancestors slowly and in long centuries wrought out theirs, as Germany, as Switzerland, as France, in briefer periods, wrought out theirs; as Mexico and the South American Republics have accomplished theirs; all of them within a century, some of them within the life of a generation. To attempt to confer the gift of freedom from without, or to impose freedom from without, on any people is to disregard all the lessons of history. It is to attempt

"A gift of that which is not to be given
By all the blended powers of earth and heaven."

9. I would strike out of your legislation the oath of allegiance to us and substitute an oath of allegiance to their own country.

A. D. 1900 (April).—Act temporarily to provide revenues and a civil government for Porto Rico. See in this vol. PORTO RICO: A. D. 1899-1900; and 1900 (April).

A. D. 1900 (April).—Appointment of Second Commission to the Philippines. The President's instructions.—Steps toward the establishment of civil government and the principles to be observed. See in this vol. PHILIPPINE ISLANDS: A. D. 1900 (April).

A. D. 1900 (May-October).—The Twelfth Census of the Republic.—The Twelfth Census of the United States was taken between May 1 and Nov. 1, 1900, with general results reported on the latter date by the Director, William R. Merriam, as follows:—The following statement gives the population of the United States in detail for each State and organized Territory and Alaska and Hawaii are finally revised. The figures purporting to give the number of "persons in the service of the United States" included "abroad" include an estimated population of 14,400 for certain military organizations and naval vessels stationed abroad, principally in the Philippines, for which the returns have not yet been received. The total population of the United States in 1900, as shown by the accompanying statement, is 76,804,799, of which 74,610,523

persons are contained in the 45 States, representing the population to be used for apportionment purposes. This statement also shows a total of 144,185 Indians not taxed of which 11,667 are found in certain of the States and who are to be deducted from the population of such States for the purpose of determining the apportionment of Representatives. The total population in 1890 with which the aggregate population of the present census should be compared is 63,069,766, comprising 62,622,250 persons enumerated in the States and organized Territories at that census, 32,662 persons in Alaska, 180,182 Indians and other persons in the Indian Territory, 115,282 Indians and other persons on Indian reservations, and 89,990 persons in Hawaii. In this statement figures being derived from the census of the Hawaiian Islands taken on October 16, 1900. Taking this population for 1890 as a basis, there has been gain in population of 13,247,043 during the ten years from 1890 to 1900, representing an increase of very nearly 21 per cent. No provision was made by the census act for the enumeration of the inhabitants of Porto Rico, but a census for that island, taken on October 16, 1899, under the direction of the War Department, showed a population of 954,243.

—Report of the Director of the Census, Nov. 1, 1900.

By the twelfth census the center of population in 1900 was in the following position: Latitude $39^{\circ} 0' 36''$; longitude $85^{\circ} 48' 54''$. In ten years the center of population has moved westward $16^{\circ} 1'$, or about fourteen miles, and southward $2' 20''$, or about two and one-half miles. It rests now in Southern Indiana, at a point about six miles southeast of Columbus, the county seat of Bartholomew county, Indiana. The center of population is the center of gravity of the country, each individual being assumed to have the same weight. The center of area of the United States, excluding Alaska and Hawaii and other recent accessions, is in northern Kansas, in approximate latitude $39^{\circ} 55'$, and approximate longitude $98^{\circ} 50'$. The center of population is therefore about three-fourths of a degree south and more than 13 degrees east of the center of area. —United States, Twelfth Census, Bulletin No. 62.

A. D. 1900 (May–November).—The Presidential election.—Party platforms and nominations.—The issues on which the presidential election of 1900 would naturally and logically have turned were those growing out of the Spanish-American War, relative to principles and policy in dealing with the colonial possessions that were taken from Spain. But circumstances forced those most important political questions into the background of consideration, so far as concerned the opinion of a large part of the American people. The monetary question, which might have been supposed to be settled by the election of 1896 and by the Congressional legislation of March, 1900, was brought forward again with a persistency that caused uneasy feeling in the commercial and industrial world. The party which had fought the battle for a silver monetary standard in 1896, and been beaten, seemed willing to abandon that "lost cause," but the candidate to whose fortunes the party had become committed would not consent. His will prevailed, and the old issue came into the canvass again, with such confusing effects that the real meaning of the votes that were cast, as an expression of the judgment and will of the American people, can by no possibility be known. Men dreaded a disturbance of the conditions under which the business of the country was active and prosperous. How far their wish to

preserve those conditions coincided as a motive in voting, with their judgment on other issues, and how far it overcame dispositions that regarded them contrariwise, are puzzling questions which the election of 1900 has left behind.

United Christian Party Platform and Nominations.—The first candidates to be set in the field of the presidential campaign were put forward by a convention held at Rock Island, Illinois, May 1, representing a small combination of voters styled the United Christian Party. It named, in the first instance, the Rev. S. C. Swallow, of Pennsylvania, for President and J. H. Woolley, of Illinois, for Vice President, both of whom declined the nomination. Joseph F. R. Leonard, of Iowa, and David H. Martin, of Pennsylvania, were subsequently made the candidates of the party, and received a few hundred votes at the ensuing election, mostly in Illinois. The "Declarations" of the United Christian Party were as follows:

"We, the United Christian party, in National Convention assembled in the city of Rock Island, Ill., May 1 and 2, 1900, acknowledging Almighty God as the source of all power and authority, the Lord Jesus Christ as the sovereign ruler of nations, and the Bible as the standard by which to decide moral issues in our political life, make the following declaration:

"We believe the time to have arrived when the eternal principles of justice, mercy, and love, as exemplified in the life and teachings of Jesus Christ should be embodied in the Constitution of our nation, and applied in concrete form to every function of our Government.

"We maintain that this statement is in harmony with the fundamental principles of our Nation's common law; our Christian usages and customs; the declaration of the Supreme Court of the United States that 'This is a Christian nation' and the accepted principle in judicial decision that no law should contravene the Divine Law."

"We deprecate certain immoral laws which have grown out of the failure of our nation to recognize these principles, notably such as require the desecration of the Christian Sabbath, authorize unscriptural marriage and divorce, and license the manufacture and sale of intoxicating liquors as a beverage.

"The execution of these immoral laws does not mention to be neither loyalty to our country nor honoring to God; therefore it shall be our purpose to administer the Government, far as it shall be intrusted to us by the suffrage of the people, in accordance with the principles heretofore set forth, and, until amended, our oath of office shall be to the Constitution and laws herein explained, and to no other, and we will look to Him who has all power in Heaven and earth to vindicate our purpose in seeking glory and the welfare of our beloved land.

"As an expression of consent or allegiance to the part of the governed, in harmony with the above statements, we declare for the adoption and use of the system of legislation known as the 'initiative and referendum,' together with 'proportionate representation' and the 'imperative mandate.'

"We hold that all men and women are created free and with equal rights, and declare for the establishment of such political, industrial, social conditions as shall guarantee to every son civic equality, the full fruits of his or

most toil, and opportunity for the righteous enjoyment of the same, and we especially condemn mob violence and outrages against any individual or class of individuals in our country.

We declare against war and for the arbitration of all National and international disputes.

We hold that the legalized liquor traffic is poisoning infancy of civilization, and we declare for the immediate abolition of the manufacture and sale of intoxicating liquors as a beverage.

We are gratified to note the widespread agitation of the cigarette question, and declare ourselves in favor of the enactment of laws prohibiting the sale of cigarettes or tobacco in any form to minors.

We declare for the daily reading of the Bible in the public schools and institutions of learning under control of the State.

We declare for the Government ownership of public utilities.

We declare for the election of the President and Vice President and United States Senators by the direct vote of the people.

We declare for such amendment of the United States Constitution as shall be necessary to give the principles herein set forth an unshakable legal basis in the fundamental law of our land.

We invite into the United Christian party every honest man and woman who believes in Christ and His golden rule and standard of righteousness. We say especially to the sons of toil—Jesus, the carpenter's son, is your true friend. In His name and through the practice of His principles you may obtain your rights long withheld and long outraged. You have the votes necessary to enthroned Him. His love and principles, politically applied, will lift you up and give you true civic liberty forever.

People's or Populist Party Platforms and Nominations.—The second of the political parties to appear in the field of the national contest was the People's, known more commonly as the Populist Party, the division in which, shown in 1896, had become separation, complete. The two wings of the party held distinct conventions, in different places, but on the same day, May 19. Those known as the Middle of the Road Populists assembled at Cincinnati and named Wharton Barker of Pennsylvania, for President, with Lemmas Donnelly, of Minnesota for Vice President. The convention representing those who wished to act in co-operation with the Democratic Party, and known as the Fusion wing, met at Sioux Falls, South Dakota, and anticipated the action of the Democracy by nominating William J. Bryan for President (see, also, in this vol., **FARMERS' ALLIANCE**, with Charles A. Towne, of Minnesota, for Vice President). The platform declarations of the two wings were substantially the same on main questions; but those of the Fusionists covered several subjects which the Cincinnati convention passed by. They were as follows:

The People's party of the United States, in convention assembled, congratulating its supporters on the wide extension of its principles in all directions, does hereby reaffirm its adherence to the fundamental principles proclaimed in its two prior platforms and calls upon all who desire to avert the subversion of free institutions by corporate and imperialistic power to unite with it in bringing the Government back to the

ideals of Washington, Jefferson, Jackson, and Lincoln. It extends hearty adhesion to the principles of universal and equal freedom, and declares its loyalty to the principles which require direct taxes and the promise of honest and hearty co-operation in every effort for their success. To the people of the United States we offer the following platform as the expression of our unshakable convictions:

Resolved: That we denounce the act of March 14, 1900, as the culmination of a long series of conspiracies to deprive the people of their constitutional rights over the money of the nation and to concentrate money in the control of the purse and hence of the people. We denounce this act, first, for making gold money obligatory on domestic and foreign payables, in gold coin or its equivalent, thus cruelly increasing the burdens of the debtors and enriching the creditors. Second, for forcing "iron bonds" not to mature for years into long time gold bonds so as to make their payment impossible and our debt perpetual. Third, for taking from the Treasury over \$200,000,000 in a time of want and presenting it as a premium to bondholders to accomplish the redemption of bonds not due. Fourth, for debasing the capital of bankers by returning to them the face value of their bonds by current money notes so that they may draw one interest from the Government and another from the people. Fifth, for allowing banks to expand and contract the circulation at pleasure, thus controlling prices of all products. Sixth, for authorizing the Secretary of the Treasury to issue new gold bonds for an unlimited amount whenever he deems it necessary to replenish the gold hoard, thus enabling insurers to secure more bonds and more bank loan money by drawing gold from the Treasury, thereby creating an endless chain of perpetually adding to a perpetual debt. Seventh, for striking down the greenback in order to force the people to borrow \$400,000,000 more from the banks at an annual cost of over \$20,000,000. While turning out the money of the Government, this law opens the printing mints of the Treasury to the free coining of bank paper money, to enrich the few and impoverish the many.

We pledge now the People's party never to cease the agitation until this great financial conspiracy is thwarted from the Statute Books, the Lincoln greenback restored, the bonds, all paid, and all corporation money forever retired. We affirm the demand for the reopening of the mints of the United States for the free and unlimited coining of silver and gold at the present legal ratio of 16 to 1, the issuance at interest in the volume of silver coins and certificates thus created to be the standard dollar for dollar for the banknotes issued by private corporations under special privilege granted by law of March 14, 1900, and prior National banking laws, the remaining portion of the banknotes to be replaced with full legal tender Government paper money, and its volume so controlled as to maintain at all times a stable money market and a stable price level.

We demand a graduated income and inheritance tax to the end that aggregated wealth shall bear its just proportion of taxation.

We demand that postal savings banks be established by the Government for the safe deposit of the savings of the people and to facilitate exchange.

"With Thomas Jefferson we declare the land, including all natural sources of wealth, the inalienable heritage of the people. Government should so act as to secure homes for the people and prevent land monopoly. The original homestead policy should be enforced, and future settlers upon the public domain should be entitled to a free homestead, while all who have paid an acreage price to the Government under existing laws should have their homestead rights restored.

"Transportation being a means of exchange and a public necessity, the Government should own and operate the railroads in the interests of the people and on a non-partisan basis, to the end that all may be accorded the same treatment in transportation, and that the extortion, tyranny, and political power now exercised by the great railroad corporations, which result in the impairment, if not the destruction, of the political rights and personal liberties of the citizen, may be destroyed. Such ownership is to be accomplished in a manner consistent with sound public policy.

"Trusts, the overshadowing evil of the age, are the result and culmination of the private ownership and control of the three great instruments of commerce—money, transportation, and the means of transmission of information—which instruments of commerce are public functions, and which our forefathers declared in the Constitution should be controlled by the people through their Congress for the public welfare. The one remedy for the trusts is that the ownership and control be assumed and exercised by the people. We further demand that all tariffs on goods controlled by a trust shall be abolished. To cope with the trust evil, the people must act directly without the intervention of representatives who may be controlled or influenced. We therefore demand direct legislation, giving the people the lawmaking and veto power under the initiative and referendum. A majority of the people can never be corruptly influenced.

"Applying the valor of our army and navy in the Spanish war, we denounce the conduct of the Administration in changing a war for humanity into a war of conquest. The action of the Administration in the Philippines is in conflict with all the precedents of our National life; at war with the Declaration of Independence, the Constitution, and the plain precepts of humanity. Murder and arson have been our response to the appeals of the people who asked only to establish a free government in their own land. We demand a stoppage of this war of extermination by the assurance to the Philippines of independence and protection under a stable government of their own creation.

"The Declaration of Independence, the Constitution, and the American flag are one and inseparable. The Island of Porto Rico is a part of the territory of the United States, and by levying special and extraordinary customs duties on the commerce of that island the Administration has violated the Constitution, abandoned the fundamental principles of American liberty, and has striven to give the lie to the contention of our forefathers that there should be no taxation without representation.

"Out of the imperialism which would force an undesired domination on the people of the Philippines springs the un-American cry for a

large standing army. Nothing in the character or purposes of our people justifies us in ignoring the plain lesson of history and putting our liberties in jeopardy by assuming the burden of militarism, which is crushing the people of the old World. We denounce the Administration for its sinister efforts to substitute a standing army for the citizen soldiery, which is the best safeguard of the Republic.

"We extend to the brave Boers of South Africa our sympathy and moral support in their patriotic struggle for the right of self-government, and we are unalterably opposed to any alliance, open or covert, between the United States and any other nation that will tend to the destruction of liberty.

"And a further manifestation of imperialism is to be found in the mining districts of Idaho. In the Coeur d'Alene soldiers have been used to overawe miners striving for a greater measure of industrial independence. And we denounce the State Government of Idaho and the Federal Government for employing the military arm of the Government to abridge the civil rights of the people, and to enforce an infamous permit system which denies to laborers their inherent liberty and compels them to forswear their mineral and their right before being permitted to seek employment.

"The importation of Japanese and other laborers under contract to serve monopolistic corporations is a notorious and flagrant violation of the immigration laws. We demand that the Federal Government shall take cognizance of this menacing evil and repress it under existing laws. We further pledge ourselves to strive for the enactment of more stringent laws for the exclusion of Mongolian and Malayan immigration.

"We endorse municipal ownership of public utilities, and declare that the advantages which have accrued to the public under that system would be multiplied a hundredfold by its extension to natural interstate monopolies.

"We denounce the practice of issuing injunctions in the cases of dispute between employers and employees, making criminal acts by organizations which are not criminal when performed by individuals, and demand legislation to restrain the evil.

"We demand that United States Senators and all other officials as far as practicable be elected by direct vote of the people, believing that the elective franchise and untrammelled ballot are essential to a government for and by the people.

"The People's party condemns the wholesale system of disfranchisement by coercion and intimidation, adopted in some States, as un-republican and undemocratic. And we declare it to be the duty of the several State Legislatures to take such action as will secure a full, free, and fair ballot, and an honest count.

"We favor home rule in the Territories and the District of Columbia, and the early admission of the Territories as States.

"We denounce the expensive red tape system, political favoritism, cruel and unnecessary delay, and criminal evasion of the statutes in the management of the Pension Office, and demand the simple and honest execution of the law, and the fulfillment by the nation of its pledges of service pension to all its honorably discharged veterans."

Socialist Labor Party Platform and Nominations. The convention of the Populists was well met by that of the Socialist Labor Party, which met in New York City, on the 2d of June, and put in nomination Joseph P. McKim of Massachusetts, and Valentine Remond of Pennsylvania. Its Platform was as follows:

The Socialist Labor party of the United States in convention assembled, reasserts the inalienable right of all men to life, liberty, and the pursuit of happiness.

Where the founders of the American Republic held the purpose of government is to secure every citizen in the enjoyment of this right, but in the light of our social conditions we hold, furthermore, that no such right can be exercised under a system of economic inequality, essentially destructive of life, of liberty, and of happiness.

With the founders of this Republic we hold that the true theory of politics is that the machinery of government must be owned and controlled by the whole people, but in the light of our industrial development we hold, furthermore, that the true theory of economics is that the machinery of production must likewise belong to the people in common.

To the obvious fact that our despotic system of economics is the direct opposite of our democratic system of politics can plainly be traced the existence of a privileged class, the corruption of government by that class, the alienation of public property, public franchises, and public functions to that class, and the abject dependence of the mightiest of nations upon that class.

Again, through the perversion of democracy to the ends of plutocracy, labor is robbed of the wealth which it alone produces, is denied the means of self employment, and, by compulsory idleness in wage slavery, is even deprived of the necessities of life. Human power and natural forces are thus wasted, that the plutocracy may rule. Ignorance and misery, with all their concomitant evils, are perpetuated, that the people may be kept in bondage. Science and invention are diverted from their humane purpose to the enslavement of woman and children.

Against such a system the Socialist Labor party once more enters its protest. Once more it reiterates its fundamental declaration that private property in the natural sources of production and in the instruments of labor is the obvious cause of all economic servitude and political dependence.

The time is fast coming when, in the natural course of social evolution, this system, through the destructive action of its failures and crises on the one hand, and the constructive tendencies of its trusts and other capitalistic combinations on the other hand, shall have worked out its own downfall.

We, therefore, call upon the wage workers of the United States, and upon all other honest citizens, to organize under the banner of the Socialist Labor party into a class conscious body, aware of its rights and determined to conquer them by taking possession of the public powers, so that, held together by an indomitable spirit of solidarity under the most trying conditions of the present class struggle, we may put a summary end to that barbarous struggle by the abolition of classes, the restoration of the bond and of all the means of production, transportation,

and distribution to the people as a collective body, and the substitution of the Cooperative Commonwealth for the present state of capitalist production, industrial war, and social distress, a commonwealth in which every worker shall have the free exercise and full enjoyment of his abilities, multiplied by all the modern factors of civilization.

Republican Party Platform and Nominations. On the 19th of June the national convention of the Republican Party began its session at Philadelphia, and put its platform on the following day, and nominated President William McKinley for reelection on the 21st, naming Theodore Roosevelt, then Governor of New York, for Vice President, in opposition to which earnestly expressed wish. The adopted platform of principles was as follows:

The Republicans of the United States, through their chosen representatives, met in National Convention, looking back upon measures passed in aid of achievement and labor of reward to a great field of duty and opportunity, and appealing to the judgment of their countrymen make these declarations:

The expectation in which the American people, turning from the Democratic party, entrusted power four years ago to a Republican Chief Magistrate and a Republican Congress, has been met and satisfied. When the people thus assembled at the polls, after a term of Democratic legislation and administration, business was at industry paralyzed, and the National credit disastrously impaired. The country's capital was hidden away and its labor distressed and unemployed. The Democrats had no other plan with which to improve the ruinous conditions which they had themselves produced than to coin silver at the ratio of 16 to 1. The Republican Party, denouncing this plan as sure to produce conditions even worse than those from which relief was sought, promised to restore prosperity by means of two legislative measures—a protective tariff and a law making gold the standard of value.

The people, by great majorities, issued to the Republican party a commission to correct these evils. This commission has been executed, and the Republican promise is redeemed. Prosperity more general and more abundant than we have ever known has followed these commitments. There is no longer controversy as to the value of any government obligations. Every American dollar is a gold dollar or its assured equivalent, and American credit stands higher than that of any nation. Capital is fully employed and labor everywhere is profitably occupied. No single fact can more strikingly tell the story of what Republican government means to the country than this: that while during the whole period of 107 years from 1790 to 1897 there was an excess of exports over imports of only \$284,028,007, there has been in the short three years of the present Republican Administration an excess of exports over imports in the enormous sum of \$1,483,577,000.

And while the American people, sustained by this Republican administration, have been achieving these splendid triumphs in the business and commerce they have conducted and in victory completed a war for liberty and human rights. No thought of National aggrandizement marred the high purpose with which American

standards were unfilled. It was a war unsought and patiently resisted, but when it came the American Government was ready. Its fleets were cleared for action, its armies were in the field, and the quick and signal triumph of its forces on land and sea bore equal tribute to the courage of American soldiers and sailors and to the skill and foresight of Republican statesmanship. To ten millions of the human race there was given "a new birth of freedom" and to the American people a new and noble responsibility.

"We endorse the Administration of William McKinley. Its acts have been established in wisdom and in patriotism, and at home and abroad it has distinctly elevated and extended the influence of the American nation. Walking untried paths and facing unforeseen responsibilities, President McKinley has been in every situation the true American patriot and the upright statesman, clear in vision, strong in judgment, firm in action, always inspiring and deserving the confidence of his countrymen. In asking the American people to endorse this Republican record and to renew their commission to the Republican party, we remind them of the fact that the measure to their prosperity has always resided in Democratic principles, and no less in the general incapacity of the Democratic party to conduct public affairs. The prime essential of business prosperity is public confidence in the good sense of the Government and in its ability to deal intelligently with each new problem of administration and legislation. That confidence the Democratic party has never earned. It is hopelessly inadequate, and the country's prosperity when Democratic success at the polls is announced halts and ceases in mere anticipation of Democratic blunders and failures.

"We renew our allegiance to the principle of the gold standard, and declare our confidence in the wisdom of the legislation of the Fifty-sixth Congress by which the parity of all our money and the stability of our currency upon a gold basis has been secured.

"We recognize that interest rates are potent factors in production and business activity, and for the purpose of further equalizing and of further lowering the rates of interest, we favor such monetary legislation as will enable the varying needs of the seasons and of all sections to be promptly met in order that trade may be evenly sustained, labor steadily employed, and commerce enlarged. The volume of money in circulation was never so great per capita as it is to-day.

"We declare our steadfast opposition to the free and unlimited coinage of silver. No measure to that end could be considered which was without the support of the leading commercial countries of the world. However firmly Republican legislation may seem to have secured the country against the peril of base and discredited currency, the election of a Democratic President could not fail to impair the country's credit and to bring once more into question the intention of the American people to maintain upon the gold standard the parity of their money circulation. The Democratic party must be convinced that the American people will never tolerate the Chicago platform.

"We recognize the necessity and propriety of the honest cooperation of capital to meet new business conditions, and especially to extend our rapidly increasing foreign trade, but we condemn

all conspiracies and combinations intended to restrict business, to create monopolies, to limit production, or to control prices, and favor legislation which will effectively restrain and prevent all such abuses, protect and promote competition, and secure the rights of producers, laborers, and all who are engaged in industry and commerce.

"We renew our faith in the policy of protection to American labor. In that policy our industries have been established, diversified, and maintained. By protecting the home market, competition has been stimulated and production cheapened. Opportunity to the twenty millions of our people has been secured and wages in every department of labor maintained at high rates, higher now than ever before, and always distinguishing our working people in their better conditions of life from those of any competing country. Enjoying the blessings of the American common school, secure in the rights of self-government, and protected in the occupancy of their own markets, their constantly increasing knowledge and skill have enabled them finally to enter the markets of the world.

"We favor the associated policy of reciprocity so directed as to open our markets on favorable terms for what we do not ourselves produce, and return for free foreign markets.

"In the further interest of American workers we favor more effective restriction of the immigration of cheap labor from foreign lands, the extension of opportunities of education to working children, the raising of the age limit for child labor, the protection of free labor against contract convict labor, and an effective system of labor insurance.

"Our present dependence upon foreign shipping for nine-tenths of our foreign carrying is a great loss to the industry of this country. It is also a serious danger to our trade, for its sudden withdrawal in the event of European war would seriously cripple our expanding foreign commerce. The National defense and naval efficiency of this country, moreover, supply a compelling reason for legislation which will enable us to recover our former place among the trade-carrying fleets of the world.

"The nation owes a debt of profound gratitude to the soldiers and sailors who have fought its battles, and it is the Government's duty to provide for the survivors and for the widows and orphans of those who have fallen in the country wars. The pension laws, founded in this sentiment, should be liberal, and should be liberally administered, and preference should be given wherever practicable with respect to employment in the public service to soldiers and sailors and to their widows and orphans.

"We commend the policy of the Republican party in maintaining the efficiency of the Civil Service. The Administration has acted wisely in its effort to secure for public service in Cuba, Porto Rico, Hawaii and the Philippine Islands only those whose fitness has been determined by training and experience. We believe that employment in the public service in these territories should be confined as far as practicable to the inhabitants.

"It was the plain purpose of the Fifteenth Amendment to the Constitution to prevent discrimination on account of race or color in regulating the elective franchise. Devices of State governments, whether by statutory or constitutional

national enactment to avoid the purpose of this amendment are revolutionary and should be condemned.

Public improvements looking to a permanent improvement of the roads and highways of the country meet with our cordial approval and we recommend this subject to the earnest consideration of the people and of the legislatures of the several States. We favor the extension of the rural free delivery service wherever its extension may be justified.

In further pursuance of the constant policy of the Republican party to provide free homes on the public domain, we recommend adequate National legislation to reclaim the arid lands of the United States, reserving control of the distribution of water for irrigation to the respective States and Territories.

We favor home rule for and the early admission to Statehood of the Territories of New Mexico, Arizona and Oklahoma.

The Dingley act, amended to provide sufficient revenue for the conduct of the war, has so well performed its work that it has been possible to reduce the war debt in the sum of \$40,000,000. Sample are the Government's revenues and so great is the public confidence in the integrity of its obligations that its newly funded 2 per cent bonds sell at a premium. The country is now justified in expecting, and it will be the policy of the Republican party to bring about, a reduction of the war taxes.

We favor the construction, ownership, control and protection of an isthmian canal by the Government of the United States.

New markets are necessary for the increasing surplus of our farm products. Every effort should be made to open and obtain new markets, especially in the Orient, and the Administration warmly to be commended for its successful effort to commit all trading and colonizing nations to the policy of the open door in China.

In the interest of our expanding commerce we recommend that Congress create a department of commerce and industries in the charge of a secretary with a seat in the Cabinet. The United States consular system should be reorganized under the supervision of this new department, upon such a basis of appointment and tenure as will render it still more serviceable to the Nation's increasing trade. The American Government must protect the person and property of every citizen wherever they are wrongfully violated or placed in peril.

We congratulate the women of America upon their splendid record of public service in the volunteer aid association and as nurses in camp and hospital during the recent campaigns of our armies in the Eastern and Western Indies, and we appreciate their faithful co-operation in all works of education and industry.

President McKinley has conducted the foreign affairs of the United States with distinguished credit to the American people. In releasing us from the vexatious conditions of a European alliance for the government of Samoa his course is especially to be commended. By securing to our undivided control the most important island of the Southern Pacific, every American interest has been safeguarded. We approve the annexation of the Hawaiian Islands to the

United States. We commend the part taken by our Government in the Peace Conference of the Hague. We assert our steadfast intention to maintain the policy announced by the Monroe Doctrine. The provisions of the Hay-Pauncefote Treaty wisely secured freedom of the international route between Great Britain and the Spanish American Republics. We believe American Government must continue the policy represented by the Hay-Pauncefote Treaty, and we believe President and Congress affirmed by the Senate, and we believe imposed upon us by the Hay-Pauncefote Treaty, American intervention in European wars, against the American people, and that a way may soon be found, honorable and consistent with existing treaties, to terminate all war between them.

In accepting by the United States the just responsibility of a victory over Spain in war the President and the Senate have secured the approval of the American people. No other course was possible, that the Spanish sovereignty should be left to the United States and the Philippine Islands. That responsibility is ours, and it is our duty to the world and to the civilized people in which our intervention had freed from Spain to provide for the maintenance of law and order and for the maintenance of good government and for the performance of international obligations. We cannot afford to be less than our responsibilities and wherever sovereign rights were extended to become the high duty of the Government to maintain its authority to put down its enemies and to counter the blessings of liberty and civilization upon all the rescued peoples. The maintenance of self government is a system with which we have and our duties shall be maintained by law.

To enter in dependence and self government were assumed in the same way which was declared, and to the latter this pledge will be performed.

The Republican party upon its history, and upon this declaration of its principles and policies, confidently invokes the consideration and approving judgment of the American people.

Prohibition Party Platform and Nominations.—In the next week after the meeting of the Republican national convention, that of the Prohibition Party was held at Chicago, opening on the 27th of June. It chose Mr. John G. Woodley of Chicago, already named by the United Christian Party for Vice President, as chosen to be its candidate for President, with Mr. Henry B. McComb of Rhode Island for Vice President. Settling local political issues save those connected with the liquor traffic, its declarations were concerned with that subject alone, and were as follows:

The National Prohibition party, in convention represented on June 27 and 28, 1900, acknowledged Almighty God as the supreme source of all just government. It declared that this Republic was founded upon Christian principles, and can continue only as it upholds justice and rights as such, and asserting that all authority should seek the best good of all the governed, to this end wisely prohibiting what is wrong and permitting only what is right, hereby records and proclaims:

First. We accept and assert the definition given by Edward Burke, that a party is a body of men joined together for the purpose of pro-

fecting by their joint endeavor the National Interest upon some particular principle upon which they are all agreed.

We declare that there is no principle now advocated by any other party which could be made a fact in government with such beneficent moral and material results as the principle of prohibition applied to the beverage liquor traffic, that the National interest could be promoted in no other way so surely and widely as by development and assertion through a National policy and a cooperation therein by every State, forbidding the manufacture, sale, exportation, importation, and transportation of intoxicating liquors for beverage purposes. But we stand for this as the only principle proposed by any party anywhere for the settlement of a question greater and graver than any other before the American people and involving more profoundly than any other their moral future and material welfare, and that all the patriotic citizenship of this country agreed upon this principle, however much disagreement there may be as to minor considerations and issues, should stand together at the ballot box from this time forward until prohibition is the established policy of the United States, with a party in power to enforce it and to insure its moral and material benefits.

"We insist that such a party agreed upon this principle and policy, having sober leadership, without any obligation for success to the saloon vote and to those demoralizing political combinations, can successfully cope with all other and lesser problems of government, in legislative halls and in the executive chair, and that it is useless for any party to make declarations in its platform as to any questions concerning which there may be serious differences of opinion in its own membership and as to which, because of such differences, the party could legislate only on a basis of mutual concessions when coming into power.

"We submit that the Democratic and Republican parties are alike insincere in their assumed hostility to trusts and monopolies. They dare not and do not attack the most dangerous of them all, the liquor power. So long as the saloon debauches the citizen and breeds the purchasable voter, money will continue to buy its way to power. Break down this traffic, elevate manhood, and sober citizenship will find a way to control dangerous combinations of capital. We propose, as a first step in the financial problem of the nation, to save more than a billion of dollars every year, now annually expended to support the liquor traffic and to demoralize our people. When that is accomplished, conditions will have so improved that with a clearer atmosphere the country can address itself to the questions as to the kind and quantity of currency needed.

"Second—We reaffirm as true indisputably the declaration of William Windom, when Secretary of the Treasury in the Cabinet of President Arthur, that 'considered socially, financially, politically, or morally, the licensed liquor traffic is or ought to be the overwhelming issue in American politics, and that the destruction of this iniquity stands next on the calendar of the world's progress.' We hold that the existence of our party presents this issue squarely to the American people and lays upon them the responsibility of choice between liquor parties,

dominated by distillers and brewers, who carry on a policy of saloon perpetration breeding waste, wickedness, war, pauperism, taxation, corruption, and crime and our one party of prohibition and moral principle with a policy which insures it forever against the blighting influence of saloon politics.

"We face with sorrow, shame, and regret the awful fact that this liquor traffic has corrupted our Government, monopolized State and National credit, through the revenue system and a salaried servility, which no other party dare challenge, a grip which dominates the party now in power from caucus to Congress, from political party to President, from the run shop to the White House, a grip which compels the Executive to consent that law shall be nullified in temperance, that the canteen shall curse the army and spread intemperance across the seas and that our flag shall wave as the symbol of procreancy at home and abroad, between the Government and the men who defy and defile it, and then unholy gain.

"Third—We charge upon President McKinley, who was elected to his high office by approval to Christian sentiment and patriotism unprecedented and by a combination of moral influences never before seen in this country, that by his conspicuous example as a wine drinker at public banquets and as a wine serving host in the White House he has done more to encourage the liquor business, to demoralize the temperance habits of young men and to bring the sin practices and requirements into disrepute than any other President this Republic has had.

"We further charge upon President McKinley responsibility for the Army canteen, without a dire brood of disease, immorality, sin and death in this country, in Cuba, in Porto Rico, and in the Philippines; and we insist that by his attitude concerning the canteen, and his apparent contempt for the vast number of petitions and petitioners protesting against it, he has outraged and insulted the moral sentiment of this country, in such a manner and to such a degree as calls for its righteous uprising and his indignant and effective rebuke. We challenge denial of the fact that our Chief Executive, as commander in chief of the military forces of the United States at any time prior to or since March 2, 1899, has closed every Army saloon, called a canteen, by executive order, as President Hayes did before him, and should have closed them for the same reason that actuated President Hayes, we assert that the act of Congress, passed March 2, 1899, forbidding the sale of liquor 'for post exchange or canteen,' by any 'soldier, private soldier' or by 'any other person on premises used for military purposes in the United States,' was and is as explicit an act of prohibition as the English language can frame. We declare our solemn belief that the Attorney General of the United States in his interpretation of the law, and the Secretary of War in his acceptance of that interpretation and his refusal to enforce the law, were and are guilty of treasonable neglect thereof, and that President McKinley through his assent to and indorsement of that interpretation and refusal on the part of the appointed by and responsible to him, share responsibility in their guilt, and we record conviction that a new and serious peril and

consent of the governed; that any government not based upon the consent of the governed is a tyranny; and that to impose upon any people a government of force is to substitute the methods of imperialism for those of a republic. We hold that the constitution follows the flag and denounce the doctrine that an executive or congress, deriving their existence and their powers from the constitution, can exercise lawful authority beyond it or in violation of it. We assert that no nation can long endure half republic and half empire, and we warn the American people that imperialism abroad will lead quickly and inevitably to despotism at home.

"Believing in these fundamental principles, we denounce the Porto Rico law, enacted by a Republican Congress against the protest and opposition of the Democratic minority, as a bold and open violation of the Nation's organic law and a flagrant breach of National good faith. It imposes upon the people of Porto Rico a government without their consent, and taxation without representation. It dishonors the American people by repudiating a solemn pledge made in their behalf by the commanding general of our Army, which the Porto Ricans welcomed to a peaceful and unresisted occupation of their land. It dooms to poverty and distress a people whose helplessness appeals with peculiar force to our justice and magnanimity. In this, the first act of its imperialistic programme, the Republican party seeks to commit the United States to a colonial policy inconsistent with republican institutions and condemned by the Supreme Court in numerous decisions.

"We demand the prompt and honest fulfillment of our pledge to the Cuban people and the world that the United States has no disposition nor intention to exercise sovereignty, jurisdiction, or control over the island of Cuba, except for its pacification. The war ended nearly two years ago, profound peace reigns over all the island, and still the Administration keeps the government of the island from its people, while Republican carpetbag officials plunder its revenue and exploit the colonial theory to the disgrace of the American people.

"We condemn and denounce the Philippine policy of the present Administration. It has enroiled the Republic in an unnecessary war, sacrificed the lives of many of its noblest sons, and placed the United States, previously known and applauded throughout the world as champion of freedom, in the false and un-American position of crushing with military force the efforts of our former allies to achieve liberty and self government. The Filipinos cannot be citizens without endangering our civilization; they cannot be subjects without imperilling our form of government; and as we are not willing to surrender our civilization, or to convert the Republic into an empire, we favor an immediate declaration of the Nation's purpose to give to the Filipinos, first, a stable form of government; second, independence; and third, protection from outside interference such as has been given for nearly a century to the republics of Central and South America. The greedy commercialism which dictated the Philippine policy of the Republican Administration attempts to justify it with the plea that it will pay, but even this sordid and unworthy plea fails when brought to

the test of facts. The war of 'criminal aggression' against the Filipinos, entailing an actual expense of many millions, has already cost more than any possible profit that could accrue from the entire Philippine trade for years to come. Furthermore, when trade is extended at the expense of liberty the price is always too high.

"We are not opposed to territorial expansion when it takes in desirable territory which can be erected into States in the Union, and whose people are willing and fit to become American citizens. We favor trade expansion by every peaceful and legitimate means. But we are unalterably opposed to the seizing or purchasing of distant islands to be governed outside the Constitution and whose people can never become citizens. We are in favor of extending the Republic's influence among the nations, but believe that influence should be extended not by force and violence, but through the persuasive power of a high and honorable example.

"The importance of other questions now pending before the American people is in nowise diminished and the Democratic party takes no backward step from its position on them, but the burning issue of imperialism, growing out of the Spanish war, involving the very existence of the Republic and the destruction of our free institutions, we regard as the paramount issue of the campaign.

"The declaration of the Republican platform adopted at the Philadelphia Convention, held in June, 1900, that the Republican party steadfastly adheres to the policy announced in the Monroe Doctrine, is manifestly insincere and deceptive. This profession is contradicted by the avowed policy of that party, in opposition to the spirit of the Monroe Doctrine, to acquire and hold sovereignty over large areas of territory and large numbers of people in the Eastern Hemisphere. We insist on the strict maintenance of the Monroe Doctrine in all its integrity both in letter and in spirit, as necessary to prevent the extension of European authority on these continents and as essential to our supremacy in American affairs. At the same time we declare that no American people shall ever be held by force in unwilling subjection to European authority.

"We oppose militarism. It means conquest abroad and intimidation and oppression at home. It means the strong arm which has ever been fatal to free institutions. It is what millions of our citizens have fled from in Europe. It will bring upon our peace loving people a large standing army, an unnecessary burden of taxation, and would be a constant menace to their liberties. A small standing army and a well disciplined State militia are amply sufficient in time of peace. This Republic has no place for a vast military establishment, a sure forerunner of compulsory military service and conscription. When the Nation is in danger the volunteer soldier is his country's best defender. The National Guard of the United States should ever be cherished in the patriotic hearts of a free people. Such organizations are ever an element of strength and safety. For the first time in our history and coeval with the Philippine conquest has there been a wholesale departure from our time honored and approved system of volunteer organization. We denounce it as un-American, undemocratic and un-republican and as a sub-

version of the ancient and fixed principles of a free people.

Private monopolies are indefensible and indefensible. They destroy competition, control the price of raw material and of the finished product, thus robbing both producer and consumer. They lessen the employment of labor and arbitrarily fix the terms and conditions thereof, and deprive individual energy and capital of their opportunity for betterment. They are the most efficient means yet devised for appropriating the fruits of industry to the benefit of the few at the expense of the many, and unless their insatiable greed is checked all wealth will be concentrated in a few hands and the Republic destroyed. The dishonest paltering with trusts is a great evil by the Republican party in its slogan and National platform is conclusive proof of the truth of the charge that trusts are the legitimate product of Republican policies that they are fostered by Republican laws and that they are protected by the Republican Administration in return for campaign subscriptions and political support. We pledge the Democratic Party to an unceasing warfare in Nation, State and city against private monopoly in every form. Existing laws against trusts must be enforced and more stringent ones must be enacted providing for publicity as to the affairs of corporations engaged in interstate commerce and requiring all corporations to show, before doing business outside of the State of their origin, that they have no water in their stock, and that they have not attempted and are not attempting to monopolize any branch of business or the production of any articles of merchandise, and the whole constitutional power of Congress over interstate commerce, the mails and all modes of interstate communication shall be exercised by the enactment of comprehensive laws upon the subject of trusts.

Tariff laws should be amended by putting the products of trusts upon the free list, to prevent monopoly under the plea of protection. The failure of the present Republican Administration, with an absolute control over all the branches of the National Government, to enact any legislation designed to prevent or even curtail the absorbing power of trusts and illegal combinations, or to enforce the anti-trust laws already on the statute books, proves the insincerity of the high sounding phrases of the Republican platform. Corporations should be protected in all their rights and their legitimate interests should be respected, but any attempt by corporations to interfere with the public affairs of the people or to control the sovereignty which creates them should be forbidden under such penalties as will make such attempts impossible. We condemn the Dingley tariff law as a trust breeding measure skillfully devised to give to the few favors which they do not deserve, and to place upon the many burdens which they should not bear. We favor such an enlargement of the scope of the Interstate Commerce law as will enable the Commission to protect individuals and communities from discrimination and the public from an unjust and unfair transportation rates.

We reaffirm and endorse the principles of the National Democratic platform adopted at Chicago in 1896 and we reiterate the demand of that platform for an American financial system made by the American people for themselves, which

shall restore and maintain a bimetallic standard level, and as part of such system the immediate restoration of the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1, without waiting for the aid of consent from any other nation.

We denounce the currency policy of the last session of Congress as a paper policy, the Republican policy which aims to deprive the sovereign right of the National Government to issue all money, whether coined or paper, and to bestow upon National banks the power to issue and control the volume of paper money for their own benefit. A permanent National bank currency, secured by Government bonds, must have a permanent debt to rest upon, and if the bank currency is to increase with population and business the debt must also increase. The Republican currency scheme is therefore a scheme of fastening upon the taxpayers a perpetual and growing debt for the benefit of the banks. We are opposed to this private corporation paper circulated as money, but with all legal tender qualities, and demand the retirement of National bank notes as fast as Government paper or silver certificates can be substituted for them. We favor an amendment to the Federal Constitution providing for the election of United States Senators by direct vote of the people, and we favor direct legislation wherever practicable. We are opposed to government by injunction, we denounce the blacklist and favor arbitration as a means of settling disputes between corporations and their employees.

In the interest of American labor and the upbuilding of the workingman as the corner stone of the prosperity of our country, we recommend that Congress create a Department of Labor, in charge of a Secretary, with a seat in the Cabinet, believing that the elevation of the American laborer will bring with it increased production and increased prosperity to our country, a home and to our commerce abroad. We are proud of the courage and fidelity of the American soldiers and sailors in all our wars, we favor national pensions to them and their dependents, and we reiterate the position taken in the Chicago platform in 1896 that the fact of enlistment and service shall be deemed conclusive evidence against disease and disability before enlistment.

We favor the immediate construction, ownership and control of the Nicaragua canal by the United States and we denounce the insincerity of the plank in the Republican national platform for an Isthmian canal in the face of the failure of the Republican majority to pass the bill pending in Congress.

We condemn the Hay-Pauncefote treaty as a surrender of American rights and interests, not to be tolerated by the American people.

We denounce the failure of the Republican party to carry out its pledges to grant statehood to the territories of Arizona, New Mexico and Oklahoma and we promise the people of those territories immediate statehood and home rule during their condition as territories, and we favor home rule and territorial form of government for Alaska and Porto Rico.

We favor an intelligent system of improving the arid lands of the West, storing the waters for the purposes of irrigation, and the holding of such lands for settlement.

We favor the continuance and strict enforce-

ment of the Chinese exclusion law and its application to the same classes of all Asiatic races.

"Jefferson said: 'Peace, commerce and honest friendship with all nations, entangling alliances with none.' We approve this wholesome doctrine and earnestly protest against the Republican departure which has involved us in so-called world politics, including the diplomacy of Europe and the intrigue and land grabbing in Asia, and we especially condemn the ill concealed Republican alliance with England, which must mean discrimination against other friendly nations, and which has already stifled the nation's voice while liberty is being strangled in Africa.

"Believing in the principles of self government and rejecting, as did our forefathers, the claims of monarchy, we view with indignation the purpose of England to overwhelm with force the South African Republics. Speaking, as we believe, for the entire American nation, except its Republican officeholders, and for all free men everywhere, we extend our sympathy to the heroic Burghers in their unequal struggle to maintain their liberty and independence.

"We denounce the lavish appropriations of recent Republican congresses, which have kept taxes high and which threaten the perpetuation of the oppressive war levies. We oppose the accumulation of a surplus to be squandered in such barefaced frauds upon the taxpayers as the shipping subsidy bill, which, under the false pretense of fostering American ship building, would put unearned millions into the pockets of favorite contributors to the Republican campaign fund.

"We favor the reduction and speedy repeal of the war taxes, and a return to the time-honored Democratic policy of strict economy in governmental expenditures.

"Believing that our most cherished institutions are in great peril, that the very existence of our constitutional Republic is at stake, and that the decision now to be rendered will determine whether or not our children are to enjoy those blessed privileges of free government which have made the United States great, prosperous and honored, we earnestly ask for the foregoing declaration of principles the hearty support of the liberty-loving American people, regardless of previous party affiliations."

Silver Republican Platform and Nominations.—The Republicans who broke from their party in 1896 on the silver question, and supported Mr. Bryan for the presidency, were still in affiliation with him and his party, but preserving a distinct organization, assuming the name of Lincoln Republicans. Simultaneously with that of the Democrats (July 6), they held a convention at Kansas City, and named Mr. Bryan as their candidate for President. The nomination for Vice President was referred to the national committee, which ultimately placed Mr. Stevenson's name on the Silver Republican ticket. The platform adopted differed little in leading principles from that of the Democratic party, except in the greater emphasis put on the monetary doctrines that were common to both. It was as follows:

"We, the Silver Republican party, in National Convention assembled, declare these as our principles and invite the cooperation of all who agree therewith:

"We recognize that the principles set forth in

the Declaration of Independence are fundamental and everlastingly true in their application to governments among men. We believe the patriotic words of Washington's farewell to be the words of soberness and wisdom, inspiring the spirit of right and truth. We treasure the words of Jefferson as priceless gems of American statesmanship.

"We hold in sacred remembrance the brave philanthropy and patriotism of Lincoln, who was the great interpreter of American history, and the great apostle of human rights and industrial freedom, and we declare, as was declared by the convention that nominated the great emancipator, that the maintenance of the principles pronounced in the Declaration of Independence and embodied in the Federal Constitution, 'that all men are created equal, that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness; that to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed,' is essential to the preservation of our republican institutions.

"We declare our adherence to the principle of bimetallism as the right basis of a monetary system under our National Constitution, a principle that found place repeatedly in Republican platforms from the demonetization of silver in 1873 to the St. Louis Republican Convention of 1896. Since that convention a Republican Congress and a Republican President, at the direction of the trusts and money power, have passed and approved a currency bill which in itself is a repudiation of the doctrine of bimetallism advocated theretofore by the President and every great leader of his party.

"This currency law destroys the full monetary power of the silver dollar, provides for the payment of all government obligations and the redemption of all forms of paper money in gold alone; retires the time-honored and patriotic greenbacks, constituting one sixth of the money in circulation, and surrenders to banking corporations a sovereign function of issuing all paper money, thus enabling these corporations to control the prices of labor and property by increasing or diminishing the volume of money in circulation, thus giving the banks power to create panics and bring disaster upon business enterprises. The provisions of this currency law making the bonded debt of the Republic payable in gold alone change the contract between the Government and the bondholders to the advantage of the latter, and is in direct opposition to the declaration of the Matthews resolution passed by Congress in 1878, for which resolution the present Republican President, then a member of Congress, voted, as did also all leading Republicans, both in the House and Senate. We declare it to be our intention to lend our efforts to the repeal of this currency law, which not only repudiates the ancient and time-honored principles of the American people before the Constitution was adopted, but is violative of the principles of the Constitution itself, and we shall not cease our efforts until there has been established in its place a monetary system based on the free and unlimited coinage of silver into gold into money at the present legal ratio of 16 to 1 by the independent action of the United States, under which system all paper money is

be issued by the Government and all such money coined or issued shall be a full legal tender in payment of all debts, public and private, without exception.

We are in favor of a graduated tax upon incomes, and if necessary to accomplish this we favor an amendment to the Constitution.

We believe that United States Senators ought to be elected by direct vote of the people, and we favor such amendment of the Constitution and such legislation as may be necessary to that end.

We favor the maintenance and the extension wherever practicable of the merit system in the public service, appointments to be made according to fitness, competitively ascertained, and public servants to be retained in office only so long as shall be compatible with the efficiency of the service.

Combinations, trusts, and monopolies contrived and arranged for the purpose of controlling the prices and quantity of articles supplied to the public are unjust, unlawful, and oppressive. Not only do these unlawful conspiracies fix the prices of commodities in many cases, but they invade every branch of the State and National Government with their polluting influence and control the actions of their employees and dependents in private life until their influence actually impairs society and the liberty of the citizen. We declare against them. We demand the most stringent laws for their destruction and the most severe punishment of their promoters and main tenants and the energetic enforcement of such laws by the courts.

We believe the Monroe doctrine to be sound in principle and a wise National policy, and we demand a firm adherence thereto. We condemn acts inconsistent with it and that tend to make us parties to the interests and to involve us in the controversies of European nations and to recognition by pending treaty of the right of England to be considered in the construction of an interoceanic canal. We declare that such canal, when constructed, ought to be controlled by the United States in the interests of American nations.

We observe with anxiety and regard with disapproval the increasing ownership of American lands by aliens and their growing control over our international transportation, natural resources, and public utilities. We demand legislation to protect our public domain, our natural resources, our franchises, and our internal commerce and to keep them free and maintain the independence of all foreign monopolies, institutions, and influences, and we declare our opposition to the leasing of the public lands of the United States whereby corporations and syndicates will be able to secure control thereof and thus monopolize the public domain, the heritage of the people.

We are in favor of the principles of direct legislation. In view of the great sacrifice made and patriotic services rendered we are in favor of liberal pensions to deserving soldiers, their widows, orphans, and other dependents. We believe that enlistment and service should be accepted as conclusive proof that the soldier was free from disease and disability at the time of his enlistment. We condemn the present administration of the pension laws.

We tender to the patriotic people of the South African Republics our sympathy and ex-

press our admiration for them in their heroic attempts to preserve their political freedom and maintain their national independence. We declare the destruction of these republics and the subjugation of their people to be a crime against civilization. We believe this sympathy should have been voiced by the American Congress as was done in the case of the French, the Greeks, the Hungarians, the Poles, the Americans, and the Cubans, and as the traitors of this country would have declared. We declare the Porto Rican Tull Law to be not only a crime but a dangerous departure from the principles of our form of government. We believe in republicanism in form of government and are opposed to monarchy and to the whole theory of imperialistic control.

We believe in self-government, a government by the consent of the governed, and are unflinchingly opposed to any government based upon force. It is clear and certain that the rulers of the Philippines are plotting against the made citizens of the United States with the danger of applying to the United States. We pledge the principle we are solemnly and publicly pledged to observe in the case of Cuba.

There is no longer being any necessity for collecting war taxes. We denounce the repeal of the war taxes levied to carry on the war with Spain.

We favor the immediate admission into the union of States, the Territories of Arizona, New Mexico, and Oklahoma.

We demand that our nation's promises to Cuba shall be fulfilled in every particular.

We believe the National Government should lend every aid and encouragement and assistance toward the reclamation of the arid lands of the United States, and to that end we are in favor of a comprehensive survey thereof and an immediate ascertainment of the water supply available for such reclamation, and we believe it to be the duty of the General Government to provide for the construction of storage reservoirs and irrigation works so that the water supply of the arid region may be utilized to the greatest possible extent in the interests of the people, while preserving all rights of the State.

Transportation is a public necessity and the means and methods of it are matters of public concern. Railway companies exercise a power over industries, business, and commerce which they ought not to do, and should be made to serve the public interests without making into a profitable device or unjust discriminations.

We observe with satisfaction the growing sentiment among the people in favor of the public ownership and operation of public utilities.

We are in favor of expanding our commerce in the interests of American labor and for the benefit of all our people by every honest and peaceful means. Our creed and our history justify the nations of the earth in expecting that wherever the American flag is unfurled in authority human liberty and political liberty will be found. We protest against the adoption of any policy that will change in the thought of the world the meaning of our flag.

We are opposed to the importation of Asiatic laborers in competition with American labor, and favor a more rigid enforcement of the laws relating thereto.

The Silver Republican party of the United States, in the foregoing principles, seeks to per-

petuate the spirit and to adhere to the teachings of Abraham Lincoln."

Platform of the American League of Anti-Imperialists. Republicans and others opposed to a policy of conquest, and to the government of people, not as citizens, but as subjects of the Republic of the United States, and who wished to make that opposition distinct and emphatic in the presidential canvass, met in convention at Indianapolis, on the 16th of August, as the "Liberty Congress of the American League of Anti-Imperialists." One party among them thought the best demonstration of public opinion on this issue could be obtained by the nomination of a third ticket; while another and larger party deemed it expedient to indorse the candidacy of William J. Bryan, as a pronounced opponent of the imperial policy. The views of the latter prevailed, and the indorsement of Mr. Bryan was carried in the convention; but many of the former refused submission to the vote of the majority, and subsequently held a Third Party convention at New York (see below). The Indianapolis Declaration was as follows:

"This Liberty Congress of Anti-Imperialists recognizes a great National crisis, which menaces the Republic, upon whose future depends in such large measure the hope of freedom throughout the world. For the first time in our country's history the President has undertaken to subjugate a foreign people and to rule them by despotic power. He has thrown the protection of the flag over slavery and polygamy in the South Islands. He has arrogated to himself the power to impose upon the inhabitants of the Philippines government without their consent and taxation without representation. He is waging war upon them for asserting the very principles for the maintenance of which our forefathers pledged their lives, their fortunes and their sacred honor. He claims for himself and Congress authority to govern the territories of the United States without constitutional restraint.

"We believe in the Declaration of Independence. Its truths, not less self-evident to-day than when first announced by our fathers, are of universal application and cannot be abandoned while government by the people endures.

"We believe in the Constitution of the United States. It gives the President and Congress certain limited powers and secures to every man within the jurisdiction of our Government certain essential rights. We deny that either the President or Congress can govern any person anywhere outside the Constitution.

"We are absolutely opposed to the policy of President McKinley, which proposes to govern millions of men without their consent, which in Porto Rico establishes taxation without representation, and government by the arbitrary will of a legislature unfettered by constitutional restraint, and in the Philippines prosecutes a war of conquest and demands unconditional surrender from a people who are of right free and independent. The struggle of men for freedom has ever been a struggle for constitutional liberty. There is no liberty if the citizen has no right which the Legislature may not invade, if he may be taxed by the Legislature in which he is not represented, or if he is not protected by fundamental law against the arbitrary action of executive power. The policy of the President offers the inhabitants of Porto Rico, Hawaii and

the Philippines no hope of independent national prospect of American citizenship, no constitutional protection, no representation in the Congress which taxes them. This is the government of men by arbitrary power without representation. This is imperialism. There is no room under the tree flag of America for subjects of the President and Congress, who derive their powers from the Constitution, can govern men without regard to its limitations.

"We believe the greatest safeguard of liberty is a free press, and we demand that the censorship in the Philippines, which keeps from the American people the knowledge of what is going on in their name, be abolished. We are entitled to know the truth and we insist that the powers which the President holds in trust for us should be used to suppress it.

"Because we thus believe, we oppose the reelection of Mr. McKinley. The supreme purpose of the people in this momentous campaign should be to stamp with their final disapproval his attempt to grasp imperial power. As if governing people can have no more imperative duty than to derive from public life a Chief Magistrate who, whether in weakness or of woe of purpose, has used his temporary authority to subvert the character of their government and to destroy their National ideals.

"We, therefore, in the belief that it is essential at this crisis for the American people again to declare their faith in the universal application of the Declaration of Independence and to reassert their will that their servants shall not have or exercise any powers whatever other than those conferred by the Constitution, earnestly make the following recommendations to our countrymen:

"First, that, without regard to their views on minor questions of domestic policy, they withhold their votes from Mr. McKinley, in order to stamp with their disapproval what he has done.

"Second, that they vote for those candidates for Congress in their respective districts who will oppose the policy of imperialism.

"Third, while we welcome any other method of opposing the reelection of Mr. McKinley, we advise direct support of Mr. Bryan as the most effective means of crushing imperialism. We are convinced of Mr. Bryan's sincerity and of his earnest purpose to secure to the Filipinos their independence. His position and the declarations contained in the platform of his party on the vital issue of the campaign meet our unqualified approval.

"We recommend that the Executive committees of the American Anti-Imperialist League and its allied leagues continue and extend their organizations, preserving the independence of the movement; and that they take the most active part possible in the pending political campaign.

"Until now the policy which has turned Filipinos from warm friends to bitter enemies, which has slaughtered thousands of them, which has wasted their country, has been the policy of the President. After the next election it becomes the policy of every man who votes to reelect him and who thus becomes with him responsible for every drop of blood thereafter shed.

"In declaring that the principles of the Declaration of Independence apply to all men, Congress means to include the negro race

Americans as well as the Filipinos. We do not care whether in the South or in the North, we give the negro of his rights as a citizen with the Declaration of Independence and the Constitution of the United States.

The "Third Party" Anti-Imperialist Platform and Nominations. The Anti-Imperialists were under a Third Party ticket in the 1900 convention which met in the city of New York, September 5 and put in nomination for President and Vice President Senator Donaldson Caffery of Louisiana, and Archibald Murray Howe of Massachusetts. The name "National Party" was assumed, and its aims and purposes were thus declared:

We find our country threatened with internal divisions. On the one hand is a public opinion inflamed by organized forces of commercialism that have provoked a war intended by the people to be a war of humanity into a war of conquest. On the other is a public opinion swayed by demagogic appeals to factional and class passions, the most fatal of diseases to a republic. We believe that either of these influences, if unchecked, would ultimately compass the downfall of our country, but we also believe that neither represents the sober convictions of our countrymen. Convinced that the extension of the jurisdiction of the United States for the purpose of holding foreign people as alien dependents is an innovation dangerous to our liberties and repugnant to the principles upon which our Government is founded, we pledge our earnest efforts through all constitutional means:

First, to procure the renunciation of all imperial or colonial pretensions with regard to foreign countries claimed to have been acquired through or in consequence of military or naval operations of the last two years.

Second, we further pledge our efforts to secure a single gold standard and a sound banking system.

Third, to secure a public service based on merit only.

Fourth, to secure the abolition of all corrupting special privileges, whether under the guise of subsidies, bounties, undeserved pensions or trust breeding tariffs.

Within a few weeks after the holding of this convention, Senator Caffery and Mr. Howe withdrew their names from the canvass, and it was decided to appoint electors at large in as many states as possible, to receive the votes of those supporting the movement.

Social Democratic Party Platform and Nominations.—The last distinct movement of organization for the presidential election was that of a "Social Democratic Party," whose convention, at Chicago, September 29, placed Eugene V. Debs of Illinois, in nomination for President, and Job Harriman, of California, for Vice President, on principles declared as follows:

The Social Democratic party of America declares that life, liberty, and happiness depend upon equal political and economic rights.

In our economic development an industrial revolution has taken place, the individual tool of former years having become the social tool of the present. The individual tool was owned by the worker, who employed himself and was master of his product. The social tool, the machine, is owned by the capitalist, and the worker

is dependent upon him for employment. The capitalist thus becomes the master of the worker, and is able to appropriate to himself a large share of the product of his labor.

A capitalist, in the private ownership of the means of production, is responsible for the necessities of subsistence of the poverty-stricken and dependent masses of the overworked and oppressed people of the same country, who have produced for him the wealth of the capitalist system with no other compensation than Socialism, the collective ownership of the means of production for the common good and welfare.

The present system of supply and demand and private ownership is rapidly converting the laboring into a few rich classes, and the propertyless class and the propertyless class. The propertyless class, and the most powerful of these, the working class, is disappointed in the material improvement. The issue is now between the two classes, named. Our political liberty is now a mere name. Liberty to the masses means social liberty, economic liberty. Independent political action and the trade union movement are the only effective fighting factors of the working class, representing its political, the other classes, the ruling class, and both must cooperate to achieve an equalist system.

Therefore, the Social Democratic party of America declares its object to be:

First, The organization of the propertyless class into a political party to strip the powers now controlled by capitalists.

Second, The abolition of wage slavery by the establishment of a National system of co-operative industry based upon the social common ownership of the means of production and distribution to be administered by society in the common interest of all its members, and the complete emancipation of the propertyless classes from the domination of capitalist classes.

The working class and all those in sympathy with their historic mission to realize a better civilization should sever connection with all capitalist and reform parties and unite with the Social Democratic party of America. The control of political power by the Social Democratic party will be tantamount to the destruction of all class rule. The solidarity of labor throughout the millions of class-conscious fellow workers throughout the civilized world will overthrow internationalism, the brotherhood of man.

As steps in that direction we make the following demands:

First—Revision of our Federal Constitution in order to remove the obstacles to a pure control of government by the people in representative form.

Second—The public ownership of all industries controlled by monopolies, trusts, and combinations.

Third—The public ownership of all railroads, telegraphs and telephones, all means of transportation and communication, all water works, gas and electric plants, and other public utilities.

Fourth—The public ownership of all gold, silver, copper, lead, iron, coal, and other mines, and all oil and gas wells.

Fifth—The reduction of the hours of labor in proportion to the increasing facilities of production.

"Sixth.—The inauguration of a system of public works and improvements for the employment of the unemployed, the public credit to be utilized for that purpose.

"Seventh.—Scholarships to be free, the inventor to be remunerated by the public.

"Eighth.—Labor legislation to be National instead of local, and international when possible.

"Ninth.—National insurance of working people against accidents, lack of employment, and want in old age.

"Tenth.—Equal civil and political rights for men and women, and the abolition of all laws discriminating against women.

"Eleventh.—The adoption of the initiative and referendum, proportional representation, and the right of recall of representatives by the voters.

"Twelfth.—Abolition of war and the introduction of international arbitration."

The Canvass and Election.—The canvass preceding the election was much less excited than that of 1896. The confusion of issues greatly lessened the intensity with which they were discussed. Mr. Bryan again took the field in person, travelling widely through all parts of the country, making great numbers of speeches to immense audiences everywhere; and Governor Roosevelt did the same on the Republican side, to a somewhat less extent.

The election, which occurred on the 6th of November, was conducted with the quiet order that is rarely broken at such times in America. About fourteen millions of votes were cast, of which, according to the returns compiled for the Tribune Almanac, President McKinley received 7,214,027, and Bryan, 6,342,514. For the Prohibition ticket, 197,112 votes were cast; for the Socialist Labor ticket, 32,433; for the Social Democratic ticket, 82,904; and 74,444 votes were scattered among other candidates. The States carried for McKinley were: California, giving 9 electoral votes; Connecticut, 6; Delaware, 3; Illinois, 24; Indiana, 15; Iowa, 13; Kansas, 10; Maine, 6; Maryland, 8; Massachusetts, 15; Michigan, 11; Minnesota, 9; Nebraska, 8; New Hampshire, 4; New Jersey, 10; New York, 36; North Dakota, 3; Ohio, 23; Oregon, 4; Pennsylvania, 32; Rhode Island, 4; South Dakota, 4; Utah, 3; Vermont, 4; Washington, 4; West Virginia, 6; Wisconsin, 12; Wyoming, 3; Total, 292. For Bryan, the electoral votes of the following States were given: Alabama, 11; Arkansas, 8; Colorado, 4; Florida, 4; Georgia, 13; Idaho, 3; Kentucky, 13; Louisiana, 8; Mississippi, 9; Missouri, 17; Montana, 3; Nevada, 3; North Carolina, 11; South Carolina, 9; Tennessee, 12; Texas, 15; Virginia, 12; Total, 155.

President McKinley was re-elected by a majority of 137 votes in the Electoral College, and by a majority of nearly half a million of the popular vote.

The popular vote for President shows three interesting things:—

"(1) Many men of each party abstained from voting. For the total was only 45,132 greater than in 1896, whereas the increase in population adds about a million to the electorate every four years. The total vote last year was 13,970,234. Mr. McKinley received only about 100,000 more than in 1896, and Mr. Bryan 130,000 less. Many men in each party, then, were dissatisfied with their candidate and platform.

"(2) Mr. Bryan's largest gains were in New England, because of the anti-imperialist feeling, and in New York and New Jersey and Indiana, because of a milder fear of financial disturbance; and his losses were greatest in Utah, in Colorado, and in the Pacific States, on account of better times and of less interest in silver.

"(3) Twelve Southern States cast a smaller vote than in 1896, partly because of the emancipation of the Negroes, and partly because many Gold Democrats abstained from voting."—*The World's Work, Feb., 1901*

The Democratic candidate on "Imperialism."—The issue which ought to have been supreme in the Presidential election, the fundamental principles of government and the consequences of policy were bound up in a question which was unhappily confused by prevailing anxieties in the sensitive region of commercial and industrial affairs, is more broadly and adequately defined in the declarations of the two leading candidates, on their formal acceptance of nominations by the Democratic and Republican parties, than it is in the party platforms quoted above. The first to speak was Mr. Bryan. Responding to the committee which notified him of his nomination, at Indianapolis, on the 8th of August, he devoted the greater part of his remarks to the policy of colonial possession, in which the government had been embroiled. The following passages are fairly representative of the view taken by those who condemned what they termed "imperialism," in the undertaking of the government of the American Republic to impose its sovereignty upon the people of the Philippine Islands, and to hold their country as a "possession."

"When the president, supported by a practically unanimous vote of the House and Senate, entered upon a war with Spain for the purpose of aiding the struggling patriots of Cuba, the country, without regard to party, applauded. Although the Democrats realized that the administration would necessarily gain a political advantage from the conduct of a war which in the very nature of the case must soon end in complete victory, they sided with the Republicans in the support which they gave to the President. When the war was over and the Republican leaders began to suggest the propriety of a colonial policy, opposition at once manifested itself.

"When the President finally laid before the Senate a treaty which recognized the independence of Cuba, but provided for the cession of the Philippine Islands to the United States, the menace of imperialism became so apparent that many preferred to reject the treaty and risk the ills that might follow rather than take the chance of correcting the errors of the treaty by the independent action of this country. I was among the number of those who believed it better to ratify the treaty and end the war, release the volunteers, remove the excuse for war expenditures, and then give the Filipinos the independence which might be forced from Spain by a new treaty. . . . The title of Spain's rights extinguished we were at liberty to deal with the Filipinos according to American principle. The Bacon resolution, introduced a month before hostilities broke out at Manila, provided independence to the Filipinos on the same terms as it was promised to the Cubans. I supported it."

resolution and believe that its adoption prior to the breaking out of hostilities would have prevented bloodshed, and that its adoption at any subsequent time would have ended hostilities.

If the Bacon resolution had been adopted by the Senate and carried out by the President either at the time of the ratification of the treaty or at any time afterwards, it would have taken the question of imperialism out of politics and left the American people free to deal with their domestic problems. But the resolution was defeated by the vote of the Republican Vice President and from that time to this a Republican Congress has refused to take any action whatever in the matter.

When hostilities broke out at Manila, Republican speakers and Republican editors at once sought to lay the blame upon those who had delayed the ratification of the treaty, and, during the progress of the war, the same Republicans have accused the opponents of imperialism of giving encouragement to the Filipinos.

"The Filipinos do not need any encouragement from Americans now living. Our whole history has been an encouragement, not only to the Filipinos, but to all who are denied a voice in their own government. If the Republicans are prepared to censure all who have used language calculated to make the Filipinos hate foreign domination, let them condemn the speech of Patrick Henry. When he uttered that passionate appeal, 'Give me liberty or give me death,' he expressed a sentiment which still echoes in the hearts of men. Let them censure Jefferson, of all the statesmen of history none have used words so offensive to those who would hold their fellows in political bondage. Let them censure Washington, who declared that the colonists must choose between liberty and slavery. Or, if the statute of limitations has run against the sins of Henry and Jefferson and Washington, let them censure Lincoln, whose Gettysburg speech will be quoted in defense of popular government when the present advocates of force and conquest are forgotten. . . . If it were possible to obliterate every word written or spoken in defense of the principles set forth in the Declaration of Independence, a war of conquest would still leave its legacy of perpetual hatred, for it was God himself who placed in every human heart the love of liberty. He never made a race of people so low in the scale of civilization or intelligence that it would welcome a foreign master.

"Those who would have this nation enter upon a career of empire must consider not only the effect of imperialism on the Filipinos, but they must also calculate its effects upon our own nation. We cannot repudiate the principle of self government in the Philippines without weakening that principle here. . . .

"Our opponents, conscious of the weakness of their cause, seek to confuse imperialism with expansion, and have even dared to claim Jefferson as a supporter of their policy. Jefferson spoke so freely and used language with such precision that no one can be ignorant of his views. On one occasion he declared: 'If there be one principle more deeply rooted than any other in the mind of every American, it is that we should have nothing to do with conquest.' And again he said: 'Conquest is not in our principles. It is inconsistent with our government.' The forcible annexation of territory to be governed

by arbitrary power differs as much from the acquisition of territory to be incorporated into the United States as a republic differs from a democracy. The Democratic party does not oppress, exploit, or oppressively exploit the Republic, and its opponents have no right to be so afraid of American citizens, or of the people of the United States, who are willing to let our government be a republic of free citizens, their duties as such.

A colonial policy means that we shall sell to the Philippine Islands a few traders, a few taskmasters, and not a few holders of authority large enough to support the authority of a sufficient fraction of the people whom they rule the natives. If we have an imperial policy we must have a great standing army as its permanent possession, a complement. The spirit which will justify the forcible annexation of the Philippine Islands will justify the seizure of other islands and the domination of other people and with wars thus going on we can expect a certain if not rapid growth of our military establishment.

"The Republican platform assumes that the Philippine Islands will be retained under American sovereignty, and we have a right to demand of the Republican leaders a discussion of the future status of the Filipinos. Is he to be a citizen or a subject? Are we to bring him to the body politic eight or ten million? As men, so-called, ferocious in race and history that amalgamation is impossible. Are they to share with us in making the laws and shaping the destiny of this nation? No Republican of prominence has been bold enough to advocate such a proposition. The McKinley resolution adopted by the Senate immediately after the ratification of the treaty, expressly negatives this idea. The Democratic platform describes the situation when it says that the Filipinos cannot be citizens without endangering our civilization. Who will dispute it? And what is the alternative? If the Filipino is not to be a citizen, shall we make him a subject? On that question the Democratic platform speaks with equal emphasis. It declares that the Filipino cannot be a subject without endangering our form of government. A Republic can have no subjects. A subject is possible only in a government resting upon force; he is unknown in a government deriving its just powers from the consent of the governed.

"The Republican platform says that 'the largest measure of self government consistent with their welfare and morality shall be secured to them (the Filipinos) by law.' This is a strange doctrine for a government which owes its very existence to the men who offered their lives as a protest against government without consent and taxation without representation. In what respect does the position of the Republican party differ from the position taken by the English government in 1776? Did not the English government promise a good government to the colonists? What king ever promised a bad government to his people? Did not the English government promise that the colonists should have the largest measure of self government consistent with their welfare and English duties? Did not the Spanish government promise to give to the Cubans the largest measure of self government consistent with their welfare and Spanish duties? The whole difference between a Monarchy and a Republic may be summed up in one

sentence. In a Monarchy the King gives to the people what he believes to be a good government. In a Republic the people secure for themselves what they believe to be a good government.

"The Republican platform promises that some measure of self government is to be given the Filipinos by law; but even this pledge is not fulfilled. Nearly sixteen months elapsed after the ratification of the treaty before the adjournment of Congress last June, and yet no law was passed dealing with the Philippine situation. The will of the President has been the only law in the Philippine Islands wherever the American authority extends. Why does the Republican party hesitate to legislate upon the Philippine question? Because a law would disclose the radical departure from history and precedent contemplated by those who control the Republican party. The storm of protest which greeted the Porto Rico bill was an indication of what may be expected when the American people are brought face to face with legislation upon this subject. If the Porto Ricans, who welcomed annexation, are to be denied the guarantees of our Constitution, what is to be the lot of the Filipinos, who resisted our authority? If secret influences could compel a disregard of our plain duty toward friendly people, living near our shores, what treatment will those same influences provide for unfriendly people 7,000 miles away?"

"Is the sunlight of full citizenship to be enjoyed by the people of the United States, and the twilight of semi citizenship endured by the people of Porto Rico, while the thick darkness of perpetual vassalage covers the Philippines? The Porto Rico tariff law asserts the doctrine that the operation of the Constitution is confined to the forty-five States. The Democratic party disputes this doctrine and denounces it as repugnant to both the letter and spirit of our organic law. There is no place in our system of government for the deposit of arbitrary and irresponsible power. That the leaders of a great party should claim for any President or Congress the right to treat millions of people as mere 'possessions' and deal with them unrestrained by the Constitution or the bill of rights, shows how far we have already departed from the ancient landmarks and indicates what may be expected if this nation deliberately enters upon a career of empire."

"The territorial form of government is temporary and preparatory, and the chief security a citizen of a territory has is found in the fact that he enjoys the same constitutional guarantees and is subject to the same general laws as the citizen of a State. Take away this security and his rights will be violated and his interests sacrificed at the demand of those who have political influence. This is the evil of the colonial system, no matter by what nation it is applied."

"Let us consider briefly the reasons which have been given in support of an imperialistic policy. Some say that it is our duty to hold the Philippine Islands. But duty is not an argument. It is a conclusion. To ascertain what our duty is, in any emergency, we must apply well settled and generally accepted principles. It is our duty to avoid stealing, no matter whether the thing to be stolen is of great or little value. It is our duty to avoid killing a human being, no

matter where the human being lives or to whom race or class he belongs."

"It is said that we have assumed too many world obligations which make it necessary for us to permanently maintain a government in the Philippine Islands. I reply, first, that the greatest obligation of this nation is to be true to itself. No obligation to any particular nation or group of nations combined, can require the abandonment of our theory of government, and the substitution of doctrines against which our whole national life has been a protest. And second, that our obligation to the Filipinos, who people the Islands, is greater than any obligation which we can owe to foreigners who have a temporary residence in the Philippines or desire to be there. It is argued by some that the Filipinos are incapable of self government and that, therefore, we owe it to the world to take control of them. Admiral Dewey, in an official report to the Navy Department, declared the Filipinos more capable of self government than the Cubans, and said that he based his opinion upon a knowledge of both races."

"Republicans ask, 'Shall we haul down the flag that floats over our dead in the Philippines?' The same question might have been asked when the American flag floated over Chapultepec and waved over the dead who fell there, but the tourist who visits the City of Mexico finds there a national cemetery owned by the United States and cared for by an American citizen. Our flag still floats over our dead but when the treaty with Mexico was signed American authority withdrew to the Rio Grande, and I venture the opinion that during the last fifty years the people of Mexico have made more progress under the stimulus of independence and self government than they would have made under a carpet bag government held in place by bayonets. The United States and Mexico, friendly republics, are each stronger and happier than they would have been had the former been cursed and the latter crushed by an imperialistic policy disguised as 'benevolent assimilation'."

"Can we not govern colonies?" we are asked. The question is not what we can do, but what we ought to do. This nation can do whatever it desires to do, but it must accept responsibility for what it does. If the Constitution stands in the way, the people can amend the Constitution. I repeat, the nation can do whatever it desires to do, but it cannot avoid the natural and legitimate results of its own conduct."

"Some argue that American rule in the Philippine Islands will result in the better education of the Filipinos. Be not deceived. If we expect to maintain a colonial policy, we shall not find it to our advantage to educate the people. The educated Filipinos are now in revolt against us, and the most ignorant ones have made the least resistance to our domination. If we are to govern them without their consent and give them no voice in determining the taxes which they must pay, we dare not educate them, lest they learn to read the Declaration of Independence and Constitution of the United States and mock us for our inconsistency. The principal arguments, however, advanced by those who enter upon a defense of imperialism are:

"First—That we must improve the present opportunity to become a world power and enter into international politics."

Second. That our commercial interests in the Philippine Islands and in the Orient make it necessary for us to hold the Islands permanently.

Third. That the spread of the Christian religion will be facilitated by a colonial policy.

Fourth. That there is no honorable retreat from the position which the nation has taken.

The first argument is addressed to the nation's pride and the second to the nation's pocket book. The third is intended for the church member and the fourth for the patriot. It is sufficient answer to the first argument to say that for more than a century this nation has been a world power. For ten decades it has been the most potent influence in the world. Not only has it been a world power, but it has done more to adapt the politics of the human race than all the other nations of the world combined. Because our Declaration of Independence was promulgated others have been promulgated. Because the patriots of 1776 fought for liberty, others have fought for it. Because our Constitution was adopted, other constitutions have been adopted. The growth of the principle of self-government, planted on American soil, has been the overshadowing political fact of the nineteenth century. It has made this nation conspicuous among the nations and given it a place in history such as no other nation has ever enjoyed. Nothing has been able to check the onward march of this idea. I am not willing that this nation should lose the omnipotent weapon of truth to seize again the weapons of physical warfare. I would not exchange the glory of this Republic for the glory of all the empires that have risen and fallen since time began.

The permanent chairman of the last Republican National Convention presented the primary argument in all its boldness when he said: "We make no hypocritical pretense of being interested in the Philippines solely on account of others. While we regard the welfare of those people as a sacred trust, we regard the welfare of the American people first. We see our duty to ourselves as well as to others. We believe in trade expansion. By every legitimate means within the province of government and constitution we mean to stimulate the expansion of our trade and open new markets. This is the commercial argument. It is based upon the theory that war can be rightly waged for pecuniary advantage, and that it is profitable to purchase trade by force and violence. . . . The Democratic party is in favor of the expansion of trade. It would extend our trade by every legitimate and peaceful means; but it is not willing to make merchandise of human blood. But a war of conquest is as unwise as it is unrighteous. A harbor and coaling station in the Philippines would answer every trade and military necessity, and such a concession could have been secured at any time without difficulty.

It is not necessary to own people in order to trade with them. We carry on trade to day with every part of the world, and our commerce has expanded more rapidly than the commerce of any European empire. We do not own Japan or China, but we trade with their people. We have not absorbed the republics of Central and South America, but we trade with them. It has not been necessary to have any political connection with Canada or the nations of Europe in

order to trade with them. Trade cannot be permanently profitable unless it is voluntary.

In pacifism would be profitable to the ship contractors who would carry their soldiers to the Philippines and to the ideal soldiers themselves. It would be profitable to those who would take up the torches and blow up the boats and to the others who would be taxed here and paid over there, but to the future of the laboring man and to the vast majority of those engaged in other occupations it would bring expatriation without return and risk without reward.

The pecuniary argument, though true of factive with certain classes, is not likely to be used so often or presented with so much enthusiasm as the religious argument. It what has been termed the "gun powder gospel" were raised against the Filipinos only, how can there be a sufficient answer to say that a majority of the Filipinos are now members of one branch of the Christian church, but the principle involved is one of much wider application and challenges serious consideration. The religious argument varies in positiveness from a passive belief that Providence delivered the Filipinos into our hands for their good and our glory to the exhortation of the minister who said that we ought to "thresh the natives (Filipinos) until they understand where we are," and that "every bullet sent, every cannon shot and every flag waved, means righteousness."

If true Christianity consists in carrying out in our daily lives the teachings of Christ, who will say that we are commanded to "civilize with dynamite and proselyte with the sword?"

"Love, not force, was the weapon of the Nazarene; sacrifice for others, not the exploitation of them, was His method of reaching the human heart. A missionary recently told me that the Stars and Stripes once saved his life because his assailant recognized our flag as a flag that had no blood upon it. Let it be known that our missionaries are seeking souls instead of sovereignty; let it be known that instead of being the advance guard of conquering armies, they are going forth to help and uplift, having their loins girt about with truth and their feet shod with the preparation of the gospel of peace, wearing the breastplate of righteousness and carrying the sword of the spirit. Let it be known that they are citizens of a nation which respects the rights of the citizens of other nations as carefully as it protects the rights of its own citizens, and the welcome given to our missionaries will be more cordial than the welcome extended to the missionaries of any other nation.

The argument made by some that it was unfortunate for the nation that it had anything to do with the Philippine Islands, but that the naval victory at Manila made the permanent acquisition of those islands necessary, is also unsound. We won a naval victory at Santiago, but that did not compel us to hold Cuba. The shedding of American blood in the Philippine Islands does not make it imperative that we should retain possession forever. American blood was shed at San Juan Hill and El Caney, and yet the President has promised the Cubans independence. The fact that the American flag floats over Manila does not compel us to exercise perpetual sovereignty over the islands; the American flag waves over Havana to day, but the

President has promised to haul it down when the flag of the Cuban Republic is ready to rise in its place. Better a thousand times that our flag in the Orient give way to a flag representing the idea of self-government than that the flag of this Republic should become the flag of an empire.

"There is an easy, honest, honorable solution of the Philippine question. It is set forth in the Democratic platform, and it is submitted with confidence to the American people. This plan I unreservedly indorse. If elected, I will convene Congress in extraordinary session as soon as inaugurated and recommend an immediate declaration of the nation's purpose, first, to establish a stable form of government in the Philippine Islands, just as we are now establishing a stable form of government in Cuba; second, to give independence to the Cubans; third, to protect the Filipinos from outside interference while they work out their destiny, just as we have protected the republics of Central and South America, and are, by the Monroe doctrine, pledged to protect Cuba."

The Republican candidate on the same subject.—The answer of the party controlling the government to the impeachment of its policy of colonial acquisition and especially of its conduct in the Philippine Islands, was given by Mr. McKinley, in a letter of acceptance, addressed, September 8, to the committee which gave him formal notice of his nomination by the Republican convention. After rehearsing at considerable length the events which preceded, attended and followed the capture of Manila, he continued:

"Would not our adversaries have sent Dewey's fleet to Manila to capture and destroy the Spanish sea power there, or, dispatching it there, would they have withdrawn it after the destruction of the Spanish fleet; and, if the latter, whither would they have directed it to sail? Where could it have gone? What port in the Orient was opened to it? Do our adversaries condemn the expedition under the command of Gen. Merritt to strengthen Dewey in the distant ocean and assist in our triumph over Spain, with which nation we were at war? Was it not our highest duty to strike Spain at every vulnerable point, that the war might be successfully concluded at the earliest practicable moment? And was it not our duty to protect the lives and property of those who came within our control by the fortunes of war? Could we have come away at any time between May 1, 1898, and the conclusion of peace without a stain upon our good name? Could we have come away without dishonor at any time after the ratification of the peace treaty by the Senate of the United States? There has been no time since the destruction of the enemy's fleet when we could or should have left the Philippine Archipelago. After the treaty of peace was ratified, no power but Congress could surrender our sovereignty or alienate a foot of the territory thus acquired. The Congress has not seen fit to do the one or the other, and the President had no authority to do either, if he had been so inclined, which he was not. So long as the sovereignty remains in us it is the duty of the Executive, whoever he may be, to uphold that sovereignty, and if it be attacked to suppress its assailants. Would our political adversaries do less?"

It has been asserted that there would have

been no fighting in the Philippines if Congress had declared its purpose to give independence to the Tagalog insurgents. The insurgents often wait for the action of Congress. They are on the offensive; they opened fire on our Army. Those who assert our responsibility for the beginning of the conflict have forgotten that before the treaty was ratified in the Senate and while it was being debated in that body and while the Beyer resolution was under discussion, on February 4, 1899, the insurgents attacked the American Army, after being previously advised by the American forces were under orders not to fire upon them except in defense. The papers found in the recently captured archives of the insurgents demonstrate that this attack had been fully planned for weeks before it occurred. This unprovoked assault upon our soldiers at a time when the Senate was deliberating upon the treaty shows that no action on our part, except surrender and abandonment, would have prevented the fighting, and leaves no doubt in my fair mind of where the responsibility rests for the shedding of American blood.

"With all the exaggerated phrase-making of this electoral contest, we are in danger of being diverted from the real contention. We are in agreement with all of those who supported the war with Spain and also with those who counsel the ratification of the treaty of peace. Upon these two great essential steps there can be no issue and out of these came all of our responsibilities. If others would shirk the obligations imposed by the war and the treaty, we must do so to act further with them, and here the issue was made. It is our purpose to establish in the Philippines a government suitable to the wants and conditions of the inhabitants and to prepare them for self government when they are ready for it and as rapidly as they are ready for it. That I am aiming to do under my Constitutional authority, and will continue to do until Congress shall determine the political status of the inhabitants of the archipelago.

"Are our opponents against the treaty? If so, they must be reminded that it could not have been ratified in the Senate but for their assistance. The Senate which ratified the treaty and the Congress which added its sanction by a large appropriation comprised Senators and Representatives of the people of all parties. Would our opponents surrender to the insurgents, abandon our sovereignty or cede it to them? If that be their purpose, then it should be promptly proclaimed, for only evil can result from the hope raised by our opponents in the minds of the Filipinos, that with their success at the polls in November there will be a withdrawal of our Army and of American sovereignty over the archipelago; the complete independence of the Tagalog people recognized and the powers of government over all the other people of the archipelago conferred upon the Tagalog leaders. The effect of a belief in the minds of the insurgents that this will be done has already prolonged the rebellion and increases the necessity for the continuance of a large army. It is now delaying full peace in the archipelago and the establishment of civil governments and has influenced many of the insurgents against accepting the liberal terms of amnesty offered by Gen. McArthur under my direction. But for these false hopes, a considerable reduction could have been

UNITED STATES, 1900.

Imperialism lies to place in the record of conduct. Freedom is a rock upon which the Republican party was built, and now rests. Liberty is the right to put our doctrine for which the people want to stand, and for which 1,000,000 lives were offered and billions of dollars expended to make the loyal policy of all without the consent of Congress or State. There is a strain of all conceived hypocrisy in the anxiety to extend the Constitutional guarantees to the people of the Philippines when their nationhood is openly advocated at home. Our opponents may distrust them, but they have no right to distrust the good faith and patriotism of the majority of the people who are opposing them. They may fear the worst form of imperialism with the help of Filipinos in their hands, but if they do it is because they have parted with the spirit and faith of the fathers and have lost the ability of the founders of the party which they profess to represent.

The Republican party does not have to assert its devotion to the Declaration of Independence. That immortal instrument of the fathers remained unexecuted until the people under the lead of the Republican party in the awful clash of battle turned its promises into fulfillment. It wrote into the Constitution the amendments guaranteeing political equality to American citizenship and it has never broken them or encouraged others in breaking them. It will not be guided in its conduct by one set of principles at home and another set in the new territory belonging to the United States. If our opponents would only practice as well as preach the doctrines of Abraham Lincoln there would be no fear for the safety of our institutions at home or their rightful balance in any territory over which our flag floats.

Empire has been expelled from Porto Rico and the Philippines by American freedom. The flag of the Republic now floats over these islands as an emblem of rightful sovereignty. Will the Republic stay and dispense to their inhabitants the blessings of liberty, education and free institutions, or stand away, leaving them to anarchy or imperialism? The American question is between duty and desertion—the American verdict will be for duty and against desertion, for the Republic against both anarchy and imperialism.

A. D. 1900 (June).—Revenues and expenditures of the government for the fiscal year ended June 30, 1900.—The revenues of the Government from all sources (by warrants) for the fiscal year ended June 30, 1900, were:

From internal revenue	\$296,257,027.76
From customs	263,161,871.16
From profits on coinage, bullion deposits, etc.	9,692,374.09
From District of Columbia	4,008,222.77
From fees (consular, letters patent, and land)	3,291,716.68
From sales of public lands	2,846,882.08
From tax on national banks	1,699,554.00
From navy pension, navy hospital, clothing, and deposit funds	1,621,538.52
From sales of Indian lands	1,384,633.49
From payment of interest by Pacific railways	1,173,466.44
From miscellaneous	197,375.08
From sales of Government property	779,522.78
From customs fees, fines, penalties, etc.	675,790.95
From mining and fuel	537,194.81
From deposits for surveying public lands	273,247.19
From sales of ordnance material	257,883.76
From Soldiers' Home, permanent fund, etc.	245,920.62
From sales of seal skins and part of seal islands	226,676.47

UNITED STATES, 1900.

From license fees Territory of Alaska	177,144
From trust funds, Department of State	1,100,000
From independent agencies, Indian lands	1,000,000
From expenditure on navy	1,000,000

From interest on public debt	1,000,000
From interest on postal revenues	1,000,000
From Postal Service	1,000,000

Total receipts

The expenditures for the same period were:

For the civil establishment, including foreign and domestic public buildings, collecting the revenues, District of Columbia, and other miscellaneous expenses	8,804,491.72
For the military establishment, including rivers and harbors, forts, arsenals, coast defenses, and expenses of the war with Spain and in the Philippines	1,617,400.28
For the naval establishment, including construction of new vessels, machinery, armament, equipment, improvement of navy yards, and expenses of the war with Spain and in the Philippines	1,617,400.28
For Indian Service	1,000,000
For pensions	1,000,000
For interest on the public debt	1,000,000
For deficiency in postal revenues	1,000,000
For Postal Service	1,000,000

Total expenditures

Showing a surplus of

As compared with the fiscal year 1899 the receipts for 1900 increased \$58,613,126.84. There was a decrease of \$117,278,388.14 in expenditures. — *United States Secretary of the Treasury, Annual Report on the State of the Finance, 1900, pp. 7-9.*

A. D. 1900 (June).—Return of losses from all causes in the armies of the U. S. since May 1, 1898.—In response to a resolution of the Senate, the following return (60th Cong., 1st Sess., Senate Doc. 136) was made by the Secretary of War, June 1, 1900, showing the losses from all causes in the armies of the United States between May 1, 1898, and June 30, 1899, casualties in the Philippines during the war with Spain, and after the close of the war with Spain down to May 20, 1900; and other interesting details.

Statement showing losses, from all causes, in the armies of the United States between May 1, 1898, and June 30, 1899. — Average strength: — 1898: Regular Army, 55,853; Volunteers, 163,103; 1899: Regular Army, 63,379; Volunteers, 45,457.

A. D. 1900, June. — Immigration for the year ended June 30. The Government report that limited return by the Government of the operations of this Bureau for the last year ended June 30, 1900, statistics of the following months show the arrival in this country during that period of 148,572 alien, of whom 145,472 through ports of the United States and 3,090 through Canada. Of these, 304,148 were males and 114,424 females. 54,674 were under 14 years of age, 470 were over 14 to 15 years old and 23,500 were 15 and over. As to the history of persons 14 years of age and over, there were 34,576 who could neither read nor write and 2,097 who could read but were unable to write. Of 1,288 brought each 830 or over, and 271-21 showed sums less than 830, the total amounts displayed to inspectors aggregating 86,657,530. There were returned to their own countries within one year after landing 356 and hospital relief was rendered during the year to 2,417. The total debarred, or refused admission at the ports, were 4,246, as compared with 3,398 last year. Of these, 1 was excluded for idleness, 332 for insanity, 2,264 as paupers or persons likely to become public charges, 333 on account of disease, 4 contracts, 2 as suspected found guilty of conspiracy, and 7 women upon the ground that they had been imported for immoral purposes. In addition to the foregoing, there were excluded at the Mexican and Canadian borders a total of 1,616 aliens.

It appears that the Croatian and Slovenian races sent an increase of 90 per cent over those of the same races who came last year, the Hungarian an increase of 62 per cent, the South Indian, including Siamites, 28 per cent, the Japanese, 27 per cent, the Finnish 196 per cent, the Magyar, 181 per cent, the Polish, 61 per cent, the Scandinavian, 11 per cent, the Slovak, 84 per cent. These races, as the total of forty-one races represented by immigration, furnished nearly as many immigrants as the total arrivals for the last year, or 319,144 and

UNITED STATES, 1900.

their aggregate increase represented 85 per cent of the total increase shown for the year. The total immigration reported, 148,572, is in excess of that for the preceding year, 311,715, by 136,857, or 43.9 per cent. As to countries of origin, 424,700 came from European, 17,916 from Asiatic, 30 from African, and 5,896 from all other sources. The Commissioner General points out that in addition to the 148,572 immigrants there arrived 65,635 other alien passengers, who, he contends, should be included in conformity to law with those classified as immigrants."—*United States, Secretary of the Treasury, Annual Report, 1900, p. 37.*

A. D. 1900 (December).—Exports for the calendar year exceeding those of any other nation.—A Press despatch from Washington, dated February 21, 1901, announced the fact that the "complete figures for the calendar year 1900, when compared with those of other nations, show that American exports of domestic products are greater than those of any other country. The total exports of domestic merchandise from the United States in the calendar year 1900 were \$1,433,913,659; those from the United Kingdom, which has heretofore led in the race for this distinction were \$1,418,318,000, and those from Germany \$1,050,611,000. Additional interest is given to the first rank which the United States now holds as an exporting nation by the fact that a quarter of a century ago she stood fourth

UNITED STATES, 1900-1901.

in that list. In 1875 the domestic exports of the United States were \$497,263,737; those of Germany, \$607,090,000; those of France, \$747,189,000, and those of the United Kingdom \$1,087,497,000. To-day the United States stands at the head of the list, the United Kingdom second, Germany third and France fourth, with the figures as follows: United States, \$1,433,913,659; United Kingdom, \$1,418,318,000; Germany, \$1,050,611,000; France, \$787,060,000. All of these figures, it should be remembered, relate to the exports of domestic products. Thus in the quarter century the United States has increased her exports from \$497,263,737 to \$1,433,913,659, or 192 per cent; Germany, from \$607,090,000 to \$1,050,611,000, or 73 per cent; the United Kingdom, from \$1,087,497,000 to \$1,418,318,000, or 34 per cent; and France, from \$747,189,000 to \$787,060,000, or 5 per cent.

The following table, compiled from official reports, shows the exports of domestic merchandise from the United States to the United Kingdom and Germany in each calendar year from 1875 to 1900:

YEAR.	United States.	United Kingdom.	Germany.
1875	\$497,263,737	\$1,087,497,000	\$607,090,000
1876	573,755,804	976,410,000	614,000,000
1877	607,666,495	967,913,000	627,110,000
1878	720,286,821	1,038,000,000	701,310,000
1879	754,656,755	1,020,000,000	671,970,000
1880	875,561,075	1,088,551,000	741,000,000
1881	811,162,351	1,138,879,000	746,070,000

1897	1,079,834,296	1,100,882,000	884,480,000
1898	1,233,964,828	1,135,642,000	894,000,000
1899	1,253,466,000	1,287,951,000	1,001,270,000
1900	1,433,913,659	1,418,318,000	1,050,611,000

A. D. 1900-1901.—Questions relating to the political status of the new possessions of the nation submitted to the Supreme Court.—Questions of surpassing importance, touching the political status of the new possessions which the nation had acquired from Spain, the relations of their inhabitants to the government and laws of the United States, the source and nature of the authority to be exercised over them by the Congress of the United States, whether exercised under the constitution of the United States or independently of it, were taken, in December and January (1900-1901), into the Supreme Court for authoritative decision, by appeals to that tribunal made in several suits which had arisen from disputed exactions of duty on importations from Porto Rico and the Philippine Islands. The questions had been burning ones in American politics, from the moment that the treaty of peace with Spain was signed, and the whole cast, character and consequence of the new policy of over sea expansion on which the American Republic was then launched depended on the decision of the Court. Soon after the January

argument and submission of these cases to the Supreme Court, their extraordinary importance was touched upon with impressive eloquence by the Hon. W. Bourke Cockran, in an address upon "John Marshall," in which he said:

"At this moment the [Supreme Court] is considering the gravest question ever submitted to a judicial tribunal in the history of mankind. Within a few days it must decide whether the government of the United States, or rather whether two of its departments can govern territory anywhere by the sword, or whether authority exercised by officers of the United States must be controlled and limited everywhere by the Constitution of the United States."

I do not mention this momentous question to express the slightest opinion upon its merits, but merely that this assemblage of judges and of lawyers may realize the part which the judiciary is now required to play in determining the influence which this country must exercise forever more in the family of nations. The power of Congress to acquire territory is of course unquestioned, but the disposition to exercise that power will always be controlled by the conditions under which newly acquired territory must be held, and these conditions the court must now prescribe. On the one hand it may hold that wherever power is exercised under the constitution there the limitations of the constitution must be obeyed—that wherever the executive undertakes to administer, or Congress to legislate, there the judiciary must enforce upon both respect for the organic law to which they owe their existence. If this doctrine be established it is clear that no scheme of forcible conquest will ever be undertaken by this government, for the simple reason that there can be no profit in such an enterprise. On the other hand the Court may decide that Congress can hold newly annexed territories on any terms that it chooses—that it may govern them according to the constitution or independently of it—that they may be administered to establish justice among the governed or for the glory and profit of the governors. If it be held that government for profit can be maintained under the authority of the United States, conceive the extent to which it may be carried and the consequences which it may portend. If it be possible to maintain two forms of government under our constitution, it is possible to establish twenty in as many different places. Territory may be annexed to the North, to the South, to the East and to the West. The President of the United States may be vested with imperial powers in one place, with royal prerogatives in another and perhaps remain a constitutional magistrate at home. He may be made a military autocrat in some South American State, an appointed emperor in some Northern clime, a turbaned sultan in some Eastern island. Nay, more, Congress can move itself and the seat of government from Washington to some newly annexed territory governed by officers of its own creation, subject to its own unlimited power, and thus take both outside the jurisdiction of the Supreme Court.

Has the world ever before seen—could the framers of this constitution have conceived—a bench of judges exercising such a power amid the universal submission and approval of the whole people. And more extraordinary than all, this submission remains unanimous though

the decision of the court may seriously affect its own position in the structure of our government. For if it be held that the constitution does not extend of itself over newly annexed territory, then clearly the authority of the court cannot extend to it except by the action of Congress and the executive. If the authority, that is to say, the existence of the court in any part of the territory of the United States, depends upon the other departments, then it is idle to contend that it is an independent and coordinate branch of the government. To decide that the executive and legislative departments have the right to govern territory outside the constitution the court must deliberately renounce the importance which it has heretofore enjoyed and accept for itself an inferior place in our political system.

To me this is the most sublime spectacle ever presented in the history of the world. Think of it! A war has been waged with signal success, vast territory has been exacted from a conquered foe, a great political campaign has been fought and won upon the policy of taking this territory and governing it at the pleasure of Congress and the executive, yet if the court should hold that what the executive has attempted, what Congress has sanctioned, and what the people appear to have approved at the polls is in contravention of the constitution, not one voice would be raised to question the judgment or to resist its enforcement. I have said the spectacle is sublime; my friends, even a few weeks ago it was inconceivable. Not so the late election I confess I believed and said that the success of the present administration would be interpreted as a popular endorsement of its foreign policy and that the popular verdict would very probably be made to exercise a strong if not decisive influence on the court. I admit now that I was mistaken. It is evident that this question will be decided on its merits without the slightest attempt to coerce, intimidate or influence the judges, and I say now with all frankness that whatever may be the judgment it will be the very best outcome for the people of this country, for the peace of the world, for the welfare of the human race. I cannot tell what this outcome may be, but I know that whenever a crisis has arisen in the pathway of the republic, the statesmanship of the common people has always met it with justice and solved it with wisdom."—W. Bourke Cockran, *John Marshall: an address before the Erie County Bar Association, Feb. 4, 1901, at Buffalo.*

Argument before the Supreme Court was begun on the 17th of December, 1900, on two cases thus stated in the brief submitted for the government: "On June 6 1899, Goetze imported from Porto Rico into the port of New York a quantity of leaf or filler tobacco, upon which duty was assessed at 35 cents per pound as filler tobacco not specially provided for in accordance with the provisions of paragraph 213 of the tariff act of 1897, commonly known as the 'Dingley Act'. The importer protested claiming that the merchandise was not subject to duty, because Porto Rico at the time of the importation was not a foreign country and because, therefore, the imposition of duties on goods brought from a place within the territory of the United States into a port of the United States is not lawful and valid under the Constitution."

The Board of General Appraisers sustained the assessment of duty imposed by the collector upon the merchandise in question, and thereupon the importer appealed to the United States circuit court for the southern district of New York, by which court the decision of the Board of General Appraisers was affirmed in an opinion rendered by District Judge Townsend. From the judgment of the circuit court this appeal was taken.

"Porto Rico was partially occupied by the war forces of the United States during the months of July and August, 1898. By the protocol of August 12, 1898, between the United States and Spain, Spain agreed to cede Porto Rico to the United States and immediately evacuate. The evacuation was effected and full possession of the island assumed by the United States prior to January 1, 1899. From that date until the 1st of May, 1900, Porto Rico was occupied and governed by the military forces of the United States, under the command of the President, as conquered territory, under the law of belligerent right. The treaty of Paris, made in pursuance of the protocol, was signed December 10, 1898, ratified by the Senate February 6, 1899, and ratifications exchanged April 11, 1899. So that the importation in this case was subsequent to the ratification of the treaty, but prior to the establishment of a civil government in the island under act of Congress. It does not appear that the importers are citizens of the United States or of Porto Rico, nor whether or not the imported tobacco was the product of Porto Rico.

"In the case of Fourteen Diamond Rings, it appears that the claimant, Popke, is a citizen of the United States and served as a United States soldier in the Island of Luzon; that while there he purchased or acquired the rings in question and brought them into the United States without paying duty thereon some time in the year 1899, between July 31 and September 25. The rings were seized, on May 18, 1900, at Chicago, by a United States customs officer as merchandise liable to duty which should have been invoiced, and was fraudulently imported and brought into the United States contrary to law. An information for the forfeiture of the rings was filed on behalf of the Government, June 1, 1900, to which the claimant pleaded. Setting up that at the time he acquired said property Luzon was a part of the territory of the United States and that the seizure of said goods was contrary to the claimant's right as a citizen of the United States under the Constitution, and particularly under section 2, Article IV, thereof, and he insisted that under Article I, section 8, Congress is required in laying and collecting taxes to see to it that all taxes and duties shall be uniform throughout the United States. To this plea the United States demurred, and upon hearing of the demurrer, the district court gave judgment of forfeiture for the Government. This judgment the claimant has removed into this court by a writ of error."

The contention of the government as set forth in the same brief, and the main contention of the appellants in the case, against which the argument for the government was directed, were partly as follows:

"The Tariff Act of 1897 declares that 'there shall be levied, collected and paid upon all

articles imported from foreign countries and mentioned in the schedules herein contained, the rates of duty which are by the schedules and paragraphs respectively prescribed.' (30 Stat. 151.)

"The Government contends, and the circuit court so held, that this act applied to merchandise imported from Porto Rico and the Philippine Islands after their cession to the United States exactly as it did before; that within the meaning of the act these countries are to be regarded as foreign, belonging to but not forming in a domestic sense a part of the United States.

"That it is within the constitutional province of the treaty making power to accept the cession of foreign territory upon such terms, conditions, and limitations as to its internal status as may best subserve the interests of the United States and it is not necessary to invest such territory with the full status of an integral part of the Union.

"That this is one of the ordinary and necessary sovereign powers of an independent nation, and nothing in the Federal Constitution or in the fundamental principles that underlie our Republic denies to the nation a right to the full exercise of this usual and common sovereign right.

"That the treaty-making power—the President and the Senate—as evidenced by the language of the treaty of Paris, did not intend to make Porto Rico and the Philippine Islands integral parts of the United States, but intended in several particulars, to reserve their final status for adjustment by Congress, at the same time making peculiar and special differential provisions for variations and exceptions in customs and port regulations as to Spain and Spanish goods and subjects, which are inconsistent with the intention that the ceded countries became upon the ratification of the treaty a part of the United States in all respects and in the fullest sense.

"The Government contends that the term 'foreign countries' in the act of 1897 is to be regarded as having been understood by Congress to be subject to the rule of interpretation of the phrase given by the Supreme Court in the case of *Fleming v. Page*, where it was held that under our revenue laws every port is regarded as a foreign one until expressly established as domestic under the authority and control of the statutes of the United States.

"That the clause of the Constitution which declares that duties, imposts, and excises shall be uniform throughout the United States does not apply to nor govern these cases, because the term 'United States,' as there used, means only the territory comprised within the several States of the Union, and was intended only for their benefit and protection, and not for the benefit or protection of outside territory belonging to the nation; that in the latter sense duties on imports from these islands are uniform throughout the United States, because they are uniformly imposed at every port in the United States, so that there is no preference given to the ports of one State over those of another, nor is any inequality between the several States created.

"That the right to bring merchandise into the United States is a right entirely within the regu-

lation of Congress, such right in no wise differs as to either citizens or aliens. Citizenship carries with it no special or peculiar privileges at the custom-house. The American, the Spaniard, the Porto Rican, are treated alike. The basis of the customs laws is not ownership, but (1) the geographical origin of the shipment, and (2) the nature of the goods. The duty is imposed against merchandise, not upon the importer.

The Government contends, therefore, that in view of the fact that tariff laws are 'in rem,' there is no principle of justice, much less of constitutional restriction, which forbids Congress from taxing in this way the merchandise of outlying possessions of the United States when brought into the ports of the Union. That the limitations of the Constitution as to customs, etc., were intended to secure equality between the States in the geographical sense, and not to forbid Congress from exercising the ordinary sovereign power of taxation as to the products of other sections of country not included within the geographical boundaries of the States; for which we rely upon the opinion of this court in *Knowlton v. Moore* as decisive and conclusive.

If the foregoing propositions are sound, then it is established (1) that the tariff act of 1897 was intended by Congress to classify as foreign all countries not a part of or belonging to the United States at the time of its passage, and the subsequent cession of the Spanish islands to the United States did not operate to admit imports from those islands free of duty, under that law; (2) that the tariff act so construed and enforced violates no constitutional rule of uniformity.

And the case of the plaintiffs in error would seem on these grounds to have no legal foundation.

The Government might well be content to rest its argument upon these propositions. But counsel for the plaintiffs in error, in the court below as well as in this court, have gone far beyond these limits, and have challenged and denied the constitutionality of certain provisions of the treaty of Paris, contending that the cession of Porto Rico and the Philippine Archipelago effected a complete incorporation of those countries with the United States, so that they have become a part of the United States in the fullest and largest sense, not only internationally, but organically, so completely, indeed, that no difference or distinction can be made by law between imports from these countries and imports from one of the States of the Union.

They insist that there can be no limited or qualified acquisition of territory by this nation; that when Porto Rico was ceded to the United States it came at once under the obligations of the Constitution and became entitled to the privileges of the Constitution, its inhabitants citizens of the United States, and its territory a part of the United States. They argue, therefore, that the clause of the treaty which says that 'the civil rights and political status of the inhabitants shall be determined by the Congress,' in so far as it is intended to defer the full enjoyment of the rights and privileges of citizenship under the Constitution until Congress shall bestow them hereafter upon the inhabitants, is 'ultra vires' and void, or at least superfluous and ineffective, because the Constitution 'ex proprio vigore' extends at once, as an automatic operation, to all territory ceded to this Govern-

ment, and no treaty or treaty-making power can hinder or even suspend it.

Counsel have been at great pains to prove that the Government of the United States is one of delegated powers, and that its powers are not absolute and untrammelled, but subject to certain limits never and nowhere to be transgressed, that the vague political entity known as The People stands behind the constituted agencies of government, holding in reserve the sources of supreme power, capable and ready to alter or destroy at its pleasure the machinery heretofore set up in its behalf. They call these doctrines truisms, and so they are. They do not help us in this case.

The Government of the United States has been vested not with all powers but only with certain particular powers. These particular delegated powers are in some respects limited and confined in scope and operation, but in other respects they are entirely unlimited. So that the real and practical question is whether there is any limitation preventing the particular thing here complained of.

It is worth while, in passing, to allude to the undeniable fact that 'The People' referred to are not the people of the Territories or of the outlying possessions of the United States, but the people of the several States, who ordained and established for themselves and their posterity the Federal Constitution.

Counsel confuse ideas when they argue that the contention of the Government in these cases implies the possession by Congress of all unlimited and despotic powers in the government of territory. We mean no more than this court meant when it said:

'The power of Congress over the Territories is general and plenary.

'Its sovereignty over them is complete.

'It has full and complete legislative authority over the people of the Territories and all departments of the Territorial governments.

'The people of the United States, as sovereign owners of the National Territories, have supreme power over them and their inhabitants.

In legislating for the Territories Congress would doubtless be subject to those fundamental limitations in favor of personal rights which are formulated in the Constitution and its amendments, but these limitations would exist rather by inference and the general spirit of the Constitution than by any express and direct application of its provisions.'—*In the Supreme Court of the U. S., October Term, 1900, John H. Goetze, Appellant, vs. B. & F. for the United States.*

On the 8th of January, 1901, four other causes, involving substantially the same questions, came before the Supreme Court, and, by order of the Court, were consolidated to be dealt with virtually as one case. The titles of the cases were respectively as follows: *Elias S. A. De Lima et al., plaintiffs in error, agt. George R. Bidwell, Samuel B. Downes et al., plaintiffs in error, agt. George R. Bidwell; Henry W. Dooley et al., plaintiffs in error, agt. the United States; Carlos Armstrong, appellant, agt. the United States; and George W. Crossmon et al., appellants, agt. the United States.* For the plaintiffs, in the case of *Henry W. Dooley et al.*, the Hon. John G. Carlisle made an oral argument. In which he said: 'What is the Constitution? In the first place it is not only the supreme law of the States

composing the union, but the supreme law of the land; supreme over every branch and department of the Government; supreme over every one exercising authority under the Government; supreme over every other law or order or regulation, and supreme over all the people, wherever they may be, within its jurisdiction, and what we claim is, that so long as this Constitution exists absolute and arbitrary power over the lives, liberties, or property of the people can be exercised nowhere in this Republic. It is now argued that it is supreme only within the boundaries of the several States, unless Congress extends it to the Territories, that it limits the powers of Congress only when legislating for the geographical area embraced in the States; that the inhabitants of the States are the only people who can, as a matter of right, claim the benefit of its guarantees and prohibitions for the protection even of those personal and property rights which have for ages been secured by the common law of England, and that all other people within the jurisdiction of the United States are dependent for the protection of their civil rights substantially upon the will of Congress. The question whether the Constitution should be declared to be the supreme law of the whole land, or only the supreme law of the respective States and their inhabitants or citizens, was presented in the Federal Convention of 1787, and was finally disposed of by the adoption of the clause as it now stands in the Constitution, which declares it to be the supreme law of the land.

"In the plan proposed by Mr. Charles Pinckney, of South Carolina, it was provided that 'all acts made by the legislature of the United States pursuant to this Constitution, and all treaties made under the authority of the United States, shall be the supreme law of the land,' etc." (1 Elliot, page 46). Mr. Patterson's plan proposed

that all acts of the United States in Congress assembled made by virtue and in pursuance of the powers hereby vested in them, and by the Articles of Confederation and all treaties made and ratified under the authority of the United States, shall be the supreme law of the respective States, so far as those acts or treaties shall relate to such States or their citizens; etc. (pages 71, 72). These plans and others were referred to the Committee of the Whole House and were reported back without any provision upon this subject. Afterwards the Convention unanimously agreed to the following resolution: "That the Legislative acts made by virtue and in pursuance of the Articles of Union and all treaties made and ratified under the authority of the United States, shall be the supreme law of the respective States, so far as those acts or treaties shall relate to the said States or their citizens or inhabitants" (page 100). This it stood when referred to the committee of five, of which Mr. Rutledge was chairman, and on the 6th of August, 1787, that committee reported back to the Convention a draft of the proposed Constitution, the eighth article of which was the same as the resolution last quoted, except that in the place of the words 'Articles of Union' it contained the words 'this Constitution' (page 120). This report was considered in the Committee of the Whole, and on the 23d of August the eighth article was unanimously amended so as to read: 'This Constitution and all laws of the

United States made in pursuance thereof, and all treaties made under the authority of the United States shall be the supreme law of the several States and of their citizens and inhabitants, etc. (page 151).

"This was the form in which the article stood when the whole draft was referred to the committee of eleven, but when reported back September 12, it constituted the second clause of the sixth article and declared that the Constitution and laws and the treaties made and to be made should be 'the supreme law of the land,' and so it now stands as part of the Constitution. If the clause had been adopted in the form agreed to in the committee and inserted in the first draft, there would have been at least a certain degree of plausibility in the argument made here for the Government, but even in that case we think the powers of Congress would have been limited whenever and wherever it might attempt to exercise them. But it is argued here that the history of the Constitution and the language employed in the preamble, and in some other places, show that it was intended to establish a government only for such of the States then existing as might ratify it, and such other States as might thereafter be admitted into the Union, and that, therefore, while it confers power upon Congress to govern Territories, it does not require that body to govern them in accordance with the supreme law of the land; that is, in accordance with the instrument from which the power to govern is derived. Even if the premises were true, the conclusion would not follow; but is it true that the Constitution was ordained and established for the government of the States only? If so, how did it happen that the great men who framed that instrument made it confer the power to govern Territories as well as States? It is true that the Constitution was ordained and established by the people of the States, but it created a National Government for national purposes, not a mere league or compact between the States, and jurisdiction was conferred upon that Government over the whole national domain, whatever its boundaries might be. It is not true that the Government was established only for the States, their inhabitants or citizens, but if it were true, then it could exercise no power outside of the States, and this court would have to put a new construction upon that provision which authorizes Congress to dispose of and make all needful rules and regulations respecting the territory, or other property, belonging to the United States. The necessary construction of that clause would be that it conferred power only to dispose of land or other property, and to make necessary rules and regulations respecting land or other property belonging to the United States; that is, belonging to the several States composing the Union. It would confer no power whatever to govern the people outside of the States."—*Supreme Court of the U. S., October Term, 1900, Henry W. Dooley (et al.) vs. the United States; Argument of J. G. Carlisle.*

On one point the argument of Mr. Charles H. Aldrich, attorney for the plaintiff in the case of the "Fourteen Diamond Rings," was as follows: In "the relations of the United States to other nations, our government is a sovereign state, and has the right, and as such 'free and independent State has full power, to levy war, conclude peace, contract alliances, establish commerce,

and to do all other acts and things which independent States may of right do." In this relation it is correct, as I conceive, to speak of the United States of America as a unit and use a singular verb. It is such unit and has this power because there was created a government upon which the people conferred these powers. If war is declared it must be under the constitution; if peace is concluded it is in the exercise of a constitutional power, if commerce is established it is because Congress under the constitution was given power to regulate commerce; if alliances are contracted it can only be done under the constitution. In short, the sovereign power exists through the adoption of the constitution, and its powers are derived from that instrument and must be found, as this court has often declared in the language thereof or by necessary implication therefrom. We are in the Philippines and Porto Rico and can be rightfully there only in the exercise of some of these enumerated powers, as in the language of the tenth amendment, "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." This amendment designates the constitution as the source of the power of the United States and excludes the idea of power free from constitutional restraint derived by implication from powers delegated by the constitution.

Nor is it true that at the time this declaration was made all independent states or nations claimed and exercised the right to acquire, hold and govern foreign dependencies, and no state or nation then recognized its obligation to confer on the people of such acquired territory the privileges and immunities enjoyed by the people of the home government, except at its own will and discretion. It is true that all independent states claimed and exercised the right to acquire territory, but if it were important in this case I think the arguments of Pitt, Camden and Barré could be used to establish the proposition that under the British Constitution as it then was, that nation had, from the time of King John and the Great Charter until King George, recognized that its subjects had essential rights not dependent upon the will and discretion of the home government. It is unnecessary to follow that subject here. It is sufficient that the Declaration of Independence was brought about by the assertion on the part of King George and his ministers of precisely the present doctrine of this administration and its representatives in this court. If value is to be attached to contemporary history that fact cannot be lost sight of. The speeches of Grenville and Townshend in favor of unlimited power on the part of Parliament over the American colonists and their affairs have been substantially parodied in Congress by the advocates of unrestrained power over our 'colonies' as it is now unfortunately fashionable to denominate them. The signers of the Declaration of Independence held that as subjects of the British Constitution there was no right to impose taxes upon them without their consent, to deprive them of trial by jury, to deprive them of their legislatures and to declare Parliament invested with power to legislate for them 'in all cases whatsoever.' These and other grievances were held denials of rights belonging to every British subject as such and to

justify rebellion and war. It seems impossible that a people who rebelled for such reasons established a State invested with the very power which they had denied to the British government and the assertions of which made rebellion necessary.

This argument that the power to declare war and conclude peace carries with it as an auxiliary power to do whatever other nations are accustomed to do with the people and territory acquired through the exercise of these powers has a remarkable likeness to the arguments put forward at the beginning of the century with reference to the Alien and Sedition Acts. The supporters of the constitutionality of these acts claimed that the common law had been introduced and become a part of the constitution of the United States, and therefore the powers usually exercisable under the common law could be exercised by the Congress of the United States in the respects involved in these acts. Mr. Madison's letter discussing this contention was answered so far as it asserted the right of a state to nullify an act of Congress, but was never answered, so far as it denied the existence of the common law as a part of the constitution of the United States. His objections to that contention, succinctly stated, were, that if the common law was a part of the constitution, then there were no constitutional limitations. Congress, like Parliament, could legislate in all cases whatsoever; that the President would be possessed of the royal prerogatives (as is now claimed in this

by the Attorney General), that the judiciary would have a discretion little short of legislative power; that these powers in the different branches of the government would not be alterable, because, being in the constitution, they could only be repealed by amendment of that instrument; and, lastly, that the constitution would have a different meaning in different States, inasmuch as the common law was different in such States, and that it would lack the certainty which a constitution should have, as the common law was an ever growing or varying body of law, and, therefore, with reference to the proper action of the government in each instance, the question would be important as to what portion of the common law was in the constitution and what not so embodied.

Nearly every sentence of Mr. Madison's able argument with reference to the common law as a part of the constitution is applicable to the contention that sovereign powers, so-called, as derived from or defined by international law, became a part of the constitution of the United States through the delegation of the powers to make war, conclude peace, and make all needful rules and regulations respecting the territory and other property belonging to the United States. This court has adopted the view of Mr. Madison. It is hoped that the child of the old error by which again the executive and legislative powers sought to be enlarged through the incorporation into the constitution of 'the sovereign power of other nations' will receive the same answer.

In fact, we submit that this court has already held that sovereign power in the sense that the words are used in the law of nations as prerogative rights of the King or Emperor not only is not vested in the United States or in any branch of its government, but cannot be so vested. The sovereign power is with the people. In leaving

It with the people our government marked a departure from all that had previously existed."
—*Supreme Court of the U. S., October Term, 1900, No. 419.* C. H. Aldrich, *Argument in reply*.

A. D. 1901.—Military and naval expenditure, compared with that of other Powers.
See (in this vol.) **WAR BUDGETS**.

A. D. 1901 (January).—Apportionment of Representatives under the Twelfth Census.—The question of obedience to the Fourteenth Amendment.—Restrictions of the elective franchise in the States.—Section 3 of Article I of the Constitution requires that "Representatives . . . shall be apportioned among the several States which may be included within this Union according to their respective numbers. . . . The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years. . . . The number of Representatives shall not exceed one for every 30,000; but each State shall have at least one." The first meeting of Congress was in 1789; the required first census of the United States was taken in 1790, and, in obedience to the constitutional requirement, the enumeration has been repeated within the closing year of every decade since, to supply the basis for a new apportionment of representatives among the States. The twelfth census, taken in 1900, called for such new distribution, and action upon it was taken in Congress in January, 1901.

As the section quoted above stood in the Constitution until 1868, it contained a further clause, inserted as one of the original compromises made between the slaveholding and the free States, requiring that the determination of numbers to be represented in the several States should be made "by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons." This original clause of the Constitution was superseded by the Fourteenth Amendment, adopted in 1868, which introduced this new provision, in its second section: "Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, except Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State." To many persons it seemed to be very clear that this provision of the amended Constitution required account to be taken of the qualifications by which a number of States have abridged the suffrage, especially where done for the understood purpose of disfranchising colored citizens (see, in this vol., LOUISIANA, NORTH CAROLINA, SOUTH CAROLINA, MISSISSIPPI, and MARYLAND), and that Congress was left with no discretion to do otherwise.

Those holding this view in the House of Representatives gave support to the following resolution, introduced by Mr. Olmsted of Pennsylvania:

"Whereas the continued enjoyment of full representation in this House by any State which has, for reasons other than participation in rebellion or other crime, denied to any of the male inhabitants thereof, being 21 years of age and citizens of the United States, the right to vote for Representatives in Congress, Presidential electors, and other specified officers, is in direct violation of the fourteenth amendment to the Constitution of the United States, which declares that in such case 'the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State,' and is an invasion of the rights and dignity of this House and of its members, and an infringement upon the rights and privileges in this House of other States and their representatives; and

"Whereas the States of Massachusetts, Maine, Connecticut, Delaware, California, Louisiana, Mississippi, North Carolina, South Carolina, Wyoming, Oregon, and other States do, by the provisions of the constitutions and statutes of said States, and for reasons other than participation in rebellion or other crime, deny the right to vote for members of Congress and Presidential electors, as well as the executive and judicial officers of such States and members of the legislatures thereof, to male inhabitants 21 years of age and over and citizens of the United States, and such denial in certain of the said States extends to more than one-half of those who prior to the last apportionment of representation were entitled to vote in such States; and

"Whereas in order that the apportionment of membership of the House of Representatives may be determined in a constitutional manner. Therefore, be it

"Resolved by the House of Representatives, That the Director of the Census is hereby directed to furnish this House, at the earliest possible moment, the following information:

"First. The total number of male citizens of the United States over 21 years of age in each of the several States of the Union.

"Second. The total number of male citizens of the United States over 21 years of age who, by reason of State constitutional limitations or State legislation, are denied the right of suffrage, whether such denial exists on account of illiteracy, on account of pauperism, on account of polygamy, or on account of property qualifications, or for any other reason.

"Resolved further, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a select committee of five members from the membership of the Census Committee of the House of Representatives who shall investigate the question of the alleged abridgment of the elective franchise for any of the causes mentioned in all the States of the Union in which constitutional or legislative restrictions on the right of suffrage are claimed to exist, and that such committee report its findings within twenty days from the date of the adoption of this resolution to the said Census Committee, and that within one week after the said report shall have been received by the Census Com-

mittee the Census Committee shall return a bill to the House of Representatives providing for the apportionment of the membership of the House of Representatives based on the provisions of the fourteenth amendment to the Constitution of the United States."

Republicans hardly less than Democrats, in Congress and outside, were averse to raising what could not fail to be a burning sectional issue, and grounds for ignoring the constitutional mandate were sought with considerable eagerness on both sides. Strict obedience to the requirement of the Constitutional provision was claimed to be impracticable, at least within the time available for proceedings connected with the present apportionment of representatives. Said one speaker, opposing the resolutions in the House: "There is not a State in this Union that has not added to or subtracted from the Federal constitutional requirements—not one. If there is any addition, whether as a matter of police regulation or otherwise, to the constitutional amendments regulating the franchise and the resultant representation in this House—if there is addition or subtraction of one iota—then those who desire to live up to this Constitution, no matter whether they ruin their neighbors, no matter whether they again kindle the fires of sectional strife, those who in their love for the Constitution are so mentally rigid that they would demand its enforcement though they set the Union aflame, must include every State in this Union."

Said another: "How would anybody find out how many people in the State of Mississippi were disfranchised for the reasons stated in this resolution? There is there an educational qualification. How are you to determine how many of the men in the State of Mississippi who did not vote, did not vote because they were disfranchised under the educational qualification? Then there is a qualification in extension and not in limitation of the suffrage, saying that even those who can not read and write may still vote, provided they can give an understanding interpretation of the Constitution or any part of it. How are you going to determine how many are disqualified by that? And then there is a qualification which says that those can not vote who shall not by a certain time have paid their poll tax. Out of the number of people who did not vote, how are you going to determine which of them have not voted because of the educational qualification? Which because of the understanding qualification? Which because of the poll tax qualification? Which because of the registration qualification? How many because of the pure Australian ballot which exists in the State of Mississippi? . . . There is not a State in the Union which has the Australian ballot which by the very fact and the necessity of voting according to that Australian ballot does not prevent the citizen who can not read and write from voting if he votes a split ticket of any sort."

A third speaker remarked: "To live up to that amendment, 'that no male inhabitant shall be deprived of suffrage except for participation in the rebellion or other crimes,' the male inhabitant, I take it, is he who has acquired domicile in that State, and the moment that he acquires domicile, and is a male, he is a male inhabitant of that State, and entitled at once to suffrage; and yet every State in the Union, I be-

lieve without exception, has requirements as to residence, not only in the State, but in the city, in the county, in the precinct, and ward and the voting place, and every one of these requirements, as every gentleman on that side must admit, are in direct conflict with and a contravention of the fourteenth amendment to the Constitution of the United States literally construed."

But the advocates of obedience to the Constitution, supporting the resolutions of Mr. Olcott, planted their argument on the very basis brought against it, as demonstrating the need of measures to check a growing tendency in the country to restrict the elective franchise. Said Mr. Shattuck, of Ohio: "We find that in 1870 there were three States that had abridged their electorates—California, Connecticut, and Massachusetts. In these three States there was a constitutional provision for an educational qualification, which disfranchised a certain percentage of the electorates, namely, the illiterates. But in those States, the percentage of illiteracy is very light, averaging about 6 per cent. The basis of representation would hardly have been affected in those States had the fourteenth amendment been conformed with."

"An examination into the election laws of the various States reveals an astonishing tendency at this time to abridge their electorates. When the Congress, which adopted the existing apportionment discussed the matter ten years ago, but three States had abridged their electorates, by action of the State, and in these the percentage of disfranchised males was but 6 per cent. But since that time similar policies have been adopted by other States, and today we face the fact that ten of the forty-five States of this Union have abridged their electorates, and that in these the percentage of males 21 years of age and over, disfranchised, averages over 20 per cent. The constitutions of several other States permit such an abridgment. Besides, there are other States preparing to adopt these policies and to disfranchise thousands of men who today hold the right of franchise. In view of this remarkable tendency it is inconceivable that Congress can longer permit the fourteenth amendment to remain a dead letter, and to pass a bill making an apportionment based solely upon the population and neglecting the provision which applies to all States which have abridged their electorates."

"We will not review the past by any discussion of the question as to whether the provisions of the fourteenth amendment should have been made effective when the last apportionment was made ten years ago. We find to-day conditions existing which make its enforcement imperative. I do not propose to discuss at this time whether the reasons given for these abridgments by the people of the various States are valid or not. . . . I am simply pointing out the conditions as they exist; I am simply pointing out that the time has come when the tendency of the States to abridge their electorates has grown to such proportions as to demand that this Congress shall proceed in a constitutional manner in making the new apportionment. I do not say that States have not the right to establish educational qualifications for their electors, but I do maintain that when they have done so they must pay the penalty prescribed in the Constitution, and have

UNITED STATES, 1901.

UNITED STATES, 1901

For representation abridged proportionately. I do not say that we shall punish only Louisiana. I do not say that we shall punish only Massachusetts. I do not say that we shall punish only California, but I do say and insist, as the representative of a State in which every male member 21 years of age and over is guaranteed the sacred

right of franchise, that there is a constitutional remedy prescribed for their acts, and I do demand that that remedy be applied."

The following interesting table, showing the restrictions of the electorate in the various States of the Union, was appended to the remarks of Mr. Shattuck:

STATES	REQUIREMENTS AS TO CITIZENSHIP	PERSONS EXCLUDED FROM SUFFRAGE
Alabama	Citizen of United States, or alien who has declared intention.	Convicted of treason or other crime punishable by imprisonment, idiots, or insane.
Arkansas	Citizen of United States, or alien who has declared intention.	Idiots, insane, convicted of felony until pardoned, failure to pay poll tax, United States soldiers on duty in State.
California	Citizen by nativity, naturalization, or treaty of Quieretaro.	Chinese, insane, embezzlers of public moneys, convicted of infamous crime, person unable to read Constitution in English, and to write his name.
Colorado	Citizen or alien, male or female, who has declared intention 4 months prior to election.	Under guardianship, insane, idiots, or imprisoned.
Connecticut	Citizen of United States	Convicted of felony or theft, unless pardoned. Person unable to read Constitution or statutes.
Delaware	Citizen who has paid registration fee of \$1	Idiots, insane, paupers, felons. Person who can not read the English language and write his name.
Florida	Citizen of United States	Insane, under guardianship, convicted of felony or any infamous crime.
Georgia	Citizen of the United States who has paid all his taxes since 1877.	Idiots, insane, convicted of crime punishable by imprisonment until pardoned, failure to pay taxes.
Iowa	Citizen of the United States, male or female.	Under guardianship, idiots, insane, convicted of felony, treason, or embezzlement of public funds, polygamist or loganist.
Illinois	Citizen of the United States	Convicted of felony.
Indiana	Citizen of United States, or alien who has declared intention and resided 1 year in United States and 6 months in State.	Convicted of crime and disfranchised by judgment of the court, United States soldiers, sailors, and marines.
Iowa	Citizen of the United States	Idiots, insane, convicted of infamous crime.
Kansas	Citizen of United States, alien who has declared intention, or under treaties with Mexico.	Felons, insane, duellists, rebels, not restored to citizenship, under guardianship, public embezzlers, offering or accepting a bribe.
Kentucky	Citizen of the United States	Treason, felony, bribery at election.
Louisiana	Citizen of United States or alien who has declared intention.	Idiots, insane, convicted of treason, embezzlement of public funds, all crime punishable by imprisonment in penitentiary, persons unable to read and write, and not owning property in the State assessed at \$200, or not the son or grandson of a citizen of the United States prior to Jan. 1, 1867, person who has not paid poll tax.
Maine	Citizen of the United States	Paupers, persons under guardianship, Indians not taxed, and in fact all new voters who can not read the Constitution or write their own names in English.
Maryland	Citizen of the United States	Convicted of larceny or other infamous crime, unless pardoned.
Massachusetts	Citizen of the United States	Convicted of bribery.
Michigan	Citizen or inhabitant who has declared intention under United States laws 6 months before election and lived in State 24 years.	Paupers and persons under guardianship, person who can not read Constitution in English and write his name, Indians, duellists, and accessories.
Minnesota	Citizen of United States or alien who has declared intention, and civilized Indians.	Convicted of treason or felony, unless pardoned, persons under guardianship or insane.
Mississippi	Citizen of the United States	Insane, idiots, Indians not taxed, felons, persons who have not paid taxes, persons who can not read or understand Constitution.
Missouri	Citizen of United States or alien who has declared intention not less than 1 year or more than 5 before offering to vote.	United States soldiers and marines, paupers, criminals convicted once until pardoned, felons and violators of suffrage laws convicted a second time.
Montana	Citizen of the United States	Felons, unless pardoned, idiots, insane, United States soldiers, seamen, and marines, Indians.
Nebraska	Citizen of United States or alien who has declared intention.	Convicts.
Nevada	Citizen of the United States	Idiots, insane, unpardoned convicts, Indians, Chinese.
New Hampshire	Citizen of United States	Paupers except honorably discharged United States soldiers and sailors, persons excused from paying taxes, their own request.
New Jersey	Citizen of the United States or alien who has declared intention 30 days prior to election.	Idiots, insane paupers, persons convicted of crimes unless pardoned which exclude them from being witnesses.
New York	Citizen who shall have been a citizen for 30 days.	Convicted of bribery or any infamous crime, Indians under tribal relations.
North Carolina	Citizen of the United States	Convicted of felony or other infamous crime, idiot, females, persons unable to read or write, unless the descendant of citizen of United States prior to Jan. 1, nonpayment of poll tax.
North Dakota	Citizen of the United States, alien who has declared intention 1 year, and civilized Indian.	Under guardianship, persons non compos mentis, or convicted of felony and treason, unless restored to rights.
Ohio	Citizen of the United States	Felony until pardoned, Idiots, insane, United States soldiers and sailors.

UNITED STATES, 1901

UNITED STATES, 1901

STATES	REQUIREMENTS AS TO CITIZENSHIP	PERSONS EXCLUDED FROM SUFFRAGE
Oregon	Citizen of United States or alien who has declared intention 1 year preceding election	Idiots, insane, convicted of felony, United States soldiers and sailors, Chinese
Pennsylvania	Citizen of the United States at least 1 month, and 2 years old or more must have paid tax within 2 years	Convicted of treason, offense whereby right of suffrage is forfeited, non-tax payers
Rhode Island	Citizen of the United States	Paupers, lunatics, persons who compose inmates convicted of bribery or other crime until restored to rights to vote under guardianship
South Carolina	Citizen of the United States	Convicted of treason, murder, or other infamous crime, convicting paupers, insane, idiots, persons who have not paid poll tax, whose names are not on list of voters, and the state constitution or a law show that he has paid poll taxes on property within the State assessed at \$200
South Dakota	Citizen of the United States or alien who has declared intention	Under guardianship, idiots, insane, convicted of treason or felony, unless pardoned
Tennessee	Citizen of the United States who has paid poll tax of preceding year	Convicted of bribery or other infamous offense
Texas	Citizen of the United States or alien who has declared intention	Idiots, lunatics, paupers, convicted of felony, United States soldiers and sailors
Utah	Citizen, male and female	Idiots, insane, convicted of treason or violation of election laws
Vermont	Citizen of the United States	Those who have not obtained the approbation of the board of civil authority of the town in which they reside
Virginia	Citizen of the United States	Idiots, lunatics, convicted of bribery at election, subornation of public, larceny, treason, felony, and petty larceny, duels, and others unless pardoned by laws of the State
Washington	Citizen of the United States	Idiots and taxed, idiots, insane, persons convicted of infamous crimes
West Virginia	Citizen of the State	Paupers, idiots, lunatics, convicted of treason, felony or bribery at elections
Wisconsin	Citizen of the United States or alien who has declared intention	Insane, under guardianship, convicted of treason or felony, unless pardoned, Indians having tribal relations
Wyoming	Citizen of the United States, male and female	Idiots, insane, persons convicted of infamous crimes unless restored to civil rights, unable to read State constitution

— *Congressional Record*, January 4-5, 1901, pp. 618-20, and 602-5

The resolutions of Mr. Olmsted were not adopted. The reapportionment was made on the basis of the totals of the census returns, with no reckoning of any denials of the right to vote. The following is the text of the Act, as passed and approved January 16:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after the third day of March, nineteen hundred and three, the House of Representatives shall be composed of three hundred and eighty-six members (the existing number being 357) to be apportioned among the several States as follows: Alabama, nine; Arkansas, seven; California, eight; Colorado, three; Connecticut, five; Delaware, one; Florida, three; Georgia, eleven; Idaho, one; Illinois, twenty-five; Indiana, thirteen; Iowa, eleven; Kansas, eight; Kentucky, eleven; Louisiana, seven; Maine, four; Maryland, six; Massachusetts, fourteen; Michigan, twelve; Minnesota, nine; Mississippi, eight; Missouri, sixteen; Montana, one; Nebraska, six; Nevada, one; New Hampshire, two; New Jersey, ten; New York, thirty-seven; North Carolina, ten; North Dakota, two; Ohio, twenty-one; Oregon, two; Pennsylvania, thirty-two; Rhode Island, two; South Carolina, seven; South Dakota, two; Tennessee, ten; Texas, sixteen; Utah, one; Vermont, two; Virginia, ten; Washington, three; West Virginia, five; Wisconsin, eleven; and Wyoming, one.

"SEC. 2. That whenever a new State is admitted to the Union the Representative or Representatives assigned to it shall be in addition to the number three hundred and eighty-six.

"SEC. 3. That in each State entitled under this

apportionment, the number to which such State may be entitled in the Fifty-eighth and each subsequent Congress shall be elected by districts composed of contiguous and compact territory and containing as nearly as practicable an equal number of inhabitants. The said districts shall be equal to the number of the Representatives to which such State may be entitled in Congress, no one district electing more than one Representative.

"SEC. 4. That in case of an increase in the number of Representatives which may be given to any State under this apportionment, such additional Representative or Representatives shall be elected by the State at large, and the other Representatives by the districts now prescribed by law until the legislature of such State in the manner herein prescribed shall re-district such State, and if there be no increase in the number of Representatives from a State the Representatives thereof shall be elected from the districts now prescribed by law until such State be re-districted as herein prescribed by the legislature of said State, and if the number hereby provided for shall in any State be less than it was before the change hereby made, then the whole number to such State hereby provided for shall be elected at large unless the legislatures of said States have provided or shall otherwise provide before the time fixed by law for the next election of Representatives therein.

"SEC. 5. That all Acts and parts of Acts inconsistent with this Act are hereby repealed."

No existing State quota was reduced by the new apportionment, and the gains were as follows: Illinois, New York and Texas, 3; Minnesota, New Jersey and Pennsylvania, 2; Arkansas, California, Colorado, Connecticut, Florida, Louisiana, Massachusetts, Mississippi, Missouri

North Carolina, North Dakota, Washington, West Virginia and Wisconsin, 1.

That clause of the third section which requires districts to be "composed of contiguous and compact territory" is intended to be a bar to the partisan trick called "gerrymandering."

The vote on the bill in the House (167 against 102) was singularly non-partisan. The minority was said to be composed of exactly the same number of Republicans and Democrats, 51 of each, and in the majority vote there were included 81 Republicans and 81 Democrats. The vote was also non-sectional, except that New England voted almost solidly for the measure. East, South and West the State delegations were almost equally divided.

A. D. 1901 (February).—Act to increase the standing army of the nation to 100,000 men.

In his annual Message to Congress, December 3, 1900, the President set forth the military needs of the country, created by its new policy of imperial expansion, and recommended that the permanent army be raised to 100,000 in number, from 45,000 to 40,000 of which would be required in the Philippine Islands until their people were made submissive to the authority of the United States. In accord with the executive recommendation, Congress passed "an Act to increase the efficiency of the permanent military establishment of the United States," which became law by the President's signature on the 2d of February, 1901. Its first section provides that "from and after the approval of this Act the Army of the United States, including the existing organizations, shall consist of fifteen regiments of cavalry, a corps of artillery, thirty regiments of infantry, one Lieutenant General, six major generals, fifteen brigadier generals, an Adjutant General's Department, an Inspector General's Department, a Judge Advocate General's Department, a Quartermaster's Department, a Subsistence Department, a Medical Department, a Pay Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, the officers of the Record and Pension Office, the chaplains, the officers and enlisted men of the Army on the retired list, the professors, corps of cadets, the army detachments and band at the United States Military Academy, Indian scouts as now authorized by law, and such other officers and enlisted men as may hereinafter be provided for." A subsequent section enacts that the total enlisted force of the line of the army shall not exceed at any one time 100,000.

Section 2 provides that "each regiment of cavalry shall consist of one colonel, one lieutenant-colonel, three majors, fifteen captains, fifteen first lieutenants, and fifteen second lieutenants; two veterinarians, one sergeant-major, one quartermaster sergeant, one commissary-sergeant, three squadron sergeants-major, two color-sergeants with rank, pay, and allowances of squadron sergeant-major, one band, and twelve troops organized into three squadrons of four troops each. . . . Each troop of cavalry shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one quartermaster-sergeant, six sergeants, six corporals, two cooks, two farriers and blacksmiths, one saddler, one wagoner, two trumpeters, and forty-three privates; the commissioned officers to be assigned from among those hereinafter authorized."

Sections 3-9, relating to the Artillery, are, in part, as follows: "That the regimental organiza-

tion of the artillery arm of the United States Army is hereby discontinued, and that arm is constituted and designated as the Artillery Corps. It shall be organized as hereinafter specified and shall belong to the line of the Army. That the Artillery Corps shall comprise two branches, the coast artillery and the field artillery. The coast artillery is defined as that portion charged with the care and use of the fixed and movable elements of land and coast fortifications, including the submarine mine and torpedo defenses, and the field artillery as that portion accompanying an army in the field and including field and light artillery proper, horse artillery, siege artillery, mountain artillery, and also machine gun batteries. Provided, That this shall not be construed to limit the authority of the Secretary of War to order coast artillery to any duty which the public service demands or to prevent the use of machine or other field guns by any other arm of the service under the direction of the Secretary of War. That the Artillery Corps shall consist of a Chief of Artillery, who shall be selected and detailed by the President from the colonels of artillery, to serve on the staff of the general officer commanding the Army, and whose duties shall be prescribed by the Secretary of War; fourteen colonels, one of whom shall be the Chief of Artillery; thirteen lieutenant colonels, thirty nine majors, one hundred and ninety five captains, one hundred and ninety five first lieutenants, one hundred and ninety five second lieutenants, and the captains and lieutenants provided for in this section not required for duty with batteries or companies shall be available for duty as staff officers of the various artillery garrisons and such other details as may be authorized by law and regulations; twenty one sergeants-major, with the rank, pay, and allowances of regimental sergeants-major of infantry; twenty seven sergeants-major, with the rank, pay, and allowances of battalion sergeants-major of infantry; one electrician sergeant to each coast artillery post having electrical appliances; thirty batteries of field artillery, one hundred and twenty six batteries of coast artillery, and ten bands organized as now authorized by law for artillery regiments. Provided, That the aggregate number of enlisted men for the artillery, as provided under this Act, shall not exceed eighteen thousand nine hundred and twenty, exclusive of electrician sergeants."

Concerning the Infantry it is provided in Section 10, that "each regiment of infantry shall consist of one colonel, one lieutenant colonel, three majors, fifteen captains, fifteen first lieutenants, and fifteen second lieutenants; one sergeant-major, one quartermaster sergeant, one commissary-sergeant, three battalion sergeants-major, two color sergeants, with rank, pay, and allowances of battalion sergeants-major, one band and twelve companies, organized into three battalions of four companies each. Of the officers hereby provided, the captains and lieutenants not required for duty with the companies shall be available for detail as regimental and battalion staff officers and such other details as may be authorized by law or regulations. . . . Each infantry company shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one quartermaster sergeant, four sergeants, six corporals, two cooks, two musicians, one artificer, and forty eight privates; the com-

commissioned officers to be assigned from those here-
before authorized.

Section 11 provides that "the enlisted force of
the Corps of Engineers shall consist of one hundred
and three battalions of engineers. Each
battalion of engineers shall consist of one ser-
geant-major, one quartermaster-sergeant, and
four companies. Each company of engineers
shall consist of one first sergeant, one quar-
termaster-sergeant, with the rank, pay, and allow-
ances of sergeant, eight sergeants, ten corporals,
two musicians, two cooks, thirty-eight first class
and thirty-eight second class privates."

Section 12 relates to the appointment of army
chaplains: one for each regiment of cavalry and
infantry, and twelve for the corps of artillery—
no person to be appointed who has passed the
age of forty years. The office of post chaplain
is abolished. Sections 13 to 27 relate mainly to
the organization of the several Departments, of
the Adjutant General, Inspector General, Judge
Advocate General, Quartermaster General, Com-
missary General, Surgeon General, Paymaster
General, Chief of Engineers, Chief of Ordnance,
etc.

Section 28, prescribing the rules of promotion
and appointment, is as follows: "That vacancies
in the grade of field officers and captain, created
by this Act, in the cavalry, artillery, and infan-
try shall be filled by promotion according to
seniority in each branch, respectively. Vacan-
cies existing after the promotions have been made
shall be provided for as follows: A sufficient
number shall be reserved in the grade of second
lieutenant for the next graduating class at the
United States Military Academy. Persons not
over forty years of age who shall have at any
time served as volunteers subsequent to April
twenty-first, eighteen hundred and ninety-eight,
may be ordered before boards of officers for such
examination as may be prescribed by the Secre-
tary of War, and those who establish their fitness
before these examining boards may be appointed
to the grades of first or second lieutenant in the
Regular Army, taking rank in the respective
grades according to seniority as determined by
length of prior commissioned service, but no
person appointed under the provisions of this
section shall be placed above another in the same
grade with longer commissioned service, and no-
thing herein contained shall change the relative
rank of officers heretofore commissioned in the
Regular Army. Enlisted men of the Regular
Army or volunteers may be appointed second
lieutenants in the Regular Army to vacancies
created by this Act, provided that they shall have
served one year, under the same conditions now
authorized by law for enlisted men of the Regu-
lar Army."

Important provisions are embodied in Sections
35 and 36, as follows: "Sec. 35. That the
Secretary of War be, and he is hereby, author-
ized and directed to cause preliminary examina-
tions and surveys to be made for the purpose of
selecting four sites with a view to the establish-
ment of permanent camp grounds for instruc-
tion of troops of the Regular Army and National
Guard, with estimates of the cost of the sites and
their equipment with all modern appliances, and
for this purpose is authorized to detail such
officers of the Army as may be necessary to carry
on the preliminary work; and the sum of ten
thousand dollars is hereby appropriated for the

necessary expense of such work, to be dispensed
under the direction of the Secretary of War.
Provided, That the Secretary of War shall report
to Congress the result of such examination and
surveys, and no contract for said sites shall be
made nor any obligation incurred until Congress
shall approve such selections and appropriate
the money therefor.

Sec. 36. That when in his report on the con-
ditions in the Philippine Islands, stating such infor-
mation the President is authorized to enlist natives
of those Islands for service in the Army, to be
organized as scouts, with such officers as he shall
deem necessary for their proper control, or as
troops or companies, as authorized by this Act
for the Regular Army. The President is further
authorized, in his discretion, to organize companies,
organized as are companies of the Regular Army,
in squadrons or battalions, with officers and non-
commissioned officers, comparable to similar
organizations in the cavalry and infantry arms.
The total number of enlisted men of such native
organizations shall not exceed two thousand, and
the total enlisted force of the force of the
Army, together with such native force, shall not
exceed at any one time one hundred thousand.

When in his report on the conditions in the
Philippine Islands, shall by the Secretary of
War, and character, show fitness for command,
the President is authorized to make promotions and
appointments to the grades of second and first
lieutenants from such natives, who, when so ap-
pointed, shall have the pay and allowances to be
fixed by the Secretary of War, not exceeding
those of corresponding grades of the Regular
Army."

Section 38 abolishes the so-called "Army Cat-
tlemen," in compliance with strong demands
from temperance organizations in the country,
notwithstanding much testimony in favor of the
cattlemen system from well-informed and con-
scientious witnesses. The language of the sec-
tion is as follows: "The sale of or dealing in
beer, wine, or any intoxicating liquors by any
person in any post exchange or other army
transport, or upon any premises used for military
purposes by the United States, is hereby prohib-
ited. The Secretary of War is hereby directed to
carry the provisions of this section into full force
and effect." Prompt obedience to this command
of law was given by the War Department, which
issued the required general order February 15.

The following amendment proposed by Sen-
ator Hear for addition to the Act, was voted
down: "Provided, That no further military
force shall be used in the Philippine Islands,
except such as may be necessary to keep order
in places there now actually under the present
control of the United States, and to protect per-
sons or property to whom the protection of
the President, until the President shall have first
proclaimed an amnesty for all political offenses
committed against the United States in the Phil-
ippine Islands, and shall have, in his power
agreed upon an armistice with persons now in
hostility to the United States, and shall have
invited such number, not less than ten, as he shall
think desirable of the leaders or representatives
of the persons now hostile to the United States
there to come to the United States and state their
wishes and the condition, character, and wishes
of the people of the Philippine Islands to the

Executive and Congress, and shall have offered to secure to them safe conduct to come ashore, and return, and shall have provided at the public charge for the expenses of their transportation both ways and their stay in this country for a reasonable and sufficient time for such purpose.

A. D. 1901 (March).—Reinauguration of President McKinley for a second term in the executive office.—His inaugural address.

The reinauguration of President McKinley, for the second term of office to which he had been elected, was performed with the customary ceremonies, at the capitol, in Washington, on the 4th of March, 1901. His inaugural address upon the occasion is especially interesting, for the reason that it indicates the understanding with which the President received his reelection, and the interpretation which he has put upon it as an expression of the national will on questions of extraordinary moment. He spoke as follows:

"My fellow citizens: When we assembled here on March 4, 1897, there was great anxiety with regard to our currency and credit. None exists now. Then our treasury receipts were inadequate to meet the current obligations of the government. Now they are sufficient for all public needs, and we have a surplus instead of a deficit. Then I felt constrained to convene the Congress in extraordinary session to devise revenues to pay the ordinary expenses of the government. Now I have the satisfaction to announce that the Congress just closed has reduced taxation in the sum of \$14,000,000. Then there was deep solicitude because of the long depression in our manufacturing, mining, agricultural and mercantile industries, and the consequent distress of our laboring population. Now every avenue of production is crowded with activity, labor is well employed and American products find good markets at home and abroad. Our diversified productions, however, are increasing in such unprecedented volume as to admonish us of the necessity of still further enlarging our foreign markets by broader commercial relations. For this purpose reciprocal trade arrangements with other nations should in liberal spirit be cordially cultivated and promoted.

"The national verdict of 1896 has for the most part been executed. Whatever remains unfulfilled is a continuing obligation resting with undiminished force upon the Executive and the Congress. But fortune as our condition is, its permanence can only be assured by sound business methods and strict economy in national administration and legislation. We should not permit our great prosperity to lead us to reckless ventures in business or profligacy in public ex-

penditures. While the Congress determines the objects and the sum of appropriations, the officials of the executive departments are responsible for honest and faithful disbursement, and should be their constant care to avoid waste and extravagance. Honesty, capacity and integrity are nowhere more indispensable than in public employment. These should be fundamental requisites to original appointment and these no guarantee of just removal.

Four years ago we stood on the brink of war without the people knowing it and without preparation or effort at preparation for the impending peril. Told all that in honor could be done to avert the war, but without avail. It became inevitable, and the Congress at its first regular session, without party division, provided money in anticipation of the crisis and in preparation to meet it. It came. The result was signally favorable to American arms and to the highest degree honorable to the government. It imposed upon us obligations from which we cannot escape, and from which it would be dishonorable to seek to escape. We are now at peace with the world, and it is my fervent prayer that if differences arise between us and other powers they may be settled by peaceful arbitration, and that hereafter we may be spared the horrors of war.

"Trusted by the people for a second time with the office of President, I enter upon its administration appreciating the great responsibilities which attach to this renewed honor and commission, promising unreserved devotion on my part to their faithful discharge and reverently invoking for my guidance the direction and favor of Almighty God. I should shrink from the duties this day assumed if I did not feel that in their performance I should have the cooperation of the wise and patriotic men of all parties. It encourages me for the great task which I now undertake to believe that those who voluntarily committed to me the trust imposed upon the chief executive of the republic will give me generous support in my duties to 'preserve, protect and defend the constitution of the United States,' and to 'care that the laws be faithfully executed.' The national purpose is indicated through a national election. It is the constitutional method of ascertaining the public will. When once it is registered it is a law to us all, and faithful observance should follow its decrees.

"Strong hearts and helpful hands are needed, and fortunately we have them in every part of our beloved country. We are reunited. Sectionalism has disappeared. Division on public questions can no longer be traced by the war maps of 1861. These old differences less and less disturb the judgment. Existing problems demand the thought and quicken the conscience of the country, and the responsibility for their presence as well as for their righteous settlement rests upon us all, no more upon me than upon you. There are some national questions in the solution of which patriotism should exclude partisanship. Magnifying their difficulties will not take them off our hands nor facilitate their adjustment. Distrust of the capacity, energy and high purpose of the American people will not be an inspiring theme for future political contests. Dark pictures and gloomy forebodings are worse than useless. These only becloud,

they do not help to point the way of safety and honor. "Hope make them not ashamed."

The prophets of evil were not the builders of the republic; nor in its crisis have they saved or served it. The faith of the fathers was a mighty force in its creation, and the faith of their descendants has wrought its progress and furnished its defenders. They are abstract theorists who dream and who would destroy confidence in the ability of our people to solve wisely and bravely the mighty problems resting upon them. The American people, intrenched in freedom at home, take their leave for it with them when ever they go, and they reject as mistaken and unworthy the doctrine that we lose our own liberties by securing the enduring foundations of liberty to others. Our institutions will not deteriorate by extension, and our sense of justice will not abate under tropic suns in distant seas.

"As heretofore so hereafter will the nation demonstrate its fitness to administer any new state which events devolve upon it, and in the fear of God will 'take occasion by the hand and make the bounds of freedom wider yet.' If there are those among us who would make our way more difficult we must not be dishonored, but the more earnestly dedicate ourselves to the task upon which we have rightly entered. The path of progress is seldom smooth. New things are often found hard to do. Our fathers found them so. We find them so. They are inconvenient. They cost us something. But are we not made better for the effort and sacrifice, and are not those we serve lifted up and blessed?"

"We will be comforted, too, with the fact that opposition has confronted every onward movement of the republic from its opening hour until now, but without success. The republic has marched on and on, and its every step has exalted freedom and humanity. We are undergoing the same ordeal as did our predecessors nearly a century ago. We are following the course they blazed. They triumphed. Will their successors falter and plead organic impotency in the nation? Surely after one hundred and twenty-five years of achievement for mankind we will not now surrender our equality with other Powers on matters fundamental and essential to nationality. With no such purpose was the nation created. In no such spirit has it developed its full and independent sovereignty. We adhere to the principle of equality among ourselves, and by no act of ours will we assign to ourselves a subordinate rank in the family of nations."

"My fellow citizens, the public events of the last four years have gone into history. They are too near to justify recital. Some of them were unforeseen; many of them momentous and far-reaching in their consequences to ourselves and our relations with the rest of the world. The part which the United States bore so honorably in the thrilling scenes in Cuba, while new to American life, has been in harmony with its true spirit and best traditions, and in dealing with the results its policy will be that of moderation and fairness."

"We face at this moment a most important question—that of the future relations of the United States and Cuba. With our near neighbors we must remain close friends. The declaration of the purposes of this government in the resolution of April 20, 1898, must be made good. Ever

since the evacuation of the island by the army of Spain the Executive with all practicable speed has been assisting its people in the successive steps necessary to the establishment of a free and independent government prepared to assume and perform the obligations of international law, which now rest upon the United States under the Treaty of Paris. The convention elected by the people to frame a constitution is approaching the completion of its labors. The transfer of American control to the new government is of such great importance, involving as it does a transition from military occupation and the treaty of peace, that I anticipated being advised by the recent act of Congress of the peace which the legislative branch of the government deemed essential to the best interests of Cuba and the United States. The principles which led to our intervention require that the fundamental law upon which the new government rests should be adapted to secure a government capable of performing the duties and discharging the functions of a separate nation, of observing its international obligations, of protecting life and property, assuring order, safety and liberty, and conforming to the established and historical policy of the United States in its relation to Cuba."

"The peace which we are pledged to leave to the Cuban people must carry with it the guarantees of permanence. We become possessors for the pacification of the island, and we remain accountable to the Cubans no less than to our own country and people for the reconstruction of Cuba as a free commonwealth including foundations of right, justice, liberty and assured order. Our entrenchment of the people will not be completed until free Cuba shall be a reality, not a name; a perfected entity, not a chasty experiment, bearing within itself the elements of failure."

"While the treaty of peace with Spain was ratified on February 6, 1899, and ratifications were exchanged nearly two years ago the Congress has indicated no form of government for the Philippine Islands. It has, however, provided an army to enable the Executive to suppress insurrection, restore peace, give security to the inhabitants and establish the authority of the United States throughout the archipelago. It has authorized the organization of native troops as auxiliary to the regular force. It has been advised from time to time of the acts of the military and naval officers in the islands of my action in appointing civil commissions, of the instructions with which they were charged of their duties and powers of their recommendations and of their several acts under Executive commission, together with the very complete general information they have submitted."

"These reports fully set forth the conditions, past and present, in the islands, and the instructions clearly show the principles which will guide the Executive until the Congress shall, as it is required to do by the treaty, determine the civil rights and political status of the native inhabitants. The Congress having added the sanction of its authority to the powers already possessed and exercised by the Executive under the constitution, thereby leaving with the Executive the responsibility for the government of the Philippines, I shall continue the effort already begun until order shall be restored throughout the islands, and as fast as conditions permit will

establish local governments, in the formation of which the full co-operation of the people has been already invited, and when established will encourage the people to administer them.

"The settled purpose, long ago proclaimed, to afford the inhabitants of the islands self government as fast as they were ready for it will be pursued with earnestness and fidelity. Already something has been accomplished in this direction. The government's representatives, civil and military, are doing faithful and noble work in their mission of emancipation, and merit the approval and support of their countrymen. The most liberal terms of amnesty have already been communicated to the insurgents, and the way is still open for those who have raised their arms against the government for honorable submission to its authority.

"Our countrymen should not be deceived. We are not waging war against the inhabitants of the Philippine Islands. A portion of them are making war against the United States. By far the greater part of the inhabitants recognize American sovereignty, and welcome it as a guarantee of order and security for life, property, liberty, freedom of conscience and the pursuit of happiness. To them full protection will be given. They shall not be abandoned. We will not leave the destiny of the loyal millions in the islands to the disloyal thousands who are in rebellion against the United States. Order under civil institutions will come as soon as those who now break the peace shall keep it. Force will not be needed or used when those who make war against us shall make it no more. May it end without further bloodshed, and there be ushered in the reign of peace, to be made permanent by a government of liberty under law."

A. D. 1901 (March).—Death of Ex-President Harrison.—Benjamin Harrison, President of the United States 1889-1893, died at his home in Indianapolis, on the afternoon of March 13, 1901, after an illness of a few days.

A. D. 1901 (March—April).—Capture of Aguinaldo, the Filipino leader.—His oath of allegiance to the United States. See in this vol. PHILIPPINE ISLANDS; A. D. 1901 (March—April).

A. D. 1901 (April).—Organization of the enlarged regular army.—Its strength, 76,000 men.—A Press dispatch from Washington, April 24, announced that the Secretary of War had approved recommendations of Lieutenant General Miles for the organization of the army, not raising it to the full strength of 100,000 men authorized by Congress, but providing for a force of 76,787 enlisted men, distributed as follows: "Line of the army, 71,704; ordnance department, 700; signal corps, 760; post quartermaster sergeants, 150; post commissary sergeants, 200; electrician sergeants, 100; Military Academy detachment and band, 298; Indian Scouts, 75. The cavalry is to be organized into fifteen regiments, consisting of 12 troops of 85 enlisted men, which, with the bands, will make a cavalry force of 17,840 men. The infantry is to consist of 38,520 men, divided into 30 regiments of 12 companies each. The artillery corps will have a total of 18,862 men, of which the coast artillery will have

13,734, organized into 126 companies of 100 men each; and the field artillery, 4,800 men, organized into 30 batteries of 150 men each. The engineer battalions will consist of 12 companies amounting to 1,282 men. This plan makes no provision for the employment of Filipino natives, but this is explained by the fact that the 12,000 authorized for the native military force was made a distinctive feature of the Army bill by Congress and separated from the Regular Army."

A. D. 1901 (April).—Petition from the workmen of Porto Rico. See in this vol. PORTO RICO; A. D. 1901 (April).

A. D. 1901 (May).—Decision of the Supreme Court in the cases involving questions touching the status of the new territorial possessions of the nation.—The opinions of the Supreme Court in the cases before it known as "the insular cases," involving questions touching the relations of the government of the United States to the insular possessions lately acquired (see above; A. D. 1900-1901), were announced on the 27th of May, as these sheets of the present volume were about to go to press.

In the case of *Elias S. A. De Lima et al.* the opinion of the majority of the Court, delivered by Justice Brown, was against the claim of the government to duties on goods imported into the United States from Porto Rico after the ratification of the treaty of peace with Spain and before the passage of the Porto Rican act of April 12, 1900 (see, in this vol., PORTO RICO, A. D. 1899-1900; and 1900-1901). It was held in this decisive opinion that Porto Rico, at the time the duties in question were collected, was not a foreign country, but a territory of the United States. Said Justice Brown: "If an Act of Congress be necessary to convert a foreign country into domestic territory, the question at once suggests itself, What is the character of the legislation demanded for this purpose? Will an act appropriating money for its purchase be sufficient? Apparently not. Will an act appropriating the duties collected upon imports to and from such country for the benefit of its government be sufficient? Apparently not. Will acts making appropriations for its postal service, for the establishment of lighthouses, for the maintenance of quarantine stations, for erecting public buildings, have that effect? Will an act establishing a complete local government, but with the reservation of a right to collect duties upon commerce, be adequate for that purpose? None of these, nor all together, will be sufficient if the contention of the government be sound. Since acts embracing all these provisions have been passed in connection with Porto Rico and it is insisted that it is still a foreign country within the meaning of the tariff laws. We are unable to acquiesce in this assumption that a territory may be at the same time both foreign and domestic. We are, therefore, of the opinion that at the time these duties were levied Porto Rico was not a foreign country within the meaning of the tariff laws, but a territory of the United States; that the duties were illegally exacted, and that the plaintiffs are entitled to recover them back."

But in the case of *Samuel B. Davies et al.* a different set of circumstances was dealt with, since the duties in question were on goods imported from Porto Rico after the passage of the Act of April 12 (called "the Foraker Act").

on the question thus presented the majority of the Court sustained the contention of the government, saying, in an opinion delivered by Justice Brown: "We are of opinion that the island of Porto Rico is a territory appurtenant and belonging to the United States, but not a part of the United States within the revenue clause of the Constitution, that the Foraker act is constitutional so far as it imposes duties upon imports from such island and that the plaintiff cannot recover the duties exacted in this case." The following general conclusions were held by Justice Brown to be established:

First—That the District of Columbia and the Territories are not States, within the judicial clause of the Constitution giving jurisdiction in cases between citizens of different States.

Second—That Territories are not States, within the meaning of revised statutes, section 700, permitting writs of error from this court in cases where the validity of a State's statute is drawn in question.

Third—That the District of Columbia and the Territories are States as that word is used in treaties with foreign powers, with respect to the ownership, disposition and inheritance of property.

Fourth—That the Territories are not within the clause of the Constitution providing for the creation of a Supreme Court and such inferior courts as Congress may see fit to establish.

Fifth—That the Constitution does not apply to foreign countries or trials therein conducted, and that Congress may lawfully provide for such trials before consular tribunals, without the intervention of a grand or petit jury.

Sixth—That where the Constitution has been once formally extended by Congress to Territories, neither Congress nor the Territorial Legislature can enact laws inconsistent therewith.

Five of the nine justices of the Court concurred in the decree announced by Justice Brown, but three of them, viz. Justices White, Shiras and McKenna, placed their concurrence on different and quite opposed grounds. In an opinion prepared by Justice White. In their view of the case before the court, "the sole and only issue is, had Porto Rico, at the time of the passage of the Act in question, been incorporated into and become an integral part of the United States?" and their conclusion is reported to have been, that "the question when Porto Rico was to be incorporated was a political question, to be determined by the American people, speaking through Congress, and was not for the courts to determine."

The minority of the Court, consisting of Chief Justice Fuller, Justices Harlan, Brewer and Peckham dissented from the decree rendered by the majority, and from the varying grounds on which the two sections of that majority had rested it. As summarized in press despatches

of the day, their opinion delivered by the Chief Justice, "absolutely repudiated the contention that the rule of uniformity [that is, the constitutional provision that "all duties, imposts and excises shall be uniform throughout the United States"] was not applicable to Porto Rico because it had not been incorporated into and become an integral part of the United States. The word 'incorporation' had no occult meaning, and whatever its situation before, the Foraker act made Porto Rico an organized Territory of the United States."

"The concurring opinion of the minority," said the Chief Justice, "recognized that Congress, in dealing with the people of new territories or possessions, is bound to respect the fundamental guarantees of life, liberty and property, but assumes that Congress is not bound in those territories or possessions to follow the rules of taxation prescribed by the Constitution. And yet the power to tax involves the power to destroy and the levy of duty burdens our people in all places under the jurisdiction of the Government. The logical result is that Congress may prohibit commerce altogether between the States and Territories, and may prescribe one rule of taxation in one Territory and a different rule in another. That theory assumes that the Constitution created a government empowered to acquire countries throughout the world to be governed by different rules than those obtaining in the original States and Territories, and substitutes for the present system of republican government, a system of domination over distant provinces in the exercise of unrestricted power. In our judgment, so much of the Porto Rico act as authorized the imposition of these duties is invalid, and plaintiffs were entitled to recover."

Justice Harlan announced his concurrence with the dissenting opinion delivered by the Chief Justice. He regarded the Foraker act as unconstitutional in its revenue provisions and believed that Porto Rico, after the ratification of the treaty with Spain, became a part of the United States. In conclusion Justice Harlan said: "The addition of Porto Rico to the territory of the United States has been recognized by direct action upon the part of Congress. It has been established in recognition of the treaty with Spain. If Porto Rico did not by such action become a part of the United States it did become such, at least, when Congress passed the Foraker act. I can not believe that Congress may impose any duty, impost or excise with respect to that territory and its people which is not consistent with the constitutional requirement that all duties, imposts and excises shall be uniform throughout the United States."

No decision was rendered in the case of the Fourteen Diamond Rings which involved questions relative to the status of the Philippine Islands in their relations to the government of the United States.

URUGUAY: A. D. 1896-1899.—Revolutionary movement.—Assassination of President Borda.—Blancos and Colorados.—Restoration of tranquil government by the Vice President, Cuestas.—In November, 1896, a movement for the overthrow of President Borda was begun, with strong assistance from the neighboring Brazilian State of Rio Grande do Sul. Months of civil war followed, with varying fortunes, but the summer of 1897 found the President parleying with the insurgents, endeavoring to make terms. His original opponents had been the party called that of the Blancos, or Whites; the Colorados, or Reds, had supported him; but he seemed to be making enemies among them. By an assassin of his own party he was shot, on the 25th of August, as he came from a service in the cathedral at Montevideo which commemorated the anniversary of Uruguayan independence. Señor Juan Luis Cuestas, the President of the Senate and ex-officio Vice President of the Republic, assumed the administration of the government, made peace with the insurgents, and prepared to deal with a faction in the Chambers, which is said to have made good government impossible. The Representatives had made themselves hated by violence, corruption, and attacks on property. Señor Cuestas accordingly removed all officials devoted to the Chambers, called out a thousand National Guards, and being thus master of the situation, on February 10th dissolved the Chambers and declared himself provisional President. He then appointed a "Council" of eighty prominent citizens of all parties, invested them with the legislative power, and directed them to elect a new

President, and to settle the method and time of the next elections. . . . According to the "Times" correspondent, the citizens of Montevideo of all parties approved his action, not a stroke was struck for the Chambers, and public securities rose at once by from eight to fourteen points. Señor Cuestas, in fact, is trusted and competent. —*The Spectator* (London), March 26, 1898. In due time, the Provisional President had federal with a military revolt, which he effectually suppressed. Then, on the 1st of March, 1899, he was constitutionally elected President, after signing his dictatorial powers for a fortnight, in order that the election might be freely held.

UTAH: A. D. 1895-1896.—Prohibition of polygamous marriages.—Proclamation of admission to the Union.—On the 4th of January, 1896, a proclamation by the President of the United States, after reciting the provisions of the Act of Congress approved July 16, 1894, and the action taken by a convention of the people of Utah, held in accordance with the said act, in March, 1895, which convention "did, by ordinance irrevocable without the consent of the United States and the people of said State, as required by said act, provide that perfect toleration of religious sentiment shall be secured and that no inhabitant of said State shall ever be molested in person or property on account of his or her mode of religious worship, but that polygamous or plural marriages are forever prohibited," thereupon declared and proclaimed the creation of the State of Utah and its admission into the Union to be accomplished. The constitution of the new State has some radical features, providing for an eight hours' day, and giving to women equal rights with men in suffrage and in eligibility to public office.

A. D. 1895 (July).—The question of the boundary of British Guiana taken up by the government of the United States.—Despatch of Secretary Olney to Ambassador Bayard.—For a number of years the government of the United States had been exerting itself to bring about the settlement of a long-standing dispute between Great Britain and Venezuela concerning the line of boundary between the territory of Venezuela and that of British Guiana. In 1895 the effort became more resolute, as appeared in a lengthy despatch addressed, on the 20th of July, by the American Secretary of State, Mr. Olney, to the American Ambassador in London, Mr. Bayard. In this despatch Mr. Olney reviewed the long controversy which had been in progress, and recalled the communications on the subject which had passed between the governments of the United States and Great Britain since 1886. He then summarised "the important

features of the existing situation" as represented in his recital, by the following statement:

"1. The title to territory of indefinite but confessedly very large extent is in dispute between Great Britain on the one hand, and the South American Republic of Venezuela on the other. 2. The disparity in the strength of the claimants is such that Venezuela can hope to establish her claim only through peaceful methods—through an agreement with her adversary either upon the subject itself or upon an arbitration. 3. The controversy with varying claims on the part of Great Britain has existed for more than half a century, during which period many earnest and persistent efforts of Venezuela to establish a boundary by agreement have proved unsuccessful. 4. The futility of the endeavour to obtain a conventional line being recognized, Venezuela, for a quarter of a century, has asked and striven for arbitration. 5. Great Britain, however, has always and continuously refused, and still refuses, to arbitrate except upon the condition of a renunciation of a large part of the Venezuelan claim, and of a concession to herself of a large share of the territory in controversy. 6. By the frequent interposition of its good offices at the instance of Venezuela, by constantly urging and promoting the restoration of diplomatic relations between the two countries, by pressing for arbitration of the disputed boundary."

by offering to act as Arbitrator, by expressing its grave concern when new alleged instances of British aggression upon Venezuelan territory have been brought to its notice, the Government of the United States has made it clear to Great Britain and to the world that the controversy is one in which both its honour and its interests are involved, and the continuance of which it can not regard with indifference.

Mr. Olney proceeds next to consider the rights, the interests and the duty of the United States in the matter, and to what extent, if any it may and should intervene in a controversy between and primarily concerning only Great Britain and Venezuela, and his conclusions on these points are founded on the doctrine set forth by President Monroe, of resistance to European intervention in American affairs. Quoting President Monroe's celebrated Message on the subject, in 1823, Mr. Olney remarks:

"The Message just quoted declared that the American continents were fully occupied, and were not the subjects for future colonization by European Powers. To this spirit and this purpose, also, are to be attributed the passages of the same Message which treat any infringement of the rule against interference in American affairs on the part of the Powers of Europe as an act of unfriendliness to the United States. It was realized that it was futile to lay down such a rule unless its observance could be enforced. It was manifest that the United States was the only Power in this hemisphere capable of enforcing it. It was therefore courageously declared, not merely that Europe ought not to interfere in American affairs, but that any European Power doing so would be regarded as an antagonizing the interests and inviting the opposition of the United States.

"That America is in no part open to colonization, though the proposition was not universally admitted at the time of its first enunciation, has long been universally conceded. We are now concerned, therefore, only with that other practical application of the Monroe doctrine the disregard of which by an European Power is to be deemed an act of unfriendliness towards the United States. The precise scope and limitations of this rule cannot be too clearly apprehended. It does not establish any general Protectorate by the United States over other American States. It does not relieve any American State from its obligations as fixed by international law, nor prevent any European Power directly interested from enforcing such obligations or from inflicting merited punishment for the breach of them. It does not contemplate any interference in the internal affairs of any American State, or in the relations between it and other American States. It does not justify any attempt on our part to change the established form of Government of any American State, or to prevent the people of such State from altering that form according to their own will and pleasure. The rule in question has but a single purpose and object. It is that no European Power or combination of European Powers shall forcibly deprive an American State of the right and power of self-government, and of shaping for itself its own political fortunes and destinies. That the rule thus defined has been the accepted public law of this country ever since its promulgation cannot fairly be denied.

"It is manifest that if a rule has been so clearly and uniformly declared and acted upon by the Executive Branch of the Government for more than seventy years, without express repudiation by Congress, it must be conclusively presumed to have its sanction. Yet the contrary is more than the exact truth, to say that every Administration since President Monroe's has adhered to it, and sometimes more, occasions than one to examine and consider the Monroe doctrine and has in each instance given it emphatic endorsement.

A doctrine of American public law thus long and firmly established and supported could not easily be ignored in a proper case for its application even were the considerations upon which it is founded obscure or questionable. No such objection can be made, however, to the Monroe doctrine understood and declared in the manner already stated. It rests on the contrary upon facts and principles that are both intelligible and incontrovertible. That distance and 3,000 miles of intervening ocean make any permanent political union between an European and an American State imaginary and inexpedient will hardly be denied. But physical and geographical considerations are the least of the objections to such a union. Europe, as Washington observed, has a set of primary interests which respect neither self. America is not interested in them, and ought not to be vexed or complicated with them.

If, for the reasons stated, the probable intrusion of European Powers into American politics is to be deprecated, it is as it is to be deprecated, it should be resisted and prevented. Such resistance and prevention must come from the United States. They would come from it, of course, were it made the point of attack. But, if they come at all, they must also come from it, when any other American State is attacked, since only the United States has the strength adequate to the exigency. Is it true, then, that the safety and welfare of the United States are so concerned with the maintenance of the independence of every American State as against any European Power as to justify and require the intervention of the United States whenever that independence is endangered? The question can be candidly answered in but one way. The States of America, South as well as North, by geographical proximity, by natural sympathy, by similarity of Governmental Constitutions, and friends and allies, commercially and politically of the United States. To allow the subjugation of any of them by an European Power is, of course, to completely reverse that situation and signifies the loss of all the advantages incident to their natural relations to us. But that is not all. The people of the United States have a vital interest in the course of popular self-government. To-day the United States is practically sovereign on this continent, and its flag is low upon the subjects to which it confines its interposition. Why? It is not because of the pure friendship or goodwill felt for it. It is not simply by reason of its high character as a civilized State, nor because wisdom and justice and equity are the invariable characteristics of the dealings of the United States. It is because, in addition to all other grounds, its infinite resources, combined with its isolated position, render it master of the situation, and practically invulnerable as against any or all other Powers. All the advantages of this super-

riority are at once imperilled if the principle be admitted that European Powers may convert American States into Colonies or provinces of their own. The principle would be eagerly availed of, and every Power doing so would immediately acquire a base of military operations against us. What one Power was permitted to do could not be denied to another, and it is not inconceivable that the struggle now going on for the acquisition of Africa might be transferred to South America. If it were, the weaker countries would unquestionably be soon absorbed, while the ultimate result might be the partition of all South America between the various European Powers.

The people of the United States have learned in the school of experience to what extent the relations of States to each other depend not upon sentiment nor principle, but upon self-interest. They will not soon forget that, in their hour of distress, all their anxieties and burdens were aggravated by the possibility of demonstrations against their national life on the part of Powers with whom they had long maintained the most harmonious relations. They have yet in mind that France seized upon the apparent opportunity of our Civil War to set up a Monarchy in the adjoining State of Mexico. They realize that, had France and Great Britain held important South American possessions to work from and to benefit, the temptation to destroy the predominance of the Great Republic in this hemisphere by furthering its dismemberment might have been irresistible. From that grave peril they have been saved in the past, and may be saved again in the future, through the operation of the sure but silent force of the doctrine proclaimed by President Monroe.

There is, then, a doctrine of American public law, well founded in principle and abundantly sanctioned by precedent, which entitles and requires the United States to treat as an injury to itself the forcible assumption by an European Power of political control over an American State. The application of the doctrine to the boundary dispute between Great Britain and Venezuela remains to be made, and presents no real difficulty. Though the dispute relates to a boundary line, yet, as it is between States, it necessarily imports political control to be lost by one party and gained by the other. The political control at stake, too, is of no mean importance, but concerns a domain of great extent—the British claim, it will be remembered, apparently extending in two years some 33,000 square miles—and, if it also directly involves the command of the mouth of the Orinoco, is of immense consequence in connection with the whole river navigation of the interior of South America. It has been intimated, indeed, that in respect of these South American possessions, Great Britain is herself an American State like any other, so that a controversy between her and Venezuela is to be settled between themselves as if it were between Venezuela and Brazil, or between Venezuela and Colombia, and does not call for or justify United States' intervention. If this view be tenable at all, the logical sequence is plain. Great Britain as a South American State is to be entirely differentiated from Great Britain generally, and if the boundary question cannot be settled otherwise than by force, British Guiana with her own independent resources, and not

those of the British Empire, should be left to settle the matter with Venezuela—an arrangement which very possibly Venezuela might not object to. But the proposition that an European Power with an American dependency is to be treated for the purposes of the Monroe doctrine to be classed not as an European but as an American State will not admit of serious discussion. If it were to be adopted, the Monroe doctrine would become valueless to be worth asserting.

The declaration of the Monroe Message—that existing Colonies or dependencies of an European Power would not be interfered with by the United States—means Colonies or dependencies then existing with their limits as then existing. So it has been invariably construed, and so it must continue to be construed, unless it is to be deprived of all vital force. Great Britain cannot be deemed a South American State within the purview of the Monroe doctrine, nor, if she is appropriating Venezuelan territory, is it material that she does so by advancing the frontier of an old Colony instead of by the planting of a new Colony. The difference is matter of form, and not of substance, and the doctrine if pertinent in the one case must be in the other also. It is not admitted, however, and therefore cannot be assumed, that Great Britain is in fact usurping dominion over Venezuelan territory. While Venezuela charges such usurpation Great Britain denies it, and the United States, until the merits are authoritatively ascertained, can take sides with neither. But while this is so—while the United States may not, under existing circumstances at least, take upon itself to say which of the two parties is right and which wrong—it is certainly within its right to demand that the truth shall be ascertained.

It being clear, therefore, that the United States may legitimately insist upon the merits of the boundary question being determined, it is equally clear that there is but one feasible mode of determining them, viz., peaceful arbitration. The impracticability of any conventional adjustment, has been often and thoroughly demonstrated. Even more impossible of consideration is an appeal to arms—a mode of settling national pretensions unhappily not yet wholly obsolete. If, however, it were not condemnable as a relic of barbarism and a crime in itself, so one-sided a contest could not be invited nor even accepted by Great Britain without distinct disparagement to her character as a civilized State. Great Britain, however, assumes no such attitude. On the contrary, she both admits that there is a controversy, and that arbitration should be resorted to for its adjustment. But, while up to that point her attitude leaves nothing to be desired, its practical effect is completely nullified by her insistence that the submission shall cover but a part of the controversy—that, as a condition of arbitrating her right to a part of the disputed territory, the remainder shall be turned over to her. If it were possible to point to a boundary which both parties had ever agreed or assumed to be such either expressly or tacitly, the demand that territory conceded by such line to British Guiana should be held not to be in dispute might rest upon a reasonable basis. By there is no such line. The territory which Great Britain insists shall be ceded to her as a condition of arbitrating her claim to other territory has never been admitted to belong to her. It

has always and consistently been claimed by Venezuela. Upon what principle—except her feebleness as a nation—is she to be denied the right of having the claim heard and passed upon by an impartial Tribunal? No reason or shadow of reason appears in all the voluminous literature of the subject.

In these circumstances, the duty of the President appears to him unmistakable and imperative. Great Britain's assertion of title to the disputed territory, combined with her refusal to have that title investigated, being a substantial appropriation of the territory to her own use, not to protest and give warning that the transaction will be regarded as injurious to the interests of the people of the United States, as well as oppressive in itself, would be to ignore an established policy with which the honour and welfare of this country are closely identified. While the measures necessary or proper for the vindication of that policy are to be determined by another branch of the Government, it is clearly for the Executive to leave nothing undone which may tend to render such determination unnecessary. You are instructed, therefore, to present the foregoing views to Lord Salisbury by reading to him this communication (leaving with him a copy should he so desire), and to reinforce them by such pertinent considerations as will doubtless occur to you. They call for a definite decision upon the point whether Great Britain will consent or will decline to submit the Venezuelan boundary question in its entirety to impartial arbitration. It is the earnest hope of the President that the conclusion will be on the side of arbitration, and that Great Britain will add one more to the conspicuous precedents she has already furnished in favour of that wise and just mode of adjusting international disputes. If he is to be disappointed in that hope, however—a result not to be anticipated, and in his judgment calculated to greatly embarrass the future relations between this country and Great Britain—it is his wish to be made acquainted with the fact at such early date as will enable him to lay the whole subject before Congress in his next Annual Message.—*Great Britain, Parliamentary Publications (Papers by Command): United States No. 1, 1896, pp. 13-21.*

A. D. 1895 (November).—The British Guiana boundary question.—Replies of Lord Salisbury to Secretary Olney.—The reply of Lord Salisbury was not written until the 26th of November. It was then given in two despatches, bearing the same date,—one devoted entirely to a discussion of "the Monroe doctrine" and of the argument founded on it by Mr. Olney; the other to a rehearsal of the Venezuela controversy from the standpoint of the British government. In the communication first mentioned he wrote:

"The contentions set forth by Mr. Olney in this part of his despatch are represented by him as being an application of the political maxims which are well known in American discussion under the name of the Monroe doctrine. As far as I am aware, this doctrine has never been before advanced on behalf of the United States in any written communication addressed to the Government of another nation, but it has been generally adopted and assumed as true by many eminent writers and politicians in the United

States. It is said to have largely influenced the Government of that country in the conduct of its foreign affairs, though Mr. Olney, who was Secretary of State under President Taylor, expressly stated that that Administration had in no way adopted it. But during the period that has elapsed since the Message of President Monroe was delivered in 1823, the doctrine has undergone a very notable development, and the aspect which it now presents in the hands of Mr. Olney differs widely from its character when it first issued from the pen of its author. The two propositions which in effect President Monroe laid down were, first, that America was hereafter to be looked upon as a field for European colonization, and, secondly, that Europe must not attempt to extend its political system to America or to control the political conduct of any of the American communities which had recently declared their independence. The dangers against which President Monroe thought it right to guard were not as imaginary as they would sound the present day.

The system of which he speaks, and of which he so resolutely deprecates the application to the American continent, was the system then adopted by certain powerful States upon the Continent of Europe of confederating to prevent by force of arms the adoption of other countries of political institutions which they disliked, and to uphold by external pressure those which they approved.

The dangers which were apprehended by President Monroe have no relation to the state of things in which we live at the present day. It is hardly likely that Mr. Olney should invoke, in defence of the views on which he is now insisting, an authority which enjoys so high a popularity with his own fellow-countrymen. But the circumstances with which President Monroe was dealing, and those to which the present American Government is addressing itself, have very few features in common. Great Britain is imposing no system upon Venezuela, and is not concerning herself in any way with the nature of the political institutions under which the Venezuelans may prefer to live. But the British Empire and the Republic of Venezuela are neighbours, and they have differed for some time past, and continue to differ, as to the line by which their dominions are separated. It is a controversy with which the United States have no apparent practical concern. It is difficult, indeed, to see how it can materially affect any State or community outside those primarily interested, except perhaps other parts of His Majesty's dominions, such as Trinidad. The disputed frontier of Venezuela has nothing to do with any of the questions dealt with by President Monroe. It is not a question of the colonization by a European Power of any portion of America. It is not a question of the imposition upon the communities of South America of any system of government devised in Europe. It is simply the determination of the frontier of a British possession which belonged to the Throne of England long before the Republic of Venezuela came into existence.

But even if the interests of Venezuela were so far linked to those of the United States as to give to the latter a theoretical standing in this controversy, their Government apparently have not formed, and certainly do not express, any opinion upon the actual merits of the dispute. The Government of the United States does not say that

Great Britain, or that Venezuela, is in the right in the matters that are in issue. But they lay down that the doctrine of President Monroe, when he opposed the imposition of European systems or the renewal of European colonization, confers upon them the right of demanding that when a European Power has a frontier difference with a South American community, the European Power shall consent to refer that controversy to arbitration; and Mr. Olney states that unless Her Majesty's Government accede to this demand, it will greatly embarrass the future relations between Great Britain and the United States. "Whatever may be the authority of the doctrine laid down by President Monroe, there is nothing in his language to show that he ever thought of claiming this novel prerogative for the United States. . . . I will not now enter into a discussion of the merits of this method of terminating international differences. It has proved itself valuable in many cases; but it is not free from defects, which often operate as a serious drawback on its value. It is not always easy to find an Arbitrator who is competent, and who, at the same time, is wholly free from bias, and the task of insuring compliance with the Award when it is made is not exempt from difficulty. . . .

"In the remarks which I have made, I have argued on the theory that the Monroe doctrine in itself is sound. I must not, however, be understood as expressing any acceptance of it on the part of Her Majesty's Government. It must always be mentioned with respect, on account of the distinguished statesman to whom it is due, and the great nations who have generally adopted it. But international law is founded on the general consent of nations, and no statesman, however eminent, and no nation, however powerful, are competent to insert into the code of international law a novel principle which was never recognized before, and which has not since been accepted by the Government of any other country. Though the language of President Monroe is directed to the attainment of objects which most Englishmen would agree to be salutary, it is impossible to admit that they have been inscribed by any adequate authority in the code of international law; and the danger which such admission would involve is sufficiently exhibited both by the strange development which the doctrine has received at Mr. Olney's hands, and the arguments by which it is supported. In the despatch under reply, in defence of it he says: 'That distance and 3,000 miles of intervening ocean make any permanent political union between a European and an American State unnatural and inexpedient will hardly be denied. But physical and geographical considerations are the least of the objections to such a union. Europe has a set of primary interests which are peculiar to herself; America is not interested in them, and ought not to be vexed or complicated with them.' . . . The necessary meaning of these words is that the union between Great Britain and Canada; between Great Britain and Jamaica and Trinidad; between Great Britain and British Honduras or British Guiana are 'inexpedient and unnatural.' President Monroe disclaims any such inference from his doctrine; but in this, as in other respects, Mr. Olney develops it. He lays down that the inexpedient and unnatural character of the union between a European and American

State is so obvious that it 'will hardly be denied.' Her Majesty's Government are prepared emphatically to deny it on behalf of both the British and American people who are subject to her Crown."

In his second despatch, Lord Salisbury drew the conclusions of his government from the facts as seen on the English side, and announced his decision, in the following terms: "It will be seen . . . that the Government of Great Britain have from the first held the same view as to the extent of territory which they are entitled to claim as a matter of right. It comprised the coast line up to the River Amacuro and the whole basin of the Essequibo River and its tributaries. A portion of that claim, however, they have always been willing to waive altogether, in regard to another portion, they have been and continue to be perfectly ready to submit the question of their title to arbitration. As regards the rest, that which lies within the so-called Schomburgk line, they do not consider that the rights of Great Britain are open to question. Even when that line they have, on various occasions, offered to Venezuela considerable concessions as a matter of friendship and conciliation, and for the purpose of securing an amicable settlement of the dispute. If as time has gone on the concessions thus offered diminished in extent, and have now been withdrawn, this has been the necessary consequence of the gradual spread over the country of British settlements, which Her Majesty's Government cannot, in justice to the inhabitants offer to surrender to foreign rule, and the justice of such withdrawal is amply borne out by the researches in the national archives of Holland and Spain, which have furnished further and more convincing evidence in support of the British claims."

"Her Majesty's Government are sincerely desirous of being in friendly relations with Venezuela, and certainly have no design to seize territory that properly belongs to her, or forcibly to extend sovereignty over any portion of her population. They have, on the contrary, repeatedly expressed their readiness to submit to arbitration the conflicting claims of Great Britain and Venezuela to large tracts of territory which from their arid nature are known to be of almost untold value. But they cannot consent to entertain, or to submit to the arbitration of another Power or of foreign jurists, however eminent, claims based on the extravagant pretensions of Spanish officials in the last century, and involving the transfer of large numbers of British subjects, who have for many years enjoyed the settled rule of a British Colony, to a nation of different race and language, whose political system is subject to frequent disturbance, and whose institutions as yet too often afford very inadequate protection to life and property. No issue of this description has ever been involved in the questions which Great Britain and the United States have consented to submit to arbitration, and Her Majesty's Government are convinced that in similar circumstances the Government of the United States would be equally firm in declining to entertain proposals of such a nature."—*Great Britain, Papers by Command: United States No. 1, 1896, pp. 23-31.*

A. D. 1895 (December).—Message of President Cleveland to the United States Con-

gress on the Guiana boundary dispute.—As the replies given by Lord Salisbury showed no disposition on the part of the British government to submit its dispute with Venezuela to arbitration President Cleveland took the subject in hand, and addressed to Congress, on the 17th of December, 1895, a special Message which startled the world by the pre-emptiveness of its tone. "In my annual message addressed to the Congress on the 31st instant," he said, "I called attention to the pending boundary controversy between Great Britain and the Republic of Venezuela and recited the substance of a representation made by this Government to Her Britannic Majesty's Government suggesting reasons why such dispute should be submitted to arbitration for settlement and inquiring whether it would be so submitted. The answer of the British Government, which was then awaited, has since been received, and, together with the dispatch to which it is a reply, is hereto appended. Such reply is embodied in two communications addressed by the British prime minister to Sir Julian Pauncefote, the British ambassador at this capital. It will be seen that one of these communications is devoted exclusively to observations upon the Monroe doctrine, and claims that in the present instance a new and strange extension and development of this doctrine is insisted on by the United States; that the reasons justifying an appeal to the doctrine enunciated by President Monroe are generally inapplicable to the state of things in which we live at the present day," and especially inapplicable to a controversy involving the boundary line between Great Britain and Venezuela.

"Without attempting extended argument in reply to these positions, it may not be amiss to suggest that the doctrine upon which we stand is strong and sound, because its enforcement is important to our peace and safety as a nation and is essential to the integrity of our free institutions and the tranquil maintenance of our distinctive form of government. It was intended to apply to every stage of our national life and can not become obsolete while our Republic endures. If the balance of power is justly a cause for jealous anxiety among the Governments of the Old World and a subject for our absolute non-interference, none the less is an observance of the Monroe doctrine of vital concern to our people and their Government. Assuming, therefore, that we may properly insist upon this doctrine without regard to the state of things in which we live or any changed conditions here or elsewhere, it is not apparent why its application may not be invoked in the present controversy. If a European power by an extension of its boundaries takes possession of the territory of one of our neighboring Republics against its will and in derogation of its rights, it is difficult to see why to that extent such European power does not thereby attempt to extend its system of government to that portion of this continent which is thus taken. This is the precise action which President Monroe declared to be dangerous to our peace and safety, and it can make no difference whether the European system is extended by an advance of frontier or otherwise.

"It is also suggested in the British reply that we should not seek to apply the Monroe doctrine to the pending dispute because it does not em-

body any principle of international law which is founded on the general consent of nations, and that no statesman, however eminent, and no nation, however powerful, are competent to insert into the code of international law a novel principle which was never recognized before and which has not since been accepted by the government of any other country. Practically the principle for which we contend has neither, if not exclusive, relation to the United States. It may not have been admitted in so many words to the code of international law, but since in international councils every nation is entitled to the rights belonging to it, if the enforcement of the Monroe doctrine is something we may justly claim, it has its place in the code of international law as certainly and as securely as if it were specifically mentioned, and when the United States is a suitor before the high tribunal that administers international law the question to be determined is whether or not we present claims which the justice of that code of law can find to be right and valid.

"The Monroe doctrine finds its recognition in those principles of international law which are based upon the theory that every nation shall have its rights protected and its just claims enforced. Of course this government is entirely confident that under the sanction of this doctrine we have clear rights and undoubted claims. Nor is this ignored in the British reply. The prime minister, while not admitting that the Monroe doctrine is applicable to present conditions, states: 'In declaring that the United States would resist any such enterprise if it was contemplated, President Monroe adopted a policy which received the entire sympathy of the English Government of that date.'

"He further declares: 'Though the language of President Monroe is directed to the attainment of objects which most Englishmen would agree to be salutary, it is impossible to admit that they have been prescribed by any adequate authority in the code of international law.'

"Again he says: 'They [Her Majesty's Government] fully concur with the view which President Monroe apparently entertained, that any disturbance of the existing territorial distribution in that hemisphere by any fresh acquisitions on the part of any European State would be a highly inexpedient change.'

"In the belief that the doctrine for which we contend was clear and definite, that it was founded upon substantial considerations, and involved our safety and welfare, that it was fully applicable to our present conditions and to the state of the world's progress, and that it was directly related to the pending controversy, and without any conviction as to the final merits of the dispute, but anxious to learn in a satisfactory and conclusive manner whether Great Britain sought under a claim of boundary to extend her possessions on this continent without right, or whether she merely sought possession of territory fairly included within her lines of ownership, this Government proposed to the Government of Great Britain a resort to arbitration as the proper means of settling the question, to the end that a vexatious boundary dispute between the two contestants might be determined and our exact standing and relation in respect to the controversy might be made clear. It will be seen from the correspondence herewith submitted

that this proposition has been declined by the British Government upon grounds which in the circumstances seem to me to be far from satisfactory. It is deeply disappointing that such an appeal, actuated by the most friendly feelings toward both nations directly concerned, addressed to the sense of justice and to the magnanimity of one of the great powers of the world, and touching its relations to one comparatively weak and small, should have produced no better results.

"The course to be pursued by this Government in view of the present condition does not appear to admit of serious doubt. Having labored faithfully for many years to induce Great Britain to submit this dispute to impartial arbitration, and having been now finally apprised of her refusal to do so, nothing remains but to accept the situation, to recognize its plain requirements, and deal with it accordingly. Great Britain's present proposition has never thus far been regarded as admissible by Venezuela, though any adjustment of the boundary which that country may deem for her advantage and may enter into of her own free will can not of course be objected to by the United States. Assuming, however, that the attitude of Venezuela will remain unchanged, the dispute has reached such a stage as to make it now incumbent upon the United States to take measures to determine with sufficient certainty for its justification what is the true divisional line between the Republic of Venezuela and British Guiana. The inquiry to that end should of course be conducted carefully and judicially, and due weight should be given to all available evidence, records, and facts in support of the claims of both parties. In order that such an examination should be prosecuted in a thorough and satisfactory manner, I suggest that the Congress make an adequate appropriation for the expenses of a commission, to be appointed by the Executive, who shall make the necessary investigation and report upon the matter with the least possible delay. When such report is made and accepted it will, in my opinion, be the duty of the United States to resist by every means in its power, as a willful aggression upon its rights and interests, the appropriation by Great Britain of any lands or the exercise of governmental jurisdiction over any territory which after investigation we have determined of right belongs to Venezuela.

"In making these recommendations I am fully alive to the responsibility incurred and keenly realize all the consequences that may follow. I am, nevertheless, firm in my conviction that while it is a grievous thing to contemplate the two great English-speaking peoples of the world as being otherwise than friendly competitors in the onward march of civilization and strenuous and worthy rivals in all the arts of peace, there is no calamity which a great nation can invite which equals that which follows a supine submission to wrong and injustice and the consequent loss of national self respect and honor, beneath which are shielded and defended a people's safety and greatness."—*United States Message and Documents* (Verdict, 1895-6).

The recommendations of the President were acted upon with remarkable unanimity and promptitude in Congress, a bill authorizing the appointment of the proposed commission, and appropriating \$100,000 for the necessary expenses,

being passed by the House on the day following the Message (December 17), and by the Senate on the 20th. See in this vol. *UNITED STATES OF AM.* A. D. 1895 (DECEMBER).

A. D. 1895-1896 (December-January).—Feeling in England and the United States over the boundary dispute. See in this vol. *UNITED STATES OF AM.* A. D. 1895-1896 (DECEMBER—JANUARY).

A. D. 1896-1899.—Appointment of the United States Commission to investigate the boundary question.—Reopening of negotiations between the United States and Great Britain.—The solution of the main difficulty found.—Arbitration and its result.—The Commission authorized by the Congress of the United States to investigate and report on the true divisional line between British Guiana and Venezuela was named by the President of the United States, on the 1st of January, as follows: David J. Brewer, Associate Justice of the Supreme Court of the United States, Richard H. Alvey, Chief Justice of the Court of Appeals in the District of Columbia; Andrew D. White, ex-President of Cornell University, and ex-Minister to Germany and Russia; Daniel C. Gilman, President of Johns Hopkins University; Frederick R. Condit, of New York. The Commission was organized on the 4th by the election of Justice Brewer to be its President. Mr. S. Mariet Prevost was subsequently appointed Secretary. One of the first proceedings of the Commission was to address a letter to the Secretary of State, suggesting a friendly intimation to the governments of Great Britain and Venezuela that their assistance to it, in procuring unpublished archives and the like evidence, would be highly appreciable, and that "if either should deem it appropriate to designate an agent or attorney, whose duty it would be to see that no such proofs were omitted or overlooked, the Commission would be grateful for such evidence of good will." This overture was well received in England, and had an excellent effect. It was responded to by Lord Salisbury, with an assurance that Her Majesty's government would readily place at the disposal of the President of the United States any information at their command, and would communicate advance copies of documents soon to be published on the subject of the boundary line. Before the close of January the Commission had organized its work, with several experts engaged to assist on special lines. Professor Justin Winsor, Librarian of Harvard University, had undertaken to report on the early maps of the Guiana-Venezuela country; Professor George L. Burr, of Cornell University, was making ready to examine the Dutch archives in Holland; and Professor J. Franklin Jameson, of Brown University, was enlisted for other investigations.

Before these labors had gone far, however, the two governments, of Great Britain and the United States, were induced to reopen a discussion of the possibility of an arbitration of the dispute. On the 27th of February, Mr. Bayard, the Ambassador of the United States at London, conveyed to Lord Salisbury a proposal from his government "that Her Majesty's Ambassador at Washington should be empowered to discuss the question at that capital with the Secretary of State," and that "a clear definition of the 'settlements' by individuals in the territory in dispute, which it is understood Her Majesty's Govern-

ment desire should be excluded from the proposed submission to arbitration, should be pronounced." Lord Salisbury assented so far as to telegraph, on the same day, to Sir Julian Pauncefote: "I have agreed with the United States Ambassador that, in principle the matter may be discussed between the United States Government acting as the friend of Venezuela and your Excellency." But, a few days later, March 10, the British Premier and Foreign Secretary gave a broader range to the discussion by recalling a correspondence that had taken place in the spring of 1895 between the then American Secretary of State, Mr. Gresham, and the British Ambassador, in contemplation of a general system of international arbitration for the adjustment of disputes between the two governments. Reviving that project, Lord Salisbury submitted the heads of a general arbitration treaty between the United States and Great Britain, which became a subject of discussion for some weeks, without offering much promise of providing for the settlement of the Venezuela dispute. In May, the correspondence returned to the latter subject more definitely, Lord Salisbury writing (May 22):

"From the first our objection has been to subject to the decision of an Arbitrator, who, in the last resort, must, of necessity, be a foreigner, the rights of British colonists who have settled in territory which they had every ground for believing to be British, and whose careers would be broken, and their fortunes possibly ruined, by a decision that the territory on which they have settled was subject to the Venezuelan Republic. At the same time, we are very conscious that the dispute between ourselves and the Republic of Venezuela affects a large portion of land which is not under settlement, and which could be disposed of without any injustice to any portion of the colonial population. We are very willing that the territory which is comprised within this definition should be subjected to the results of an arbitration, even though some portion of it should be found to fall within the Schomburgk line." He proposed, accordingly, the creation of a commission of four persons, for the determination of the questions of fact involved, on whose report the two governments of Great Britain and Venezuela should endeavor to agree on a boundary line, failing which agreement, a tribunal of arbitration should fix the line, on the basis of facts reported by the Commission. "Provided always that in fixing such line the Tribunal shall not have power to include as the territory of Venezuela any territory which was bona fide occupied by subjects of Great Britain on the 1st January, 1887, or as the territory of Great Britain any territory bona fide occupied by Venezuelans at the same date."

Objections to this proposal, especially to its final stipulation, were raised by the government of the United States, and the negotiation looked unpromising again for a time; but at length, on the 13th of July, Mr. Olney made a suggestion which happily solved the one difficulty that had been, from the beginning a bar to agreement between the two governments. "Can it be assumed," he asked, in a letter of that date, "that Her Majesty's Government would submit to an unrestricted arbitration the whole of the territory in dispute, provided it be a rule of the arbitration, embodied in the arbitral agreement, that

territory which has been in the exclusive, peaceful, and actual use and occupation of either party for even two generations, or sixty to seventy years, shall be held by the arbitrators to be the territory of such party? In other words, would Her Majesty's Government assent to unrestricted arbitration of all the territory in controversy, with the period for the acquisition of title by prescription fixed by agreement of the parties in advance at sixty years? Lord Salisbury assented to the principle thus suggested, but proposed a shorter term of occupation than sixty years. Finally the term of fifty years was accepted on both sides, and from that point the arrangement of a Treaty of Arbitration between Great Britain and Venezuela went smoothly on.

The good news that England and America were punctually at the end of their dispute was proclaimed by Lord Salisbury, on the 9th of November, in a speech at the Lord Mayors' banquet in London when he said: "You are aware that in the discussion had with the United States on behalf of their friends in Venezuela, our question has not been whether there should be arbitration, but whether arbitration should have unrestricted application, and we have always claimed that those who assert their right, had the right which attaches to established settlements, should be excluded from arbitration. Our difficulty for months has been to define the settled districts, and the solution has I think come from the suggestion of the Government of the United States that we should treat our colonial empire as we treat individuals, that the same lapse of time which protects the latter in civil life from having their rights questioned should similarly protect an Empire. I should say, 'beyond that' when a lapse could not be claimed, there should be an examination of title, and all the equity demanded in regard thereto should be granted." "I do not believe I can use any other sanguine words when I declare my belief that this has brought the controversy to an end."

On the 10th of November, the Secretary of the United States Commission appointed to investigate the disputed boundary published the following: "The statements of Lord Salisbury as reported in the morning papers, make it probable that the boundary dispute now pending between Great Britain and Venezuela will be settled by arbitration at an early day. Under the circumstances the Commission, while continuing its deliberations in the preparation and orderly arrangement of many valuable maps, reports, and documents, which have been prepared and used in the course of its labors, does not propose to formulate any decision for the present of the matters subject to its examination. It will continue its sessions from time to time, but with the hope and expectation that a friendly and just settlement of all pending differences between the nations interested will make any final decision on its part unnecessary." This hope was substantially realized a few days later, when a convention embodying the agreement of the United States and Great Britain was signed by Secretary Olney and the British Ambassador, Sir Julian Pauncefote. The agreement was carried to its next stage, on the 2d of February, 1897, when a treaty between Great Britain and the United States of Venezuela was signed at Washington, which provides as follows:

"Art. I. An Arbitral Tribunal shall be im-

mediately appointed to determine the boundary line between the Colony of British Guiana and the United States of Venezuela.

Art. II. The Tribunal shall consist of five Jurists: two on the part of Great Britain, nominated by the Members of the Judicial Committee of Her Majesty's Privy Council, namely, the Right Honourable Baron Herschell, Knight Grand Cross of the Most Honourable Order of the Bath, and the Honourable Sir Richard Henn Collins, Knight, one of the Justices of Her Britannic Majesty's Supreme Court of Judicature; two on the part of Venezuela, nominated, one by the President of the United States of Venezuela, namely, the Honourable Melville Weston Fuller, Chief Justice of the United States of America, and one nominated by the Justices of the Supreme Court of the United States of America, namely, the Honourable David Josiah Brewer, a Justice of the Supreme Court of the United States of America; and of a fifth Jurist to be selected by the four persons so nominated, or in the event of their failure to agree within three months from the date of the exchange of ratifications of the present Treaty, to be selected by His Majesty the King of Sweden and Norway. The Jurist so selected shall be President of the Tribunal. In case of the death, absence, or incapacity to serve of any of the four Arbitrators above named, or in the event of any such Arbitrator omitting or declining or ceasing to act as such, another Jurist of repute shall be forthwith substituted in his place. If such vacancy shall occur among those nominated on the part of Great Britain, the substitute shall be appointed by the members for the time being of the Judicial Committee of Her Majesty's Privy Council, acting by a majority, and if among those nominated on the part of Venezuela, he shall be appointed by the Justices of the Supreme Court of the United States, acting by a majority. If such vacancy shall occur in the case of the fifth Arbitrator, a substitute shall be selected in the manner herein provided for with regard to the original appointment.

Art. III. The Tribunal shall investigate and ascertain the extent of the territories belonging to, or that might lawfully be claimed by, the United Netherlands or by the Kingdom of Spain respectively at the time of the acquisition by Great Britain of the Colony of British Guiana, and shall determine the boundary line between the Colony of British Guiana and the United States of Venezuela.

Art. IV. In deciding the matters submitted, the Arbitrators shall ascertain all facts which they deem necessary to a decision of the controversy, and shall be governed by the following Rules, which are agreed upon by the High Contracting Parties as Rules to be taken as applicable to the case, and by such principles of international law not inconsistent therewith as the Arbitrators shall determine to be applicable to the case.—Rules. (a.) Adverse holding or prescription during a period of fifty years shall make a good title. The Arbitrators may deem exclusive political control of a district as well as actual settlement thereof, sufficient to constitute adverse holding or to make title by prescription. (b.) The Arbitrators may recognize and give effect to rights and claims resting on any other ground whatever valid according to international law, and on any principle of in-

ternational law which the Arbitrators may deem to be applicable to the case, and which are not in contravention of the foregoing rules. (c.) In determining the boundary line, if territory of one Party be found by the Tribunal to have been at the date of this Treaty in the occupation of the subjects or citizens of the other Party, such effect shall be given to such occupation as reason, justice, the principles of international law, and the equities of the case shall in the opinion of the Tribunal require. . . . Art. XIII. The High Contracting Parties engage to consider the result of the proceedings of the Tribunal of Arbitration as a final, perfect, and final settlement of all the questions referred to the Arbitrators.—*Great Britain, Papers by Command, Treaty Series No. 5, 1897.*

Before the Arbitrators named in the treaty had entered on their duties, a vacancy in the tribunal was created by the death of Baron Herschell and the Lord Chief Justice of England, Lord Russell of Killowen, was appointed in his place. His Excellency, Frederic de Martens, Privy Counsellor and Permanent Member of the Council of the Ministry of Foreign Affairs in Russia, was selected to be the fifth Arbitrator. As thus constituted, the Arbitral Tribunal met in Paris on the 15th of June, 1899. In the hearings before it, Venezuela was represented by Benjamin Harrison, ex-President of the United States, and other counsel; the British government by Sir Richard Webster, Attorney General of Great Britain, and others. The decision of the Tribunal, which is said to have been rendered with unanimity, was announced on the 3d of October, 1899, as follows:

"We the undersigned Arbitrators do hereby make and publish our decision, determination and Award of, upon, and concerning the questions submitted to us by the said Treaty of Arbitration, and do hereby, conformably to the said Treaty of Arbitration, finally decide, award, and determine that the boundary line between the Colony of British Guiana and the United States of Venezuela is as follows:—Starting from the coast at Point Playa, the line of boundary shall run in a straight line to the River Barima at its junction with the River Murumuma, and thence along the mid stream of the latter river to its source, and from that point to the junction of the River Halowen with the Amakuru, and thence along the mid stream of the Amakuru to its source in the Imataka Ridge, and thence in a south westerly direction along the highest ridge of the spur of the Imataka Mountains to the highest point of the main range of such Imataka Mountains opposite to the source of the Barima, and thence along the summit of the main ridge in a south-easterly direction of the Imataka Mountains to the source of the Acarabisi, and thence along the mid stream of the Acarabisi to the Cayuni, and thence along the northern bank of the River Cayuni westward to its junction with the Wenamu, and thence following the mid stream of the Wenamu to its westernmost source, and thence in a direct line to the summit of Mount Roraima, and from Mount Roraima to the source of the Cottiga, and along the mid stream of that river to its junction with the Takutu, and thence along the mid stream of the Takutu to its source, thence in a straight line to the westernmost point of the Akarai Mountains, and thence along the ridge of the Akarai Mountains to the source of the Corentin called the

Orinoco River. Provided always that the line of delimitation fixed by this Award shall be subject and without prejudice to any questions now existing or which may arise, to be determined between the Government of her Britannic Majesty and the Republic of Brazil, or between the latter Republic and the United States of Venezuela.

"In fixing the above delimitation the Arbitrators consider and decide that in times of peace the Rivers Amakura and Barima shall be open to navigation by the merchant ships of all nations, subject to all just regulations and to the payment of light or other like dues. Provided that the dues charged by the Republic of Venezuela and the Government of the Colony of British Guiana in respect of the passage of vessels along the portions of such rivers respectively owned by them shall be charged at the same rates upon the vessels of Venezuela and Great Britain, such rates being no higher than those charged to any other nation. Provided also that no customs duties shall be chargeable either by the Republic of Venezuela or by the Colony of British Guiana in respect of goods carried on board ships, vessels, or boats passing along the said rivers, but customs duties shall only be chargeable in respect of goods landed in the territory of Venezuela or Great Britain respectively."—*Great Britain, Papers by Command: Venezuela No. 7, 1899, pp. 16-7.*

A. D. 1898-1900.—Change in the Presidency.

—Death of ex-President Crespo.—Revolution.—Rebellion.—General Joaquín Crespo retired from the presidency and was succeeded by General Ignacio Andrade on the 1st of March, 1898. A revolutionary movement was soon started, with General Hernandez at its head, and ex-President Crespo, who led the forces of the government against it, was killed in a charge, on the 10th of April. Hernandez was surprised and captured a few weeks later, and the rebellion then subsided for a time. In the spring of 1899 Hernandez was set at liberty by Andrade, who, meantime, had crushed a minor revolt, undertaken by one General Guerra. August found the harassed President assailed by a fresh rising, started by General Cipriano Castro, and the restless revolutionist, Hernandez, was soon in league with it. This proved to be a revolution in earnest, and, after hard fighting, President Andrade fled from the capital and the country in October; Puerto Cabello, the last town to hold out for him, was bombarded and stormed the following month, and a new government was established, nominally under the Vice-President, Rodriguez, but with Castro for its actual head. Before this had been fully accomplished, however, Hernandez was in arms against Castro, with his accustomed ill success. Before the year closed he had fled the country, but early in 1900 he was once more in the field, maintaining a troublesome war until May, when he was defeated, and again a prisoner in his opponents' hands.

A. D. 1900. Census. According to a report from the United States Consul at Vienna, the census taken December 31, 1900, shows a population of 1,645,647, or nearly 50,000 less than that of Chicago, when the recent census of that city was taken. These figures show Vienna to rank next after London, Paris and Berlin among the European capitals, while in this country, only New York and Chicago are larger. In the last ten years Vienna has increased 21.6 per cent, or slightly faster than the average for the whole United States. Of the two American cities larger than Vienna New York increased in ten years 37.8 per cent, and Chicago 51.1 per cent.

WAR BUDGETS: Military and naval expenditures of the great Powers.—I follow the compilation of statistics of the military and naval expenditure of the leading Powers (Great Britain excepted) was submitted to the House of Representatives at Washington by the Hon. George H. McCallan, of New York, in a speech, February 12, 1900, on the bill then pending in Congress, to make appropriations for the support of the Army of the United States. The tabulated statements were introduced with explanations and comments as follows: "For purposes of comparison, I have taken the armies and navies of Austria-Hungary, France, the German Empire, Italy, and Russia. I have not included Great Britain, for its conditions have been abnormal for nearly two years. I have based my estimates on the enlisted strength of the armies referred to, excluding commissioned officers. The figures are the most recent obtainable without direct communication with foreign authorities and are for the most part for the last fiscal year of the several countries, although in some cases they are for 1898-99. The German naval budget does not include the extraordinary expenditures for the new navy authorized by the recent enactment of the Reichstag. This does not begin to be effective until the next fiscal year. In estimating the equivalent in dollars of the Italian budget I have allowed 6 per cent for the depreciation of the present paper currency—a very moderate estimate. The Russian budget will appear abnormally low, for I have recently seen it stated at \$159,000,000. This is because the ruble has been assumed to be the gold ruble, worth 52 cents, but the budget is expressed in paper rubles, and is now, under a recent order of M. Witte, uniformly reckoned at two-thirds of the gold ruble. I have therefore called it 31 6 cents."

As to the military expenditure of the United States, "the House has during the present session appropriated, or is about to appropriate, for the support of what may be called the active Army, \$152,000,000. The appropriations growing out of past wars amount to a total of \$151,691,292. I have charged to this account every item that could by any possible construction be assumed to refer to past wars and not to the maintenance of the present Army. The pension appropria-

tion bill carried \$145,245,230. The cost of administering the Pension Bureau will amount, by \$1,352,790. The Record and Pension Office cost \$585,170. I have further included appropriations for National and State Homes, back pay, etc., cemeteries, and \$712,580 for extra clerks due to the Spanish war. Adding the appropriations due to past wars to the appropriation for the active Army, we find a total of \$300,703,392.81, which represents the total of our Army budget. Taking the total cost of our active Army, and assuming the enlisted strength of the Army to be 100,000, we find the cost per annum of each enlisted man to be \$1,520. Taking the total Army budget, including appropriations arising from past wars, we find the cost per annum of each enlisted man \$1,007.

Without including appropriations arising from past wars, we find the cost of the Army per capita of population to be \$1.90. Including appropriations arising from past wars we find the cost of the Army per capita of population to be \$1.02. The army budget of Austria-Hungary is \$67,561,410, the cost of maintaining 1 enlisted man for one year being \$184.80, and the cost of the army per capita of population \$1.50. The army budget of France is \$128,959,061, the cost of maintaining 1 enlisted man is \$218.71, and the cost per capita of population is \$1.34. The army budget of the German Empire is \$150,127,713, the cost per annum of 1 enlisted man is \$377.85, the cost per capita of population is \$2.98. The army budget of Italy is \$13,920,132, the cost of maintaining 1 enlisted man per annum is \$392.65, the cost per capita of population is \$1.39. The army budget of Russia is \$90,927,997, the cost of maintaining 1 enlisted man is \$119.65, the cost per capita of population is 77 cents.

The appropriations for the support of the naval establishment are by no means so widely distributed as are those for the Army. The naval bill carries \$77,010,635.00. In the legislative, executive, and judicial bill there are carried appropriations directly chargeable to the support of the Navy, including pay of the clerical force in the Auditor's office, the office of the Secretary, the office of the heads of the bureaus, maintenance of building, and contingent expenses, amounting to \$399,150. In the sundry civil bill there are carried, for printing and binding, appropriations amounting to \$127,000. Up to the present time the Secretary of the Treasury has submitted to the House a statement of deficiencies for the support of the naval establishment amounting to \$2,491,549.64, making a total of \$80,034,335.21 that the House has appropriated or is about to appropriate during the present session for the support of the naval establishment. In addition to this the legislative, executive, and judicial bill carries an appropriation of \$21,800 for the payment of extra clerks whose employment is necessitated by the Spanish war, making a total naval budget of \$80,056,135.21.

The naval budget of Austria-Hungary is \$7,028,167, a cost per capita of population of 15 cents. The naval budget of France is \$61,238,478, a cost per capita of population of \$1.58. The naval budget of the German Empire is \$32,419,602, a cost per capita of population of 62 cents. The naval budget of Italy is \$18,455,111, a cost

WAR BUDGETS.

per capita of population of 58 cent.
budget of Russia is \$48,432,230, a
of population of 17 cents

The combined appropriations of the Army and Navy represent the total defense budget of the United States. The total defense budget for the past year, including the Army and Navy, amounts to \$1.5 billion. The total defense budget for the past year, including the Army and Navy, amounts to \$1.5 billion.

wars, amount to \$35,000,000,000 for a population of \$3,000,000,000. Austria-Hungary is \$74,500,000,000 for a population of \$1,000,000,000. France is \$190,197,542, a cost per capita of \$190.22. The total war budget of the German Empire is \$188,547,345, a cost per capita of \$190. The total war budget of Italy is \$62,375,241, a cost per capita of population of \$197. The total war budget of Russia is \$118,060,017, a cost per capita of population of \$144. The combined total war budgets of France and of the German Empire amount to \$378,744,887, or \$8,073,640 less than that of the United States.

United States. This criticism has been made that there can be no comparison between the cost of maintaining our Army and the cost of maintaining those of Europe, for the reason that the European private receives no pay, and ours receives \$150 a year. As a matter of fact, while service is compulsory on the Continent, the continental private is paid a small sum, amounting on the average to about \$36 a year. In other words, our private receives about \$100 more than his comrade of Europe. This criticism does not affect comparisons, as will be seen on the casual relation of a few figures. The war budget of the German Empire is the largest in Europe. Were the Prussian private to receive the same pay as our private the Prussian Army budget would be swelled to \$212,354,343. Were the Russian private to receive the same pay as our private the Russian budget would be swelled to about \$190,000,000 per annum. The difference in pay does not account for the proportionate difference in the size of the budgets, for were our Army to be increased to the size of that of the German Empire our budget would be increased by \$792,644,320, making a total of \$851,712,420, without including expenses due to past wars, or, including such expenses making an Army budget of \$1,009,167,712. Were our Army to be increased to the size of Russia's, our budget would be increased by \$1,132,120,220, making a total Army budget, without including appropriations due to past wars, of \$1,284,188,320, or, including appropriations due to past wars, making a total budget of \$1,438,882,612.

"I submit these figures to the consideration of the House without any comment whatsoever. Comment is unnecessary.

Comment is unnecessary.

— *Congressional Record*, Feb. 15, 1901, pp. 2707-9

The following is an abstract of the British Army estimates for 1901-1902, submitted to Parliament in March, 1901, compared with those of the previous year. They cover, of course, the extraordinary expenditure incident to the South African war.

	NET ESTIMATES.	
	1901-1902.	1900-1901.
I. — NUMBERS.	Total Numbers.	Total Numbers.
Number of men on the Home and Colonial Establishments of the Army, exclusive of those serving in India	420,000	430,000
II. — EFFECTIVE SERVICES.	£	£
Pay, &c., of Army (General Staff, Regiments, Reserve, and Departments)	21,637,500	18,450,000
Medical Establishment, Pay, &c.	4,085,000	308,000
Militia, Pay, Bounty, &c.	2,062,000	2,288,000
Yeomanry Cavalry, Pay and Allowances	375,000	111,000
Volunteer Corps, Pay and Allowances	1,200,000	1,730,000
Transport and Remounts	15,475,000	19,800,000
Provisions, Forage and other Supplies	18,782,000	18,200,000
Clothing, Establishments, and Services	4,825,000	6,530,000
Warlike and other Stores, Supply and Repair	13,450,000	13,200,000
Works, Buildings, and Repairs	3,281,000	4,730,700
Establishments for Military Education	110,000	110,000
Miscellaneous Effective Services	218,000	200,000
War Office Salaries and Miscellaneous Charges	300,000	275,000
Total Effective Services	83,570,500	85,573,400
III. — NON-EFFECTIVE SERVICES.		
Non-Effective Charges for Officers, &c.	2,271,000	1,861,000
Non-Effective Charges for Men, &c.	1,485,000	1,470,000
Superannuation, Compensation, and Compassionate Allowances	188,500	186,000
Total Non-Effective Services	3,944,500	3,426,000
Total Effective and Non-Effective Services	87,515,000	88,999,400

NOTE. — The provision for Ordinary and War Services is as follows: —

	1901-02.	1900-01.
For War Services:		
South Africa	50,000,000	11,800,000
China	2,000,000	500,000
For Ordinary Services	58,250,000	64,700,000
Total	87,050,000	80,000,000

The British navy estimates for 1901-1902 amount to a net total of £30,875,500, being an increase of £2,082,600 beyond the amount of £28,791,900 voted for the year 1900-1901. The total number of Officers, Seamen and Boys, Coastguard, and Royal Marines, proposed for the year 1901-1902 is 118,635, being an increase of 3,745.

The following statistics of the numerical strength and ratio to population of the armies of twenty-two nations, compiled in the War Department of the United States, were cited in the debate in the U. S. Senate on the bill to increase the strength of the U. S. Army, January 15, 1901. They differ in some particulars, but not greatly, from the corresponding figures given by Mr. McClellan.

War Department, Adjutant General's office, Washington, August 28, 1900. According to the latest available sources, which are considered fairly reliable, the peace and war strength of the armies of the nations mentioned below is stated to be as follows:

NATION.	PEACE STRENGTH.		WAR STRENGTH.
	Officers.	Men.	
Austria-Hungary, 1899	26,454	335,230	1,870,000
Belgium, 1899	3,472	48,000	100,000
Brazil, 1896	2,000	25,000	100,000
China, 1900	300,000	1,000,000	1,000,000
France, 1900	26,740	586,735	1,200,000

† Estimated.

‡ Available men liable to military service.

WAR BUDGETS.

WASHINGTON

NATION.	PEACE STRENGTH		WAR STRENGTH
	Officers	Men	
Germany, 1899	23,190	562,290	1,100,000
Great Britain, 1900	11,004	215,507	500,000
Italy, 1898	14,084	300,000	1,000,000
Japan, 1898	1,100	11,000	400,000
Mexico, 1898	2,000	30,000	100,000
Portugal, 1899	1,800	24,000	100,000
Russia, 1900	4,200	100,000	1,000,000
Spain, 1899	3,000	30,000	100,000
Sweden, 1899	2,500	35,000	100,000
Switzerland, 1900	1,000	10,000	100,000
Turkey, 1898	2,500	35,000	100,000
United States, 1900	2,500	35,000	100,000

* Estimated on present organization to have over 4,000,000 men. War strength not given.
 † Of this number 71,298 are Indian troops.
 ‡ In addition there are maintained in the colonies 10,000 officers and men.
 § Approximate.
 ¶ No standing army.

War Department, Adjutant General's office, Washington, December 8, 1900. Peace strength of the armies, population, and percentage of foreign to latter of the principal countries of the world. This table is not strictly accurate at the present time, because the dates of censuses vary. In preparing this table the latest published census has been taken for population, and the countries are arranged in order of their percentages.

NATION	Peace Strength	Population	Per Cent
France	410,475	38,717,075	1.1
Germany	562,290	41,000,000	1.4
Great Britain	215,507	21,000,000	1.1
Italy	300,000	32,000,000	1.0
Japan	11,000	30,000,000	0.04
Mexico	30,000	10,000,000	0.3
Portugal	24,000	5,000,000	0.5
Russia	1,000,000	130,000,000	0.8
Spain	30,000	15,000,000	0.2
Sweden	35,000	5,000,000	0.7
Switzerland	10,000	2,000,000	0.5
Turkey	35,000	15,000,000	0.2
United States	35,000	75,000,000	0.05
Switzerland	10,000	2,000,000	0.5

Switzerland has no standing army, but every citizen has to bear arms. The first year of the present war between the ages of 17 and 45 has been forty or eighty days, training the first year and exercising it every other sixteen days. Able to be sent into the field annually.

In December, 1900, the British Board of Trade issued a notice for the year 1899. According to the notice, the "Naval Register" of 1900, which is the latest published, shows that the following table is correct:

COUNTRIES	Aggregate Naval Expenditure on Sea-going Force	Aggregate Revenue	Aggregate Expenditure on Merchant Marine
Great Britain-United Kingdom	2,111,700 (1899-00)	11,000,000 Year ended 31st March 1900 (1899-00)	2,111,700 (1899-00)
Russian Empire	8,200,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Germany	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Netherlands	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
France	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Portugal	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Spain	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Italy	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Austria-Hungary	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
United States (year ended 30th June)	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)
Japan	1,000,000 (1899-00)	1,000,000 (1899-00)	1,000,000 (1899-00)

NOTE.—(a) Includes the Chinese indemnity. (b) Registered foreign trade only.

A. D. 1900 December. Celebration of the Centennial Anniversary. The 100th anniversary of the removal of the national capital from Philadelphia to Washington was annually celebrated on the 12th of December, 1900, by an imposing military parade and by a notable address in the House of Representatives, when addresses were delivered and the principal events took place. The President and the Vice President

dent elect. members of all branches of the public service, the Governors and delegates from all the States and Territories, and various other dignitaries, were present. The day of celebration was not precisely that of the anniversary, but one chosen for convenience to represent it. Under the law in 1800 the two houses of Congress began their regular winter session about two weeks earlier than they do now, and November 17 was set as the date on which the Vth Congress should reassemble at the new seat of Federal power. As neither house could have taken part this year in anniversary ceremonies held on November 17, a day was naturally chosen which should allow the legislative branch its proper share in the centennial celebration. The Executive Departments had, in fact, been partially installed in the new District some time before the members of the Vth Congress found their way to the unfinished Capitol. President Adams, leaving Philadelphia on May 27, and travelling by a circuitous route through Lancaster and Frederick, reached Georgetown on June 3, 1800. He inspected the single wing of the original Capitol, then far from finished, visited Alexandria at the southern extreme of the District, and after a ten days stay in Georgetown departed for Massachusetts. The President and Mrs. Adams remained to occupy the White House early in November of the same year.

WEST INDIES, The British: A. D. 1897.—Report of a Royal Commission on the condition and prospects of the sugar-growing colonies. A state of increasing distress in most of the British West India colonies, caused by the depression of the sugar-growing industry, led to the appointment, in December, 1896, of a Royal Commission, to make an inquiry into the condition and prospects of the colonies of Jamaica, British Guiana, Trinidad and Tobago, Barbados, Grenada, St. Vincent, St. Lucia, and the Leeward Islands, and to suggest such measures as appeared calculated to restore and maintain the prosperity of these colonies and their inhabitants. In the August following the Commission made its report, with the following summary of conclusions:

"1. The sugar industry in the West Indies is in danger of great reduction, which in some colonies may be equivalent or almost equivalent to extinction.

"2. The depression of the industry is due to the competition of other sugar-producing countries, and in a special degree to the competition of beet sugar produced under a system of bounties. It is also affected by high protective duties, and by the competition of cane sugar, the production of which is specially encouraged by the Governments concerned. The causes of the depression may be described as permanent, inasmuch as they are largely due to the policy of foreign countries, and there is no indication that that policy is likely to be abandoned in the near, or even in the immediate future.

"3. It is not due in any considerable degree to extravagance in management, to imperfection in the process of manufacture, or to inadequate supervision; consequent on absolute ownership and the removal of these causes, wherever they exist, would not enable it generally to be profitably carried on under present conditions of competition.

"4. The depression in the industry is such as to render sugar estates to be abandoned, and will cause more estates to be abandoned, and such abandonment is causing and will cause distress among the labouring population, including a large number of East Indian immigrants, and will so affect for a considerable time the general prosperity of the sugar-producing Colonies, as to render it impossible for some, and perhaps for a greater number of them, to provide without external aid, for their own government and administration.

"5. If the production of sugar is decreased, or very largely reduced, there is no room for other industries that could completely replace it, in such islands as Barbados, Antigua, and St. Kitts, and be profitably carried on and supply employment for the labouring population. In Barbados, in Trinidad, in British Guiana, in St. Lucia, in St. Vincent, and to some extent in Martinique and Nevis, the sugar industry may in time be replaced by other industries, but only after the lapse of a considerable period, and at the cost of a much displacement of labour and consequent suffering. In Dominica the sugar industry is not at the present day of great importance. We think it right to add that in all Colonies where sugar can be completely or very largely replaced by other industries, the Colonies in question will be in a much sounder position, both politically and economically, when they have ceased to depend wholly or to a very great extent upon the continued prosperity of a sugar industry.

"6. The total or partial extinction of the sugar industry would in most places very seriously affect the condition of the labouring classes, and the worse, and would largely reduce the revenue of the Colonies. In some places the loss of revenue could be met to a limited extent by economies, but this could not be done generally, nor to a material degree in most of the Colonies. Some of the Colonies could not provide the necessary cost of administration, including the extent of distressed and necessitous persons, or of the support and repatriation when necessary of the East Indian immigrants. A large part of the outlay would have to be met by subsidies or contributions from the mother country. Jamaica, Trinidad, and Grenada may be expected to derive from their own resources the whole of their expenditure that is likely to fall on them.

"7. The best immediate remedy for the sugar

WEST INDIES

Colleges which we have shown to have a high level of financial soundness are the beneficiaries of contractual riders. This change will not only probably enable a large portion of the colleges to come even to be attracted to the best schools and would not only rid the rate of interest but would diminish. Looking, however, what appears to be the policy of the United States of America to the great cheapening of the cost of production of beet sugar and the fact that many countries appear to have singled out the sugar industry as one which ought to be artificially stimulated in various ways it is not clear that even if the bounties were abolished in other cases of a similar character might not arise in the West Indies at a future day.

It is a remedy which was strongly supported by witnesses interested in the West Indian situation, was the imposition of a duty on imported sugar, but which had sought when imported into the United Kingdom.

1. The specimens made up the resident population of the island, which was mostly composed of men. 2. The settlement of the labouring population consisted of persons of Indian as present population. 3. The establishment of modern agricultural industries and the improvement of the existing industries were especially in the case of such population. 4. The improvement of the means of communication between the different islands. 5. The encouragement of a free trade with New York and possibly other foreign countries with the aim of the part of the income to the Imperial Government for the establishment of Central Factories in Barbados. The establishment of a central bank to supply the said islands with paper money and to take care of the currency to be issued by the Government. 6. The improvement of the means of the present time and a possible future development of the island.

1. We estimate the cost of the special needs of communities 1, 2, 3, and 4 to be of 25, 30, 40, and 60 million francs, respectively, for 10 years. The expenditure may be borne by the mother country. We estimate the amount of the French contribution for the creation of a center for the first 20,000 francs. This cost is considerable, involves the risk of loss. Grants will be required in Denmark and St. Vincent for funds, and to enable the settlement of the foreign population of the land to be carried out and their amount may be taken at 20,000 francs. A further grant of about 60,000 francs is required to offset the shipping debt in some of the smaller islands. In addition, the smaller islands should receive grants to enable them to meet their primary expenditure of an obligation to pay. The amount may be placed at 20,000 francs for five years, or possibly a reduced amount for the first period of five years. The expenditure which we are able to estimate may be summarized as follows: 1. A grant of 25,000 francs a year for five years. 2. A grant of 20,000 francs a year for five years. 3. Immediate grants of 60,000 francs, 40,000 francs, 20,000 francs, 1. A grant of 120,000 francs. But also 4 for the establishment of a center for the first.

The response for the federated and the West German states to the Commission's proposals varies widely for the reasons that the objectives of the policy are shared and differ for the two countries. The Commission's interpretation of the policy is very different. Nor does it seem that the Commission report that the very important federal

WOMAN SUFFRAGE. — Four States have given to women unlimited political freedom, these States being Colorado, Utah, Wyoming, and Idaho. The women of all these States, except Idaho, had the privilege of voting in the Presidential election of 1896. The women of Idaho voted in the State election of 1898, their first chance to vote for a Presidential ticket was in 1900. To some extent in the election of school boards and officers, or on questions of taxation, woman suffrage exists in a limited way in Arizona, Connecticut, Delaware, Illinois, Iowa, Kentucky, Massachusetts, Michigan, Minnesota, Montana, Nebraska, New Hampshire, New York, North Dakota, Ohio, Oklahoma, Oregon, South Dakota, Texas, Vermont, Washington and Wisconsin.
